(d) The commissioner may undertake surveys and appraisals to obtain data on regional insect infestations and disease conditions. Upon a determination that an area is infested with forest insects or infected with diseases injurious to forest resources and that the infestation or infection threatens the forest land or timber of adjacent owners, the commissioner may establish the boundaries of an infestation or infection zone. The commissioner may enter into an agreement with an owner o

Sec. 41.17.116. Riparian standards for private land. (a) Private forest land adjacent to the following types of water and located in Region I is subject to the riparian protection standards established in this subsection:

Page 11

(b) Private forest land adjacent to the following types of water and located in Region II is subject to the riparian protection standards established in this subsection: the stream bank changes to the lower angle slope of the adjacent upland. For purposes of measurement, the break of a slope is where the degree of slope is forest road according to the following standards:

Page 12

(6) where an estuarine area is adjacent to an anadromous or high value resident fish water body, the riparian retention area for the adjacent water body applies to the estuarine area.

Page 13

(c) Private forest land adjacent to the following types of waters and located in Region III is subject to the riparian protection standards established in this subsection:

Page 13

(1) on state forest land managed by the department that is in Region I,
(A) harvest of timber may not be undertaken within 100 feet immediately adjacent to an anadromous or high value resident fish water body;

Page 14

(F) where an estuarine area is adjacent to an anadromous or high value resident fish water body, the riparian retention area for the adjacent water body applies to the estuarine area;

(29) "terrace top break" means, in Region II, the point at which the terrace slope changes to the lower angle slope of the adjacent upland; for purposes of measurement, the terrace top break is where the degree of slope is reduced by 20 percent or more when measured away from the stream;
