Chair, Senate Labor and Commerce  
Alaska State Capitol  
Room 504  
Juneau, AK 99801

**RE: Opposition Senate Bill 160 – Broadband Internet: Neutrality/Regulation**

**Committee Chair Costello:**

On behalf of AT&T, please accept this letter of opposition regarding Senate Bill 160 – Broadband Internet: Neutrality/Regulation -- a bill that -purports to regulate internet service providers at the state level to ensure a free and open internet. While history has shown that the internet will remain free and open even without regulation, AT&T supports appropriately tailored federal legislation to ensure internet openness and to end uncertainty created from FCC rule changes. The nature of the internet is inherently interstate, a web of interconnected networks that spans across state, and even national borders. Accordingly, any such legislation must be adopted by Congress to ensure a consistent approach across all states. Alaska should urge its congressional delegation to craft federal open internet legislation.

For more than a decade, under both Republican and Democratic administrations, AT&T has consistently made clear that we provide broadband service in an open and transparent way.

- We do not block websites.
- We do not censor online content.
- We do not throttle or degrade internet traffic based on content.
- We do not unfairly discriminate in our transmission of internet traffic.

These are legally enforceable commitments that are published on our website and readily available for consumers to review.

In addition to making these longstanding enforceable commitments, AT&T has long supported and continues to support a legislative solution in Congress that would make these core consumer protections permanent, while preserving incentives to invest and innovate. Congressional action ensures uniformity of the rules that regulate the internet. Attempts by individual states to pass disparate legislation can result in a patchwork of possibly inconsistent state laws that would be virtually impossible to implement. Instead, we need strong and permanent rules across the internet ecosystem to help create a stable regulatory

environment that encourages investment in next generation technologies and the delivery of innovative services.

I have included an open letter from AT&T Chairman and CEO Randall Stephenson published recently in the New York Times, the Los Angeles Times, USA Today, and the Wall Street Journal. As expressed in Mr. Stephenson's letter, AT&T is calling on Congress to end the debate once and for all by writing new laws that govern the internet and protect consumers across all states.

The internet has thrived, and Alaskans have benefitted from all of the great innovations and technological advancements that were made under balanced framework first established by the Clinton Administration and that remained in place for all but two years over the last two decades. AT&T fully supports Congress adopting basic rules of the road to permanently ensure that the internet remains an open and flourishing platform for all users.

Respectfully submitted,

# Consumers Need an Internet Bill of Rights

Government rules for the internet have been debated for nearly as long as the internet has existed, even before a professor coined the term "net neutrality" 15 years ago.

The internet has changed our lives and grown beyond what anyone could have imagined. And it's done so, for the most part, with very few—but often changing—rules. Regulators under four different presidents have taken four different approaches. Courts have overturned regulatory decisions. Regulators have reversed their predecessors. And because the internet is so critical to everyone, it's understandably confusing and a bit concerning when you hear the rules have recently changed, yet again.

It is time for Congress to end the debate once and for all, by writing new laws that govern the internet and protect consumers.

Until they do, I want to make clear what you can expect from AT&T.

AT&T is committed to an open internet. We don't block websites. We don't censor online content. And we don't throttle, discriminate, or degrade network performance based on content. Period.

We have publicly committed to these principles for over 10 years. And we will continue to abide by them in providing our customers the open internet experience they have come to expect.

But the commitment of one company is not enough. Congressional action is needed to establish an "Internet Bill of Rights" that applies to all internet companies and guarantees neutrality, transparency, openness, non-discrimination and privacy protection for all internet users.

Legislation would not only ensure consumers' rights are protected, but it would provide consistent rules of the road for all internet companies across all websites, content, devices and applications. In the very near future, technological advances like self-driving cars, remote surgery and augmented reality will demand even greater performance from the internet. Without predictable rules for how the internet works, it will be difficult to meet the demands of these new technology advances.

That's why we intend to work with Congress, other internet companies and consumer groups in the coming months to push for an "Internet Bill of Rights" that permanently protects the open internet for all users and encourages continued investment for the next generation of internet innovation.

Randall Stephenson  
AT&T Chairman and CEO
