Subject: HB280 Corporate Income Tax Modernization

House Finance Committee Members,

HB 280 is similar to SB113 which was passed last session, vetoed by the governor and subsequently not overridden by the legislators.

At a press conference in May, Senator Wielechowski, sponsor of SB113, stated "Much of the revenue that is generated from this bill will come from other states who are currently collecting the revenues that should be coming to Alaska... Alaska brick and mortar businesses are picking up the cost for that ... and that's not fair."

The Senator's Sponsor Statement states the bill "would apportion income from highly digitized businesses based on the sales factor alone, to ensure that income earned in Alaska is subject to Alaska's corporate income tax. These reforms will have little, if any, effect on consumer prices for Alaskans."

Alaska has not updated its corporate income tax laws since 1970.

News reports suggest revenue could be anywhere from \$10-\$65 million. This sounds like well-needed money easily put to use in our state - thinking education, ferries, ... pfd?

I support this bill and encourage the committee to as well.

Thank you,

Therese Lewandowski

Homer

Subject: HB 280

I urge you to support HB 280 - a common-sense revenue measure that won't increase costs for Alaskans.

This bill will ensure that Alaska collects the taxes we are due from online sales. A majority of other states already do this. Updating our laws catches us up so we're not losing out on money Alaskans are due.

This is a small easy step towards addressing our giant fiscal gap.

Thank you,
Megan McBride

Subject: I support HB 152 and HB 280

Good morning,

I am writing to express my strong support for both HB 152 and HB 280.

HB 152 would bring in much-needed revenue to help fund public education. These dedicated funds would provide some stability and help districts plan and budget for the future. The cuts to education funding over the last 15 years are devastating, and I am outraged that we are expecting our districts to survive with \$1,400 less in buying power than they had in 2011. No other state department is expected to run on flat funding and reduced buying power, and we must treat education the same way.

I also support HB 280 as a common sense way to bring in a stable revenue stream to our state so we are not solely reliant on oil and gas taxes. This bill would bring in income that is due to the state, and it is a much better option than the sales tax proposed by the governor. Please get this bill across the finish line so that we can properly fund state services such as public education.

Thank you for your time.

Sincerely,
Colleen Bolling
