

My name is Anna Goncharova and I am a resident of Delta Junction, Ak. Thank you for the opportunity to testify at this public hearing.

There is an increase in chronic illnesses in children associated with vaccines and this is the reason I oppose the SB37.

There are studies made that show relation of the vaccines to many allergies, brain damage, autism, SID, developmental delays and much more. I want to see people of USA as a strong healthy nation. In 1960 we had only 5 doses administrated to the kids, in 1983- 24 dozes, as on 2019 – we have 72 dozes before e person reaches 18 years old. Statistic show that in 1983 we had 1/2000 cases of autism, in 2018 – 1/36. Experts predict that by 2035 we will have 1 out of 2 kids to be autistic.

As a taxpayer I oppose the distribution of the vaccines that causes so much damage and are not as safe as they claim to be and then we need to pay for rehabilitation or life-time care of the people who were harmed by it. I witnessed in my family the effect and what a financial burden it is to have children effected after vaccines. Many people don't realize it until it happens with them.

Please vote NO on SB 37.
