

Child Care Assistance Eligibility And Provider Payment Rates 2014 Policy Fact Sheet

March 4, 2014

Every week in Alaska, about 38,000 children under age 6 with working parents are in some type of child care setting. Parents depend on child care in order to work, while at the same time, children need a safe place to be that promotes their healthy development.

Child Care Affordability

The availability, affordability, and quality of child care are challenges that working parents face throughout Alaska.

For many parents, it's simply hard to find child care. thread, Alaska's statewide child care resource and referral system, helps about 8,000 families every year find quality child care in their communities.

Many families report difficulty affording child care. Alaska is one of 19 states where both the annual cost of center-based infant care and center-based preschool-age care exceed the annual cost of tuition and fees at 4 year state public colleges.

In fact, Alaska is one of 9 states (*Alaska, DC, Florida, Montana, Nevada, New Mexico, New York, North Carolina, and Utah*) where the annual cost in both centers and family child care homes for children under age 5 exceeds the annual cost of college tuition!¹

- The average annual cost of center-based infant care in Alaska is \$10,338.
- The average annual cost of center-based preschool-age care is \$7,655.
- The average annual cost for infant care in a family child care home is \$8,476.
- The average annual cost for preschool age care in a family child care home is \$8,421.

Affording child care is a challenge for most families, but particularly for those with more than one child and for those families with low incomes.

Child Care Assistance for Working Families in Alaska

The federal government allocates funds to states to be used for child care, both to assist low-income families to afford the cost of care and for activities related to improving the quality of care (i.e., training for the child care workforce). These funds are allocated under the federal law: the Child Care and Development Block Grant (CCDBG).²

The Child Care Assistance Program (CCAP) in Alaska assists children under the age of 13 or older children with certain disabilities pursuant to the federal CCDBG law. Federal law allows each state to set eligibility criteria for assistance. In Alaska, a family of three can qualify for assistance with an annual income up to \$54,288 (278 percent of the poverty level; 75 percent of state median income).

About 14,000 children under age 6 in Alaska live in low-income working families. Another 30,000 children between the ages of 6 and 13 in Alaska live in low-income families.³

Yet, on average, about 4,200 children each month receive a subsidy for their families to help make the cost of child care more affordable. The most recent data reported to the federal government (FY2012) shows that in Alaska:⁴

- 60 percent of the children (2,520) receiving a monthly subsidy are under age 5.
- 40 percent of the children (1,680) receiving a monthly subsidy are school age – between the ages of 5 and 12.

State policy also determines state payment rates on behalf of low- income children to child care providers. Reimbursement rates are critical because they allow child care providers the resources to maintain their business and facilities, establish low child-staff ratios, attract and retain quality staff and purchase materials. Provider payment rates ultimately determine the quality of child care programs because of the connection between rates and operating expenses.

Federal regulations do not mandate a specific state payment rate, but they do recommend that rates be set at 75 percent or above of the current market rate. This would mean that low-income families have access to at least 75 percent of the child care providers in their communities.

A state survey of market rates is required every two years to inform state rate setting policy. However, current federal law does not require that a current market survey be used to set subsidy rates (just that the survey be undertaken). Alaska has a recent market rate survey, but the survey used to set provider payment rates is from 2009.

Provider payment rates within CCAP vary according to the age of children served and characteristics of provider settings (centers or homes). Alaska's rates for infants and toddlers are at the 75th percentile of the 2009 market survey. All other rates are around the 50th percentile of the 2009 survey. In the past 5 years, the cost of child care has increased significantly. Fees charged to private pay parents have increased every year.

When state payment rates are low, there are several collateral effects:

- Child care providers may be less interested in enrolling low- income children whose care is paid for with a subsidy because funds are insufficient to operate a quality program. This means fewer parent choices.
- Some child care providers may take children whose care is paid for by low state rates, but the quality of the program may reflect the low rates (less educated staff, less experienced staff, lower paid staff (which may mean higher turnover), and fewer resources) since a combination of state payments and private parent payments represent the operating funds for most programs.

Alaska's Quality Rating and Improvement System

Alaska is developing a quality rating and improvement system (QRIS) for child care so that parents can more easily differentiate the quality of care among various settings. Once a QRIS system is in place, it would make it easier for the state to differentiate rates paid to providers based on the quality of the program. (For example, providers could be paid higher rates as they achieve higher levels within the state QRIS).

Quality Child Care Matters!

The research shows that early brain development, early language development, executive function ability, and effective staff practice (the interaction between staff and children that supports learning and higher order thinking), has a direct connection to a child's healthy development and ultimate school success. In essence, quality child care makes a difference. **Beginning with provider payments that reflect the current market and then increasing payments related to higher quality care will help ensure that parents have choices among quality providers.**

For 2014, thread recommends the following policies:

- Increase Child Care Assistance to align with current market rates and adjust family payments to provide equitable access to child care for working families.
- Increase investment to thread to respond to growing needs of families in their search for child care and increased demands for professional development and support to advance the availability of quality child care across Alaska.
