BACKGROUND				
<p>Ryan joined the Alaska Army National Guard at seventeen years old, enabling both military service and civilian commitment to the workforce in both construction and environmental industries. Enlisting in the military provided a foundational baseline for leadership, dedication, commitment, values, and high moral integrity. As a natural leader in various roles, Ryan found a calling in training and consulting, resulting in being an active consultant for over twenty years. During his consultancy, the diversity of knowledge includes mergers and acquisitions, fiscal literacy, employee management and staff development, organizational leadership, and concept-to-implementation for full change management in various industries. Ryan has a risk-balanced approach to innovation and changes to existing processes to find efficacy in business operations. Possessing a solid background in self-employment success, Ryan can take calculated risks with the highest probability of reward. Diversity of business acumen has lent itself to a wide range of industry knowledge in aviation, construction, finance, investing, environmental science, and occupational health and safety.</p> <p>The most significant amount of time has been spent in the scientific field of environmental science and occupational health and safety. Ryan worked in the emergency response field, hazard abatement, and construction field, running heavy equipment and organizing crews. Quickly elevating to a project estimator/planner and then a project manager, A keen sense of developed leadership fostered the drive of self-employment starting in 2012. A unique opportunity presented itself to immerse myself in the aviation industry while maintaining a direct affinity for environmental/hazardous materials and construction.</p> <p>In 2015, Ryan went “all-in” for the environmental/hazardous materials industry by combining both technical (certificated) and professional (post-secondary education) abilities into a boutique consultancy uniquely positioned in the Gulf of Alaska. Operating a turnkey consultancy on a remote island in Alaska drew from previous work history, self-employment knowledge, and calculated risks, all of which enabled a successful organization spanning Alaska and Washington State. As the organization grew, another unique opportunity presented itself: conducting a new M&A for a larger business based in Oregon. This business (NWFF) has grown nearly 300% and increases staffing by nearly 50%. NWFF had also conducted a tertiary M&A of a small business (Scuba Do) and various real estate transactions.</p>
