

May 8, 2023

The Honorable Bert Stedman, Lyman Hoffman, and Donny Olson  
Co-Chairs of the Senate Finance Committee  
Alaska State Legislature  
Juneau, AK 99801

Dear Co-Chairs Stedman, Hoffman, Olson, and Members of the Senate Finance Committee,

**The Nature Conservancy in Alaska (TNC-AK) supports S.B. 125, legislation intended to establish the Alaska Energy Independence Fund.** Establishing this fund within the Alaska Housing Finance Corporation (AHFC) will create a mechanism for increased investment in sustainable energy development and deployment across Alaska. As Alaskans face some of the highest energy costs in the country, this investment is more critical than ever.

Between 2010 and 2020, more than \$750 million in public and private investments were made across Alaska for sustainable energy efficiency, integration, and deployment – with AHFC playing a substantial role in facilitating the State’s investment in many of these programs, particularly at the residential level. Establishing the Alaska Energy Independence Fund within AHFC would build off their record of success in deploying sustainable energy development programs. As well, it could allow the State to leverage funding and economic opportunities created by the Bipartisan Infrastructure Law (BIL) and the Inflation Reduction Act (IRA) pertaining to the financing of clean energy and technology.

**As supporting material, we are also submitting a report entitled “Resilient Homes” as an attachment to this letter.** This report, prepared in July 2021 by McKinley Research Group (formerly McDowell Group) for TNC-AK, summarizes the relationship between energy efficiency investments and cost savings. Notably, it specifically states that a state entity with an intent like that of the Alaska Energy Independence Fund “would be the most comprehensive way to make financing available statewide” for sustainable energy deployment, with “[s]tate and federal efforts to capitalize the institution” being critical to this effort (page 21). Other important impacts from historical energy efficiency investments in Alaska noted in this report include an estimated \$444 million reduction in residential energy savings and \$320 million in health and safety benefits between 2008 and 2018, as well as increased employment opportunities due to the deployment of energy efficiency programs.

Thank you for your work to call attention to the role the Alaska Energy Independence Fund could play in facilitating sustainable energy investment in Alaska. We strongly support S.B. 125 and encourage its timely passage.

Sincerely,

A handwritten signature in blue ink that reads "Kelsey Schober".

Kelsey Schober  
Senior Policy Advisor  
The Nature Conservancy in Alaska

Dear Senate Finance Committee,

Please prioritize the Governor's legislation to create an Alaska Energy Independence Fund in the Alaska Housing Finance Corporation.

I live in Fairbanks and work in the nonprofit sector. I am a GVEA member and have urged them to invest in renewable energy.

I support SB 125 and its companion bill HB 154. It is important that these bills pass the legislature this session for a few reasons. States with established Green Banks are in a more competitive position to receive federal funding for clean energy programs under the \$27 billion Greenhouse Gas Reduction Fund administered by the Environmental Protection Agency (EPA). Funds are to be allocated by September of 2024. Since it will take time for the Alaska Housing Finance Corporation to establish the Green Bank after it is signed into law, it makes great sense for the legislature to act now. The next twelve days could determine whether we are eligible and prepared for a huge investment in clean energy and transportation projects that will save Alaskans billions of dollars in electric, home heating, gasoline, diesel, and car maintenance bills.

Federal investment tax credits for renewable energy projects were extended for a ten-year period under the Inflation Reduction Act. Another clear reason for the AK Legislature to pass a Green Bank this year is that the clock is ticking on the decade of available tax credits. These are significant, historic tax credits. With a Green Bank to provide low-interest financing and tax credits to incentivize purchases, energy efficiency construction projects, and rooftop and community solar projects will skyrocket in Alaska, providing good-paying jobs. By not moving the Green Bank bills this year, another year in the life of the IRA tax credits will be gone.

Please consider moving these bills forward this session. Good luck in the home stretch!

Sincerely,  
Christin Swearingen

**To:** Senate Finance Committee; Isaac Vanderburg  
**Subject:** Support for Green Bank legislation

Dear Co-Chairs Stedman, Hoffman, and Olson and Members of the Senate Finance Committee,

Launch Alaska strongly supports the Alaska Energy Independence Fund bills (aka Green Bank) - Senate Bill 125 and House Bill 154. We urge you to pass this legislation *this year* so that Alaska can take advantage of important and limited federal funds that will be available for state green banks in 2024.

A green bank would spur renewable energy generation, energy storage, energy efficiency improvements for commercial and residential buildings, and much more. Launch Alaska's mission is to accelerate the energy transition and the green bank's activities are crucial for our state and its economy. We are glad to see the Governor's support for this legislation through his sponsorship, and that the fund will be housed within AHFC.

We urge you to pass the green bank legislation this year.

Thank you,

--

**Cc:** Sen. Scott Kawasaki  
**Subject:** Support SB 125

Good morning members of the Senate Finance Committee:

I am writing today to ask for your support to pass on the SB 125 - the Green Bank in support of energy projects in Alaska. I was not in favor of this measure when the AIDEA was the entity to oversee, but I feel the Alaska Housing Finance Corporation is the perfect fit to advance us towards renewables in our state.

It has been shown over and over that renewables will be cheaper for the consumer, but it will take some financing to get there. This would be the perfect vehicle to get it moving.

Thank you for this opportunity to share my opinion.  
Mary C Burtness

**Subject:** I support SB 125

Dear Senate Finance Committee,

Please prioritize the Governor's legislation to create an Alaska Energy Independence Fund in the Alaska Housing Finance Corporation.

I support SB 125 and its companion bill HB 154. It is important that these bills pass the legislature this session for a few reasons. States with established Green Banks are in a more competitive position to receive federal funding for clean energy programs under the \$27 billion Greenhouse Gas Reduction Fund administered by the Environmental Protection Agency (EPA). Funds are to be allocated by September of 2024. Since it will take time for the Alaska Housing Finance Corporation to establish the Green Bank after it is signed into law, it makes great sense for the legislature to act now. The next twelve days could determine whether we are eligible and prepared for a huge investment in clean energy and transportation projects that will save Alaskans billions of dollars in electric, home heating, gasoline, diesel, and car maintenance bills.

Federal investment tax credits for renewable energy projects were extended for a ten-year period under the Inflation Reduction Act. Another clear reason for the AK Legislature to pass a Green Bank this year is that the clock is ticking on the decade of available tax credits. These are significant, historic tax credits. With a Green Bank to provide low-interest financing and tax credits to incentivize purchases, energy efficiency construction projects, and rooftop and community solar projects will skyrocket in Alaska, providing good-paying jobs. By not moving the Green Bank bills this year, another year in the life of the IRA tax credits will be gone.

Please consider moving these bills forward this session. Good luck in the home stretch!

Sincerely,  
Rachel Cella

Dear Senate Finance Committee,

I am writing in support of the Governor's legislation to create an Alaska Energy Independence Fund in the Alaska Housing Finance Corporation: HB 154 and SB 125.

I believe it is vital that these bills pass the legislature this year: Alaska will be in a more competitive position to receive federal funding for clean energy programs to be allocated by September of 2024. The Alaska Housing Finance Corporation will need time to establish the Green Bank after it is signed into law.

Another reason to pass a Green Bank law this year is that the clock is ticking on the decade of available federal tax credits under the Inflation Reduction Act.

Please consider moving these bills forward this session.

Thank you.

Sincerely,  
Doug Woodby

Dear Senate Finance Committee,

Please prioritize the Governor's legislation to create an Alaska Energy Independence Fund in the Alaska Housing Finance Corporation.

I support SB 125 and its companion bill HB 154. It is important that these bills pass the legislature this session for a few reasons. States with established Green Banks are in a more competitive position to receive federal funding for clean energy programs under the \$27 billion Greenhouse Gas Reduction Fund administered by the Environmental Protection Agency (EPA). Funds are to be allocated by September of 2024. Since it will take time for the Alaska Housing Finance Corporation to establish the Green Bank after it is signed into law, it makes great sense for the legislature to act now. The next twelve days could determine whether we are eligible and prepared for a huge investment in clean energy and transportation projects that will save Alaskans billions of dollars in electric, home heating, gasoline, diesel, and car maintenance bills.

Federal investment tax credits for renewable energy projects were extended for a ten-year period under the Inflation Reduction Act. Another clear reason for the AK Legislature to pass a Green Bank this year is that the clock is ticking on the decade of available tax credits. These are significant, historic tax credits. With a Green Bank to provide low-interest financing and tax credits to incentivize purchases, energy efficiency construction projects, and rooftop and community solar projects will skyrocket in Alaska, providing good-paying jobs. By not moving the Green Bank bills this year, another year in the life of the IRA tax credits will be gone.

Please consider moving these bills forward this session. Good luck in the home stretch!

Sincerely,  
Joan McBeen

**To:** Senate Finance Committee  
**Subject:** I support SB 125

Dear Senate Finance Committee,

Please prioritize the Governor's legislation to create an Alaska Energy Independence Fund in the Alaska Housing Finance Corporation.

I support SB 125 and its companion bill HB 154. It is important that these bills pass the legislature this session for a few reasons. States with established Green Banks are in a more competitive position to receive federal funding for clean energy programs under the \$27 billion Greenhouse Gas Reduction Fund administered by the Environmental Protection Agency (EPA). Funds are to be allocated by September of 2024. Since it will take time for the Alaska Housing Finance Corporation to establish the Green Bank after it is signed into law, it makes great sense for the legislature to act now. The next twelve days could determine whether we are eligible and prepared for a huge investment in clean energy and transportation projects that will save Alaskans billions of dollars in electric, home heating, gasoline, diesel, and car maintenance bills.

Federal investment tax credits for renewable energy projects were extended for a ten-year period under the Inflation Reduction Act. Another clear reason for the AK Legislature to pass a Green Bank this year is that the clock is ticking on the decade of available tax credits. These are significant, historic tax credits. With a Green Bank to provide low-interest financing and tax credits to incentivize purchases, energy efficiency construction projects, and rooftop and community solar projects will skyrocket in Alaska, providing good-paying jobs. By not moving the Green Bank bills this year, another year in the life of the IRA tax credits will be gone.

Please consider moving these bills forward this session. Good luck in the home stretch!

Sincerely,  
Cami Dalton
