CLIENT PROGRESS

Client & Family Satisfaction

Results of our annual consumer survey of children and families both in service and discharged indicated the following level of satisfaction with service they received.

Zero (0) would indicate no satisfaction and five (5) very high satisfaction.

Clinically Meaningful Change

The Global Assessment of Functioning (GAF) is a numeric scale (1-100) that measures an individual's social and psychological functioning. FCSA assesses the GAF score for each child at intake, every six months and finally at discharge. Children in FCSA services had the following improvement in their GAF scores:

- Children in services for less than 120 days had an average increase of 4 points.
- Children in services at least 120 days, but less than 365 days, had an average increase of 10 points.
- Children in services 365 days or longer had an increase of 14 points.

Community Satisfaction

Results of our annual community survey of social workers, probation officers, medical facilities and other provider agencies indicated the following level of satisfaction with service and collaboration.

Zero (0) would indicate no satisfaction and five (5) very high satisfaction.

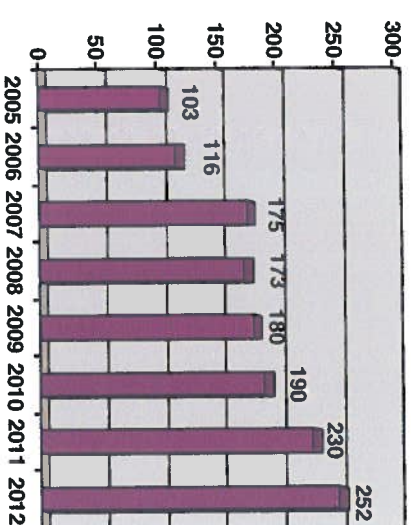

Treatment Goal Progress

Each child in services has an Individual Service Plan (ISP) developed by the child and his/her treatment team. Each ISP contains an average of three (3) treatment goals. Progress on treatment goals is evaluated every 90 days.

- 95% of children in services made progress on at least one (1) treatment goal.
- 84% of children in services made progress on at least two (2) treatment goals.
- 50% of children in services made progress on all three (3) treatment goals.

Total of Clients and Families Served

Parent Guardian Satisfaction

In addition to an annual satisfaction survey, parents/guardians are asked to rate their overall satisfaction with services every 90 days. 99.9% of parents/legal guardians are satisfied with the services being provided to their child.
