Dear Representative Lincoln and Tarr, I am distressed by any act that would not protect our waters. More and more plastic is filling our oceans and streams - it is time to put a stop to this. My suggestion is send House Bill 138 to the Fisheries Committee and the Tribal Affairs Committee, as it will have a heavy impact on these stakeholders and possibly protect our water sources better. Thank you. Jeff Budd Sitka , AK

I understand that mining is a big part of the Alaska economy, but it should not come at putting any of our local waterways in potential peril. Accidents happen -- All.The.Time.

If the "National Resource Water Designation" bill (HB 138) introduced by Rep. Kopp passes, it would put the Chilkat River in Haines in a precarious position. The Chilkat has, for hundreds of years, been a source for pristine waters that provide wildlife and humans with an abundance of food. Any spoiling of the waters would likely take tens if not hundreds of years to reverse.

Several local tour companies responsibly guide thousands of guests each summer on the Chilkat so that too can look in awe at the natural beauty surrounding us. And partly because of the Chilkat River, the Haines Highway has a national designation from the Dept. of Transportation as a "Scenic Drive."

I am respectfully asking each of you to put this bill where it belongs: in the trash can.

Kind regards, Nelle Jurgeleit-Greene

Haines, AK 99827

Dear John Lincoln,

Please stop the recently introduced House Bill 138 (HB 138), sponsored by Representative Kopp. Please show Alaska that you care about our ecosystem and way of life.

Sincerely, Ryan Bunker

Subject:	Tier 3 designation
Date:	Monday, April 29, 2019 9:07:10 AM

The Clean Water Act allows residents of Alaska to protect waters critical to their communities or culture from pollution under a **Tier 3 Designation**. HB 138 would require a Tier 3 nomination get passed as a law through the state legislature to exercise this right. The decision would be political rather than science-based and would make the approval process nearly impossible. Meanwhile, corporations only have to fill out a 6-page online form, through an administrative process managed by the Department of Environmental Conservation, to get permission to degrade our waters.

Corporations should not be granted rights denied to residents. A Tier 3 designation process to protect waters should be no more onerous than the process to degrade our waters.

As a man who made his living fishing, this bill is an affront to my making a living, and looks like an intentional gutting of the Clean Waters Act.

I strongly oppose HB138 please do not pass this bill or anything like this

Dear Representative Lincoln

I oppose hr138 because protecting Alaska water should be based on science not on politics. It should not be any more difficult to get protection than it is to get permits for development. Thank you for the opportunity to comment.

Joan McBeen

Tenakee Springs, AK Sent from my iPhone Dear Representatives Lincoln and Tarr: I oppose HB 138.

Alaska very likely has more water bodies that could be considered Outstanding National Resource Waters (ONRWs), also called Tier 3 waters, than any other state. Our happy abundance should not be a reason to make nominations of these waters more difficult.

We are also a sparse population -- this is directly correlated with the abundance of high quality waters. As we grow -- more roads, railroads, housing, manufacturing and extractive industries -- the risks to the waters increases. Instead of handing over the rights of high protection for waters to legislators, the waters that deserve the highest protections -- even in the face of economic challenges -- should go to the agencies with a mission to protect waters and wildlife -- DEC, in conference with ADFG.

This is already allowed under Alaskan regulations. In July 2018, the EPA approved the process of allowing DEC to designate Tier 3 waters through the triennial review process; this is similar to Montana where I believe DEQ designated Tier 3 water bodies. In some states, waterways in wildlife refuges or other protected areas may be designated Tier 3.

As a scientist, I have more trust in a science-based decision making than politicaldecision making. The science around the benefits of a waterway may change some as the populations and landscape (with climate change) change, but the political view of the benefit of a water body will constantly flip around.

Please oppose HB138. Instead, request specific items that DEC should require for nomination prior to designating a water body. These should include the reason for designation (it may be cultural or historical and not necessarily based on water chemistry purity) and documentation to back up the reason. If the reason is that the water is pure and supports a diversity of fish, plant, and animal species, water chemistry documenting purity and data on biodiversity should be supplied. If it is for cultural reasons, cultural history should be provided.

Although I prefer the bill be dropped entirely, if it is to remain in play it should be referred to the Fisheries Committee and Tribal Affairs Committee, to balance the views of the House Resources Committee.

We are blessed with an abundance of pure, clear, productive, and cool waterways used for everything from transportation to supporting fish-eating birds. As more of the US loses freshwater habitat - due to drought, heat, human activity -- Alaska's becomes even more important. Even here in Alaska we are seeing some streams warm, as documented in the Susitna Valley. Identifying waters that will remain cool and continue to provide habitat is a crucial scientific endeavor, not a political one. Scientists will not ignore the human needs of waterways for transportation, subsistence, and recreation, but consider them in recommendations.

Thank you,

Kendra Zamzow, PhD Chickaloon, AK

Representative Lincoln,

I oppose this bill as it turns a scientific decision into a political decision. Protecting our waters should be based on science not politics.

Sincerely, Thomas Ely Haines, AK
