Resolution of Support for Smokefree Alaska

Whereas, Secondhand smoke contains more than 7,000 chemicals, including at least 69 of which are known to cause cancer¹, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide², and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers³; and

Whereas, Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers⁴, including heart disease, stroke, respiratory disease and lung cancer⁵; and

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace⁶; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful⁷; and

Whereas, There are serious questions about the safety of inhaling the substances in some e-cigarette aerosol, and e-cigarettes have not been subject to thorough, independent testing, making it difficult for users to be sure of what they are actually inhaling. And some studies have shown that some e-cigarettes can cause short-term lung changes and irritations and the long-term health effects, are unknown¹⁰; and

Whereas, For every nine smokers who die, one nonsmoker dies from exposure to secondhand smoke⁸; and

Whereas, Approximately half of Alaska's population is not protected by a smokefree workplace law⁹; and

Whereas, Among those who work primarily indoors, young adults aged 18 to 29 are significantly less likely to be protected by a smokefree indoor workplace policy than other Alaskan adults⁸; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement⁹; and

Whereas, Smokefree workplace laws protect people from secondhand smoke⁴, reduce tobacco use overall and reduce health care costs⁶; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke:

Whereas, Secondhand smoke contains more than 7,000 chemicals, including at least 69 of which are known to cause cancer¹, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide², and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers³; and

Whereas, Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers⁴, including heart disease, stroke, respiratory disease and lung cancer²; and

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace⁴; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful⁵; and

Whereas, For every nine smokers who die, one nonsmoker dies from exposure to secondhand smoke⁶; and

Whereas, Approximately half of Alaska's population is not protected by a smokefree workplace law⁷; and

Whereas, Among those who work primarily indoors, young adults aged 18 to 29 are significantly less likely to be protected by a smokefree indoor workplace policy than other Alaskan adults⁸; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement⁹; and

Whereas, Smokefree workplace laws protect people from secondhand smoke⁴, reduce tobacco use overall and reduce health care costs⁶; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

Title: AANP Secretary

Resolution of Support for Smokefree Alaska

Whereas, Secondhand smoke contains more than 4,000 chemicals, 69 of which are known to cause cancer, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide, and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers; and

Whereas, Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers, including heart disease, stroke, respiratory disease and lung cancer; and

Whereas, The 2005 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful; and

Whereas, For every eight smokers who die, one nonsmoker dies from exposure to secondhand smoke; and

Whereas, Nine out of ten Alaskans, including seven out of ten smokers, believe that smoking should be prohibited in Alaska workplaces; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement; and

Whereas, Smokefree workplace laws protect people from secondhand smoke, reduce tobacco use overall and reduce health care costs; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

Dear Ken,

The Alaska Dental Society is pleased to offer our full support of legislation filed that would introduce a statewide smoke-free workplace ban. With the mountains of evidence now of the detrimental effects of secondhand smoke, no Alaskan should be subjected to such a well known health hazard in their place of employment. We applaud all the communities that have been able to institute such a ban and are 100% behind making the jump to a statewide ban on smoking in the workplace.

ALASKA FEDERATION OF NATIVES, INC.

2011 ANNUAL CONVENTION

RESOLUTION 11-51

TITLE: STATEWIDE SMOKEFREE WORKPLACES TO PROTECT TRIBAL CITIZENS FROM THE DANGERS OF SECONDHAND SMOKE

WHEREAS: Alaska Native and the non-Alaska Native people have the highest rate of tobacco use in the state of Alaska; and,

WHEREAS: Tobacco use is the leading cause of preventable death and disease and Alaska Native people and non-Native people suffer serious health consequences including heart disease and cancer; and,

WHEREAS: Secondhand tobacco smoke exposure is another leading cause of preventable death, and causes disease in health non-smokers, including heart disease, stroke, respiratory disease, and cancer; and,

WHEREAS: It has been determined by the U.S. Surgeon General that there is no safe level of exposure to secondhand smoke, air ventilation systems do not work, and that only completely smoke free environments can protect health; and,

WHEREAS: A significant amount of secondhand smoke exposure for Alaska Native and non-Alaska Native adults and children occurs in the workplace and even short exposures may result in serious adverse health effects and even death; and,

WHEREAS: Smoke free workplace laws protect people from secondhand smoke, reduce tobacco use overall, support healthy lifestyles, model healthy behavior, and support quit attempts; and,

WHEREAS: The health of our people is of upmost importance and Alaska Native and non-Alaska Native people have taken a lead in addressing health issues throughout the years; and,

WHEREAS: Smoke free workplaces will protect the health of our children, grandchildren, families, and community members; and,

NOW THEREFORE BE IT RESOLVED by the Delegates to the 2011 Annual Convention of the Alaska Federation of Natives, Inc. that AFN support statewide smoke free workplaces to protect Alaska Native and non-Alaska Native people from the known dangers of secondhand smoke.

Resolution of Support for Smokefree Alaska

Whereas, Secondhand smoke contains more than 4,000 chemicals, 69 of which are known to cause cancer, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide, and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers; and

Whereas, Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers, including heart disease, stroke, respiratory disease and lung cancer; and

Whereas, The 2005 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful; and

Whereas, For every eight smokers who die, one nonsmoker dies from exposure to secondhand smoke; and

Whereas, Nine out of ten Alaskans, including seven out of ten smokers, believe that smoking should be prohibited in Alaska workplaces; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement, and

Whereas, Smokefree workplace laws protect people from secondhand smoke, reduce tobacco use overall and reduce health care costs; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

Chair

Resolution of Support for Smokefree Alaska

Whereas, Secondhand smoke contains more than 7,000 chemicals, including at least 69 of which are known to cause cancer¹, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide², and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers³; and

Whereas, Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers⁴, including heart disease, stroke, respiratory disease and lung cancer²; and

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace⁴; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful⁵; and

Whereas, There are serious questions about the safety of inhaling the substances in some e-cigarette aerosol, and e-cigarettes have not been subject to thorough, independent testing, making it difficult for users to be sure of what they are actually inhaling. And some studies have shown that some e-cigarettes can cause short-term lung changes and irritations and the long-term health effects, are unknown¹⁰; and

Whereas, For every nine smokers who die, one nonsmoker dies from exposure to secondhand smoke⁶; and

Whereas, Approximately half of Alaska's population is not protected by a smokefree workplace law⁷; and

Whereas, Among those who work primarily indoors, young adults aged 18 to 29 are significantly less likely to be protected by a smokefree indoor workplace policy than other Alaskan adults⁸; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement⁹; and

Whereas, Smokefree workplace laws protect people from secondhand smoke⁴, reduce tobacco use overall and reduce health care costs⁶; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace⁴; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful⁵; and

Whereas, For every nine smokers who die, one nonsmoker dies from exposure to secondhand smoke⁶; and

Whereas, Approximately half of Alaska's population is not protected by a smokefree workplace law⁷; and

Whereas, Among those who work primarily indoors, young adults aged 18 to 29 are significantly less likely to be protected by a smokefree indoor workplace policy than other Alaskan adults⁸; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement⁹; and

Whereas, Smokefree workplace laws protect people from secondhand smoke⁴, reduce tobacco use overall and reduce health care costs⁶; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

Resolution of Support for Smokefree Alaska

Whereas, Secondhand smoke contains more than 7,000 chemicals, including at least 69 of which are known to cause cancer¹, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide², and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers³; and

Whereas, Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers⁴, including heart disease, stroke, respiratory disease and lung cancer²; and

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace⁴; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful⁵; and

Whereas, There are serious questions about the safety of inhaling the substances in some e-cigarette aerosol, and e-cigarettes have not been subject to thorough, independent testing, making it difficult for users to be sure of what they are actually inhaling. And some studies have shown that some e-cigarettes can cause short-term lung changes and irritations and the long-term health effects, are unknown¹⁰; and

Whereas, For every nine smokers who die, one nonsmoker dies from exposure to secondhand smoke⁶; and

Whereas, Approximately half of Alaska's population is not protected by a smokefree workplace law⁷; and

Whereas, Among those who work primarily indoors, young adults aged 18 to 29 are significantly less likely to be protected by a smokefree indoor workplace policy than other Alaskan adults⁸; and

Whereas, Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers⁴, including heart disease, stroke, respiratory disease and lung cancer²; and

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace⁴; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful⁵; and

Whereas, There are serious questions about the safety of inhaling the substances in some e-cigarette aerosol, and e-cigarettes have not been subject to thorough, independent testing, making it difficult for users to be sure of what they are actually inhaling. And some studies have shown that some e-cigarettes can cause short-term lung changes and irritations and the long-term health effects, are unknown¹⁰; and

Whereas, For every nine smokers who die, one nonsmoker dies from exposure to secondhand smoke⁶; and

Whereas, Approximately half of Alaska's population is not protected by a smokefree workplace law⁷; and

Whereas, Among those who work primarily indoors, young adults aged 18 to 29 are significantly less likely to be protected by a smokefree indoor workplace policy than other Alaskan adults⁸; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement⁹; and

Whereas, Smokefree workplace laws protect people from secondhand smoke⁴, reduce tobacco use overall and reduce health care costs⁶; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace⁴; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful⁵; and

Whereas, For every nine smokers who die, one nonsmoker dies from exposure to secondhand smoke⁶; and

Whereas, Approximately half of Alaska's population is not protected by a smokefree workplace law⁷; and

Whereas, Among those who work primarily indoors, young adults aged 18 to 29 are significantly less likely to be protected by a smokefree indoor workplace policy than other Alaskan adults⁸; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement⁹; and

Whereas, Smokefree workplace laws protect people from secondhand smoke⁴, reduce tobacco use overall and reduce health care costs⁶; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

Whereas, For every nine smokers who die, one nonsmoker dies from exposure to secondhand smoke⁶; and

Whereas, Approximately half of Alaska's population is not protected by a smokefree workplace law⁷; and

Whereas, Among those who work primarily indoors, young adults aged 18 to 29 are significantly less likely to be protected by a smokefree indoor workplace policy than other Alaskan adults⁸; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement⁹; and

Whereas, Smokefree workplace laws protect people from secondhand smoke⁴, reduce tobacco use overall and reduce health care costs⁶; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

Resolution of Support for Smokefree Alaska

Whereas, Secondhand smoke contains more than 7,000 chemicals, including at least 69 of which are known to cause cancer¹, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide², and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers³; and

Whereas, Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers⁴, including heart disease, stroke, respiratory disease and lung cancer²; and

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace⁴; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful⁵; and

Whereas, There are serious questions about the safety of inhaling the substances in some e-cigarette aerosol, and e-cigarettes have not been subject to thorough, independent testing, making it difficult for users to be sure of what they are actually inhaling. And some studies have shown that some e-cigarettes can cause short-term lung changes and irritations and the long-term health effects, are unknown¹⁰; and

Whereas, For every nine smokers who die, one nonsmoker dies from exposure to secondhand smoke⁶; and

Whereas, Approximately half of Alaska's population is not protected by a smokefree workplace law⁷; and

Whereas, Among those who work primarily indoors, young adults aged 18 to 29 are significantly less likely to be protected by a smokefree indoor workplace policy than other Alaskan adults⁸; and

Whereas, The 2006 U.S. Surgeon General's Report, "*The Health Consequences of Involuntary Exposure to Tobacco Smoke*," concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace⁴; and

Whereas, The 2010 U.S. Surgeon General's Report, "*How Tobacco Smoke Causes Disease*," determined that even occasional exposure to secondhand smoke is harmful⁵; and

Whereas, There are serious questions about the safety of inhaling the substances in some e-cigarette aerosol, and e-cigarettes have not been subject to thorough, independent testing, making it difficult for users to be sure of what they are actually inhaling. And some studies have shown that some e-cigarettes can cause short-term lung changes and irritations and the long-term health effects, are unknown¹⁰; and

Whereas, For every nine smokers who die, one nonsmoker dies from exposure to secondhand smoke⁶; and

Whereas, Approximately half of Alaska's population is not protected by a smokefree workplace law⁷; and

Whereas, Among those who work primarily indoors, young adults aged 18 to 29 are significantly less likely to be protected by a smokefree indoor workplace policy than other Alaskan adults⁸; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement⁹; and

Whereas, Smokefree workplace laws protect people from secondhand smoke⁴, reduce tobacco use overall and reduce health care costs⁶; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

Whereas, Secondhand smoke contains more than 7,000 chemicals, including at least 69 of which are known to cause cancer¹, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide², and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers³; and

Whereas, Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers⁴, including heart disease, stroke, respiratory disease and lung cancer⁵; and

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace⁶; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful⁵; and

Whereas, For every nine smokers who die, one nonsmoker dies from exposure to secondhand smoke⁶; and

Whereas, Approximately half of Alaska's population is not protected by a smokefree workplace law⁷; and

Whereas, Among those who work primarily indoors, young adults aged 18 to 29 are significantly less likely to be protected by a smokefree indoor workplace policy than other Alaskan adults⁸; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement⁹; and

Whereas, Smokefree workplace laws protect people from secondhand smoke⁴, reduce tobacco use overall and reduce health care costs⁶; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

Resolution of Support for Smokefree Alaska

Whereas, Secondhand smoke contains more than 7,000 chemicals, including at least 69 of which are known to cause cancer¹, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide², and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers³; and

Whereas, Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers⁴, including heart disease, stroke, respiratory disease and lung cancer²; and

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace⁴; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful⁵; and

Whereas, For every nine smokers who die, one nonsmoker dies from exposure to secondhand smoke⁶; and

Whereas, Approximately half of Alaska's population is not protected by a smokefree workplace law⁷; and

Whereas, Among those who work primarily indoors, young adults aged 18 to 29 are significantly less likely to be protected by a smokefree indoor workplace policy than other Alaskan adults⁸; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement⁹; and

Whereas, Smokefree workplace laws protect people from secondhand smoke⁴, reduce tobacco use overall and reduce health care costs⁶; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

Whereas, Secondhand smoke contains more than 7,000 chemicals, 70 of which are known to cause cancer, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide, and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers; and

Whereas, Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers, including heart disease, stroke, respiratory disease and lung cancer; and

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful; and

Whereas, For every eight smokers who die, one nonsmoker dies from exposure to secondhand smoke; and

Whereas, Nine out of ten Alaskans, including seven out of ten smokers, believe that smoking should be prohibited in Alaska workplaces; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement, and

Whereas, Smokefree workplace laws protect people from secondhand smoke, reduce tobacco use overall and reduce health care costs; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

Resolution of Support for Smokefree Alaska

Whereas, Secondhand smoke contains more than 7,000 chemicals, 70 of which are known to cause cancer, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide, and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers; and

Whereas, Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers, including heart disease, stroke, respiratory disease and lung cancer; and

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful; and

Whereas, For every eight smokers who die, one nonsmoker dies from exposure to secondhand smoke; and

Whereas, Nine out of ten Alaskans, including seven out of ten smokers, believe that smoking should be prohibited in Alaska workplaces; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement, and

Whereas, Smokefree workplace laws protect people from secondhand smoke, reduce tobacco use overall and reduce health care costs; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

Resolution of Support for Smokefree Alaska

Whereas, Secondhand smoke contains more than 7,000 chemicals, including at least 69 of which are known to cause cancer¹, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide², and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers³; and

Whereas, Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers⁴, including heart disease, stroke, respiratory disease and lung cancer⁵; and

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace⁴; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful⁵; and

Whereas, There are serious questions about the safety of inhaling the substances in some e-cigarette aerosol, and e-cigarettes have not been subject to thorough, independent testing, making it difficult for users to be sure of what they are actually inhaling. And some studies have shown that some e-cigarettes can cause short-term lung changes and irritations and the long-term health effects, are unknown¹⁰; and

Whereas, For every nine smokers who die, one nonsmoker dies from exposure to secondhand smoke⁶; and

Whereas, Approximately half of Alaska's population is not protected by a smokefree workplace law⁷; and

Whereas, Among those who work primarily indoors, young adults aged 18 to 29 are significantly less likely to be protected by a smokefree indoor workplace policy than other Alaskan adults⁸; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement⁹; and

Whereas, Smokefree workplace laws protect people from secondhand smoke⁴, reduce tobacco use overall and reduce health care costs⁶; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

Resolution of Support for Smokefree Alaska

Whereas, Secondhand smoke contains more than 7,000 chemicals, 70 of which are known to cause cancer, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide, and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers; and

Whereas, Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers, including heart disease, stroke, respiratory disease and lung cancer; and

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful; and

Whereas, For every eight smokers who die, one nonsmoker dies from exposure to secondhand smoke; and

Whereas, Nine out of ten Alaskans, including seven out of ten smokers, believe that smoking should be prohibited in Alaska workplaces; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement, and

Whereas, Smokefree workplace laws protect people from secondhand smoke, reduce tobacco use overall and reduce health care costs; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

Resolution of Support for Smokefree Alaska

Whereas, Secondhand smoke contains more than 7,000 chemicals, including at least 69 of which are known to cause cancer¹, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide², and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers³; and

Whereas, Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers⁴, including heart disease, stroke, respiratory disease and lung cancer²; and

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace⁴; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful⁵; and

Whereas, There are serious questions about the safety of inhaling the substances in some e-cigarette aerosol, and e-cigarettes have not been subject to thorough, independent testing, making it difficult for users to be sure of what they are actually inhaling. And some studies have shown that some e-cigarettes can cause short-term lung changes and irritations and the long-term health effects, are unknown¹⁰; and

Whereas, For every nine smokers who die, one nonsmoker dies from exposure to secondhand smoke⁶; and

Whereas, Approximately half of Alaska's population is not protected by a smokefree workplace law⁷; and

Whereas, Among those who work primarily indoors, young adults aged 18 to 29 are significantly less likely to be protected by a smokefree indoor workplace policy than other Alaskan adults⁸; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement⁹; and

Whereas, Smokefree workplace laws protect people from secondhand smoke⁴, reduce tobacco use overall and reduce health care costs⁶; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

Resolution of Support for Smokefree Alaska

Whereas, Secondhand smoke contains more than 7,000 chemicals, including at least 69 of which are known to cause cancer¹, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide², and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers³; and

Whereas, Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers⁴, including heart disease, stroke, respiratory disease and lung cancer²; and

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace⁴; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful⁵; and

Whereas, For every nine smokers who die, one nonsmoker dies from exposure to secondhand smoke⁶; and

Whereas, Approximately half of Alaska's population is not protected by a smokefree workplace law⁷; and

Whereas, Among those who work primarily indoors, young adults aged 18 to 29 are significantly less likely to be protected by a smokefree indoor workplace policy than other Alaskan adults⁸; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement⁹; and

Whereas, Smokefree workplace laws protect people from secondhand smoke⁴, reduce tobacco use overall and reduce health care costs⁶; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

Resolution of Support for Smokefree Alaska

Whereas, Secondhand smoke contains more than 7,000 chemicals, 70 of which are known to cause cancer, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide, and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers; and

Whereas, Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers, including heart disease, stroke, respiratory disease and lung cancer; and

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful; and

Whereas, For every eight smokers who die, one nonsmoker dies from exposure to secondhand smoke; and

Whereas, Nine out of ten Alaskans, including seven out of ten smokers, believe that smoking should be prohibited in Alaska workplaces; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement, and

Whereas, Smokefree workplace laws protect people from secondhand smoke, reduce tobacco use overall and reduce health care costs; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

TANANA CHIEFS CONFERENCE

Full Board of Directors

Resolution No. 2012-20

TOBACCO FREE WORKPLACES AND EVENTS TO PROTECT ALASKA CITIZENS AND GUESTS FROM THE DANGERS OF SECONDHAND SMOKE

WHEREAS, Alaska Native people have the highest rate of tobacco use in the State of Alaska;
and

WHEREAS, Tobacco use is the leading cause of preventable death and disease and Alaska Native people suffer serious health consequences including heart disease and cancer; and

WHEREAS, Secondhand tobacco smoke exposure is another leading cause of preventable death, and causes disease in healthy nonsmokers, including heart disease, stroke, respiratory disease, and cancer; and

WHEREAS, It has been determined by the U.S. Surgeon General that there is no safe level of exposure to secondhand smoke, air ventilation systems do not work, and that only completely smoke free environments can protect health; and

WHEREAS, Tobacco use will be prohibited on all property, and minimum of 50 feet of the entrance and other doors and windows; and

WHEREAS, A significant amount of secondhand smoke exposure for adults and children occurs in the workplace, including local or statewide events where smoking is permitted and even short exposures may result in serious adverse health effects and even death; and

WHEREAS, The health of our people is of utmost importance and Alaska Natives have taken a lead in addressing health issues, modeling healthy behaviors and changing social norms throughout the years; and

WHEREAS, Tobacco free workplaces and events will protect the health of our children, grandchildren, families, community members and guests.

NOW THEREFORE BE IT RESOLVED that the Tanana Chiefs Conference Full Board of Directors supports adoption of the TCC tobacco free policy to protect Alaska Natives from the known dangers of secondhand smoke and other tobacco products.

Resolution of Support for Smokefree Alaska

Whereas, Secondhand smoke contains more than 7,000 chemicals, including at least 69 of which are known to cause cancer¹, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide², and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers³; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful; and

Whereas, For every eight smokers who die, one nonsmoker dies from exposure to secondhand smoke; and

Whereas, Nine out of ten Alaskans, including seven out of ten smokers, believe that smoking should be prohibited in Alaska workplaces; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement, and

Whereas, Smokefree workplace laws protect people from secondhand smoke, reduce tobacco use overall and reduce health care costs; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

Resolution of Support for Smokefree Alaska

Whereas, Secondhand smoke contains more than 7,000 chemicals, including at least 69 of which are known to cause cancer¹, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide², and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers³; and

Whereas, Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers⁴, including heart disease, stroke, respiratory disease and lung cancer²; and

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace⁴; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful⁵; and

Whereas, For every nine smokers who die, one nonsmoker dies from exposure to secondhand smoke⁶; and

Whereas, Approximately half of Alaska's population is not protected by a smokefree workplace law⁷; and

Whereas, Among those who work primarily indoors, young adults aged 18 to 29 are significantly less likely to be protected by a smokefree indoor workplace policy than other Alaskan adults⁸; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement⁹; and

Whereas, Smokefree workplace laws protect people from secondhand smoke⁴, reduce tobacco use overall and reduce health care costs⁶; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace⁴; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful⁵; and

Whereas, There are serious questions about the safety of inhaling the substances in some e-cigarette aerosol, and e-cigarettes have not been subject to thorough, independent testing, making it difficult for users to be sure of what they are actually inhaling. And some studies have shown that some e-cigarettes can cause short-term lung changes and irritations and the long-term health effects, are unknown¹⁰; and

Whereas, For every nine smokers who die, one nonsmoker dies from exposure to secondhand smoke⁶; and

Whereas, Approximately half of Alaska's population is not protected by a smokefree workplace law⁷; and

Whereas, Among those who work primarily indoors, young adults aged 18 to 29 are significantly less likely to be protected by a smokefree indoor workplace policy than other Alaskan adults⁸; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement⁹; and

Whereas, Smokefree workplace laws protect people from secondhand smoke⁴, reduce tobacco use overall and reduce health care costs⁶; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

Phone: (907) 373-0800 • Fax (907) 373-0808

Classified Employees' Association Resolution No. 14-01

A RESOLUTION OF THE MATANUSKA SUSITNA CLASSIFIED EMPLOYEES' ASSOCIATION SUPPORTING A SMOKEFREE ALASKA WORKPLACE.

Whereas, Secondhand smoke contains more than 7,000 chemicals, including at least 69 of which are known to cause cancer, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide, and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers; and

Whereas, Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers, including heart disease, stroke, respiratory disease and lung cancer; and

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful; and

Whereas, There are serious questions about the safety of inhaling the substances in some e-cigarette aerosol, and e-cigarettes have not been subject to thorough, independent testing, making it difficult for users to be sure of what they are actually inhaling. And some studies have shown that some e-cigarettes can cause short-term lung changes and irritations and the long-term health effects, are unknown; and

Whereas, For every nine smokers who die, one nonsmoker dies from exposure to secondhand smoke; and

Whereas, Approximately half of Alaska's population is not protected by a smokefree workplace law and

Whereas, Among those who work primarily indoors, young adults aged 18 to 29 are significantly less likely to be protected by a smokefree indoor workplace policy than other Alaskan adults; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement; and

Whereas, Smokefree workplace laws protect people from secondhand smoke, reduce tobacco use overall and reduce health care costs; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE BE IT RESOLVED, that the Matanuska Susitna Classified Employees' Association supports making all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

ADOPTED by the Classified Employees' Association Executive Board this 13th day of October, 2014.

Ernie Kirby, CEA President

Resolution of Support for Smokefree Alaska

Whereas, Secondhand smoke contains more than 7,000 chemicals, including at least 69 of which are known to cause cancer¹, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide², and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers³; and

Whereas, Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers⁴, including heart disease, stroke, respiratory disease and lung cancer²; and

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace⁴; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful⁵; and

Whereas, For every nine smokers who die, one nonsmoker dies from exposure to secondhand smoke⁶; and

Whereas, Approximately half of Alaska's population is not protected by a smokefree workplace law⁷; and

Whereas, Among those who work primarily indoors, young adults aged 18 to 29 are significantly less likely to be protected by a smokefree indoor workplace policy than other Alaskan adults⁸; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement⁹; and

Whereas, Smokefree workplace laws protect people from secondhand smoke⁴, reduce tobacco use overall and reduce health care costs⁶; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

The Greater Palmer Chamber of Commerce enthusiastically supports smoke-free workplaces.

In 2011, the Greater Palmer Chamber of Commerce polled our membership with the question of, "Should the Greater Palmer Chamber of Commerce support the Breathe Free Palmer campaign?" Our membership voted overwhelmingly to support the cause. In July 2012, the voters in the City of Palmer passed a ballot initiative that made smoking in public places within the city limits a violation. On January 2, 2013, Palmer became a smoke-free community.

We understand that the question of "civil liberties" is a common theme in this debate. While our Board of Directors appreciates lawmakers who value a person's right to choose for themselves whether or not they smoke; we also value a non-smoker's right to breathe smoke-free air in public places.

In December 2013, almost a year after Palmer went smoke-free; the Greater Palmer Chamber of Commerce Board of Directors polled the membership again to learn what they think of the change. Since Palmer went smoke-free, many business owners have noted an increase in commerce and attribute it to the smoke-free ordinance. 80 percent of respondents said that the impacts to business in Palmer have been positive; 85 percent said they like Palmer better now that it's gone smoke-free.

Society has become better aware of the dangers that secondhand smoke poses to non-smokers. People who have never smoked tobacco can be afflicted with heart disease, stroke, respiratory disease and even lung cancer. As business owners our employees, customers, and vendors deserve to shop and work in smoke free workplaces, free from the health hazards.

Respectfully submitted,

KNIK TRIBAL COUNCIL

KNIK, THE OLDEST VILLAGE IN COOK INLET

Resolution 14-47

Resolution for the Control and Elimination of Secondhand Tobacco Smoke in the Work Place and Enclosed Public Places.

WHEREAS, The Knik Tribe, is an Indian Tribe as defined in Section 4 of the Indian Self-Determination and Education Assistance Act, Pub. L. 93-638, 25 U.S.C. 450b;

WHEREAS, Alaska Native people have the highest rate of tobacco use in the state of Alaska;

WHEREAS, Tobacco use is the leading cause of preventable death and disease and Alaska Native people suffer serious health consequences including heart disease and cancer;

WHEREAS, Secondhand tobacco smoke exposure is another leading cause of preventable death, and causes disease in healthy nonsmokers, including heart disease, stroke, respiratory disease, and cancer;

WHEREAS, It has been determined by the U.S. Surgeon General that there is no safe level of exposure to secondhand smoke, air ventilation systems do not work, and that only completely smoke-free environments can protect health;

WHEREAS, A significant amount of secondhand smoke exposure for Alaska Native adults and children occurs in the workplace and even short exposures may result in serious adverse health effects and even death;

WHEREAS, Smoke-free workplaces protect people from secondhand smoke, reduce tobacco use overall, support healthy lifestyles, model healthy behavior, and support quit attempts;

WHEREAS, The health of our people is of utmost importance and Alaska Native people have taken a lead in addressing health issues throughout the years; and

WHEREAS, Smoke-free tribal workplaces will protect the health of our children, grandchildren, families, and community members.

THEREFORE, BE IT RESOLVED that to protect the health and welfare of others and employees, smoking tobacco shall be prohibited within all facilities owned, operated or leased by the Knik Tribe including:

- a) all areas within enclosed places that are open to or frequented by the public;
- b) all areas within places of employment; and
- c) all outdoor areas within 20 feet of entrances, exits and windows that open to enclosed places and places of employment.

BE IT FURTHER RESOLVED, that signs prohibiting smoking shall be posted and a smoking distance no less than 20 feet from any entrances be enforced.

Whereas, Secondhand smoke contains more than 4,000 chemicals, 69 of which are known to cause cancer, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide, and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers; and

Whereas, Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers, including heart disease, stroke, respiratory disease and lung cancer; and

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful; and

Whereas, For every eight smokers who die, one nonsmoker dies from exposure to secondhand smoke; and

Whereas, Nine out of ten Alaskans, including seven out of ten smokers, believe that smoking should be prohibited in Alaska workplaces; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement, and

Whereas, Smokefree workplace laws protect people from secondhand smoke, reduce tobacco use overall and reduce health care costs; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

Resolution of Support for Smokefree Alaska

Whereas, Secondhand smoke contains more than 7,000 chemicals, including at least 69 of which are known to cause cancer¹, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide², and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers³; and

Whereas, Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers⁴, including heart disease, stroke, respiratory disease and lung cancer²; and

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace⁴; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful⁵; and

Whereas, For every nine smokers who die, one nonsmoker dies from exposure to secondhand smoke⁶; and

Whereas, Approximately half of Alaska's population is not protected by a smokefree workplace law⁷; and

Whereas, Among those who work primarily indoors, young adults aged 18 to 29 are significantly less likely to be protected by a smokefree indoor workplace policy than other Alaskan adults⁸; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement⁹; and

Whereas, Smokefree workplace laws protect people from secondhand smoke⁴, reduce tobacco use overall and reduce health care costs⁶; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

Whereas, Secondhand smoke contains more than 7,000 chemicals, including at least 69 of which are known to cause cancer¹, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide², and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers³; and

Whereas, Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers⁴, including heart disease, stroke, respiratory disease and lung cancer²; and

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace⁴; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful⁵; and

Whereas, For every nine smokers who die, one nonsmoker dies from exposure to secondhand smoke⁶; and

Whereas, Approximately half of Alaska's population is not protected by a smokefree workplace law⁷; and

Whereas, Among those who work primarily indoors, young adults aged 18 to 29 are significantly less likely to be protected by a smokefree indoor workplace policy than other Alaskan adults⁸; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement⁹; and

Whereas, Smokefree workplace laws protect people from secondhand smoke⁴, reduce tobacco use overall and reduce health care costs⁶; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace⁴; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful⁵; and

Whereas, There are serious questions about the safety of inhaling the substances in some e-cigarette aerosol, and e-cigarettes have not been subject to thorough, independent testing, making it difficult for users to be sure of what they are actually inhaling. And some studies have shown that some e-cigarettes can cause short-term lung changes and irritations and the long-term health effects, are unknown¹⁰; and

Whereas, For every nine smokers who die, one nonsmoker dies from exposure to secondhand smoke⁶; and

Whereas, Approximately half of Alaska's population is not protected by a smokefree workplace law⁷; and

Whereas, Among those who work primarily indoors, young adults aged 18 to 29 are significantly less likely to be protected by a smokefree indoor workplace policy than other Alaskan adults⁸; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement⁹; and

Whereas, Smokefree workplace laws protect people from secondhand smoke⁴, reduce tobacco use overall and reduce health care costs⁶; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

Resolution of Support for Smokefree Alaska

Whereas, Secondhand smoke contains more than 7,000 chemicals, including at least 69 of which are known to cause cancer¹, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide², and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers³; and

Whereas, Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers⁴, including heart disease, stroke, respiratory disease and lung cancer²; and

Whereas, The 2006 U.S. Surgeon General's Report, "*The Health Consequences of Involuntary Exposure to Tobacco Smoke*," concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace⁴; and

Whereas, The 2010 U.S. Surgeon General's Report, "*How Tobacco Smoke Causes Disease*," determined that even occasional exposure to secondhand smoke is harmful⁵; and

Whereas, There are serious questions about the safety of inhaling the substances in some e-cigarette aerosol, and e-cigarettes have not been subject to thorough, independent testing, making it difficult for users to be sure of what they are actually inhaling. And some studies have shown that some e-cigarettes can cause short-term lung changes and irritations and the long-term health effects, are unknown¹⁰; and

Whereas, For every nine smokers who die, one nonsmoker dies from exposure to secondhand smoke⁶; and

Whereas, Approximately half of Alaska's population is not protected by a smokefree workplace law⁷; and

Whereas, Among those who work primarily indoors, young adults aged 18 to 29 are significantly less likely to be protected by a smokefree indoor workplace policy than other Alaskan adults⁸; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirements⁹; and

Whereas, Smokefree workplace laws protect people from secondhand smoke⁴, reduce tobacco use overall and reduce health care costs⁶; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

Resolution of Support for Smokefree Alaska

Whereas, Secondhand smoke contains more than 7,000 chemicals, including at least 69 of which are known to cause cancer¹, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide², and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers³; and

Whereas, Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers⁴, including heart disease, stroke, respiratory disease and lung cancer⁵; and

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace⁶; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful⁷; and

Whereas, There are serious questions about the safety of inhaling the substances in some e-cigarette aerosol, and e-cigarettes have not been subject to thorough, independent testing, making it difficult for users to be sure of what they are actually inhaling. And some studies have shown that some e-cigarettes can cause short-term lung changes and irritations and the long-term health effects, are unknown¹⁰; and

Whereas, For every nine smokers who die, one nonsmoker dies from exposure to secondhand smoke⁶; and

Whereas, Approximately half of Alaska's population is not protected by a smokefree workplace law⁷; and

Whereas, Among those who work primarily indoors, young adults aged 18 to 29 are significantly less likely to be protected by a smokefree indoor workplace policy than other Alaskan adults⁸; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement⁹; and

Whereas, Smokefree workplace laws protect people from secondhand smoke⁴, reduce tobacco use overall and reduce health care costs⁶; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

Native Village of Kotzebue

Kotzebue IRA

RESOLUTION 13-164

A RESOLUTION SUPPORTING A SMOKE-FREE ALASKA

WHEREAS, the Native Village of Kotzebue is a federally-recognized tribe and is the governing body of the tribal members of Qikiqtagruk or Kotzebue, Alaska; and

WHEREAS, the Tribe ascribes to self-determination so as to render all services to be more responsive to needs and desires of the Native Village of Kotzebue; and

WHEREAS, the Tribe seeks to support healthy lifestyles of our tribal members and community which promote wellness and reduce the risk of cancer; and

WHEREAS, research conducted by the US Surgeon General has found that secondhand tobacco smoke contains more than 7,000 chemicals, including at least 69 of which are known to cause cancer such as including benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide, and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and hazards as the smoker; and

WHEREAS, according the 2006 US Surgeon General's Report, "*The Health Consequences of Involuntary Exposure to Tobacco Smoke*," concluded that there is no safe level of secondhand smoke exposure and smoke-free workplace policies are an effective way to eliminate exposure in the workplace; and

WHEREAS, the 2010 US Surgeon General's Report, "*How Tobacco Smoke Causes Disease*," determined that even occasional exposure to secondhand smoke is harmful; and

WHEREAS, smoke-free workplaces protect people, especially children and Elders, from secondhand smoke, reduce tobacco use overall, and reduce health care costs, and the Tribe has a smoke-free workplace policy according to the personnel policies; and

WHEREAS, all tribal members have the right to breathe clean and smoke-free air.

NOW THEREFORE BE IT RESOLVED, the Native Village of Kotzebue Tribal Council supports measures in Kotzebue and throughout Alaska to achieve smoke-free workplaces for protecting the health and safety of all tribal members, workers and visitors; reducing the risks of cancer among our people; and promoting community wellness.

Title: Statewide Smokefree Workplaces to Protect Tribal Citizens from the Dangers of Secondhand Smoke.

WHEREAS, the Native Village of Koyuk, is an Indian tribe as defined in Section 4 of the Indian Self-Determination and Education Assistance Act, Pub. L. 93-638, U.S.C. 450b; and

WHEREAS, Alaska Native people have the highest rate of tobacco use in the state of Alaska; and

WHEREAS, tobacco use is the leading cause of preventable death and disease and Alaska Native people suffer serious health consequences including heart disease and cancer; and

WHEREAS, secondhand tobacco smoke exposure is another leading cause of preventable death, and causes disease in healthy nonsmokers, including heart disease, stroke, respiratory disease, and cancer; and

WHEREAS, it has been determined by the U.S. Surgeon General that there is no safe level of exposure to secondhand smoke, air ventilation systems do not work and that only completely smokefree environments can protect health; and

WHEREAS, a significant amount of secondhand smoke exposure for Alaska Native adults and children occurs in the workplace and even short exposures may result in serious adverse health effects and even death; and

WHEREAS, smokefree workplace laws protect people from secondhand smoke, reduce tobacco use overall, support healthy lifestyles, model healthy behavior, and support quit attempts; and

WHEREAS, the health of our people is of upmost importance and Alaska Natives have taken a lead in addressing health issues throughout the years; and

WHEREAS, smokefree workplaces will protect the health of our children, grandchildren and all our people.

NOW THEREFORE BE IT RESOLVED, the Native Village of Koyuk supports statewide adoption of a smokefree workplace law to protect Alaska Natives from the known dangers of secondhand smoke.

**Samuel Simmonds Memorial
Hospital Governing Body**

Resolution 2014 - 01

WHEREAS, Arctic Slope Native Association, Hospital Governing Body was established on March 15th 1996, has the responsibility and oversight as a member of the North Slope; and

Whereas, Secondhand smoke contains more than 7,000 chemicals, including at least 69 of which are known to cause cancer¹, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide², and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers³; and

Whereas, Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers⁴, including heart disease, stroke, respiratory disease and lung cancer²; and

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace⁴; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful⁵; and

Whereas, For every nine smokers who die, one nonsmoker dies from exposure to secondhand smoke⁶; and

Whereas, Approximately half of Alaska's population is not protected by a smokefree workplace law⁷; and

Whereas, Among those who work primarily indoors, young adults aged 18 to 29 are significantly less likely to be protected by a smokefree indoor workplace policy than other Alaskan adults⁸; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement⁹; and

Whereas, Smokefree workplace laws protect people from secondhand smoke⁴, reduce tobacco use overall and reduce health care costs⁶; and

Whereas, North Slope Borough adults (49%) were more than twice as likely to report smoking tobacco as did adults statewide (22%); and

**SAMUEL SIMMONDS
MEMORIAL HOSPITAL**

Managed by the Arctic Slope Native Association

Whereas, North Slope Borough youth ages 14-18 smoking rates (40%) are twice the rate of the rest of the state and nation (16-20%); and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

Resolution of Support for Smokefree Alaska

Whereas, Secondhand smoke contains more than 7,000 chemicals, including at least 69 of which are known to cause cancer¹, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide², and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers³; and

Whereas, Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers⁴, including heart disease, stroke, respiratory disease and lung cancer²; and

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace⁴; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful⁵; and

Whereas, There are serious questions about the safety of inhaling the substances in some e-cigarette aerosol, and e-cigarettes have not been subject to thorough, independent testing, making it difficult for users to be sure of what they are actually inhaling. And some studies have shown that some e-cigarettes can cause short-term lung changes and irritations and the long-term health effects, are unknown¹⁰; and

Whereas, For every nine smokers who die, one nonsmoker dies from exposure to secondhand smoke⁶; and

Whereas, Approximately half of Alaska's population is not protected by a smokefree workplace law⁷; and

Whereas, Among those who work primarily indoors, young adults aged 18 to 29 are significantly less likely to be protected by a smokefree indoor workplace policy than other Alaskan adults⁸; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement⁹; and

Whereas, Smokefree workplace laws protect people from secondhand smoke⁴, reduce tobacco use overall and reduce health care costs⁶; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

RESOLUTION No. 14-21

Title: Support Smoke Free Workplaces in Alaska

WHEREAS, secondhand smoke contains more than 7,000 chemicals, including at least 69 of which are known to cause cancer, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide, and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers; and

WHEREAS, numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers, including heart disease, stroke, respiratory disease and lung; and

WHEREAS, the 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smoke free workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace; and

WHEREAS, the 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful; and

WHEREAS, there are serious questions about the safety of inhaling the substances in some e-cigarette aerosol, and e-cigarettes have not been subject to thorough, independent testing, making it difficult for users to be sure of what they are actually inhaling. Some studies have shown that some e-cigarettes can cause short-term lung changes and irritations and the long-term health effects, are unknown; and

WHEREAS, for every nine smokers who die, one nonsmoker dies from exposure to secondhand smoke; and

WHEREAS, approximately half of Alaska's population is not protected by a smoke free workplace law; and

WHEREAS, among those who work primarily indoors, young adults aged 18 to 29 are significantly less likely to be protected by a smoke free indoor workplace policy than other Alaskan adults; and

WHEREAS, research in communities where smoke free laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smoke free workplace requirement; and

WHEREAS, smoke free workplace laws protect people from secondhand smoke, reduce tobacco use overall and reduce health care costs; and

WHEREAS, all Alaskans have the right to breathe smoke free air.

NOW THEREFORE BE IT RESOLVED, that the Alaska Native Brotherhood and the Alaska Native Sisterhood in Grand Camp assembled in Petersburg, Alaska between October 8 through October 11, 2014 support a law in Alaska to make all workplaces 100% smoke free to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

William E. Martin
ANB Grand President

Freda M. Westman
ANS Grand President

ATTEST: I certify that this resolution was adopted by the ANB/ANS Grand Camp in convention at Petersburg, Alaska, during the week of October 8 through October 11, 2014.

Colette Buchanan
ANB Grand Secretary

Resolution of Support for Smoke-free Alaska

Whereas, Secondhand smoke contains more than 7,000 chemicals, including at least 69 of which are known to cause cancer¹, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide², and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers³; and

Whereas, Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers⁴, including heart disease, stroke, respiratory disease and lung cancer²; and

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smoke-free workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace⁴; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful⁵; and

Whereas, For every nine smokers who die, one nonsmoker dies from exposure to secondhand smoke⁶; and

Whereas, Approximately half of Alaska's population is not protected by a smoke-free workplace law⁷; and

Whereas, Among those who work primarily indoors, young adults aged 18 to 29 are significantly less likely to be protected by a smoke-free indoor workplace policy than other Alaskan adults⁸; and

Resolution of Support for Smokefree Alaska

Whereas, Secondhand smoke contains more than 7,000 chemicals, including at least 69 of which are known to cause cancer¹, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide², and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers³; and

Whereas, Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers⁴, including heart disease, stroke, respiratory disease and lung cancer²; and

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace⁴; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful⁵; and

Whereas, There are serious questions about the safety of inhaling the substances in some e-cigarette aerosol, and e-cigarettes have not been subject to thorough, independent testing, making it difficult for users to be sure of what they are actually inhaling. And some studies have shown that some e-cigarettes can cause short-term lung changes and irritations and the long-term health effects, are unknown¹⁰; and

Whereas, For every nine smokers who die, one nonsmoker dies from exposure to secondhand smoke⁶; and

Whereas, Approximately half of Alaska's population is not protected by a smokefree workplace law⁷; and

Whereas, Among those who work primarily indoors, young adults aged 18 to 29 are significantly less likely to be protected by a smokefree indoor workplace policy than other Alaskan adults⁸; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement⁹; and

Resolution of Support for Smokefree Alaska

Whereas, Secondhand smoke contains more than 7,000 chemicals, including at least 69 of which are known to cause cancer¹, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide², and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers³; and

Whereas, Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers⁴, including heart disease, stroke, respiratory disease and lung cancer²; and

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace⁴; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful⁵; and

Whereas, For every nine smokers who die, one nonsmoker dies from exposure to secondhand smoke⁶; and

Whereas, Approximately half of Alaska's population is not protected by a smokefree workplace law⁷; and

Whereas, Among those who work primarily indoors, young adults aged 18 to 29 are significantly less likely to be protected by a smokefree indoor workplace policy than other Alaskan adults⁸; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement⁹; and

Whereas, Smokefree workplace laws protect people from secondhand smoke⁴, reduce tobacco use overall and reduce health care costs⁶; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

Resolution of Support for Smokefree Alaska

Whereas, Secondhand smoke contains more than 7,000 chemicals, including at least 69 of which are known to cause cancer¹, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide², and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers³; and

Whereas, Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers⁴, including heart disease, stroke, respiratory disease and lung cancer²; and

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace⁴; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful⁵; and

Whereas, For every nine smokers who die, one nonsmoker dies from exposure to secondhand smoke⁶; and

Whereas, Approximately half of Alaska's population is not protected by a smokefree workplace law⁷; and

Whereas, Among those who work primarily indoors, young adults aged 18 to 29 are significantly less likely to be protected by a smokefree indoor workplace policy than other Alaskan adults⁸; and

ORGANIZED VILLAGE OF KASAAN

P. O. Box 26-Kasaan
(907) 542-2230

Ketchikan, Alaska 99950-0340
(fax) 907-542-3006

RESOLUTION OVK-11-08-001

A Resolution of the Organized Village of Kasaan, in support of the Statewide Smoke Free Workplaces to protect Tribal Citizens from the Dangers of Secondhand Smoke.

WHEREAS, the Organized Village of Kasaan is a federally recognized Tribe organized pursuant to the Indian Reorganization Act of June 18, 1934 (48 Stat. 984) and May 1, 1936 (49 Stat. 1250); and

WHEREAS, the Corporate Charter of the Organized Village of Kasaan (Ratified October 15, 1938) states in its Purpose and Existence, "In order to further the economic development of the Indians residing in the neighborhood of Kasaan, Alaska, by conferring upon the Organized Village of Kasaan corporate rights and powers; and to enable this Village and its members to undertake enterprises designed to secure for the members of the corporation an assured economic independence..."; and

WHEREAS, the Organized Village of Kasaan (hereinafter "OVK") is governed by a Council of elected representatives composed of a President and six members who act in accordance with the powers granted to it by its Constitution and By-Laws (Ratified on October 15, 1938); and

WHEREAS, the OVK is an Indian tribe as defined in Section 4 of the Indian Self-Determination and Education Assistance Act, P.L. 93-638, 25 U.S.C. 450b; and

WHEREAS, Alaska Native people have the highest rate of tobacco use in the state of Alaska; and

WHEREAS, tobacco use is the leading cause of preventable death and disease and Alaska Native people suffer serious health consequences including heart disease and cancer; and

WHEREAS, secondhand tobacco smoke exposure is another leading cause of preventable death, and causes disease in healthy nonsmokers, including heart disease, stroke, respiratory disease, and cancer; and

WHEREAS, it has been determined by the U.S. Surgeon General that there is no safe level of exposure to secondhand smoke, air ventilation systems do not work, and that only completely smoke free environments can protect health; and

WHEREAS, a significant amount of secondhand smoke exposure for Alaska Native adults and children occurs in the workplace and even short exposures may result in serious adverse health effects and even death; and

WHEREAS, smoke free workplace laws protect people from secondhand smoke, reduce tobacco use overall, support healthy lifestyles, model healthy behavior, and support quit attempts; and

WHEREAS, the health of our people is of utmost importance and Alaska Natives have taken a lead in addressing health issues throughout the years;

WHEREAS, smoke free workplaces will protect the health of our children, grandchildren and all our people.

NOW THEREFORE BE IT RESOLVED, that the Organized Village of Kasaan Tribal Council supports statewide adoption of a smoke free workplace law to protect Alaska Natives from the known dangers of secondhand smoke.

CERTIFICATION

APPROVED, PASSED AND ADOPTED by a duly constituted quorum of the OVK Tribal Council on this 9th day of August 2011; by a "Telephone Poll"/Roll Call Vote: Della Coburn: Yes, Julia Coburn: Yes, Glenn Hamar: Yes, Ronald Leighton: Absent, Fredetick Olsen: Yes, and Paula Peterson: Yes.

**Tribal Council Resolution 2013-027
In Support of Smoke Free Workplaces in Alaska**

Whereas, secondhand smoke contains more than 4,000 chemicals, 69 of which are known to cause cancer, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia, and hydrogen cyanide, and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers; and

Whereas, numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers, including heart disease, stroke, respiratory disease and lung cancer; and

Whereas, the 2006 U.S. Surgeon General's Report, "*The Health Consequences of Involuntary Exposure to Tobacco Smoke*," concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace; and

Whereas, the 2010 U.S. Surgeon General's Report, "*How Tobacco Smoke Causes Disease*," determined that even occasional exposure to secondhand smoke is harmful; and

Whereas, for every eight smokers who die, one nonsmoker dies from exposure to secondhand smoke; and

Whereas, nine out of ten Alaskans, including seven out of ten smokers, believe that smoking should be prohibited in Alaska workplaces; and

Whereas, Research in communities where smoke free laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smoke free workplace requirement, and

Whereas, smoke free workplace laws protect people from secondhand smoke, reduce tobacco use overall and reduce health care costs; and

Whereas, all Alaskans have the right to breathe smoke free air;

THEREFORE, the Tribal council supports a law in Alaska to make all workplaces 100% smoke free to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

CERTIFICATION

The foregoing resolution was adopted at a duly called and convened meeting of the Tribal Council of Sitka Tribe of Alaska held September 18, 2013, at which a quorum was present by a vote of 8 IN FAVOR, 0 AGAINST, 1 ABSTAINING, 0 ABSENT.

Resolution of Support for Smokefree Alaska

Whereas, Secondhand smoke contains more than 7,000 chemicals, including at least 69 of which are known to cause cancer¹, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide², and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers³; and

Whereas, Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers⁴, including heart disease, stroke, respiratory disease and lung cancer²; and

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace⁴; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful⁵; and

Whereas, For every nine smokers who die, one nonsmoker dies from exposure to secondhand smoke⁶; and

Whereas, Approximately half of Alaska's population is not protected by a smokefree workplace law⁷; and

Whereas, Among those who work primarily indoors, young adults aged 18 to 29 are significantly less likely to be protected by a smokefree indoor workplace policy than other Alaskan adults⁸; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement⁹; and

Whereas, Smokefree workplace laws protect people from secondhand smoke⁴, reduce tobacco use overall and reduce health care costs⁶; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

Resolution of Support for Smokefree Alaska

Whereas, Secondhand smoke contains more than 4,000 chemicals, 69 of which are known to cause cancer, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide, and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers; and

Whereas, Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers, including heart disease, stroke, respiratory disease and lung cancer; and

Whereas, The 2005 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful; and

Whereas, For every eight smokers who die, one nonsmoker dies from exposure to secondhand smoke; and

Whereas, Nine out of ten Alaskans, including seven out of ten smokers, believe that smoking should be prohibited in Alaska workplaces; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement, and

Whereas, Smokefree workplace laws protect people from secondhand smoke, reduce tobacco use overall and reduce health care costs; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

Resolution of Support for Smokefree Alaska

Whereas, Secondhand smoke contains more than 7,000 chemicals, including at least 69 of which are known to cause cancer¹, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide², and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers³; and

Whereas, Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers⁴, including heart disease, stroke, respiratory disease and lung cancer²; and

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace⁴; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful⁵; and

Whereas, There are serious questions about the safety of inhaling the substances in some e-cigarette aerosol, and e-cigarettes have not been subject to thorough, independent testing, making it difficult for users to be sure of what they are actually inhaling. And some studies have shown that some e-cigarettes can cause short-term lung changes and irritations and the long-term health effects, are unknown¹⁰; and

Whereas, For every nine smokers who die, one nonsmoker dies from exposure to secondhand smoke⁶; and

Whereas, Approximately half of Alaska's population is not protected by a smokefree workplace law⁷; and

Whereas, Among those who work primarily indoors, young adults aged 18 to 29 are significantly less likely to be protected by a smokefree indoor workplace policy than other Alaskan adults⁸; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement⁹; and

Whereas, Smokefree workplace laws protect people from secondhand smoke⁴, reduce tobacco use overall and reduce health care costs⁶; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

Resolution of Support for Smokefree Alaska

Whereas, Secondhand smoke contains more than 7,000 chemicals, including at least 69 of which are known to cause cancer¹, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide², and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers³; and

Whereas, Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers⁴, including heart disease, stroke, respiratory disease and lung cancer²; and

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace⁴; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful⁵; and

Whereas, There are serious questions about the safety of inhaling the substances in some e-cigarette aerosol, and e-cigarettes have not been subject to thorough, independent testing, making it difficult for users to be sure of what they are actually inhaling. And some studies have shown that some e-cigarettes can cause short-term lung changes and irritations and the long-term health effects, are unknown¹⁰; and

Whereas, For every nine smokers who die, one nonsmoker dies from exposure to secondhand smoke⁶; and

Whereas, Approximately half of Alaska's population is not protected by a smokefree workplace law⁷; and

Whereas, Among those who work primarily indoors, young adults aged 18 to 29 are significantly less likely to be protected by a smokefree indoor workplace policy than other Alaskan adults⁸; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement⁹; and

Whereas, Smokefree workplace laws protect people from secondhand smoke⁴, reduce tobacco use overall and reduce health care costs⁶; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace⁴; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful⁵; and

Whereas, There are serious questions about the safety of inhaling the substances in some e-cigarette aerosol, and e-cigarettes have not been subject to thorough, independent testing, making it difficult for users to be sure of what they are actually inhaling. And some studies have shown that some e-cigarettes can cause short-term lung changes and irritations and the long-term health effects, are unknown¹⁰; and

Whereas, For every nine smokers who die, one nonsmoker dies from exposure to secondhand smoke⁶; and

Whereas, Approximately half of Alaska's population is not protected by a smokefree workplace law⁷; and

Whereas, Among those who work primarily indoors, young adults aged 18 to 29 are significantly less likely to be protected by a smokefree indoor workplace policy than other Alaskan adults⁸; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement⁹; and

Whereas, Smokefree workplace laws protect people from secondhand smoke⁴, reduce tobacco use overall and reduce health care costs⁶; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace⁴; and

Whereas, The 2010 U.S. Surgeon General's Report, *"How Tobacco Smoke Causes Disease,"* determined that even occasional exposure to secondhand smoke is harmful⁵; and

Whereas, For every nine smokers who die, one nonsmoker dies from exposure to secondhand smoke⁶; and

Whereas, Approximately half of Alaska's population is not protected by a smokefree workplace law⁷; and

Whereas, Among those who work primarily indoors, young adults aged 18 to 29 are significantly less likely to be protected by a smokefree indoor workplace policy than other Alaskan adults⁸; and

Whereas, Research in communities where smokefree laws have been adopted has consistently shown neutral or positive economic effects to the hospitality industry following a smokefree workplace requirement⁹; and

Whereas, Smokefree workplace laws protect people from secondhand smoke⁴, reduce tobacco use overall and reduce health care costs⁶; and

Whereas, all Alaskans have the right to breathe smokefree air;

THEREFORE, we, the undersigned support a law in Alaska to make all workplaces 100% smokefree to protect the health and safety of all workers and visitors from the dangers of secondhand smoke.

Resolution of Support for Smokefree Alaska

Whereas, Secondhand smoke contains more than 7,000 chemicals, including at least 69 of which are known to cause cancer¹, including formaldehyde, benzene, vinyl chloride, arsenic, ammonia and hydrogen cyanide², and people who are exposed to secondhand smoke are inhaling many of the same cancer-causing substances and poisons as smokers³; and

Whereas, Numerous studies have found that tobacco smoke is a major contributor to indoor air pollution and that breathing secondhand smoke is a cause of disease in healthy nonsmokers⁴, including heart disease, stroke, respiratory disease and lung cancer⁵; and

Whereas, The 2006 U.S. Surgeon General's Report, *"The Health Consequences of Involuntary Exposure to Tobacco Smoke,"* concluded that there is no risk-free level of exposure to secondhand smoke; ventilation and other air cleaning technologies cannot eliminate exposure of nonsmokers to secondhand smoke; and smokefree workplace policies are the only effective way to eliminate secondhand smoke exposure in the workplace⁴; and
