Senator Bettye Davis

SB 10 - Cancer Clinical Trials

"An Act requiring health care insurers to provide insurance coverage for medical care received by a patient during certain approved clinical trials designed to test and improve prevention, diagnosis, treatment, or palliation of cancer; directing the Department of Health and Social Services to provide Medicaid services to persons who participate in clinical trials; relating to experimental procedures under a state plan offered by the Comprehensive Health Insurance Association; and providing for an effective date."

SPONSOR STATEMENT

Clinical trials are research studies that test how well new medical approaches work in patients. Each study answers scientific questions and tries to find better ways to prevent, screen for, diagnose, or treat disease. Patients who take part in cancer clinical trials have an opportunity to contribute to the knowledge of, and progress against cancer. They also receive state-of-the art treatment from experts in the field. The National Cancer Institute, as part of the U.S. National Institutes of Health, reports 6,000 cancer trials in the United States any one time. They include trials in prevention, screening, diagnosis, treatment, quality-of-life, and genetic studies.

SB 10 removes important barriers to the participation of patients in cancer clinical trials in Alaska. It requires that applicable health care plans, including Medicaid, cover routine patient care costs for patients enrolled in all phases of clinical trials, including prevention, detection, treatment, and palliation (supportive care) of cancer. Medicare, the VA and military insurance already cover the benefits that SB 10 provides. Currently Alaska health plans may exclude coverage for routine patient-care costs while a patient with cancer is enrolled in a clinical trial. Providers of health care plans often conclude that money is saved by excluding care while patients participate in clinical trials. But these patients, if not enrolled in clinical trials, will continue to receive conventional therapy at roughly the same or slightly increased costs.

Over 2600 Alaskans are diagnosed with cancer each year. In FY 2007 an estimated 4,600 patients received cancer treatments through Alaska's Medicaid program at a cost of \$21.5 million. The average payment per beneficiary was about \$4,675. The federal government reimburses the state at about 50% of the total costs. Without in-state facilities and support of clinical trials participants in Alaska currently have to travel out of state, increasing the cost of non-emergency transportation which is about 3% of total Medicaid costs.

Studies have shown that only 2% to 3% of adult cancer patients and less than 0.5% Medicare patients enroll in clinical trials of the approximately 20% who are eligible -largely due to fear of denial of insurance. A recent study found only slight increase in treatment costs for adult clinical trial patients compared to nonparticipants, \$35,418 versus \$33,248 or about 6.5% increase in costs for clinical trial participants compared to nonparticipants. Even if enrollment was increased to the full 20%, it is unlikely that these numbers will significantly impact overall costs to health plans. See National Conference of State Legislatures, "Clinical Trials: What are States Doing? February, 2009 Update," www.ncsl.org/programs/health/clinicaltrials.htm.

Twenty-three or more states have passed legislation or instituted special agreements requiring health plans to pay the cost of routine medical care patients receive while participating in clinical trials. Passage of SB 10 will result in more successful outcomes in cancer treatments in Alaska, increase retention of patients in Alaska for their cancer care, and also, after full implementation, result in cost savings in the short and long term.

A description of "The Access to Cancer Clinical Trials Act of 2009" H.R. 716, 111th Congress 2009-2010, (Rep. Sue Myrick) per "The Hill's Congress Blog" January 30, 2009 sums up to a large extent what SB 10 is attempting to do:

"Clinical trials are so critical for patients and or medical research, yet many patients find that their health insurance won't cover the rest of their routine cancer treatment if they decide to enroll in clinical trials. We're not asking insurance companies to pay for clinical trials. This bill simply states that insurers must continue to pay for routine treatments — that they would be paying for regardless — if patients enroll in a clinical trial.

No patient should ever have to fear exploring all treatment options at the cost of losing coverage. We should be encouraging participation in clinical trials, not discouraging it by removing coverage for routine care. Were it not for patients who have enrolled in past trials, the medical advancements we've experienced toward finding a cure for cancer would not be possible."
