Subject: Support for the Alaska LNG project

House Committee members, I'm a 48-yr resident of the Alaska and have witnessed the transformation of the Alaska economy and benefits that came from the completion the TAPS pipeline and the corresponding development of the North Slope. We are poised to continue that legacy in developing the natural gas version of that via the Alaska LNG project. I have personally worked on the Alaska LNG project since 2014 in getting through the major permitting and regulatory process, as well as the pre-FEED engineering, and clearing understand it is ready to move forward. This is even more evident given the commercial agreements in place for a lead developer, the market conditions for Alaska gas, and the unprecedented bipartisan federal support. Additionally, it has to move forward to address our urgent in-State gas supply needs. We can't face our future generation of Alaskans and tell them we are dependent on importing natural gas to a gas rich state!

I can say that I have witnessed the same can-do approach that Alaska is known for in the team of Alaskans that have been tirelessly working to make Alaska LNG project a reality, in spite of a decades long resignation by many in Alaska that a gas pipeline would never happen. I strongly urge you to support Alaska LNG project and change that attitude and actively engage in making it a reality to set the stage for future economy of the State.

Thank you,

Chris Humphrey, PE
