Good morning,

I'm writing to request that you do not forward HB 369. I worked for GVEA for 8 years in the New construction/engineering department, specifically with environmental regulations for new construction. I have seen that more salary money goes towards environmental and social management than towards actually providing electricity, and most of that money is just endless back and forth paperwork with arbitrary decisions from government. The DEC does not know the climate future, how to obtain an "ideal climate", or even what an "ideal climate is".

Please help the the average Alaskan to maintain electricity in their home, and keep energy prices low so that we can build a future for our children - agriculture, possibly industry, and purposeful jobs for them!

Thank you,
Jacquie goss

Fairbanks

PS I am also against HB 247 for similar reasons
