ANALYSIS: (Attach a separate page if necessary)

This bill changes the time between oil spill contingency plan approvals from the current three years to five years. Plans are required of operators of oil terminals, pipelines, exploration and production facilities, oil tank vessels, nontank vessels, oil barges, and railroad tank cars.

This bill furthers the goal of permit streamlining and complements initiatives currently being undertaken by DEC to shift emphasis away from the administrative review and approval process, which can often become bogged down in legal and adjudicatory challenges from third parties, to actual inspection and verification of response capability, which falls under the purview of DEC's enforcement authority.

FISCAL NOTE

STATE OF ALASKA
2003 LEGISLATIVE SESSION

BILL NO. SB 74 #1

ANALYSIS CONTINUATION

Continuation from Page 1

The application, review and approval process for oil spill prevention and contingency plans has become unnecessarily burdensome to applicants and DEC. The ability to prevent and respond to spills will be improved by increasing the capacity to conduct on-site regulated facility and vessel inspections, spill drills and exercises, technical assistance, and interaction with regulated operators to enhance response preparedness.

The bill supports the Governor's goal of fostering clarity and certainty through clear and consistently applied industry requirements and providing a stable and predictable permitting process.
