FISCAL NOTE ANALYSIS

STATE OF ALASKA 2021 LEGISLATIVE SESSION

Analysis

This legislation would create and establish parameters for the Alaska Energy Independence Fund (Fund) and the Alaska Energy Independence Program (Program) within the Alaska Industrial Development and Export Authority (AIDEA). It provides AIDEA with the ability to arrange financing to suit Alaska's unique energy finance needs, particularly with regard to addressing urban and rural energy requirements. It is estimated that establishing the Fund would create new jobs and businesses, lower commercial and household energy costs for redeployment in Alaska's economy, and improve Alaska's energy independence.

Estimated Fund Capitalization: \$10 million

The appropriation represents the minimum level of capitalization required to optimally fulfill the mission and growth of the Fund. The amount required for the fund capitalization is based on the initial capitalization received by the State of New York and the State of Connecticut, as well as Montgomery County, Maryland in the establishment of similar programs. The fund capitalization analysis factored in the percentage of the initial capitalization against each respective state's annual Gross Domestic Product and the state/county population per initial capitalization.

Additional factors that determined the capitalization estimate were sourced from the Coalition of Green Capital (CGC) May 2020 Green Bank Opportunity Report, Municipality of Anchorage, which highlighted addressable market segments for the program. In that report, CGC estimated that an initial capitalization of \$5 million could finance 25 C-PACE projects in Anchorage alone, ultimately resulting in over \$700 thousand in energy savings and the creation of 70 jobs. All municipalities within the State of Alaska will have access to the benefits of the Fund and its programs. Once combined, the analysis suggested an initial capitalization for the fund to be between \$7 million and \$10 million. The higher capitalization figure is requested due to Alaska's energy consumption per capita representing a 100% to 150% premium to the comparable states and municipalities used in this analysis.
