FISCAL NOTE

STATE OF ALASKA 2010 LEGISLATIVE SESSION

BILL NO. CSSB305(FIN)

ANALYSIS CONTINUATION

Under current law the tax rate is based on the combined BTU value of oil and gas. However, oil and gas can have vastly different values on a BTU basis. Currently a BTU of oil is worth much more than a BTU of gas. Accordingly, once a major gas sale would start up, overlaying the existing oil production, the BTU value of the combined oil and gas would be much lower than it was for oil alone. This could cause a significant reduction in oil taxes as a result of a major gas sale.

This structure, in conjunction with the inherent uncertainty of future oil and gas prices, exposes the state to significant financial risk were a major gas sale to occur. The structure also creates economic instability for entities looking to participate in the development and financing of a natural gas pipeline project in Alaska.

Under the tax inducement provisions of the Alaska Gasline Inducement Act (AGIA), the tax structure in place at the time of the first binding open season (May 1, 2010), may be locked in for the first ten years of gas commercialization. Consequently, to the extent there is interest in decoupling our tax structure, it needs to be done before April 30, 2010.

The bill removes the dilution effect by having progressivity calculated distinctly for oil and gas. This will result in no reduction in oil taxes from a major gas sale.

As in current law, the bill gives the Department of Revenue the authority to adopt regulations to allocate costs between oil and gas, with the added instruction that a method based on relative BTU barrel of oil equivalents should be considered. That method was the one adopted by the department under the same authority for implementation of the current law, for the same purposes as would be for the proposed law.

Some producers currently produce Cook Inlet gas or other in-state gas along with North Slope oil. If all gas were separated from oil these producers would see an immediate tax increase. The bill is not intended to increase taxes on current activity. Having the progressivity for Cook Inlet gas and other in-state gas calculated together replicates the current situation, so these producers will see no tax increases. Only progressivity on export gas, like the gas from a major gas sale, would be calculated distinctly. This will prevent a major gas sale from diluting progressivity on oil.

Expenditures

The Tax Division is in the process of developing a new, single, comprehensive, integrated tax management system for all tax types. The new system will incorporate tax programs and recent tax changes as necessary to improve the efficiency and accuracy of the Division's revenue collection efforts. There is a \$300,000 request in the Governor's FY2011 Capital Budget to complete the agency's IT plan for submission and review by the Enterprise Investment Board. It is assumed that the tax structure changes contained in this bill will be addressed by this systemwide review and eventual restructuring project.
