Supporting Situational Awareness using the STARS Monitoring System

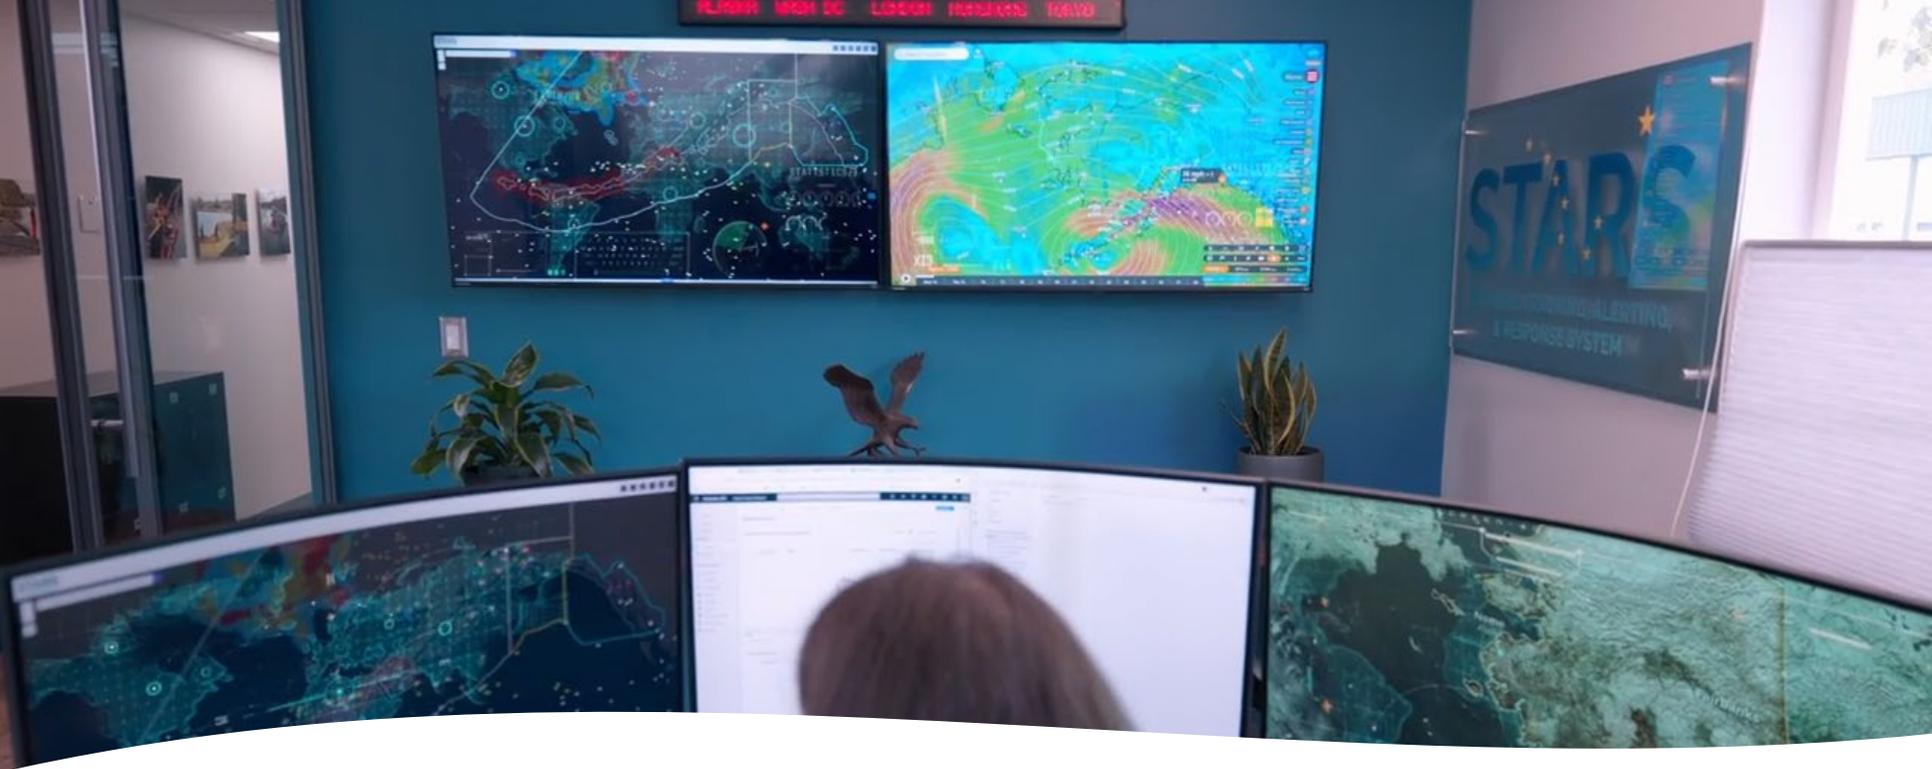

ALASKA
**ChaduX
Network**
PREVENT / RESPOND / PIONEER

STARS
STRATEGIC TRACKING, ALERTING,
& RESPONSE SYSTEM

- Fully integrated, web-based **Geographic Information System (GIS)** platform designed specifically for Alaska.
- Strengthens oil spill prevention, preparedness, and response.
- Addresses Alaska's distance, weather, and limited infrastructure by providing a single, shared common operating picture—helping prevent small issues from becoming major incidents.

What STARS Delivers

Integrated Data, One Map

Operational Decision Support

Intuitive GIS Capability

Analyze & Display Data

Export Maps & Reports

Toggle Layers
for Ops

Toggle Layers ▶

STARS Supports

Spill preparedness, planning, and situational awareness.

Detecting vessel anomalies early to prevent a mass incident

Coordinated emergency response for environmental and natural/man-made disasters

Ecological recovery and restoration

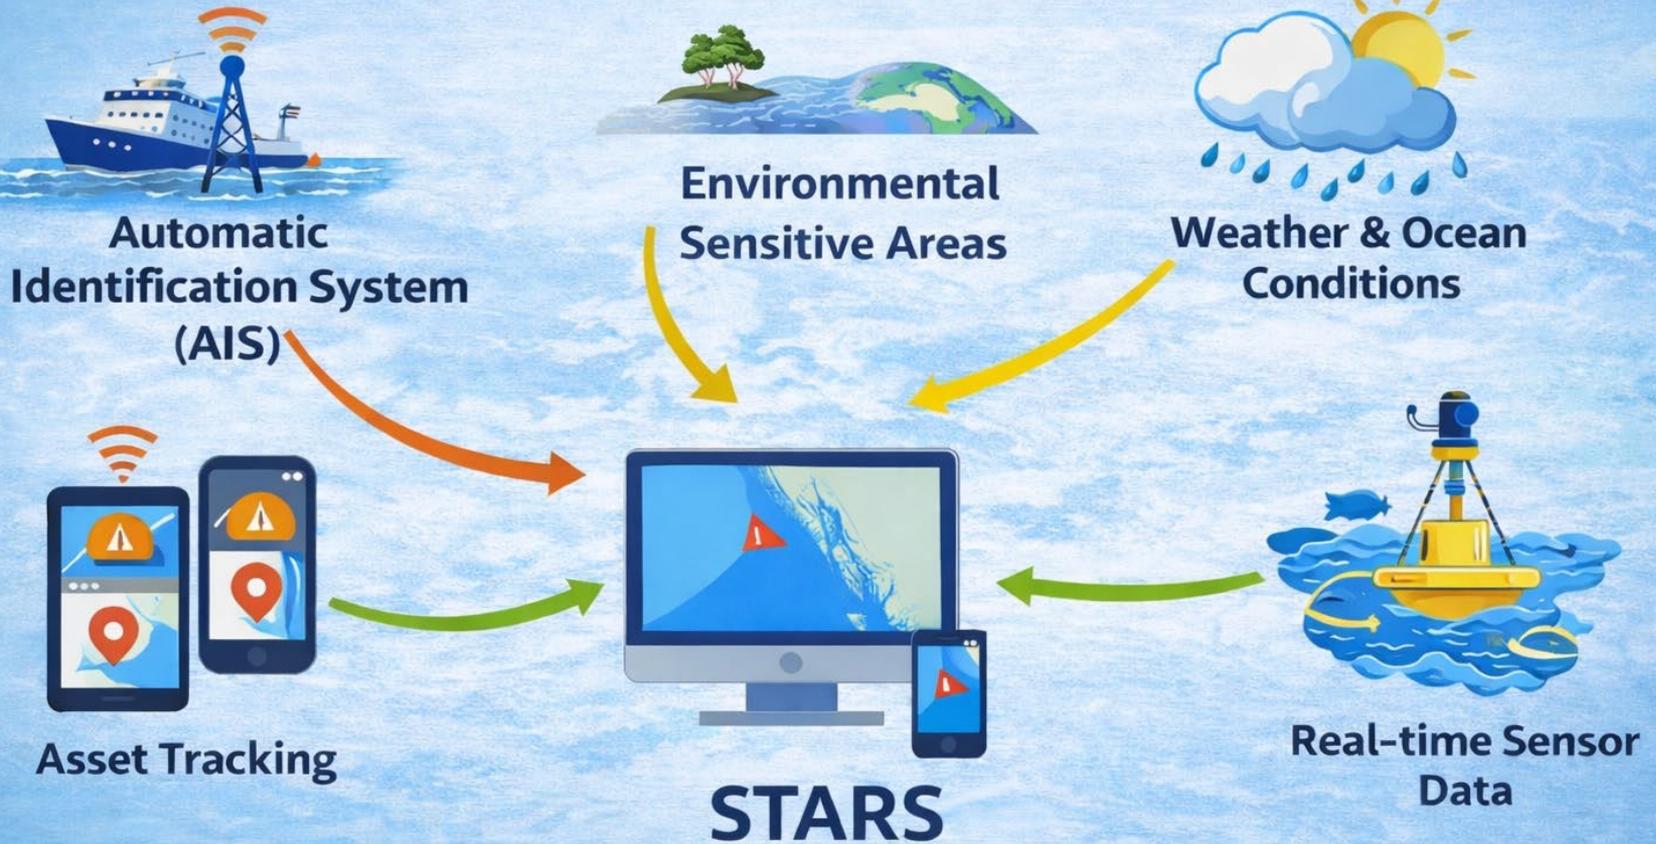

Transparency and data sharing through a shared common operating picture

Bottom Line

STARS transforms fragmented data into actionable intelligence,—protecting Alaska’s communities, environment, and economy.

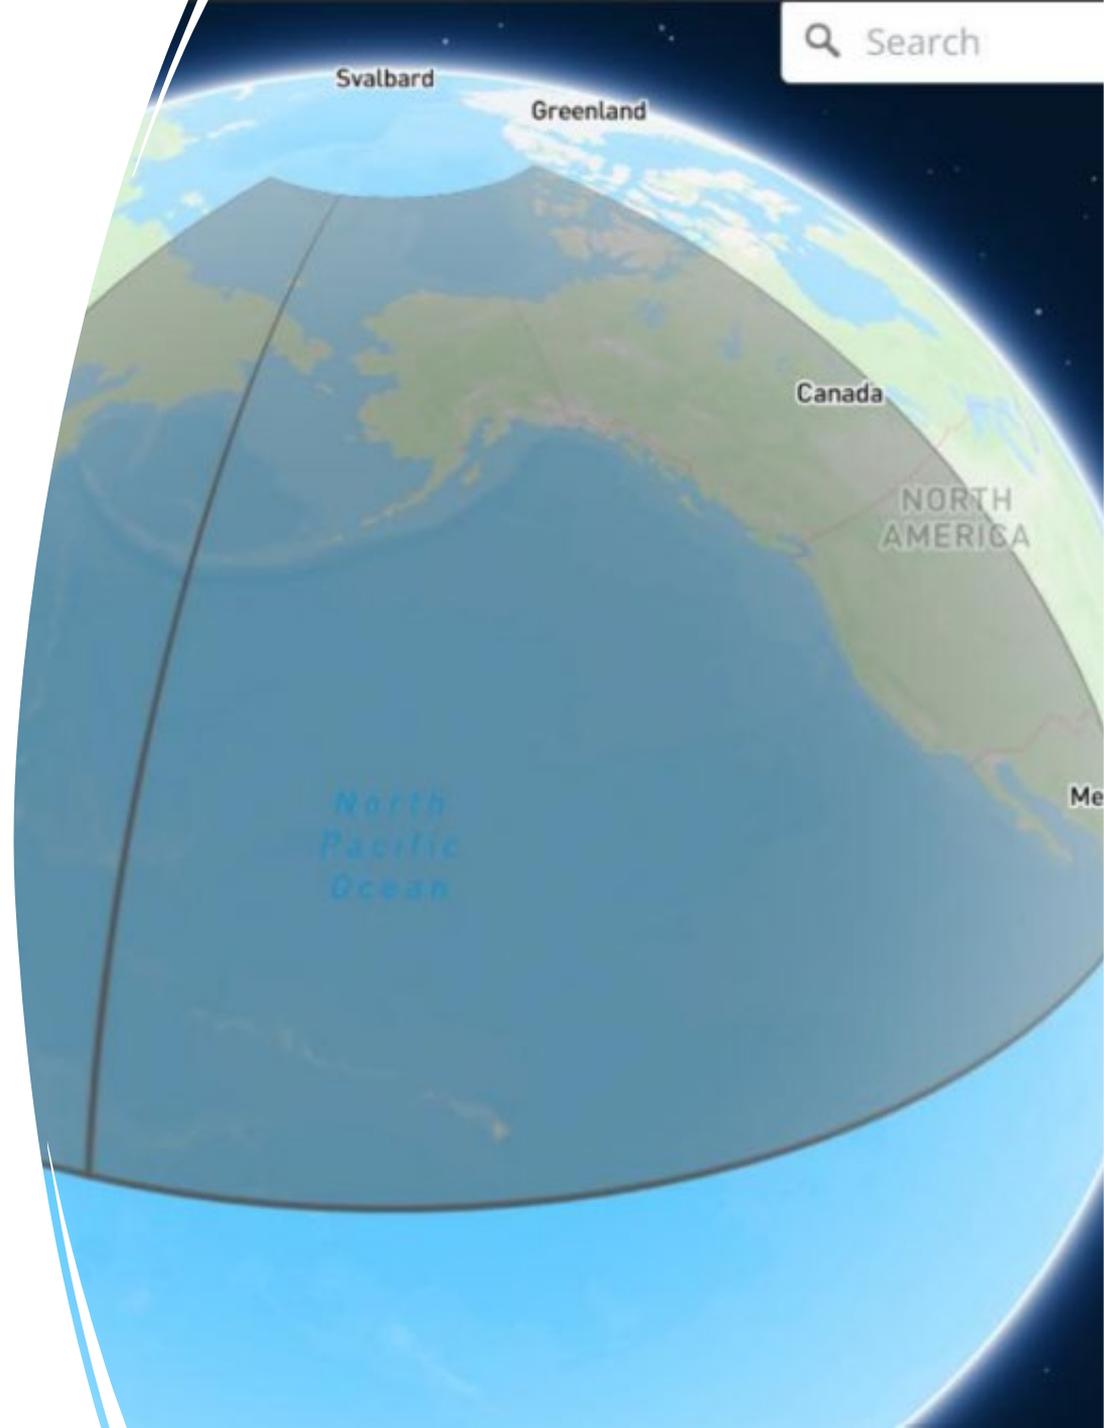

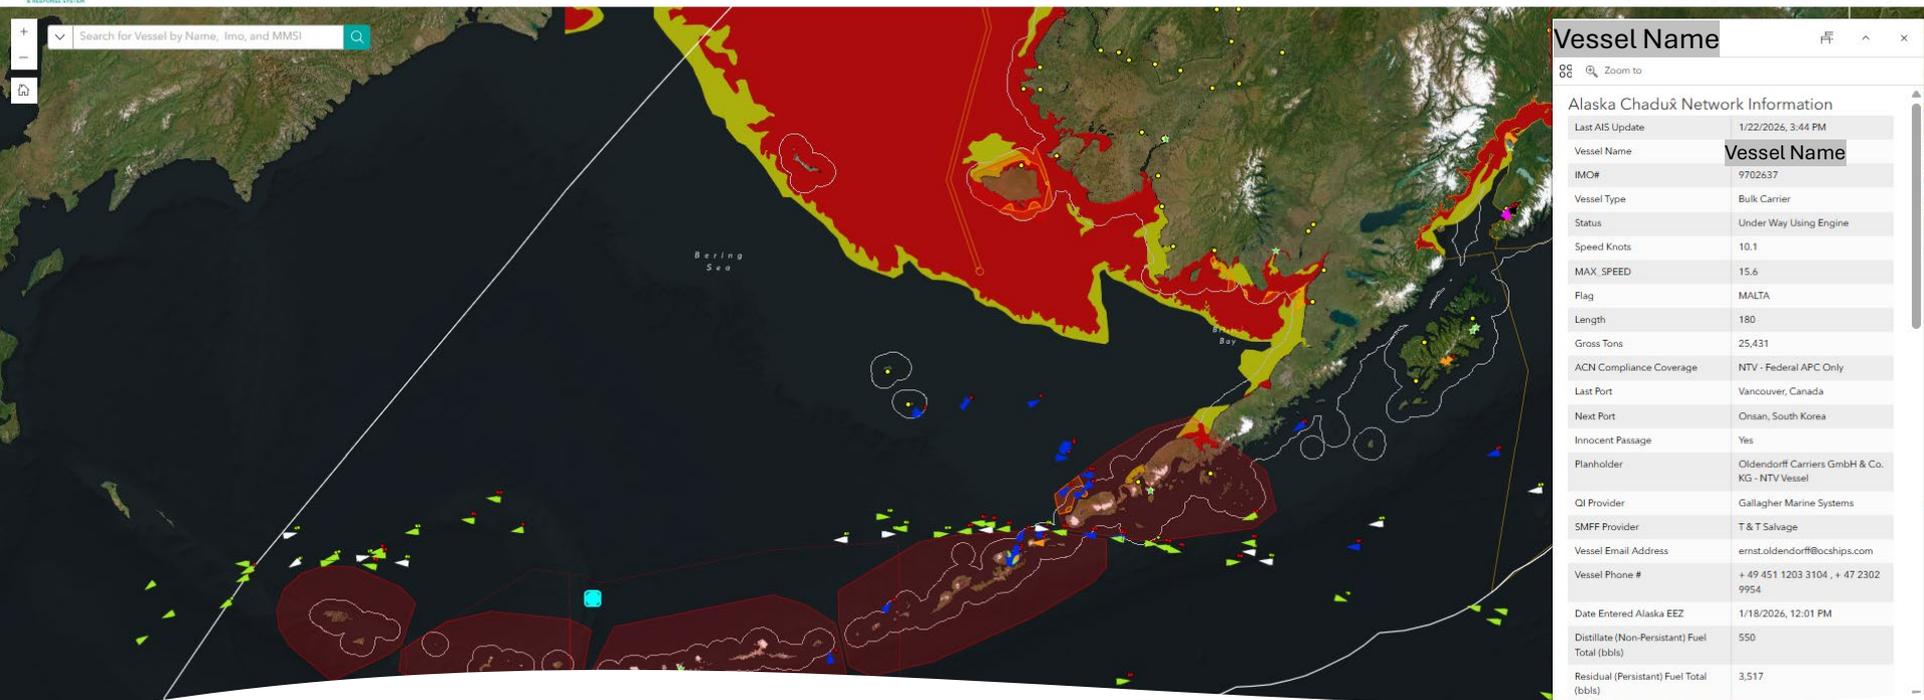

Data Streams that Feed STARS

Automatic Identification System (AIS) Coverage Area

- Satellite & Terrestrial Data Feeds
- Refresh rate ~ 5 minutes

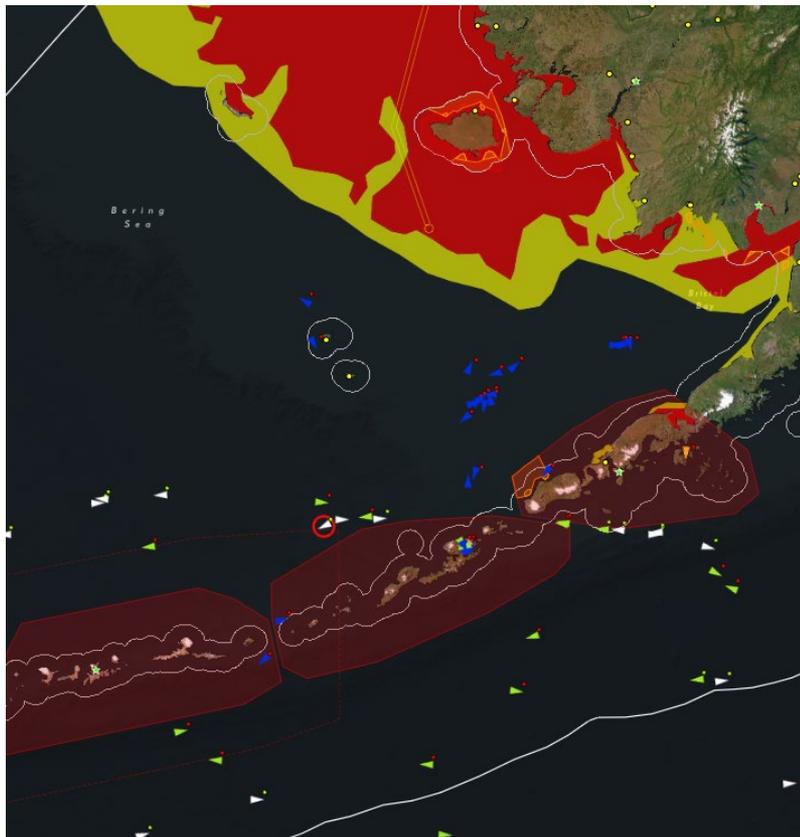

STARS provides immediate access to critical vessel information, including:

- Last AIS update with current position.
- Vessel name and IMO number.
- Vessel type and cargo.
- Flag state, LPOC, NPOC.
- Speed and course.
- Fuel amount and type compared to worst-case discharge.
- OSRO, QI, SMFF.
- All data is dynamically updated and viewable in a single interface.

Vessel Data

Vessels are color-coded according to type, and tagged to indicate passage type – at a glance

STARS

STARS employs a suite of state-of-the-art, customized, electronic “watch dogs” and “geo-fencing” interfaced with terrestrial and satellite Automatic Identification System (AIS) to alert the watch for anomalies that could indicate loss of propulsion or if a vessel begins to enter an area to be avoided.

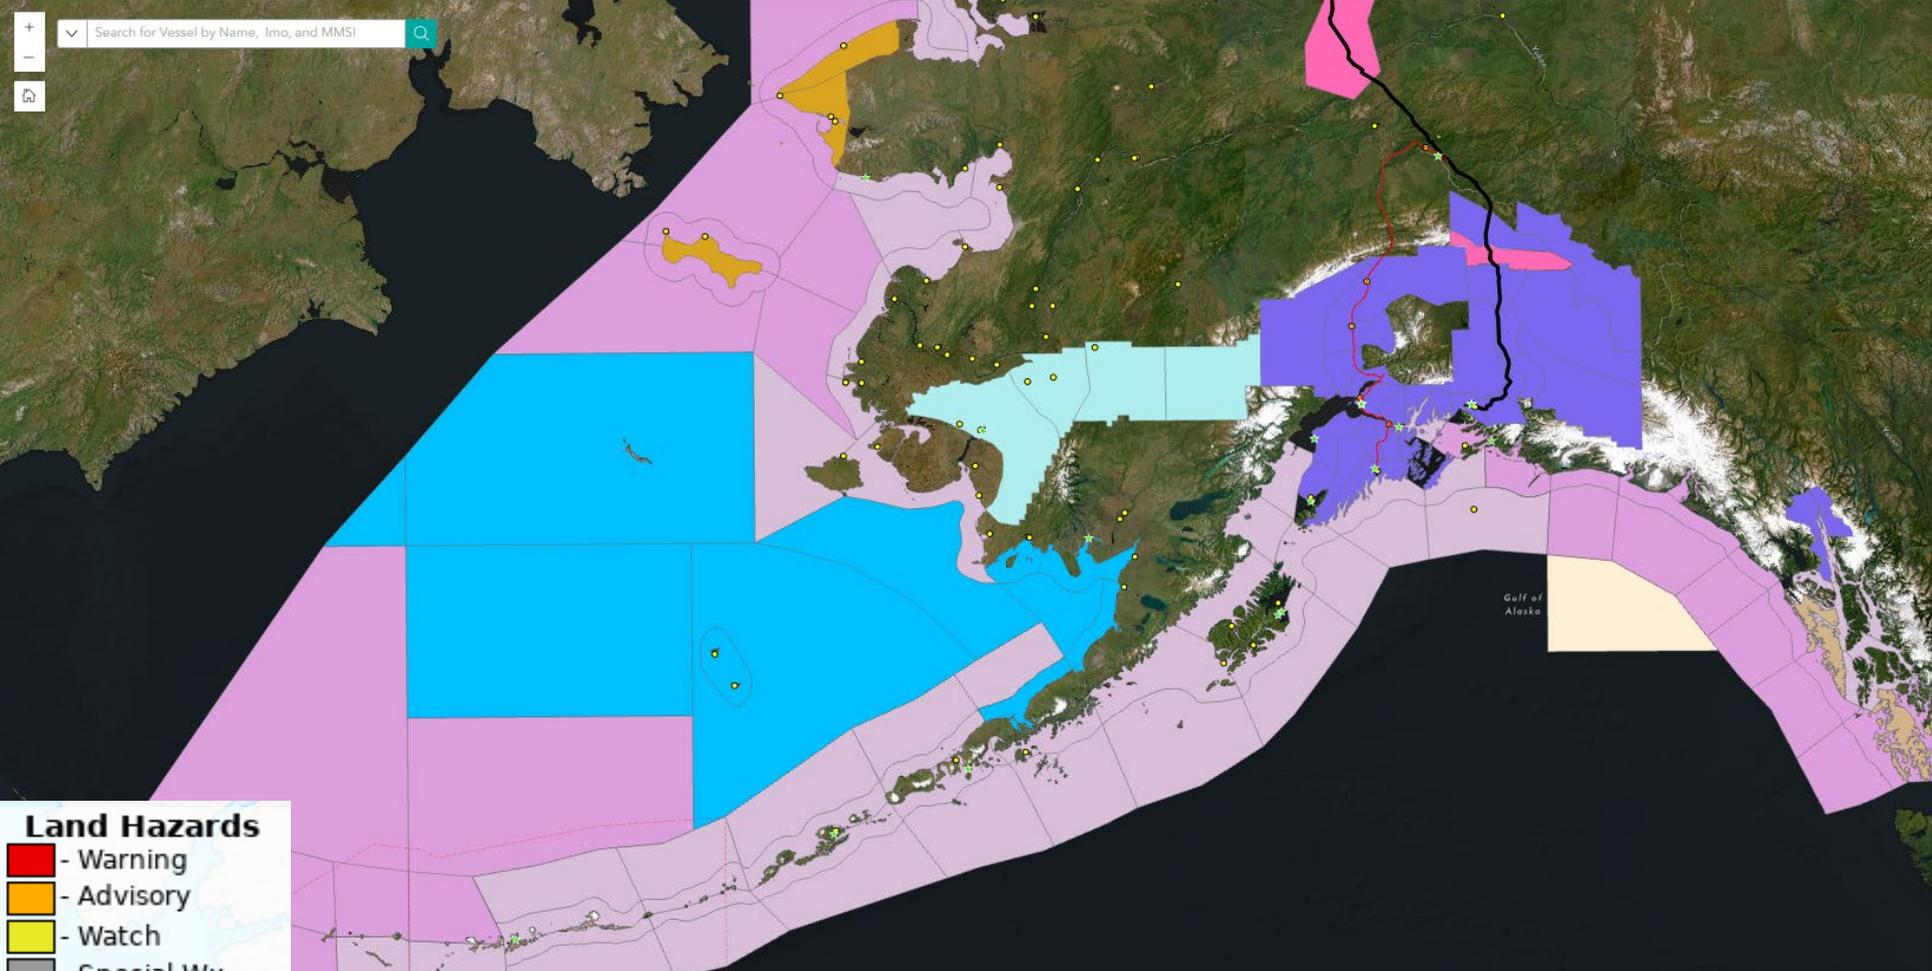

This technology provides a virtual “safety net” that contributes to situational awareness of maritime activity in Alaska.

Can be viewed on a phone, tablet, laptop, and desktop

Transportation Overview - Harbor or Dock in Community: Minto [Icons]

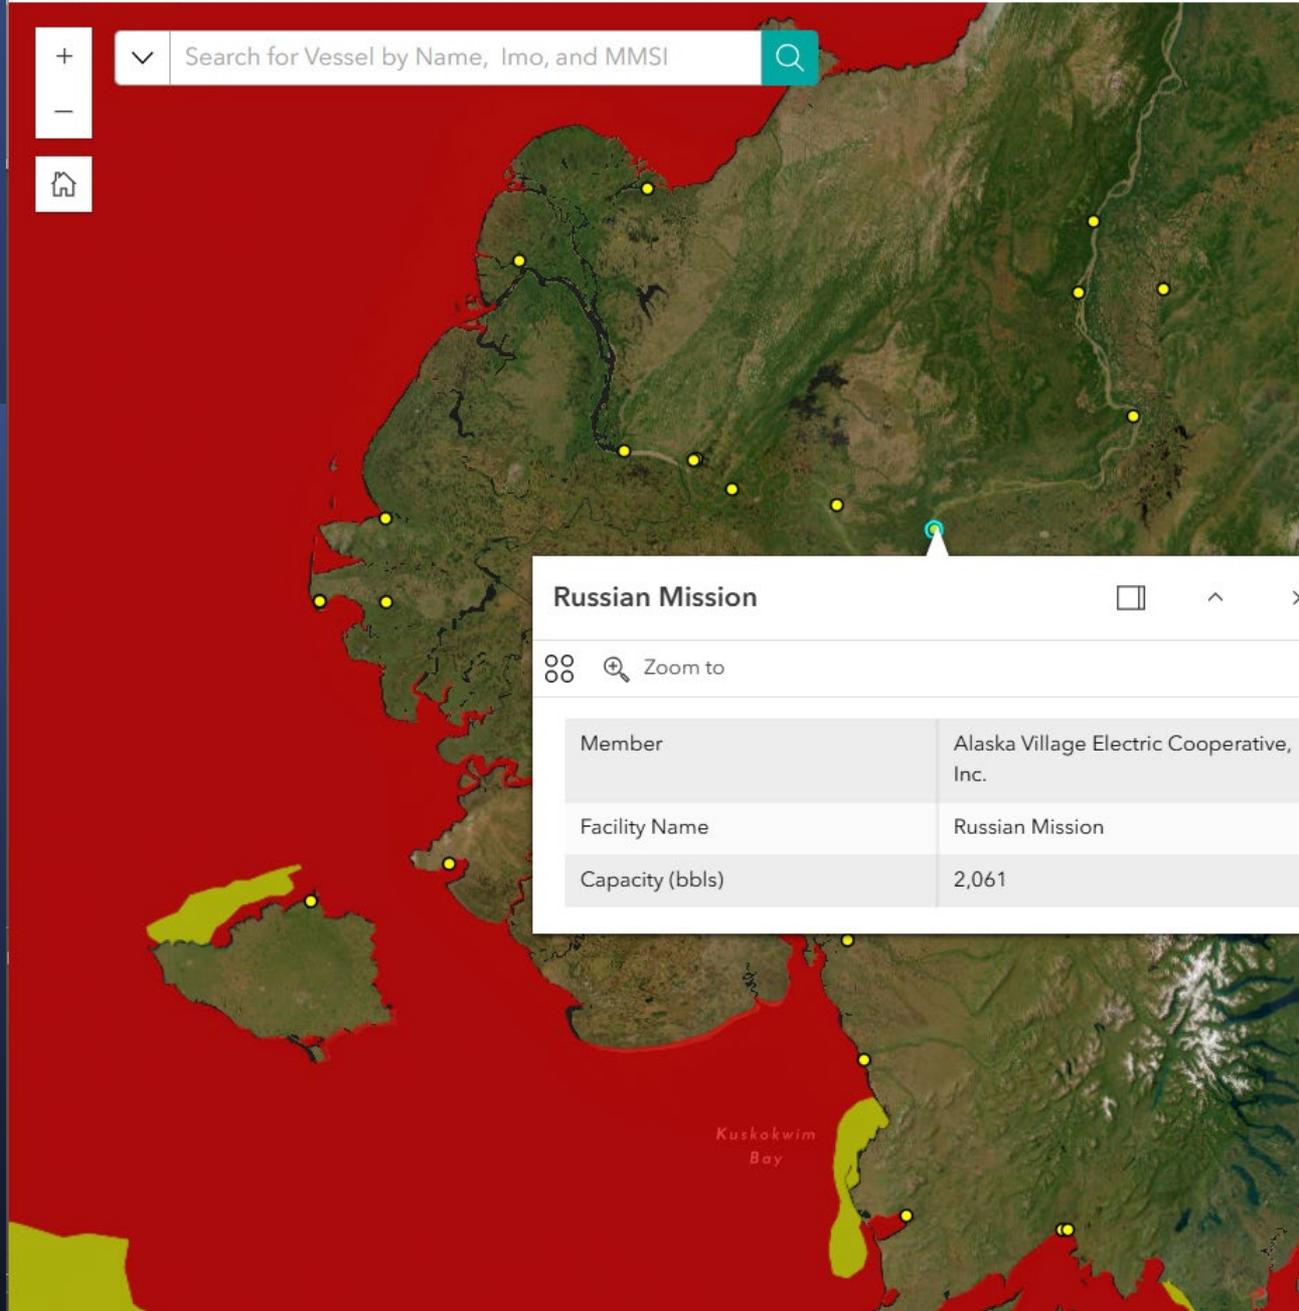

☰ 🔍 Zoom to

AsOfDate	8/24/2023, 12:00 AM
CommunityName	Minto
Description	Minto is located off of the Elliot Highway, about 126 miles northwest of Fairbanks. Minto has a state-maintained public airport with a gravel runway in good condition. The Tolovana River provides boat access to the Tanana and Nenana Rivers. The area is too shallow for barge service. Trucks, cars, snow machines, ATVs, and riverboats are used for transportation, recreation, and subsistence purposes. Minto receives funds from the Essential Air Services program that subsidizes the cost of commercial flights.

Transportation Overview - Airport in Community: Kipnuk

Zoom to

Airport	Yes
AsOfDate	8/24/2023, 12:00 AM
CommunityName	Kipnuk
Description	Kipnuk offers a gravel airstrip, with scheduled air taxi service and available charter services. A seaplane base is also available. Boats and skiffs are used by residents for local travel during the summer, with snowmobiles in the winter. Winter trails lead to Tuntutuliak (77 miles), Cheformak (20 miles), and Kwigillingok (35 miles). Although there is no dock, barges from Bethel deliver cargo each summer.

Daily Readiness Report

Every night, we send out a “Daily Readiness Report”

- Daily counts of vessels in our coverage area
- Summary of vessel events
- Active responses
- Weather, Wave, Wind Data
- Sea Ice and Sea State
- Tides for select ports
- Road conditions
- Airport Status
- Wildfire Data (Seasonally)

BY THE NUMBERS

ACN VESSELS IN ZONE				SUMMARY OF VESSEL EVENTS	
VESSELS BY PASSAGE TYPE		VESSELS BY TYPE		ACTIVE EVENTS IN THE LAST 24 HRS	
Alaska Operations	58	Cargo	54	Routing Measure Deviations	0
Non-Innocent-Transit	28	Fishing	32	Vessels of Interest	2
Innocent Transit	27	Tug	16	Vessels of Concern	0
		Passenger	5	Other	0
		Misc/Other	3		
		Tank	3		

See Page 3 for details on Active and Closed Vessel Events

The Future of STARS: AI-Enabled Decision Support

By integrating AI and Machine Learning (ML), STARS will provide advanced decision support to anticipate, identify, and mitigate risks—enhancing maritime safety and environmental protection in Alaska waters.

Automatic Situation Reports (SITREPs)

AI-generated SITREPs during a response.

Draft Incident Action Plans (IAPs)

AI-draft IAP components based on evolving data.

Risk Identification & Early Warning

AI-driven risk alerts for traffic density, weather, and sensitive areas.

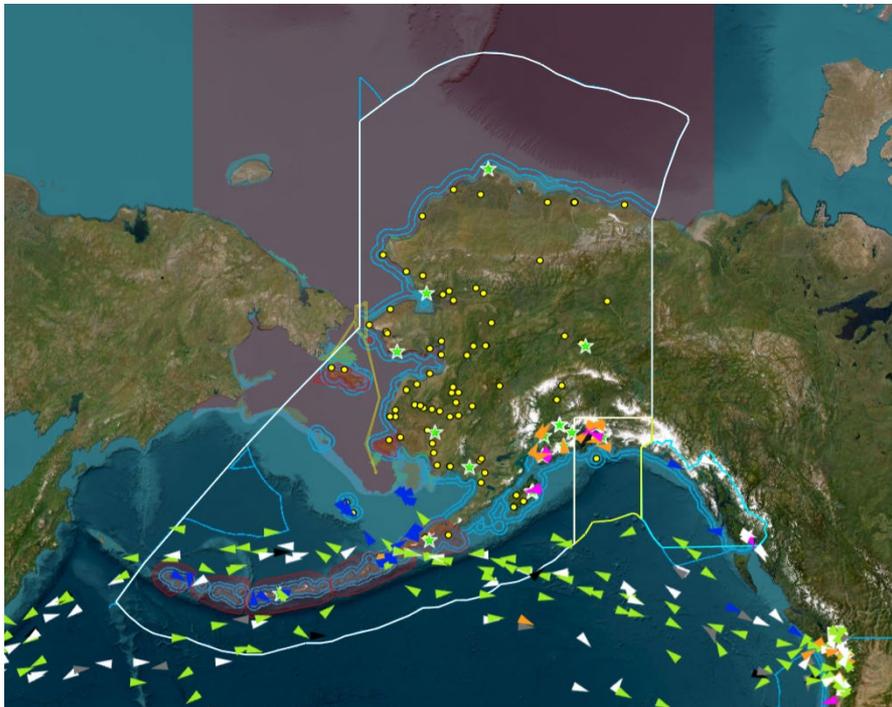

Risk Factor & Mitigation Analysis

AI & ML risk analysis and mitigation strategy evaluation.

STARS represents the next generation of maritime situational awareness, integrating multiple geospatial data feeds into a single, shared Common Operating Picture, strengthening maritime safety, protecting sensitive ecosystems and subsistence use areas, supporting community food security, and enabling safe, reliable commerce across Alaska's waters.
