

Indian Reservation Road (IRR) Program Within Alaska
Synopsis by Alaska DOT&PF
February, 2009

Overview

IRR program established in federal law in 1982. Though initially managed primarily by the Bureau of Indian Affairs, this has evolved to a joint management structure between tribal governments and two federal agencies (BIA and FHWA). Participation by Alaska tribes in this program was limited prior to 2005 by two factors: First, the BIA held most decision and performance authority, and second, the funding allocated to Alaska was relatively small, resulting in very little road work being accomplished.

Under SAFETEA-LU (2005 surface transportation authorization) the statutory foundation for the program changed significantly. First, the amount of nationwide funding increased each year (starting at \$300 Million per year in 2005 and rising to \$450 Million per year in 2009). Second, each tribe was allotted funding annually based on a formula established through regulations. The formula is complex, but apart from population, the most important variable to each tribe is the number of road miles in their tribe's inventory.

Road Inventory and Funding

This identification of road miles takes place between each tribe and BIA and can include roads owned by other entities (such as Alaska DOT&PF, USFS and local governments). Since 2005 there has been a very active effort by tribes in Alaska to add as many road miles as possible to their individual inventories. While there was at one point (in 2007) a legal complication between the tribes and the State of Alaska over the inventory process (because BIA was requiring that road owners such as the state must "consent" to their roads being added to an inventory), this has been favorably resolved and the state is no longer involved in the inventory process.

The inventory process for Alaska tribes is different than most other tribes, which have reservations and thus clear boundaries. The tribal inventory of reservation-based tribes was largely based on the roads within their reservation boundary. In Alaska, with only one reservation-based tribe, essentially all but one of Alaska's 228 or so tribes must rely on road miles in and around each tribe's geographic location. Because some tribes are located in areas with a substantial number of roads, their tribal inventories are large. Other Alaska tribes, in areas with limited road mileage, have much smaller inventories and thus garner far less funding each year under the federal formula.

Another factor is the national split of funds between tribes. As Alaska's tribes have increased their inventory of IRR road miles since 2005, this has led to a smaller share of funding to other tribes in the United States. In response, these tribes have sought to expand their own inventory of miles, by expanding to include roads that lead to the reservation but are not within the reservation. Since Alaska, taken as a whole, has relatively few miles of total road in the state, this effort by non-Alaska tribes is likely to shift the balance of miles under IRR inventory back to these other non-Alaskan tribes as their inventories expand.

There are also some other categories of funding that are allocated on a discretionary (competitive) basis, such as \$14 million per year for bridge projects across all tribes in the U.S.

Examples of IRR Funding to Alaska Tribes

In 2008 Alaska tribes received about \$40 Million in funding based on the Relative Need" formula used by BIA. This formula uses several factors, including population, amount of vehicle travel, the total number of road miles and a "cost to construct factor" (which is designed to normalize funds across different construction cost circumstances). This is somewhat less than an average of \$175,000 per Alaska tribe per year. However, the distribution of funds varies widely from this average. Some tribes garner nearly \$2 million per year, while others earn less than \$5,000. In general, the tribes in Southeast Alaska do the best under the formula, in part because of their population, and also because there are relatively high number of road miles in this region due to USFS logging road construction. (See attached table from BIA)

Use of IRR Funding by Tribes

The rules governing the use of IRR funding gives substantial latitude to each tribe as to how they use their funds. Some examples of what they can perform with their funding includes:

- Maintenance: 25% of each year's funding is eligible for routine road and bridge maintenance
- Match to other federal: IRR road funds can be used to match other federal funds, including FHWA highway funds and/or Denali Commission funds
- Design and Construction: IRR funds can be used for the tasks required to plan and engineer roads, as well as the actual construction. Construction can occur under force-account rules, unlike most other federal fund sources, which require competitive bids.
- Projects types include:
 - Transportation facility planning, research, engineering, construction and reconstruction
 - Tourism enhancement and recreational development
 - Vehicular parking area improvements and additions
 - Interpretive signage installation
 - Scenic easement and scenic or historic site acquisition
 - Pedestrian and bicycle on-and-off road system improvements, including modification of public walkways to comply with the Americans with Disabilities Act (ADA)
 - Construction and reconstruction of roadside rest areas, including sanitary and water facilities
 - Provision of transit facilities and services within public lands, national parks and Indian reservations
 - Other appropriate facilities such as visitor centers

In order to use their funds, each tribe must prepare a Transportation Improvement Program or TIP (much like the state STIP) which identifies the project scope, cost and location of each project and activity to be funded.

Successful Examples of DOT&PF-Tribal Cooperation

Several groups of tribes within Alaska have established mutual organizations to better manage the program and take advantage of a pooled approach. For example, twenty tribes in the Bering Strait area operate a transportation organization called the Kawerak Transportation Program, which has professional road engineers, planners and accountants to internally identify and manage projects. By pooling their IRR funds and taking turns at project construction within their several communities, they are able to accomplish one or more projects each year, in order to improve employment opportunities and the road system in their communities. Several of these multi-tribe transportation organizations, sometimes called compacts, have been established in the state.

There have also been examples of tribes wishing to help fund work on state roads. For example, in Petersburg, the Petersburg Indian Association has helped to fund two state projects, including intending to perform the work on one project the tribe funded. This work is planned to be accomplished in cooperation with Alaska DOT&PF. Other examples of state-tribal partnerships include:

- Cordova: Native Village of Cordova (Eyak) is performing highway work on the state-owned Copper River Highway and intends to perform bridge work in the future.
- Sitka: Sitka Tribe of Alaska is operating a community-wide transit system and has received state managed transit funds.
- Mat-Su Borough: Chickaloon Native Village is evaluating the possibility of a transit system that might run from Glenallen to Anchorage on a daily or several times per week basis. This latter project received a transit grant from the Federal Transit Administration. DOT&PF transit planners have assisted the planning for this effort.
- Gambell: A federal highway earmark for road work in Gambell is being performed by Kawerak, under a transfer of funds from Alaska DOT&PF.

Impact of Stimulus Funds to Alaska Tribes

The American Recovery and Reinvestment Act contains \$310 M nationally for funding to tribes for stimulus purposes. This is about 75% increase to regular 2009 funding to all tribes, including Alaska tribes or about \$35 Million. The law's language requires that priority be given to projects that can be completed in 2 years or less, and after one year, BIA may be redistribute funds among the tribes. The allocation of IRR stimulus funds, and any redistribution of funds, is determined by the two federal agencies involved: BIA and FHWA.

Role of DOT&PF in the IRR Program

DOT&PF has been active in working with tribes in order to better achieve transportation improvements for all Alaskans. We have recently agreed to participate in a task force between the state and tribes to find workable solutions, including standard legal formats, in order to accelerate projects. That work is underway this year. We have also entered into several agreements, or otherwise assisted tribes in their use of IRR funds. Perhaps one key factor, as we prepare the next STIP, is that for the first time tribes can bring both matching funds, and maintenance funds to the table. Both factors will permit tribes' nominated projects to score higher, and thus improve the chances of garnering funds.
