Subject: HB259 testimony

I support the passage of HB259.

This is a very important protection for retail electric and gas consumers on the Kenai Peninsula.

Although it is obvious for high electric use data centers, it is equally important as a protection for natural gas or electric customers from new mines. Please be sure to make it clear that the extra capital or operational costs associated with facilities for integrating any new mine must be fully attributed to the new industry.

Thank you.
