

Property Crime Rates 1985-2016

Trend Data From Six Alaska Police Agencies

Uniform Crime Reports (UCR)

- UCR data play an important role in developing policy responses to crime
 - Like any data source, UCR data have both strengths and weaknesses
- Strengths
 - As name suggests, uniformity in data collection/compilation methodology
 - Important data source for understanding **crime trends**
- Weaknesses
 - “Dark Figure of Crime” (flawed measure of crime prevalence)
 - Tell us WHAT is happening, but not WHY

Property Crimes

- The focus of this presentation is on **property crimes**
 - Larceny theft; shoplifting (sub-category); burglary; motor vehicle theft
- Data sources
 - All crime UCR data obtained from “Crime in Alaska” reports published by Department of Public Safety
 - All population data obtained from Department of Labor & Workforce Development

Jurisdictions

- UCR data from six Alaska jurisdictions
 - Anchorage, Fairbanks, Juneau, Kenai, North Slope Borough, Palmer
 - Communities with police departments with consistent participation in UCR program (minimize missing data)
- Goal
 - Provide some additional context beyond just time period
 - Geography, total population, population density, population demographics

Property Crimes Known to Police: 1985-2016

LARCENY THEFT

Larceny Thefts

Larceny Thefts Known to Police: 1985-2016

Property Crimes Known to Police: 1985-2016

SHOPLIFTING

Shoplifting

Shoplifting Incidents Known to Police: 1985-2016

Property Crimes Known to Police: 1985-2016

BURGLARY

Burglary

Burglaries Known to Police: 1985-2016

Property Crimes Known to Police: 1985-2016

MOTOR VEHICLE THEFT

Motor Vehicle Theft

MV Thefts Known to Police: 1985-2016

Summary

- Are rates of property crime increasing?
 - It depends on **when**, on **where**, and **crime type**
 - When...
 - What is the appropriate reference period? 1985? 1995? 2005? 2015?
 - Where...
 - Crime levels and patterns of fluctuation vary widely across jurisdictions
 - Crime type
 - Crime levels and patterns of fluctuation vary widely according to the crime being considered

The Issue of Causation

- **What causes crime rates to increase (or decrease)?**
 - Crime is not a single-variable cause phenomenon
 - Crime is not only a multi-variable phenomenon, it is a multi-level phenomenon
 - Crime “drivers” depend heavily on the level of analysis
 - Individual risk factors...
 - Situational (“crime event”) factors...
 - Neighborhood factors...
 - City/borough factors...
 - And so on...

The Issue of Causation {continued}

- All of which is to say...
 - Crime correlates depend heavily on which level of analysis is being analyzed!
- What is required to establish causation?
 - Correlation/association
 - Time sequence
 - Lack of spuriousness
 - Theoretical rationale*
 - "Necessary" and "Sufficient" conditions
