

May 5, 2021

The Honorable Zack Fields House Labor and Commerce Committee State Capitol Room 24 Juneau, AK 99801

Dear Representative Fields,

Thank you for the opportunity to participate in the House Labor and Commerce's April 30, 2021, hearing on House Bill 170 Energy Independence Program and Fund with the Alaska Industrial Development and Export Authority (AIDEA). Please find answers below to the questions posed to the Alaska Energy Authority (AEA) by Representative McCarty and yourself.

# 1. 8:28 a.m. Renewable Energy Fund, Weatherization Assistance Program, and the Four Dam Pool

**Q: Representative McCarty** – It was stated that there was \$280 million that had been allocated the past 12 years for energy programs. I remember in Kodiak that there was a big push to insulate and put new windows into houses and there were a lot of contractors very busy those few years to do that. It brings up the question, since that was already happening in Kodiak, but I hear that was a movement throughout the state. What percentage of homes did that impact over the past 12 years?

Q: Representative Fields – And let me make a more pointed question I guess or specific. So Mr. Thayer, if you recall offhand, could you just do a quick rundown of aggregate investment in the Renewable Energy Fund going back to I think about 2008, and the weatherization assistance program; and looking back just a little further the investment in the Four Dam Pool Railbelt, which, of course, was intimately linked with our PCE program? And if you don't have those numbers offhand wouldn't really expect you to you can always send them to the committee in writing.

**A:** The response below addresses the Renewable Energy Fund (REF), the Weatherization Assistance Program, and the Four Dam Pool and its linkage to the Power Cost Equalization Program (PCE).

## **Renewable Energy Fund**

Established by the Alaska State Legislature in 2008, the REF program funds cost-effective renewable energy projects throughout the state. The program is unique in that, by statute, it can fund an eligible project from feasibility analysis through to construction. REF seeks to allocate an equitable balance of grant monies across the state by energy region, according to the prevailing cost of energy in each region.

Attached is a summary of all REF-funded projects since program's inception. To date, the REF has funded \$270 million worth of projects. The vast majority of REF funding has been directed to non-Railbelt projects. As a competitive grant program, applicants are incentivized to pursue those renewable projects which optimize the most cost-effective application of local renewable resources. In addition to providing electricity and heat cost stabilization, the program creates jobs, utilizes local energy resources, keeps money in local economies, and fosters economic development.

Now in its thirteenth annual funding cycle, there are 11 REF grants under consideration for funding by the Legislature. Six are for reconnaissance/feasibility, two are for design/permitting, and three seek funding through construction.

Originally intended to be funded for five years, the Legislature extended the REF for an additional 10 years in 2012. The program's sunset provision is currently scheduled for June 30, 2023.

#### **Weatherization Assistance Program**

The Alaska Housing Finance Corporation (AHFC) administers the Weatherization Assistance Program. For more information, please contact AHFC CEO Bryan Butcher at bbutcher@ahfc.us.

## Power Cost Equalization (and linkage to Four Dam Pool)

The PCE program of today began some 20+ years after Statehood. Forward-looking legislators acknowledged that access to affordable electricity was the bedrock of continuing economic development in the state. With that in mind, a great many of those legislators focused efforts to identify options to bring low-cost power to rural and urban communities alike across the state.

In the early 1980s, the State pursued several projects to reduce the cost of energy for Anchorage, Matanuska-Susitna Valley, Fairbanks, and medium-sized communities with hydro potential. Between 1980 and 1984, appropriations totaling \$124 million were made towards the construction of the Alaska Intertie, a transmission line between Willow to Healy. Money was also spent on projects such as the Healy

cogeneration facility, the Four Dam Pool, which consisted of four individual hydroelectric projects, and other projects. The predecessor of today's Susitna-Watana Hydroelectric Project was also studied using State funds.

While money was invested in energy projects in urban areas, there was no easy solution to the rising cost of energy in rural areas. To aid rural Alaskans as they dealt with increasing costs of power, the Power Cost Assistance program was created in 1981; and in 1985 the program was renamed the Power Cost Equalization program.

In 2000, the Legislature created and seeded the PCE Endowment Fund to ensure the long-term sustainability of the PCE program. Initial funding for the endowment was an appropriation of \$100 million from the Constitutional Budget Reserve and in the early years, the endowment was additionally funded by proceeds from the sale of the Four Dam Pool hydroelectric projects to those communities served.

Today, the PCE program continues to help rural Alaskans with their high energy costs. The program seeks to reduce the high costs of electricity paid by rural consumers to a level comparable to an average of rates paid in Anchorage, Fairbanks, and Juneau. Small rural communities that are not road accessible experience high costs of producing electricity, usually by diesel, due to significant transportation costs and limited fuel storage capacity, resulting in high diesel fuel prices upon delivery. The kilowatt-hour (kWh) charge for electricity in rural Alaska is considerably higher than the average kWh rate in the state's urban centers. These costs must be recovered from a limited number of customers, many of whom have the limited disposable income associated with generally low economic development.

A utility's eligibility for PCE is determined by state statute. Only communities with centralized utilities can receive payments and they must report operational cost data to the Regulatory Commission of Alaska to remain eligible for PCE disbursements.

PCE ensures the financial viability of centralized power generation in rural communities. Reliable lower-cost energy enhances the quality of life, the standard of living, and the economic strength of the communities. Economic development and access to affordable power are necessary to grow healthy economies in rural Alaska.

## **Eligible Utilities**

The Railbelt electric utilities, the electric utility in Juneau, and those utilities that receive electric power from the Four Dam Pool facilities (Ketchikan, Wrangell, Petersburg, Kodiak, Glennallen, and Valdez) are not eligible for PCE assistance.

## **Eligible Customers**

An eligible residential customer may receive PCE credit on up to the first 500 kWh consumed each month. Community facilities are also eligible to receive PCE credit on up to a maximum of 70 kWh per month x the community population. For example, a community of 100 would receive credit on up to 7,000 kWhs for its community facilities combined. State and Federal customers, as well as commercial customers including schools, are not eligible for PCE credit.

## **PCE Program Funding**

This fund is administered by AEA and is composed of:

- Appropriations by the State Legislature.
- Appropriations from the National Petroleum Reserve in Alaska.
- Gifts, bequests, and contributions from other sources.
- Interest earned on the fund balance.

If you have further questions, please contact me at (907) 771-3009.

Sincerely,

Curtis W. Thayer

**Executive Director** 

In & Gun
