

# BERING STRAITS NATIVE CORPORATION

RENEWABLE ENERGY PROJECTS

# Bering Straits Native Corporation is currently investing in renewable energy for the benefit of its shareholders future

Matt Ganley, BSNC.

- Solar panels installed in all our rental facilities and offices
- Rental cabins all powered by solar energy
- Staff trained to maintain and install solar and wind generation systems and perform energy audits
- Partnered with a village corporation to develop commercial renewable energy to invest in the future to other communities in the region

Brian Jackson, Western Community Energy, LLC.

## What has our work done for us?

- We generate about 15 to 20% of the electricity for the BSNC Building with solar energy
- Enabled us to give realistic cost estimates for energy projects in our region
- Develop our natural resources passed on to us by generations past based on our rich cultural heritage and way of life in our communities

What are some of the energy problems we face in the communities?

- High cost of fuel due to shipping costs
- High cost of electrical power
- Increased cost of transportation
- Limited ability and lack of funds to develop natural resources

# What do we need?

- State of Alaska to partner in developing renewable energy in the communities
- Extend the inclusion of PCE assistance to local governments, non-profits and businesses
- Continue the PCE funding to households

Tony A. Weyiouanna Sr.
