

**NOAA
FISHERIES
SERVICE**

**Report on Holding of Individual Fishing
Quota (IFQ) by Residents of Selected Gulf
of Alaska Fishing Communities 1995-2009**

NOAA

UNITED STATES DEPARTMENT OF COMMERCE
National Oceanic and Atmospheric Administration
National Marine Fisheries Service
P.O. Box 21668
Juneau, Alaska 99802-1668

August 2010

To Whom It May Concern:

The attached reports summarize the status of quota holdings by residents of 42 Alaska coastal communities under the halibut and sablefish Individual Fishing Quota (IFQ) program. For each included community, for each year (1995 – 2009) and for both species, the data show:

- The year-end amount of quota (expressed in 2009 equivalent pounds) held by residents of the communities;
- The number of persons holding such quota;
- The actual annual fishable pounds; (which includes lbs. derived from QS plus carryover adjustments)
- The actual annual pounds landed and,
- The estimated annual gross ex-vessel value of the quota that was fished.

To understand the data in the tables, carefully read the table footnotes and only non confidential data may be disclosed. These tables show several items of interest, and the information could be confusing. If you have questions about the data or their proper interpretation, please contact RAM:

Figure 2.

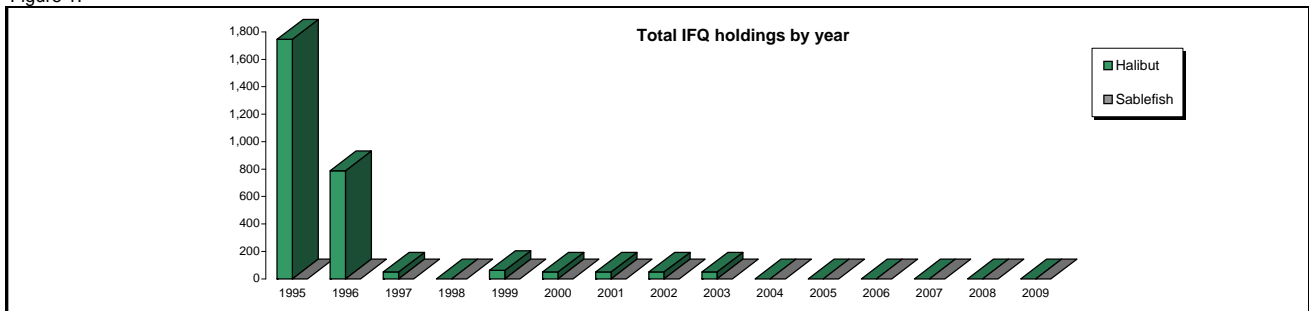

Notes:

- * Indicates that the data may not be displayed because simple subtraction would allow confidential data to be computed.
- ** Indicates that the data are confidential because they are derived from the landings of fewer than three IFQ permit holders.
- *** Indicates that the offloading vessels delivered to fewer than three Register Buyers (RB) permit holders.
- 1. Halibut weights are reported in net (headed and gutted) pounds; sablefish weights are reported in round pounds.
- 2. Residence determinations are based on unverified self-reported addresses provided by QS holders.
- 3. Estimated earnings (dollar amounts) are nominal; they are not adjusted for inflation nor by year.
- 4. Table 1:
 - a. "2009 Equivalent Pounds" are IFQ pounds derived from all QS held by residents of the subject community. They are computed using 2009 Quota Share Pool and TACs; therefore, they are comparable across all reported years. These reported pounds include pounds derived from QS held in all IFQ management areas.
 - b. "QS holders" includes all entities (including individuals, corporations, etc.) holding and reported the subject community, as a permanent business mailing address, as of the end of the indicated year.
- 5. Tables 2 and 3:
 - a. "Fishable Pounds" are calculated from amounts of QS held by all residents of the subject community as of the end of the indicated year. These amounts are adjusted for "overages and underages" resulting from prior years fishing activities.
 - b. "Pounds Landed" display the actual pounds landed during the indicated year.
 - c. "Estimated Earnings" are calculated by multiplying the actual pounds landed by the estimated ex-vessel values as reported by the CFEC, State of Alaska for each area. (<http://www.fakr.noaa.gov/ram/ifqreports.htm#special>) Annual Ex-Vessel Prices)
 - d. "Individuals making landings" includes all individuals with recorded landings of IFQ derived from QS held by persons reporting business address in subject community (as displayed on Table 1). The total includes hired skippers; accordingly, in some instances, the total number of individuals with landings may exceed the total number of "persons" who hold QS.
- 6. Table 4:
 - a. "Use of port" shows the number of distinct vessels that landed IFQ in this location, regardless of the vessels homeport and of the IFQ permit holder.
 - b. Only years landings are shown.

Figure 2.

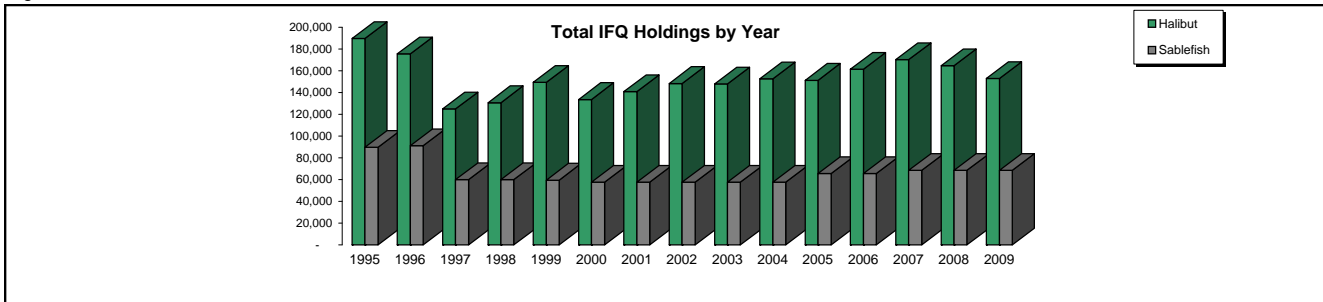

Notes:

- * Indicates that the data may not be displayed because simple subtraction would allow confidential data to be computed.
- ** Indicates that the data are confidential because they are derived from the landings of fewer than three IFQ permit holders.
- *** Indicates that the offloading vessels delivered to fewer than three Register Buyers (RB) permit holders.
- 1. Halibut weights are reported in net (headed and gutted) pounds; sablefish weights are reported in round pounds.
- 2. Residence determinations are based on unverified self-reported addresses provided by QS holders.
- 3. Estimated earnings (dollar amounts) are nominal; they are not adjusted for inflation nor by year.
- 4. Table 1:
 - a. "2009 Equivalent Pounds" are IFQ pounds derived from all QS held by residents of the subject community. They are computed using 2009 Quota Share Pool and TACs; therefore, they are comparable across all reported years. These reported pounds include pounds derived from QS held in all IFQ management areas.
 - b. "QS holders" includes all entities (including individuals, corporations, etc.) holding and reported the subject community, as a permanent business mailing address, as of the end of the indicated year.
- 5. Tables 2 and 3:
 - a. "Fishable Pounds" are calculated from amounts of QS held by all residents of the subject community as of the end of the indicated year. These amounts are adjusted for "overages and underages" resulting from prior years fishing activities.
 - b. "Pounds Landed" display the actual pounds landed during the indicated year.
 - c. "Estimated Earnings" are calculated by multiplying the actual pounds landed by the estimated ex-vessel values as reported by the CFEC, State of Alaska for each area. (<http://www.fakr.noaa.gov/ram/ifqreports.htm#special>) Annual Ex-Vessel Prices)
 - d. "Individuals making landings" includes all individuals with recorded landings of IFQ derived from QS held by persons reporting business address in subject community (as displayed on Table 1). The total includes hired skippers; accordingly, in some instances, the total number of individuals with landings may exceed the total number of "persons" who hold QS.
- 6. Table 4:
 - a. "Use of port" shows the number of distinct vessels that landed IFQ in this location, regardless of the vessels homeport and of the IFQ permit holder.
 - b. Only years landings are shown.

Figure 2.

Notes:

- * Indicates that the data may not be displayed because simple subtraction would allow confidential data to be computed.
- ** Indicates that the data are confidential because they are derived from the landings of fewer than three IFQ permit holders.
- *** Indicates that the offloading vessels delivered to fewer than three Register Buyers (RB) permit holders.
- 1. Halibut weights are reported in net (headed and gutted) pounds; sablefish weights are reported in round pounds.
- 2. Residence determinations are based on unverified self-reported addresses provided by QS holders.
- 3. Estimated earnings (dollar amounts) are nominal; they are not adjusted for inflation nor by year.
- 4. Table 1:
 - a. "2009 Equivalent Pounds" are IFQ pounds derived from all QS held by residents of the subject community. They are computed using 2009 Quota Share Pool and TACs; therefore, they are comparable across all reported years. These reported pounds include pounds derived from QS held in all IFQ management areas.
 - b. "QS holders" includes all entities (including individuals, corporations, etc.) holding and reported the subject community, as a permanent business mailing address, as of the end of the indicated year.
- 5. Tables 2 and 3:
 - a. "Fishable Pounds" are calculated from amounts of QS held by all residents of the subject community as of the end of the indicated year. These amounts are adjusted for "overages and underages" resulting from prior years fishing activities.
 - b. "Pounds Landed" display the actual pounds landed during the indicated year.
 - c. "Estimated Earnings" are calculated by multiplying the actual pounds landed by the estimated ex-vessel values as reported by the CFEC, State of Alaska for each area. (<http://www.fakr.noaa.gov/ram/ifqreports.htm#special>) Annual Ex-Vessel Prices)
 - d. "Individuals making landings" includes all individuals with recorded landings of IFQ derived from QS held by persons reporting business address in subject community (as displayed on Table 1). The total includes hired skippers; accordingly, in some instances, the total number of individuals with landings may exceed the total number of "persons" who hold QS.
- 6. Table 4:
 - a. "Use of port" shows the number of distinct vessels that landed IFQ in this location, regardless of the vessels homeport and of the IFQ permit holder.
 - b. Only years landings are shown.

Notes:

- * Indicates that the data may not be displayed because simple subtraction would allow confidential data to be computed.
- ** Indicates that the data are confidential because they are derived from the landings of fewer than three IFQ permit holders.
- *** Indicates that the offloading vessels delivered to fewer than three Register Buyers (RB) permit holders.
- 1. Halibut weights are reported in net (headed and gutted) pounds; sablefish weights are reported in round pounds.
- 2. Residence determinations are based on unverified self-reported addresses provided by QS holders.
- 3. Estimated earnings (dollar amounts) are nominal; they are not adjusted for inflation nor by year.
- 4. Table 1:
 - a. "2009 Equivalent Pounds" are IFQ pounds derived from all QS held by residents of the subject community. They are computed using 2009 Quota Share Pool and TACs; therefore, they are comparable across all reported years. These reported pounds include pounds derived from QS held in all IFQ management areas.
 - b. "QS holders" includes all entities (including individuals, corporations, etc.) holding and reported the subject community, as a permanent business mailing address, as of the end of the indicated year.
- 5. Tables 2 and 3:
 - a. "Fishable Pounds" are calculated from amounts of QS held by all residents of the subject community as of the end of the indicated year. These amounts are adjusted for "overages and underages" resulting from prior years fishing activities.
 - b. "Pounds Landed" display the actual pounds landed during the indicated year.
 - c. "Estimated Earnings" are calculated by multiplying the actual pounds landed by the estimated ex-vessel values as reported by the CFEC, State of Alaska for each area. ((<http://www.fakr.noaa.gov/ram/ifqreports.htm#special>) Annual Ex-Vessel Prices)
 - d. "Individuals making landings" includes all individuals with recorded landings of IFQ derived from QS held by persons reporting business address in subject community (as displayed on Table 1). The total includes hired skippers; accordingly, in some instances, the total number of individuals with landings may exceed the total number of "persons" who hold QS.
- 6. Table 4:
 - a. "Use of port" shows the number of distinct vessels that landed IFQ in this location, regardless of the vessels homeport and of the IFQ permit holder.
 - b. Only years landings are shown.

- * Indicates that the data may not be displayed because simple subtraction would allow confidential data to be computed.
- ** Indicates that the data are confidential because they are derived from the landings of fewer than three IFQ permit holders.
- *** Indicates that the offloading vessels delivered to fewer than three Register Buyers (RB) permit holders.
- 1. Halibut weights are reported in net (headed and gutted) pounds; sablefish weights are reported in round pounds.
- 2. Residence determinations are based on unverified self-reported addresses provided by QS holders.
- 3. Estimated earnings (dollar amounts) are nominal; they are not adjusted for inflation nor by year.
- 4. Table 1:
 - a. "2009 Equivalent Pounds" are IFQ pounds derived from all QS held by residents of the subject community. They are computed using 2009 Quota Share Pool and TACs; therefore, they are comparable across all reported years. These reported pounds include pounds derived from QS held in all IFQ management areas.
 - b. "QS holders" includes all entities (including individuals, corporations, etc.) holding and reported the subject community, as a permanent business mailing address, as of the end of the indicated year.
- 5. Tables 2 and 3:
 - a. "Fishable Pounds" are calculated from amounts of QS held by all residents of the subject community as of the end of the indicated year. These amounts are adjusted for "overages and underages" resulting from prior years fishing activities.
 - b. "Pounds Landed" display the actual pounds landed during the indicated year.
 - c. "Estimated Earnings" are calculated by multiplying the actual pounds landed by the estimated ex-vessel values as reported by the CFEC, State of Alaska for each area. (<http://www.fakr.noaa.gov/ram/ifqreports.htm#special>) Annual Ex-Vessel Prices)
 - d. "Individuals making landings" includes all individuals with recorded landings of IFQ derived from QS held by persons reporting business address in subject community (as displayed on Table 1). The total includes hired skippers; accordingly, in some instances, the total number of individuals with landings may exceed the total number of "persons" who hold QS.
- 6. Table 4:
 - a. "Use of port" shows the number of distinct vessels that landed IFQ in this location, regardless of the vessels homeport and of the IFQ permit holder.
 - b. Only years landings are shown.

Figure 2.

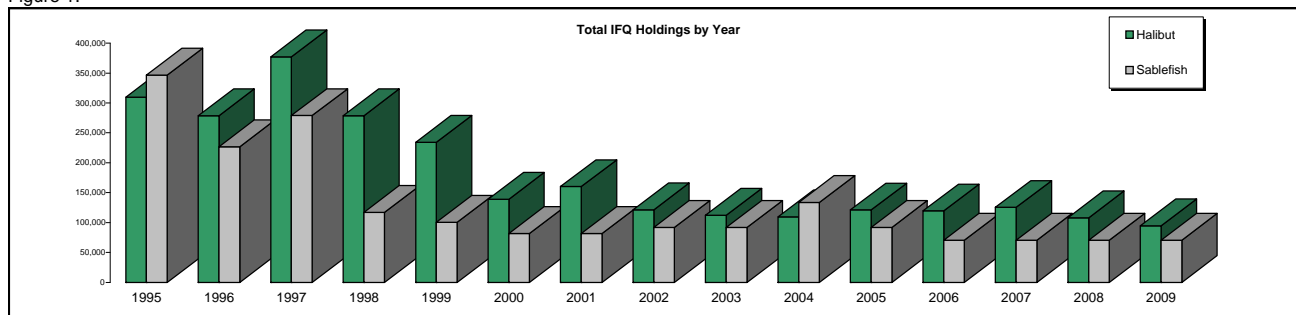

Notes:

- * Indicates that the data may not be displayed because simple subtraction would allow confidential data to be computed.
- ** Indicates that the data are confidential because they are derived from the landings of fewer than three IFQ permit holders.
- *** Indicates that the offloading vessels delivered to fewer than three Register Buyers (RB) permit holders.
- 1. Halibut weights are reported in net (headed and gutted) pounds; sablefish weights are reported in round pounds.
- 2. Residence determinations are based on unverified self-reported addresses provided by QS holders.
- 3. Estimated earnings (dollar amounts) are nominal; they are not adjusted for inflation nor by year.
- 4. Table 1:
 - a. "2009 Equivalent Pounds" are IFQ pounds derived from all QS held by residents of the subject community. They are computed using 2009 Quota Share Pool and TACs; therefore, they are comparable across all reported years. These reported pounds include pounds derived from QS held in all IFQ management areas.
 - b. "QS holders" includes all entities (including individuals, corporations, etc.) holding and reported the subject community, as a permanent business mailing address, as of the end of the indicated year.
- 5. Tables 2 and 3:
 - a. "Fishable Pounds" are calculated from amounts of QS held by all residents of the subject community as of the end of the indicated year. These amounts are adjusted for "overages and underages" resulting from prior years fishing activities.
 - b. "Pounds Landed" display the actual pounds landed during the indicated year.
 - c. "Estimated Earnings" are calculated by multiplying the actual pounds landed by the estimated ex-vessel values as reported by the CFEC, State of Alaska for each area. (<http://www.fakr.noaa.gov/ram/ifqreports.htm#special>) Annual Ex-Vessel Prices)
 - d. "Individuals making landings" includes all individuals with recorded landings of IFQ derived from QS held by persons reporting business address in subject community (as displayed on Table 1). The total includes hired skippers; accordingly, in some instances, the total number of individuals with landings may exceed the total number of "persons" who hold QS.
- 6. Table 4:
 - a. "Use of port" shows the number of distinct vessels that landed IFQ in this location, regardless of the vessels homeport and of the IFQ permit holder.
 - b. Only years landings are shown.

Figure 2.

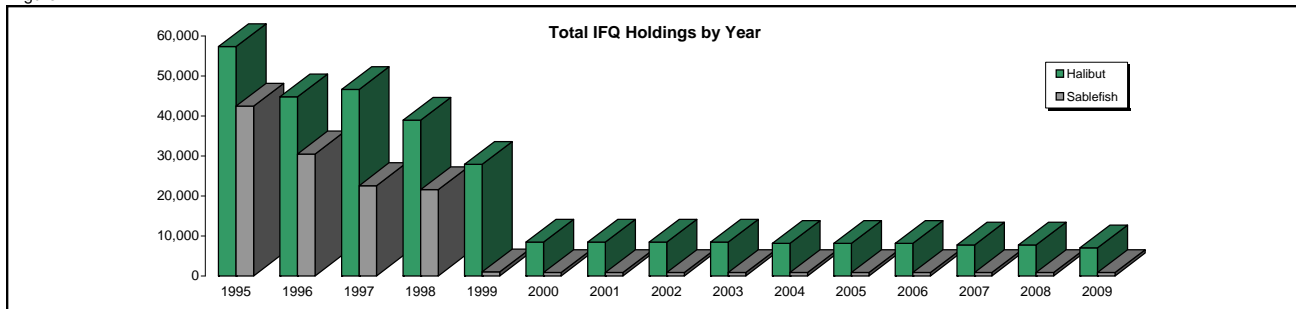

Notes:

- * Indicates that the data may not be displayed because simple subtraction would allow confidential data to be computed.
- ** Indicates that the data are confidential because they are derived from the landings of fewer than three IFQ permit holders.
- *** Indicates that the offloading vessels delivered to fewer than three Register Buyers (RB) permit holders.
- 1. Halibut weights are reported in net (headed and gutted) pounds; sablefish weights are reported in round pounds.
- 2. Residence determinations are based on unverified self-reported addresses provided by QS holders.
- 3. Estimated earnings (dollar amounts) are nominal; they are not adjusted for inflation nor by year.
- 4. Table 1:
 - a. "2009 Equivalent Pounds" are IFQ pounds derived from all QS held by residents of the subject community. They are computed using 2009 Quota Share Pool and TACs; therefore, they are comparable across all reported years. These reported pounds include pounds derived from QS held in all IFQ management areas.
 - b. "QS holders" includes all entities (including individuals, corporations, etc.) holding and reported the subject community, as a permanent business mailing address, as of the end of the indicated year.
- 5. Tables 2 and 3:
 - a. "Fishable Pounds" are calculated from amounts of QS held by all residents of the subject community as of the end of the indicated year. These amounts are adjusted for "overages and underages" resulting from prior years fishing activities.
 - b. "Pounds Landed" display the actual pounds landed during the indicated year.
 - c. "Estimated Earnings" are calculated by multiplying the actual pounds landed by the estimated ex-vessel values as reported by the CFEC, State of Alaska for each area. (<http://www.fakr.noaa.gov/ram/ifqreports.htm#special>) Annual Ex-Vessel Prices)
 - d. "Individuals making landings" includes all individuals with recorded landings of IFQ derived from QS held by persons reporting business address in subject community (as displayed on Table 1). The total includes hired skippers; accordingly, in some instances, the total number of individuals with landings may exceed the total number of "persons" who hold QS.
- 6. Table 4:
 - a. "Use of port" shows the number of distinct vessels that landed IFQ in this location, regardless of the vessels homeport and of the IFQ permit holder.
 - b. Only years landings are shown.

Figure 2.

Notes:

- * Indicates that the data may not be displayed because simple subtraction would allow confidential data to be computed.
- ** Indicates that the data are confidential because they are derived from the landings of fewer than three IFQ permit holders.
- *** Indicates that the offloading vessels delivered to fewer than three Register Buyers (RB) permit holders.
- 1. Halibut weights are reported in net (headed and gutted) pounds; sablefish weights are reported in round pounds.
- 2. Residence determinations are based on unverified self-reported addresses provided by QS holders.
- 3. Estimated earnings (dollar amounts) are nominal; they are not adjusted for inflation nor by year.
- 4. Table 1:
 - a. "2009 Equivalent Pounds" are IFQ pounds derived from all QS held by residents of the subject community. They are computed using 2009 Quota Share Pool and TACs; therefore, they are comparable across all reported years. These reported pounds include pounds derived from QS held in all IFQ management areas.
 - b. "QS holders" includes all entities (including individuals, corporations, etc.) holding and reported the subject community, as a permanent business mailing address, as of the end of the indicated year.
- 5. Tables 2 and 3:
 - a. "Fishable Pounds" are calculated from amounts of QS held by all residents of the subject community as of the end of the indicated year. These amounts are adjusted for "overages and underages" resulting from prior years fishing activities.
 - b. "Pounds Landed" display the actual pounds landed during the indicated year.
 - c. "Estimated Earnings" are calculated by multiplying the actual pounds landed by the estimated ex-vessel values as reported by the CFEC, State of Alaska for each area. (<http://www.fakr.noaa.gov/ram/ifqreports.htm#special>) Annual Ex-Vessel Prices)
 - d. "Individuals making landings" includes all individuals with recorded landings of IFQ derived from QS held by persons reporting business address in subject community (as displayed on Table 1). The total includes hired skippers; accordingly, in some instances, the total number of individuals with landings may exceed the total number of "persons" who hold QS.
- 6. Table 4:
 - a. "Use of port" shows the number of distinct vessels that landed IFQ in this location, regardless of the vessels homeport and of the IFQ permit holder.
 - b. Only years landings are shown.

 - a. "2009 Equivalent Pounds" are IFQ pounds derived from all QS held by residents of the subject community. They are computed using 2009 Quota Share Pool and TACs; therefore, they are comparable across all reported years. These reported pounds include pounds derived from QS held in all IFQ management areas.
 - b. "QS holders" includes all entities (including individuals, corporations, etc.) holding and reported the subject community, as a permanent business mailing address, as of the end of the indicated year.
- 5. Tables 2 and 3:
 - a. "Fishable Pounds" are calculated from amounts of QS held by all residents of the subject community as of the end of the indicated year. These amounts are adjusted for "overages and underages" resulting from prior years fishing activities.
 - b. "Pounds Landed" display the actual pounds landed during the indicated year.
 - c. "Estimated Earnings" are calculated by multiplying the actual pounds landed by the estimated ex-vessel values as reported by the CFEC, State of Alaska for each area. (<http://www.fakr.noaa.gov/ram/ifqreports.htm#special>) Annual Ex-Vessel Prices)
 - d. "Individuals making landings" includes all individuals with recorded landings of IFQ derived from QS held by persons reporting business address in subject community (as displayed on Table 1). The total includes hired skippers; accordingly, in some instances, the total number of individuals with landings may exceed the total number of "persons" who hold QS.
- 6. Table 4:
 - a. "Use of port" shows the number of distinct vessels that landed IFQ in this location, regardless of the vessels homeport and of the IFQ permit holder.
 - b. Only years landings are shown.

Notes:

- * Indicates that the data may not be displayed because simple subtraction would allow confidential data to be computed.
- ** Indicates that the data are confidential because they are derived from the landings of fewer than three IFQ permit holders.
- *** Indicates that the offloading vessels delivered to fewer than three Register Buyers (RB) permit holders.
- 1. Halibut weights are reported in net (headed and gutted) pounds; sablefish weights are reported in round pounds.
- 2. Residence determinations are based on unverified self-reported addresses provided by QS holders.
- 3. Estimated earnings (dollar amounts) are nominal; they are not adjusted for inflation nor by year.
- 4. Table 1:
 - a. "2009 Equivalent Pounds" are IFQ pounds derived from all QS held by residents of the subject community. They are computed using 2009 Quota Share Pool and TACs; therefore, they are comparable across all reported years. These reported pounds include pounds derived from QS held in all IFQ management areas.
 - b. "QS holders" includes all entities (including individuals, corporations, etc.) holding and reported the subject community, as a permanent business mailing address, as of the end of the indicated year.
- 5. Tables 2 and 3:
 - a. "Fishable Pounds" are calculated from amounts of QS held by all residents of the subject community as of the end of the indicated year. These amounts are adjusted for "overages and underages" resulting from prior years fishing activities.
 - b. "Pounds Landed" display the actual pounds landed during the indicated year.

 - c. "Estimated Earnings" are calculated by multiplying the actual pounds landed by the estimated ex-vessel values as reported by the CFEC, State of Alaska for each area. (<http://www.fakr.noaa.gov/ram/ifqreports.htm#special>) Annual Ex-Vessel Prices)
 - d. "Individuals making landings" includes all individuals with recorded landings of IFQ derived from QS held by persons reporting business address in subject community (as displayed on Table 1). The total includes hired skippers; accordingly, in some instances, the total number of individuals with landings may exceed the total number of "persons" who hold QS.
- 6. Table 4:
 - a. "Use of port" shows the number of distinct vessels that landed IFQ in this location, regardless of the vessels homeport and of the IFQ permit holder.
 - b. Only years landings are shown.

Figure 2.

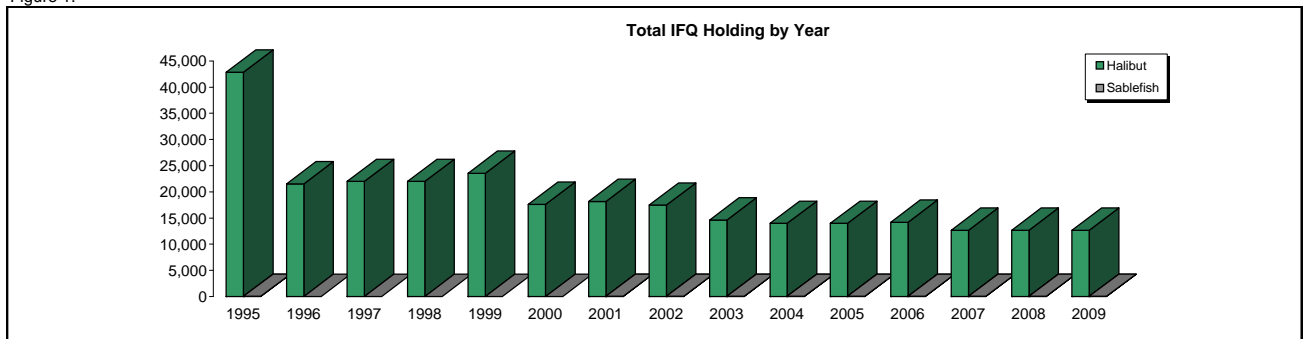

Notes:

- * Indicates that the data may not be displayed because simple subtraction would allow confidential data to be computed.
- ** Indicates that the data are confidential because they are derived from the landings of fewer than three IFQ permit holders.
- *** Indicates that the offloading vessels delivered to fewer than three Register Buyers (RB) permit holders.
- 1. Halibut weights are reported in net (headed and gutted) pounds; sablefish weights are reported in round pounds.
- 2. Residence determinations are based on unverified self-reported addresses provided by QS holders.
- 3. Estimated earnings (dollar amounts) are nominal; they are not adjusted for inflation nor by year.
- 4. Table 1:
 - a. "2009 Equivalent Pounds" are IFQ pounds derived from all QS held by residents of the subject community. They are computed using 2009 Quota Share Pool and TACs; therefore, they are comparable across all reported years. These reported pounds include pounds derived from QS held in all IFQ management areas.
 - b. "QS holders" includes all entities (including individuals, corporations, etc.) holding and reported the subject community, as a permanent business mailing address, as of the end of the indicated year.
- 5. Tables 2 and 3:
 - a. "Fishable Pounds" are calculated from amounts of QS held by all residents of the subject community as of the end of the indicated year. These amounts are adjusted for "overages and underages" resulting from prior years fishing activities.
 - b. "Pounds Landed" display the actual pounds landed during the indicated year.
 - c. "Estimated Earnings" are calculated by multiplying the actual pounds landed by the estimated ex-vessel values as reported by the CFEC, State of Alaska for each area. (<http://www.fakr.noaa.gov/ram/ifqreports.htm#special>) Annual Ex-Vessel Prices)
 - d. "Individuals making landings" includes all individuals with recorded landings of IFQ derived from QS held by persons reporting business address in subject community (as displayed on Table 1). The total includes hired skippers; accordingly, in some instances, the total number of individuals with landings may exceed the total number of "persons" who hold QS.
- 6. Table 4:
 - a. "Use of port" shows the number of distinct vessels that landed IFQ in this location, regardless of the vessels homeport and of the IFQ permit holder.
 - b. Only years landings are shown.

Figure 2.

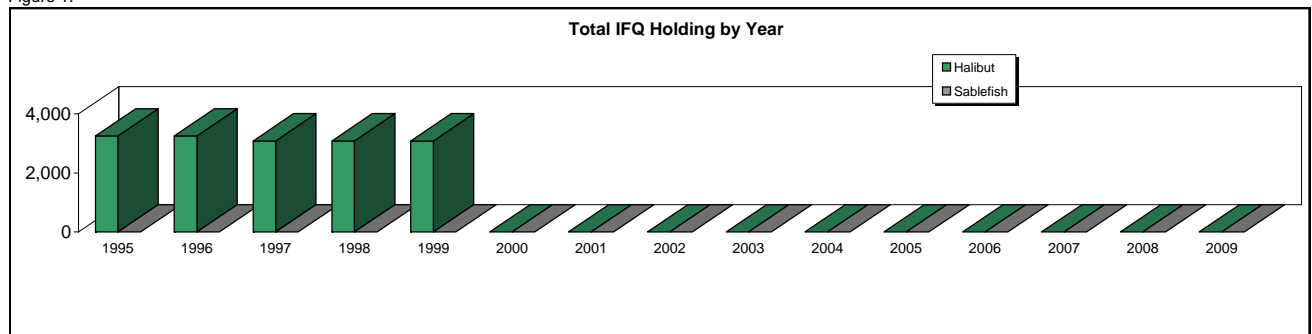

Notes:

- * Indicates that the data may not be displayed because simple subtraction would allow confidential data to be computed.
- ** Indicates that the data are confidential because they are derived from the landings of fewer than three IFQ permit holders.
- *** Indicates that the offloading vessels delivered to fewer than three Register Buyers (RB) permit holders.
- 1. Halibut weights are reported in net (headed and gutted) pounds; sablefish weights are reported in round pounds.
- 2. Residence determinations are based on unverified self-reported addresses provided by QS holders.
- 3. Estimated earnings (dollar amounts) are nominal; they are not adjusted for inflation nor by year.
- 4. Table 1:
 - a. "2009 Equivalent Pounds" are IFQ pounds derived from all QS held by residents of the subject community. They are computed using 2009 Quota Share Pool and TACs; therefore, they are comparable across all reported years. These reported pounds include pounds derived from QS held in all IFQ management areas.
 - b. "QS holders" includes all entities (including individuals, corporations, etc.) holding and reported the subject community, as a permanent business mailing address, as of the end of the indicated year.
- 5. Tables 2 and 3:
 - a. "Fishable Pounds" are calculated from amounts of QS held by all residents of the subject community as of the end of the indicated year. These amounts are adjusted for "overages and underages" resulting from prior years fishing activities.
 - b. "Pounds Landed" display the actual pounds landed during the indicated year.
 - c. "Estimated Earnings" are calculated by multiplying the actual pounds landed by the estimated ex-vessel values as reported by the CFEC, State of Alaska for each area. (<http://www.fakr.noaa.gov/ram/ifqreports.htm#special>) Annual Ex-Vessel Prices)
 - d. "Individuals making landings" includes all individuals with recorded landings of IFQ derived from QS held by persons reporting business address in subject community (as displayed on Table 1). The total includes hired skippers; accordingly, in some instances, the total number of individuals with landings may exceed the total number of "persons" who hold QS.
- 6. Table 4:
 - a. "Use of port" shows the number of distinct vessels that landed IFQ in this location, regardless of the vessels homeport and of the IFQ permit holder.
 - b. Only years landings are shown.

Figure 2.

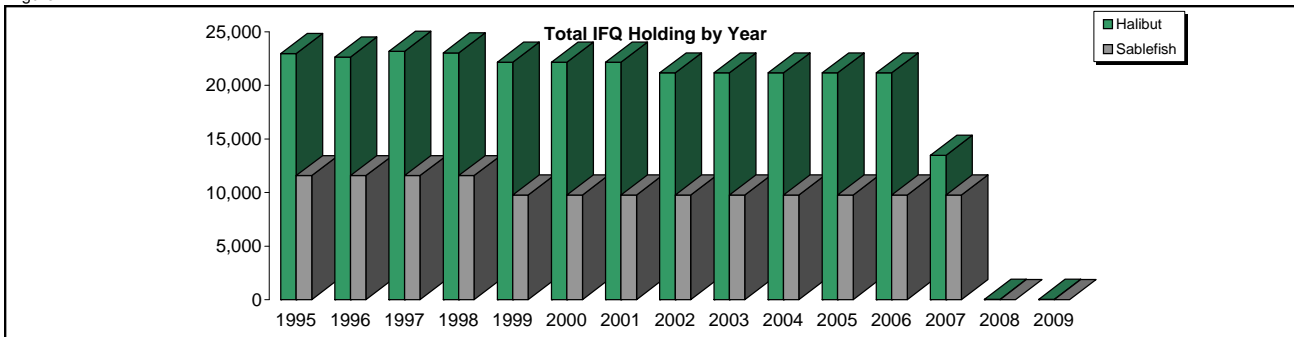

Notes:

- * Indicates that the data may not be displayed because simple subtraction would allow confidential data to be computed.
- ** Indicates that the data are confidential because they are derived from the landings of fewer than three IFQ permit holders.
- *** Indicates that the offloading vessels delivered to fewer than three Register Buyers (RB) permit holders.
- 1. Halibut weights are reported in net (headed and gutted) pounds; sablefish weights are reported in round pounds.
- 2. Residence determinations are based on unverified self-reported addresses provided by QS holders.
- 3. Estimated earnings (dollar amounts) are nominal; they are not adjusted for inflation nor by year.
- 4. Table 1:
 - a. "2009 Equivalent Pounds" are IFQ pounds derived from all QS held by residents of the subject community. They are computed using 2009 Quota Share Pool and TACs; therefore, they are comparable across all reported years. These reported pounds include pounds derived from QS held in all IFQ management areas.
 - b. "QS holders" includes all entities (including individuals, corporations, etc.) holding and reported the subject community, as a permanent business mailing address, as of the end of the indicated year.
- 5. Tables 2 and 3:
 - a. "Fishable Pounds" are calculated from amounts of QS held by all residents of the subject community as of the end of the indicated year. These amounts are adjusted for "overages and underages" resulting from prior years fishing activities.
 - b. "Pounds Landed" display the actual pounds landed during the indicated year.
 - c. "Estimated Earnings" are calculated by multiplying the actual pounds landed by the estimated ex-vessel values as reported by the CFEC, State of Alaska for each area. (<http://www.fakr.noaa.gov/ram/ifqreports.htm#special>) Annual Ex-Vessel Prices)
 - d. "Individuals making landings" includes all individuals with recorded landings of IFQ derived from QS held by persons reporting business address in subject community (as displayed on Table 1). The total includes hired skippers; accordingly, in some instances, the total number of individuals with landings may exceed the total number of "persons" who hold QS.
- 6. Table 4:
 - a. "Use of port" shows the number of distinct vessels that landed IFQ in this location, regardless of the vessels homeport and of the IFQ permit holder.
 - b. Only years landings are shown.

Figure 2.

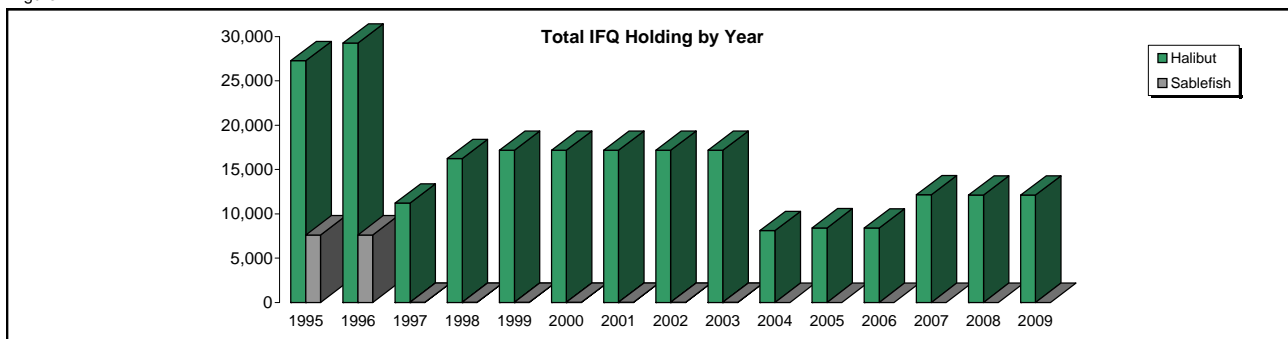

Notes:

- * Indicates that the data may not be displayed because simple subtraction would allow confidential data to be computed.
- ** Indicates that the data are confidential because they are derived from the landings of fewer than three IFQ permit holders.
- *** Indicates that the offloading vessels delivered to fewer than three Register Buyers (RB) permit holders.
- 1. Halibut weights are reported in net (headed and gutted) pounds; sablefish weights are reported in round pounds.
- 2. Residence determinations are based on unverified self-reported addresses provided by QS holders.
- 3. Estimated earnings (dollar amounts) are nominal; they are not adjusted for inflation nor by year.
- 4. Table 1:
 - a. "2009 Equivalent Pounds" are IFQ pounds derived from all QS held by residents of the subject community. They are computed using 2009 Quota Share Pool and TACs; therefore, they are comparable across all reported years. These reported pounds include pounds derived from QS held in all IFQ management areas.
 - b. "QS holders" includes all entities (including individuals, corporations, etc.) holding and reported the subject community, as a permanent business mailing address, as of the end of the indicated year.
- 5. Tables 2 and 3:
 - a. "Fishable Pounds" are calculated from amounts of QS held by all residents of the subject community as of the end of the indicated year. These amounts are adjusted for "overages and underages" resulting from prior years fishing activities.
 - b. "Pounds Landed" display the actual pounds landed during the indicated year.
 - c. "Estimated Earnings" are calculated by multiplying the actual pounds landed by the estimated ex-vessel values as reported by the CFEC, State of Alaska for each area. (<http://www.fakr.noaa.gov/ram/ifqreports.htm#special>) Annual Ex-Vessel Prices)
 - d. "Individuals making landings" includes all individuals with recorded landings of IFQ derived from QS held by persons reporting business address in subject community (as displayed on Table 1). The total includes hired skippers; accordingly, in some instances, the total number of individuals with landings may exceed the total number of "persons" who hold QS.
- 6. Table 4:
 - a. "Use of port" shows the number of distinct vessels that landed IFQ in this location, regardless of the vessels homeport and of the IFQ permit holder.
 - b. Only years landings are shown.

The total includes hired skippers; accordingly, in some instances, the total number of individuals with landings may exceed the total number of "persons" who hold QS.
- 6. Table 4:
 - a. "Use of port" shows the number of distinct vessels that landed IFQ in this location, regardless of the vessels homeport and of the IFQ permit holder.
 - b. Only years landings are shown.

Figure 2.

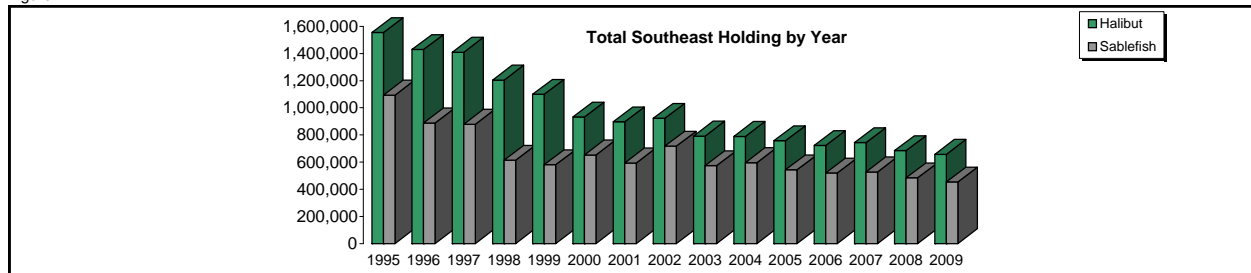

Notes:

- * Indicates that the data may not be displayed because simple subtraction would allow confidential data to be computed.
- ** Indicates that the data are confidential because they are derived from the landings of fewer than three IFQ permit holders.
- *** Indicates that the offloading vessels delivered to fewer than three Register Buyers (RB) permit holders.
- 1. Halibut weights are reported in net (headed and gutted) pounds; sablefish weights are reported in round pounds.
- 2. Residence determinations are based on unverified self-reported addresses provided by QS holders.
- 3. Estimated earnings (dollar amounts) are nominal; they are not adjusted for inflation nor by year.
- 4. Table 1:
 - a. "2009 Equivalent Pounds" are IFQ pounds derived from all QS held by residents of the subject community. They are computed using 2009 Quota Share Pool and TACs; therefore, they are comparable across all reported years. These reported pounds include pounds derived from QS held in all IFQ management areas.
 - b. "QS holders" includes all entities (including individuals, corporations, etc.) holding and reported the subject community, as a permanent business mailing address, as of the end of the indicated year.
- 5. Tables 2 and 3:
 - a. "Fishable Pounds" are calculated from amounts of QS held by all residents of the subject community as of the end of the indicated year. These amounts are adjusted for "overages and underages" resulting from prior years fishing activities.
 - b. "Pounds Landed" display the actual pounds landed during the indicated year.
 - c. "Estimated Earnings" are calculated by multiplying the actual pounds landed by the estimated ex-vessel values as reported by the CFEC, State of Alaska for each area. (<http://www.fakr.noaa.gov/ram/ifqreports.htm#special>) Annual Ex-Vessel Prices)
 - d. "Individuals making landings" includes all individuals with recorded landings of IFQ derived from QS held by persons reporting business address in subject community (as displayed on Table 1). The total includes hired skippers; accordingly, in some instances, the total number of individuals with landings may exceed the total number of "persons" who hold QS.
- 6. Table 4:
 - a. "Use of port" shows the number of distinct vessels that landed IFQ in this location, regardless of the vessels homeport and of the IFQ permit holder.
 - b. Only years landings are shown.

 - b. "Pounds Landed" display the actual pounds landed during the indicated year.
 - c. "Estimated Earnings" are calculated by multiplying the actual pounds landed by the estimated ex-vessel values as reported by the CFEC, State of Alaska for each area. (<http://www.fakr.noaa.gov/ram/ifqreports.htm#special>) Annual Ex-Vessel Prices)
 - d. "Individuals making landings" includes all individuals with recorded landings of IFQ derived from QS held by persons reporting business address in subject community (as displayed on Table 1). The total includes hired skippers; accordingly, in some instances, the total number of individuals with landings may exceed the total number of "persons" who hold QS.
- 6. Table 4:
 - a. "Use of port" shows the number of distinct vessels that landed IFQ in this location, regardless of the vessels homeport and of the IFQ permit holder.
 - b. Only years landings are shown.

Figure 2.

Notes:

- * Indicates that the data may not be displayed because simple subtraction would allow confidential data to be computed.
- ** Indicates that the data are confidential because they are derived from the landings of fewer than three IFQ permit holders.
- *** Indicates that the offloading vessels delivered to fewer than three Register Buyers (RB) permit holders.
- 1. Halibut weights are reported in net (headed and gutted) pounds; sablefish weights are reported in round pounds.
- 2. Residence determinations are based on unverified self-reported addresses provided by QS holders.
- 3. Estimated earnings (dollar amounts) are nominal; they are not adjusted for inflation nor by year.
- 4. Table 1:
 - a. "2009 Equivalent Pounds" are IFQ pounds derived from all QS held by residents of the subject community. They are computed using 2009 Quota Share Pool and TACs; therefore, they are comparable across all reported years. These reported pounds include pounds derived from QS held in all IFQ management areas.
 - b. "QS holders" includes all entities (including individuals, corporations, etc.) holding and reported the subject community, as a permanent business mailing address, as of the end of the indicated year.
- 5. Tables 2 and 3:
 - a. "Fishable Pounds" are calculated from amounts of QS held by all residents of the subject community as of the end of the indicated year. These amounts are adjusted for "overages and underages" resulting from prior years fishing activities.
 - b. "Pounds Landed" display the actual pounds landed during the indicated year.
 - c. "Estimated Earnings" are calculated by multiplying the actual pounds landed by the estimated ex-vessel values as reported by the CFEC, State of Alaska for each area. (<http://www.fakr.noaa.gov/ram/ifqreports.htm#special>) Annual Ex-Vessel Prices)
 - d. "Individuals making landings" includes all individuals with recorded landings of IFQ derived from QS held by persons reporting business address in subject community (as displayed on Table 1). The total includes hired skippers; accordingly, in some instances, the total number of individuals with landings may exceed the total number of "persons" who hold QS.
- 6. Table 4:
 - a. "Use of port" shows the number of distinct vessels that landed IFQ in this location, regardless of the vessels homeport and of the IFQ permit holder.
 - b. Only years landings are shown.

Figure 2.

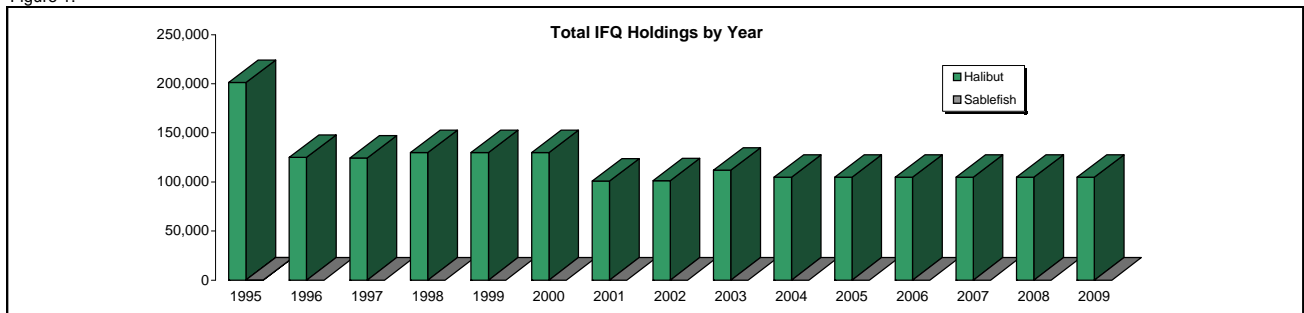

Notes:

- * Indicates that the data may not be displayed because simple subtraction would allow confidential data to be computed.
- ** Indicates that the data are confidential because they are derived from the landings of fewer than three IFQ permit holders.
- *** Indicates that the offloading vessels delivered to fewer than three Register Buyers (RB) permit holders.
- 1. Halibut weights are reported in net (headed and gutted) pounds; sablefish weights are reported in round pounds.
- 2. Residence determinations are based on unverified self-reported addresses provided by QS holders.
- 3. Estimated earnings (dollar amounts) are nominal; they are not adjusted for inflation nor by year.
- 4. Table 1:
 - a. "2009 Equivalent Pounds" are IFQ pounds derived from all QS held by residents of the subject community. They are computed using 2009 Quota Share Pool and TACs; therefore, they are comparable across all reported years. These reported pounds include pounds derived from QS held in all IFQ management areas.
 - b. "QS holders" includes all entities (including individuals, corporations, etc.) holding and reported the subject community, as a permanent business mailing address, as of the end of the indicated year.
- 5. Tables 2 and 3:
 - a. "Fishable Pounds" are calculated from amounts of QS held by all residents of the subject community as of the end of the indicated year. These amounts are adjusted for "overages and underages" resulting from prior years fishing activities.
 - b. "Pounds Landed" display the actual pounds landed during the indicated year.
 - c. "Estimated Earnings" are calculated by multiplying the actual pounds landed by the estimated ex-vessel values as reported by the CFEC, State of Alaska for each area. (<http://www.fakr.noaa.gov/ram/ifqreports.htm#special>) Annual Ex-Vessel Prices)
 - d. "Individuals making landings" includes all individuals with recorded landings of IFQ derived from QS held by persons reporting business address in subject community (as displayed on Table 1). The total includes hired skippers; accordingly, in some instances, the total number of individuals with landings may exceed the total number of "persons" who hold QS.
- 6. Table 4:
 - a. "Use of port" shows the number of distinct vessels that landed IFQ in this location, regardless of the vessels homeport and of the IFQ permit holder.
 - b. Only years landings are shown.

Overview of the Amendment 66 Community Quota Entity (CQE) Program

In 2004 (69 FR 23681, April 20, 2004) Amendment 66 was implemented to help smaller communities that have had a decline in quota holdings. A group of 42 remote Gulf of Alaska coastal communities received approval to purchase, hold, and use commercial halibut and sablefish catcher vessel quota share in the Gulf of Alaska (Halibut Areas 2C, 3A, and 3B and Sablefish area SE, WY CG and WG). These communities are eligible to form a non-profit entity (Community Quota Entity, or CQE) to hold and lease the quota to individual community residents. This amendment was developed to assist a number of small coastal communities in Southeast and Southcentral Alaska to increase or maintain their participation in the commercial halibut and sablefish fisheries.

The halibut and sablefish IFQ Program increased the cost of entry and expansion in these commercial fisheries. Several years after implementation, some larger Gulf communities appear to have benefited from the program and continue to increase their participation in the IFQ fisheries, while other smaller communities have experienced a significant decline in participation. The Council began considering including communities in the commercial IFQ Program in June 2000, motivated by several provisions in the Magnuson Stevens Act, recommendations by the National Research Council (NRC), and a proposal from the Gulf of Alaska Coastal Communities Coalition (Coalition).

The concern is that because these remote communities are dependent on fisheries for a large portion of their employment and income and have few alternative economic opportunities, a decline in the number of quota share holders has a severe effect on unemployment and related social and economic impacts. The objective of this program was to allow qualifying communities to purchase halibut and sablefish quota share for lease to, and use by, community residents. This is intended to address the identified problem without undermining the goals of the IFQ Program or precluding entry-level opportunities for fishermen residing in other fishery dependent communities. Amendment 66 was implemented in 2004.

Six years after the implementation of Amendment 66, there has been only one community (Old Harbor) that has formed a CQE, purchased quota, and is actively fishing this quota. Half of the other eligible communities have the structure in place to purchase quota but have been unable to come up with the necessary funds.¹

The Council formally adopted the following problem statement for this amendment package: A small number of small coastal communities in Southeast and Southcentral Alaska are struggling to remain economically viable. The halibut and sablefish IFQ program, as with other limited entry programs, increases the cost of entry into or expansion in the commercial halibut and sablefish fishery. Allowing qualifying communities to purchase halibut and sablefish quota shares for lease to and use by community residents will help minimize adverse economic impacts on these small, remote, coastal communities in Southeast and Southcentral Alaska, and help provide for sustained participation of these communities in the halibut and sablefish IFQ fisheries. The council seeks to provide for this sustained participation without undermining the

¹ For a list of non profits formed under Amendment 66 and additional information on this program visit this site: <http://www.alaskafisheries.noaa.gov/ram/cqp.htm>

goals of the halibut and sablefish IFQ program or precluding entry-level opportunities for fishermen residing in other fishery dependant communities.

Communities with less than 1,500 people, no road access to larger communities, direct access to saltwater, and a documented historic participation in the halibut or sablefish fisheries are eligible to hold and use commercial catcher vessel halibut and sablefish quota share. Forty-two Gulf of Alaska communities qualify under these criteria (see table 21 of 50 CFR part 679). The Council required that in addition to meeting these criteria at final action, eligible communities must be listed as a defined set of eligible communities in Federal regulation. Communities not meeting the qualifying criteria and not on the list adopted by the Council are not eligible to participate. Other communities can petition the Council for inclusion after the implementation of this program.

Ownership Entity

The Council recommended that new nonprofit organizations be formed explicitly for the purpose of purchasing and holding QS on behalf of communities. These nonprofit entities may each represent one or more eligible communities.

Individual Community Use Caps

Eligible communities are limited to purchasing and using 1% of the Area 2C and 0.5% of the combined Area 2C, 3A, and 3B halibut QS, and 1% of Southeast and 1% of all combined sablefish QS. Eligible communities in Areas 3A and 3B cannot buy halibut QS in Area 2C and eligible communities in Area 2C cannot buy halibut QS in Area 3B.

Cumulative Community Use Caps

Communities are limited to holding and using 3% per area of the Area 2C, 3A, or 3B halibut QS and 3% of the SE, WY, CG, or WG sablefish QS the first year of the program, with an increase of 3% per year to a maximum of 21% in the seventh and later years.

Purchase, Use and Sale Provisions

Original block and vessel size designations apply if the community transfers the QS to any person other than another eligible community. These restrictions would help ensure that the goal of providing access to local residents is maintained and limit the potential for QS to be leased to larger vessels, presumably owned by non-residents fishing further from shore. These restrictions would also address an array of concerns about the distribution of QS among prospective new community entities and existing or future individual participants.²

As stated previously, there has been very little quota purchased since the implementation of the program in 2004, primarily due to the difficulty in financing the purchase, high quota share prices, and quota share availability. However, half of the eligible communities have formed CQEs and are trying to develop strategies to purchase quota. Recently, the Council has approved provisions within two programs associated with other fisheries (i.e., fixed gear permits for Pacific cod in the Western and Central

² Final Environmental Assessment/Regulatory Impact Review, for Amendment 66, NPFMC, March 15, 2004

Gulf, halibut charter permits in Areas 2C and 3A) in order to further the opportunities provided under the original CQE Program.

The limited entry program for halibut charter was recently approved by the Secretary; it establishes a new requirement that charter businesses meet criteria and hold a charter permit for halibut charter fishing in Areas 2C and 3A. It also allows for CQEs to request a limited number of permits at no cost, depending on the area. Thus, new charter businesses in these communities, or existing businesses that did not meet the qualification requirements for a charter permit, could potentially lease a community halibut charter permit from the CQE and lower the cost of entry into or expansion in the charter halibut fishery. This program is scheduled to be in effect in early 2011.

The fixed gear Pacific cod fishery is a slightly different situation. The Council's overall action would remove existing latent licenses from the fixed gear Pacific cod fisheries in the Gulf, including those from residents of eligible CQE communities. The Council then recommended that NMFS issue a number of permits to each CQE equivalent to the number estimated to be removed from residents of the represented community, or two permits, whichever is greater, such that access to Pacific cod remain as a long-term community asset. This program has not yet been implemented. In sum, the expansion of the base of community holdings beyond that of halibut and sablefish QS may help further the CQE Program, and in fact, may allow CQEs to leverage their assets such that purchases of halibut and sablefish QS become more financially feasible.³

In addition, the Council recently initiated several other amendments to the CQE Program. All changes are subject to council recommendations and approved by the Secretary of Commerce. These are summarized as follows:

1) The Council initiated an analysis to evaluate eligibility for four new Gulf communities, using the original criteria. This analysis is scheduled for initial review and final action at the February 2011 Council meeting. Currently, the same 42 Gulf communities are eligible that were eligible at the start of the program. This analysis is scheduled to be reviewed by the Council in February 2011.

2) The Council initiated an analysis to revise regulations to allow CQEs representing Area 3A communities to purchase D class halibut QS located in Area 3A. Currently, there is a prohibition on CQEs purchasing D shares in both Area 2C and 3A. The alternatives would limit the amount of Area 3A D shares that could be purchased to an amount equal to that allocated to residents of eligible Area 3A CQE communities at initial issuance (1995). It would also require that D shares be used only on D class vessels (vessels 35' or less). This analysis is scheduled to be reviewed by the Council in December 2010.

3) The Council initiated a discussion paper to consider developing a CQE program for (non-CDQ) communities in Area 4B. The proposal would allow eligible Area 4B communities to select or form a CQE, which could purchase Area 4B halibut catcher vessel quota share and/or Aleutian Islands sablefish QS. This discussion paper is scheduled to be reviewed by the Council in December 2010.
