

Dear House Labor and Commerce Committee,

There are safe, effective, and economical alternatives to the use of PFAS-based firefighting foams that are in use at major airports, military installations, and oil and gas facilities around the world.

We also need comprehensive legislation to establish health protective drinking water standards and other protections for Alaska communities.

Please pass companion bill HB 166 during this session!

Thank you for your consideration.

Sincerely,
Ms. Natalie Watson

Dear House Labor and Commerce Committee,

There are safe, effective, and economical alternatives to the use of PFAS-based firefighting foams that are in use at major airports, military installations, and oil and gas facilities around the world.

We also need comprehensive legislation to establish health protective drinking water standards and other protections for Alaska communities.

Mr. Frank Lahr

Dear House Labor and Commerce Committee,

I would really like safe drinking water for my children and grandchildren and their children. Also, for the subsistence foods they will gather off the land and water. The plants, berries, fish and wildlife need good water to grow for people to eat off the land. Contaminated water should not even be an issue, especially here in Alaska, where there are a lot of people who subsist. Please listen.

There are safe, effective, and economical alternatives to the use of PFAS-based firefighting foams that are in use at major airports, military installations, and oil and gas facilities around the world.

We also need comprehensive legislation to establish health protective drinking water standards and other protections for Alaska communities.

Please pass companion bill HB 166 during this session!
