

Hunter participation as a % of population displayed as a trend from 1990-2019 (or most recent survey year) in the following jurisdictions;

The most recent data is from the 2016 National Survey of Fishing, Hunting, and Wildlife-Associated Recreation report which was published in April 2018.

These results are displayed as a trend from 1991. According to the USFWS "the 2016 numbers reported can be compared with those in the 1991, 1996, 2001, 2006, and 2011 Survey reports because they used similar methodologies. However, the 2016 estimates should not be directly compared with results from Surveys conducted earlier than 1991 because of changes in methodology to improve accuracy."
