

HB283 Oppose John Sonin

Dear Governor Walker:

It makes not a wit of difference whether one believes it's all about "money & sex" or "quality & fulfillment," existence for everyone (everything organic!) requires unadulterated fresh water. If you think the Legislature, through its current leadership is capable, has the awareness that comes with an un-bigoted education and a reality-based maturing process thorough enough to recognize this fact, especially with their insane lack of firearm controls and push to criminalize women's liberty (or behaviors of anyone else beside them-self and their 'tribes'), than your nerves must be as frayed as mine have become because it appears the TRUMP-ateer-ing psychosis has taken control of Alaska.

STOP these insane policies from achieving fruition as best as you are able. Water is the 'Holy Grail' replicating the Creation in all of us!

Alaskans have proven time and time again that it's important that we have a say in how our natural resources are managed and protected. As an Alaskan that cares about how our waterways are managed, I'm writing to ask you to please withdraw your support for SB 163 and HB 283.

These bills put the decision in the hands of the legislature rather than using the Department of Environmental Conservation and other resource agencies to carry out a scientific process to determine whether or not an Alaska water body should be designated. The best approach in a state like ours, where we all value our clean water is to have the final protection decision be science based and driven by Alaskans.

You were elected by Alaskans that expected you to work with them to keep their voices in the public process, now it's up to you to put a stop to politicizing the our waterways and put our fish first.

Sincerely,

(CC: Sen. Cathy Giessel, Chairwoman, Senate Resources Committee & Rep. Louise Stutes, Chairwoman, House Fisheries Committee)
