

CHRISTINE RESLER

PRESIDENT & CHIEF EXECUTIVE OFFICER
ASRC ENERGY SERVICES, LLC (AES)

Christine Resler has over 30 years of experience in senior management leadership, guiding organizations through integration and change, technology development and commercialization, teaching, and finance including mergers and acquisitions. She is the President and CEO of ASRC Energy Services (AES). With approximately 2,500 employees, AES is the largest energy solutions company in Alaska and a subsidiary of Arctic Slope Regional Corporation. Her primary focus at AES is to ensure the organization transitions and diversifies with our changing energy landscape while delivering the highest attention to safety, service quality, and operational excellence in AES' core business. Throughout her career she has demonstrated success in creating and sustaining high performing collaborative teams, acquiring and integrating organizations, increasing profitability and long-term returns through innovation and continuous improvement, and optimizing capital structure and strategy within publicly traded and private companies.

WORK EXPERIENCE

Building Teams and Culture - Over the past 4 years, she led an effort to define AES' business culture and transition AES for success in the evolving energy landscape. AES included over 1,000 of the employees from across the organization in a three-phase workshop experience where they defined the AES purpose and business values. Christine wanted the values of AES to be authentic and coworker curated. Under her leadership, divisions of AES received the 2019, 2020 and 2021 Global Supplier Award from ConocoPhillips: a testament to her focus on continuously improving processes to lower total cost of operations while sustaining leading safety and service quality performance. This has allowed AES to sustain and grow its core business in an increasingly competitive environment.

Commercializing Technology - Christine ushered AES into government contracting to become a small business enterprise that is 8(a) certified. Additionally, the AES technology team launched its first commercialized innovative product, the mobile remediation system (MRS-1). MRS-1 removes harmful Per- and Polyfluoroalkyl Substances (PFAS) from contaminated soil at location, eliminating the need for contaminated soil transport or disposal. Under Christine's leadership, AES is executing a \$150 million research project sponsored by Japan Oil, Gas and Metals National Company (JOGMEC) and the US Department of Energy to prove up the ability to commercially produce methane hydrates. She recently commercialized a high return Arctic coiled tubing well interventions business to significantly increase the production of existing wells. This service offering also strategically positions AES for the future when oil and gas wells need to be abandoned, further increasing the service offering AES can provide in remediation and reclamation, and also fits nicely with the recent government funding outlined in the Infrastructure Bill and the Inflation Reduction Act.

Public-Private Partnerships in Carbon Capture and Storage - In 2022, aligned with the AES diversification strategy, Christine is leading the private side of Alaska's public-private partnership team to develop a Carbon Capture and Storage (CCS) project to benefit the state, AES and its clients. She is also leading the development of carbon and methane monitoring and reduction initiatives and collectively these initiatives combined with low carbon energy solutions will allow Alaska to diversify and continue to responsibly develop hydrocarbons while reducing the carbon footprint in Alaska. Santos recently announced they had entered into an Alliance with AES to lead technology development for carbon solutions in the Arctic.

Operations, Technology and Service Deployment - Christine ran the Alaska region for Schlumberger. She deployed Schlumberger's technology and services to drill new wells and sustain an aging 5,000 plus well oil and gas field. Christine was instrumental in introducing new service lines and technologies and executing performance based contracts that allowed Schlumberger to realize upside for efficient performance and results aligned with the client's objectives. Schlumberger Alaska received the ConocoPhillips Global supplier of the year award under her tenure for outstanding drilling performance and an innovative business model. The region also received the Schlumberger President's award. Christine led a transformation of the region's safety and service quality performance during her tenure from 2013 to 2018.

Manufacturing and Engineering - Prior to managing Alaska for Schlumberger, Christine was Vice President of Advanced Technologies for Schlumberger's Bits and Advanced Technologies unit. She was steward of a million square feet of global manufacturing facilities coupled with technology development and commercialization through a one hundred person engineering and R&D team and a significant patent portfolio. She led multiple lean transformations and integrated multiple businesses into her group.

Mergers and Acquisitions and Integration - Christine was involved in the acquisition of Smith International, Inc. by Schlumberger and subsequently led the integration of Smith Bits and Advanced Technologies into Schlumberger while maintaining her operating role. Christine led Mergers and Acquisitions for Smith International from 2006 to 2008 where she made multiple acquisitions and led joint ventures that have gone on to be some of Schlumberger's top technologies today, including downhole motor technology and managed pressure drilling. In 2007, she led an initiative to identify a strategic fourth leg for Smith International. She led the \$3.2 billion purchase and subsequent integration of Pathfinder Limited into Smith prior to taking over as the manager of one of the acquired businesses and leading the Advanced Technologies Group.

Christine started her career in investment banking in mergers and acquisitions and corporate finance working for Merrill Lynch, Credit Suisse First Boston and Jefferies & Co.

NON-PROFIT AND CORPORATE BOARD EXPERIENCE

- Serves on the Board of the Alaska Resource Development Council since 2015, joined the Executive Committee in 2019 and the Nominating Committee in 2023
- Served on the Arctic Economic Council's Infrastructure and Responsible Resource Development Working Groups

- In 2022, became an active member of the American Petroleum Institute with key positions on the Service, Supply and Technology Committee, the Low Carbon Energy Initiative Sub-committee and the Arctic Sub-committee
- Leads the working group on CCUS for the State of Alaska in partnership with Alaska's Department of Natural Resources
- Serves on the National Petroleum Council's Coordinating Sub-committee for the Greenhouse Gas Emissions Study
- From 2010 to 2013, served as Chairman of the Board of MegaStir Technologies, Inc. a Schlumberger majority owned joint venture focused on friction stir welding technology

EDUCATIONAL BACKGROUND

Graduated from Boston University with a bachelor's degree in Economics and Political Science with a concentration in Finance. Received her MBA from the University of Chicago's Graduate School of Business (Now Booth School of Business) with concentrations in finance and entrepreneurial business.

In 2015, received a Certificate from Harvard University's National Preparedness Leadership Initiative ("NPLI") program. Nominated and sponsored by Schlumberger to be a part of this elite group of leaders trained with the skills, knowledge, and abilities required to effectively lead during crisis in the 21st century. Program conducted over 6 months and graduates include many of our top ranking military and government officials.

Christine was an adjunct undergraduate and graduate professor of Finance at University of Houston's CT Bauer College of Business from 2001 to 2013 and an adjunct undergraduate and graduate professor of Finance at Alaska Pacific University from 2015 to 2019. She is currently teaching a class on Innovation within the Graduate Engineering School at the University of Alaska Fairbanks.

PERSONAL

Christine is a wife and mother of three. She enjoys horses, fly fishing, skiing, pilates and gardening and has more pets than she should admit.
