

# Alaska's Health Information Exchange (HIE)

A Public Good for Alaska

# Our Story

Created as a result of legislation in 2009 (Alaska SB 133),  
healthEconnect Alaska was designed

**“to improve the safety, cost-effectiveness,  
and quality of healthcare in Alaska”.**

We are a nonprofit organization facilitating comprehensive  
health data sharing and utility tools to improve the health and  
wellbeing of all Alaskans.

# Governance: Board of Directors

---

- Commissioner, DOH/Designee
- Hospitals and Nursing Home Facilities
- Private Medical Care Providers
- Community-Based Providers
- Federal Health Care Providers
- Alaska Tribal Health Organizations
- Health Insurers
- Health Care Consumers
- Employers or Businesses
- Non-voting liaison member for the University of Alaska

# Approved Uses of HIE

**Care Coordination**

**Treatment**

**Billing**

**Public Health**

# Services

## POINT OF CARE

The healthEconnect Portal provides information from across care organizations for point-of-care decision making.

## CARE COORDINATION

Provider-driven notifications and filters allow efficient coordination of care.

## PUBLIC HEALTH DATA UTILITY

Collecting and connecting disparate data sources for public health surveillance and decision-making

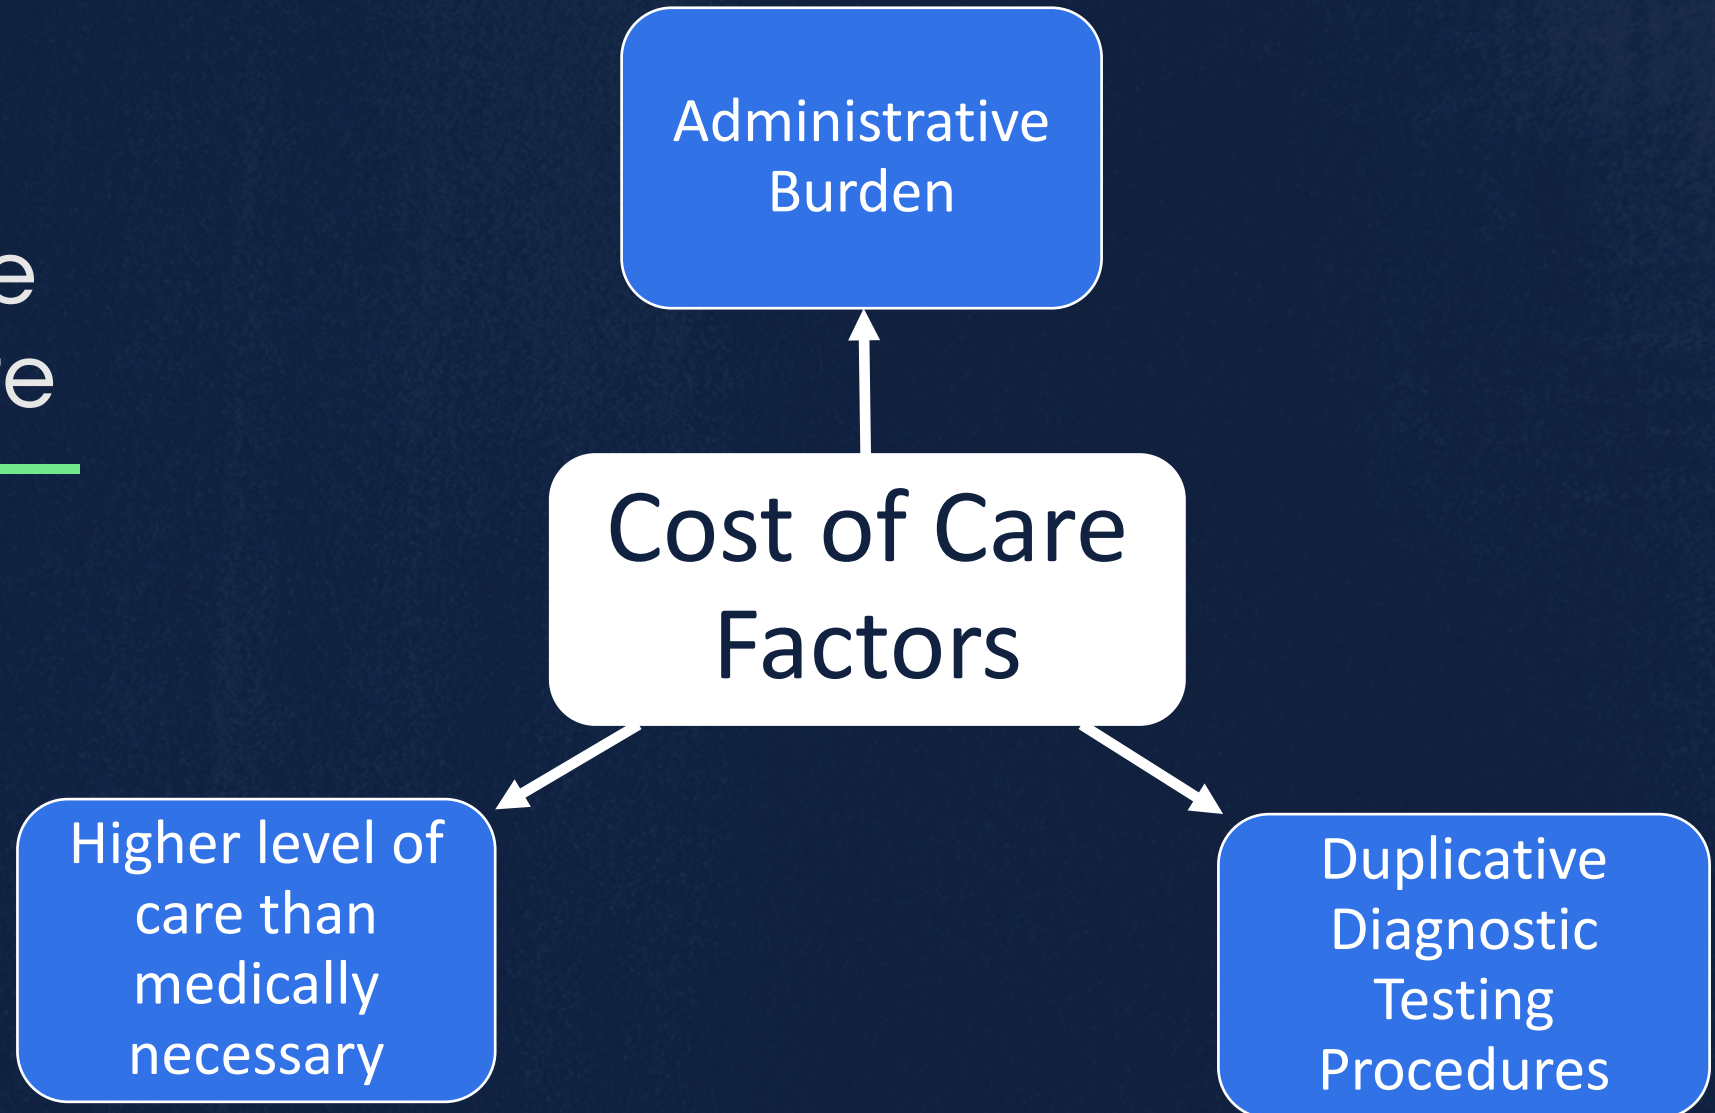

## MANAGING COST OF CARE

Providing data to connect individuals with the right care at the right time supports efficiencies in cost of care.

# Providing Tools to Reduce the Cost of Care

---

# HIE Budget Overview

## Expenses

Category	Cost	Percent of Budget
Personnel	\$1,254,000	40%
Technology Solutions	\$1,117,000	36%
Administrative Costs	\$659,000	21%
Outreach, Marketing, and Communication	\$95,000	3%
<b>TOTAL</b>	<b>\$3,125,000</b>	<b>100%</b>

## Revenue

Category	Revenue	Percent of Budget
State of Alaska DOH Contract	\$2,800,000	90%
User Fees / Non-State DOH Revenue	\$325,000	10%
<b>TOTAL</b>	<b>\$3,125,000</b>	<b>100%</b>

# HEALTH DATA UTILITY (HDU)

## COLLECT

Collect disparate data sources  
in one secure, compliant  
repository.

## CONNECT

Connect diverse data;  
turn data into actionable  
information.

## DELIVER

Deliver actionable health  
information to the right  
person at the right time.

# Care Coordination/SDOH Project

he<sup>l</sup>thEconnect  
ALASKA

REPORT:  
**Care Coordination  
in the Mat-Su  
Valley**

## INTRODUCTION

The health and well-being of individuals are profoundly influenced by social factors such as:

- HOUSING**
- TRANSPORTATION**
- ACCESS TO HEALTHCARE**

These Social Drivers of Health (SDOH) significantly impact health outcomes; the integration of healthcare and social services is crucial for addressing these complex needs. However, existing systems lack the comprehensive infrastructure to efficiently link social health needs with appropriate services.

In January, 2024, healthEconnect Alaska, in partnership with Mat-Su Health Services, Inc. (MSHS), and the State of Alaska Department of Health (DOH), launched a pilot project aimed at improving care coordination through the innovative use of Health Information Exchange (HIE) technology. The project harnessed the capabilities of the Population Explorer tool within the HIE portal to bridge the gap between healthcare and social services, ensuring that healthcare and social services receive the comprehensive support they need. By integrating social health data into the healthcare system, the project aims to create a more efficient and effective care, leading to better health outcomes.

## KEY PLAYERS

- healthEconnect Alaska:** As the primary provider of Health Information Exchange services in Alaska, healthEconnect Alaska played a pivotal role in developing and deploying the Population Explorer tool.
- State of Alaska Department of Health:** The Department of Health provided strategic oversight and collaboration throughout the project.
- Mat-Su Health Services, Inc.:** Located in the Mat-Su Valley, this Federally Qualified Health Center (FQHC) served as the primary site for the pilot project. Their active participation and feedback were instrumental in testing and refining the Population Explorer tool.
- CRISP Shared Services:** As healthEconnect's key technology partner, CRISP Shared Services developed and supported the implementation and enhancement of the Population Explorer tool. Their involvement ensured that the technology met the needs of the pilot project and facilitated effective data integration and analysis.

CRISP  
Shared Services

## KEY OUTCOMES

healthEconnect and the DOH established key outcome metrics to measure the pilot's success. These metrics guided our efforts in making necessary adjustments to the Population Explorer tool. This report details our findings, challenges, successes, and recommendations for future implementation based on the pilot project's outcomes.

### 1. ASSESS

#### THE PILOT ORGANIZATION'S EXPERIENCE WITH THE HIE USABILITY AND USER-FRIENDLINESS

healthEconnect led the evaluation of the user experience throughout the pilot by conducting bi-weekly meetings with representatives from Mat-Su Health Services. We systematically collected and reviewed feedback, focusing on internal workflows and external factors impacting ease of use. As the first HIE participant to use the Population Explorer tool, Mat-Su Health Services provided critical insights that guided our development and improvements.

During the pilot, Mat-Su Health Services identified several challenges with filtering and exporting data. In response, healthEconnect collaborated with CRISP Shared Services to enhance the HIE technology to improve export capabilities and include corresponding diagnosis information. This development was important for enabling accurate and efficient patient outreach.

Additionally, Mat-Su Health Services required a tracking feature to monitor patient contact status. In response, a status tracking feature was integrated into the Population Explorer tool, enhancing its usability. These improvements made the tool intuitive and effective for identifying and reaching out to patients with SDOH needs.

### 2. MONITOR

#### THE NUMBER OF INDIVIDUALS IDENTIFIED FOR OUTREACH THROUGH Z CODE MATCHING

The Population Explorer tool identified 100 unique individuals for outreach based on Z code matching. However, 21 of these individuals were incorrectly identified due to an end-user filtering error. We addressed this issue by providing additional training sessions and updating the user guide, ensuring more accurate identification in future use.

This pilot highlighted the importance of accurate filtering and data management. We will continue to support users with ongoing training to maintain the tool's efficacy.

#### NUMBER OF UNIQUE INDIVIDUALS IDENTIFIED

- Newly identified needs (47)
- Already enrolled in MSHS Services (27)
- DNR Codes pulled in error (20)
- Unknown client needs (5)

### 3. TRACK

#### THE QUANTITY AND VARIATION OF Z CODE AVAILABILITY WITHIN THE HIE THROUGHOUT THE PILOT.

healthEconnect tracked the quantity of Z codes within the HIE and compiled them into a detailed report that provides a month-to-month account of occurrences over one year (May 2023-April 2024), segmented by inpatient, outpatient, and emergency room settings. The charts below illustrate just a few of the trends identified in this separate report. Our analysis, in collaboration with the Department of Health, helps identify and develop strategies to address the most pressing SDOH needs effectively.

Emergency Room Outpatient Inpatient Total
