LR/gb

Dear Hugh -

I'm really sorry I forgot to get the schedule to you.

The committee moved out one major bill on 2/16 (revenue sharing). We have three other bills which I consider major, all by Pass:

HB 75 (municipal income tax)
HB 219 (permits for shore facilities)
HB 202 (property tax in the unorganized borough)

I do not expect to get HB 202 out of the committee in time for passage this year.

The schedule is as follows:

To move out of the committee the week of 2/21:

HB 215 (supplemental appropriation for day care assistance)
HB 190 (municipal air pollution control programs)
HB 110 (municipal planning and zoning powers)
HB 133 (land selection by municipalities)
HB 116 (state land classification)

To move out of the committee the week

of 2/28:

HB 219 (permits for shore facilities)
HB 75 (municipal income tax) If information we need is available by then.
HB 83 (procedures of Local Boundary Commission) We're waiting to get info from you on reasons for sections 2, 3 & 4
HB 147 (construction in municipalities by state agencies)

To move out of committee the week of 3/7:

HB 193 (child care in home rule municipalities)
HB 72 (historical districts)

Of course, this leaves no room for yet-to-be introduced legislation which may seem important. But we can "bump" some of the less important bills here if need be.

Thanks for your patience.

Lisa

P.S. I could garner only 2 votes to move HB 85 (residential property tax exemption) & disallowed a tabling motion by Kelly. Shall I persist? (The 2 votes were Rudd & Phillippis)

HB

Mayor runoff election Feb. 8

Officials of the Kodiak Island Borough have called a special election Tuesday, Feb. 8, for a runoff between the two vote-getters in last week's borough mayor election.

According to the final count of votes, reached today in the official canvassing, Wayne Kotula and Dorothy "Dottie" Paulson must appear again on the ballot since none of the six in the race garnered the 40 per cent required by law.

Kotula came close, as he needed 348 out of a total vote of 871. Today after the 25 challenged ballots and 10 absentee ballots were counted, Kotula had 341 votes. Paulson was a distant second with 158.

Paulson, contacted immediately after the canvassing, said she had called borough officials to say "It was obvious he was the choice of the voters."

Yet, apparently, a concession by Paulson would require the candidate with the next highest count — Dan Ogg with 115 — to run against Kotula. Paulson's reaction to that opinion: "Well, I guess we'll have a rerun!"

She said, however, she thought it unnecessary to hold a runoff for an abbreviated term. She said she would rather the money be applied somewhere else. "My thought was just to save some money."

But as it is, Feb. 8 it will be Paulson versus Kotula.

Inside today...

CITY OF HOMER

HOMER, ALASKA 99603

January 21, 1977

Mrs. Lisa Rudd
House of Representatives
Pouch V
Juneau, Alaska 99801

Subject: HB 9, Runoff Elections in Municipal Elections
Hearing Janaury 28

Dear Mrs. Rudd:

The City of Homer has continually supported the position that a municipality, through its elected body, should determine for iteself if a runoff electic is a necessary part of their election process.

Expe ience has shown that voter interest in a runoff election is extremely low, ranging between 10% or less turnout to 20% at the most. This is partly due to confusion created by a runoff election. The "runoff" election is quite different from a "primary" election. A primary election precedes the general election; the runoff follows it. The voter is accustomed to the general election being the deciding election. The runoff reverses this standard procedure.

The runoff election doubles the election expense.

A considerable hardship caused by the runoff election is the delay that results in organizing the Council. The runoff provision means that an entire month is lost. This is valuable time to the Councils that could be spent in running the business of the municipality rather than waiting for its final members.

AS 29.28.010 mandates that the City Council "shall prescribe the rules for conducting municipal elections..." The legislature should not then try to prescribe what should be included in the municipal election process.

The City of Homer encourages the passage of any bill which allows the municipalities, through their duly elected governing body, to provide for plurality elections for municipal office.

Very truly yours,

CITY OF HOMER

Larry C. Farnen
City Manager

On alcohol

Dear Editor:

I am a non - drinker, but perhaps I should change that. Recent proposals for increasing the taxes on alcoholic beverages inspire me to at least consider the above action — as a public service, you understand.

That is, if proper treatment of social ills such as alcoholism depends upon the availability of tax - monies generated by sale of booze (or whatever), then perhaps it becomes my duty as a citizen to help increase sales of the stuff (to generate more tax - revenue, to . . .).

Strange business indeed, eh?

Charles Konigsberg

P.S. Would we be wiser, perhaps, to orient our efforts more directly at helping to create the kind of Alaska in which alcoholic intake is not so important to so many people?

IN THE HOUSE BY DUNCAN

HOUSE BILL NO. 31

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to municipal powers to tax the sale of alcoholic beverages."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 29.53 is amended by adding a new section to read:

Sec. 29.53.416. SALES TAX LEVY ON ALCOHOLIC BEVERAGES. In addition to taxes authorized by sec. 415 of this chapter, a borough which provides a program for the treatment of alcoholics and intoxicated persons may tax the sale of alcoholic beverages. The rate of levy of the tax may not exceed that rate which will provide revenue from the tax in an amount equal to the total expenditure made by the borough during the previous fiscal year on alcohol treatment programs and facilities.

Re: HB 31 - Taxation on Alcoholic Beverages

Per our conversation of 1/26/77 I wanted to put into writing some of the problems that are being put forth in regards to Mr. Duncan's Bill. As you know, the Governor's office, in conjunction with a number of agencies including the Sate Office of Alcoholism, is in the process of preparing a packet of (6) bills deeling with alcohol and alcohol related problems. The following are some of the concerns regarding HB 31:

"borough" may tax the sale of alcoholic be erages seemingly excludes 1st and 2nd class cities.

"treatment" seemingly excludes monies for taxation being applied to handle all other alcohol related concerns.

Monies for treatment programs are to be based on the previous fiscal year - the concern as I understand it, is that this will not allow for any expansion beyond maintainence level of alcohol treatment programs.

IN THE HOUSE / SENATE

CS for HOUSE BILL NO. 31

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: " An Act relating to municipal powers to tax the sale of alcoholic beverages."

tax on retail sales?

law enforcement / health & welfare / corrections } alcohol related costs -

*1. - What if they collect too much?

"

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 29.53 is amended by adding a new section to read:

Sec. 29.53.416. SALES TAX LEVY ON ALCOHOLIC BEVERAGES. In addition to taxes authorized by sec. 415 of this chapter, a home rule or general law borough which provides a program for the prevention and treatment of alcoholics and intoxicated persons may, by ordinance, tax the sale of alcoholic beverages. The *rate of levy of the tax may not *1. exceed that rate which *1. will provide revenue from the tax in an amount equal to the total expenditure made by the borough during the previous fiscal year on alcohol treatment programs and facilities. approp. by boro. - local contribution [The delete to require referendum requirements of sec. 420 of this chapter do not apply to a sales tax levied under this section.]

* Sec. 2. AS 29.13.100 is amended by adding a new paragraph to read:

(37) AS 29.53.416 -- Sales tax levy on alcoholic beverages.

* Sec. 3. AS 04.15.070(a) is amended to read:

(a) A municipality may by ordinance provide rules and regulations governing the barter, sale and possession of intoxicating liquor within

* round to nearest 1/2

the municipality necessary to the orderly conduct of the business of selling intoxicating liquor. When, under a local option election, the city clerk finds the majority of the voters are against the sale of intoxicating liquor, the municipality, by ordinance, may make the sale of intoxicating liquor within the municipality a misdemeanor whether the sale is made pursuant to license or otherwise. The ordinance may not be inconsistent with this title or the rules and regulations promulgated under this title. Except as authorized by AS 29.53.416, no [NO] municipality may impose taxes other than property taxes on liquor inventories and sales taxes on liquor sales when these taxes are levied on other property and sales within the municipality.

HB66

January 14, 1977

The Honorable Hugh Malone
Speaker of the House
Alaska State Legislature
Juneau, Alaska 99811

Dear Mr. Speaker:

Under the authority of art. III, sec. 18 of the Alaska Constitution, and in accordance with AS 24.30.060(b) and the Uniform Rules of the Alaska State Legislature, I am transmitting a bill relating to the community legal assistance fund (AS 44.47.200 - 44.47.230). This bill will permit the Department of Community and Regional Affairs, using funds from the community legal assistance fund, to contract directly with the Department of Law to provide direct legal assistance to eligible communities or regions in the limited areas of ordinance codification and statutory interpretation when that interpretation is not related to litigation in which the eligible community or region is a party.

The bill is designed to remedy a deficiency in the existing community legal assistance program. Existing statutes do not permit community legal assistance funds to be expended for general legal work such as ordinance codification and statutory interpretation. Review of the program during FY 1976 showed that most of the applications received requested this kind of assistance. As a result, only two applications (seeking legal costs for developing ordinances related to specific, unique situations) were approved. The amendments in this bill will permit community legal assistance funds to be used for the limited purposes of ordinance codification and statutory interpretation not related to litigation, the two areas of eligible communities' greatest need, while continuing to provide for retention of private attorneys to handle specific problems as originally contemplated.

STATE of ALASKA

MEMORANDUM

HB 66

DEPARTMENT OF COMMUNITY AND REGIONAL AFFAIRS

TO: Palmer McCarter, Director
Local Government Assistance

DATE: August 10, 1976

FROM: David Jensen Dave
Local Government Specialist

SUBJECT: Proposal for amending 44.47.200

Throughout the past year we have administered the Community Legal Assistance Grant Program. The program somehow seems appropriate in concept but proves difficult in application to real situations.

As you know we have approved only two applications for legal assistance. Both applications were for legal costs in developing an ordinance or ordinances related to specific situations. Most inquiries for information on the program have been in the nature of requests for ordinance codification or code development. (See attached summary) We have held the view that general ordinance writing, code development and codification are functions common to all cities and hence general legal work. Clearly the grant fund does not allow for us to take any other viewpoint. If we were to grant funds for general ordinance work we would soon exhaust the funds available and serve only a handful of cities.

Since the majority of requests are for general ordinance development perhaps we should consider a means to accomodate the requests. As I mentioned earlier we cannot give grants to each city requesting ordinances without quickly exhausting the grant fund. Private attorneys are asking approximately $75.00 per hour.

I suggest that an attorney hired for the specific purpose of writing ordinances would be far more cost effective than contracting with private attorneys.

I envisage a program where we could hire an attorney (part-time or full-time) who could write ordinances as requested by cities. I believe there are sufficient funds to hire an attorney and still leave funds available for grants for "exceptional" circumstances.

I am attaching a proposed legislation that would, I believe, allow a change in the existing program to accomodate requests for ordinance writing at a cost the fund will bear.

Article 6. Community Legal Assistance

Section
200. Community legal assistance fund
210. Eligibility
220. Grants
230. Regulations

Sec. 44.47.200. Community legal assistance fund. There is created in the Department of Community and Regional Affairs the community legal assistance fund. From legislative appropriations to the fund, the department may make grants to eligible communities and regions for the purpose of enabling them to obtain legal assistance. The department may hire an attorney on a permanent or part-time basis for the purpose of providing direct legal assistance to eligible communities and regions.

Sec. 44.47.210. Eligibility. First and second class cities and un-incorporated villages, and regional associations of those communities, may apply to the department for legal assistance under §200 of this chapter. Legal assistance shall be made only to those communities or regions that would otherwise be unable to obtain legal assistance. No regional or village corporation formed under the Alaska Native Claims Settlement Act (P.L. 92-203) is eligible for legal assistance under §200 of this chapter.

Sec. 44.47.220. Community Legal Assistance. Legal assistance made under §200 of this chapter shall be for a single legal project and not for the provision of general legal counsel. The department shall assure that any grant made is spent for necessary legal assistance and that appropriate accounting procedures are maintained. Grants may not exceed $20,000.00.

Sec. 44.47.230. Regulations. The department shall adopt regulations to carry out the purpose of §§200-220 of this chapter.

August 12, 1976

Honorable Lee McAnerney
Commissioner
Department of Community and Region Affairs
Pouch B
Juneau, Alaska 99801

Dear Commissioner McAnerney:

I have had several conversations with you and David Jensen concerning the Community Legal Assistance program. I would like to outline my thoughts concerning a possible change in the present legislation, which I believe, would make the program more responsive to village needs and provide for a better and more efficient use of the funds.

As it is presently established, the Community Legal Assistance Grant Fund enables first and second class cities and unincorporated villages a..d regional associations of those communities to apply to the Department of Community and Regional Affairs for grants to enable the community to obtain legal counsel for general legal assistance. One of the main objectives of this legislation was to make funds available to communities for legal counsel to assist them in the development of ordinances and assist them with establishment of viable local governments. As you know, this was a recommendation of the delegates to the Bush Justice Conference held in Minto, in 1974. The specific recommendation is as follows: "That the Department of Community and Regional Affairs should provide attorneys residing in regional villages and help them codify their customary and traditional laws."

Recent conversations with you and Dave Jensen indicate you have contemplated amending the program to enable the Department to hire at least one, and possibly two, attorneys to work on a permanent or part-time basis for the purpose of providing direct legal assistance to eligible communities and regions. We believe this would be a good thing and support your efforts so long as no substantive changes are made in the existing law.

Our reasons are twofold: First, representation of cities, the development of municipal ordinances and establishment of local governments is a highly specialized area of the law.

It requires a great deal of research and familiarity with municipal law, administrative law, and revenue sharing to do this. As the program is presently set up, successful grant applicants hire attorneys to do this work for them. There is no assurance that the attorneys they might hire have experience or expertise in the field, on intimate knowledge of the community. Should the Department have attorneys on staff with the responsibility for this, they could develop model ordinances based on their research and experience much easier and with less attorney time involved than attorneys lacking knowledge or background in this field. Attorneys working in your department would also have the advantage of being able to call on people in your department who have considerable experience working with rural communities, and a great deal of familiarity with their special needs. They would also be able to assist the staff attorneys in bridging the cultural and language gaps that occur when working with Native villages in Alaska.

The second reason for our support of your proposal is that although Alaska Legal Services has been asked many times to perform this legal work for villages, and we recognize the great need of the communities for this help, we are unable to do so because of potential conflict situations. Our Board has established that our priorities for providing legal assistance are to low income individuals, and although we frequently do provide assistance to groups which meet our income guidelines, the Board has determined that it could pose conflict situations should we become the attorney of record for villages and small rural cities.

For these reasons I believe it would be an improvement of the current program for your department to have attorneys on staff who have the capability and responsibility for providing this assistance. It would be a much more efficient method for providing this much-needed assistance and I believe more communities would be served as a result. One problem with the present grant program is that many communities who need this help are unaware of the program, and even if they are aware, there are no people in the community sufficiently skilled to make the application. The change you propose could help bridge that gap also.

Alaska Legal Services supports this program, and if we can do anything to assist you with its implementation, please let me know. If we can provide further information, please contact me.

Sincerely,

ALASKA LEGAL SERVICES CORPORATION

IN THE HOUSE

BY THE COMMUNITY AND REGIONAL AFFAIRS COMMITTEE

HOUSE BILL NO. 70

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to municipal revenue sharing, and the Alaska Business License Act; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 43 is amended by adding a new chapter to read:

CHAPTER 17. MUNICIPAL REVENUE SHARING.

Sec. 43.17.010. CONSTRUCTION AND IMPLEMENTATION OF CHAPTER. (a) This chapter may not be construed so as to create a debt of the state.

(b) The special municipal services account is established. Funds to carry out the provisions of this chapter may be appropriated annually by the legislature to the account. If amounts in the account are insufficient for the purpose of each local government's or other recipient's share authorized under this chapter, ~~such funds as are~~ available shall be distributed ~~pro rata~~ among eligible local governments and other recipients.

(c) Money in the special municipal services account which, at the end of the fiscal year for which the money is appropriated, exceeds the amount required for the allocations authorized in this chapter reverts to the general fund.

Sec. 43.17.020. MINIMUM GRANTS TO MUNICIPALITIES. (a) A municipality proposing to provide administrative services or a service provided for in sec. 30(a)(1) of this chapter may, in lieu of obtaining revenue sharing money as provided in this chapter, obtain instead a minimum grant of $25,000.

(b) The department shall issue regulations regarding procedures and time limits for making an election under this section.

Sec. 43.17.030. BASIC GRANTS TO MUNICIPALITIES. (a) If a municipality elects not to receive the grant provided for under sec. 20 of this chapter, the amount of revenue sharing for which it is eligible shall be calculated: as a result of B X P where

(1) B is the base revenue sharing amount of $1 times the service units for each service performed by the municipality established as follows:

(A)	police protection	12 units
(B)	fire protection	7.5 units
(C)	water pollution control	2 units
(D)	land use planning	2 units
(E)	parks and recreation	5 units
(F)	small boat harbor or port	5 units
(G)	mass transit	5 units
(H)	airport	5 units
(I)	solid waste disposal	2 units
(J)	ambulance	2 units
(K)	air pollution	2 units

(2) P is the population of the municipality rounded up to the nearest 100.

(b) If a municipality provides one or more of the services in (a)(1) of this section under contract to a defined area outside the boundaries of the municipality the revenue sharing amount for those services shall be increased by the service units for that service or services times the population of the area served rounded up to the nearest 100.

(c) If a municipality contains areas having different rates of

taxation, the entitlement shall be calculated for areawide services and for each area ~~separately~~ and totaled ~~to reach~~ the entitlement of the municipality. Revenue sharing money ~~for which the entitlement is~~ based upon areawide services may be used for areawide purposes only. ~~and~~ Revenue sharing money ~~for which the entitlement is~~ based upon service area services may be used for that service area only.

gone to the hospital lapse into the state general fund; payments to the municipality shall be transferred to the hospital in accord with the basis by which the entitlement was generated by the hospital and shall be applied to the annual cost of operation and maintenance of the hospital or for the provision of health care service at the hospital as the directors of the hospital determine;

(C) a hospital may not receive payment under both (A) and (B) of this paragraph;

(3) $1,000 per bed to an organized borough or city outside an organized borough in which a health facility is operated for each bed actually used for patient care, limited to the number of beds provided for in the construction design of the health facility, or $4,000 per health facility as the local government may determine;

(4) funds received by a municipality under (1) or (3) of this subsection shall be used for expenses of health services or operation and maintenance of facilities as the municipality determines.

(b) If construction of a hospital or health facility began before January 1, 1976, and state matching aid for construction approved under AS 18 for payment to a municipality or other facility sponsor constitutes less than 25 per cent of the total project cost, the state shall pay to the municipality or other facility sponsor each fiscal year a sum equal to $2,500 a bed for the maximum number of beds provided for in the construction design of the facility. State aid provided for in this subsection shall continue until the municipality or other facility sponsor has received an amount which, combined with state matching money for construction of the facility approved under AS 18, equals 25 per cent of the total project cost. No funds received for construction shall be used for any other purpose.

(c) In this section

(1) "hospital" means a licensed hospital determined by the Department of Health and Social Services to be a general hospital; the term excludes facilities operated or wholly supported by the state or the federal government;

(2) "health facility" means public health centers, maternity homes and community mental health centers, facilities for the mentally or physically handicapped, nursing homes and convalescent centers which are licensed, when required, by the state under AS 18.20.010 - 18.20.130 and are owned or operated or both by a local government or by a nonprofit corporation or other nonprofit sponsor; the term excludes facilities operated or wholly supported by the state or the federal government.

Sec. 43.17.050. VOLUNTEER FIRE DEPARTMENTS OUTSIDE MUNICIPALITIES. (a) The state shall pay to a volunteer fire department registered with the state fire marshal and serving an area not in an organized borough or a city a sum for protection purposes equal to $7.50 per capita for the population served by the department, ~~as~~ determined by the state fire marshal using the latest figures of the United States Bureau of the Census or other reliable data. ~~(b) Grants shall be made on the same basis of this section, a state shall pay $7.50 per capita for the prop. p roose~~ to facilitate the organization of volunteer fire departments in an area not in an organized borough or a city, upon application ~~of~~ the proposed fire protection group to the department and approval of applications according to standards of organization and service prescribed by regulations promulgated by the department.

Sec. 43.17.060. AREA COST-OF-LIVING DIFFERENTIAL. (a) State payments to a ~~municipality or to a hospital or volunteer fire department located outside a municipality under this chapter~~ shall reflect an area cost-of-living differential. Amounts distributed shall be based upon the sum of the grants due each ~~municipality or each hospital or volunteer fire department located outside a municipality~~ multiplied by the

appropriate area cost-of-living differential. The area cost-of-living differential for each ~~municipality or each hospital or volunteer fire department located outside a municipality~~ recipient shall be determined annually by election district under the provisions of AS 39.27.030; however, the area cost-of-living differential to be applied shall not result in an amount to be distributed less than the base allocation.

(b) The election districts used in (a) of this section are those designated by the proclamation of reapportionment and redistricting of December 7, 1961, and retained for the house of representatives by proclamation of the governor September 3, 1965.

Sec. 43.17.070. FINANCIAL REPORTS. No final payment may be distributed to a municipality under this chapter unless ~~the~~ that municipality ~~has first submitted~~ submits to the dept. a financial report ~~to the department~~ for each of the two fiscal years immediately preceding the fiscal year in which funds are to be distributed, and a budget ~~for the municipality's fiscal~~ (keep) year in which funds are to be distributed. The department may, by regulation, prescribe procedures and filing dates for submitting financial reports and for obtaining all information required to determine the municipality's tax effort.

Sec. 43.17.080. POPULATION DETERMINATION. For purposes of this chapter, population shall be determined by the latest figures of the United States Bureau of the Census, Department of Labor estimates or other population data which ~~in the judgment of the department, is reliable~~ that dept. judges as reliable. However, a municipality may not receive state shared revenue based on the population residing on that portion of a military reservation annexed to a city or borough after January 1, 1973, except as provided in this section. If a military reservation is located within a city or borough, ~~the~~ that city or borough is limited ~~in its entitlement to state shared revenue~~ the state shared revenue it receives, based on the population residing on the reserva-

tion, as follows: 50 per cent of the amount paid per capita for police protection ~~under this chapter~~; 25 per cent of the amount paid per capita for parks and recreation ~~under this chapter~~; 50 per cent of the amount paid per capita for mass transit ~~under this chapter~~; 50 per cent of the amount paid per capita for water pollution ~~under this chapter~~; and 50 per cent of the amount paid per capita for air pollution ~~under this chapter:~~

Sec. 43.17.090. ADDITIONAL LIMIT. In addition to the limitations on expenditure of funds contained in sec. 40 of this chapter:

(1) if a borough exercises the powers in sec. 30(a)(1) of this chapter in the borough area outside cities only, or in a service area only, the grants authorized under this section shall be based on the population of ~~the borough area outside cities or the service area~~ respectively;

(2) if a city within an organized borough provides police protection services, the borough may not qualify for aid under sec. 30(a)(1)(A) of this chapter unless

(A) police protection services are provided in the borough area outside cities, or if limited to a service area, in the service area, through borough contract with a city or with the state or

(B) the borough assumes and exercises power to provide police protection services on an areawide basis in the manner provided by law.

Sec. 43.17.100. ROAD MAINTENANCE. ~~During each fiscal year~~ the state shall pay to a city or organized borough ~~of any class~~ which has ~~power to provide for road maintenance~~ and exercises the power ~~a sum equal to~~ $1,500 per mile for each mile of road, street or highway maintained by the local government ~~excluding the official state highway~~

system, roads, streets, or highways not dedicated to public use, any roads, streets or highways maintained under the local service road program (AS 19.30.111 - 19.30.251), and alleyways, in accordance with regulations adopted by the Department of Highways. No payments may be made for maintenance of roads not used by automotive equipment. Frozen waterways and connections from inhabited areas to the waterways which may be safely used for public transportation by automotive equipment and are so used during a portion of a year are eligible for payments of $900 per mile if the waterways and connections are maintained during the period of use by a municipality or combination of municipalities. The Department of Community and Regional Affairs, after consultation with the Department of Highways, shall determine which waterways and connections qualify and, where the waterways or connections lie outside the corporate limits of a municipality, which municipality is eligible for the shared revenue unless the municipalities involved have agreed in writing to a particular distribution.

Sec. 43.17.110. REGULATIONS. The department shall adopt regulations necessary to carry out the purposes of this chapter. ~~The regulations shall include~~ minimum standards of service required to qualify a municipality for service unit credit. ~~for each service and~~ provisions for a performance report adequate to demonstrate to the department that each service for which credit was allowed was actually performed by the municipality ~~at least~~ at the prescribed minimum level.

Sec. 43.17.120. EXPENDITURE OF FUNDS. Funds received by a municipality under this chapter may be expended for any public purpose for which the municipality has power to expend funds except as provided in sec. 40 of this chapter.

Sec. 43.17.130. UNIFICATION, MERGER OR CONSOLIDATION OF MUNICIPALITIES. If a borough and the cities within the borough merge,

consolidate or unify in accordance with AS 29.68, the amount of revenue sharing to which the successor municipality is entitled shall be computed for the first year ~~and each year thereafter~~ as if the merger, consolidation or unification had not occurred, and the successor municipality shall receive ~~in~~ less than the amount so computed.

Sec. 43.17.140. DEFINITIONS. In this chapter

(1) "department" means the Department of Community and Regional Affairs;

(2) "municipality" for revenue sharing purposes means a city, borough or unified municipality incorporated under the laws of the State of Alaska except a second class city incorporated after the effective date of this Act and lying within an organized borough.

(3) Recipient" means a munic, hosp, health fac, or volunteer fire dept located outside a municipality.

* Sec. 2. AS 43.18.010 - 43.18.045 are repealed.

* Sec. 3. Other provisions of this Act notwithstanding, a municipality which would receive less money under the provisions of this Act than it was entitled to receive in fiscal year 1976 under the provisions of AS 43.18 repealed by this Act shall continue to receive an amount equal to that authorized for fiscal year 1976 under the former provisions of AS 43.18, in accordance with those provisions.

* Sec. 4. AS 43.70.010 is repealed.

* Sec. 5. AS 43.70.030(a) is amended to read:

(a) The license fee for each business is $25 [PLUS A SUM EQUAL TO ONE-HALF OF ONE PER CENT OF THE GROSS RECEIPTS IN EXCESS OF $20,000 FROM THE BUSINESS DURING THE YEAR FOR WHICH THE LICENSE IS ISSUED, EXCEPT THAT ALL GROSS VOLUME IN EXCESS OF $100,000 A YEAR IS TAXED AT THE RATE OF ONE-QUARTER OF ONE PER CENT. THE ANNUAL LICENSE FEE PAID BY A PROFESSIONAL PERSON TO HIS PROFESSIONAL BOARD SHALL BE CREDITED AGAINST THE INITIAL FEE REQUIRED UNDER THIS CHAPTER].

* Sec. 6. AS 43.70.030(c) is amended to read:

(c) The license for the privilege of taking orders through use of catalogs and by mail order offices in the state is the same as set out in this chapter for business generally [AND GROSS VOLUME OF BUSINESS OF THOSE OFFICES INCLUDES ALL ORDERS TAKEN AT THEM WHETHER DELIVERY OF THE MERCHANDISE IS MADE THROUGH THE OFFICES OR NOT].

* Sec. 7. AS 43.70.030(d) is amended to read:

(d) The initial fee of $25 applies to all of the provisions of this section, and shall accompany the application. The balance under sec. 30(b) of this chapter is due and payable on December 31st of each year and shall be paid before the first day of March following, except that the department may extend the time until the 30th of the following April upon application showing that the extension is necessary to enable the applicant to ascertain the amount of license money due. To enable accurate determination of the balance of the tax due at the end of each year, each person to whom this chapter applies shall keep records, give statements under oath, and make returns which the department requires. Returns are made under penalty of perjury.

* Sec. 8. AS 43.70.040 is amended to read:

Sec. 43.70.040. REVIEW AND DETERMINATION OF LICENSE TAX. As soon as practicable after the final payment of the tax under sec. 30(b) of this chapter, the department shall examine the return and determine the correct amount of the tax and, if an error is found, shall notify the taxpayer of the error and examine the taxpayer's records as authorized in AS 43.05.040, and take other proper steps to determine the amount due.

* Sec. 9. AS 43.70.110(2) is repealed.

* Sec. 10. AS 43.17 is amended by adding a new section to read:

Sec. 43.17.140. ADDITIONAL GRANTS TO REPLACE LOST REVENUE. In addition to all other revenue sharing with municipalities, a munici-

pality is entitled to and shall receive each year an amount equal to the amount of money it was entitled to receive under AS 43.70.080 for the year 1978.

* Sec. 11. Sections 1, 2, 3 and 4 of this Act take effect July 1, 1977. Sections 5, 6, 7, 8, 9, and 10 of this Act take effect January 1, 1980.

December 8, 1975

Senator Genie Chance
310 "K" Street
Suite 701
Anchorage, Alaska 99501

Dear Senator Chance:

I am pleased to enclose with this letter two pieces of proposed legislation which represent the recommendations of this interim committee in the area of shared revenues with municipalities. The proposed legislation is the product of a number of meetings of the committee in the months since the adjournment of the legislature plus two public hearings. One of these public hearings was held in conjunction with the October convention of the Alaska Federation of Natives, in order to receive bush community viewpoints. The other hearing was held in conjunction with the October conference of the Alaska Municipal League. In addition, suggestions and constructive criticism were requested by mail and received from a wide variety of cities and communities throughout the State of Alaska.

It was considered crucial, since revenue sharing has been created solely for the purpose of assisting municipalities in the funding of needed local services, that the final product of the committee take maximum note of the views and suggestions of the various municipalities across the state. The enclosed bill represents what the committee considers to be the most beneficial and most feasible of those suggestions.

Perhaps some review might be in order concerning the need for revision of the current shared revenue program. Although the program in concept currently enjoys the unanimous and enthusiastic support of every municipality in the state, the following were considered deficiencies which new legislation could correct.

REPRESENTATIVE
MIKE MILLER
ALASKA STATE LEGISLATURE
P.O. Box 1494

HOME PHONE 586-3067
LEGISLATIVE PHONE 465-3739

HOUSE MAJORITY LEADER
VICE CHAIRMAN, LEGISLATIVE COUNCIL
VICE CHAIRMAN, STATE AFFAIRS COMMITTEE
MEMBER, RULES COMMITTEE
MEMBER, COMMITTEE ON COMMITTEES

First, it was felt that a "foundation" approach might be useful in the field of revenue sharing--"foundation" approach meaning a formula with a foundation amount similar in concept to that utilized in the school foundation statutes. The beauty of such an approach is that whenever a legislature wishes to raise the foundation amount (to recognize increases in the cost of doing business) it is necessary merely to amend one word in the statutes. Absent the foundation approach it is necessary, whenever you wish to recognize the increase in the cost of doing business, to go into the statutes and revise the per capita dollar figure for each of the various categories in which shared revenue assistance is given to municipalities. This is both cumbersome and, in practice, inequitible. Some categories tend to get raised, others do not and the system can easily get out of balance.

It was felt, too, that the amount of shared revenues being designated for small communities was much too small. It was recognized that the present purely per capita approach just did not offer the very small communities enough money to assist in any meaningful way in meeting the obligations of local government. It was recognized that whether a second class city had 25 residents, or 75 residents, or 125 residents there was nonetheless an irreducible minimum cost of doing business, and that that minimum was just as great for very small villages as it was for medium sized second class cities. It was, therefore, considered desirable that a minimum grant base be established for these communities and it was further considered desirable that the base amount agreed upon be as generous as possible in order that the benefits of government on the local level be economically feasible for the communities.

Another deficiency in the current statutes was the lack of the requirement for standards and criteria by which the Department of Community and Regional Affairs could determine whether communities were actually entitled to shared revenues in the various categories under which they were seeking aid. This deficiency has long been recognized by the Department of Community and Regional Affairs and has been recognized additionally by the Legislative Budget and Audit staff. This is not to say that the shared revenue monies alloted to the communities should be required to be spent in the categories designated--far from it. It was and still is the consensus of the committee and of the municipalities that local discretion should continue in the spending of shared revenue receipts. It was felt, however, that in order to receive shared revenue monies in, for example the fire department category it should be demonstrated that the community can meet minimum standards in that category.

> Finally, there was a question projected by some communities as to whether the use of categories in sharing state revenues was even appropriate. It was thought perhaps more appropriate simply to allocate available dollars to the municipalities and let each local government establish its own pricrities without regard to existing municipal services.

In order to correct these deficiencies the committee drafted three alternate pieces of legislation for consideration by the committee and the municipalities of Alaska. With considerable--and greatly appreciated--assistance from the University of Alaska/Anchorage, we were able to develop extensive data showing the practical results (i.e., the dollars to be received) for each community in the state under the various alternatives. We developed similar data based on proposed legislation already in the house (legislation which, incidently, had been previously endorsed by the Alaska Municipal League) and also on a simple per capita allocation of funds to municipalities. Four of these five total alternative were specifically noncategorical in approach. All of the alternatives and all of the data were presented to delegates of the Alaska Federation of Natives Convention and delegates to the Alaska Municipal League Conference. In addition, this material was mailed to virtually every municipality, large and small, in the state with requests for evaluations and suggestions.

I think it would be fair tc say that prior to the hearings and mialings there was a strong feeling among the larger communities, in partiuclar, that revenue sharing should be based on tax effort. The feeling was that those who tax themselves the most should receive the most additional state aid. This was the principle thrust of the existing proposed legislation which the Alaska Municipal League had previously endorsed. The committee recognized this concept in two of the alternatives they proposed, but built in additional factors including the availability of tax resources plus tax effort in relation to those resources. Interestingly, when all the facts--in the form of state-wide computerized readouts--were laid before the communities a very noticable modification of opinion became apparent during the hearings and in countless conversations afterward. Committee memebers noted a discernible reluctance on the part of communities, large and small, to terminate the categorical approach. What was needed, several elected officials indicated, was a bill which more or less continued the "tried and true" categorical approach, in the present revenue sharing system but which <u>also</u> incorporated the "foundation approach".

Basically, then, this is the bill which the interim subcommittee has proposed:

First, the bill does create a municipal "foundation approach" to revenue sharing. It does so by allocating varying numbers of units to various categories of municipal services and then multiplying those units times population, and then multiplying this product times a "foundation" base figure. For this bill the committee established a foundation base at $1.00. In future years if the cost of doing business goes up, for instance 11%, the legislature may, if it chooses, raise the foundation amount by simply changing the figure $1.00 to $1.11.

In establishing categories and establishing unit values within each category, the committee did indeed stick by the "tried and true" categories of past years. Police protection, for instance, which in previous years earned communities shared revenue at the rate of $12.00 per capita will earn units within the foundation formula at the rate of 12 units. Fire protection is 7.5 units (as opposed to $7.50 per capita under the present system). Additional ingredients include air or water pollution control (2 units), land use planning (2 units), parks and recreation (5 units). Two important changes have been made in the categorical designations. Under present law a community can receive $5.00 per capita for operating either a small boat harbor/ port or for operating mass transit or for operating an airport. In the proposed bill 5 units can be accumulated in <u>each</u> of these categories. The second important difference is the addition of solid waste disposal as a new category, which in the proposed bill will be valued at 2 units.

The proposed legislation establishes a $25,000 minimum grant for municipalities whose low per capita standing would otherwise earn them only small amounts of revenue. The committee felt the $25,000 figure was a generous but nonetheless fair amount. It was interesting to note that at neither public hearing was there any critism of this amount. At one meeting of the committee, a single individual did observe that he thought the figure was pretty high for the very smallest communities. He did not, however, seek to have the committee change the amount.

Additional features of the bill include the following:

Special start-up grants have been established in various categories for municipalities who do not currently offer such services as police protection, fire protection, air

and water pollution control, land use planning, parks and recreation, small boat harbors/ports, air ports or mass transit systems. The Department of Community and Regional Affairs is specifically charged with creating minimum standards of service in the various categories for which municipalities can receive revenue sharing. Revenue sharing for hospitals remains virtually the same as under current law except that responsibility for administering this section is transferred to the Department of Health and Social Services. Additionally, in the area of health, a paragraph specifies that no hospital or health facility shall be eligible for revenue sharing unless the facility has received a Certificate of Need from a municipality or the state. This paragraph anticipates that "Certificate of Need" legislation will be passed in this session of the legislature. Another interim committee is studying the whole broad area of health facilities so this section may undergo substantial modification when that interim committee completes its deliberations. Shared revenues for road maintenance remains virtually the same as current law. A very important feature of the new legislation is that if a new second class city is created in an organized borough after passage of this law, the city would not be eligible for the $25,000 minimum grant. This feature is designed to preclude small gatherings of 25 people or more from incorporating simply to take advantage of the $25,000 revenue sharing opportunity. Finally, a very important feature of the proposed legislation is the clause which guarantees each municipality that it will not receive less money than it is receiving under the current statutes.

There, of course, are many additional features to the legislation, but this summary covers most of the major changes.

As noted earlier, the committee is submitting two bills for introduction and for consideration by the legislature. One is quite large and comprehensive and is described in the report above. The other bill consists of only one paragraph and this paragraph constitutes one of the many provisions of the larger bill.

The provision, drafted at the request of the Department of Community and Regional Affairs, simply mandates that the department create minimum standards and criteria to qualify municipalities for grants in each category of shared revenue. If the major bill should run into difficulties and if passage does not seem assured, then it is recommended that the legislature consider and enact the oneparagraph small piece of "clean-up" legislation.

The fiscal impact of the legislation will be to raise the state shared revenue allocation from a current level of about $15 million to a level of approximately $20 million--if the bill is fully funded. The raise, of course, comes from creating the $25,000 minimum grants to small cities, from creating a new category (solid waste) and from separating the now-combined port/harbor-airport-mass transit category into three separate categories.

This report would not be complete without making special acknowledgement of the work of the several individuals and agencies. The committee is extremely appreciative of the hours of work, both during committee sessions and out of session, by Dr. Garth Jones and P. J. Hill, both of the University of Alaska/Anchorage. The vast volume of computerized data that both Dr. Jones and Mr. Hill provided was crucial in the final deliberations and directions of the committee.

Similarly, we would like to give a special thanks to Mr. Rich Wilson and Mr. Sam Coxson, both of the City of Anchorage who helped in obtaining and analyzing the data, and who attended most of the sessions and hearings of the committee and contributed greatly to the deliberations. We are indebted as well to the Alaska Federation of Natives who made time available for us during the annual AFN convention in Anchorage, and the Alaska Municipal League who similarly made time available during its annual conference in that same city. The League, as well, was most helpful to the committee in circularizing its membership and alerting municipalities of Alaska to the work of the committee. Finally, I would like to acknowledge the fine work of the staff of the Legislative Affairs Agency, and Bill Berrier in particular, plus the membership of the interim committee. Interest was lively, suggestions were broad and imaginative and attitudes were positive throughout the course of the committee's deliberations. It has been a pleasure to chair this committee and of course all of us on the committee stand ready to answer any questions which you or other members of the legislature might have concerning the recommended legislation. Thank you for your own fine support of the committee.

Sincerely,

Mike Miller, Chairman, Interim
Committee on Shared Revenues
with Municipalities

STATE
of ALASKA

MEMORANDUM

TO: Judith Pinero
Staff Representative for
Rep. Rudd
Room 620, Court Building

DATE : January 21, 1977

FROM: Mike McCormick
Chief, Audit Services
Audit Division

SUBJECT: House Bill No. 70

You have inquired as to the dollar impact of House Bill 70. The bill has not been referred to the Audit Division for an assessment of the fiscal impact. As soon as it is we will issue the usual statement. In the meantime, the following will give an indication of the impact.

As I understand it, the Bill would abolish the gross receipts tax aspect of AS 43.70 but keep the $25.00 business license requirement. The following figures would be used to project the future impact:

Total revenue for fiscal year ending June 30, 1976 from AS 43.70		$ 19,077,400
No. of licenses issued	30,286	
Less estimated number of no fee license (professional)	606	
Estimated number of taxable licenses issued	29,680	
X $25.00 fee		742,000
Approximate revenues from gross receipts portion AS 43.70 for fiscal year ending June 30, 1976		$ 18,335,400

Estimated revenue from business license and gross receipts For:

1977	20,430,000
1978	17,422,500

It should be noted that the impact for the revenue loss will be 60 per cent at the local level and 40 per cent at the State level due to the revenue sharing aspects of the law.

I believe these figures will give you a feel for the fiscal impact. I did not want to hold your request for the detailed analysis which the Department will issue.

Please contact me at 465-2321 if there are any further questions.

CITY OF FAIRBANKS

410 CUSHMAN ST.
FAIRBANKS, ALASKA 99701

March 1, 1977

Representative Larry Carpenter
Chairman, Interior Caucus
State Capitol
Pouch V
Juneau, Alaska 99811

Dear Larry:

I am writing with regard to HB 70 and HB 135.

In HB 70 there are some new catagories - some we can support, some we can not. The only one we can support is the ambulance. As you all know, the city is the only ambulance service into town and, therefore, we operate it area-wide, with the exception of the University of Alaska. This source of income will at least help the city taxpayer with some of those costs.

I object to the breaking out of the ports and the small boat harbors. Those are revenue producing programs and should be self-sustaining. I feel adding them as separate catagories is going to dilute the total amount appropriated. As you know, revenue sharing only received 90% funding last year and, if the funding level goes up considering previous catagories, we will receive less than last year.

We are in full support of HB 135. We feel that, if the total amount cannot be had, at least 50% should be gotten this year and the balance next.

Best regards,

James W. Rolle
Councilman

STATE OF ALASKA
THE LEGISLATURE

LEGISLATIVE AFFAIRS AGENCY

POUCH Y - STATE CAPITOL
JUNEAU, ALASKA 99811
907-465-3800

M E M O R A N D U M January 21, 1977

SUBJECT: HB 70, relating to the municipal revenue sharing program.

TO: Representative Lisa Rudd

FROM: John B. Chenoweth
Legislative Counsel

At your request, I have reviewed HB 70 with reference to the current program of state aid to local governments (AS 43.18.010 - 43.18.045) and offer these comments.

The origin of HB 70 is HB 474 (1976 session) and the several committee substitutes offered by the House Community and Regional Affairs Committee and Finance Committee. HB 474 was the product of work undertaken by an interim committee. The activities of the interim committee and the reasons underlying many provisions of the bill now before your committee for consideration are summarized in the attached letter from Representative Mike Miller, chairman of the interim committee, to Senator Genie Chance, chairman of the Legislative Council.

* * *

Section 1. In lieu of AS 43.18, section 1 amends the revenue sharing program by adding a new chapter, designated AS 43.17.

Sec. 10 of the bill generally follows AS 43.18.020 of the current program in establishing the municipal services account as the source of payments to recipients under the program and by authorizing pro-ration of funds in the event of an appropriation shortfall and reversion to the general fund amounts appropriated in the event of excess.

Sec. 20 of the bill is new language authorizing an optional minimum grant to municipalities. A municipality may elect to receive a grant of $25,000 under chis section instead of the basic grant conditioned on provision of services as provided in the following section. Sec. 20 is, of course, of benefit to small cities.

Sec. 30 of the bill replaces much of current AS 43.18.010 and is the heart of the program revision. The present program provides shared revenues to local governments (and others) generally on the basis of dollars per capita for the number of residents of the local government or service area on the basis of service provided. This section of the bill would authorize payments on the basis of units per capita for the services provided, with the unit count then being multiplied by a predetermined dollar amount to ascertain the dollar total of the entitlement. Consistent with the interim committee's intention that there be, in the revised program, a mechanism which, if amended, would allow for general adjustment of entitlements in all categories, the unit per capita approach tied to a determined dollar value would permit subsequent adjustment of the program not by amendment of specific categories (as in the present program) but by simple amendment of the one figure. In other words, when the dollar amount is altered at any subsequent date, the change would be applicable to all entitlement categories set forth in (a)(1) of this section.

Within (a)(1), the following categories do not appear in the current program and are additions to the program in this bill:

(I) Solid waste disposal	2 units
(J) Ambulance	2 units

Additionally, where the current program provides assistance for pollution control -- air or water, but not separately for each -- this bill establishes each as a separate category:

(C) Water pollution control	2 units
(K) Air pollution control	2 units

Again, where, in the current program, there is a "general" transportation category providing assistance for any one of the following services, but no additional assistance for a second and subsequent service provided, this bill creates three separate categories and provides separate unit credit for each:

(F) Small boat harbor and ports	5 units
(G) Mass transit	5 units
(H) Airport	5 units

The remaining categories of the bill -- police protection, fire protection, land use planning and parks and recreation -- are comparable to like categories in the existing program.

Note that, in sec. 30(a)(2) of the bill, it is no longer to be required that the exact population of the municipality serve as the basis of computation of per capita entitlements under the program, but that the population of the municipality rounded upward to the nearest hundred should be used. There is no rounding provision specified in the current program.

Subsection 30(b) of the bill authorizes payments on the basis of services provided by a municipality to persons residing outside the boundaries of the municipalities. This is especially significant in the case of cities in the unorganized borough where certain services may reach beyond corporate limits. In order to receive additional unit count credit for persons residing outside the municipality, an applicant would have to demonstrate provision of services under contract within a defined area. The provision is applicable to each of the eleven categories of entitlement set forth in sec. 30(a)(1). The current program does not require evidence of a contract for service, but authorizes payments for persons outside municipalities only in the category of fire protection [AS 43.18.010(a)(2)(B)].

Subsection (c) of the bill authorizes payments for services which are provided on a less-than-areawide (that is, non-areawide) basis within the municipality, where service areas or differential tax zones have been established. It restricts the use of funds received by category to areawide and non-areawide use, respectively, depending upon the nature and extent of the particular service which generated the payment.

Sec. 40(a) of the bill is taken wholesale from existing AS 43.18.010(h)(1) - (4), as enacted in the 1976 session (sec. 2, Ch. 268, SLA 1976). Distinction is made between hospitals which are operated and supported by a local government and those which are within the boundaries of a local government but which are not owned and operated by the municipality, with financial assistance directed to each.

Sec. 40(b) of the bill, relating to assistance for hospital construction, changes in one marked respect the language of the current program found in AS 43.18.010(j). Where the current provision authorizes assistance for hospitals and health facilities construction of which started after January 1, 1968, the provision of the bill would extend support for construction only to facilities the construction of which had started before January 1, 1976.

The definitions of 'hospital' and 'health facility' of sec. 40(c) of the bill derive from comparable definition in the current program, found in AS 43.18.010(i)(1) and (2).

Sec. 50 of the bill, extending assistance on a dollar per capita (rather than per unit) basis to volunteer fire departments of the unorganized borough derives from current AS 43.18.010(a)(2)(B). Please note that the authority for the promulgation of regulations setting qualifying standards for organization and service of new volunteer fire departments is shifted, in the bill, from the fire marshal to the department of community and regional affairs.

Sec. 60 of the bill authorizes payment of area cost-of-service differentials. It is taken from AS 43.18.012 of the current program with minor changes of wording to assure that recipients in all sections -- minimum grants, basic grants, hospitals and health facilities, volunteer fire departments, and road maintenance -- enjoy the benefits of the differential.

Sec. 70 of the bill adds new language that does not appear per se in the current program. The section, as drafted, was intended to provide a means by which the department could ascertain local tax effort through the submission of necessary reports. Tax effort, however, is not the basis by which the amount of shared revenue assistance is determined in the bill. Because other statutory provisions [AS 29.23.560(a)(2) and (b) and AS 29.48.220] currently require the preparation and submission of certain kinds of reports by local governments as a condition of receipt of shared revenues, and because a budget serves as a useful check for the department in determining whether a local government is actually providing the service, retention of the concept of sec. 70 -- if not the specific language -- may prove beneficial.

Sec. 80 of the bill is a combination of AS 43.18.010(c) and (k) of the current program, with two amendments: in the bill, at page 7, lines 3 and 4, "50 percent of the amount paid per capita for mass transit under this chapter" replaces "50 per cent of the amount paid per capita for transportation facilities and services under (a) (6) of this section" in current law; the final clause of the section (lines 4 - 7) making provision for assistance for water and air pollution appears as entirely new language in the bill.

Sec. 90(1) of the bill, setting additional limitation on the expenditure of funds for non-areawide services in boroughs, follows, in principle, current AS 43.18.010(e). Sec. 90(2) of the bill, addressing police protection services, is carried forward verbatim from current AS 43.18.010(g)

Sec. 100 of the bill carries forward from the current statutes the provisions for shared revenue assistance in the category of road maintenance, retaining the same rate for "regular" road maintenance ($1500 per mile) and for maintenance of so-called "ice roads" or seasonal roads maintained across frozen waterways ($900 per mile). The language of the bill is taken verbatim from current AS 43.18.010(b).

Sec. 110 of the bill likewise derives from current law (AS 43.18.040). The 1976 legislature added the language appearing in the second sentence of the section, having reference to minimum service standards. The minimum standards provision is significant in light of the fact that HB 70 does not carry forward from present law any other statutory provisions defining minimum services standards relating to police protection [AS 43.18.010(a)(1)], fire protection [AS 43.18.010(a)(2)(A pollution control [AS 43.18.010(a)(3)], or land use planning [AS 43.18.010(a)(4)]. Rather, in the absence of these statutory definitions of minimum qualifying services, the department would be required to make the determination by regulation. The department has adopted such standards as required by current AS 43.18.040: see 19 AAC 30.020.

Sec. 120 of the bill permits expenditure of funds received under this program by a municipality for a public purpose for which the municipality otherwise enjoys authority to expend funds. In other words, except in the instance of health facilities and hospitals (sec. 40 of the bill), funds received on account of provision of a particular service need not be expended for that particular service. This section follows, in principle, similar provisions of the current program [AS 43.18.010(b) and AS 43.18.010(h)(4)].

Sec. 130 of the bill, comparable to AS 43.18.045 added by the 1976 legislature, assures that, in the event of unification, consolidation, or merger of local governments, the successor local government receives at least the amount of shared revenues under the program to which the merged or unified municipalities would have been individually entitled.

Sec. 140 of the bill includes two definitions applicable to the program. Note especially the exceptional language involving second class cities in organized boroughs: as I read the language, the effect of the definition precludes such newly-incorporated cities from participating in the revenue sharing program.

Section 2. This section repeals the existing revenue sharing program.

Section 3. This section appears to be intended to serve as a "hold harmless" provision, guaranteeing by way of a minimum payment to local governments at least that amount which the local government was entitled to receive on the basis of the FY 1976 program, as administered under AS 43.18 repealed in sec. 2 of this act.

The remaining sections relate to amendment of the Alaska business license tax provisions and are beyond the scope of the memorandum.

* * *

I would direct attention to several provisions of the current program which are not carried over into this bill. One of those -- the removal of standards of service for certain categories -- has already been mentioned. Others include, notably, the removal of any reference to legislative purpose or intent [AS 43.18.030(a)] and the requirement that local governments advise taxpayers of the value of the assistance provided by this and another program expressed in terms of millage rate [AS 43.18.030(b)]. Also lost is the provision of current AS 43.18.010(h)(5) which requires the certification of the commissioner of health and social services prior to disbursement of funds for health facility and hospital purposes.

* * *

I trust this provides an initial overview of the similarities and differences between the bill and the existing program. Please contact me should you want additional work performed.

Re: House Bill No. 70

Dear Representative Rudd:

House Bill No. 70, an Act relating to municipal revenue sharing and the Alaska Business License Act was introduced in the House on January 19, 1977 and was referred to the House Community and Regional Affairs and Finance Committees.

For the consideration of the House Community and Regional Affairs Committee, I am enclosing copies of Fiscal Notes prepared by Mr. P. A. Wall, Director, Administrative Services Division, Department of Revenue concerning the proposed legislation.

Very truly yours,

R. D. Stevenson

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

The effective date of July 1, 1977 for Section 4 should be changed to January 1, 1980 as Section 4 relates to Sections 5-10.

HB 70 locks us in to 1978 — so 1978 January 1st not shared

If the effective date of January 1, 1980 is realized, Gross Receipts revenues will not continue after 12/31/79. The continued revenue sharing provision of this act will require an additional authorization of $4,250,000 from the General Fund for FY 80 and $8,500,000 each FY thereafter. The Tax on Banks ($1,800,000 in 1975) will continue to be shared under the Act.

$9,000,000 of Annual Gross Receipts income to the General Fund (income not shared) will be eliminated.

8,500 could be reported

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)
The effective date of July 1, 1977 for Section 4 should be changed to January 1, 1980 as Section 4 relates to Sections 5-10. The Statute reference on page 10, lines 27 & 28 should be AS 43.18.090. Recommend that on page 10, line 9, after the word "payable" that the remainder of the sentence be deleted and the following inserted, "at the same time and under the same conditions as the federal tax."

A cost decrease will occur when the total Gross Receipts tax impact ends. This will not occur for at least a year after the tax is abolished as final returns must be received, audited and shared. Decrease will consist of 1 position, forms and postage costs.

MEMORANDUM

TO: Judith Pinero
Staff Representative for
Rep. Rudd
Room 620, Court Building

DATE : January 21, 1977

FROM: Mike McCormick mc
Chief, Audit Services
Audit Division

SUBJECT: House Bill No. 70

You have inquired as to the dollar impact of House Bill 70. The bill has not been referred to the Audit Division for an assessment of the fiscal impact. As soon as it is we will issue the usual statement. In the meantime, the following will give an indication of the impact.

As I understand it, the Bill would abolish the gross receipts tax aspect of AS 43.70 but keep the $25.00 business license requirement. The following figures would be used to project the future impact:

Total revenue for fiscal year ending June 30, 1976 from AS 43.70		$ 19,077,400
No. of licenses issued	30,286	
Less estimated number of no fee license (professional)	606	
Estimated number of taxable licenses issued	29,680	
X $25.00 fee		742,000
Approximate revenues from gross receipts portion AS 43.70 for fiscal year ending June 30, 1976		$ 18,335,400

Estimated revenue from business license and gross receipts For:

1977	20,430,000
1978	17,422,500

It should be noted that the impact for the revenue loss will be 60 per cent at the local level and 40 per cent at the State level due to the revenue sharing aspects of the law.

I believe these figures will give you a feel for the fiscal impact. I did not want to hold your request for the detailed analysis which the Department will issue.

Please contact me at 465-2321 if there are any further questions.

JANUARY 21, 1977

TO: LISA

FROM: JUDITH

RE: Revenue Sharing / Alaska Business License Act

Contacted Department of Revenue, Mike McCormick, Division of Audit and he can give us an estimated loss of revenue based on 1976 intake from licenses. Because that could be done fairly rapidly I requested that, and told him that the more difficult forecast to 1980 would probably still be needed in order to get the best picture. After we take a look at what he submits based on 1976, I informed him that I would get back to him the first of next week - 1/24.

December 8, 1975

Senator Genie Chance
310 "K" Street
Suite 701
Anchorage, Alaska 99501

Dear Senator Chance:

I am pleased to enclose with this letter two pieces of proposed legislation which represent the recommendations of this interim committee in the area of shared revenues with municipalities. The proposed legislation is the product of a number of meetings of the committee in the months since the adjournment of the legislature plus two public hearings. One of these public hearings was held in conjunction with the October convention of the Alaska Federation of Natives, in order to receive bush community viewpoints. The other hearing was held in conjunction with the October conference of the Alaska Municipal League. In addition, suggestions and constructive criticism were requested by mail and received from a wide variety of cities and communities throughout the State of Alaska.

It was considered crucial, since revenue sharing has been created solely for the purpose of assisting municipalities in the funding of needed local services, that the final product of the committee take maximum note of the views and suggestions of the various municipalities across the state. The enclosed bill represents what the committee considers to be the most beneficial and most feasible of those suggestions.

Perhaps some review might be in order concerning the need for revision of the current shared revenue program. Although the program in concept currently enjoys the unanimous and enthusiastic support of every municipality in the state, the following were considered deficiencies which new legislation could correct.

REPRESENTATIVE
MIKE MILLER
ALASKA STATE LEGISLATURE

HOUSE MAJORITY LEADER
VICE CHAIRMAN, LEGISLATIVE COUNCIL
VICE CHAIRMAN, STATE AFFAIRS COMMITTEE
MEMBER, RULES COMMITTEE
MEMBER, COMMITTEE ON COMMITTEES

First, it was felt that a "foundation" approach might be useful in the field of revenue sharing--"foundation" approac meaning a formula with a foundation amount similar in concep to that utilized in the school foundation statutes. The beauty of such an approach is that whenever a legislature wishes to raise the foundation amount (to recognize increase in the cost of doing business) it is necessary merely to amend one word in the statutes. Absent the foundation approach it is necessary, whenever you wish to recognize the increase in the cost of doing business, to go into the statutes and revise the per capita dollar figure for each of the various categories in which shared revenue assistance is given to municipalities. This is both cumbersome and, in practice, inequitible. Some categories tend to get raised, others do not and the system can easily get out of balance.

It was felt, too, that the amount of shared revenues being designated for small communities was much too small. It was recognized that the present purely per capita approach just did not offer the very small communities enough money to assist in any meaningful way in meeting the obligations of local government. It was recognized that whether a second class city had 25 residents, or 75 residents, or 125 residents there was nonetheless an irreducible minimum cost of doing business, and that that minimum was just as great for very small villages as it was for medium sized second class cities. It was, therefore, considered desirable that a minimum grant base be established for these communities and it was further considered desirable that the base amount agreed upon be as generous as possible in order that the benefits of government on the local level be economically feasible for the communities.

Another deficiency in the current statutes was the lack of the requirement for standards and criteria by which the Department of Community and Regional Affairs could determine whether communities were actually entitled to shared revenues in the various categories under which they were seeking aid. This deficiency has long been recognized by the Department of Community and Regional Affairs and has been recognized additionally by the Legislative Budget and Audit staff. This is not to say that the shared revenue monies alloted to the communities should be required to be spent in the categories designated--far from it. It was and still is the consensus of the committee and of the municipalities that local discretion should continue in the spending of shared revenue receipts. It was felt, however, that in order to receive shared revenue monies in, for example the fire department category it should be demonstrated that the community can meet minimum standards in that category.

> Finally, there was a question projected by some communities as to whether the use of categories in sharing state revenues was even appropriate. It was thought perhaps more appropriate simply to allocate available dollars to the municipalities and let each local government establish its own priorities without regard to existing municipal services.

In order to correct these deficiencies the committee drafted three alternate pieces of legislation for consideration by the committee and the municipalities of Alaska. With considerable--and greatly appreciated--assistance from the University of Alaska/Anchorage, we were able to develop extensive data showing the practical results (i.e., the dollars to be received) for each community in the state under the various alternatives. We developed similar data based on proposed legislation already in the house (legislation which, incidently, had been previously endorsed by the Alaska Municipal League) and also on a simple per capita allocation of funds to municipalities. Four of these five total alternative were specifically noncategorical in approach. All of the alternatives and all of the data were presented to delegates of the Alaska Federation of Natives Convention and delegates to the Alaska Municipal League Conference. In addition, this material was mailed to virtually every municipality, large and small, in the state with requests for evaluations and suggestions.

I think it would be fair to say that prior to the hearings and mialings there was a strong feeling among the larger communities, in partiuclar, that revenue sharing should be based on tax effort. The feeling was that those who tax themselves the most should receive the most additional state aid. This was the principle thrust of the existing proposed legislation which the Alaska Municipal League had previously endorsed. The committee recognized this concept in two of the alternatives they proposed, but built in additional factors including the availability of tax resources plus tax effort in relation to those resources. Interestingly, when all the facts--in the form of state-wide computerized readouts--were laid before the communities a very noticable modification of opinion became apparent during the hearings and in countless conversations afterward. Committee memebers noted a discernible reluctance on the part of communities, large and small, to terminate the categorical approach. What was needed, several elected officials indicated, was a bill which more or less continued the "tried and true" categorical approach, in the present revenue sharing system but which also incorporated the "foundation approach".

Basically, then, this is the bill which the interim subcommittee has proposed:

First, the bill does create a municipal "foundation approach" to revenue sharing. It does so by allocating varying numbers of units to various categories of municipal services and then multiplying those units times population, and then multiplying this product times a "foundation" base figure. For this bill the committee established a foundation base at $1.00. In future years if the cost of doing business goes up, for instance 11%, the legislature may, if it chooses, raise the foundation amount by simply changing the figure $1.00 to $1.11.

In establishing categories and establishing unit values within each category, the committee did indeed stick by the "tried and true" categories of past years. Police protection, for instance, which in previous years earned communities shared revenue at the rate of $12.00 per capita will earn units within the foundation formula at the rate of 12 units. Fire protection is 7.5 units (as opposed to $7.50 per capita under the present system). Additional ingredients include air or water pollution control (2 units), land use planning (2 units). parks and recreation (5 units). Two important changes have been made in the categorical designations. Under present law a community can receive $5.00 per capita for operating either a small boat harbor/ port or for operating mass transit or for operating an airport. In the proposed bill 5 units can be accumulated in <u>each</u> of these categories. The second important difference is the addition of solid waste disposal as a new category, which in the proposed bill will be valued at 2 units.

The proposed legislation establishes a $25,000 minimum grant for municipalities whose low per capita standing would otherwise earn them only small amounts of revenue. The committee felt the $25,000 figure was a generous but nonetheless fair amount. It was interesting to note that at neither public hearing was there any critism of this amount. At one meeting of the committee, a single individual did observe that he thought the figure was pretty high for the very smallest communities. He did not, however, seek to have the committee change the amount.

Additional features of the bill include the following:

Special start-up grants have been established in various categories for municipalities who do not currently offer such services as police protection, fire protection, air

and water pollution control, land use planning, parks and recreation, small boat harbors/ports, air ports or mass transit systems. The Department of Community and Regional Affairs is specifically charged with creating minimum standards of service in the various categories for which municipalities can receive revenue sharing. Revenue sharing for hospitals remains virtually the same as under current law except that responsibility for administering this section is transferred to the Department of Health and Social Services. Additionally, in the area of health, a paragraph specifies that no hospital or health facility shall be eligible for revenue sharing unless the facility has received a Certificate of Need from a municipality or the state. This paragraph anticipates that "Certificate of Need" legislation will be passed in this session of the legislature. Another interim committee is studying the whole broad area of health facilities so this section may undergo substantial modification when that interim committee completes its deliberations. Shared revenues for road maintenance remains virtually the same as current law. A very important feature of the new legislation is that if a new second class city is created in an organized borough after passage of this law, the city would not be eligible for the $25,000 minimum grant. This feature is designed to preclude small gatherings of 25 people or more from incorporating simply to take advantage of the $25,000 revenue sharing opportunity. Finally, a very important feature of the proposed legislation is the clause which guarantees each municipality that it will not receive less money than it is receiving under the current statutes.

There, of course, are many additional features to the legislation, but this summary covers most of the major changes.

As noted earlier, the committee is submitting two bills for introduction and for consideration by the legislature. One is quite large and comprehensive and is described in the report above. The other bill consists of only one paragraph and this paragraph constitutes one of the many provisions of the larger bill.

The provision, drafted at the request of the Department of Community and Regional Affairs, simply mandates that the department create minimum standards and criteria to qualify municipalities for grants in each category of shared revenue. If the major bill should run into difficulties and if passage does not seem assured, then it is recommended that the legislature consider and enact the oneparagraph small piece of "clean-up" legislation.

The fiscal impact of the legislation will be to raise the state shared revenue allocation from a current level of about $15 million to a level of approximately $20 million--if the bill is fully funded. The raise, of course, comes from creating the $25,000 minimum grants to small cities, from creating a new category (solid waste) and from separating the now-combined port/harbor-airport-mass transit category into three separate categories.

This report would not be complete without making special acknowledgement of the work of the several individuals and agencies. The committee is extremely appreciative of the hours of work, both during committee sessions and out of session, by Dr. Garth Jones and P. J. Hill, both of the University of Alaska/Anchorage. The vast volume of computerized data that both Dr. Jones and Mr. Hill provided was crucial in the final deliberations and directions of the committee.

Similarly, we would like to give a special thanks to Mr. Rich Wilson and Mr. Sam Coxson, both of the City of Anchorage who helped in obtaining and analyzing the data, and who attended most of the sessions and hearings of the committee and contributed greatly to the deliberations. We are indebted as well to the Alaska Federation of Natives who made time available for us during the annual AFN convention in Anchorage, and the Alaska Municipal League who similarly made time available during its annual conference in that same city. The League, as well, was most helpful to the committee in circularizing its membership and alerting municipalities of Alaska to the work of the committee. Finally, I would like to acknowledge the fine work of the staff of the Legislative Affairs Agency, and Bill Berrier in particular, plus the membership of the interim committee. Interest was lively, suggestions were broad and imaginative and attitudes were positive throughout the course of the committee's deliberations. It has been a pleasure to chair this committee and of course all of us on the committee stand ready to answer any questions which you or other members of the legislature might have concerning the recommended legislation. Thank you for your own fine support of the committee.

Sincerely,

Mike Miller, Chairman, Interim
Committee on Shared Revenues
with Municipalities

Regarding House Bill No. 72: Historical Districts

Dear Representative Rudd:

It was recently brought to our attention that along with others you are sponsoring the subject bill on establishment of Historical Districts. I have also been informed that the Anchorage Historical Landmarks Preservation Commission has reviewed the bill and endorses it.

Our community is under tremendous pressure for development in areas where some of our older buildings are located. We are very much interested in trying to preserve these landmarks of our past. Just last week, the Municipality entered into a contract with an historic preservation specialist, Mr. Michael Carberry, to conduct a survey of our older structures. Your bill should help us considerably in attempting to establish an historic district encompassing these treasures of our past.

The Municipal Administration endorses the proposed bill and would like to support any efforts you are making to get it approved by the legislature.

Sincerely,

for George M. Sullivan,
Mayor

Regarding House Bill No. 72: Historical Districts

Dear Representative Rudd: Lisa!

The Municipality of Anchorage Historical Landmarks Preservation Commission is pleased to announce that in their regular meeting of January 25, 1977 House Bill Number 72 pertaining to creation of Historical Districts was formally and unanimously endorsed.

As you may be aware, our community is currently struggling to preserve some of our older landmarks and attempting to establish a district. These efforts are being conducted under dynamic circumstances where development pressures are forcing the replacement of older homes and buildings by high rise structures on a daily basis.

It is gratifying to the Commission that our State legislators are cognizant of our situation. We deeply appreciate your support. Your proposed Bill will aid us immeasurably in our activities in Anchorage.

As a result of your efforts, the lives of countless future residents and visitors of Alaska should be enriched through experiencing the fascinating historical and cultural foundations of our community.

Sincerely,

Katharine C. Crittenden

Katharine C. Crittenden, Chairwoman
Historical Landmarks Preservation Commission

LISA RUDD, CHAIRMAN

HOUSE OF REPRESENTATIVES

JUNEAU, ALASKA.

* WE, THE UNDERSIGNED, OPPOSE HB72. IT WOULD ALLOW ANY PROPERTY TO BE INCLUDED WITHIN AN HISTORIC DISTRICT ONLY BECAUSE OF ITS PROXIMITY TO STRUCTURES SELECTED AS HISTORIC. THIS DESIGNATION COULD EVENTUALLY HAVE AN ADVERSE EFFECT UPON DEVELOPMENT OF THE NON-HISTORIC PROPERTY. NO APPOINTIVE BODIES SHOULD HAVE THE RIGHT TO TAKE BINDING ACTION AFFECTING PRIVATE PROPERTY WITHOUT STRICT ADHERENCE TO PROFESSIONALLY ACCEPTED STANDARDS FOR ESTABLISHING HISTORIC SIGNIFICANCE. POSSIBLY UNQUALIFIED PERSONS COULD, IN THEIR ZEAL, ADVERSELY AFFECT THE RIGHTS OF OTHERS. WE URGE NO ACTION BE TAKEN ON HB72.

* SEE ATTACHED LIST OF SIGNATURES.

Dear Mr. Nagle:

Enclosed is a copy of H.B. 72, An Act relating to the creation of historical districts within municipalities. Perhaps you misunderstood the intent of the legislation. The bill in no way takes away property with or without compensation. H.B. 72 establishes historical districts and allows individuals owning property within the districts to become eligible for low-interest long-term loans.

I hope this clarifies any questions you may have had concerning my bill.

Sincerely,

Mike Miller

STATE of ALASKA

MEMORANDUM

TO: House Community & Regional Affairs Committee
The Alaska State Legislature

DATE : May 19, 1977

FROM: Gary L. Jenkins
Director
Audit Division

SUBJECT: CSHB 75

I have reviewed the recent version of the referenced bill. While it addresses some of the concerns which I mentioned previously to the committee, there are still several very important issues which are not addressed.

let's wait. this on one

First, there is no limitation in the bill as to how large a population center or centers would be necessary to place this in effect. For example, the City of Hoonah could decide to adopt the municipal income tax which would necessitate our putting into effect the full administrative procedures necessary to carry out this legislation. The cost of the administrative procedures would far outweigh any income which the municipality might receive from the tax. I strongly urge the committee to consider placing a restriction in the law which would make the tax effective only after a city or cities in the State, comprising a certain percentage of the State population, have opted to enact the municipal income tax.

OK

In subsection B of page 1 of the bill, there is a provision that a municipality may impose, modify, or repeal the income tax only after giving 120 days notice to the Commissioner of the Department of Revenue. That simply is not enough time for us to make the necessary adjustments to the tax forms prior to printing them for that year. I strongly urge that the provision be changed to read that the tax may be imposed, modified, or repealed "only after first giving notice to the Commissioner of Revenue not later than July 1 of the previous year".

OK

Subsection C on page 1 states that the income tax may not exceed 50 percent of the liability of the taxpayer under AS 43.20. I strongly recommend that a definition of liability be placed in the bill so that it is clear which liability figure is to be used. Is it to be the initially computed liability, the liability after deducting some or all credits, or the liability after deducting credits and adding in additional taxes due?

In subsection E on page 2 it should still be recognized that determining the source of the income will be difficult since we will have to go by mailing address. As I am sure the committee realizes, many people live in one area and have their mail delivered in a different area.

OK

In section 3 of the bill, on page 2, the new phrase added reference to a municipality which levies "and collects" a tax on net income. In this version of the bill, which provides for the State of Alaska to collect the tax for the municipality, it would appear that you might want to delete the words, "and collects".

let's leave out

With regard to the concept of allowing the tax to be deducted in a subsequent year on the Alaska income tax return, this would establish a precedent which is not normally allowed in an income tax. It should be remembered that the municipal tax, being based on the Alaska income tax, would be reduced by the allowance of the deduction of the tax previously paid. As I am sure the committee is aware, the Alaska income tax paid in one year is not deductible in the next year on the Alaska income tax return.

leave at 5% for now

In subsection C of section 7 of the bill, it is noted that the administration costs will be allowed up to 5 percent of the amount of tax payable to a municipality. First, I feel that the change from 2 percent to 5 percent is a good one. Second, this will only be valid if the limitation is placed on how large a population must be represented before the municipal income tax is placed into effect.

Dear Ms. Rudd:

Subject: House Bill 75

On several occasions the Matanuska-Susitna Borough Assembly has sought alternative revenue sources in order to reduce property taxes.

Since HB 75 would permit municipal income taxes under certain conditions, this Borough favors HB 75 and encourages its passage--hopefully with a provision that the State Department of Revenue could assist municipalities to collect local income taxes.

Very truly yours,

HB 75 - BOROUGH AND CITY INCOME TAX AUTHORITY

At its meeting of February 14, 1977, the Seward City Council voiced opposition to House Bill 75, authorizing boroughs and cities to levy income taxes. The Council unanimously felt this was an authority which should not be granted to the local governmental bodies.

The Council requests that this opinion of HB 75 be considered during the hearings to be held this week.

Representative Lisa Rudd
Chairperson , Community & Regional Affairs Committee
Pouch V
Juneau, Alaska 99811

Dear Representative Rudd:

At the regular meeting of the Bethel City Council held on March 27, 1978, Council passed Resolution No. 229, endorsing sponsor subsitute for House Bill No. 75, "AN ACT AUTHORIXING A BOROUGH OR CITY TAX ON NET INCOME."

Although there seems to be some problem wether you tax individuals that reside in the community or the ones that work in the community it is felt by the Bethel City Council that a City income tax on net income would be a more equitable form of taxation than a property tax.

If this bill was passed by the legislature it would also give municipalities another option under taxation which could eventually improve services at the local level because the Communities would have a wider choice of ways to fund different services and programs.

In the Bethel area where a large portion of the citizens depend on subsistance as a way of life and own property, a tax on property would jeoperdize their choice to live off the land. It is for this reason as well as giving each municipality an option in taxation that the City of Bethel endorses this legislation and encourages the State legislature to pass and approve it.

If you should need any additional information in regard to the City's position on this piece of legislation, do not hisitate to contact Me.

Sincerely,

Lyman Hoffman

CITY OF BETHEL, ALASKA
RESOLUTION NO. 229

A RESOLUTION OF THE CITY OF BETHEL, ALASKA ENDORSING THE SPONSOR SUBTSITUTE FOR HOUSE BILL NO. 75, A BILL FOR AN ACT ENTITLED: "AN ACT AUTHORIZING A BOROUGH OR CITY TAX ON NET INCOME."

WHEREAS, a Municipal Tax on net income would provide an additional option of taxation other than sales tax, personal property tax, or real property tax to an assembly or council of a municipality, and

WHEREAS, this Municipal Income Tax would not become effective unless the residents of the municipality, by referendum, enacted an ordinance adopting a local income tax, and

WHEREAS, the United States Federal Government as well as the Alaska State Government do levy a individual income tax to support governments services, and

WHEREAS, the Council believes that a municipal income tax would be a more fair and equitable form of taxation then the sales tax, personal and real property tax.

NOW THEREFORE BE IT RESOLVED THAT The City of Bethel, Alaska endorses the Sponsor Substitute of House Bill No. 75, a bill for an act entitled: "An Act Authorizing a Borough or City Tax on Net Income." and would endorse a similar bill if introduced in the Senate and encourages the State Legislature to pass and approve this important piece of legislation.

PASSED, APPROVED AND ADOPTED BY THE CITY COUNCIL OF THE CITY OF BETHEL, ALASKA THIS 23 DAY OF March, 1978.

SPONSOR SUBSTITUTE FOR HOUSE BILL NO. 75

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act authorizing a borough or city tax on net income."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 29.53 is amended by adding a new section to read:

ARTICLE 6. MUNICIPAL TAX ON NET INCOME.

Sec. 29.53.500. TAX ON NET INCOME. (a) The assembly or council of a municipality may, by referendum, enact an ordinance adopting by reference a local income tax impo ed upon individual residents and corporations doing business within the municipality. The tax shall be a percentage of the liability of the resident or corporation of the tax imposed under the Alaska Net Income Tax (AS 43.20).

(b) An ordinance enacted in accordance with the provisions of this section shall impose a rate of tax for the next calendar year and may provide that the tax rate shall continue in effect for each succeeding calendar year until the tax rate is modified by a subsequent ordinance. A municipality imposing an income tax may repeal the tax. A municipality may impose, modify or repeal an income tax only after first giving notice to the commissioner of revenue not later than July 1 of the previous year. Enactment, modification or repeal of an income tax authorized by this section shall become effective only on the first day of a calendar year.

(c) An income tax imposed by a municipality under this section may not exceed 50 per cent of the liability of the taxpayer under AS 43.20 after deduction of credits and inclusion of additional taxes due.

(d) An income tax imposed under this section shall be administered by the commissioner of revenue, who shall collect and account for the revenue in the manner provided in AS 43.20.360.

(e) A borough may preempt an income tax levied by a city under this section by adopting an areawide income tax. The commissioner shall refund the taxes collected within the borough to the borough and all cities within the borough in proportion to the amount of income tax revenue raised by each city within the borough unless the borough and all cities within it mutually agree on a different method of sharing.

(f) A municipality may levy the tax authorized under this section if it levies and collects not more than one of the following taxes authorized by law:

(1) sales taxes, authorized by sec. 415 of this chapter;

(2) personal property taxes, authorized by sec. 10 of this chapter;

(3) real property taxes, authorized by sec. 10 of this chapter;

(g) In this section, "resident" means an individual resident, nonresident or part-year resident of Alaska, as defined in AS 43.20.011, who is domiciled in or maintains his principal residence or place of abode in the municipality.

* Sec. 2. AS 29.13.100 is amended by adding a new paragraph to read:

(37) AS 29.53.500 (borough or city tax on net income)

* Sec. 3. AS 29.53.035 is amended by adding a new subsection to read:

(f) A municipality which levies an income tax under sec. 500 of this chapter may exempt from taxation real or personal property.

* Sec. 4. AS 43.20.160(c) and (d) are amended to read:

(c) The department shall prescribe and furnish all necessary forms, and adopt and publish all necessary regulations in plain and concise language conformable with this chapter for the assessment and collection

What cities, States & fed all levy inc. taxes (Utah R)

of the taxes imposed by secs. 10 - 350 of this chapter and for a municipal tax on net income levied and collected under authority of AS 29.53.500 and sec. 360 of this chapter. The department shall apply as far as practicable the administrative and judicial interpretations of the federal income tax law. The department shall also prepare a concise statement of the contents of the code sections referred to in this chapter for the information of the taxpayer and make them available to the taxpayer making a return.

(d) All money collected by the department under secs. 10 - 350 of this chapter shall be deposited in the general fund of the state.

* Sec. 5. AS 43.20.170(a) is amended to read:

(a) Every employer making payment of wages or salaries shall deduct and withhold an amount of tax computed in a manner to approximate the amount of tax due on those wages under this chapter and under an income tax levied by a municipality in accordance with AS 29.53.500 and collected by the department for that year. The department shall publish the rate of withholding required by this section and the rate required by the income tax levy of a municipality which shall be expressed as a percentage of the amount required to be withheld under sec. 3402 of the Internal Revenue Code of 1954. Every employer making a deduction and a withholding shall furnish to the employee upon request a record of the amount of tax withheld from the employee on a form prescribed by the department.

* Sec. 6. AS 43.20.290 is amended to read:

Sec. 43.20.290. [EXCLUSIVE] STATE AUTHORITY. No tax may be levied and collected upon the net income of resident or nonresident individuals by a general law municipality [CITY] or by a home rule municipality [CITY] or any other political subdivision of the state except as provided by AS 29.53.500.

* Sec. 7. AS 43.20 is amended by adding a new section to read:

ARTICLE 6. MUNICIPAL TAX ON NET INCOME.

Sec. 43.20.360. ADMINISTRATION. (a) Municipal income taxes levied and collected under AS 29.53.500 are subject to the provisions of this chapter.

(b) A municipal income tax levied and collected under AS 29.53.500 shall be administered by the commissioner of revenue, who shall collect and account for the revenue.

(c) The commissioner shall determine each municipality's share of the cost of administering this section. In determining each municipality's share, the commissioner shall apportion the cost of collection and accounting for the funds in proportion to the tax collected from each municipality of the state which levies an income tax. The commissioner may withhold the prorated share of the cost of collecting and accounting for funds, but the amount withheld may not exceed five per cent of the amount payable to a municipality. After deducting the amount of any refunds due and the prorated share of the cost of collecting and accounting for funds, the commissioner shall pay to each municipality, as soon as practicable, the amount to which it is entitled under AS 29.-53.500.

LOCAL INCOME TAX

Philadelphia enacted a local income tax in 1939. Since then about 4,000 localities in 10 states have followed its example. Approximately 40 million residents live within localities levying a local income tax.[1]

Revenue derived from these taxes rose from 18 million in 1940 to 2.403 billion in 1973. The percentage of revenue from local income taxes has grown from .3% (1940) to 3% in 1973.[2]

A majority of these municipalities levy a flat rate which varies between .25% and 3.5%. Cities in Maryland charge a percentage of the state income tax.[3]

The total revenue from all municipalities derived from city income tax is 8.8%.*[4] A number of communities receive a majority of their revenue from income tax.[5]

Collections per capita from 48 communities range from $35.17 to a maximum of $195.71.[6]

From 1948-1972, the increase in receipts from local income tax was 17.9%.[7]

*does not include the Washington D.C. which is 25.7%.

① Readers Digest Almanac 1977

CITY INCOME TAXES

Sources: Tax Foundation; Commerce Clearing House

Philadelphia has the distinction of levying the oldest local income tax still in effect today. Earlier efforts at such taxation, including one in Charleston, S.C., in the early 1800s, foundered on administrative difficulties.

Since the path-breaking Philadelphia enactment in 1939, however, about 4,000 localities in 10 states have followed suit. And authorizations have been granted (although no locality has acted) in Arkansas and Kansas.

In addition, a related levy has been imposed on employers: the local payroll tax, based on an employer's wage expenses. This has been enacted in Jersey City, Newark, N.J., San Francisco, and four Oregon counties.

Despite first impressions from the table that follows, the local income tax is primarily a big-city phenomenon.

Most of the taxing jurisdictions are small, but this is because many—over 3,800—small towns and school districts in Ohio and Pennsylvania use the levy. Elsewhere the tax is typically used by large jurisdictions.

Nine of the 25 biggest cities in the United States, including Washington, D.C., now impose their own income taxes.

Few of these local taxes are really comparable to state or U.S. taxes, since most apply only to wages and salaries—"earned" income. However, those levied by New York City, Baltimore, and cities in Michigan are closely linked, both in coverage and administration, to overlapping state taxes.

In the District of Columbia, where the tax has broad coverage and applies at graduated rates, there is little to distinguish it from a state income tax.

Besides the roughly 40 million residents in localities levying income taxes, countless others who work in them but live elsewhere—commuters in Alabama, Delaware, Kentucky, Missouri, Ohio, and Pennsylvania—are subject to the levy.

Maryland's local taxes apply to residents only, as does the District of Columbia's tax.

Commuters in Michigan pay one-half the resident rates, while those in New York City pay sharply lower rates.

Where many localities in the same area tax income, special arrangements are necessary to avoid unfair treatment of those who work in one jurisdiction but live in another.

As the table below shows, local income taxes are essentially confined to the states in the Northeast and Middle Atlantic regions—with the exception of St. Louis and Kansas City, Mo., and six places in Alabama, including Birmingham and Gadsden.

The table below, compiled by the Tax Foundation from Commerce Clearing House data, lists the rates in effect as of Sept. 1, 1976, for all U.S. localities with income taxes.

[a] Duplicative transactions between levels of government are excluded in arriving at aggregates.
[b] Principally individual income.
[c] Includes collections for unemployment compensation and employee retirement funds.
[d] Amounts received directly from Federal government, not transfers of Federal funds received initially by states.
[e] Intergovernmental revenue is shown as a percent of total revenue.

TABLE 150 – LOCAL INCOME TAXES, RATES AND COLLECTIONS (Cont'd)
(Dollar amounts in thousands)

State and local government	Rate July 1, 1973 (percent)	Municipal tax collections, 1971-72 (Cities with over 50,000 population in 1970)		
		Total tax collections	Income tax collections	
			Amount	As a percent of total collections
Pennsylvania:[6] (Continued)				
Wilkes-Barre	0.5[7]	$4,291	$630	14.7
York	1.0[9]	4,157	556	13.4
Approx. 3,750 other local jurisdictions (including over 1,000 school systems)	0.25-1.0	–	–	–

Note: Excludes Washington, D.C. which has a graduated net income tax that is more closely akin to a State tax than to the municipal income taxes (see table 141). Also excludes the Denver Employee Occupational Privilege Tax of $2 per employee per month, which applies only to employees earning at least $250 per month; the Newark 1% payroll tax imposed on employers, profit and nonprofit, having a payroll over $2,500 per calendar quarter, the San Francisco 1% payroll expense tax (eff. 10/1/70); the 1/2 of 1% quarterly payroll tax on employers imposed in the Tri-county Metropolitan Transit District (encompassing all of Washington, Clackamas and Multnomah counties, Oregon); and the 1/4 of 1 percent payroll tax imposed on employers in the Lane County Oregon Mass Transit District.

– Signifies a county, or a city under 50,000 population.
n.a.-"not available."

[1] The tax rate on nonresidents for all counties is 1/4 of 1%.
[2] A taxpayer subject to the 1.25 percent tax imposed by the City of Louisville may credit this tax against the 2.0 percent levied by Jefferson County.
[3] Under the Michigan "Uniform City Income Tax Act," the prescribed rates are 1.0 percent for residents and 0.5 percent for nonresidents. A resident is allowed credit for taxes paid to another city as a nonresident.
[4] The rate for residents in Detroit was increased from 1 percent to 2 percent effective October 1, 1968.
[5] New York City residents' rate ranges from 0.7 percent on taxable income of less than $1,000 to 3.5 percent on taxable income in excess of $30,000. An earnings tax of 0.45 percent of wages or 65/100 of 1 percent on net earnings from self-employment, not to exceed that which would be due if taxpayer were a resident, is levied against nonresidents. A 4% tax is imposed on unincorporated businesses carried on in the city.
[6] Except for Philadelphia, Pittsburgh, and Scranton, the total rate payable by any taxpayer is limited to 1 percent. For coterminous jurisdictions, such as borough and borough school district, the maximum is usually divided equally between the jurisdictions unless otherwise agreed. However, school districts may tax only residents. Thus, if a borough and a coterminous school district each have a stated rate of 1 percent, the total effective rate for residents is 1 percent (½ of 1 percent each to the borough and school district) and the tax on nonresidents is 1 percent, the stated rate imposed by the borough.
[7] The school district rate is the same as the municipal rate.
[8] The school district rate is 0.5 percent.
[9] There is no school district income tax.
[10] The Philadelphia school district imposes a 2% tax on investment income.
[11] School district rate. The Pittsburgh city income tax was repealed effective January 1, 1973.
[12] Combined city and school district rate may not exceed 2.0 percent.

York	1.0[10]	2,286	523	22.3

Note: Includes only cities with 50,000 or more inhabitants in 1960. Excludes Washington, D. C., which has a graduated net income tax that is more closely akin to a State tax than to the municipal income taxes. Also excludes the Denver Employee Occupational Privilege Tax of $2 per employee per month, which applies only to employees earning at least $250 per month.

[1] If total annual wages or net profits are $4,000 or less there is no tax liability. On income between $4,000.01 and $6,000.00 the rate is ¼ of 1%; on income of $6,000.01 or more ½ of 1%. The tax rates apply to total income, not merely to the proportion of income falling within a given bracket. In this sense the tax is not a typical graduated levy.

REPORT OF THE INTERIM COMMITTEE ON TAXATION IN THE UNORGANIZED BOROUGH

The purpose and scope of the interim committee was to organize public hearings to receive comments from citizens in Delta, Tok, and Fort Yukon as representative of unorganized areas of the state that would be effected by taxation in the unorganized borough.

The interim committee was composed of standing members of the House Community and Regional Affairs Committee for the Tenth Session of the Alaska State Legislature. The members are:

Representative Lisa Rudd, Chair
Representatives Merle Snider, Bill Miles, Sally Smith, Randy Phillips, Nels Anderson, Pete Lovseth, Al Ose and Tim Kelly.

Staff accompanying the committee were:

Bob Dozier, State Assessor, Jim McKenzie, Legislative Affairs Legal Division and Judity Pinero, Administrative Assistant to the committee.

There was no action taken on the bill nor was there any work sessions or mark-up during the scheduled public hearings.

Public Hearings

Delta	October 17
Tok	October 18
Fort Yukon	October 20

(with stops in Beaver and Stevens village)

Notification-Publication

August, 1977	Letters to Delta, Tok and Fort Yukon School Board to arrange meeting space in the local schools.
August, 1977	Letters to Dot Lake, Beaver, and Stevens Village advising community of the committee's informal visit to talk to residents.
September, 1977	Public hearing announcements provided to interested persons and newspapers in the community and surrounding area.

Summary and History of House Bill 202

House bill 202 - An Act providing for assessment, levy and collection of a tax on developed land in the unorganized borough; and providing for an effective date."

HB 202, if enacted, would levy a tax on improved property in the state's unorganized borough - that is, any land in the state which is not within an incorporated borough or a first class borough or a home rule city. HB 202 was introduced by Rep. Charles Parr of Fairbanks.

There is a similar bill in the Senate, which was introduced by Senator Joe Orsini of Anchorage.

Only improved property would be taxed and the bill calls for the tax rate to equal the average of the property tax rates levied by the boroughs in the state for the support of borough school districts . The Department of Community and Regional Affairs has estimated that the rate is about 7 mills (7/10ths of 1% of the assessed value of the property).

As the bill is drafted, the following property would be execpt from taxation:

1. Property which has not been improved, such as acreage in woodland.

2. Real property which is exempt from taxation under the state's municipal code, such as the property of churches, veterans' groups and senior citizens;

3. Real property which is being taxed under the state's 20 mill levy on property used for the exploration, production or transportation of oil, and

4. up to $10,000. of the value of residential real property, if it is within a municipality and if the municipality approves the exemption.

The bulk of the legislation, after describing the extent of the tax, addresses the mechanics of assessment, appeals of assessments, collection of the tax, and enforcement processes and penalties.

HB 202 is not the first time the question of a property tax in the unorganized borough has been raised. It came up in 1972 when the 20 mill tax was placed on oil and gas properties. At that time, the question was whether it was fair to tax the pipeline, but not any of the other valuable property in the unorganized areas.

In fact, I believe the oil industry raised this question as a constitutional "equal protection" issue in litigation, but the suit was settled before the issue was decided. Later efforts to focus on the question of taxation in the unorganized borough came in 1975 with the rural education attendance areas in the unorganized borough. Some legislators felt at that time that local control and policy making power should not be given to the REAA's without requiring them to make local tax contributions to help support the REAA's.

The fact that the REAA's are entirely supported by the state whereas school districts in incorporated areas must support much of their education services through local tax levies, seems to be the reason for the introduction of HB 202. Urban legislators find it hard to justify this apparent inequity to their constituents, who are paying both local and state taxes to support education in the state.

That the legislature has the power to levy a property tax, or any tax, in the unorganized borough is without doubt. Under the state constitution (Art. X, Sec. 6) the legislature is the assembly, or governing body, of the unorganized borough.

PUBLIC HEARING COMMENTS - SYNOPSIS

The majority of those testifying in Delta, Tok and Fort Yukon were opposed to the levy and collection of a tax on developed land in the unorganized borough for the following reasons:

- imposed taxation forces the formation of local government.
- cost of levy and collection versus revenue
- no assurance that revenues generated would benefit their area.
- taxation without representation
- assessed valuation is too high in the present bill
- opposition to property tax in principle.
- amount of taxation would not equal the services to the area.
- punitive legislation

- improved land to be taxed (i.e. local electric company) would result in higher rates to consumer.

SUGGESTED AMENDMENTS TO HB 202:

- remove exemption for unimproved land
- clarify vague language in the bill
- provide a definition of unimproved land

RECOMMENDATIONS BY PUBLIC HEARING PARTICIPANTS:

1. raise the amount of school tax paid by residents of the unorganized borough.
2. if the tax were to be levied, upon receipt of 100% state-funded education, the tax would be lifted.
3. one request for a further referral to House Health, Education and Social Services Committee to determine the possibility of redistricting that would effect the satellite REAA's.
4. Need for more public testimony.

KETCHIKAN GATEWAY BOROUGH

June 6, 1977

The Honorable Lisa Rudd
2827 Lore Road
Anchorage, Alaska 99507

The Honorable Ms. Rudd:

I am writing in response to your letter requesting testimony relative to House Bill 75, borough or city net income tax. The overall concept of this bill has merit, especially in that income tax is generally accepted as a more fair taxation than property tax or sales tax. There are a great many detail questions that deserve some consideration before I could support such legislation.

(1) Why should real and personal property taxes be separated, thus allowing only one or the other to be imposed in conjunction with an income tax? Property tax should be one classification for the purposes of this legislation to avoid confusing the situation more than it already is. In recent years we have seen mobile homes changed from personal to real property for taxation purposes, which leaves an impression of ambiguity to confuse the issue.

(2) The proposal to refund the taxes collected within a borough that has preempted a city income tax in proportion to the amount of income tax revenue raised by each city within the borough is unclear. Does it mean that the Borough will only receive income tax from those persons living outside the City? Does it mean for those taxes generated within the City that the that the City an Borough receive one-half (½) each? Does it mean that the distribution is in the ratio of each jurisdictions tax levy for the appropriate area inside or outside of each City?

(3) What are the options for a borough to preempt the income tax levied by a city? Must they establish a single tax rate for the entire area, or can separate, different rates be set for borough and city income tax?

These questions are important to answer before this legislation becomes law. The borough and cities provide different services. The borough services, including education, apply to all borough residents, both inside and outside of the cities. The tax rates should be adjusted to reflect a higher rate in the cities to raise funds for those city services to be funded by income taxes.

I appreciate the opportunity to furnish my opinions for the consideration of your committee.

Sincerely,

W. J. Verwolf
Borough Manager

Juneau, Alaska 99811

Dear Ms. Rudd:

If reference to your letter dated May 29, 1977, pertaining to HB 75 which authorizes a Borough or City tax on net income. The City of Kodiak has no objection to the idea of a municipality adopting a local income tax, nor to the method that is prescribed for collection.

However, the City does object to the portion of the bill that limits the municipality's right to levy only two (2) of the four (4) possible taxes. Between the City and the Kodiak Island Borough, we already levy three (3): property and real property by the Borough, and sales tax by the City. The sales tax is the largest source of income for the City and we feel this bill would force us to eliminate it.

If you need any further information on our feelings or suggestions towards this bill, please let us know.

Very truly yours,

CITY OF KODIAK

Dear Mrs. Rudd:

You recently sent to Mayor Sullivan a letter notifying the Municipality of Anchorage of hearings you plan to hold on House Bill No. 75 entitled, "An Act authorizing a borough or city tax on net income". Your letter states that hearings will be held in Yakutat, Cordova, Kenai, Homer, and Kodiak; but you do not mention Anchorage.

As Chairman of the Ad Hoc Tax Review Commission, recently appointed by Mayor Sullivan, I respectfully request that you hold hearings on HB-75 in Anchorage. The work of the Commission is directly concerned with this subject. I would appreciate you notifying me as to whether or not an Anchorage hearing is possible.

Yours very truly,

Jim Campbell, Jr.

Re: House Bill 75

Dear Representative Rudd:

In response to your May 29, 1977 letter to Alaskan municipalities on House Bill 75, the City of Soldotna would certainly appreciate notification of any hearings on HB75 that will be held on the Kenai Peninsula.

In case the City does not have the opportunity to participate at any hearings, the following comments are given as testimony:

1. The limitation of only two taxes would place a substantial limit on the ability of many cities to raise revenue. Many cities currently levy sales, property realty and personalty taxes. To cut out any of these would limit the potential revenue a municipality might raise.

2. A net income tax would never pass a voter's referendum in most Alaskan municipalities. This would effectively reduce the ability to raise revenues under HB75.

Thank you for this opportunity to submit this testimony.

Sincerely,

Frank Mielke

SPONSOR SUBSTITUTE FOR HOUSE BILL NO. 75

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act authorizing a borough or city tax on net income."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 29.53 is amended by adding a new section to read:

ARTICLE 6. MUNICIPAL TAX ON NET INCOME.

Sec. 29.53.500. TAX ON NET INCOME. (a) The assembly or council of a municipality may, by referendum, enact an ordinance adopting by reference a local income tax imposed upon individual residents and corporations doing business within the municipality. The tax shall be percentage of the liability of the resident or corporation of the tax imposed under the Alaska Net Income Tax (AS 43.20).

can be evaded - if tied to employment, not as easily

(b) An ordinance enacted in accordance with the provisions of this section shall impose a rate of tax for the next calendar year and may provide that the tax rate shall continue in effect for each succeeding calendar year until the tax rate is modified by a subsequent ordinance. A municipality imposing an income tax may repeal the tax. A municipality may impose, modify or repeal an income tax only after first giving notice to the commissioner of revenue not later than July 1 of the previous year. Enactment, modification or repeal of an income tax authorized by this section shall become effective only on the first day of a calendar year.

(c) An income tax imposed by a municipality under this section may not exceed 50 per cent of the liability of the taxpayer under AS 43.20 after deduction of credits and inclusion of additional taxes due.

(d) An income tax imposed under this section shall be administered by the commissioner of revenue, who shall collect and account for the revenue in the manner provided in AS 43.20.360.

(e) A borough may preempt an income tax levied by a city under this section by adopting an areawide income tax. The commissioner shall refund the taxes collected within the borough to the borough and all cities within the borough in proportion to the amount of income tax revenue raised by each city within the borough unless the borough and all cities within it mutually agree on a different method of sharing.

(f) A municipality may levy the tax authorized under this section if it levies and collects not more than one of the following taxes authorized by law:

(1) sales taxes, authorized by sec. 415 of this chapter;

(2) personal property taxes, authorized by sec. 10 of this chapter;

(3) real property taxes, authorized by sec. 10 of this chapter

(g) In this section, "resident" means an individual resident, non-resident or part-year resident of Alaska, as defined in AS 43.20.011, who is domiciled in or maintains his principal residence or place of abode in the municipality.

* Sec. 2. AS 29.13.100 is amended by adding a new paragraph to read:

(37) AS 29.53.500 (borough or city tax on net income)

* Sec. 3. AS 29.53.035 is amended by adding a new subsection to read:

(f) A municipality which levies an income tax under sec. 500 of this chapter may exempt from taxation real or personal property.

* Sec. 4. AS 43.20.160(c) and (d) are amended to read:

(c) The department shall prescribe and furnish all necessary forms, and adopt and publish all necessary regulations in plain and concise language conformable with this chapter for the assessment and collection

of the taxes imposed by secs. 10 - 350 of this chapter and for a municipal tax on net income levied and collected under authority of AS 29.53.500 and sec. 360 of this chapter. The department shall apply as far as practicable the administrative and judicial interpretations of the federal income tax law. The department shall also prepare a concise statement of the contents of the code sections referred to in this chapter for the information of the taxpayer and make them available to the taxpayer making a return.

(d) All money collected by the department under secs. 10 - 350 of this chapter shall be deposited in the general fund of the state.

* Sec. 5. AS 43.20.170(a) is amended to read:

(a) Every employer making payment of wages or salaries shall deduct and withhold an amount of tax computed in a manner to approximate the amount of tax due on those wages under this chapter and under an income tax levied by a municipality in accordance with AS 29.53.500 and collected by the department for that year. The department shall publish the rate of withholding required by this section and the rate required by the income tax levy of a municipality which shall be expressed as a percentage of the amount required to be withheld under sec. 3402 of the Internal Revenue Code of 1954. Every employer making a deduction and a withholding shall furnish to the employee upon request a record of the amount of tax withheld from the employee on a form prescribed by the department.

* Sec. 6. AS 43.20.290 is amended to read:

Sec. 43.20.290. [EXCLUSIVE] STATE AUTHORITY. No tax may be levied and collected upon the net income of resident or nonresident individuals by a general law municipality [CITY] or by a home rule municipality [CITY] or any other political subdivision of the state except as provided by AS 29.53.500.

* Sec. 7. AS 43.20 is amended by adding a new section to read:

ARTICLE 6. MUNICIPAL TAX ON NET INCOME.

Sec. 43.20.360. ADMINISTRATION. (a) Municipal income taxes levied and collected under AS 29.53.500 are subject to the provisions of this chapter.

(b) A municipal income tax levied and collected under AS 29.53.500 shall be administered by the commissioner of revenue, who shall collect and account for the revenue.

(c) The commissioner shall determine each municipality's share of the cost of administering this section. In determining each municipality's share, the commissioner shall apportion the cost of collection and accounting for the funds in proportion to the tax collected from each municipality of the state which levies an income tax. The commissioner may withhold the prorated share of the cost of collecting and accounting for funds, but the amount withheld may not exceed five per cent of the amount payable to a municipality. After deducting the amount of any refunds due and the prorated share of the cost of collecting and accounting for funds, the commissioner shall pay to each municipality, as soon as practicable, the amount to which it is entitled under AS 29.-53.500.

April 7, 1977

Honorable Keith Specking
Alaska House of Representative
Pouch V
Juneau, Ak 99811

Dear Keith:

The City of Seward urges your strong objection to HB 83. This bill amends AS 29.68.10 by adding a new section stating that if 10 percent of the qualified voters of an area which is to be annexed or excluded from any proposed local government boundary change, petition for a vote on the question, the local Boundary Commission must conduct at its own expense an advisory vote.

We believe by placing an advisory vote before the Legislature this bill will only further serve to increase the difficulty of Seward in acquiring territory desperately needed to adequately guide OCS support facilities development. Title 29.68.10 (b) (1) already provides that annexation of land by local action must first be approved by a majority of the qualified voters in the area proposed to be annexed. HB 83 would expand this requirement to an advisory vote on all annexation actions, including direct action by the Local Boundary Commission. We feel that this would go way beyond the original purposes of AS 29.68.10 and would for a practical matter, lead to a policy of voter approval of all proposal annexation.

Sincerely,

Clarence E. Johnson
City Manager

TENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to appropriations and grants from boroughs to service areas and cities; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 29.63.090(b) is amended to read:

(b) The assembly may levy or authorize the levying of taxes, charges, or assessments in service areas to finance the special services or may by ordinance authorize appropriations from areawide taxes or other areawide revenues to finance all or part of the special service and, after enactment of an authorizing ordinance, may make appropriations for the purpose authorized.

* Sec. 2. AS 29.73 is amended by adding a new section to read:

Sec. 29.73.070. REVENUE SHARING GRANTS BY BOROUGHS. A home rule or general law borough of any class may make grants from areawide taxes or other areawide revenues to cities within the borough or service areas of the borough for a function the city or service area is authorized to perform. Grants so made shall be authorized by borough ordinance.

* Sec. 3. AS 29.13.100 is amended by adding a new subsection to read:

(37) AS 29.73.070 (revenue sharing by boroughs)

* Sec. 4. AS 29.48.210 is amended to read:

Sec. 29.48.210. EXPENDITURE OF BOROUGH REVENUES. Borough revenues levied and collected on an areawide basis by a home rule or general law borough may be expended on general administrative costs, [AND] on areawide functions, and as authorized in AS 29.63.090(b) and 29.73.070 only.

Revenues levied and collected in the area outside cities only may be expended on general administrative costs and functions which render service to the area outside cities only.

* Sec. 5. AS 29.53.010 is amended to read:

Sec. 29.53.010. GENERAL PROPERTY TAX. Home rule and general law boroughs may levy (1) an areawide property tax for areawide functions, <u>for appropriations authorized under AS 29.63.090(b), for grants authorized under AS 29.73.070;</u> and (2) a property tax limited to the area outside cities for functions limited to the area outside cities. A property tax if levied must be assessed, levied and collected on real and personal property as provided in this chapter.

* Sec. 6. This Act takes effect immediately in accordance with AS 01.10.-070(c).

December 8, 1975

PROFIT SHARING

Senator Genie Chance
310 "K" Street
Suite 701
Anchorage, Alaska 99501

Dear Senator Chance:

I am pleased to enclose with this letter two pieces of proposed legislation which represent the recommendations of this interim committee in the area of shared revenues with municipalities. The proposed legislation is the product of a number of meetings of the committee in the months since the adjournment of the legislature plus two public hearings. One of these public hearings was held in conjunction with the October convention of the Alaska Federation of Natives, in order to receive bush community viewpoints. The other hearing was held in conjunction with the October conference of the Alaska Municipal League. In addition, suggestions and constructive criticism were requested by mail and received from a wide variety of cities and communities throughout the State of Alaska.

It was considered crucial, since revenue sharing has been created solely for the purpose of assisting municipalities in the funding of needed local services, that the final product of the committee take maximum note of the views and suggestions of the various municipalities across the state. The enclosed bill represents what the committee considers to be the most beneficial and most feasible of those suggestions.

Perhaps some review might be in order concerning the need for revision of the current shared revenue program. Although the program in concept currently enjoys the unanimous and enthusiastic support of every municipality in the state, the following were considered deficiencies which new legislation could correct.

REPRESENTATIVE
MIKE MILLER
ALASKA STATE LEGISLATURE
P.O. Box 1494
JUNEAU, ALASKA 99802
HOME PHONE 586-3067
LEGISLATIVE PHONE 465-3739

HOUSE MAJORITY LEADER
VICE CHAIRMAN, LEGISLATIVE COUNCIL
VICE CHAIRMAN, STATE AFFAIRS COMMITTEE
MEMBER, RULES COMMITTEE
MEMBER, COMMITTEE ON COMMITTEES

First, it was felt that a "foundation" approach might be useful in the field of revenue sharing--"foundation" approach meaning a formula with a foundation amount similar in concept to that utilized in the school foundation statutes. The beauty of such an approach is that whenever a legislature wishes to raise the foundation amount (to recognize increases in the cost of doing business) it is necessary merely to amend one word in the statutes. Absent the foundation approach it is necessary, whenever you wish to recognize the increase in the cost of doing business, to go into the statutes and revise the per capita dollar figure for each of the various categories in which shared revenue assistance is given to municipalities. This is both cumbersome and, in practice, inequitible. Some categories tend to get raised, others do not and the system can easily get out of balance.

It was felt, too, that the amount of shared revenues being designated for small communities was much too small. It was recognized that the present purely per capita approach just did not offer the very small communities enough money to assist in any meaningful way in meeting the obligations of local government. It was recognized that whether a second class city had 25 residents, or 75 residents, or 125 residents there was nonetheless an irreducible minimum cost of doing business, and that that minimum was just as great for very small villages as it was for medium sized second class cities. It was, therefore, considered desirable that a minimum grant base be established for these communities and it was further considered desirable that the base amount agreed upon be as generous as possible in order that the benefits of government on the local level be economically feasible for the communities.

Another deficiency in the current statutes was the lack of the requirement for standards and criteria by which the Department of Community and Regional Affairs could determine whether communities were actually entitled to shared revenues in the various categories under which they were seeking aid. This deficiency has long been recognized by the Department of Community and Regional Affairs and has been recognized additionally by the Legislative Budget and Audit staff. This is not to say that the shared revenue monies alloted to the communities should be required to be spent in the categories designated--far from it. It was and still is the consensus of the committee and of the municipalities that local discretion should continue in the spending of shared revenue receipts. It was felt, however, that in order to receive shared revenue monies in, for example the fire department category it should be demonstrated that the community can meet minimum standards in that category.

> Finally, there was a question projected by some communities as to whether the use of categories in sharing state revenues was even appropriate. It was thought perhaps more appropriate simply to allocate available dollars to the municipalities and let each local government establish its own priorities without regard to existing municipal services.

In order to correct these deficiencies the committee drafted three alternate pieces of legislation for consideration by the committee and the municipalities of Alaska. With considerable--and greatly appreciated--assistance from the University of Alaska/Anchorage, we were able to develop extensive data showing the practical results (i.e., the dollars to be received) for each community in the state under the various alternatives. We developed similar data based on proposed legislation already in the house (legislation which, incidently, had been previously endorsed by the Alaska Municipal League) and also on a simple per capita allocation of funds to municipalities. Four of these five total alternative were specifically noncategorical in approach. All of the alternatives and all of the data were presented to delegates of the Alaska Federation of Natives Convention and delegates to the Alaska Municipal League Conference. In addition, this material was mailed to virtually every municipality, large and small, in the state with requests for evaluations and suggestions.

I think it would be fair tc say that prior to the hearings and mialings there was a strong feeling among the larger communities, in partiuclar, that revenue sharing should be based on tax effort. The feeling was that those who tax themselves the most should receive the most additional state aid. This was the principle thrust of the existing proposed legislation which the Alaska Municipal League had previously endorsed. The committee recognized this concept in two of the alternatives they proposed, but built in additional factors including the availability of tax resources plus tax effort in relation to those resources. Interestingly, when all the facts--in the form of state-wide computerized readouts--were laid before the communities a very noticable modification of opinion became apparent during the hearings and in countless conversations afterward. Committee memebers noted a discernible reluctance on the part of communities, large and small, to terminate the categorical approach. What was needed, several elected officials indicated, was a bill which more or less continued the "tried and true" categorical approach, in the present revenue sharing system but which <u>also</u> incorporated the "foundation approach".

Basically, then, this is the bill which the interim subcommittee has proposed:

First, the bill does create a municipal "foundation approach" to revenue sharing. It does so by allocating varying numbers of units to various categories of municipal services and then multiplying those units times population, and then multiplying this product times a "foundation" base figure. For this bill the committee established a foundation base at $1.00. In future years if the cost of doing business goes up, for instance 11%, the legislature may, if it chooses, raise the foundation amount by simply changing the figure $1.00 to $1.11.

In establishing categories and establishing unit values within each category, the committee did indeed stick by the "tried and true" categories of past years. Police protection, for instance, which in previous years earned communities shared revenue at the rate of $12.00 per capita will earn units within the foundation formula at the rate of 12 units. Fire protection is 7.5 units (as opposed to $7.50 per capita under the present system). Additional ingredients include air or water pollution control (2 units), land use planning (2 units), parks and recreation (5 units). Two important changes have been made in the categorical designations. Under present law a community can receive $5.00 per capita for operating either a small boat harbor/ port or for operating mass transit or for operating an airport. In the proposed bill 5 units can be accumulated in <u>each</u> of these categories. The second important difference is the addition of solid waste disposal as a new category, which in the proposed bill will be valued at 2 units.

The proposed legislation establishes a $25,000 minimum grant for municipalities whose low per capita standing would otherwise earn them only small amounts of revenue. The committee felt the $25,000 figure was a generous but nonetheless fair amount. It was interesting to note that at neither public hearing was there any critism of this amount. At one meeting of the committee, a single individual did observe that he thought the figure was pretty high for the very smallest communities. He did not, however, seek to have the committee change the amount.

Additional features of the bill include the following:

Special start-up grants have been established in various categories for municipalities who do not currently offer such services as police protection, fire protection, air

and water pollution control, land use planning, parks and recreation, small boat harbors/ports, air ports or mass transit systems. The Department of Community and Regional Affairs is specifically charged with creating minimum standards of service in the various categories for which municipalities can receive revenue sharing. Revenue sharing for hospitals remains virtually the same as under current law except that responsibility for administering this section is transferred to the Department of Health and Social Services. Additionally, in the area of health, a paragraph specifies that no hospital or health facility shall be eligible for revenue sharing unless the facility has received a Certificate of Need from a municipality or the state. This paragraph anticipates that "Certificate of Need" legislation will be passed in this session of the legislature. Another interim committee is studying the whole broad area of health facilities so this section may undergo substantial modification when that interim committee completes its deliberations. Shared revenues for road maintenance remains virtually the same as current law. A very important feature of the new legislation is that if a new second class city is created in an organized borough after passage of this law, the city would not be eligible for the $25,000 minimum grant. This feature is designed to preclude small gatherings of 25 people or more from incorporating simply to take advantage of the $25,000 revenue sharing opportunity. Finally, a very important feature of the proposed legislation is the clause which guarantees each municipality that it will not receive less money than it is receiving under the current statutes.

There, of course, are many additional features to the legislation, but this summary covers most of the major changes.

As noted earlier, the committee is submitting two bills for introduction and for consideration by the legislature. One is quite large and comprehensive and is described in the report above. The other bill consists of only one paragraph and this paragraph constitutes one of the many provisions of the larger bill.

The provision, drafted at the request of the Department of Community and Regional Affairs, simply mandates that the department create minimum standards and criteria to qualify municipalities for grants in each category of shared revenue. If the major bill should run into difficulties and if passage does not seem assured, then it is recommended that the legislature consider and enact the oneparagraph small piece of "clean-up" legislation.

The fiscal impact of the legislation will be to raise the state shared revenue allocation from a current level of about $15 million to a level of approximately $20 million--if the bill is fully funded. The raise, of course, comes from creating the $25,000 minimum grants to small cities, from creating a new category (solid waste) and from separating the now-combined port/harbor-airport-mass transit category into three separate categories.

This report would not be complete without making special acknowledgement of the work of the several individuals and agencies. The committee is extremely appreciative of the hours of work, both during committee sessions and out of session, by Dr. Garth Jones and P. J. Hill, both of the University of Alaska/Anchorage. The vast volume of computerized data that both Dr. Jones and Mr. Hill provided was crucial in the final deliberations and directions of the committee.

Similarly, we would like to give a special thanks to Mr. Rich Wilson and Mr. Sam Coxson, both of the City of Anchorage who helped in obtaining and analyzing the data, and who attended most of the sessions and hearings of the committee and contributed greatly to the deliberations. We are indebted as well to the Alaska Federation of Natives who made time available for us during the annual AFN convention in Anchorage, and the Alaska Municipal League who similarly made time available during its annual conference in that same city. The League, as well, was most helpful to the committee in circularizing its membership and alerting municipalities of Alaska to the work of the committee. Finally, I would like to acknowledge the fine work of the staff of the Legislative Affairs Agency, and Bill Berrier in particular, plus the membership of the interim committee. Interest was lively, suggestions were broad and imaginative and attitudes were positive throughout the course of the committee's deliberations. It has been a pleasure to chair this committee and of course all of us on the committee stand ready to answer any questions which you or other members of the legislature might have concerning the recommended legislation. Thank you for your own fine support of the committee.

Sincerely,

Mike Miller, Chairman, Interim Committee on Shared Revenues with Municipalities

EQUALIZATION OF LOCAL GOVERNMENT REVENUES IN ALASKA

by

Richard W. Garnett, III

> Now fine and just actions, which political science investigates, admit of much variety and fluctuation of opinion, so that they may be thought to exist only by convention and not by nature.... We must be content, then, in speaking of such subjects and with such premises to indicate the truth roughly and in outline.... In the same spirit therefore should each type of statement be *received*; for it is the mark of an educated man to look for precision in each class of things just so far as the nature of the subject admits.
>
> Aristotle, *Ethics*.

Introduction

As the development of natural resources in Alaska accelerates, the need to determine how the taxable wealth of the state is to be distributed becomes increasingly important. This paper discusses revenue sharing in Alaska as a means toward equalizing, rather than simply augmenting, revenues of local governments.[1] First, the general problem of financing municipal services is

[1] The term "revenue sharing" ordinarily is applied to transfer downward from one level of government to another, as in the federal-state program recently enacted (H.R. 11950) or the state municipal services revenue sharing program (AS 43.18).

reviewed briefly. Then a description of the Alaska case provides background for discussion of recent legislative efforts in Alaska and suggestions for future policy approaches.

This paper does not discuss fully every aspect of revenue equalization among localities. Rather, it focuses primarily on technical and legal problems involved with such a program. Nevertheless, a realistic approach to this topic cannot ignore the influence of strong social and political forces at work in Alaska on any effort to readjust local tax revenues.

One of these forces is related to the widely accepted, anthropomorphic idea that towns and regions have rights and interests of their own apart from the sum of the rights and interests of the individuals involved. Consequently, a program that takes from one governmental unit and gives to another suggests to many a form of economic egalitarianism that they find unacceptable at both individual and corporate levels.

Further, a comprehensive equalization program involves creation of new taxing units and, perhaps, a state tax to eliminate tax havens. Naturally, the businesses and individuals who benefit from the present situation will oppose changes that subject them to additional taxation and government control.

Race is another factor affecting the situation in Alaska. Rural Alaska is inhabited primarily by Indian and Eskimo people. The growth of political consciousness among Alaska Natives, dramatically symbolized by passage of the Alaska Native Claims Settlement Act, has paralleled a tremendous increase in the wealth and the prospect of wealth in rural Alaska and in the North Slope region in particular. Many regional Native leaders are distinctly wary of any state government activity that might affect the economic prospects of their constituents. Moreover, ther is a general fear that local government in rural areas may somehow compete with or impede full implementation of the Claims Act.

By definition, an adequate local government revenue equalization program will result in less economic power for those regions

most extraordinarily endowed with natural wealth.[2] The justification, if any, for reduction of economic power of the North Slope or other regions is the corresponding benefit to other, equally needy and deserving areas where nature was less generous.

The General Problem

Municipal services in the United States are financed largely by revenues from an ad valorem tax on property located within the taxing jurisdiction. The level and quality of services therefore depends on the value of the tax base, which varies widely among different communities and regions. As a result, areas with low valuation per capita must tax themselves at a higher rate than more wealthy areas in order to raise the same revenue.

The value of the local tax base has not always varied so widely. One writer describes the typical composition and effects of the tax base before World War II this way:

> The important thing to remember is that in the pre-war days the total tax base of the community was there to support the needed services. It allowed a logical concentration of commercial and industrial property. It allowed a section of town to be low-value housing without a diminution of services in that area or a severe tax penalty. The tax base to educate the children of the area was the rich man's home, the poor man's home, the places where they both worked and where they shopped. When land was taken off the tax rolls for parks or for other purposes, everyone was affected.

He goes on to note an important structural change in local government organization since the war, and describes the disparity in

[2] It should be noted that the loss may be more theoretical than real, as in the case where taxable property provides potential revenue far in excess of the needs of the local jurisdiction. For example, the North Slope Borough proposes to levy a very small tax on the vast property at Prudhoe Bay. Additional revenue raised from a state tax on this property could benefit other rural areas of the state without undue burden on the owners or loss to the North Slope.

wealth and its effects among local areas which have resulted from this change:

> The post-war experience has been vastly different. The interdependent neighborhoods of the actual total community have become legally independent municipalities . . .
>
> Suburban communities that happen to have the shopping centers and the commercial property—and if they are lucky, the wealthy homes—can live "high on the hog." On the other hand, those communities which are carved out of the northern sand plains in our region, flat and relatively uninteresting, may be in trouble.[3]

The tax-service inequity problem has been challenged in the courts. In *Serrano v. Priest*,[4] the Supreme Court of California held that the state could not maintain a system of financing public education which made the quality of education largely dependent on the taxable wealth of the local school district. In spite of a certain amount of state aid, it was shown at trial that certain areas with low property valuation could not achieve a level of financing for education, even with a relatively high tax rate, that others could achieve with low tax rates.

The court reached its conclusion by characterizing education as a "fundamental interest" and wealth as a "suspect category"[5] when dealing with education. In light of these determinations, the court found that the state must show a "compelling state interest"

[3]Charles R. Weaver, "Urban Fiscal Capacity," *State Government*, Council of State Governments, Lexington, Kentucky (Spring 1972) p. 100-01.

[4]487 P. 2d 1241 (Cal. 1972).

[5]Ordinarily, in reviewing classifications created by state law, courts accord very wide latitude to legislative discretion. However, where the classification relates to certain specially protected areas, such as free speech or voting, and where the basis of the classification appears invidious on its face, as in the case of distinctions according to race or religion, the presumption of validity is replaced by a burden on the state to show that the classification is necessary.

rather than the usual "rational basis" in order to justify its financing system.

In considering wealth a "suspect category" with respect to education, *Serrano* and related cases have alluded to the special nature of education, distinguishing it from other municipal services. Thus, the *Serrano* line of cases has not yet provided direct support for the view that the level of other local government services, such as water supply and sanitation or police protection, also may not be tied to the local tax base.

Nevertheless, when courts enunciate a principle in a particular context it may subsequently be extended to its logical limit. Note, for example, the extension of the one man, one vote principle from the state level to units of general and specialized local government and the progressive elimination of durational residence requirements. If local wealth is a "suspect category" in determining education services, past experience suggests that it will not long remain a legitimate determinant of the level of other local services.

It has already been held that differences in the level of any public service available in a municipality cannot be based on race. In *Hawkins v. Town of Shaw*,[6] the court found that the town provided better services of all kinds to white areas than to black, and held that such a pattern denies equal protection of the laws.

As wealth increasingly becomes a category as suspect as race, it is difficult to see how the courts will be able to avoid extending the "compelling state interest" test beyond education to a broader range of public service disparities. It can be argued that hospitals and police, in their spheres, are as important to local well-being as is public education, and that their availability, too, should not depend on how much wealth a particular community happens to have.

[6]437 F. 2d 1286 (5th Cir. 1971).

In any case, it is clear that local government spending is not immune from equitable constraints, at least in the educational field. Regardless of whether judicial activism carries the *Serrano* principle all the way, that principle deserves serious consideration in legislative policy making for state and local government services and taxation.

The Problem in Alaska

The Alaska constitution calls for "maximum local self-government with a minimum of local government units"[7] and for avoiding "duplication of tax levying jurisdiction."[8] It also directs that "the entire state shall be divided into boroughs, organized or unorganized"[9] and that the legislature "shall provide for the performance of services it deems necessary or advisable in unorganized boroughs . . . "[10]

There are 11 organized boroughs in Alaska, located, with two exceptions,[11] in the more developed areas of the state. A single unorganized borough comprises the rest of the state, an area several times larger than all of the organized boroughs combined (see map on following page).

Organized boroughs levy a property tax inside their boundaries. Cities within the boroughs may also levy taxes, but assessment and collection are exclusively borough responsibilities. Outside organized boroughs, no property tax is levied except within cities that have taxing power.

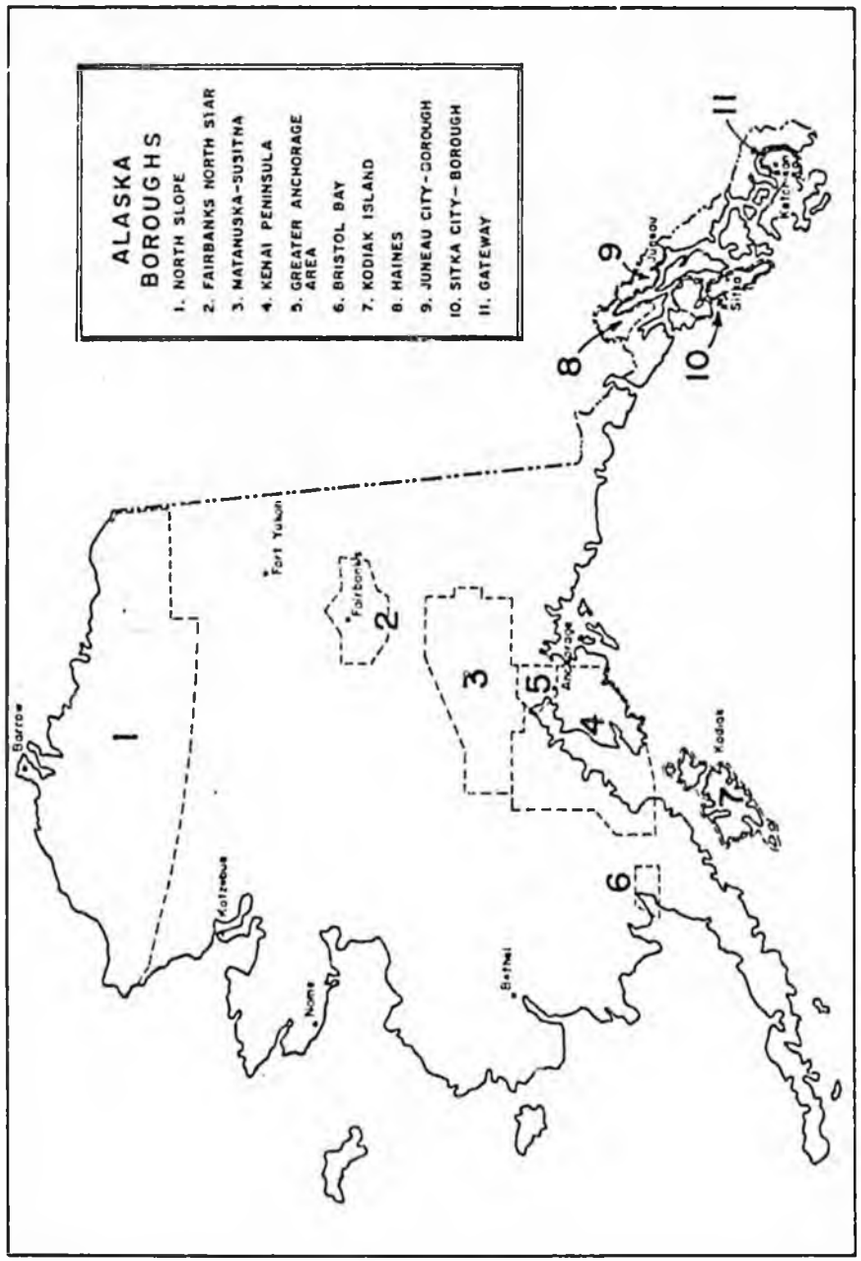
[7] Art. X, Sec. 1, Constitution of Alaska.

[8] *Ibid.*

[9] Art. X, Sec. 3, Constitution of Alaska.

[10] Art. X, Sec. 6, Constitution of Alaska.

[11] The North Slope and Bristol Bay boroughs.



The boroughs are typically quite large relative to local government units in other states. Generally, boroughs encompass one or more core communities, scattered settlements, and a considerable amount of vacant territory. Responsibility for education and other basic services is borough-wide. Accordingly, the whole borough tax base supports certain services for all borough residents.[12] The problem of tax and service equity is therefore on a different scale in Alaska than in the more developed states.

In Alaska the major disparities are among rather than within regions. Taxable wealth per capita in 1967 varied from $3,182 in the Bristol Bay Borough to $16,067 for the Kenai Peninsula Borough.[13] Although assessment figures for the newly organized North Slope Borough have not yet been established, the concentration of property in the Prudhoe Bay area is conservatively estimated at $300 million, yielding a North Slope Borough tax base per capita of approximately $98,000.

No comprehensive assessment of the unorganized borough has been made. However, the present per capita tax base in the unorganized borough is well below the average for organized boroughs, partly because much of the real estate in the unorganized area is tax exempt but more so because the area lacks appreciable commercial and industrial development.

In the more developed and populated states, where the bulk of the tax base is residential, commercial, or manufacturing-industrial, there is at least some correlation between the taxable

[12]It is said with some justification that cities may carry more than their share of the revenue burden by taxing themselves to provide nonareawide services, such as police protection and parks and recreation, which noncity residents utilize. Nevertheless, the system of allocating powers between borough and city contains, however imperfectly, the mechanism for equitable distributions of tax burdens and services.

[13]Thomas A. Morehouse and Victor Fischer, *Borough Government in Alaska*, Institute of Social, Economic and Government Research, University of Alaska, ISEGR Report No. 29 (1971) p. 162.

value of the property and the service requirements that arise from the property itself. (However, such correlation, as the *Serrano* case testifies, is not sufficiently close to avoid constitutional difficulty.) By contrast, the major taxable properties in Alaska are and will be related to mineral extraction. Such activity normally emphasizes capital rather than labor, generating less need for public services than does other revenue-producing activity. Accordingly, it may be anticipated that Alaska local government financing as presently organized, will reflect a significant disparity between the taxable wealth available and the level of services required.

North Slope oil development and the trans-Alaska oil pipeline dramatize this point. Taxable value of the pipeline alone will exceed the total assessed value of property in all organized areas of the state.[14] Moreover, neither the pipeline nor oil production facilities will demand heavy public services. Unlike hotels, shopping centers, factories, and homes, the pipeline will need no sewers, no playgrounds, no schools. It is, in this regard, the ideal addition to a local tax base.

The prospective mining operation at Lost River on the Seward Peninsula is another of several developments that will add to the taxable wealth of the state. At around $50 million, its probable value is small compared to the pipeline, but immeasurably significant relative to the present situation on the peninsula. Comparable mineral development, including oil, may occur in other rural areas of the state as well.

Most of the valuable taxable property that will appear in the unorganized borough will be located in accordance with the distribution of natural resources. Because this distribution bears little relation to the pattern of local jurisdictions and fiscal needs, there will be increasing variation in wealth and services among regions unless an equitable statewide distribution of revenue from Alaska resources can be achieved.

[14]Robert Dozier, *Alaska Taxable*, Local Affairs Agency, Juneau, Alaska (1971) p. 36.

Wealth Distribution and New Boroughs

The disparity in wealth among boroughs that follows from the pattern of development described above has several consequences. The likelihood of severe disparity in service levels among regions has been noted. A less obvious consequence stems from the unfinished nature of the Alaska local government system.

The local government article of the state constitution calls for the division of the state into boroughs, organized and unorganized. The language of the article presupposes plural unorganized units. The specific reference in Section 6 to "maximum local participation and responsibility" in unorganized boroughs indicates that manageable units encompassing communities of interest were contemplated for unorganized as well as organized boroughs.[15]

It is difficult to believe that the single unorganized borough that now exists complies with the intention expressed in the constitution. All indications are that a division of the state into natural socioeconomic units was contemplated. These units would achieve organized status at varying rates. But from the beginning, the people of rural Alaska were to have a governmental framework under state law for identifying regional problems and participating in their solution. Partly as a result of the absense of state-created units and partly for fiscal and political reasons, to be discussed further, the unorganized areas, with the exception of the North Slope, have so far made only negligible movement toward regional governmental organization.

The Need for Organization

Some form of governmental organization should come to rural Alaska as soon as possible. There are several reasons for

[15]See Appendix A for the local government article of the Alaska constitution.

urgency. The first reason is political and social unity. The governmental vacuum in rural Alaska has been occupied in part by the Native corporations established under the Alaska Native Claims Settlement Act. But the claims corporations are private entities outside the framework of state government. If state-ordained forms of local government with appropriate governmental powers remain unavailable to help solve problems in rural Alaska, disenchantment with state government, already evident, may increase and persist to the point of polarization. The potential problem will become more threatening as the contrast continues and increases between regional corporation activity and orthodox local government inactivity.

The terms of the Claims Act certainly are not hostile to the growth of local government. Sec. 2(c) provides that the Act is not intended to diminish the obligation of the state to promote the welfare of Native citizens. In a very real sense, the legacy of local government power is a means by which the state promotes the welfare of its citizens. If services are not provided by local government, the tendency will be to use claims money for this purpose. But this money was intended for payment in settlement of private rights, not in lieu of public services. Also more directly, Sec. 14(c)(3) of the Act provides for transfer to the local (village) municipality of title to the surface estate of land where the municipality is located. Where a municipality has not been formed, the state holds the same land in trust until incorporation.

Another reason for deliberate speed lies in the accelerated pace of economic development anticipated in rural areas, partly as a result of the claims settlement, and partly on the initiative of the private sector. The general welfare in Alaska will be advanced if local government organization precedes rather than follows economic development. New industrial development will create stresses manageable only by application of governmental powers. Planning and zoning will be particularly important in reconciling industrial development with subsistence living, and taxing power will be needed to insure local benefit from development activity. Municipalities which form after major economic interests have become

established may be too late to influence significantly the activities of those interests.[16]

On the other hand, it may be futile to extoll the desirability for self-determination to people who presently lack the economic resources necessary to the effective exercise of local government power. In fact, Native leaders wisely may have sensed that organization under such circumstances would only increase frustration as expectations went unsatisfied.

To summarize, a power vacuum presently exists in rural Alaska, where vast resources, actual and anticipated, are unevenly spread across the state, requirements for government services are increasing as the pace of development accelerates, and many areas are financially unable to organize prior to development. In this context, the absence of a mechanism for more efficient and equitable distribution of public revenues is a problem requiring state initiative.

1972 Legislative Program

The Governor introduced to the second session of the Seventh Legislature a series of bills dealing with local government.[17] Five bills were designed to function together as a coherent program to:

- Provide for subdivision of the unorganized borough (HB 596).
- Create a Department of Community and Regional Affairs (HB 552).

[16]The canned salmon, copper, and lumber industries have each furnished examples of economic power wielded in Alaska without effective governmental restraint, with resultant hardship for resident Alaskans.

[17]These bills resulted from extended problem analysis, drafting, and policy review at several levels of state government.

- Levy a 15 mill tax on property located in unorganized boroughs, with distribution of revenue among unorganized boroughs (HB 597).
- Levy a 20 mill tax on the pipeline, with distribution to local governments, organized and unorganized (HB 598).
- Provide for a general equalization of new taxable property, wherever located (not introduced).[18]

The following sections review the bills, discuss their intended operation, and point out the areas of greatest difficulty encountered. The bills are discussed in their final versions, which include committee amendments.

Subdivision of the Unorganized Borough

An essential starting point to organization, HB 596 provided for establishing borough boundaries in the unorganized borough which would conform to statutory and constitutional standards.[19] The unorganized boroughs so formed would serve as units for administering state services and the revenue sharing features of the proposed property and pipeline taxes. The people within each unorganized borough might at their option proceed toward organization either as boroughs of a particular class or as home rule boroughs. This bill was reported favorably by the House Local Government Committee, but died in the House Finance Committee.

[18]See Appendix B through Appendix F for copies of these bills.

[19]A number of previous bills had attempted a similar division into borough units, but they have not provided for charter organization. The Mandatory Borough Act, 52 SLA 1963, sponsored by Senator John Rader, was the only effective state initiative to actually establish boroughs in the unorganized area of the state.

formula based on population, present wealth, and the cost of providing services. In other words, if the cost of services were twice as great in one area as in another, the first area would receive twice the revenue per capita in order to insure the same level of service. If the first area also had only half the taxable revenue per capita as the second area, the share of the first area would again double per capita with respect to the second area.

The 15 mill tax was withdrawn by the Governor for further study prior to final action.

Pipeline Tax

Designed to complement the 15 mill general property tax, HB 598 provided for a 20 mill tax on property used in oil and gas transportation. Property subject to this tax was limited to oil and gas pipelines over 21 inches in diameter. The 20 mill rate, which approximates the existing tax level for such property in organized boroughs and cities, was to be in lieu of any other state and local taxes on the same property, including the 15 mill tax under HB 597. However, local governments that already taxed property affected by HB 598 would continue to do so with respect to property taxed as of January 1, 1972 (e.g., oil and gas transportation facilities on the Kenai Peninsula). Property that became taxable under HB 598 after January 1, 1972 (e.g., trans-Alaska oil pipeline) would be subject only to the 20 mill state tax.

The rationale for the state tax as the exclusive tax on the oil pipeline was that such property provides immense taxable value to certain areas without regard to the level of services required in those areas. It was believed that the revenue anticipated from taxation of oil and gas pipelines is properly considered a state resource rather than the exclusive property of the area where the property happens to be located. At the same time, it was also felt that this revenue, like other property tax revenue, should be used for the benefit of local governments. Accordingly, the revenue from the state oil and gas pipeline tax would be distributed to all local government units, including cities, organized boroughs, and

unorganized boroughs, in accordance with a formula similar to that which governed distribution of the general property tax revenue under HB 597.

The pipeline tax bill passed the House but died in the Senate Finance Committee.

Tax Equalization

The tax equalization bill (not introduced) was simple in concept. It provided for a determination of the *annual increase* in assessed valuation of property in all "governmental units," defined to include cities and boroughs, organized and unorganized. Sixty percent of the new revenue from this increased valuation, raised by application of the mill rate of each jurisdiction, including the 15 mill rate applicable to unorganized boroughs under HB 597, would be remitted to the state. The Department of Community and Regional Affairs would administer this revenue pool. The department would distribute the funds directly to organized units of local government, and, as trustee for unorganized units, would expend amounts to be determined by a distribution formula. The formula was similar to the HB 598 formula, except that a "local effort" provision insured that areas which taxed themselves heavily (thus contributing greater proportionate amounts to the pool) would receive a proportionately higher return.

Distribution Formula

A key to any revenue sharing system is the distribution formula. The 1972 legislative proposals based the distribution of revenues on four factors: (1) need for services, (2) ability to raise revenue, or fiscal capacity, (3) relative cost of services, and (4) local tax effort. Each of these elements may be defined and weighted according to desired goals.

"Need for services" may be expressed as a function of total population, school age population, population density, or other

other boroughs, but also to draw on revenues from resources outside its own borders. Finally, the distribution of revenues under HB 598, the 20 mill pipeline tax, also would have provided revenue regardless of whether an area was organized.

The 20 mill tax suffered because the major legislative struggle of the 1972 session centered on a package of legislation designed to protect the state's future oil production revenues. When these bills finally were passed, legislative leadership was in no mood to face what appeared to be still another oil revenue bill.[23]

As noted, the borough organization bill failed largely because establishment of new boroughs, in the absense of adequate revenues, might have created expectations which could not be fulfilled. In addition, some Native leaders felt that the state should not be involved in drawing boundaries for rural boroughs, but that people in these areas should determine their own governmental configuration. Especially in rural areas with Native population majorities, Native leaders are most likely to prefer that borough boundaries be coterminous with those of the regional corporations established under the Alaska Native Claims Settlement Act. This is also likely to be the view of state policymakers, unless there are compelling reasons for following a different course. In any case, the Alaska constitution[24] and state Supreme Count decisions on the point[25] indicate that the state has ultimate responsibility for local government boundaries. As noted by the court in the *Fairview* case:

[23]HB 598's relatively simple ad valorem approach to oil revenue (the 20 mill pipeline tax) is likely to command further attention particularly if present measures based on maintenance of wellhead price encounter serious difficulty in court.

[24]Art. X, Sec. 3 and 12.

[25]*Fairview Public Utility District No. 1 v. City of Anchorage*, 368 P. 2d. 540, 543 (Alaska 1962).

> An examination of the relevant minutes of [the Constitutional Convention's committee on local government] meetings shows clearly the concept that was in mind when the local boundary commission was being considered: that local political decisions do not usually create proper boundaries and that boroughs should be established at the state level.[26]

Also, the failure of voluntary borough formation in the years since statehood indicates the practical importance of state initiative in this area.

Conclusion

The 1972 legislative program brought before the legislature and the public much useful information and debate. New programs take time to be perfected in detail and to gain public acceptance. The possible approaches to fiscal resource equalization were by no means exhausted by the 1972 legislative proposals. Given the legal and social pressures involved, it is likely that further attempts will be made, based either on refinements of that legislation or on different concepts. It may be useful to suggest certain tentative principles which seem to emerge from the research and experience generated by the 1972 program:

- Revenue equalization is desirable to promote early formation of rural boroughs, and on legal and equitable grounds.
- A prerequisite to equalization is coherent geographic units; the state should have ultimate control over the configuration of new boroughs.
- Revenue distribution should not be dependent on organizational status. That is, an area should not be forced to assume government responsibility prematurely in order to procure adequate services, and a decision to incorporate should carry no fiscal penalty.

[26]*Ibid.*

- The mechanics of the program should be as simple and orthodox as possible, involving minimum interference with local decision making and minimum disturbance of existing tax bases.

Local government is a volatile policy area, and proposals dealing with local finances can verge on the incendiary. As a result, any legislative decision on new approaches to local government is difficult. But inaction is also a decision, and by now we should know enough about the historical results of inaction in Alaska to prefer innovation, unnerving though it may sometimes be.

APPENDIX A

ALASKA STATE CONSTITUTION

Article X

Local Government

Section 1. Purpose and Construction. The purpose of this article is to provide for maximum local self-government with a minimum of local government units, and to prevent duplication of tax-levying jurisdictions. A liberal construction shall be given to the powers of local government units.

Section 2. Local Government Powers. All local government powers shall be vested in boroughs and cities. The State may delegate taxing powers to organized boroughs and cities only.

Section 3. Boroughs. The entire State shall be divided into boroughs, organized or unorganized. They shall be established in a manner and according to standards provided by law. The standards shall include population, geography, economy, transportation, and other factors. Each borough shall embrace an area and population with common interests to the maximum degree possible. The legislature shall classify boroughs and prescribe their powers and functions. Methods by which boroughs may be organized, incorporated, merged, consolidated, reclassified, or dissolved shall be prescribed by law.

Section 4. Assembly. The governing body of the organized borough shall be the assembly, and its composition shall be established by law or charter.

Section 5. Service Areas. Service areas to provide special services within an organized borough may be established, altered, or abolished by the assembly, subject to the provisions of law or charter. A new service area shall not be established if, consistent with the purposes of this article, the new service can be provided by an existing service area, by incorporation as a city, or by annexation to a city. The assembly may authorize the levying of taxes, charges, or assessments within a service area to finance the special services.

Section 6. Unorganized Boroughs. The legislature shall provide for the performance of services it deems necessary or advisable in unorganized boroughs, allowing for maximum local participation and responsibility. It may exercise any power or function in an unorganized borough which the assembly may exercise in an organized borough.

Section 7. Cities. Cities shall be incorporated in a manner prescribed by law, and shall be a part of the borough in which they are located. Cities shall have the powers and functions conferred by law or charter. They may be merged, consolidated, classified, reclassified, or dissolved in the manner provided by law.

Section 8. Council. The governing body of a city shall be the council.

Section 9. Charters. The qualified voters of any borough of the first class or city of the first class may adopt, amend, or repeal a home rule charter in a manner provided by law. In the absence of such legislation, the governing body of a borough or city of the first class shall provide the procedure for the preparation and adoption or rejection of the charter. All charters, or parts or amendments of charters, shall be submitted to the qualified voters of the borough or city, and shall become effective if approved by a majority of those who vote on the specific question.

Section 10. Extended Home Rule. The legislature may extend home rule to other boroughs and cities.

Section 11. Home Rule Powers. A home rule borough or city may exercise all legislative powers not prohibited by law or by charter.

Section 12. Boundaries. A local boundary commission or board shall be established by law in the executive branch of the state government. The commission or board may consider any proposed local government boundary change. It may present proposed changes to the legislature during the first ten days of any regular session. The change shall become effective forty-five days after presentation or at the end of the session, whichever is earlier, unless disapproved by a resolution concurred in by a majority of the members of each house. The commission or board, subject to law, may establish procedures whereby boundaries may be adjusted by local action.

Section 13. Agreements; Transfer of Powers. Agreements, including those for cooperative or joint administration of any functions or powers, may be made by any local government with any other local government, with the State, or with the United States, unless otherwise provided by law or charter. A city may transfer to the borough in which it is located any of its powers or functions unless prohibited by law or charter, and may in like manner revoke the transfer.

Section 14. Local Government Agency. An agency shall be established by law in the executive branch of the state government to advise and assist local governments. It shall review their activities, collect and publish local government information, and perform other duties prescribed by law.

Section 15. Special Service Districts. Special service districts existing at the time a borough is organized shall be integrated with the government of the borough as provided by law.

ARTICLE 2. COMMUNITY AND REGIONAL AFFAIRS.

Sec. 44.47.050. GENERAL POWERS AND DUTIES. The department may

(1) advise and assist local governments;

(2) serve as staff for the Local Boundary Commission;

(3) conduct studies and carry out experimental and pilot projects for the purpose of developing solutions to community and regional problems;

(4) promote cooperative solutions to problems affecting more than one community or region, including joint service agreements, regional compacts, and other forms of cooperation;

(5) serve as a clearinghouse for information useful in solution of community and regional problems, and channel to the appropriate authority requests for information and services;

(6) advise and assist community and regional governments on matters of finance, including but not limited to bond marketing and procurement of federal funds;

(7) prepare suggested guidelines relating to the content of notice of bond sale advertisements, prospectuses and other bonding matters issued by local governments;

(8) administer state funds appropriated for the benefit of unorganized regions within the state, allowing for maximum participation by local advisory councils and similar bodies;

(9) carry out those administrative functions in unorganized boroughs that the legislature may prescribe;

(10) study existing and proposed laws and state activities that affect community and regional affairs and submit to the governor recommended changes in those laws and activities;

(11) coordinate activities of the state which have impact on community and regional affairs;

(12) assist in the development of new communities and serve as the agent of the state for purposes of participation in federal programs relating to new communities;

(13) supervise planning, management, and other activities required for local eligibility for financial aid under those federal and state programs which provide assistance to community and regional governments;

(14) administer state, and, as appropriate, federal programs for revenue sharing, grants, and other forms of financial assistance to community and regional governments;

(15) provide staff assistance, as requested, to the Rural Affairs Commission;

(16) apply for, receive and use funds from federal and other sources, public or private, for use in carrying out the powers and duties of the department;

(17) request and utilize the resources of other agencies of state government in carrying out the purposes of this chapter to the extent such utilization is more efficient than maintaining departmental staff, reimbursing the other agencies when appropriate;

(18) carry out other functions and duties, consistent with law, necessary or appropriate to accomplish the purpose of this chapter.

ARTICLE 3. PLANNING ASSISTANCE.

Sec. 44.47.080. PLANNING ASSISTANCE TO PLATTING AUTHORITIES. To facilitate urban planning in cities and other political subdivisions, the department may provide planning

assistance, including but not limited to surveys, land-use studies, urban renewal plans, technical services, and other planning work to a city, borough, or other platting authority. In an area under the jurisdiction for planning purposes of a city, borough, or other platting authority, the department may not perform the planning work except at the request or with the consent of the local authority.

Sec. 44.47.090. ASSISTANCE BY CITIES AND PLATTING AUTHORITIES. A city or platting authority may make funds under its control available to the department for the purposes of obtaining planning work or planning assistance, or both, for its area. The department may contract for, accept, and expend the funds for urban planning for the local jurisdiction.

Sec. 44.47.100. PLANNING POWERS OF AUTHORITY. The department may accept and expend grants from the federal government and other public or private sources, may contract with reference thereto, and may enter into contracts and exercise all other powers necessary to carry out secs. 80-100 of this chapter.

ARTICLE 4. RURAL DEVELOPMENT

Sec. 44.47.130. POWERS AND DUTIES. To promote development of rural areas of the state the department is authorized to

(1) investigate social and economic conditions of rural areas to determine the need to expand economic opportunities and improve living conditions;

(2) formulate a coordinated program to broaden and diversify the economic base of rural areas;

(3) coordinate administration of emergency relief, surplus food distribution, or other public assistance programs, except the regular relief and assistance programs of the federal government in rural areas;

(4) formulate and conduct a program of construction of basic facilities to improve health, welfare and economic security and provide employment and income in the rural areas;

(5) promote training and educational programs designed to expand employment opportunities for residents of rural areas.

ARTICLE 5. GENERAL PROVISIONS.

Sec. 44.47.160. REGULATIONS. The department may adopt regulations in accordance with the Administrative Procedure Act (AS 44.62) to carry out the purposes of this chapter.

Sec. 44.47.170. DEFINITIONS. In this chapter

(1) "commissioner" means the commissioner of community and regional affairs;

(2) "community" means home rule cities and boroughs, cities and boroughs of any class, and unorganized boroughs and villages which are social units;

(3) "department" means the Department of Community and Regional Affairs;

(4) "region" means an area larger than a community, or including all or part of more than one community, but sufficiently integrated that it may be treated as a unit for administration of particular services.

*Sec. 3. AS 43.18.010(a)(4)(B)(ii) is amended to read:

(ii) an annual contract with a recognized planning firm to provide land use planning and plan implementation on a consulting basis with a work program outline approved by the Department of Community and Regional Affairs; or

*Sec. 4. AS 43.18.010(a)(4)(B)(iii) is amended to read:

(iii) the state's continuing planning advisory service program through the Department of Community and Regional Affairs;

*Sec. 5. AS 44.19.250 is amended to read:

Sec. 44.19.250. LOCAL BOUNDARY COMMISSION. There is in the Department of Community and Regional Affairs a local boundary commission. The local boundary commission consists of five members appointed by the governor for overlapping five-year terms. One member shall be appointed from each of the four major senatorial election districts and one from the state at large. The member appointed from the state at large is the chairman of the commission.

*Sec. 6. AS 44.19.260(a)(3) is amended to read:

(3) consider a local government boundary change requested of it by the legislature, the commissioner of community and regional affairs, or a political subdivision of the state; and

*Sec. 7. AS 44.19.270 is amended to read:

Sec. 44.19.270. MEETINGS AND HEARINGS. The chairman of the commission or the commissioner of community and regional affairs with the consent of the chairman may call a meeting or hearing of the local boundary commission. All meetings and hearings shall be public.

*Sec. 8. AS 44.19.880(a)(10) is amended to read:

(10) assist the governor and the Department of Community and Regional Affairs in coordinating the activities of state agencies which have an impact on the solution of local and regional development problems;

*Sec. 9. When the titles "Local Affairs Agency" or "Rural Development Agency" appear in the law of this state, they shall be read as the "Department of Community and Regional Affairs".

*Sec. 10. AS 18.55.970 - 18.55.990; AS 44.19.180 - 44.19.210; 44.19.580 - 44.19.620; 44.19.880(5) are repealed.

*Section 11. All litigation, hearings, investigations and other proceedings pending under a law amended or repealed or functions which may be transferred by this Act, continue in effect and may be continued and completed notwithstanding a transfer or amendment or repeal provided for in this Act. Certificates, orders, rules or regulations issued or filed under authority of law amended or repealed by this Act or functions which may be transferred by this Act, remain in effect for the term issued, until revoked, vacated, or otherwise modified under the provisions of this Act. All contracts or other obligations created by a law amended or repealed by this Act or by virtue of functions which may be tranferred by this Act, and in effect on the effective date of this Act, remain in effect until revoked, or modified under the provisions of this Act. Appropriations, records, equipment and other property of agencies of the state integrated with the Department of Community and Regional Affairs established under this Act are transferred to the department. Appropriations and other money available and to become available to agencies the functions, powers and duties of which have been transferred to the Department of Community and Regional Affairs established under this Act shall be available for the objects and purposes for which appropriate or otherwise made available, subject to the terms, restrictions, limitations or other requirements imposed under this section or federal law.

*Sec. 12. This Act takes effect July 1, 1972.

Approved by governor: July 7, 1972
Actual effective date: July 1, 1972

APPENDIX C

IN THE HOUSE

BY THE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

HOUSE BILL NO. 596

IN THE LEGISLATURE OF THE STATE OF ALASKA
SEVENTH LEGISLATURE—SECOND SESSION

A BILL

For an Act entitled: "An Act providing for boroughs in the unorganized borough; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*Section 1. AS 07 is amended by adding a new chapter to read:

CHAPTER 04. BOUNDARIES AND ORGANIZATION OF BOROUGHS IN THE UNORGANIZED BOROUGH.

ARTICLE 1. BOUNDARIES, ADMINISTRATION AND INCORPORATION.

Sec. 07.04.010. BOUNDARIES. By the tenth day following the convening of the first session of the Eighth Legislature, the Local Boundary Commission shall propose to the legislature a division of the unorganized area of the state into unorganized boroughs. The Local Boundary Commission may propose adjustments to the boundaries of existing boroughs to the extent necessary to secure conformity with the standards for borough boundaries set forth in the statutes and in the Constitution of the State of Alaska. A proposed adjustment of existing boundaries shall provide for those transitional matters the

commission considers necessary or appropriate. The boundaries proposed by the Local Boundary Commission become effective 45 days after presentation or at the end of the session whichever is earlier, unless disapproved by resolution concurred in by a majority of the members of each house. The proposed division is not subject to modification by the legislature as an alternative to disapproval, and if disapproved by the legislature the proposed division made in accordance with the section is of no effect.

Sec. 07.04.020. ADMINISTRATION. Unorganized boroughs shall be administered by the Department of Community and Regional Development as prescribed by the legislature.

Sec. 07.04.030. ADVISORY COUNCIL. In each unorganized borough the lieutenant governor, within 60 days of the establishment of unorganized borough in the manner provided in sec. 10 of this chapter shall provide for election of an advisory council of 11 members. The council may participate in an advisory capacity in the development and implementation of state programs and projects relating to the borough. Elections of council members shall be held every four years.

Sec. 07.04.035. COUNCIL MEMBERSHIP. At the time of election and during their tenure advisory council members shall be qualified voters of the state and residents of the borough. A vacancy on the advisory council shall be filled by a person qualified for election to the advisory council and selected by majority vote of the remaining members of the council. If a majority of seats on the advisory council are vacant concurrently, the lieutenant governor shall fill the vacancies by appointment of persons qualified for election to the advisory council.

Sec. 07.04.040. INCORPORATION. A percentage, determined in accordance with AS 07.10.020(8), of the qualified voters of an unorganized borough may petition for organization of the borough as a borough of the first, second or third class in the manner provided in AS 07.10 and 07.17, except that the petition need not include matters relating to boundaries.

ARTICLE 2. HOME RULE CHARTERS.

Sec. 07.04.050. ADOPTION OF CHARTER. An unorganized borough established under this chapter may adopt a home rule charter in the manner prescribed by AS 29.40.010 - 29.40.030 and AS 29.85.110(a) - (d), except that the advisory council elected in accordance with sec. 30 of this chapter shall perform the duties assigned to city councils, and except that the charter commission shall consist of 11 members. Vacancies on the charter commission shall be filled in the same manner as vacancies on the advisory council.

Sec. 07.04.060. ORGANIZATION The charter commission shall initiate organization of the borough in accordance with the terms of the charter by submission of the charter to the Department of Community and Regional Development. The charter shall be submitted within one year of the first meeting of the commission. The department shall review the charter in light of the circumstances of the particular borough and, within 120 days from receipt shall transmit the charter, together with its findings and recommendations, to the Local Boundary Commission.

Sec. 07.04.070. HEARING. The Local Boundary Commission shall hold at least one hearing in the area proposed to be organized for the purpose of hearing public comment on the charter.

Sec. 07.04.080. LOCAL BOUNDARY COMMISSION DETERMINATION. The Local Boundary Commission, within 90 days from receipt of the charter and the recommendations and findings of the Department of Community and Regional Development, shall determine whether the charter meets standards for organization established by the laws and the Constitution of the State of Alaska and by regulations adopted by the commission.

Sec. 07.04.090. REJECTION OF CHARTER. If the Local Boundary Commission determines that the charter fails to meet the standards for organization it shall reject the charter stating in writing its reasons for the rejection.

Sec. 07.04.100. AMENDED CHARTER. A charter commission, within 60 days of rejection, may prepare and submit to the Department of Community and Regional Development an amended charter fairly meeting the stated objections to the original charter. The amended charter shall be evaluated in the same manner as the original charter. No more than one original and one amended charter may be submitted within one 12 month period.

Sec. 07.04.110. RATIFICATION OF CHARTER. If the Local Boundary Commission determines that the charter meets the standards for organization it shall notify the lieutenant governor. As soon thereafter as practicable the lieutenant governor shall provide for an election in the borough on the question of whether or not the charter is ratified and for election of the officers provided for in the charter. The election shall be preceded by publication and posting of the proposed charter by the lieutenant governor substantially in the manner provided for other charter elections in AS 29.85.150.

Sec. 07.04.120. CERTIFICATION OF RESULTS. If a majority of the votes cast by the qualified voters of the borough are against ratification the lieutenant governor shall so certify and shall certify that the charter is defeated. If a majority of the votes cast by the qualified voters on the question are in favor of ratification the lieutenant governor shall so certify and declare that the borough in which the election was held is an organized borough and a municipal corporation in accordance with the terms of the charter. The lieutenant governor shall also certify the names of those candidates who received the greatest number of votes for the offices established by the charter.

Sec. 07.04.125. VOTERS, ELECTIONS AND COSTS. (a) A person is qualified to vote in a borough election authorized in this chapter if he is qualified to vote in state elections and if he is a resident of the borough.

(b) The lieutenant governor shall supervise elections under this chapter as provided for supervision of other borough elections under AS 07.10.120(d).

(c) The state through the office of the lieutenant governor shall assume the costs of elections and charter preparation under this chapter.

*Sec. 2. Nothing in the Act may be construed to affect any organization petition pending on the effective date of this Act. All such petitions shall be acted upon in the manner provided by law in effect prior to the effective date of this Act.

*Sec. 3. AS 07.05.010 and AS 07.05.040 are repealed.

*Sec. 4. This Act takes effect July 1, 1972.

APPENDIX D

IN THE HOUSE

BY THE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

HOUSE BILL NO. 597

IN THE LEGISLATURE OF THE STATE OF ALASKA
SEVENTH LEGISLATURE—SECOND SESSION

A BILL

For an Act entitled: "An Act providing for assessment, levy, collection and distribution of a property tax; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*Section 1. AS 43 is amended by adding a new chapter to read:

CHAPTER 77. PROPERTY TAX

ARTICLE 1. LEVY, ASSESSMENT AND COLLECTION.

Sec. 43.77.010. LEVY OF TAX. An annual tax of 15 mills is levied each tax year, beginning January 1, 1973, on the full and true value of taxable real and personal property located in the state.

Sec. 43.77.020. EXEMPTIONS. The following property is exempt from the tax levied in sec. 10 of this chapter:

(1) an owner-occupied single family dwelling, and the land it stands on, including but not limited to condomi-

niums to the extent of the interest of an owner, and household goods and personal effects, including but not limited to farm equipment, inventory, mechanic's tools and other equipment necessary to the business of the taxpayer and other property of the taxpayer of any description otherwise taxable under this chapter; however, an exemption under this paragraph may not exceed $50,000;

(2) property exempt under AS 29.10.336;

(3) unimproved land;

(4) aircraft weighing 6,000 pounds or less;

(5) boats and vessels otherwise taxed by a city or borough.

Sec. 43.77.030. CREDIT. A credit is allowed to an owner on the tax payable with respect to particular property under this chapter equal to the full amount of ad valorem tax levied by a city or borough on the same property for the same tax year and not satisfied by means of a tax credit or by means of a tax incentive.

Sec. 43.77.040. LOCAL EEFFORT EXCLUSION. No return need be filed nor tax paid by any person with respect to property located in a city or borough for any tax year as to which the Department of Revenue certifies that the amount of tax which would be levied under this chapter in the city or borough for that year exceeds the amount of revenue raised or anticipated from all local taxes in the city or borough during the tax year next preceding.

Sec. 43.77.050. ASSESSMENT. Assessment of property in unorganized boroughs subject to the tax levied under this chapter shall be carried out by the office of the state assessor in the Department of Community and Regional Development in the manner provided in AS 29.10.378 - 29.10.453 for first class cities, except that the state assessor in the Department of Community and Regional Development shall function in place of the local

assessor and a state assessment review officer shall function in place of the city council sitting as a board of equalization.

Sec. 43.77.060. STATE ASSESSMENT REVIEW OFFICERS. The commissioner of community and regional development shall appoint at least five qualified persons to serve at his pleasure as state assessment review officers. At least one such person shall be appointed from each of the four judicial districts.

Sec. 43.77.070. COMPENSATION, PER DIEM AND EXPENSES. State assessment review officers receive no compensation but are entitled to per diem and expenses authorized by law for boards.

Sec. 43.77.080. POWERS AND DUTIES. Each state assessment review officer has the powers and duties with respect to assessment in unorganized boroughs of a city council sitting as a board of equalization with respect to first class cities.

Sec. 43.77.090. HEARINGS. The commissioner of community and regional development shall assign annually at least one state assessment review officer to hear assessment appeals at appropriate locations in each election district.

Sec. 43.77.100. REAL PROPERTY RECORDING. To assist in assessment of real property subject to tax under this chapter, no recorder may accept for filing any document of transfer unless the document shows on its face a legal description of the property, the names and addresses of the buyer and seller, the date of the sale, and the purchase price, attested to by the transferee, except that the recorder may accept, in place of this information on the document of transfer, a sworn statement of the transferee containing the same information. The statement shall be held in confidence for use only by the office of the state assessor.

Sec. 43.77.110. COLLECTION AND ENFORCEMENT. The tax levied in this chapter is payable in full to the Department of Revenue on September 30 of the tax year. A penalty of ten per cent shall be added to delinquent taxes and interest at the rate of six per cent a year shall accrue on all unpaid

taxes, excluding penalties, from the due date until paid in full. Collection of the tax levied in this chapter shall be carried out by the Department of Revenue in the manner provided in AS 29.10.456 - 29.10.537 and AS 29.10.348 - 29.10.351 for first class cities.

Sec. 43.77.120. PROCEEDS OF TAX. Money collected under this chapter shall be deposited in the general fund.

Sec. 43.77.130. LIEN FOR TAX. The tax levied under this chapter and interest and penalty set out in sec. 110 of this chapter are liens upon the property assessed and taxed. With respect to property located outside an organized borough and outside of a city, the tax liens provided by this chapter are prior and paramount to all other liens or encumbrances against the property assessed. With respect to property located in cities and boroughs the tax liens provided by this chapter are prior to all liens and encumbrances against the property assessed except liens for taxes levied by the city or borough.

Sec. 43.77.140. FALSE STATEMENT. A person who knowingly makes a false statement in a return required under this chapter as to the amount, location, kind or value of property subject to taxation with intent to evade the taxation is guilty of a misdemeanor and upon conviction is punishable by a fine of not more than $500 or by imprisonment for not more than five days, or by both, together with the costs of prosecution.

ARTICLE 2. REVENUE SHARING AMONG UNORGANIZED BOROUGHS.

Sec. 43.77.160. DISTRIBUTION OF PROCEEDS. The legislature is authorized to appropriate each year as shared revenue for the benefit of unorganized boroughs an amount equal to the net amount of revenue raised under this chapter in the preceding year on property located in unorganized boroughs. Revenue so appropriated shall be administered by the Department of Community and Regional Development. The department shall hold and

utilize for the benefit of each unorganized borough an amount determined in accordance with secs. 170 - 190 of this chapter.

Sec. 43.77.170. DIRECT RETURN. From the appropriation authorized under sec. 160 of this chapter an amount equal to the net revenue raised by a five mill levy on property taxable under this chapter within each unorganized borough shall be held and used for the benefit of the unorganized borough where the particular property is located.

Sec. 43.77.180. DISTRIBUTION. Revenue appropriated under sec. 130 of this chapter, less revenue allotted in accordance with sec. 170 of this chapter, shall be held and used for the benefit of each unorganized borough in accordance with the ratio of its distribution index to the sum of the distribution indices of all unorganized boroughs.

Sec. 43.77.190. DISTRIBUTION INDEX. The distribution index of each unorganized borough is based upon its wealth, cost of services, population and area and is determined by the following formula:

$$D = \frac{F_a CP}{2F_p}$$

where

D = distribution index

F_a = average fiscal capacity of unorganized boroughs

F_p = fiscal capacity of the particular unorganized borough

C = cost of service which is the cost as determined by the state assessor for each tax year in each particular unorganized borough of providing education, water, sewer, police, fire, administrative and other government services expressed as a percentage of the average cost of such services in all unorganized boroughs.

P = population of the particular unorganized borough as a percentage of total population of unorganized boroughs.

Sec. 43.77.200. DEFINITIONS. In this chapter

(1) "Taxable real and personal property" means property not exempt from taxation under the constitution and laws of the state; particularly the term does not include property exempt under sec. 20 of this chapter, in AS 29.10.342, in AS 29.10.343 and in 29.10.344; the term otherwise includes property exempted from taxation by home rule charter provision and property exempted from execution under AS 09;

(2) "real property" means property defined in AS 29.10.552(1);

(3) "personal property" means property as defined in AS 29.10.552(3) excluding money on deposit;

(4) "unimproved land" means land with respect to which the state assessor in the Department of Community and Regional Development determines that no current physical addition or alteration which enhances the utility, value, or income producing potential exists;

(5) "fiscal capacity" means the total assessed value within an organized borough divided by its population.

Sec. 43.77.210. REGULATIONS. The Department of Community and Regional Development and the Department of Revenue may adopt regulations as appropriate to carry out their respective duties under this chapter.

*Sec. 2. This Act takes effect on the day after its passage and approval or on the day it becomes law without approval.

APPENDIX E

IN THE HOUSE BY THE LOCAL GOVERNMENT COMMITTEE

SENATE CS FOR CS FOR HOUSE BILL NO. 598

IN THE LEGISLATURE OF THE STATE OF ALASKA
SEVENTH LEGISLATURE—SECOND SESSION

A BILL

For an Act entitled: "An Act providing for a state tax on property used in connection with transportation of unrefined oil and gas; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*Section 1. AS 43 is amended by adding a new chapter to read:

CHAPTER 56. OIL AND GAS TRANSPORTATION PROPERTY TAX.

Sec. 43.56.010. LEVY OF TAX. An annual tax of 20 mills is levied each tax year beginning January 1, 1973, on the full and true value of taxable real and tangible personal property employed in the transportation of unrefined oil and gas. With respect to a facility employed for part of a tax year in such a manner as to render it taxable under this chapter or partly so employed for a full tax year, the value of the facility taxable under this chapter shall be proportionate to the employment. Property taxable under this chapter does not include property employed in the construction of facilities taxable under this chapter as distinct from the facilities themselves. The tax levied under this chapter does not apply to property with respect to which an ad valorem tax is

payable to a city or borough on January 1, 1972 and on January 1 of any succeeding year during which a tax is levied under this chapter.

Sec. 43.56.020. EXEMPTIONS. In addition. to property excluded under sec. 150(6) of this chapter, the following property is exempt from the tax levied under this chapter:

(1) producing oil or gas leases;

(2) machinery, appliances and equipment used in and around a well producing oil or gas and actually used in the operation of a well;

(3) oil and gas produced in the state upon which gross production taxes are paid;

(4) pipelines less than 21 inches in diameter.

Sec. 43.56.030. IN LIEU OF OTHER TAXES. Payment of the tax levied under this chapter is in lieu of all ad valorem taxes on property subject to tax under this chapter now or hereafter imposed by the state, or by a city or a borough.

Sec. 43.56.040. ASSESSMENT. Assessment of property subject to the tax levied under this chapter shall be carried out by the Local Affairs Agency substantially in the manner provided in AS 29.10.378 - 29.10.453 for first class cities, except that the agency shall function in place of the local assessor, and the State Assessment Review Board shall function in the place of the city council sitting as a board of equalization.

Sec. 43.56.050. STATE ASSESSMENT REVIEW BOARD. The director of local affairs shall appoint at least five qualified persons to serve at his pleasure as the State Assessment Review Board. At least one person shall be appointed from each of the four judicial districts.

Sec. 43.56.060. PER DIEM AND EXPENSES. Members of the State Assessment Review Board shall be compensated and are entitled to per diem and expenses authorized by law for boards.

Sec. 43.56.070. POWERS AND DUTIES. The State Assessment Review Board has the powers and duties with respect to assessment of property taxable under this chapter of a city council sitting as a board of equalization with respect to first class cities.

Sec. 43.56.080. COLLECTION AND ENFORCEMENT. The tax levied in this chapter is payable in full to the Department of Revenue on September 30 of the tax year, except that, the Department of Revenue may by regulation provide for prepayment of taxes and payment by installments. A penalty of ten per cent shall be added to delinquent taxes and interest at the rate of eight per cent per annum, or four percentage points above the per annum rate charged member banks for advances by the 12th Federal Reserve District that prevailed on the first day of the month preceding the commencement of that calendar quarter, whichever is greater, shall accrue on all unpaid taxes, excluding penalties, from the due date until paid in full. Collection of the tax levied under this chapter shall be carried out by the Department of Revenue substantially in the manner provided in AS 29.10.456 - 29.10.537 and 29.10.348 - 29.10.351 for first class cities.

Sec. 43.56.090. LIEN FOR TAX. The tax levied under this chapter and interest and penalty set out in sec. 80 of this chapter are liens upon the property subject to tax under this chapter. The liens provided by this section are prior and paramount to all other liens or encumbrances upon the same property.

Sec. 43.56.100. FALSE STATEMENT. A person who knowingly fails to file a return when due or makes a false statement in a return required under this chapter as to the amount, location, kind or value of property subject to taxation with intent to evade the taxation is guilty of a misdemeanor and upon conviction is punishable by a fine of not more than $1,000, or by imprisonment for not more than six months, or by both, together with the costs of prosecution.

Sec. 43.56.110. DEPOSIT IN GENERAL FUND. The annual revenue from the tax levied under this chapter shall be deposited in the general fund.

Sec. 43.56.120. AUTHORIZATION OF APPROPRIATION. There is authorized to be appropriated to the Local Affairs Agency each year an amount equal to the sum of the amounts deposited in the general fund under sec. 110 of this chapter, less costs incurred or anticipated in administration of the tax for the year of levy.

Sec. 43.56.130. DISTRIBUTION. As soon as practicable following the annual appropriation provided for in sec. 120 of this chapter, the Local Affairs Agency shall distribute to the treasurer of each taxing unit, and shall segregate and hold for the benefit of each unorganized borough, an amount which bears the same ratio to the total amount of the annual appropriation under sec. 120 of this chapter as the distribution index of the governmental unit bears to the sum of the distribution indices of all governmental units.

Sec. 43.56.140. DISTRIBUTION INDEX. The distribution index of each governmental unit is based on its cost of services, wealth and population and is determined annually in accordance with the following formula:

$$D = \frac{PCF_a}{F_p}$$

where

D = distribution index

P = total population of the governmental unit as a percentage of the statewide total population

C = cost of service index

F_p = fiscal capacity

F_a = statewide fiscal capacity.

Sec. 43.56.150. DEFINITIONS. In this chapter

(1) "cost of service index" means the ratio as determined by the Local Affairs Agency of the average cost of materials and personal services, weighed equally, in a particular governmental unit to the average cost of materials and personal services in the state as a whole for each tax year; in determining the cost of service index the state assessor may utilize such standards of reference as federal cost of living data, state employee regional pay differentials and other measures and standards which in his opinion tend to reflect cost differentials of construction materials, labor, and other components of the overall cost of local government operations;

(2) "fiscal capacity" means the ratio of total taxable assessed value to total population in a governmental unit;

(3) "governmental unit" means an organized borough or a city levying ad valorem taxes whether located inside or outside an organized borough, and an unorganized borough;

(4) "statewide fiscal capacity" means the ratio of total taxable assessed value to total population for the state as a whole;

(5) "taxable real and tangible personal property" means property not exempt from taxation under the constitution and laws of the state or of the United States, but does not include any subsurface estate or property used in a consumer distribution system; the term includes otherwise taxable property exempted from taxation under home rule ordinance or charter;

(6) "taxing unit" means any organized borough or city levying ad valorem taxes whether located inside or outside an organized borough.

Sec. 43.56.160. REGULATIONS. The Local Affairs Agency and the Department of Revenue may adopt regulations as

appropriate to carry out their respective duties under this chapter, including regulations governing determination of the population valuation and cost factors in sec. 140 of this chapter.

*Sec. 2. This Act takes effect on the day after its passage and approval or on the day it becomes law without approval.

APPENDIX F

IN THE HOUSE

BY THE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

HOUSE BILL NO.

IN THE LEGISLATURE OF THE STATE OF ALASKA
SEVENTH LEGISLATURE—SECOND SESSION

A BILL

For an Act entitled: "An Act providing for equalization of local tax resources; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*Section 1. AS 43 is amended by adding a new chapter to read:

CHAPTER 17. STATEWIDE TAX RESOURCE EQUALIZATION.

Sec. 43.17.010. PURPOSE. The purpose of this chapter is to provide for equitable allocation of tax resources among local government units organized and unorganized, and to insure that no area suffers impoverishment of necessary public services, relative to other areas, because of the chance location of taxable wealth within the state.

Sec. 43.17.020. DETERMINATION OF VALUE INCREASE. As soon as practicable following completion of assessment rolls for the tax year beginning January 1, 1973 and each tax year thereafter, the state assessor shall ascertain and certify for each governmental unit the amount by which the value of taxable property within the governmental unit as of January 1, 1973, and

each year thereafter, exceeds the value of the taxable property within the governmental unit as of January 1 of the preceding year. The amount of such excess is the annual value increase of the governmental unit.

Sec. 43.17.030. RETAINED REVENUE. (a) Forty per cent of the net revenue raised by the annual application of the mill rate levy of each taxing unit to the value increase of the tax base of the taxing unit may be retained and expended by the taxing unit in which the increase occurred.

(b) Forty per cent of the net revenue raised by the annual application of the mill rate levy imposed under AS 43.77 to the value increase of each unorganized borough may be appropriated, held and used for the benefit of unorganized boroughs in the manner provided in AS 43.77.160.

Sec. 43.17.040. EQUALIZATION REVENUE. (a) An amount equal to 60 per cent of the net revenue raised by the annual application of the mill rate levy of each taxing unit to the value increase of the taxing unit shall be remitted to the Department of Revenue for deposit in the general fund of the state not later than December 31, 1973 and each year thereafter.

(b) An amount equal to 60 per cent of the net revenue raised by the application of the mill rate levy imposed under AS 43.77 to the value increase of each unorganized borough shall be collected by the Department of Revenue for deposit in the general fund of the state not later than December 31, 1973 and each year thereafter.

Sec. 43.17.050. STATEWIDE TAX EQUALIZATION FUND. There is authorized to be appropriated each year an amount equal to the sum of the amounts deposited in the general fund under sec. 140 of this chapter. The amount appropriated under authority of this section is the statewide tax equalization fund which shall be administered by the Department of Community and Regional Development.

Sec. 43.17.060. DISTRIBUTION. As soon as practicable following appropriation of the statewide tax equalization fund provided for in sec. 50 of this chapter, the Department of Community and Regional Development shall distribute to the treasurer of each taxing unit, and shall segregate and hold for the benefit of each unorganized borough an amount which bears the same ratio to the total amount of the statewide tax equalization fund as the distribution index of each governmental unit bears to the sum of the distribution indices of all governmental units.

Sec. 43.17.070. DISTRIBUTION FORMULA. The distribution index of each governmental unit is based on its cost of services, wealth, population and local tax effort and is determined in accordance with the following formula

$$D = \frac{PCLF_a}{F_p}$$

where

D = distribution index

P = civilian population of the governmental unit as a percentage of the statewide civilian population

C = cost of service index

L = local tax effort

F_p = fiscal capacity

F_a = statewide fiscal capacity.

Sec. 43.17.080. DEFINITIONS. In this chapter

(1) "taxing unit" means any organized borough or city levying ad valorem taxes whether located within or outside an organized borough;

(2) "governmental unit" means an organized borough or a city levying ad valorem taxes whether located within or outside an organized borough, and an unorganized borough;

(3) "fiscal capacity" means the ratio of total taxable assessed value to total population within a governmental unit;

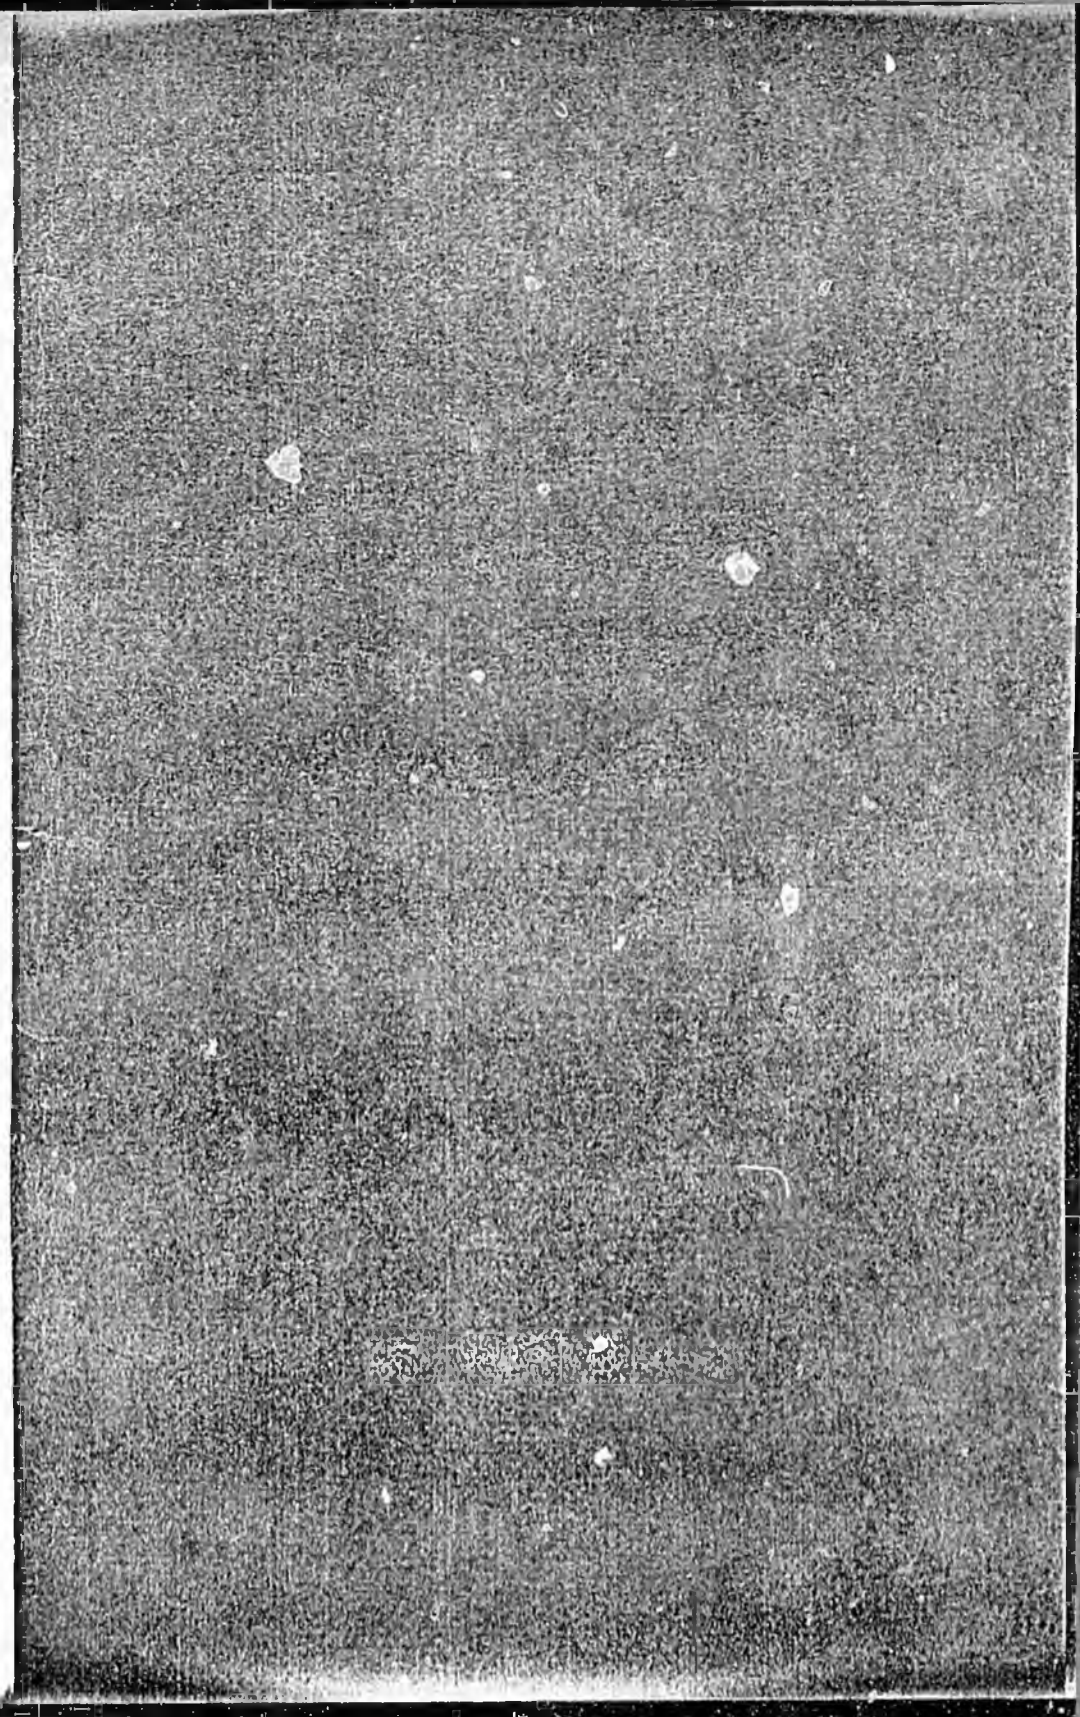
(4) "statewide fiscal capacity" means the ratio of total taxable assessed value to total population for the state as a whole;

(5) "local tax effort" means the ratio of total revenue raised from ad valorem taxes within each governmental unit, including, as applicable, the tax levied under AS 43.77, to the total assessed value of taxable property within the governmental unit;

(6) "cost of services index" means the cost as determined by the state assessor in the Department of Community and Regional Development for each tax year in each particular governmental unit of education, sewer, water, police and fire protection, road construction and other governmental services expressed as a percentage of the average cost of those services in the state as a whole.

Sec. 43.17.090. REGULATIONS. The Department of Community and Regional Development may adopt regulations necessary or appropriate to carry out the purpose of this chapter.

*Sec. 2. This Act takes effect on the day after its passage and approval or on the day it becomes law without approval.



EXTRA SESSION
CHAPTER 21—S.F.No.10

[Coded]

An act relating to metropolitan development; providing for allocation among governmental units of increases in the assessed valuation of commercial-industrial property within the metropolitan area; providing a formula for the distribution of additional revenues to municipalities within the metropolitan area; creating certain accounts in the state treasury; and appropriating money.

Be it enacted by the Legislature of the State of Minnesota:

Section 1. [473F.01] METROPOLITAN AREAS; DISTRIBUTION OF REVENUES; PURPOSE. The legislature finds it desirable to improve the revenue raising and distribution system in the seven county Twin Cities area to accomplish the following objectives:

(1) To provide a way for local governments to share in the resources generated by the growth of the area, without removing any resources which local governments already have;

(2) To increase the likelihood of orderly urban development by reducing the impact of fiscal considerations on the location of business and residential growth and of highways, transit facilities and airports;

(3) To establish incentives for all parts of the area to work for the growth of the area as a whole;

(4) To provide a way whereby the area's resources can be made available within and through the existing system of local governments and local decision making;

(5) To help communities in different stages of development by making resources increasingly available to communities at those stages of development and redevelopment when financial pressures on them are the greatest;

(6) To encourage protection of the environment by reducing the impact of fiscal considerations so that flood plains can be protected and land for parks and open space can be preserved; and

(7) To provide for the distribution to municipalities of additional revenues generated within the area or from outside sources pursuant to other legislation.

Sec. 2. [473F.02] DEFINITIONS. Subdivision 1. The terms defined in this section shall have the meanings therein ascribed to them for purposes of this act unless context otherwise requires.

Subd. 2. "Area" means the territory included within the boundaries of Anoka, Carver, Dakota, Hennepin, Ramsey, Scott, and Washington counties.

Subd. 3. "Commercial-industrial property" means the following categories of property, as defined in Minnesota Statutes, Section 273.13, excluding that portion of such property (a) which may, by law, constitute the tax base for a tax increment pledged pursuant to Minnesota Statutes, Section 462.585 or Section 474.10, to the extent and while such tax increment is so pledged; (b) which may, by law, constitute the tax base for tax revenues set aside and paid over for credit to a sinking fund pursuant to direction of the city council in accordance with Laws 1963, Chapter 881, as amended, to the extent such revenues are so treated in any year; or (c) which is exempt from taxation pursuant to Minnesota Statutes, Section 272.02:

(a) That portion of class 3 property consisting of stocks of merchandise and furniture and fixtures used therewith; manufacturers' materials and manufactured articles; and tools, implements and machinery, whether fixtures or otherwise.

(b) Class 3h property.

(c) Class 3j property.

(d) That portion of class 4 property which is either used or zoned for use for any commercial or industrial purpose, except for such property which is, or, in the case of property under construction, will when completed be used exclusively for residential occupancy and the provision of services to residential occupants thereof. Property shall be considered as used exclusively for residential occupancy only if all of not less than 80 percent of its occupied residential units is, or, in the case of property under construction, will when completed be occupied under an oral or written agreement for occupancy over a continuous period of not less than 30 days.

If the classification of property prescribed by section 273.13 is modified by legislative amendment, the references in this subdivision shall be to such successor class or classes of property, or portions thereof, as embrace the kinds of property designated in this subdivision.

(e) That property valued and assessed under Minnesota Statutes, Section 273.13, Subdivision 14.

Subd. 4. "Residential property" means the following categories of property, as defined in Minnesota Statutes, Section 273.13, excluding that portion of such property exempt from taxation pursuant to Minnesota Statutes, Section 272.02:

(a) Class 3b property

Words or additions indicated by underline, deletions by strikeout.

(b) Class 3c property

(c) Class 3cc property

(d) Class 3f property

(e) And that portion of Class 4 property used exclusively for residential occupancy.

(f) That property valued and assessed under Minnesota Statutes Section 273.13, Subdivision 17.

Subd. 5. "Governmental unit" means a county, city, village, borough, town, school district, or other taxing unit or body which levies ad valorem taxes in whole or in part within the area.

Subd. 6. "Administrative auditor" means the person selected pursuant to section 3.

Subd. 7. "Population" means the most recent estimate of the population of a municipality made by the metropolitan council and filed with the state auditor. The council shall annually estimate the population of each municipality as of a date which it determines and, in the case of a municipality which is located partly within and partly without the area, the proportion of the total which resides within the area, and shall promptly thereafter file its estimates with the state auditor.

Subd. 8. "Municipality" means a city, village, borough, town or township located in whole or part within the area. If a municipality is located partly within and partly without the area, the reference in this act to property or any portion thereof subject to taxation by a taxing jurisdiction within the municipality are to such property or portion thereof as is located in the portion of the municipality within the area, except that the fiscal capacity of such a municipality shall be computed upon the basis of the valuation and population of the entire municipality.

Subd. 9. "Qualifying municipality" means each city, village or borough which is located in whole or in part within the metropolitan area and which has a population of not less than 2500.

Subd. 10. "County" means each county in which a governmental unit is located in whole or in part.

Subd. 11. "Locally raised revenues" means the total current receipts of a municipality, including those of its constituent agencies, boards, commissions, and other bodies, from all sources and for all purposes, reduced by the expenses, including a reasonable allowance for depreciation of capital assets, incurred in the operation by the municipality of facilities for the production or sale of [illegible]

...r, gas, heat, or telephone service, except that locally raised ...enues shall not include:

(a) Revenues derived from the operation of municipal liquor ...es;

(b) Public grants, as defined in subdivision 17, except that for ...poses of this subdivision the amount prescribed by clause (2) of ...division 16 shall be multiplied by 10;

(c) Grants or gifts from private persons, unless made by an entity ...mpt from ad valorem taxation in an amount which does not ...ed the ad valorem tax which would have been payable by the ...ity during that year for the benefit of the recipient if the ...mption did not exist; and

(d) The proceeds of any indebtedness incurred by the municipali-

The public examiner shall certify the locally raised revenues of ... municipality for each year to the state auditor not later than ...cembe: 1 of the subsequent year. If the fiscal year of a ...icipality ends on a date other than December 31, the certification ... relate to the fiscal year which ended in the calendar year ...ding that in which the certificate is required to be made, and ...rences in this act to the locally raised revenues of a municipality ...specified year shall be deemed to refer to the fiscal year ended in ...specified calendar year.

Subd. 12. "Market value" of real property within a municipality ...s the "actual market value" of real property within the ...icipality, determined in the manner and with respect to the ...erty described for school districts in Minnesota Statutes, Section ...3, Subdivision 4, except that no adjustment shall be made for ...erty on which taxes are paid into the state treasury under gross ...ings tax laws applicable to common carrier railroads. For ...oses of this act, the equalization aid review committee shall ...ally make determinations and reports with respect to each ...icipality which are comparable to those it makes for school ...icts under Minnesota Statutes, Section 124.211, Subdivision 3, in ...same manner and at the same times as are prescribed by that ...division. The auditor of each county and the commissioner of ...tion shall annually determine and certify to the state auditor, for ...municipality, information comparable to that required of each of ... by section 475.53, subdivision 4, for school districts, as soon as ...ticable after it becomes available. The state auditor shall then ...ute the market value of property within each municipality.

Subd. 13. "Valuation" means the market value of real property ...a municipality.

...ons or additions indicated by underline, deletions by strikeout.

Subd. 14. "Fiscal capacity" of a municipality means its valuation, determined as of January 2 of any year, divided by its population, determined as of a date in the same year.

Subd. 15. "Average fiscal capacity" of municipalities means the sum of the valuations of all municipalities, determined as of January 2 of any year, divided by the sum of their populations, determined as of a date in the same year.

Subd. 16. "Fiscal effort" of a municipality for any year means its locally raised revenues in that year, divided by its valuation in that year.

Subd. 17. "Public grants" means (1) the sum of all moneys received by a municipality pursuant to Minnesota Statutes, Sections 273.13, Subdivisions 3 and 15 (4), 273.69, Subdivision 8, 297.03, Subdivision 4, 297.13, 297A.51 to 297A.60, and 340.60; and (2) one-tenth of all other moneys received by a municipality from the federal and state governments, and their agencies and political subdivisions, under programs of intergovernmental aids and grants distributed by formula or upon application. The public examiner shall certify the public grants of each municipality for each year to the state auditor not later than September 1 of the subsequent year.

Subd. 18. "Adjusted fiscal capacity" of a municipality means the product of its fiscal capacity and the sum of its locally raised revenues and public grants, divided by its locally raised revenues.

Subd. 19. "Base adjusted fiscal capacity" for municipalities for any year means the highest adjusted fiscal capacity of any qualified municipality in that year.

Subd. 20. "Metropolitan area municipal equity account" or "municipal equity account" means the moneys deposited in the state treasury and credited to the account, for distribution to municipalities in accordance with this act, pursuant to other legislation. A metropolitan area municipal equity account is hereby established in the state treasury.

Subd. 21. "Metropolitan council" or "council" means the metropolitan council created by Minnesota Statutes, Chapter 473B.

Subd. 22. "Levy" means the amount certified to the county auditor pursuant to Minnesota Statutes, Chapter 275, less all reductions made by the auditor pursuant to any provision of law in determining the amount to be spread against taxable property.

Sec. 3. [473F.03] ADMINISTRATIVE AUDITOR. Subdivision 1. On or before July 1 of 1972 and each subsequent even numbered year the auditors of the counties within the area shall meet at the office of the auditor of Hennepin county and elect from among their

ber one auditor to serve as administrative auditor for a period of years and until his successor is elected. If a majority is unable gree upon a person to serve as administrative auditor, the state or shall appoint him from among the auditors of the counties in area. If the administrative auditor ceases to serve as a county or within the area during the term for which he was elected or nted, a successor shall be chosen in the same manner as is ded herein for the original selection, to serve for the unexpired

Subd. 2. The administrative auditor shall utilize the staff and ities of the auditor's office of the county he serves to perform the tions imposed upon him by this act. His county shall be bursed for the marginal expenses incurred by its county auditor his staff hereunder by contributions from each other county in area in an amount which bears the same proportion to the total enses as the population of the other county bears to the total lation of the area. The administrative auditor shall annually, or before February 1, certify the amounts of total expense for the eding calendar year, and the share of each county, to the surer of each other county. Payment shall be made by the surer of each other county to the treasurer of the county rring expense on or before the succeeding March 1.

Sec. 4. [473F.04] ASSESSED VALUATION; 1971. On or before ember 20, 1972, the assessors within each county in the area shall rmine and certify to the county auditor the assessed valuation in of commercial-industrial property subject to taxation within municipality in his county.

Sec. 5. [473F.05] ASSESSED VALUATION; 1972 AND SUBQUENT YEARS. On or before November 20 of 1972 and each quent year, the assessors within each county in the area shall rmine and certify to the county auditor the assessed valuation in year of commercial-industrial property subject to taxation n each municipality in his county.

Sec. 6. [473F.05] INCREASE IN ASSESSED VALUATION. or before November 20 of 1972 and each subsequent year, the or of each county in the area shall determine the amount, if any, hich the assessed valuation in that year of commercial-industrial erty subject to taxation within each municipality in his county eds the assessed valuation in 1971 of commercial-industrial erty subject to taxation within that municipality. If a municiy is located in two or more counties within the area, the auditors se counties shall certify the data required by sections 4 and 5 to unty auditor who is responsible under other provisions of law locating the levies of that municipality between or among the ed counties. That county auditor shall determine the amount of t excess, if any, for the municipality under this section, and

nges or additions indicated by underline, deletions by strikeout.

certify that amount under section 7. Notwithstanding any other provision of this act to the contrary, in the case of a municipality which is designated on the effective date of this act as a redevelopment area pursuant to Section 401(a) (4) of the Public Works and Economic Development Act of 1965, P.L. 89-136, the increase in assessed valuation of commercial-industrial property for purposes of this section shall be determined in each year subsequent to the termination of such designation by using as a base the assessed valuation of commercial-industrial property in that municipality in the year following that in which such designation is terminated, rather than the assessed valuation of such property in 1971.

Sec. 7. [473F.07] COMPUTATION OF AREA-WIDE TAX BASE. Subdivision 1. Each county auditor shall certify the determinations pursuant to sections 4, 5, and 6 to the administrative auditor on or before November 20 of 1972 and each subsequent year. The administrative auditor shall determine the sum of the amounts certified pursuant to section 6, and divide that sum by two and one-half. The resulting amount shall be known as the "area-wide tax base for ..... (year)."

Subd. 2. The state auditor shall certify to the administrative auditor, on or before November 20 of 1972 and each subsequent year, the population of each municipality for the preceding year, the proportion of that population which resides within the area, the average fiscal capacity of municipalities for the preceding year, and the fiscal capacity of each municipality for the preceding year.

Subd. 3. The administrative auditor shall determine, for each municipality, the product of (a) its population, (b) the proportion which the average fiscal capacity of municipalities for the preceding year bears to the fiscal capacity of that municipality for the preceding year, and (c) two. The product shall be the area-wide tax base distribution index for that municipality, provided that (a) if the product in the case of any municipality is less than its population, the index shall be increased to its population, and (b) if a municipality is located partly within and partly without the area its index shall be that which is otherwise determined hereunder, multiplied by the proportion which its population residing within the area bears to its total population as of the preceding year.

Subd. 4. The administrative auditor shall determine the proportion which the index of each municipality bears to the sum of the indices of all municipalities. In the case of each municipality he shall then multiply this proportion by the area-wide tax base.

Subd. 5. The product of the multiplication prescribed by subdivision 4 shall be known as the "area-wide tax base for ..... (year) attributable to ..... (municipality)." The administrative auditor shall certify such product to the auditor of the county in which the municipality is located on or before November

Sec. 8. [473F.08] TAXABLE VALUE. Subdivision 1. The ...nty auditor shall determine the taxable value of each governmen... unit within his county in the manner prescribed by this section.

Subd. 2. The taxable value of a governmental unit is its ...essed valuation, as determined in accordance with other provisions ...law, subject to the following adjustments:

(a) There shall be subtracted from its assessed valuation, in each ...icipality in which the governmental unit exercises ad valorem ...ing jurisdiction, an amount which bears the same proportion to 40 ...cent of the amount certified in that year pursuant to section 6 in ...pect to that municipality as the total assessed valuation of ...mmercial-industrial property which is subject to the taxing juris... of the governmental unit within the municipality bears to the ...al assessed valuation of commercial-industrial property within the ...icipality;

(b) There shall be added to its assessed valuation, in each ...icipality in which the governmental unit exercises ad valorem ...ing jurisdiction, an amount which bears the same proportion to the ...-wide base for the year attributable to that municipality as the ...al assessed valuation of residential property which is subject to the ...ing jurisdiction of the governmental unit within the municipality ...rs to the total assessed valuation of residential property of the ...icipality.

Subd. 3. On or before November 30 of 1972 and each subsequent ..., the county auditor shall apportion the levy of each governmen... unit in his county in the manner prescribed by this subdivision. ...shall:

(a) Determine that portion of the levy which bears the same ...portion to the total levy as the amount set forth in subdivision 2, ...se (b), bears to the taxable value of the governmental unit; and

(b) Determine the excess of the levy over that portion of the levy ...rmined pursuant to clause (a).

Subd. 4. In 1972 and subsequent years, the county auditor shall ...de that portion of the levy determined pursuant to subdivision 3, ...se (b), by the assessed valuation of the governmental unit, less ...portion subtracted from assessed valuation pursuant to subdivi... 2, clause (a). The resulting rate shall apply to all taxable ...erty except commercial-industrial property, which shall be taxed ...ordance with subdivision 6.

Subd. 5. On or before November 30 of 1972 and each subsequent ... the county auditor shall certify to the administrative auditor ...portion of the levy of each governmental unit determined ...uant to subdivision 3, clause (a). The administrative auditor

...ges or additions indicated by underline, deletions by strikeout.

shall then determine the rate of taxation sufficient to yield ... amount equal to the sum of such levies from the area-wide tax ... On or before December 5 the administrative auditor shall certify ... rate to each of the county auditors.

Subd. 5a. If a governmental unit is located in two or ... counties, the computations and certifications required by subdivis... 3 to 5 with respect to it shall be made by the county auditor ... responsible under other provisions of law for allocating its le... between or among the affected counties.

Subd. 6. The rate of taxation determined in accordance ... subdivision 5 shall apply in the taxation of each item of commerc... industrial property subject to taxation within a municipality to ... portion of the assessed valuation of the item which bears the ... proportion to its total assessed valuation as 40 percent of the am... determined pursuant to section 6 in respect to the municipality ... which the property is taxable bears to the amount determ... pursuant to section 5. The rate of taxation determined in acc... ance with subdivision 4 shall apply in the taxation of the remainder ... the assessed valuation of the item.

Subd. 7. On or before January 1 of 1973 and each subsequ... year, the administrative auditor shall certify to the state treas... the amount of that portion of the levy made by each governm... unit set forth in ...bdivision 3, clause (a). Each county trea... shall remit all tax payments computed pursuant to subdivision ... the state treasurer not later than 20 days before the times prescri... by Minnesota Statutes, Chapter 276, for the apportionment ... distribution of tax revenues by county treasurers. The state t... surer shall deposit such payments to the credit of the area-wide ... account, which is hereby created. Marginal expenses incurred by ... state treasurer under this section, and all refunds of tax receipts ... into the account, shall be paid from the account, and all inte... earned on moneys in the account shall be credited to the account. ... the distributions under subdivision 8 shall be adjusted proportion... to reflect expense payments and interest income and reduc... reflect the payment of each refund in amounts proportionate ... distributions received in the year the tax was paid.

Subd. 8. The state treasurer shall apportion and distri... amounts received by him pursuant to subdivision 7 to the co... treasurer having jurisdiction of each governmental unit ent... thereto as shown by the certification to him in accordance ... subdivision 7. The apportionment and distribution shall be ma... the manner and not later than ten days before the times pre... by Minnesota Statutes, Chapter 276, for the apportionment ... distribution of tax revenues by county treasurers. Each co... treasurer shall include the amounts thus received in his distrib... pursuant to Chapter 276. Amounts necessary for distrib...

funds and payment of administrative expenses under this act are hereby appropriated.

Subd. 9. If the payment of any tax attributable to the area-wide tax base is delinquent, the county treasurer to whom said tax is payable shall promptly notify the state treasurer of the failure of payment. The state treasurer shall deduct the amount of the delinquency from his distributions to the county entitled to receive payment from the taxpayer. If the tax is subsequently paid or collected, the amount so paid or collected shall be retained by the county and distributed by it to the governmental units whose distributions were reduced pursuant to this subdivision by reason of the delinquency in the amount of such reduction.

Subd. 10. For the purpose of computing the amount or rate of any salary, aid, tax, or debt authorized, required, or limited by any provision of any law or charter, where such authorization, requirement, or limitation is related in any manner to any value or valuation of taxable property within any governmental unit, such value or valuation shall be adjusted to reflect the adjustments to valuation effected by subdivision 2, provided that: (1) in determining the market value of commercial-industrial property or any class thereof within a governmental unit for any purpose other than section 7, (a) the reduction required by this subdivision shall be that amount which bears the same proportion to the amount subtracted from the governmental unit's assessed valuation pursuant to subdivision 2, clause (a), as the market value of commercial-industrial property, or such class thereof, located within the governmental unit bears to the assessed valuation of commercial-industrial property, or such class thereof, located within the governmental unit, and (b) the increase required by this subdivision shall be that amount which bears the same proportion to the amount added to the governmental unit's assessed valuation pursuant to subdivision 2, clause (b), as the market value of commercial-industrial property, or such class thereof, located within the governmental unit bears to the assessed valuation of commercial-industrial property, or such class thereof, located within the governmental unit; and (2) in determining the market value of property within a municipality for purposes of section 7, the adjustment prescribed by clause (1)(a) hereof shall be made and that prescribed by clause (1)(b) hereof shall not be made.

Subd. 11. For the purposes of computing distributions under Minnesota Statutes, Section 273.69, the property tax levy imposed on all taxable property for the purpose of a governmental unit, referred to therein, shall be deemed to consist of the levy of that governmental unit, as defined in section 2, subdivision 22, irrespective of the extent to which levies are spread against the area-wide tax base pursuant to this section.

Words or additions indicated by underline, deletions by strikeout.

Sec. 9. [473F.09] ADJUSTMENTS IN DATES. If, by reason of the enactment of any other law, the date by which the commissioner of taxation is required to certify to the county auditors the records or proceedings affecting the assessed valuation of property is advanced to a date earlier than November 15, the dates specified in sections 3 through 7 and 10 may be modified in the years to which such other law applies in the manner and to the extent prescribed by the administrative auditor.

Sec. 10. [473F.10] REASSESSMENTS AND OMITTED PROPERTY. Subdivision 1. If the commissioner of taxation orders a reassessment of all or any portion of the property in a municipality other than in the form of a mathematically prescribed adjustment of valuation, or if omitted property is placed upon the tax rolls, and the reassessment has not been completed or the property placed upon the rolls, as the case may be, by November 15, the assessed valuation of the affected property shall, for purposes of sections 3 to 8, be determined from the abstracts filed by the county auditor with the commissioner of taxation.

Subd. 2. If the reassessment, when completed and incorporated by the commissioner of taxation in his certification of the assessed valuation of the municipality, or the listing of omitted property, when placed on the rolls, results in an increase in the assessed valuation of commercial-industrial property in the municipality which differs from that used, pursuant to subdivision 1, for purposes of sections 3 to 8, the increase in the assessed valuation of commercial-industrial property in that municipality in the succeeding year, as otherwise computed under section 6, shall be adjusted in a like amount, by an increase if the reassessment or listing discloses a larger increase than was used for purposes of sections 3 to 8, or by a decrease if the reassessment or listing discloses a smaller increase than was used for those purposes, provided that no adjustment shall reduce the amount determined under section 6 to an amount less than zero.

Subd. 3. Subdivisions 1 and 2 shall not apply to the determination of the tax rate under section 8, subdivision 4, or to the determination of the assessed valuation of commercial-industrial property and each item thereof for purposes of section 8, subdivision 6.

Sec. 11. [473F.11] LATE LEVIES. Subdivision 1. If a governmental unit does not certify its levy to the county auditor by November 25, then for purposes of section 8, subdivision 3, clause (a), and section 8, subdivision 5, its levy shall be deemed to equal its levy in the preceding year.

Subd. 2. If a governmental unit certifies its levy to the county auditor on or before November 25, no change in its levy subsequent to that date shall be recognized for purposes of section 8, subdivision 3, clause (a), and section 8, subdivision 5.

Changes or additions indicated by underline, deletions by strike-

Subd. 3. Subdivisions 1 and 2 shall not apply to section 8, subdivision 3, clause (b), and section 8, subdivision 4.

Subd. 4. If, in any year, the levy employed in respect to a governmental unit, for purposes of section 8, subdivision 3, clause (a), of section 8, subdivision 5, is determined under subdivision 1 or subdivision 2, and its actual levy as determined subsequent to December 25 is a different amount, then its levy as otherwise determined in the succeeding year shall, for purposes of those provisions, be increased in the amount of the difference if the actual levy was greater than that employed for purposes of those provisions, decreased in the amount of the difference if the actual levy was less than that employed for purposes of those provisions.

Sec. 12. [473F.12] DISTRIBUTIONS FROM MUNICIPAL EQUITY ACCOUNT. Subdivision 1. The sums deposited in the state treasury to the credit of the municipal equity account and all interest earned thereon shall be distributed to qualifying municipalities in the manner provided by this section. Amounts so distributed shall be expended by each municipality in the manner determined by its governing body consistently with other statutory and charter provisions.

Subd. 2. On September 1 of 1971 and each subsequent year, the state auditor shall estimate the total amount available for distribution to municipalities from the municipal equity account during the subsequent calendar year. The amount so estimated shall be the sum of the estimated balance in the account on November 15 of the year in which the estimate is made, the estimated deposits to the credit of the account thereafter through November 15 of the subsequent year, and interest earned by the fund over the 12 month period. The amount to be distributed to each qualifying municipality shall be the amount determined in accordance with subdivision 3, except that (a) if the sum of the amounts so determined differs from the total amount estimated to be available for distribution, the amount of the distribution to each municipality shall be adjusted proportionately, and (b) the amount to be distributed to each qualifying municipality, after any adjustment prescribed by clause (a), shall not be less than $9, or, if the total amount estimated to be available for distribution is less than $10 millions, that proportion of $9 which equals the proportion which the total amount estimated to be available for distribution bears to $10 millions, multiplied by the population of the municipality residing within the area as determined for the year preceding that in which the estimate is made. To the extent that the distributions to any municipality or group of municipalities are adjusted pursuant to clause (b), the distributions to other municipalities shall be adjusted proportionately in amounts sufficient to make the total of the distributions to all municipalities equal the total amount estimated to be available for distribution. The state auditor shall notify the governing body of each qualifying

New or additions indicated by underline, deletions by strikeout.

municipality of the amount so determined with respect to the municipality before September 20.

Subd. 3. The amount of the distribution to each qualifying municipality is the product of its fiscal effort for the year preceding that in which the estimate is made and the excess of base adjusted fiscal capacity for municipalities for the preceding year over the adjusted fiscal capacity of the municipality for the preceding year. If a qualifying municipality is located partly within and partly without the area, its distribution shall be that which is otherwise determined hereunder, multiplied by the proportion which its population residing within the area bears to its total population as of the year preceding that in which the estimate is made.

Subd. 4. On or before each of the dates June 15 and November 15 of 1972 and each subsequent year, the state auditor shall issue a warrant in favor of the treasurer of each qualifying municipality in an amount equal to one half the amount determined by the state auditor to be due the municipality in that year under the terms of subdivision 2. There is hereby appropriated from the municipal equity account, to each municipality entitled to payments authorized by this section, sufficient moneys to make such payments.

Sec. 13. [473F.13] CHANGE IN STATUS OF MUNICIPALITY. Subdivision 1. If a qualifying municipality is dissolved, consolidated with all or part of another municipality, annexes territory, has a portion of its territory detached from it, or is newly incorporated, the secretary of state shall immediately certify the fact to the state auditor. The secretary of state shall also certify to the state auditor the current population of the new, enlarged, or successor municipality, if determined by the municipal commission incident to consolidation, annexation, or incorporation proceedings. The population so certified shall govern for purposes of this act until the metropolitan council files its first population estimate as of a later date with the state auditor. If an annexation of unincorporated land occurs without proceedings before the municipal commission, the population of the annexing municipality as previously determined shall continue to govern for purposes of this act until the metropolitan council files its first population estimate as of a later date with the state auditor.

Subd. 2. The amount of each distribution from the municipal equity account shall reflect the status of municipalities as certified by the state auditor on September 1 of the year preceding that in which the distribution is made. If the status of a municipality thereafter changes before the distribution is made, the distribution shall be made to the successor municipality or municipalities. If there are two or more successors, the distribution shall be apportioned among them in accordance with Minnesota Statutes, Section 414.037.

Subd. 3. In determining the locally raised revenues or market ue of property attributable to a successor municipality for a year or to a change in status, such amount shall be deemed the sum of e amounts of its predecessor municipalities and towns. If any of e predecessors were divided incident to the change, then for poses of this act its locally raised revenues shall be apportioned ong its successors in proportion to the division of population ween them, and the market value of property located therein shall allocated to the successor in which the property is located.

Approved July 23, 1971.

EXTRA SESSION
CHAPTER 25—H.F.No.212

[Coded]

An act relating to employment; authorizing the state, its ernmental subdivisions and other public instrumentalities to ploy certain persons in accordance with a federal emergency ployment act.

it enacted by the Legislature of the State of Minnesota:

Section 1. [15.61] FEDERAL EMERGENCY EMPLOYMENT T; EMPLOYMENT OF PERSONS BY STATE. Subdivision 1. state of Minnesota, its departments, agencies and instrumentali- and any county, city, village, borough, town, school district or r body corporate and politic, may employ unemployed and employed persons as defined in the federal Emergency Employ- t Act of 1971 pursuant to and in accordance with the terms of act.

Subd. 2. The provisions of Minnesota Statutes 1969, Sections 5 to 197.48 and 43.30 and any other law or ordinance relating to erence in employment and promotion of persons having served in armed services, the provisions of any civil service law, ule or ation, the provisions of any city charter or any ordinance or ation, or the provisions of any other law or statute in conflict the provisions of the federal Emergency Employment Act of shall not be applicable to the employment of the persons ed in subdivision 1.

Subd. 3. The provision of any law limiting the complement of state department or agency is not applicable to persons employed

ges or additions indicated by underline, deletions by strikeout.

HB 87

Note: Minnesota's Metropolitan Fiscal Disparities Act—An Experiment in Tax Base Sharing

The problem of fiscal disparities within a metropolitan area[1] is essentially one of inequalities in the taxable resources available to each of the various political subdivisions that compose the metropolis. It is a problem of relatively recent development. At one time, the taxable resources of most central cities were more or less balanced, consisting of commerce and industry as well as the residences of people of varying income levels. Although these various land uses were generally concentrated in different neighborhoods, the city itself was large enough to contain them all and thus to allow the rich areas to subsidize the poorer ones. After development reached the borders of the central city, however, growth began to occur within political subdivisions in the surrounding countryside—suburban municipalities which were generally smaller and more homogeneous than the central city, and which tended to be either rich or poor in terms of taxable resources. At the same time, the central city came to shelter an increasing proportion of the less-advantaged while it lost both industry and residences of the more affluent to the suburbs. In short, the sharing of taxable resources that once was possible within the confines of the central city has today become impossible because of the increasing political fragmentation of the metropolis.[2] This in turn has given rise to one aspect of today's much decried urban fiscal crisis.

The Metropolitan Fiscal Disparities Act[3] represents Minne-

1. Many terms used in this Note to denote a community or political subdivision will be used in a narrow, technical fashion. "Metropolis" or "metropolitan area" will be used to mean the overall seven-county area to which the Metropolitan Fiscal Disparities Act applies. *See* note 4 *infra*. Within this area are "governmental units" and "municipalities," both of which are defined by the Act. "'Governmental unit' means a county, city, town, school district, or other taxing unit or body which levies ad valorem taxes in whole or in part within the [seven-county] area." MINN. STAT. § 473F.02(5) (1974). A governmental unit is thus a taxing body. "'Municipality' means a city, town, or township located in whole or part within the [seven-county] area." *Id.* § 473F.02(3). *See also* notes 42-43 *infra* and accompanying text.

2. *See* U.S. ADVISORY COMM'N ON INTERGOVERNMENTAL RELATIONS, URBAN AMERICA AND THE FEDERAL SYSTEM 9-13 (1969) [hereinafter cited as URBAN AMERICA].

3. MINN. STAT. ch. 473F (1974).

sota's attempt to partially alleviate the financial imbalance among certain of its metropolitan municipalities. The Act applies to a seven-county area that includes the central cities of St. Paul and Minneapolis and their suburbs.[4] Under the Fiscal Disparities Act, all local governmental units in this seven-county area share a portion of the growth in the area's commercial-industrial[5] tax base. It is the purpose of this Note to investigate the workings and constitutionality of the Act, as well as to critically analyze the effect of the Act on the provision of public services[6] and the development of the seven-county area.[7]

I. THE PROBLEM OF FISCAL DISPARITIES

A "fiscal disparity" exists between two or more governmental units when they have unequal abilities to generate revenue. Since local governments in Minnesota generate their revenues primarily through an ad valorem tax upon real property,[8] the

4. The Act applies to the seven counties of Anoka, Carver, Dakota, Hennepin, Ramsey, Scott, and Washington, which cover almost 3000 square miles and contain approximately two million people. Within this area lies a diverse sampling of municipalities, including central cities, balanced cities, dormitory suburbs, and commercial-industrial areas. *See* J. MARGOLIS, W. HELLER & N. GLICKMAN, METROPOLITAN FISCAL DISPARITIES: PROBLEMS AND POLICIES 5-1 to 5-5 (1971) [hereinafter cited as MARGOLIS]. The various and oftentimes overlapping political subdivisions include 137 cities, 52 townships, 49 school districts, 7 counties, and numerous special purpose governmental units.

5. "Commercial-industrial property" is defined in MINN. STAT. § 473F.02(3) (1974). Basically, it is property which is either used or zoned for any commercial or industrial purpose. Apartment buildings, however, are not included. *Id.* § 473F.02(3)(d).

6. The term "public services" will be used to denote those services that local governmental units normally provide, such as fire and police protection, water and sewer service, and education.

7. This Note will not, however, discuss the portions of the Act that provide for a municipal equity account. Those provisions establish a formula whereby funds appropriated pursuant to other state legislation may be distributed to municipalities in the seven-county area. *See* MINN. STAT. §§ 473F.01(7), .02(9), (11), (16)-(20), .12, .13 (1974). But the provisions for this account are essentially unrelated to the rest of the Act.

8. *See* MINNESOTA LEGISLATURE SUBCOMM. ON FISCAL DISPARITIES OF HOUSE COMM. ON METROPOLITAN AND URBAN AFFAIRS, FINAL REPORT, 1969-70 INTERIM 1-2 (1971) [hereinafter cited as HOUSE REPORT]. In recent years, the Minnesota legislature has attempted to partially relieve both citizens and local governments from the burdens of local property taxes by using state income tax revenues as a source for increased state aid to school districts and local governments. *See* MINN. STAT. § 124.212 (1974); *id.* § 477A.01 *et seq.* The governor's proposals for the 1975-77 budget indicate that this form of state aid will continue to increase. *See* Minneapolis Tribune, Jan. 17, 1975, § B, at 10, cols. 3-4. As to the

taxable resources available to these governmental units are heavily dependent on the assessed valuation of the real property located within their borders. As indicated earlier,[9] however, political fragmentation of a metropolitan area results in the area's property tax base being divided rather arbitrarily among the various governmental units.[10] Fiscal disparities may thus arise when the per capita assessed valuation of real property differs between two of these governmental units; a unit with a high fiscal capacity[11] can tax itself at a low rate and still generate the same revenue per capita that a poorer municipality will generate with a high tax rate.[12] This situation has had two major effects: inequities in the provision of public services, and im-

---

efficacy of this form of state aid in providing relief to local governmental units, see note 125 *infra*.

9. *See* text accompanying note 2 *supra*.

10. *See* San Antonio Indep. School Dist. v. Rodriguez, 411 U.S. 1, 53-54 (1973). In addition, local political subdivisions do not necessarily correspond to the areas benefiting from the public services that a particular governmental unit provides. *See* note 19 *infra*.

11. "Fiscal capacity is a quantitative measure intended to reflect the resources which a taxing jurisdiction can tax to raise revenue for public purposes." U.S. ADVISORY COMM'N ON INTERGOVERNMENTAL RELATIONS, MEASURES OF STATE AND LOCAL FISCAL CAPACITY AND TAX EFFORT 3 (1962) [hereinafter cited as MEASURES]. The Act defines a municipality's fiscal capacity to be the market value of all real property within its jurisdiction divided by its population. MINN. STAT. § 473F.02(13), (14) (1974).

The fact that two municipalities have equal fiscal capacities, however, does not necessarily mean that they will provide the same level of public services. There are many factors besides the total available resources that affect the ability and inclination of taxpayers to seek a particular level of services from their local government; these factors include other demands which may be made upon the available resources, the taxpayers' perception of the fairness and reasonableness of the tax, the taxpayers' preference for public services, the nature of the local decisionmaking process, and the composition of the local tax base and population. *See* MARGOLIS, *supra* note 4, at 3-1 to 3-3; MEASURES, *supra*; Note, *A Statistical Analysis of the School Finance Decisions: On Winning Battles and Losing Wars*, 81 YALE L.J. 1303, 1315 (1972) [hereinafter cited as *A Statistical Analysis*]. Differences in the per capita costs of public services will also affect the level of the services that a governmental unit can provide. *See* note 112 *infra*.

The fiscal capacity of a municipality within the seven-county area and the assessed valuation of its commercial-industrial property appear to be directly related. Brief for Appellants at 25-26, Add-31, Village of Burnsville v. Onischuk, 222 N.W.2d 523 (Minn. 1974), *appeal dismissed*, 420 U.S. 916 (1975). *See also* MARGOLIS, *supra* note 4, at 5-6 to 5-7 (noting that the central cities may be the one exception to this relationship).

12. Brief for Appellants at 23-28, Add-31, Village of Burnsville v. Onischuk, 222 N.W.2d 523 (Minn. 1974), *appeal dismissed*, 420 U.S. 916 (1975); URBAN AMERICA, *supra* note 2, at 7-13.

balance in the development of the seven-county metropolitan area.

It is apparent that in the seven-county area there is a direct relationship between a municipality's fiscal capacity and its per capita expenditures for public services.[13] Significant differences in fiscal capacity,[14] however, cannot be readily compensated for by increases in the tax rate of the poorer municipalities.[15] Thus, a preference for a certain level of public services within a municipality will not always control; relative wealth must also be considered. If the position is accepted that equal tax efforts should result in commensurate yields to the taxing units, inequities in either the public services provided or the tax burdens borne are manifestly unfair.[16]

The resulting unfairness to the taxpayer becomes even more apparent when it is recognized that the more or less arbitrary

13. *See* Brief for Appellants at 26-28. Add-31, Village of Burnsville v. Onischuk, 222 N.W.2d 523 (Minn. 1974), *appeal dismissed*, 420 U.S. 916 (1975); METROPOLITAN COUNCIL, THE IMPACT OF FISCAL DISPARITY ON METROPOLITAN MUNICIPALITIES AND SCHOOL DISTRICTS 15 (1971) [hereinafter cited as METROPOLITAN COUNCIL]. *See generally* Netzer, *Federal, State, and Local Finance in a Metropolitan Context*, in ISSUES IN URBAN ECONOMICS 435, 442 (1968) [hereinafter cited as Netzer]. *Cf. A Statistical Analysis*, *supra* note 11, at 1329.

14. In the seven-county area, fiscal capacity may vary between municipalities by a ratio of as much as three to one. *See* Brief for Appellants at 22. Add-31, Village of Burnsville v. Onischuk, 222 N.W.2d 523 (Minn. 1974), *appeal dismissed*, 420 U.S. 916 (1975); HOUSE REPORT, *supra* note 8, at 1. *Cf.* CITIZENS LEAGUE FISCAL DISPARITIES COMM., BREAKING THE TYRANNY OF THE LOCAL PROPERTY TAX 8 (1969) [hereinafter cited as CITIZENS LEAGUE].

15. A governmental unit may encounter legal restraints on the tax levy it can set, because the Minnesota legislature, in an effort to provide property tax relief, has placed significant limitations on such levies. MINN. STAT. § 275.125 (1974) (school districts); *id.* §§ 275.50-.59 (counties, cities, and towns). If a statutory limit is exceeded, the governmental unit will lose state funds. *See id.* §§ 275.125(4), .51(4). The limit, however, may be increased by a referendum within the governmental unit. *Id.* §§ 275.125(2a)(3), .59.

Regardless of statutory limitations, a substantial increase in the tax rate is almost always an unpopular political course. Even if politically feasible, this course of action may prove ineffective—if the increased tax burdens are greater than anticipated relocation costs, the more mobile portion of the local tax base may move to a municipality with a lower tax rate. *See* URBAN AMERICA, *supra* note 2, at 13. Similarly, individuals and businesses giving consideration to locating in the municipality may be deterred by the increased tax rate, thereby exacerbating the problem of a small local tax base.

16. *See* Comment, *Ad Valorem Financing of Law Enforcement Services: An Equitable Solution to an Inequitable Condition*, 19 U.C.L.A.L. REV. 59, 63-66 (1971) [hereinafter cited as *Ad Valorem Financing*].

political fragmentation of the seven-county metropolitan area fails to reflect the social and economic interdependence of the area.[17] That interdependence is evidenced by the considerable intercommunity travel within the area,[18] and by the presence of local governmental "spillovers."[19] Commercial and industrial enterprises, generally staffed and patronized at least in part by nonresidents of the municipality in which the enterprise is located, are especially likely to be of a metropolitan character.[20]

---

17. For a discussion of the interdependence of the seven-county area, see MARGOLIS, *supra* note 4, at 1-1. It should be noted that as a metropolitan area develops and subcenters emerge in surrounding areas, the economic interdependence of the area as a whole will decline. *See* Netzer, *supra* note 13, at 472-73. The problem of fiscal disparities will remain, however, since commercial and industrial development will continue to concentrate in certain municipalities. *See* Minneapolis Tribune, July 16, 1971, § A, at 5, cols. 1-2 (65 percent of new commercial-industrial tax base to locate in 15 percent of the metropolitan area over the next 25 years). *See also* note 32 *infra*.

18. *See* Brief for Appellants at 19-21, Village of Burnsville v. Onischuk, 222 N.W.2d 523 (Minn. 1974), *appeal dismissed*, 420 U.S. 916 (1975). For example, approximately one-half of the persons employed in the metropolitan area reside in a county other than the one in which they work, and one-third of all trips in the area begin and end in different counties. *Id.*

19. "Spillovers" can be defined as the benefits or detriments one community receives as a result of another's action or inaction. *See* Note, *Metropolitan Government: Minnesota's Experiment with a Metropolitan Council*, 53 MINN. L. REV. 122, 123 (1968) [hereinafter cited as *Metropolitan Government*]. Thus, when political boundaries do not coincide with the area benefited by a particular public service, either benefit or cost spillovers may result. *Benefit* spillovers can be of two types: nonresidents may enter the community and make use of local services; or the nature of the service itself may affect other areas or follow a resident if he leaves the community. Note, *Equalization of Municipal Services: The Economics of* Serrano *and* Shaw, 82 YALE L.J. 89, 99 (1972) [hereinafter cited as *Municipal Services*]. Examples of the latter type of benefit spillover are preventive health care and education. *Cost* spillovers are similar in form, as when local taxes are shifted to nonresidents or when the pollution created in one community contaminates the environment of an adjoining community.

Spillovers tend to be the rule in metropolitan areas, *see* U.S. ADVISORY COMM'N ON INTERGOVERNMENTAL RELATIONS, STATE AID TO LOCAL GOVERNMENT 6-7 (1969) [hereinafter cited as STATE AID], and are likely to increase with technological change and growing consumer demands. Netzer, *supra* note 13, at 472-73.

The presence of spillovers alone does not mandate tax reform, however, since they may balance out between municipalities or their effects may be reduced via user charges, intergovernmental transfers, or redefined political boundaries. *See Municipal Services*, *supra*.

20. An example is the Southdale shopping center, located in Edina, a Minneapolis suburb. It is patronized not only by Edina residents, but also by residents of Minneapolis and other area suburbs. The property taxes that Southdale contributes to local governmental units are thus

To the extent that such property increases the fiscal capacity of a particular municipality, it does so in part through the contributions of nonresidents. Thus the taxable property that is scattered among the municipalities of the seven-county area is in this sense a metropolitan tax base. If this social and economic interdependence of the seven-county area is accepted, then clearly the different costs to taxpayers of the public services provided by various municipalities stems not from any inherent differences in the taxpayers' situations, but only from the circumstance of their location in municipalities of different fiscal capacities.

The other major problem raised by the presence of fiscal disparities within the metropolitan area is that of imbalance in the development of the area. The decision of an industrial firm to locate in a particular municipality within the metropolitan area can be influenced by a number of factors, notably tax rate differentials,[21] the ability of a local government to negotiate pref-

borne in part by nonresident shoppers. Admittedly, the municipality may have to provide additional public services to the area because of the presence of the shopping center; but the surplus in excess of such costs that accrues to the municipality will be funded in part by nonresidents.

Similarly, a factory may locate in a municipality, thereby increasing that municipality's fiscal capacity, while its employees will establish residence elsewhere. The governmental units in which the employees live thus face increased costs, particularly for the education of the employees' children, without benefit of any corresponding increase in their industrial tax base.

21. *See* U.S. ADVISORY COMM'N ON INTERGOVERNMENTAL RELATIONS, STATE-LOCAL TAXATION AND INDUSTRIAL LOCATION 68-70 (1967) [hereinafter cited as STATE-LOCAL TAXATION]. Nontax factors, such as location of raw materials, markets, and labor, tend to be more influential in the firm's selection of a particular region—as distinguished from a site within the region. *Id.*

22. *See* URBAN AMERICA, *supra* note 2, at 12. The traditional taxing system has encouraged preferential tax treatment, *see* HOUSE REPORT, *supra* note 8, at 6, in that there is considerable pressure on local assessors to offer such treatment, *see* STATE-LOCAL TAXATION, *supra* note 21, at 85. The ability of Minnesota municipalities to offer preferential assessment was reduced, however, by 1971 legislation providing that assessors be certified by the State Board of Assessors. MINN. STAT. §§ 270.41, .48, .50 (1974). Furthermore, a State Board of Equalization was established to review assessments. *Id.* § 270.12. *See also id.* §§ 274.01, .13 (review by city council and County Board of Equalization). Because of the difficulty in determining the market value of business property, however, U.S. ADVISORY COMM'N ON INTERGOVERNMENTAL RELATIONS, FINANCING SCHOOLS AND PROPERTY TAX RELIEF—A STATE RESPONSIBILITY 71, 73 (1973) [hereinafter cited as FINANCING SCHOOLS], the possibility of preferential assessments still exists.

erential assessments,[22] and the provision of public services.[23] The possibility of augmenting their respective fiscal capacities by attracting new industry through a manipulation of these factors causes "keen competition" among the municipalities of the metropolitan area.[24]

This competition manifests itself on both a local and a regional plane. At the local level, the initial decision on the appropriateness of a given development within the municipality tends to be based on an analysis of whether the tax revenue to be gained from that development will exceed the cost of providing the necessary public services to it.[25] At the regional level, municipalities strive to influence the location or nature of area-wide development so as to derive the greatest possible improvement in their fiscal capacities; this improvement in fiscal capacity may be sought regardless of safety, environmental, or other considerations.[26] On the other hand, individual municipalities resist the location within their borders of developments which will redound to the benefit of the entire metropolitan area, but which will not contribute to the local tax base.[27] In attempting to allocate local land use so as to maximize the tax advantage of their municipality, local officials may thus forgo or resist de-

23. *See* STATE-LOCAL TAXATION, *supra* note 21, at 71-75.

24. *Id.* at 70. *See also* URBAN AMERICA, *supra* note 2, at 12 ("cut-throat intergovernmental competition").

25. *See* MARGOLIS, *supra* note 4, at 2-22; *Metropolitan Government*, *supra* note 19, at 126. Regulating development on this basis is termed "fiscal zoning." Netzer, *supra* note 15, at 473. Its effect is most pronounced when the municipality is confined to a small geographic area. *Id.*

The usual tactic for discouraging unwanted development within the municipality is exclusionary zoning. CITIZENS LEAGUE, *supra* note 14, at 5. If, on the other hand, the development under consideration would be an economic asset to the municipality, its growth may be encouraged by offering preferential assessments, *see* HOUSE REPORT, *supra* note 8, at 6, or by extending water and sewer facilities to the intended site, *see* Margolis, *The Demand for Urban Public Services*, in ISSUES IN URBAN ECONOMICS 527, 535 (1968).

26. For example, although municipalities have little hope of influencing the location of a freeway, they may have some effect on the number and location of freeway interchanges. The more interchanges a municipality has within its boundaries, the more access it can offer to local commercial or industrial development. A concern for traffic safety, however, might call for widely spaced interchanges, thus running counter to the economic interests of local communities. *See* HOUSE REPORT, *supra* note 8, at 4-5.

27. For example, parks, open spaces, and wetlands might well be sacrificed if balanced in the calculus of only one municipality, whereas they would perhaps be preserved if the interest of the seven-county area as a whole were to be considered. *See id.* at 3-4.

velopment that might be highly desirable from the viewpoint of noneconomic considerations.

As a result of this competition for a more productive tax base, the seven-county area has suffered haphazard and inefficient development. Municipal ordinances designed to improve a municipality's fiscal capacity force developers who do not meet prescribed standards to move farther away from the center of the area. This contributes to urban sprawl and high public service costs in remote areas,[28] while undeveloped land nearer to the central cities and already fully furnished with public services is available.[29] Furthermore, tax considerations hinder the consolidation and annexation of some of the myriad governmental units in the seven-county area,[30] thereby precluding economies of scale in the provision of public services. Consequently, the interest of municipalities in improving their fiscal capacities conflicts with what might be regarded as optimal regional development.

Under a traditional taxing system, therefore, municipalities have little incentive to cooperate with a regional development plan that conflicts with their interest in maximizing fiscal capacities. Yet the need for a regional development plan is evidenced by the legislative mandate to the Metropolitan Council[31] to co-

28. CITIZENS LEAGUE, *supra* note 14, at 5-6.

29. In 1973, 41 percent of the 562 square miles in the seven-county area served by existing sewer systems was vacant land, suitable for development. METROPOLITAN COUNCIL, METROPOLITAN DEVELOPMENT FRAMEWORK INTERIM POLICIES 9 (1974) (similar figures for storm sewers and public water reported to be 34 percent and 35 percent, respectively). A Metropolitan Council staff report estimated that two billion dollars in development costs could be saved through 1990 by planning the area's growth so as to utilize undeveloped land within the area. *See* METROPOLITAN COUNCIL, METROPOLITAN DEVELOPMENT GUIDE, ch. Development Framework, at 3-4 (1974) [hereinafter cited as METROPOLITAN DEVELOPMENT GUIDE]; METROPOLITAN COUNCIL OF THE TWIN CITIES AREA, NEWSLETTER, Aug. 1974, at 1.

30. For example, one obstacle to consolidation or annexation is usually the reluctance of a richer governmental unit to share its tax base with a poorer unit. *See* CITIZENS LEAGUE, *supra* note 14, at 3-4.

31. The Metropolitan Council was created by MINN. STAT. ch. 473B (1974). *See generally* S. BALDINGER, PLANNING AND GOVERNING THE METROPOLIS—THE TWIN CITIES EXPERIENCE (1971); *Metropolitan Government*, *supra* note 19. The Council is responsible for providing a Development Guide for the seven-county area, *see* note 33 *infra*, and for coordinating the functions of various commissions that provide certain services in the seven-county area. *See* MINN. STAT. §§ 473B.06(5a), .062 (1974) (Council's powers); *id.* §§ 473A.051(2), .06(1a) (transit); *id.* §§ 473C.01, .06 (sewage); *id.* § 473D.03 (solid waste disposal); *id.* § 473G.04 (1) (metropolitan parks and open space). The Council also has the power to review the long-term, comprehensive plans of independent

ordinate and plan development for the seven-county area.[32] Without some tax reform, however, the Council might expect to encounter serious opposition to its Development Guide[33] from municipalities that would be economically injured by its implementation.[34] Thus, some way of reducing the impact of fiscal disparities on area development and the provision of public services was necessary in order to allow development in accordance with a regional plan. It is this need which the Fiscal Disparities Act attempts to meet.

II. THE FISCAL DISPARITIES ACT

A. History and Operation of the Act

In 1971, the Minnesota legislature after stormy debate[35]

commissions if those plans may have an area-wide or multi-community effect, or a substantial effect on metropolitan development. *Id.* § 473B.06(6).

32. For example, the Council has adopted the policy that commercial and industrial growth should be clustered in several major, diversified centers, rather than being scattered throughout the metropolitan area. Metropolitan Development Guide, *supra* note 29, at 8-9, 16-17, 31. In this respect, the Fiscal Disparities Act promotes the Council's plans by reducing the competitive need for such development to occur in a particular community, while avoiding the otherwise inequitable result of concentrating the commercial-industrial tax base in only a few localities. *See* notes 16-20 *supra* and accompanying text.

33. Minn. Stat. § 473B.06(5) (1974) requires the Council to produce a Development Guide for the seven-county area. The Guide will establish general policies for the area's growth. *See generally* Freilich & Ragsdale, *Timing and Sequential Controls—The Essential Basis for Regional Planning: An Analysis of the New Directions for Land Use Control in the Minneapolis-St. Paul Metropolitan Region*, 53 Minn. L. Rev. 1009 (1974). Different levels of government share the planning and implementation responsibilities for the Guide's Development Framework; local governmental units originate plans which must accord with the general policies established by the Council. *See* Metropolitan Development Guide, *supra* note 29, at 10-12, 39-43. *See also* note 104 *infra*.

34. *See* Citizens League, *supra* note 14, at 6; House Report, *supra* note 8, at 2. *See also* notes 31-32 *supra*.

35. The bill passed the senate by one vote. Of the 31 senators who voted against the bill, 12 were from the seven-county area and 19 were from outstate Minnesota. Minneapolis Tribune, June 2, 1971, § A, at 1, cols. 2-6, at 4, cols. 4-5. Final passage in the house was by a vote of 83 to 39, with 13 of the opponents representing districts within the seven-county area. Minneapolis Tribune, July 16, 1971, § A, at 1, cols. 4-8, § C, at 5, cols. 5-8.

Suburban opponents feared that the bill would lead to loss of the local tax base, reduction of incentives to attract commercial development, and adoption of a metropolitan government. *See id.*, § A, at 1, col. 8; Minneapolis Tribune, June 2, 1971, § A, at 1, col. 4. The Act was also

passed the Metropolitan Fiscal Disparities Act,[36] which provides a method of reducing fiscal disparities within the seven-county area while retaining existing governmental and tax structures. The Act, which nominally[37] went into operation in 1972, was greeted with national acclaim as both an innovative and a realistic approach to metropolitan problems.[38] Some skepticism has been expressed, however, as to whether the Act will ultimately be effective.[39]

The basic concept of the Fiscal Disparities Act is tax base sharing. In particular, the Act implements a plan whereby 40 percent of the commercial-industrial growth in the seven-county area since 1971 is to be shared by all governmental units levying property taxes within the area. The Act places no restrictions on where or how the shared funds can be spent by the recipient governmental units, although it does state six objectives which it is hoped the tax base sharing will accomplish.[40] The Act, moreover, does not fundamentally change the

---

said to have virtually insurmountable administrative problems. *See* Minneapolis Tribune, July 16, 1971, § A, at 1, col. 3.

Rural legislators who opposed passage of the Act feared that it would be expanded to the entire state. *Id.* At the time, such expansion of the plan was politically unfeasible, although the State Planning Agency did consider the option, finding that the outstate tax base was insufficient to render the plan economically feasible. *See* J. HOYT & D. NELSON, A REPORT ON REGIONAL TAX BASE SHARING 4 (1973).

36. Minn. Laws Extra Sess. 1971, ch. 24 (codified at MINN. STAT. ch. 473F (1974)). The concept of tax base sharing for the seven-county area, now embodied in the Act, originated with the Citizens League. *See generally* CITIZENS LEAGUE, *supra* note 14.

37. The first assessments under the Act were required to be completed and certified to the appropriate county auditor by November 20, 1972. MINN. STAT. §§ 473F.04, .05 (1974). Operation of the Act was enjoined by a Minnesota district court, however, on the ground that it violated the uniformity clause of the Minnesota Constitution. This decision was reversed by the Minnesota Supreme Court on September 13, 1974. Village of Burnsville v. Onischuk, 222 N.W.2d 523 (Minn. 1974), *appeal dismissed*, 420 U.S. 916 (1975). *See* notes 55-64 *infra* and accompanying text.

38. *See, e.g.*, Corditz, *A Word for the Property Tax*, 85 FORTUNE, May 1972, at 105, 112; Falternayer, *'Metro' government, Twin Cities-style*, 72 LIFE, Jan. 21, 1972, at 28; Editorial, *Tax Base Sharing*, 60 NAT'L CIVIC REV. 424 (1971).

39. *See A Statistical Analysis*, *supra* note 11, at 1325 n.196 ("But by restricting its scope to 'commercial-industrial property,' the plan does little to end enclaves of low or high residential property taxes.").

40. MINN. STAT. § 473F.01 (1974) provides:

> The legislature finds it desirable to improve the revenue raising and distribution system in the seven county Twin Cities area to accomplish the following objectives.
>
> (1) To provide a way for local governments to share in the

existing tax structure or its administration;[41] it merely provides a method by which property in one governmental unit can be taxed by others.

Before exploring the workings of the Fiscal Disparities Act, it is necessary to review several technical definitions. The focus of the Act is upon "municipalities," which are defined by the Act as cities, towns, or townships located in whole or in part within the seven-county area.[42] Municipalities are used as a basic unit for calculating both the contributions to and the distributions from the area-wide tax base. "Governmental units" are the jurisdictional units that actually collect taxes under the Act. They may or may not be municipalities. The Act defines them as taxing units or bodies which levy ad valorem taxes in whole or in part within the seven-county area; this would include such units as counties, cities, and school districts.[43]

---

resources generated by the growth of the area, without removing any resources which local governments already have;

(2) To increase the likelihood of orderly urban development by reducing the impact of fiscal considerations on the location of business and residential growth and of highways, transit facilities and airports;

(3) To establish incentives for all parts of the area to work for the growth of the area as a whole;

(4) To provide a way whereby the area's resources can be made available within and through the existing system of local governments and local decision making;

(5) To help communities in different stages of development by making resources increasingly available to communities at those early stages of development and redevelopment when financial pressures on them are the greatest;

(6) To encourage protection of the environment by reducing the impact of fiscal considerations so that flood plains can be protected and land for parks and open space can be preserved . . . .

A seventh objective, concerning the distribution to municipalities of other revenues, is beyond the scope of this Note. *See* note 7 *supra*.

41. One of the seven county auditors serves as the "administrative auditor" and administers the statute from his county office. MINN. STAT. §§ 473F.03, .07(3), (4) (1974). Each county treasurer remits the tax revenues from the shared tax base to the state treasurer, who deposits the revenues in an area-wide tax account from which they are subsequently distributed to governmental units in the same manner as are all other tax revenues. *Id.* §§ 473F.08(7), (8). Assessment of the market value of commercial-industrial property within each jurisdiction takes place as it did before passage of the Act.

42. *Id.* § 473F.02(8). *See also* note 1 *supra*.

43. MINN. STAT. § 473F.02(5) (1974). *See also* note 1 *supra*. Seventeen school districts and three municipalities are located partly within and partly without the seven-county area. The Act deals to some extent with these divided governmental units. Section 473F.02(8) limits the Act's application to property located within the seven-county area, although each municipality's fiscal capacity is to be computed on the basis of its entire property valuation and population. Section 473F.07(3)

The first step in the operation of the Act is to determine the *area-wide tax base*. Every year, the assessors of each county in the metropolitan area assess the value of all non-exempt commercial-industrial property located within the municipalities of that county. This amount is then compared with the assessed valuation[44] of such property in 1971, the base year. Forty percent of the increase over the 1971 valuation is then contributed by the municipality to the area-wide tax base for the given year.[45] If the market value of the commercial-industrial property within a municipality shows no increase over 1971, that municipality makes no contribution to the area-wide tax base. The sum of the contributions from all the municipalities in the entire seven-county area constitutes the area-wide tax base.

In order to determine the share of the area-wide tax base which each municipality is to receive, a *distribution index*, based on the population and fiscal capacity of each, must be calculated.[46] A particular municipality then receives a share of the area-wide tax base proportional to the ratio of its index to the sum of the indices of all municipalities within the seven-county area.[47] Whether the municipality gains or loses assessed valuation under the plan depends on whether the share it receives is larger or smaller than the one which it has contributed.[48]

---

provides that the municipality's area-wide tax base distribution index, *see* note 46 *infra*, must be multiplied by the fraction of the municipality's population residing in the seven-county area.

44. *Valuation* is defined as the market value of the real property within a municipality. MINN. STAT. § 473F.02(13) (1974). *Assessed valuation* is thus the percentage of the valuation which Minnesota subjects to the tax. *See id.* § 273.13.

45. *Id.* §§ 473F.05-.07.

46. The area-wide tax base *distribution index* for a municipality is equal to its population multiplied by the ratio of the average fiscal capacity for the seven-county area to the municipality's fiscal capacity (both measured in the prior year) multiplied by two; if the product of those factors is less than the municipality's population, however, the index is equal to the population. *Id.* § 473F.07(3).

47. *Id.* §§ 473F.07(3)-(5).

48. Whether a municipality gains or loses *tax dollars* under the plan depends on the relationship between its local tax rate and the area-wide tax rate. *See* text accompanying notes 52-53 *infra*. The amount of tax dollars a municipality contributes to the area-wide tax account is equal to the assessed valuation contributed by the municipality to the area-wide tax base multiplied by the area-wide tax rate. The amount of tax revenue a municipality receives is equal to its share of the area-wide tax base multiplied by the local tax rate. *See* note 51 *infra* and accompanying text. Thus, even if on balance a municipality loses assessed valuation to the area-wide tax base, it could receive more tax dollars than it contributes to the area-wide tax account if its local tax rate is sufficiently greater than the area-wide tax rate. A similar situation may

Once the contributions to and the distributions from the area-wide tax base have been calculated for municipalities, the focus shifts to the governmental unit so that the mechanics of actually collecting tax revenues under the Act may be worked out. Initially, each governmental unit must ascertain its *local tax base*; this is done by determining the assessed valuation of *all* nonexempt real property within the governmental unit and subtracting the contributions made to the area-wide tax base by municipalities located in whole or in part within its jurisdiction.[49] The governmental unit must also ascertain its share of the area-wide tax base; this share is determined by adding together the distributions to which all municipalities located in whole or in part within the unit's jurisdiction are entitled.[50] Aware of the size of the tax bases upon which it can levy a tax, the governmental unit then determines the amount that it desires to raise in tax revenue and certifies this amount to the appropriate county auditor as its *levy*. The county auditor will subsequently apportion that levy between the local tax base—that is, that part of the particular governmental unit's assessed valuation which was not contributed to the area-wide tax base—and the unit's share of the area-wide tax base.[51]

The first portion is termed the *local levy*. The local levy divided by the local tax base equals the *local tax rate*, a rate which will be applied to all taxable property within the jurisdic-

---

exist for other governmental units. *See* notes 49-53 *infra* and accompanying text.

49. The contribution of a governmental unit to the area-wide tax base is proportionate to the assessed valuation of the commercial-industrial property located within each municipality subject to that unit's taxing power. MINN. STAT. § 473F.03(2)(a) (1974). Thus, if one-half of the commercial-industrial property in a particular municipality were subject to taxation by the unit, one-half of the amount contributed by the municipality to the area-wide tax base would be subtracted from the unit's tax base. This procedure would be repeated for all municipalities in which the unit levies taxes.

50. The proportion of each municipality's distribution to which a governmental unit is entitled is calculated by dividing the assessed valuation of all residential property within a municipality subject to the unit's taxing power by the total assessed valuation of all residential property within that municipality. *Id.* § 473F.08(2)(b).

51. The area-wide levy is equal to that portion of the total levy represented by the unit's share of the area-wide tax base divided by the sum of the unit's local tax base and its share of the area-wide tax base. *Id.* §§ 473F.08(2), (3)(a). The local levy is equal to the difference between the total levy and the area-wide levy. *Id.* § 473F.08(3)(b). The ratio of the area-wide levy to the local levy is thus equivalent to the ratio that the unit's share of the area-wide tax base bears to the local tax base.

Minnesota Supreme Court had previously held that tax legislation must satisfy two requirements in order to be valid under this clause: similarly situated taxpayers must be treated alike,[57] and special benefits must accrue to the community that bears the tax.[58] Relying principally on the latter of these two requirements, the district court held that there was no reasonable relationship between the contribution made by a municipality to the area-wide tax base and the benefits that its citizens would derive from the distribution of funds under the Act.[59] In other words, the main issue of the case was whether those units of government within the metropolitan area which in a given year contribute more of their tax base to the pool than is redistributed to them are sufficiently benefited to meet the constitutional requirement of uniformity.[60]

In a four-three decision in *Village of Burnsville v. Onischuk*,[61] the Minnesota Supreme Court reversed, holding that the Act satisfies the requirements of the uniformity clause; an appeal to the United States Supreme Court was dismissed for want of a substantial federal question. The Minnesota court admitted that a "literal reading" of its prior decisions would have dictated invalidation of the Act because special benefits would not accrue to each governmental unit on which the tax was imposed.[62] Nonetheless, the court stated that requiring a special benefit to accrue to the governmental unit

> no longer adequately serves the constitutional requirement of uniformity. In a seven-county area which is heavily populated, . . . it is no longer necessary for units of government providing tax revenue to receive the kind of tangible and specific benefits to which our court has previously referred . . . to satisfy the uniformity clause.[63]

Instead, the court found that governmental units which contribute more than they receive under the Act derive benefits

---

57. *See, e.g.*, Montgomery Ward & Co. v. Comm'r of Taxation, 216 Minn. 307, 310, 12 N.W.2d 625, 627 (1943).

58. *See* City of Jackson v. County of Jackson, 214 Minn. 244, 7 N.W.2d 753 (1943); Village of Robbinsdale v. County of Hennepin, 199 Minn. 203, 207, 271 N.W. 491, 493 (1937); Sanborn v. Comm'rs of Rice County, 9 Minn. (9 Gill.) 258, 262 (1864).

59. The statute "imposes a tax on some [units] for the benefit of others." 222 N.W.2d at 528, quoting the trial court memorandum.

60. *Id.* at 529.

61. 222 N.W.2d 523 (Minn. 1974), *appeal dismissed*, 420 U.S. 916 (1975) (no substantial federal question). Burnsville, the municipality that challenged the Act, can be characterized as a developing suburb.

62. *Id.* at 530.

63. *Id.*

from the area-wide tax base by reason of the social and economic interdependence of the seven-county area. Hence, residents "of highly developed commercial-industrial areas . . . enjoy direct benefits from the existence of adjacent municipalities which provide open spaces, lakes, parks, golf courses, zoos, fairgrounds, low density housing areas, churches, schools, and hospitals."[64]

Two aspects of the court's decision deserve comment. First, the Fiscal Disparities Act is tax legislation and thus is entitled to a presumption of validity.[65] This deference is essential to allow the legislature to reform local property taxes in the most efficient and realistic manner.[66] In *Onischuk*, the Minnesota Supreme Court expressly accorded such deference to the legislature's scheme for reducing fiscal disparities.

Second, even though the court found that the "special benefit" requirement did not invalidate the Fiscal Disparities Act, that requirement was not completely abandoned: residents must still derive some threshold benefit from the allocation of taxes under a challenged statute.[67] The court in *Onischuk* merely revised its view of the uniformity clause to take into account what it called "a developing concept of the meaning of the word 'benefit.'"[68] That concept apparently centers around an implicit recognition that benefits can be derived from the social and economic interdependence of the seven-county area.[69] This percep-

64. *Id.* at 532.

65. Courts traditionally defer to the legislative judgment on tax legislation because the subject matter is complex, because courts tend to lack familiarity with local problems, and because a stricter standard of review would entail inquiry into the purpose of the statute, an especially difficult matter with respect to tax legislation. Tussman & tenBroek, *The Equal Protection of the Laws*, 37 CALIF. L. REV. 341, 370 n.68, 372-73 (1949). *See, e.g.*, General Mills, Inc. v. Division of Employment & Security, 224 Minn. 306, 310-11, 28 N.W.2d 847, 849-50 (1947).

66. *See* San Antonio Indep. School Dist. v. Rodriguez, 411 U.S. 1, 58 (1973)

67. 222 N.W.2d at 530-32.

68. *Id.* at 530. The court cited Visina v. Freeman, 252 Minn. 177, 89 N.W.2d 635 (1958), as the precursor of this "evolving" notion of benefit. *Visina* involved a challenge under the uniformity clause to the statute establishing the Port Authority of Duluth, an agency which was to finance the reclamation of land and the construction of a terminal port facility. In that case, the Minnesota Supreme Court found that all involved taxpayers received benefits sufficient to uphold the statute's constitutionality. Yet *Visina* concerned benefits that would be derived from a specific improvement, whereas *Onischuk* involved benefits to be derived from undetermined uses of redistributed revenues—benefits arising from the social-economic interdependence of the area.

69. *See* text accompanying note 64 *supra*. The court also acknowl-

tion of benefit is based on the realization that the political fragmentation of the seven-county area is artificial and that the area is actually a socially and economically integrated entity. In essence, the seven-county area can be viewed as a large city rather than as numerous, completely autonomous political subdivisions.

In ruling on the constitutionality of the Fiscal Disparities Act, the Minnesota Supreme Court did not explicitly address the equal protection issue raised by the plaintiffs.[70] Thus, it might be argued that the statute remains open to a constitutional challenge on that ground.[71] It seems likely, however, that the court

edged that commercial-industrial property can provide a windfall to the municipality in which it locates, and that competition for such property could lead to disorderly development of the seven-county area. 222 N.W. 2d at 532.

70. In their complaint, plaintiffs had alleged that the statute violated the equal protection provisions of the fourteenth amendment to the United States Constitution. 222 N.W.2d at 526. Both the district and supreme courts, however, ruled explicitly only on the uniformity ground. In passing over the equal protection issue, the supreme court seemed to indicate that its inattention was attributable to the fact that the uniformity clause has been construed "to be no more restrictive than the [federal] equal protection clause." *Id.* at 527. *See In re* Taxes on Property of Cold Spring Granite Co., 271 Minn. 460, 466, 136 N.W.2d 782, 787 (1965); Apartment Operators Ass'n v. Minneapolis, 191 Minn. 365, 366, 254 N.W. 443, 444 (1934); Reed v. Bjornson, 191 Minn. 254, 261, 253 N.W. 102, 105 (1934). *See also* Lake Superior Consol. Iron Mines v. Lord, 271 U.S. 577, 581 (1926).

71. There is a line of cases which suggests that the Act could not be successfully challenged under the federal equal protection clause. Thus, while the Minnesota Supreme Court has held that the uniformity required by the Minnesota Constitution in the distribution of tax benefits is achieved if there is a reasonable relationship between tax benefits and burdens, *see* Visina v. Freeman, 252 Minn. 177, 195, 89 N.W.2d 635, 650 (1958) (uniformity of distribution among several taxing districts); Village of Robbinsdale v. County of Hennepin, 199 Minn. 203, 271 N.W. 491 (1937) (uniformity of distribution within one taxing district); State *ex rel.* City of New Prague v. County of Scott, 195 Minn. 111, 261 N.W. 863 (1935) (uniformity of distribution within one taxing district), some courts have stated that the fourteenth amendment does not require that a tax bear a reasonable relationship to the benefits received. *See* Carmichael v. Southern Coal & Coke Co., 301 U.S. 495, 521-23 (1937); Thomas v. Gay, 169 U.S. 264, 278-80 (1897); Hess v. Mullaney, 213 F.2d 635, 639-40 (9th Cir.), *cert. denied*, 348 U.S. 836 (1954); Morton Salt Co. v. City of South Hutchinson, 177 F.2d 869, 891-92 (10th Cir. 1949); Lafayette Steel Co. v. City of Dearborn, 360 F. Supp. 1127, 1131 (E.D. Mich. 1973). The latter view, however, may not apply to the situation in *Onischuk*. Those cases involved general taxes, *see* Illinois Cent. R.R. v. Decatur, 147 U.S. 190, 196-97 (1892); Kelly v. Pittsburgh, 104 U.S. 78, 80-83 (1881), and the statute in each instance was challenged by a member of a community whose government was supported by the disputed taxes. The Fiscal Disparities Act, on the other hand, shifts local

implicitly ruled on this issue.[72] This fact, as well as the practical

property tax revenues from one governmental unit to another. Under the Act, a taxpayer in one community may be taxed for the benefit of a community of which he is not a member and from which he receives no general benefits. On this basis, the Act is distinguishable from the cases cited above and may be subject to scrutiny under the equal protection clause of the fourteenth amendment. *See Ad Valorem Financing*, *supra* note 16, at 81-83.

Two possible claims could be made under the equal protection clause. First, by limiting the area-wide tax base to commercial-industrial growth, the Act is arguably underinclusive since residential property above a certain value may provide as much of a windfall to the fiscal capacity of a governmental unit as does commercial-industrial property. Even though the capacity of high income housing for generating tax revenue may be less than that of commercial-industrial property, the former requires less expense for public services, and thus could provide a windfall to the governmental unit; residential suburbs with high fiscal capacities are examples of governmental units receiving such windfalls. It should be noted, however, that residential property lacks the "metropolitan" aspect of commercial-industrial property. *See* note 20 *supra* and accompanying text.

Second, the apportionment of the area-wide tax base among area municipalities is not necessarily linked to deficiencies in their fiscal capacities. Rather, the Act's distribution formula is based primarily on a municipality's population, *see* text accompanying notes 78-87 *infra*, a measure which fails to take into account the actual needs and costs faced by municipalities in the seven-county area. By allowing residential suburbs with relatively high fiscal capacities to share the area-wide tax base on the same basis as municipalities with lower fiscal capacities and greater public service costs, the Act might be overinclusive as to its class of beneficiaries.

72. The equal protection issue was raised in the pleadings, *see* 222 N.W.2d at 526, and was briefly referred to by the district and supreme courts, *see id.* at 527. The comment of the Minnesota Supreme Court that the uniformity clause has been construed to be "no more restrictive" than the equal protection clause, *see* note 70 *supra*, appears to indicate that the court felt it was resolving both issues. If, as seems likely, the issue was considered by the Minnesota court, it must have been resolved in favor of the statute's constitutionality; otherwise, the case could not have been decided as it was. Thus, a strong argument can be made that the equal protection issue was litigated and decided by implication in the *Onischuk* case.

If this argument is accepted, the *Onischuk* decision places two doctrinal obstacles in the path of a future taxpayer plaintiff. The first is that of traditional stare decisis. The other is that of res judicata, under which the parties to an action may be estopped from relitigating in a subsequent action issues that were raised and determined in the prior action. *See generally* Brooks Realty, Inc. v. Aetna Ins. Co., 263 Minn. 122, 123 N.W.2d 151 (1964). Specific findings are unnecessary; the doctrine applies to every issue which was actually litigated or raised by the pleadings in the original case. *See* Youngstown Mines Corp. v. Prout, 266 Minn. 450, 470, 124 N.W.2d 328, 342 (1963); Gollner v. Cram, 253 Minn. 8, 10-11, 102 N.W.2d 521, 523 (1960); Prendergast v. Searle, 81 Minn. 291, 292, 84 N.W. 107, 103 (1900); O'Brien v. Manwaring, 70 Minn. 86, 87-88, 31 N.W. 745 (1900). In the present situation, the doctrine of res judicata would have an effect beyond the original plaintiffs, since

unavailability of a federal forum,[73] makes it improbable that the Act will again be subjected to judicial review on equal protection grounds.

The holding in *Onischuk* may prove to be a narrow one. The court's emphasis on the social and economic interdependence of the seven-county area[74] suggests that its new interpretation of the term "special benefit"[75] may be limited by the requirement of such interdependence. Even so, the decision may have a far reaching impact on regionalism; similar statutory schemes could be established in other parts of the state where an area is found to be socially and economically interdependent. The interde-

---

the determination in an action brought by one taxpayer binds other taxpayers to the same extent that it binds the original plaintiff. Oakman v. City of Eveleth, 163 Minn. 100, 102, 203 N.W. 514, 515 (1925); Driscoll v. Board of County Comm'rs, 161 Minn. 494, 500-02, 201 N.W. 945, 947-48 (1925).

73. A federal court would probably refuse to assume jurisdiction of a challenge to the Act under the federal equal protection clause for at least two reasons. First, when the *Onischuk* case was appealed to the United States Supreme Court on equal protection grounds, among others, the Court dismissed for want of a substantial federal question. 420 U.S. 916 (1975) (issues of taxation without representation and due process were also raised). It is unclear what effect the dismissal will have on future equal protection challenges to the Act. *Compare* Ohio *ex rel.* Eaton v. Price, 360 U.S. 246, 247 (1959) (Brennan, J., separate opinion); P. Bator, P. Mishkin, D. Shapiro & H. Wechsler, Hart and Wechsler's The Federal Courts and the Federal System 649 (2d ed. 1970); R. Stern & E. Gressman, Supreme Court Practice 233 (4th ed. 1969); Note, *The Insubstantial Federal Question*, 62 Harv. L. Rev. 488, 494 (1949) (taking the view that dismissal for want of a substantial federal question is a declaion on the merits), *with* Comment, *The Significance of Dismissals "For Want of a Substantial Federal Question": Original Sin in the Federal Courts*, 68 Colum. L. Rev. 765 (1968) (taking the view that such a dismissal is in many cases akin to a denial of certiorari, which lacks precedential weight).

Second, the Tax Injunction Act of 1937, 28 U.S.C. § 1341 (1970), may preclude a federal court from assuming jurisdiction. That statute provides that "the district courts shall not enjoin, suspend or restrain the assessment, levy or collection of any tax under State law when a plain, speedy and efficient remedy may be had in the courts of such State." *Id. See, e.g.*, Mandel v. Hutchinson, 494 F.2d 364 (9th Cir. 1974). The very occurrence of the *Onischuk* suit is strong evidence that such a remedy exists in Minnesota. Moreover, federal declaratory relief, though still technically available, 1A J. Moore, Federal Practice ¶ .207, at 2265 (2d ed. 1959), is a discretionary remedy governed by general equitable principles. It has usually been denied in cases attacking state tax legislation where an adequate remedy exists under state law. *E.g.*, Great Lakes Dredge & Dock Co. v. Huffman, 319 U.S. 293 (1943). *See* Lynch v. Household Fin. Corp., 405 U.S. 538, 542-43 n.6 (1972).

74. *See* text accompanying note 64 *supra*.

75. *See* text accompanying notes 68-69 *supra*.

pendence itself would appear to meet the threshold requirement of benefit necessary to validate the tax scheme.

The fact that additional use of this statutory scheme would be found constitutional, however, does not mean that it will come into common use. There is a basic political conflict between the sort of regionalism that the Fiscal Disparities Act represents and local autonomy. The Act itself was a compromise, partially introducing regional financing of governmental units while at the same time retaining local decisionmaking. Whether this compromise is likely to be repeated or not depends heavily on the effect of the present Act.

III. EFFECT OF THE FISCAL DISPARITIES ACT: A CRITICAL ANALYSIS

As previously noted,[76] the presence of fiscal disparities within the seven-county metropolitan area has had two major effects: inequities in the provision of public services and imbalance in area development. The success of the Fiscal Disparities Act will thus be largely contingent on the extent to which it eliminates those problems.

A. Provision of Public Services

Fiscal disparities produce inequities in the tax rates which residents of different governmental units must pay in order to obtain a given level of public services.[77] The effectiveness of the Act in equalizing those tax burdens will depend upon the degree to which the factors chosen to measure "fiscal capacity" relate to the problems that the Act is intended to solve, and also upon the extent to which a perceived fiscal capacity will influence the Act's distribution formula.

Fiscal capacity can be measured in two ways: through the use of economic indicators such as income levels, or by a comparison of the revenues that would be raised in different municipalities by a representative tax system.[78] The Fiscal Disparities Act relies on the second conceptual measure of fiscal capacity, defining the fiscal capacity of a municipality as the market value of the real property within its borders divided by its population,[79] and using the real property tax—the prime generator of

76. *See* text accompanying notes 8-24 *supra*.
77. *See* notes 11-20 *supra* and accompanying text.
78. *See* MEASURES, *supra* note 11, at 4-8, 13-52.
79. MINN. STAT. §§ 473F.02(13), (14) (1974).

local government revenues—as its representative tax. The use of the market value of real property rather than its assessed valuation is desirable, since it will eliminate inter-municipality differences which might arise from varying assessment practices as well as from Minnesota's property classifications.[80] Market values also serve as some indicator of the income received and produced within the municipality.[81] Nevertheless, the use of population as a divisor in the Act's definition of fiscal capacity renders that definition a per capita index, reflecting the assumption that a municipality's expenditure requirements vary directly with its population. This assumption, however, ignores the fact that the *composition* of a municipality's population may have an extraordinary effect upon that municipality's need for public services.[82] To some extent, the limitation on the Act's definition of fiscal capacity may be attributed to statistical deficiencies—a lack of data that impedes both the determination of an accurate measure of fiscal capacity and the usefulness of such a formula once it has been devised.[83] Even so, the Act's definition fails to account for grants-in-aid that a municipality may receive from outside sources, funds which are certain to affect fiscal capacity and which should be readily ascertainable.

Once determined, fiscal capacity may be at best a fractional part of the distribution formula of the Act. Under the Act, a municipality's area-wide tax base distribution index is proportional to its population and inversely proportional to its fiscal

80. METROPOLITAN COUNCIL, *supra* note 13, at 50. Minnesota classifies property and, based upon that classificatio., applies a particular percentage figure to the property's market value to arrive at the property's assessed valuation. *See* MINN. STAT. § 273.13 (1971).

81. METROPOLITAN COUNCIL, *supra* note 13, at 50. The market value of residential property serves as a fairly accurate measure of personal income, but commercial and industrial property values are less closely related to business income. MARGOLAS, *supra* note 4, at 4-5, 4-6, 4-11, 5-4.

82. For example, the age distribution of the population may affect public service requirements. If a municipality's population is relatively young (requiring schools) or relatively old (requiring assistance), the municipality's public service expenditures will be greater than if this were not the case. MEASURES, *supra* note 11, at 9, 97-105. Generally, central cities such as Minneapolis and St. Paul contain a greater percentage of these special populations than do the suburbs. *See* E. BRANDT, R. JACKSON & J. WHITE, THE PLIGHT OF THE CITIES (1972); E. BRANDT, THE PLIGHT OF THE CITIES (Supp. 1973).

83. *See* METROPOLITAN COUNCIL, *supra* note 13, at 51. Compare, for example, the recommendation of a fiscal capacity formula based on income received and produced within a community, MARGOLAS, *supra* note 4, at 3-9, with the Metropolitan Council's recommendation of a formula based on the market value of real property, METROPOLITAN COUNCIL, *supra* note 13, at 51.

capacity,[84] unless a municipality's fiscal capacity exceeds twice the average fiscal capacity of the area, in which case its distribution index equals its population.[85] Population is therefore actually utilized twice in the distribution formula: first, as an element in the determination of fiscal capacity; and, second, as a factor in the formula itself. Population alone, however, is not an accurate measure of a municipality's public needs.[86] Because of this reliance on population, the distribution formula of the Act will be of limited effectiveness in reducing fiscal disparities and the resulting inequities in tax burdens. Municipalities will still be unable to provide a given level of public services at a uniform cost.[87]

But this objection remains somewhat abstract. A more concrete understanding of the Act's relationship to the provision of public services can best be achieved by examining the possible effects of the statute in three types of communities.

---

84. A municipality's area-wide tax base distribution index is equal to the product of its population, the average fiscal capacity for the area divided by the municipality's fiscal capacity, and two:

$$\text{Pop.} \times ((\text{avg. f.c.})/(\text{f.c.})) \times 2$$

MINN. STAT. § 473F.07(3) (1974). Since the average fiscal capacity, *id.* § 473F.02(15), is a constant for each municipality, if K is designated as 2 × (avg. f.c.), a municipality's share of the area-wide tax base equals:

$$\text{Pop.} \times ((\text{avg. f.c.})/(\text{f.c.})) \times 2 = K \times ((\text{pop})/(\text{f.c.})).$$

85. The formula used in the calculation of a municipality's area-wide tax distribution index does not take account of the amount by which a municipality's fiscal capacity exceeds twice the average fiscal capacity; the possibility exists, therefore, that a particular municipality could receive an unneeded additional amount of the area-wide tax base. This situation arises because of the presence of the numeral two as a factor in the formula and because the index is not allowed to be less than a municipality's population. *Id.* § 473F.07(3). For example, if r equals average fiscal capacity and s equals the fiscal capacity of a municipality, then where p equals the population of that municipality, $p > p \times (r/s) \times 2$, for any $s > 2r$. In 1970 only two small municipalities in the seven-county area, however, had fiscal capacities greater than twice the average fiscal capacity; thus the problem may be negligible. *See* Brief for Appellants at Add-31, Village of Burnsville v. Onischuk, 222 N.W.2d 523 (Minn. 1974), *appeal dismissed*, 420 U.S. 916 (1975).

86. *See* note 82 *supra*. A true measure of need may be impossible to express in any formula. *See Municipal Services*, *supra* note 19, at 112. *See also* McInnis v. Shapiro, 293 F. Supp. 327 (N.D. Ill. 1963), *aff'd mem. sub nom.* McInnis v. Ogilvie, 394 U.S. 322 (1969).

87. The discussion regarding municipalities also applies to other governmental units that calculate their distribution from the area-wide tax base according to the amounts municipalities within their taxing jurisdiction receive. Insofar as these units are larger in area than municipalities, however, costs and population composition tend to be more equally distributed.

1. Residential Suburbs with a High Fiscal Capacity

Residential suburbs generally have a low proportion of commercial-industrial to total assessed valuation. If a residential suburb has a high fiscal capacity—because, for example, of high property values—it may well benefit unduly from the operation of the Act. Such a municipality would contribute relatively little to the area-wide tax base; yet, because distribution is based primarily on population, it would almost certainly be assured of showing a net gain under the statute. Thus, an already superior ability to provide public services to residents would be further enhanced by the Act.[88]

2. Municipalities with Commercial-Industrial Development

Although a municipality with a high proportion of commercial-industrial to total assessed valuation may have a correspondingly high fiscal capacity, that municipality must provide services such as fire and police protection to the commercial-industrial property. Where the municipality also has a small population, however, it will receive less than it contributes to the area-wide tax base. If the cost of providing services to the commercial-industrial property is greater than the tax revenues that such property will generate after the redistribution mandated by the Act, the burden of providing the services will partially fall upon the residents of the municipality.[89] In this respect, the Act may actually hinder the provision of public services in those municipalities with a small population and a fiscal

88. *See* Village of Burnsville v. Onischuk, 222 N.W.2d 523, 538-39, 541 (Minn. 1974) (dissenting opinions), *appeal dismissed*, 420 U.S. 916 (1975). *Cf.* Stephens, *The Metropolitan Impact of Fiscal and Governmental Reforms: A Simple Model of the Metropolis*, 2 URBAN LAW. 495, 510 (1970). *But see* CITIZENS LEAGUE, *supra* note 14, at 16 (deemphasizing this problem because of the benefit to school districts encompassing residential suburbs with high fiscal capacities).

89. Before enactment of the Fiscal Disparities Act, those residents would not have been so burdened, if it is assumed that revenues from the commercial-industrial property would have covered the cost of providing services to the property. But it is difficult to estimate the true cost of serving commercial and industrial property. Usually commercial-industrial development is considered to be a fiscal advantage for a municipality, but a conservative view would be that the cost of services to such property consumes the tax revenues that it generates. Although some municipalities may benefit greatly from commercial-industrial property within their borders, there is no agreement that this will be true in the average case. *See* MARGOLIS, *supra* note 4, at 1-17 to 1-18, 5-8, 7-52.

capacity composed primarily of commercial-industrial assessed valuation.[90]

3. *Certain Governmental Units Noncoterminus with Municipalities*

Governmental units other than municipalities determine both their contribution to and their share of the area-wide tax base on the basis of the municipalities wholly or partly within their boundaries."[91] When the boundaries of a governmental unit do not coincide with municipal lines, the unit may be either the beneficiary or the victim of the uneven distribution of residential and commercial-industrial property in the divided municipality. For example, if a municipality is located within two governmental units so that one of the units possesses a large percentage of the residential valuation of the municipality while the other unit has a large percentage of the municipality's commercial-industrial valuation, the former unit will contribute little to the area-wide tax base but will receive a large share in the population-based distribution. For similar reasons, the latter unit will "lose" in the distribution. If the governmental unit in which the residential area is located also has a high fiscal capacity relative to the other unit, such a result would be contrary to the statute's intent. This effect will be significant, however, only when the governmental units cover a relatively small area; over large areas such uneven distributions should tend to balance out.

To the extent that these and other adverse consequences occur, the Act's success in reducing fiscal disparities will be undermined. Even if the Act ultimately equalizes the benefits that residents of the seven-county area receive for their tax dollars, however, inequities may nonetheless arise while the Act is being implemented. Before the passage of the Act, residents living in a municipality with a high fiscal capacity may have enjoyed a

---

90. If poor people tend to live in municipalities with a high commercial-industrial valuation, a distribution of this nature may resemble a "befuddled Robin Hood," taking from the poor and giving to the individually wealthy who reside in the suburban municipalities with high fiscal capacities. *See A Statistical Analysis, supra* note 11, at 1337-38.

Recognizing the general problem illustrated by this example, the Metropolitan Council recommended a percentage equalization plan for municipalities and a sharing of commercial-industrial growth for school districts, which provide no direct services to commercial-industrial property. *See* METROPOLITAN COUNCIL, *supra* note 13.

91. *See* notes 49-50 *supra* and accompanying text.

high level of public expenditures at a relatively low tax rate. They may have found this advantage capitalized in their property values, whereas residents of a municipality with a low fiscal capacity may have suffered depressed property values.[92] Following implementation of the Act and the resulting equalization of these advantages and disadvantages, property values in a wealthy municipality should drop while those in a poor municipality should rise. During the interim, owners and lessees in the former locality will suffer from this adjustment, while occupants of the latter will benefit.[93] Inasmuch as the Act will have only a moderating impact on fiscal disparities in the seven-county area, however, these effects may be so gradual as not to be serious.

In discussing the impact of the Act on the provision of public services, consideration must go beyond the question whether the Act will indeed have its anticipated effect on the ability of

92. *See generally* MALCOLIS, *supra* note 4, at app. 1-A; Oates, *The Effects of Property Taxes and Local Public Spending on Property Values: An Empirical Study of Tax Capitalization and the Tiebout Hypothesis*, 77 J. POL. ECON. 957 (1969). *See also* Smith, *Property Tax Capitalization in San Francisco*, 23 NAT'L TAX J. 177 (1970).

Tax capitalization occurs where property values rise because a substantial number of prospective residents, in making their locational decision, consider the mix of tax rate and public services that various communities offer. A model based on this notion is the Tiebout hypothesis. *See generally* Tiebout, *A Pure Theory of Local Expenditures*, 64 J. POL. ECON. 416 (1956). Theoretically, if tax advantages are capitalized fully into property values, taxpayers who are residents of different municipalities having different fiscal capacities will pay equivalent sums for public services. The resident of the municipality with the higher fiscal capacity will find that his lower taxes force him to pay more for his housing, while the resident of the poorer municipality will find his taxes higher but his housing cheaper. Thus, the total payments of each for public services may be the same, merely being apportioned differently between tax and rent payments.

93. Oates, *supra* note 92, at 958-59, 959 n.3. For example, an individual who buys property in a municipality with a high fiscal capacity pays an inflated price because the municipality's tax advantages are capitalized in the market value of that property. After implementation of the Act, such a municipality's tax advantages will diminish. The individual will find not only that his tax dollar buys less public services, but also that his property is worth less than it formerly was. Conversely, a property owner in a municipality with a low fiscal capacity will find that his tax dollar will be worth more as reflected in the amount of public services it will purchase, and also that this advantage will be capitalized in the value of his property—a windfall increase to him. Exactly who will be benefited and who will be hurt, of course, depends upon one's view of the incidence of the property tax, a matter over which there is some controversy. *See* FINANCING SCHOOLS, *supra* note 22, at 131-33, app. C.

local governments to provide these services. The Fiscal Disparities Act expressly relies on existing local governmental structure and local decisionmaking; in effect, local governments retain discretion in both the raising and the spending of revenues received from the area-wide tax base. Because of this discretion, any increased ability to raise revenues for public services which results from the operation of the Act will not necessarily be converted into such services. Whether a governmental unit which loses under the Act will raise its tax rate to restore the previous level of expenditures for public services or simply reduce the quantum of those services is not controlled by the Act.[94] And a unit which gains under the Act could choose to lower its tax rate or spend the funds on other projects, rather than increase its level of public services.

Thus, if the Act is successful in reducing fiscal disparities, its effect will be to remove the size of the local tax base as a determining factor in local governmental spending decisions, allowing other considerations to be given more weight. The Act thereby enables a governmental unit to fund public services in an amount based to a greater degree on the unit's preference for those services. In this way, the Act tends to equalize the resources of communities, while allowing them the freedom to use their equalized resources as they see fit.

It might be argued, however, that in an urban area composed of a myriad of local governmental units lacking the size, population, and fiscal resources to provide public services rationally, the ideal of local self-determination is superseded—or at least outweighed—by notions of equality, in the sense of equal tax burdens for a uniform level of services.[95] On the basis of efficiency—and perhaps fairness, if benefit and cost spillovers are not otherwise recompensed—the present system of local self-determination should give way to an alternative local governmental structure that can provide a standard level of services throughout the metropolitan area at a uniform cost to all residents.[96]

94. *Cf.* R. Reischauer & R. Hartman, Reforming School Finance 88-90 (1973); *A Statistical Analysis*, *supra* note 11, at 1335 n.115.

95. *Cf.* San Antonio Indep. School Dist. v. Rodriguez, 411 U.S. 1 (1973); Areen & Ross, *The Rodriguez Case: Judicial Oversight of School Finance*, 1973 Sup. Ct. Rev. 33, 45; Bateman & Brown, *Some Reflections on* Serrano v. Priest, 49 J. Urban Law 701, 705-09 (1972).

96. For a list of criteria relevant to evaluating local governmental structure and also an enumeration of eleven approaches to local government reorganization, see *Metropolitan Government*, *supra* note 19, at 134-42. For a comprehensive analysis of public services and their efficiencies, see U.S. Advisory Comm'n on Intergovernmental Relations, Per-

Such an alternative structure could take the form of a special taxing district providing a single service;[97] a metropolitan government furnishing all public services;[98] or a federated metropolitan government, with the metropolitan government and its subdivisions each supplying certain public services.[99]

Opposing this argument is the contention that if local self-determination were to be substantially curtailed, not only would the traditional values of local political autonomy be sacrificed[100] but a source of public funds might also be lost.[101] Moreover, local autonomy may not be as inefficient as it has been argued to be. By retaining the existing local governmental structure, the Act preserves, and may in fact increase,[102] the freedom which both the residents of and newcomers to the seven-county area

---

FORMANCE OF URBAN FUNCTIONS: LOCAL AND AREAWIDE (1963) [hereinafter cited as URBAN FUNCTIONS].

97. The formation of special districts is, however, subject to objection, because such districts diffuse local government accountability and also lack a balanced perspective. *See* Netzer, *supra* note 13, at 462-64; *Metropolitan Government*, *supra* note 19, at 135.

98. An area-wide government may not provide all public services in the most efficient manner, however, as different services have different economies of scale. In particular, a metropolitan government may not be as efficient as a local governmental unit in providing services that are local in nature, such as fire protection. *See* URBAN FUNCTIONS, *supra* note 96, at 9.

The consolidation of the city of Nashville and Davidson County in Tennessee illustrates this type of alternative. The city-county, however, was divided into two service districts: a general service district, which served the entire county, and an urban service district, which served the area that formerly was Nashville. *See* Lineberry, *Reforming Metropolitan Governance: Requiem or Reality*, 58 GEO. L.J. 675, 698-700 (1970).

99. Toronto has adopted this alternative, whereby the metropolitan government provides social services, water supply, sewage disposal, mass transit, regional parks, and complete financing of the educational system for the entire area. Toronto's six political subdivisions, however, continue to provide fire protection, garbage and local water and sewage service, and administration of the local schools. *See* U.S. ADVISORY COMM'N ON INTERGOVERNMENTAL RELATIONS, IN SEARCH OF BALANCE—CANADA'S INTERGOVERNMENTAL EXPERIENCE 84-86, app. F (1971) [hereinafter cited as IN SEARCH OF BALANCE].

Other examples of a two-tiered system for providing services include Winnipeg, Canada, and Miami-Dade County, Florida. *See generally* IN SEARCH OF BALANCE, *supra* at 86-99; Lineberry, *supra* note 98, at 703-05.

100. These values have been said to be increased opportunity for political participation and greater knowledge of the local area. *See* STATE AID, *supra* note 19, at 8.

101. Carrington, *Financing the American Dream: Equality and School Taxes*, 73 COLUM. L. REV. 1227, 1250 (1973).

102. The Act could improve mobility within the seven-county area by encouraging each municipality to accommodate increased population. *See* notes 109-12 *infra* and accompanying text.

have had in selecting the municipality that they prefer in relation to its costs and services. In this way—ignoring economies of scale—the Act could prove more efficient than a political structure composed of only one or a few local governmental units.[103]

Ultimately, of course, the desired balance will probably lie between the extremes of complete local self-determination and the realization of the most equitable and efficient tax base for the provision of an equal level of services over the entire metropolitan area. The Fiscal Disparities Act resolves this conflict to a degree by forgoing absolute equality in favor of equal opportunity: since only resources are equalized, governmental units retain the discretion to determine the level of public services that they will provide. The Act's impact on the final balance will likely be slight and equivocal, however, since it preserves the present local governmental structure[104] while perhaps improving the efficiency of local tax bases.

Finally, it should be observed that the discretion left to governmental units by the Act cannot lead to a depredation of the area-wide tax base. The levy that officials of a local governmental unit choose is apportioned between the local and the area-wide tax base, with the funds derived from the latter available only in proportion to the unit's taxation of its own local assessed valuation. The procedure thus prevents communities from ravaging the area-wide tax base without enduring a corresponding burden.

B. Area Development

The Fiscal Disparities Act is almost certain to have profound effects upon the development of the seven-county metropolitan area, at both the local and regional levels. Just what those effects will be has not yet become clear; certain speculations, however, are possible.

---

103. *See* Netzer, *supra* note 13, at 460-61. This efficiency is exemplified by the operation of the Tiebout model. By presenting a potential resident with a number of communities, each offering a varying mix of services and tax rates, his true preferences will govern his choice of location within the metropolitan area, resulting in a more efficient allocation of services. *See* Tiebout, *supra* note 92, at 417, 422.

104. The Twin Cities area is developing the outline of a two-tier system of government, with broad policy decisions being made on a regional level by the Metropolitan Council, and implementation of these policies being accomplished by local governmental units. *See* Kolderie, *Reconciling Metropolis and Neighborhood: The Twin Cities*, 62 Nat'l Civic Rev. 184 (1973).

At the local level, the Act is likely to affect the location of future commercial-industrial development. Inasmuch as any growth in the assessed valuation of commercial-industrial property is to be shared in part by the entire area, municipalities will have less incentive to attract commercial-industrial development, and therefore less desire to offer preferential assessments or to extend public services to areas not otherwise requiring them. Residential suburbs, in particular, should have little incentive to encourage commercial-industrial development, because under the Act they can share in the assessed valuation of such property while enduring none of the accompanying congestion or pollution.[105] Developing communities should also have less desire for additional commercial-industrial development, since 40 percent of its assessed valuation would be subject to the levies of other communities. Insofar as the tax revenues to be generated by the remaining 60 percent of the new property's assessed valuation—together with the amount received from the area-wide tax base—exceed the costs of services for the development and also offset the nuisance of the development to ear, eye, and lung, commercial and industrial concerns should not be unwelcome. A fine line exists, therefore, between desirable and undesirable developments, especially in view of the uncertainties inherent in the relationship between tax liabilities and service costs.[106] A municipality's decision may be influenced, however, by the employment opportunities that a new development might offer.

In the event that no municipality desires commercial-industrial growth, or if developers become too dissatisfied with the Act's effect, commercial-industrial development may well locate outside the borders of the seven-county area.[107] The Act could thus become a cause of urban sprawl.[108] For this to occur, however, the tax advantages of doing business outside the metropolitan area would have to significantly outweigh the added costs—especially transportation costs. Consequently, the possibility of

105. *See* Goldstein, *Interdistrict Inequalities in School Financing: A Critical Analysis of* Serrano v. Priest *and its Progeny*, 120 U. PA. L. REV. 504, 523 (1972).

106. *See* note 69 *supra*.

107. Nevertheless, since the area-wide tax rate is in some measure merely the average of all the tax rates levied in the seven-county area, its effect is unlikely to be decisive for developers.

108. *See* Village of Burnsville v. Onischuk, 222 N.W.2d 523, 539 (Minn. 1974) (Kelly, J., dissenting), *appeal dismissed*, 420 U.S. 916 (1975).

the Act's becoming a cause of extraregional development seems remote.

Residential development, too, may be affected by the Fiscal Disparities Act. Since the distribution of the funds collected from the area-wide tax base is proportional to a municipality's population, the Act provides some incentive for a municipality to encourage population growth. Because the distribution formula does not take into account the composition of a municipality's population, however, municipalities will probably still be unwilling to encourage high-service-cost persons, such as the poor and the elderly, to locate within their borders.[109]

In can be argued that by equalizing fiscal capacities, the Act has diminished suburban motives for maintaining exclusionary zoning practices.[110] Under this theory, low- and middle-income housing would no longer be a burden on the municipality if the additional service costs associated with such development could be satisfied out of funds received from a levy on the area-wide tax base. Realistically, however, the Act does little to aid development of low- and middle-income housing.[111] Many municipalities will still prefer wealthier people as residents, because they not only significantly raise the residential valuation that a municipality can retain for itself, but also do not require the "enabling" public services that the poor and elderly need. Furthermore, cost differentials in the provision of public services may favor the wealthier communities[112] so that even if expenditures were equalized on a per capita basis, a wealthy community could still enjoy a greater quantum of public services.

---

109. *See* Hagman, *Property Tax Reform: Speculations on the Impact of the* Serrano *Equalization Principle*, 1 REAL ESTATE L.J. 115, 123-24 (1972).

110. *See id.* at 122; *Municipal Services*, *supra* note 19, at 120.

111. Other means, however, are available to encourage low- and middle-income housing development. For example, the Metropolitan Council discourages applications for federal aid for any purpose if the community applicant has not made reasonable efforts to find sites for federal housing programs. *See* Kolderie, *supra* note 104, at 186; Minneapolis Tribune, Dec. 9, 1974, § B, at 9, cols. 1-7.

112. The central cities are burdened with greater municipal service costs than are the suburbs. This condition is usually termed "municipal overburden." For example, Minneapolis and St. Paul spend two and one-half times as much per capita for police protection as do suburban municipalities. This expenditure per capita corresponds closely to the crime rate. Similar situations exist with respect to fire protection, public health, housing, park programs, and street maintenance. *See* E. BRANDT, THE PLIGHT OF THE CITIES 1-15 (Supp. 1973). Thus, merely equalizing expenditures per capita will not account for the different level of public services each community requires.

Local planners may also be affected by the Act, to the extent that it removes tax base considerations as a factor in urban planning. Rather than concentrating on whether a particular land use will generate maximum tax revenues while keeping service costs to a minimum, a municipality can base its planning decisions on nontax factors.[113] On the other hand, the tax revenue-service cost calculus may simply become more complicated under the Act. Local planners may attempt to weigh the loss of two-fifths of the incremental growth in a municipality's commercial-industrial assessed valuation against the implications of such development under the statutory distribution formula. In other words, the existence of the Act might simply result in the incorporation of its effects into the tax revenue-service cost balance. Nevertheless, to the extent that the Act shifts a municipality's focus from commercial-industrial development to a broader range of development by making the latter more economically feasible, it should remove tax base considerations as the primary determinant of that municipality's planning decisions.

On the regional level, the Fiscal Disparities Act should aid implementation of the Metropolitan Council's Development Guide[114] and promote local government cooperation[115] by reducing intergovernmental competition for commercial and industrial development. Viewed as part of an overall legislative scheme, therefore, the Act furthers the orderly growth of the seven-county area and may make possible the realization of other regional objectives. If successful, however, the Act may result in the elimination of one reason for local government reorganization,[116] since the problem of fiscal disparities will have been re-

113. Freilich & Ragsdale, *Timing and Sequential Controls—The Essential Basis for Effective Regional Planning: An Analysis of the New Directions for Land Use Control in the Minneapolis-St. Paul Metropolitan Region*, 53 MINN. L. REV. 1009, 1032 (1974).

114. *See* note 33 *supra*.

115. *See* Hagman, *supra* note 109, at 129-30. The initial response to the Act, however, has been resistance by most municipalities that must share their tax base with others. Burnsville's lawsuit challenging the validity of the Act exemplifies this hostility toward the implementation of the Act. In addition, the Minnesota Supreme Court's decision upholding the Act's validity resulted in the introduction in the legislature of a bill that would repeal the Act. Minneapolis Tribune, Jan. 25, 1975, § B, at 10, col. 1. This reaction was foreseen by the house subcommittee which considered the fiscal disparities bill. *See* HOUSE REPORT, *supra* note 8, at 28-29. That subcommittee suggested that the Act be combined with the Metropolitan Council's proposed percentage equalization program, under which all communities would be net beneficiaries.

116. *See* U.S. ADVISORY COMM'N ON INTERGOVERNMENTAL RELATIONS,

moved or reduced. By so preserving the existing local governmental structure, the Act may thus incongruously prove to be an obstacle to regional government.

The Act may also further, on a more subjective level, the notion of regionalism in the seven-county area. An enunciated objective of the Act is "to establish incentives for all parts of the area to work for the growth of the area as a whole."[117] One such incentive is provided by the fact that when commercial-industrial development occurs anywhere in the seven-county area, many municipalities will share in its contribution to the area-wide tax base. The Act may thus broaden the focus of local officials from their own municipalities to the entire seven-county area.

IV. CONCLUSION

In terms of concrete accomplishment, the Fiscal Disparities Act is perhaps only a modest step toward improved local governmental finance. It continues the use of the much maligned property tax, which has been decried for its regressivity, inequitable administration, adverse land use consequences, and even unpopularity.[118] In recent years, however, the property tax has been looked upon with more favor,[119] and there now seems little doubt that it will continue as the mainstay of local finance.[120] For this reason, the Act's most significant achievement may be its redistribution over the seven-county area of possible tax windfalls, gained by a particular municipality from the location of commercial-industrial property within its borders.

Other deficiencies, however, detract from this achievement. Since the distribution formula is founded primarily on population, the shares that governmental units receive from the area-wide tax base are not necessarily related to the unit's needs.

METROPOLITAN SOCIAL AND ECONOMIC DISPARITIES: IMPLICATIONS FOR INTERGOVERNMENTAL RELATIONS IN CENTRAL CITIES AND SUBURBS 124-25 (1965).

117. MINN. STAT. § 473F.01(3) (1974).

118. *See generally* CITIZENS LEAGUE, *supra* note 14, at 18-19; FINANCING SCHOOLS, *supra* note 22, at 11-42, 69-74, 76; Glickstein & Want, *Inequality in School Financing: The Role of Law*, 25 STAN. L. REV. 335, 397-98 (1973).

119. *See* FINANCING SCHOOLS, *supra* note 22, at 12; Areen & Ross, *supra* note 95, at 49-50; Carrington, *supra* note 101, at 1244-46.

120. *See* HOUSE REPORT, *supra* note 8, at 11; Meon & Moon, *The Property Tax, Governmental Services, and Equal Protection: A Rational Analysis*, 18 VILL. L. REV. 527, 591-92 (1973) (property taxes should continue to support public services not producing significant spillovers).

Moreover, because the shared area-wide tax base is limited in nature and extent,[121] the Act can only partially reduce fiscal disparities. The Act could be revised either to broaden the character of property whose assessed valuation is shared,[122] or to supplement its operation with additional funds derived from a nonproperty tax source at the state or regional level.[123] Increased state aid to municipalities and school districts, for example, would lessen the reliance of governmental units on the property tax[124] and thus mitigate the deficiencies of the Act.[125] Without modification, however, the Act remains open to attack as being relatively ineffective in relieving inequities in the tax burden with respect to the provision of public services.

On other levels, the Fiscal Disparities Act may have a greater effect. One very important impact may well be that, in conjunction with the activities of the Metropolitan Council, the Act will serve to further the orderly development of the seven-county area. In this regard the Act's narrow focus on commercial-

121. The Act provides that the assessed valuation of only commercial-industrial property will be shared. Moreover, only 40 percent of the increase in this valuation since 1971 forms the area-wide tax base.

122. Even if the assessed valuation of other property—such as residential—were included in the redistribution scheme of the Act, merely requiring the area's tax base to be shared on a larger scale might not provide sufficient funds for all communities. If a high minimum level of public services were desired, additional funding would be necessary.

123. *See* CITIZENS LEAGUE, *supra* note 14, at 18-23. Of the five fiscal disparities proposals that were before the house subcommittee, all but the bill eventually enacted provided for additional revenues. *See* HOUSE REPORT, *supra* note 8, at 15-29. The house subcommittee felt that, with or without provision for additional revenues, a statute was needed which would allow local governmental units to share the property tax base. *Id.* at 14.

124. Municipalities in Minnesota are relying less on property taxes and more on state and federal aid. *See* Minneapolis Tribune, Jan. 31, 1975, § B, at 2, cols. 3-4 (37 percent of municipalities' revenue generated by property taxes in 1971; 29 percent in 1973). Nonetheless, property taxes continue to increase in most municipalities. *Id.*

125. The present state aid program, however, does little to equalize taxpayers' burdens. The legislature has concentrated on aiding education while doing little to alleviate municipal overburden. E. BRANDL, *supra* note 112, at 29-37. For example, in 1972 state-provided funds represented 70 percent of revenue for elementary and secondary schooling, but only 25 percent of municipal government revenue. *Id.* at 29. This pattern of state aid only increases the discrepancies between the fiscal position of the suburbs, whose primary financial burden is education, and that of the central cities, which are plagued by greater municipal costs. *See note 112 supra.* Minneapolis has been hurt by such a state aid program. *See* Minneapolis Tribune, Feb. 12, 1975, § A, at 4, cols. 1-2. *But see* Minneapolis Tribune, Feb. 21, 1975, § A, at 12, cols. 1-2 (suburbs' rebuttal).

industrial property may be appropriate, since such property is the prime object of municipal competition to improve the local tax base. Also, the Act may have major significance because its notion of funding governmental units in part on an area-wide basis recognizes the seven-county area as a single community. To this extent the statute may help foster a growing regionalism in the seven-county area. Conversely, it may serve to rescue those governmental units faced with a fiscal crisis from the fate of annexation, merger, or consolidation, and thus encourage the forces of decentralization.

The impact of the Fiscal Disparities Act will increase in the future.[126] For the present, however, its significance seems to rest in its function as an interim measure, a milestone in the regional development of the seven-county area.

126. In 1973, the shared commercial-industrial assessed valuation was to have been only about two percent of the area's total tax base. By 1985, this figure is expected to be 25 percent. Minneapolis Tribune, July 18, 1971, § A, at 14, cols. 1-2.

Appendix

ILLUSTRATION OF THE WORKINGS OF THE FISCAL DISPARITIES ACT

Consider a metropolitan area in which three municipalities, A, B, and C, comprise a county, W. For purposes of this illustration, these four entities will be assumed to constitute the only existing governmental units. A is a central city beset with urban problems, B is a highly developed inner ring suburb, and C is a developing outer ring suburb.* The following data is postulated:**

	A	B	C	W
Population 1971	50,000	20,000	5,000	75,000
1972	49,000	20,000	6,000	75,000
Valuation***1971	$400	$140	$60	$600
Assessed valuation 1972	$105	$50	$20	$175
C-I assessed valn. 1971	$23.0	$4.9	$3.0	
C-I assessed valn. 1972	$23.5	$5.0	$3.5	
C-I growth	$ .5	$ .1	$ .5	
40% C-I growth	$ .2	$ .04	$ .2	

The effect of the Fiscal Disparities Act on the metropolitan area can be studied through the use of this data.

1. Calculation of fiscal capacity and area-wide tax base: ****

Fiscal capacity for 1971 (f.c.=valn./pop.) (§473F.02(14))
for A = $400/50,000 = 8,000
for B = $140/20,000 = 7,000
for C = $60/5,000 = 12,000

Average fiscal capacity for 1971 (§473F.02(15))
($400 + $140 + $60)/(50,000 + 20,000 + 5,000) = 8,000

Area-wide tax base (§473F.07(1))
$.2 + $.04 + $.2 = $.44

2. Determination of a municipality's distribution from the area-wide tax base:

---

* A, B, and C have the approximate fiscal capacities of Minneapolis, Richfield, and Burnsville, respectively.

** All dollar amounts are in millions. Valn.=valuation; pop.=population; C-I=commercial-industrial; f.c.=fiscal capacity.

*** Valuation is the market value of real property within a governmental unit.

**** Throughout this statutory process, the burden of calculating the various figures is allocated between the administrative auditor and each county auditor.

The area-wide tax base distribution index (pop.× ((avg. f.c. 1971)/(f.c. 1971)) × 2) (§473F.07(3))

for A = 49,000 × (8,000/8,000) × 2 = 98,000
for B = 20,000 × (8,000/7,000) × 2 = 45,714
for C = 6,000 × (8,000/12,000)× 2 = 8,000

The sum of these indices = 98,000 + 45,714 + 8,000 = 151,714

The area-wide tax base for 1972 (((index)/(indices)) × (area-wide tax base)) attributable (§473F.07(4), (5))

to A = (98,000/151,714) × $.44 = $.2842
to B = (45,714/151,714) × $.44 = $.1326
to C = (8,000/151,714) × $.44 = $.0232

Therefore:

	Assessed Valuation		
	Contribution	Distribution	Net
A	$.2000	$.2842	$.0842
B	$.0400	$.1326	$.0926
C	$.2000	$.0232	−$.1768

C is a net loser to the area-wide tax base while A and B gain on balance.

3. Calculation of taxable value for each governmental unit:
((assessed valn.) — (contribution to area-wide tax base) + (distribution therefrom))

for A	for B	for C	
$105.0000	$50.0000	$20.0000	(§473F.03(2))
— .2000	— .0400	— .2000	(§473F.08(2)(a))
+ .2842	+ .1326	+ .0232	(§473F.08(2)(b))
$105.0842	$50.0926	$19.8232	

for W
$175.0000 (§473F.03(2))
—((.2 + .04 + .2) = .44) (§473F.08(2)(a))
+((.2842 + .1326 + .0232) = .44) (§473F.08(2)(b))
$175.0060

4. Determination of levy:

After the taxable value for their governmental unit has been calculated, officials can decide upon the amount they wish to levy. Suppose A decides on a levy of $12.6, B $2.25, C $.7, and W $17.5. These are total levies, which must be apportioned among the local and area-wide tax bases.

The taxable resources available to each unit (local tax base + area-wide share)

A = $104.8000 + $.2842 = $105.0842
B = $49.9600 + $.1326 = $50.0926
C = $19.8000 + $.0232 = $19.8232
W = $174.5600 + $.4400 = $175.0000

Unit's area-wide levy (((area-wide share)/(taxable value)) × (total levy)) (§473F.03(3)(a))

Unit's local levy ((total levy) — (area-wide levy)) (§473F.03(3)(b))

for A area-wide levy = (.2842/105.0842) × 12.6 = $.03403
local levy = 12.6 — .03403 = $12.56592

for B area-wide levy = (.1326/50.0926) × 2.25 = $.00596
local levy = 2.25 — .00596 = $2.24404

for C area-wide levy = (.0232/19.8232) × .7 = $.00082
local levy = .7 − .00082 = $.69918
for W area-wide levy = (.4400/175.0000) × 17.5 = $.04400
local levy = 17.5 − .04400 = $17.45600

5. Calculation of tax rates:

The local tax rate ((unit's local levy)/(unit's local tax base)) ($473F.03(4))

with respect to municipalities
for A = (12.56592)/(101.8000) = .11990 = 119.90 mills
for B = (2.24404)/(49.9600) = .04492 = 44.92 mills
for C = (.69918)/(19.8000) = .03531 = 35.31 mills
with respect to the county
W = (17.45600)/(174.5600) = .10000 = 100.00 mills

The local tax rate is the tax levied on all taxable property except commercial-industrial property. Thus, for noncommercial-industrial property, the tax rate is
in A 119.90 + 100.00 = 219.90 mills
in B 44.92 + 100.00 = 144.92 mills
in C 35.31 + 100.00 = 135.31 mills

The area-wide tax rate ($473F.03(5))
The area-wide levy = $.03403 + $.00595 + $.00032 + $.04400 = $.08486
The area-wide tax rate ((area-wide levy)/(area-wide tax base))
= (.08486)/(.44)
= .19286 = 192.86 mills

The tax rate on commercial-industry property (((40% C-I growth)/(C-I assessed valn. 1972)) × area-wide tax rate) + (((C-I assessed valn. 1972−40% C-I growth)/(C-I assessed valn. 1972)) × local tax rate) ($473F.03(6))
in A = ((.2/23.5) × 192.86) + ((23.3/23.5) × 219.90) = 219.67 mills
in B = ((.04/5) × 192.86) + ((4.96/5) × 144.92) = 145.30 mills
in C = ((.2/3.5) × 192.86) + ((3.3/3.5) × 135.31) = 138.60 mills

Prior to the passage of the Fiscal Disparities Act, tax rates would have been (unit's tax rate = unit's levy/unit's assessed valn.)

	municipal	county		
in A =	(12.6/105)	+ (17.5/175)	= .12000 + .10000	= 22.00 mills
in B =	(2.25/50)	+ (17.5/175)	= .04500 + .10000	= 14.50 mills
in C =	(.7/20)	+ (17.5/175)	= .03500 + .10000	= 13.50 mills

on both commercial-industrial and other property.

TO: LISA

FROM: Mr. Bernier

RE: HB 87

Mr. Bernier would like you to return his call as he is having a bit of a problem drafting the amendment regarding dual majority in both borough and city. I told him that you'd get back to him 2/23 A.M.

J.

Introduced: 1/21/77
Referred: Community & Regional Affairs and Judiciary

IN THE HOUSE BY MALONE

HOUSE BILL NO. 87

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - FIRST SESSION

vote on issue dual majority?

A BILL

For an Act entitled: "An Act relating to appropriations and grants from boroughs to service areas and cities; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 29.63.090(b) is amended to read:

(b) The assembly may levy or authorize the levying of taxes, charges, or assessments in service areas to finance the special services or may by ordinance authorize appropriations from areawide taxes or other areawide revenues to finance all or part of the special service and, after enactment of an authorizing ordinance, may make appropriations for the purpose authorized.

* Sec. 2. AS 29.73 is amended by adding a new section to read:

Sec. 29.73.070. REVENUE SHARING GRANTS BY BOROUGHS. A home rule or general law borough of any class may make grants from areawide taxes or other areawide revenues to cities within the borough or service areas of the borough for a function the city or service area is authorized to perform. Grants so made shall be authorized by borough ordinance.

* Sec. 3. AS 29.13.100 is amended by adding a new subsection to read:

(37) AS 29.73.070 (revenue sharing by boroughs)

* Sec. 4. AS 29.48.210 is amended to read:

Sec. 29.48.210. EXPENDITURE OF BOROUGH REVENUES. Borough revenues levied and collected on an areawide basis by a home rule or general law borough may be expended on general administrative costs, [AND] on areawide functions, and as authorized in AS 29.63.090(b) and 29.73.070 only.

Revenues levied and collected in the area outside cities only may be expended on general administrative costs and functions which render service to the area outside cities only.

* Sec. 5. AS 29.53.010 is amended to read:

Sec. 29.53.010. GENERAL PROPERTY TAX. Home rule and general law boroughs may levy (1) an areawide property tax for areawide functions, <u>for appropriations authorized under AS 29.63.090(b), for grants authorized under AS 29.73.070;</u> and (2) a property tax limited to the area outside cities for functions limited to the area outside cities. A property tax if levied must be assessed, levied and collected on real and personal property as provided in this chapter.

* Sec. 6. This Act takes effect immediately in accordance with AS 01.10.-070(c).

In short, this is a nice, neat way to impose a large borough tax on the remaining commercial and oil industry property with all functions of government (i.e., city, special district and borough) being paid for by the borough taxes. Such a plan also effectively gets around an annexation problem to reach the large industry properties in the borough.

One of the problems with this whole scheme, from a political standpoint, is that if the borough tax is raised significantly (for example, suppose it went from 5-mills to 12-mills), the amount of tax paid to Kenai borough becomes a credit against the 20-mill "hardware" tax imposed at the state level on oil and gas producing equipment and pipelines. Thus, as the Kenai borough takes more in taxes with respect to property taxable under the 20-mill hardware tax, the less revenue the state receives.

Politically, it is difficult to see how anyone outside the Kenai Borough would agree to such a scheme, because the people outside Kenai have everything to lose and nothing to gain by permitting the state, in effect, to subsidize homeowners at the expense of state revenue. This is probably one of the strongest arguments why such a scheme as this would not be acceptable.

The foregoing discussion perhaps cynically assumes that voters in Kenai would agree to take property taxes off their homes. This may or may not be what the author has in mind but it certainly would be a rather powerful force to reckon with if these changes ever became a law.

HB

110

February 17, 1977

The Honorable Hugh Malone, Speaker
House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Hugh:

Attached to this letter is a proposed sponsor or committee substitute to HB 110 of draft legislation which would correct or otherwise clarify certain portions of Title 29 from a basically technical viewpoint. In preparing this draft legislation it was our intent not to, in any way, deal with issues involving policy or subjects that might be controversial in nature. I believe that as you read the draft legislation, most proposed changes will be self-explanatory; therefore, I will not attempt to go into detailed explanation as to the background for each of the changes.

By way of general background, Commissioner McAnerney had earlier requested that the Division assume responsibility for reviewing all of Title 29 and to make an attempt to correct those obvious errors or omissions which were apparent in the 1972 legislation or which have been caused by subsequent amendments to the original 1972 version of Title 29. In July, the Department sent a letter to all municipalities requesting their input or suggested amendments to Title 29. Additionally, four attorneys were invited to a meeting which included Billy Barrier and Greg Machyowski (of Legislative Affairs Agency), Jim Nordale (attorney for the Fairbanks North Star Borough), and Karl Walter (formerly city attorney for the City of Anchorage and now a private practitioner). The language of the attached draft legislation (with the exception of sections 1, 7, & 15) is the result of that all-day meeting between the Division of Local Government Assistance and the four attorneys who primarily drafted the 1972 version of Title 29.

Section 1 of the proposed draft may not be technically considered "clean-up" legislation but provides what we in this Division feel would permit a "streamlined" mechanism to allow earlier home-rule charter adoption of a municipality upon incorporation.

On November 15, 1976, the Division received a letter from Wes Howe, borough manager of the Matanuska-Susitna Borough, calling to our attention some technical

deficiencies in AS 29.23.310. Therefore, section 7 of the attached draft is the language proposed by the borough attorney from the Matanuska-Susitna Borough to correct that one problem area. Section 9 of the proposed draft achieves the same purpose as your HB 110.

Section 15 of the proposed draft re-enacts identical language passed by the legislature last year. However, the AG's office has ruled that this enactment would be held invalid since it was contained in a bill which amended Title 43 (thus violating the two subject rule). Ketchikan Gateway Borough administration reminded us of the need to have this provision re-enacted into Title 29. The AG's office has advised that re-enactment of the language is appropriate.

Representative Lisa Rudd has indicated a willingness to consider our proposal as a sponsor or committee substitute but requested that I meet with you for your concurrence.

I hope that you will be able to propose this additional language as a sponsor substitute or that, in the alternative, you will have no objection to allowing this proposal to be considered as a committee substitute for HB 110.

I look forward to discussing this with you at 3:30 tomorrow afternoon.

Sincerely,

Lee McAnerney
Commissioner

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPT. OF COMMUNITY & REGIONAL AFFAIRS

DIVISION OF LOCAL GOVERNMENT ASSISTANCE

POUCH B — JUNEAU 99811

March 29, 1977

The Honorable Lisa Rudd
House of Representatives
Pouch V
Juneau, Alaska 99811

Re: Analysis of Legislation to "Clean-Up" Title 29

Dear Representative Rudd:

An analysis of the attached draft legislation amending Title 29 is made to explain the effects of the proposed amendments as well as identify the "sponsors" of same. When reference is made to "municipal attorneys" as sponsors, this refers to the group invited to attend a one day seminar in Juneau to review Title 29. The four involved were all active in the original Alaska Municipal League draft of the 1972 version of Title 29 and include Billy Barrier, Greg Machyowski, Jim Nordale and Karl Walter.

Section 1

Newly incorporated first class boroughs would be able to form home rule municipalities in a more timely manner than existing statutes allow. Currently, a region desiring to incorporate as a home rule borough must first incorporate as a first class borough and then proceed to pose the question of establishing a charter commission. This two-step process would be accelerated since a charter commission could be created at the incorporation election; individual commission members would be elected at a special election to be held "not less than 30 nor more than 90 days after the date of the election order". The Local Government Assistance Division (LGAD) has proposed this section to encourage the development of home rule, borough government.

Section 2

The new sentence clarifes the date that newly elected assemblymen assume office. This new language is the same as that for city councilmembers (AS 29.23.200(c)). This section was proposed by the municipal attorneys.

Sections 3, 4 and 5

Amend existing provisions of law by removing redundant language in Sections 29.23.130(c), 29.23.200(c) and 29.23.250 (d) providing that the regular date of election is "the first Tuesday of October...". This language is considered redundant because AS 29.28.020 already specifies that "the first Tuesday of October..." is the regular date for municipal elections. These amendments were suggested by the municipal attorneys.

Section 6

The amendment allows cities to conduct emergency meetings. Boroughs under AS 29.23.060, may conduct emergency meetings, and similar language has been introduced to permit cities the same privilege. LGAD was the sponsor of this amendment and the municipal attorneys have concurred.

Section 7

The election of school board members from zones within a school district is currently permitted under AS 29.23.310. However, AS 29.23.100 which implements the creation of the zones was repealed by section 16, chapter 118, SLA 1972. Section 7 describes a process which creates these zones. The sponsor of this section is the attorney for the Matanuska-Susitna Borough.

Section 8

The amendment removes what is considered to be unnecessary reference language, thereby clarifying the meaning of this particular section. The amendment is proposed by the municipal attorneys.

Section 9

Cities within 25 miles of the boundary of the borough seat may not be permitted to have their councils act as a board of adjustment or assume other planning responsibilities for the area within the city limits. This prohibition is eliminated. The municipal attorneys group sponsored this section as has Representative Malone through his introduction of HB 110 which has passed the House and is now in Senate C & RA.

Section 10

The amendment makes AS 29.33.110(a) consistent with the immediately preceding amendment by deleting the reference to 29.33.070(b)(1). The municipal attorneys sponsored this amendment.

Section 11

By removing the reference to "planning commission acting as the platting board" and substituting the term borough any ambiguities as to who is the final decision making authority is removed. (It has been argued that the planning commission is not subject to assembly review and approval when acting as the platting board). The municipal attorneys sponsored this amendment.

Section 12

Accomplishes the same purpose as the amendment in Section 11. Again, the municipal attorneys are the sponsor.

Section 13

This section essentially restates language contained in AS 29.48.200, which provides for required codification of ordinances. The municipal attorneys sponsored this amendment.

Section 14

Through the deletion of the six words "by the council" and "by the city" this section makes clear that which might otherwise appear to be unclear. Both cities and boroughs would now be covered by AS 29.48.180(C)(2). The sponsor is the municipal attorneys group.

Section 15

The proposed language reenacts the identical language passed by the legislature last year (SLA 1976, Chapter 56). However, the AG's office ruled that this enactment would be held invalid since it was contained in a bill which amended, Title 43 (thus violating the two subject rule). The AG's office has advised that reenactment of the language is appropriate. The Ketchikan Gateway Borough has requested this reenactment.

Sincerely,

Lee McAnerney

HB

116

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPARTMENT OF NATURAL RESOURCES

DIVISION OF LANDS / 323 E. 4TH AVENUE – ANCHORAGE 99501

February 14, 1977

Representative Lisa Rudd
Pouch V
Juneau, AK 99811

Dear Lisa:

I've just reviewed a copy of House Bill 116, which you sponsored entitled "An Act Relating to the Classification of State Land and Providing for an Effective Date". I understand from Gary Thurlow that this was an attempt to bring pressure on municipalities to accomplish recreational trail designation within their boundaries. I believe that the authority to classify State land already exists and that the purpose of the legislation would not be met by this bill, since it pertains to classification of State Lands only. I suggest that if this purpose really is to accelerate municipal action it might be better to look to AS41.20.355 which authorizes grants for the establishment of trails and footpaths. There is a requirement there for a comprehensive plan for the establishment of the trails. It might be appropriate to include some language that requires dedication by the municipality prior to the grant being made. 61.10.070

As a matter of information, the statutory authority for classifying lands is found in AS38.05.300 and regulations adopted thereunder.

Give me a call if you have any questions about this or any other matter I may be able to assist you with.

Yours truly,

Ted

TED SMITH
Director

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPARTMENT OF NATURAL RESOURCES

DIVISION OF LANDS

323 E. 4TH AVENUE – ANCHORAGE 99501

ALASKA MUNICIPAL LEAGUE
26th ANNUAL LOCAL GOVERNMENT CONFERENCE
November 4-6, 1976
Fairbanks, Alaska

MUNICIPAL LAND SELECTIONS

The attached information is presented to members of the Alaska Municipal League to share information developed or synthesized by the Alaska Division of Land Management pertaining to municipal land selections under AS 29.18.190-.200. In compiling this document the Division has drawn upon a number of sources. Specific data, therefore, represent a continuum from precise figures (e.g. accumulative Tentative Approval received by the State), through best estimates (population figures), to rough approximations for the sake of discussion (occupied, appropriated and reserved land acreage).

This information is not offered to prove any particular point, but rather to show the existing situation regarding municipal land selections and some relationships among the municipalities which have participated in this program to date.

Explanatory Notes for Table A

Column 1 contains the cumulative total of tentatively approved ("T.A.") lands conveyed to the State of Alaska under Section 6(b) of the Alaska Statehood Act.

Column 2 is a consolidated cumulative total of occupied, appropriated and reserved lands comprised of the following:

a. Five Classifications (Timber, Grazing, Watershed, Public Recreation and Resource Management) which cover areas not available for transfer to boroughs. Only those above classifications covering areas of Section 6(b) lands (GS) in excess of 40 acres in size have been included.

b. Municipal approvals per date of issue.

c. State Parks were excluded upon the effective date for that portion then under BLM T/A or patent under Sec. 6(b). Additional title received within park areas after formation was excluded in the six month period in which title was received.

d. State Recreation areas are treated in a similar manner.

e. State Wildlife Refuges, except for Susitna Flats State Game Refuge and Trading Bay State Game Refuge.

f. Estimated tentatively approved Sec. 6(b) lands selected by village corporations. The totals given are only those lands selected as of December, 1973 rather than those lands within the 25 township withdrawal as of December, 1971.

g. Estimated lands obligated under the Cook Inlet Land Trade.

Column 2 does not include mineral or oil and gas leases, tidelands, submerged lands or shorelands.

Column 3 (Column 1 minus Column 2). These figures comprise the best available State estimate of net vacant, unappropriated and unreserved lands based upon the items included above. Some items (i.e., ANSCA and Cook Inlet Trade) include variables, both in amounts and as to the areas (Matanuska, Kenai or Anchorage) in which the natives can elect to receive their lands.

Explanatory Notes

A total State Population figure of 404,634 is based upon the State Department of Labor "Estimates of Total Resident Population of Alaska By Census Divisions as of July 1, 1975 and Components of Population Change since April 1, 1970."

Individual city and borough totals are based upon population data from FY 1976 State Revenue Sharing as shown on "Organized Boroughs and Cities" January 1, 1976 map produced by the State of Alaska, Department of Community and Regional Affairs. These figures were amended by Community and Regional Affairs in the case of the following: North Slope Borough, Fairbanks North Star Borough, Matanuska Susitna Borough, Valdez and the correction of a typographical error in the case of Savoonga.

Based upon the above Community and Regional Affairs information, 306,967 comprises the population of the unified municipalities of Juneau, Sitka, Anchorage and the other eight organized boroughs.

The population total for those incorporated cities outside the area of the organized boroughs is 51,397.

UNIFIED HOME RULE MUNICIPALITIES

	*POPULATION	ESTIMATED SQ. MILES	INCORPORATION DATE
City and Borough of Juneau	17,356	3,109	July 1, 1970
City and Borough of Sitka	6,966	2,900	December 2, 1971
Municipality of Anchorage	175,697	1,500	September 25, 1975

ORGANIZED BOROUGHS

CLASSIFICATION	*POPULATION	ESTIMATED SQ. MILES	INCORPORATION DATE
Home Rule			
North Slope Borough	8,634	68,281	July 1, 1972
Second Class			
Bristol Bay Borough	1,147	1,200	October 2, 1962
Fairbanks North Star Borough	50,029*	7,500	January 1, 1964
Kenai Peninsula Borough	16,645	25,600	January 1, 1964
Ketchikan Gateway Borough	11,052	1,250	September 6, 1963
Kodiak Island Borough	6,627**	4,500	September 30, 1963
Matanuska-Susitna Borough	10,834	23,000	January 1, 1964
Third Class			
Haines Borough	1,980***	2,620	August 29,1968

*Portions of Fort Wainwright have been annexed to the City of Fairbanks, Eielson Air Force Base is excluded from the Fairbanks North Star Borough.
**Excluding residents of Kodiak Coast Guard Station (base proper).
***Excluding residents of the Klukwan Indian Reservation and Petroleum Distribution office, Haines Terminal and Pumping Station (base proper).

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPARTMENT OF NATURAL RESOURCES

OFFICE OF THE COMMISSIONER / POUCH M — JUNEAU 99811

May 2, 1977

The Honorable Lisa Rudd
Chairman, House Community and
Regional Affairs Committee
Pouch "V"
Juneau, Alaska 99811

Dear Representative Rudd:

In response to several questions from members of your committee concerning the necessity for action on your committee substitute for HB 133, I thought it appropriate to document those needs and explain some of the significant problems if the Legislature does not act on this bill this session.

As you know, this bill represents a compromise consensus among the State and most of the major municipalities within the state to finally establish a "settlement" of the existing, outmoded land selection legislation passed 14 years ago. Hammering out comprehensive legislation of this magnitude is not an easy task, but the State and the municipalities have been doing just that since last August. Like you, we wish the bill had been in this form earlier in the session, however, that was simply not possible considering the tremendous diversity of needs that had to be met for the many varied communities involved. The bill before you represents a rational compromise for all parties and testimony has been offered in its support by virtually all municipalities involved.

Below are listed the seven reasons why the State and the municipalities feel it imperative for the Legislature to act this session on the municipal land selection bill.

1. Judicial action--The State is presently being sued by two municipalities concerning interpretations of the original act. If the Legislature does not act this session, some judge will interpret the Legislature's intention of 14 years ago. Why leave to the judicial process the role of interpreting an outdated land selection law when a document of settlement exists with which all parties concur?

2. Land exchange mandates--Under the terms of the Cook Inlet land exchange, the State must identify large acreages of land for conveyance to that regional corporation. Without the vested entitlement rights which this legislation would provide, the Kenai and Matanuska-Susitna Boroughs will be at a very significant disadvantage during the process by which the State and Cook Inlet Region determine which lands should go into private ownership. This problem could be critical to these two municipalities.

3. Further exchanges prevented--Both the villages of Eklutna and Seldovia, which have selected large portions of Chugach and Kachemak Bay State Parks, repsectively, have approached the State seeking to initiate a land exchange to "trade out" of these State Parks. Both the Legislature and the Administration are receptive to these approaches, however, without a specific land entitlement defined for the municipalities in whose borders these lands lie, no such exchange is possible. These corporations have indicated an increasing reluctance on the part of some members of their boards of directors that their private corporate ownership of these parks may ultimately be more favorable to them than such an exchange. If we cannot initiate such exchanges in the near future while these coproations are interested, we may foreclose forever the opportunity of such exchanges.

4. Land disposals halted--Some municipalities, particularly the Kenai Borough, have indicated that they will vigorously object, and may even consider legal action, to prevent the State from classifying or disposing of state lands within their boundaries until such time as they receive a specific land entitlement. Such municipalities have few alternatives since without a specific entitlement state land disposals may be robbing them of land entitlement rights which they may already have under the original legislation.

5. National forest land selection--The Department of Natural Resources has begun an intensive program to identify and select the majority of our remaining entitlement within the National Forests. This will have profound impact upon Southeast Alaska, particularly the Boroughs of Juneau, Ketchikan and Sitka. Under existing law, these three communities combined possess an entitlement of only about 1,000 acres. The present bill would grant them a total of 32,000 acres. Without legislative action this session, these communities will not know their ultimate land entitlement since, under existing law, they are entitled to only 10 percent of the vacant, unappropriated, unreserved land within their municipal boundaries. Thus, without legislative

action, these communities will be forced to fight amongst themselves to insure that the State selects a maximum acreage within the municipal borders of each community from which they will obtain a 10 percent entitlement. This would be the very worst environment within which the State and its forest communities could make the decisions for future state selection.

6. Effective resource management stopped--The municipalities have been waiting 14 years to receive their land. Without legislative action, a continuation of this lack of coordination and proper land management will continue. Under existing law, the State and the municipalities are forced to become protagonists in a battle for land ownership. At a time when State and municipal cooperation in land and resource management is so desperately needed, and when a document has been agreed upon to provide such coordination, the continuance of the conflicts engendered under the original legislation is simply untenable.

I hope this will convey some of the urgency which both the State and the municipalities feel with respect to solving this longstanding problem. Eight months ago no one would have thought that rational legislation could have been drafted which would be supported by all parties--we trust the Legislature will see fit to pass that legislation this session.

Sincerely,

Michael C.T. Smith
Assistant Commissioner

The Hon. Bill Miles
The Hon. Nels Anderson

ANALYSIS OF SENATE C&RA VERSION OF HB 133

This CS, passed out 5/25/78, contains 4 main changes from the Senate Resources version:

Sec.29.18.201 P. 1

1). General grant land entitlement for Anchorage is changed. Anchorage is increased from 20,865 to 44,893 acres. The increase for Anchorage is based on the Municipality's argument that their previous entitlement did not take into account 240,893 acres selected by the state in the Anchorage area but not yet given formal approval by the Feds. Anchorage should receive 10% of that land as well.

This land is not usable by the municipality because it is primarily on the back side of the Chugach Mts., however, it does have the advantage of (1) qualifying the municipality to receive "deficiency payments;" and (2) allowing for the possibility of selecting land which may be made available at a future date in the area of Ft. Richardson and Elmendorf.

The State, in a letter to Senator Orsini dated May 19, 1978, commented on Anchorage's argument for more land. Mike Smith stated the 240,893 acre figure is erroneous because it includes roughly 72,000 acres which have been double-filed over the years. This leaves only 168,000 acres for the total entitlement of 37,665 acres for Anchorage.

I was not able to get anyone to tell me whether or not any other boroughs may have the same situation within their boundaries, ie, where the state has selected additional land but not given the borough credit for it in its entitlement computations. Presumably, it is up to each municipality to sleuth out the real story and present it to the legislature.

Sec. 29.18.204(g) P. 5

(2) The development of the concept of lands "appropriate" for municipal purposes. On page 5 , Sec. 204 (g), the criteria for municipal selection is broken out as follows:

(1) Land suitable for residential, commercial and industrial needs; and
(2) Other responsibilities of the local government, including but not limited to, support of municipal services,; education; local transportation; private recreation; public recreation, natural, historical and archaelogical areas of local concern; and other responsibilities authorized or delegated by the state to the municipality.

What is new is 204 (g)(1). This comes into play in the sections pertaining to selection of trust lands and payments in lieu of land.

Sec.29.18.205 P. 6 (3) Trust Lands. This section has been restricted somewhat as to what municipalities can take advantage of trust lands selection.

There are apparently a substantial amount of trust lands available in Anchorage, 10,300 acres, some of which would be "appropriate" for municipal selection. Some Southeast communities also could not get close to fulfulling their entitlement without access to trust lands. The new elements therefore are: (1) a municipality's entitlement must be less than 1 1/2 acre/capita before it can qualify to select trust lands; and (2) the trust boards have no approval or disapproval authority.

The Senate Resources version had given the option of selecting trust lands to all municipalities, given approval by the appropriate trust board. The Senate C&RA version has precluded some municipalities from selecting trust lands where land is not a problem, while allowing Anchorage and Southeast where there is an apparent land crunch, to select trust lands without the risk of being disapproved by the trust boards.

The DNR is to trade land of equal value to the trusts for those trust lands selected by municipalities. The trust boards must agree to the transfer. If they do not agree, the DNR keeps trying until they do. Identification of lands suitable for trade is to be accomplished within 6 months of a municipal selection. In Mike Smith's letter of May 19, he states no time limit should be set for this land exchange because he feels that the work load involved in the identification of all these alternative suitable lands would be more than the department could handle.

Sec.29.18.207 P. 9 + 10 (4) Payment for Land Deficiency. This is a difficult section to explain.

The committee was working with 4 things here:
(1) The fact that Anchorage cannot fulfill its entitlement in land regardless of whether it has a 20,000 acre entitlement or a 45,000 acre entitlement;
(2) The argument that Anchorage has not received anywhere near its equitable entitlement given its large population;
(3) The possibility that Kodiak will not be able to fulfill its entitlement given the extensive top fillings on their selections by area Native corporations;
(4) The administration's position that the total payments to all communities must not exceed $20 mil and that the amount to be received by any one municipality should not be more than $10 million. (Mike Smith's letter of 5/19/78) It is estimated only Anchorage and Kodiak would be qualifying for payments.

Under this section a municipality may only receive a payment if it meets one of two criteria: It either cannot fulfill its entitlement because there are not sufficient "suitable/appropriate" lands available, or because those lands have been conveyed to a Native corporation under ANCSA.

By the first criteria, a municipality with an entitlement of less than 1/3 acre per capita of land "suitable for residential, commercial and industrial needs" (204(g)(1)), can receive $1,000/acre for that land which is not appropriate as described above. The total payment to any one municipality may not be more than $9,000,000.

The way this subsection (b) is worded it appears that Anchorage will be credited for 60,000 acres. Less any appropriate land under 204(g)(1), say, approximately, 20,000 acres.

1/3 X 180,000 = 60,000
-20,000 selectable
40,000 X $1,000/acre = $40,000.00

9,000,000 limit; 15,000 acres payment request

25,000 acres to be selected later

A $9 million limit encourages Anchorage to request payment for only 9,000 acres or at the most 15,000, leaving 25,000 still available for selection should more land become available. There is no time limit for selecting land. DNR has mentioned that land from Elmendorf and Ft. Rich may come available in the future.

Subsection (c) addresses the situation in Kodiak: If a municipality is unable to select its full entitlement because its lands were ultimately conveyed to a Native corporation under ANCSA it may request payment at $1,000 per acre for a maximum of 8,000 acres. $1,000,000/FY; $8,000,000 total.

In lieu payments received under this subsection (c) are deducted from the total entitlement. Not so for subsection (b); there is no deduction.

I believe the rationale for this difference is that in Kodiak there is other land available although it is not particularly appropriate. In Anchorage there is no other land available.

OTHER CHANGES IN THE SENATE CRA COMMITTEE SUBSTITUTE ARE:

Sec.29.18.212 P. 13

1) The definition of vacant, unappropriated state land is changed to accommodate "appropriate" land for municipal purposes as outlined in 204 (g)(1).

Sec.38.05.321 (b) and (c) P. 16

2) The section on agricultural lands is tightened up. P. 16, lines 5-7 bring in the provisions of 38.05.069 when the state determines to transfer rights other than agricultural rights to a municipality. This section seems to say that the public auction procedure will come into play here. The intent of putting in this language was to have the Director use procedures now in effect for other lands. Without this there would be too much discretionary authority to the Director.

Also, the date of April 1, 1978 is inserted as a grandfather clause for selections already made by a municipality. This date is apparently to avoid any last minute land transfers by the Department between the date of passage and the effective date. This is also intended to shield any municipalities who have gotten land under different auspices.

Some of the testimony given at the Senate CRA final hearing may be of interest.

The municipality of Juneau pointed out that emphasis is placed on developable land. Reference is constantly made to 204 (g)(1). Municipal selections need not be just for development. Juneau plans several selections which would not be developable.

Stewart Bowdin of the Bristol Bay Borough testified the Bristol Bay Borough is in dire need of land for utility purposes such as for sanitary landfills. They perferred the entitlement contained in the House Finance version, but would be content with that contained in the Senate CRA CS.

Phil Holdsworth, representing the Southeastern Conference of municipalities, noted that a formula based on per capita was just aimed at certain municipalities. He was referring to the qualifying formula for selecting trust lands. Before being amended at the close of the meeting ,this section limited qualification to 1/2 acre per capita. Holdsworth was concerned that this left out Southeastern communities where there was a real land shortage due to the presence of trust lands within municipal boundaries.

Pat Conheady spoke for DNR and although he was not able to finish his testimony before the motion was made to move

the bill, he did make four points:

1) DNR does agree that trust land selection should be an option for all municipalities;
2) The Anchorage entitlement should be 37,665 acres.
3) The criteria of lands suitable for development contained in 204(g)(1) should be eliminated. The provision is open to interpretation and could be interpreted to allow all municipalities to collect a payment in lieu of land. DNR suggests returning to a general definition of vacant, unappropriated, appropriate lands since there are other legitimate uses of municipal land than just strictly for development.

4) The date of January 1, 1981 (p.9, line 20) should be eliminated. Conheady stated with regard to the 6A selections there is an uncertainty as to the time involved in their turnover to the state; enough so that the 1.5 acre criteria could open it up to payments to more municipalities.

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPARTMENT OF NATURAL RESOURCES

OFFICE OF THE COMMISSIONER / 323 E. 4TH AVENUE – ANCHORAGE 99501

May 19, 1978

The Honorable Joesph Orsini
Chairman
Senate Community and Regional Affairs Committee
Pouch V
Juneau, AK 99811

Dear Joe:

Following the completion of testimony before your committee on the Municipal Land Selection Bill (SCS CSHB 133), I felt it appropriate to forward some comments from the Administration based upon information brought out at the hearings, as well as discussions with the representatives of individual municipalities.

As I suggested at the hearings, and as has been echoed by several of the municipalities, we feel that it is important that the Senate Resources Committee Bill be used as the "mark-up vehicle." While your committee may wish to make several amendments to the legislation, the Resources Committee Substitute represents the most finely honed version to date and is certainly the most suitable version upon which to build at this time.

In reviewing the May 5, 1978 letter to you from Theodore D. Berns of the Anchorage Municipality, I believe several comments on the suggested amendments in Exhibit D of that letter are appropriate. With respect to suggested amendments nos. 3 and 5, Ted is addressing the need to clarify the difference between land that is merely "vacant, unappropriated, unreserved," and land which is vacant, unappropriated, unreserved which is actually appropriate for municipal ownership. In other words, there might be mountaintops, glaciers, and coastlines which are by definition vacant, unappropriated, unreserved, yet are clearly not appropriate for municipal ownership. The State supports a clarification of this issue, but we would do so in a slightly different manner than the language suggested in Exhibit D of Ted's letter.

We suggest that the definitions section (29.18.212) be amended by the addition of a new definition no. (1) which would read:

> (1) "Appropriate vacant, unappropriated, unreserved land" means vacant, unappropriated, unreserved land which meets the criteria for municipal selection under Section 204(g) of this chapter;

In referring to Section 204(g) the definition incorporates the specific municipal criteria found in that subsection and therefore clearly differentiates between all vacant, unappropriated, unreserved land and land in that category which is actually appropriate for municipal ownership. By using this new definition, the suggested amendments nos. 3 and 5 in Exhibit D of Ted's letter may be changed to merely refer to this definition. Specifically, with respect to suggested amendment no. 3 on page 2, line 28 (SCS CSHB 133) the language would read:

> "or to that portion of an entitlement that cannot be satisfied by such date due to a lack of appropriate vacant, unappropriated, unreserved land."

The intent of suggested amendment no. 5 may then be manifested by adding on page 9, line 1, between the words "the" and "vacant," the word "appropriate."

Ted's suggested Amendment no. 4 on page five, at line 12, is acceptable to the State and we would not object to its inclusion in the bill. Likewise, with respect to suggested amendment no. 1 on page 1, at line 17-18, the State would not object to this deletion.

Suggested amendment no. 2 on page 1, at line 24, which would increase Anchorage's entitlement by 115 percent, causes us concern. While we again question, as has Senator Hackney, when the continual spiral of increases for municipal entitlements in this legislation will end, our specific concern here is that the 240,280 acres of selected land cited as being within the Anchorage Municipality is incorrect. That figure, as brought before your committee, includes substantial "double filed" acreage--land which has been filed on for selection by the State at different times or under different selection entitlements. While an exact determination of the degree of double filing would be a very time consuming effort, our best estimate of this double filing, giving Anchorage the benefit of any doubt, is approximately 72,000 acres. Reducing the 240,000 figure by 72,000 acres leaves approximately 168,000 acres of state

selected land. Ten percent of this total yields a figure of 16,800 acres. When added to Anchorage's existing entitlement of 20,865 acres, a more correct total of 37,665 acres is obtained.

Although not listed in Exhibit D of Ted's May 5 letter, Anchorage has requested that language found in Section 29.18.210(c) of the House bill (CSHB 133 (Finance) am) be reinserted in the Senate version (page 12, lines 8-11). This language, which refers to land conveyed to the State under Section 12(d)(2) of Public Law 94-204 is acceptable to the State provided that the ultimate entitlement for Anchorage is not in excess of the 37,665 acre figure addressed above.

With respect to Section 29.18.207, concerning payments in lieu of land, I have indicated several times that the Administration feels that the cumulative total of payments to all communities under this section should not total more than 20 million dollars. At present it appears that only the municipalities of Anchorage and perhaps Kodiak will qualify for payments under this section. I also understand that these municipalities are amenable to amendatory language, probably in Subsection (f), which would limit the total amount of in lieu revenue payments any one municipality could receive to a maximum of 10 million dollars. If language is included in that subsection which limits the total cumulative payments to all municipalities under this act to a total of 20 million dollars, and limits the total cumulative payments any one municipality can receive under this act to 10 million dollars, the Administration can support this section. Our suggested language is as follows:

> Once the total of cumulative in lieu revenue payments to a municipality under this section has reached 10 million dollars, there exists no obligation on the part of the State to provide further in lieu revenue payments to that municipality for any of its remaining entitlement. Once the total accumulative in lieu revenue payments to all municipalities under this section has reached 20 million dollars, there exists no obligation on the part of the State to provide further in lieu revenue payments for any remaining entitlement of any municipality.

The purpose of this language is to ensure that the artificially inflated entitlements of communities, whose appropriate state land for municipal selection may not exist, do not return to haunt the State for additional revenue payment in the future. The remaining entitlements would, however, remain effective should additional appropriate land be received by the State within a municipality.

A major problem which we have all wrestled with throughout consideration of this legislation has been that of the trust lands. Your suggestion that appropriate trust lands be made available for municipal selection without the need for concurrence of the respective trust board has considerable merit in that it would significantly speed up the conveyance process. There are, however, two corollary considerations which must be addressed. First, if the trust boards are not to be formally approached for their approval, trust land selected by a municipality should be treated no differently than general selection lands selected by a municipality. That is, they should be subject to the same processes found in subsections (e) through (i) of Section 204. Second, while there may be a requirement to identify other lands of equal value for exchange with the municipally-selected trust lands, no specific time limit for identification or culmination of an exchange should be given. If the trust boards do not have approval authority, the rapidity of the conveyance process would simply outstrip the capability of the Department of Natural Resources to formally execute exchanges. Specific identification and accounting of all trust lands conveyed to municipalities would of course be kept for the execution of exchanges at a later time.

I would like to take this opportunity to thank you for your diligent and detailed review of this legislation. If I can supply any further information please do not hesitate to let me know.

Sincerely,

MICHAEL C. T. SMITH
Assistant Commissioner

JAY S. HAMMOND, GOVERNOR

DEPARTMENT OF NATURAL RESOURCES
OFFICE OF THE COMMISSIONER 11TH FLOOR, STATE OFFICE BLDG.
POUCH M – JUNEAU 99811

April 19, 1973

Honorable Clem Tillion
Alaska Senate
Pouch "V"
Juneau, Alaska 99811

Dear Senator Tillion:

This letter is in response to your request for information about the number of acres of land the State of Alaska owns within the municipality of Anchorage which could be made available to fulfill Anchorage's municipal land entitlement of 20,865 acres.

The figures below, for lands to which the State presently has either patent or tentative approval, are for lands which are not in Chugach State Park and are not affected by Eklutna Native Village land selections under ANCSA. The acreages listed as selected are for lands which the State has already selected and has a high probability of receiving from the federal government within the next few years. They also are not included within Chugach State Park and will not be affected by Native selections.

The lands listed as coming to the State under the Cook Inlet Land Exchange will definitely come to the State, and are generally of a nature more suitable for municipal management than State management.

Types of Land	Acres	
I. General Selection		
A. Patent and Tentative Approval	6,728	
B. Selected	240,280	
		247,008
II. Trust		
A. Patent or Tentative Approval	28,475	
B. Selected	6,998	
		35,473

Types of Land		Acres	
III.	Cook Inlet Land Exchange		
	A. Goose Lake	20	
	B. Point Woronzoff	325	
	C. Campbell Tract	4,892	
	D. Point Campbell	1,282	
			6,519
IV.	Totals		
	A. Presently Available for Early Transfer	6,720	
	B. Available After Exchange for Trust Lands*	28,475	
	C. Available Upon Receipt via Cook Inlet Land Exchange	6,519	
			41,714
	D. Selected Lands Available When Transfered From Federal Government	247,278	
V.	Anchorage's Existing Situation		
	A. Entitlement	20,865	
	B. Patented or Approved to Anchorage	6,728	
	C. Remaining Entitlement	14,137	
	D. Remaining Entitlement After Conveyance of Existing Lands Available for Early Transfer	7,417	

It should also point out that in the future the State will certainly receive substantial land from the Elmendorf and Fort Richardson military bases within the municipality. In most cases, these lands will be more suitable for municipal than State ownership. As an example, as part of their land exchange entitlement Cook Inlet Region, Inc., is currently working with the Departments of Interior and Defense, as well as the State, to have a parcel of about 5,700 acres removed from Fort Richardson. Since portions of that parcel are not suitable for private ownership, the State will seek to receive title to those areas (e.g., green belts, aquifer recharge, etc.).

*Approx. 3,000 acres are prime lands within the Anchorage Bowl.

Because of their location and local importance, these lands would be best conveyed to the Anchorage municipality for management. The acreage would probably be a minimum of 500 to 800 acres.

I hope this information answers your requests. Please let me know if you have any questions.

Sincerely,

Michael C. T. Smith
Assistant Commissioner

HOUSE BILL NO. 133

Municipal Land Selection

COMPARISON OF COMMITTEE SUBSTITUTE BILLS

House C&RA CS

Sec. 1: Statement of Purpose: short statement "..provide for timely patent."

Sec. 202 Determination f Entitlement

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPARTMENT OF NATURAL RESOURCES

OFFICE OF THE COMMISSIONER / POUCH M — JUNEAU 99811

May 4, 1977

The Honorable Steve Cowper
Chairman, House Finance Committee
Pouch "V"
Juneau, Alaska 99811

Dear Representative Cowper:

Re: CS for HB 133

Representative Lisa Rudd, Chairman of the House Community and Regional Affairs Committee, requested that this department provide additional information to the fiscal note for CS for HB 133. Representative Rudd was specifically interested in the amount of money which might be appropriated to eligible municipalities as payment in lieu of land titlement under Section 208 of the subject bill.

As there are several variables which would influence such estimates, firm figures are impossible to predict. However, I believe the following projections to be fairly accurate. One of the assumptions made here is that the Legislature will fund the requests of eligible municipalities in their entirety for each fiscal year.

ESTIMATED APPROPRIATIONS (Millions)

FY	MAX	MIN.
79	4	4
80	4	3
81	7	3
82	6	2
83	5	-
84	4	-
85	3	-
86	3	-
87	2	-
88	1	-
	39	12.0

As these figures represent the estimated maximum and minimum values, actual appropriations will undoubtedly lie somewhere between these figures and will almost surely take approximately ten years to accomplish.

Sincerely,

Michael C.T. Smith
Assistant Commissioner

ANALYSIS OF SCS CSHB 133

Assume: Average land values equal $1,500 per acre

Population equals most recent revenue sharing data

Total Value of Land Transferred to Municipalities Under SCS CSHB 133

1. Kenai Peninsula Borough

Entitlement = 155,780 acres
Land value = $233,670,000
Population = 24,611

Per capita value = $9,495 Per capita acreage = 6.33

2. Fairbanks North Star Borough

Entitlement = 112,000 acres
Land value = $168,000,000
Population = 60,227

Per capita value = $2,789 Per capita acreage = 1.86

3. Mat-Su Borough

Entitlement = 355,210 acres
Land value = $532,815,000
Population = 16,724

5,250 acres = 1/3 acre per capita

Per capita value = $31,859 Per capita acreage = 21.24

4. Ketchikan Gateway Borough

Entitlement = 9,200 acres
Land value = $ 13,800,000
Population = 11,490

Per capita value = $1,201 Per capita acreage = .8

5. Kodiak Borough

Entitlement = 56,500 acres
Land value = $ 84,750,000
Population = 7,901

Per capita value = $10,726 Per capita acreage = 7.15

6. Bristol Bay Borough

Entitlement = 1,940 acres
Land value = $ 2,910,000
Population = 1,311

Per capita value = $2,220 Per capita acreage = 1.48

7. City and Borough of Juneau

Entitlement = 13,600 acres
Land value = $20,400,000
Population = 20,465

Per capita value = $997 Per capita acreage = .66

8. Haines Borough

Entitlement = 1,080 acres
Land value = $ 1,620,000
Population = 1,924

Per capita value = $842 Per capita acreage = .56

9. Anchorage

Entitlement = 20,865 acres
Land value = $31,297,500
Population = 180,863

Per capita value = $173 Per capita acreage = .12 .25

10. North Slope Borough

Entitlement = 89,850 acres
Land value = $134,775,000
Population = 9,140

Per capita value = $14,333 Per capita acreage = 9.83

11. City and Borough of Sitka

Entitlement = 9,200 acres
Land value = $13,800,000
Population = 7,650

Per capita value = $1,803 Per capita acreage = 1.20

5-12.

LISA —

You asked for the previous DNR Total estimate of land available in Anchorage.

This is from a report to Municipal League dated Nov. 4, 1976.

The latest figures Anchorage claims are in the letter distributed at the Sunday meeting.

*Includes lands approved and patented to the former City of Girdwood.

Note: Columns 1 & 4 are accurate figures based on Division of Land Management Records

Explanatory Notes for Table A

Column 1 contains the cumulative total of tentatively approved ("T.A.") lands conveyed to the State of Alaska under Section 6(b) of the Alaska Statehood Act.

Column 2 is a consolidated cumulative total of occupied, appropriated and reserved lands comprised of the following:

a. Five Classifications (Timber, Grazing, Watershed, Public Recreation and Resource Management) which cover areas not available for transfer to boroughs. Only those above classifications covering areas of Section 6(b) lands (GS) in excess of 40 acres in size have been included.

b. Municipal approvals per date of issue.

c. State Parks were excluded upon the effective date for that portion then under BLM T/A or patent under Sec. 6(b). Additional title received within park areas after formation was excluded in the six month period in which title was received.

d. State Recreation areas are treated in a similar manner.

e. State Wildlife Refuges, except for Susitna Flats State Game Refuge and Trading Bay State Game Refuge.

f. Estimated tentatively approved Sec. 6(b) lands selected by village corporations. The totals given are only those lands selected as of December, 1973 rather than those lands within the 25 township withdrawal as of December, 1971.

g. Estimated lands obligated under the Cook Inlet Land Trade.

Column 2 does not include mineral or oil and gas leases, tidelands, submerged lands or shorelands.

Column 3 (Column 1 minus Column 2). These figures comprise the best available State estimate of net vacant, unappropriated and unreserved lands based upon the items included above. Some items (i.e., ANSCA and Cook Inlet Trade) include variables, both in amounts and as to the areas (Matanuska, Kenai or Anchorage) in which the natives can elect to receive their lands.

Fadel

NOTES OF KGB POSITION CONCERNING THE
COMMITTEE SUBSTITUTE FOR SENATE BILL 241

CSSB 241

1) Wholehearted support of the purposes to which ~~this Bill~~ is directed, i.e., "to remove uncertainties in the existing municipal land selection law of the state", to determine municipal entitlements, and to provide for expeditious transfer of lands from state to municipal ownership.

It is the policy of both the state and the Ketchikan Gateway Borough that the disposal of lands intended for residential and commercial expansion should be managed by local governments. However, in Southeast Boroughs, the 10% entitlement incorporated into the Mandatory Borough Act has failed to provide an effective means for the state to convey lands to local governments for expansion purposes. In the area's 3 most populous boroughs less than 1000 acres in total have been made available using this method. State residents in these areas, as well as throughout the state, have a right to know how much land is to be made available, to know that these lands will be adequate for their areas' future needs, and to know that local government is responsible for managing the pattern of development and timeliness and manner of conveyance of these lands to private uses. Upon thorough review of the provisions of CSSB 241 (~~HB 133~~), it is our conclusion that its enactment will rectify these current and past uncertainties.

2) The method of determining municipal entitlements in CSSB 241 (~~HB 133~~) is equitable and in keeping with the intent of the 10 percent entitlement guaranteed by the Mandatory

Borough Act. The entitlements for southeast boroughs located in the national forest fairly reflects the state's ultimate right to select up to 400,000 acres of land for community expansion and development purposes. There are 16,000,000 acres of forest lands in the Tongass National Forest compared to less than 5,000,000 acres in Chugach. Using this as a rule-of-thumb basis for distributing the state's national forest entitlement geographically, this would mean 310,000 acres of state selected lands would be allocated to the Southeast region. However, more than 60% of the southeast region's population reside in the 3 major boroughs located in the Tongass National Forest - Ketchikan, Juneau, and Sitka. As they are today, in the future these boroughs are likely to play even stronger roles as regional population and economic centers. An aggregate entitlement of lands designated for community expansion of 32,000 acres for these boroughs is an adequate allocation considering the existing and future land needs of these areas. This fair allocation has been arrived at jointly by the Alaska Division of Lands and those communities.

3) Finally, it is understood that the "payment in lieu of land" provisions is immediately addressed to special circumstances in other boroughs in which additional land ownership might not be the highest priority need for their community development programs. In Ketchikan, land is the top priority need and for this reason, we can support that subsection which would delay Ketchikan's participation in the "payments in lieu of land" program until after the cumulative appropriations to

the municipal land account exceeds $12,000,000 or until the fiscal year beginning July 1, 1984, which ever comes first.

C. G. Fader

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPARTMENT OF NATURAL RESOURCES

OFFICE OF THE COMMISSIONER

11TH FLOOR, STATE OFFICE BLDG.
POUCH M – JUNEAU 99811

April 27, 1977

The Honorable Lisa Rudd
Chairman, House Community &
Regional Affairs Committee
Pouch "V"
Juneau, Alaska 99801

Dear Representative Rudd:

Attached is the fiscal note for the draft sponsor substitute for HB 133.

Just as the final federal determination of the "d(2)" question will decide which federal land shall be permanently retained by the United States, so too will the implementation of SB 241 decide the ultimate land ownership patterns on present state lands. Unlike the d(2) lands, however, the land ownership determined as a result of SB 241 will be for those lands upon which 80 per cent of the human use and activity will occur within Alaska in perpetuity. At a time when state government is wrestling with the question of what to do with its future revenue surpluses, we cannot think of a better way to use a small portion than for our greatest renewable natural resource - our land. This department feels strongly that the relatively insignificant monies needed to implement the municipal selection requirements of SB 241, for lands whose values are in the billions, are more than justified. We cannot provide the cooperative resource analysis and joint planning so desperately needed between the state and its municipalities without this funding.

Yours sincerely,

Mctsmith

Michael C.T. Smith
Assistant Commissioner

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

HB 133
~~SB 241~~ directs the Department of Natural Resources to accomplish a number of tasks within some relatively stringent time frames. Those requirements, and necessary personnel and fiscal needs to accomplish them, are shown below.

I. Short Range:

A. Review, within six months, for every municipality in Alaska, state land status and certify each municipality's entitlement under Section 202(b).

B. Review, within six months, 263,000 acres of approved selections within all municipalities and certify acreage to be patented under Section 204(b).

C. Publish public notice, conduct necessary public hearings, and complete and issue patented documents for approximately 255,000 acres of approved selec-

tions within 90 days of survey.

Fiscal Requirement: Three positions required: land management officer III (Anchorage), land management officer II (Anchorage), and a cartographer III (Anchorage). The cartographer will also be used to accomplish medium range objectives shown below.

II. Medium Range:

With each municipality:

A. Review approximately 12,000,000 acres of vacant, unappropriated, unreserved state land within all municipal boundaries to determine appropriate municipal selections for remaining 465,000 acres of entitlement.

B. Review all remaining federal land (20,000,000 plus acres) within municipalities to determine municipal needs for future state general grant selections.

Fiscal Requirement: Four positions are needed to work closely with each municipality to accomplish the joint cooperative land planning and identification process mandated in Section 204(e). These are a principle planner (Anchorage), two land management officer III positions (one each Fairbanks and Juneau), and a land management officer II (Anchorage).

III. Southeast Forest Selection:

To accomplish approximately 200,000 acres of forest community grant selections within FY 78, a total of 24 man months of temporary time is needed. This will be a onetime FY 78 expense only. This temporary time is needed to insure municipal input to state selections to guarantee the 32,000 acres of entitlement for Juneau, Sitka, and Ketchikan.

RE: Municipal Land Selection Legislation

As you know, the Mandatory Borough Act adopted by the Alaska Legislature in 1963 provided for the selection by municipalities of ten percent (10%) of the "vacant, unappropriated and unreserved" state lands located within their boundaries. See AS 29.18.190-218. Among the purposes of the municipal land selection program were to provide a source of revenue for municipalities lacking an established tax base and to make available a "resource and community development tool" which would give local governments a measure of control over development within their boundaries.[1]

Unfortunately, the passage of time coupled with radically changing economic conditions in Alaska have created numerous problems in attempting to implement the municipal land selection program. Because the 1963 legislation was silent concerning the proper relationship between statewide land management goals, and municipal land interests, disputes arose between the state and municipalities concerning which lands were appropriate for transfer to local governments. Also, the lack of any consistent administrative or legislative definition of "vacant, unappropriated and unreserved" lands added to the controversy. For the past several years, the process of land transfers to municipalities under AS 29.18.190-218 has ground to a halt, and it has become apparent that only a final legislative settlement of the municipal land selection program can achieve the purposes of the original legislation.

1. Senator John Rader, Chapter 2 in The Metropolitan Experiment in Alaska, Praeger, London, (1968) p 113.

CSSB 241 is the product of a series of meetings between representatives of local governments and the Alaska Division of Lands. The purpose of these meetings was to produce legislation which would specify municipal land entitlements and provide an equitable and efficient settlement of those entitlements by taking into account both statewide and local interests in land management. The proposed bill establishes land entitlements for various local governments and mandates orderly procedures for the fulfillment of those entitlements.

Several municipalities, including the Municipality of Anchorage, have experienced substantial losses of state land available for local selection under existing statutes. These losses have been caused by a variety of factors including the impact of native claims and state classification of land for various statewide purposes such as state parks and mineral resource development. The effect of such actions has been that Anchorage, together with several other municipalities, will probably not be able to receive enough state land to satisfy their entitlements.

On the other hand, the need for municipally owned land in Anchorage and other communities has never been greater. Faced with increasing population and demands for services, Anchorage has pursued an aggressive program of land acquisition for parks, recreation and other public purposes. For example, in 1976, voters in Anchorage approved $7.5 million in bonds for park and recreation developments. Land acquired from private owners in Anchorage costs taxpayers thousands of dollars per acre and places yet another burden on already strained municipal tax revenues.

The proposed bill would deal with the unavailability of state land in Anchorage and other communities by allowing such local governments to exchange their unsatisfied land entitlements for payments in lieu of land. The bill would create the Alaska Municipal Land Account and establish procedures for receiving payments in lieu of land. Funds received under the proposed AS 29.18.208 could be used by local governments such as Anchorage to offset burdens on municipal taxpayers in acquiring private lands for public uses.

It is important to reemphasize that the proposed bill (CSSB 241), including those sections providing for payment in lieu of land, has been arrived at through numerous meetings and compromises among Anchorage, other municipalities and the Alaska Division of Lands. The Municipality of Anchorage therefore strongly requests your support for the passage of a House bill that is identical or very similar to CSSB 241. Since Representative Parr has introduced a bill (HB 133) dealing with municipal land selection, perhaps a committee substitute incorporating the language of CSSB 241 would be the most expeditious way to secure passage of the proposed legislation by the First Session of the Tenth Legislature. If members of the Committee have any questions concerning the Municipality's position on the proposed bill, they may contact Ted Berns, Assistant Municipal Attorney at 264-4443.

Sincerely yours,

George M. Sullivan
Mayor

Box 1267, Fairbanks, Alaska 99707

April 29, 1977

Representative Lisa Rudd, Chairman
House Community and Regional Affairs Committee
Pouch V, State Capitol
Juneau, Alaska 99811

Dear Representative Rudd:

In response to your letter of April 26th, reference SB 241 and the work draft for HB 133, I want to go on record as being in support of this legislation and encourage its early passage. This piece of important legislation is necessary for orderly development and disposition of lands within the Fairbanks North Star Borough and other affected municipal governments.

Our staff has been working with the other boroughs, the Division of Lands and our local representatives in developing a bill which would be acceptable. The determination of entitlement of 112,000 acres, we feel at this time, is a justifiable amount.

Very truly yours,

John A. Carlson

JOHN A. CARLSON

JAC:nic

THE CITY AND BOROUGH OF JUNEAU
CAPITAL OF ALASKA
155 SOUTH SEWARD ST. JUNEAU, ALASKA 99801

DATE: April 30, 1977

FILE NO. SB 241/HB 133

SUBJECT: Municipal Land Entitlements

The Honorable Lisa Rudd, Chairman
House Community and Regional
Affairs Committee
Pouch V
Juneau, Alaska 99811

Dear Representative Rudd:

Your letter to Mayor Overstreet requesting comment on proposed municipal land selection legislation has been referrred to my office. The legislation which is currently proposed as a committee substitute for SB 241 has been presented to the assembly of the City and Borough of Juneau. The assembly endorses the legislation and requests your committee report it out as a committee substitute for HB 133 as quickly as possible. The legislation would settle troublesome entitlement questions and would deal with municipal land entitlements in a much more rational manner than the current ten percent system as applied to the three boroughs in Southeast Alaska which are completely surrounded by national forest.

Under section 6(a) of the Statehood Act the state was given a right to select 400,000 acres in the national forest

> for the purpose of furthering the development of and expansion of communities . . . all of which [land] shall be adjacent to established communities or suitable for prospective community centers and recreational areas.

Thus, congress recognized that the communities which were surrounded by the national forest had a problem which should be dealt with by allowing the state to select up to 400,000 acres in the national forest for community development and expansion purposes. This 400,000-acre entitlement is in addition to the 102,550,000 acres which the state may select outside the national forest for general state purposes. Thus, those lands selected within the national forest should be for community purposes and should either be conveyed to adjacent municipalities or held by the state for the development of communities which will come into existence in the future. National forest land selections may not be used for general state purposes other than, perhaps, for recreational purposes. Thus, a substantial part of the land selected in the national forest should be selected for community purposes and conveyed to existing communities.

The question which arises is, how much of the state's 400,000-acre community purposes entitlement should be conveyed to the City and Borough of Sitka, the Ketchikan Gateway Borough and the City and Borough of Juneau, the three largest municipalities in the state which are completely surrounded by the national forest. The Division of Lands has indicated that it believes that only 32,000 acres is the appropriate combined amount that should be conveyed to the three municipalities. Using this figure of 32,000 acres the three municipalities have agreed that this amount or any additional amount made available should be divided among the three communities on a ratio of 2:2:3 for Sitka, Ketchikan and Juneau. It was using this method that the entitlements which appear in the proposed CSSB 241 were arrived at. This division of the 32,000 acres has been approved by all three communities.

These three Southeast communities also face another critical land problem. Immediately after statehood, the state came into these communities and selected almost all the developable land which was within or immediately adjacent to the populated areas. These selections were made for the mental health trust. Sitka has a particularly critical problem created by mental health trust selections. Juneau and Ketchikan are also afflicted by a mental health lands problem. Within the populated area of the City and Borough of Juneau, there are over 11,000 acres of mental health lands. These lands can be put into public or private ownership only when the mental health land trustees believe it is appropriate to do so and only when the trust will receive market value or more for such lands. The municipalities do not have the resources to effect the release of mental health lands. Giving these three Southeast communities a reasonable entitlement to other lands will provide them with one resource which could be used to free up some of the mental health lands and ease a general land shortage problem.

Section 208 of the bill, beginning on page 7 of CSSB 241 sets up a system of in-lieu payments where there is insufficient land to meet entitlements. You will note that subsection (b) of that section makes the three Southeast communities ineligible to go into the fund until 1984 or until a total of $12 million have been appropriated to the fund. This limitation has been placed in the bill with the agreement of the three communities involved. The communities recognize that there are other communities which have little hope of obtaining their full entitlement through land selections. The three Southeast communities fully anticipate that the state will select sufficient lands within their boundaries to meet the entitlement set forth in section 202. At present, however, the state has selected very little land within these communities. Because the three Southeast communities are much more interested in receiving land than in-lieu payment (presuming the land can be made available) these communities have agreed to the deferred

eligibility for in-lieu payments as set forth in section 208(b). This will give those municipalities with an immediate selection problem an opportunity to cash in a substantial part of their entitlement without the threat of having to compete with the Southeast municipalities for the limited dollars that will be available in the fund.

There is one minor change which I suggest should be made to section 204(f) on page 5 of proposed CSSB 241 at line 7. The sentence involved sets out the factors to be considered by the state as being primarily of local concern. One of the elements is "other responsibilities delegated by the state to the municipality." As it can be very easily argued that the state has "delegated" only the three mandatory powers of education, assessment collection, and planning and zoning, this phrase should be changed to indicate that all functions which are municipal in nature are to be considered. I believe this can be accomplished by merely adding the words "authorized or" between the words "responsibilities" and "delegated" in line 7.

Michael Smith of the Division of Lands discussed several reasons for the need to have this legislation on the books this year. We echo his statement of need. As he pointed out, the state will be making its major selections in the national forest of Southeast Alaska this year. In fact, the state has indicated that our nominations are to be in to them in the very near future. It is extremely difficult for any municipality to make rational nominations under the ten percent system which is now in effect. That system forces a municipality to suggest nominations which are in excess of local needs in order to ensure that there will be sufficient ten percent lands available to the municipality. If the proposed legislation does not pass this session of the legislature, the Southeast communities will be in a quandary as to whether the nominations which they make in the near future should be based upon a ten percent rationale or should be related to a known specific entitlement in which case the municipality may make rational selections based upon the perceived needs of the community. Passage this session will resolve the question in favor or rational nominations.

Again, we urge your early approval and support of legislation such as that proposed in CSSB 241.

Very truly yours,

Lee Sharp

April 28, 1977

Ms. Lisa Rudd, Chairman
Alaska State Legislature
House Community and Regional
Affairs Committee
Pouch V
Juneau, Alaska 99811

Dear Ms. Rudd:

Subject: Senate Bill 241

This is to follow up on our telegram expressing support for CSSC 241. We have worked closely with Michael Smith, Director, Division of Lands and representatives of other municipalities in an attempt to reach consensus on a bill which we can all support. I believe we have reached that consensus.

The copy of CSSC 241 which accompanied your letter of April 26, 1977, should be changed in two respects.

Section 29.18.202 (d) should read as follows: "General grant land entitlements provided in this section constitute vested property rights which shall be fulfilled as provided in sec. 204 or sec. 208 of this chapter, but no municipal selection vests any interest in or right to receive a particular tract of land except as provided by sec. 204 of this chapter."

Section 38.05.321 (c) should be amended to read as follows: "The provisions of (a) and (b) of this section do not apply to state land classified as agricultural or grazing land which has been selected by a municipality under the provisions of AS 29.18.190 - 29.18.200 if the selection is an approved selection valid under AS 29.18.204 (b)."

If you desire to discuss the details of these changes, you might want to contact Director Smith or Tom Meacham, legal counsel in ADL.

We hope CSSC 241 will be enacted.

Very truly yours,

Wesley M. Howe

Kodiak Island Borough
Box 1246
Kodiak, Alaska 99615

Re: Kodiak Island Borough Land Selections - 77-209

Dear Mr. Denslow:

An acreage count of state tentative approved and patented land within the Kodiak Island Borough is approximately 619,000 acres. This base will give the borough a 61,900 acre selection right. According to my recap of the existing selections 38,187 acres have been selected to date. This figure includes some acreage that is not available and will be rejected. In addition, if the borough selected acreage is rejected in areas selected by eligible native villages the 38,187 acre figure will be reduced accordingly.

At present the difference between the selected and the selectable acreage is 23,713 acres. This differs considerably from the 9000 acres indicated by the Alaska Division of Lands. [The Division of Lands based their figures only on land that was vacant, unappropriated and unreserved. We are taking the position that the entire state acreage is to be used in determining the borough selection base.]

Sincerely,

MOENING-GREY & ASSOCIATES, INC.

Re: Legislation
Our File 101-28

Dear Dale:

Last year legislation was introduced in the State Legislature to compensate municipalities for lands which they were entitled to select under state statutes but which, however, were not available for selection. As you are well aware, the Kodiak Island Borough faces serious deficiency in the availability of lands for selection under the Alaska Native Claims Act.

Assuming that legislation is passed, providing for their compensation for these lands, it may be that this procedure not only is a fair approach to the problem, but is the only method by which the problem can be resolved.

In a meeting with Mike Smith, Jack Roderick, representatives from each of the municipal governments of Kenai, Matanuska-Susitna and Fairbanks, and myself, on October 30, 1977, the group was unanimous in its desire to again pursue passage of legislation during this session.

The purpose of my letter is to ask that you review the maps prepared by the Division of Lands which depict some 450,000 acres of state land within the Kodiak Island Borough which, in turn, would mean that the borough's eligibility under the 10% clause of the applicable statute would be 45,000 acres. Mr. Smith stated that it was the Division's estimate that the 450,000 acres was the total amount of land which was ever selected, and that the 45,000 acres then available for selection by the borough was a

top figure. I remember, in our earlier discussions, that you expressed the opinion that, rather than 45,000 acres, it may be slightly higher. Mr. Smith requested that we bring to his attention any errors which we may have found with regard to the maps and that we do this as soon as possible, in order that, if it becomes necessary, we can change the total figures in the legislation.

For your information, I have also enclosed a copy of the proposed legislation so that you might know what is attempted to be accomplished. Should you have any questions concerning it or have comments, I would appreciate receiving them.

Yours truly,

COLE, HARTIG, RHODES,
NORMAN & MAHONEY

Re: Kodiak Island Borough Land Selection Entitlement.

Dear Bob:

My meeting with Ron Swanson, employee of the Alaska Division of Lands, on December 19, 1977 was brief and to the point. He had reviewed my acreage figures relating to the total number of acres tentatively approved and/or patent to the State in the Kodiak Island Borough. His recalculations of the state documents indicate 600,765.31 acres have been conveyed. This compares to the 618,957 acres I used. My figures were based on a combination of T.A. documents and dot counting the land configuration on the state status plats. Mr. Swanson indicated a number of the T.A. documents have been modified by BLM to exclude some of the water. The true acreage will never be known until survey is completed. This will not be known in many instances because some state T.A. is being revoked to benefit the native village selections. The 18,191.69 acre difference between his and my figures can stand without challenge. The 600,765.31 acre figure is within acceptable limits with the present data.

Mr. Swanson stated the Division of Lands would be notifying the Kodiak Island Borough of the increased total state acres within the borough boundary. From the new total they will then deduct the following acreages to determine the boroughs base:

Land classified Grazing & Timber	11,070.00 acres
Land classified Timber	50,342.00 acres
Land classified Public Recreation	214.62 acres
Land classified Watershed	11,821.00 acres
Land classified Resource Management	18,897.00 acres
	92,344.62 acres

These acreage deductions must be challenged for the following reasons:

Grazing-Timber - This is the acreage for Marmot Island. The island was classified prior to borough existence. A grazing lease was issued for the island but has since been terminated. The lessee did not place any stock on the lease. The classification was never reviewed with the borough.

Timber - This classification is for Shuyak Island. The island was classified timber to authorize the sale of timber from lands selected by the borough. The Borough-State Management Agreement states, "All leases, sales or other disposals which are made by the State on behalf of the Borough pursuant to this agreement - - - - - shall be conducted in accordance with the Alaska Land Act and the regulations promulgated by the State pursuant thereto." The borough had selected lands on the island to benefit from a timber sale that was advertised but did not sell at auction. The State did not approve the selection but only because of lag in paper work. When the sale did not receive an acceptable offer there was no urgency to approve the selection to validate the transfer of timber revenue to the borough.

Watershed - This acreage is made up of the Port Lions and Monashka Bay-Pillar Creek Watersheds. Again the classification was made by borough request to protect values and conform to the Borough-State Management Agreement.

Resource Management - This acreage was placed on lands that were once open-to-entry. When the OTE lands were closed to entry the state in an overnight action, without consultation with the borough, reclassified the lands to resource management. No input was requested of the borough or indication given by the division the reclassification would take the acreage out of reach from borough selection.

Public Recreation - No challenge is necessary for the public recreation lands at Fort Abercrombie (182.72 acres), however, the remaining public recreation lands are included in lands already conveyed to the Borough.

It is apparent the division also figures any of the acreage conveyed to the state with an existing grazing lease are not available for selection. No acreage deduction has been made for those leases to date but may surface once a borough selection is adjudicated.

I am available to discuss the above points at your convenience.

Sincerely,

MUENING-GREY & ASSOCIATES, INC.

Juneau, AK 99811

Re: Fiscal Note for CSHB 133

Dear Representative Cowper:

Since the 1977 Legislature did not act upon the Municipal Land Selection Bill (CSHB 133), certain changes need to be made in the fiscal note which was submitted by the Department of Natural Resources for this bill in April 1977. A copy of the new fiscal note is attached and is fairly self explanatory.

While the amounts remain fairly similar, two changes are apparent. First, in the April 1977 fiscal note a request was made for a one-time cost of $33.1 for the purpose of working with communities within the national forests in Alaska to enable the State to select a substantial portion of its national forest community grant land entitlement. Since this bill did not move last year, that money was granted elsewhere in the budget. Since this program, which was highly successful, has already been completed, that portion of the fiscal note request has been dropped.

The other change is an increase in salaries and benefits due to the APEA contractual agreements which automatically raised the salary levels during the current fiscal year.

If you have any questions concerning this fiscal note, please contact me.

Sincerely,

Michael C. T. Smith
Assistant Commissioner

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

CS HB 133 directs the Department of Natural Resources to accomplish a number of tasks within some relatively stringent time frames. Those requirements, and necessary personnel and fiscal needs to accomplish them, are shown below.

1. Short Range:

A. Review, within six months, for every municipality in Alaska, state land status and certify each municipality's entitlement under Section 202(b).

B. Review, within six months, 263,000 acres of approved selections within all municipalities and certify acreage to be patented under Section 204(b).

C. Publish public notice, conduct necessary public hearings, and complete and issue patented documents for approximately 255,000 acres of approved selec-

tion: within 90 days of survey.

Fiscal Requirement: Three positions required: land management officer III (Anchorage), land management officer II (Anchorage), and a cartographer III (Anchorage). The cartographer will also be used to accomplish medium range objectives shown below.

II. Medium Range:

With each municipality:

A. Review approximately 12,000,000 acres of vacant, unappropriated, unreserv ' state land within all municipal boundaries to determine appropriate munic[illegible] pal selections for remaining 465,000 acres of entitlement.

B. Review all remaining federal land (20,000,000 plus acres) within municipalities to determine municipal needs for future state general grant selections.

Fiscal Requirement: Four positions are needed to work closely with each municipality to accomplish the joint cooperative land planning and identification process mandated in Section 204(e). These are a principle planner (Anchorage), two land management officer III positions (one each Fairbanks and Juneau), and a land management officer II (Anchorage).

Re: Meeting with ADL - Land Selection Base

Dear Mr. Denslow:

This capsulizes the meeting held with the Alaska Division of Lands to resolve the acreage base to be used in determining Kodiak Island Borough's land selection entitlement.

Persons in attendance:
Michael C.T. Smith - Director, Division of Lands
Thomas Meachum - Assistant District Attorney
Ronald Swanson - Staff employee - ADL
Robert L. Hartig - Attorney representing Kodiak Island Borough
Dale Tubbs - Land Management Consultant representing Kodiak Island Borough

Date and Place of Meeting:
January 30, 1978 - Division of Lands

Reason for meeting:
The meeting was held to express KIB's disagreement with the 45,200 acres entitlement as stated in ~~House~~ Senate Bill 241 and get it adjusted.

Prior to the meeting I had several meetings with Ron Swanson to substantiate the total acres tentative approved to the State within the KIB. This resulted in more than 24,000 acres being added to the States total T.A. acreage figures. The State then calculated an acreage figure for vacant, unappropriated and unreserved land at six month intervals. The six month interval began in 1962. With refinement the State now arrived at a maximum of 521,844.97 acres to be used to determine KIB's base. (See attach table.)

The new base figure takes into account a reduction in acreage based on lands being classified Timber, Grazing-Timber, Watershed, Public Recreation, Resource Management and acres already conveyed to the borough. Our argument at this point was, the reduction is a "Catch 22" to the borough. Reason: The State-Borough land management agreement required the land be classified prior to disposal action or to implement management. The total acres classified is 92,000+ acres. Most of these classifications were requested by the borough or to assist in the States procedures to conduct a disposal for the borough's interest. Smith admitted the "Catch 22" and agreed to change the figures where classification were for borough managment. I am to work with Ron Swanson to present evidence of the boroughs involvement in the classifications.

18,897 acres were classified resource management. This was done in an overnight exercise by ADL to close the open to entry program. No consultation was made with the borough. At that time, lands classified as resource management were borough selectable. Now ADL's interpretation is they are not. If the borough had known this was going to happen they would have opposed the reclassification as such. This battle is not won.

The maximum selectable acreage remains reduced by acreage conveyed to the borough. This point needs to be discussed with you and Hartig to determine if it should be challenged. If the high point in column 2 was 1967 I would say forget it. However, the high point is now in 1975 and reflects a 10,000 acre base reduction due to borough title. (1000 acre selection right)

Smith was upset over the KIB land selection made September 6, 1977. He accused the borough of bad faith in not holding a status quo while the present legislation is being considered. Hartig explained the legal rationale but didn't phase Mr. Smith.

Final resolution of the meeting is to recalculate the acres involved in the "Catch 22" and adjust upward in favor of the borough. I'm not convinced at this point both parties are on the same wave length. As Mr. Smith learns more about anything the more adept he becomes in burying it with further study.

Sincerely,

Dale P. Tubbs

Re: Kodiak Island Borough Land Selection Entitlement.

Dear Mr. Hartig:

Following our meeting with Michael Smith, Director, Division of Lands, January 30, 1978, I have been furnished a new summary of TA'ed, occupied and vacant lands within the Kodiak Island Borough. Four new columns have been added proporting to show lands classified at the borough request and selected, lands classified at the borough request but not selected by the borough and a new summary column in each case to show a new net vacant acreage. I do not follow the logic or significance of the borough selecting or not selecting acreage that it requested the classification thereof.

In reference to the occupied column (A) of the summary sheet, the division has included acres approved to the borough. The impact amounts to approximately 9800 acres. Therefore, the occupied column acreage is made up of lands classified as grazing-timber, timber, public recreation, watershed, resource management and acres conveyed to the borough. The inclusion of the borough TA'ed acres is reducing its own entitlement. I do not follow the logic put forth by the division and it is not the understanding I had on determining the base acreage.

The following list summerizes the classification orders affecting the land selectability.

Item #	Classification Order #	Date of Class. Order	Total Acres Involved	Classification
1	130	10/31/62	11,070	Grazing-timber (Marmot Island)
2	315	10/28/65	183	Public Recreation (Fort Abercombie)

3	380 ~~138~~	5/19/66	7,630	Watershed (Monashka Bay)
4	479	1/18/68	50,342	Timber (Shuyak Island)
5	656	9/7/69	4,316	Watershed (Port Lions)
6	715 (A-2)	4/15/71	15,548	OTE to Res. Mgmt.
7	715 (A-4)	1/24/72	1,990	OTE to Res. Mgmt.
8	805	3/10/72	10,980	Resource Mgmt. (Red Meat Lease)

My interpretation of classifications that may preclude borough selectability are Items 1, 2 and possibly 8. Item #1 established a land classification prior to the formation of a borough; Item #2 involves the classification of the State Park at Fort Abercrombie; and Item #8 classifies the area involved in the Red Meat lease to the University. Item #8 was done without consultation with the borough to legalize the lease to the University of Alaska. At the most, I would say 22,233 acres could be used to reduce the 623,997 acres TA'ed to the State. By accident this closely corresponds to the net vacant column (NV3) for 12/31/75.

Ron Swanson indicated to me Mike Smith does not concur in the 12/31/75 date for establishing entitlement. My understanding is, he is picking the high point prior to ANCSA. I do not concur in this logic as the new acres TA'ed to the State after ANCSA do not involve village withdrawal acreage. We should discuss these points with Mr. Denslow to formulate a stand we can fall back on.

Sincerely,

Dale P. Tubbs

Dear Representative Snider:

Mr. Stuart Denslow, Manager, Kodiak Island Borough, has asked I forward you a copy of CSSB 241 relating to selection and transfer of land to municipalities. Also included is correspondence regarding the selection entitlement to the Kodiak Island Borough. As stated in the February 2nd letter to Denslow, the Division of Lands used a "Catch 22" in computing the borough's entitlement. They excluded acreage from being eligible that was classified at the request of the borough and as required in the Borough-State Management Agreement. The borough is looking for a 60,000 acre entitlement as opposed to the 45,200 acres indicated in the bill.

Sincerely,

Dale P. Tubbs

JAY S. HAMMOND, GOVERNOR
DEPARTMENT OF NATURAL RESOURCES
OFFICE OF THE COMMISSIONER
11TH FLOOR, STATE OFFICE BLDG.
POUCH M — JUNEAU 99811

March 3, 1978

The Honorable Steve Cowper
Chairman, House Finance Committee
Pouch V
Juneau, Alaska 99811

Dear Mr. Cowper:

Re: Payment in lieu of land projected costs for CSHB 133 (Finance)

In view of the amendments to CSHB 133 which have occurred since my last estimate of projected in lieu payment in my February 15, 1978, letter. I have stated below my best estimate of the maximum and minimum values. This estimate is based upon the draft which will be submitted to the House Finance Committee on Friday, March 3, 1978.

The projections below are based upon the following assumptions:

1. The land entitlements presently found in CSHB 133 will remain constant (any upward change of entitlement will probably increase the projected request).

2. The U. S. Forest grant selections made by the State in December, 1977, will be conveyed to the State by July 1, 1984 (so that they would be available for municipal selection).

3. 75% of boroughs which form in the future, and which automatically receive an entitlement of 25,000 acres, will receive that entitlement in land. 25% of future boroughs will have the same entitlement, but will not be able to fulfill it completely with land and will take payments in lieu of land under section 208.

Under the above assumptions, the maximum and minimum total projected requests (in millions of dollars) by qualified municipalities is:

Minimum	Maximum
19.0	23.0

The maximum request in any one year would be approximately 5.7 million.

Section 29.18.208 permits qualified municipalities to request up to the above maximum amounts, but the actual appropriation could be less in any particular year. Thus, the time period during which in lieu payments might be made is under legislative control.

Sincerely,

Michael C.T. Smith

Deliver to Rep. Rudd
ASAP.

Representative Lisa Rudd
Community & Regional Affairs Committee
Pouch V
Juneau, Alaska 99811

Dear Representative Rudd:

You have asked for comment concerning CSHB 133 (Finance) relating to selection of state land by municipalities. In general, the Municipality of Anchorage strongly supports this legislation and urges its expedited approval by the House and Senate. However, a number of problems and ambiguities should be addressed in order to make the proposed legislation an equitable settlement of land entitlements between local governments and the state.

AS 29.18.202(C)(D) in the proposed bill would, in essence, require some municipalities to promise that large amounts of land received from the state would be "committed to disposal to private ownership." Although such a proposal may have merit with respect to boroughs with large amounts of available vacant land, it is manifestly unreasonable for a municipality such as Anchorage that does not possess enough vacant land to satisfy even its own governmental needs. Anchorage is presently engaged in an on-going land acquisition program to provide land for streets, utilities, and park and recreation purposes. This land is being acquired at a tremendous cost in order to provide critically needed municipal facilities and services. Faced with such a situation, the idea of requiring Anchorage to give away vacant land for private ownership is, at best, unreasonable.

I realize that proposed AS 29.18.202(E) authorizes the director to waive the above-described requirements in certain cases. However, the Municipality feels that it should not be left to the director to decide on a waiver of a provision that is, on its face, unreasonable with respect to some local governments. I would suggest that a specific exemption for municipalities such as Anchorage be inserted in place of the proposed AS 29.18.202(E).

With respect to the proposed AS 29.18.206 (school, university and mental health lands) the Municipality strongly supports this concept and urges its retention in the proposed bill. However, I would like to call your attention to some confusion in subsection (D) and (E) of this provision. Subsection (D) provides:

> No selection of school, university or mental health land may be approved by the director under this section without the concurrence of (1) the State Board of Education, for school lands; (2) the Board of Regents of the University of Alaska, for university lands; or (3) the members of the Mental Health Land Board specified in AS 38.05.035(13), for mental health land.

However, subsection (e) states that:

> Within three years after the approval under (D) of this section of a municipal selection of school, university or mental health lands, the director, with the concurrence of the respective board, shall designate appropriate state general grant land of approximately value as school, university or mental health replacement land.

It seems to me that school, university or mental health land officials are not going to concur in the transfer of their lands until after the state has identified alternative equal value land and obtained their approval. I would suggest that the Director of Lands be required, at the request of a municipality, to initiate an active program of identifying alternative equal value lands and to obtain the approval of the necessary school, university or mental health board officials within a specified time period in order to implement the policies expressed in proposed AS 29.18.206. For example, the Director could be required to identify a specific amount of land and present a proposal to school, university or mental health officials within one year from a request by a municipality. This would allow the municipality some degree of certainty in determing whether or not it would be able to acquire school, university or mental health lands.

Finally, the Municipality of Anchorage continues to support the proposed AS 29.18.208 (payment in lieu of land). This section is the only hope for Anchorage to obtain something approaching equitable treatment under the old municipal land selection program. For example, I call your attention to the fact that, under the old system, Anchorage, with a population of close to 200,000, was entitled to at most 20,865 acres. On the other hand, the Mat-Su Borough, with a small fraction of the Anchorage population, is

entitled to 355,210 acres of extremely valuable state land. The in lieu payment system proposed by CSHB 133 would at least allow Anchorage to receive in lieu payments to be used in aid of its own acquisition programs or for other important municipal purposes. Faced with the extreme inequity of the old land selection formula, the Municipality has serious objection to proposed AS 29.18.208(F) that would limit payments in lieu of land to no more than $100 per capita. Since the Municipality is willing to take its in lieu payments over a number of years, I see no reason why Anchorage should be arbitrarily denied a major portion of its in lieu entitlement by the $100 per capita limit. Such a provision should be seen as an outrage by Anchorage taxpayers, and should be deleted from the proposed legislation.

Thank you for the opportunity to comment on CSHB 133 (Finance). The Municipality will have representatives available to testify on this bill at any time, and will provide whatever data or other assistance you may require. If you have any questions concerning the above, please contact Mr. Ted Berns, Municipal Attorney, at 264-4237.

Sincerely yours,

MUNICIPALITY OF ANCHORAGE

POUCH 6-650
ANCHORAGE, ALASKA 99502
(907) 274-1525

GEORGE M. SULLIVAN,
MAYOR

OFFICE OF THE MUNICIPAL ATTORNEY

April 4, 1978

Senator Kay Poland, Chairman
Senate Resource Committee
Pouch V
Juneau, Alaska 99811

Dear Senator Poland:

Thank you for the recent opportunity to testify before your committee on CSHB 133 Finance am. The Municipality of Anchorage continues to strongly support this legislation and urges its expedited approval by your committee. However, as I indicated during my testimony, the Municipality believes that a number of amendments should be made in order to make the proposed legislation an equitable settlement of land entitlements between local governments and the state.

AS 29.18.202(C)(D) in the proposed bill would, in essence, require some municipalities to promise that large amounts of land received from the state would be "committed to disposal to private ownership." Although such a proposal may have merit with respect to boroughs with large amounts of available vacant land, it is manifestly unreasonable for a municipality such as Anchorage that does not possess enough vacant land to satisfy even its own governmental needs. Anchorage is presently engaged in an on-going land acquisition program to provide land for streets, utilities, and park and recreation purposes. This land is being acquired at a tremendous cost in order to provide critically needed municipal facilities and services. Faced with such a situation, the idea of requiring Anchorage to dispose of a fixed amount of vacant land for private ownership is, at best, unreasonable. Although it may be desirable to sell municipal lands not needed for public purposes, such a decision should be left to the sound discretion of local elected officials.

I realize that proposed AS 29.18.202(E) authorizes the director to waive the above-described requirements in certain cases. However, the Municipality feels that it should not be left to the director to decide on a waiver of a provision that is, on its face,

unreasonable with respect to some local governments. I would suggest that a specific exemption for municipalites such as Anchorage be inserted in place of the proposed AS 29.18.202(E).

With respect to the proposed AS 29.18.206 (school, university and mental health lands) the Municipality strongly supports this concept and urges its retention in the proposed bill. However, I would like to call your attention to some confusion in subsection (D) and (E) of this provision. Subsection (D) provides:

> No selection of school, university or mental health land may be approved by the director under this section without the concurrence of (1) the State Board of Education, for school lands; (2) the Board of Regents of the University of Alaska, for university lands; or (3) the members of the Mental Health Land Board specified in AS 38.05.035(13), for mental health land.

However subsection (e) states that:

> Within three years <u>after the approval under (d) of this section</u> of a municipal selection of school, university or mental health lands, the director, with the concurrence of the respective board, shall designate appropriate state general grant land of approximately equal value as school, university or mental health replacement land. (emphasis added)

It seems to me that school, university or mental health land officials are not going to "concur" in the transfer of their lands until <u>after</u> the state has identified alternative equal value land and obtained their approval. I would suggest that the Director of Lands be required, at the request of a municipality, to initiate an active program of identifying alternative equal value lands and to obtain the approval of tne necessary school, university or mental health board officials within a specified time period in order to implement the policies expressed in proposed AS 29.18.206.

For example, the Director could be required to identify a specific amount of land and present a proposal to school, university or mental health officials within six months from a request by a municipality. This would allow municipalities some degree of certainty in determining whether or not they would be able to acquire school, university or mental health lands. The following is suggested language for such an amendment:

29.18.206(e) (replacement for existing subsection (e))

(e) Within six months after request by a municipality for selection of school, university or mental health land, the director shall identify state general grant land of approximately equal value to the land requested by the municipality, and shall propose such replacement land for the concurrence of the appropriate board under (d) of this section. If a proposal by the director is rejected by the board, the director shall meet with the board as often as necessary to determine the type and amount of equal value replacement land that would be required to obtain the board's concurrence under (d) of this section, and shall propose such land for consideration by the board. The replacement land shall thereafter be managed for the purposes for which the land selected by the municipality was acquired by the Territory and the State of Alaska.

In regard to the proposed AS 29.18.206(c), the present language provides that, "upon receipt of a selection by a municipality of school, university or mental health land, the director shall determine whether the land selection should be approved." The Municipality believes that, if the appropriate board concurs in a proposed exchange of land under AS 29.18.206, the director should not have the unfettered discretion to deny approval.

Finally, the Municipality of Anchorage continues to support the proposed AS 29.18.208 (payment in-lieu of land). This selection is the only hope for Anchorage to obtain something approaching equitable treatment under the old municipal land selection program. For example, I call your attention to the fact that, under the old system, Anchorage, with a population of close to 200,000, was entitled to at most 20,865 acres. On the other hand, the Mat-Su Borough, with a small fraction of the Anchorage population, is entitled to 355,210 acres of extremely valuable state land. The in-lieu payment system proposed by CSHB 133 would at least allow Anchorage to receive in-lieu payments to be used in aid of its own acquisition programs or for other important municipal purposes. However, faced with the extreme inequity of the old land selection formula, the Municipality has serious objection to proposed AS 29.18.208(F) that would limit payments in-lieu of land to no more than $100 per capita.

A brief analysis will reveal the inequity of the $100 per capita limit. Under the present bill, the in-lieu entitlement for Anchorage is 90,863 acres. Although the precise amount of land

that Anchorage may be able to obtain is difficult to compute, our staff estimates that the figure will almost certainly be less than 12,000 acres. This leaves an unfulfilled entitlement of 78,863 acres to be satisfied by the payment in-lieu of land provision of CSHB 133. Under the payment schedule contained on page 10 of the bill, Anchorage should therefore be able to obtain a total of $43,102,050 over a period of not less than eight (8) years. However, Anchorage would not object to taking its in-lieu payments over a period of from 10 to 15 years, if the per capita limit of $100 is increased.

Under the arbitrary $100 per capita limit however, Anchorage would be entitled to a total of not more than $20,000,000, which amounts to payment on 46% of its actual, unfulfilled entitlement. In other words, the $100 per capita limit would have the effect of arbitrarily denying payment for 54% of the 78,863 acres that Anchorage cannot obtain in the form of land. Moreover, it appears from our research that Anchorage may be the only municipality that would be denied a major portion of its in-lieu entitlement through the proposed $100 per capita limit.

I can understand why some per capita limit is necessary as a safeguard to protect the state treasury. However, I suggest that a limit of not less than $250 per capita would serve this function and yet allow Anchorage to receive at least a major portion of its entitlement either as land or payment in-lieu of land. I strongly urge your committee and the entire Senate to amend CSHB 133 to increase the present $100 per capita limit to not less than $250.

At the committee hearing, some objection was raised to the effect that the payment in-lieu of land provision would constitute an unjust enrichment of Anchorage at the expense of the State. However, as I noted in my testimony, the proposed bill would have the effect of transferring a truly incredible amount of valuable land to Alaska municipalities. Given the ever increasing demands for land and ever increasing land prices in Alaska, the State must view land transferred to local governments at least in part as the equivalent of money. Using what I feel are very conservative assumptions of average land value, it is not difficult to see that in terms of total value received, expressed in monetary terms, the proposed bill is far from any sort of unjust enrichment of Anchorage. The attached chart lists some of the comparisons that I mentioned to the committee during my testimony.

By revealing the comparisons shown on the attached chart, the Municipality does not object to the entitlement of any other borough under the proposed bill. By allowing Anchorage to take its entitlement in the form of in-lieu payments perhaps over a substantial period of time, the needs of all municipalities can be met and an equitable final settlement of the long standing controversy over land selections can be achieved.

Thank you for the opportunity to comment on CSHB 133 (Finance)am. The Municipality will have representatives available to testify on this bill at any time, and will provide whatever data or other assistance you may require. If you have any questions concerning the above, please contact me at 264-4237.

ANALYSIS OF CSHB 133 (FINANCE)AM

Assume: Average land values equal $1,500 per acre

Population equals most recent revenue sharing data

Total Value of Land Transferred to Municipalities Under CSHB 133

1. Kenai Peninsula Borough

Entitlement	=	155,780 acres
Land value	=	$233,670,000
Population	=	24,611

Per capita value = $9,495

2. Fairbanks North Star Borough

Entitlement	=	112,000 acres
Land value	=	$168,000,000
Population	=	60,227

Per capita value = $2,789

3. Mat-Su Borough

Entitlement	=	355,210 acres
Land value	=	$532,815,000
Population	=	16,714

Per capita value = $31,859

4. Ketchikan Gateway Borough

Entitlement	=	11,500 acres
Land value	=	$17,939,500
Population	=	11,490

Per capita value = $1,513

5. Kodiak Borough

Entitlement = 45,200 acres
Land value = $67,800,000
Population = 7,901

Per capita value = $8,581

6. Bristol Bay Borough

Entitlement = 2,898 acres
Land value = $4,347,000
Population = 1,311

Per capita value = $3,316

7. City and Borough of Juneau

Entitlement = 19,584 acres
Land value = $29,376,000
Population = 20,465

Per capita value = $1,435

8. Haines Borough

Entitlement = 3,985 acre
Land value = $5,977,500
Population = 1,924

Per capita value = $3.107

9. Anchorage

Entitlement = 90,863 acres
Land value = $136,294,500
Population = 180,363

Per capita value = $754 1/

1/ Note that Anchorage in fact would be able to exchange only approximately 78,000 acres for payment in-lieu of land. Under the formula in HB 133, this works out to less than $250 per capita.

Municipality of Anchorage

POUCH 6-650
ANCHORAGE, ALASKA 99502
(907) 274-2525

GEORGE M. SULLIVAN,
MAYOR

OFFICE OF THE MUNICIPAL ATTORNEY

May 5, 1978

Senator Joseph Orsini, Chairman
Senate Community & Regional
Affairs Committee
Pouch V
Juneau, Alaska 99811

Dear Senator Orsini:

On May 2, 1978, the Anchorage Assembly adopted Resolution AR 78-61 (copy attached as Exhibit A) dealing with SCS CS HB 133, presently before your Committee. In this resolution, the Assembly, together with the Municipal Administration, point to the inequitable treatment received by Anchorage under the present version of HB 133. The following is a brief summary of the major points:

With respect to land entitlement figures, at least seven, and probably more, of the municipalities listed on pages 1-2 of the bill have had their entitlements substantially increased over a literal application of the 10% VUU formula contemplated by existing law. For example, one municipality has been increased from 25 acres to 9,200, another has gone from 440 acres to 13,600 acres, and another has been adjusted from 645 acres to 89,850 acres. Anchorage, on the other hand, has remained at its 10% figure of 20,865 acres even though this entitlement results in by far the lowest per capita entitlement of any local government in the state.

SCS CS HB 133 also deleted language that would have prevented the area known as the "Campbell Tract" (approximately 5,000 acres) from being deducted from the Anchorage entitlement if that land eventually is transferred to the Municipality. Use of the Campbell Tract is restricted, by federal act, to a specific park plan that contemplates management by the state and federal governments as well as the Municipality. Any change in use from that listed in the federally recognized plan, even for such things as necessary expansion of local roads, may well require approval by the Congress. To my knowledge, no other municipality has had

land that is so restricted and encumbered counted against its land selection entitlement. Anchorage should not be forced to decide whether to reject a transfer of the Campbell Tract in order to prevent using a major part of its remaining entitlement for land that is subject to severe use restrictions.

In the Senate Resources Committee, a great deal of rhetoric was addressed to the point that Anchorage should not be entitled to receive any payments in lieu of land under A.S. 29.18.207 in the proposed legislation. The Committee reviewed figures from the Alaska Division of Lands (ADL) attempting to create the impression that there is ample available land to meet the Anchorage entitlement of 20,865 acres. As discussed later in this letter, subsequent investigation has revealed that these figures are, at best, misleading, and in fact, have been acknowledged to be in error by ADL staff. The figures presented by the State speak in large part to land for which the State does not even have tentative approval or lands that are otherwise clearly not presently available for local selection. Of the small amount of land that might be available for selection by Anchorage, most is clearly inappropriate and therefore unavailable for municipal use under the criteria advanced by the State on pages 4-5 of SCS CS HB 133. (See Exhibit B)

The figures advanced by ADL to the Senate Resources Committee are an attempt to create the illusion of adequate, appropriate state land in Anchorage that would, I can assure you, disappear once the bill is enacted into law. The simple fact is, as anyone who is even remotely familiar with Anchorage land clearly knows, the Municipality cannot expect with any assurance to obtain any appreciable amount of its entitlement in the form of land in the forseeable future. It is, however, the Municipality's position, as stated in the Assembly's Resolution, to accept any appropriate state land within the Municipality in partial satisfaction of its entitlement.

It is the position of the Municipality that Anchorage be entitled to payment in lieu of land for any portion of its entitlement that cannot be satisfied through a timely transfer of appropriate state land. Hollow promises concerning various types of land that "might" be available "sometime" for use by the Municipality are unacceptable. It is my belief that a majority, if not all, municipalities in the state support the in lieu payment schedule in SCS CS HB 133 as at least a small attempt to achieve equity for Anchorage taxpayers in a final settlement of the land selection program.

Based on the attached analysis (Exhibit B) of appropriate state land in Anchorage, it is anticipated that Anchorage might eventually request payment in lieu of land for up to 12,500 acres of entitlement. This would mean that Anchorage would receive approximately $16,875,000 in payments over approximately four

years under the present entitlement figure of 20,865 acres. In the Resources Committee, great concern was expressed over any payment to Anchorage. However, that Committee added language to the bill that may result in payment to Kodiak Island Borough of up to $26,000,000 based on a legal argument concerning the Native Claims Act (ANCSA) which is tenuous at best. The logic of such action is difficult to fathom.

The State Administration has indicated that it will not accept an in lieu payment system that would commit the State to payment of over approximately $20,000,000. Apparently this figure is advanced as the Administration's "bottom line" regardless of the time period over which municipalities are willing to accept payment. Again, the logic of this position is difficult to understand when the value of state land to be transferred to other municipalities under the bill could be over one billion dollars ($1,000,000,000.). (See attached analysis, Exhibit C). The Administration apparently either believes that Alaska land does not readily translate into money (a position so naive it cannot be accepted) or (more likely) that by attempts to frighten the Legislature with large dollar figures and veiled threats of veto, it can force Anchorage legislators to accept less than an equitable settlement for their municipality.

One other alternative that has received some discussion is to force Anchorage to select state land in other boroughs or in the unorganized borough in satisfaction of its entitlement. Although it is conceivable that such a plan could have merit, it would clearly force the Municipality into a speculative gamble on the availability of suitable land not already subject to selection by other boroughs or native claims. The potential administrative expense and land management problems that such a proposal would entail are substantial. The Municipality could not know beyond mere speculation what land it might receive or what the costs associated with such land might be. Although the Assembly's resolution did not specifically address this option, as the Municipal Attorney, I would be forced to advise against such an uncertain solution to an equitable settlement for Anchorage.

Attached to this letter as Exhibit D, are suggested specific amendments to SCS CS HB 133 together with brief explanations of the reasons for such amendments. It should be noted that Anchorage has not and does not begrudge other boroughs their relatively large entitlements under the proposed bill. Certainly no one would argue that all of the circumstances existing when the land selection program was started exist today. Consequently, it could be argued that it would be in the best interests of Anchorage to propose a simple repeal of the old program. The sale of state land could then be used to fund local government programs on some sort of equitable, per capita basis. The Municipality has not taken such a position and has instead agreed to work toward an equitable settlement of the old land selection program. With this

in mind, I urge your committee and all Anchorage legislators to adopt the attached amendments to SCS CS HB 133.

If you have any questions concerning the above, please contact me at 264-4237. Thank you for the opportunity to comment on this legislation.

Sincerely yours,

at the request of the Mayor
Prepared by: Department of Law
For Reading:

ANCHORAGE, ALASKA
AR NO. 78-61

A RESOLUTION REQUESTING EQUITABLE TREATMENT OF ANCHORAGE IN SETTLEMENT OF THE MUNICIPAL LAND SELECTION PROGRAM.

WHEREAS, the Alaska Legislature has had House Bill 133 entitled, "An Act relating to selection and transfer of state land to municipalities; and providing for an effective date" under consideration, and the Senate Resources Committee has recently reported out SCS CSHB 133 for further consideration by the Senate Community and Regional Affairs Committee; and

WHEREAS, the intent of the present version of HB 133 is to provide for an immediate, equitable settlement of municipal land entitlements under the municipal land selection program existing pursuant to AS 29.18.190 - .200; and

WHEREAS, land entitlements confirmed under HB 133 have been substantially adjusted upward for several municipalities other than Anchorage from the actual figure of ten percent (10%) of state vacant, unappropriated and unreserved land within local boundaries as contemplated by AS 29.18.190 - .200; and

WHEREAS, Anchorage has been denied any similar adjustment of its land entitlement notwithstanding the fact that the Municipality is already scheduled to receive by far the lowest per capita land entitlement of any local government in the state; and

WHEREAS, there exists no justification in law or fact for such inequitable and discriminatory treatment of Anchorage in the settlement of disputes over the municipal land selection program; and

"A"

WHEREAS, there is a serious shortage of appropriate and available state land for municipal selection in the Anchorage area as well as a shortage of funds available for land acquisition and other land related needs of municipal residents; and

WHEREAS, HB 133 provides for payment in lieu of land to municipalities such as Anchorage that are unable to obtain sufficient, appropriate state land to meet their entitlements; and

WHEREAS, such in-lieu payments are desperately needed to assist in meeting the land related needs of the Municipality but are threatened by the discriminatory and inequitable treatment of the land entitlement established for Anchorage in HB 133;

NOW, THEREFORE, the Anchorage Assembly in conjunction with the Municipal Administration hereby resolves:

Section 1. That the position of Anchorage with respect to HB 133 is to accept every available acre of appropriate state land within the Municipality in partial satisfaction of its land entitlement; and

Section 2. That Anchorage residents are entitled to equitable, nondiscriminatory treatment with respect to other municipalities in the upward adjustment of land entitlement figures under HB 133 over the entitlements authorized by a strict application of AS 29.18.190 - .200; and

Section 3. That land, such as the area commonly known as the Campbell tract, that is subject to preexisting federal or state restrictions on use or management not be counted toward the Municipality's land entitlement, and that the Municipality

"A"

be required to count against its entitlement only land that is appropriate for municipal selection, and subject exclusively to municipal control.

Section 4. That Anchorage be entitled to payment in-lieu of land for any portion of its land entitlement that cannot be satisfied through a timely transfer of appropriate state land, and that such payment, as a minimum, follow the payment scale and other payment provisions expressed in SCS CSHB 133; and

Section 5. That the Governor and Legislature be reminded that both the total and per capita dollar value of state lands to be transferred to many other municipalities under HB 133 far exceeds the amount that could possibly be awarded to Anchorage as payment in-lieu of land, and that equity demands the Administration's support for funding any in-lieu payment system established by HB 133.

Section 6. That the Senate Community and Regional Affairs Committee address the inequities and discriminatory treatment of Anchorage under the present SCS CSHB 133 and that all Anchorage legislators make the expeditious passage of an acceptable version of HB 133 a matter of highest priority for the present legislative session.

Passed and approved by the Anchorage Assembly, this _____ day of _____, 1978.

_____
Chairman

ATTEST:

_____
Municipal Clerk

"A"

EXHIBIT B

ANCHORAGE LAND STATUS

It should be noted that the following figures are the result of a cooperative effort between municipal staff and ADL personnel to determine the status of government owned land in Anchorage. Data and records at both the State and local level is at best imprecise. However, the figures below represent the best possible estimates to date.

State Land

Trust Lands
(not presently available
for selection)

Mental Health		1,806 acres
School		2,294
University		6,200
	TOTAL:	10,300

It should be noted that a great deal of these trust lands would probably not be suitable for land exchanges under the proposal contained in SCS CS HB 133.

Vacant, Unappropriated, Unreserved Lands	6,720 acres

Of the 6,720 acres identified by the State as VUU on maps presented to the Municipality, analysis has shown that probably no more than 1,700 acres that would meet the criteria for local selection and use outlined on pages 4-5 of the proposed bill.

Selected from the Federal Government (No Tentative Approval)	240,280 acres

Virtually all of these lands are located east of Chugach State Park. There is presently no way of knowing for certain whether all or part of this land would be available or appropriate for local selection under the proposed bill.

Municipal Land

Patented or Approved	4,253 patent
To Anchorage	2,475 TA
	6,728 acres

Under AS 29.18.204(b) of the proposed bill, some or all of the 2,475 acres of TA land could be rejected as inappropriate for local selection. There is no way to know at this time precisely how many acres could be affected.

It should also be noted that state records show another 9,770 acres of municipal selections for which TA has not been received. This figure, however, includes over 5,000 acres of Campbell Tract and other lands that apparently do not meet VUU criteria. As noted above, from data supplied by the State and from working with ADL staff, it appears that only up to 1,700 acres of VUU land would be available to Anchorage in addition to land for which TA or Patent has been received.

Summary Of Lands
Available To Anchorage

Patent	4,253
TA	2,475
To be selected	1,700
	8,428 acres
Entitlement under SCS CS HB 133	20,865
-	8,428
Remaining Entitlement	12,437 acres

EXHIBIT C

ANALYSIS OF SCS CS HB 133

Assume: Average land values equal $1,500 per acre

Population figures are from revenue sharing data

Value of Land Transferred to
Municipalities Under SCS CS HB 133

1. Kenai Peninsula Borough

Entitlement	=	155,780 acres
Land value	=	$233,670,000
Population	=	24,611

Per capita value = $9,495

2. Fairbanks North Star Borough

Entitlement	=	112,000 acres
Land value	=	$168,000,000
Population	=	60,227

Per capita value = $2,789

3. Mat-Su Borough

Entitlement	=	355,210 acres
Land value	=	$532,815,000
Population	=	16,724

Per capita value = $31,859

4. Ketchikan Gateway Borough

Entitlement	=	9,200
Land value	=	$13,800,000
Population	=	11,490

Per capita value = $1,201

5. Kodiak Borough

Entitlement = 56,500
Land value = $84,750,000
Population = 7,901

Per capita value = $10,726

6. Bristol Bay Borough

Entitlement = 1,940
Land value = $2,910,000
Population = 1,311

Per capita value = $2,219

7. City and Borough of Juneau

Entitlement = 13,600
Land value = $20,400,000
Population = 20,465

Per capita value = $997.

8. Haines Borough

Entitlement = 1,080
Land value = $1,620,000
Population = 1,924

Per capita value = $842.

EXHIBIT D

SUGGESTED AMENDMENTS TO SCS CS HB 133

1. Page 1, lines 17-18: Delete "to assist in meeting costs of acquisition of land to meet public needs."

   Although this would no doubt be a legitimate use of in lieu payments, actual expenditures of funds should be left to the decision of local elected officials. Other boroughs have for years sold land received from the state and have used the proceeds for public purposes without restrictions. Anchorage should be allowed the same flexibility with respect to any in-lieu payments received under HB 133.

2. Page 1, line 24: Delete "20,865" and insert "44,893."

   The state has selected 240,280 acres of land in Anchorage but has not yet received tentative approval. Consequently, the figure was not included in the 20,865 acres listed in SCS CS HB 133. Since the bill fixes and thereby cuts off entitlements, it is only fair for Anchorage to be credited with at least 10% of the above-described state selected land.

3. Page 2, line 28: Add "or to that portion of an entitlement that cannot be satisfied by such date due to a shortage of appropriate available state land."

   This amendment would allow municipalities such as Anchorage more time to fill their entitlements with appropriate state land should it become available in the future. In Anchorage, for example, it is possible that land controlled by the Army or Air Force could become available in the future and be used to fill part of any remaining entitlement for which in lieu payment had not been reviewed.

4. Page . line 12: Add after the period-

   "Lan deemed appropriate for municipal selection shall be land that is suitable and appropriate for an identifiable present or future municipal use or for disposal to private use by the municipality by sale or other means."

   This language would protect municipalities from possible abuse of the broad criteria expressed in subsections (g) and (h) on pages 4 and 5. The intent of the language is to minimize disputes with the state over the type of land that is appropriate for local selection and management.

5. Page 9, line 10: Add after the period-

"In certifying a municipality's remaining entitlement and available vacant, unappropriated, unreserved land under this subsection, only land meeting the criteria for local selection and use under 204(g) of this chapter shall be considered."

The purpose of this amendment is to eliminate ambiguity in applying the payment in lieu of land formula. Since only VUU land meeting the criteria of 204(g) can be approved for transfer to municipalities, it is only consistent to use these lands in applying the in lieu payment formula.

6. Page 10, Line 13: "Except as provided in (g) of this section," (Comment)

This language has the effect of possibly allowing Kodiak Island Borough to receive up to $26,000,000 in in lieu payments. Kodiak's claim is based on a legal theory concerning lands selected under the Native Claims Act (ANCSA) over which there is no doubt considerable disagreement. It is by no means clear that Kodiak will not be able to obtain many of the disputed lands for which payment might be claimed under this section. If, as the State Administration indicates, the dollar impact of the bill must be limited to less than full compensation for all municipalities entitled to in lieu payment, any per capita limit should be applied evenly to all municipalities.

Re: Oil Spill Civil Penalties

Gentlemen:

On March 7, you requested the Department of Law to review the legality of the submission process utilized by the Department of Environmental Conservation for the oil spill civil penalty regulations pending before the Administrative Regulations Review Committee. Our opinion, issued on March 9, concluded that the regulations were indeed properly before the legislature.

It has come to my attention that a March 7 memorandum from Joseph A. Guthrie of the Legislative Affairs Agency is being cited for the proposition that our conclusion was erroneous. The memorandum, of course, was prepared without prior review of the Department of Law opinion. In our view, the memo rather badly misconceives both the nature and purpose of the Department of Environmental Conservation's actions in this matter.

As you are aware, the Department of Environmental Conservation submitted these regulations to the legislature prior to their adoption and filing. The Legislative Affairs memo asserts that, in doing so, that Department was attempting to escape the adoption requirements of the Administrative Procedure Act (AS 44.62). The memo then suggests the obvious conclusion that the specific review provisions of the civil penalty law (AS 46.03.758) do not excuse that Department from compliance with the APA--a view with which the Department of Law has no quarrel. Thus, the memo concludes, the Department of Environmental Conservation's actions must be illegal.

The flaw in the memo's reasoning is that the Department of Environmental Conservation is not attempting to short-cut the APA. As our March 9 opinion makes clear, the APA requires adoption and filing prior to regulations becoming effective, and there is no question that the Department of Environmental Conservation must adopt and file the regulations before they may become effective. Thus, the question in this matter is not whether Environmental Conservation must comply with the APA but, rather, in what sequence should the steps required by the APA be taken in relation to the peculiar provisions of AS 46.03.758.

The question is thus one of timing--which the March 7 memo does not even address, much less attempt to resolve. As our March 9 opinion concludes, the language of sec. 758 and the APA do not answer the question. The APA, of course, does not require adoption at any particular time. Moreover, sec. 758(b) does not require the submission of "adopted" regulations. Indeed, the only use of the term "adoption" in the statute is found in subsection (c), in which the sixty-day review period provided in (b) is referred to as an "adoption" process.

Given the ambiguous wording of sec. 758, our March 9 opinion takes the next necessary step of looking to the legislative intent of the law. Particularly in light of the fact that the legislature already possesses post-adoption review authority under AS 44.63.320, it is our view that the review provisions of AS 46.03.760(b)-(c) were intended to give the legislature a meaningful role in the promulgation of the regulations. Given this intent, the only action the Department of Environmental Conservation could have taken was to submit the regulations unadopted. Had they been submitted then in adopted and filed form, the unique limitations of sec. 758(c) would have precluded any changes--no matter how strongly urged by the legislature--for an entire year. The role which sec. 758 was intended to guarantee for the legislature would have been abrogated.

The March 7 memo also concludes that, since the sixty-day review provisions of sec. 758 "have the same essential effect" as AS 44.62.320, which grants the legislature broad annulment authority over all administrative regulations, the former section impliedly repeals the latter. This conclusion, if correct, would mean the legislature would have no power to subsequently annul these regulations, if it permits them to go into effect at this time.

It is our view that the legislature intended to expand, rather than limit its regulations review role, and that sec. 758 should be viewed as a supplement to, rather than an implied repealer of AS 44.62.320. One can reach that conclusion, of course, only if one shares our view that sec. 758 was intended as a pre-adoption review. However, once that conclusion is reached, the basis for concluding that the post-adoption annulment authority of sec. 320 is impliedly repealed vanishes.

Thus, assuming the constitutionality of the legislature's basic power to annul regulations of any kind, the legislature, after March 20, will retain its authority to annul these particular regulations.

Yours very truly,

Avrum M. Gross

Re: Submission of Oil Spill
Civil Penalty Regulations

Dear President Rader:

You have asked whether the regulations for oil spill civil penalties have been properly submitted to the legislature.

The short answer is yes.

AS 46.03.758(b) requires that "regulations" establishing a schedule of penalties for oil spills be submitted to the legislature no later than 10 days after the convening of the Second Session of the Tenth Alaska Legislature. AS 46.03.758(c) provides as follows:

> Regulations adopted under (b) of this section shall become effective 60 days after submission to the legislature, unless disapproved by a special concurrent resolution. . . within 60 days of the submission of the regulations. . . . . Revised regulations shall be submitted to the legislature no later than 10 days after the convening of the appropriate regular session of the legislature, and are subject to disapproval as specified in this subsection. */

---

*/ It is, of course, the executive's contention that a legislative veto of the adoption of an administrative regulation is unconstitutional. The defect does not affect the validity of the regulations which ultimately may be adopted.

These provisions may be viewed as prescribing one of two, contrary results. One, they may be viewed as prescribing that regulations be adopted formally under the Administrative Procedure Act (APA) AS 44.62, and then submitted to the legislature to be voted up or down as adopted. Two, they may be viewed as prescribing that regulations be proposed as provided for in the APA, but not formally adopted, and then submitted for approval or disapproval. The latter method allows the proposed regulations to be altered prior to final approval or disapproval by the legislature. If, and as, approved, the regulations are then filed with the Lieutenant Governor for codification. We believe that the second view is the correct view.

To begin with, the statute itself contemplates a one-time procedure for submitting and adopting the regulations, i.e., at this session of the Tenth State Legislature. It is not reasonable to suppose that this legislature, at its last session, sought or intended to tie its own hands with a yes-or-no, all-or-nothing proposition. It is much more reasonable to assume that it intended to allow itself some degree of flexibility by using the veto power to compel the rulemaker to modify its proposed rules to avoid a veto. Were the regulations already adopted, this could not be done.

We are supported in our belief by the Administrative Regulation Review Committee's actual use of the veto power to compel modification of the proposed regulations. Additionally,

Chairman Gardiner--whose Judiciary Committee inserted these provisions for the legislative veto--confirms our view. While his confirmation is not cognizable evidence in a court of law, A.P.E.A. v. State, 525 P.2d 12 (Alaska 1974), it is certainly cognizable by the legislature in its consideration of the matter.

We are further supported in our belief by the existence of AS 44.62.320, which purports to vest the legislature with a power to annul an administrative regulation by a concurrent resolution. */ The provisions for legislative annulment of an administrative regulation is an all-or-nothing thing, the legislature examines a regulation which has already been adopted and determines whether it is consistent with the law under which it was adopted. If the legislature determines that it was not, it annuls it by adoption of a concurrent resolution.

While the same result could be achieved by a veto of a final administrative adoption of the regulation, as it is under AS 44.62.320, it would, in this case, also result in no penalties being set whatsoever, an unlikely result at best. The net effect would be to repeal the statutory provision for civil penalties by a concurrent resolution. We cannot attribute this intent to the legislature. It, therefore, seems more likely that the legislative veto was to be employed to obtain

---

*/ It is, of course, the executive's contention that this provision is unconstitutional. The issue is now before the Alaska Supreme Court.

regulations for penalties which met with legislative approval. This could only be achieved, however, if the regulations before the legislature were proposed, but not adopted, prior to their submission.

Sincerely yours,

AVRUM M. GROSS
ATTORNEY GENERAL

Hearing before Senate Resources
March 29, 1978

Committee Members	Municipal Representatives
Poland	Bob Hardig, Kodiak
Meland	Dale Tubbs, Kodiak
Tillian	Gillman, Kenai
Huber	Sharp, Juneau
Sumner	Berns, Anchorage
Croft	Carlson, Fairbanks
	Slajer, Ketchikan
	Jim Rolle

Main Items of Testimony:

1. The deletion of (g) and (h) of 29.18.205 which established criteria for approval or disapproval of municipal selections by the ADL. Testimony by Mike Smith indicated this also eliminates the possibility of considering selections from other than the strict definition of vacant, unappropriated, unreserved land and general grant land (see definition section). For example, it eliminates lands classified as resource management (this is a very general classification) and future state land selections. Eliminates land for new communities.

   Several communities pointed out that deletion of (g) and (h) also eliminates the criteria for judging whether a municipality should select certain trust lands as well.

2. In Lieu Payments were considered by several municipalities to be too low. The $1,500 etc./acre figure was found fault with as being no where near fair market value. The $100 per capita limit was considered way too low. Anchorage stated $250/capita would be the least they could live with.

Testimony on CSHB133 Fin am
Senate Resources
March 29, 1978

Kodiak

1. felt legislation should consider the unique problems of each municipality.
2. outlined problems they have had in receiving their entitlements.
a) 9,700 acres selected (approx.)
2,120 acres patented
7,600 acres tentative approval
b) Running into problems with Native Claims act; villages are selecting same lands.
c) ADL has classified several areas over the years w/ coop. from boro.
d) Borough did not realize this would preclude borough selection.
e) Feels that ADL deliberately stalled on approving selections & duped them into coop. on land classifications
f) Looks like only mountain tops left for borough selection.
g) May have to take in lieu payments. #100 per capita should be rescinded.
3. Would not want to be precluded from pursuing litigation.
4. Eliminate "grazing" from definition of classified lands ___ insert " or classified as per state resource mgmt classification."
and on 38.05.321
There are grazing leases on Kodiak; sometimes 30-40 thousand acres — no revenue.

Kodiak (cont.)

5. Feels ADL has made a mistake in calculating their entitlement. Should be 65,000 acres.
(see attached correspondence)

Anchorage

1. Strongly supports trust lands swaps
2. Value of land (in lieu payments) not near enough; should be fair market value.
3. ADL should not have veto power over trust land selection
4. $100/capita limit way too low
Should be $250 = $43,268,000

Bristol Bay

1. Supports bill
2. Concurs w/ Kodiak's comments
3. Prefers land to in lieu cap $100/capita too limiting small population

Fairbanks

1. Favors reinstatement of (g) + (h)
2. Supports trust lands swap but (g) + (h) needed for criteria

Kenai

1. (g) + (h) restored
2. Supports trust lands portion
3. Agreed on Kenai's portion no matter what other boros get
4. Stressed expeditious action — land use planning + energy planning.

147

Municipality of Anchorage

MEMORANDUM

DATE: February 7, 1977

TO: Ted Berns, Legal

FROM: Tom Nelson, Planning TN

SUBJECT: House Bill No. 147

This is just a brief outline of our concern over actions taken by the Alaska State Highway Department that do not comply with Municipal land use regulations such as the Zoning Ordinance and Subdivision Regulations which everyone else must and do comply with. Specific cases of Highway Department actions that have created problems and conflicts will be presented at a later date when more time is available to gather the information together.

The primary cause of most land use problems created by the Highway Department is the creation of non-conforming lots following land acquisition for additional right-of-way. In several instances the Highway Department acquired a portion of a lot or tract and left the owner with a relatively useless parcel. In doing so, resulting land use patterns are ignored. Thus, access problems develop; either normal access is shut off on the front of the lot and thence, alleys become thoroughfares, or every little non-conforming lot remaining has its own access onto the arterial being up-graded. The end result is additional traffic circulation and safety problems.

In several instances the Highway Department has split lots, but filed no plat, thus leaving no record after land was taken. Land is subdivided without filing a plat. The Highway Department may know better, but as long as they can ignore local land use regulations they'll try to get by with it.

These types of actions present problems to land owners and developers. Tax inequities result when owners are taxed for useless land, and Municipal government loses tax revenue when relief is given to the owner because of the non-conformity--all or most of which could have been prevented through adherence to local regulations. In addition, developers are severely limited by problems with access and setbacks for structures.

Another problem that has arisen in regard to highway projects is the Highway Department's source of gravel materials. They have had a practice to buy gravel from private landholders. The private landholder in that case is responsible for getting a Special Exception to extract gravel. However, the Highway Department may not always inform the landholder of that when entering an agreement for the gravel. If the Highway Department decides to extract gravel itself, it can presently do so, without any regulations on such operations. This may be a possibility in the Eagle River/Chugiak area where the Highway Department plans to utilize gravel resources for the construction of Minnesota Drive Extension. In such an instance there is no way the neighboring residents could be protected from noise, dust, traffic, or hazards from such activity.

The purpose of having Special Exceptions, platting procedures, along with all the other land use regulations is to "protect the health, safety and welfare of the public." This responsibility is entailed to the Anchorage Municipality, yet little protection can be offered from actions taken by the Highway Department.

These problems also create unnecessary and costly administration problems with requests for zone changes and variances, not to mention the litigation that has been leveled against the Municipality.

These problems will continue until the Highway Department is forced to abide by the same rules as everyone else. It is this department's firm belief that the Highway Department does not deserve to have any privilege status in regard to local land use regulations. As with other State agencies, if there is a clearly demonstrated over-riding State interest, a waiver from the local compliance requirements may be granted by the governor.

Dave Doris, a member of the Platting Board, is quite familiar with the practices of the Highway Department here in Alaska and similar problems in other states. I would suggest having him testify on this Bill. He would strongly support our stand and has indicated a willingness to help.

February 24, 1977

TO: LISA
FROM: JUDITH

RE: HB 147

I spoke with Mr. Constantine of the Department of Highways this morning at 9:40 a.m. and dictated verbatim the proposed changes. We discussed them briefly and he didn't feel that said changes would be any problem whatsoever for the department.

I informed him that in light of his approval a committee substitute would be drafted and brought before our committee on Friday, February 25, 1977.

PUBLIC WORKS/HIGHWAY PROJECTS--PLANNING

Current Law

AS 35.10.020, as amended by the Ninth Legislature, requires that the construction of a "public works" be commenced only after consultation with municipal planning and zoning authorities and compliance with local planning and zoning ordinances. However, this statute is ambiguous in terms of its affect on highway construction projects and the Department of Highways. The construction or modification of a state highway often poses serious problems for municipal planning programs and should therefore be commenced only after consultation with local planning authorities. Of course, if an overriding state interest in a highway project is demonstrated, a state agency should possess the ability to override local planning and zoning ordinances. This, however, does not detract from the need to incorporate local planning and zoning review into the design and construction of state highway projects.

Proposed Bill

The proposed legislation would clarify the scope of AS 35.10.020 to require consultation with municipal planning authorities and compliance with local planning and zoning ordinances prior to the construction of "any building,

structure, public works, or highway project and prior to commencement of extraction activities in a municipality". In addition, the bill would maintain the state's present authority to override local planning and zoning ordinances to serve overriding state interests in construction projects.

MEMORANDUM

March 22, 1977

SUBJECT: Day Care Statistics (W.O. #3824)

TO: The Honorable Lisa Rudd, Chairman
House Community and Regional Affairs Committee

FROM: Deborah Behr
Research Analyst DB

As you requested, I have obtained statistics from the Department of Community and Regional Affairs regarding their AFDC and WIN day care clients. At the present time, the department reports that all of these families are receiving 100% subsidy by the state for their day care payments. Please note that the statistics represent both the AFDC and WIN recipients, as the Department of Community and Regional Affairs records do not separate payments by category of client eligibility.

I hope this answers your questions. If you require additional information on this topic, please do not hesitate to contact me at 465-4917.

DISCUSSION

During the 1975 Legislative Session, HCS SB 753 am H was enacted. A part of the effect of that legislation was the transfer of day care assistance for families eligible to receive AFDC and WIN from the Division of Social Services, Department of Health and Social Services, to the Department of Community and Regional Affair's Day Care Assistance Program. This created two very different types of day care assistance clientele: 1) non welfare recipient children through age 6 years; and 2) AFDC/WIN recipient children through age 13 years. One of the goals for the Day Care Assistance Program since its inception is to prevent the cost of day care from being or becoming a significant factor in determining whether a family can be or become self-supporting. Having two types of day care recipients works in direct opposition to that goal since there is obviously very little incentive in dropping from the welfare rolls only to learn that one must now assume total liability for paying the cost of day care for one's children - a cost which would be provided at the State's expense should one remain on the welfare rolls. This cost could prove quite significant to a family since the average cost of day care for AFDC/WIN recipient's children varies from a low of $125 in the City of Petersburg to a high of $252 per month per child in the Municipality of Anchorage. On the other hand, the non welfare recipients are certainly treated unequally since they must currently assume total liability for the cost of their children's day care when the child reaches age 7 years.

FISCAL EFFECT

The fiscal and social impact projected for AFDC/WIN program recipients is minimal. Based on current families subsidized only 6 children would be ineligible for day care assistance should the age limitation be reduced from age 14 to age 11. All these children live in Anchorage, and once dropped from the Day Care Assistance Program, their families would then be liable for their day care costs. In return they would receive an offsetting increase in their AFDC/WIN cash entitlement - 50% of which is Federally funded and which would result in savings to the State General Fund, and the remaining 50% State Funded through the Division of Public Assistance.

The greatest impact will be in increasing the age limitations for non welfare recipients from age 7 to age 11. Several considerations were analyzed to determine fiscal and social impact: 1) school age children are subsidized predominantly on a part-time day care need basis except on school holidays and summer vacations; 2) cost savings realized from removing the 100% preferential rate from AFDC/WIN recipients and providing day care assistance according to family income; and 3) increase in number of persons enabled to work or train as a result of day care assistance. It is estimated that the savings gained from dropping the 100% preferential assistance rate for AFDC/WIN clientele will result in an annual savings of $133,000 to the Day Care Assistance Program. This savings would become a liability to the Division of Public Assistance and, as above, the State would realize a savings of $66,500 - the State's share of AFDC cash entitlements.

Of the 831 children who were receiving day care assistance on 2/28/77, 241 (or 29%) were from families who are AFDC/WIN eligible. The average age of the AFDC/WIN child receiving day care assistance is 4 years 2 months. Since the AFDC family's child is eligible for day care through age 13, we assume that raising the age limitation for non welfare recipients would not significantly increase the average age of their day care assisted children. This assumption is based on the 29% sample of AFDC/WIN recipients which could have been subsidized to a significantly higher age.

Children aged 6 years and over who attended school need day care assistance for less than full time. We estimated these children need part-time care for 8 months annually while they attend school and full time care for only 4 months during holidays and summer vacations. The estimated cost for each of these children is $2,600 annually in day care of which the State would pay approximately 75% or $1,965. Since dropping the preferential 100% rate for AFDC/WIN recipients would result in an estimated savings of $133,000, an additional 68 children or an increase of 8% over the total currently assisted could be added at no additional cost to the Program. Since we feel that current AFDC/WIN recipients are a good representative sample of the program should the age limitation be raised to 11 years, and because only 20 of the 241 welfare children subsidized are over age 7, which is the current age limitation, we feel that at most only an 8% increase in total children subsidized would result. This increase would then be offset by abolishing the 100% preferential AFDC/WIN rate.

In summary, we feel the proposed adjustment of age limitation for assistance eligibility would: result in equal treatment for all families; allow an increase in the number of children and families assisted; assist more families in becoming self-supporting; provide incentive for low income or single parent families to work or train; not result in an increase in cost to the State.

Representative Lisa Rudd
House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Representative Rudd:

Enclosed is a copy of a letter which I received from Don Kemp in the Division of Public Assistance regarding my inquiry as to whether or not it would be possible to place AFDC/WIN recipients who are receiving day care assistance on our sliding fee schedule. It appears there will be no difficulty in accomplishing this since the payments received by families eligible for AFDC/WIN recipients would in no case ever result in a reduction of eligibility for day care assistance under our current program guidelines. If I can be of further assistance to you please do not hesitate to call upon me.

Very truly yours,

Harvey

619 Warehouse Avenue
Anchorage, Alaska 99501

Dear Mr. Pitts:

Re: Your March 7, 1977 Letter

Mr. Landes and I have discussed Representative Rudd's request that you explore the possibility of reducing the 100% subsidy of AFDC/WIN recipients' day care costs; there is nothing in federal regulations or in our AFDC State Plan that would prohibit such a change.

Under 45 CFR 233.20, all reasonable costs of earning must be deducted from gross earned income in determining AFDC eligibility and grant amounts. Any payment for work-necessary child care which is verified as made by an AFDC recipient will be reflected dollar for dollar in her AFDC grant. For example, if you began charging a recipient $50 per month for day care, and she had been previously subsidized at 100% and was receiving a $150 AFDC monthly payment, we would rebudget her case and increase her grant to $200. (AFDC funding is 50% federal, 50% state general fund match.)

We would be concerned about the effect of subsidy reduction upon AFDC recipients who are in a training program and who have no income other than their AFDC payments. If your income schedules count AFDC payments, and our maximum allowable AFDC payments would place such clients in a less-than-100% subsidy category, the AFDC program cannot increase payment to them, and they would suffer a net loss in total available income. We can deduct only the costs of child care directly related to the earning of income.

Obviously, any contemplated change in your subsidization patterns will produce a corresponding change in the AFDC component of the Assistance Payments BRU. Because of this, and because of the time which will be required for our field staff to rebudget our shared clients, we would appreciate the earliest possible notice of any subsidy change.

Sincerely,

Don Kemp
Acting Director

RE: DAY CARE AMENDMENT

SUGGEST THE FOLLOWING BE INTRODUCED TO RESOLVE CURRENT AND ANTICIPATED PROBLEMS:

~~wd. make all AFDC~~
wd. eliminate all reference to AFDC, & their special classification

SEC. 44.47.280 (4)
DELETE ALL

SEC 44.47.310 also wd. raise eligibility for day care age to age 11
DELETE LANGUAGE TO BE ADDED THAT IS EFFECTIVE FOR FY 77 ONLY IN REFERENCE TO AFDC. (THE HOUSE SRA COMM. WILL BE ADDING THIS TO CORRECT A MISTAKE BY THE REVISOR. IT IS NECESSARY TO MAKE ALL OF OUR PAYMENTS THIS YEAR LEGAL AID WILL BE MADE RETRO TO JULY 1,1976). THIS SHOULD THEN BE DELETED EFFECTIVE JULY 1,1977 AND REPLACED WITH THE FOLLOWING:

((44.47.310 (3) DEFINITION OF A CHILD
(3) "CHILD" MEANS A PERSON WHO HAS NOT YET REACHED THE AGE OF 11))

THIS REDUCES THE AGE OF THE AFDC RECIPIANT CHILDREN FROM AGE 14 AND RAISES THE OTHERS FROM AGE 7. THE NET EFFECT SHOULD APPROXIMATELY BALANCE OUT IN NUMBERS. WE DO PROJECT AN ACTUAL COST SAVINGS BECAUSE WE WOULD NO LONGER NEED TO FUND ALL AFDC AT 100%. EVERYONE WOULD BE TREATED EQUALLY.

NEED TO GET INTRODUCED PRONTO. PLEASE ADVISE. ERIC

– also, if they don't have to work w/ federal funds might
year they have to meet fed.
adpn. changes which could save
$1000 per day

Natural cut off seems to be age
11 kids in day care prog now over age 11 (out = 800)
14% more kids eligible w/ new age than now

POSITION PAPER/Department of Health and Social Services

POSITION PAPER
ON
HOUSE BILL NO. 193

"An Act relating to child care; and providing for an effective date."

This bill would make certain amendments to AS 47.35.101(b), which was enacted last year by sec. 3, ch. 253 SLA 1976, to provide for delegation by the Department of Health and Social Services of it's powers relating to nurseries to municipalities which have adopted their own ordinance to provide for day care licensing.

The first proposed change is the addition of a requirement that the municipality notify the Department in writing that licensing powers have been assumed and that the department formally delegate it's licensing powers within 90 days from receipt of the written notification. By providing for a written request for delegation of licensing powers and a time period for action, a more orderly process can be followed which will reduce confusion between the municipality and the Department.

The second proposed change would make it clear that delegation of licensing powers by the Department applies to home rule municipalities which derive their powers from the Alaska Constitution. The addition of home rule municipalities corrects an oversight in the technical aspects of the original statute. The City of Anchorage claims that their ordinance was enacted prior to the new state statute and was derived from Article 10, Sec. 11 of the Alaska Constitution, not under AS 29.48.030(a) (20). Anchorage, therefore, will not accept delegation of powers. This amendment to the Bill will clarify legislative intent.

Additional proposed changes are to clarify the intent of the Bill in it's relationship to day care licensing.

The Department supports this Bill as a necessary step in appropriately fulfilling the intention of the statute. During the past 6 months, letters were mailed by The Division of Social Services in the Department to each of the 180 units of local government eligible to assume day care licensing power, providing information about the statute and offering technical assistance. The communities of Anderson, Bethel

and Nome enacted ordinances. The City of Nome had the misunderstanding that the assumption of licensing powers was required to receive State funds under the Day Care Assistance program. When this misunderstanding was corrected, the City Council rescinded the ordinance. The cities of Hoonah, Tununak and Petersburg made inquires, but have taken no action.

The Department supports the bill without change.

CS HOUSE BILL NO. 193

"An Act relating to child care; and providing for an effective date."

Although this bill amends existing statutes governing the Department of Community and Regional Affairs Day Care Assistance Program, two of its provisions would impact this Department's Aid to Families with Dependent Children (AFDC) cash assistance program:

1. Sec. 2 of CHSB No. 193 would reduce the maximum age of AFDC eligible children covered by the Day Care program from age 14 to age 11. The AFDC parents of children in this deleted age group would therefore be required to pay their own full day care costs. Community and Regional Affairs notes that 6 AFDC children would become ineligible for day care subsidy if this measure were to be enacted, and that current costs of day care for these 6 children averages $2600 per year per child.

   Federal Regulations governing the AFDC program mandate that all reasonable costs of earning income, including client-paid day care costs, be deducted from gross monthly income in determining AFDC eligibility and payment amounts (45 CFR 232.20). Under this provision, client-paid day care expenses would qualify as a budgeting deduction, decreasing AFDC adjusted gross income and thus increasing the amount of the monthly AFDC grant on a dollar-for-dollar basis.

   Thus the parents of each of these 6 affected AFDC children would be required to pay an average of $2600 per year per child to their day care contractor, but each client would receive an exactly compensatory increase in AFDC monthly payments. The effect of this change would be to increase expenditures within the AFDC program component of the Assistance Payments BRU by $15,600 in FY 78 (6 children times $2600 per child per year = $15,600). Since AFDC funding is 50% federal, 50% State General Fund matching, and the Day Care program is 100% General Funds, the impact of passage of Sec. 2 upon the General Fund expenditures would be a net reduction of $7,800 for FY 78.

2. Sec. 3 of CSHB No. 193 would remove all AFDC eligible children from 100% subsidization of Day Care costs and place such children upon varying percentage subsidies appropriate to family income levels. Currently C & RA serves 235 AFDC children who would be affected by enactment of this measure; they estimate that placement on existing subsidy/income schedules would require parents of these children to pay an average of $499.57 per year per child for day care.

As noted above, the AFDC grants to each of the families affected would have to be increased to allow a dollar-for-dollar compensation for the actual client-paid day care expenses. Thus the effect of enactment of Sec. 3 upon the FY 78 Assistance Payments BRU would be to increase AFDC program expenditures by $117,400 (235 children times $499.75 per child per year = $117,400; $58,700 Federal Funds, $58,700 in State General Funds). The net effect of passage of Sec. 3 upon total General Fund expenditures would be a net reduction of $58,700 for FY 78.

The Department supports the concept of removing the preferential treatment for working AFDC recipients which might tend to emphasize their welfare-related status and to reinforce dependency patterns. The Department further supports the concept of expanding the availability of the Day Care Assistance Program without increasing total State expenditures.

However, if CSHB No. 193 were to be enacted, an increased appropriation of 133.0 for FY 78 for the Assistance Payments BRU would be required. Such increase would result in a net savings of 66.5 SG^F.

Day Care

"For Your Information"
OFFICE OF CHILD ADVOCACY
2457 Arctic Boulevard
Anchorage, Alaska 99503

FACTS ABOUT DAY CARE IN ANCHORAGE -- 1974

I. DAY CARE NEEDS (see page 4 for further statistics)

10,677	children need out of home day care
1,043	licensed day care slots available as recorded by Division of Family & Children Services

II. FINANCIAL COSTS OF OPERATING A DAY CARE CENTER

A. Minimal Budget

Based on enrollment of 40 children at an average of $150.00 a month per child.

40 children x $150/month = $6,000.00

Budget sheet on page 5 shows average expenditures for a center based on this income with minimal staff and minimal expenses

B. Well Balanced Budget

A well balanced program with trained and well paid staff would cost $10,600.00 a month. (see budget sheet on page 7 for further explanation)

COSTS FOR A WELL DEVELOPED CENTER WITH TRAINED AND WELL PAID STAFF IS PRESENTLY PROHIBITIVE. QUALITY DAY CARE CANNOT BE DEMANDED DUE TO FINANCIAL UNFEASIBILITY.

Mr. Carl A. Propes, Jr.
Land Manager
Chugach Natives, Inc.
912 East 15th Avenue
Anchorage, Alaska 99501

Dear Mr. Propes:

Thank you for your letter regarding HB 202. The Committee is looking at several other means by which rural residents could help with school costs.

In my opinion, the new law on 3rd class boroughs provides a means for rural areas to incorporate and provide themselves with needed local government services without placing an onerous tax burden upon themselves. You might call the Anchorage Legislative Information office and ask them to send you a copy of the new law.

We will try to keep you informed of further action on HB 202.

Cordially,

Lisa Rudd

Put on 202 mailing list

Rep. Lisa Rudd, Chairman
Interim Committee on Taxation
in the Unorganized Borough
Alaska State Legislature
Juneau, Alaska 99811

Dear Representative Rudd,

I have seen several articles recently in the Tundra Times concerning your hearings in Delta, Tok and Fort Yukon on House Bill 202. The possibility of a tax on personal and real property within the unorganized areas of Alaska greatly concerns Chugach Natives, as the majority of our land selections under the Alaska Native Claims Settlement Act lie outside of incorporated areas. We would therefore like to be kept informed of any developments which take place on this subject, both during the "off-season" and the regular legislative session.

Of special concern to me is the definition of "unimproved land" in section 29.03.230(2) of H.B. 202. This may have to be refined so that the discretion of the state assessor in making his own definitions is kept to a minimum.

What troubles me most about H.B. 202 is its potential for indirectly instigating areas and communities which are presently unincorporated to organize. If they are to be taxed anyway, why shouldn't the inhabitants of these regions want increased local control over how their tax dollars are spent? Most of the state's rural areas which would be caught in this bind lack the unity of interest and the economic base needed to sustain viable organized governments. Moreover, I believe that the majority of residents in these remote areas and villages prefer to continue to

912 East 15th Avenue, Anchorage, Alaska 99501, Phone (907) 274-4558

Chugach Natives, Inc.

live as they have traditionally, without being bothered by more restrictions imposed by government.

Therefore, I recommend that if H.B. 202 is to be passed by the Legislature, a strong statement of purpose is needed to declare that the intent of the bill is not to compel hasty and premature incorporations of new governmental entities. Those brave and hardy persons who reside in the Alaskan "bush" must be allowed full self-determination over issues such as this, and only as a last resort should the Legislature enact a bill which would have the effect of reducing their freedoms.

Before H.B. 202 is seriously considered by the Legislature I would further hope that all other means by which rural residents could pay their fair share of school costs would be thoroughly analyzed.

I appreciate this opportunity to communicate my views on H.B. 202 to you and your Committee.

Sincerely,

Carl A. Propes Jr.

19 October 1977

Dear Chairperson:

I regret that I was unable to attend the public hearing on HB 202, (Real Property Tax in Rural Alaska), that was held in Delta Junction on October 17. You have asked for written comments on this Bill and my comments are as follow.

First I would like to state that the people living in Rural Alaska, ie, the unorganized boroughs, pay exactly the same Alaska State and Federal taxes as does anyone else living in the Cities or in the Organized boroughs. We pay the Federal and Alaska State Income tax and the Alaska School tax and these are the only Federal and State taxes paid by anyone in the State.
Secondly I would like to point out that the State of Alaska does not pay one cent more towards the education of a child living in the unorganized borough than it does to help educate one living in the organized boroughs. The amount paid per child is the same. At least this is my understanding.

In that the people in the unorganized boroughs pay the same State and Federal taxes as does the people in the organized boroughs it would appear to be an act of gross discrimination for the State of Alaska to place a Real Property tax on one part of the State population and not on the other part. The fact that one part of the population has voted to tax it's self and the other part has choosen not to tax themselves should have no bearing on whether the State levies a tax or not.

Unless HB 202 is expanded to tax ALL the people of Alaska equally I will provide financial support to any group of citizens formed to challenge the constitutionality of this discrimatory tax in the courts.

Sincerly

RE: HB 202 - Tax on developed land in the unorganized borough.

In my conversation with Mr. Ted Smith on Friday, February 26, 1977 he informed me that approximately fifty to sixty percent of the land owned in the unorganized borough is registered with the Division of Lands; this would be original owners only, as there is no control over transfer of ownership. Mr. Smith did indicate that his department can publish a foreclosure notice to force the unregistered owner to come forward; however, this practice has been used very rarely.

Mr. Smith is in agreement with Bob Dozier, state assessor that HB 202 should not exempt unimproved land. It is his feeling that this would unduly burden those individuals who do improve their land while owners of land would not be inclined to make improvements knowing that they would be subject to a tax.

Testimony for Tuesday, March 1st, will include Mr. Dozier and Mr. Pomeroy from C&RA and Mr. Wall from the Department of Revenue. Both departments have prepared fiscal notes and copies of both will be sent over today.

Thank you.

Tax bill reminds Wallis of tea party

Tundra Times 4/77

HB 202

By MARGIE BAUMAN

President Tim Wallis of Doyon, Limited, is taking a critical view of Senate Bill 35, saying it's made of the same stuff that brought on the Boston Tea Party.

Wallis sees the legislation, to provide for taxing developed land within the Unorganized Borough, as another classic case of taxation without representation.

He reminded the Tanana Chiefs Conference in convention at Fairbanks March 16, of some colonists in Massachusetts who took a dim view of such tactics back in 1773. They disguised themselves as Indians and proceeded to dump a sizeable amount of British tea into Boston harbor.

"What they're trying to do in Juneau now is exactly what they (the colonists) were fighting against back then," Wallis said.

"People in Juneau will be assessing, taxing your property and deciding how to spend it. Most of those people come from urban areas; people from rural areas will not have much say in this," Wallis said.

As Wallis spoke he offered delegates to the convention copies of a memorandum on the bill prepared by Bill Timme, Doyon's attorney.

The memorandum notes that "There is a possibility that the tax as proposed is in violation of the equal protection clause of the U.S. Constitution.

"It would appear that the state would be treating one type of property differently than other property of similiar character," Timme said.

"The only property which is being taxed is property in the unincorporated borough. No tax is levied by the state on identical property in incorporated boroughs this tax cannot be said to be substitute for such borough taxes since the assessment rate varies borough to borough.

"While variances in the millage rate is acceptable from one borough to the next, the fact that it is the state which is acting as the taxing authority may require the tax to be struck down unless all land in the state is subject to it," Timme said.

'Likewise," he added, "the tax is being imposed on property which is located in an area in which the majority of the taxing body."

Timme also questioned the validity of the special fund that would be set up for deposit of taxes collected under that legislation. The special account would be within the state's general fund.

"The state consitution says that when you tax someone you cannot set up a special fund," Wallis said.

The Timme memorandum said the section of the legislation regarding the special fund would require close scrutiny

Shifting the Tax Burden

Timme said the proposed tax structure "Is basically one which will shift the tax burden to Native enterprises for Native services provided in the rural areas."

"However, the decisions as to the tax rates, exemptions and use of the funds will be made by a body, in excess of 75 percent of whose members are elected by persons neither subject to the tax nor the intended recipients of its benefits.

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

1. @ assessment date January 1, 1979 (Amendment necessary)
2. The estimated tax base for the unorganized borough is based on known taxable property values, parcels per capita and average per parcel valuation within home rule and first class municipalities as of January 1, 1976.
3. Estimated tax base is discounted 20% to reflect the unimproved property exclusion. (809,328,988 = 1,011,661,235 - 20% 202,332,247)
4. Estimated average mill rate for administration of schools within 11 boroughs is 7 mills (7 mills = numerical average 6.11 weighted upward to reflect Anchorage municipality at 8.69 mills.)
5. Estimated revenue is based on a 7 mill tax rate times the adjusted tax base ($5,665,302 = 809,328,988 X .007)

Analysis Continued

IV. DATE 2-24-77 PREPARED BY Robert Dozier
AGENCY Community and Regional Affairs
PHONE 465-4730

Original: Legislative Finance

Coord. w/ Div. of Lands?

Analysis Continued, HB No. 202

House Bill No. 202 requires the state assessor, Department of Community and Regional Affairs to assess all developed real property situated within the unorganized borough including second class cities and deliver an equalized assessment roll to the Department of Revenue who shall be responsible for collection and enforcement of the tax. The Department of Revenue will provide a fiscal note concerning its duties.

Within the time allocated for the study and the limited information available concerning taxable property within the unorganized borough an attempt has been made to estimate the potential tax base and administrative costs which are the responsibilities of this Department.

An estimate with a high degree of accuracy would be possible if an ad valorem tax base study were initiated and funded prior to implementation of House Bill No. 202.

Marundi says before vote -

The beginning date of January 1, 1978, provides 9 months in which to complete the assessment roll. In our opinion the project will require no less than two years to complete. Administrative costs as indicated are based on an assessment levy date of January 1, 1979, rather than January 1, 1978, as stated on page 1, line 13 of the bill.

BASIS FOR ESTIMATED POTENTIAL REVENUE

Home Rule and 1st Class Municipalities

valuation → after exemption

Real Property - 1-1-76	$ 5,426,772,680 (acres or $?)
Number of parcels	164,830
Valuation per parcel	32,923
Population	357,815
Population per parcel	2.174

Unorganized Area and 2nd Class Cities

Population July 1, 1976 (Est. 6% increase over 7-1-75)	51,386
Population per parcel	2.174
Number of parcels	23,637
Valuation per parcel	$16,000 - $ 32,923 - too high for rural areas?
Real property valuation 1-1-76	½ - 778,200,950
Adjusted Tax Base 1-1-79 30% Increase (10% Annually)	1,011,661,235
Estimated Revenue @ 10 mills FY 79 (Real Property)	$10,116,612
Unimproved Land Exclusion (-20% of Tax Base)	809,328,988
Average Borough School levy @ 7 mills (HB 202)	$ 5,665,302

Program development, implementation, and administration is divided between the Department of Community and Regional Affairs and the Department of Revenue.

Marunde says shd. be 80% of tax base

The pilot program will require in-depth research to develop standardized methods, procedures and forms. A professional services fee is included to assist the office staff in completing by June 1979, the required mapping, appraisal, appeal, and delivery to the Department of Revenue the certified 1979 assessment roll, listing all real property taxable under provisions of the bill. The project includes the assembly of all available survey maps, aerial photos; map design and drafting of required area; title search and ownership data, required market and construction cost data; on-site property inspection, enumerating, and grading; office calculations; computer listing of the assessed value of land and improvements according to individual 2nd class cities and regional areas as determined to be appropriate; mailing assessment notices; appeal procedures before the state assessment review board and delivery of an equalized and certified assessment roll to the Department of Revenue.

The State Assessor would be upgraded from range 22 to range 24 and be assigned a secretary. Under direction of the state assessor, the appraiser and mapping supervisors, will develop regulations, forms and procedures. The mapping supervisor will correlate all phases of the mapping project with this staff and a cadastral mapping firm under contract and assume full responsibility for the initial and ongoing land status mapping system. The appraiser supervisor will correlate all phases of the appraisal project with his staff and an appraisal firm under contract and assume full responsibility for property appraisal, appeal, and maintenance of the assessment roll. Under direction of the state assessor the supervisors, staff appraisers, title examiners, draftsmen, and clerks will function as an integrated unit.

The project may be completed with contractual professional fee budget allocations by private, cadastral mapping and appraisal firms under contract or by a combination of departmental staff and private enterprise. The latter is preferred, as initial staff involvement will provide continuity of trained key personnel for subsequent program years administration. The initial two year project costs based on total professional contractual services will add $133,660 or 10.53% to the FY 78 Fiscal Note estimate, and a comparable amount to the FY 79 estimate. ($1,401,852 = 600,000 + 668.3 X 20%)

Program maintenance reflecting the three year reassessment schedule as outlined on page 2, line 14 of the Bill may result in a 10 to 15% decrease in administration costs after the two year initial assessment project is completed. (FY 78 $582,505 = $685,300 - 15% $102,795)

Administrative costs as estimated and as supplied by the Department of Revenue for the initial project could be funded in full by enactment of the proposed Real Property Transfer Act (See Appendix G, Alaska Taxable, 1976) with a fee based on 1/2 of 1% of the consideration, estimated to produce $2,250,000 annually.

Enactment of the proposed Real Property Transfer Act will, in addition to providing full funding for the entire project, decrease by 20% the FY 80 and subsequent years administrative costs, as the cadastral mapping and market data information for all of Alaska will be weekly received, catalogued, and filed in-house by the Department. (FY 80 $466,004 = $582,505 - 20% $116,501)

H.B. 202

The purpose of this bill is to remedy at least in part, an existing inequity in taxation across the state. At present, in all the organized borough and first class cities, Seldovia does not property owners must pay real property taxes, part of which go for the support of the educational system. Still carrying over from earlier days, however, is a lack of any taxation of a sort on real property in the unorganized borough.

Once upon a time this exemption may have been justified. There was little in the Bush except one or two-room cabins, sod houses, and fish camps. The cost of collecting taxes would have far exceeded the amount of revenue derived.

Now, however, the situation has changed. Lodges and service stations, stores, restaurants and other business have sprung up along the major highways of the state. The owners of these properties pay only state income tax toward the cost of the state and a portion of this income tax goes to support schools. They are obviously getting a free ride at th expense of property owners in the boroughs and cities.

Under the bill real property in the unorganized borough would be assessed at its fair market value (what a willing buyer would pay to a willing seller with both of them knowing property values) as is now the case required by law for organized municipalities. All of the exemptions presently authorized for municipalities are included in the bill (Senior citizens Prop. tax - Equiv. Reb. have a basic $10,000 exemption authorized under the pipeline act). optional for munic.

Unimproved land which is held by native corporations under the Alaska Native Claim Settlement Act is exempted by that Act and in order to avoid discrimination this exemption has been extended to the whole unorganized borough.

The millage rate would be the average millage rate presently levied for educational purposes in the organized municipalities. It is my guess that this will be about a 5 mill rate.

I have no desire to tax nor do I believe it would be feasible to tax the small low value cabins in many of the villages. People who live in such cabins to frequently do not have the wherewithal to support themselves much less to pay a property tax. The committee may decide that an exemption ceiling greater than $10,000 is desirable if taxation of this kind of property is to be avoided. The $10,000 figure was picked because it is presently the ceiling authorized by law for the boroughs and cities. There is, however, in my mind no justification for failing to tax the significant properties in the unorganized borough and requiring the property owners in the organized areas to bear an unfair share of the burden.

March 13, 1978

The Honorable Lisa Rudd
Alaska State House of Representatives
Pouch "V" State Capitol Building
Juneau, Alaska 99811

Dear Representative Rudd:

We have reviewed H.B. 202 (taxation in the unorganized boroughs) and for the immediate we are opposed to the legislation, however we do have some recommendations.

In order for any taxation policy to work properly an economic base needs to be strong enough if any services are to be rendered. To my knowledge, none of the regions have a strong economic base. What good is taxation if the citizens of the area don't have the income to pay taxes?

It would be in the best interest of everybody to have the State study the effects of this type of legislation (H.B. 202) more thoroughly. One recommendation would be for the State to appropriate funds to create a model of a borough based on the same lines of a region such as Bristol Bay. The important factors of this is; what does it cost to provide the present services? What would it cost to provide more services such as police, fire, etc.? Is there a good tax base? What is the economic base in the area? What is the income per capita? Is there enough revenue to provide services?

These are very important questions that should be answered before any legislation is acted upon.

Sincerely,

Donald F. Nielsen

SCHOOL TAX REVENUES

IN THE UNORGANIZED BOROUGH

Department of Revenue is unable to give us a breakdown of the $10 school tax revenues by district.

However, some sort of relationship may be developed through figures for school membership.

$$\frac{\text{Total District Membership}}{\text{Total State Membership}} \quad \text{to} \quad \frac{\text{Total REAA Membership}}{\text{Total State Membership}}$$

71,885 = Total District (City-Borough) School Membership*

11,417 = Total REAA School Membership*

83,302 = TOTAL

86% = District
14% = REAAs

$2,588,600 = Total Revenues from $10 School Tax

86% = $2,226,196 = Amt from District Taxpayers at $10/yr

14% = $ 362,404 = Amt from REAA Taxpayers at $10/yr

$ 906,010 = Amt from REAA Taxpayers at $25/yr

$2,536,828 - Amt from REAA Taxpayers at $70/yr

* Includes 1/2 of Centralized Correspondence Membership

ADVANTAGES OF HB 202

1. Source of Revenue;

2. Important machinery for determining and keeping current a record of property ownerships;

3. Cadastral mapping allows for accurate planning and value estimating during important negotiations such as D-2, Alaska Gas Pipeline and other future issues;

4. Is a step toward remedying an existing inequity in taxation across the state in that citizens in the organized boroughs pay not only toward support of their own schools, but also toward those in the unorganized areas --- this is a matter of discrimination;

5. The Legislature will begin to exercise its responsibilities as Assembly of the Unorganized Borough.

Annette

REPORT OF THE INTERIM COMMITTEE ON TAXATION IN THE UNORGANIZED BOROUGH

The purpose of the interim committee was to hold public hearings to receive comments from citizens in Delta, Tok, and Fort Yukon as representative of unorganized areas of the state that would be affected by taxation in the unorganized borough. The vehicle for the hearings was HB 202, by Rep. Charles Parr.

The interim committee was composed of members of the standing House Community and Regional Affairs Committee for the Tenth Alaska State Legislature. The members are:

Representative Lisa Rudd, Chair
Representatives Merle Snider, Bill Miles, Sally Smith, Randy Phillips, Nels Anderson, Pete Lovseth, Al Ose and Tim Kelly.

Staff accompanying the committee were:

Bob Dozier, State Assessor; Jim McKenzie, Legislative Affairs Legal Division and Judith Pinero, Administrative Assistant to the committee.

There was no action taken on the bill nor were there any work sessions or mark-up during the interim.

Public Hearings

Delta	October 17
Tok	October 18
Fort Yukon	October 20

(With stops in Dot Lake, Beaver and Stevens village)

Notification-Publication

August, 1977	Letters to Delta, Tok and Fort Yukon School Board to arrange meeting space in the local shcools.
August, 1977	Letters to Dot Lake, Beaver, and Stevens Village advising community of the committee's plans for an informal visit to talk to residents.
September 1977	Public hearing announcements provided to interested persons and newspapers in the communities and surrounding areas.

In fact, the oil industry raised this question as a constitutional "equal protection" issue in litigation, but the suit was settled before the issue was decided by the courts. Later efforts to focus on the question of taxation in the unorganized borough came in 1975 with the establishment of rural education attendance areas in the unorganized borough. Some legislators felt at that time that local control and policy making power should not be given to the REAA's without requiring them to make local tax contributions to help support the REAA's.

The fact that the REAA's are entirely supported by the state whereas school districts in incorporated areas must support much of their education services through local tax levies, seems to be the reason for the introduction of HB 202. Urban legislators find it hard to justify this apparent inequity to their constituents, who are paying both local and state taxes to support education in the state.

That the legislature has the power to levy a property tax, or any tax, in the unorganized borough is without doubt. Under the state constitution (Art.X, Sec.6) the legislature is the assembly, or governing body, of the unorganized borough.

PUBLIC HEARING COMMENTS - SYNOPSIS

- taxation imposed by the state forces the formation of local government.

- no assurance that revenues generated would benefit their area.

- taxation without representation.

- cost to the state of levying the tax is too high for the revenues to be realized.

- opposition to property tax in principle.

- amount of taxation would not equal the services to the area.

- punitive legislation

HB 202 - Delta Junction - Tok - Fort Yukon

Study Requests - how many $ all together the unorganized boroughs get (i.e. total for REAA's + entire unorg.) (anything for CRA?)
✓ - what does it cost to support Delta Junction (GF) Tok, Ft. Y.
✓ - assurance of ability to separate between real & personal property tax
~~- what is the amount of state and federal $ to Tok area?~~

Reasons for opposition - objections to the bill
- forcing organization of local government
- oppose exclusion of unimproved land
- the cost does not equal the anticipated revenue * Heier. Anchorage assessor - early days of pipeline assessments
- vague language of bill - esp. def. of "unimproved land"
~~- taxation without representation / punitive legislation~~
- no assurance that revenue generated would benefit the specific area
- question the basis & estimates upon which fiscal note was drafted
- opposed as the tax is a means to do mapping and title to land
- tax will effect commercial properties and ripple consumer (i.e. electric corp. in Fort Yukon)

Concerns
- possibility & redistricting that would effect the satellite REAA's in the Tok area if they were forced to organize
- those receiving services are not those that pay the tax
✓ - what about the large tract with one structure - ½ the value of the land taxed?
- no reason to impose a tax in order to do mapping and title search in the unorganized boroughs

Questions

- wants the $ amts of services to equal the tax revenue
- ✓ does the ~~borough~~ State own schools and the land upon which they stand?
- ✓ are there any properties locally exempted by Fort Yukon as a 2nd-class city? they don't levy a p. tax – NO
- ✓ will the imposition of this tax result in loss of foundation entitlements (i.e.: per pupil $ amts. based on attendance) makes no provision for only if legislature amended school foundation formula program – NO

Proposed Amendment

~~- refer bill to H HESS~~

- upon receipt of 100% state funded education – request that the tax be lifted
- amend to a ceiling of tax levied
- ✓ – raise the school tax – *constitutional?*
- exemption for a town or a village with a BIA school

✓ *Are native allotments taxable – ?*

✓ " *BIA ~~lottion~~ townsite lots taxable – ?*

Is HUD housing tax exempt? – Yes, but within

Re: House Bill No. 202

Dear Representative Rudd:

House Bill No. 202, an Act providing for assessment, levy and collection of a tax on developed land in the unorganized borough was introduced in the House on February 10, 1977 and was referred to the House Community & Regional Affairs and Finance Committees.

For the consideration of the House Community & Regional Affairs committee, I am enclosing a Fiscal Note prepared by Mr. P. A. Wall, Director, Administrative Services Division, Department of Revenue concerning the proposed legislation,

Very truly yours,

R. D. Stevenson
Special Assistant

Dear Congressperson:

I am sorry I missed the meeting in Delta Junction about HB 202 and consequently don't know the wording on the bill. Actually, it doesn't matter. I only had one important question: Why is this bill necessary at this time?

Any bill that wants to extract more taxes from Alaskans at a time when we should rejoice and reap the fruits of our oil royalties looks, to say the least, strange. To say nothing about a congress working on bills to put millions of surplus dollars into saving accounts and at the same time trying to collect more taxes. It shows the mentality of our legislators to always want more power and more money even if there is more than enough already. Mr. Parr, for instance, initiated HB 202 for more taxes. He never thought of initiating a bill instead to lower an already heavy tax burden for his constituants in Fairbanks.

A few years back another Alaskan congress wanted to abolish the state income tax or finance all schools in Alaska by the state with our oil royalties. This would make much more sense now, and lower our tax burden considerably. Strangely enough, Alaska's population did not even double since 1965, but the government more than tripled during that time and it seems that the more oil money and taxes are collected, the bigger our government gets with little or no improvement in services. What we have now is taxes for taxation's sake and no other reason. If it is not stopped, it can happen again and again at any time to borough, city and bush residents alike. Think about it.

Sincerely,

Joseph Bohmer

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

1. *assessment date January 1, 1980 (Amendment necessary)
2. The estimated tax base for the unorganized borough is based on known taxable property values, parcels per capita and average per parcel valuation within home rule and first class municipalities as of January 1, 1977.
3. Estimated tax base is discounted 20% to reflect the unimproved property exclusion. (503,003,120 = 628,753,900 - 125,750,780)
4. Estimated average mill rate for administration of schools within 11 boroughs is 7 mills (7 mills = numerical average 6.11 weighted upward to reflect Anchorage municipality at 8.69 mills.)
5. Estimated revenue is based on a 7 mill tax rate times the adjusted tax base ($3,521,020 = 503,003,120 X .007)

Analysis Continued

IV. DATE March 28, 1978 PREPARED BY Oren Pomeroy

AGENCY Community and Regional Affairs

PHONE 465-4730

Original: Legislative Finance

cc: Budget and Management

Prime Sponsor (First Legislator Named)

Oren Pomeroy, Jr.

33-001 (Rev. 12/77)

House Bill No. 202 requires the state assessor, Department of Community and Regional Affairs to assess all developed real property situated within the unorganized borough including second class cities and deliver an equalized assessment roll to the Department of Revenue who shall be responsible for collection and enforcement of the tax. The Department of Revenue will provide a fiscal note concerning its duties.

Within the time allocated for the study and the limited information available concerning taxable property within the unorganized borough an attempt has been made to estimate the potential tax base and administrative costs which are the responsibilities of this Department.

An estimate with a high degree of accuracy would be possible if an ad valorem tax base study were initiated and funded prior to implementation of House Bill No. 202.

The beginning date of January 1, 1978, provides only months in which to complete an assessment roll. In our opinion the project will require no less than two years to complete. Administrative costs as indicated are based on an assessment levy date of January 1, 1980, rather than January 1, 1978, as stated on page 1, line 13 of the bill.

BASIS FOR ESTIMATED POTENTIAL REVENUE

Home Rule and 1st Class Municipalities including 20 2nd Class Cities

Real Property - 1-1-77	6,886,720,100
Number of parcels	181,315
Valuation per parcel	37,985
Population	365,815
Population per parcel	2,018

Unorganized Area including 93 2nd Class Cities

Population July 1, 1977 (Estimated)	32,116
Population per parcel	2,018
Number of parcels	15,915
Valuation per parcel at 80% X Organized	30,390
Real property valuation 1-1-77	483,656,850
Adjusted Tax Base 1-1-80 30% Increase (10% Annually)	628,753,900
Estimated Revenue at 10 mills FY 79 (Real Property)	6,287,540
Unimproved Land Exclusion (-20% of Tax Base)	503,003,120
Average Borough School levy at 7 mills (HB 202)	3,521,020

Program development, implementation, and administration is divided between the Department of Community and Regional Affairs and the department of Revenue.

The pilot program will require in-depth research to develop standardized methods, procedures and forms. A professional services fee is included to assist the office staff in completing by June 1980, the required mapping, appraisal, appeal, and delivery to the Department of Revenue the certified 1980 assessment roll, listing all real property taxable under provisions of the bill. The project includes the assembly of all available survey maps, aerial photos; map design and drafting of required area; title search and ownership data, required market and construction cost data; on-site property inspection, enumerating, and grading; office calculations; computer listing of the assessed value of land and improvements according to individual 2nd class cities and regional areas as determined to be appropriate; mailing assessment notices; appeal procedures before the state assessment review board and delivery of an equalized and certified assessment roll to the Department of Revenue.

The State Assessor would be upgraded from range 22 to range 24 and be assigned a secretary. Under direction of the state assessor, the appraiser and mapping supervisors, will develop regulations, forms and procedures. The mapping supervisor will correlate all phases of the mapping project with this staff and a cadastral mapping firm under contract and assume full responsibility for the initial and ongoing land status mapping system. The appraiser supervisor will correlate all phases of the appraisal project with his staff and an appraisal firm under contract and assume full responsibility for property appraisal, appeal, and maintenance of the assessment roll. Under direction of the state assessor the supervisors, staff appraisers, title examiners, draftsmen, and clerks will function as an integrated unit.

The project may be completed with contractual professional fee budget allocations by private, cadastral mapping and appraisal firms under contract or by a combination of departmental staff and private enterprise. The latter is preferred, as initial staff involvement will provide continuity of trained key personnel for subsequent program years administration. The initial two year project costs based on total professional contractual services will add $133,660 or 10.53% to the FY 78 Fiscal Note estimate, and a comparable amount to the FY 79 estimate.
($1,487,045 = 660,000 + 690.1 X 120%)

Program maintenance reflecting the three year reassessment schedule as outlined on page 2, line 14 of the Bill may result in a 10 to 15 % decrease in administration costs after the two year initial assessment project is completed.
(FY 81 $741,288 = 872,104 - 15% (130,816))

Administrative costs as estimated and as supplied by the Department of Revenue for the initial project could be funded in full by enactment of the proposed Real Property Transfer Act (See Appendix G, Alaska Taxable, 1976) with a fee based on 1/2 of 1% of the consideration, estimated to produce $2,250,000 annually.

Enactment of the proposed Real Property Transfer Act will, in addition to providing full funding for the entire project, decrease by 20% the FY 81 and subsequent years administrative costs, as the cadastral mapping and market data information for all of Alaska will be regularly received, catalogued, and filed in-house by the Department. (FY 81,$593,030 = $741,288 - 20% $148,258)

February 28, 1977

The Honorable Lisa Rudd
Chairman
House Community & Regional Affairs
Committee
Alaska State Legislature
Room 620 - Court Building
Juneau, Alaska

Re: House Bill No. 202

Dear Representative Rudd:

House Bill No. 202, an Act providing for assessment, levy and collection of a tax on developed land in the unorganized borough was introduced in the House on February 10, 1977 and was referred to the House Community & Regional Affairs and Finance Committees.

For the consideration of the House Community & Regional Affairs committee, I am enclosing a Fiscal Note prepared by Mr. P. A. Wall, Director, Administrative Services Division, Department of Revenue concerning the proposed legislation,

Very truly yours,

R. D. Stevenson
Special Assistant

Enclosure

cc: The Honorable Steve Cowper
Chairman
House Finance Committee
Alaska State Legislature
State Capitol Building
Juneau, Alaska

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III) Revenue receives tax roll from Community and Regional Affairs. Revenue establishes average mill rate and prepares 20,000 tax bills using computer assisted procedures and mails bills. Revenue receives tax remittance, receipts money, post accounts and transmits money to Treasury. Revenue prepares separate budget and Annual Report. Revenue shares taxes collected to certain new boroughs and first class cities.

A Systems Analyst is required to design and program the Billings/Receipts System, a 6 month requirement. An Accounting Clerk is required to supervise the billings preparation and receipts processing 6 months in FY 78 and full time thereafter.

SUBJECT: HB 202; general comments

TO: Lisa Rudd, Chairman
House Community and Regional Affairs Committee

FROM: Richard A. Bradley, Legislative Counsel

At the recent hearing on HB 202, you invited my comments generally on HB 202; I gather no particular focus was requested, merely whatever might seem useful to you or the committee. Accordingly, my comments will generally explicate what I did, perhaps why I did it, and offer a suggestion on one problem identified at the recent hearing.

When I drafted HB 202 for Representative Parr, SB 35 (Orsini) had already been introduced. Parr requested a departure from some of the approaches in SB 35.

Generally speaking, SB 35 and HB 202 do represent different approaches to the general problem of the unevenness of taxation in the state:

(1) SB 35 levies a property tax (sec. 100) but gives a credit against the tax for sales tax levied in second class cities in the unorganized borough. (Sec. 110). There is no explicit relationship created between the levy of the tax and the state's support of education in the unorganized borough.

(2) HB 202 levies a tax which is an unweighted average of the mill rates levied in boroughs for education. (Sec. 100, 110) No credit for the sales tax in second class cities is granted, quite logically, because these cities do not pay for their schools from sales taxes raised.

SUBJECT: HB 202; general comments

TO: Lisa Rudd, Chairman
House Community and Regional Affairs Committee

FROM: Richard A. Bradley, Legislative Counsel

At the recent hearing on HB 202, you invited my comments generally on HB 202; I gather no particular focus was requested, merely whatever might seem useful to you or the committee. Accordingly, my comments will generally explicate what I did, perhaps why I did it, and offer a suggestion on one problem identified at the recent hearing.

When I drafted HB 202 for Representative Parr, SB 35 (Orsini) had already been introduced. Parr requested a departure from some of the approaches in SB 35.

Generally speaking, SB 35 and HB 202 do represent different approaches to the general problem of the unevenness of taxation in the state:

(1) SB 35 levies a property tax (sec. 100) but gives a credit against the tax for sales tax levied in second class cities in the unorganized borough. (Sec. 110). There is no explicit relationship created between the levy of the tax and the state's support of education in the unorganized borough.

(2) HB 202 levies a tax which is an unweighted average of the mill rates levied in boroughs for education. (Sec. 100, 110) No credit for the sales tax in second class cities is granted, quite logically, because these cities do not pay for their schools from sales taxes raised.

While the state does provide services in the unorganized borough apart from education, the education function does represent the most substantial service delivered and accordingly HB 202 does seem a more focussed approach to the general question that SB 35.

The unweighted average of taxes levied for education in organized boroughs, as the basis for the tax in the unorganized borough, seems somewhat crude. I was not requested to run any analyses of what this does and I have no judgment as to the fairness of the averaging concept. I assume that Mr. Parr also may recognize the concept as crude.

The exemptions from the taxation under sec. 100(b) are rather straightforward:

(1) The unimproved land exemption has a number of justifications, only one of which is the problems created by §21(d) of the settlement act. Other reasons would include a logical state policy of discouraging development in the unorganized borough, either for pure environmental reasons or to discourage the proliferation of individuals who will inevitably demand state services.

(2) AS 29.53.020 is the general exemption from property tax "required" by state law. It includes §20(e), the senior citizen exemption.

(3) AS 29.53.025(a) grants the optional exemption of up to $10,000 for residential property.

(4) AS 43.56 and 43.58 are the Oil and Gas Property Taxes and the Oil and Gas Ad Valorem taxes.

The reference in §120 of the bill is to AS 09.35.090 and perhaps other sections of AS 09.

Secs. 130 - 190 seem rather straightforward and not to require comment.

Sec. 200 would be complied with by the establishment of separate BRU's.

The effective dates of the bill need revision. See sec. 100(a) and sec. 2.

Two other issues merit analysis:

1. The ultimate logic of taxation in the unorganized borough is the encouragement to REAA's, for example, to incorporate as boroughs. Sec. 220 is a gesture towards such a result but perhaps more could be done.

If the bill passes and if the taxation level approaches the amount a borough would need to raise under the foundation program as local effort, consider directing C&RA to work with the REAA's as transitional governments for the study of borough incorporation.

2. During the recent testimony on HB 202, comment was made that present residents of the unorganized borough reacted negatively to the exemption granted undeveloped lands. As I recall the comments, the concern seemed directed at the perceived evils of speculators and speculation. While I have argued above for encouraging nondevelopment, if speculation is viewed as a problem, then consider what might be called a "turnover tax" as part of the property tax scheme.

The difficulty is that frequently property tax evaluations lag substantially behind real values and the system (except perhaps in the Juneau Indemnification example) does not reward those who come forward to volunteer the view that their property is actually worth more than the assessor thinks it is worth.

I have no solution to the latter point but it would be possible to levy a tax on transfers of property which would regain the property tax which would have been collected if the property had been assessed at the value at which it sold. AS 29.53.035(a) approaches the concept though it is administratively ineffective.

The concept, of course, has statewide application.

The comments offered are somewhat random. Should you or the committee have further questions, please advise.

MEMORANDUM

SUBJECT: Unorganized Borough Appropriations
W. O. #4363

TO: The Honorable Lisa Rudd

FROM: Linda Haagensen LH
Research Analyst

Attached are rough estimates of general fund appropriations for Delta Junction, Tok, and Fort Yukon in the categories you have requested. Please keep in mind that these figures do not precisely reflect what is being spent in the three locations because in many cases budget allocations are not formulated by region but on the basis of overall program costs. Persons contacted in the various state agencies provided us with he estimates along with qualifying information attached. (See Table A)

In answer to the second part of your request regarding per capita state expenditures in the organized boroughs compared to the unorganized borough, the information in Table B summarizes educational costs for FY 77 and projected figures for FY 78.

Costs are given per ADM for comparisons based upon actual attendance figures and per capita. Population estimates were obtained from the Department of Labor. As these cost figures indicate, the state spends twice as much per ADM and roughly two and 1/2 times as much per capita in the unorganized borough as it does in organized boroughs.

You stated during our meeting of November 1, that you would also like a per capita estimate of what the state is spending in general inside boroughs as opposed to within the unorganized borough if such information were relatively easy to obtain. Overall state expenditures are not available in categories that would allow for an accurate computation of costs. Our only means of deriving these figures would entail a lengthy process with extremely rough estimates of low reliability as results. For this reason, we have not included this information.

Please advise us if the enclosed information is insufficient for your purposes, so that we may implement further research.

**Based on population estimates from the Department of Community and Regional Affairs*

TABLE A

Notes to Table A:

1. Health Clinics - includes costs for Public Health nursing and Capital Improvement Funding.

   Fort Yukon's FY '77 funding covered services to additional villages of Allakaket, Anaktuvuk Pass, Arctic Village, Beaver, Beetle, Birch Creek, Chalkyitsik, Stevens Village, and Venetie with an estimated population of 1400. Capital Improvement money was appropriated for Health Center to increase FY '76 amount of $200,000.

   FY '78 funds covered services to additional villages of Arctic Village, Beaver, Birch Creek, Chalkyitsik, Rampart, Stevens Village, and Venetie with an estimated total population of 1,150. Delta Junction's funding covers services to additional villages of Cantwell, Circle, Clear, Eagle, Healy, Mt. McKinley, Nenana, Suntrana and Usibelli.

   FY '78 funds were reduced because a part-time nursing position was relocated from another service to provide more coverage for Delta area and reduce the workload of the Fairbanks Itinerant nurse position.

   Tok's operating costs covered services to the following villages: Dot Lake, Mentasta, Northway, Richardson Highway (from mile 219), Tanacross, Tetlin, Tok, Area North of Mile 63.5 to Porcupine Creek. FY 77 Capital Improvements for repair of community buildings leased by Tanana Valley Physician Clinic in Fairbanks.

2. The only locations in the state where general funds have been allocated for ambulance services are Cooper Landing and Healy to assist with gas and maintenance costs.

3. The Division of Tourism in the Department of Commerce awarded money to Delta Junction and Tok for visitor information services.

4. These figures reflect salaries and benefits estimates for Trooper positions assigned to the three areas which include:

   Fort Yukon - 1 Trooper (currently vacant)

   Delta Junction - FY '77 - 1 Dispatcher, 1 Corporal, 2 Troopers; another 1/2 time Dispatcher allocated for FY '78.

   Tok - FY '77 - 2 Troopers, 1 Constable (currently vacant), 1 Corporal; another Trooper position in FY '78.

   Other Trooper-related costs such as for building and vehicle maintenance were unobtainable for each specific location.

5. Educational expenditures are available by school district only. Comparative costs have been computed per average daily membership (ADM), an average daily school attendance figure that provides a more meaningful basis of comparison than would per capita allotments. Per Capita costs are not included due to the difficulties in ob taining reliable population estimates for each school district.

6. FY '77 funds shown here were granted through the Revenue Sharing Program with Community and Regional Affairs. They were provided for the development of a park with play and picnic areas in Delta Junction and for 2 campgrounds and a community center in Fort Yukon. This program bases allotments on a $5 per capita rate for each city/ village that applies in the state. FY '78 appropriations depend upon applications submitted and will be determined later.

7. Money for alcohol programs thru the Office of Alcoholism and Drug Abuse is available if applied for. Fort Yukon and Delta Junction have not submitted applications within the past several years and therefore have received no state funds. Allocations of FY '78 funds have not yet been determined.

TABLE B

Education Expenditures in Boroughs vs. Unorganized Borough, FY'77 & FY'78

		Boroughs	Unorganized Borough
FY'77	Population	329,060	69,160
	ADM	65,427	16,558
	State Aid	$ 121,474,550	60,408,733
	Aver. State Aid/ADM	1,857	3,648
	Aver. State Aid/Capita	369.	873.

REPORT OF THE INTERIM COMMITTEE ON TAXATION IN THE UNORGANIZED BOROUGH

The purpose of the interim committee was to hold public hearings to receive comments from citizens in Delta, Tok, and Fort Yukon as representative of unorganized areas of the state that would be affected by taxation in the unorganized borough. The vehicle for the hearings was HB 202, by Rep. Charles Parr.

The interim committee was composed of members of the standing House Community and Regional Affairs Committee for the Tenth Alaska State Legislature. The members are:

Representative Lisa Rudd, Chair
Representatives Merle Snider, Bill Miles, Sally Smith, Randy Phillips, Nels Anderson, Pete Lovseth, Al Ose and Tim Kelly.

Staff accompanying the committee were:

Bob Dozier, State Assessor; Jim McKenzie, Legislative Affairs Legal Division and Judith Pinero, Administrative Assistant to the committee.

There was no action taken on the bill nor were there any work sessions or mark-up during the interim.

Public Hearings

Delta	October 17
Tok	October 18
Fort Yukon	October 20

(With stops in Dot Lake, Beaver and Stevens village)

Notification-Publication

August, 1977	Letters to Delta, Tok and Fort Yukon School Board to arrange meeting space in the local shcools.
August, 1977	Letters to Dot Lake, Beaver, and Stevens Village advising community of the committee's plans for an informal visit to talk to residents.
September 1977	Public hearing announcements provided to interested persons and newspapers in the communities and surrounding areas.

Summary and History of House Bill 202

House Bill 202 is"An Act providing for assessment, levy and collection of a tax on developed land in the unorganized borough; and providing for an effective date."

The bill,if enacted, would levy a tax on improved property in the state's unorganized borough - that is, any land in the state which is not within an incorporated borough or a first class or home rule city. House Bill 202 was introduced by Rep. Charles Parr of Fairbanks.

There is a similar bill in the Senate, which was introduced by Senator Joe Orsini of Anchorage.

Only improved property would be taxed and the bill calls for the tax rate to equal the average of the property tax rates levied by the boroughs in the state for the support of borough school districts . The Department of Community and Regional Affairs has estimated that the rate is about 7 mills (7/10ths of 1% of the assessed value of the property).

As the bill is drafted, the following property would be exempt from taxation:

1. Property which has not been improved, such as acreage in woodland.

2. Real property which is exempt from taxation under the state's municipal code, such as the property of churches, veterans' groups and senior citizens;

3. Real property which is being taxed under the state's 20 mill levy on property used for the exploration, production or transportation of oil, and

4. up to $10,000. of the value of residential real property, if it is within a municipality and if the municipality approves the exemption.

The bulk of the legislation, after describing the extent of the tax, addresses the mechanics of assessment, appeals of assessments, collection of the tax, and enforcement processes and penalties.

HB 202 is not the first time the question of a property tax in the unorganized borough has been raised. It came up in 1972 when the 20 mill tax was placed on oil and gas properties. At that time, the question was whether it was fair to tax the pipeline, but not any of the other valuable property in the unorganized areas.

In fact, the oil industry raised this question as a constitutional "equal protection" issue in litigation, but the suit was settled before the issue was decided by the courts. Later efforts to focus on the question of taxation in the unorganized borough came in 1975 with the establishment of rural education attendance areas in the unorganized borough. Some legislators felt at that time that local control and policy making power should not be given to the REAA's without requiring them to make local tax contributions to help support the REAA's.

The fact that the REAA's are entirely supported by the state whereas school districts in incorporated areas must support much of their education services through local tax levies, seems to be the reason for the introduction of HB 202. Urban legislators find it hard to justify this apparent inequity to their constituents, who are paying both local and state taxes to support education in the state.

That the legislature has the power to levy a property tax, or any tax, in the unorganized borough is without doubt. Under the state constitution (Art.X, Sec.6) the legislature is the assembly, or governing body, of the unorganized borough.

PUBLIC HEARING COMMENTS - SYNOPSIS

- taxation imposed by the state forces the formation of local government.

- no assurance that revenues generated would benefit their area.

- taxation without representation.

- cost to the state of levying the tax is too high for the revenues to be realized.

- opposition to property tax in principle.

- amount of taxation would not equal the services to the area.

- punitive legislation

- improved land to be taxed (i.e. local electric company) would result in higher rates to consumer.

SUGGESTED AMENDMENTS TO HB 202;

- remove exemption for unimproved land
- clarify vague language in the bill
- provide a definition of unimproved land

RECOMMENDATIONS BY PUBLIC HEARING PARTICIPANTS:

1. In lieu of enacting HB 202, raise the amount of school tax paid by residents of the unorganized borough.
2. If the tax were to be levied, upon receipt by organized areas of 100% state-funded education, the tax should be lifted.
3. One request was received for a referral of the bill to the House Health, Education and Social Services Committee to determine the effect of the bill on the REAA's.
4. Need for more public testimony.

About 80 people attended each public hearing.- A very large number considering the size of the communities. Only one person (in Delta) testified in favor of the bill. However, after each hearing several people told committee members that they realized that their area should contribute to the cost of the education services they receive but had not dared say so in face of community opposition to the tax.

The House Community and Regional Affairs Committee is continuing work on the issue of taxation in the unorganized borough during the 1978 Legislative session.

Respectfully submitted,

Lisa Rudd, Chair
House Community and Regional
Affairs Committee

Anchorage, Alaska 99509

Dear John,

Thanks so much for your thoughtful letter about HB 202 (taxation in the unorganized borough). I am enclosing a copy of my response to Ms. Johnston's letter. I would like also to address the concerns you raise.

It is not completely true that local governments have been formed when a local tax base develops. There is no local government in Tok, for instance, although there is certainly enough tax base there for at least a second class city. I understand that there is a move afoot to form a borough in the Yukon Flats area, using 150 miles of pipeline as its tax base. (In fact, I have been instrumental in getting $90,000 put into the state budget for FY 79 to fund studies, surveys and public meetings to help the Yukon Flats people decide whether to form a borough.)

I am not at all sure that the state per capita limit on local government taxation of oil and gas production facilities works a hardship on local governments. Rather than being held under the level of other local governments the North Slope Borough and the Kenai Peninsula Borough collect more property taxes per capita than any other boroughs, and the North Slope Borough collects 3 1/2 times as much property tax per capita as the Kenai Borough. (I am referring here to 1976 figures, the only ones available to me as I write this on a Sunday afternoon).

You can argue if you wish that rural areas are supporting the state through oil production, but the fact is that the North Slope development is on state land which the state leased to the oil compaines and the royalties which go into the state treasury were granted to the state in the Statehood Act. If you believe it is true even after all that that the rural areas are supporting the state, then you must a least recognize that it is not because of any effort put forth by

the rural populations of the state.

The thing that I think we need the most in this state is the formation of local governments. There is a very unhealthy love/hate relationship developing between the unincorporated areas of the state and the state government. Rural people are dependant on the state and powerless to influence it. I would be willing to have the state fund the entire cost of local governments in the rural areas to get things started, as we have done with the REAAs. But I would have to have some assurances that local governments would tax themselves as soon as their property valuation reached a certain per capita amount. In fact, I have tried to initiate discussions with my own committee and some rural legislators along these lines and have been firmly rebuffed. It is only natural, I suppose, that as long as people in the rural areas can get things free they will resist any proposals which may lead to their having to pay.

To summarize: the present situation is unhealthy. The best way to end it is to encourage the formation of local governments in the rural areas of the state. I have made a number of efforts this year to interest other legislators in various methods of encouraging the formation of local governments without putting financial burdens on those local governments. So far I am the only legislator I know who is interested in that approach.

I believe that unless something is done to form local governments soon we will see the enactment of a state property tax, for the reasons I outlined in my letter to Ms. Johnston.

Let's sit down and talk this over next time you're in Juneau.

Yours sincerely,

Lisa Rudd

Juneau, Alaska 99811

Dear Lisa:

Elizabeth Johnson of Bristol Bay Native Corporation, was kind enough to send me a copy of a letter relating to taxation in the unorganized borough. I would like to say that I personally concur with all of her comments. I think that the letter states fairly clearly the dilemma facing the State Legislature in attempting to levy a property tax on the unorganized borough.

I believe that there are a couple of further points to be made in regard to taxation in the unorganized borough. The first and most important is that whenever there has been industrial or other economic development in the rural areas, which have provided for a tax base, local government of some kind has been formed. Sometimes in rural areas, this government has been formed over the vigorous objection of people in the State Legislature and the State administration as in the case of the North Slope Borough. It is not that rural people do not want a tax system, it is just tht presently there is not a base out there to support any kind of meaningful government.

You should realize that the State has reduced the possibility of potential rural governments by limiting the amount of taxation that can be received from oil development. It is quite possible that one or more boroughs could have been formed along the pipeline route, but with the State limitation on taxation, this will most likely not take place. It seems inconsistent to me that the State Legislature on one hand limits rural people's ability to tax major economic development such as pipeline yet wants to mandate a tax on small homes and businesses owned by individuals that can barely afford to eek out a living.

I think another point worthy of note is that presently State government is supported by the rural areas. Without the income received from oil development, fisheries, and to a limited extent timber, the State government could not exist in its present form. There seems to be a myth among many Anchorage legislators

that the rural parts of the State do not carry out their own weight. I am sure rural people would be more than pleased to retain those revenues that are produced from the rural areas and let Anchorage and Fairbanks try to subsist on the revenues produced from their contributions to the State.

I would be glad to talk to you further on this issue if you would like.

Sincerely yours,

John Shively
Vice President of Operations

ALASKA HOUSE OF REPRESENTATIVES

Community and Regional Affairs Committee

LISA RUDD, Chair

Pouch V, State Capitol
Juneau, Alaska 99811
(907) 465-3870

26 April 1978

Ms. Elizabeth Johnston
General Counsel - Bristol Bay
Native Corporation
445 E. 5th Avenue P.O. Box 220
Anchorage, Alaska 99510

Dear Ms. Johnston,

Thank you very much for your remarks concerning HB 202, taxation in the unorganized borough. HB 202 has passed out of the Community and Regional Affairs Committee and is now in the House Finance Committee.

My personal feeling is that HB 202 is a needed bill in that it will address an inequity which has existed since statehood. That is, that those residents in the organized municipalities are paying to support not only local government services in their own areas, but also for local government services provided by the state to residents in the unorganized borough.

You suggested that local autonomy cannot be fostered by HB 202. I would, of course, prefer local government incorporation to HB 202. This would allow for local autonomy. However, as long as the state is funding what are normally local government services in the unorganized areas of the state, I must support the levy of a state property tax there.

It may interest you to know that the territorial government instituted a property tax which was levied throughout Alaska. One of the benefits which accrued from that tax and which will accrue to the state again if HB 202 is implemented, is that we will have a current inventory of properties and ownership throughout the state. The cadastral mapping process will straighten out property descriptions and title claims. This is an important tool for planning and value estimating during important negotiations such as D-2, the natural gas pipeline, and other future issues, as well as aiding in the planning of future municipalities.

I do not believe that cadastral mapping and property valuation will be as difficult as you envision. Properties do change hands fairly frequently in the bush. The same mechanisms for property assessment which are used in the organized areas of the state are relevant in the unorganized borough. The sheer magnitude of the inventory task will undoubtedly make it expensive, but once the program is in operation, revenues can be expected to exceed expenses.

To address your points regarding low income in the bush, information presented to the committee did not indicate that Bristol Bay residents are below the state average per capita income level. Rather, they are above the state average. High employment is a normal condition throughout the state --urban and rural, organized and unorganized areas. This is not a desirable condition, but it remains with us and property taxes remain an effective mechanism for funding local services.

As the bill passed out of committee, unimproved land was exempted from taxation. With regard to Native Lands, it is clear in the Alaska Native Claims Settlement Act that the state can tax only lands which have been leased or developed. Among those, HB 202 proposes to tax only those which are "improved." I have enclosed a memorandum from Richard Bradley of Legislative Affairs Agency which discusses this issue.

Please rest assured that HB 202 is not in any way a retreat from the state's obligation to provide education for all its residents. As you have stated, the state pays twice as much for education in the unorganized borough as in the organized boroughs. To provide for a property tax in the unorganized borough is simply an effort to equalize the tax burden. And although education is the largest area of concern there is no dedication of funds to education contained in HB 202. The bill is concerned with all those services which are normally local government services provided by the State in the unorganized borough.

I will say in closing that the time for HB 202 has probably not yet arrived, but I believe such a program is not far away. The obvious alternative for people in the unincorporated areas of the state is to form local governments.

Last year the legislature (led by my Community and Regional Affairs Committee) changed the powers of third class boroughs so that the only mandatory responsibility they now have is providing education within their boundaries. Since the state pays most of the cost of education anyway and since many other local government services are supported by revenue sharing from the state, the cost to rural people of maintaining a minimal

local government structure should not be too great. I have proposed a minimum $25,000 grant to small villages which receive revenue sharing money, which should ease the burden even further.

Again, thank you for your letter. I hope that my response has clarified some of the issues for your.

Yours sincerely,

Lisa Rudd

March 31, 1978

The Honorable Lisa Rudd
Alaska State House of
Representatives
Pouch V
State Capitol Building
Juneau, AK 99811

Dear Representative Rudd:

We have reviewed the proposed H.B. 202 and S.B. 35 dealing with real property taxes in the unorganized borough. While real property taxes are the favored way to support school systems, they cannot be justified in the present instance.

1. Real property taxes have basically three virtues: they preserve the autonomy of the local decision-making; they are subject to equitable exemptions for the poor and elderly; finally, they are relatively simple or inexpensive to administer. However, if real property taxes are levied in unorganized borough, none of these goals will be achieved.

a. Local autonomy cannot be fostered by the State Legislature making decisions on local tax rates, exemptions or spending. Not only is the State Legislature removed from the locale to be taxed, but seventy-five percent of that body is elected by persons not subject to the tax.

b. Although Alaska Statute 29.53.025(a) permits certain equitable exemptions, they are optional only. For any of them to be effective, a municipality within the borough, then the borough, and finally, in some instances, the voters must act. Unless first-class cities within the unorganized borough have created a $10,000 exemption for residences, the State Legislature functioning as a borough assembly cannot make said exemption a reality. Equity is thereby lost.

c. Real property taxes are, in general, relatively inexpensive to administer. This fact coupled with high compliance makes them extremely appealing to government. However, the factors which make these taxes inexpensive are absent in the bush. In the unorganized borough, real property descriptions, locations, or recorded owners are almost nonexistent. Furthermore, an identifiable market on which to base full and true value is also lacking. Since the comparable sales approach could not be used for valuation, only the capitalization of income and the cost replacement approaches remain. The income approach, of course, could be used only on income-producing property, yet values will be needed for all "improved" real property. Finally, the cost replacement approach is the least fair or reliable one and, in any case, is of aid only as to buildings. Giving these administrative and valuation problems, costs will be substantial, and the worth of any tax correspondingly reduced.

2. Certain weaknesses or problems are inherent in real property taxes. Such taxes are regressive, and their high effective rate influences economic behavior. Both of these problems are exacerbated when real property taxes are instituted in the bush.

a. Real property taxes are regressive. Unlike income taxes, they impose a greater proportional burden on those with low income. For instance, the estimated income per return of Bristol Bay residents is only half that of Anchorage residents while their cost of living is twenty-eight percent higher. Clearly, the proportional burden of real property taxes on such people is great.

b. Real property taxes influence economic choices or the use of resources. Therefore, care must be taken so that such taxes will foster the type of resource allocation which the State favors. At present, the State of Alaska is trying to protect traditional subsistence and, at the same time, trying to encourage development sufficient to reduce unemployment. Neither of these goals is enhanced by real property taxes.

For instance, it is very expensive for commercial enterprises to locate in rural Alaska. They incur additional costs in housing, communications and transportation by so doing. At present, only the fishing or extractive industries are drawn there because of certain resources.

As a result, rural Alaskans suffer from high unemployment which is only partially offset by their subsistence rights. Many outside communities which have struggled with depressed economies have not only cut taxation, but also donated lands to businesses willing to relocate. Yet Alaska is proposing a real property tax for depressed areas.

To complicate matters further, Bob Dozier of the State Assessor's office has proposed that the unimproved land be taxed too. Such an action would force the landowner to choose among developing, paying taxes out of his other income, or losing his land to the State. Therefore such taxes increase pressure for development but, as discussed above, without the existence of development opportunities. Given that many rural Alaskans do not have much by way of other income, more land would move into State ownership through foreclosure. Certainly, this does not protect a subsistence life-style or encourage development.

Even if the problems discussed above do not exist, two technical or legal difficulties remain. H.B. 202 and S.B. 35 fail to adequately take into account Section 21(d) of the Alaska Native Claims Settlement Act and Article IX, Section 7 of the Alaska Constitution. Confusion, litigation and additional expenses for the State and private property owners alike would result.

1. Generally, Section 21(d) provides that Native lands are exempt for twenty years provided that they are not leased or developed. Congress granted this tax moratorium for many reasons. Partially it was additional compensation for Native claims. Partially it was to allow for necessary adjustments to the economic mainstream. The intent was to give Native corporations time to experiment economically before assuming substantial tax burdens, to provide temporary sanctuary for traditional subsistence, and to retard the inexorable movement of Native lands to non-Native hands. Price, The Tax Exemption of Native Lands Under Section 21(d) of the Alaska Native Claims Settlement Act, 6 UCLA-AK. L.REV. 1 (1976). In so doing, Congress has preempted and limited the State of Alaska's options.

The relevant language of section 21(d) is as follows:

> Real property interests conveyed, pursuant to this Act, to a Native individual, Native group, or Village or Regional Corporation which are not developed or leased to third parties, shall be exempt from State and local real property taxes for a period of twenty years ... Provided

Clear in ANCSA that state can tax only lands which have been leased or developed. Among these, HB 202 proposes to tax only those which are "improved."

> That ... local real property taxes ... may be imposed upon leased or developed real property within the jurisdiction of any governmental unit under the laws of the State ...

Yet the State Legislature proposes to tax all improved real property. How does this fit with the phrase "leased or developed"? When the State Legislature is acting as a borough assembly, is it imposing a State or a local tax? Where is the landowner/third-party distinction recognized by the State? Certainly, the proposed bills as presently drafted do not make clear that the State will not encroach on Native rights granted by Congress.

Ed a concern in fact Habeid does not contain any such

2. Article IX, Section 7 of the Alaska Constitution states that "the proceeds of any State tax or license shall not be dedicated to any special purpose ..." Yet S.B. 35 appropriates the net revenues generated by taxation for the benefit of the unorganized borough. Assuming, arguendo, that S.B. 35 imposes a State tax, then the attempt to dedicate revenues to schools or to local government is unconstitutional. It is of no effect. 1969 Atty Gen'l Opinion #3.

Our final concern is that H.B. 202 and S.B. 35 attempt to link the burdens of taxation to the benefits of education. Yet for the foreseeable future, taxable lands in rural Alaska cannot pay for the high cost of education in the bush. Is the State retreating from its commitment to equal opportunities for all Alaska's children? At present, the State spends twice the money ADM in the unorganized borough as it does in the boroughs. If the State does not continue this type of commitment, only areas with a high assessed valuation of real property can choose to have quality education. For the unorganized borough, such choice is illusory. The State's withdrawal, therefore, would violate equal protection. Serrano v. Priest, 557 P.2d 929 (1977) cert. denied.

Very truly yours,

Elizabeth Johnston

MEMORANDUM

SUBJECT: Individual Income Tax Base in Municipalities (W.O. #4480)

TO: The Honorable Lisa Rudd

FROM: Ken Humphreys
Research Analyst

This memorandum is in response to your request for information concerning the income tax base in municipalities. We have obtained data from the Department of Revenue which sheds some light on the geographical distribution of individual Alaska income tax collections.

The enclosed table gives actual tabulations for the number of 1975 returns for each census district and total adjusted gross income. Returns were assigned to census divisions on the basis of zip codes. Some 70,348 returns (39% of the total number accounting for 44% of total adjusted gross income) were filed with a zip code outside the state; another 17,545 returns (about 10% of the total number accounting for about 10% of total adjusted gross income) had an Alaskan zip code but are "unclassified" by census district.

On the basis of these tabulations, we have assumed that income tax revenues are proportional to adjusted gross income and generated an estimate for state income tax revenues for each division. Finally, we have, as you requested, applied factors of 30%, 40% and 50% to the estimated state income tax revenues for each division to arrive at approximate amounts that might have been generated under a local income tax such as H.B. 75 would allow.

Census divisions have been categorized under a heading of either Organized Boroughs or Unorganized Borough even though boundaries do not exactly correspond.

Zip code allocation of 1976 returns will not be available until March at the earliest. Until then, the best estimate for 1976 individual income tax revenues by census division can be obtained by multiplying the

figures in the enclosed table by $\frac{176,732,500}{125,192,700}$ or 1.41, the ratio of 1976 to 1975 total collections. There is evidence to suggest that there are appreciable differences in the distribution of income from 1975 to 1976, so this method of estimation is not recommended.

Please let us know if you would like further information.

M E M O R A N D U M March 7, 1977

SUBJECT: HB 202; certain questions

TO: Representative Lisa Rudd
Chairperson of C & R A

FROM: Richard A. Bradley
Legislative Counsel

You have requested my comments on certain features of HB 202, introduced by Representative Parr.

An analysis of §100(b)(1): This subsection provides that certain property is exempt from the tax levied under §100(a). Four classes of property are listed:

"(1) unimproved land." Section 21(d) of the Alaska Native Claims Settlement Act provides:

> (d) Real property interests conveyed pursuant to this Act, to a Native individual, Native Group, or Village or Regional Corporation which are not developed or leased to third parties, shall be exempt from state and local real property taxes for a period of twenty years after the date of enactment of this Act (December 18, 1971): Provided, That municipal taxes, local real property taxes, or local assessments may be imposed upon leased or developed real property within the jurisdiction of any governmental unit under the laws of the state: Provided further, That easements, rights of way, leaseholds, and similar interests in such real property may be taxed in accordance with state or local law. All rents, royalties, profits and other revenues or proceeds derived from such property interests shall be taxable to the same extent as such revenues or proceeds are taxalbe when received by a non-Native individual or corporation.

Congress possesses constitutional authority to deal with Natives (or Indians) differently than non-Natives. Art. I, §8, clause 3, United States Constitution. Accordingly, §21(d) does not violate the "equal protection clause" of the

Fourteenth Amendment. There is a general consensus, however, that states do not have a similar authority and must deal with all their residents equally.

It strikes me that a provision of state law according a preferred status tax-wise to unimproved property establishes a reasonable classification for tax purposes; the existence of §21(d) is an adequate basis for the exemption. If a more elaborate rationale needs to be developed, consider the thesis that undeveloped land (in rural settings) is unproductive and hence should not be taxed. In an age concerned with the environment, a policy of establishing tax patterns which do not encourage (or force) development is socially desirable. Other states (and Alaska, AS 29.53.035) currently give special tax status to agricultural lands. Whether all the lands which will benefit from this exemption are agricultural does not seem significant.

Note that section 21(d) would allow taxation when property interests in third parties are created by lease. The exemption in §100(b)(1) does not seek to reach unimproved property held by lessees.

Note also that "unimproved land" is defined in the bill at §230(2).

"(2) real property exempt from taxation under AS 29-.53.020," this provision of the municipal code establishes "required exemptions." They include (under §20(a)):

(a)(1) municipal, state, or federally owned property. This section merely recites existing law, that is, the listed property is exempt, not because of this section but because of Federal and State law. Note that the section explicitly recognizes that to the extent that lessees are taxable, they pay taxes to the extent of their interest.

(2) household furniture of individual householders not exceeding $500.

(3) property used exclusively by nonprofit religious, charitable, hospital, cemetary or educational purposes.

(4) property of veterans' organization.

(5) "money on deposit."

(6) property owned by senior citizens under the terms of the exemption at §20(e).

The provisions of subsections (b) through (i) of 20 elaborate on the rights granted under (a), above.

"(3) real property exempted by a second class city under AS 29.53.025(a)." Second class cities may exist within the unorganized borough, AS 29.03.010. Such cities possess a "limited property tax," AS 29.53.410. A municipality levying that tax may grant an exemption on the first $10,000 of value on a residence, AS 29.53.025(a).

"(4) real property subject to or exempt from taxation under AS 43.56 and AS 43.58." AS 43.56 establishes "oil and gas exploration production, and pipeline transportation property taxes." AS 43.58 establishes the "oil and gas reserves ad valorem tax." The property described in this paragraph is exempt from the taxes levied under HB 202 because the scheme of taxation established under AS 43.56 and AS 43.58 is comprehensive and is considered to result in full taxation of the properties subject to those taxes.

If you have any questions on the analysis here, please advise.

You also requested our comments on the implications of HB 202 for Village Housing or for ASHA projects generally that may exist in the unorganized borough.

AS 18.55.250 provides:

> The property of the [Alaska State Housing] authority is public property used for essential public and governmental purposes and this property and the authority are exempt from all taxes and special assessments of a municipality, the state or a political subdivision of the state. However, instead of taxes, the authority may make payments to the municipality or political subdivision for improvements services and facilities furnished by it for the benefit of a housing or public building project.

Regional Native Housing Authorities created under AS 18-55.995-.996 are given "all [the] powers, rights, and functions now or subsequently specified for the Alaska State Housing Authority...under §§10-290 of [AS 18.55].

Accordingly, it appears that any improvements to lands owned by ASHA or the regional native housing authorites will be tax exempt (and will also contribute funds in lieu of taxes, if any are levied).

If you have any other questions, please advise; if you need me at the hearing Thursday, I am as close as your telephone and can come over immediately (3896).

MEMORANDUM

April 12, 1977

SUBJECT: Comparison of Per Capita Individual Income Tax Derived From the Unorganized Borough With That Derived From the Organized Boroughs (W.O.# 3666)

TO: The Honorable Lisa Rudd

FROM: Alexander Hoke AH
Research Analyst

WITH: Gregg K. Erickson
Director of Research

The Audit Division of the Department of Revenue informs us that the means to distinguish between those state individual income tax returns from the organized boroughs and those from the unorganized borough is not available to the department at the present time. Gary Jenkins, Director of the Audit Division, estimates that his present staff size must be at least doubled in order to extract and retain from the returns the additional data elements crucial to answering this and many similar questions referred to his office every year.

In the face of Revenue's inability to provide the data you need, we have developed an alternative approach.

The U.S. Bureau of Census generates population estimates annually, and the Bureau of Economic Analysis (BEA) of the U.S. Department of Commerce provides statistics on per capita personal income by Census Division. The BEA data and the Census Bureau data (adjusted by the Alaska Department of Labor) used in this study is published in the Alaska Department of Commerce and Economic Development analysis of The Alaskan Economy Mid-Year Performance Report 1976 (hereinafter referred to as Mid-Year Report). A systematic categorization of the Census Division data into the organized borough or unorganized borough classifications provides a basis for estimating the proportion of state personal income tax revenues derived from each jurisdiction. Our method, though very complex, yields estimates that are--in our opinion-reasonably accurate *when used for the purposes intended*, i.e., to provide a comparison of the aggregate income tax burden in the organized and unorganized boroughs.

Our first assumption, then, is that the Census Division boundaries correspond closely enough to borough boundaries that Census Division population and income data can be grouped into borough classifications with a relatively high degree of confidence.

The second assumption we must make is that 1974 BEA statistics for per capita income (the most current available) are directly proportional to 1975 levels. [It is our opinion that an evaluation of 1974 data would prove so far removed from present reality that such an analysis would be valueless. Hence, we have chose to adjust 1974 data to correspond with 1975 conditions.] Naturally, there exists the very real danger, discussed in more detail later, that pipeline construction activity, Alaska Native Settlement Act impact, and other causes may have significantly disturbed the arithmetic relationship of a given Census Division with that of any other division.

Next, we note the "known" statistics which we manipulate on the basis of the above assumptions, namely the following statewide statistics for 1975 which provide guidelines for our computations:

404,634 = state total population for 1975
(Department of Labor)

$2,306,407,942 = state total taxable income for calendar 1975
(Department of Revenue)

$119,385,690 = state individual income tax revenues calculated from fiscal 1976 collections of $146,202,135

plus 1st Quarter Withholding of FY 1975	+26,582,449
plus 2nd Quarter Withholding of FY 1975	+33,406,030
minus 1st Quarter Withholding of FY 1976	-37,216,531
minus 2nd Quarter Withholding of FY 1976	-49,588,393
(Department of Revenue)	$119,385,690

182,907 = number of state individual income tax returns
(Department of Revenue)

Referring, now, to the attached computer printout (1975 Personal Income Tax Evaluation) we define each column of the printout as to its origin and/or derivation:

Census Division: This column represents a categorization of the Census Divisions into either the organized boroughs classification or the unorganized borough classification.

Population: These figures are taken directly from the Mid-Year Report (Table 10, page 45).

Estimated Per Capita Taxable Income: Table 15, page 49 of the Mid-Year Report offers Bureau of Economic Analysis residency adjusted estimates of per capita personal income (adjusted gross income) by Census Division for 1974. Recalling that we have a reliable 1975 total for state taxable income, $2,306,407,942, we assume that taxable income is directly proportional to adjusted gross income, for which we have BEA 1974 statistics. If we further assume that the 1974 taxable income per Census Division is directly proportional to 1975 taxable income per Census Division, we can compute the appropriate proportionality factor which will lead us to an estimate of the 1975 state total taxable income figure. To summarize our procedure, the figures in the Estimated Per Capita Taxable Income column of the computer printout represent the product of 1974 BEA per capita personal income statistics and two factors of proportionality--one converting adjusted gross income to taxable income, and the other adjusting 1974 data to 1975 levels.

Estimated Total Taxable Income: The Census Division total taxable income is merely the product of the population and the per capita taxable income.

Estimated State Income Tax Revenues: We have a reliable estimate of calendar 1975 state individual income tax revenues, $119,385,690. In line with our earlier assumption that the taxable income per Census Division is proportional to the BEA personal income figures, we further assume that income tax revenues per Census Division are proportional to the total taxable income for the division. Census Division income tax revenue figures are then equal to the product of state total individual income tax revenues times the quotient of total taxable income for the division as a fraction of the total taxable income for the state.

Estimated Number of Returns: Assuming that the number of tax returns from a given Census Division is proportional to the population of that division, we compute the number of returns per division as the product of the total number of returns for the state and the ratio of the population of that Census Division to the total state population.

Estimated Income Per Return: Per return income is the quotient of total taxable income for the Census Division (numerator) and the number of tax returns (denominator).

Method 1 Estimated Tax Per Return: Method 1 computes per return income tax as a function of the per return income for the Census Division as applied to the tax tables, and is adjusted proportionately so that total state income tax revenues matches the value supplied by the Department of Revenue.

Method 2 Estimated Tax Per Return: Method 2 is offered as a check against method 1 values, and is simply the quotient of the income tax revenues for the Census Division divided by the number of tax returns. It should be noted that when the per return income tax falls below $668, method 1 values are less than the corresponding method 2 values, and when the per return tax is greater than $668, method 1 values are greater than the corresponding method 2 values. This is the relationship we expected, in light of the progressive nature of the income tax tables.

It is our belief that the methodology used in this evaluation is the most useful and the most responsible procedure attainable under present circumstances. Nevertheless, several caveats are in order. Obtaining a satisfactory total for state population, for instance, is a highly speculative matter. The disparity between the Bureau of the Census estimates for 1975 state population (352,000) and the estimates provided by the Alaska Department of Labor (404,634) readily attests to the magnitude of the problem. Moreover, because revenue sharing allocations are based on the number of residents, there is much squabbling among borough governments over the residency of many pipeline construction workers. Hence, the proper ranking of Census Divisions in terms of population size is uncertain.

Additionally, many of our assumptions are subject to some degree of error. For example, while we have assumed a direct relationship between the number of tax returns and the population size of a Census Division, common sense dictates that in rural areas, where a significant proportion of residents rely on a subsistence economy, the ratio of the number of returns to the number of residents may differ widely from the same ratio in the urban areas.

Furthermore, according to the Mid-Year Report, radical changes in the BEA personal income statistics after 1973 arose from the large transfer payments of the Alaska Native Settlement Act. Although state averages were not greatly affected, certain Census Divisions (Angoon, Barrow, Bethel, Wade Hampton, etc.) experienced marked increases in personal income levels as a consequence of these transfer payments, due primarily to the subsistence economy prevalent in these districts. The question that arises is--just what sort of changes have taken place from our 1974 BEA income statistics to our 1975 income estimates?

To further compound the problem, BEA assumes, for purposes of personal income calculations, that these Alaska Native Settlement Act transfer payments are present, tangible income to the individual natives involved. In fact, the payments are made to regional native corporations and hence the income is essentially non-transferable (until 1991) stock in the corporations. In other words, the BEA per capita income figures tend to infer higher incomes than is actually the case since the transfer payment income is not a readily accessible or liquid income.

An additional problem emanates from the methodology used by the Bureau of the Census for population estimates. The Census Bureau population migration estimates are directly related to the number of school age children in a Census Division over the period of time in question. The Division of Economic Enterprise, according to the Mid-Year Report, believes that this methodology ignores the phenomenon of the preponderence of pipeline construction workers being either single or having decided not to bring their families to Alaska. Consequently, the per capita personal income data supplied by BEA, for those Census Divisions affected most severely by pipeline construction, is skewed toward higher values, since the relatively low numbers of school children would reflect a low general population (according to Census Bureau methodology).

In summary, avenues for the introduction of error into our calculations are clearly present in this evaluation. Nevertheless, we feel that a reliance on the relative magnitudes and interrelationships of the data is warranted, particularly in view of the close agreement of the estimated income tax as calculated by the two different methods.

LEGISLATIVE AFFAIRS AGENCY

M E M O R A N D U M

March 31, 1977

SUBJECT: Legislative Powers in the Unorganized Borough

TO: Representative Lisa Rudd

FROM: Richard Bradley, Legislative Counsel RB

Judith Pinero's memorandum raised questions regarding the responsibilities of the legislature when it exercises powers granted to a borough assembly in organized boroughs. Specifically, she asked that I comment on two questions:

> (1) Since the legislature acts as the assembly for the unorganized borough, does the legislature then fall under the statutory restrictions on the taxing powers of the boroughs? If so, what are those restrictions?
>
> (2) Given the same authority of the legislature for the unorganized borough, does the legislature fall under any statutory requirements on the assessment and the appeal process of assessments?

Under the Alaska Constitution,

> The legislative power of the State is vested in a legislature consisting of a senate ... and a house of representatives .... (Art. II, sec. 1)

Acting under this grant of authority, the legislature has created the framework of cities and boroughs and given them the broad range of powers they exercise. The legislature has established by statute the taxing powers of cities and boroughs (AS 29.53.010); similarly it has established the statutory requirements on assessment of property and has established an appeal process on assessments (AS 29.53.100 et. seq.)

At the same time, the Alaska Constitution recognizes that not all areas of the State may be organized into cities and boroughs. The areas excluded from organized municipal

context, in fact the legislature does not presently possess the responsibility, in any capacity, to act as an assessment review board. Since any legislation establishing such taxes and necessitating a review process may well deal with this issue explicitly, it seems undesirable to address the question abstractly. I suggest, moreover, that the legislature may wish to consider alternatives to the assumption of this function in any future legislation establishing a real property tax. See, for example, AS 43.56.040.

M E M O R A N D U M March 7, 1977

SUBJECT: HB 202; certain questions

TO: Representative Lisa Rudd
Chairperson of C & R A

FROM: Richard A. Bradley
Legislative Counsel

You have requested my comments on certain features of HB 202, introduced by Representative Parr.

An analysis of §100(b)(1): This subsection provides that certain property is exempt from the tax levied under §100(a). Four classes of property are listed:

"(1) unimproved land." Section 21(d) of the Alaska Native Claims Settlement Act provides:

> (d) Real property interests conveyed pursuant to this Act, to a Native individual, Native Group, or Village or Regional Corporation which are not developed or leased to third parties, shall be exempt from state and local real property taxes for a period of twenty years after the date of enactment of this Act (December 18, 1971): Provided, That municipal taxes, local real property taxes, or local assessments may be imposed upon leased or developed real property within the jurisdiction of any governmental unit under the laws of the state: Provided further, That easements, rights of way, leaseholds, and similar interests in such real property may be taxed in accordance with state or local law. All rents, royalties, profits and other revenues or proceeds derived from such property interests shall be taxable to the same extent as such revenues or proceeds are taxalbe when received by a non-Native individual or corporation.

Congress possesses constitutional authority to deal with Natives (or Indians) differently than non-Natives. Art. I, §8, clause 3, United States Constitution. Accordingly, §21(d) does not violate the "equal protection clause" of the

Fourteenth Amendment. There is a general consensus, however, that states do not have a similar authority and must deal with all their residents equally.

It strikes me that a provision of state law according a preferred status tax-wise to unimproved property establishes a reasonable classification for tax purposes; the existence of §21(d) is an adequate basis for the exemption. If a more elaborate rationale needs to be developed, consider the thesis that undeveloped land (in rural settings) is unproductive and hence should not be taxed. In an age concerned with the environment, a policy of establishing tax patterns which do not encourage (or force) development is socially desirable. Other states (and Alaska, AS 29.53.035) currently give special tax status to agricultural lands. Whether all the lands which will benefit from this exemption are agricultural does not seem significant.

Note that section 21(d) would allow taxation when property interests in third parties are created by lease. The exemption in §100(b)(1) does not seek to reach unimproved property held by lessees.

Note also that "unimproved land" is defined in the bill at §230(2).

"(2) real property exempt from taxation under AS 29-.53.020," this provision of the municipal code establishes "required exemptions." They include (under §20(a)).

(a)(1) municipal, state, or federally owned property. This section merely recites existing law, that is, the listed property is exempt, not because of this section but because of Federal and State law. Note that the section explicitly recognizes that to the extent that lessees are taxable, they pay taxes to the extent of their interest.

(2) household furniture of individual householders not exceeding $500.

(3) property used exclusively by nonprofit religious, charitable, hospital, cemetary or educational purposes.

(4) property of veterans' organization.

(5) "money on deposit."

(6) property owned by senior citizens under the terms of the exemption at §20(e).

The provisions of subsections (b) through (i) of 20 elaborate on the rights granted under (a), above.

"(3) real property exempted by a second class city under AS 29.53.025(a)." Second class cities may exist within the unorganized borough, AS 29.03.010. Such cities possess a "limited property tax," AS 29.53.410. A municipality levying that tax may grant an exemption on the first $10,000 of value on a residence, AS 29.53.025(a).

"(4) real property subject to or exempt from taxation under AS 43.56 and AS 43.58." AS 43.56 establishes "oil and gas exploration production, and pipeline transportation property taxes." AS 43.58 establishes the "oil and gas reserves ad valorem tax." The property described in this paragraph is exempt from the taxes levied under HB 202 because the scheme of taxation established under AS 43.56 and AS 43.58 is comprehensive and is considered to result in full taxation of the properties subject to those taxes.

If you have any questions on the analysis here, please advise.

You also requested our comments on the implications of HB 202 for Village Housing or for ASHA projects generally that may exist in the unorganized borough.

AS 18.55.250 provides:

> The property of the [Alaska State Housing] authority is public property used for essential public and governmental purposes and this property and the authority are exempt from all taxes and special assessments of a municipality, the state or a political subdivision of the state. However, instead of taxes, the authority may make payments to the municipality or political subdivision for improvements services and facilities furnished by it for the benefit of a housing or public building project.

Regional Native Housing Authorities created under AS 18-55.995-.996 are given "all [the] powers, rights, and functions now or subsequently specified for the Alaska State Housing Authority...under §§10-290 of [AS 18.55].

Accordingly, it appears that any improvements to lands owned by ASHA or the regional native housing authorites will be tax exempt (and will also contribute funds in lieu of taxes, if any are levied).

If you have any other questions, please advise; if you need me at the hearing Thursday, I am as close as your telephone and can come over immediately (3896).

All of the above exempt from HB 202

H.B. 202

Submitted by: Parr

The purpose of this bill is to remedy at least in part, an existing inequity in taxation across the state. At present, in all the organized borough and first class cities, property owners must pay real property taxes, part of which go for the support of the educational system. Still carrying over from earlier days, however, is a lack of any taxation of a sort on real property in the unorganized borough.

Once upon a time this exemption may have been justified. There was little in the Bush except one or two-room cabins, sod houses, and fish camps. The cost of collecting taxes would have far exceeded the amount of revenue derived.

Now, however, the situation has changed. Lodges and service stations, stores, restaurants and other business have sprung up along the major highways of the state. The owners of these properties pay only state income tax toward the cost of the state and a portion of this income tax goes to support schools. They are obviously getting a free ride at the expense of property owners in the boroughs and cities.

Under the bill real property in the unorganized borough would be assessed at its fair market value (what a willing buyer would pay to a willing seller with both of them knowing property values) as is now the case required by law for organized municipalities. All of the exemptions presently authorized for municipalities are included in the bill (Senior citizens have a basic $10,000 exemption authorized under the pipeline act).

Unimproved land which is held by native corporations under the Alaska Native Claim Settlement Act is exempted by that Act and in order to avoid discrimination this exemption has been extended to the whole unorganized borough.

The millage rate would be the average millage rate presently levied for educational purposes in the organized municipalities. It is my guess that this will be about a 5 mill rate.

I have no desire to tax nor do I believe it would be feasible to tax the small low value cabins in many of the villages. People who live in such cabins to frequently do not have the wherewithal to support themselves much less to pay a property tax. The committee may decide that an exemption ceiling greater than $10,000 is desirable if taxation of this kind of property is to be avoided. The $10,000 figure was picked because it is presently the ceiling authorized by law for the boroughs and cities. There is, however, in my mind no justification for failing to tax the significant properties in the unorganized borough and requiring the property owners in the organized areas to bear an unfair share of the burden.

HB202

November 4, 1977

Sally Smith - State Representative
321 Chuch St.
Fairbanks, AK. 99701

Dear Representative Smith,

Regarding the articles printed in the Mukluk News Oct. 20,'77 by Glen Marunde on the tax meeting held in Tok.

It can be easily seen that Mr. Marunde and a few other large property owners are against local government or State taxes. They also state that they don't want any State or Federal Programs. Yet, they seem to forget and didn't mention how many people attended the meeting that are on the State and Federal payroll here in Tok. In fact, as a contractor, Mr. Marunde put a notice in the paper a year or so ago stating he was not in the contracting business for private homes but would only bid or work on State and Federal projects. You might also notice on Page3 of the School News , Mr. marunde was awarded a contract for major maintenance of the schools in this area. He is , therefore, paid by the Alaska taxpayers, Also, a few years ago he was a leader inaquireing a R.D.A. grant to build the Tok Fire Dept/ building, also an appropriation from the State legislature, Alaska tax payer's money.

Most of the ones attending the meeting were the same ones who 3 years ago were having meetings to get Public Works funding to build roads to their property. This raised the value of their property which some are now asking $ 4,500 for 2 1/2 acres and higher. They forget, who do they have maintaining these roads now and complain if they aren't maintained, none other than the State Highway Dept. with State equipment and personnel. This takes up their time that could be used on our main highways. But, there is no concern about that as long as their own needs are met, "to hell with the rest".

It seems they want local control but will make no effort to Incorporate. It's not fair to other areas who are organized to have to pay their share for schools and police protection when another area is getting the same services for free.

If it wasn't for the State and Federal payroll in Tok it could not exist at its present size. Some people are inclined to bite the hand that feeds them. Something Mr. Marunde should think about.

I personally am not for higher taxes, but it is something we have to put up with if we want improvements and better services. I believe in fairness to all Alaska residents to all pay our share.

Some of the same people at that meeting stand to make some good money from the gas pepeline as tt will be going right through their property.

On the front page of the Nov. 3 news, I have marked out a para-

graph written by Mr. Marunde where he states he would like a new state building for Tok. He could see a chance for a contracting job, otherwise he wouldn't be interested. You might check with the Dept. of Highways, Tok. This past summer, they had funds to construct a warm storage building for their equipment. The Dept.'s construction crew was here from Fairbanks working on the building and just before freeze-up, Mr. Marunde complained so loudly about local contractors doing the plumbing that it stopped the project. Now the Dept. has an unheated and incomplete building to try and use this winter on account of one persons greed of more money for himself. As long as the ones complaining get what they want, they could care less of the needs of others.

Plumbing

It is estimated that there is approximately 900 people living in the Tok area, with about 208 who voted in the last general election. So, I would not call it a majority of the people who attended the meeting. That group led by Mr. Marunde likes to state that they express the views of the people. They're just making the loudest noise because they might lose a dollar. They better start looking at where they're getting the money to make their living, and most of them are making a real good living and quite a bit extra, above cost. The biggest % of the Tok funds are State and Federal.

I am hoping that you will pass this information on to the other members of the tax committee.

Sincerely,

Charlie R. Biederman

MEMORANDUM

SUBJECT: Unorganized Borough Appropriations
W. O. #4363

TO: The Honorable Lisa Rudd

FROM: Linda Haagensen LH
Research Analyst

Attached are rough estimates of general fund appropriations for Delta Junction, Tok, and Fort Yukon in the categories you have requested. Please keep in mind that these figures do not precisely reflect what is being spent in the three locations because in many cases budget allocations are not formulated by region but on the basis of overall program costs. Persons contacted in the various state agencies provided us with he estimates along with qualifying information attached. (See Table A)

In answer to the second part of your request regarding per capita state expenditures in the organized boroughs compared to the unorganized borough, the information in Table B summarizes educational costs for FY 77 and projected figures for FY 78.

Costs are given per ADM for comparisons based upon actual attendance figures and per capita. Population estimates were obtained from the Department of Labor. As these cost figures indicate, the state spends twice as much per ADM and roughly two and 1/2 times as much per capita in the unorganized borough as it does in organized boroughs.

You stated during our meeting of November 1, that you would also like a per capita estimate of what the state is spending in general inside boroughs as opposed to within the unorganized borough if such information were relatively easy to obtain. Overall state expenditures are not available in categories that would allow for an accurate computation of costs. Our only means of deriving these figures would entail a lengthy process with extremely rough estimates of low reliability as results. For this reason, we have not included this information.

Please advise us if the enclosed information is insufficient for your purposes, so that we may implement further research.

Based on population estimates from the Department of Community and Regional Affairs

TABLE A

Notes to Table A:

1. Health Clinics - includes costs for Public Health nursing and Capital Improvement Funding.

   Fort Yukon's FY '77 funding covered services to additional villages of Allakaket, Anaktuvuk Pass, Arctic Village, Beaver, Beetle, Birch Creek, Chalkyitsik, Stevens Village, and Venetie with an estimated population of 1400. Capital Improvement money was appropriated for Health Center to increase FY '76 amount of $200,000.

   FY '78 funds covered services to additional villages of Arctic Village, Beaver, Birch Creek, Chalkyitsik, Rampart, Stevens Village, and Venetie with an estimated total population of 1,150. Delta Junction's funding covers services to additional villages of Cantwell, Circle, Clear, Eagle, Healy, Mt. McKinley, Nenana, Suntrana and Usibelli.

   FY '78 funds were reduced because a part-time nursing position was relocated from another service to provide more coverage for Delta area and reduce the workload of the Fairbanks Itinerant nurse position.

   Tok's operating costs covered services to the following villages: Dot Lake, Mentasta, Northway, Richardson Highway (from mile 219), Tanacross, Tetlin, Tok, Area North of Mile 63.5 to Porcupine Creek. FY 77 Capital Improvements for repair of community buildings leased by Tanana Valley Physicians Clinic in Fairbanks.

2. The only locations in the state where general funds have been allocated for ambulance services are Cooper Landing and Healy to assist with gas and maintenance costs.

3. The Division of Tourism in the Department of Commerce awarded money to Delta Junction and Tok for visitor information services.

4. These figures reflect salaries and benefits estimates for Trooper positions assigned to the three areas which include:

   Fort Yukon - 1 Trooper (currently vacant)

   Delta Junction - FY '77 - 1 Dispatcher, 1 Corporal, 2 Troopers; another 1/2 time Dispatcher allocated for FY '78.

   Tok - FY '77 - 2 Troopers, 1 Constable (currently vacant), 1 Corporal; another Trooper position in FY '78.

   Other Trooper-related costs such as for building and vehicle maintenance were unobtainable for each specific location.

5. Educational expenditures are available by school district only. Comparative costs have been computed per average daily membership (ADM), an average daily school attendance figure that provides a more meaningful basis of comparison than would per capita allotments. Per Capita costs are not included due to the difficulties in ob taining reliable population estimates for each school district.

6. FY '77 funds shown here were granted through the Revenue Sharing Program with Community and Regional Affairs. They were provided for the development of a park with play and picnic areas in Delta Junction and for 2 campgrounds and a community center in Fort Yukon. This program bases allotments on a $5 per capita rate for each city/ village that applies in the state. FY '78 appropriations depend upon applications submitted and will be determined later.

7. Money for alcohol programs thru the Office of Alcoholism and Drug Abuse is available if applied for. Fort Yukon and Delta Junction have not submitted applications within the past several years and therefore have received no state funds. Allocations of FY '78 funds have not yet been determined.

TABLE B

Education Expenditures in Boroughs vs. Unorganized Borough, FY'77 & FY'78

		Boroughs	Unorganized Borough
FY'77	Population	329,060	9,160
	ADM	65,427	16,558
	State Aid	$ 121,474,550	60,408,733
	Aver. State Aid/ADM	1,857	3,648
	Aver. State Aid/Capita	369.	873.
FY'78 Estimates	Population	338,932	72,046
	ADM	66,773	17,356
	State Aid	$ 135,971,910	74,715,377.
	Aver. State Aid/ADM	2,036.	4,305.
	Aver. State Aid/Capita	401.	1,037.

EDITORIAL COMMENT

The DELTA PAPER
VOL. 2, NO. 22
Oct. 12, 1977

The time has come, like it or not, to again consider formation of a borough for the Delta area. Most people are aware of the public hearing scheduled for next Monday evening concerning legislation which would levy a property tax on Alaska's huge unorganized borough.

Many hours will be consumed during the next few weeks as we engage in discussion about property taxes on the unorganized borough and about the possibility of a city sales tax. Imposition of either would affect just about everyone living within the greater Delta area. The unorganized borough includes all of the state of Alaska which is not already defined as being part of a specific borough.

According to their own news release, the legislature's Interim Committee on Taxation in the Unorganized Borough declares that "the tax would be equal to the average of the mill rates levied by the boroughs of the state for the support of school district activities, a figure currently estimated as seven mills." Our guess is, it would not be long before that figure is more like 10 mills, the figure previously

EDITORIAL COMMENT
(Continued from Page 1)

proposed by other legislation as a tax on the unorganized borough.

The Alaska Legislature has recently expanded the powers of the third class borough, making it flexible and yet far less constricting than a second class borough.

Our own third class borough could receive a portion of the state's ad valorem tax on the trans-Alaska pipeline and probably something similar from the planned natural gas line. To get the tax on the oil pipeline, we must also tax ourselves - it is generally agreed by those who have explored this avenue that a tax of abou 3 mills would bring monies enough to provide for the needs of the people in a Delta area borough for a long time.

One of the problems which arose when the Deltana Borough was proposed in 1974 was the matter of a boundary. The local study committee suggested a relatively small area; the Dept. of Community and Regional Affairs wanted to impose a much larger one - including towns and areas not related according to the guidelines for establishment of boroughs. The people within a borough need to be socially, economically and culturally compatible. Part of the "boundary battle" would appear to be solved as a re-

The publishers of The Delta Paper realize full-well that taking a stand on the borough issue will probably make them unpopular with a number of local residents. We felt it was something we had to do, however, and if some people choose to no longer read The Delta Paper because of this, so be it, we are sorry. Readers are welcome to express their own opinions in letters to the editor, though unsigned, anonymous letters will not be published.

REAA School District, which closely follows the borough boundary suggested in 1974 and was approved by Community and Regional Affairs.

Though it had some support, the previous attempt toward the formation of a borough drew quite vocal opposition from some residents. Most opponents felt we could "put off" taxation and development - maintain the "status quo".

Who was here before Fort Greely? Only a handful of people remain who came to this area prior to the construction of the army post in the early 50's. The entire economic base of the area - Delta Junction, Big Delta, Clearwater - is dependent upon employment at Fort Greely and the providing of support services related to the post and its personnel and employees.

Beyond the obvious economic base, most of us live here because we like it here. We stayed on through the tough times and have enjoyed the good times. Few people can say (honestly) that they moved to Delta because there were no taxes here.

We can direct community progress and growth but we cannot stop it lest we also stop our own personal growth. And, the Delta area has grown in spite of those who would stop it.

No one can put a cuddly puppy in a box, because [illegible]

EDITORIAL COMMENT...(Continued from Page 2)

stay just the way he is. By nature, he will grow and mature; the only way to stop it is to kill him.

Those who would stop reasonable growth and development would kill a community in their effort to keep it as they liked it. How much better to grow with it and help guide it and enjoy it as it grows!

As far as military facilities are concerned, Fort Greely is still on the "endangered species" list. If and when it should go - where will be the much-guarded status quo? The days of preserving status quo have passed - standing still means going backward as a community.

We need to stay informed on matters related to the coming natural gas pipeline; not only that it will undoubtedly bring economic benefits, but we need to encourage a take-off point so that Delta homes and businesses can enjoy lower cost heating, we need to explore the possibility of getting petro-chemical industry into the area - perhaps a urea plant to manufacture fertilizer to assist the agricultural development in the area. We must look to ways of supporting ourselves and our community IF Fort Greely were closed or greatly curtailed.

The comment is often heard: "Once 'they' get taxes 'they' keep raising them." Who is 'they'? Think about it.

Taxes are coming - that fact is inevitable - a few details are still debatable.

Do we want to govern ourselves and tax ourselves and have a part in deciding what to do with our own tax monies? Or do we want to sit back and let the "big city" legislators govern us and impose the unorganized borough tax while we beg to have some of our own tax money spent in this area? Do we opt for "taxation without representation"? That is hardly the position one would expect the intelligent hard-working, independent thinkers of the Delta area to take.

Taxation and related matters will surely be among the topics brought up for discussion during Town Meeting which is planned for October 23. We sincerely hope that future matters of this nature will not again result in the dissension which occurred in 1974 when borough formation was attempted and again in 1975 when the City of Delta Junction voted down a taxing ordinance. An old clipping from the Fairbanks Daily News-Miner of December 5, 1975, is a painful reminder of "Delta Junction divided by tax" as the headline stated.

(Continued on Page 9)

EDITORIAL COMMENT...

(Continued from Page 4)

The story was circulated by Associated Press and concluded with: "According to..., the chairwoman for the Anti-property tax committee, feelings are so bitter in the community that long-time friends and neighbors are refusing to speak to each other." Hopefully, we have grown and matured enough to avoid another situation which divides residents so drastically.

In the past, it has been evident that the Delta area would be in line for more frequent and larger shares of state and federal funding if there were some amount of local effort - something more than bake sales and dances, which are commendable efforts but not terribly lucrative. Delta is noticeably missing out on two current funding items - see news stories on pages 8 and 10.

The City of Delta Junction is presently proposing to levy a three per cent sales tax. As Mayor Stan Orcutt pointed out in his column last week, the city's financial problems cannot be ignored any longer. Perhaps the answer would be a third class borough, with unified government which would allow the Delta area to control its future with as little government as would be absolutely necessary - there would then be no need for a sales tax within the city. We certainly don't have all the answers; we do feel that people working together can find them.

The time has come, it is here, now, to once again study the third-class borough - it may be our only hope to preserve the things we enjoy about this place we have chosen to call home.

TAXES, what a dirty word. I am sure that a lot of you, like me, are paying taxes that exceed what our yearly income was a few years back.

We have heard a lot about taxes recently. A few days ago there was a legislative hearing in Tok, dealing with a proposed unorganized burough property tax. This hearing was attended by a few people from our area. I did not attend. I do have information that indicates that things were not what our leading anti-everything man reports that they were. He would have us believe that an overwhelming majority of the 700+ citizens of Tok rose up in mass to protest this gross invasion of our soverign rights. Believe me this was not the case.

Our "Anti-man" made an issue of our tax money being spent in Tok. He seems to object to the fact that we have an ambulance paid for with state (tax) money. We have a volunteer fire department (true) but where did the money come from to build that fire hall? Where does the money come from (based on our population) to support our volunteer fire department activities? Where did the money come from to remodel the clinic garage so we can house our ambulance safely and not have to shop around for storage space? Where did the money come from to renovate our clinic sewage system to the point where it will work in cold weather? Where does the money come from to provide a feeling of "We have not been forgotten" to the senior citizens of our area, the money that allows them to come to town, do their shopping, do their laundry and maybe have a hot meal along with their friends.

Where does the money come from to support our one million dollar plus, school system? It comes from tax money, your tax money, PROPERTY TAX money.

I don't like taxes. You don't like taxes. We don't like to be freeloaders either, do we?

CHAMBER OF COMMERCE

The annual election meeting of the Chamber of Commerce was held on October 28. The position of secretary and treasurer was combined and Jackie Currington was elected as secretary-treasurer. Mellie Terwilliger was re-elected as 2nd Vice President and Wally Wallis as president.

Mr. Carl A. Propes, Jr.
Land Manager
Chugach Natives, Inc.
912 East 15th Avenue
Anchorage, Alaska 99501

Dear Mr. Propes:

Thank you for your letter regarding HB 202. The Committee is looking at several other means by which rural residents could help with school costs.

In my opinion, the new law on 3rd class boroughs provides a means for rural areas to incorporate and provide themselves with needed local government services without placing an onerous tax burden upon themselves. You might call the Anchorage Legislative Information office and ask them to send you a copy of the new law.

We will try to keep you informed of further action on HB 202.

Cordially,

Lisa Rudd

Put on 202 mailing list

Rep. Lisa Rudd, Chairman
Interim Committee on Taxation
in the Unorganized Borough
Alaska State Legislature
Juneau, Alaska 99811

Dear Representative Rudd,

I have seen several articles recently in the Tundra Times concerning your hearings in Delta, Tok and Fort Yukon on House Bill 202. The possibility of a tax on personal and real property within the unorganized areas of Alaska greatly concerns Chugach Natives, as the majority of our land selections under the Alaska Native Claims Settlement Act lie outside of incorporated areas. We would therefore like to be kept informed of any developments which take place on this subject, both during the "off-season" and the regular legislative session.

Of special concern to me is the definition of "unimproved land" in section 29.03.230(2) of H.B. 202. This may have to be refined so that the discretion of the state assessor in making his own definitions is kept to a minimum.

What troubles me most about H.B. 202 is its potential for indirectly instigating areas and communities which are presently unincorporated to organize. If they are to be taxed anyway, why shouldn't the inhabitants of these regions want increased local control over how their tax dollars are spent? Most of the state's rural areas which would be caught in this bind lack the unity of interest and the economic base needed to sustain viable organized governments. Moreover, I believe that the majority of residents in these remote areas and villages prefer to continue to

912 East 15th Avenue, Anchorage, Alaska 99501, Phone (907) 274-4558

Chugach Natives, Inc.

live as they have traditionally, without being bothered by more restrictions imposed by government.

Therefore, I recommend that if H.B. 202 is to be passed by the Legislature, a strong statement of purpose is needed to declare that the intent of the bill is not to compel hasty and premature incorporations of new governmental entities. Those brave and hardy persons who reside in the Alaskan "bush" must be allowed full self-determination over issues such as this, and only as a last resort should the Legislature enact a bill which would have the effect of reducing their freedoms.

Before H.B. 202 is seriously considered by the Legislature I would further hope that all other means by which rural residents could pay their fair share of school costs would be thoroughly analyzed.

I appreciate this opportunity to communicate my views on H.B. 202 to you and your Committee.

Sincerely,

Carl A. Propes Jr.

Pouch V, Juneau, Alaska 99811

19 October 1977

Dear Chairperson:

I regret that I was unable to attend the public hearing on HB 202, (Real Property Tax in Rural Alaska), that was held in Delta Junction on October 17. You have asked for written comments on this Bill and my comments are as follow.

First I would like to state that the people living in Rural Alaska, ie, the unorganized boroughs, pay exactly the same Alaska State and Federal taxes as does anyone else living in the Cities or in the Organized boroughs. We pay the Federal and Alaska State Income tax and the Alaska School tax and thése are the only Federal and State taxes paid by anyone in the State.
Secondly I would like to point out that the State of Alaska does not pay one cent more towards the education of a child living in the unorganized borough than it does to help educate one living in the organized boroughs. The amount paid per child is the same. At least this is my understanding.

In that the people in the unorganized boroughs pay the same State and Federal taxes as does the people in the organized boroughs it would appear to be an act of gross discrimination for the State of Alaska to place a Real Property tax on one part of the State population and not on the other part. The fact that one part of the population has voted to tax it's self and the other part has choosen not to tax themselves should have no bearing on whether the State levies a tax or not.

Unless HB 202 is expanded to tax ALL the people of Alaska equally I will provide financial support to any group of citizens formed to challenge the constitutionality of this discrimatory tax in the courts.

Sincerly

Leston L. McNeil

Juneau, Alaska 99811

Dear Congressperson:

I am sorry I missed the meeting in Delta Junction about HB 202 and consequently don't know the wording on the bill. Actually, it doesn't matter. I only had one important question: Why is this bill necessary at this time?

Any bill that wants to extract more taxes from Alaskans at a time when we should rejoice and reap the fruits of our oil royalties looks, to say the least, strange. To say nothing about a congress working on bills to put millions of surplus dollars into saving accounts and at the same time trying to collect more taxes. It shows the mentality of our legislators to always want more power and more money even if there is more than enough already. Mr. Parr, for instance, initiated HB 202 for more taxes. He never thought of initiating a bill instead to lower an already heavy tax burden for his constituants in Fairbanks.

A few years back another Alaskan congress wanted to abolish the state income tax or finance all schools in Alaska by the state with our oil royalties. This would make much more sense now, and lower our tax burden considerably. Strangely enough, Alaska's population did not even double since 1965, but the government more than tripled during that time and it seems that the more oil money and taxes are collected, the bigger our government gets with little or no improvement in services. What we have now is taxes for taxation's sake and no other reason. If it is not stopped, it can happen again and again at any time to borough, city and bush residents alike. Think about it.

Sincerely,

Joseph Bohmer

The Honorable Lisa Rudd
Alaska State House of Representatives
Pouch "V" State Capitol Building
Juneau, Alaska 99811

Dear Representative Rudd:

We have reviewed H.B. 202 (taxation in the unorganized boroughs) and for the immediate we are opposed to the legislation, however we do have some recommendations.

In order for any taxation policy to work properly an economic base needs to be strong enough if any services are to be rendered. To my knowledge, none of the regions have a strong economic base. What good is taxation if the citizens of the area don't have the income to pay taxes?

It would be in the best interest of everybody to have the State study the effects of this type of legislation (H.B. 202) more thoroughly. One recommendation would be for the State to appropriate funds to create a model of a borough based on the same lines of a region such as Bristol Bay. The important factors of this is; what does it cost to provide the present services? What would it cost to provide more services such as police, fire, etc.? Is there a good tax base? What is the economic base in the area? What is the income per capita? Is there enough revenue to provide services?

These are very important questions that should be answered before any legislation is acted upon.

Sincerely,

Donald F. Nielsen

Ms. Elizabeth Johnston
Bristol Bay Native Corporation
P.O. Box 220
Anchorage, Alaska 99510

Dear Ms. Johnston:

Representative Nels A. Anderson, Jr. has kindly given me a copy of your letter of March 31 to Representative Lisa Rudd.

Since I am the sponsor of HB 202 some comments may in in order in reply to your remarks on that bill. To deal with your points in order:

1. Your discussion of the virtues of real property taxes is highly simplified, if not simplistic. You set up straw men, then demolish them.

a. The "seventy-five percent" (of the Legislature) which "is elected by persons not subject to the tax" is the same seventy-five percent which consistently funds the schools in the untaxed areas of the state.

b. Your logic escapes me. The legislature can't give the exemption in the unorganized borough unless it's being given in first-class cities? Try reading the parable of the workers in the vineyard.

c. I don't know if you have worked in property assessing-I did for a while, and can say only that you're wrong. True, there won't be a lot of revenue for the first two years or so, but then the program will more than pay for itself.

2. You appear to be making an argument against real property taxes in general, and much of what you say would apply to such taxes in the organized cities and boroughs as well. Is it your argument that they should be abolished? If so, in favor of...?

a. Sales taxes are even more regressive...

b. All taxes do this. Your point about subsistence and development isn't very clear, unless you are opposing

a subsidy for development (i.e., a tax exemption).

The latter part of your letter is addressed by the enclosed memorandum from Mr. Bradley.

Finally, Ms. Johnston, one point which your letter ignores. A lot of people in the unorganized borough are getting a free ride, and a significant percentage don't need it. Tell me why the owner of a $400,000 lodge in Tok pays no property taxes, while one in Fairbanks North Star Borough does.

Because of this free ride, my constituents are paying more than their share. These are the simple facts of the case.

Sincerely,

Charles H. Parr

MEMORANDUM

April 17, 1978

SUBJECT: HB 202; Comment on letter to Representative Rudd from general counsel of Bristol Bay Native Corporation. (Work Order No. 5357)

TO: Representative Charles H. Parr

FROM: Richard A. Bradley
Legislative Counsel

You have provided me with a copy of a letter to Representative Lisa Rudd from Elizabeth Johnston, General Counsel of the Bristol Bay Native Corporation, dated March 31, 1978.

You ask that I comment on two questions.

Ms. Johnston's first question arises under section 21(d) of the Settlement Act. She notes that certain protections are given to the lands conveyed to Native Corporations. Because the language of the section is significant, it is useful to set out the material language:

> Real property interests conveyed pursuant to this Act, to a Native individual, Native group, or Village or Regional Corporation which are not developed or leased to third parties, shall be exempt from State or local real property taxes for a period of twenty years after the date of enactment of this Act [December 18, 1971]: Provided, That municipal taxes, local real property taxes, or local assessments may be imposed upon leased or developed real property within the jurisdiction of any governmental unit under the laws of the State: ...

The language of HB 202 [and SB 35] exempts "unimproved land." Both Jack Chenoweth [the drafter of SB 35] and I appear to conclude that the phrase "unimproved land" is the opposite of the phrase in §21(d) prohibiting taxes on "leased or developed real property."

In my opinion, the judgment is completely proper; if anything, the phrase is quite conservative since lands subject to a leasehold interest without development, while taxable under the Federal law, do not become taxable under either HB 202 or SB 35 until they are "improved."

In my opinion, the phrase "leased or developed" need not be used in state legislation for it to be effective and the words actually used are effective and within the authority allowed to the legislature under the Settlement Act.

Ms. Johnston then asks whether the legislature, when it acts as a borough assembly, is imposing a "state or a local tax." The distinction is not significant although section 21(d) could well have been written with more precision.

(1) The first sentence of §21(d) exempts the property "from state or local property taxes" if it is not "developed or leased to third parties..."

(2) The first proviso allows "municipal taxes, local real property taxes, or local assessments on leased or developed real property within the jurisdiction of any governmental unit under the laws of the state:..."

(3) The second proviso allows taxation of "leaseholds, and similar interests in such real property" "in accordance with state or local law."

(4) The second sentence allows taxation of "all rents, royalties, profits, and other revenue or proceeds derived from such property interests."

Under the first phrase quoted, a state or local real property tax may be assessed and collected if the lands are "developed or leased to third parties." Since these phrases authorize state or local real property taxes and since the three remaining phrases do not explicitly contradict the first phrase, no problems are presented. However, if the first phrase is not relied on, it seems that it is quite reasonable to conclude that under our constitutional framework, the legislature is the effective agent for local government when it acts as the borough assembly for the unorganized borough.

Finally, it is not clear what Ms. Johnston means by her comment on the "landowner/third-party" distinction. If by her comment she is implying that taxation can occur only when the real property is [both] "developed and leased" to third parties, then I suggest that she note that the language of sec. 21(d) rather reads "developed or leased" each time it is used in the section. The language clearly suggests that development of protected, unimproved lands either by a village or regional corporation or by a third party equally, in either situation, subjects the lands to property taxes. Nothing in the legislative history is to the contrary. See 2, 1971 USCCAN at 2192, 2247. While there are valid reasons for Congress to prevent the "tax alienation" which has plagued Indian lands in the other states, (an event that typically occurs when the lands are unproductive or under-productive and the owner lacks the wherewithal to pay the taxes) there seem minimal policy arguments for a conclusion that development of the protected lands by a Native Corporation should be more protected from taxation than development of the same lands by "third parties."

Her second and final concern is essentially a policy question addressed to the legislature. She states

> "Yet for the foreseeable future, taxable lands in rural Alaska cannot pay for the high cost of education in the bush. Is the state retreating from its commitment to equal opportunities for all Alaska's children. At the present, the state spends twice the money ADM in the unorganized borough as it does in the boroughs."

While to this observer, no lack of commitment by the state legislature to education "in the bush" seems apparent, the concern vis-a-vis HB 202 is unfocussed and perhaps irrelevant.

HB 202 is a tax-raising measure, taxing the unorganized borough property not exempted at a rate

> "equal to the average of the mill rates levied in boroughs in the state for support of the borough school districts on January 1 of the preceding year ..."

There is no explicit or implicit correlation between the tax realizeable under HB 202 and the amounts appropriated to the support of education in bush Alaska, [or for that matter, between the amounts raised in organized boroughs by the property tax and the amounts spent there for education].

The citation of Serrano v. Priest is inapposite. Serrano essentially says that the rule should be

> "From each according to his ability; to each according to his needs."

RAB:jpd

February 24, 1978

Report of the Local Government Committee
RurAlCap Citizen Participation Conference

The committee recognized the large number of House and Senate bills, either proposed or already introduced, addressing state, city, and borough needs. In addition, the committee recognized the limited time available to review and comment on these bills.

The committee, therefore, decided to study only those bills of extreme importance, that have the greatest impact on boroughs and cities. The committee, following the advise and suggestion of the assigned Technical Assistant, chose to consider, in detail, the following bills:

see below
- o HB843: "Providing for equalization of the tax resources of municipalities and continuing a portion of the program of state aid for municipal purposes".
- o SB502 Identical to HB843.

see below
- o SB208 "Relating to municipal organization grants".

add non residents
- o SSHB75 "Authorizing a borough or city tax on net income".
- o HB~~302~~ "Providing for assessment, levy, and collection of a tax on developed land in the unorganized borough".
- o HB~~309~~ "Exempting certain items from sales tax".
- o HB~~378~~ "Relating to the levy and collection of sales and use tax by municipalities".

The committee, after study and evaluation of the bills identified above, recommended the following:

1. HB843/SB502: The committee supports this bill in principle, with the stipulation that: (a) Section 29.88.010(b) be revised to indicate that the grant made available to a municipality be a minimum of $50,000 in those cases where the indicated formula grant is lower than $50,000, and (b) the last sentence of Section 29.89.010(a) ("No payment may be made...") be eliminated.

2. SB208: The committee supports this bill with the proposed Department of Community and Regional Affairs ammendments relative to dollar amounts available under Section 29.18.180(1) and (2) (please see the attached). Further, the committee feels that a section should be added to provide for pre-planning study grants of up to $50,000 for borough incorporation, and up to $25,000 for city incorporation; provided that: (1) the applicant submit a projected budget, (2) unexpended grant monies be returned to the State, and (3) identification of local governing bodies eligible for pre-planning grants occur.

3. SSHB75: The committee supports the concept of this bill with a stipulation that Section 29.53.500(g) be modified to include transient residents as subject to income tax payment. The concern of the committee is that non-resident wage earners should be taxed on their earned income.

commercial workers, etc.

The committee members unanimously agreed that they cannot support HB202, HB509, and HB578 and, therefore, have recommend to the entire Citizen Participation Conference delegation that it not support the bills.

Submitted: February 24, 1978

RE: Basic Tax Information / Purpose and Authority

State Tax System

Personal Income Tax: Should stand-out as the single most important revenue instrument in the state tax system and should produce close to 25% of total state-local tax revenues.

General Sales Tax: As the other major state tax it should produce 20 to 25% of the total state-local tax revenue without imposing an extraordinary burden on low income families. Retail sales tax rests on the belief that consumption is an appropriate basis on which to distribute a substantial part of the state tax load.

Local Tax System

Property Tax: Provides 5 out of 6 local tax dollars.

In many states there are existing constitutional and statutory restrictions on the taxing powers of local governments in terms of specific rates or allowed rates of increase, coupled with requirements for specific referendum approval of proposed property tax levies.

The State Role

The state has a useful and significant coordinative role to play in the administration of local income taxes as well as in other non-property taxes. Income taxes are preferable to sales and many other types of taxes because they can be structured to distribute their burden in conformity with ability to pay and with necessary regard to the taxpayer's family obligations.

Income tax limitations for use at the local level:

- frequently people live in one jurisdiction and work in another.

- people often supplement their wages and salaries from local sources with investment and other unearned income from other parts of the state; however, local jurisdictions that now use these taxes generally limit them to income from wages and salaries, the type of income most easily taxed.

HB 202 is one of two bills which have been introduced in the legislature which, if enacted, would levy a tax on improved property in the state's unorganized borough — that is, any land in the state which is ~~outside~~ not or a 1st class or within an incorporated borough. ~~The bill was sent~~ HB 202 was introduced by Rep. Charles Parr of Fairbanks, ~~while~~. There is a similar bill in the Senate, which was introduced by ~~Rep~~ Senator Joe Orsini of Anch. home rule city

Only improved property would be taxed and the bill calls for the tax rate to equal the average of the property tax rates levied by the boroughs in the state for the support of borough school districts. The Dept. of C&RA has estimated that that rate is about 7 mills (7/10 of 1% of the assessed value of the property).

As the bill is drafted, the following property would be exempt from taxation:

1. property which has not been improved, such as acreage in woodland
2. real property which is exempt

from taxation under the state's municipal code, such as the property of churches, veterans' groups & senior citizens;

3. real property which is being taxed under the state's 20 mill levy on property used for the exploration, production or transportation of oil, and

4. up to $10,000 of the value of residential real property, if ~~the~~ it is within a municipality and if the municipality approves the exemption.

The bulk of the legislation, after describing the extent of the tax, addresses ~~#~~ the mechanics of assessment, appeals of assessment, collection of the tax, and enforcement processes and penalties. The state assessor, from the Dept. of C&RA, is here with us and can discuss specific questions involving what constitutes "improved" land, assessment practices, & the role of the Dept. should the bill pass.

HB 202 is not the first time the question of a property tax in the unorganized borough has been raised. It first came up in, &

think, 1972, when the 20 mill tax was placed on ~~pipeline~~ oil + gas properties. at that time the question was whether it was fair to tax the pipeline, but not any of the other valuable property in the unorganized areas. In fact, I believe the oil industry raised this question as a constitutional "equal protection" issue in litigation, but the suit was settled before the issue was decided.

Later efforts to focus on the question of taxation in the unorganized borough came ~~at the time of the creation~~ in 1975 when the rural education attendance areas were established in the unorganized borough. Some legislators felt at that time that local control and policy making power should not be given to the REAA's without requiring them to make local tax contributions to help support ~~the education~~ the REAAs.

The fact that the REAAs are entirely supported by the state, whereas school districts in incorporated areas must support much of their education services through local tax levies, seems

to be the ~~doing away with the third~~ reason for the introduction of HB 202. Urban legislators frankly find it hard to justify this apparent inequity to their constituents, who are paying both local and state taxes to support education in the state.

That the legislature has the power to levy a property tax, or any tax, in the unorganized borough is without doubt. Under the state constitution (Art. X, Sec. 6) the legislature is the assembly, or governing body, of the unorganized borough. Whether the legislature will act on HB 202 during the '78 session will turn, in part, on your testimony here tonight.

Describe bill passage process.
Introduce everyone.

Nice to listen
questions first, then testimony

file 202

House Bill 202 is one of two bills before the Legislature (the other being SB 35 by Orsini) which, if enacted, would levy and collect a property tax on property within the state's unorganized borough. The bill was introduced by Representative Charles Parr of Fairbanks.

If enacted, the bill would levy a tax on improved property ~~within~~ in the unorganized borough. The tax would be at a rate which equals the average of the property tax rates levied by all boroughs in the state for the support of borough school districts, a figure which has been estimated by the Department of Community and Regional Affairs at about seven mills (seven-tenths of one per cent of the value of property taxable) per year.

As drafted, the bill would exempt from taxation

(1) property which nas not been improved, such as acreage in woodland;

(2) real property which is exempt from taxation under ~~certain provisions of~~ the state's municipal code -- the property of churches, veteran's groups, and senior citizens;

(3) real property ~~picked up~~ taxed under the state's 20 mill levy on property used for the exploration, production or transportation of oil (pipeline property tax);

(4) ~~a maximum of the first~~ up to $10,000 of the value of residential real property, if the municipality authorizes the exemption and the voters approve by ordinance -- but I assume that the exemption would only be allowed in municipalities which themselves approve levy of a property tax by the municipality and would not be authorized in a municipality which itself did not levy

and collect a tax but approved the exemption for the purpose of reducing payment due under the state levy.

~~5) Land selected by Native Corps. is~~

As I read the bill, agricultural lands used for farming -- which are exempted in boroughs and cities -- would not necessarily be exempted from levy under this tax -- the definition of "unimproved" would seem not to ~~preclude~~ Permit a tax on lands actually put to the plow, but would recognize lands as exempt if held for grazing purposes. (This could be a major point of discussion at the Delta Junction hearing.)

improved = put to plow
unimproved = grazing

The bulk of the legislation, after describing the ~~reach of the levy,~~ extent of the tax addresses mechanical things such as the manner of assessment, procedures for collection and appeals, and enforcement processes and penalties. The state assessor, in the Department of Community and Regional Affairs, will be with the committee and can discuss specific questions involving assessment practices and the nature of the Department's role should the legislation be enacted.

The House Bill is not the first ~~in time~~ to call for an unorganized borough tax levy. The question of levy was first seriously raised at the time the 20 mill property tax was levied on the pipeline -- at that time the question was one of equity between taxation of the pipeline and taxation, or rather non-taxation, of all other property in the unorganized areas, a typical "equal protection" based argument which the oil industry once raised in litigation but which, I understand, was settled prior to final hearing or appeal. Later efforts to focus on the question of levy in the unorganized borough came at the time of reform of the state-operated school system and its replacement by the system of rural educational ~~service~~ attendance areas (1975 session), where some legislators were

1972.?

year?

asking whether it was fair to provide for local control and policy-making responsibility without adding the concomitant requirement of local tax contribution to support of educational services.

This, I suspect, is the chief reason underlying introduction of this bill: urban residents -- where property tax rates are hefty -- are asking legislators who represent them why it is that a dual system of education financing is permitted to continue [urban areas = Foundation program plus local property/sales tax; rural areas = no local effort], and if the legislature cannot figure out some way to reduce urban property/sales tax rates and levies, at least it could require a contribution for support of local schools by residents of rural areas.

The other bill, Senator Orsini's SB 35, is farther reaching: it would levy a flat ten mills (with a slightly broader system of tax credits) and indicates that an amount equal to the annual total receipts from the tax would be re-appropriated for the benefit of the unorganized borough, [an effort to avoid the "dedicated fund prohibition" problem.] Presumably the Orsini bill is grounded upon the assumption that residents of rural areas should contribute not only for local support of education but for general government services as well.

The levy and collection of any tax in the state's unorganized borough would be a step of major and historic proportions. In the unorganized area, aside from the first class cities which are school districts unto themselves, and are required to contribute to school costs, only one city levies a property tax, the City of Eagle, at three mills. About one-third of the second class cities levy a sales tax for the support of

general government (not educational) services, including Fort Yukon (3%), but not including Delta Junction ~~with all the transient travel activity and the increase in business volume due to pipeline construction~~. Tok is, of course, unincorporated.

This, and it should be stressed, is not the opening gun in the salvo leading to mandatory incorporation of new boroughs. (Admittedly, mandatory incorporation is always possible, ~~but the current administration won't address it in an election year, and a legislative initiative to that end is impossible without strong gubernatorial prodding.~~ but at present it is improbable. However, the same result could be obtained by, say, the levy of a very high property tax rate -- 20 or 25 mills -- which would force the citizen-taxpayers to seriously consider taking steps of their own volition to remove themselves from unorganized status.

~~On this point~~, you ~~should know that the Department of Community and~~ Regional Affairs ~~has received tentative inquiries from residents of Fort Yukon asking advice and assistance through the preliminary stages~~ of organization of a general law borough in the region generally embracing the Upper Yukon REAA. ~~Usually such "feelers" die an early natural death; in this instance, there is reason to be slightly more optimistic, if only because of the exceptional tax base provided in that region by the trans-Alaska pipeline. The committee's consideration of a property tax for the unorganized borough - as distinct from any initiative by the members, serving as members of the House Community and Regional Affairs Committee, to overhaul or substantially modify the pipeline property tax and the generous treatment given under it to boroughs and cities containing pipeline property -- ought not to adversely affect the Fort Yukon area borough study effort.~~

That the legislature can levy a property tax -- or any tax -- in the unorganized borough is undoubted: under the constitution, ~~you are~~ the legis. is the assembly of the unorganized borough (Article X, sec. 6). Whether, for reasons of equity or practical finance, the Legislature will act or avoid action in this session will turn, in part, on the reception given the idea of levy and collection of a tax by the residents of the unorganized borough themselves.

~~In short, what the Interim Committee on Taxation in the Unorganized Borough is being asked to do is act to disprove the validity of the shopworn proverb: "Nothing is certain except death and, except in Alaska's unorganized borough, taxes." HB 202 is merely a gentle step in that direction.~~

September 19, 1977

The Honorable John A. Carlson
Mayor, Fairbanks-North Star Borough
P.O. Box 1267
Fairbanks, Alaska 99707

Dear Mayor Carlson:

My thanks to you for working with Representative Sally Smith to provide an opportunity for the members of the House Community and Regional Affairs Committee to meet with elected municipal officials of the Fairbanks area to discuss matters of mutual interest and concern. I understand that the meeting has been scheduled for Wednesday, October 19, at 7:30 p.m., at the Borough Assembly chambers, 520 Fifth Avenue.

By this letter, I am extending a cordial invitation to you and the members of the Fairbanks-North Star Borough Assembly to meet with us at that time. I look forward to that meeting and hope that you and as many members of the assembly as possible will attend.

Sincerely,

/s/ Lisa Rudd by jc

North Pole, Alaska 99705

Dear Mayor Lewis:

In conjunction with public hearings in the Interior of Alaska during the third week of October, the House Community and Regional Affairs Committee will have an opportunity to meet with municipal officials from the metropolitan Fairbanks area. Mayor John Carlson of the Fairbanks-North Star Borough has graciously offered the use of the Borough Assembly Chambers for that meeting.

By this letter, I am extending a cordial invitation to you and the members of the council of the City of North Pole to meet with us to review matters of mutual interest. There will be no formal agenda: rather, the members of the committee will be available to review with you legislation currently pending, your ideas concerning other needed legislation, and any other matters of mutual concern.

The meeting will be held at 7:30 p.m., Wednesday, October 19 in the Borough Assembly chambers, 520 Fifth Avenue, Fairbanks. I welcome the opportunity to meet with you and hope that you and as many members of the council as possible will attend.

Sincerely,

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

1. @ assessment date January 1, 1979 (Amendment necessary)
2. The estimated tax base for the unorganized borough is based on known taxable property values, parcels per capita and average per parcel valuation within home rule and first class municipalities as of January 1, 1976.
3. Estimated tax base is discounted 20% to reflect the unimproved property exclusion. (809,328,988 = 1,011,661,235 - 20% 202,332,247)
4. Estimated average mill rate for administration of schools within 11 boroughs is 7 mills (7 mills = numerical average 6.11 weighted upward to reflect Anchorage municipality at 8.69 mills.)
5. Estimated revenue is based on a 7 mill tax rate times the adjusted tax base ($5,665,302 = 809,328,988 X .007)

RE: HB 213 - HOUSING ASSISTANCE OFFICE

Mr. Riggs, the Director of the Alaska State Housing Authority, returned my call on March 1, 1977. He is interested in HB 213 and would like some clarification as to the intent of the legislation. Mr. Riggs said that ASHA is working with the regional housing authorities to get them to take more responsibility for the management of their programs in the rural area. If the creation of a Housing Assistance Office in Community and Regional Affairs would primarily be a coordinating and assistance agency for the regionals, dealing with the problems of rural housing, then his agency is very much in favor of HB 213. Mr. Riggs does not oppose the bill if in fact the intent is to create a more general Housing Assistance Office; however, he would like more time to consider the legislation if the intent of the bill is to include administration of both urban and rural housing authorities.

I informed Mr. Riggs that his comments would be communicated to you and possible made available to the committee members. He requested that I keep him informed which I assured him that I would do.

RE: Day Care Appropriation

My conversation with Mr. Pitts on Monday, February 7, 1977, proved to be very beneficial. He briefed me on the background of HCS 750 which increased the subsidy by $123,000 to include day care for AFDC recepients. The AFDC criterion was mandated to be the first priority and resulted in approximately 400 new children at $12.00 per day X 21 days per month; in excess of the $123,000.

Communities such as Anchorage began taking steps in September and October to reduce their clients to only those families in the lower one-third income categories. Mr. Pitts pointed out that the attached estimated supplemental funding would allow funding of day care in the three communities who are unable to fund all eligible families for the balance of the current fiscal year.

Families whose net income is $7,000 or less are currently eligible in addition to all AFDC families. As I understand it, all other families have been rejected or in the process of being cutback. Fairbanks and Kodiak are currently providing day care to only those at the poverty level and Anchorage apparently will be initiating some additional cutbacks to reduce family eligibility to poverty-level.

Projected Supplemental Appropriation for FY 77
Letter to Representative Larry Carpenter

Thanks very much -

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPT. OF COMMUNITY & REGIONAL AFFAIRS

OFFICE OF THE COMMISSIONER / POUCH B – JUNEAU 99811

February 7, 1977

The Honorable Lisa Rudd
Chairman
House Community and Regional
Affairs Committee
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Fbr peak $ 20,000 per. mo.

Dear Representative Rudd:

The following information is in reference to your inquiry regarding a supplemental appropriation for FY 77 Day Care Funding. Per your request we have projected additional funding to allow total funding of day care in the three communities who are unable to fund all eligible families for the balance of the current fiscal year. The required additional funding is:

1) Fairbanks North Star Borough	$262,800	$75,000
2) City and Borough of Juneau	76,100	$1000 $35,000
3) Kodiak Island Borough	73,600	
	$412,500	

These additional funds would cover the period of March through June, 1977, only. and 80,00

The above total was computed based on the number of subsidized families plus eligible families rejected because of the lack of funds as of December 31, 1976, and using a standard gross index of ten percent overall during the last half of the current fiscal year.

I trust this information will be satisfactory. However, if you desire more please feel free to call me or Mr. Harvey Pitts, Day Care Coordinator in Anchorage, at 279-3462.

Sincerely,

Michael C. Harper
Deputy Commissioner

Larry D. Carpenter, Representative
Alaska State House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Larry,

Please excuse the tardiness of this reply; I wanted to have a response to your letter and the letter written by Ann Maxton to you before you left Fairbanks for Juneau. Unfortunately, the beginning of the month is hectic--and a couple of court appearances didn't help.

The basic facts provided to you by Ms Maxton are basically correct: the amount of funding made available to the Fairbanks North Star Borough for day care assistance is simply inadequate to meet the demand. Although I was successful in getting a supplemental appropriation of approximately $20,000 from the Office of the Child Care Programs Coordinator (the total for the Fairbanks North Star Borough thus totalling $128,620), the demand for our community is probably in excess of $300,000.

The day care assistance program is set-up so that five distinct income categories exist; as the parent's income goes up, the amount of state assistance decreases. Thus, we fund from 10% to 100% of the cost of care for those hours the parent is working and/or in training and/or in school. There is no funding available through this program for parents not meeting the above criteria; it is not a welfare operation.

In July and August, the word from the Coordinator's office was that we should advertise the program, get lots of eligible folks on the program, and that additional funding could be expected. Unfortunately, the extra funding could not come anywhere close to the unexpected demand within the Fairbanks North Star Borough. As soon as this became evident, we were told to eliminate those families within the top two categories--those folks making the most. Since then, categories #3 and #2 had to be cut out also. At this time, we are only funding those families who receive 100% support; these folks make less than $7500 per year.

There is one additional constraint that must be noted: no matter what, those families who are eligible and are receiving AFDC, must be funded for the entire fiscal year; they cannot be

ANCHORAGE - Approximately $80,000 thru 6/30 to subsidize Group IV & V.

To: Members of the House CRA Committee 18 February 1977

The American Association of University Women wishes to lend its support to the passage of HB215. We spoke out strongly in favor of the original day care subsidy bill which has been providing day care assistance to low income children, assuring them the opportunity for licensed, qualified care.

As you must be aware, the availability of qualified child care is far less than the need. In fact more than 80% of the day care population in Alaska (children aged 0-9years) is served by unlicensed arrangements of one sort or another. What is most startling is that there are hundreds of young children in our state without any care at all. One reason for this situation is that parents cannot afford to pay the seemingly high cost of qualified care which averages about $10/day. That is $200/month (or $2,400/year) which is as much or more than a family must pay for food or rent. Consider that cost to a family earning a $10,000 to $12,000/year salary. And child care costs are on the rise. Care givers are no longer willing to work for poverty wages at what may be one of the most important jobs in our nation, one unequalled in responsibility, stress and long hours, even though the going rate of $5/hour for child care staff can hardly be said to be an incentive to enter that line of work.

Only two years ago when the subsidy bill was introduced, the average cost of care in Alaska was at $7.50/day (according to the League of Women Voter's "Alaskan Day Care: Quality and Cost" pg. 6). Two years before that it was $5/day in Alaska, and nationwide the national average was $3.50/day! In 1965,however, seventy to eighty percent of the child care arrangements in the nation were free from an adult relative or through trade arrangements with friends and neighbors (see the League's "Day Care - Alaska's Unmet Need" pg. 2-3). As you can see, child care costs are rising at a phenomenal rate - far faster than people's salaries - yet even at the present rate of $10/day the cost is no greater per hour than what we would pay the casual babysitter for watching TV at night while the kids are asleep. For little over a dollar an hour we expect the care giver to provide the major upbringing of a child during almost all of that child's waking day.

The question then always arises whether one parent shouldn't be staying home with his young children instead of "choosing" to work outside the home. Statistics from the Dept. of Labor's Women's Bureau in their "Handbook on Women Workers, 1975" show that over 70% of all working women have more than good reason:

29% had husbands earning less than $10,000
19% were widowed, divorced or separated
23% were single.

Working mothers would fall within the first two catagories and over 50% of all mothers with children under age 18 are working. In fact 33% of white women and 52% of minority women with children under age 6 hold jobs outside the home!

Parents are not staying home because they must work, and their children deserve and need adequate care. We feel that the additional subsidy requested in this bill is valid and desperately needed by Alaskans to meet the soaring cost of child care.

Sincerely,

Connie Stewart, President
American Association of University Women
Juneau-Douglas Branch

February 21, 1977

TO: STEVE COWPER, CHAIR
HOUSE FINANCE COMMITTEE

FROM: LISA RUDD, CHAIR
COMMUNITY & REGIONAL AFFAIRS COMMITTEE

RE: HB 215 - Supplemental Appropriation for the Day Care Assistance Program

The Community & Regional Affairs Committee, after hearing testimony from the Community and Regional Affairs Department and the managers of the day care assistance program in Juneau and Anchorage and from a day care provider in Fairbanks, has reduced the requested appropriation from $412,500 to $368,750.

While the department had allowed for maximum possible growth in the program for the next four months in arriving at the $412,500 figure, testimony from the program managers and provider indicated that such dramatic growth was not likely to take place. Therefore the committee chose a figure which would allow some growth in the program, but not as much as originally predicted by the department.

It is proposed that the $368,750 appropriation be divided in the following way:

Fairbanks North Star Borough	$183,960
City and Borough of Juneau	53,270
Kodiak Island Borough	51,520
Municipality of Anchorage	80,000

The Community and Regional Affairs Committee would like to draw the Finance Committee's attention to the need to increase the FY'78 appropriation for the day care assistance program by at least the $368,750 which is being added to this year's appropriation. The department testified at our hearings that the amount shown in the Governor's budget for FY '78 is simply a maintenance budget based on the original FY'77 appropriation.

re: HB 215 meeting of 2/18 with Harvey Pitts, Theressa Donnally, Margo Dick, Lisa Rudd, myself

Dear Committee members,

In my recollection, the way we arrived at a new figure for the Day Care Assistance supplimental appropriation began with our questioning Mr. Pitts, statewide DCA coordinator, on how he derived the original one. He explained exactly the factors he considered and how he had weighted each factor. We asked him how varying the amount would affect the program, statewide, during the next four months. Eventually we arrived at a figure (368,960. or close) we were all comfortable with; it allows for reinstatement of the program at the original level with a moderate growth factor. It would take up all the people who were dropped, include the waiting lists and plan for a reasonable, but less than maximal, growth. This seemed entirely satisfactory to all present and I urge your support for this important bill.

I would like to thank Rep. Phillips and the committee for enlisting my help on this problem, allowing my voice to be heard on a matter that concerns me deeply. Thank you.

Sincerely,
John Hartle

LEAGUE OF WOMEN VOTERS OF ALASKA

HB 215

The League of Women Voters of Alaska is firmly in support of HB 215 and urges its swift passage, since passage much after March 1st will ~~require additional appropriation~~ and will cut deserving parents unnecessarily from the program. The League has been a strong backer of day care assistance, and our statewide position established just last year after careful study states that "supplemental financial and regulatory responsibilities should be shared by all levels of government to insure that day care is of high quality and available to those who need it".

I would like to underscore the fact that care given to children under this Dept. of Community and Regional Affairs program is required to be licensed by the State and is therefore providing a basic quality that is unavailable to too many Alaskan children. In fact 85% of the children in Alaska are cared for outside the home in unlicensed facilities. That is 17,000 kids (almost 9,000 in Anchorage alone) with working parents or a working single parent who must rely on arrangements that may be less than satisfactory because very few young families in the big cities have relatives close by that are available to help provide care. It is especially interesting to follow the licensing pattern that this program has produced. As parents become aware of their eligibility in the day care subsidy program, they tend to pressure their "babysitters" to become licensed, thus increasing the quantity and quality of overall childcare in Alaska. In Anchorage, for example, the number of available day care slots for 11,000 kids was 1,300 in October, 1975, when the program began. At the end of this last fiscal year it had risen to over 2,000 and now the number of slots has expanded to 2,400 with 300 more ready for processing. The same has happened in Kodiak and Juneau where available slots have doubled since the program began.

I would like to remind this committee that parents work because they have no other economic choice. Most employed parents are widowed, divorced, separated, or their spouse is earning less than $10,000 a year; and in fact 52% of all minority women with children under the age of 6 are employed (compared with 52% of all women with children under 18) according to U. S. Dept. of Labor statistics. Low income working parents are faced with day care expenses that few can adequately meet. The going rate for childcare is about $10 to $12 a day (with infant care as high as $15 to $17 a day) and that is up drastically from only four years ago, for providers are no longer willing or able to work for poverty wages. That daily rate for one preschool child adds up to between $2,400 and $3,000 each year, or more if a family has more than one child. Working parents need to fund additional childcare during the summer months when school is out of session. That yearly sum takes a pretty hefty bite out of even a $10,000 a year salary. When you add up the costs of rent, food, clothes, utilities and taxes, not to mention car and medical expenses, you may find the salary already expended past its limits. And yet in Fairbanks, for example, we understand that the program has already had to cut back service to all but those families whose <u>combined</u> income is $8,000 or less!

The League feels that this program can therefore not yet reach significant numbers of people for whom help was intended. It would pay, for example, all or most of a family's day care expenses, allowing that family frequently to pull itself up from reliance on welfare; and yet would not support that family during the trying months that follow when the family is or would be actually paying more and more of its own share, requiring less and less from the State program. One particularly revealing case is

that of an Anchorage woman who recently called the CRA office. She explained how the program was keeping her family unit together because previously she had to hold down three jobs as a single parent to provide for her family - two during the week and one on the weekends. The subsidy program permitted her to live normally with one job and to be with her children. She worked her way up to level IV in which she was paying 50% of her childcare costs. But as of March 1st she would be dropped in the cut back, and she was calling in tears because this was going to force her to disrupt her family, to dissipate her resources and her energy just trying to make a living wage.

We understand the reluctance of some of you to grant supplemental budget appropriations, however in this case we feel that the grant is not only justified but vital to the parents and children involved. The Dept. of CRA had little way of knowing last year how many families would actually be applying for the available monies. The need was greater than many realized and we are seeing now the results of the program's sucess in responses from families and the mushrooming of available licensed slots. We are seeing sucess in the movement of families into, up through, and out of the program.

But there is one further important reason that we feel that the Dept. should not be jepardized for using up existing funds. Last year's SB 753 which caused such flack at the end of the session contained some unalarming language that changed the definition of child to include "a child determined to be eligible for assistance under AS 47.25.310-47.25.420 and living with a family receiving benefits under AS 47.25.30 - 47.25.420." This in effect put the AFDC and WIN kids into the CRA program and out of Health and Social Service. Since Title XX funds could not be spent through the CRA Dept., those funds were reallocated to other areas within the Dept. of HSS, and only the State of Alaska general fund match monies were transferred for the use of the CRA Dept. to maintain the program. In other words 100% of the AFDC and WIN children were transferred to CRA, but only 20% of the money that it took HSS to run the program were transferred over. This financial burden has greatly affected the intent and expansion of the subsidy program, for monies which would otherwise have gone into the subsidy program have had to go to fully fund the AFDC kids which under law have priority. I should mention, however, that aside from the undue financial burden placed upon the Dept. of CRA, the overall move of AFDC and WIN kids out of HSS has been most beneficial. Prior to the move many childcare facilities refused to take state subsidized children ("welfare cases") and most day care homes would not. Now under the Dept. of CRA the stigma is gone and facilities are cooperating and new slots are opening up weekly.

We commend the Department of Community and Regional Affairs for a job being well done in helping communities take responsibility for their day care populations. We feel that the added supplemental appropriation asked for in this bill is not at all unreasonable or unjustified and we urge quick passage.

Sincerely,

Susan R. Clark
Human Resources Lobbiest
League of Women Voters of Alaska

Times 3/2

Lack Of Funds Cuts Day Care Subsidies

Abou: 10 per cent of the Anchorage families receiving state-subsidized day care are being dropped from the program because of a lack of funds, a municipal official said yesterday.

Theresa Donnelly, coordinator for the Municipa' Day Care Assistance Program, said 60 families with a total of 73 children are being dropped from the program effective today because there are not enough state funds left to carry the program through June 30, the end of the state's fiscal year. During February 515 families with a total of 743 children participated in the program.

The legislature authorized the subsidized day care program in 1975 with the hope that welfare parents might have the incentive to seek jobs if they received help with the high cost of day care. Working parents pay for the day care on a sliding fee scale based on their income and the state picks up the remainder of the day care costs.

Mrs. Donnelly said the state pays a maximum of $12 per day for each child over a year old who is in a licensed care center and a maximum of $15 a day for infants. The average cost of children to age one is $315 a month and $252 a month for children over the age of one year.

Mrs. Donnelly fears that people holding down paying jobs might go back on welfare since they cannot afford to pay 100 per cent of day care costs for their children. Some of the participants in the program are "talking about resigning their positions and going back on welfare" since they were notified of the program cutbacks, Mrs. Donnelly said.

Involved are parents who were on welfare, then found low-paying jobs and have worked their way up to higher salary ranges.

The families who were cut off from the program today have adjusted incomes ranging from $11,000 to $14,999 annually, Mrs. Donnelly said. Additionally, persons who make between $8,000 and $10,999 must pay a larger percentage of the day care costs for their children, she said.

Those who do not have large financial committments are being asked to pay 40 per cent of the costs of caring for their children. They now pay 20 per cent.

Mrs. Donnelly said this is being done in an effort to maintain those in the lowest income brackets in the program. She also said in the last six months some parents have been voluntarily increasing their own payments so that more could remain in the program.

The municipality is spending about $7,000 a month more than the $70,000 it is receiving from the state, said Mrs. Donnelly, "which means there is an immediate need to cut some people off the program" in order to maintain those at the lower end of the income scale.

The municipality has a total grant from the state of $841,044 for fiscal 1977, she said.

That amount of money probably would have been enough to subsidize working parents it the legislature hadn't last year moved day care payments fo. parents on the Aid to Families with Dependent Children from the Department of Health and Social Services to the Department of Community and Regional Affairs which administers the first program.

The government picks up 100 per cent of the day care costs for the dependent children aid recipients. "The impact of ADC recipients took half of our annual allocation," Mrs. Donnelly said.

A bill which would ease the situation has been introduced int the state legislature. The bill, sponsored by the Community and Regional Affairs Committee, calls for a $368,750 supplemental appropriation to fund the statewide program through the end of this fiscal year.

That bill has already received approval from the sponsoring committee and is likely to win favorable recommendation from the House Finance Committee, which reportedly plans to reduce the appropriation before sending it to a vote of the full House later this week.

"We're hoping it will have some kind of priority and move through as quickly as possible," Mrs. Donnelly said.

If the legislature approves the appropriation, a portion of Anchorage's share would be used to make retroactive payments to providers of day care. Mrs. Donnelly said that the families who are being deleted from the program can be reimbursed for day care expenses retroactive to March 1 if they leave their children in licensed day care facilities.

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPT. OF COMMUNITY & REGIONAL AFFAIRS

DIVISION OF COMMUNITY & RURAL DEVELOPMENT

Bayview Commercial Bldg.
Suite 230
619 Warehouse Avenue
Anchorage, Alaska 99501

March 14, 1977

Mr. John Swan
Director
Eneput Children's Center
P.O. Box 80452
College, Alaska 99701

Dear John:

I have been asked to respond to your letter of February 22, 1977 to Commissioner McAnerney regarding the supplemental appropriation for the Child Assistance Program which is contained in House Bill 215. Your letter to Commissioner McAnerney was written on the day before our last conversation in Juneau, which took place on February 23, 1977. Therefore, we have already discussed most of the points mentioned in your letter. However, I will again address each of those points in an attempt to "clear the air" regarding our position on the supplemental appropriation itself.

In your letter you state that "...Community and Regional Affairs personnel do seem ill prepared to ask for a supplemental appropriation that is in excess of the original appropriation for most communities...". Let me assure you this is not the case. In fact, the opposite is true. Our files contain statistics gathered from each community in the state where a child care assistance grant has been made. Further, these files are more complete than any files which may be found anywhere else in the State with regards to the Day Care Assistance Program. It was this data, which we have carefully gathered over the past year and a half, that was used to compute the $412,000 figure which was originally submitted in answer to an inquiry from Representative Lisa Rudd. The $412,000 figure was computed using growth patterns that have occurred throughout the State over the past year and a half of program operation. I still believe that figure to be reasonable, and not in the least over stated.

We too feel that the Day Care Assistance Program is providing an extremely important service to our low income and single parent families throughout the State.

Our original objection to a supplemental appropriation stems from the administration's position of holding the line on all program expenditures. Obviously, a supplemental appropriation would be in opposition to that position. However, the administration's present

position is that the supplemental appropriation for the Child Assistance Program will not be opposed this fiscal year. However, any increase in the administration's recommendation for the Day Care Assistance Program next year must be accompanied by a concomitant reducation in program expenditures in other areas, or an increase in revenues.

Most of your testimony and the objections which you voiced to me privately centered around the fact that there does not exist sufficient licensed spaces to expend the supplemental appropriation in Fairbanks or Juneau. In my response to that allegation, I have stated that where sufficient demand and Day Care Assistance funding are available in the various communities throughout the State, we have observed that the number of licensed spaces trends upward to accomodate. For instance, in June of 1976 there were 295 licensed child care spaces in the Fairbanks North Star Borough. Even though the Day Care Assistance Program funding in Fairbanks was limited to an amount less than could have been utilized, on January 19, 1977 the number of licensed spaces in the Fairbanks North Star Borough had grown to a much higher total of 431. This represents an increase of 46% in licensed spaces available; which, I'm sure, is at least in part due to the Day Care Assistance Programs as well as the demand for licensed child care in Fairbanks. You also mentioned the program in Juneau. Like the Fairbanks North Star Borough, the City and Borough of Juneau has realized a substantial increase in the number of licensed child care spaces during that same period of time. In June of 1976 there were 273 licensed child care spaces available in Juneau, Alaska. However, as of January 19, 1977 this figure had grown to 513 licensed child care spaces. This represents an increase of 88%, and again, like Fairbanks, the City and Borough of Juneau also received a day care assistance grant which was less than could have been expended in that community! In June of 1976 the Kodiak Island Borough contained 91 licensed child care spaces. On January 19, 1977 the number of licensed child care spaces had grown to 199, an increase of 119%! In the smaller communities-the City of Petersburg-in June of 1976 there were 46 licensed child care spaces in the City of Petersburg. On January 19, 1977, the total number of licensed child care spaces in the City of Petersburg had increased to 62, an increase of 35%. In June of 1976 the Municipality of Anchorage contained 1,929 licensed child care spaces. On January 19, 1977 this figure had grown to 2,419, an increase of 25%. In every instance these figures lend valitity to my statements regarding program growth in various communities wherein the day care assistance grants are available, and any figures regarding the need of a supplemental appropriation for day care assistance which does not consider the growth factors quoted above are certainly unrealistic.

At any rate, John, it appears that our debate is academic, since it is now apparent that the supplemental appropriation will not be passed in time for it to be utilized during the month of March. I do want to thank you, though, for your efforts on behalf of the many families throughout the State who have benefitted and who, hopefully, will continue to benefit, from the States Day Care Assistance Program. It is through constructive criticism such as your's that those of us who are responsible for administering the program receive many ideas which are vital to the proper evolution of the program, and gives us more and more insight into the problems encountered at the local level. We hope to continue working with you in the future to provide the best possible service to the families and children of this State.

Again, let me assure you that everyone connected with the administration of the Day Care Assistance Program is interested in providing the best possible service with the limited resources we have.

If you should ever find yourself in Anchorage with a few spare moments, please do drop by the office so we can chat. Meanwhile, if we can be of further assistance to you, please do not hesitate to contact us.

Very truly yours,

F. Harvey Pitts

TO: All Alaska Legislators

RE: Supplemental Day Care Appropriation

We, the undersigned, wish to express our support of the supplemental appropriation now before the legislature which would provide for the continuance of the state's day care assistance program through the remainder of this fiscal year.

We urge you to consider Alaskan families' dramatic needs for day care assistance (outlined in the Status of Women in Alaska 1977 report) as an issue of high priority during this legislative term.

Thank you.

HOUSE BILL NO. 219

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act providing for permits and fees for the construction of shore facilities associated with outer continental shelf natural resource extraction; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 41 is amended by adding a new chapter to read:

CHAPTER 45. SHORE FACILITIES FOR OFFSHORE RESOURCE EXTRACTION.

Sec. 41.45.010. LEGISLATIVE FINDINGS AND DECLARATION OF PURPOSE. (a) The legislature finds that [major] resource development, exploration, + production projects create an [immediate] demand for greatly increased state and municipal services in areas contiguous to the projects and that tax revenues derived from these projects are received by the state and local governments only after significant impact on and expense by the state and local governments in providing necessary services has [already] occurred.

(b) The legislature considers it probable that the initial demand for publicly provided services related to outer continental shelf oil and gas development, exploration, + production projects will exceed corresponding initial tax revenues from the projects by an even greater proportion than occurs with resource [development] projects wholly inside the state.

(c) It is the purpose of this chapter to provide a mechanism by which the increase in demand for state and municipal services occurring as the result of an outer continental shelf oil or gas [development] project will be met by revenue from the project responsible for the increase in demand.

Sec. 41.45.020. SHORE FACILITIES CONSTRUCTION PERMIT. A person engaged in the exploration, development or production of oil or gas under terms of a lease from the United States in outer conti. ental shelf areas shall, before constructing, leasing, or in any other manner providing for shore facilities associated with the exploration, development, or production, apply for and obtain from the Department of Community and Regional Affairs a shore facilities construction permit and pay the permit fee provided in sec. 30 of this chapter.

Sec. 41.45.030. FEE FOR SHORE FACILITIES PERMIT. (a) The fee for a shore facilities construction permit is equal to the proportion of the anticipated outer continental shelf oil and gas development within the affected area which the facility represents of gross impact costs less development revenues. For purposes of this section

(1) "gross impact cost" equals the maximum anticipated population increase attributable to outer continental shelf oil and gas development in the affected area during a 20-year period multiplied by the per capita costs of state and local government in the affected area in the year in which application is made for a permit; and

what is?

7 + following yrs?

(2) "development revenue" equals the sum of estimated petroleum property taxes and general property taxes levied and collected on onshore facilities in the affected area, estimated income taxes collected from Alaska residents in the affected area, and anticipated outer continental shelf oil and gas development grants for which application may be made to the United States government, each of which shall be discounted on a cash flow basis using a discount rate which includes both the cost of money to the state and anticipated reductions in purchasing power due to inflation.

Wilco incl. prop. + sales taxes from increased business + pop.

(b) The applicant shall be provided access to the data used by the department in calculating the permit fee, and shall be given notice

and opportunity for hearing by the department before determination of the permit fee.

Sec. 41.45.040. REIMBURSEMENT TO MUNICIPALITIES. The department shall allocate to each municipality affected by a project an amount equal to that portion of the permit fee which is attributable to the provision of public facilities and services by the municipality.

Sec. 41.45.050. REGULATIONS. The department shall promulgate regulations to implement this chapter.

Sec. 41.45.060. DEFINITIONS. In this chapter

(1) "department" means the Department of Community and Regional Affairs;

(2) "shore facility" means a facility which is an integral part of, or directly associated with, the exploration for, or extraction, production or transportation of, oil or gas from the outer continental shelf, and which is owned by, or committed by contract or other agreement to, persons exploring for or producing or transporting oil or gas from the outer continental shelf; "shore facility" includes but is not limited to pumping stations, compressor stations, power plants, topping plants, processing units, roads, tank farms, tanker terminals, docks and other port facilities, air strips and communication equipment and facilities, maintenance equipment and facilities, construction camps and maintenance camps and other related facilities.

* Sec. 2. This Act takes effect immediately in accordance with AS 01.10.-070(c).

41.45.030. FEE FOR SHORE FACILITIES PERMITS -

Application Fee

(a) The fee for a shore facilities construction permit is the sum of the estimated "Multiple of the Local Services Fees" plus the "Population Adjustment"

(b) "Local Services Fees" are equal to the quintuple (i.e.) of the quotient computed by dividing the total state and locally financed costs of providing local governmental services to the community for the community's fiscal year during which the application for a permit is made by the total local resident population during that period. For purposes of this computation the Department of Community and Regional Affairs with the assistance of the local government is to ascertain the costs on the basis of the necessary data from the community's financial records.

(c) The "Multiple of the Local Services Fees" is computed by multiplying the "Local Services Fees" with the estimated total additional residents in the community employed by the applicant at the peak of the operation in the area during a 20-year period commencing with the time the application for the permit is made.

(d) "Population Adjustment" is the product of multiplying the "Multiple of the Local Services Fees" with the percentage determined by dividing the number of total additional residents in the community employed by the applicant at the peak of operation in te area by the total resident population in the community at the time of application for the permit, and multiplying the quotient wth one hundred.

Permit Renewal

(a) Every year the permittee is to apply for renewal of the permit, and is to pay a renewal fee.

(b) The renewal fee is the product computed by multiplying the total number of additional residents in the community employed by the permittee during the preceeding fiscal year of the community with the amount determined by dividing the total state and locally financed costs of local services to be provided by the local community for the fiscal year during which application for the renewal is made by the number of total residents in the community at the time application for renewal is made.

DRAFT OUTLINE 3/18/77 CSHB. 219

does franchise go on forever?

CONTINENTAL SHELF SERVICE FACILITIES ACT

*Section 1. Legislative Findings and Purpose. Taken from page 1 of HB 219 with whatever changes are necessary to enhance chance of favorable judicial review.

*Section 2. Amend AS 44.47.050 to beef up "purposes" section of C & RA organic statute.

*Section 3. Adds new chapter (44.48)

Sec. 010. Creates Alaska Continental Shelf Services Authority in C & RA for the purposes of coordinating on-shore development related to outer continental shelf petroleum and mineral exploration activities, devel. prod. for purposes of assisting communities impacted by such development, and for the administration of the franchise requirements of this chapter.

Sec. 020. The authority is to be governed by a committee composed of the commissioner (C & RA), the director of the Division of Community Planning (in C & RA), and the director of the Division of Local Government Assistance.

Sec. 030. No person may operate an "on-shore service facility" for continental shelf development without a franchise from the authority except as provided in sec. 100 of this chapter.

Sec. 040. The authority shall monitor the activities of the federal government and state government with respect to continental shelf exploration and leasing, prepare a 2 quarterly report to the legislature and the governor on the potential need for continental shelf on-shore service facilities. When the board determines that service facilities are likely to be required in the near future, but in no case later than 90 days prior to the date at which the Department of Interior or other leasing authority proposes to receive bids on outer continental shelf tracts, the authority shall give notice of a hearing for the purpose of selecting a site or sites to serve the proposed continental shelf development. The purpose of the hearing shall be to solicit nominations of appropriate sites from interested communities and from continental shelf developers, operators of existing on-shore facilities, and other interested parties. The nominations shall contain 1) location of the proposed site, 2) the types of supply services expected to be required at this site, 3) the ownership of the land at and surrounding the site, 4) the capacity of the site to grow to meet the expected demands and an estimation of that expected demand and 5) such other information as the board may consider pertinent. In the case of facilities already in operation the board shall additionally solicit information concerning the current use of the facility and its ownership.

Sec. 050. The committee shall hold site selection hearings not less than 90 days nor more than 120 days after notice of those hearings have been distributed to all interested parties. Input shall be solicited from local communities in the area of the continental shelf development, prospective

This means before leasing - advisable?

users of the port facility including but not limited to holders of outer continental shelf leases, firms supplying the operations on those leases, local governments in the area of the proposed sites, representatives of fishing or other commercial activities who may be adversely impacted economically from the choice of a particular site or sites, and federal and state governmental experts on civil engineering, environmental science, or other technical matters which may relate to the port development.

Sec. 060. The committee shall determine, on the basis of the public hearing record, and any other relevant information available to it, the preferred site or sites for a continental shelf development facility or facilities. The criteria to be used by the committee in making this selection, in descending order of importance, are 1) minimize adverse economic and social impact on any community that may be adjacent to or coincident with the site, 2) minimize adverse environmental impact, 3) minimize the costs of facility development, minimize the expense of servicing OCS activities, and make the best use of existing port facilities, 4) maximize the likelihood that facilities will be useful for other purposes if and when OCS development tapers off.

Sec. 070. If the chosen site is in a borough, the borough may appeal the site decision to the governor who shall have 30 days to 1) affirm the decision, or 2) direct the board to give the issue further study, in which case the governor shall provide specific instructions as to what areas of concern should be looked into further. (If the site is in a city which is not itself included in a borough, the city has the same appeal right.) This appeal must be exercised within 30 days of the date of the initial site

choice decision. Other parties with a major interest in the siting decision including the prospective companies developing the OCS resource, land owners in the vicinity of the site, or others with similar interests may, within the 30 day period subsequent to the initial decision, request a rehearing by the board stating in that request the reasons why they believe an additional hearing is necessary.

Sec. 080. Once a final site selection decision is made a regional continental shelf facilities board shall be formed composed of the committee members or their designees (who must be on the C & RA staff) plus three members elected by the borough assembly (or the city council if there is no borough. If the city later becomes a part of a borough the new assembly elects new board members. The regional board is empowered to select a franchisee and negotiate the franchise fee.

what if unorganized no city?

If requested by a majority of the board members the Department of C & RA shall provide staff support to the board in its selection of the franchisee, and in the setting of the franchise fee. Four members of the board constitute a quorum, and actions of the board require an affirmative vote of four members.

Sec. 090. The franchise shall be awarded to firms actually engaged in continental shelf development unless the board determines that other ownership is in the best interests of the state and community; however, in the case where an approved site is an existing facility the franchise shall be awarded to the operator of the existing facility unless it is the board's decision that the operator does not have the technical or financial capability to promptly and efficiently meet the expected requirements for continental shelf supply services. In this case the board shall encourage the existing facility operator and prospective continental shelf developers to establish some form of joint venture to which the franchise then shall be awarded.

Sec. 109. Where a port exists at the approved continental shelf supply facility site the franchise and franchise fee shall not be required unless cargo directly destined for outer continental shelf development crossing the facility exceeds 25 per cent of all other cargo either in value or in tonnage over the period of one month. The facility operator shall periodically report to the board on the tonnage crossing its facility and shall not exceed the 25 per cent figure without first obtaining the franchise from the regional facilities board.

Sec. 110. The franchise fee shall be a matter of free negotiation between the board and the franchisee. The fee may be paid on the basis of any or all of the following: 1) an initial lump sum payment, 2) periodic payments of fixed amounts, 3) periodic payments based on the value of material moved across the franchise facility, 4) initial lump sum payment to be followed by a subsequent lump sum payment if and when activity reaches a specified level, or 5) any other method that reasonably relates fee payments to impact costs expected to be imposed upon the community by OCS development.

Sec. 120. The franchise fee shall be subject to reneogtiation each five years, and shall not exceed the cost to the community and state that have a reasonable probability of occurring during the five year period. These costs shall be net of any payments expected to be received for property taxes on the facility, and if the franchise fee includes a periodic payment, shall be net of the expected value of those periodic payments. After the initial five year period has lapsed the maximum permissible franchise fee during the second five year period shall be calculated in the same manner as was the maximum fee for the first five year period, except that the maximum

shall be increased by the net community costs incurred over the previous five year period in excess of those collected or defrayed by the franchise fee paid during that period, or alternatively, decreased by the amount that the actual monies paid were in excess of actual net costs incurred on the community. However, in no case shall a community be required to reimburse the franchisee for any "excess payments" except by means of credits against future franchise payments.

Sec. 130. The franchisee or prospective franchisee who believes that the fee proposed by the board is higher than permitted under sec. 120 may pay the fee under protest and appeal to the superior court, and such payment shall not prejudice the franchisee's rights in any way. No franchise shall be awarded, however, without payment of the fee, and a prospective franchisee who appeals an offer of the board to the court acquires no rights in the franchise, which the board may then award to another applicant on the same terms and conditions as were turned down by the initial prospective franchisee. Acceptance by a second applicant of the terms rejected by the initial prospective franchisee shall be prima facie evidence of the reasonableness of the proposed fee under the criteria established in sec. 120. The attorney general shall defend the board and the committee in any actions brought against it.

Sec. 140. If on renegotiation the board and the franchisee cannot agree the franchisee may pay the franchise fee proposed by the board under protest and appeal as provided under sec. 130 above. If the franchisee does not wish to make payment under protest then the local government may acquire by eminent domain the facilities of the franchisee at the approved site, or if the local government is not interested the state may so acquire them.

Sec. 150. Franchise payment shall be shared between the state and local government (if one exists) on the basis of 30 percent to the state and 70 per cent to the local government. If a local government should be formed or should expand to encompass an approved site subsequent to the collection of a franchise fee the local government shall receive 1.167 per cent of the previously collected fee for each month of the five year franchise period yet to run, counting from the effective date of the annexation or formation of the local government. how arrived at?

Sec. 160. The board shall have power of eminent domain, but this may be exercised only through unanimous vote of the board and only to acquire an approved site. Nothing herein requires the use of this power by the board.

Sec. 170. A franchise may not be sold or otherwise alienated to a non OCS operator without local government having right of first refusal, and the state the right of second refusal.

Sec. 180. Non discrimination in operation of the facility with respect to rates, terms and conditions charged to other users shall be a condition of the franchise.

Sec. 190. Nothing herein shall exempt a franchise facility from payment of property taxes or compliance with lawful zoning requirements. Neither shall a facility be entitled to any local services or special treatment by virtue of its franchise. The franchise is not necessary exclusive.

Sec. 200. Civil penalities shall be assessed for operation of an OCS service facility without a franchise. Penalties shall be based on the value of the cargo moved across the facility during any period when the facility did not possess but should have possessed a franchise. Owner of the cargo and the owner and/or operator of the facility shall be jointly liable for the civil penality.

Sec. 300. Definitions.

franchise to operators?

PARR, BRADLEY, BROWN et al

BY THE COMMUNITY AND REGIONAL AFFAIRS COMMITTEE

IN THE HOUSE ~~SENATE~~

CS for HOUSE BILL NO. 219

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act establishing the Alaska Outer Continental Shelf Service Authority; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. LEGISLATIVE FINDINGS AND PURPOSE. (a) The Legislature finds that activities which occur in the waters of the Outer Continental Shelf adjacent to the territorial waters of the state require the construction of support facilities in onshore areas of the state contiguous to the projects; that the siting, planning and construction and operation of new or expanded onshore facilities and activities associated with supply of outer continental shelf projects involve demands for public facilities and services which, initially, are beyond the ability of local governments to meet; and that the planning and provision of public services and facilities without corresponding generation of offsetting tax revenues should occur without net fiscal loss to the state and its local governments and should not otherwise adversely affect the welfare of the citizens of the community and the state.

(b) It is the purpose of this Act to provide a mechanism by which to ensure that the location, construction and operation of support

facilities and services for outer continental shelf projects will produce minimal adverse effects on the citizens of the state and affected communities by providing for exchange of information between parties involved with outer continental shelf activity, and that the increase in demand for state and municipal services occurring as a result of outer continental shelf development will be met by revenue from the project responsible for the increase in demand.

* Section 2. AS 44 is amended by the addition of a new chapter to read:

CHAPTER 48. CONTINENTAL SHELF SERVICE FACILITIES

Sec. 44.48.010. ALASKA CONTINENTAL SHELF SERVICE AUTHORITY. (a) There is created within the department the Alaska Continental Shelf Service Authority for the purpose of administering the franchise requirements established in this chapter, to assist in providing better coordination of onshore development resulting from continental shelf petroleum and exploration and development activities, and for the purpose of assisting communities impacted or likely to be impacted by this development.

(b) The authority is governed by a committee composed of the commissioner, the director of the Division of Community Planning in the department, and the director of the Division of Local Government Assistance in the department. The commissioner may by public notice designate other employees of the department to serve in the place of any member of the committee.

Sec. 44.48.020. FRANCHISE FOR ONSHORE SERVICE FACILITIES. ✓Expect as provided in sec. 030 of this chapter, no person may construct an onshore facility except on a site approved by the authority and under a franchise issued by the authority.

Sec. 44.48.030. ONSHORE SERVICE FACILITIES SITE SELECTION PROCESS. (a) The authority shall monitor the activities of the federal government

and state government with respect to continental shelf exploration and leasing and prepare a quarterly report to the legislature and the governor on the potential need for continental shelf onshore service facilities. When the authority determines that service facilities are likely to be required in the near future, but in no case later than 90 days prior to the date at which the Department of Interior or other leasing authority proposes to receive bids on outer continental shelf tracts, the authority shall give notice of a hearing for the purpose of selecting a site or sites to serve the proposed continental shelf development.

(b) Nominations of appropriate sites or comments shall be solicited from: interested communities; local governments; prospective developers of the petroleum resources which may be found in the area to be leased; operators or owners of existing or proposed port facilities in the region of the leasing activity; other agencies of the state and federal government; experts on civil engineerings, environmental science, or other technical matters which may relate to port development; current users of existing port facilities; representatives of fishing or other commercial interests which may be adversely impacted by the selection of a particular site or sites; and other interested parties.

(c) The authority shall hold site selection hearings not less than 90 days nor more than 120 days after notice of the hearings, which shall be published in all newspapers of general circulation in the region of the expected development and mailed to all local governments in that region.

Sec. 44.40.040. CRITERIA FOR SITE SELECTION. (a) The authority shall determine, on the basis of the record of public hearing and any other relevant information available to it, the preferred site or sites for service facilities.

to total of 6 20 yrs. -

make user & facility pay State -

give local com. control over developments - ~~franchise awarded to coast should distributed~~

(b) A determination of the authority shall be based upon application of the following criteria to the candidate sites:

(1) preference shall be given to a site or sites which minimize the adverse economic and social impact on any municipality or community that may be adjacent or proximate to the site;

(2) among candidate sites:

(A) the selection shall favor sites which minimize adverse environmental impact;

(B) the selection shall favor the use of existing port facilities to minimize necessary investment in development of facilities, to minimize the costs of serving offshore petroleum exploration, development and production operations, and to provide for expansion of existing facilities in the most economical fashion;

(3) consideration shall be given to the necessity and desirability of developing or expanding facilities for use by the community or region after use of the facility to service outer continental shelf development has been completed.

(c) If a site or sites are within the boundaries of a municipality which exercises planning and zoning powers under AS 29.33.070 - 29.33.245, no site may be selected unless the site is in an area which is zoned for a use not inconsistent with service facility development.

(d) A single site may be composed of noncontiguous parcels.

Sec. 44.48.050. DECISION. The authority shall announce its decision within 90 days following the date of the last site selection hearing. A copy of the decision of the authority shall be mailed to all parties of record to any hearings concerning a site approved or rejected by the authority. The decision of the authority becomes effective on the 30th day following announcement of the decision unless an interested party files a written request for reconsideration in the manner provided in

Sec. 44.48.~~060~~ 070. REGIONAL CONTINENTAL SHELF FACILITIES BOARD. Immediately after the site selection becomes final a Regional Continental Shelf Facilities Board shall be established, composed of six persons, three state members designated by the commissioner and

(1) if the site is in an organized borough, three local members elected by the borough assembly;

(2) if the site is in a city in the unorganized borough, three members elected by the city council; or

(3) if the site is in the unorganized borough and not in a city, three local members appointed by the commissioner. by a vote of community

Sec. 44.48.~~070~~ 080. AWARD OF FRANCHISE. (a) Subject to the limitations imposed in (b) of this section, the board shall select the franchisee. The authority shall award the franchise contingent upon the successful conclusion of negotiations between the board and the franchise of the amount and manner of payment of a franchise fee as provided in sec. ~~080~~ 090 of this chapter.

(b) In awarding a franchise, if the site or sites finally approved by the authority encompass an existing port facility,

(1) the franchise shall be awarded to a firm or firms actually engaged in outer continental shelf development unless the board determines that award of the franchise to another party is in the best interests of the state or the municipality;

(2) when the port facility ceases to be exempted from the provisions of this chapter by operation of (c) of this section, the franchise shall be awarded to the operator of the facility unless the board finds that the operator does not have the technical or financial capacity to promptly and efficiently meet the expected requirements for outer continental shelf supply services through the facility; the board shall, after hearing, enter a finding that the operator fails to qualify for

sec. ~~55~~ 060 of this chapter.

Sec. 44.48.~~055~~ 060. RECONSIDERATION An interested party is entitled to a reconsideration hearing by the authority. Requests for reconsideration shall be acted upon by the authority in preference to any other matter.

(b) A request for reconsideration shall specify the grounds upon which the request is based and include a succinct statement of the issues or matters to be presented by the party requesting the hearing.

(c) The authority shall serve a copy of the request for reconsideration on any other interested party at the same time notice of reconsideration is provided under (d) of this section.

(d) The authority shall determine the time and place of the hearing. The hearing shall be held, whenever possible, in a community proximate to the site or sites approved or rejected by the authority which are the subject of the request for reconsideration. The date for the hearing shall be not later than 90 days after the date of announcement of the of the decision of the authority that is the subject of request for reconsideration.

(e) The case may be reconsidered by the authority on all the pertinent parts of the record and the additional evidence or argument that are presented. If oral evidence is introduced before the authority, no member of the authority may vote unless he has heard the evidence.

(f) In secs. 50 and ~~55~~ 60 of this chapter, "interested party" means

(1) a municipality adjacent or proximate to a site approved or rejected by the authority;

(2) an operator of an existing onshore service facility; or

(3) the owner of a lease within the outer continental shelf or within the territorial sea which is to be served by the service facility.

the franchise and may, thereafter, assist the operator and any outer continental shelf developer to operate the facility under agreement or joint venture.

(c) If a port facility exists at an approved supply facility site, no franchise shall be required until cargo directly destined for outer continental shelf developments handled to ~~t~~ransshiped through the facility in any month exceeds 25 percent of all cargo, by value or tonnage, handled or transshipped through the facility during the preceding month. The exemption provided by this section expires 90 days after the last day of the calendar month in which cargo directly handled or transshiped through the facility exceeds the limitation imposed in this section.

Sec. 44.48.090. DETERMINATION OF FRANCHISE FEE. (a) Subject to the conditions and limitations of (b)-(d) of this section, the fee for a franchise issued under the provisions of this chapter and the manner of its payment are determined by negotiation between the board and the prospective franchisee.

(b) No franchise fee may exceed the costs to the state and municipality which have a reasonable probability of occuring as a result of outer continental shelf petroleum development, less anticipated payments by all franchisees within the community, during the five year period. If two or more franchises are negotiated and approved by the board, the franchisees shall, between or among themselves, determine the percentage of the total of the franchise fee to be paid by each.

(c) A franchise fee is subject to renegotiation at the end of five years. The provisions of (b) of this section are applicable to renegotiated franchise fees except that to limit of 20 yrs?

(1) if the net community costs incurred during the previous five year period exceeded the costs defrayed by the franchise fees paid

during that period, the maximum permissible fee is increased by the excess amount; and

(2) if the net community costs incurred during the previous five year period were less than the costs defrayed by the franchise fees paid during that period, the maximum permissible fee is reduced by the amount by which excess franchise fees were paid.

(d) A fee may be paid on any of the following bases:

(1) initial payment of the full amount due in one sum;

(2) initial partial payment with subsequent payment or payments contingent upon transshipment of cargo through the facility at a predetermined volume;

(3) periodic payments of fixed amounts;

(4) periodic payments based on the value of cargo transshipped through the facility for which the franchise is issued; or

(5) any other method that reasonably relates fee payments to costs expected to be incurred or imposed on the community and the state by outer continental shelf petroleum exploration, development and production.

Sec. 44.48.100. APPEAL OF DETERMINATION OF FRANCHISE FEE. (a) A prospective franchisee who believes that the fee determined by the board exceeds the amount permitted under sec. 090 of this chapter may pay the fee under protest and appeal the question to the superior court. Payment of the fee under protest shall not prejudice the claim of the prospective franchisee.

(b) A prospective franchisee who appeals a determination of the board to the court without payment acquires no rights in a franchise. The board may award the franchise to another party on terms and conditions equal or more favorable to the board than those rejected by the initial prospective franchisee. Acceptance by another party of the terms and

conditions rejected by an initial prospective franchisee is evidence of the reasonableness of the proposed fee.

(c) The provisions of this section are applicable to franchise fees subject to renegotiation under sec. 090(c) of this chapter.

Why?

Sec. 44.48.110 . EMINENT DOMAIN. The board, by unanimous vote of its members, may exercise the power of eminent domain to acquire an approved site. Exercise of the power of eminent domain within a municipality requires the concurrence of the governing body of the municipality. The provisions of AS 09.55.240 - 09.55.460 are applicable to the provisions of this section.

Sec. 44.48.120. COLLECTION AND DISPOSITION OF FRANCHISE FEES. (a) Franchise fees determined under the provisions of sec. 090.of this chapter shall be remitted to the department. The commissioner shall pay to an organized borough or to a city in the unorganized borough in which is located a facility for which a franchise has been issued 70 percent of the franchise fee collected under this chapter.

(b) If a municipality entitled to receive a portion of a franchise fee under (a) of this section is incorporated or annexes territory which contains an approved site containing a facility subject to collection of a franchise fee, the municipality is entitled to receive 1.167 percent of the fee previously collected for the facility for each month of any unexpired portion of the franchise period after the effective date of the incorporation of the municipality or its annexation of the territory containing the approved site. There is authorized to be appropriated annually to the department the sum, if any, that is certified by the commissioner to the governor as necessary to provide an amount to each municipality entitled to receive a portion of a franchise fee previously collected in accordance with this subsection.

(c) Sums not paid to a municipality under (a) of this section shall be deposited in the general fund.

Sec. 44.48.130. LIMITATIONS ON SALE OR TRANSFER OF A FRANCHISE. No franchise may be sold or otherwise conveyed by a party holding a franchise to any person not engaged in outer continental shelf activity without prior consent of the governing body of the municipality in which the facility is located and the commissioner. Before acting to convey the franchise or any rights in the franchise to any

person not engaged in outer continental shelf activity, the party holding a franchise shall first offer the franchise for sale to the municipality, which shall have a period of 60 days to purchase the franchise or any rights in it. If the governing body of the municipality refuses the franchise, the holder of the franchise shall offer the franchise or rights in it to the commissioner, who shall have a period of 60 days to purchase the franchise or any rights in it.

Sec. 44.48.140. NONDISCRIMINATION IN FACILITY OPERATION. Nondiscrimination in operation of a facility for which a franchise is granted under the provisions of this chapter as to rates, terms and conditions of use of the facility by users shall be a condition of each franchise.

Sec. 44.48.150. COMPLIANCE WITH OTHER PROVISON OF LAW. (a) The provisions of secs. 10 - of this chapter do not exempt a franchised facility from the payment of property taxes under AS 29.53 or AS 43.56 or from compliance with the applicable zoning regulations lawfully adopted under AS 29.333.090.

(b) The grant of a franchise to a facility is not exclusive unless the provisions of the franchise so permit.

Sec. 44.48.160. ENFORCEMENT. (a) When it appears, after investigation, that there is a violation of a provision of this chapter, the department (authority) shall proceed in accordance with the provisions of this section to enforce compliance with the provisions of this chapter.

(b) A person who violates sec. of this chapter or a provision or condition of a franchise issued under this chapter is subject to civil penalties. Penalties shall be based upon the value of cargo moved across or through the facility during any period when an operator of a facility required to have a franchise under this chapter

did not have a franchise.

(c) a person may be enjoined by the superior court from committing a violation of a provision of this chapter.

(d) Actions under this section to recover penalties or damanges or to enjoin violations shall be brought by the attorney general in a court of competent jurisdiction.

(e) All penalties recovered shall be paid into the general fund of the state.

Sec. 44.48.170 . DEFINITIONS. In this chapter,

(1) "authority" means the Alaska Continental Shelf Services Authority;

(2) "board" means a regional Continental Shelf Service Facilities Board;

(3) "commissioner" means the commissioner of the Department of Community and Regional Affairs;

(4) "department" means the Department of Community and Regional Affairs;

(5) "onshore service facility" means each of the following:

(A) a wharf, dock, quay or other structure used for the final transshipment of cargo destined to supply mobile or fixed offshore oil and gas drilling vessels or structures;

(B) warehouses, storage yards and tank farms associated with the facilities described in (A) of this paragraph for the storage of cargo destined to supply offshore drilling operations; and

(C) offices and repair shops or yards primarily required for servicing or administering offshore drilling operations which are located in physical proximity to the facilities described in (A) and (B) of this paragraph.

(D) pipeline terminals ?

* Sec. 3. AS 44.47.050 is amended by adding a new paragraph to read:

(19) provide staff and technical assistance to the Continental Shelf Services Authority established by AS 44.48;

* Sec. 4. This Act takes effect immediately in accordance with AS 01.10.070(c).

Part on coastal mgmt. 3 hearing defin community state leases after 1/1/72 jurisdiction of municip. areas

BY THE COMMUNITY AND REGIONAL AFFAIRS COMMITTEE

IN THE HOUSE

CS FOR HOUSE BILL NO. 219

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act providing for permits and fees for the construction of shore-based support facilities for offshore oil and gas exploration, development and production; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 41 is amended by adding a new chapter to read:

CHAPTER 45. SHORE FACILITIES FOR OFFSHORE RESOURCE EXTRACTION.

Sec. 41.45.010. LEGISLATIVE FINDINGS AND DECLARATION OF PURPOSE. (a) The legislature finds that activities associated with the exploration, development and recovery of natural resources from the waters adjacent to the state require the construction of support facilities in onshore areas of the state contiguous to the projects; that the siting, planning, construction and operation of new [or expanded] onshore facilities and activities associated with the supply of offshore projects involve demands for public facilities and services which, initially, are beyond the capacity of local governments to provide; that early knowledge of the location and magnitude of anticipated shore-based support facilities will better allow municipalities and the state to plan the provision of public facilities and services before and during the period of construction and operation of the support facilities; that the planning and provision of public facilities and services in advance of construction of shore-based support facilities generates a temporary demand for additional revenues to defray costs associated with extra-

ordinary municipal expenditures; and that there is a need to provide a mechanism by which the state and local governments may receive information about projected onshore support activity as a basis for sound public planning decisions and to obtain financial support in order to partially defray the costs of planning and initiating provision of necessary public facilities and services.

(b) It is the purpose of this chapter to provide a mechanism by which to ensure that the location, construction and operation of support facilities for projects in all waters adjacent to the state will produce minimal adverse effects upon the people of the state and affected local governments by providing for the exchange of information between parties involved with offshore activity, and that the increase in demand for public services occurring as a result of shore-based facility development will be met by a contribution of revenue from the facilities responsible for the increase in demand.

Sec. 41.45.020. SHORE FACILITIES CONSTRUCTION PERMIT. (a) No person engaged in exploration, development or production of oil or gas under terms of a lease from the United States, the state, or any party in the offshore waters adjacent to the state may construct, lease or in any other manner provide for shore facilities associated with exploration, development or production without first applying for and securing from the department a shore facilities construction permit and paying the fee provided in sec. 30 of this chapter.

(b) An applicant for a permit under this section shall file an application with the department in a form which the department, by regulation, has prescribed. The application shall contain the following information:

(1) a description of the location and of the facility to be built at the location;

(2) an estimate of the value of the facility upon its completion;

(3) a summary of any studies or reports which have been made examining the economic impact of the construction and operation of the facility on an adjacent community or on the region, including, but not limited to, the applicant's estimate of the number of persons to be employed in the construction and operation of the facility during each year of the five-year period commencing with the submission of the application;

(4) a statement explaining the need for the facility;

(5) a description of any reasonable alternate locations for the proposed facility, a statement of the comparative merits and detriments of each location identified, and a statement of why the primary proposed location is best suited for the facility;

(6) any additional information which the department, by regulation, may require in order to fairly evaluate

(A) conformance of the proposed facility to applicable state and local laws and regulations;

(B) the effects of the economic activity of the proposed facility;

(C) the effects of the proposed facility on the public health, welfare, and safety;

(D) the capacity of the state and of a municipality adjacent to the proposed facility to provide necessary public facilities and services;

(7) any additional information which the applicant considers relevant; and

(8) a resolution of approval of the governing body of

(A) a municipality in which the proposed facility is to

be located;

(B) a municipality in the vicinity or area affected by construction and operation of the proposed facility.

how broad?

(c) An application filed with the department shall be available for public inspection.

(d) An application shall be accompanied by proof of service of a copy of the application on the mayor of each municipality in the area in which any portion of the facility is to be located, both as primarily and alternatively proposed.

(e) The department may, by order entered after filing, require the applicant to serve notice of the application, and file proof of notice, on other persons as the department considers appropriate.

what?

Sec. 41.45.030. PERMIT FEE. (a) At the time of filing an application for a permit under sec. 20 of this chapter, the applicant shall pay a permit fee to the Department of Revenue.

(b) The fee payable under (a) of this section is based upon the one of the following two schedules which produces the greater revenue:

(1) valuation of the proposed facility upon completion, with payment of two per cent of the estimated value up to $5,000,000; plus one per cent of the estimated value over $5,000,000 and up to $20,000,000; plus one-half of one per cent of the estimated value over $20,000,000;

w/in municipality +

(2) the estimate of the maximum anticipated population increase attributable to employment in construction or operation of the facility over the five-year period following submission of the application, multiplied by the per capita cost of state and local government in the year in which application is made for the permit.

(c) The applicant shall provide the department with the data which was used to calculate the permit fee.

language not moved — extra sheet

3rd. developer have right to appeal?
No - he determines fee.

Sec. 41.45.040. APPEAL OF FEE. (a) A municipality which is entitled to receive a portion of a shore facilities construction permit fee paid by an applicant under this chapter may appeal the determination of the amount of the fee. The governing body of the municipality shall, within 30 days of receipt of written notice that an application has been submitted and a fee paid, file an appeal with the department setting out the reasons why it believes the fee paid has not been correctly computed.

(b) If a municipality appeals the determination of the fee paid under (a) of this section, the commissioner of the department shall, within 45 days after giving written notice to all parties, conduct a hearing on the matter. If, after the hearing, the commissioner determines that the fee payable by the applicant has been incorrectly computed, he shall provide the applicant a written statement describing the error in computation and indicating the amount of the fee due. The applicant shall pay the additional amount of the fee within 30 days of receipt of the decision of the commissioner.

redundant?

(c) An applicant or a municipality aggrieved by a decision of the commissioner under (b) of this section may appeal the decision in the superior court.

Sec. 41.45.050. AMENDMENT OF PERMIT. (a) A permit issued by the department under sec. 30 of this chapter may be amended. An application for an amended permit shall be submitted in the manner provided for new applications in sec. 20 of this chapter. If an amendment to an approved permit would result in a substantial change of an original permit, the amendment shall be treated as a new application and a supplemental permit fee shall be paid.

(b) If it appears to the commissioner or to officials of a municipality entitled to receive a portion of a shore facilities construction permit fee under this chapter that there will occur substantial change

in the use of the facility from the activity described in the original application or an amended application for a permit, the commissioner may call for a public hearing on the question. The commissioner shall, within 45 days after giving written notice to all parties, conduct a hearing on the matter. If, after the hearing, the commissioner determines that there has been substantial change in the use of the facility from the activity described in the original or amended application for a permit, he shall require the applicant to submit an application for an amended permit.

(c) An amended permit submitted by an applicant under an order of the commissioner entered under (b) of this section shall be accompanied by payment of the increment in the fee due, together with a penalty payment of 10 per cent of the total amount of permit fees due for the facility. judicial review?

(d) For purposes of this section, a change in the use of a facility for which a permit has been issued is "substantial" if

(1) the applicant or the commissioner determines that the value of any changes or improvements in the facility would increase the estimated value of the facility under sec 30(a)(1) by more than 10 per cent; or

(2) the applicant or the commissioner determines that the actual population increase under sec. 30(a)(2) will exceed the estimate determined under sec. 30(a)(2) of this chapter by more than 10 per cent.

Sec. 41.45.060. REFUSAL OF PERMIT. shall issue w/in 30 days - The department may refuse to issue a permit under this chapter only if it finds that

(1) a fee due and payable by the applicant on an original application or an amended application has not been promptly paid; or

(2) the application does not contain, or is not supported by written concurrence of the governing body of a municipality required by sec. 20(b)(8) of this chapter.

zoning jurisdictional dispute Seward - Kenai bous -

Sec. 41.45.070. REVOCATION OR SUSPENSION OF PERMIT. The department may revoke or suspend a permit issued under the provisions of this chapter if, after notice +

(1) the facility does not conform, in location, construction or operation, to applicable municipal ordinance or regulation; or

(2) after notice and hearing to all parties, the commissioner determines that an additional fee is due and payable under sec. 40(b) of this chapter or an additional fee and penalty are due and payable under sec. 50(b) of this chapter, and the holder of the permit has failed to pay the additional fee, together with penalty due if any, within the time prescribed by law. judicial review?

Sec. 41.45.080. DISPOSITION OF FEES AND PENALTIES. The commissioner of the Department of Revenue may retain five per cent of the fees and penalties collected under this chapter to defray the costs of [receipt and review of applications for permits or for the] adm. + enforcement enforcement of the provisions of this chapter. Of the balance remaining, not less than 50 per cent of the fee shall be returned to a municipality or combination of municipalities in which the proposed facility is to be located or which are in the vicinity of, or which may be affected by, construction and operation of the proposed facility. Determination of the amount transmitted to a municipality shall be subject to negotiation between the Department of Community and Regional Affairs and any affected municipality. The portion of the fee not returned to municipalities shall be deposited by the Department of Revenue in the general fund.

Sec. 41.45.090. MONITORING OF FACILITIES. The department shall review and monitor the operation of all facilities for which a permit has been issued under this chapter.

Sec. 41.45.100. ADMINISTRATION. (a) Annually, the department shall compute and report, for use by applicants and permittees under this

Att. 2

chapter

(1) standard multiplier factors relating the number of persons engaged in direct employment in a shore facility to the number of persons indirectly employed and the number of dependents of all persons employed; and

(2) the per capita cost of state and local government service.

(b) The department shall, by regulation, requi olders of permits issued under this chapter to furnish:

(1) information indicating the number of persons employed in a facility for which a permit is issued under this chapter;

(2) the estimate of the value of facilities for which a permit is issued under this chapter.

Sec. 41.45.110. LONG-RANGE DEVELOPMENT PLAN. (a) Any person contemplating the construction of a facility subject to issuance of a permit under this chapter in the state in the ensuing three years shall furnish annually to the department for its review a long-range plan for the construction and operation of facilities. The plan shall be submitted not later than September 1 of each year, and shall include the following information:

(1) the general location, size and type of all facilities to be owned or leased and operated whose construction is projected to commence during the ensuing three-year period;

(2) projections of the demand for public facilities and services required by the facility and explanation of the basis for those projections, and a description of the manner and extent to which the proposed facilities will meet project demand.

(b) A plan furnished under this section shall be made available to the governing body of any municipality or community affected by the activity described or summarized in the plan.

Sec. 41.45.120. FAILURE TO SUBMIT LONG-RANGE PLAN. If an applicant for a permit under secs. 10 - 100 of this chapter has failed to provide the department with annual copies of a long-range plan as required by sec. 110 of this chapter, the permit fee due and payable by the applicant for permit shall be twice the amount authorized in sec. 30(b) of this chapter.

Sec. 41.45.130. PENALTIES FOR VIOLATION OF PROVISIONS OF THIS CHAPTER. (a) A person who wilfully violates a provision of secs. 10 - 100 of this chapter or any regulation adopted by the department under this chapter is guilty of a misdemeanor and, upon conviction, is punishable by a fine of not more than $10,000 for each violation. Each day of a continuing violation constitutes a separate offense.

(b) At the request of the commissioner, the attorney general shall enforce this chapter and institute legal actions to accomplish its enforcement.

Sec. 41.45.140. DEFINITIONS. In this chapter, unless the context otherwise requires,

(1) "commissioner" means the commissioner of the Department of Community and Regional Affairs;

(2) "department" means the Department of Community and Regional Affairs;

(3) "shore facility" means a facility which is an integral part of, or directly associated with, the exploration for, or extraction, production or transpc ation of, oil or gas from the waters adjacent to the state, and which is owned by, or committed by contract or other agreement to, persons exploring for or producing or transporting oil or gas from adjacent coastal waters; the term includes, but is not limited to,

(A) a wharf, dock or other port structure or facility

used for the final transshipment of cargo destined for mobile or fixed offshore oil or gas drilling vessels or structures;

(B) warehouses, storage yards, tank farms, tanker terminals and pipelines associated with the facilities described in (A) of this paragraph for the storage of cargo destined for offshore drilling operations or for the storage of petroleum products from offshore drilling operations;

(C) offices, maintenance facilities, maintenance and construction camps and related facilities primarily required for administration or servicing of offshore drilling operations which are located in physical proximity to the facilities described in (A) and (B) of this paragraph.

* Sec. 2. This Act takes effect immediately in accordance with AS 01.10.-070(c).

APPLICABILITY

Page 2, line 16:

Sec. 41.45.020. SHORE FACILITIES CONSTRUCTION PERMIT. (a) No person engaged in exploration, development or production of oil or gas under terms of a lease from the United States, the state, or any party in the offshore waters adjacent to the state may construct, lease or in any other manner provide shore facilities associated with exploration, development or production after the effective date of this Act without first applying for and securing from the department a shore facilities construction permit and paying the fee provided in sec. 30 of this chapter.

RESPONSE TO COMMENTS RECEIVED DURING TESTIMONY ON FRIDAY, MARCH 25, WITH REFERENCE TO PROPOSED CSHB 219 --

Page 3, line 5: reference to "adjacent community or on the region" --

The term has no clearly understood reference unless one is provided in the bill. The committee may want to phrase a definition in terms of distance or mileage or, in keeping with the spirit of the bill, suggest or require that the department define the term by regulation. This could be done by incorporating the latter as a mandatory requirement in the section entitled "Administration, " AS 41.45.100(b) of the draft. [The term also appears, obliquely, at page 4, lines 2 and 3 and 6.]

Page 3, lines 21 and 22: reference to "health, welfare, and safety" --

The purpose of inclusion of the phrase was to allow the department to require evaluation of impact in the broadest possible terms with reference to any governmental function which an affected local government might perform under AS 29.

Page 3, line 28: correct to read :

(8) a resolution <u>of approval</u> of the governing body...

Page 4, line 10: Subsection (e) may be deleted; because applications are available for public inspection [subsection (c)], the department may provide copies to any interested party.

Page 4, lines 23 and 24: The formula could be made "tighter" by having it read:

(2) the estimate of the maximum anticipated population increase <u>within the municipality</u> attributable to employment...

Page 5: Sec. 40 of the draft.

With respect to the observation of Mr. Singletary, it was my intent that the issuance of a permit not be held up while the parties engage in hearings over whether the fee determined and tendered by the applicant was properly computed, but only if a fee, however determined, was not "promptly paid" [see sec. 60(1), following page].

Page 6, line 19:

estimated value of the facility <u>determined under sec. 30(a)(1) of this chapter</u> by more than 10 per cent;

Page 6, line 23: Objection was made that there was no time frame within which the department would be required to release a permit. The provision could be amended to read:

Sec. 41.45.060. ISSUANCE OF PERMIT. The department shall issue a permit within 30 days of receipt of a complete application. The department may refuse to issue a permit...

Page 7, lines 1 - 11: Request that no permit be revoked or suspended without opportunity for a public hearing. Revise the section to read:

Sec. 41.45.070. REVOCATION OR SUSPENSION OF PERMIT. The department may revoke or suspend a permit issued under the provisions of this chapter if, after notice and hearing to all parties, the commissioner determines that

(1) the facility does not conform, in location, construction or operation, to applicable municipal ordinance or regulation; or

(2) an additional fee is due and payable under sec. 40(b) of this chapter or an additional fee and penalty are due and payable under sec. 50(b) of this chapter, and the holder of the permit has failed to pay the additional fee, together with penalty due, if any, within the time prescribed by law.

Page 7, line 15 and 16: Revise to read:

...to defray the costs of administration and enforcement of the provisions of this chapter.

Page 7, lines 25 - 27: Amend to read:

... for which a permit has been issued under this chapter <u>for compliance with the provisions of this chapter and the provisions of the permit application</u>.

[The purpose of the section is to require that some entity having the technical capacity to do so oversee operations of permittees in order to assure that the statements made by the applicant for permit reflect the later circumstances. If activity exceeds predictions, a supplementary permit fee may be levied.]

Page 8, line 2: One witness mentioned that "standard multiplier factors" vary among communities. I don't know whether this is true but, assuming it is, the paragraph could be amended to read:

(1) standard multiplier factors <u>determined by region and appli-</u>

cable to all communities within a region relating the number...

Page 8, lines 13 and following: In light of the fact that some of the information required under long-range reports must be provided to the Department of the Interior under the provisions of an OCS lease, the committee might want to consider a further subsection in sec. 110 authorizing return of this information in satisfaction of the requirements imposed in this section.

Page 9, lines 7 - 12: This is a CRIMINAL penalty intended for application to a party required to have a permit under this chapter and conducting operations without that permit. The CIVIL penalties in the bill are to be found in two places: the 10% penalty of sec. 50(c) [page 6, line 10] and the "double payment" provision of sec. 120 [page 9, lines 1 - 6].

Page 9: Add, to the definitions section, a standard definition of the term "municipality."

***

Page 2, line 16 and following: You have asked for clarification of the parties which would be required to apply for a permit. As section 20(a) is now written, the applicant would be a party "engaged in exploration, development or production under terms of a lease... in the offshore waters adjacent to the state," thus placing the burden squarely on the companies holding the leases. Should you want to require that actual contractors and/or operators (rather than the industry directly) bear the responsibility and attendant costs, it would be sufficient to rewrite sec. 20(a) to read:

(a) No person may construct a shore facility without first applying for and securing from the department a shore facilities construction permit and paying the fee provided in sec. 30 of this chapter.

You would, of course, rely on the definition of "shore facility" set out in the definitions section to distinguish between facilities for which a prior permit is required and those which would not. Using the language set out above, however, it would appear clearer that the contractor would carry the burden.

Sec. 41.45.060. ISSUANCE OF PERMIT. (a) The department shall issue a permit within 30 days of receipt of a completed application and payment of the permit fee. The department may refuse to issue a permit only if it finds that

(1) a fee due and payable by the applicant on an original application or an amended application has not been promptly paid; or

(2) the application does not contain, or is not supported by, written approval of the governing body of the municipality required by sec. 20(b)(8) of this chapter.

(b) If the area affected by construction of a shore facility is within one municipality and the municipality unreasonably withholds approval of an application for permit required by sec. 20(b)(8) of this chapter, the commissioner may waive the approval requirement and issue the permit.

Your file only - did not distribute to members -

D

REQUIREMENT OF PROMPT PAYMENT --

Amend Sec. 41.45.080 by adding another subsection to read:

( ) Payments due a municipality under this section shall be transmitted by the department within 30 days of agreement between the parties of the amount payable.

"REBATE" OR "REFUND" PROVISION --

Page 7, line 2 --

After Sec. 41.45.060, add a new section to read:

Sec. 41.45.070. OVERPAYMENT AND REFUND. (a) If a holder of a permit for a facility issued under this chapter has reason to believe that there has occurred or will occur a substantial change in the use of a facility from the activity described in the application for an original permit or amended permit, he may file with the commissioner an application for an amended permit and request a refund of a portion of the fees previously paid. Within 45 days after receipt of an application, after notice to the applicant and any affected municipality, the commissioner shall conduct a public hearing on the application. If, after the hearing, the commissioner determines that there has been a substantial change or that a substantial change is reasonably likely to occur, he shall accept the amended application and authorize a refund of the ~~amount of a~~ unobligated portion of the fee previously paid by the applicant.

(b) A refund of a portion of a fee authorized by the commissioner under (a) of this section shall be the difference between amounts previously paid by the applicant and the amount ~~computed~~ obligated in accordance with sec. 30(a) c this chapter on an application accepted by the commissione under (a) of this section.

(c) Not later than October 1 of each year, the commissioner shall certify to the governor the amount of refunds payable to permit holders under this section. The governor shall include the amount which the commissioner certifies in the annual budget submitted in accordance with AS 37.07.

(d) For purposes of this section, a change in the use of a facility is "substantial" if

(1) the estimated or actual value of any changes or improvement

in a facility for which a permit has been issued will be less than the estimated value of the facility determined in an original or amended application by more than 10 per cent; or

(2) the actual population increase attributable to the construction and operation of a facility for which a permit has been issued will be less than the estimate determined in an original or amended application by more than 10 per cent.

ALLOCATION FOR THE BENEFIT OF UNINCORPORATED AREAS --

Page 7, line 13 and following -- Change sec. 41.45.080 to read:

Sec. 41.45.080. DISPOSITION OF FEES AND PENALTIES. (a) The commissioner of the Department of Revenue shall deposit in the general fund the money collected under this chapter.

(b) There is established in the general fund the shore facilities assistance account. Ninety-five per cent of the fees and penalties received under this chapter, or as much of the amount as the legislature may annually appropriate, shall be placed in the account for the uses and purposes described in (c) and (d) of this section.

(c) Not less than 50 per cent of the fees and penalties paid by an applicant for a permit under this chapter for a facility located within a municipality or within 10 miles of a municipality shall be paid by the department from the account to a municipality or combination of municipalities. Determination of the amount payable under this subsection to a municipality or combination of municipalities shall be determined by agreement between the department and the governing body of an affected municipality.

(d) Fees and penalties paid by an applicant for a permit under this chapter for a facility located in a community or within 10 miles of a community of the unorganized borough are available for the benefit of the community. The department may

(1) transfer amounts to another state agency for use by the agency to benefit the community; or

(2) retain an amount for its use for the benefit of the community.

Amend the definition section to include a definition of "community":

( ) "community" means a village located in the unorganized borough in which is located a school operated by an educational service area or the Bureau of Indian Affairs and any other village containing 25 or more permanent residents;

LA-L 20

INCLUDE PROVISION THAT FACILITIES PROVIDED TO OPERATORS UNDER LEASE BE SUBJECT TO THE LONG-RANGE DEVELOPMENT PLAN REQUIREMENT --

Page 8, lines 22 - 24:

(1) the general location, size and type of all facilities to be owned and operated <u>or leased</u> whose construction is projected to commence during the ensuing three-year period;

Page 8, line 25 --

Delete the current language of subsection (c) and insert --

(c) Fees and penalties paid by an applicant for a permit under this chapter for a facility located in a municipality or within 10 miles of a municipality shall be paid by the department to the municipality or combination of municipalities. [If two or more municipalities are entitled to receive an amount under this subsection, the municipalities shall, among themselves, propose to the department the amount payable to each and the department shall make payment based upon the determination.]

Page 9, line 12 --

Delete the current language of subsection (e) and insert --

(e) Payments due a municipality under this section shall be transmitted by the department

(1) within 30 days of receipt of payment of the fee by the Department of Revenue, if payment is due to only one municipality;

(2) within 30 days of receipt of the allocation agreed to by the municipalities, if payment is due to more than one municipality.

Charles Prokop of Exxon, testimony before the Council on Environmental Quality, September 26-27, 1973:

"As production grows it would become necessary to have more and more personnel 'on location' until within a year or so a sizable community would develop near the producing area. If we keep our assumption of 200,000 B/D production as an example area, we could expect approximately 20 modest size business buildings, and two small hotels for temporary personnel and approximately 400 homes for the 600 people directly employed. A similar number would be expected to live outside the area in nearby cities with heavy emphasis still on Anchorage.

Of course, new supporting services would grow into the communities to serve the families of the employees, providing new jobs for those not directly associated with the industry. This could produce a community of near 2400 people and the churches, schools, recreation and service buildings accompanying a small population center. Land use would be approximately 6 square miles . . . .

There are several locations on the coastline of the Gulf which would accommodate sizable communities. At present Yakutat and Cordova are the only towns in the area under discussion. Neither is large enough to absorb even a part of the increased population, but either could be enlarged substantially should their positions be strategic. Yakutat would probably be the most ideally located of the two."

OIL INDUSTRY EMPLOYMENT IN SCOTLAND

TABLE 5.6 CHANGES IN OIL INDUSTRY EMPLOYMENT, MARCH 1973–DECEMBER 1974

	Mar. '73	*Jun. '73*	*Sep. '73*	*Dec. '73*	*Mar. '74*	*Jul. '74*	*Oct. '74*	*Dec. '74*
Inverness and Easter Ross	1 840	1 795	2 040	3 205	4 175	4 375	3 520	4 025
Remainder of Highlands and Islands	50	65	50	85	395	930	1 365	1 565
North East	1 410	2 305	2 305[b]	3 730	4 065	4 715	5 495	6 925
Tayside	25	35	95	135	150	280	475	765
East Central[a]	665	770	910	975	1 815	2 530	2 430	2 080
West Central[c]	110	170	250	480	675	785	855	870
Total	4 100	5 140	5 650	8 610	11 275	13 615	14 140	16 230

a. East Central is equivalent to the Firth of Forth region as described in Chapter 6.
b. No fresh figure was published for this quarter, therefore previous total has been carried forward.
c. The figures for West Central Scotland do not include workers engaged in rig construction work in Clyde shipyards, e.g. Marathon, Clydebank. In December 1974 workers in this category numbered 1935.

Analysis of HB 219 as Proposed February 15, 1977

The bill proposes to establish a shore facilities construction permit system, and to charge a permit fee based on the difference between "gross impact cost" and "development revenue" to be estimated by the Department of Community and Regional Affairs.

The "gross impact costs" are determined by multiplying the per capita costs of state and local government services in the area with the maximum anticipated population increase anticipated in conjunction with the offshore development in the area. "Development revenue" is to be determined by estimating petroleum property taxes, general property taxes, estimated income tax collections, and anticipated outer continental shelf oil and gas development grants.

The bill is unclear with respect to several items:

1. It appears that the permit fee to be assessed is aimed at covering costs of governmental services which will not be funded from other sources. The bill refers to per capita state and local government cost without specifically indicating which cost items are to be included, especially state costs.

2. It is unclear whether the permit fee assessed is supposed to reflect estimated total cost for the 20-year period, or whether it is to be based on the maximum impact at one point in time. The question of the 20-year coverage occurs because of the reference to the discounting of the cash flow on the revenue side. This implies that on the revenue side, the whole period will be taken into consideration.

3. In this connection, the question occurs why the inflationary impact is to be taken into account on the revenue side while no reference to this is made on the cost side.

4. If the permit to be assessed is to reflect the otherwise unfunded portion of state and local costs, all state and local revenue sources applicable should be incorporated. This would include a local sales tax, if applicable, school taxes, all excise taxes, license fees and other revenue sources, especially at the state level. However, most of these revenues, as well as some of the expenditure items, cannot yet be traced to specific localities. Because of this, the concept incorporated in the bill appears to be unworkable, at least in its present form.

HB 219

Statement, Parr, March 14, 1977

I am sorry that conflicting committee meetings did not permit me to be here during oil company testimony on HB 219. Over the weekend, however, I have listened to the tapes of that testimony and would like to offer a few comments.

Mr. Mathews of Exxon made quite a point of the fact that the North Sea was a case of rushed development whereas only 5% of the U.S. OCS had been developed over a number of years. Against his statement should be read the attached pages from the Baldwins' book: Onshore Planning for Offshore Oil: Lessons from Scotland. (Appendix 1)

The Exxon representative further indicated that very few jobs would be made available for Alaskans, that the bulk of the work force would be brought in to the rigs or platforms by air from the Lower 48, spend two weeks at work (beyond the three-mile limit) and fly home again. Two points: They don't intend to train and hire Alaskans-which would benefit our economy-and it seems unlekely that the state will collect any income tax from those workers who neither live nor work within the three-mile limit.

Also, the Committee should compare the above statements with that by Mr.Showalter of SOHIO, that the OCS development will help unemployment following completion of pipeline construction, hiring skilled workers who live in Anchorage.

Mr. Matthews and Mr. Wiles (Shell Oil) stated that the number of people will be small. It is up to the Committee to decide whether to accept their figures or those prepared by Mr. Waring and Mr. Trimble. My own preference is to assume the higher figures, require the companies to submit payrolls and other data, and give them a rebate if they have indeed been overcharged.

The Committee might also note that expansion of a water, wewer, electric power, or school systems does not happen overnight. The community simply cannot wait until the development phase hits to begin construction of needed facilities.

References were made to $1.6 billion (sic). A column by Senator Ted Stevens, which I furnished the Committee at its first hearing on HB 219, indicates

(1) a total of $1.2 billion, of which

(2) $800 million is for loans and

(3) $400 million is for grants, of which

(4) $50 million is for planning, the rest for unavoidable

ecological losses (fish?) and necessary projects which cannot be funded under the loan program.

It is hardly likely that Alaska will get the lion's share of the grant funds... .

Mr. Larry Vavra of Union Oil furnished information on the Collier plant in Kenai and its happy tax status. I should point out that the Collier plant has been paying only about 1/3 of what it should have paid in the North Kenai Fire Service Area. There has also been heavy (and uncompensated) impact on Kenai and Soldotna, as Representative Malone can verify.

Mr. Wiles quoted the preparer of the Mathematerial Sciences Northwest study, "who spent more than three weeks in Scotland, Shetlands," to the effect that the "local authorities in Scotland, with the active cooperation of the oil companies and contractors had been able to effectively plan for on-shore development..." Some idea of the active cooperation may be gleaned from Appendix 2. (Baldwin, ibid).

A final point. Mr. Wiles discussed possible constitutional problems. Although not a lawyer, I'll venture the opinion that there are two sides to the case. See, for example, K & L Distributors, Inc. v. Murkowski, 486 P.2d 351(1971).

what schools ?
no approp of funds by congress must not be impeachment.

Collier plant no tax - matter of fact.

Introduction

Why should Americans look to Scotland for lessons about the impacts of offshore oil, when an offshore industry has operated in the Gulf of Mexico for nearly 40 years?

At first glance, the Gulf of Mexico experience might seem to provide a sufficient guide for future oil developments elsewhere in the United States. Yet a closer look reveals important differences between oil experience in the Gulf and the prospects elsewhere in the United States, particularly along the Atlantic and Alaskan coasts. In these areas, climate, sea conditions, landscape, and perhaps even the social structure more closely resemble the North Sea coast of Scotland than the shores of Texas and Louisiana.

For one thing, the discovery of offshore oil and gas in the Gulf of Mexico followed many years of nearby onshore production, complete with pipelines, refineries, storage tanks, and a work force of thousands. Thus, the industry began its marine operations in the Gulf with trained local manpower and sophisticated facilities. This was not the case with the North Sea—nor will it be with the continental shelves of the Atlantic or the Gulf of Alaska. An even more significant difference between Gulf of Mexico operations and new offshore developments in the United States lies in the fact that the Gulf industry grew in the 1950's and 1960's at a pace that was far more gradual than that of the crash programs required by today's oil shortages. Rapid growth in energy use combined with the current drive to reduce energy imports and the

Appendix 1

severe problems associated with expansion of coal production and nuclear power have now turned the attention of American government and industry toward prospects for expanding oil supplies. Since onshore oil reserves in the United States are declining, most future expansion must come from offshore.

The continental shelves of the Atlantic Ocean and the Gulf of Alaska represent great untapped potential sources of new oil and gas for the United States. Consequently, these regions loom large on the drawing boards of the oil companies and the managers of the federal oil domain in the Department of the Interior. Current plans call for an expanded federal program specifying as much as 10 million acres of offshore lands for leasing to oil companies in 1975.

This level of leasing represents an enormous jump from earlier policy, and is cause for concern. Federal leasing of 10 million acres in 1975 would double, in a single year, the total offshore acreage leased since the program began in 1953. Never before has the total for a single year surpassed even two million acres, and only six million were under active federal lease in early 1975. The levels anticipated for such untapped regions as the Middle Atlantic and the Gulf of Alaska seem particularly large; some 3.5 million acres would be leased in each area.

Acreage figures do not, of course, indicate the level of oil production that we might expect from these frontier areas in the future. Normaily, it takes four to eight years to bring a new oil field into production, and this lead time cannot even begin until extensive exploratory drilling confirms the presence of commercial quantities of oil. It is therefore safe to say that there will be virtually no Atlantic or Alaskan production before the end of this decade. Until exploratory efforts

are well underway, estimates of outer continental shelf (OCS) production in frontier areas are little better than guesswork. But it could be folly to base predictions of onshore environmental effects on the Gulf of Mexico experience. In 1969—after 30 years of state and federal offshore operations in the Gulf of Mexico—the average daily production level in Gulf waters reached one million barrels per day. In the North Sea, by contrast, that level of production will be surpassed before 1980, or less than ten years after British Petroleum discovered the first major oil field in the British sector. But because massive oil and gas reserves are still being discovered in the North Sea, the 1980 production level could be closer to 2.5 million barrels a day; indeed, many experts predict production of four to five million barrels a day by 1985.[1] These numbers dwarf the Gulf of Mexico operation.

Planners who hope to be ready for potential oil development in new areas of the United States would be wise to examine the impacts on the coastal environment of such rapid build-up to high production levels. There is barely time now to learn from the North Sea oil experience and to plan for oil development in Atlantic and Alaskan coastal regions with the benefit of both the successes and the failures of planning efforts in Scotland.

Our report thus focuses on both sides of the Atlantic: it is a description of the Scottish experience, based on observation, interviews, and literature review carried out in the spring and summer of 1974, accompanied by conclusions and recommendations for the United States. It is an environmental study in the broad sense of that word. We have been concerned in part with the impact of oil development on the natural environment, including the land, the scenery,

dominant position in the Islands' political and economic affairs. While Brae and the other three "growth villages" near Sullom Voe will not begin to rival Lerwick in population, they will together form a new educational, commercial, and, of course, industrial center for the northern half of Shetland.

The oil facilities at Sullom Voe will also require new infrastructure, especially new roads. Existing roadways are narrow and winding. Many are limited in their capacity to handle heavy loads because they lie above Shetland's ubiquitous peat bogs. Some of the new roads will therefore require excavation of the peat and its replacement with a more solid fill. Getting the roads built during the next few years, simultaneously with the oil industry's development and community housing and related facilities, will require great ingenuity on the part of Shetland's planners.

While there is no precise American equivalent to the Shetlands, remote communities in northern Maine and in Alaska could well experience demands similar to those now facing Shetland if oil were discovered nearby. It is possible that the local spirit and determination to maintain a quality environment in such places would match those qualities in Shetland. It is encouraging to recall that the Shetland Islands began without sophisticated planning controls or even a planning body at the local level. There is no reason why American communities could not plan as well. By 1980, it may be possible to applaud the Shetland deepwater port, with its related development, for being as successfully brought off in reality as it appears today on paper.

Shetland's success thus far in meeting oil head-on and remaining firmly in the driver's seat is

Appendix 2

due in large part to an unintimidated attitude of local officials toward the oil industry. It was apparent to oil men early in their discussions that Shetland was not to be cowed by the money and power of multi-national oil companies. At one point, negotiations between the industry and the county broke down temporarily after Shell executives showed their frustration with Shetland County's tight planning controls. They reminded the County Clerk that the oil companies could always give up their plans for Shetland and take their development, their riches, and their jobs elsewhere.

"That's the best news we've heard since you arrived," the County Clerk replied, as he and his staff members rose to leave the meeting.[40]

Such confidence and lack of anxiety at the thought of doing without oil convinced the oil companies that they had to accommodate local wishes, rather than the other way around.

The concentration of large oil fields near the Shetland Islands will give the Sullom Voe terminal the largest oil throughput of any British port. The impacts of the Shetland terminal will outpace all the other tanker terminals associated with North Sea oil. Nonetheless, two other terminals, currently under construction, are worth mentioning.

The Orkney Islands, sister group to the Shetlands, are similarly remote and sparsely settled. Occidental Oil is now constructing a deepwater tanker terminal on the Orkney island of Flotta, where oil from the Piper field will land by pipeline for transfer to tankers in the sheltered waters of Scapa Flow. Since the Flotta terminal will serve only one field and one company, its impacts will be less noticeable to Orkney residents than Sullom Voe will be to Shetlanders.

Analysis of HB 219 as Proposed February 15, 1977

The bill proposes to establish a shore facilities construction permit system, and to charge a permit fee based on the difference between "gross impact cost" and "development revenue" to be estimated by the Department of Community and Regional Affairs.

The "gross impact costs" are determined by multiplying the per capita costs of state and local government services in the area with the maximum anticipated population increase anticipated in conjunction with the offshore development in the area. "Development revenue" is to be determined by estimating petroleum property taxes, general property taxes, estimated income tax collections, and anticipated outer continental shelf oil and gas development grants.

The bill is unclear with respect to several items:

1. It appears that the permit fee to be assessed is aimed at covering costs of governmental services which will not be funded from other sources. The bill refers to per capita state and local government cost without specifically indicating which cost items are to be included, especially state costs.

2. It is unclear whether the permit fee assessed is supposed to reflect estimated total cost for the 20-year period, or whether it is to be based on the maximum impact at one point in time. The question of the 20-year coverage occurs because of the reference to the discounting of the cash flow on the revenue side. This implies that on the revenue side, the whole period will be taken into consideration.

3. In this connection, the question occurs why the inflationary impact is to be taken into account on the revenue side while no reference to this is made on the cost side.

4. If the permit to be assessed is to reflect the otherwise unfunded portion of state and local costs, all state and local revenue sources applicable should be incorporated. This would include a local sales tax, if applicable, school taxes, all excise taxes, license fees and other revenue sources, especially at the state level. However, most of these revenues, as well as some of the expenditure items, cannot yet be traced to specific localities. Because of this, the concept incorporated in the bill appears to be unworkable, at least in its present form.

February 21, 1977

RE: Basic Tax Information / Purpose and Authority

State Tax System

Personal Income Tax: Should stand-out as the single most important revenue instrument in the state tax system and should produce close to 25% of total state-local tax revenues.

General Sales Tax: As the other major state tax it should produce 20 to 25% of the total state-local tax revenue without imposing an extraordinary burden on low income families. Retail sales tax rests on the belief that consumption is an appropriate basis on which to distribute a substantial part of the state tax load.

Local Tax System

Property Tax: Provides 5 out of 6 local tax dollars.

In many states there are existing constitutional and statutory restrictions on the taxing powers of local governments in terms of specific rates or allowed rates of increase, coupled with requirements for specific referendum approval of proposed property tax levies.

The State Role

The state has a useful and significant coordinative role to play in the administration of local income taxes as well as in other non-property taxes. Income taxes are preferable to sales and many other types of taxes because they can be structured to distribute their burden in conformity with ability to pay and with necessary regard to the taxpayer's family obligations.

Income tax limitations for use at the local level:

- frequently people live in one jurisdiction and work in another.
- people often supplement their wages and salaries from local sources with investment and other unearned income from other parts of the state; however, local jurisdictions that now use these taxes generally limit them to income from wages and salaries, the type of income most easily taxed.

May 24, 1977

Options for CRA Input on HB 219

A. Justification for bill.

Document the actual potential for onshore impacts , and the inability of local governments to plan for, control, and pay for these impacts.

In a narrative, describe how HB 219 provides a mechanism for control.

B. Local concerns.

Examine and address anticipated local concerns and objections to HB 219. For example, discuss the bill's effect on local property tax, on local regulatory powers and autonomy, on the localities' ability to attract development, and on the development of facilities not included within the bill's coverage.

C. Legal issues.

Explore legal issues which could be used by onshore developers to challenge the bill. Federal issues are interstate commerce, preemption, conflict and equal protection. State issues are local legislation, double taxation, delegation, and preemption.

D. Planning issues.

Does the Act accomplish its pupose? What powers are given to local units? Are regional needs addressed? Is the role of CRA appropriate for it? How does the

Coastal Management bill (HB 342) affect HB 219, especially in terms of local actors and pertinent issues? Does the proposed severance tax potentially alter the role of HB 219?

E. Drafting.

Suggestions for improvement in drafting HB 219 either to reflect the same substantive/procedural goals at present or to add to those goals.

F. Alternative means under existing law.

What techniques presently exist for local and state authorities to plan and pay for onshore developments related to OCS energy development. For example, are special assessment bonds (AS 29.63.085) or special tax rates (AS 29.63.010) or special tax zones (AS 29.53.405) useful in passing the additional costs of development to the developer? Will loans under the Coastal Energy Impact Program be useful to local units.

Role of local zoning powers, especially ~~contraband~~ conditional use.

heating oil because of inadequate insulation in their houses.

The purpose of HB 219 is to compensate for the on-shore impacts caused by the OCS development.

The State cannot force the Federal Government to furnish such compensation. It can, however, require the companies exploiting the OCS territory to pay for the on-shore impact costs. The bill provides that the amount of uncompensated impact is estimated and that this amount is the price of the building permit for the on-shore facilities.

Draft - 2/25/77

H.B. 219

The Anchorage Times of February 16 reports Senator Ted Stevens as saying that Congress has directed the Interior Department to accelerate off-shore oil and gas leasing. Although Alaska has been successful in delaying the leasing of the Outer Continental Shelf off it shores, it appears that the honeymoon may be over and we may soon see an accelerated program of leasing going on.

The Supreme Court has decided that all of the lands beyond the 3-mile limit belong to the Federal Government. This means that any revenues--severance taxes, royalties or other--will go to the Federal Government. There is no provision for the State to collect any revenue from this activity. The state will, however, have impact on its shores because of the on-shore facilities necessary to support the development.

An estimate by the President's office of Management and Budget gives the impact cost for infra-governmental infra-structure for the State of Alaska as 680 million dollars. A later estimate by the Department of Community and Regional Affairs is somewhat lower. Here the cost is estimated to be somewhat over 400 million dollars. No legislation so far passed by Congress or envisioned, will compensate the State on this order of magnitude.

It is my belief that Alaskan taxpayers should not bear the impact costs involved in OCS production so that persons in other parts of the country may continue to run their air-conditioners, drive their cars at 70 miles per hour or waste

3-10-77

Larry Vavra--Union Oil Company

Data for Collier Carbon:

Investment

Latest gross investment of old plant reported to the State is $63.012 million (undepreciated).

Estimated cost of new plant is about $250 million.

Amounts paid to Kenai Borough

1972	$128,500
1973	126,329
1974	120,191
1975	125,190
1976	228,896
1977	1,547,319 (estimate)

Employees

The "old" plant has about 130-140 regular employees. However, in anticipation of the new plant completion, the work force has risen to about 200, the added number being people in training phases. When the new plant is operational, it is estimated that there will be about 240 regular employees.

When Collier first came to Kenai, about half of the work force was hired locally, the others being transferred in from elsewhere because of a scarcity of labor in the area possessing the appropriate skills. Hence, some 60-70 employees were already in the general area.

Of the some 70 people or so currently added to the regular work force, some 85-90% of them are local people from the area and are not "lower 48" transferees. It is Collier's policy to hire locally as much as possible and a training program has been going for some time.

When the new plant is operational, Collier estimates the regular employee work force will be around 240 people. Most of the added personnel will be drawn from the local area.

In addition to regular employees, Collier has contractors who themselves hire workers to do the contract work. Currently, the number of these workers range from a low of about 15 to as many as 300 when the "turnaround" work is done annually, and which takes about a month on a facility. However, even these additional contract employees are hired locally and Collier estimates that some 65% or more come from the immediate area and 35% from the Anchorage area. Very few come from outside Alaska.

Offshore Oil Facility Siting on Kodiak

The Department of Community & Regional Affairs has announced the award of a consultant contract to evaluate possible sites on the Island of Kodiak, suitable for use by the offshore oil industry. The study will be carried out by Woodward-Clyde, Inc., with assistance from Earl and Wright Engineers of San Francisco.

The directive to the consultants is to study all possible sites on Kodiak Island which might be suitable for use either as oil transhipment and storage terminals, L.N.G. plants with their associated Marine loading facilities or onshore supply bases. Each site will be ranked for its suitability for oil industry operations and its impacts on the environment and community life of Kodiak. The objective is to produce a list of recommended sites which match the oil industry's requirements and high environmental standards, and best fit in with the existing pattern of life on Kodiak.

Sites initially under consideration are:

Kazakof Bay
Kizhuyak Bay
Monashka Bay
St. Paul Harbor
Kalsin Bay
Ugak Bay
Old Harbor
Cape Chiniak
Barling Bay
Three Saints Bay

This list is not an exclusive one and other sites may emerge in the course of the study which would merit consideration.

The study, sponsored jointly by the Department of Community and Regional Affairs, the Kodiak Island Borough, and Koniag, Inc., is funded to plan for OCS development. The timing of this project is particularly important as it is scheduled to be completed prior to the Kodiak Shelf OCS lease sale, now scheduled by the Department of the Interior for November, 1977. In this way, local groups will have an opportunity to influence company location policy.

Since the views of the Kodiak Islanders are an important input to the project, the contractors have been directed to take careful note of any site preferences expressed at a series of public meetings schedules to be held in Kodiak this spring.

The study will start in mid-April and should be complete by the end of November. For further information, please contact:

COLLIER CARBON & CHEMICAL CORPORATION
JAPAN GAS-CHEMICAL COMPANY, INC.
ALAP CORPORATION

CERTIFICATE OF INDUSTRIAL TAX EXEMPTION

(AS 43.25 as amended)

THIS IS TO CERTIFY THAT pursuant to AS 43.25 and AS 44.45.020(a)(12), the Commissioner of Economic Development, for the State of Alaska, has determined that the urea and ammonia plant and related facilities proposed and being built in the Cook Inlet area by the Collier Carbon and Chemical Corporation (hereafter sometimes referred to as "Collier" or as one of the "applicants") and Japan Gas-Chemical Company, Inc. (hereafter sometimes referred to as "Japan Gas" or as one of the "applicants") and Alap Corporation (hereafter sometimes referred to as "Alap" or as one of the "applicants") is an "eligible business", manufacturing a product as defined in AS 43.25.160(a)(1) and that said applicants be and are hereby granted a tax exemption with the terms and conditions set forth below:

A. Those facilities and properties of the aforesaid applicants upon which this exemption is granted are those described in the application and which are located near Kenai, Alaska, on the Cook Inlet, consisting of:

1. The land on which the urea and ammonia plant and related industrial facilities are constructed.

2. The urea and ammonia plants, storage tanks, dock (wharf) facilities, plant and loading lines, and other attendant plant facilities and improvements, and personal property.

CONFIDENTIAL

3. Related facilities located at the plant site include, but are not limited to, the following items:

(a) The furniture, office equipment, and machinery used in the administration of the exempt business.

(b) Administration building and control laboratory.

(c) Shop and warehouse combination buildings.

(d) Equipment and machinery used in the maintenance and transportation facilities, including but not limited to, automobiles, trucks, buses, graders, dozers, fork lift, payloaders and cranes and watercraft.

(e) Equipment and machinery owned by the applicants and not leased or under a lease option contract which are used in connection with the supplying of utility services similar to that supplied by a public utility. Included among these items, but not necessarily limited thereto, are:

(i) Natural gas distribution, including spur pipelines and equipment, running from the plant premises to trunk gas pipelines from which gas is supplied to the plant premises.

(ii) Electric power generation with building and distribution system.

(iii) Raw water distribution and supply system including water wells with pump houses, whether located on or off the plant premises, and iron removal system with building.

CONFIDENTIAL

(iv) Cooling water distribution and supply system including cooling tower and pump house.

(v) Steam generation and distribution facility including condensate system.

(vi) Boiler feed water treating system with building including facilities for instrument air, utility air and inert gas generation.

(vii) Equipment, machinery, piping, used in the treatment and distribution of waste material and to pollution control, including but not limited to:

(1) Septic tanks.

(2) Waste water disposal system including pump house, chemical treatment with building, and retention pond, and including deep wells, and related piping and facilities in connection therewith.

(f) Equipment, machinery or supplies used for communication, which are owned by the applicants and not leased or under lease with an option to purchase and are located on the premises of the exempted plant, including but not limited to:

(i) Telephonic, telegraphic, teletype or microwave systems.

(ii) Radio communication systems.

(iii) Firefighting and safety equipment.

(iv) Fencing.

(v) Security stations and equipment.

CONFIDENTIAL

Those facilities and property considered for exemption purposes in this certificate, including those specifically set forth above, are only those which in fact actually meet the definition of "property devoted to industrial development" as defined in AS 43.25.150(a)(11).

B. Property not deemed to be a part of the described property is:

1. Except as elsewhere noted herein, any property not located or based at or on the plant premises.

2. Any residence or living quarters, except those living quarters or facilities not constituting a permanent residence, which are located on the plant premises for the convenience of employees while in the course of performing their official duties, such as watchmen.

3. Commissaries, except that food items may be made available to employees on the plant premises for consumption during their hours of work. Any equipment used in connection therewith shall be deemed to not constitute commissary.

4. Vehicles, vessels and aircraft which are used away from the plant premises <u>are not exempt</u> from taxation, except the vessels used exclusively for water testing and line handling.

5. All facilities and appurtenant machinery pertaining to or used in connection with the supplying of utility services for other than the applicants' exclusive use. However, in the case of emergency, such as a power failure temporary use of such facilities for others than the applicants will not

CONFIDENTIAL

make that property taxable or put the applicants in violation of this exemption certificate. Temporary means not more than 72 hours. For any use longer than that permission of the Commissioner of Economic Development, or his delegate, shall be obtained if the applicants are not to be in violation of this certificate.

6. Docking facilities - See paragraph No. C which follows:

C. If the trestle and wharf facility of the exempted business subject to this certificate is used in connection with the transportation of items not produced by or used in the operations of the exempted business, a portion of the value of such facility shall be deemed to be non-exempt property, as hereafter determined, to the extent such facility is used in connection with the transportation of items not produced by or used in the operations of the exempted business.

The percentage of use of the trestle and wharf facility in connection with the transportation of products not produced by or used in the operations of the exempted business shall, for any year covered by this certificate, except the first year (1969) and the last year (1978) of the exemption, be determined by computing the percentage of total tonnage during the preceding year of items transported across the trestle and wharf facility which represent products not produced or used in the exempted business. That percentage of the total value of the trestle and wharf facility shall be subject to taxation by political subdivisions who, under state law, could levy taxes on that property. In valuing the property AS 29.10.396 shall be followed. (For example, if the facility were used 50% for non-exempt purposes in 1969, then 50% of the value of that facility on January 1, 1970 would be subject to property taxes in 1970 and would not be considered to be tax exempt.)

ATTORNEY GENERAL, STATE OF ALASKA
STATE CAPITOL
POUCH K, JUNEAU, ALASKA
PHONE 586-5391

CONFIDENTIAL

For the calendar year 1969, the percentage of use shall be deemed to be 15 percent.

In the last year of the exemption (1978) the same formula used for years 2 through 9, as explained above shall be followed except that the period used to compute total tonnage and the percentage of non-exempt use shall consist of the 9th year tonnage plus the tonnage of each month of the 10th year which ends prior to the date the tax roll is certified.

The applicants shall prepare and submit annually to the Assessor of the Kenai Peninsula Borough a determination of the percentage of use, as provided herein, for any period to which this certificate applies, starting with the calendar year 1969. Such determination for each of the years 1969 through 1977 shall be submitted at or prior to the time the property tax returns are filed within the Kenai Peninsula Borough (including any extension of time for filing such returns). Tonnage figures on use during the months of 1978 (the last year under this exemption) to be used in computing the percentage of non-exempt use for that year shall be furnished by the applicants to the Borough Assessor not later than the 5th day of the month in which the tax roll will be certified. Notice of that date shall be furnished to applicants by the Borough.

D. The applicant shall be exempt from the following taxes presently or hereafter levied or imposed upon the property defined in paragraph A, or the receipts therefrom:

1. All ad valorem taxes on real or personal property which may be imposed by the State, borough or other political subdivision or taxing jurisdiction.

2. All sales and use taxes and taxes measured by sales or profits on sales levied by the State, borough or other political subdivisions or taxing jurisdictions in the State.

ATTORNEY GENERAL, STATE OF ALASKA
STATE CAPITOL
POUCH K, JUNEAU, ALASKA
PHONE 586-5301

GOVERNMENT COPY

3. All franchise taxes levied by the State in excess of $1,000 per year and all franchise taxes levied by the borough or other political subdivisions or taxing jurisdictions in the State.

4. All business receipt taxes and business licenses levied by the State, borough or other political subdivisions or taxing jurisdictions.

5. All income taxes levied by the State, borough or other political subdivisions or taxing jurisdictions.

E. The tax exemption granted in this certificate shall apply, inure to, and be transferred to the benefit of:

UNION OIL COMPANY OF CALIFORNIA. In the event of a complete liquidation of COLLIER in which all of the assets owned by COLLIER in the exempted business are transferred to UNION as part of a distribution in complete cancellation or redemption of all of Collier's shares of stock owned by UNION, and

To a Subsidiary American Corporation of Japan Gas which is 100% owned by Japan Gas, and which subsidiary is the transferee of all of the assets owned by Japan Gas in the exempted business.

Any of the transfers described above which occur before the expiration of the period for which the exemption is granted shall not extend the period for which any exemption from taxes is granted. The transfer of rights under this numbered paragraph will be valid only if the transferees, Union Oil or the Subsidiary of Japan Gas, notify the Department of Economic Development within thirty days after the transfer has taken place. Such notice to be in writing by registered letter. In the event of transfer, the transferee shall be subject to

CONFIDENTIAL

all restrictions and requirements of this exemption certificate, together with any amendments which may be added from time to time.

A transfer under this numbered paragraph shall not relieve the applicants or their successors from the statutory requirements of AS 43.25.020 and .030.

F. The exemptions referred to in paragraph D shall be for a period of ten years commencing January 1, 1969, but these exemptions may be terminated sooner under any provision contained in paragraph K of this certificate.

G. Only those exemptions from taxes specified in this certificate are granted to the applicatns.

H. The applicants shall make all reports required by the Alaska Industrial Incentive Act or provided for hereafter or that the Commissioner may from time to time request pertaining to the exempt property. A copy of all reports made to other Alaska State Departments or agencies under the Industrial Incentive Act shall be sent to the Commissioner of Economic Development or other State official subsequently administering the Industrial Incentive Act.

I. All income tax returns and other tax returns required to be filed with the Department of Revenue or other departments shall be complied with as though no exemption existed and copies of all returns shall be furnished to the Commissioner of Economic Development on their due dates, including any extension of time granted by the department whose tax returns are involved. The applicants shall indicate on or attached to the returns what portion of the receipts, income and expenses are derived from the exempt property as defined in paragraph A and may show on the returns the amount of credits claimed.

CONFIDENTIAL

The fact that an applicant may be included as a member of a consolidated group which files a consolidated income tax return with the State of Alaska shall not operate to deny the exemption from Alaska income taxes granted herein to any such applicant. However, if consolidated returns are filed the amount of the tax credit granted shall be only that amount that would be allowed if separate returns had been filed. For example, the exempted business may have a net income for tax purposes (computed as if no exemption existed) of $100,000 and a tax of $8,370. Whereas, a consolidated return showing $1,000,000 in taxable income would have a tax of, say, $93,000. (Part of its tax being in a higher tax rate classification.) The amount of tax credit claimed on the consolidated return would be $8,370 and not the amount of tax arising on $100,000 income if it were computed as coming off the top at the higher tax rate. (Note: The income and tax figures used in this paragraph are hypothetical. Actual figures would have to be used in each instance.)

J. Only those items of income and/or expenses of the applicants which are necessary to the operation of the tax exempt business referred to above may be charged to the exempt business. Operation of a store or stores (inventory) department which makes sales to employees or third persons shall not be deemed to be necessary to the operation of the exempt business.

K. The above described exemptions may be revoked by the Commissioner of Economic Development or other State official charged with administering the Industrial Incentive Act for any one or more of the following reasons:

1. Any violation of or failure by one or more applicants to comply with the Industrial Incentive Act.

CONFIDENTIAL

2. Any violation of or failure by one or more of the applicants to comply with this exemption certificate.

3. Any failure by one or more of the applicants to timely pay any State or borough or city license fee or tax not exempt under this certificate.

4. Any failure of one or more of the applicants to timely make any payment to the State, borough or other political subdivision on any agreement.

5. Any failure of one or more of the applicants to comply with the State's oil and gas conservation regulations.

In the event of any violation or failure by any of the applicants to comply with 1, 2, 3, 4, or 5 above, the State or political subdivision shall give the applicant or applicants 30 days' notice by registered mail to the applicant's plant or their registered agent or agents in which to cure the defect, and if the applicant or applicants cure the defect within the 30 day period, the exemption shall not be revoked for that violation.

In the event of a good faith dispute existing as to whether a violation of 1, 2, 3, 4, or 5 has occurred and is being contested in a court of law, the applicant shall have 30 days after the final order by the court of competent jurisdiction in which to cure the defect, except where revocation is mandatory under the Industrial Incentive Act. However, when a revocation occurs, its effective date shall be that specified by AS 43.25.060. Nothing herein shall operate to deny an applicant the right to appeal adverse decisions as provided in the Industrial Incentive Act.

CONFIDENTIAL

DATED this 25th day of March, 1969, at Juneau, Alaska.

OIL INDUSTRY EMPLOYMENT IN SCOTLAND

TABLE 5.6 CHANGES IN OIL INDUSTRY EMPLOYMENT, MARCH 1973--DECEMBER 1974

	Mar. '73	*Jun. '73*	*Sep. '73*	*Dec. '73*	*Mar. '74*	*Jul. '74*	*Oct. '74*	*Dec. '74*
Inverness and Easter Ross	1 840	1 795	2 040	3 205	4 175	4 375	3 520	4 025
Remainder of Highlands and Islands	50	65	50	85	395	930	1 365	1 565
North East	1 410	2 305	2 305[b]	3 730	4 065	4 715	5 495	6 925
Tayside	25	35	95	135	150	280	475	765
East Central[a]	665	770	910	975	1 815	2 530	2 430	2 080
West Central[c]	110	170	250	480	675	785	855	870
Total	4 100	5 140	5 650	8 610	11 275	13 615	14 140	16 230

a. East Central is equivalent to the Firth of Forth region as described in Chapter 6.
b. No fresh figure was published for this quarter, therefore previous total has been carried forward.
c. The figures for West Central Scotland do not include workers engaged in rig construction work in Clyde shipyards, e.g. Marathon, Clydebank. In December 1974 workers in this category numbered 1935.

EXECUTIVE OFFICE OF THE PRESIDENT
OFFICE OF MANAGEMENT AND BUDGET
WASHINGTON, D.C. 20503

January 28, 1977

Mr. Keith Arnold
Assistant Manager
Alaska Oil and Gas Association
308 G Street, Suite 217
Anchorage, Alaska 99501

Dear Mr. Arnold:

The enclosed paper describes the approach used to derive the direct employment estimates for Alaskan OCS development underlying the figures cited in the Coastal Zone Management Newsletter enclosed in your letter of January 21.

We do not consider the figures quoted in the Newsletter to be valid estimates of the expected impacts in Alaska of OCS development. Those figures were prepared in an analysis done in May of 1975. The purpose was to determine the rough order of magnitude of OCS development impacts based upon deliberately pessimistic assumptions. It would then be possible, despite the great uncertainties, to credibly say that the likelihood of even more severe impacts would be negligible.

The estimates, therefore, were deliberately biased upwards at several stages in the analysis in order to produce an "upper limit" or "worst case" estimate. Some of the major sources of bias are:

- The leasing scenario used was the OCS planning schedule which was later published in June of 1975. It was recognized as a very ambitious and optimistic schedule for Alaska. Actual leasing in Alaska is likely to be spread over a substantially longer period than that schedule had anticipated. The impacts will also be spread over a longer period, reducing the infrastructure needs toward a level based on the "permanent" direct employment.

- The development scenario following each lease sale assumed very rapid exploration and development.

- It was assumed that all direct employment in every affected Alaskan region will be of people new to that region. This is clearly unrealistic.

The paper calculated a peak direct employment of 19,200 and a permanent direct employment of 8,100 resulting from the OCS development scenario examined. In order to arrive at a total population increase figure and a total infrastructure cost figure, the following steps were taken:

- The peak and permanent direct employment were averaged, giving 13,650. It was assumed that public infrastructure needs would be based on this volume of direct employment.

- It was assumed that all direct employment was by people new to the Alaskan areas in question.

- This direct employment of new residents was multiplied by a direct to total employment multiplier of 2.75 and a total employment to population multiplier of 2.5, giving a total additional population of 94,185.

- The total infrastructure cost was derived from this population figure by using $7,250 per capita.

It is unfortunate that these figures are receiving a wide circulation which characterizes them as OMB projections of future OCS impacts in Alaska. Their purpose was not to project the most likely future, but rather to show that, even when unrealistically pessimistic assumptions are used in the analysis, the calculated impacts are manageable.

I believe that the paper and the further steps described above are self-explanatory. However, if you have any further questions about the analysis, we will be glad to address them.

Sincerely yours,

Donald E. Crabill
Deputy Associate Director
for Natural Resources

Enclosure

Socioeconomic Impacts of OCS Development

Staff Papers

The following package describes the bases for our estimates of OCS onshore impacts. Attachment 1 is a description of the approaches used in making the estimates. Attachment 2 describes our own analysis to produce an upper limit estimate of direct employment impact. Attachment 3 includes a paper on Alaska impacts and Atlantic impacts describing the conclusions of existing impact studies on those areas. Attachment 4 is a summary of conclusions which can be drawn from North Sea (Scottish) experience.

The impact estimates finally derived from these analyses are basically the direct employment figures of Attachment 2 blown-up by multipliers to get total employment including induced employment and total population. The multipliers were taken from the earlier impact studies.

The resulting estimates should be treated as order-of-magnitude estimates which are deliberately biased toward the high side. Uncertainties about how much oil will be found, where, and over what time period are very large. Additional uncertainties exist about the response of local economies to the temporary influx of exploration and development workers.

Induced employment and population in short-term boom situations are likely to be less than the induced employment and population which would eventually result if the boom level of activity were to continue indefinitely. However, the multipliers used here are those usually considered suitable for estimating long-term equilibrium results, so they bias the peak employment period results toward the high side.

Another source of uncertainty in Alaska is the unknown degree to which companies during the exploration and development phases will provide facilities and services for their employees because they are about totally absent in the local economy.

METHODOLOGY OF IMPACT ESTIMATIONS

Two approaches used

Two approaches to impact estimates were taken:

1. In the papers "Alaska Impacts," "Atlantic Impacts," and "California Impacts," existing impact studies pertaining to specific OCS areas were reviewed and estimates were derived from them. These studies estimate direct employment based upon assumed levels of production and apply multiplier factors to obtain total number of "new residents."

2. In the paper "Estimates of OCS Employment Impacts," estimated acreages to be leased under the planning schedule along with assumptions about exploration and development rates and percentage of exploratory success were converted into primary employment using unit employment estimates furnished by the National Ocean Industries Association. Production phase employment was derived using those unit employment estimates and production assumptions from the Project Independence Report. Estimates are shown both for total direct employment and new residents directly employed, with the latter based on Gulf of Mexico experience.

   Multipliers to derive indirect employment and total new population were not used in this approach because the base conditions differ so significantly area by area, and the number of uncertainties in the projections make it almost impossible to derive a general multiplier that would be considered valid.

Defects of each approach

The estimates based on the production level approach suffer from several defects:

- The exploration activity and, to a lesser extent, the development activity associated with a given production level are not determinate. Since the exploration and development phases are the peak employment period, the uncertainties about peak employment are both large and ill defined.

- Under this approach, the exploration and development employment (the peak employment) is derived by extrapolating back in time from an assumed production level in some given future year. However, the time schedule and volume of leasing actually determine the exploration, and to some degree, the development employment levels and timing because of the fixed time period after lease issuance in which exploration must occur to avoid forfeiture of the tract.

The total direct employment is assumed to be the appropriate base for calculating the total population increase due to OCS activities, even though a large percentage of direct employees (particularly during the production phase) will not be new residents of the locality.

The estimates based on the leasing level approach also suffer from defects:

- Since they assume exploration and development to occur at very rapid rates after leasing, the peak employment estimates are probably upper limit estimates rather than most likely estimates.

- The development employment assumptions are based on Gulf of Mexico exploratory success rates and development drilling rates; therefore the corresponding employment figures for new areas are subject to substantial uncertainty, although that uncertainty is not likely to result in the peak employment estimate being substantially exceeded.

- The production phase employment is based upon production level estimates which are highly uncertain.

- Production phase employment includes employment in platform operations which is derived from acres leased plus Gulf of Mexico exploration and development experience. This platform operation employment may not be consistent with Project Independence Report production estimates.

Comparison of results

Total direct employment at its peak is substantially larger when estimated by the leasing level approach than in the available studies using the production level approach. This is to be expected since the assumptions in the leasing level approach were selected to produce upper-limit estimates. However, the size of the discrepancy, a factor of 3 to 13, suggests that the production level approach studies do underestimate the total direct employment during the exploration phase.

Total direct employment during the production phase is generally similar in the two approaches, except in Alaska. In the case of Alaska, the platform operation employment estimate in the leasing level approach probably implicitly assumes substantially higher production than does either the Project Independence Report or the impact study based on the production level approach.

Attachment No. 2

ESTIMATES OF OCS EMPLOYMENT IMPACTS

Estimates were made of OCS employment impacts using the following assumptions:

Sale	Tracts Sold
Alaska 11-75	305
Alaska 4-76	87
Alaska 12-76	305
Alaska 9-77	305
Alaska 10-77	174
Alaska 7-78	174
Alaska 9-78	87
Pacific Coast 9-75	174
Pacific Coast 9-76	174
Pacific Coast 5-77	87
Pacific Coast 2-78	87
Gulf of Mexico 2-76	69
Gulf of Mexico 2-77	260
North Atlantic 8-76	260
North Atlantic 12-77	260
Middle Atlantic 5-76	305
Middle Atlantic 7-77	305
South Atlantic 10-76	260
South Atlantic 5-78	260

It was assumed that these tracts were explored and developed in the following percentages based on Gulf of Mexico historical information:

	Alaska	All other areas
Undrilled and relinquished in primary term	25	25
Undrilled but extended by unitization	25	10
Drilled and productive	25	32.5
Drilled and unproductive	25	32.5

All exploratory drilling done in 1st through 5th years following sale year at rate of 2 wells/tract drilled

Mobile rig field definition drilling done in 2nd through 6th years after sale at 5 wells per tract with discovery.

1 platform installed per productive tract. Platform drilling done in 4th through 8th years after sale

For each of the three Atlantic areas in turn it was assumed that the following production resulted:

Year	Millions of barrels annually
1978	17
1979	34
1980	51
1981	79
1982	107
1983	135
1984	163
1985	190

This level corresponds to the Project Independence Report level for the entire Atlantic OCS. It was allocated in turn to each of the areas in order to provide an upper limit estimate of direct employment, given the very great uncertainty about what reserves might be discovered and developed in each area by 1985.

The assumed production for other OCS areas above 1976 production levels:

Oil, millions of barrels annually

Year	Gulf of Mexico	Alaska	Pacific
1977	19	0	9
1978	56	0	49
1979	94	0	90
1980	132	0	130
1981	174	32	179
1982	216	64	232
1983	258	96	283
1984	300	128	334
1985	343	161	385

Table 1 gives the estimated total employment per unit of OCS activity and the number of employees which are both new to the area and are residing locally.

ESTIMATES OF OCS EXPLORATION IMPACTS

Table 1

Facility	Total Employment	New Resident Employed
Exploratory rig	113	45
Development rig	65	37
Platform production operations 1/	16	1
Onshore operations base 2/	136	25
Onshore office 2/	42	26
Gas processing plant 3/	21	8
Pipeline shore terminal 2/	17	4
Service support 4/	143	53

1/ Per platform.
2/ Per 200 K BOPD.
3/ Per 300 K MCFD.
4/ Per 10 to 20 rigs served.

Table 2 shows the maximum total employment calculated in turn for each Atlantic OCS area using the above assumptions. Table 3 shows the similar estimates for new residents employed in OCS activities. Tables 4 and 5 show similar information for the other OCS areas.

Table 2

1984	5,100	4,500	13,800
1985	5,300	3,800	10,700
1986	3,800	3,700	9,300
1987	3,800	3,400	8,100

Table 5
New residents employed

	Gulf of Mexico	Washington, Oregon, and California	Alaska
1977	200	800	500
1978	1,200	1,300	1,700
1979	2,100	2,000	3,000
1980	2,500	2,500	6,700
1981	3,600	2,600	8,300
1982	3,500	2,200	6,600
1983	2,600	1,900	8,600
1984	1,700	1,700	5,000
1985	1,600	900	3,100
1986	500	700	2,100
1987	500	500	1,100

No estimate was included above for refinery employment because total refinery capacity needed is dependent on domestic consumption levels rather than upon the availability of domestic crude oil. Refinery capacity will be built; it will process OCS crude if it is available and foreign crude if OCS crude is not available. Table 6 shows the direct employment for processing the estimated OCS production.

Table 6

Refining incremental OCS production 1985
(Above 1970 base)

Area	Annual crude oil consumed (M bbls.)	All employees
Gulf of Mexico	343	8,100
Alaska	161	3,800
Pacific	385	9,100
Atlantic	190	4,500
	1,079	25,500

Existing refinery capacity used for processing foreign crude already (as of June 1974) equals or exceeds the estimated incremental OCS production in the Eastern region for Atlantic production and in the South for Gulf of Mexico production. The Pacific Coast and Alaskan OCS crude production estimate for 1985 is substantially greater than the present capacity in the West which is processing foreign crude. This may mean that crude from the Pacific and Alaskan OCS would be processed in new refinery

capacity in the West which in the absence of OCS crude would be located elsewhere in the country and utilize foreign crude. Alternatively western OCS crude in excess of the region's needs might be transported to other regions in unrefined form. In any event, Alaskan OCS crude is not likely to be refined in Alaska. Table 7 shows these comparisons.

Table 7

Refinery region (OCS area)	Incremental OCS production estimate, 1985 (K bbls./day)	Using foreign crude 6-74	Refinery capacity (K bbls./day) Total 6-74	Total 3-75	Annual rate of (%) change
South (Gulf of Mexico)	940	942	5,275	6,223	24.7
West (Pacific & Alaska)	1,496	894	1,996	2,303	21.0
East (Atlantic)	521	1,325	1,519	1,760	21.7

Increased refinery capacity will probably be achieved largely by adding capacity to existing refineries rather than building new refineries from the grass roots up. Existing capacity increased very substantially between 6-74 and 3-75 without any significant additions of grass roots capacity. This will minimize fiscal impacts since existing refineries are largely in or very near urbanized areas so that refinery employees and their households are a negligible part of the local population.

Construction employment estimates have not been included for the following reasons:

- Mobile rigs will probably continue to be built in shipyards now in that business. Any additions to capacity are likely to be where there are already harbor and shipyard facilities. Such areas are usually already urbanized.

- Platform construction is also likely to be located where there are major harbor and shipyard facilities. (One possible rural site has been identified across the mouth of Chesapeake Bay from Norfolk.) Some of these areas, such as Boston, already have significant problems of unemployment and excess facilities that are not merely short term consequences of current economic conditions.

Conclusion

The employment figures summarized in Table 8 below are probably the maximum or upper limit direct employment impacts that will result from OCS exploration and development. They assume very rapid exploration and development. Using total direct employment figures as a measure of fiscal impact on coastal jurisdictions implicitly assumes that all direct employees are new residents. The figures in Table 9 summarizes estimates of new residents resulting from OCS exploration and development. They

are largely based on Louisiana experience but there is no reason to suppose that experience elsewhere will be drastically different except in Alaska. In Alaska the remoteness of the areas of exploration and potential development from all but the smallest of villages will probably mean that practically all employees in the exploration and development phases probably will be brought in from outside by the oil companies and will be housed, both on and off duty, in substantially self-contained company facilities. For this reason impacts on local governments during the peak exploration and development period are likely to be less than the figures on new residents would indicate.

Table 8

Maximum total employment from incremental OCS activities

Area	Peak development period	Production period
North Atlantic	8,400	3,400 1/
Middle Atlantic	9,800	3,400 1/
South Atlantic	8,300	3,400 1/
Gulf of Mexico	8,500	3,800
Pacific Coast	6,200	3,400
Alaska	19,800	8,100

Table 9

Estimated new residents employed in incremental OCS activities

Area	Peak development period	Production period
North Atlantic	3,700	400 1/
Middle Atlantic	4,300	400 1/
South Atlantic	3,300	400 1/
Gulf of Mexico	3,600	500
Pacific Coast	2,600	500
Alaska	8,600 2/	1,100 2/

1/ This figure is the total for the Atlantic region as a whole but is shown against each sub-region (as an upper-limit estimate for the sub-region) in the absence of an allocation of the Project Independence report production estimate among sub-regions.

2/ These are the calculated figures for Alaska using Gulf of Mexico experience. They are considered unrealistically small for the reasons described in the text above.

Atlantic Coastal State Population Projections 1/

1/ IID Series

1975 to 1985 growth is 8,658,000 persons

New infrastructure capital at $5,000 per person is $43.29B

OCS related infrastructure at $100 to $250M is 1/4 to 1/2 percent of total requirements

Alaska Impacts

Reports from and discussions with Mathematical Sciences Northwest have brought out the following points about impacts in the Gulf of Alaska.

- 1970 populations of the most likely towns for development were:

Cordova	1,164	
Kodiak	3,798	
Seward	1,587	
Whittier	130	
Yakutat	190	(A Tlingit Village)

- The total 1970 population of the five census divisions encompassing these towns was 18,857 which includes 3052 (16%) military.

- At a production level of 700,000 BPD by 1985, OCS primary employment is expected to peak in 1980 at 1500 and drop to 900 in 1985. OCS secondary employment will also peak in 1980 at 2800 and drop to 1600 in 1985.

  Total OCS-induced population will peak in 1980 at 8400 and drop to 5100 in 1985.

- With petrochemical and LNG development in addition, the population would peak in 1981 at 12,700 and drop to 6500 in 1985.

- Most of the platform construction and fabrication will take place outside of Alaska in Japan, California, or the Northwest.

- On-site facilities construction will be limited to the summer season (May Sept).

- Virtually all increased employment represents either an inter-state or inter-region population shift.

- With the exception of Kodiak, these areas are 100% rural and generally have higher than State average incidences of Alaskan native population, percent of families with incomes under poverty level, unemployment and substandard housing.

- There are substantial needs for roads, water and sewage treatment, and airport and seaport improvements if the OCS is developed.

- Although the capital cost of the public infrastructure needed in the Gulf of Alaska because of OCS development has not yet been detailed, the estimated total cost should be less than $60M (about $6250 per capita) without LNG and petrochemical development and less than $80M with them.

- Additional annual local operating expenditures, exclusive of Federal contribution, would be about $4M ($500 per capita) at the population peak without LNG and petrochemical development and $6M with them.

- On shore capital investment in the Gulf by the oil companies is estimated to run $80-100M without LNG and petrochemical development. Annual property taxes for on-shore oil facilities would be about $2M without LNG and petrochemical development and $14M with them.

- "If the Federal Government collected 12.5% royalty on a $10.00/bbl wellhead price and shared this revenue with the State of Alaska, revenue which in turn would be expended in the State, the resulting economic impacts would be greater than the total direct and indirect wage effect." (A 25% State share of Federal royalties on projected Alaskan production in 1985 would be $67M, while total wages would only be $45M.)

California Impacts

Los Angeles County's study of OCS impacts (Jan. 31, 1975) made the following statements, which are consistent with the recent studies by Rand (for the State of California) and Western Oil and Gas Association (WOGA).

- OCS exploration and development of a 4 billion barrel find may create 5000 new primary jobs and possibly 15,000 secondary jobs (3/5 of 1% of the 3.1M jobs in L.A. County).

- "Secondary impacts...would involve no large scale changes in either the area's population, or its labor force."

- Significant impacts (including excess demand for construction labor and materials and consequent price rises) might occur if platforms and equipment are constructed locally. Current evidence suggests, however, that the Gulf of Mexico and the San Francisco Bay are more likely sites.

- On-shore impacts from storage and processing will be tied to levels of demand rather than to OCS production. (Present refining and storage capacity are sufficient and no new refineries are projected).

- Overall impacts on local government operation is not expected to be significant, except in the case of an oil spill.

- Significant adverse effects on local industry and employment could occur if adequate alternative supplies of oil and gas are not found to replace the potential, but untapped OCS sources.

The Rand and WOGA studies also point out that the increase of 5000 new jobs would partially offset Southern California's declining employment in on-shore oil production so that the actual net gain in primary employment will be less than 1000.

According to the Chief Engineers of the Los Angeles and Long Beach Harbors:

- Long Beach port improvements necessitated by OCS could be handled on a "routine basis," financed out of current cash flow;

- Los Angeles port improvements would involve an estimated $20-25M for channel deepening financed through bonding with a charge back to the oil companies. (The Federal Government is already involved in a project with the port of L.A. to deepen some channels).

According to the California State Energy Commission, "on-shore or socio-economic impacts in California is a non-issue....We don't want to depend on the Federal Government for our revenues."

The State of California, to raise revenue for OCS-related and other uses, is actively pursuing the idea of a through-put charge (an estimated $280M a year at $.50/barrel). DOI is currently assessing the legality of California's plan. If legal, the availability of such a tax scheme should significantly reduce the states' claim on OCS revenues.

Atlantic Impacts

Magnitude of the Impacts

There is considerable debate about the magnitude of on-shore impacts on Atlantic OCS.

Resource Planning Associates (for CEQ) estimates that a 750,000 bbl/day Atlantic production may induce a population growth of up to 250,000. A study by the State of New Jersey for a similar production scenario says the population impact may be around 100,000. A rough calculation based on industry supplied labor inputs, a production estimate of 190M bbl/year by 1985, and some rule-of-thumb multipliers puts the "new resident" population impact at under 25,000.

According to industry estimates, the capital investment in OCS on-shore support facilities for the Atlantic could run about $100M for 1M bbl/day production, exclusive of refinery, petrochemical, and deep water port development. Annual wages during the production phase for 1M bbl/day (i.e., excluding construction) could run about $25M.

Public capital investment in infrastructure; exclusive of airport or seaport improvements, but inclusive of moderate road building, could run as high as $125M if 25,000 people moved into the region or $250M if 50,000 people moved in.

Potential non-Federal revenues from OCS-related on-shore developments are difficult to quantify because of uncertainties about the location of development and the myriad tax structures of the various Atlantic Coast states. However, in most States OCS related development would be subject to the following major taxes: corporate income, sales, construction, and property. Employees would be subject to income, sales, and property taxes in most states.

It has been estimated (WOGA) that a find of 4B barrels of oil and 8 trillion cubic feet of natural gas would yield revenues of $19.4B to Federal, State, and local governments over the life of the fields (assumed to be 30 years). This breaks down as follows:

	$('73) B
Lease payments	3.6
Royalties	7.5
Federal corporate income	6.3
Federal personal income	.9
	18.3
State & local corporate income	.7
State & local personal income	.1
State & local other than income	.3
	1.1

(The $1.1B State and local revenues is about $36.7M per year. This compares to annual debt service (7%, 20 years) of $10.5M on an initial capital investment of $112M (25,000 x $4500 per capita) and annual operating costs of $10M (25,000x $400 per capita).

It appears, then, that there will be sufficient capital-intensive on-shore industry investment to cover the normal corporate share of local tax revenues. The timing of cash flows and access to capital markets for major public investments, however, may be problems, particularly for small, rural towns with little bonding history, exhausted bonding capacity, tax structures in need of revamping, and a weak existing economic base.

Nature of the Impacts

Construction of Drilling Rigs

Rigs can be built in existing shipyards and towed long distances to drilling sites (Gulf of Mexico to Noth Sea, e.g.). Consequently, the on-shore impacts during this phase are expected to be minimal because few, if any, population shifts or new commitments of land will be involved. The potential for on-shore impacts would be reduced even further to the extent that drilling rigs now used in the North Sea are towed back to the U.S.

Conversations with industry representatives indicate that drilling rigs for the Atlantic will most likely be built in Gulf shipyards and towed out. Some rigs for the Atlantic, however, may be constructed in Atlantic shipyards (Baltimore, e.g.), in which case rig building would reduce the current unemployment in the affected areas rather than add to the population base.

Exploration Phase

During the exploration phase, the major on-shore impact is the demand for harbor supply bases. Communities with harbors near the leased tracts are the most likely to become support centers for oil development.

Population impacts are expected to be relatively small during this phase.

• Construction of Production Platforms

Platform construction is not expected to induce significant on-shore impacts in Alaska and California. Construction of platforms for the Atlantic, however, is likely to involve significant on-shore impacts because it will probably require at least one new site, which is specifically designed for platform building, rather than use of existing shipyards. This is because 1) existing shipyards are not equipped for such construction and are unlikely to commit capital for conversion, given the uncertainty of oil finds and, 2) platform building requires a site which has easy access to both deep water and materials as well as hundreds of acres of level land, a requirement few shipyards can meet.

Brown and Root recently purchased about 2000 acres in Cape Charles (Northampton County), Virginia and has requested the rezoning of 980 acres from agriculture to industrial use for manufacturing platforms, among other products.

Brown and Root employment is estimated to reach 1500 and induce a population growth in the County of about 2900, a 15% increase over the County's 1970 population.

With 40% of the existing housing substandard, a projected severe 5-10 year housing shortage is expected to hit low income and retired persons especially hard as rents are driven up.

Additional annual County expenditures induced by Brown and Root have been estimated at over $900,000 ($313 per capita), not including debt service on $2,000,000 in needed highway improvements.

Additional annual revenues have been estimated at about $1,000,000 which includes $300,000 property taxes from Brown and Root (on $40M capital investment), $150,000 from residential property taxes, $140,000 other locally generated tax receipts, about $400,000 in additional State grants, and $38,000 from Federal General Revenue Sharing.

The apparent $100,000 surplus may be illusory, however, because of a lag in property tax receipts, which the County could correct if it so desired, and because the annual debt service on the highway improvements would exceed $100,000.

Fiscal impacts on the towns within Northampton County may be more noticeable, particularly if the new people choose to live outside Cape Charles, in towns which cannot tax Brown and Root. Likewise, the other counties which receive new people (an estimated 2100 in the families of employees commuting from other counties) may experience some fiscal gaps.

Over the last five years, about one-half the county's income has been from the State, one-fourth from the Federal Government, and one-fourth from local citizens and businesses.

Because of Brown and Root's locating in Northampton, the State's proportional contribution to County receipts would decrease from 50% to 40%. From the State's viewpoint, the fiscal burden of its contribution should be minimal, unless a significant number of the Brown and Root employees were not Virginia residents, because the State contribution would be the same whichever county the people lived in.

- Development Phase

Manpower requirements peak during this phase. Local communities are expected to be under their most severe strains then because of the short-term (2-4 year) influx of construction workers. The danger of overbuilding public facilities is greatest during this phase, a danger which could be increased by the easy availability of "free" Federal funds.

- Production Phase

This phase is very capital intensive and brings a sharp decline in jobs as construction requirements subside. Small, one-economy towns that grew rapidly to support OCS will be the hardest hit by the decline.

- Pipelines, Terminals, and Storage

The number of pipelines and landfalls depend on the location of the find and of the processing facilities, the number of companies able to share a pipeline, and environmental factors.

Oil can be piped to inland refineries, but coastal processing facilities are necessary for gas pipelines because of the safety factor.

After construction, the pipeline itself requires virtually no manpower. A pipeline terminal for 200,000 bbl/day requires only 17 employees (capital investment of $2.4M).

Fiscal impacts on the towns within Northampton Co. may be more noticeable, particularly if the new re- OCS impacts from storage depend primarily on existing capacity and whether or not OCS production will back out imports. A gain, storage facilities are capital intensive.

8- Refineries

The extent to which new refineries will be built also depend on existing capacity and whether OCS production will back out imports. Because it is cheaper to transport crude oil rather than refined products, the siting of refineries depends on the location of the demand or market area, not on the location of the supply. Refineries are very capital intensive with a capital investment of $600-800M and permanent employment of 500.

Atlantic OCS Employment and New Resident Population Impacts

	1976	1980	1985
Primary New Resident Employment 1/	0	3,100	1,600
Induced Employment (Primary X 2)	0	6,200	3,200
Total New Resident Employment	0	9,300	4,800
Total New Resident Population (Employment x 2.5)	0	23,250	12,000

1/ See Attachment 3 for assumptions and calculation of direct employment.

because of the Outer Banks.

After construction, the refinery itself would require [illegible] employees [illegible]

Attachment No. 4

North Sea Experience

North Sea experiences would indicate that:

1. On-shore impacts are most significant in communities with limited labor pools, existing housing shortages, and no slack in existing public infrastructure.

2. Large cities can absorb OCS-induced growth more easily than small ones.

3. Those towns with a diversified economy can adjust more readily than those which are dependent on a single existing industry (tourism, fishing, etc.).

North Sea impacts which may have bearing for Alaska and Atlantic rural areas include the following:

- Public expenditure on roads, harbors, and airports increased significantly in "oil areas" while they decreased elsewhere in Britain.

- The benefit of new jobs has not been channeled into Scotland's neediest cities.

- Inflationary side effects have seriously affected those individuals and small businesses outside the oil boom.

- Housing shortages have been particularly severe and long lasting, primarily because existing construction capacity is being used for oil facilities and new workers aren't imported because they would only aggrevate the shortage.

- Lack of housing has constrained the in-migration of teachers and other service personnel.

- High land prices (a 30-fold increase in five years) discourage non-oil industries from locating in oil boom towns, thus hindering diversification of the economic base.

- High wages in the oil industry have created labor shortages in several industries and services, particularly factories, retailing, and government.

- Impacts from platform construction have been among the most significant in North Sea communities.

- Shetland County Council levied a per barrel tax on oil passing through Shetland facilities and negotiated with the companies for an advance payment to help with front-end capital costs of public infrastructure.

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPT. OF COMMUNITY & REGIONAL AFFAIRS

DIVISION OF LOCAL GOVERNMENT ASSISTANCE / POUCH B – JUNEAU 99811

March 4, 1977

Mayors of Coastal Municipalities:

Yesterday, I received a phone call from Chuck Cohen; who, as you know, is our representative in Washington D.C., with responsibility for doing research and technical analyses of the new Coastal Energy Impact Program. Chuck advised me that a supplemental appropriation for FY '77, as prepared by President Ford and amended by President Carter, and a budget for FY '78, have been presented to the Congress in the following amounts:

FY '77- $10 million - Formula Grants
$110 million - Facilities Loans
$0.00 - Planning
$0.00 - Environmental or Recreational Grants

FY '78- $13 million - Formula Grants
$143 million - Facilities Loans
$0.00 - Planning
$0.00 - Environmental or Recreational Grants

From the proposed appropriations the federal Office of Coastal Zone Management has tentatively proposed to allocate to the State of Alaska and its municipalities the following amounts:

FY '77 (Supplemental)
$700,000 - Formula Grants
$31,900,000 - Facilities Loans
$0.00 - Planning
$0.00 - Enviromental or Recreational Grants

FY '78 (Budget)
$3,200,000. - Formula Grants
$68,600,000. - Facilities Loans
$0.00 - Planning
$0.00 - Enviromental or Recreational Grants

The most obvious omission from the proposed budgetary figures, in our view point, is the lack of appropriations for planning which would ordinarily precede application for facilities loans or formula grants. In other words, it appears the federal administration is putting the "cart before the horse" by providing funding for facilities without any funding being provided for necessary planning. Therefore, this date, Kevin Waring, Director of Community Planning, is preparing a draft of a letter for Governor Hammond's signature to members of our congressional delegation in Washington strongly urging that they amend the proposed FY '77 supplemental and FY '78 budget figures to include funds for planning. By way of this letter we encourage each of you to likewise send letters or telegrams to members of the Alaska Congressional Delegation in Washington, expressing your concern for the need for funding of planning under the C.E.I.P. As in the past, we would appreciate receiving a carbon copy of any correspondence you might send to the congressional delegation. As we understand it, the supplemental appropriation bill and the FY' 78 budget are now in Congressional committees. It is imperative that, if you propose to make your wishes known to the Congressional Delegation, letters or telegrams be sent A.S.A.P.

One week ago today, the Coastal Management Policy Committee of Governor Hammond's Administration, authorized the Department of Community and Regional Affairs to take the lead in the development of the intrastate allocation formula process as provided for in the federal regulations which implement the C.E.I.P. I had earlier requested that Chuck Cohen prepare a draft intrastate allocation formula for our consideration and I expect to receive that first draft sometime next week. Also, while in Fairbanks this coming week Kevin Waring will meet with representatives of the Institute of Social and Economic Research at the University of Alaska, to see if the Institute is willing to also draft a formula for the proposed intrastate allocation. We will be contacting you in the very near future with our proposal. Any finally adopted intrastate allocation formula, as we envision it, will include municipal representation and input regarding the distribution of the federal allocation for formula grants ~~grants~~ and facilities loans made available to the State of Alaska.

We again urge you to contact our congressional delegation in Washington if you share our concern that money should be appropriated for Coastal Energy Impact planning. We also appreciate any comments or concerns you might have as to the manner in which our Department is proceeding in drafting a proposed intrastate allocation formula for the Coastal Energy Impact Program.

Sincerely,

Palmer

Juneau, Alaska 99811

RE: House Bill #219

Dear Representative Rudd:

House Bill 219, as proposed, clearly makes the developer of OCS resources liable for costs relative to the impacts generated from construction of shore-related facilities.

The principle of this proposed legislation has been long established in American municipalities, though normally called "off-site improvements", required as a result of significant development; commercial, industrial and housing.

The legislation, as proposed, is long overdue. The boroughs ought to be the agencies to establish such legislation, through their planning and zoning mandates; however, in the absence of borough action, then the State is obviously compelled to act.

The City of Kenai has been victimized by the absences of such legislation and, therefore, we are obliged to support this legislation, not only for our own protection, but for the greater good of the State.

If there are any problems in this proposed legislation, it is in Section 41.45.930 "Fees". The language is unclear and needs clarifying.

Our congratulations on the introduction and grateful support for the legislation.

For the Mayor and Council of the City of Kenai, Alaska, I am

Sincerely,

John E. Wise,
City Manager

JW:dd

MEMORANDUM

FROM: Mike Davis, Administrative Assistant

RE: Phone Conversation with Larry Powell, Major of Yakutat. - OCS IMPACT.

DATE: March 10, 1977

"We have had a direct impact since ept. last year. The construction of the service base took pl during the year preceding that."

We have five service boats servicing two rigs with service base.

Presently, some of the city services are impacted.

a. Water supplies
b. All the people working on the rigs move thru the airport. (There is an attempt to not have people in town. But, we are experiencing bad weather, so we can have anywhere from 15-25 people (or more) stuck in town.)

These demands should remain constant for the next two years (from Shell and Arco).

Exxon and Gulf will begin supplying their rigs with five service boats. Some of these will be based in Yakutat (which means a greater movement of people thru town).

We are looking for things to escalate...traffic thru the airport, the service base will need to be enlarged to handle the increased activity.

"Fact: We are faced with increasing our fire protection capability both onshore and offshore (due to the increased industrial activity). We will need to have a full time policeman (currently we have a trooper and a part-time policeman)."

"I would very much like a copy of the bill and background material." (sent 3-10-77).

MED:ab

MEMORANDUM

TO: Members of House Community & Regional Affairs Committee

FROM: Michael Davis

DATE: March 14, 1977

RE: OCS Impact - phone conversation with Darryl Schaefermeyer, City Manager of Seward

We anticipate a great amount of primary and secondary stage development.

Exxon has leased property for pipe storage and other supplies.

We anticipate 200 boat visits per month (these are 200 foot supply vessels) as soon as the weather breaks.

Most immediate impact:

1. They will be taking on large amounts of water, which requires us to upgrade the water system, to install water lines out to the dock area. We will also have to drill new wells and construct storage tanks.

2. A lease has been negotiated with Dresser by the city. It will be a large dock built by the company. We will get revenue from anything that moves across the dock.

3. Private property is being leased for a dock facility.

4. We have acquired land by annexation and plan to develop these.

5. Oil companies have acquired land to be used for storage.

The impact we forsee in the future:

1. The number of transient people which will be in town from boats, etc.

2. We currently have a serious electrical situation and it will need to be taken care of.

3. Seward already has a critical housing shortage without any influx of people.

4. Our local roads will have to be improved.

On HB 219:

1. We do not understand the formula, but from what we do understand, it would help us only if there would be an influx of residents.

Juneau, Alaska

Re: House Bill 219
Shore Facility Impact Permits

I would like to apologize for not being able to be present for the continuation of testimony on House Bill 219 which occurred on March 14, 15, and 16. However, after reading and hearing some of the testimony that occurred on those days, I would like to submit several comments in regards to the misrepresentations and belittlements made by Messrs. Parr and Waring concerning much of my testimony.

First of all, much was said in regards to comparison of North Sea impacts versus Alaska impacts. Mr. Parr cited and attached passages from Baldwin's book on North Sea oil in regards to planned OCS development schedules in the U.S. Baldwin's book was written principally in early 1975. On Page 12, it discusses the OCS leasing schedules that Mr. Parr indicates as evidence of crash program development. If one checks the record, he will see that most of the sales were delayed, cancelled, or reduced in size and certainly today there is no evidence of crash programs. In fact all indications point to further delay pending new Federal OCS legislation and even Federal exploratory drilling in proposed leasing areas. Both of which will postpone industry exploration and development and increase our dependence on foreign imports. A further point on the North Sea is that currently there are 44 exploratory drilling vessels working in the North Sea (and nearly 50 at its recent peak active in the North Sea) compared to the 5 or 6 seen for Alaskan waters and by the end of 1977, approximately 45 major production platforms will be active compared to none for the Alaskan OCS. No one can even in their wildest imagination attest that this has any potential of occurring in the Alaskan OCS.

In Baldwin's book on Page 116, it is interesting to note the author found the North Sea onshore development was accomplished and controlled "without sophisticated planning controls or even a planning body...". It is probable the existing Alaska communities and municipalities could do the same thing without the need of state or Federal bodies imposed upon them.

The principal point I made in my testimony was evidently missed by Mr. Parr. The whole premise of the bill is that an immediate major impact occurs on public and municipal services with the commencement of exploratory work. I attempted to point out that this was false, particularly based on actual data from the Gulf of Alaska. One does not deny that if discoveries are made; if they are economical for development; if permits are obtained to develop; and if development occurs, impacts will occur. But this happens from 5 to 10 years after exploration, not immediately. Necessarily during the exploration phase, major investments are not made due to its uncertainty and only small shore based manpower forces are used to support the activities. Exxon has approximately a total of 25 at Seward, Anchorage, and Yakutat; ARCO/Shell has a total of 36. In both cases these are predominately local hires and essentially all existing Alaskans. The large crews on the drilling vessels are those that travel around the world with the vessel. They work alternate shifts of either two weeks on/two weeks off, or four weeks on/four weeks off, and during their off time are flown back to their home, wherever that may be. Even during this exploratory phase, major revenues accrue to the state and local areas as indicated in my testimony.

Mr. Showalter's testimony, contrary to the implications of Mr. Parr, did not conflict with mine. Mr. Showalter pointed out what then happens during development, the type of impacts realized, and the employment benefits accrued. Also accrued to the local and state entities are revenues and taxes (company, personal, and associated services) that pay for impacts that occur. Mr. Showalter pointed out the people requirements associated with a major industrial, petrochemical, petroleum area like the Cook Inlet and the Kenai peninsula are moderate (2-3,000) and certainly not the 95,000 to 100,000 people indicated in government testimony.

In regards to the population and cost impacts propagated by Mr. Parr and Mr. Waring, attached is a letter from the Office of Management and Budget in Washington, D. C. who developed the numbers back in early 1975. Please note their comments as to the validity of their own numbers.

To get a good understanding of the Federal Coastal Energy Impact Program, one should read 15 CFR Part 931 as printed in the October 22, 1976 Federal Register. Contrary to what Mr. Parr indicates, the program includes the following:

SECTION	ITEM	PERIOD	TOTAL APPROPRIATION
305	CZM Program Development Grants	3 years	$60 million
306	CZM Program Administration Grants	4 years	$200 million
308	Impact Grants	8 years	$400 million
	Impact Fund Grants, Assistance, Loans	10 years	$800 million

310	Technical Assistance Grants	4 years	$40 million
315	Estaurine, Beach Access Grants	4 years	$124 million
-	CZMA Administration	4 years	$20 million
		Total	$1644 million

The grants are allocated based on the formula -

Adjacent leased OCS acreage	1/3
Adjacent OCS production	1/6
OCS production landed in state	1/6
New employment associated with OCS	1/3

Based on this the Federal Coastal Zone Management Administration House-Senate Conference Committee estimated that Alaska would be eligible for 25% of the grants.

The financial assistance or loans are of course based on needs or desires of the state. If there are loans, they are for a maximum of 30 years at interest rates not to exceed comparable market rates and the interest rates are calculated every three months to make sure the state gets advantage of lowest prevailing market rates.

In summary, Exxon's position remains that the bill is not needed. There will not be major immediate impacts and demands due to OCS exploration as evidenced by the Gulf of Alaska. What impacts occur are minimal and even Byron Mallot of Yak Tat Kwaan in a recent interview said the Yakutat impacts were positive. If and when development does occur in 5 to 10 years, then some impact will be realized, but not to the extent dreamed by the bill author's projections; and even then as now, the positive benefits in revenues from property taxes, sales and use taxes, income taxes, franchise taxes, business taxes, service use charges, fuel taxes, etc., will compensate for the impacts and pay for required services if any. In remote area developments, such as Prudhoe Bay/Beaufort Sea or even the Gulf of Alaska, services will be supplied by the base itself in the areas of water supplies, sewage, power, fire, and security. Even in the isolated case mentioned by Mr. Parr, I doubt if the facility ever made use of the fire service facilities.

Thank you for your attention and the opportunity to become involved in this matter.

Very truly yours,

T. M. Matthews

EXECUTIVE OFFICE OF THE PRESIDENT
OFFICE OF MANAGEMENT AND BUDGET
WASHINGTON, D.C. 20503

January 28, 1977

Mr. Keith Arnold
Assistant Manager
Alaska Oil and Gas Association
308 G Street, Suite 217
Anchorage, Alaska 99501

Dear Mr. Arnold:

The enclosed paper describes the approach used to derive the direct employment estimates for Alaskan OCS development underlying the figures cited in the Coastal Zone Management Newsletter enclosed in your letter of January 21.

We do not consider the figures quoted in the Newsletter to be valid estimates of the expected impacts in Alaska of OCS development. Those figures were prepared in an analysis done in May of 1975. The purpose was to determine the rough order of magnitude of OCS development impacts based upon deliberately pessimistic assumptions. It would then be possible, despite the great uncertainties, to credibly say that the likelihood of even more severe impacts would be negligible.

The estimates, therefore, were deliberately biased upwards at several stages in the analysis in order to produce an "upper limit" or "worst case" estimate. Some of the major sources of bias are:

- The leasing scenario used was the OCS planning schedule which was later published in June of 1975. It was recognized as a very ambitious and optimistic schedule for Alaska. Actual leasing in Alaska is likely to be spread over a substantially longer period than that schedule had anticipated. The impacts will also be spread over a longer period, reducing the infrastructure needs toward a level based on the "permanent" direct employment.

- The development scenario following each lease sale assumed very rapid exploration and development.

- It was assumed that all direct employment in every affected Alaskan region will be of people new to that region. This is clearly unrealistic.

The paper calculated a peak direct employment of 19,200 and a permanent direct employment of 8,100 resulting from the OCS development scenario examined. In order to arrive at a total population increase figure and a total infrastructure cost figure, the following steps were taken:

- The peak and permanent direct employment were averaged, giving 13,650. It was assumed that public infrastructure needs would be based on this volume of direct employment.

- It was assumed that all direct employment was by people new to the Alaskan areas in question.

- This direct employment of new residents was multiplied by a direct to total employment multiplier of 2.75 and a total employment to population multiplier of 2.5, giving a total additional population of 94,185.

- The total infrastructure cost was derived from this population figure by using $7,250 per capita.

It is unfortunate that these figures are receiving a wide circulation which characterizes them as OMB projections of future OCS impacts in Alaska. Their purpose was not to project the most likely future, but rather to show that, even when unrealistically pessimistic assumptions are used in the analysis, the calculated impacts are manageable.

I believe that the paper and the further steps described above are self-explanatory. However, if you have any further questions about the analysis, we will be glad to address them.

Sincerely yours,

Donald E. Crabill
Deputy Associate Director
for Natural Resources

Re: House Bill No. 219

Dear Madam Chairman:

Attached is testimony submitted on behalf of Chugach Natives, Inc., expressing opposition to House Bill No. 219, a bill for an Act entitled: "An Act providing for permits and fees for the construction of shore facilities associated with outer continental shelf natural resource extraction; and providing for an effective date."

Because of prior commitments at Cordova, it will be impossible for me to attend personally the hearings scheduled for March 21. I therefore respectfully request that the attached written testimony be incorporated in the record of the hearings, and that copies (which are enclosed) be distributed to members of your Committee.

With best wishes, I am

Respectfully yours,

Cecil Barnes

CECIL BARNES
President
Chugach Natives, Inc.

CB/ab
Encl.

912 East 15th Avenue, Anchorage, Alaska 99501, Phone (907) 274-4558

Chugach Natives, Inc.

Madam Chairperson and members of the Committee on Community and Regional Affairs of the Alaska House of Representatives:

My name is Cecil Barnes. I am President of Chugach Natives, Inc., one of Alaska's twelve regional Native corporations. We appreciate the opportunity to submit our views in opposition to House Bill 219.

As the Joint Federal-State Land Use Planning Commission found in reports to the Secretary of the Interior, and as the Congress of the United States found when it considered the January, 1976, amendments to the Alaska Native Claims Settlement Act, Chugach Natives, Inc. faces some difficult land selection and land management tasks. Our difficulties arise in large part because of the substantial extent of permanently withdrawn federal lands--especially the Chugach National Forest, and the frequently mountainous terrain in our region, and the pending "d(2)" proposals before the Congress.

For these reasons, Congress in the 1976 amendments asserted legislatively the right of our region to select lands in the vicinity of Icy Bay.

Chugach has entered into a contract with Phillips Petroleum Company for on-shore exploration work within the land area we have selected, to determine if petroleum there is of a commercially valuable nature. Needless to say, our corporation and its Native shareholders hope that there will be oil production from Icy Bay, to help assure the prosperity of our company, and to help meet the energy needs of the nation.

We have also had discussions with some of the Gulf of Alaska operators. We want them to know that with careful land use planning, and with fair compensation to our shareholders, Icy Bay could be a natural support and staging area for any developmental phase of Gulf of Alaska activities.

With the aid of Bomhoff and associates, consulting engineers, we have placed before the Corps of Engineers our request for a permit to construct a dock at Icy Bay. At our expense, an environmental assessment of the area, and the proposed dock project, is already under way.

These are the imaginative steps we must take if our shareholders are to receive the full benefit of the Native Claims Settlement Act, and take their rightful place in the economy of Alaska.

With that background, I am sure you can appreciate the basis for our concern about House Bill 219. But permit me to make some specific comments about this measure.

First, we at Chugach believe that the finding that "major resource development projects create an immediate demand for greatly increased state and municipal services in areas contiguous to the project" is overstated and over-simplified. There is no community at Icy Bay, just as there was none--and in many respects still is none--at Prudhoe Bay. A project of unprecedented dimension may have a great impact in an Alaska community; I suppose that the impact of the TAPS project in Fairbanks is a case in point. That does not mean that petroleum discovery in the Gulf of Alaska will have a significant impact on any Alaska community or create a demand

for State or municipal services. If petroleum of commercial quality and quantity is found on corporation land at Icy Bay, we foresee that the development of this resource from our private land could occur with little public impact and with no significant demand for publicly supplied services.

We believe that at the minimum, proponents of House Bill 219 should set out in detail, for public comment, the nature of the "significant impact" and the items of "expense" which petroleum development in the Gulf or at Icy Bay would bring to the State or to any local governments.

It may be answered that much of the impact is expected to be felt in the Yakutat community. If so, we stand ready, willing and able to divert unwanted impact from the existing community of Yakutat to our Icy Bay deficiency land selection area, which is unpopulated. To do that, of course, we would like to enjoy the encouragement and the support of the Department of Community and Regional Affairs--but here I speak of technical and moral support, not financial aid.

Second, the bill recites that "the Legislature considers it probable that the initial demand for publicly provided services related to outer continental shelf oil and gas development projects will exceed corresponding initial tax revenues from the project by an even greater proportion than occurs with resource development projects wholly inside the state." On its face, the assertion appears to be illogical. We know of no evidence, at least, that would support it. We wonder if the proponents of the bill have asked OCS developers what "initial demand", if any, for publicly

provided services they intend to make. I can tell you forthrightly that the only "publicly provided services" we at Chugach have requested are that the Department of Community and Regional Affairs should refrain from negative interference in Chugach's relations with the federal Corps of Engineers through communications sent without Chugach's knowledge. We believe that our point has been made, and we are hopeful that our request for improved consultation techniques by State agencies with Chugach will be honored.

Third, proponents of House Bill 219 declare that the bill would "provide a mechanism by which the increase in demand for state and municipal services occurring as a result of an (OCS petroleum) development project will be met by revenue from the project responsible for the increase in demand." I have already noted that the claimed increase in demand for services is speculative, not proved, and not inevitable. Moreover, any demand for services that might occur in one place might be different in character and degree from the kind of demand, or the kind of services demanded, arising in a different place. But the bill treats every area and every development and every impact by an identical, simplistic formula.

Another fallacy is the notion that all development, regardless of when it occurs, will impact public expenditures in the same way. The notion that new development projects attract new residents to Alaska, and raise a demand for more public services, may have limited validity. But at a certain stage of Alaska's growth, in the post-TAPS era, there exists in the State a body of unemployed

or underemployed Alaska residents. For them, future development projects are a livelihood. The demand for "publicly provided services" from these people is inversely proportionate to the employment opportunities available within the State. Without employment, they become dependent upon public assistance; with employment, they become State and federal taxpayers.

I mention these facts only to demonstrate again that the underlying theme of House Bill 219, i.e., that all OCS development in Alaska, wherever and whenever it occurs, creates a like demand for "publicly provided services" is false; in some contexts, OCS developments may diminish the demand for "publicly provided services", we believe.

We also believe that the formula for computing the fee for a shores facilities permit is too rough a tool. We note that the worst possible case is assumed in a speculative way: "gross impact cost" is the "maximum anticipated population increase in the affected area during a 20-year period multiplied by the per capita costs of state and local government in the affected area". As noted above, in the worst case, the existence of OCS development will inspire mobility of some Alaskans from other places in the state to "the affected area". Thus OCS would be the cause of a lessened demand for "publicly provided services" in some places in the State. On the logic of House Bill 219, why doesn't the permittee receive some credit for that?

Again, for the same reasons I have discussed above, it cannot be assumed that the "per capita costs" in an "affected area" will be comparable from place to place. In Fairbanks, the impact meant

more demands for services like schools and sewers and roads. In a controlled area like Icy Bay, no such demands for public services are necessarily in the offing.

We also note that a discount rate is included in the bill to apply to the revenues that government would receive for the purpose of determining "development revenue", but no discount rate is used to weigh or measure the per capita costs of governments over a 20-year period. On its face, this is unfair and indefensible.

We object, in any event, to using historic "per capita" costs of "development" as any measure of future per capita impact, even assuming that some generalizations could be made on a statewide basis. After all, the State is proposing increased controls over coastal zone development and land use in a variety of ways. The effect of these controls, when and if fully implemented, should be to reduce the alleged public services costs which some associate with development. Therefore, the historic approach is inappropriate.

At bottom, our concern is based upon our realization that this measure calls for large front-end payments by developers, to be paid on a highly speculative basis, on property that may or may not exist, and with no provision for credits if estimated future maximum impacts do not occur. The business effect will be to discourage investment in areas like Icy Bay, encourage inefficient uses of existing facilities however antiquated they may be, reduce employment, and remove from petroleum production marginal properties.

Finally, we note that the same rationale that is included in HB 219 is used by the Governor in his cover letter supporting franchise tax legislation as the Governor's proposals would affect

companies operating in the Outer Continental Shelf; that is, the claim is made that proposed taxes are needed to compensate the State for services provided to OCS operators.

The question that arises is whether House Bill 219, if enacted, would foreclose the need for the franchise tax legislation, because permit fees would satisfy the rationale, or whether, in the alternative, the Legislature will seek more than one remedy for a single asserted burden.

In this light, we would respectfully recommend that no action on House Bill 219 be taken until the entire set of tax measures has been acted on finally by the Legislature prior to its 1978 adjournment, by passage, amendment, or defeat.

Thank you again for allowing us to share these views.

Respectfully submitted,

Cecil Barnes

STATE OF ALASKA
DEPT. OF COMMUNITY & REGIONAL AFFAIRS
DIVISION OF COMMUNITY PLANNING
JAY S. HAMMOND, GOVERNOR
POUCH E – JUNEAU 99811

March 22, 1977

The Honorable Lisa Rudd
Alaska State Legislature
Pouch V
Juneau, AK 99811

Dear Representative Rudd:

As requested by the House Community and Regional Affairs Committee, this letter summarizes the amount and status of matching grants-in-aid allocated by the Division of Community Planning to local governments for OCS-related planning over the immediate past and current fiscal years.

To date, a total of $590.6 in matching grants has been awarded or reserved for local OCS planning. Grants were funded from the following federal and state program sources:

(A) Federal HUD 701 Comprehensive Planning Assistance Program;
(B) Two federal OCS Supplemental Planning grants the Division obtained through the federal office of Coastal Zone Management;
(c) Federal Economic Development Administration title IX OCS grant for economic adjustment planning; and
(d) State Oil Impact Program.

The following Table identifies the locality, grant amount and status of each local grant.

Locale	Grant Amount	Project Status
HUD 701		
1. City of Cordova	18.0	completed
2. City of Yakutat	24.0	completed
3. City of Yakutat	6.7	completed
4. North Slope Borough	9.0	completed
5. City of Sand Point	15.0	current
	$72.7	

Locale	Grant Amount	Project Status
OCZM/OCS I (Total Grant: $300.0)		
6. Kenai Peninsula Borough	60.0	completed
7. Kenai Peninsula Borough	25.0	pending
8. Kodiak Island Borough	36.0	completed
9. Kodiak Island Borough	12.0	current
10. Alaska Native Foundation	18.0	completed
	$151.0	
OCZM/OCS II (Total Grant: $250.0)		
11. North Slope Borough	40.0	pending
12. Unalaska	25.0	current
13. Kodiak Island Borough	50.0	current
	$115.0	
EDA Title IX (Total Grant: $300.0)		
14. Kodiak Island Borough	45.0	current
15. City of Seward	30.0	current
16. Cities of Kenai-Soldotna	30.0	pending
17. Cities of Homer-Seldovia	30.0	pending
18. City of Yakutat	33.0	current
19. City of Cordova	30.0	pending
	$198.0	
State Oil Impact Grant Program		
20. City of Yakutat	$53.9	completed

The OCZM/OCS Supplemental Grants and the EDA Title IX Grant represent new federal grant program funds which were obtained at the initiative of the Division of Community Planning to help local governments underwrite the cost of much-needed OCS impact planning. Of course, since all these federal programs require local matching contributions ranging from one-half to one-fourth of the grant amount, employment of these federal grant funds by local governments still means that substantial outlays of local funds are necessary. This has placed a serious financial squeeze on those local governments with small tax bases (e.g., Yakutat) or high mil rates (e.g., Seward at 25.0 mils) and has unfortunately hampered their ability to take quick advantage of matching grant funds available through the Division.

To summarize, better than half of the federal funds ($464.0 out $850.0) obtained by the Division specifically for OCS planning over these two years has been allocated to local agencies for locally sponsored projects. The bulk of the remainder has been allocated either to other State agency projects uniquely the responsibility of the State (e.g., drafting of Department of Environmental Conservation's oil tanker traffic regulations, Department of Highways' Gulf of Alaska regional transportation planning) or to special planning projects of common benefit to local and state governments alike (e.g., Marine Service Base

Study; Employment Forecast Model; OCS Bibliography; Management of OCS-Related Industrial Development Handbook). In my judgment, it is more sensible and economical to undertake this latter type of studies once under State sponsorship for universal use and reference, than to have them undertaken time and again by each separate local government.

I will be glad to provide any additional information on these matters that the Committee may request.

Sincerely,

Kevin Waring
Director

LISA RUDD

ALASKA HOUSE OF REPRESENTATIVES

Anchorage Daily News
821 W. 5th Avenue
Anchorage, Ak 99501

Dear Editor,

I was glad to see your recent editorial on House Bill 219, which would provide money to the state and communities impacted by the construction of shore facilities associated with outer continental shelf developments. The money would come before construction of the shore facilities, so that they can plan for and fund the increase in governmental services caused by the new development. The original bill sponsored by Representative Charlie Parr, D-Fairbanks, has undergone many changes. I am convinced however, that the original intent of the legislation remains intact.

Almost all of Alaska's coasts are going to be effected by outer continental shelf development. There are currently two rigs involved in exploratory drilling in the Gulf of Alaska and the community of Yakutat has already felt impact as a result of offshore exploration. Planned federal outer continental shelf lease sales are scheduled for November 1977 in the area southeast of Kodiak Island and a joint federal-state sale for February 1978 in the nearshore area of the Beaufort Sea. Additional sales are planned in the Bering Sea in 1979 and 1980 and second sales in the Kodiak Aleutian shelf area in 1980. The exploration phase of activity will affect shore communities to some extent, as one can learn by talking to anyone from Yakutat. If oil or gas is found and field development takes place it is likely that the nearest shore community will be heavily impacted, as Kenai can testify.

House Bill 219 will help the state and communities prepare for and deal with rapid increases in the demand for municipal services. The bill requires that any person or party engaged in exploration, development or production of oil or gas in the waters

adjacent to the state must secure a permit and pay a fee prior to constructing or leasing shore facilities. The bill further provides that the applicant for a permit must file a report on the size, location and estimated value of the proposed facility as well as projected impacts, both economic and environmental, upon the community in which the facility will be located.

The bill's strength lies in the fact that it provides the local communities affected by offshore activites the opportunity to have advance notification of potential development that will affect their area and to decide whether they wish to have the proposed facility within their boundaries. Besides gaining time to prepare for industrial growth, the community will receive a large percentage of the permit fee to cover the costs of providing the increased municipal services needed because of the development of the shore facility.

I feel that it is important that communities be able to control the siting and other aspects of shore facilities and that they receive "up front" money to help them provide new municipal services. It is for this reason that I still hope to get the bill moving. The recent editorial (April 9, 1977) of the Anchorage Daily News lends support toward that end and is much appreciated.

Yours sincerely,

Lisa Rudd

LR/ds

House

JUNEAU ALASKA

TO: All C.R.A. Committee Members

FROM: Merle G. Snider

Q. How do you make a Liberian tanker sink?

A. You put it in water.

That joke and the enclosed information I picked up at the O.C.S. conference sponsored jointly by the Alaska Native Foundation and the Kellogg Project of the University of Alaska, held in Anchorage Feb. 4,5, & 6th. I also have ten lbs. of material directly concerned with O.C.S. and will be happy to share any of it with you, on any specific question.

Attending this conference were representatives from 90 villages, State personnel, House members, the press, and many others. As you can see by the program, many areas of concern were expressed.

Also noted in the program are events that were closed to non-villagers, in order to permit a freedom of expression and direct questions. All legislators were encouraged to attend these meetings.

I attended the Friday night banquet at which Senator Kay Poland spoke at length of the proposed Coastal Zone Management Bill, which will soon be submitted to the legislature. It is a bill on which an interm committee has been working on for at least two years. Public hearings have been held throughout the state on the issue.

Senator Poland stated that the bill will gather together, all of the existing state regulations concerning Coastal Zone Management, and will also allow a maximum of local control to exist. There have been some differences of opinion between the committee and the Administration, on this question of local control. Part of the problem has been with what to do with the unorganized lands of our state. Both the committee and the Administration have been addressing this issue.

Also speaking at the banquet, was Representative Alvin Osterback, as Chairman of the House Resources Committee. He replaced Frank Woods, who was unable to attend, and spoke briefly on the direction he felt the State should take regarding d2 Land Selections, State Land Selections, and of Park Lands.

The conference ended Sunday at noon. As I said, I returned to Juneau with a wealth of information on O.C.S.; a question that the State and the people of Alaska will be dealing with over the next 50 years. I shall be pleased to share any and all of this information with any member who wishes it.

Merle G. Snider

HOW TO DO IT:

A COMMUNITY GUIDE FOR MANAGING OCS INDUSTRIAL DEVELOPMENT

*STEP 1

Determine what to expect from OCS development.

In other words, know how the oil companies work, and what they expect on-shore to support their off-shore activities.

*STEP 2

Evaluate community ability to serve industry needs.

Check to see if your village has the type of harbor and shoreline oil companies need; also estimate your village's potential for providing the needed facilities, services and utilities.

*STEP 3

Determine what the community wants.

Decide what your village wants--and doesn't want--from any OCS-related development.

*STEP 4

Examine and revise local zoning and other regulations.

Determine what codes and regulations will be required, or what changes in existing codes must be made to achieve the village's objectives and to accommodate the development.

*STEP 5

Annex or acquire land to extend jurisdiction.

Bring the areas that may be chosen for OCS development under village control.

*STEP 6

Develop a financial plan.

The plan should include: methods to expand or add to the village infrastructure; an operations and maintenance program for needed additional services; and a revenue program which balances the costs of everything with the funds to pay for them.

*STEP 7

Establish procedures for reviewing development proposals.

Require that developers submit development proposals to the village. These proposals must contain enough information to tell if they will fit into the village's goals and policies; the reviewers must have enough knowledge to adequately evaluate the proposals; and any conflicts between developer and village should be dealt with in meetings so that every effort can be made to resolve them.

Each of the above steps is essential to fully deal with and manage the changes promised by on-shore development from OCS activities.

Three types of tools are available to villages for managing their future:

1. Leases: A detailed outline of the complete leasing process appears on pages 12-24 of the small blue booklet entitled "Leasing and Management of Energy Resources on the Outer Continental Shelf" in this conference packet. Briefly, you have a say at four specific times during the pre-sale period, and at three times after the sale.

Pre-sale times include:

1) After the Call for Nominations, the announcement of a general area under consideration for a possible future lease sale: At this time a village may--on its own or through the State Government--identify specific parts of the general area which it doesn't want to be sold, or which should be sold only with special restrictions because of environmental or other reasons.

2) During Tract Selection: When the Secretary of the Interior gets down to selecting actual tracts to include in the lease sale, he consults with State governors; so, this is the time to let the governor know how you feel.

3) Public Hearing: After the draft of the environmental impact statement is completed, a public hearing is held in the area of the proposed sale. Both written and verbal testimony count at this time.

4) A Final Decision by the Secretary: This is made only after final consultation with State Governors, as to which tracts will be included and with what restrictions. Again, here's a time to tell the governor what you want.

Post-sale times include:

The United States Geological Survey must write a plan of operation for each phase of OCS activity: Exploration, development and production. USGS must submit this to affected communities for comment before each phase is allowed to begin. These USGS studies include an analysis of what will happen both on-and off-shore during that phase.

2. Public Powers: This tool revolves around zoning and permits. Local communities can restrict, encourage or otherwise control development on their lands by the use of zoning and other local ordinances. Municipalities and boroughs can exercise control through their land use planning powers. Both the State and Federal Governments have extensive permit systems and regulatory procedures which allow public and local input prior to any development.

3. Indirect Management Tools: This is the least cut-and-dried tool of the three, but by far the most effective. This is when the village really takes the initiative and acts to try to achieve its goals. Some examples include: Negotiations with oil companies and their subcontractors, working with them on every step of proposed development to insure the village's concerns are taken care of; making sure village desires (for instance, local hire) are included in contracts; entering into joint-venture business arrangements with the oil companies for any business conducted in the area; helping decide where on-shore facilities will be located, working with the State and Federal officials to have their assistance on issues. In short, this tool involves using every resource available to the village to influence development to the benefit of local residents.

Material courtesy of Dept. of Community and Regional Affairs, USGS, Bureau of Land Management, Tryck, Nyman & Hayes

A NOTE ON SESSION #7

"Three Villages Response to OCS"

We chose these three villages because they reacted in different ways to OCS development near their shores. We present these as models: Villages may decide to pattern their responses after one of these, or may combine features of each in new ways to fit their own situations and goals.

YAKUTAT

The village corporation and the City of Yakutat have worked closely together to plan for on-shore facilities and to ensure that all on-shore development occurs only where the community wants it. Yak-Tat Kwaan's main priority has been to assure that development does not destroy the unique cultural and natural environment which make up the Yakutat community. By entering into a partnership role with the oil companies--and thus having a direct say in what happens--the corporation intends to minimize the degree of change and at the same time benefit from the opportunities presented by OCS development.

KODIAK

The joint-venture between Koniag, Inc. and its villages is pursuing the most pro-development course of action of the three examples. They are actively seeking to exploit their resources and land. Cape Chiniak, an old Air Force tracking station, is their choice for construction and operation of support facilities for off-shore activities, and the corporation and the villages are negotiating with the oil companies to get that firmed up. Koniag and its member village corporations are working closely with the Kodiak Island Borough and the State on comprehensive planning for development on the island.

ENGLISH BAY

This small community on the Kenai Peninsula represents the opposite position from Koniag, wanting no change in its present lifestyle. Residents want no on-shore facilities, nor any development in the nearby fisheries-rich waters of the Lower Cook Inlet. They succeeded, with private and State help, in getting former Interior Secretary Thomas Kleppe to remove objectionable tracts from this month's lease sale. English Bay residents decided that economic benefits of OCS development were not worth the necessary changes in the present fishing-based economy and in the surrounding wilderness environment.

515 "D" Street ■ Anchorage, Alaska 99501 ■ 274-5638

February 4, 1977

Dear Conference Participant:

WELCOME! We're very pleased you're joining us in Anchorage for this conference, "The Management of Change." The Alaska Native Foundation, with the assistance of the Kellogg Project of the University of Alaska, decided to sponsor this meeting because of the great importance to Alaskans of the consequences of Outer Continental Shelf petroleum development.

With the help of films, slides and speakers, we'll be exploring three major issues:

1) What changes can villages expect with OCS development?

2) What are the legal rights with regard to any development which affects a community or region?

3) How can villages best use all resources to plan for and manage the changes to the benefit of local residents?

In order for small group discussions to concentrate on specific subjects and particular regional and village concerns, several sessions will be open only to those directly affected. These sessions are noted on your conference schedule.

For those of you from the villages, a special word: This conference is not designed for us to simply pass on some interesting information to you. Rather, we hope you will take home what you learn and start an awareness among the residents of your village--the awareness that if you all act together, you can successfully manage the coming changes to meet your village's goals for the future.

If you believe we're on the right track with this conference, and are giving you the information you need and can use, tell us! If you want additional information or assistance, we may be able to hold follow-up meetings on specific subjects or problems. But only with your ideas and help can we do this.

The development of Alaska's Outer Continental Shelf may cause great changes in the lifestyles of our peoples living along the coast. We believe these changes -- properly managed -- may be beneficial. The time to begin planning and acting is now.

Again, on behalf of ANF's Board of Directors, Welcome to Anchorage and "The Management of Change".

Sincerely,

Richard Janson

Richard Janson, President

THE MANAGEMENT OF CHANGE

FRIDAY-February 4

	9:00 a.m. until Noon, Saturday	Registration, Lobby of Ramada Inn
#1	1:00 - 1:30	Welcome, Opening Comments, Introduction of Village Participants --Dick Janson, Pres., Alaska Native Foundation --Michael DeMan, Village Management Assistance --Roger Lang, Chairman, Alaska Native Human Resource Development
#2	1:30 - 3:00	Slide Presentation: "OCS" (in both Yupik and English) --Andrew Chikoyak, film maker, Tununak "The Yakutat Experience" --The Yakutat Team: --Byron Mallott, Yakutat, Chairman of the Board, Yak-Tat Kwaan, Inc. --Sam Demmert, Pres., Yak-Tat Kwaan, Inc. --Vernon R. Wiggins and Robert C. Sharp, of Tryck, Nyman and Hayes, Consultants to Yak-Tat Kwaan, Inc.
#3	3:30 - 5:00	Film: "Offshore" (18 min.) "The Community's Role: Some Considerations" --Sam Demmert, Pres., Yak-Tat Kwaan, Inc. --Hugh W. Fleischer, attorney, city of Yakutat --Jack Wick, Pres., Koniag, Inc. --Stuart Denslow, Planning and Management Consultant to Kodiak Island Borough "The Shetland Experience" --Niall Trimble, Economist, Dept. of Community and Regional Affairs
#4	7:00 - 9:00 (CLOSED TO NON-VILLAGERS) Attend	Dinner with speakers - "OCS-The Local Approach" --The Hon. Kay Poland, State Senator from Kodiak and Co-Sponsor of Proposed OCS legislation --Frank Woods, New Stuyahok

END Friday Sessions

SATURDAY-February 5

#5 8:30 - 10:15

Slide Presentation: "A Question of Values"

"The Federal Role: How the OCS Office Relates to You."
--Ed Hoffmann, Alaska Director, OCS Office of the Bureau of Land Management

"Will Hold Hearings in Kodiak."

9 Lease Sales in AK
16 " " " US.

"The State and You, and OCS Development"
--The Hon. Guy Martin, Commissioner, Dept. of Natural Resources
--Sandy Sagalkin, Attorney General's Office
--Glenn Akins, Office of Coastal Zone Management
--Kevin Waring, Dept. of Community and Regional Affairs
--Jim Wiedeman, Dept. of Commerce

"A Shift of Emphasis to Local Control."

#6 10:30 - 11:45
(CLOSED TO NON-VILLAGERS)

"Three Villages Response to OCS"
--David Wolf, Attorney for Yak-Tat Kwaan, Inc.
--Martin Farrell, Attorney for Kodiak OCS Project
--Arnold Melsheimer, English Bay

"Eating After OCS Development"
--Pat Wennekens, Arctic Environmental Information and Data Center

#7 Noon - 1:15

Lunch and Speaker: "The Oil Industry's View of Yakutat"
--James W. Hart, District Engineer for South Alaska, Atlantic Richfield Oil Company

#8 1:45 - 3:15

"Off-shore Means On-shore Too"
--Joe Homer, Alaska Drilling Manager, Exxon Co.

Slide Presentation: "Icy Bay"
--Cecil Barnes, Pres., Chugach Natives, Inc.

"Be Ready Before the Oil Companies Pull Into Your Harbor"
--Anthony Vaska, Calista, KCC
--Linda Ellana, Bering Straits, ACC

#9 3:30 - 5:00
(CLOSED TO NON-VILLAGERS)

"How to Talk to Oil Companies"
--The Yakutat Team

Small Group Discussions of Conference Purpose, Follow-up Activities and Action

#10 8:00 - 10:00

Banquet: "OCS and Polar Rim Peoples"
--Eben Hopson, Sr., North Slope Borough
"Village Self-Determination"
--Clay Antioquia, Area Director, BIA

END Saturday Sessions

SUNDAY-February 6

#11	10:00 - 12:30 (CLOSED TO NON-VILLAGERS)	Summary and Projection of Future for Management of Change; small group discussions on specific subjects identified by village participants --Roger Lang --Byron Mallott --Sam Kito --Emil Notti --Willie Hensley --Eben Hopson
	12:30 - 2:00	Lunch (no program) at Ramada Inn
	12:30	Conference officially ends
	1:30 - 3:30	OCS Films, Slide Shows

END Sunday Sessions

Lisa,

Several points of clarification you might make when Tom Mathews testifies again:

1) Oil Revenue to the State. Future oil company contributions to state revenues may approach 60% of total State revenue. However, that revenue will come mostly from oil royalties not from taxation. Royalties are equivalent to rents paid to any landlord and are normal practice whether the landlord is public or private. Furthermore, oil company royalty and tax payments from the North Slope should not necessarily subsidize oil development elsewhere. The same companies might not even be involved. Why should severence taxes paid by ARCO on the North Slope pay for impacts occuring because of Texaco's or Shell's onshore operations in the Gulf of Alaska?

2) Who Needs to Obtain a Permit. Native corporations will not have to purchase permits unless they are successful bidders for offshore tracts. Under Sec. 41.45.020, only "a person engaged in the exploration, development, or production of oil or gas under terms of lease from the United States... If the Native corporation merely owns and operates a shoreside facility, they will not be requred to obtain a permit - oil operators leasing the facility will have to obtain the permit. (This means that no facility will be built without a prior commitment by the operators to use the facility. That's good.)

3) Timing of Development. Mathews emphasizes exploration and minimizes other phases of oil development. It is true that actual oil production may not begin until 5-8 years after a lease sale. However, if there is oil to be found, it will take about one year to make a discovery and another 2 1/2 years to delineate the field and estimate recoverable reserves. At that point (3 1/2 years from lease sale), major decisions about pipelines and terminals will be made. Assuming some preliminary design work is underway, construction could begin shortly thereafter. Construction of a terminal on, say, Kodiak Island will create temporary but major local changes - see Table 3.27. If construction workers are hired out of local hiring halls, a situation similar to Fairbanks may arise. During the construction phase of a terminal or LNG plant, there is bound to be a boom-bust situation.

4) North Sea and Santa Barbara Comparisons. It's true that acreage leased in the North Sea far exceeds that leased offshore in the U.S. However, operating conditions in the North Sea are quite similar to the Gulf of Alaska. Floating bases are not too attractive. The weather is too rough. The similarity between Santa Barbara and Alaska rests with the high degree of public interest and possible hassles for the oil companies.

Fee for Shore Facilities Permit. Lisa, this section needs reworking. It would not be very fruitful to get sidetracked on a discussion of whose 20-year projections are most reliable.

Coastal Energy impact Program. This federal program is primairly a loan program. Grants will be hard to come by.

Nuisance points

Further Questions about Exxon Operations. I was under the impression that the Alaskan Star was not drilling yet. They have been training crew while moored in Resurrection Bay and have not begun operations. Also their stated plan is to move rig crews through the Yakutat Airport. Mathews slipped by that detail. You might also ask him to specify the $750,000 expenditures per month.

RE: Highlights from OCS Conference

Friday - February 4

- "The Yakutat Experience" was the focus of this first days sessions with two excellent presentations by the Yak-Tat Kwaan board members on the history and the future of OCS for their village. I learned about cultural preservation as seen through the eyes and experience of the Native peoples. I now understand what a service base is and how it develops and the determination of the Yak-Tat Kwaan in obtaining an agreement with the oil companies to confine the service base to a single 77-acre tract known as the Industrial Park. This service base will be supply and storage with no production facilities and no oil coming ashore.

- We were also briefed on the current events in Cook Inlet, English Bay and the Kodiak Island Borough by people of those areas.

Saturday - February 5

- A briefing by the Bureau of Land Management provided these highlights:

The Federal leasing program is nationwide and is being accelerated due to the fact that currently 40% of our energy in the form of oil and natural gas is imported.

The current lease schedule is a planning schedule and not a committment. (see attached proposed lease sites for Alaska area)

The Alaska Natives are in an excellent position to control industrial development.

The lease plan provides for:

- Announcement to the public 4 years in advance
- Call for nominations (industries opportunity to identify tracts) 18 months in advance.
- With good planning and village committment there can be a site selection that is agreeable. In the case of English Bay, the village wanted no intrusion and currently that tract in their area is no longer being considered.

- The State's approach to OCS highlights: - (a panel consisting of Guy Martin, Kevin Waring, Glen Aikens, Sandy Sagalkin and Jim Wiedeman.)

Alaska operates over 1/2 of the national OCS burden and is the harshest critic of federal leasing. The basic problem of the program was that it was too big and too fast. The state's approach was to buy time on the part of local areas so that they would have ample time to organize and plan.

What is Coastal Zone Management?

- Helping communities deal with change.
- Coordination between the state and local community.
- Planning for federal law implementation of Alaska's CZM program.

What is Community Planning?

- Federal government "treasure hunt" if successful there will be tremendous changes in the way of life on the coast.
- There can be a partnership with C&RA and the local government by way of providing practical skills and consulting assistance backed by state funding whenever possible.
- C&RA can assist the village in appraising the basic situation in the community and formulating projections of employment and population growth generated by OCS development.

The Shetland Experience - Niall Trimble

This experience in Scotland's North Sea provides many similarities to conditions and life styles along Alaska's coast.

The ever-present and still unanswered questions of impact to marine life were addressed without resolution due principally to a lack of knowledge as to the potential threat to aquaculture.

RE: HB 219

Sec. 41.45.030. FEE FOR SHORE FACILITIES PERMIT.

In arriving at the permit fee, gross impact cost and development revenue are the two factors being estimated as follows:

Step 1.

anticipated population increase
x
per capita costs of state and local government

= gross impact cost

Step 2.

estimated pertroleum taxes (over what period of time?)
+
general property taxes for onshore facilities "
+
income taxes from residents in affected area "
+ OCS and gas grants (fed. money) summed and discounted
= development revenue

Definition:

"discounted on a cash flow basis"

Money has a "time value", in the sense that it can be reinvested and earn future profits, a dollar of profit today is worth more to a corporation than a dollar of profit ten years from now. It is this truism which underlies the widespread corporate use of the discounted cash flow, or DCF, method of analysis for computing the rate of profit on different investments. As is implied by the name of the method, discounted cash flow analysis involves two basic elements: a cash flow of costs and profits over time, and discounting these flows by some factor to take into account the greater value of near money as compared to far money.

Step 3.

gross impact cost

- development revenue

= the fee for a shore facilities construction permit

1. Mike Davis should have some back-up information for us by Frieday which apparently includes a statement attesting to the constitutionality of this concept.

2. On advice from Jim Rhode of House Finace, I contacted Gregg Erickson from the Division of Research Services to let him know of the hearing on HB 219 for Monday. Mr. Erickson is an economist and he and his staff are apparently well versed regarding this bill; either himself or one of his staff will be on hand for the meeting.

RE: Income Tax of OCS drilling rig employees

Transcript - Verbatim 3/7/77

Ose: "These 75 or whatever, that are being brought up then, the only revenue is through income tax?"

Matthews: "That's right, because they don't live in the state and they don't place any demand or services on the state".

Kelly: "Why are we receiving income tax on these people, I don't think we are, are we?"

Matthews: "It depends on how their residency is established with the company. If they are working for a company that is established and franchised with the State of Alaska, and they're paid out of Alaska, then essentially a portion of their income is subject to Alaskan taxation."

Kelly: "Is the Alaska Star subject to Alaska taxation?"

Matthews: "Yes sir, being it's maintained and operated by a company called North-Star Drilling Company in Anchorage."

I spoke with Mike McCormick, Chief, Audit Services, Department of Revenue and between corporate and individual taxation. The company has a legal obligation to withhold taxes on employees who are residents of the state. The state can tax individuals who are non-residents for income earned within the state. The state has no legal jurisdiction to tax income earned outside of the state.

RE: Department of Interior Reports

I spoke with Kevin Waring (12:50 p.m. 3/30/77) to find out what is included in reports filed with the Department of Interior and whether or not these reports might be applicable to development plans required for issuance of a permit.

According to Kevin these reports are filed only by the operators of a rig. The information is directed at the exploration phase and attendant factors relative to the rig operation. This would not generate any information or development plans to include subcontractors supplying services to the facility.

Kevin also pointed out that currently the Department of Interior reports are filed only two months prior to actual construction.

MICHAEL MONCHINO

capacity of the hotel, located on South Benson. It will reportedly be a split-level, three story structure, and may include banquet facilities. Tentative plans call for construction to begin this spring.

Monchino, 25, has served as manager of the Sheffield Top of the World Hotel in Barrow. He

Kodiak Sen. Kay Poland has announced that the contract for a 1.9-mile Mill Bay Road extension has been signed with an Anchorage contractor.

Stephan and Sons, Inc.-Mat-Su, Inc., a joint venture, was awarded the contract at their bid of $1,662,115.95. The engineer's estimate for the project, which extends from the intersection of Rezanof and later connects with Mill Bay, was more than $300,000 under the contract figure.

Work is expected to be completed on the project, which does not include paving, by the end of the year.

Impact: Problem of becoming a center of development while maintaining traditional lifestyles . . .

By CHRIS BLACKBURN
Daily Mirror Correspondent
Second of a Series

If the exploratory wells drilled in 1978 confirm there are indeed extensive deposits of oil on the Kodiak shelf, the oil industry will begin plans for oil development and production. Unless the oil fields lie in the extreme northern end of the lease sale area Kodiak Island can expect to become a center of oil development activity. Construction workers, production personnel, planes and tankers and materials for support facilities will flont in, ferry in and fly onto the island.

If the people of Kodiak Island have discussed and accepted a new comprehensive plan and supporting zoning ordinances, the oil support facilities will be constructed in the areas the citizens of Kodiak have predetermined to be most desirable — or least undesirable.

If the groundwork is not completed by 1979, the oil facilities will be constructed wherever the oil industry can build most efficiently and with least expense.

THE KODIAK ISLAND OUTER CONTINENTAL SHELF Impact Study recommends that "To the extent possible, the Kodiak Island Borough should discourage the location of OCS related industrial facilities within the Kodiak metropolitan area or in any of the other villages on Kodiak Island. The location of such facilities within these areas would be extremely disruptive to the traditional lifestyles, community structures, and social and economic characteristics.... The Borough should insist that the oil industry be self-sufficient and willing to pay its own way in terms of the impacts resulting from the facilities directly related to OCS development..."

The Kodiak Island Outer Continental Shelf Impact Study estimates that the Western Gulf oil lease sale lands could produce as much as 164 million barrels of oil a year. All estimates of oil facilities and personnel requirements are based on this figure.

In 1979, as the first exploratory wells show evidence of productive oil fields, the oil industry will begin looking for a site for permanent onshore facilities. By 1984, at the projected peak of the development phase, a maximum of ten berths for oil company vessels may be needed — plus land for silos, tank storage and warehousing, open storage and office facilities. In all, about 80 acres of land will be needed in conjunction with harbor facilities.

THE OIL INDUSTRY will probably prefer a site on or near the existing road system. Chiniak may best suit the needs of the oil industry, provided the people of Kodiak have decided to prohibit industrial facilities within or near the metropolitan areas. The north side of Ugak Bay would also be suitable. Possible, but less likely, sites are Kalsin Bay and Middle Bay.

Karl Armstrong, executive vice president of the Koniag Regional Native Corporation, which holds title to the former Chiniak tracking station, said that the oil companies have shown interest in using Chiniak as the site of onshore facilities, but that discussions ceased when the Kodiak lease sale was postponed.

Armstrong a former fisherman, also mentioned that harbor facilities at Chiniak would offer sanctuary to fishing vessels encountering rough seas near Cape Chiniak, an area notoriously hazardous for fishing vessels.

ARMSTRONG SAID that while Koniag is not averse to discussing the prospect of onshore oil facilities at Chiniak, only further study will tell which site would be most desirable.

Whichever site is selected, harbor development must be preceded by public hearings. The State of Alaska owns all coastal waters from the shoreline to three miles from shore and would have to grant a permit for development. Before any permits could be granted public hearings would have to be held.

Likewise, any attempt to locate onshore support facilities on federal lands would require public hearings.

PUBLIC HEARINGS can be used by the people of Kodiak to direct the eventual siting of oil facilities. A strong and unified show of support, or opposition, to a particular location usually has a decided effect on final decisions.

Armstrong also pointed out the desirability of the people of Kodiak insisting — with the help of the Borough government, state legislators and other groups — that all public hearings related to development on Kodiak Island be held in Kodiak rather than Anchorage or Juneau.

As the development phase progresses more airport land will be needed — for helicopters, for increased commercial and cargo flights and for warehouses, and maintenance and service areas: approximately 40 additional acres.

DURING THE DEVELOPMENT phase over 1,000 people would be employed in development and construction. The year '85 is predicted to be a peak employment year with 1,565 people involved in oil-related activities.

By 1987 the oil industry could be entering the production phase on the Kodiak lease lands. As early as 1979 the oil industry will begin selecting the site of a crude oil storage area and marine terminal. These facilities would require about 150 acres of flat, stable land — more if the land is hilly or unstable. The size of the crude oil storage facilities will determine the number of tanker trips required each year to keep the production operations underway. As few as eight tanker trips could be needed, or as many as 26.

By 1987 the oil related population should begin to stablize. The impact study estimates that about 2,651 people will be employed in oil-related occupations and Kodiak Island will have a total population of 14,252 people.

Tomorrow: Housing — how can Kodiak meet the demands?

Comics 7
Local News 8

Kodiak housing need could hit peak in year 1984

By CHRIS BLACKBURN
Daily Mirror Correspondent
Third of a Series

Assuming that large oil reserves will be proven on the Kodiak lease sale lands, the island's population could grow by 8,000 people in the next 10 years, according to the Kodiak Island Borough Outer Continental Shelf Impact Study. Those 8,000 people would need nearly 3,000 new homes.

The growth and resultant need for dwellings is expected to vary each year. The Impact Study projects that in 1979 the island's population would increase by 500, requiring 170 new homes. But during 1984, the peak of oil development activity, the population increase is projected to be 1,300 people needing 440 additional homes.

As evidenced by Kodiak's continuing critical housing shortage, construction has not been able to keep pace with the comparatively modest demands of the last decade. During 1974 only 26 new single-family homes were built. In 1975 another 26 single-family homes were built, but 107 additional dwelling units were built in multi-family dwellings.

IF KODIAK ISLAND does not find a way to cope with the projected future housing needs, the island could conceivable become the site of the same headline-making conditions that occurred on the mainland during the peak of the trans-Alaska pipeline construction — families squatting in campers in parks and along the backroads, several families crowded together in one dwelling and long-term residents forced out by soaring rents.

Failing to provide for growth did not stop population increases.

Fairbanks is often cited as a community that was caught totally unprepared for rapid growth. Reacting to the population pressures and ended up overbuilding.

Kodiak has a chance to plan and consider both the kinds of dwelling units that would most likely meet the future needs, and the methods the people feel will best stimulate construction without overbuilding.

Impact

The new comprehensive plan should clearly reflect the feelings of the people of Kodiak. Supporting zoning ordinances should insure that growth takes place as was planned.

TRADITIONALLY KODIAK has been a city of single-family residences. Under current zoning and subdivision ordinances a single family home requires 7,200 square feet of land, provided the lot is served by sewer and water facilities. Otherwise each single family home requires 25,000 to 40,000 square feet of land.

Thus, if current patterns continue and there were sufficient buildable land, between 635.7 acres and 3,500 acres would be taken by the needed 3,000 units — depending on the availability of water and sewer.

Conversely, were Kodiak to completely reverse current trends and house the growing population in apartments, townhouses and condominums — high density housing using only 2,774.5 square feet per dwelling — only 175.8 acres of land would be needed for 3,000 additional units.

ACCORDING TO the impact study

"It is impossible to determine at this time how much land along the existing roads and sewer and water lines are available for development...It can be assumed, however, that as development activity increases, the majority of new structures would be placed on existing utilities and roads. Therefore, within a few short years after the initial impacts of OCS development...the existing road and utility system will be completely utilized..."

According to Stuart Denslow, Kodiak Island Borough manager, extension of public utilities requires a capital improvements program, which Kodiak does not currently have. The Impact Study recommends, "In the capital improvements program and the comprehensive plan, the community should indicate exact areas where public utilities and facilities are to be extended. They should also specify the timing of the provision of those services...(This) will reduce escalation in land costs and result in improved physical planning."

WITHOUT PUBLIC UTILITIES, high-density housing is not usually feasible. All of Kodiak's current multi-unit dwellings are within the municipal service area, and the townhouse developments planned for Russell Estates' Divisions 2 and 3 will be on municipal utility lines.

Extension of public utilities tends to stimulate new construction. According to Denslow, two years are required to plan and obtain the state matching funds to build a sewer line. Thus the ability of Kodiak to meet the housing needs of 1980 depends partly on decisions made — or not made — in 1977.

The density of housing will determine the amount of new sewer and water lines that will be needed and the rate at which new units can be built. The impact study estimates that for the projected 2,761 new units needed by 1988, 24.7 miles of sewer lines would be required if the current low-density trend continues. However, the same 2,761 units could require only 6.7 miles of sewer and water lines if built in high-density configurations.

THE IMPACT STUDY also suggests that Kodiak develop a mobile home park ordinance and plan to use trailer court areas to absorb some of the population impact. Housing for employes of the onshore facilities could be developed near those facilities rather than in the Kodiak Metropolitan area. Additionally, the borough could consider developing some of its land, which lies north of the City of Kodiak. The study suggests a joint venture agreement with the oil industry.

Alternative methods of meeting Kodiak's housing needs can be discussed at the Borough's planning and zoning commission meetings every third Wednesday of the month. Further citizen input will come from a planned borough housing questionnaire, and public hearings preceding adoption of the new comprehensive plan.

The plan should outline which alternatives and which compromises will best provide housing for Kodiak's growing population.

Monday: Transportation — Roads, planes, ferries and barges.

community to look like in the future. The effort will be in- Alaska oil lease sales, Denslov said.

Report reasons problems are not insoluble

By CHRIS BLACKBURN
Daily Mirror Correspondent

The Kodiak Island Borough Outer Continental Shelf Impact Study — the result of a half-year's research by an Anchorage consulting firm — concludes that "the assets of the Kodiak Island Borough and the communities are uniquely valuable and should be protected and enhanced. The problems faced by the communities are not insoluble...They are the type that can be dealt with through community awareness, local action and proper planning and implementation.

"...The result of the OCS impact will depend upon the level of oil industry activity which will occur in Kodiak and the methods that are used in planning for and coping with the impact."

According to the impact study, which was just completed, Kodiak Island Borough's population will continue to grow. If current trends continue, the population will double in 20 years without OCS activity. OCS activity could double the population in 10 years.

As the population increases the existing problems of crime, housing, land availability, social services and recreational facilities will become more acute.

How acute depends on the decisions made during 1977 and on the exact location of oil reserves. The impact statement predicts that the initial oil exploratory phase will probably use facilities in Seward, giving Kodiak precious time to plan.

If oil reserves are developed near Kodiak Island, onshore oil facilities will require 300 acres of land somewhere in the Kodiak Island Borough. The OCS-related Kodiak Island population increase could total 8,000 people by 1988.

According to the impact study, the additional 8,000 people would require 2,700 more housing units. If Kodiak continues

(Continued on Page 2)

Report

(Continued from Page 1)

its current low-density development pattern — with an estimated 4.35 housing units per acre — an additional 635.7 acres of residential land, 24.7 miles of road and water and sewer lines will be needed.

Were "high-density development" — with an estimated 15.7 units per acre — considered, only 175.8 additional acres of residential land would be required and only 6.7 more miles of road, sewer and water lines.

There will be corresponding increases in services government and costs. However, the impact study lists many federal and state funding sources which could be used.

The future of Kodiak depends on where the oil reserves are and how thoroughly the community prepares.

A copy of the Kodiak Island Borough Outer Continental Shelf Impact Study has been placed in the A. Holmes Johnson Memorial Library. Additional copies will be available in about six weeks.

A time to prepare

Editor's Note — Kodiak recently received the first copies of the finished Kodiak Island Borough Outer Continental Shelf Impact Study, which not only qualified much of what may be expected if oil actually is discovered off of Kodiak, but also quantifies some interesting information about the island as it is now. Mirror correspondent Chris Blackburn today begins a series examining the impact study — and the impact of the study on the community.

By CHRIS BLACKBURN
Daily Mirror Correspondent

Impact from the Western Gulf oil lease sale could bypass Kodiak Island, or it could bring thousands of people and all the support facilities oil development requires.

The first clue to Kodiak Island's potential involvement with oil will come in November 1977 — if the oil lease sale occurs as scheduled. If the oil industry leases land in the southern half of the lease sale area, the probability of Kodiak Island becoming a desirable service base site is high.

The second clue will come as the exploratory phase progresses and the size and location of the oil fields are delineated. Once again, the closer to Kodiak Island the oil fields lie, the more likely it is that Kodiak Island will become impacted by oil development.

THOUGH ONLY ONE OUT OF every three potential oil fields contain enough oil to warrant development, it is felt the people of Kodiak must plan now as though oil discovery were a certainty or face the prospect of an unmanageable and undirected impact that disastrously alters the quality of life.

The experience of Fairbanks in 1975 — soaring rents, overcrowded facilities and unrealistic property values which is leaving an aftermath of defaults and arson — can be avoided on Kodiak Island.

The Kodiak Island Borough Outer Continental Shelf Impact Study, commissioned by the Kodiak Island Borough, outlines what can be expected and alternative methods of absorbing oil-related impact. The next step is for the people of Kodiak Island to develop a plan ready for implementation if developments in the oil industry indicate that Kodiak will become part of the saga of oil and Alaska.

AFTER THE NOVEMBER, 1977 oil lease sales, according to the Outer Continental Shelf Impact Study, the oil companies can be expected to begin the exploratory phase of oil development in the Western Gulf during the spring of 1978. In the past the oil industry has taken a "minimum investment during exploration" approach and utilized existing facilities as much as possible. The exploratory phase of development in Cook Inlet during the late 1950's was supplied from Anchorage. Seward, Cordova and Yakutat are believed to be being considered as supply bases for exploration in the Northern Gulf.

The Western Gulf could be supplied either from Kodiak or Seward. Kodiak has neither the land nor the port facilities to act as a supply base without intensive capital investment and development. Seward, however, has land and harbor space available. Exxon already controls 32 acres of land in Seward, including two acres on the waterfront. Shell and Arco depend on Seward for water to support drilling operations on the Northern Gulf.

However, Seward does not have adequate facilities for air support. The runway cannot accommodate the Hercules-type aircraft used by oil companies, nor commercial jets. The Seward airport also lacks an instrument landing system. Kodiak does have an instrument landing system which can handle both helicopters and cargo aircraft. Further, there is no practical weight limit on Kodiak's runways.

THUS IN 1978 KODIAK will probably experience its first taste of oil impact at the airport if its facilities are used to serve the first two exploratory wells. Commercial aircraft will bring some supplies and personnel from Seattle and Anchorage. Helicopters will fly from Kodiak to the exploratory rigs.

According to the Outer Continental Shelf Impact Study, an additional seven acres will have to be developed at the airport for

(Continued on Page 2)

Impact

(Continued from Page 1)

warehouse space, office space, aircraft maintenance facilities and apron area. Some additional personnel will be needed for expediting, aircraft maintenance, loading and unloading.

By late summer, 1978 the first discovery well should be completed and confirmed by a second well. Then the oil companies will begin deciding if the oil fields will be productive and where to locate permanent onshore marine service facilities.

By 1981, 10-12 exploratory wells will have been drilled and, if the suspected oil reserves are proven, the development phase will begin.

The site for onshore facilities will have been chosen and Kodiak Island will know if it will become an oil-impacted island. Hopefully, by the time the oil development phase begins, Kodiak Island will be prepared to grow rapidly in a graceful manner.

Tomorrow: Oil development and production; the maximum impact Kodiak can expect.

Kodiak supply system could be challenged

By CHRIS BLACKBURN
Daily Mirror Correspondent
Fourth of a series

Temporary consumer supply shortages resulting in inflated prices were a part of the Trans-Alaska Pipeline impact on the mainland. The supply system was unable to meet the increased demands of a growing population and increased commercial and industrial development as well as the pipeline's supply needs. The Kodiak shelf oil lease sales pose an even greater threat to Kodiak's ability to supply its residents.

The marine cargo system — Kodiak's lifeline — is already operating at maximum capacity, according to the Kodiak Island Borough Outer Continental Shelf Impact Study. In 1976 a total of 205,000 tons of cargo moved over the dock to and from Kodiak — approximately 21 tons for each man, woman and child on the island. The total cargo tonnage can be expected to increase as the population increases, and to have periods of even greater increase as the commercial and industrial segments of the island attempt to expand their facilities in response to the population growth.

Currently the city cargo dock, operated by the city of Kodiak, has 21,600 square feet of warehouse space and two piers over 300 feet in length. Sea-Land, under the provisions of its contract with the City of Kodiak, is allowed 104 berthings a year. Not only do the piers serve the cargo vessels, but they are used by the fishing fleet on a space-available basis. The boat harbor, also run by the City of Kodiak, is currently overcrowded.

TO MEET THE EXPECTED increased cargo demands the city cargo dock will have to be expanded, according to the impact statement. Were more storage and maneuvering space available, supplies could be delivered on larger vessels and the actual number of berthings would not necessarily have to increase.

Impact

Also, if the recommendation made in the impact study — that the cargo docks not be used for OCS related cargo — is followed, the pressure on the cargo system will be reduced.

The airport services will also come under pressure. The study estimates that an additional eight flights a week will be necessary to accommodate the increased demands for passenger travel, including oil and construction crew shifts. Also two additional cargo flights a week may be necessary.

THERE IS ADEQUATE LAND at the airport for the expected demands. Funds for airport master planning are available through the Federal Aviation Administration. The airport facilities are administered by the State of Alaska. Thus airport expansion will not be a part of the borough's planning efforts.

However, the people of Kodiak will be dependent on their own efforts and the efforts of their legislators to encourage the state government to plan for airport expansion to meet the anticipated demands.

The ferry Tustumena represents the only vehicular link between Kodiak and the mainland. The ferry carries a maximum of 200 people and 45 cars. It can also transport vans up to 40 feet in length.

AS POPULATION PRESSURES increase, the demands on the ferry system should also increase. Eventually year round service may be necessary, as well as more frequent service. Since the ferry system is administered by the State of Alaska Division of Marine Transportation, Kodiak's own planning efforts will not include the ferry system.

However, once again, the people of Kodiak can encourage the state to consider planning for increases in ferry service.

Additional cargo and people moving into Kodiak will mean proportionate increases in vehicular traffic on Kodiak's road system. Though the proportions of the increase and potential areas of congestion depend on the future housing patterns and siting of oil industry facilities.

The city, the borough and the state are all involved in the building and maintenance of different parts of the road system.

THE STUDY QUOTED the State Department of Highways as saying, the bridges along the Chiniak Highway can support large semi-tractor-trailer trucks. The road would have to be widened an additional 28 feet and straightened in some parts.

The city road system is designed for low-density traffic and may need considerable upgrading to meet anticipated demands. The impact study recommends that road standards by adopted; methods of separating commercial, industrial and normal traffic be examined; and a trail system for pedestrian traffic be considered.

Anchorage has had success with its bicycle trails program which has received ready bonding support. The bicycle trails are usually built in conjunction with new roads or the upgrading of existing roads.

MEETING THE TRANSPORTATION needs anticipated for the future involves the city and the borough and diverse state agencies. To consolidate planning efforts and utilize funding sources, the impact study recommends the borough and city create a transportation authority with its own charter.

"The authority should be comprehensive, with powers over the port, airports, the OCS transportation facilities, and should operate in close coordination with the Public Works Department of the City of Kodiak."

Whatever method is used to meet the anticipated demands on Kodiak's transportation system, close cooperation between the borough, the city and the state will be essential.

Tommorow: Social strains.

Young Raps Impact Aid

By BETTY MILLS
Times Washington Bureau

WASHINGTON — A bill to compensate coastal states for the adverse impact of offshore oil drilling would not provide adequate funds, Rep. Don Young, R-Alaska, says.

The House will consider legislation Friday which would provide $50 million in automatic state grants to meet the onshore impact of development on the outer continental shelf in the next two fiscal years. It also would authorize $125 million in discretionary funds administered by the secretary of commerce in the next five years.

In minority views submitted with the report on the bill, Young said the funding "is not sufficient to cover the costs that the local and state government will have to bear as a result of the federal development.

"This will leave the states in serious economic straits, especially in the more heavily impacted areas, from overcrowded schools and services, insufficient sewage systems, poor roads and higher state and local taxes," the congressman said.

Young said the per capita cost of offshore development from increased population, based on growth figures from the Alaska pipeline, would be $1,630 to the state govern.ment and $351 to the local government. The projected population growth directly attributable to oil development is 94,000 by 1985, according to estimates of the Office of Management and Budget. The total cost to state and local governments from offshore oil development would be $186,214,000 per year, Young said.

"While the revenue received from the Alaska pipeline was sufficient to meet much of the cost of impact funding, this is presently impossible to meet since no revenue is coming into the state as a result of OCS development," Young said.

The congressman said the authorization to coastal states must be increased.

"The state deserves the money for investment for other worthy projects, instead of underwriting the cost of a federal project," Young said. "The OCS is a federal project and should be a federal responsibility."

Nome should prepare for sales

NOME (AP)—The president of the Northwest Alaska Chamber of Commerce says it is time this Bering Sea community began preparing for upcoming oil and gas lease sales on the outer continental shelf.

Jack Carpenter announced formation of the chamber's OCS Planning Committee at a chamber meeting in Nome Friday.

He said OCS leasing will begin in the Nome area in about two years and its impact "should be dynamic."

Carpenter told the chamber that he spoke in Kotzebue last week with Patrick Dobey, manager of Alaska's Petroleum Department and head of the state's OCS leasing program.

He said Dobey quoted him some figures which indicate how significant that impact will be. For example, he said, "a dredge out there will cost $1,000 a minute, and they will have five such dredges going."

Carpenter said there is a possibility local businesses will be bought out by persons involved in oil exploration and development.

"These are the kinds of things we have to start looking at—the impact of these funds being spent in Nome," he said, adding he believes Nome can learn from the experiences of other communities.

Guest speaker at the meeting was Frank Murkowski, state chamber president and president of Alaska National Bank, who said the impact of the Alaska Native Claims Settlement Act on the state's business community has been significant. He noted most Alaska Natives are staying here and using the settlement funds to develop the state.

And he said while some Natives have made mistakes in their dealings with the business community, "by the same token, they are developing, and every time you make a mistake you look at your own life and you learn by it. And how many opportunities are you afforded because of that knowledge?"

Kenai mayor testifies on Coastal Act

ANCHORAGE (AP)—The mayor of the Kenai Peninsula Borough has testified in Washington before a U.S. House subcommittee looking into regulations proposed for implementation of 1976 amendments to the Coastal Zone Management Act.

The Anchorage Times Washington Bureau reports Mayor Don Gilman told the House oceanography subcommittee Friday that Alaska needs money immediately to plan for offshore oil exploration and development.

Grants are available for such planning under the amendments passed by Congress this year. The office of coastal zone management of the U.S. Department of Commerce has prepared draft regulations for implementation.

Gilman told the subcommittee the Borough is a microcosm of the issues and problems the nation faces in preparing for impact of drilling on the outer continental shelf (OCS).

He said the borough's population is expected to increase 50 per cent in the next seven years during preparation for lease sales in the northern Gulf of Alaska, lower Cook Inlet and the western gulf.

Gilman told the subcommittee, "Our present community facilities and services are either at or beyond their planned capacity."

He said increased population, whether temporary or permanent, cannot occur without severe impact unless funds are accessible for planning and providing needed services.

Some subcommittee members were critical of the draft regulations. Rep. Pierre Dupont, RDel., told assistant administrator for coastal zone management Robert Knecht he had "misconstrued the intent of Congress."

"I don't know how you think you have the authority to add things in your regulations that Congress did not provide," said Dupont, who will leave the House next month to become governor of Delaware. "Congress has once again been frustrated by the fourth branch of government—the bureaucracy."

Kenai mayor testifies on Coastal Act

ANCHORAGE (AP)—The mayor of the Kenai Peninsula Borough has testified in Washington before a U.S. House subcommittee looking into regulations proposed for implementation of 1976 amendments to the Coastal Zone Managemet Act.

The Anchorage Times Washington Bureau reports Mayor Don Gilman told the House oceanography subcommittee Friday that Alaska needs money immediately to plan for offshore oil exploration and development.

Grants are available for such planning under the amendments passed by Congress this year. The office of coastal zone management of the U.S. Department of Commerce has prepared draft regulations for implementation.

Gilman told the subcommittee the Borough is a microcosm of the issues and problems the nation faces in preparing for impact of drilling on the outer continental shelf (OCS).

He said the borough's population is expected to increase 50 per cent in the next seven years during preparation for lease sales in the northern Gulf of Alaska, lower Cook Inlet and the western gulf.

Gilman told the subcommittee, "Our present community facilities and services are either at or beyond their planned capacity."

He said increased population, whether temporary or permanent, cannot occur without severe impact unless funds are accessible for planning and providing needed services.

Some subcommittee members were critical of the draft regulations. Rep. Pierre Dupont, RDel., told assistant administrator for coastal zone management Robert Knecht he had "misconstrued the intent of Congress."

"I don't know how you think you have the authority to add things in your regulations that Congress did not provide," said Dupont, who will leave the House next month to become governor of Delaware. "Congress has once again been frustrated by the fourth branch of government—the bureaucracy."

this company expects added industry spending of $25-30 million for detail work.

The company says the most heavily mapped regions for reconnaissance are the mid-Atlantic, North Atlantic, off southern California, and in the eastern Gulf of Alaska and Lower Cook Inlet. More reconnaissance remains to be done in the South Atlantic, off northern California, in the Western Gulf of Alaska, Bering Sea, and Beaufort Sea.

Another company says the industry's spending to date for geophysical work amounts to about $35 million along the East Coast and $45 million off Alaska, with more multimillion-dollar programs required.

The company estimates about 70,000 line-miles of seismic data costing $25 million has been gathered off the East Coast since 1968 in programs involving group shoots and nonexclusive work by several contractors. This doesn't include spending by individual companies. Gravity, magnetic, and refraction-type surveys to date could add another $10 million to the total geophysical costs.

And future investments in frontier geophysical operations could pile still another $15-20 million on total costs, the company says.

It places industry's total outlay at $45 million for 150,000 miles of marine seismic off Alaska, with another 100,000 miles required at a cost of $50 million.

Several operators report difficulty in shooting off Alaska, particularly in the Gulf of Alaska and the Beaufort Sea.

Seismic-acquisition programs in the stormy gulf are subject to frequent and lengthy interruptions due to heavy seas and high winds. What's more, seismic data generally isn't of highest quality, because a thick layer of glacial till and large boulders obscures the Tertiary and Cretaceous objectives.

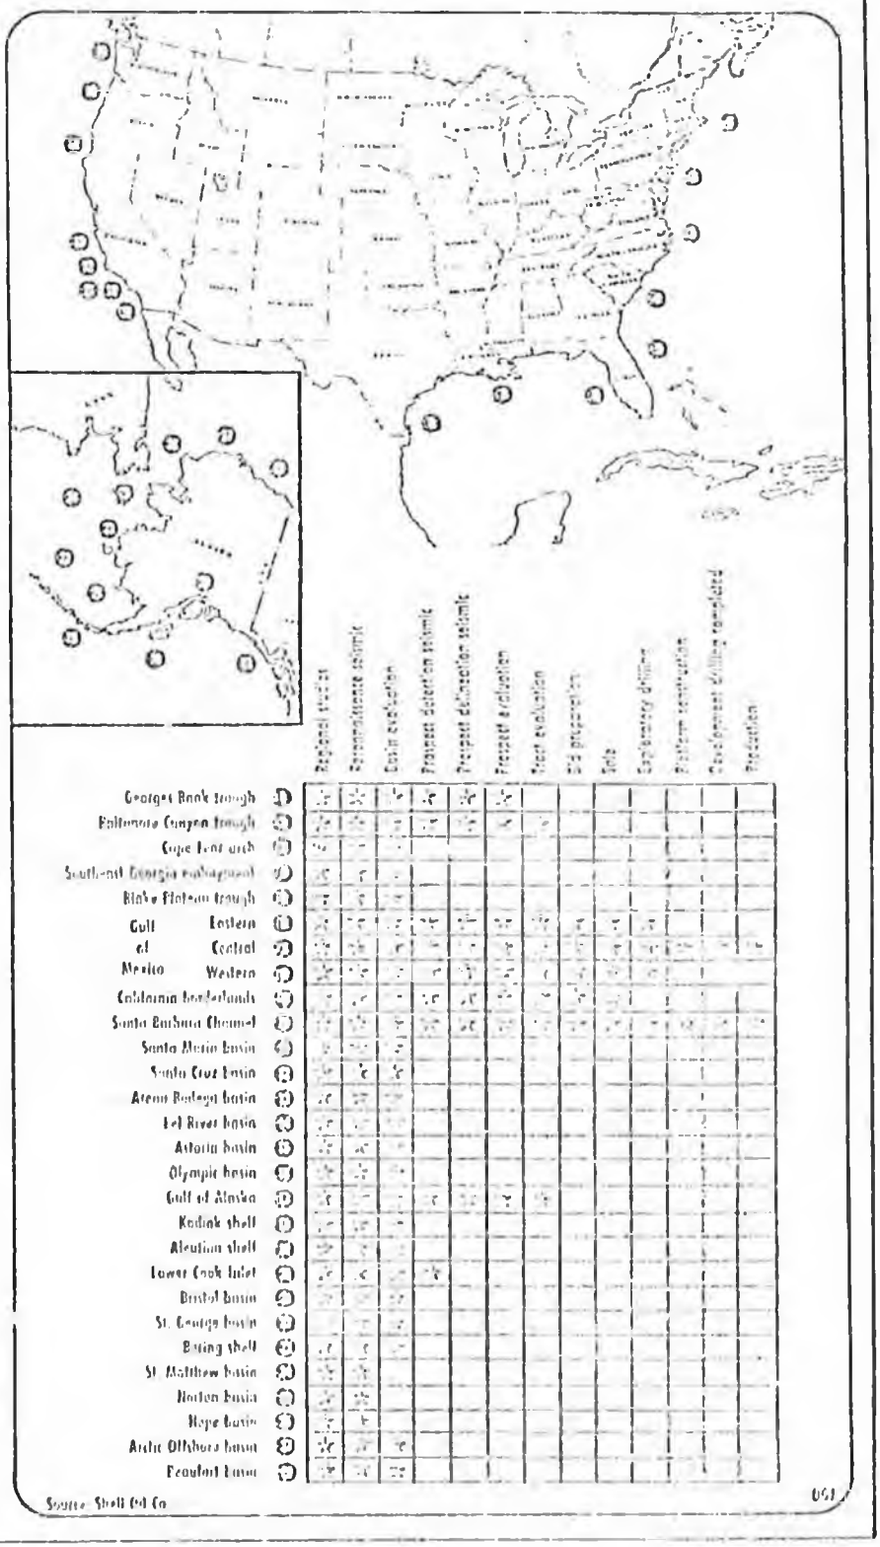
In the Beaufort Sea, shooting depends on pack ice moving out in the summer. And the ice hasn't cleared enough to permit seismic acquisition for a number of years. As a result, the federal portion of the Beaufort Sea shelf isn't well covered by seismic lines.

A major company says its offshore-frontier program has run into "no unusual shooting problems" except those related to Arctic ice, permit restrictions, currents which make it hard to keep cables aligned, and logistical problems in certain areas.

Action by areas. Structures involved in the first proposed sale of Gulf of Alaska tracts and in the Baltimore Canyon off the East Coast have been well delineated by numerous seismic surveys in the past several years, says Exxon's Jones. In fact, Jones says, these proposed-sale tracts are well explored up to the point of drilling.

He sees little if any additional seismic work being done in the Gulf of Alaska sale area and the Baltimore Canyon prior to sales. However, additional acquisition of in-fill data is likely after sales.

What's happening in Offshore U.S. basins



MICHAEL MONCHINO
New Kodiak manager

capacity of the hotel, located on South Benson. It will reportedly be a split-level, three story structure, and may include banquet facilities. Tentative plans call for construction to begin this spring.

Monchino, 25, has served as manager of the Sheffield Top of the World Hotel in Barrow. He

Kodiak Sen. Kay Poland has announced that the contract for a 1.9-mile Mill Bay Road extension has been signed with an Anchorage contractor.

Stephan and Sons, Inc.-Mat-Su, Inc., a joint venture, was awarded the contract at their bid of $1,662,115.95. The engineer's estimate for the project, which extends from the intersection of Rezanof and later connects with Mill Bay, was more than $300,000 under the contract figure.

Work is expected to be completed on the project, which does not include paving, by the end of the year.

Impact:

Problem of becoming a center of development while maintaining traditional lifestyles . . .

By CHRIS BLACKBURN
Daily Mirror Correspondent
Second of a Series

If the exploratory wells drilled in 1978 confirm there are indeed extensive deposits of oil on the Kodiak shelf, the oil industry will begin plans for oil development and production. Unless the oil fields lie in the extreme northern end of the lease sale area Kodiak Island can expect to become a center of oil development activity. Construction workers, production personnel, planes and tankers and materials for support facilities will float in, ferry in and fly onto the island.

If the people of Kodiak Island have discussed and accepted a new comprehensive plan and supporting zoning ordinances, the oil support facilities will be constructed in the areas the citizens of Kodiak have predetermined to be most desirable — or least undesirable.

If the groundwork is not completed by 1979, the oil facilities will be constructed wherever the oil industry can build most efficiently and with least expense.

THE KODIAK ISLAND OUTER CONTINENTAL SHELF Impact Study recommends that "To the extent possible, the Kodiak Island Borough should discourage the location of OCS related industrial facilities within the Kodiak metropolitan area or in any of the other villages on Kodiak Island. The location of such facilities within these areas would be extremely disruptive to the traditional lifestyles, community structures, and social and economic characteristics.... The Borough should insist that the oil industry be self-sufficient and willing to pay its own way in terms of the impacts resulting from the facilities directly related to OCS development..."

The Kodiak Island Outer Continental Shelf Impact Study estimates that the Western Gulf oil lease sale lands could produce as much as 164 million barrels of oil a year. All estimates of oil facilities and personnel requirements are based on this figure.

In 1979, as the first exploratory wells show evidence of productive oil fields, the oil industry will begin looking for a site for permanent onshore facilities. By 1984, at the projected peak of the development phase, a maximum of ten berths for oil company vessels may be needed — plus land for silos, tank storage and warehousing, open storage and office facilities. In all, about 80 acres of land will be needed in conjunction with harbor facilities.

THE OIL INDUSTRY will probably prefer a site on or near the existing road system. Chiniak may best suit the needs of the oil industry, provided the people of Kodiak have decided to prohibit industrial facilities within or near the metropolitan areas. The north side of Ugak Bay would also be suitable. Possible, but less likely, sites are Kalsin Bay and Middle Bay.

Karl Armstrong, executive vice president of the Koniag Regional Native Corporation, which holds title to the former Chiniak tracking station, said that the oil companies have shown interest in using Chiniak as the site of onshore facilities, but that discussions ceased when the Kodiak lease sale was postponed.

Armstrong a former fisherman, also mentioned that harbor facilities at Chiniak would offer sanctuary to fishing vessels encountering rough seas near Cape Chiniak, an area notoriously hazardous for fishing vessels.

ARMSTRONG SAID that while Koniag is not averse to discussing the prospect of onshore oil facilities at Chiniak, only further study will tell which site would be most desirable.

Whichever site is selected, harbor development must be preceded by public hearings. The State of Alaska owns all coastal waters from the shoreline to three miles from shore and would have to grant a permit for development. Before any permits could be granted public hearings would have to be held.

Likewise, any attempt to locate onshore support facilities on federal lands would require public hearings.

PUBLIC HEARINGS can be used by the people of Kodiak, to direct the eventual siting of oil facilities. A strong and unified show of support, or opposition, to a particular location usually has a decided effect on final decisions.

Armstrong also pointed out the desirability of the people of Kodiak insisting — with the help of the Borough government, state legislators and other groups — that all public hearings related to development on Kodiak Island be held in Kodiak rather than Anchorage or Juneau.

As the development phase progresses more airport land will be needed — for helicopters, for increased commercial and cargo flights and for warehouses, and maintenance and service areas: approximately 40 additional acres.

DURING THE DEVELOPMENT phase over 1,000 people would be employed in development and construction. The year 1985 is predicted to be a peak employment year with 1,565 people involved in oil-related activities.

By 1987 the oil industry could be entering the production phase on the Kodiak lease lands. As early as 1979 the oil industry will begin selecting the site of a crude oil storage area and marine terminal. These facilities would require about 150 acres of flat, stable land — more if the land is hilly or unstable. The size of the crude oil storage facilities will determine the number of tanker trips required each year to keep the production operations underway. As few as eight tanker trips could be needed, or as many as 26.

By 1987 the oil related population should begin to stablize. The impact study estimates that about 2,651 people will be employed in oil-related occupations and Kodiak Island will have a total population of 14,252 people.

Tomorrow: Housing — how can Kodiak meet the demands?

Comics 7
Local News 8

Kodiak housing need could hit peak in year 1984

By CHRIS BLACKBURN
Daily Mirror Correspondent
Third of a Series

Assuming that large oil reserves will be proven on the Kodiak lease sale lands, the island's population could grow by 8,600 people in the next 10 years, according to the Kodiak Island Borough Outer Continental Shelf Impact Study. Those 8,600 people would need nearly 3,000 new homes.

The growth and resultant need for dwellings is expected to vary each year. The Impact Study projects that in 1979 the island's population would increase by 500, requiring 170 new homes. But during 1984, the peak of oil development activity, the population increase is projected to be 1,300 people needing 440 additional homes.

As evidenced by Kodiak's continuing critical housing shortage, construction has not been able to keep pace with the comparatively modest demands of the last decade. During 1974 only 26 new single-family homes were built. In 1975 another 26 single-family homes were built, but 107 additional dwelling units were built in multi-family dwellings.

IF KODIAK ISLAND does not find a way to cope with the projected future housing needs, the island could conceivable become the site of the same headline-making conditions that occurred on the mainland during the peak of the trans-Alaska pipeline construction — families squatting in campers in parks and along the backroads, several families crowded together in one dwelling and long-term residents forced out by soaring rents.

Failing to provide for growth did not stop population increases.

Fairbanks is often cited as a community that was caught totally unprepared for rapid growth. Reacting to the population pressures and ended up overbuilding.

Kodiak has a chance to plan and consider both the kinds of dwelling units that would most likely meet the future needs, and the methods the people feel will best stimulate construction without overbuilding.

Impact

The new comprehensive plan should clearly reflect the feelings of the people of Kodiak. Supporting zoning ordinances should insure that growth takes place as was planned.

TRADITIONALLY KODIAK has been a city of single-family residences. Under current zoning and subdivision ordinances a single family home requires 7,200 square feet of land, provided the lot is served by sewer and water facilities. Otherwise each single family home requires 25,000 to 40,000 square feet of land.

Thus, if current patterns continue and there were sufficient buildable land, between 635.7 acres and 3,500 acres would be taken by the needed 3,000 units — depending on the availability of water and sewer.

Conversely, were Kodiak to completely reverse current trends and house the growing population in apartments, townhouses and condominums — high density housing using only 2,774.5 square feet per dwelling — only 175.8 acres of land would be needed for 3,000 additional units.

ACCORDING TO the impact study

"It is impossible to determine at this time how much land along the existing roads and sewer and water lines are available for development...It can be assumed, however, that as development activity increases, the majority of new structures would be placed on existing utilities and roads. Therefore, within a few short years after the initial impacts of OCS development...the existing road and utility system will be completely utilized..."

According to Stuart Denslow, Kodiak Island Borough manager, extension of public utilities requires a capital improvements program, which Kodiak does not currently have. The Impact Study recommends, "In the capital improvements program and the comprehensive plan, the community should indicate exact areas where public utilities and facilities are to be extended. They should also specify the timing of the provision of those services...(This) will reduce escalation in land costs and result in improved physical planning."

WITHOUT PUBLIC UTILITIES, high-density housing is not usually feasible. All of Kodiak's current multi-unit dwellings are within the municipal service area, and the townhouse developments planned for Russell Estates' Divisions 2 and 3 will be on municipal utility lines.

Extension of public utilities tends to stimulate new construction. According to Denslow, two years are required to plan and obtain the state matching funds to build a sewer line. Thus the ability of Kodiak to meet the housing needs of 1980 depends partly on decisions made — or not made — in 1977.

The density of housing will determine the amount of new sewer and water lines that will be needed and the rate at which new units can be built. The impact study estimates that for the projected 2,761 new units needed by 1988, 24.7 miles of sewer lines would be required if the current low-density trend continues. However, the same 2,761 units could require only 6.7 miles of sewer and water lines if built in high-density configurations.

THE IMPACT STUDY also suggests that Kodiak develop a mobile home park ordinance and plan to use trailer court areas to absorb some of the population impact. Housing for employes of the onshore facilities could be developed near those facilities rather than in the Kodiak Metropolitan area. Additionally, the borough could consider developing some of its land, which lies north of the City of Kodiak. The study suggests a joint venture agreement with the oil industry.

Alternative methods of meeting Kodiak's housing needs can be discussed at the Borough's planning and zoning commission meetings every third Wednesday of the month. Further citizen input will come from a planned borough housing questionnaire, and public hearings preceding adoption of the new comprehensive plan.

The plan should outline which alternatives and which compromises will best provide housing for Kodiak's growing population.

Monday: Transportation — Roads, planes, ferries and barges.

community to look like in the future. The effort will be in- Alaska oil lease sales, Denslov said.

Report reasons problems are not insoluble

By CHRIS BLACKBURN
Daily Mirror Correspondent

The Kodiak Island Borough Outer Continental Shelf Impact Study — the result of a half-year's research by an Anchorage consulting firm — concludes that "the assets of the Kodiak Island Borough and the communities are uniquely valuable and should be protected and enhanced. The problems faced by the communities are not insoluble...They are the type that can be dealt with through community awareness, local action and proper planning and implementation.

"...The result of the OCS impact will depend upon the level of oil industry activity which will occur in Kodiak and the methods that are used in planning for and coping with the impact."

According to the impact study, which was just completed, Kodiak Island Borough's population will continue to grow. If current trends continue, the population will double in 20 years without OCS activity. OCS activity could double the population in 10 years.

As the population increases the existing problems of crime, housing, land availability, social services and recreational facilities will become more acute.

How acute depends on the decisions made during 1977 and on the exact location of oil reserves. The impact statement predicts that the initial oil exploratory phase will probably use facilities in Seward, giving Kodiak precious time to plan.

If oil reserves are developed near Kodiak Island, onshore oil facilities will require 300 acres of land somewhere in the Kodiak Island Borough. The OCS-related Kodiak Island population increase could total 8,000 people by 1988.

According to the impact study, the additional 8,000 people would require 2,700 more housing units. If Kodiak continues

(Continued on Page 2)

Report

(Continued from Page 1)

its current low-density development pattern — with an estimated 4.35 housing units per acre — an additional 635.7 acres of residential land, 24.7 miles of road and water and sewer lines will be needed.

Were "high-density development" — with an estimated 15.7 units per acre — considered, only 175.8 additional acres of residential land would be required and only 6.7 more miles of road, sewer and water lines.

There will be corresponding increases in services, government and costs. However, the impact study lists many federal and state funding sources which could be used.

The future of Kodiak depends on where the oil reserves are and how thoroughly the community prepares.

A copy of the Kodiak Island Borough Outer Continental Shelf Impact Study has been placed in the A. Holmes Johnson Memorial Library. Additional copies will be available in about six weeks.

A time to prepare

Editor's Note — Kodiak recently received the first copies of the finished Kodiak Island Borough Outer Continental Shelf Impact Study, which not only qualified much of what may be expected if oil actually is discovered off of Kodiak, but also quantifies some interesting information about the island as it is now. Mirror correspondent Chris Blackburn today begins a series examining the impact study — and the impact of the study on the community.

By CHRIS BLACKBURN
Daily Mirror Correspondent

Impact from the Western Gulf oil lease sale could bypass Kodiak Island, or it could bring thousands of people and all the support facilities oil development requires.

The first clue to Kodiak Island's potential involvement with oil will come in November 1977 — if the oil lease sale occurs as scheduled. If the oil industry leases land in the southern half of the lease sale area, the probability of Kodiak Island becoming a desirable service base site is high.

The second clue will come as the exploratory phase progresses and the size and location of the oil fields are delineated. Once again, the closer to Kodiak Island the oil fields lie, the more likely it is that Kodiak Island will become impacted by oil development.

THOUGH ONLY ONE OUT OF every three potential oil fields contain enough oil to warrant development, it is felt the people of Kodiak must plan now as though oil discovery were a certainty or face the prospect of an unmanageable and undirected impact that disastrously alters the quality of life.

The experience of Fairbanks in 1975 — soaring rents, overcrowded facilities and unrealistic property values which is leaving an aftermath of defaults and arson — can be avoided on Kodiak Island.

The Kodiak Island Borough Outer Continental Shelf Impact Study, commissioned by the Kodiak Island Borough, outlines what can be expected and alternative methods of absorbing oil-related impact. The next step is for the people of Kodiak Island to develop a plan ready for implementation if developments in the oil industry indicate that Kodiak will become part of the saga of oil and Alaska.

AFTER THE NOVEMBER, 1977 oil lease sales, according to the Outer Continental Shelf Impact Study, the oil companies can be expected to begin the exploratory phase of oil development in the Western Gulf during the spring of 1978. In the past the oil industry has taken a "minimum investment during exploration" approach and utilized existing facilities as much as possible. The exploratory phase of development in Cook Inlet during the late 1950's was supplied from Anchorage. Seward, Cordova and Yakutat are believed to be being considered as supply bases for exploration in the Northern Gulf.

The Western Gulf could be supplied either from Kodiak or Seward. Kodiak has neither the land nor the port facilities to act as a supply base without intensive capital investment and development. Seward, however, has land and harbor space available. Exxon already controls 32 acres of land in Seward, including two acres on the waterfront. Shell and Arco depend on Seward for water to support drilling operations on the Northern Gulf.

However, Seward does not have adequate facilities for air support. The runway cannot accommodate the Hercules-type aircraft used by oil companies, nor commercial jets. The Seward airport also lacks an instrument landing system. Kodiak does have an instrument landing system which can handle both helicopters and cargo aircraft. Further, there is no practical weight limit on Kodiak's runways.

THUS IN 1978 KODIAK will probably experience its first taste of oil impact at the airport if its facilities are used to serve the first two exploratory wells. Commercial aircraft will bring some supplies and personnel from Seattle and Anchorage. Helicopters will fly from Kodiak to the exploratory rigs.

According to the Outer Continental Shelf Impact Study, an additional seven acres will have to be developed at the airport for

(Continued on Page 2)

Impact

(Continued from Page 1)

warehouse space, office space, aircraft maintenance facilities and apron area. Some additional personnel will be needed for expediting, aircraft maintenance, loading and unloading.

By late summer, 1978 the first discovery well should be completed and confirmed by a second well. Then the oil companies will begin deciding if the oil fields will be productive and where to locate permanent onshore marine service facilities.

By 1981, 10-12 exploratory wells will have been drilled and, if the suspected oil reserves are proven, the development phase will begin.

The site for onshore facilities will have been chosen and Kodiak Island will know if it will become an oil-impacted island. Hopefully, by the time the oil development phase begins, Kodiak Island will be prepared to grow rapidly in a graceful manner.

Tomorrow: Oil development and production; the maximum impact Kodiak can expect.

Kodiak supply system could be challenged

By CHRIS BLACKBURN
Daily Mirror Correspondent
Fourth of a series

Temporary consumer supply shortages resulting in inflated prices were a part of the Trans-Alaska Pipeline impact on the mainland. The supply system was unable to meet the increased demands of a growing population and increased commercial and industrial development as well as the pipeline's supply needs. The Kodiak shelf oil lease sales pose an even greater threat to Kodiak's ability to supply its residents.

The marine cargo system — Kodiak's lifeline — is already operating at maximum capacity, according to the Kodiak Island Borough Outer Continental Shelf Impact Study. In 1976 a total of 205,000 tons of cargo moved over the dock to and from Kodiak — approximately 21 tons for each man, woman and child on the island. The total cargo tonnage can be expected to increase as the population increases, and to have periods of even greater increase as the commercial and industrial segments of the island attempt to expand their facilities in response to the population growth.

Currently the city cargo dock, operated by the city of Kodiak, has 21,600 square feet of warehouse space and two piers over 300 feet in length. Sea-Land, under the provisions of its contract with the City of Kodiak, is allowed 104 berthings a year. Not only do the piers serve the cargo vessels, but they are used by the fishing fleet on a space-available basis. The boat harbor, also run by the City of Kodiak, is currently overcrowded.

TO MEET THE EXPECTED increased cargo demands the city cargo dock will have to be expanded, according to the impact statement. Were more storage and maneuvering space available, supplies could be delivered on larger vessels and the actual number of berthings would not necessarily have to increase.

Impact

Also, if the recommendation made in the impact study — that the cargo docks not be used for OCS related cargo — is followed, the pressure on the cargo system will be reduced.

The airport services will also come under pressure. The study estimates that an additional eight flights a week will be necessary to accommodate the increased demands for passenger travel, including oil and construction crew shifts. Also two additional cargo flights a week may be necessary.

THERE IS ADEQUATE LAND at the airport for the expected demands. Funds for airport master planning are available through the Federal Aviation Administration. The airport facilities are administered by the State of Alaska. Thus airport expansion will not be a part of the borough's planning efforts.

However, the people of Kodiak will be dependent on their own efforts and the efforts of their legislators to encourage the state government to plan for airport expansion to meet the anticipated demands.

The ferry Tustumena represents the only vehicular link between Kodiak and the mainland. The ferry carries a maximum of 200 people and 45 cars. It can also transport vans up to 40 feet in length.

AS POPULATION PRESSURES increase, the demands on the ferry system should also increase. Eventually year round service may be necessary, as well as more frequent service. Since the ferry system is administered by the State of Alaska Division of Marine Transportation, Kodiak's own planning efforts will not include the ferry system.

However, once again, the people of Kodiak can encourage the state to consider planning for increases in ferry service.

Additional cargo and people moving into Kodiak will mean proportionate increases in vehicular traffic on Kodiak's road system. Though the proportions of the increase and potential areas of congestion depend on the future housing patterns and siting of oil industry facilities.

The city, the borough and the state are all involved in the building and maintenance of different parts of the road system.

THE STUDY QUOTED the State Department of Highways as saying, the bridges along the Chiniak Highway can support large semi-tractor-trailer trucks. The road would have to be widened an additional 28 feet and straightened in some parts.

The city road system is designed for low-density traffic and may need considerable upgrading to meet anticipated demands. The impact study recommends that road standards by adopted; methods of separating commercial, industrial and normal traffic be examined; and a trail system for pedestrian traffic be considered.

Anchorage has had success with its bicycle trails program which has received ready bonding support. The bicycle trails are usually built in conjunction with new roads or the upgrading of existing roads.

MEETING THE TRANSPORTATION needs anticipated for the future involves the city and the borough and diverse state agencies. To consolidate planning efforts and utilize funding sources, the impact study recommends the borough and city create a transportation authority with its own charter.

"The authority should be comprehensive, with powers over the port, airports, the OCS transportation facilities, and should operate in close coordination with the Public Works Department of the City of Kodiak."

Whatever method is used to meet the anticipated demands on Kodiak's transportation system, close cooperation between the borough, the city and the state will be essential.

Tomorrow: Social strains.

Young Raps Impact Aid

By BETTY MILLS
Times Washington Bureau

WASHINGTON — A bill to compensate coastal states for the adverse impact of offshore oil drilling would not provide adequate funds, Rep. Don Young, R-Alaska, says.

The House will consider legislation Friday which would provide $50 million in automatic state grants to meet the onshore impact of development on the outer continental shelf in the next two fiscal years. It also would authorize $125 million in discretionary funds administered by the secretary of commerce in the next five years.

In minority views submitted with the report on the bill, Young said the funding "is not sufficient to cover the costs that the local and state government will have to bear as a result of the federal development.

"This will leave the states in serious economic straits, especially in the more heavily impacted areas, from overcrowded schools and services, insufficient sewage systems, poor roads and higher state and local taxes," the congressman said.

Young said the per capita cost of offshore development from increased population, based on growth figures from the Alaska pipeline, would be $1,630 to the state government and $351 to the local government. The projected population growth directly attributable to oil development is 94,000 by 1985, according to estimates of the Office of Management and Budget. The total cost to state and local governments from offshore oil development would be $185,214,000 per year, Young said.

"While the revenue received from the Alaska pipeline was sufficient to meet much of the cost of impact funding, this is presently impossible to meet since no revenue is coming into the state as a result of OCS development," Young said.

The congressman said the authorization to coastal states must be increased.

"The state deserves the money for investment for other worthy projects, instead of underwriting the cost of a federal project," Young said. "The OCS is a federal project and should be a federal responsibility."

Next Three Years Hold Plans For Other Areas

Today's lease sale of tracts in the northeastern Gulf of Alaska is the first of nine federal outer continental shelf oil and gas lease sales planned off Alaska's shores during the next three years.

The accelerated leasing program is aimed at making the United States more energy self-sufficient, says Edward Hoffman, manager of the Alaska Outer Continental Shelf Office.

The tentative schedule calls for two more sales this year. Tracts in Lower Cook Inlet are to be leased this fall, possibly by October, and tracts in the western Gulf of Alaska, in the Kodiak area, are scheduled to be leased in December.

Other sale areas on the federal schedule include Bering Sea (St. George area), March 1977; Beauford Sea, October 1977; Outer Bristol Basin, December 1977; Bering Sea (Norton Basin), August 1978; Gulf of Alaska, Aleutian Shelf October 1978, and Chukchi Sea (Hope Basin), December 1978.

Offshore Alaska has an estimated petroleum potential of 69 billion barrels of oil and 349 trillion cubic feet of gas, according to the Alaska Outer Continental Shelf Office.

An estimated 40 per cent of the nation's "frontier areas" which are untouched by the drill lie off Alaska's shores. Another 40 per cent lie onshore, said Dr. V. E. McKelvey, director of the U.S. Geological Survey. But both are subject "to some of the worst operating conditions known on our planet," he said.

Offshore, drifting sea ice, 50- to 75-knot winds, 75 foot waves, protracted periods of darkness and occasional major earthquakes all present potential hazards, McKelvey pointed out in a Dallas speech in September.

"Onshore, temperatures reach well below zero and logistic problems are staggering. In addition, the entire area is 1,000 to 2,000 miles away from a major energy market. One does not have to look far to understand why this area has been left alone until now."

Anch. Times Apr 13, 1976

B/1976

Jones believes companies will wait until they obtain leases before investing in more data. The first wells in each area, he predicts, will have considerable impact on subsequent seismic activity.

Esso Seismic Inc.'s Kirsten Bravo shot about 1,000 miles of seismic line last September in the Baltimore Canyon and Georges Bank for Exxon.

The Georges Bank area isn't far behind the Baltimore Canyon in the amount of seismic data available to companies, Jones tells the Journal. There may be a last-minute flurry of proprietary shooting in Georges Bank in the coming months if it appears the sale will come off in August as proposed.

Jones predicts considerable seismic activity in the South Atlantic next spring and summer. Not much seismic data have been gathered on the Southeast Georgia Embayment or the broad, deepwater Blake Plateau.

Jones expects a rapid buildup of group, speculative, and proprietary shooting within 600 ft of water on the Southeast Georgia Embayment. A gradual increase is predicted for the Blake Plateau, which isn't scheduled for a sale until mid-1978.

Because basins off northern California, Washington, and Oregon are believed by industry to be very poor petroleum prospects, Jones doubts there will be any rush to acquire new data there.

Very little seismic data are available in Offshore Alaska basins, other than in the Gulf of Alaska.

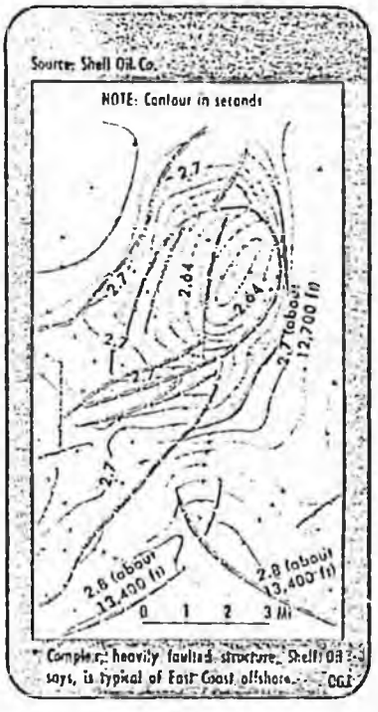
Industry is in the midst of an active exploratory effort in the Lower Cook Inlet, although acquisition programs there currently are shut down for the winter. Jones expects a spurt of shooting and possibly core or deep-stratigraphic drilling this summer.

The Kodiak shelf also should be an active area in the coming months, if it appears the proposed December sale will materialize. A very coarse grid of seismic data is available on Kodiak.

Although exploration on this shelf is still in an early stage, Jones believes industry can generate and interpret enough data in the coming months to be fully prepared for a December sale.

Seismic data in the Bering Sea consist of a very coarse grid over only a portion of the area, in the Bristol basin. Most of the current data was acquired beginning in the summer of 1973. Activity speeded up in the summer of 1974, and Jones predicts considerable shooting and possibly core drilling will take place in the next few summers.

Atlantic prospect*



Complex, heavily faulted structure, Shell Oil says, is typical of East Coast offshore.

USGS reconnaissance surveys indicate six or seven distinct basins in the Bering Sea, Jones reports.

The Exxon explorationist also foresees increased seismic activity in the unexplored Aleutian shelf, Norton basin, and Hope basin. The latter, he says, has been the scene of proprietary shooting by one or two companies.

Stratigraphic tests. The Sedco J semisubmersible is drilling the first of two Offshore East Coast stratigraphic tests (see cover photo) for a 31-company group led by Ocean Production Co. And more tests are planned in other regions as part of industry's program to collect the first subsurface information in offshore frontiers.

Spudded last Dec. 14, the initial East Coast test is projected to 16,000 ft. Site for the B-2 test is 73.6 miles off the New Jersey coast in the Baltimore Canyon (see map, OGJ, Oct. 20, 1975, p. 39).

The Ocean Production group also will use Sedco J to drill its second 16,000-ft test, designated G-1, more than 100 miles off the Massachusetts coast in the Georges Bank area.

Combined cost of the two operations is a little less than $18 million to determine porosity and permeability in Jurassic and younger sediments.

Among future work, Exploration Services Co. Inc., Ventura, Calif., proposes to drill a 12,000-ft stratigraphic test in Lower Cook Inlet beginning in March. Estimated cost is $5.5 million at a site in 19-14s-22w.

Exploration Services also is trying to generate 3,000-5,000-ft tests on the Kodiak shelf, Exxon's Jones reports.

West Coast sources say a second attempt may be made this summer to drill a stratigraphic test in the Gulf of Alaska, where mechanical problems halted a similar test last October. Last year's hole reached the 5,100-ft level — far short of its 16,500-ft goal — at a reported cost of $12 million.

Earlier deep stratigraphic drilling included two holes on the Outer Continental Shelf off South Texas. Drilled by two 32-company groups, the tests revealed poor characteristics in potential reservoirs. This poor showing was reflected in low bonuses offered in Feb. 4 and May 28, 1975, sales of federal leases.

Discouraging results from another stratigraphic test, this one drilled off southern California, drew part of the blame for the generally low level of bonuses offered at last December's federal lease sale off California (OGJ, Dec. 22, 1975, p. 15).

On-structure drilling has yet to take place in the frontiers. And only this can determine if known structures hold oil and gas.

Gulf's Carter believes results of on-structure drilling in the Gulf of Alaska will have a strong influence on pre-drilling evaluation of the Kodiak shelf, Bristol basin, and Bering shelf. Likewise, Baltimore Canyon drilling will determine to a great degree how much leasing and exploration Georges Bank, Southeast Georgia Embayment, and Blake Plateau will attract.

Drilling problems. Several companies surveyed by the Journal declare the Gulf of Alaska presents some of the frontier regions' thorniest problems in exploration, drilling, and production. Lesser problems are foreseen in most other areas of the offshore frontier.

"To be economic, a structure in the Gulf of Alaska will have to contain several hundred million barrels of reserves," Gulf's Carter says. He doesn't see gas as a viable exploration target because of enormous development costs.

Severe storms, strong currents, and

OIL & GAS JOURNAL JAN 1976

though its presence is widely known to the industry because of seismic work in the area.

It resembles a huge oval about 25 miles long and 10 miles wide, starting near the 3-mile line offshore and extending southwest into the center of the Icy Bay sale area.

"There is room here for another Prudhoe Bay field," says one company geologist. "But no one suggests that it will turn out to be another Prudhoe Bay. It's extremely rare to find a big structure filled with oil. What I am saying is that there is room here for another Prudhoe Bay. We just hope that it contains several billion barrels of oil.

"But if it's going to have anything big, it must have pay sections which are tremendously thick, and it certainly must have better porosity than the same formations onshore.

"Just because it is offshore, or downdip, doesn't mean it would have more porosity. That would not be a valid geological supposition. But we can reasonably expect some porosity. If we have that, we must also have the source beds to contribute the oil. Everything has to come together just right."

Operating costs. Companies preparing to bid on Gulf of Alaska leases have tempered their enthusiasm for the area in the past 2 years because of the great surge in offshore drilling and production costs.

The semisubmersible rigs which will be used for most of the drilling, plus other supporting services, will cost an estimated $100,000/day. This would mean that a well which took 100 days to drill would cost $10 million.

A shallow test may cost only $7 million, but if there is any trouble with the hole, the price tag of an exploratory well could rise to $15 million.

And finding oil is just the first step. Constructing platforms which meet the weather, ocean-bottom, and earthquake specifications will start at $100 million. Laying pipelines to a shore base, or constructing an offshore loading terminal, will add to the mounting costs.

Because of such prospective costs, companies are counting on reasonable crude prices to recoup their investments and make a profit.

"We couldn't go into the Gulf of Alaska for oil priced at $3 to $4/bbl," says one oil-company executive. "If we found a 5-billion-bbl field, we could make it on $5 to $6 oil. But if it's just a 1-billion-bbl field, we would need $10. We couldn't develop a 500-million-bbl field at today's oil prices."

Economics such as this will have a dampening effect on bids at the sale.

The rigs. Two semisubmersible rigs are being built by the Kaiser Shipyards near San Francisco specifically for use in the Gulf of Alaska. Others will be available from shipyards in Japan and other yards of Southeast Asia.

Federal report says

Pipeline construction has sped deterioration of state's highways

ANCHORAGE (AP)—The federal Department of Transportation reports that trans-Alaska pipeline construction has speeded the deterioration of Alaska state highways—and says the federal government has no responsibility for repairs.

Alaska's Gov. Jay Hammond has fired off telegrams protesting that conclusion to Vice President Nelson Rockefeller, House Speaker Carl Albert, Transportation Secretary William Coleman and Federal Highway Administrator Norbert Tiemann.

Hammond noted the trans-Alaska pipeline was mandated by the U.S. Congress. This year's federal highways appropriations bill includes a section directing the Federal Highway Administration to study the need for special federal aid in building or repairing roads necessary for energy-related projects.

"This is another Catch-22," the governor stated. "Why should the study go forth if precedent has been established that there is no federal responsibility for impacts to highways used for the nation's energy needs?"

Coleman stated in his report to Vice President Nelson Rockefeller, president of the Senate, "This report of initial finding documents the fact that pipeline construction has accelerated deterioration of several state highways at a more rapid rate than highways not subjected to such traffic.

"The report further establishes that repair and restoration of the damaged highways is not a federal responsibility."

The report estimates some $300 million would be needed for reconstruction made necessary by pipeline construction.

The state sought $70 million from Congress for emergency repairs during the last session. That bill passed the Senate but was downed by the House.

In August, Sen. Ted Stevens, R-Alaska, said he believed the DOT study would indicate damage exceeded the $70-million figure, adding, "There is no question it is a federal responsibility."

Coleman said the department report is an interim study and makes no recommendation for a final solution to the problem.

SUN OIL CO. estimates development of 100,000 b/d of production in the Gulf of Alaska would cost $500 million to $1.1 billion, depending on water depth.

That is based on estimated development costs ranging from $5,000 to $11,000 per daily barrel of production, depending on water depth, M. D. (Zeke) Noble says.

Noble, president of Sun's newly formed Sunmark Exploration Co., and J. Dwayne Taylor, an executive vice-president of Sun, spoke to the Houston Society of Financial Analysts on Mar. 17. Taylor described the purpose of Sun's recent reorganization.

Gulf of Alaska. In the face of such ferocious costs, how high must the price of oil be to support development

Taylor says the price should be in the range of $14-16/bbl. And Noble says "a great deal of Gulf of Alaska potential would not be developed at today's prices." If the Gulf of Alaska sale occurs as scheduled on Apr. 13, Noble says, first production probably could not take place until 1981.

Sun also has revised upward its cost estimates for exploratory drilling in the Gulf of Alaska (see graph). A year ago, Sun estimated a 10,000-ft exploratory hole in 300 ft of water would cost about $6.5 million. Noble now estimates the same well would cost $8 million. He estimates a well on some of the known structures in deeper waters of the Gulf of Alaska would cost $9 million.

Gulf of Alaska, Atlantic wildcat costs*

Work is expected to be completed on the project, which does not include paving, by the end of the year.

Impact: Problem of becoming a center of development while maintaining traditional lifestyles . . .

By CHRIS BLACKBURN
Daily Mirror Correspondent
Second of a Series

If the exploratory wells drilled in 1978 confirm there are indeed extensive deposits of oil on the Kodiak shelf, the oil industry will begin plans for oil development and production. Unless the oil fields lie in the extreme northern end of the lease sale area Kodiak Island can expect to become a center of oil development activity. Construction workers, production personnel, planes and tankers and materials for support facilities will float in, ferry in and fly onto the island.

If the people of Kodiak Island have discussed and accepted a new comprehensive plan and supporting zoning ordinances, the oil support facilities will be constructed in the areas the citizens of Kodiak have predetermined to be most desirable — or least undesirable.

If the groundwork is not completed by 1979, the oil facilities will be constructed wherever the oil industry can build most efficiently and with least expense.

THE KODIAK ISLAND OUTER CONTINENTAL SHELF Impact Study recommends that "To the extent possible, the Kodiak Island Borough should discourage the location of OCS related industrial facilities within the Kodiak metropolitan area or in any of the other villages on Kodiak Island. The location of such facilities within these areas would be extremely disruptive to the traditional lifestyles, community structures, and social and economic characteristics.... The Borough should insist that the oil industry be self-sufficient and willing to pay its own way in terms of the impacts resulting from the facilities directly related to OCS development..."

The Kodiak Island Outer Continental Shelf Impact Study estimates that the Western Gulf oil lease sale lands could produce as much as 164 million barrels of oil a year. All estimates of oil facilities and personnel requirements are based on this figure.

In 1979, as the first exploratory wells show evidence of productive oil fields, the oil industry will begin looking for a site for permanent onshore facilities. By 1984, at the projected peak of the development phase, a maximum of ten berths for oil company vessels may be needed — plus land for silos, tank storage and warehousing, open storage and office facilities. In all, about 80 acres of land will be needed in conjunction with harbor facilities.

THE OIL INDUSTRY will probably prefer a site on or near the existing road system. Chiniak may best suit the needs of the oil industry, provided the people of Kodiak have decided to prohibit industrial facilities within or near the metropolitan areas. The north side of Ugak Bay would also be suitable. Possible, but less likely, sites are Kalsin Bay and Middle Bay.

Karl Armstrong, executive vice president of the Koniag Regional Native Corporation, which holds title to the former Chiniak tracking station, said that the oil companies have shown interest in using Chiniak as the site of onshore facilities, but that discussions ceased when the Kodiak lease sale was postponed.

Armstrong a former fisherman, also mentioned that harbor facilities at Chiniak would offer sanctuary to fishing vessels encountering rough seas near Cape Chiniak, an area notoriously hazardous for fishing vessels.

ARMSTRONG SAID that while Koniag is not averse to discussing the prospect of onshore oil facilities at Chiniak, only further study will tell which site would be most desirable.

Whichever site is selected, harbor development must be preceded by public hearings. The State of Alaska owns all coastal waters from the shoreline to three miles from shore and would have to grant a permit for development. Before any permits could be granted public hearings would have to be held.

Likewise, any attempt to locate onshore support facilities on federal lands would require public hearings.

PUBLIC HEARINGS can be used by the people of Kodiak to direct the eventual siting of oil facilities. A strong and unified show of support, or opposition, to a particular location usually has a decided effect on final decisions.

Armstrong also pointed out the desirability of the people of Kodiak insisting — with the help of the Borough government, state legislators and other groups — that all public hearings related to development on Kodiak Island be held in Kodiak rather than Anchorage or Juneau.

As the development phase progresses more airport land will be needed — for helicopters, for increased commercial and cargo flights and for warehouses, and maintenance and service areas: approximately 40 additional acres.

DURING THE DEVELOPMENT phase over 1,000 people would be employed in development and construction. The year 1985 is predicted to be a peak employment year with 1,565 people involved in oil-related activities.

By 1987 the oil industry could be entering the production phase on the Kodiak lease lands. As early as 1979 the oil industry will begin selecting the site of a crude oil storage area and marine terminal. These facilities would require about 150 acres of flat, stable land — more if the land is hilly or unstable. The size of the crude oil storage facilities will determine the number of tanker trips required each year to keep the production operations underway. As few as eight tanker trips could be needed, or as many as 26.

By 1987 the oil related population should begin to stablize. The impact study estimates that about 2,651 people will be employed in oil-related occupations and Kodiak Island will have a total population of 14,252 people.

Tomorrow: Housing — how can Kodiak meet the demands?

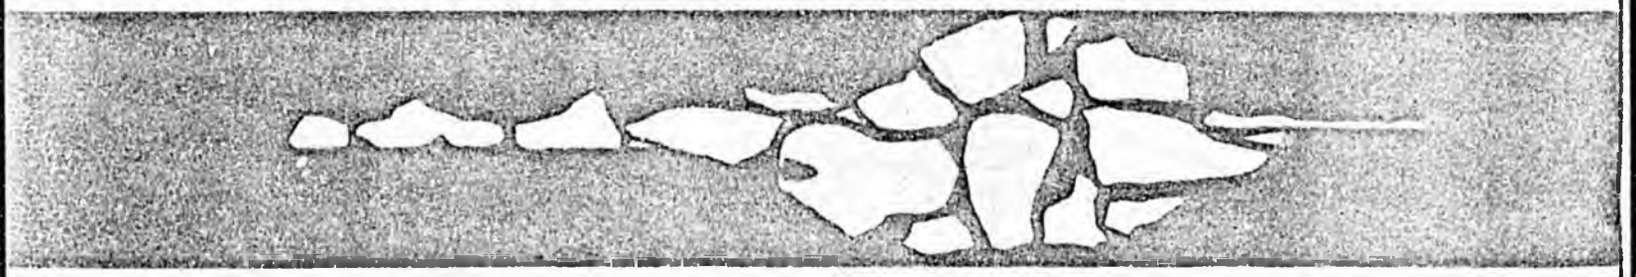
ALASKA Seas and Coasts

A Newsletter for the Alaska Commercial Fishing Industry



THE ALASKA OCS - An update

By John Williams

Until recently, John Williams served as a Marine Advisory Program Agent with the University of Alaska. He was involved with seafood processing and coastal resource activities.

Because of the rapid changes in the policies and scheduling of the development of the Alaskan outer continental shelf, and the necessary time lapse between completion of a story and the delivery of Alaska Seas and Coasts, *some points contained in this article may have changed. More information will be presented soon in* Citizen's Handbook — The Alaska OCS. *The publication will be presented by the Alaska Sea Grant Program with partial funding by the State of Alaska.*

OCS UPDATE

ALASKA — One down — eight to go.

In April of this year, the Department of the Interior leased the first outer continental shelf (OCS) oil development tracts off the coast. The sale, located in the northeast Gulf of Alaska from Icy Bay to Kayak Island, netted over 500 million dollars in bonus bids for the Department of the Interior, which administers the OCS program through the Bureau of Land Management (BLM). This is the first of nine scheduled sales on Alaska's OCS.

Shell Oil Company began exploratory drilling in the Icy Bay region on September 1, with Sedco 706, a semisubmersible drilling rig. In October, ARCO began exploratory drilling operations with the semisubmersible Ocean Ranger, recently transferred from the Bering Sea.

Sedco 706 is 330 feet high with its derrick upright, 245 feet wide, and 295 feet long. It provides living quarters for 96 men, and storage space sufficient to drill for several weeks without resupply. The drilling rig is held in place by anchors connected to computer controlled tension winches, which compensate for wind, waves, and current to keep the rig located over the undersea well.

Next on BLM's agenda is a sale scheduled for lower Cook Inlet, followed by a western Gulf of Alaska (Kodiak) sale. Cook Inlet could go on the auction block early next year, with the Kodiak sale following later in 1977.

OCS IMPACTS

In early 1976, the federal government estimated that OCS leasing would create 90,000 oil jobs in Alaska to be filled by trained personnel and that this would cost state and local governments in excess of $600 million to supply the necessary services and facilities to these new residents. This dollar figure did not consider families of the oilmen or the jobs created in the service industries which accompany the oil business. An additional 1.3 to 1.7 jobs will likely be created in service industries for each new oil job.

The Coastal Zone Management Act of 1972 (CZM) was amended this year to help states in planning and funding coastal energy development activities. The CZM amendments of 1976 created a $1.2 billion national impact fund. Eight hundred million dollars of the fund is in the form of loans for environmental and economic planning, schools, highways, hospitals, guaranteed bonds, etc.

The remaining $400 million is available as grants to be used as a back-up system for the loan fund. Money from this source will be distributed to states based upon a formula considering the number of offshore acres leased, the volume of oil and gas produced, population influx, etc.

The federal government's assistance to states coping with the onshore effects of OCS development is much more limited than for mineral resource development on federal lands contained within state boundaries. In this situation, the federal royalty from the resource is shared with the state from which it was extracted and can be used in any manner that state government chooses. The royalty from OCS petroleum development is not shared by the federal government with adjacent states. In the case of OCS resources, state and local governments must apply for impact monies for specific purposes and be able to prove that it is a reasonable request.

In addition to the burden of proof requirement, states receiving OCS impact monies must already have or be

(Continued on page 2)

(Continued from page 1)

making "reasonable progress" toward a coastal management plan as outlined in the CZM Act. Legislative support for development of such a plan for Alaska's coast has been minimal. The Legislature may have another look at coastal management legislation in the upcoming January session.

NEW ADMINISTRATION

Because of Jimmy Carter's election, many people in Alaska are now trying to assess the impact the new administration will make on the OCS lease schedule and procedures. To date, Carter has not been specific on the issue. He has, however, expressed some concern about the accelerated pace of lease sales and its impact on federal revenues from the leases.

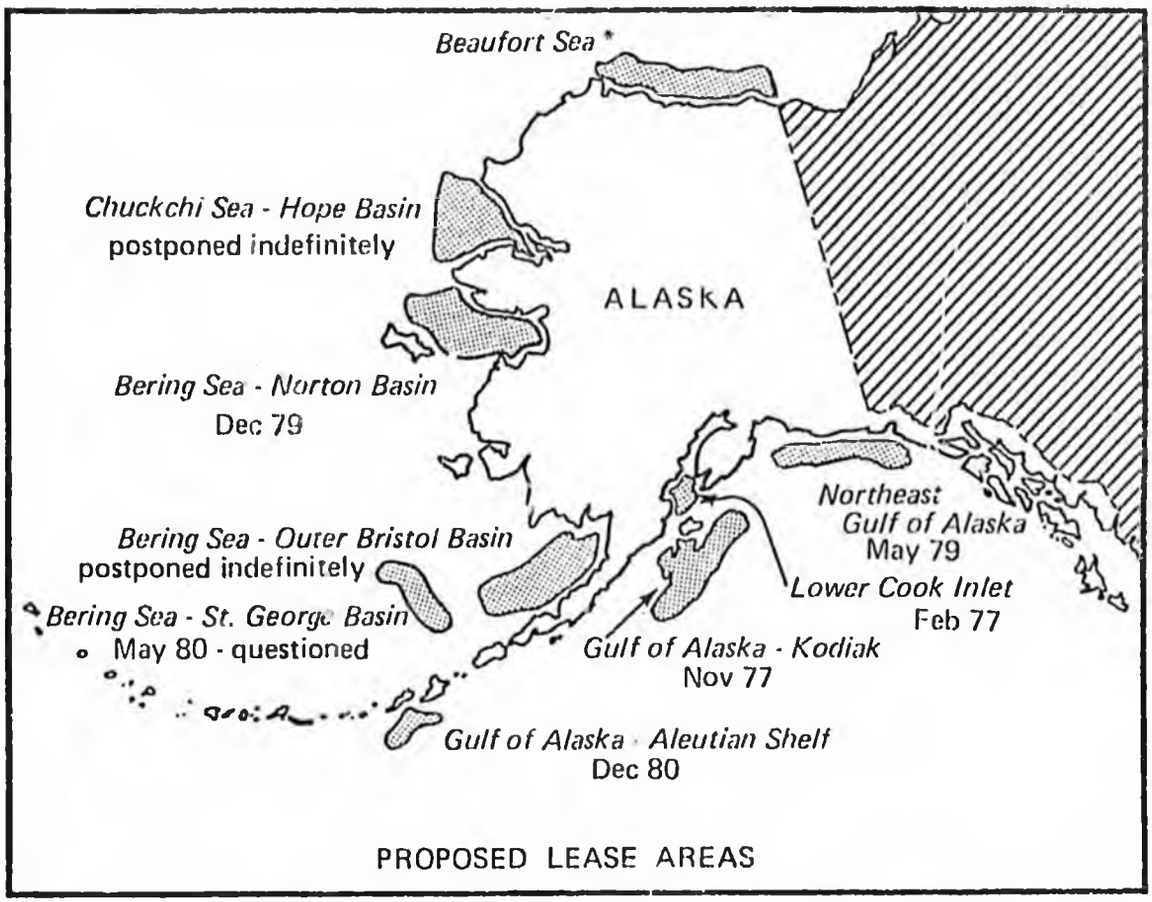
With a Democratic congress and president, chances seem better that some changes will be made in the OCS Lands Act, under which the OCS is administered. Senator Jackson (D-Washington) wants new amendments completed and signed by late spring. The amendments reportedly would consider states' interests to a much greater degree, and involve state and local governments in the process.

The State of Alaska has conducted an ongoing battle with the Department of the Interior over the presently proposed lease schedule and procedures. In a letter dated August 4, 1976, Governor Hammond submitted the State's proposal for an OCS lease schedule to Secretary of the Interior Thomas Kleppe. The Secretary had promised to reassess the Alaska OCS sale schedule, which presently calls for nine sales in three years. What actions the lame duck Ford Administration may take on this matter prior to January 20 are uncertain, although at press time negotiations were ongoing to dramatically revamp the present BLM schedule.

Hammond bases his schedule on a number of factors of importance to the people and environment of Alaska. His reasons for slowing down the sale pace include the cumulative effects which would result from the present accelerated lease schedule and the impact on communities and people unprepared for the rapid influx of large development. Hammond also wanted time for further study of the physical hazards and potential environmental risks, especially in the ice covered western and northern waters, and time to prepare the management sectors of state and local government to deal with the many implications of petroleum development on the frontier Alaska OCS.

Hammond's proposal, substantiated by considerable research by state agencies, would extend the schedule to six years, and would not include scheduled sales in the federal areas of the Beaufort Sea, Bristol Bay, or St. George Basin until further research and industrial technology are achieved. The state would agree to hold a joint state/federal lease sale in the shallow, inshore Beaufort Sea area in the fall of 1977 in place of a federal Beaufort Sea sale in the deeper, shear ice zone.

Many of the changes resulted from recommendations by Governor Hammond in his August letter to Interior Secretary Kleppe. The new sale dates reflect a compromise between the rapid schedule and Hammond's proposed delays. The Department of the Interior and the state disagreed on the need to complete environmental studies before scheduling a lease sale.



PROPOSED LEASE AREAS

Included in Interior's proposed new OCS lease schedule are changes brought about because of the state's insistence on a slower, more cautious pace in Alaska.

**The Beaufort Sea lease area is subdivided into at least three zones generally characterized by distance from shore, water depth, type of ice and anticipated ice motion. The leases for this area in the current schedule are: near shore, Mar. 78; less than 60 ft. water depth, Feb. 79; greater than 60 ft. water depth, not scheduled.*

OCS Impact Aid

By Sen. Ted Stevens

President Ford recently signed the Coastal Zone Management Act Amendments of 1976 into law. This new government program will provide a $1,200,000,000 impact assistance fund for states and municipalities affected by outer continental shelf oil and natural gas development.

The Office of Coastal Zone Management, which is part of the National Oceanic and Atmospheric Administration, will be administering the impact assistance program. That office is presently drafting regulations which will serve as guidelines for the disbursement of funds. Draft regulations have been published in the Federal Register so that they may be viewed by the public, and the Office of Coastal Zone Management is soliciting comments from interested citizens and public groups in the formulation of final regulations.

The Office of Coastal Zone Management is particularly interested in Alaska problems. During the month of August the Coastal Zone Management Advisory Committee, the Citizens Advisory Committee to the Office of Coastal Zone Management, was in Alaska for a tour of areas of the state which potentially could be impacted by outer continental shelf oil and gas development. The members of the Advisory Committee went to Juneau, Yakutat, Anchorage, and Kenai. All of the members found the trip to be informative and they learned a great deal about Alaskan problems.

The Coastal Energy Impact Assistance program has an authorization level of $800 million in loans and $400 million in grants. The grants are to be used for planning, to meet the needs created by unavoidable ecological losses, and any other projects which are necessary and cannot be funded under the loan program. The $800 million loan program is for public facilities and services.

Under a series of amendments which I sponsored, the loans issued by the federal government can go either to the state or to the municipalities. The full faith and credit of the United States is pledged to these loans — not the credit of the state or municipality. Therefore, the complex system of referendums required for normal state or municipal indebtedness is unnecessary.

In order for a state or municipality to receive a loan, it must first set out a revenue schedule to the Secretary of Commerce in which the state or municipality assures the Secretary that income which the state or municipality would receive from the oil and natural gas development over a 20-year period would be sufficient to pay off the loan. Should that income fail to accrue for any reason, the Secretary must automatically forgive the balance of the loan indebtedness.

Many Alaskan communities will be interested in receiving planning grants from the Office of Coastal Zone Management. The Act provides for $50 million in planning grants, to be awarded to states and municipalities impacted by outer continental shelf oil and gas development. These are non-matching grants in which the federal government puts up 100% of the money. These monies can be used for any planning activities to meet the on-shore impacts of outer continental shelf oil and natural gas activities. The Office of Coastal Zone Management informs me that they are working as expeditiously as possible to see that planning grants are awarded to Alaskan communities at the earliest possible date. Since the Office of Coastal Zone Management is presently drafting regulations to implement the Act, it has not yet begun receiving grant applications.

The Coastal Zone Management Act Amendments of 1976 will be of substantial benefit to the Alaska fishing industry. In areas of the state which are impacted by outer continental shelf oil and natural gas development, impact assistance funds may be used to build harbor and dock facilities, breakwaters, aids to navigation, and other facilities of general benefit to the entire maritime community. I also expect that impact assistance funds may be used to build aquaculture facilities. In the unlikely event that a major oil spill occurs, an aquaculture facility could be used to offset any damage which was incurred to fish stocks. It is therefore essential that these facilities be built prior to the production of oil and natural gas. I have strongly urged the Office of Coastal Zone Management to include aquaculture facilities in its funding program.

In addition to impacts resulting from outer continental shelf oil and natural gas development, the coast energy impact fund can be used to meet the impacts resulting from the transportation of energy resources through the coastal zone. This means that state municipalities located in the coastal zone, such as Valdez, which are the transportation centers for oil, natural gas, or coal would also be eligible to receive funding. The city of Valdez is potentially eligible to receive funding as a result of the trans-Alaska pipeline project. Looking ahead a few years, in the event that Alaska ships coal to the southern 48 states, port facilities for the operation would also be eligible to receive impact assistance funds.

The Office of Coastal Zone Management expects to be finished drafting its regulations by April of 1977. Dr. Robert Knecht, Associate Administrator for Coastal Zone Management of the National Oceanic and Atmospheric Administration, has advised me that he expects the first funds from the impact assistance program to be available for states and municipalities sometime in April or May of 1977.

On May 17, 1971, Cornell University ornithologists announced what they said was the first successful rearing of a wild bird of prey hatched from an artificially inseminated egg.

In the bloody battle of Jutland, the German navy slugged it out with the British navy in the North Sea in 1916. It was the only major sea battle of World War I.

CAPITAL NEEDS FOR EXISTING AND NEW OIL AND GAS FIELDS 1975 THROUGH 1985

(Billions of Dollars)

	Area	Capital Outlays

95,000 people due in oil migration

JUNEAU (AP) — Gov. Jay Hammond said Friday a new federal study indicated Alaska would carry a vast share of the population increase expected from accelerated development of oil resources on the outer continental shelf.

A report compiled by the Office of Management and Budget (OMB), Hammond said, showed that of the more than 147,000 persons who would be attracted by development off all states, nearly 95,000 would come to Alaska by 1985.

Such a migration of new residents would bulge Alaska's current population by more than 25 per cent.

Other figures from the OMB report, disclosed by Hammond at a news conference, projected rapid development of offshore oil and gas tracts nationwide would generate $951 million in additional government "infrastructure" in the next 10 years.

Of that total, $683 million was allocated to Alaska, more than seven times the cost of government services expected in any other region.

"This is just a working paper," Hammond said of the report. "Whether or not the figures are firm is debatable, but it is what the federal government is keying into their assessment of impact upon the state of Alaska.

"And, I think it is very dramatic in its revelation."

Bob Palmer, chief of staff to Hammond, said he had obtained the figures during a trip to Washington Monday. They are part of a report to be distributed to coastal states soon, he said.

A copy of the full report was not available.

Hammond has been an outspoken critic of Interior Department plans for conducting nine major lease sales off Alaska during the next three years, including one in the northeast Gulf of Alaska early this year.

A study conducted by the state last year concluded that costs associated with the leasing program would mean an additional $300 tax burden for each Alaska resident annually.

Interior Secretary Thomas Kleppe has delayed the gulf sale while he considers criticism by the Environmental Protection Agency and the President's Council on Environmental Quality leveled at an environmental impact statement on the sale.

Other figures from a portion of the report released by Hammond predicted peak employment in Alaska during the 10-year period would be 19,200 workers, with permanent employment set at 8,100.

Net additional new employment was projected to be 13,650 persons.

Offshore oil boom: where's the revenue?

By HAROLD POMEROY
(Second of three articles)

Consider these revenue facts:

—The state spends more than twice what it receives from recurring revenues (income taxes and liquor-cigaret levies, etc.) on a variety of items and services, capital improvements, debt payments and revenue sharing to boroughs and cities.

—The deficit above normal revenue receipts is met from the petroleum industry payments, primarily lease bonus bid payments (about $1.1 billion since the beginning), royalty and production taxes.

—The 20-mill pipeline tax is significant but from the start of flow from Prudhoe Bay, the revenue diminishes toward zero in proportion as the reservoir is depleted.

Now consider this:

Most of the lower Cook Inlet petroleum industry activity that produces revenue for the public treasury will be located beyond the three-mile state jurisdiction. Tax revenue from on shore activities, such as corporate income, personal income (from workers) and gross receipts, will be negligible compared with the revenues denied Alaskans from bonus bids, royalty, production tax.

Thus, in order that the national interest be served, the state will face a deficit of the gap between available tax revenues and the cost in state services disbursements to boroughs and cities for the people added to the population by reason of the new oil boom.

The deficit in revenue may be the equivalent of $800 or more per person per year. The total number of people — workers and dependents — in the boom period may be an average of as many as 13,500. This number at $800 per person is $10,800,000 per year. If half the people chargeable to the boom were already residing in Alaska, the net deficit might be assumed to be around $5 million a year. For those enticed here by the boom and who manage to find ways to stay indefinitely the deficit between public revenues and cost will continue indefinitely.

It is demonstrated daily that we are unable to discourage "foreigners" from coming to Alaska to find greener pastures and excitement. Efforts in this direction are inevitably of minor effect. There is no residency requirement for state service, for example, for the very good reason that a residency requirement is subject to constitutional challenge.

The pending federal development activities in lower Cook Inlet highlight the unique "cost element" of our Alaskan society. The facts are not obscure, but there is a temptation to find a palatable explanation.

The central facts are: When we became a state in 1959 the public services we provided for ourselves were limited and meager. Our means were very meager without any oil production. Since then normal tax revenues have been enormously augmented by petroleum industry revenues. The people wanted, and continue to want, a range and extent of services similar to what is considered normal in other states. Costs of doing public business are as extreme as the costs of doing private business in Alaska.

What has been happening is well illustrated by the Alaska Psychiatric Institute, working on the funding of which started before we became a state. Before that, the mentally ill might be held in jail temporarily, or put in beds in medical hospitals not equipped for their care, then shipped Outside, far from friends and families. Under the leadership of Delegate Senator Bob Bartlett, money was secured from the federal government to build API, and Alaska was authorized to select one million acres of land to be used as a resource for mental health programs. API was opened in 1963. The mentally ill were brought home for treatment here. Now there are also mental health centers, which function as outpatient clinics.

Thus, we are doing what civilized people consider a "must" — engaging in services for the mentally ill contrasted with the alternative of a combination of just ignoring them or locking them up in an "insane asylum." API care ranks with average for the smaller states.

It is probable that most people will want a decent American standard of services, even if it takes revenue we haven't got — in the absence of using bonus bid money, royalties and production taxes. Is such an expectation unreasonable?

Meanwhile, we face an unusual situation.

Up to now, with respect to development in lower Cook Inlet, the Gulf of Alaska, or anywhere else beyond the three-mile limit, the federal government position is: We are going to establish developments out there; you are expected to provide the people from onshore; it is not our concern how much more it costs you beyond your tax revenues to take care of them decently.

(The writer is a member of the governor's growth policy council and a former chairman of the Kenai Peninsula Borough. His final article will appear on Tuesday's Opinion Page.)

Auditors Say Lease Mistakes Costly

WASHINGTON (AP) — Congressional auditors say the Nixon and Ford administrations were in such a hurry to obtain offshore oil that they failed to make sure the oil companies paid a fair price for drilling rights.

The General Accounting Office said yesterday the former policy of expedited leasing of offshore oil areas "could adversely affect our domestic energy production."

The Interior Department leased oil fields on the outer continental shelf "without reliable knowledge of the resources they contained," the GAO report said.

This encouraged speculation in offshore oil lands, thereby tying up oil industry capital in lands with little or no oil and infringing "on the public's right to receive fair market value for the resources," the GAO said.

President Carter's interior secretary, Cecil Andrus, has promised to overhaul leasing procedures for offshore oil fields. In recent congressional testimony, Andrus said the government plans to do some exploratory drilling before leasing new areas to make sure that the government receives a fair return.

The GAO said the Interior Department estimated fiscal 1976 revenues from sale of offshore leases at $12.9 billion. "Actual bonus revenues received from all sales amounted to $1.3 billion, only 10 per cent of the original estimate by the department," GAO said.

Included in this was revenue from leases of 1.3 million acres off southern California sold on Dec. 11, 1975. Before the sale the Interior Department estimated that two-thirds of the 231 leases up for bidding would be sold for about $2.3 billion. However, oil companies bought only 24 per cent of the leases for $417 million.

This sale came after former President Richard Nixon had twice ordered the Interior Department to triple its leasing of offshore oil fields.

"Exploring Offshore Oil: A Scottish Economist Views Onshore Impacts for Alaskan Communities"

An Interview with Niall Trimble

ALASKA
COASTAL MANAGEMENT PROGRAM

INTRODUCTION

Good day, this is Kevin Waring. I'm Director of the Division of Community Planning in the Alaska Department of Community and Regional Affairs. With me today is Mr. Niall Trimble, an Economist with the University of Aberdeen in Scotland. Niall has done substantial research on the development of the offshore oil fields in the North Sea. It's a very timely visit Mr. Trimble is making here to Juneau. He is here shortly after we have seen the first of the Federal offshore leases in the Gulf of Alaska. We have arranged for an interview with him to talk about some of what he has seen in his own research in oil development in the North Sea, particularly what it might mean to the communities and the State too, which over the next few years, will be facing some pretty substantial responsibilities for managing population growth and onshore growth associated with the offshore industries.

MR. WARING: Niall, in your research in the North Sea, what have your findings been, generally?

MR. TRIMBLE: Our research has basically covered two areas. We've been studying the industry itself, trying to predict the level of activity. For example, the demand for helicopter services, the demand for supply bases, supply routes, the requirements for merchant platforms and for the sites being constructed. We've looked at the overall demand for labor that's involved in all these processes, and we've also looked at area studies for several of the areas likely to be seriously effected by the advent of North Sea oil. This includes areas like the Shetland Islands and the Aberdeen area.

MR. WARING: Niall, one of the things that has been of most concern to many of Alaska's smaller communities has been the uncertainty of the schedule of development, how quickly things would happen, and what would happen following a lease sale. Could you outline the schedule of development in the North Sea since exploration began there?

MR. TRIMBLE: The first serious leasing for the northern half of the North Sea, the area off the Scottish coast, took place in early 1969. There was also a major leasing in 1971-72. Following the 1969 leasing, there were rigs exploring in 1970. I would expect that in Alaska there will be at least some rigs out there within a year of this Gulf of Alaska lease sale. Probably, substantial activity would be occuring two or three years after that. I would also expect that as soon as exploration starts, there will be some oil discovery, probably within six months ta a year of the first rig going up. After that, it gets a little more complicated. Once you've found oil, then there is a period of approximately a year or so to determine the structure of the oil deposit and where to put the platforms. They then have to sit down and think about the way in which they are going to develop the field (six months) - how many platforms they are going to have, where they need pipelines, whether to use tanker loading. Then about two years after the field has been first discovered, they will announce a development plan of some sort. They will then order platforms, announce contracts for labor to lay pipelines, and that sort of thing. Once you've ordered a platform, it will take about two years to construct, assuming

there is no delay in starting construction. After two years, the platform is ready and it will bave to be towed out. If it's a steel platform it will take as much as a year to 18 months to install. Assuming the Gulf of Alaska is like the North Sea and you can't work in the winter months, then you can't do installation or pipe laying in the period from October to March. You are confined to the summer months. About a year after you've first towed the platform out, it will be ready to start drilling. You should be able to start producing from this field in about a year or so. Production will probably build very quickly to a peak within about three years. Drilling will not be completed for another three years after that. So roughly from the time leasing starts, you'd expect to see some oil production within about six or seven years. Alaska can look forward to oil production from about 1982, 83 or 84, I would imagine.

MR. WARING: Is it at the production stage that employment starts to taper off? Is it at the earlier stages that the most intensive employment occurs?

MR. TRIMBLE: Most intensive employment is in the development stage when you are actually constructing platforms and laying pipelines. This may not be the case in Alaska, because all of these activities may take place elsewhere. Alaska is a very remote rural area with small communities which simply don't have the facilities to produce platforms, coat pipe or anything like this. The greatest employment will probably be in two areas. First of all, supply bases, supplying the exploration rigs and the platforms. It will also be in marine terminals. The pipelines running into shore will eventually reach terminals where oil will be shipped into tankers and on to markets. These things will cause employment in the Alaskan case.

MR. WARING: How much employment might be involved in the exploration associated with, say, one platform or terminal construction or, were it to occur, platform fabrication?

MR. TRIMBLE: If you have an exploration rig operating, it will have a crew of about 45 to 60 people. There will be two crews that will work about a fortnight, so it's between 90 and 120 people on a rig. There will also be perhaps 100 people on shore associated with this. In the case of Alaska these may be located elsewhere, not necessarily in a shore base, but perhaps in Anchorage or Seattle. In the case of a platform, there are probably about 200 or 300 people involved, both in installation work and in the first 5 or 6 years while the platform is drilling. Thereafter it will fall off quite considerably to maybe 50 to 80 people. The terminal, it depends on the size of the terminal. The Sullom Voe terminal in Shetland is a very large one. About 100 million tons of oil a year scheduled to be shipped through it. It would employ about 600 people. I would guess that terminals on the Alaskan coast would employ about 150 or thereabouts.

MR. WARING: Would that be true of the construction period too?

MR. TRIMBLE: No, during the construction period for most of these things, employment would be very much larger. Again, the example we can look at is the

Shetlands, where a terminal would require about 2000 to 3000 people to construct. I imagine that any medium size terminal handling 10 to 20 million tons of oil a year could require 1000 people to construct it. So the problem of accomodating large numbers of men will probably come at the construction stage, rather than long-term operations.

MR. WARING: Are there any rough figures on overall employment directly associated with the offshore industries? What level has this reached now in Scotland?

MR. TRIMBLE: The current figure is about 25,000 people in those establishments which have been set up specifically to deal with the oil industry. There is a lot of employment with indigenous companies which were there prior to the arrival of the oil industry. I think these are things like engineering firms who have taken additional oil industry business and have had to hire extra people to meet the demand. The overall figure would be something like 35,000 to 45,000. I wouldn't expect it to be anything like this in Alaska.

MR. WARING: How have the national governments and the local governments reacted to the growth of the offshore industry? What is of special concern to us is how the smaller communities have reacted to the substantial changes in economics and lifestyles.

MR. TRIMBLE: The British government has been concerned about the development of offshore oil in parts of Scotland because some of the areas effected are very small, isolated areas with social ways of life which may be adversly effected by the arrival of the oil industry and large construction camps. On occasions they have diverted construction projects to other areas which they felt to be more suitable. Some of the local authorities have imposed particularly rigorous conditions on their developments in order to try and maintain there own way of life. The obvious example is the case of the Shetland Islands. Shetland is very similar to many of the communities in Alaska. It is remore, rural, with a total population of about 18,000 people. It is located 150 miles from the Scottish mainland. Its people have traditional independence. The Shetland Council has insisted that development on the Island be held to the absolute minimum. Any activities which are not absolutely required to be located on Shetland must be sent elsewhere -- to Aberdeen or somewnere like that. Importantly, all developments must be grouped together to avoid unnecessary proliferation around the Shetland coastline. For example, the main function of Shetland is a trans-shipment terminal where oil comes in by pipelines. It's stored in tanks and passed through jetties into waiting tankers. This is one of the major activities which is going to occur in Alaska. Shetland has concentrated all of its trans-shipment activities in one site. That's Sullom Voe, north of the Shetlands. The companies are not being allowed to go elsewhere. If they don't want to come to Sullom Voe, then they can't go to Shetland at all. They have also taken rigorous control of the proliferation of supply bases. They've controlled that very sucessfully. In general, they try to limit the impact of the industry on Shetland. The long term job creation is probably only about 1000, which a place like the Shetlands can cope with successfully, even though there are problems at the construction stage when the labor force is always much larger.

MR. WARING: Has the oil industry been discouraged by the rather stringent planning requirements?

MR. TRIMBLE: It doesn't appear to have been at all.

MR. WARING: Can they accomodate themselves quite well to them?

MR. TRIMBLE: Very much so. It doesn't cost them that much and Shetland is the obvious place for them to go, under the circumstances. They just accept these sort of planning constraints. They have no choice. There is only one obvious site for them to use and the Shetlands are not insisting on anything unreasonable. The oil industry seems to react to this quite favorably.

MR. WARING: What sort of arrangements are made for providing local revenue to, say, the county government for providing services or housing expansion?

MR. TRIMBLE: A lot of these things are financed centrally by the British government and the Scottish Office: like roads, new airports, expansion of port facilities, and housing. These aren't financed entirely from central government, but they offer large grants, perhaps 75%. So, a lot of funding comes from outside. The Shetland government also has an unusual arrangement with the oil companies whereby it receives a certain amount of revenue on every ton of oil which passes through the Shetland Terminal. It gets a revenue of something like four or five million pounds a year coming directly from the oil companies. That is in addition to the normal property taxes that are levied on the terminal itself and on the port dues that the companies pay. It is an entirely separate thing.

MR. WARING: You've been here a few days, Niall, and have had a chance to learn some of what is going on in Alaska, what the reactions have been to the potential offshore development, and what the community situations are. Could you offer some recommendations to our State and to some of the communities as to how they might manage things to their own best advantage?

MR. TRIMBLE: I think the best advice you could offer to the communities of Alaska is not to underestimate the strength of your position. There are certain obvious sites for the oil industry to choose from for supply bases and terminals. The oil industry will take these sites come what may. The people living in parts of Alaska don't need to think that they have to surrender to the oil companies. They can impose quite strong conditions. Their position is very strong. They can dictate to the oil companies, not the other way around, because the oil companies have no choice. They have to go to the nearest position for supply bases and to the nearest land for pipeline land falls. The industry is forced to choose this so the position of a local community can really be quite strong. But you must try and prepare yourself, you mustn't assume that you can do nothing about it. You can impose strong planning conditions and try and make sure that the arrival of the industry is acceptable to the community. Another thing for the State government in general is to acquaint itself

with the modus operandi of the oil industry. How exactly do they operate? Have your own source of expertise, so when the oil industry makes requests of you, you know whether to turn them down or not, and what the effect is likely to be if you do turn these things down.

MR. WARING: Given the importance of the fishing industries in Alaska, have there been any particular problems or conflicts between the fishing industry and oil developments in the North Sea?

MR. TRIMBLE: There don't appear to have been many problems as far as I'm aware, though I'm not an expert in this field. There are two problems which could arise. First of all, labor loss from the fishing industry to the oil industry. I gather there have been several problems in Alaska before with the construction of the pipeline. With very high paid employment, people have left all sorts of jobs. This doesn't appear to have happened in Scotland as far as the fishing industry is concerned, partly because the fishing industry offers very high paid employment. This may be different in Alaska, where I gather fishing is not as well paid as oil company jobs. But it certainly doesn't appear to have been a problem in Scotland. The other possibility is pollution. Dumping of oil at sea could damage fishing grounds. Again, this doesn't appear to have been a problem so far. Another possible problem is the dumping of debris over the side of rigs and over platforms, which may get caught up in nets. The oil industry has made arrangements to compensate fishermen in the North Sea and I imagine some arrangements could be made here.

MR. WARING: Has the industry accepted, or do they have unlimited liability for damage they might do to fisheries through pollution or damage of equipment?

MR. TRIMBLE: I'm not quite sure what their position is. They certainly have a fund to pay for damaged nets. Obviously, if the damage to the net can be traced to a specific company, it is automatically liable under normal British law. If a net is damaged, and there is no obvious person to blame, then the industry has a general fund for compensation, though it's not very large.

MR. WARING: Before we come to a close, might there be any other points you'd like to call to our attention?

MR. TRIMBLE: Again, I think your strength with the oil companies is quite great, and there is not very much you can do that is going to turn them away. Communities all over the world are imposing more rigorous conditions and imposing high taxes. Don't feel constrained. Don't feel that you have to give them a particularly good deal because Alaska is a very attractive area for them. There are very good reserves here. It's quite possible that in the next 10 to 15 years Alaska could become the biggest oil producing state in the United States, and that is quite sufficient on its own to attract the oil companies here.

MR. WARING: Thank you very much Mr. Niall Trimble, from the University of Aberdeen, for a very informative, comparative point of view on offshore oil development and what it means for the communities in Alaska.

This project was supported, in part, by the Federal Coastal Zone Management Program Development funds (P.L. 92-583, Sec. 305) granted to the State of Alaska by the Office of Coastal Zone Management, National Oceanic and Atmospheric Administration, U.S. Department of Commerce.

Coastal Energy Impact Assistance program -- initial determinations of assistance to states...

House C&RA Committee may want to hold hearings by way of "oversight" to determine, first, whether available federal assistance is adequate for coastal municipalities, and how the assistance is being made available to municipalities, as well as to determine whether a state program of assistance (HB 219) is necessary, and, if so, how it could be tailored...

Coastal Zone Management

FIRST NEWSLETTER OF COASTAL RESOURCES DEVELOPMENT, CONSERVATION & ENHANCEMENT

Volume 8, Number 20, May 18, 1977

THE COASTAL ENERGY IMPACT PROGRAM PASSED A MILESTONE THIS WEEK with the announcement from Commerce Secretary Juanita Kreps of the first allotments of funds to the coastal states and territories. Some $125 million is involved, including $15 million in outright grants ($3.5 million for planning, $1.5 million for environmental grants, plus $10 million in the so-called "formula" grants for past impacts), and $110 million in the form of "credit assistance" -- loans and guarantees. The allotment will be turned into cash for the 30 states and three territories no later than next month, a source at the Office of Coastal Zone Management told CZM newsletter, when the first planning grants are awarded. The states have been drafting their applications for those funds with the help of OCZM personnel during a series of site visits. The first states to receive their planning funds will not be those with the largest allotments, according to CZM's source. He emphasized that "certainly" part of the $3.5 million in planning monies will be awarded in June but indicated the bulk of the funds would be going out in July.

There is no further state review of the allotments announced this week. That process ended 4May after a 45-day period in which the states had the opportunity to examine the data base OCZM had established for allocating the funds. An OCZM source noted that there had been "some questions" on the planning grants during the review process, so there may be a second look at just how these funds are allocated. There's a possibility another technical paper will be circulated among the states for comment during the next few months which would describe "alternative" ways of dealing with planning grants. The largest questions center around how OCZM should weight the impact of energy facilities on heavily populated areas in contrast to the impact on environmentally sensitive regions -- the difference between New York and Alaska, for example. The planning grants are allotted on the basis of all energy facilities in the planning stage for the coastal zone.

Asked if OCZM would change its allotments on the basis of any new outer continental shelf leasing schedule from the Dept. of the Interior, an OCZM source said the agency would not "go back and withdraw the money." Schedule changes would simply affect the next allotment of CEIP funds. (See page 3 for the latest OCS leasing schedule.)

There are few surprises in the allotments. Alaska takes the lion's share of the credit assistance program -- $48.6 million of the total $110 million available. Louisiana ranks second with $19.4 million, while the mid-Atlantic sale group of states will share $12.7 million (although the funds are impounded until current litigation is resolved). Texas is allotted $4 million. The west coast situation looks like this: California is allotted $6.6 million, Oregon, $484,000, and Washington $5.8 million. The Washington state impact is based mostly on the movement of oil from Alaska. Three states together account for almost $1 million of the $3.5 million in planning grants: Alaska, California and New York, each getting about $350,000. Surprisingly, two Great Lakes states don't fare badly at all: both Michigan and Ohio will receive over $250,000 in planning grants. Massachusetts on the other hand will get only $65,000. The Gulf states together account for a little better than 10% of these grants. Alaska is allotted over 40% of the environmental grants ($663,000 of the $1.5 million available), while Louisiana runs a distant second, getting $265,000. The mid-Atlantic sale group gets $173,000. (Continued on next page)

THE NEW SCHEDULE FOR THE SALE OF OCS LEASES WAS ISSUED 17MAY BY INTERIOR:

#47	Gulf of Mexico	Jun77	#49	Mid-Atlantic	Dec78
CI	Cook Inlet, Alaska	Oct77		Beaufort Sea, Alaska	1979
#42	North Atlantic	Nov77	#46	Kodiak, Alaska	1979-80
#43	South Atlantic	Jan78	#48	So. California	1979-80
#45	Gulf of Mexico	Feb78	#54	S. Atlantic Blake Plateau	1979-80
	Eastern Gulf of Mexico	Aug78	#53	General Pacific	In doubt
#51	Gulf of Mexico	Oct78			

The above schedule represents a general delay by Interior Secretary Cecil Andrus of two months in Gulf of Mexico sales originally scheduled in 1977 by former Secretary Thomas Kleppe, and four to six months in the Atlantic coast sales originally scheduled from Jun77 to Jun78. The Cook Inlet AK sale will go forward, but later than had been anticipated (CZM, 4May) -- not until Oct77. The Kodiak sale (originally Nov77), as well as the ones in southern California (originally Mar78) and on the Atlantic's Blake Plateau (originally Dec78), will be allowed to slip into the 1979-1980 period. Andrus said merely that they would be "considered for the planning schedule to be developed for the period through 1980." That schedule is due in August.

The Secretary practically ruled out a general Pacific sale when he said it "may be dropped from the planning schedule." Departmental planning activities for those sales which could occur in 1979 or 1980 "will continue." Andrus further emphasized his own flexibility: The schedule issued 17May and the one to be issued in August are, he said, "for planning purposes only." Specific dates for all the sales under discussion have yet to be fixed, and the Secretary added: "I will make decisions on whether to proceed with specific sales only after all the requirements of the Natl. Environmental Policy Act have been met and I have personally studied the comments of the governors of the affected states and others on all issues related to the sale." The Dept. of the Interior will in no way "be bound," he said "by a desire to achieve a schedule...."

The Secretary described the new program as having "twin thrusts" -- completion of development in known areas and a "steady exploration and development pattern in frontier areas." He recognized the "need to develop" U.S. oil and gas resources "as a part of the President's Natl. Energy Plan." But he also recognized the states' concerns for the impact of outer continental shelf development off their shores. Claiming that his leasing program would be different from that of the previous Administration, Andrus said he intended "to recognize fully the distinct social, economic, technological, cultural and environmental elements associated with each individual region and sale." He promised to work with the states "and others" to resolve key issues, and suggested that those issues can be resolved "by providing adequate time in the planning process." He said he believed that the department "will benefit from the advice of the coastal states and, in turn, the states may better understand the impacts they must plan for."

AESTHETICS TOOK ITS LUMPS ON THE FIRST DAY OF THE MARK-UP OF THE OCS BILL (S. 9) by the Senate's Energy Committee. Otherwise the session produced some heat among the members over the basic issues confronted in the Senate's version of the 1977 amendments to the Outer Continental Shelf, as well as some light on how those opposed to the bill intend to fight it. The whole session (two and one-half hours) was spent on amendments submitted by Sen. J. Bennett Johnston (D-LA). Some 27 amendments to the bill will be unopposed on the basis of agreements reached between the majority and minority staffs, but there seems to be an ample number of "opposed" amendments to keep the committee in mark-up sessions for several full working days at least.

The committee earnestly considered its future schedule of meetings in order to continue the mark-up as quickly as possible -- Chairman Henry Jackson (D-WA) emphasizing the need to meet at least two more days this week -- but it was decided today (18May) that the best the committee could do was to schedule a "tentative" mark-up session Friday (20May). So much

Exxon Man Belittles Oil Impact

Times Juneau Bureau

JUNEAU — Impact on the northern Gulf of Alaska communities where federal outer continental shelf oil development is to take place will be minimal, an oil company representative testified before the House Community and Regional Affairs Committee yesterday.

Most of the impact will be out of Anchorage, Monte Taylor, spokesman for Exxon Co. USA, said.

The committee is considering a bill sponsored by Rep. Charlie Parr, D-Fairbanks, which would require oil companies to pay a construction permit fee equal to the amount of impact their facility will have on state and municipal onshore services.

Parr, testestifying earlier before the committee, said he read press reports which said Alaska would gain 95,000 people becouse of federal offshore leasing. He also based his support for the bill on a study on North Sea oil development.

Taylor, whose company bid $49 million for 24 gulf tracts earlier this month, said it is not fair to compare the North Sea with Alaska becauuse the North Sea was developed faster than any oil development planned in the U.S.

Taylor also said a final environnental impact statement on oil leasing in the state said that Alaska would gain only 95,000 persons if El Paso Natural Gas Co. constructs a trans-Alaska gas pipeline at the same time the lease development occurred.

This will not occur simultaneously, Taylor said, adding that the report also said El Paso would employ more people than oil development.

In Exxon's exploratory work in the Santa Barbara Channel off California only 50 persons were employed at the peak, Taylor said.

When the firm begins construction work there, offshore and onshore, to prepare for production, 500 to 700 persons will be employed but that figure will drop to 50 to 100 persons after production begins, Taylor said.

Taylor also said his firm proposes to build a $30 million facility onshore, which will cost the company $1 million annually in taxes to Santa Barbara County. The impact on the county will be only $15,000 to $20,000 annually, he said.

Other oil company representatives are expected to testify against the bill when the committee continues its hearings next week.

Alaska Construction & Oil

Oil at Yakutat? March '77

Three Residents Have Their Say

To illustrate the impact offshore development has had and is having on the northeast Gulf village of Yakutat, AC&O's Grant Petersen talked with three of its residents.

Byron Mallott, 33, was recently named president of the Alaska Federation of Natives. Born and raised in Yakutat, he has served as city councilman and mayor, and was commissioner of community and regional affairs under former Governor William A. Egan. He serves on the board of Yak-tat Kwaan, the Native village corporation of Yakutat and is chairman of the Sealaska Native regional corporation. He also operates charter and commercial fishing businesses in Yakutat. Yakutat is the northernmost Tlingit village in Alaska. Fishing and related activities are the primary sources of income. In addition to oil-related employment, other significant income sources include state and federal jobs.

AC&O: 1976 was a big year for OCS operations in the northern Gulf of Alaska, with two exploration rigs (SEDCO 706 and Ocean Ranger) drilling in the fall and a third enroute when 1977 arrived. When was the impact of offshore development first felt in Yakutat?

MALLOTT: The first apparent activity began in the fall of 1974 when a consortium of three companies, Shell-ARCO-Mobil (SAM), purchased the old Ocean Cape cannery properties. They then contacted the city council. Yakutat is a first class city, has a number of governmental powers and exercises most of them. It's a pretty sophisticated village both in terms of leadership and the services it provides; it's not what most people think of when they think of a typical Native village. The city had anticipated interest by oil business and earlier in the year contacted me for some assistance in my capacity as commissioner of community and regional affairs, and our department started assembling a planning assistance program for Yakutat. The council was contacted by real estate agents seeking to obtain rights to the tidelands that fronted the cannery. The previous owners didn't own the rights and thus couldn't transfer them to the oil companies. Communications between the SAM group and the city government continued through the winter and into 1975 as the companies outlined their plans.

In 1975 I resigned from the cabinet, returned to Yakutat and subsequently testified for the city at the Gulf of Alaska lease sale EIS hearings held in Anchorage. Immediately after the hearings the state contacted the city concerning its planning and zoning program.

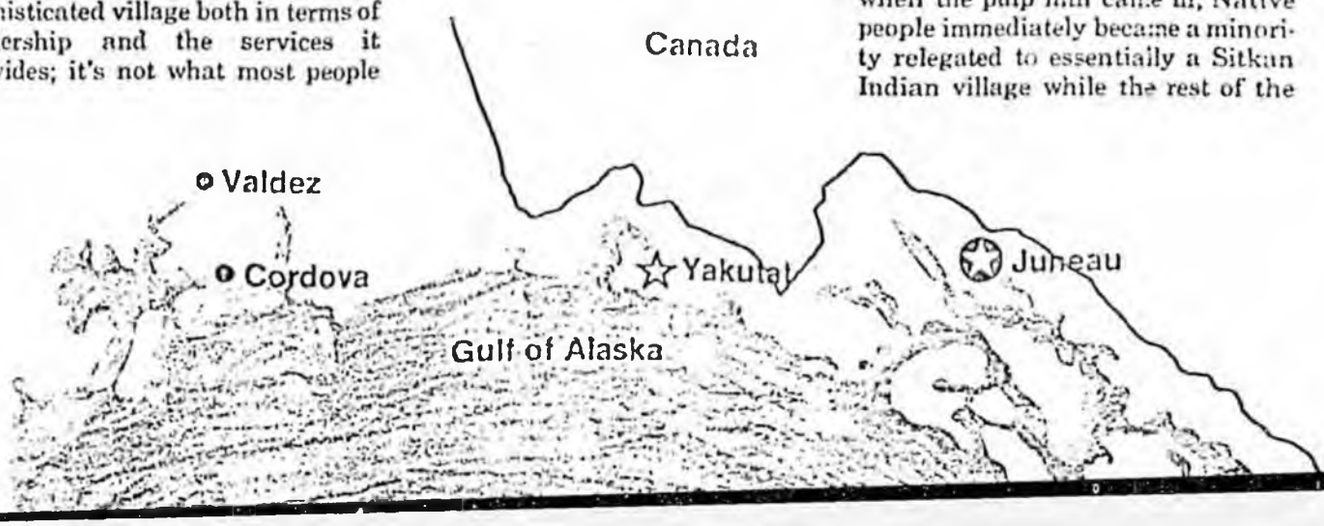
Shortly after my resignation and prior to the EIS hearings, I came to the AFN and asked them if they could assist us in dealing with the impact issue. I pointed out that the city was about to move into building a planning and zoning program from scratch in a relatively short period of time and asked if the AFN would help us fund an attitudinal study of the whole Yakutat area, to allow the city to get some sense of what local people really felt. We were inquiring not about OCS oil development but about growth and the future of Yakutat as a general proposition. They said they would and gave us a grant of $15,000.

That survey revealed a number of things. It showed that local people are very concerned about OCS and what the potential for rapid growth meant to Yakutat. At the same time they were very concerned that Yakutat needed a much stronger economic base. It had suffered economically for years and years from the seasonal cycle of summer employment from fishing and winter welfare.

On the one side was the combination of wishing to maintain a small town lifestyle which translated for Native residents into wishing to maintain subsistence uses of natural resources and concern about what population increases would mean to everyone. You see it every year. In a short period of time, sport fishing bag limits on the nearby Situk River went from 12 to six to two salmon daily simply because of the increase in the number of people in sport fishing.

People are very concerned about that type of thing. A lot of people use sport fishing bag limits as part of their subsistence and subsistence permits were becoming much more complex to obtain. People were concerned that this would be the trend and that sooner or later they would be shut out, and they recognized that it all came from population growth; that in turn resulted in over-utilization of resources.

At the same time, local people in leadership roles also felt that they wanted to maintain a small-town lifestyle because of the political control that local residents have of smaller governmental institutions. Fresh in our minds were examples of what happened with rapid growth in Native places elsewhere. At Sitka when the pulp mill came in, Native people immediately became a minority relegated to essentially a Sitkan Indian village while the rest of the



prosperous city grew up around it without their having any economic or social participation. At Juneau, Ketchikan and Wrangell the same things happened; a major industry came and the Native people were left to live in what amounted to a Native slum. We didn't want that to happen in Yakutat. We didn't feel that the history of the development of the Alaska Native and the understanding of non-Natives in the terms of industry, in terms of their social habits had progressed to the point where this was not something to be concerned about.

But at the same time people were saying we want jobs. We're sick and tired of being poor. So we developed the survey so that we could try to get a more definite statement of the people's real wants. People were saying essentially those two things but beyond it they were saying "We think that if economic growth comes, we'd still have essentially a small town lifestyle even if Yakutat got up to 1,500 people, which would be doubling or tripling the size of the city; we could live with this."

While this was happening, the oil companies began preparation of the cannery site for additional service space. This was taking place while the city was protesting the use of that property for that purpose and asking the companies to wait until the planning and zoning program had been developed. They were advised that the property would not be zoned for industrial purposes. About the same time, the oil group purchased from the local Standard Oil distributor, a man named Israelson, some beach property on the other side of Monti Bay and began to develop this area also, thinking that with the existing connecting roadway they could use both sites.

At this point we had two types of impact, one economic and one psychological. The former was in terms of more employment. Green Construction, as the contractor, hired as many local people as they could. Thus it was normal summer construction impact that Yakutat had known for many years.

The greater impact was more in the area of expectation, anticipation that this was going to be something far larger than had ever happened here before. It produced a sense of concerned expectation, especially on the part of the city government, which took a substantial interest in what was happening.

AC&O: You mentioned the city was advising the companies while they were setting up their work pad that the zoning would likely be inconsistent with their plans for the area. How was this resolved?

MALLOTT: It was settled basically through the oil companies asking what the rules of the game were, our establishing the rules and the companies, the Kwaan and the city working within them. How we got to this point is important and considerably more complex. The outcome was an outgrowth of the realtionship between the Kwaan and the city, policy recommendations from several sources and by basic land use considerations.

We have about 350 shareholders in Yak-tat Kwaan and almost all of them reside in Yakutat. Recognizing that the corporation's shareholders comprised 90 percent of the residents of Yakutat in 1975, it was pretty likely that public policy and corporate policy wouldn't be too far apart.

I should also mention that at this time there was a pretty paranoid attitude based on a lot of rather scarey information we were hearing. The

SERVING OUR BEST CUSTOMER, BETTER AND BETTER.

For almost a century Alaska has been Seattle's best customer and today that historic relationship continues to expand. In 1976 over 775,000 passengers and 1.75 million tons of cargo moved over Seattle docks and through Sea-Tac International Airport bound to and from the 49th state.

Both people and cargo move smoothly and efficiently because of the consistent, cooperative planning of Alaskans, the carriers, and the Port of Seattle. Working together, we have created a handling and shipping complex capable of meeting the needs of Alaska's burgeoning economy. Together we continue meeting those needs.

The Port of Seattle, serving our best customer better.

EIS of course had to include a wide range of possibilities as to what OCS oil development might mean to Yakutat. Population impacts were projected to range from 1,000 to ten times that figure and the state was talking to us about major impacts over a relatively short period of time.

We had a lot of very conservation-oriented people riding us, calling us, saying "Give 'em hell." Major policy makers in state government were saying "You have (we think) if you choose to exercise it the capability of getting them out of Yakutat. All you have to do is say it, and do it." Other state officials were saying "You have the capability of achieving something different here, achieving what you want in terms of limited growth, building a strong local economy but at the same time avoiding the other kinds of difficulties." Still other advice from state circles said "You're going to get wiped out so you might as well roll over and play dead."

Along with the advice we also received a firm offer of support from the state, specifically from Governor Hammond and Commissioner of Natural Resources Guy Martin.

During this time we had been giving the oil companies a series of what were essentially ultimatums that said they weren't really wanted, nor was (their) rapid growth desired. We asked what they were going to do and got little response back because in view of this, they didn't know how they fit into the picture.

Their reply was essentially: "Hey. We want to be good neighbors. Give us the ground rules. We want to know what the rules are and we'll be glad to play the game."

We decided that we didn't want a confrontation with the industry, so we went to them and said there was no desire to do battle with them. Instead we said "If you'll agree to move out of the Ocean Cape property and won't fight us over it (and they had, with lawyers coming from Denver and Houston to the planning and zoning meetings to oppose the new ordinances), we'll try to put together a comparable package agreeable to us both."

The decision ultimately made did agree with the industry and with Yakutat, although others did not understand how we reached an agreement and some very much opposed what we were doing, in some cases for personal gain reasons.

As background to the agreement, in the fall of 1974, when Yak-tat Kwaan had just begun its land selection, we were more concerned at that time with the selection of lands having significant timber value and with balancing that with lands having significant historical and cultural value to shareholders.

We chose those large blocks which obviously had no other value than commercial timber; we also selected all of the islands and as much shoreline as was possible to get ownership of as many salmon streams and camping areas as we could, since our history and culture is tied into use of the seashore.

In the meantime we'd been hearing something about this OCS business but weren't aware of the magnitude of things accompanying it. Then in the winter of 1975 when the city was gearing up its planning and zoning program, with Shell-ARCO-Mobil already on the ground, a number of other oil companies contacted us about the acquisiton of Kwaan property. BP wanted to purchase property further away from the city on Yakutat Bay. Yak-tat Kwaan was then a brand new corporation and we'd just made our land selections; suddenly we're being hit by oil companies wanting our land. In addition we'd been approached by Pacific Alaska, who wanted to lease land on Monti Bay for the future siting of a liquefied natural gas plant.

While the Kwaan was building its land use policy statement, the city was designing its planning and zoning program. The latter also supported a major policy position made at the time by the Kwaan—no major developments on Yakutat Bay, other than on Monti Bay. We felt that for the benefit of our shareholders, for recreation use and for subsistence use, development on Yakutat Bay had to be limited. This coincided very closely with the city's thinking; at an early stage they had said they didn't want one oil firm to use the (facing) Ocean Cape and Israelson properties because other oil companies would seek similar sites and service spaces would be scattered around the Bay and all over Yakutat. The city said, "We want development to be located in an industrial area, a single integrated industrial park complex to which all users would have access."

Although they came from different directions, the Kwaan and the city were saying the same thing. The Kwaan wanted protection of recrea-

tion and subsistence resources in other parts of Yakutat Bay and preferred development confined to Monti Bay. The city said local residents should be protected by isolating development to a specific part of the area. Coming from different locations, the Kwaan and the city arrived at a pretty major policy decision on how they wanted it to happen and where.

Enter the state, which owned a significant hunk of nearby property—almost all of the land surrounding the Israelson property that SAM had purchased on the other side of Monti Bay.

In July 1976, the city and the Kwaan met with Governor Hammond and his cabinet with a proposition to exchange some land. To obtain the land around the Israelson property, the Kwaan and the city would offer land of comparable value further down Monti Bay. This arrangement would allow the corporation and the city to go to the oil companies with an alternative to their initial two-site location, an area that could be developed into a single integrated industrial park.

The governor agreed with the concept and the Kwaan and the city each appointed several people to a negotiating group that worked with the state. The resulting land trade proposal was approved and the Kwaan obtained 70 acres surrounding the ARCO base.

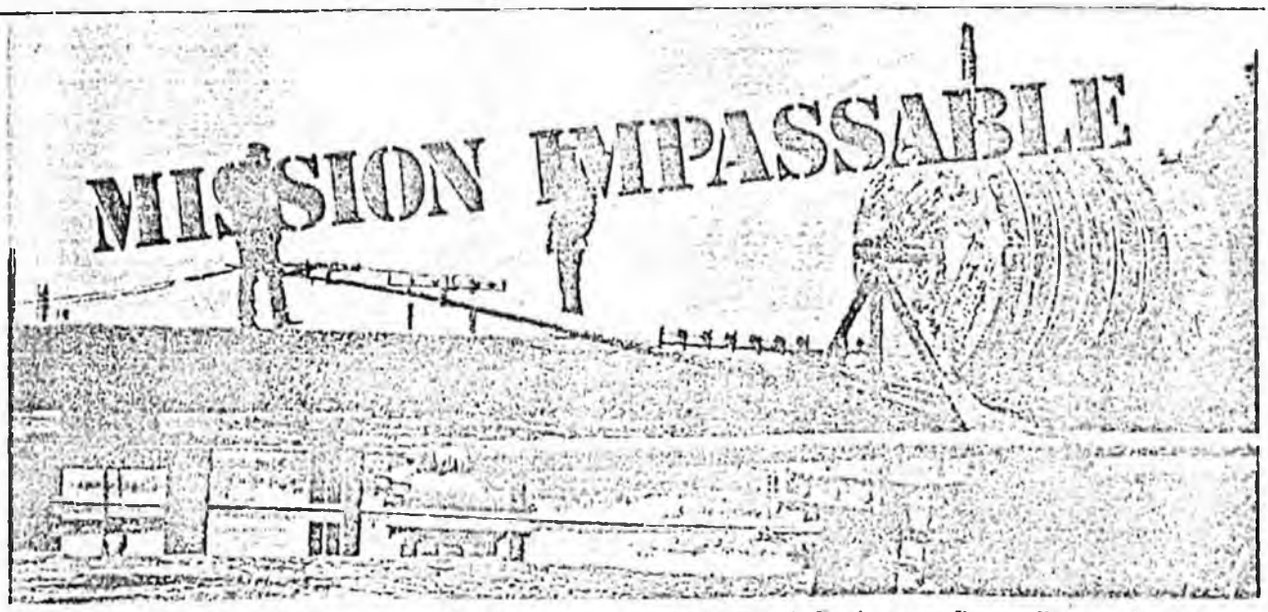
This trade, incidentally, was done over fierce opposition. A number of local people and several developers essentially from Anchorage were trying to kill it, knowing it could stifle other speculative development opportunities in Yakutat, so it was over a number of "dead bodies" that the land trade was finally accomplished. It's significant to note that throughout this critical stage, we had a solid 80 percent of the Yakutat area residents supporting our efforts. One minority said "Development at any cost, bring it on, man, let's open up Yakutat and go!"

With the trade complete, one step remained before going back to the companies with an offer. The city as part of its planning and zoning and a look to future growth felt it needed to expand the municipal boundaries to take in the other side of Monti Bay, which was proposed for industrial use. The Kwaan, who owned most of the land, agreed with the city. In what is an unusual move for business, the Kwaan urged the city to expand the city boundaries to take in this Kwaan land. Usually local businesses raise hell when local governments start to annex, but again, because Kwaan shareholders comprise the majority of city residents, they said bring the Kwaan land for industrial use into the city so there is some control over how things happen.

The local boundary commission approved it and by March 1976, the city boundaries were nearly quadrupled to include all the potential development in Monti Bay.

At the same time the city and the Kwaan came to an agreement on the tidelands. As part of the boundary expansion, the city agreed to include the tidelands fronting the Kwaan lands used for the industrial park. This gave the city additional local governmental leverage on what would happen in the park. This then set the stage for a return to negotiations with the oil companies.

The Ocean Cape area, on which work had already been done, was zoned non-industrial; the oil companies could have sought relief in the courts. To diminish that possibility, they were given an alternative. In essence they were told they couldn't



MISSION: 40,000 feet of pipelines carrying flare gas on the North Slope must be strung with heat cables to keep the moisture in the gas from freezing.

PROBLEM: Pipeline is up to 50 feet from the gravel work pad. Terrain is tough — much of the pipeline on vertical supports over water and muskeg. Temporary work platforms could be built on or near the pipeline — the heat cables pulled from spools by power winch or by hand. But engineers from Rogers Electric decide it would be slow, difficult and costly. Rogers ingenuity is called upon.

SOLUTION: Engineers at Rogers Electric design a custom-made aluminum side-boom and have it mounted on a truck bed. The rig is driven down the gravel work pad, parallel to the pipeline — stringing up to 12 heat cables at a time.

RESULT: The project can be completed in record time — the customer makes big savings in both labor and money. Improved methods, materials and ingenuity at Rogers Electric means a better job at a more competitive price. That's why Rogers is a leader in the electrical construction industry.

ROGERS ELECTRIC DIVISION
of Newbery Energy Corp.

Phone (907) 274-7581

operate there but were not going to be kicked out altogether. Instead we told them that we had 80 acres across the Bay and that we'd like to talk about putting together a joint venture for operating all of this. The results of that approach can been seen in a lease agreement we just signed with ARCO and Shell. The agreement provides for their operation of a 77-acre industrial park that will serve as a supply and operations base for petroleum activity in the Gulf.

A related transaction calls for the buy-back of half of the 21-acre Ocean Cape property by the Kwaan. The remainder is to be sold to the city in the near future.

AC&O: We've covered much of the early development-related decisions that were made and some of the background. What about the experiences of other communities in dealing with very similar problems? Were you able to use their experiences?

MALLOTT: As you noted earlier, several of us went to England, Norway and the Shetland Islands to see how things were being done in the North Sea and to learn how the people there had handled it. One of the lessons, a significant one, was learned from the Shetland Islands' Council. That council, in getting a special act through Parliament, got the powers of both a local government and a business corporation combined in a single entity. For example they could zone an area, tell a company wanting to establish there where it would locate, and, functioning as the same governmental unit, tell the company they (the council) would own 51 percent of whatever business goes in. Their powers were huge. They could exercise jurisdiciton as far as three miles out, could even stop ships from coming into their waters. But the basis of their strength to deal with the oil industry there was the quasi-business powers given to the council. They could require part ownership in any business activity that took place in their area.

That was the essence of the governmental strength that the Shetlanders had, and it reinforced our beliefs that we were moving in the right direction by insisting on and designing in local control. We were two separate agencies, but through the close working relationship developed between the city of Yakutat and the Kwaan, we achieved something close to the leadership strength of the council.

The other thing we observed over there that alleviated much of my personal uncertainties over offshore activity was the technological capabilities of the industry. This is not to say they didn't make mistakes; they did make them, a couple of which were financially very costly. The important thing was that they showed the capability to deal with their problems, and without placing the surrounding environment in jeopardy.

AC&O: The impacts of a business the size of the oil industry on a local economy are significant. This is especially true in the case of Yakutat, with a small population and an economy that has been based primarily upon the seasonal business of fishing. What are some changes you've observed in the area?

MALLOTT: Inflated property values were one, and the best example I can give is the oil companies' purchase of the Ocean Cape property. They paid over $500,000 for property listed on the city assessor's books for $170,000. This started an inflationary spiral. All of a sudden, property that in 1974 was selling for $1,000 was selling for $10,000 less than two years later; real estate agents from Anchorage were interested and were in Yakutat scouring the area for available property. A corporation that owned large mobile home parks throughout the state wanted to put in a 200-unit mobile home park in Yakutat. There were home builders who were interested in putting together a subdivision.

The city had been urged by its planners and state agencies to plan for this kind of impact, which could include a two- to 20-fold increase in population. The city refused and said they'd plan for what they considered to be sufficient services for local people and prepared instead for a maximum of 1,500, in terms of expansion of municipal services.

Their position was and is to stop at 1,500 and to make it tough for people to live here beyond that. The Kwaan cooperated by keeping a lid on speculative kinds of purchases by not allowing their area lands to be sold. That was one major early impact. The assessed valuation of properties more than doubled from 1974 to 1976.

In 1974 the total city budget was $75,000; it was $300,000 in 1976, largely as a result of increased demands for city services. Legal fees increased significantly. While the city was working on the planning and zoning, it instructed its legal counsel to look at all existing ordinances to determine if they were sufficient to deal with potential OCS oil development. One of his principal responsibilities was to look at the city's financial ordinances to ascertain whether the city would be receiving its fair share. The instructions were not to rip off the oil industry but to draft ordinances to ensure that the city would receive sufficient revenues to meet required services. To meet the increase in city operating expenses, the 1975 city mill rate of 7.5 went to 20 mills in 1976.

The two percent sales tax was modified. There had been a segregation of funds within the sales tax which earmarked half the tax for a specific health and education process. To meet the operating budget, we had to change the ordinance to allow all the sales tax to go into the general fund.

The city school system (the local school district) was operating at maximum, so we needed a new elementary school. We went to Juneau and obtained state funding to build the school. It will be a $2-million physical plant whose large operating costs will have to be picked up by local sources and that'll be a strain on the budget. The city now receives less than one-fourth of its total operating capital from local sources. All other revenues come from federal and state revenue-sharing, grant-in-aid programs and various kinds of contract services with the state and federal governments. These are some of the impacts.

To lessen them, particularly those involving property values, when we were negotiating for the buy-back of the old Ocean Cape property, we said we'd not contribute to furthering the inflationary spiral created by paying what ARCO and Shell paid for it. The oil companies said they recognized the fact that their activity was a cause, agreed to take a look at realistic property values and based the negotiations on that.

AC&O: Did you see any signs of people moving in, anticipating jobs with the industry?

MALLOTT: Nobody has moved into Yakutat just looking for employment. It didn't happen in '75 or '76. As a matter of fact, the FAA pulled some people out and it caused the school district to have fewer people. This

resulted in some problems because we count heads in order to get our money.

One thing the Kwaan did that greatly minimized some of the impact on the area was to obtain the old RCA "White Alice" communications site and convert it to a transient housing complex for oil workers involved in crew changes out of Yakutat. Yak-Tat Kwaan has operated the transient camp for about six months and by doing so aleviated potential crowding in the city's hotels and restaurants. ARCO in fact has provided financial support beyond its obligations to keep the camp going and thus hold down the effect of its crew rotations.

AC&O: There are some obvious pluses to the industry's arrival in Yakutat.

MALLOTT: Several. We now have one of the best airports in the state. Before it didn't have all the aircraft navigational facilities that other airports had. It was largely the advent of increased air traffic from OCS that caused the FAA to install a full instrument landing system in 1975. Alaska Airlines, looking at increased traffic, has constructed a new terminal. The Evergreen and Era chopper outfits have built hangars. Essentially all of the impacts with the exception of the ones mentioned, have been positive.

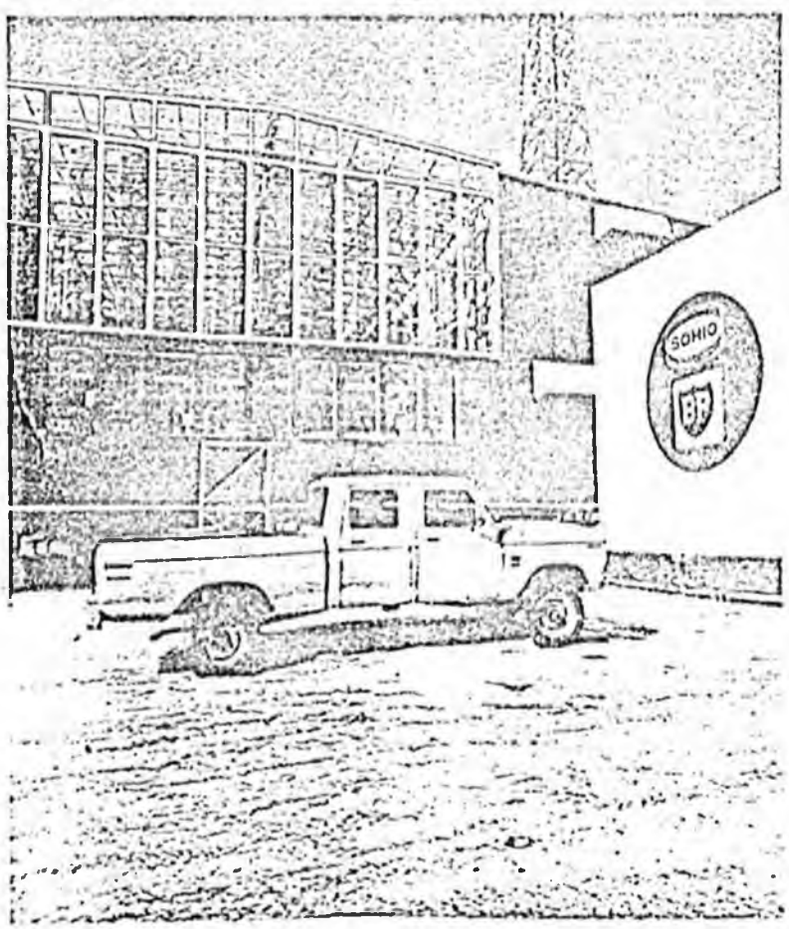
In the area of employment, we worked very hard, both the city and the Kwaan, with the oil companies to get them to hire locally; they agreed, sought qualified people and hired them. We had local people working on the construction of the on-shore operations base. When it became operational, a majority of the 40 workers were local people, half of which were Kwaan shareholders.

That amounts to a $200,000 a month payroll. This has had great impact on the health of our people. They now have the money to get medical and dental care that before was out of their reach. Some people are traveling outside of Yakutat for the first time in their lives. The impact has been very positive.

Incidently, while on the subject of employment, part of a lease agreement signed by ARCO and Shell for the industrial area includes provisions for training and hiring Kwaan shareholders and members of their families, as well as keeping to a minimum the number of new families the industry moves into the area.

AC&O: Much of what we've discussed concerns consensus feelings and thoughts of Yakutat's people. As one who is obviously very concerned about the city's future, what are your feelings about offshore development in the northeast Gulf and throughout the state.

MALLOTT: The industry is far ahead of any of the governmental institutions in terms of preparedness for offshore development. As a result, we should proceed slowly until the governing agencies are capable of dealing with even potential impacts. I think the federal "Project Independence" development schedule amounts to insanity, and is based upon no sense of reality. I'm not saying I oppose offshore development, but even if we develop all the oil resources available to the United States, we're looking at a very limited supply. They are not sufficient to allow us to not be dependent upon other sources. Members of the government and the industry are ignoring this to justify speeding up oil development. We'll never be independent of other sources; I think we need to accept this and slow down the schedule. The industry has the



The Slope on wheels.

AVIS Alaska, Alaska's only international car rental on the Slope with complete maintenance shop.

AVIS is the number one choice in Alaska because of their twenty years of dependable Alaskan experience. Economy cars, sedans, trucks, four wheel drives. . . whatever your automotive needs, AVIS can handle them.

AVIS

technological know-how, but the local, state and federal governments do not have the ability to deal with the cumulative effects of rapid OCS oil development.

AC&O: What changes, improvements in the existing procedures do you consider essential?

MALLOTT: I think that the federal government should channel sufficient revenues to state and local governments to allow them to do the necessary planning. This does not need to be a long, involved process.

The state government should do a better job of channeling those state and federal resources available to it on down to the local level. It needs to develop state and regional priorities but not over the "dead bodies" of local governments.

Local officials must recognize and accept their responsibilities in this area, including development of local resources to the maximum degree possible, and utilizing state and federal assistance where needed. City governments up and down the coasts of Alaska need to realize the importance of the development and utilization of strong local governmental tools to deal with the challenges they will soon encounter.

Harvey Milton is a 63-year-old Tlingit Indian who has resided in Yakutat all his life. He has fished "since I can remember," and has done commercial gillnet fishing. He has been a registered big game hunting guide for over 30 years. Milton welcomes the new industry to his home but worries about the effect a nearby oil spill would have on his people's subsistence and livelihood.

AC&O: Mr. Milton, you mentioned your father, grandfather and great-grandfather all lived in the Yakutat Bay region. As a resident of this same area for over 60 years, you know a great deal about its people, its history and what happens here. When did you first become aware of the oil companies coming to your village?

MILTON: The oil people first came here about two years ago to see if we could work together. That was going to be alright because they would help Yakutat people by giving them jobs.

AC&O: How do the people here feel about oil exploration in Yakutat?

MILTON: We all know the oil is needed. It's like the tide; we can't stop it and we can't stop needing the oil, but it won't last forever because it is getting shorter. I teach my grandchildren to eat seafood because the time will come when we go back the way as before. When they get no more oil, we go back to the olden days and burn the wood.

AC&O: How do most of the Yakutat people make their living?

MILTON: Most people here, whites and our people, live from fishing the Bay.

AC&O: When did you first notice the impact of the oil companies on the village of Yakutat?

MILTON: At first the oil company was going to build where lots of children go to school, near the old Ocean Cape cannery. Be. Yakutat people were worried about their children, so they talked to the oil people. They agreed to go across the bay and everything worked out fine.

AC&O: What is your main concern about the oil companies being here?

MILTON: If the oil spills on the sea and drifts into the shore it will affect Yakutat. In the springtime, salmon come in here and if the oil comes, all the seafood is going to die because I know the wind and currents and they will bring it in here and the salmon can't go up their streams near Yakutat. That is our concern.

Jeff Widdows, 26, is a commercial fisherman and owner of transportation and janitorial businesses in Yakutat. A 15-year Alaska resident, Widdows lived in Anchorage for 10 years where he attended East High and AMU. Five years ago shortly after he and his wife Kris bought a house in east Anchorage, "We all of a sudden realized we were settled in for the next 30 years with an 8 to 5 schedule and knew we wanted more out of life." They decided on Yakutat, where Jeff had been offered a job with the Standard Oil distributor; Kris went to work for the U.S. Forest Service. As reflected in the interview, Jeff Widdows' feelings about big business coming to his "refuge" are clearly mixed.

AC&O: In our discussions with present and past residents of Yakutat, almost all have ambivalent feelings about the coming of the oil industry. The greatest concern is that it might adversely affect the rural, outdoor-oriented lifestyle characteristic of the community. Why did you move to the area and have any of its attractions been influenced by the new industry?

WIDDOWS: I like the outdoors, and the hunting and fishing it provides, and am consciously aware of it. I cuss the rain but it's part of what I love and part of something that somebody did a damn good job of putting together. What's more important is just knowing that they're available when I have time to do them.

Other attractions of the area I value are the people and the way of living here. Our Anchorage friends ask us what we do "down there." We visit people and don't worry about calling first, or whether it's mealtime, or whether we're properly dressed; or, maybe we'll get hungry for some clams and go down at night and dig some.

If I forget about leaving my keys in the truck, or locking it, I don't worry about it; you'd think at least twice before doing that in Anchorage.

You asked if any of this has been affected by the oil companies coming here. It's hard to say. There are some things that most people would consider minor, but they're important to me and I think they've been somewhat affected. I mentioned that Kris and I often go down to the beach in the evening. A couple of years ago we'd be the only ones there. Now you're seldom alone. When we lived out near the airport we'd see bears all the time. In fact one morning I heard a lot of noise nearby, looked out and saw three of them playing in the bed of my pickup, rocking it and bouncing up and down 'til they got tired of it and left. Another time when I was getting ready to leave for work, I heard some commotion and went to the door to check it out. When I looked out the narrow window in the door as I started to open it, a bear was peering in to see what was happening inside. I loved it. I seldom see them now. This might be related to the increased activity around here.

AC&O: Has the oil business had any direct impact on your livelihood, and if so, what kind?

WIDDOWS: The first impact was when I discovered I no longer had a place to keep my bus. *(Widdows provides transportation services for area school children and had stored his vehicle in a warehouse that Atlantic Richfield leased; ARCO later consented to letting him store the bus in an adjacent warehouse.)* They later asked me if I could provide maintenance services for their offices. I didn't need the money but it was a good offer.

Our house is another example of impact. Ten years ago it sold for $3,000, two years ago it sold for $17,000, and we bought it this spring for $40,000. The reason for that price tag is offshore development in the vicinity. It was the first house available in over four years. It's in poor condition, but we wanted to be part of the community and when you live out at the airport, you're considered to be transient. It may not be the way you feel, but that's the way it is here.

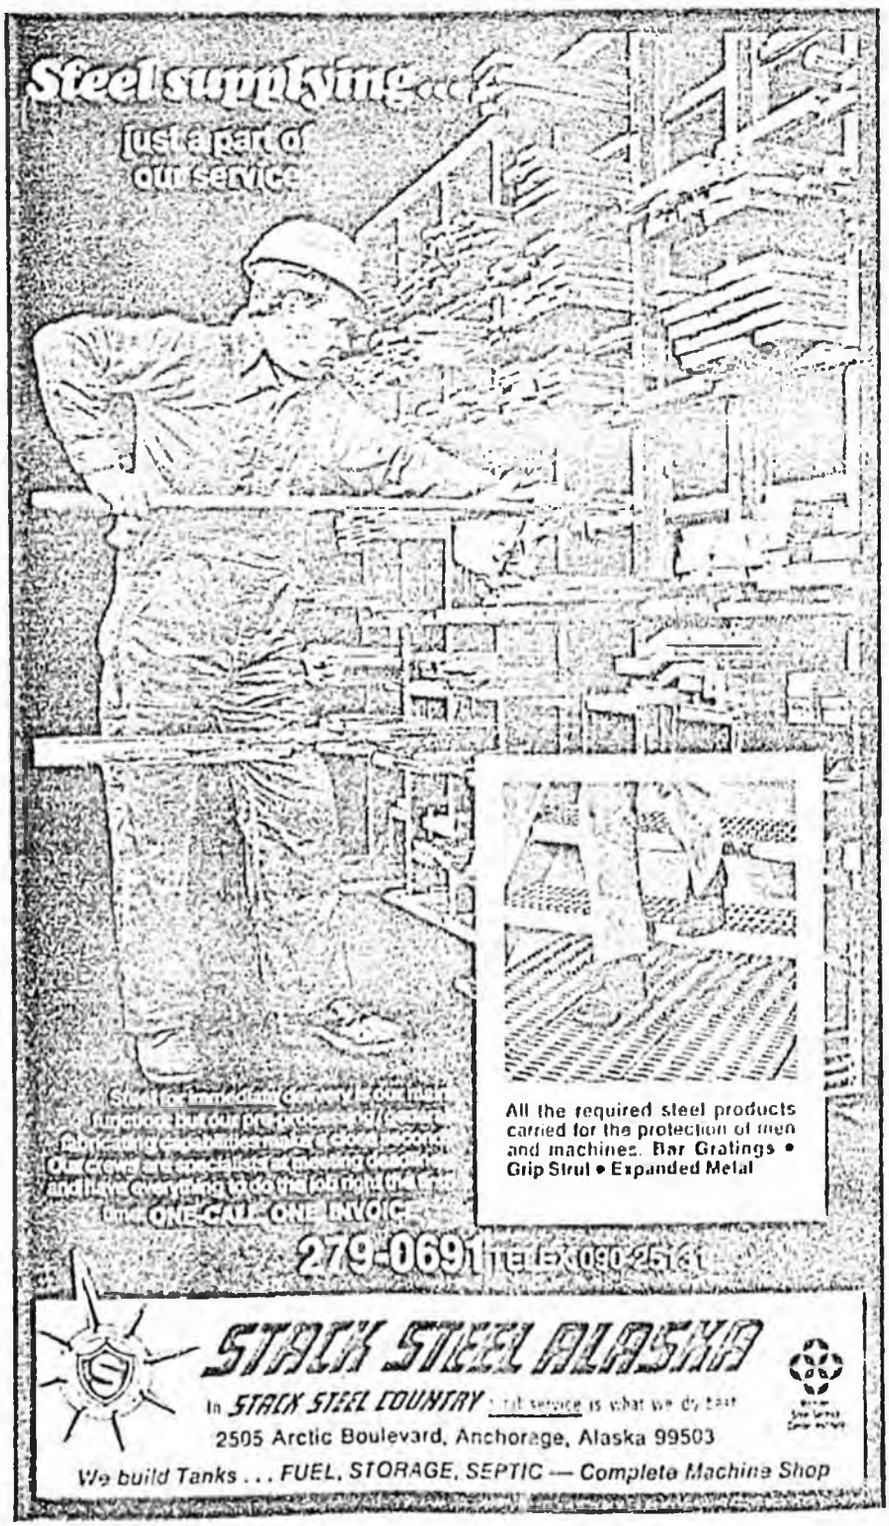
AC&O: How have others you know been affected?

WIDDOWS: The companies have brought money to the town. There are a lot of people here who in the past had little or no money coming in during the winter time. Now they have a regular paycheck coming in during what used to be pretty lean months. This in turn has helped the local stores. One of the biggest assets of this community is its isolation. What has happened to many other Alaskan communities that are more accessible to big business hasn't happened here yet. In others where business has come, many residents by choice or by no choice were sort of pushed aside, but here they haven't been and that's good. Fishing has traditionally been the mainstay of the Yakutat economy and continues to be, gillnetting and subsistence fishing. Considering the options available and the possibilities, I think all sides involved in the planning did a good job.

AC&O: What are your overall feelings about the way the companies have related to the community?

WIDDOWS: This is something I've found it a little hard to admit but I'm pleased with the way they've conducted their operations, with the way they've tried and in most cases succeeded in cooperating with the people here. I hate to admit it but the detrimental impact so far has been very slight and there have been some advantages. A lot of people are employed by their being here and are making more money than they ever have before.

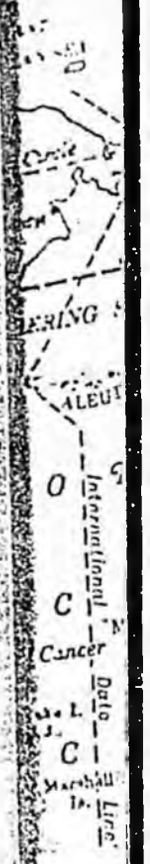
I was dead set against their coming here and I'm dead set against this place changing; until recently my feelings were if they need the oil, get it out of somebody else's backyard, but realistically maybe that's not possible here. I'm still against any big development here but I'm very relieved with the way they've conducted themselves so far, in cooperating with the community in just about every way that they could. I'm pleased also with the caliber of people that they've brought in; they're pretty nice people. I've always noticed two kinds of people in a community, those that are there because they want to be and those that have to be such as for their jobs. The people that came in have been friendly, kept a low profile and seem to get along. □



Alaska Construction & Oil
March '77

"northern latitudes, cold weather, rough seas, deep waters..."

Alaska has no monopoly



AC&O production editor Norman Bolotin recently travelled to Great Britain as part of the preparation for this special report. Having covered Alaska oil development for the magazine for the past four years, he went there to tour the support facilities serving the North Sea oil fields. The following several pages illustrate many more parallels between the North Sea and Alaska than just lines on a map. Photos are by the author unless otherwise indicated.

There are striking similarities between the North Sea and Alaska, and many more than one would suspect at a superficial examination. The obvious parallels come to mind immediately: northern latitudes, cold weather, rough seas. But rough and deep waters for drilling can be found in many parts of the world, although likely not as rough as in the North Seas or offshore Alaska. Initially, it should be noted that the U.K. is perhaps a decade ahead of Alaska in offshore development. Some of the major fields have been producing now for over a year. Onshore construction and offshore drilling continues at a hectic pace in the North Sea while exploratory drilling is only now getting underway in the 49th state.

When discussing petroleum these

days, the political aspects of the industry are sure to touch off a controversy. Great Britain is involved in a merry-go-round situation similar to the one in the states—high consumer costs for petroleum products, the resulting dissatisfaction among residents and a mounting national interest in reducing exports and imports of petroleum products: energy independence. Sound familiar? It would take another entire issue just to scratch the political surface of the issues, so this article will deal only with the non-political similarities of the oil industry in the United States and Great Britain.

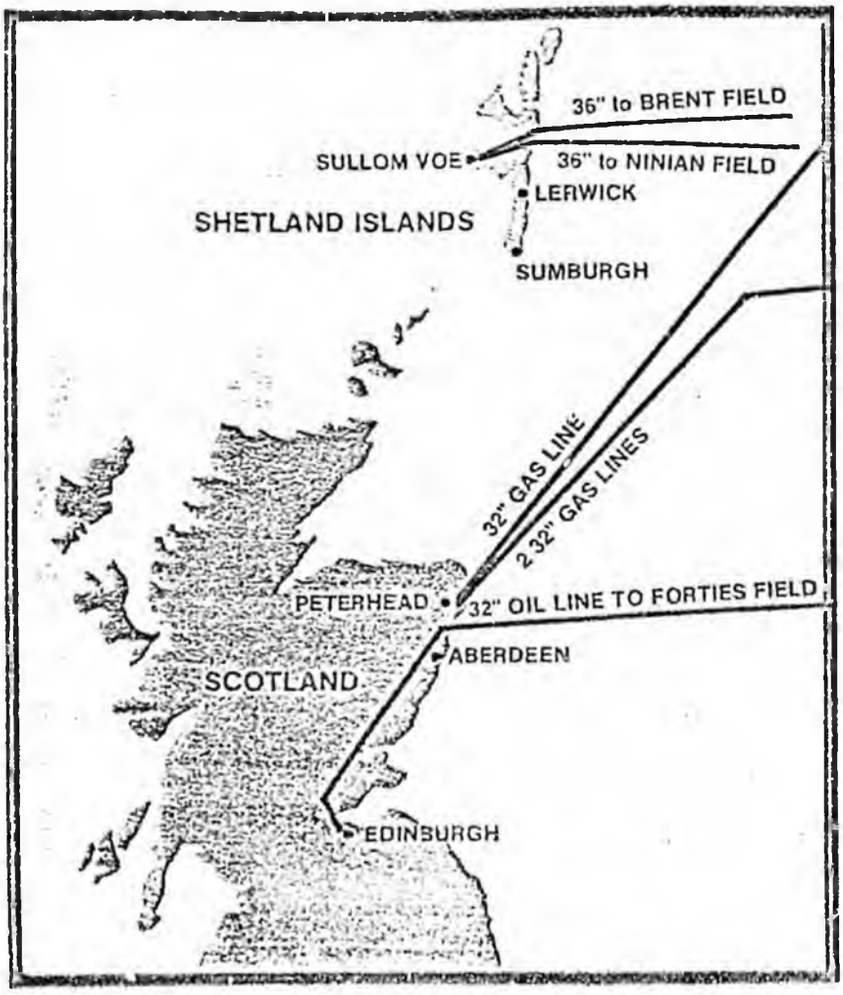
The effects of offshore development in Alaska—on the economy, on the land and on the people—will be more subtle than those experienced on the pipeline. At the same time, they could be greater. Until oil was discovered at Prudhoe Bay, Alaska—to the rest of the country at least—was some land of igloos and gold miners, a place in the far corner of the map that was mired in the 19th century. The oil line educated outsiders and expanded and stabilized the state's economy. The population doubled and the economy doubled many times. The coming of the offshore oil industry, over several decades, will have a tremendous effect on Alaska; but it will come in periodic jumps and it will come after the oil line has had its massive, initial effect. On the positive side, Alaskans know what to expect and so do outsiders. A negative effect could be complacency, an incorrect assumption that after the pipeline, anything will be easy. Those who were in Alaska six or seven years ago have learned to be wary after that first boom and bust came with North Slope oil. A lot can be learned from what has taken place in Great Britain, as well.

OIL FROM THE FORTIES FIELD

AC&O's trip to the U.K. included visits to Edinburgh, Scotland, where a subsea oil line terminates. The other end is in the Forties Field, the largest of the North Sea oil fields. At Edinburgh is the Dalmeny tank farm, where oil is stored prior to loading onto tankers, and the Hound Point tanker terminal, where the crude is loaded onto ships.

The known recoverable reserves of 17.5 billion barrels in the North Sea nearly double those at Prudhoe Bay. It was back in 1959 that British Petroleum, the parent company of the firm so well known to Alaskans now, first demonstrated an interest in the North Sea. Exploratory activity, primarily seismic, began in 1962-63 with a cooperative effort between BP, Shell and Esso. Later, GUMBP was formed: Gulf Oil, Union, Mobil and BP. This group continued searching for potential subsea oil and gas structures, and in 1965, BP sank the first exploratory well. By the end of the year, the firm announced the first commercial discovery of gas in the North Sea.

Due to problems reminiscent of the struggles between the state of Alaska and the federal government, there had been little interest shown in the North Sea earlier. This was because of uncertainty over ownership of the waters; here the question was an international one. The first U.K. leases were issued in 1964. At that time, BP obtained rights to an area 100 miles east of Aberdeen . . . what was to become the Forties Field. The name comes from the water depth along the sandbank in the area—40 fathoms. North Sea weather, like Alaska's, is among the worst in the world, as well. In that area of the North Sea, there are 273 "bad" days in any given year and 49 "marginal" ones. This leaves just 43 classified as "fair" or "good." Due to this and other circumstances, design criteria are stringent, as in Alaska. Platforms in the North Sea are constructed to withstand 94-foot waves and 130-mph winds, statistically probable every 100 years.



Once BP knew there was oil present under the North Sea in commercial quantities, the problem became one of logistics—how to produce it and get it to land. It was decided that the Forties Field would be covered by four platforms some three miles apart. Each production platform would be identical in terms of output and would house 27 wells. The wells would fan out into the subterranean reservoir at angles up to 55 degrees. The next step would be getting the oil to the mainland.

The minimum size line that was determined adequate to carry the projected 400,000 barrels per day of crude oil was 26-in. in diameter. The line was to be built in two segments: a 107-mile stretch under water and a 130-mile section overland to the Grangemouth refinery near Edinburgh. Again, to allow for expanded capacity, the line was redesigned to 32-in. in diameter; the on-land portion of the pipeline measures 36-in. in diameter.

The submarine line was coated with a special concrete mix. By September 1974, the underwater line was in place, with only one major incident having occurred. A typically rough North Sea storm had damaged one section during laying. It was subsequently replaced. The project continued on schedule. Then, again because of weather, the difficult final linking of the line underwater was delayed over one month, waiting for ideal weather.

The onshore portion of the line was simple by comparison . . . by comparison to either the underwater segment or the trans-Alaska pipeline. The right of way was less than 20 feet wide and the temporary work area only another 40 feet. Here weather was not a problem and the line was buried conventionally, as only a portion of the Alaska pipeline could be. The 36-in. diameter onshore pipeline was coal-tar-enamel coated and fiberglass wrapped, then laid in a six-foot deep trench. The onshore line was completed early in 1974, having been placed at up to three miles per day at a cost of $700,000 per mile.

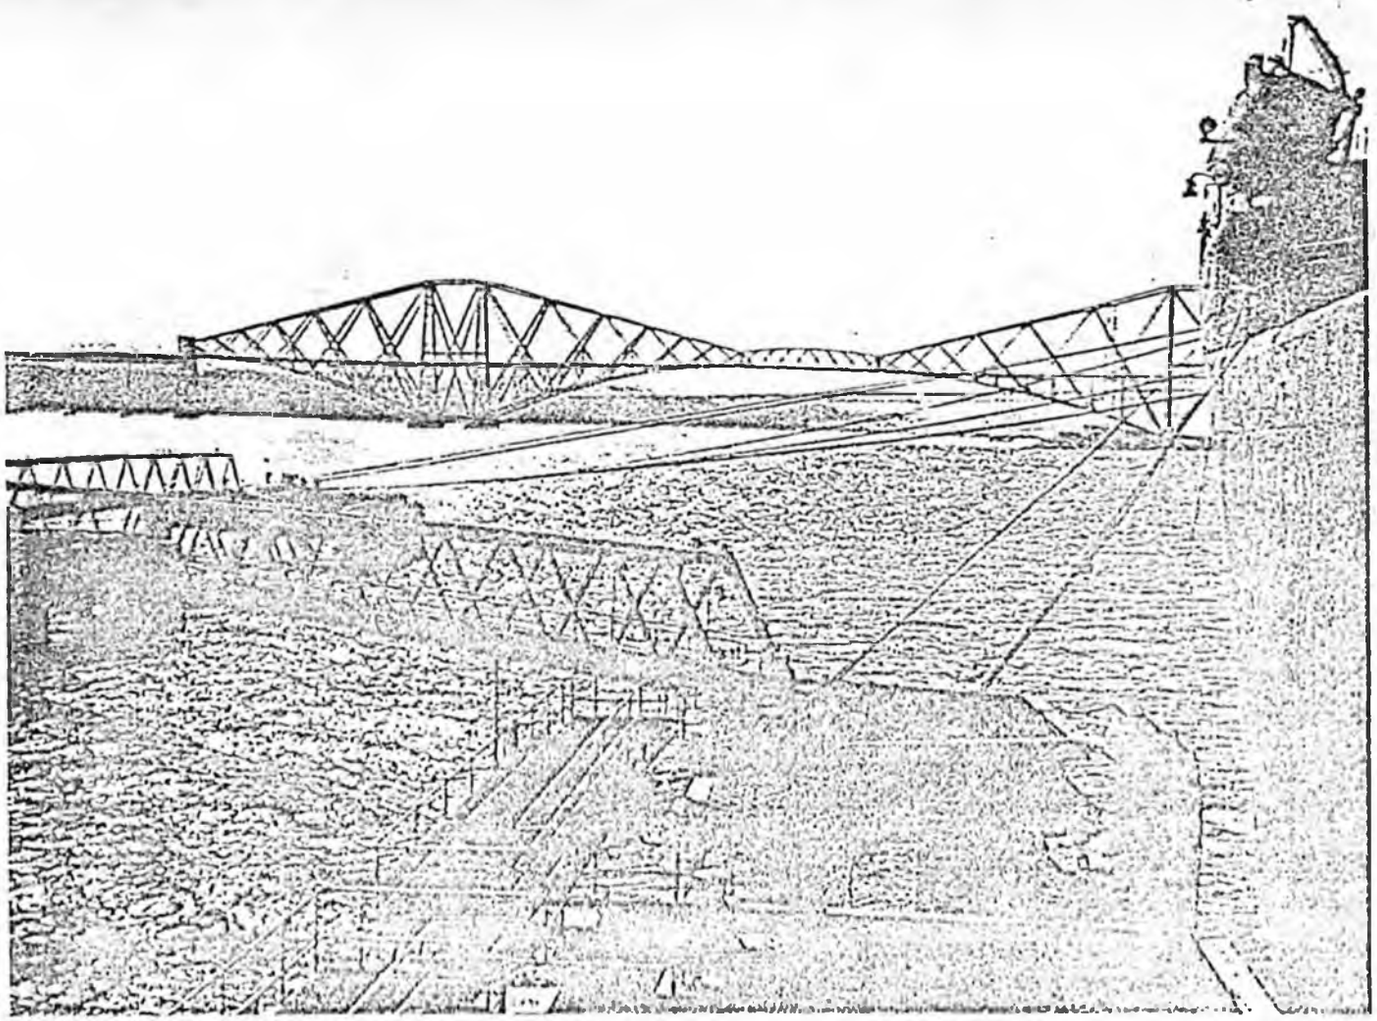
There are alarm systems and check valves built in every 10 miles, and driving through the area now the casual observer would be unaware of the line's existence. If full, the line would contain approximately 1.4 million barrels of crude. Once the oil reaches the refinery, the similarities to the U.S. are even more obvious. Oil and gas are separated as they are at the Slope in BP and ARCO gathering and flow stations.

Another structure of significance was built at Cruden Bay. This is where the 21-in. diameter underwater line meets the 36-in. diameter overland (or more accurately, underland) line. Two surge tanks were erected there, to avoid shutting down the line completely in the event of any problem. This way, oil could be diverted for a couple of hours if necessary. Flow in the line can be stopped almost immediately, but start-up takes a full day. The tanks, but nothing else, can be seen at Cruden Bay. The line winds innocently under the area, including a stretch that runs next to the local golf club.

FROM PIPELINE TO REFINERY TO TANKERS

BP already had a large tanker terminal in western Scotland, but using it to serve the Forties Field would have meant construction of another long and costly pipeline. The problem—again similar to the situation in Alaska—was to find a suitable site. It had to be downstream from the large Firth of Forth bridges, yet not too near the more than half-million people of Edinburgh. Tankers would be needed to take the crude to other refineries, since only one-fourth of it would be handled at Grangemouth. Hound Point was selected. The name is reflective of typical Great Britain history. A faithful dog there is said still to mourn his master, who was lost in the Crusades of the 12th century.

The Hound Point terminal, and the Dalmeny tank farm inland from it, are amazingly unnoticeable, despite their close proximity to Edinburgh. The site selected for the tank farm was already environmentally impacted. A half-century earlier the area was a thriving shale oil mining site and was scarred with a huge "bing," or spoil heap. In July 1973, the construction began. The project required dozing and rearranging 2.5 million cu. yd. of the spoil. Today, the site looks more like a landscaped industrial park than a tank farm of such magnitude. It is clean and aesthetically pleasing. Grass covers the area, as do 55,000 trees and shrubs . . . and nettles. The 93-acre site is less than four miles inland from the tanker terminal and just 10 miles from the heart of Edinburgh; yet it is isolated. Coming around a curve in the road, there is a



View from the Hound Point tanker terminal near Edinburgh. At the right is the stern of a tanker being loaded. In the distance are the twin Firth of Forth bridges; the nearer one is the old steel railroad structure.

fence with green hills behind it. After a few more turns up the private road, the tanks seem to jump out. The area is landscaped to blend in with the surrounding countryside. The tank farm was built to be functional and unobtrusive; it is the latter, and BP says it is the former, as well.

The tank farm sits 165 feet above the sea level of the tanker terminal, so loading all can be done by gravity flow if desired. Pumps are present for faster ship loading when needed. The entire plant can feed a tanker at up to 15,000 tons (7.5 bbl. per metric ton) of crude per hour when employing the pumps. The tank farm includes not only the crude tanks, but ballast facilities as well. And a 250,000 dwt supertanker can be turned around in just 24 hours, including off-loading and treating ballast. This time is exactly the same as it will take to deballast and load a crude tanker at Valdez.

The Hound Point tanker terminal is not owned by BP, but leased to the oil company by the Forth Port Authority. The "W" shaped maze of valves, pipe and steel sits in 78 feet of water and stretches a quarter of a mile in length. The terminal, while its actual capacity could be more, is to be used for an average of three tanker callings per week—one super and two smaller tankers.

The tank farm and terminal have served their purpose, and in fact have helped bolster the local economy, according to Ron Findlay, BP spokesman at Grangemouth. But the effects have been subtle, as intended. On the environmental side, the tank farm is well hidden, as we have said, and it is revegetated so well that sheep have been brought in to graze on the site. Any visitor to the area would be totally unaware of the tank farm and likely would miss the tanker terminal as well; the twin Firth of Forth bridges are far more impressive and offer an interesting contrast: the old steel cantilever railway bridge and the newer automobile suspension bridge.

Some residents there are less than happy with the results of the oil development, however. This comes back to the political situation mentioned earlier. One resident summed up the situation: "Oil is like everything else," he said. "We export more whisky than anyone else in the world . . . but we never see the money. Oil? We won't see that money, either. Nothing for Scotland. That bridge is like your Golden Gate Bridge, but you know how long it took us to get the money?" And one shopkeeper added simply, "we don't see any extra money from it."

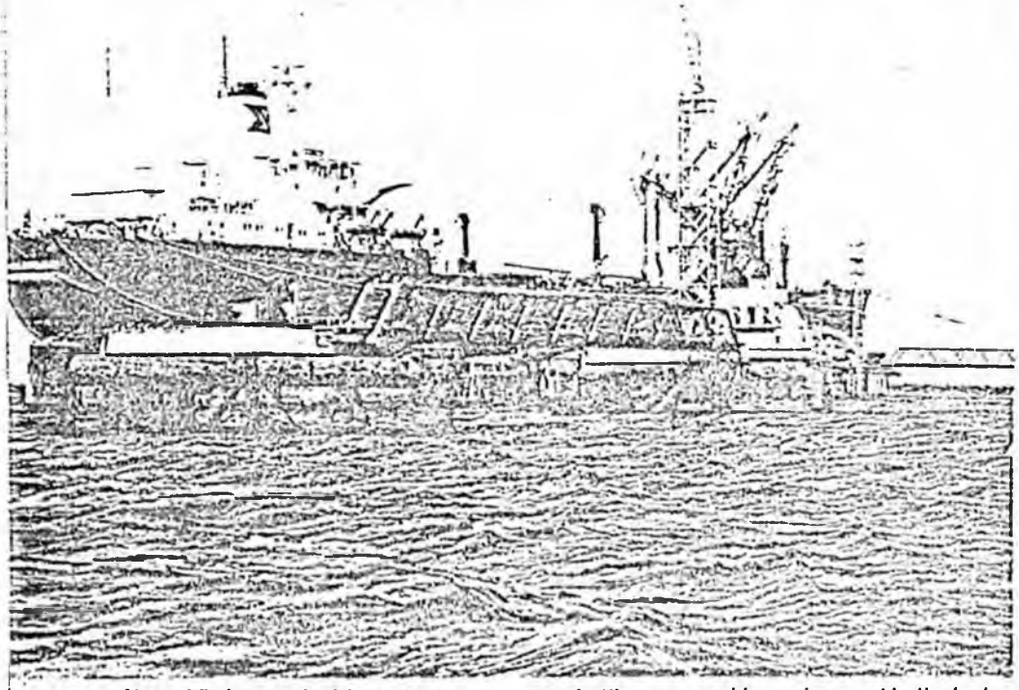
Edinburgh is hundreds of years old, a city with more people than the whole of Alaska. The oil industry is making very small ripples in the lifestyle there. The pipeline in Alaska should have made one thing very clear to Alaskans. Any tanker terminal, ANYWHERE in Alaska, will have a much, much greater effect on nearby communities, both socially and economically.

Also of interest to Alaskans is the difference in scheduling between offshore development and that which is underway at Prudhoe Bay. With the Alaska pipeline, there was a single major field with a single major construction project to serve it.

In the North Sea—and in Alaska's

future—there will be more incidences of construction coinciding with production. For example, the "ultimate" capacity of the Alaska pipeline is 2 million bbl./day; but to handle production as it is scheduled from the planned number of wells and known reserves at Prudhoe, the actual capacity will be more like 1.5 million bbl./day. This figure is based on the production that should come from the Prudhoe Bay structure as it is planned to be drilled. In addition to four pump stations needed to bring the line to full capacity, other structures in the North Slope area would have to be tapped to increase the throughput to 2 million bbl./day.

In the North Sea, plans call for exploratory drilling to be ongoing with the construction of new facilities needed to keep pace with anticipated discoveries. As new wells are sunk, onshore facilities are increased. In Alaska, the pipeline is a more singular project, but the added pump stations could come if these other structures are tapped in the next few years. On the longer term, of course, would be activities in the Beaufort Sea, which also could feed the line.

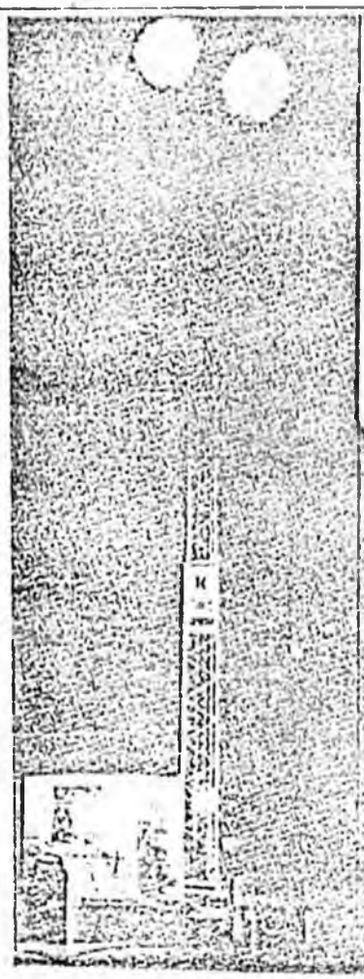


Hound Point terminal from the ferry used to shuttle personnel from shore out to the tanker terminal. The cantilever-like structures near the front of the vessel are the offloading booms feeding crude to the tanker at the time this shot was taken.

THE SHETLAND ISLANDS

The Shetland Islands are like the small communities of Alaska and Sullom Voe is the Valdez of the North Sea. While all of Alaska is isolated, Shetland is somewhat unique to the U.K. Remember that Great Britain has a land mass roughly equivalent to the state of Oregon—just a small

HAVE LIGHT WHERE AND WHEN YOU NEED IT!



OUR MOBILE LIGHT TOWER GIVES YOU FOUR 1000 WATT LIGHTS...WHEREVER NEEDED!

Self-contained, sturdily built, job tested, performance proven, these enclosed trailer units are assembled with quality materials and workmanship throughout. Enclosed cab deters theft and vandalism. The telescoping sectional tower is constructed with strong air-craft tubular steel for long life and low maintenance.

STANDARD SPECIFICATIONS INCLUDE:
• Fully enclosed, lockable cab • 4 ply nylon tires with automobile wheels • Directional signals and tail lights • Adjustable screw type, tongue jack with wheel • Two inch ball safety hitch • Tower and lift winches with safety stop • Monocoque frame construction • Telescoping tower — aircraft tubular steel • Stabilizing outrigger bars with jacks • Heavy gauge sheet metal body construction • Fuel tanks — ballasts — battery located in cab

island in comparison to Alaska. Scotland is densely populated in only a few areas, but compared to Alaska, there are people everywhere. The Shetland Islands are nearly 700 miles north of London, and 185 miles above Aberdeen. Aberdeen, like Edinburgh, is old, but smaller, with less than 200,000 people. It is the main transport point for North Sea personnel. But because it is so old, and relatively large, the impact of the oil industry has not been what it will be on the Shetland Islands or on Alaska.

In Shetland, the feelings are much like those of Alaska. A feeling that the less than 20,000 residents there (only 3/100 of one percent of the U.K. population) are isolated and ignored. Even Alaska can boast a larger percentage of the U.S. population, an overwhelming 1/5 of one percent. The size and isolation of the area and the feeling of Shetlanders should be familiar to Alaskans.

THE SULLOM VOE TERMINAL

Sullom Voe is more isolated than the facilities at Edinburgh, and not just because everything in Shetland is remote. It is even isolated to those living in the islands. It sits just beyond the remains of a World War II air base. It is hardly small, but to be an eyesore, someone has to be nearby to see it.

The closest town is Lerwick, 25 miles down the narrow road; it is also the only town in Shetland, boasting about one-third of the islands' population. The most recent census of 6,100 does not reflect the oil industry, which has increased the town's population by perhaps as much as 25 percent. And another 25 miles from Lerwick is the Sumburgh airport, at the extreme southern tip of the main island. Beyond Lerwick, the rest of Shetland's population lives in a few scattered villages and on farms. Anyone who enjoys the countryside or quiet solitude of Southeast Alaska couldn't help but enjoy the Shetland Islands. But Shetlanders don't necessarily like the oil industry. This is not to say that it is resented; it is accepted, at the least. Still, despite the smallness of Shetland and the largeness of the oil development, the impacts seem remarkably few, either positive or negative.

This level of impact should be interesting to Alaskans. We have already mentioned the isolation, with which Alaskans surely can identify, as well as the feelings that perhaps too many of the economic benefits are reaped at the national rather than local level.

The accompanying article in this issue on development in the Yakutat area should be read with Great Britain in mind. The problems and development in Great Britain and Yakutat offer unique insight into one another, enough that we felt the subject warranted a separate article. In Shetland, development is far beyond the exploration underway in Yakutat; but it is what has been learned in this activity that we hope can help in guiding the activities in Alaska.

The Shetland project, exclusive of other North Sea work to the south at Edinburgh and in the Forties Field, totals approximately $9 billion, thus far. This includes $7 billion for offshore platforms and field development, $1 billion for pipelines and another $1 billion for the terminal itself. The Sullom Voe terminal "will be Britain's biggest oil port, and is designed to be a tangible expression of co-operation between the Shetland Islands Council and the oil industry," according to BP. In a local paper, Ian Clark, chief executive of the Shetland Islands Council (the local political body) was quoted as saying that "what is surprising is not that difficulties have arisen but that there have been so few!"

The environment has received prime concern from BP. While the Cruden Bay-to-Grangemouth line discussed earlier was larger, the conventionally-buried lines at Shetland were placed with the same care. Of particular environmental interest is the countryside in general: the roadways could not accommodate a pair of typical American sedans side by side. And the paved roads that wind through Shetland with sheep grazing only a few feet to each side are off limits to all construction vehicles. The large trucks simply were not allowed to service the site from land. All shipments—from machinery and cement to steel and food—had to be hauled by sea and delivered at a dock at the Voe. To the farmer or shopkeeper living somewhere between Lerwick and Sullom Voe, just looking out the window would not reveal the presence of a billion-dollar construction project so near. And since crews are shuttled north from Aberdeen by plane, then directly to rigs by helicopter, there is no booming bed and bar business.

One of the two pipelines coming inland in the Shetland Islands is shown here. The line is all conventionally buried in Shetland and from this work, one would hardly guess the magnitude of the project. The pipeline will carry half the oil that arrives at Sullom Voe when the terminal comes on line, but to the casual observer, this work might look like little more than a new irrigation line being placed on a Scottish sheep farm.

THE PIPELINES TO SULLOM VOE

The pipeline out to the Ninian Field is impressive, even if the onshore portion is short—just 17 kilometers. The 36-in. steel subsea line was laid at the rate of one mile per day in the midst of 30-ft. waves. The Ninian line comes inland at Grut Wick and the second 36-in. steel line, from the Brent Field, comes inland at Firth Voe.

The Ninian line runs 103 miles to Grut Wick on the Lunna Ness, where the coastline out to sea is very rugged, dipping to 270 feet below the surface just a half mile offshore. The Brent Line is only 10 miles shorter, with connecting lines bringing crude from other fields in the area. Because of the rough sea floor, gravel was dumped along the route to provide a soft bed for the line.

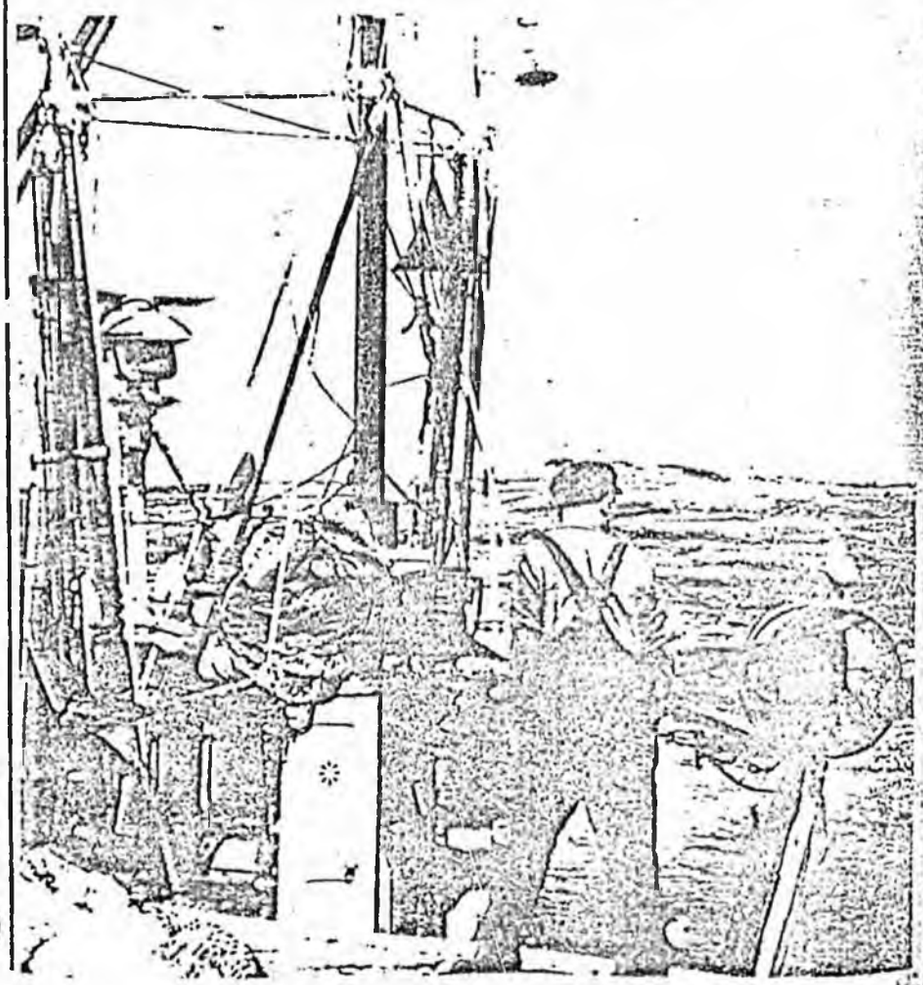
The Brent Field was discovered by Shell/Esso in 1971, starting the oil industry on its way in the northern areas of the North Sea. Considering how much development has taken place since then, and comparing it to the 1968 Prudhoe Bay discovery, a lot has been accomplished in a very short span of time.

After the Brent discovery, four other fields were found in subsequent years, with the Ninian field (the other major one in the area) being the fifth discovered. There is oil industry speculation that other fields could eventually lead to more pipelines into Sullom Voe.

Sullom Voe, a 1,200-acre complex, is to be operational in 1978, but by no means complete. The initial stage of operation will have the terminal receiving 800,000 bbl./day of crude, with 3 million bbl. day scheduled several years in the future. Of the firms involved there many would be familiar to those involved in Alaska oil: BP, Chevron, Conoco, Gulf, Shell, Esso, Amoco, Amerada, Mobil.

When Sullom Voe is completed, it will be the largest oil terminal in all of Europe. Interestingly, the senior project manager for the terminal is David Henderson, a BP engineer who formerly worked in Alaska. By the time his work is completed, the terminal will be handling tankers up to 300,000 dwt and as

The fishing fleet has always been a mainstay in Lerwick, and even though it is smaller than in previous years, fishing will likely outlive oil in the Shetland Islands.

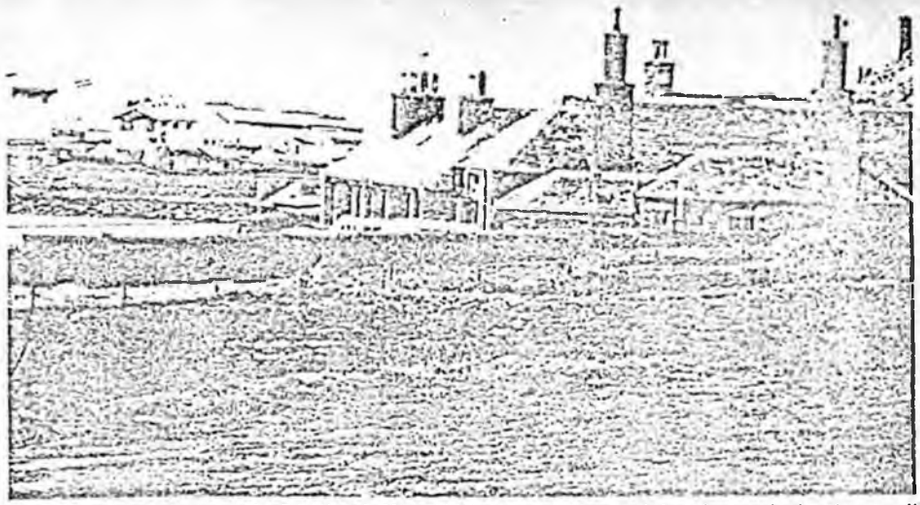


many as 1,000 vessel movements per year. Like other facilities mentioned here, Sullom Voe is not privately owned. It is a 50-50 arrangement between the Shetland Islands Council and a consortium of over 30 oil companies.

Unlike those at Valdez, the crude storage tanks at Sullom Voe will have floating roofs and each of the four tanks currently under construction will have a 600,000-bbl. capacity. The total capacity will be expanded in later phases of construction. Ships docking at the terminal will berth at one of two jetties. Number One will accommodate tankers from 18,000 dwt to 120,000 dwt and Number Two will handle the larger vessels, ranging from 50,000 dwt to 300,000 dwt. The smaller of the two jetties will also handle dockings by liquefied gas tankers. A third pipeline is being built in the area as well; it will run from the Brent field south to St. Fergus, near Peterhead on the mainland of Scotland. It will carry 500 million cu. ft. per pay of natural gas.

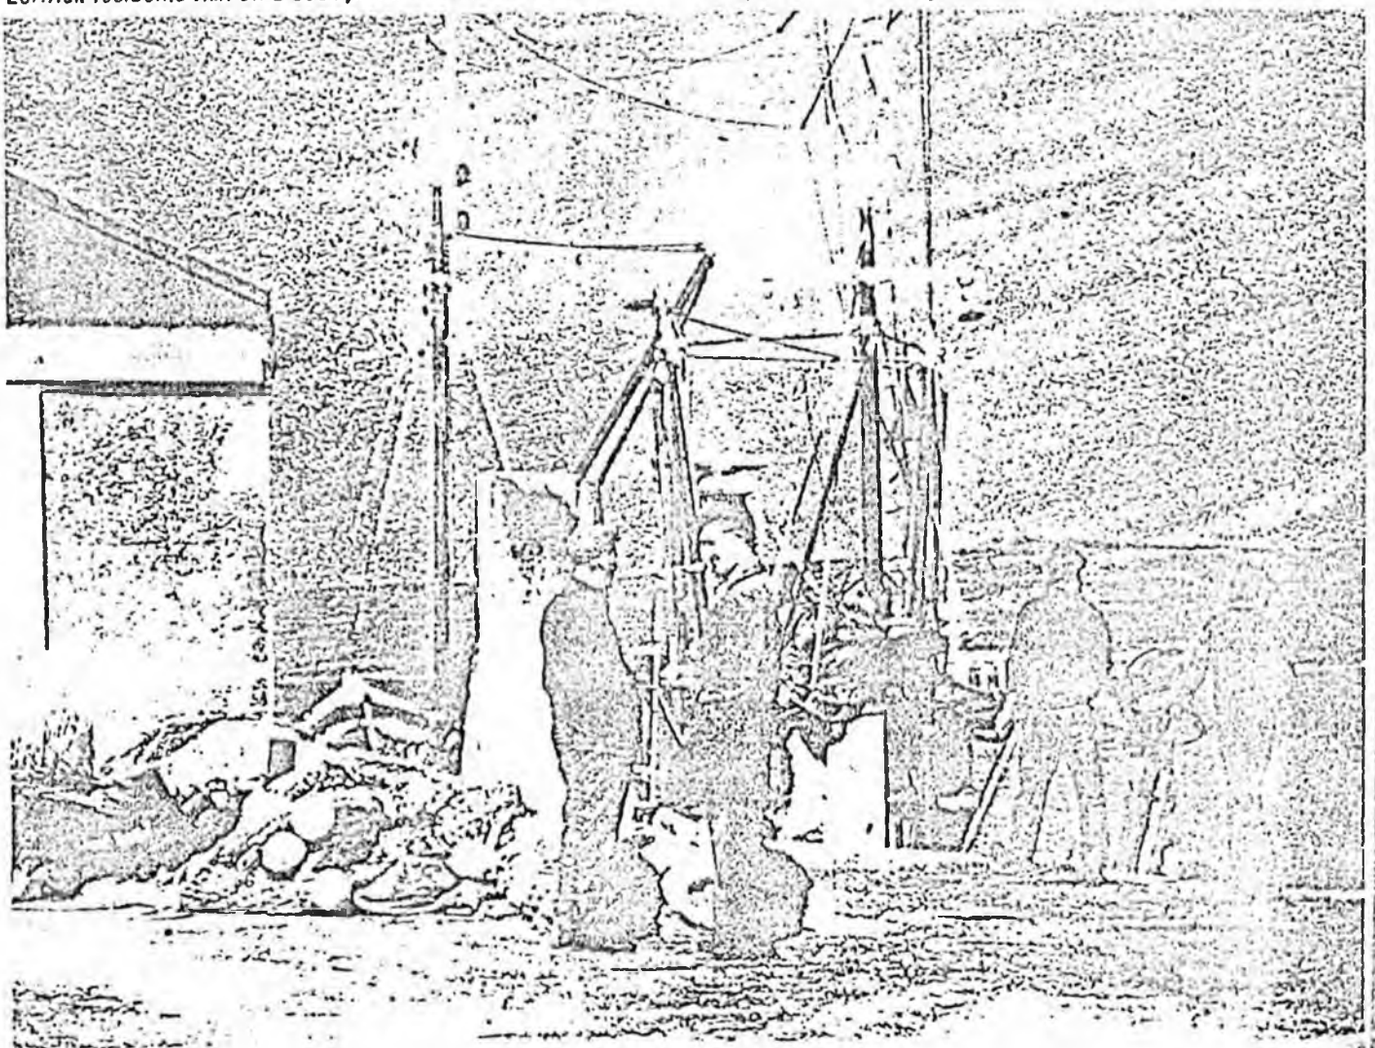
Peat in this area of the world is quite common, but disposing of the large amount excavated at Sullom Voe was not easy. JMJ, earthmoving contractor on the job from Northern Ireland, moved several million cu.yd. of the material—used there for home heating—on the site; it was used as fill in nearby Orka Voe, an inlet just east of the terminal. One of the important factors on the job was coordination. With nearly three dozen firms involved in the consortium building the massive facility, often as much as six weeks was needed before each phase of work to ensure approval of all of the oil companies. While BP has been designated project manager, there is no separate company formed by those involved, such as was done by the pipeline owners in the formation of Alyeska Pipeline Service Co.

The list of equipment operating at Sullom Voe to accomplish this big



Lerwick, the only town in Shetland. The 1971 census showed 5,100 people in the small community; forty years earlier there were 5,500 living here.

Lerwick residents visit on a dock just a block from the commercial street, closed as it always is this Wednesday.



earthmoving task is impressive . . . and familiar to U.S. construction personnel. Caterpillar equipment dominated, including the following:

Dozers,
D4s through D9s.....16
657 Scrapers.....6
End dumps.....19
Excavators.....8

Other equipment on the job included much of European manufacture, as well as some from this country. Among these were a pair of Massey-Ferguson dozers and two each Hyster and Dynapac compactors.

The "average" size vessel calling at Sullom Voe is estimated to be in the 100,000 dwt class. Each ship will be met by a qualified local pilot to guide it into port. Tugs will steer the tanker in and after safety and anti-pollution checks, it will be allowed into the terminal entrance channel for deballasting. Loading rates will be 25,000 to 30,000 tons per hour.

An interesting Alaska-U.K. comparison is the size of the Sullom Voe facility in relation to Valdez. Assuming 1.5 million bbl./day throughput for the Alaska pipeline in 1980, Valdez will be handling about 7 percent of the U.S. projected consumption of 21 million bbl./day. On the other hand, Sullom Voe will be handling 40 percent of Great Britain's domestic need. And by 1980, total North Sea production is expected to fulfill 100 percent of the U.K.'s needs. Both Alaska and North Sea resources are, of course, finite, while demand often seems infinite. The North Sea fields currently being developed are estimated to have a producing life of 25 to 40 years.

In Shetland, residents will be assured of at least one positive impact from this oil development. Somewhere between $70 million and $175 million is to be distributed to local industries as reimbursement for the disturbance caused by the oil industry. Other effects already have been felt.

The fishing fleet has dwindled, but the economy is stronger than in recent years. But one Lerwick resident asked AC&O rhetorically, "What will we do when the oil industry goes . . . ?" It does not seem unreasonable that perhaps 40 years from now life will not be all that different in Shetland than it is today, or as it was 40 years ago. If the several thousand residents of Shetland had wanted another way of life, they would have changed the area before the oil industry arrived or they would have moved elsewhere. In 1931, for instance, the official census of Lerwick was 5,538—little different from the present. Naturally, those that own the small hotels or that drive the taxis are glad to see that business is better. But no Hilton or Sheraton is going up to rival the Kveldsro or Lerwick hotels; each is small, with a restaurant and bar where residents go for an evening out.

A college student in her twenties saw more good coming from the growth of industry there. "There used to be one flight in and out a day," she said. "There are close to 100 now." That figure includes the helicopter flights to the platforms but still it reflects the obvious change in the small airport. "Young people have not had much opportunity here, you know," she went on. "You could teach . . . or work in a shop . . . or be a fireman," she said. "Otherwise you had to leave Shetland. Now there are other things to keep the younger people with an education from leaving." And that viewpoint is part of what seemed fairly universal there: living in Shetland because one likes

Shetland, a pride in being a Shetlander—not wanting to leave. It is that same camaraderie one sees in Alaska.

The hotels do receive more business because of the oil industry, no longer relying totally on seasonal trade. But as we said, there has been no rash of construction to meet a demand by industry people. Houses are another story, however. "It's hard to find a home for sale," one man related, but again, not solely because of the industry. "Most farms have been handed down from generation to generation and you can't just go buy one." His farm was small by Shetland standards: 40 acres, a couple dozen sheep. He has lived in Shetland all of his 40 years, driving a taxi for wages. "My wife takes care of the house and garden," he said. Then remembering what outsiders, even outsiders from as near as London, had written, he added that "newspaper people come up here, spend a day and think they're experts on Shetland. They see a farm like mine and look around here (the road from Sumburgh to Lerwick) and then go write about the poor potato farmer and the barren islands with no trees." It's not unlike what happens when uneducated politicians or journalists come to Alaska and produce "exposés" on the crime or describe Alaska as it was when Jack London wrote about it.

A painter enjoys the cool wind and scenic waterfront of Lerwick.

Visibly annoyed, the taxi driver continued, "Sure, I've got potatoes, and I dig up just what we need to cook for dinner each night. But I'm not a potato farmer. And I slaughter a sheep or two each year for food, but that's all. I drive a taxi every day, and work on my farm the rest of the time. There's a lot we don't have here... one television station, no nightclubs...." But that's why Shetlanders live in Shetland. He smiled a bit and added: "I could drive you to one of the most beautiful places you've ever seen," motioning over the rolling hills. "We've got trees here; there's a place over there where they bend over the road and come together. You can drive under them and not even see the sky." But it all depends on who is doing the looking; a lot of people would find Alaska unattractive or boring, too.

One can learn a lot during a 25-mile taxi ride, and besides the education, the price compares well, too. It costs under $10 from Sumburgh to Lerwick, about the same as from Juneau to the airport there, which is only nine miles. And in Lerwick gas is twice the price as in Alaska. But Shetland prices have nothing to do with the coming of the oil industry. Gas was expensive and taxis cheap before anyone decided to build the Sullom Voe terminal.

"BUILT LIKE A MACK TRUCK. . ."

MACK

. . .IT'S PART OF THE LANGUAGE IN ALASKA—AND NO ONE ELSE BUILDS A TRUCK FOR THE CONSTRUCTION AND TRANSPORTATION INDUSTRIES THAT'S AS TOUGH AND DURABLE AS A MACK!

Mack vehicles do virtually any kind of work, do it well and reliably, and in nearly any kind of terrain, off-highway or over the road.

Depend on ALASKA MACK for all your truck needs, one at a time or by the fleet. ALASKA MACK is backed up by sales, parts and service to match the growth of Alaska.

Some prices do reflect the oil industry. House prices, because supply is low and demand high, have gone up considerably. "If the oil company wants them, they'll pay any price," one person said.

With a large work force at Sullom Voe, the effects have to be felt. There are over 1,000 w[illegible]ers at the site now; that number w[illegible]peak at 2,800 by late 1978. But they have Shetland's second largest "town," the construction camp at Sullom Voe. Like those in Alaska, it has a cafeteria, television rooms, tennis courts, the excellent camp food and something not one of the pipeline camps can offer: liquor.

One company helping to see that crews are well taken care of in the North Sea is quite familiar to Alaska, as well: Universal Services. USI, well-known for feeding and serving Alaskan pipeliners, began its North Sea work in 1965. The firm had grown so much that in 1972 it opened an office in Aberdeen. The following year, Universal Services Inc.-International set up its headquarters for North Sea operations in Edinburgh. As in Alaska, USI employs mostly locals for its operations, which include Sedco, Santa Fe International Service, Transworld Drilling, Penrod Drilling Company and Zapata North Sea, Inc., as clients in the North Sea.

Besides the well-known ponies, sheep are even more prevalent in Shetland. There is also arctic wildlife like that found in Alaska, such as the brightly-colored puffin. And the environment is well cared for according to a local newspaper, which said that the oil industry has drawn "on (its) accumulated experience in environmental care and research from the island of Britain to the delicate tundra of Alaska" to ensure that no damage is done during construction.

The environment in Shetland is unique to Great Britain just as Alaska's is to the U.S. The climate in Shetland, despite the northern latitude, is relatively mild, aided by a gulfstream. Snow is uncommon, as is extreme cold; but fog is another story. It can lay in patches all day in one valley, yet be conspicuously absent only a mile away. This is onshore, remember, as once one travels the 100 miles to the oil fields, Alaska-like ice, snow and cold accompany the rough waters.

At Sumburgh, there might be excellent visibility and sunshine at noon, only to have the airport socked in by that afternoon.

NORTH SEA TRANSPORTATION LINK

And when the airport is socked in, crews go nowhere. It used to be that talking of offshore rigs conjured up visions of rough seas and small boats carrying the seasick crews. The seas weather and temperament of the seas haven't improved over the years, but transportation has. Today, supertankers carry the crude and massive helicopters carry the crews.

In 1975, nearly 200,000 passengers and 1,000 metric tons of supplies were carried from Aberdeen and Sumburgh to the northern North Sea platforms by helicopter. This total is exclusive of the lifts done in other areas of the North Sea, and the freight figure refers only to small items carried along with crews. The big lifts of supplies and million-pound items is done by ship and barge. But the passenger figures are impressive, and when the totals are released for 1976, the figures will be much higher.

The oil workers are hauled predominantly by two firms—Bristow Helicopters and British Air-

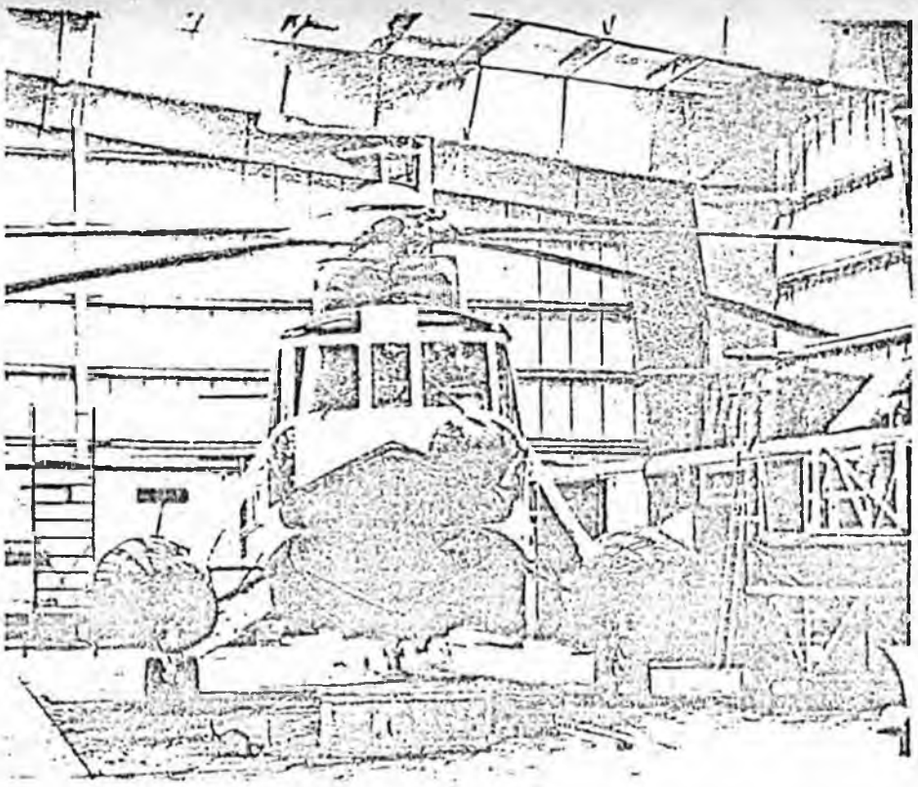
ways Helicopters. The latter is a wholly-owned subsidiary of the large airline with the same name, but is a totally independent operation. Together, they have made Aberdeen the busiest heliport in the world. The two companies' investments in Scotland are approaching $100 million. In 1975 pilots for the two firms logged 36,000 hours of flying time out of Sumburgh and Aberdeen. The totals were higher in 1976, as well, but complete figures were not yet available as we went to press.

The weather at Shetland can change as rapidly as anywhere in the world; but when it changes before a chopper is in the air, it is no problem for the pilot. He either flies or he doesn't. It does cause immense logistics problems for the companies trying to get crews and supplies to and from rigs. The danger from the pilot's point of view is that a weather window may open to fly and be gone before the flight is completed. To put the area in perspective, the drilling platforms are roughly 100 miles out of Shetland, or halfway to Bergen, Norway. Flights to the rigs often have unscheduled stopovers in Bergen due to weather.

Brian Johnstone, in charge of scheduling and flight control for British Airways Helicopters at Sumburgh, told AC&O that the problem is compounded when the weather forces a helicopter to Norway. "We have no aircraft for the next group out," he said. Robin Zingel, manager of the British Airways Helicopter operation at Sumburgh, reiterated the problem. "We're stretched so thin ... we could use two more aircraft right now." When the airport is socked in or a flight is delayed by weather, the small airport is jammed with crews waiting . . . and waiting. The back-up is a constant problem, as every oil company is obviously anxious to have its crews on the rigs working rather than sitting in an airport waiting.

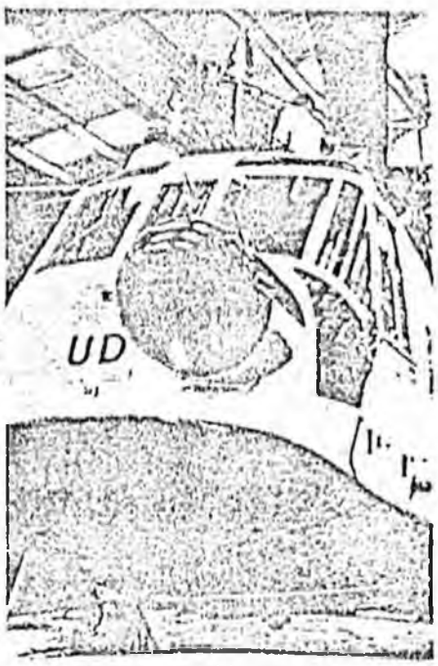
The growth of the helicopter service in the area has been tremendous, but that is to be expected with this type of development. It is the same effect that has made Anchorage and Fairbanks two of the fastest growing major airports in the world.

The mainstay of both Bristow and British Airways fleets is the big Sikorsky S61N. The reliable aircraft is used by the British Navy and in normal passenger applications can haul 25 passengers. In the North Sea, however, heavy freight cargoes and safety requirements in the rough weather cut the number of passengers to about 22 per flight.



Having been serviced, this British Airways helicopter is ready to go back to shuttling crews out to the rigs, 100 miles from Shetland.

As the industry has grown, so have the carriers. In 1971, for instance, British Airways had a single aircraft servicing the area. British Airways now has five of the big Sikorsky aircraft each at Aberdeen and Sumburgh. Bristow runs only one to three out of Sumburgh, but has a fleet of 15 at Aberdeen. The companies utilize smaller aircraft as well, but the S61N is the workhorse of the North Sea oil industry. Sikorsky passenger helicopters and sky cranes are already in use in Alaska, and the S61N obviously could play a large role in the coming offshore industry in the 49th state.



The easily-recognizable nose of a Sikorsky S61N, the main mode of transportation to and from North Sea oil platforms.

There are a total of 150 pilots flying out of the two airports, with some 400 ground personnel employed for support. In the past three years, British Airways Helicopters' operation, nearly all of which is serving the North Sea oil fields, has grown from six to 18 aircraft and flying time has tripled, as well, Zingel told AC&O. There are 83 pilots in the firm. At Sumburgh, Zingel said an average of eight or nine British Airways Helicopter flights are scheduled daily, accounting for about 80 percent of the company's flying time. The remainder is taken up with special charters and unscheduled runs to the oil platforms.

The S61N has a built-in safety feature for use in such rugged conditions. It is a twin engine aircraft, so there is always back-up power if one engine fails. The helicopters are equipped with the latest navigational aids, and are also used in North Sea search and rescue operations. The search and rescue work is in conjunction with the British government, and ensures safety in an area where conditions can be extremely dangerous.

Anch Times Feb 16, 1977

Stevens Cites Directive To Speed Offshore Leasing

The Anchorage Times

Congress has directed the Interior Department to accelerate offshore oil and gas leasing, Alaska's Sen. Ted Stevens said yesterday, and since 70 per cent of the nation's outer continental shelf lies off Alaska's shores, "the question is where and when and under what conditions."

Stevens, here for the congressional recess, said it shouldn't be surprising that Interior Secretary Cecil Andrus canceled the lower Cook Inlet lease sale, which was scheduled for Feb. 23 by his predecessor.

"He (Andrus) wanted to make the decision himself," Stevens said. "The first thing that happened after he became secretary was to be sued over his predecessor's decision (to hold the lower Cook Inlet sale). If he was going to be sued, he wanted it to be on the basis of his own decision.

"What he will do, I don't know," Stevens said. "But I don't think we ought to overreact to his (Andrus) acting in a rational manner.

"I still believe that lower Cook Inlet oil development ought to go ahead under safeguards for the fishing industry and for protection of the total environmental area there, including Kachemak Bay and others.

"But I think we ought to recognize the secretary must be in a position to personally defend the order (for a lease sale)."

Stevens said there are strong forces in the Congress which believe that the development of the outer continental shelf has been delayed by industry waiting for oil and gas prices to change and trying to create a false shortage.

"I don't agree," he said. "I don't think people realize the complexity of outer continental shelf development. Most don't realize that 70 per cent of it is off Alaska. I believe they are going to get a little bit better educated. Every year, members of Congress who have been there a while sound more reasonable. But when we just get someone to the place he understands the problems, he either retires or gets defeated for re-election.

Towboats Slice Mississippi Ice

ST. LOUIS (AP) — For the first time since Jan. 19, the Mississippi River has been opened to commercial traffic, the U.S. Coast Guard announced.

Towboats succeeded in breaking up ice above Cairo, Ill., and the channel between there and St. Louis was 300 feet wide and nine feet deep in most places, officials report.

Officials warned there were still some obstacles such as sunken barges that could present a hazard to navigation.

HB 219

(OUTER CONT. SHELF RESOURCES)

#2

MERITS OF HB 219

1. Places municipalities in the driver's seat for any OCS-related shoreside development.

2. Creates a land management tool which is applied statewide and thus is not a disincentive to development.

3. Provides money to finance costs of local planning not presently covered by CEIP or other grants.

SHORTCOMINGS OF BILL AS CURRENTLY WRITTEN

1. Local approval or veto of a proposed facility need not be consistent with existing local or State plans.

2. Standards for permit evaluation are not specified. No procedural or substantive rights of developers are enumerated or protected.

3. HB 219 is not tied to the Coastal Management Act and its requirements.

4. Three years advance notice of construction plans may not be feasible in all cases.

SUGGESTED IMPROVEMENTS

1. To limit potential arbitrary uses of local approval or veto of a proposed facility by:

a. Requiring municipal decisions to be consistent with existing and emerging plans and policies under the Coastal Management Act;

or b. Establishing decision guidelines in the bill to ensure that a municipal approval or veto is to protect the public welfare and is consistent with Coastal Management policies;

or c. Grant municipalities the power to suspend a permit application for one year while a Coastal Management program is written.

Each alternative should clarify the procedural rights of the developer.

2. Make the advance planning requirement more flexible so that developers will not be penalized by changes in their plans caused by forces beyond their control.

July 5, 1977

I. Summary of HB 219

The onshore facilities construction permit bill was proposed in the Tenth legislature - First session by representative Parr and eighteen others. It is designed to provide municipalities affected by offshore energy development with a means of exercising control over the location and public costs of OCS related onshore development.

Under the bill, each facility must obtain a permit prior to beginning construction. Permits cannot be issued without local approval from the municipality where the facility will be located. Thus, local units are given a bargaining tool which can be used to negotiate over the location and types of OCS related facilities. If negotiation fails to satisfy local needs, municipal denial of project approval will bar issuance of the permit and prevent construction of the facility in that municipality.

Permit fees generated under the bill are to be used to plan for and minimize the public costs of the OCS related onshore development. Fee amounts are proportionate to the projected impacts of the facility. (see table 1) At least 50% of the fees will go directly to the municipality where the facility is being built. An additional 45% of the fees will benefit the municipality in the form of state assistance.

This 45% of the fees will be allocated among state agencies and the municipality by DCRA according to their relative responsibilities for the provision of public facilities and services necessitated by the development. State assistance will be in forms of planning, legal expertise, and the direct provision of services such as education, transportation, and health care.

HB 219 proposes two alternative fee schedules. One measure of fees is based on population growth and the cost of government. The alternative measure is based solely on the value of the proposed development. For each facility, the formula producing the highest fee is used.

Using the valuation measure of fees, the amount of revenues produced by a development is related to the size of the proposed facility. Facility value is roughly predictable by the stages of the oil extraction process. During exploration, support facilities on shore will be valued at $10 million or less. Based on a value percentage fee calculation, a $10 million facility would pay $250,000 in fees. (see table 1) If oil is discovered, shore processing facilities will have a much higher value. The very large processing facility at Valdez is valued at $1.2 billion dollars. Fees for a facility that size would be $6 million dollars. Although the scale of the terminal at Valdez represents the largest type of terminal which may be built to service offshore oil, it is obvious that processing facilities will generate large fees. Table 1 gives examples of fees produced by different sized production facilities.

July 5, 1977

House bill 219 provides an important boost to local preparation for OCS - onshore facilities. Developers are required to submit plans to the state three years in advance. This advance notice allows time for local assessment of the project and definition of a local policy in regard to the project. Advance reporting also requires the developer to disclose information which will assist municipal decision making.

Municipalities may use fees paid to cover planning and capital improvements costs. Independent legal assistance, land use and financial planners, and administrative assistance may be paid for out of the fees. Localities can use the planning process to control growth and establish a pattern for evaluating subsequent land use demands.

Status of the bill: HB 219 was not reported out of committee in the first session. Public hearings are being held to explain the bill and provide a channel for local input into the legislative process.

July 5, 1977

TABLE 1

REVENUES THAT THE FEES WILL GENERATE

EXPLORATORY STAGE

IF the facility is valued at $5 million fee = $100,000

IF the facility is valued at $20 million fee = $250,000

Most of the facilities built to service OCS exploration will cost $10 million or less. The assessed value of the service base at Yakutat is $5.5 million as of the first of 1977.

DEVELOPMENT AND PRODUCTION STAGE

IF the facility is valued at $500 million fee* = $2.5 million

IF the facility is valued at $750 million fee = $3.75 million

IF the facility is valued at $1 billion fee = $5.0 million

IF the facility is valued at $1.2 billion fee = $6.0 million

The oil terminal at Valdez will process 1.2 million barrels of oil per day and is valued at 1.2 billion dollars. If the largest possible find is made in the Northern Gulf, shore terminal capacity will need to be 650,000 barrels per day at a value of approximately $800 million. Also a larger discovery in the NOrthern Gulf would require a Liquified Natural Gas terminal with one billion cubic feet per day capacity at a value of approximately one billion dollars.

*These fees for the production stage are calculated at a straight one half percent. If the developer failed to provide three year advance information, the fees would double.

02 001B (Rev. 10/76)

STATE of ALASKA

MEMORANDUM

DEPARTMENT OF COMMUNITY AND REGIONAL AFFAIRS

TO: Members of House Committee
Community and Regional Affairs

DATE: August 9, 1977

FILE NO:

TELEPHONE NO:

FROM: Robert Shoaf
Summer Intern

SUBJECT: HB 219

Our critical examination of HB 219 focuses on a few major topics:

A. Local approval power
B. Prior planning by developers
C. Fee schedule

A. Local approval power

Local approval power and permit fees are the two major features of the onshore facilities construction permit. A permit will not be issued without local approval. Municipalities are not required to have planning and zoning in place to make this local decision. Areas that do exercise land use controls do not have to make their decision inconsistent with existing municipal plans and ordinances.

Regardless of how the permit is classified, the local approval power is regulatory in nature and should be designed to protect private property rights. Private property uses cannot be abridged by government unless the public intervention is reasonably related to public welfare. Traditionally, to prevent arbitrary public intervention in private land use, police power controls established standards for intervention (by planning and zoning) in advance.

The Division of Community Planning feels that local approval power in HB 219 is an essential tool which will enable municipalities to manage OCS onshore development. However, municipal decisions must be directed to protect the public welfare. Furthermore, HB 219 should be coordinated with coastal planning under the Coastal Management Act.

Three alternatives are available to remove the arbitrary nature of local approval.

1. Prior planning

OCS onshore facilities siting decisions will be made in the context of coastal planning under Alaska's Coastal Management Act. Local decisions under HB 219 should adhere to approval District Coastal Management Programs. In municipalities where no management programs have been written, local decisions should be in accordance with any existing land use controls and with the principles and emerging plans of the Coastal Management Act.

It is not certain that District Programs under CMA will produce the type of specific standards needed to guide local development decisions. Additionally, not every municipality may be able to afford adequate, on going planning.

2. Guidelines in HB 219
To guide local decisons and to prevent arbitrariness the legislature can incorporate guidelines for municipal decision making in HB 219. Because of the comprehensive mandate for coastal planning in the Coastal Management Act, these guidelines should mirror the policies of CMA.

Guidelines could require that municipal evaluation of a onshore facility construction proposal consider the environmental, social and economic impacts of the project. Approval of a project could issue when a City Council or Municipal Borough found that these impacts were manageable. For example, a municipality could base its decision in part, on whether or not the necessary supportive public facilities and services will be available when the development is completed.

Evaluation of a proposal will require detailed assessment of the proposal and its effects on a municipality. A third alternative is to structure a municipality's use of this assessment period so that local land use plans are produced to serve as a guide for the municipal decision.

3. Interim Planning
This alternative grants municipalities the power to suspend construction of an onshore facility for a reasonalble time while District Coastal Management Programs are written and implemented. These programs would place the municipal decision in a more comprehensive framework than would the reliance on guidelines. Additionally, the municipal programs would serve as a guide for future management of OCS impacts, and as a basis for ongoing planning.

If a municipality chooses to approve a proposal without suspending construction pending implementation of a District Program, local approval should be based on positive findings that the impacts of the project are manageable.

In this alternative, HB 219 would only serve municipalities who have not yet written District Management programs.

B. Prior planning by developers
The requirement of three years advance notice of construction plans by developers (section 41.45.110, May 28, 1977 version) may not be feasible. Uncertainties not controlled by developers, such as Federal OCS leasing policies, may interfere with their ability to accurately project construction plans three years in advance.

When external factors dictate a change in plans for OCS onshore activities, developers should be able to change their plans without the excessive penalty of doubling the permit fee. To allow flexibility, the advance planning requirement might be reduced to two years, with changes in plans allowed with one years notice, unless waived by a municipality. Additionally, the Department of Community and Regional Affairs should determine what advance information is feasible in terms of progress of lease sales and exploration.

Statutory Language To Structure Municipal Decisions

Alternative 1: Prior planning

"Local approval or denial of a permit shall be in accord with existing or emerging Coastal Management Programs, policies and guidelines."

Alternative 2: Guidelines

"Local permit approval may be granted by a City Council or Borough Assembly if it finds:

a. That the use will not materially endanger the public health or safety if located where proposed:

1. That the municipal water supply will be of sufficient quality and quantity to meet the increased demand attributable to the facility;
2. That the proposed use will not have an unreasonable impact of the coastal environment;
3. That the necessary supportive public facilities and services will be available as the demand for them attributable to the facility increases;
4. That associated land and water transportation will minimize degradation of waterfront uses.

b. That the proposed facility is in accord with existing plans and regulations;

c. That the use will not substantially injure the value of adjoining or abutting property, or is a public necessity;

d. That the use will not unreasonably disrupt the social and economic well-being of the municipality."

Alternative 3: Interim planning

HB 219 should specify whether the decision to utilize the moratorium or proceed immediately will be an administrative or legislative one.

Language to implement alternative three should be placed in a new section of the bill. The new section could state:

"Local Approval of an Onshore Facilities Construction Permit.

"When a developer of an OCS onshore facility requests local approval of its proposal, the municipal assembly or council shall meet to make one of two possible decisions.

"If the assembly finds that the project will be consistent with state and local plans then existing under Alaska's CMA [or consistent with enumerated standards], then local approval may be given.

"If the assembly finds that the proposal is not consistent with these guidelines [or will have a significant impact on coastal resources which is not adequately managed by present planning] or is not consistent with the local health, safety and welfare, then the assembly, by a majority vote, may choose to impose a two year moratorium on the proposal, during which time the municipality shall prepare a district coastal management program (See A.S. 46.35.030) to guide subsequent local decisions.

"If a municipality already has implemented a coastal management program, this section does not apply and the local permit decision shall be made in accordance with the policies and procedures of that plan.

"Once a moratorium is imposed, the municipality should contact the Department of Community and Regional Affairs to make arrangements to locate any funds needed for planning."

local approval power most imp. there of did not dwell on need to change fee structure

PROPOSED OCS PLANNING SCHEDULE

S - Sale

1/ State May Conduct Sale

2/ Within 60 Foot Isobath or Technology Capability

Sales are contingent upon technology being available for exploration and development. A decision whether to hold any of the lease sales listed will not be made until completion of all necessary studies of the environmental impact and the holding of public hearings, as a result of the environmental, technical, and economic studies employed in the decision making process, a decision may, in fact, be made not to hold any sale on this schedule.

Curt Berklund

Director, Bureau of Land Management

Past FY now to come

(1) Preliminary planning for the consequences of new or expanded significantly affecting the coastal zone, including energy facilities

Fed Reg for CEIP

(i) analysis of government or private industry siting policies;

(ii) devising strategies for the public purchase of land or the establishment of other enforceable land-use controls for lands upon or near which energy development is to take place;

(iii) devising methods of protecting environmental resources, as defined in §931.72, threatened by the siting, construction, operation, or expansion of new or expanded energy facilities; or

(iv) conducting risk management studies, hazard analyses, emergency contingency planning and coordination studies, and assessment of mitigating measures for maintaining or improving public safety threatened by the siting, construction, expansion, or operation of new or expanded energy facilities.

(2) Planning for the consequences of a specific new or expanded energy facility significantly affecting the coastal zone, including

(i) study of and planning for economic, social, or environmental consequences of the siting, construction, expansion, or operation of a new or expanded energy facility such as

(A) increased population;

(B) changes in employment patterns, including those in fishing and tourism;

(C) changes in demand for public facilities, public services, and housing;

(D) local price inflation;

(E) changes in patterns of tax and user fee revenues or inter-governmental transfers;

(F) effects on fishing and tourism resources;

(G) effects on beaches, sand dunes, air quality, water quality, or other environmental or recreational resources;

(H) shoreline erosion;

(I) ecological effects; and

(J) effects on public safety.

(ii) conducting analyses required for state or local regulatory decisions related to energy facilities, including licenses, leases, permits, and zoning ordinances;

(iii) performing cost/benefit analyses or otherwise comparing the consequences of alternate energy facility sites or types;

(iv) devising strategies for recovering compensation from appropriate parties for any adverse effects caused by the energy facility involved;

(v) forecasting employment, population, public facility and public service needs and costs, and tax or user-fee revenues;

(vi) planning for the public facilities eligible for financing under Subpart E of this part;

(vii) study of and planning for the secondary consequences, including environmental and economic consequences, of alternative types and sites of public facilities eligible for financing under Subpart E of this part; and

(viii) study of and planning for the consequences of the phasing out of energy facilities.

(3) Carrying out projects necessary to administer assistance under Section 308, including;

(i) collecting data and analyzing information required in §§931.48 (a)(5) and 931.78(c)(4) for environmental impact assessment;

(ii) designing and carrying out an intrastate allocation process as described in Subpart J of this part; and

(iii) paying other reasonable costs of administering assistance under section 308

RECEIVED
APR 25 1977
DEPT. OF COMMUNITY
AND REGIONAL AFFAIRS

Mr. Kevin Waring
Department of Community and Regional Affairs
Community Planning
Pouch B
Juneau, Alaska 99811

Dear Kevin:

It was good seeing you again last week. I hope our meetings on the Coastal Energy Impact Program (CEIP) - both in Juneau and in Anchorage -- were productive and useful from your perspective.

I have read the draft your staff provided me of Alaskan House Bill 219. The permit-fee provisions of this legislation certainly could provide Alaskan communities with significant assistance in planning for and dealing with the effects of new onshore energy and support facilities and I can say with certainty that this proposed legislation would create a useful complement to the CEIP. The provisions of the bill, I feel, would not be duplicative of the CEIP in any way.

By providing credit assistance -- loans and guarantees -- for front-end financing of new public facilities and services needed as a result of coastal energy activity, the CEIP acts in effect, as a source of last resort.

The regulations implementing the CEIP encourage a state or community to internalize the costs of energy development (as HB 219 would). And, since CEIP assistance is largely in the form of loans -- not grants -- the Federal Impact Program creates an incentive for the state or community to charge a private developer with the full costs that the development imposes on the state or community.

As has been emphasized before, the CEIP cannot be used as a complete solution to the energy impact problems of any state, the CEIP is only one tool that can be employed in conjunction with other tools (such as the permit-fee system perhaps) to deal in a comprehensive way with all the effects of energy development.

It appears to us that the provisions of the legislation when used in conjunction with those types of assistance that are available through the CEIP, could go a long way to solving Alaska's energy impact problems.

Sincerely,

Joellyn K. Murphy
Director
Office of Federal Programs

SUMMARY OF TESTIMONY ON HOUSE BILL 219

SHORE FACILITY USE PERMITS

T. M. Matthews
Exxon Company, U.S.A.

My name is Tom Matthews. I am Manager of Engineering for Exxon in Alaska. I appreciate the opportunity to offer comments on the bill before this committee, House Bill 219, concerning shore facility use permits. I would like to talk about the premise of the bill and how that is false and what the real impacts of OCS exploration and development activities are.

The basic premise of the bill is that there are immediate major impacts and demands on state and municipal public services from OCS activities and that no revenue accrues to the state or municipalities affected. A second premise of the bill is that OCS caused demands for public services exceeds revenues even more than onshore energy projects.

I would like to point out that the basic premise is false on both points and will point out why. The second premise is an incredible statement in view that the petroleum industry now pays over 60% of the revenues that go into the state's unrestricted general fund and will grow to 85% in a few years. Certainly the industry doesn't require 85% of the public services. The bill, however, assumes all of the premises are true and wants to recover all costs associated with impacts. It thus requires of every person exploring, developing, or producing under a valid OCS lease, a permit for anything leased, contracted, constructed, or in any way provided to support shore facility activity during exploration development, production or transportation. One could stretch this to the ludicrous extremes of requiring a permit to rent an Avis car or lease an ERA helicopter, and restricts a person's right to privately contract and conduct business in a normal manner. This would also place indirect restrictions on a person exploring from doing business with native corporation shore base facility plans at Yakutat, Icy Bay, Cape Chimak, etc., as the permit/impact fee alleged by the state might be too expensive.

The permit cost or fee is based on the state's assessment of maximum population increase occurring over the next 20 years from OCS development multiplied by current per capital cost estimates. This apparently assumes no dry holes and full discoveries everywhere. This is essentially paying a tax today for something that might happen in the future. The tax is reduced by the state's projections for revenues and grants associated with OCS development.

The revenues and grants are discounted to reduce them to present day dollars. Amazingly, according to the bill, however, the future population costs are not.

These cost impacts are based on the state's projections of future population increases. Reported in earlier testimony, these impacts were said to be 95,000 to 100,000 people and impact costs ranging from $400 to $685 million. These numbers were originally developed by the Office of Management and Budget in Washington, D.C. They assumed all lease sales occurring simultaneously, simultaneous discovery and development in all areas, no use of existing population, and simultaneous with a Trans-Alaska gas pipeline. Even OMB admits these numbers are inaccurate; not indicative of actual probabilities. (See attached.) The state's numbers are further based on North Sea experience. This is inaccurate. North Sea development was very accelerated. Essentially all attractive acreage, about 40% of the total North Sea was leased in a 3-4 year period. Currently there are 44 exploratory rigs working in the North Sea. At the peak there were nearly 50. At the end of this year, there will be 45 major producing platforms. Over 100 oil and gas discoveries have been made, 50 of them major. Contrast this to less than 5% of the total OCS acreage in the United States being leased since its inception and a maximum of 5 to 6 exploratory rigs forecast for Alaska OCS exploration. Furthermore in the North Sea, sites were set up to construct rigs, platforms, ships, etc. This will not be done in Alaska. Existing yards in the Northwestern states and Japan will most likely be used and new yards will not be constructed in Alaska. Evidently the countries involved in the North Sea such as the United Kingdom decided on a program of energy development and, as a result, will be energy self-sufficient within a couple of years. Perhaps the United States should have the same program objectives in action rather than just in thought.

Let's review what then are some real impact numbers in Alaska, based on actual experience in exploratory work that has resulted from the Northern Gulf of Alaska lease sale #39 that occurred in early 1976. Today three $50 million dollar semi-submersible rigs are drilling in the OCS area of Alaska, Exxon, ARCO, and Shell.

Exxon has established a temporary shore base at Seward to provide the primary logistical support for its Gulf of Alaska exploratory operations.

A 30-acre tract three miles north of Seward was leased by Exxon to be used as a storage area for pipe and other materials. Radio communications equipment also has been installed at this site and at Yakataga, which includes a small warehouse. Exxon also has leased a small tract near the Alaska Railroad Docks for open storage of heavier items such as anchors and chain.

Two large workboats, each approximately 210 feet long by 40 feet wide, will be used to transport fuel, equipment and material from the Alaska Railroad dock to the Alaskan Star. After drilling operations begin, personnel will be transported to the rig by helicopter from Yakutat which provides a shorter flying distance from Seward. Most of Exxon's tracts are more than 200 miles from Seward and approximately 100 miles from Yakutat.

Exxon's work force in Seward, including company and contract employees, will include about four people to handle and dispatch materials and to man the radios. In addition, it is anticipated that local subcontractors will require about eight residents on either a full or part-time basis for shore transportation and material handling. Additionally, 13 people will be used in supply and logistics, therefore a total of about 25 Alaska residents will be employed in Seward, Anchorage, Yakataga, and Yakutat by Exxon and its contractors.

The overall work force -- including rig crews, helicopter and workboat crews and onshore personnel -- will total approximately 200. Essentially all of these crew personnel will be from out of state and will fly back to the Lower 48 during their time off. These are experienced offshore crewmen who travel around the world, wherever rigs such as the Alaskan Star operate. These people work 2 weeks on/2 weeks off and are flown back to their homes during off times.

On the short term then, the impact of Exxon's operations in the Seward area will consist of a limited amount of local employment and as much in the way of goods and services as can be provided locally for an operation of this nature. These goods and services are estimated at $750,000/month.

ARCO/Shell indicate in recent publications that their total shore facility force in Yakutat totals 36, most of which were hired from existing local residents, with similar types of operations for goods and services. These numbers represent the real evidence of impact during exploratory operation as offshore development is not people intensive but capital intensive. It in no way resembles the people intensive construction of the Alyeska pipeline.

Predicting specific long-term impact is more difficult, and even impossible at this time, because there are too many variables and unknowns. Future actions by Exxon will depend on whether discoveries are made, how much oil or gas is discovered, where it is located, and whether there are additional lease sales in the western gulf and the lower Cook Inlet.

In any case, there will be no boom or bust effect on the economics of coastal communities such as Seward. If Exxon or any other company makes a discovery in the Gulf, it will take at least three to ten years to bring it on production, depending on permit procedures and construction times. During the early part of this period, many of the uncertainties will have been answered, and decisions regarding the location of permanent shore-support facilities will be made.

That discussion shows what the real operations today are. Twenty-five people in Exxon's operation, essentially all existing Alaskans. Yet under this bill, before we could have begun, we would have been required to obtain permits for the rental warehouses, property leases, railroad dock usage, helicopter contracts, and communications facilities; essentially everything and pretty ridiculous.

The point was made that no revenues accrue to local or state entities from this current operation. Even in view of the non-existence of impacts on state or local public services, let us talk about the revenue being received:

In Seward, we pay 3% sales and use taxes. We pay wharfage fees and property taxes on land improvements. Add to this the benefit to local employment and economy. Other municipalities also receive property taxes and use taxes. The state receives income taxes from the individuals employed. Franchise and business licensee taxes for all businesses utilized are increased as their gross proceeds increase. The state gets 2¢ to 4¢ per gallon on the 10,000 gallons per day of fuel that the rig operations use. At the state number of $7000 per capita for public services, this alone would pay for public service costs of all of the people involved in Exxon's operation even if they were new additions to Alaska.

Furthermore the state income tax on companies such as Exxon is based on a three factor formula of revenue, people, and property. As these three factors go up, so does the state income tax take from Exxon. These revenues, of course, will be even more true and increase in the future if development takes place.

There are also currently existing federal programs that grant monies for OCS impacts that negate the need for new state permit fees/taxes. The 1976 amendments to the 1972 CZMA Act placed $1.6 billion for use by states. $800 million are in various grant forms and $800 million are in assistance, loans, and partial grants. The Senate-House Conference Committee estimated Alaska would be eligible for 25% of the funds.

In summary, our position is that the need for the bill is non-existent. No major demands have been realized. There are no immediate problems nor is there evidence there will ever be a problem. Current facility and service demands are fully paid for in existing revenues plus additional funds are available from federal CZMA program grants.

EXECUTIVE OFFICE OF THE PRESIDENT
OFFICE OF MANAGEMENT AND BUDGET
WASHINGTON, D.C. 20503

January 28, 1977

Mr. Keith Arnold
Assistant Manager
Alaska Oil and Gas Association
308 G Street, Suite 217
Anchorage, Alaska 99501

Dear Mr. Arnold:

The enclosed paper describes the approach used to derive the direct employment estimates for Alaskan OCS development underlying the figures cited in the Coastal Zone Management Newsletter enclosed in your letter of January 21.

We do not consider the figures quoted in the Newsletter to be valid estimates of the expected impacts in Alaska of OCS development. Those figures were prepared in an analysis done in May of 1975. The purpose was to determine the rough order of magnitude of OCS development impacts based upon deliberately pessimistic assumptions. It would then be possible, despite the great uncertainties, to credibly say that the likelihood of even more severe impacts would be negligible.

The estimates, therefore, were deliberately biased upwards at several stages in the analysis in order to produce an "upper limit" or "worst case" estimate. Some of the major sources of bias are:

- The leasing scenario used was the OCS planning schedule which was later published in June of 1975. It was recognized as a very ambitious and optimistic schedule for Alaska. Actual leasing in Alaska is likely to be spread over a substantially longer period than that schedule had anticipated. The impacts will also be spread over a longer period, reducing the infrastructure needs toward a level based on the "permanent" direct employment.

- The development scenario following each lease sale assumed very rapid exploration and development.

- It was assumed that all direct employment in every affected Alaskan region will be of people new to that region. This is clearly unrealistic.

The paper calculated a peak direct employment of 19,200 and a permanent direct employment of 8,100 resulting from the OCS development scenario examined. In order to arrive at a total population increase figure and a total infrastructure cost figure, the following steps were taken:

- The peak and permanent direct employment were averaged, giving 13,650. It was assumed that public infrastructure needs would be based on this volume of direct employment.

- It was assumed that all direct employment was by people new to the Alaskan areas in question.

- This direct employment of new residents was multiplied by a direct to total employment multiplier of 2.75 and a total employment to population multiplier of 2.5, giving a total additional population of 94,185.

- The total infrastructure cost was derived from this population figure by using $7,250 per capita.

It is unfortunate that these figures are receiving a wide circulation which characterizes them as OMB projections of future OCS impacts in Alaska. Their purpose was not to project the most likely future, but rather to show that, even when unrealistically pessimistic assumptions are used in the analysis, the calculated impacts are manageable.

I believe that the paper and the further steps described above are self-explanatory. However, if you have any further questions about the analysis, we will be glad to address them.

Sincerely yours,

Donald E. Crabill
Deputy Associate Director
for Natural Resources

Enclosure

May 24, 1977

Options for CRA Input on HB 219

A. Justification for bill.

Document the actual potential for onshore impacts , and the inability of local governments to plan for, control, and pay for these impacts.

In a narrative, describe how HB 219 provides a mechanism for control.

B. Local concerns.

Examine and address anticipated local concerns and objections to HB 219. For example, discuss the bill's effect on local property tax, on local regulatory powers and autonomy, on the localities' ability to attract development, and on the development of facilities not included within the bill's coverage.

C. Legal issues.

Explore legal issues which could be used by onshore developers to challenge the bill. Federal issues are interstate commerce, preemption, conflict and equal protection. State issues are local legislation, double taxation, ~~delegation~~, and preemption by the feds of taxing powers .

D. Planning issues.

Does the Act accomplish its pupose? What powers are given to local units? Are regional needs addressed? Is the role of CRA appropriate for it? How does the not addressed

p. 3 - possible reference to regional concerns & perhaps move the it in = CM
- where is the within 10 mile - just state makes the approval ?? leave it ss muni when there is someone there.
- cut out section that pays back

Coastal Management bill (HB 342) affect HB 219, especially in terms of local actors and pertinent issues? Does the proposed severance tax potentially alter the role of HB 219?

E. Drafting.

Suggestions for improvement in drafting HB 219 either to reflect the same substantive/procedural goals at present or to add to those goals.

F. Alternative means under existing law.

What techniques presently exist for local and state authorities to plan and pay for onshore developments related to OCS energy development. For example, are special assessment bonds (AS 29.63.085) or special tax rates (AS 29.63.010) or special tax zones (AS 29.53.405) useful in passing the additional costs of development to the developer? Will loans under the Coastal Energy Impact Program be useful to local units.

Role of local zoning powers, especially contraband use.

2. We have been economically depressed for 17 years. We are hesitant to support legislation that could adversely affect a company's decision to locate here.

3. We are reluctant to comment even though we like the concept. We will take it up with the council Monday night.

Draft - 2/25/77

H.B. 219

The Anchorage Times of February 16 reports Senator Ted Stevens as saying that Congress has directed the Interior Department to accelerate off-shore oil and gas leasing. Although Alaska has been successful in delaying the leasing of the Outer Continental Shelf off it shores, it appears that the honeymoon may be over and we may soon see an accelerated program of leasing going on.

The Supreme Court has decided that all of the lands beyond the 3-mile limit belong to the Federal Government. This means that any revenues--severance taxes, royalties or other--will go to the Federal Government. There is no provision for the State to collect any revenue from this activity. The state will, however, have impact on its shores because of the on-shore facilities necessary to support the development.

An estimate by the President's office of Management and Budget gives the impact cost for infra-governmental infra-structure for the State of Alaska as 680 million dollars. A later estimate by the Department of Community and Regional Affairs is somewhat lower. Here the cost is estimated to be somewhat over 400 million dollars. No legislation so far passed by Congress or envisioned, will compensate the State on this order of magnitude.

It is my belief that Alaskan taxpayers should not bear the impact costs involved in OCS production so that persons in other parts of the country may continue to run their air-conditioners, drive their cars at 70 miles per hour or waste

heating oil because of inadequate insulation in their houses.

The purpose of HR 219 is to compensate for the on-shore impacts caused by the OCS development.

The State cannot force the Federal Government to furnish such compensation. It can, however, require the companies exploiting the OCS territory to pay for the on-shore impact costs. The bill provides that the amount of uncompensated impact is estimated and that this amount is the price of the building permit for the on-shore facilities.

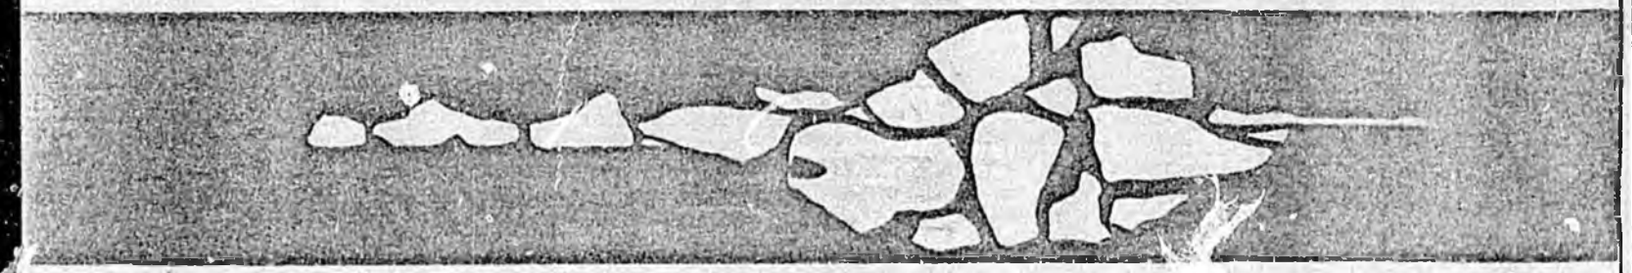
ALASKA Seas and Coasts

A Newsletter for the Alaska Commercial Fishing Industry



THE ALASKA OCS - An update

By John Williams

Until recently, John Williams served as a Marine Advisory Program Agent with the University of Alaska. He was involved with seafood processing and coastal resource activities.

Because of the rapid changes in the policies and scheduling of the development of the Alaskan outer continental shelf, and the normal time lapse between completion of a story and the delivery of Alaska Seas and Coasts, *some points contained in this article may have changed. More information will be presented soon in* Citizen's Handbook — The Alaska OCS. *The publication will be presented by the Alaska Sea Grant Program with partial funding by the State of Alaska.*

OCS UPDATE

ALASKA — One down — eight to go.

In April of this year, the Department of the Interior leased the first outer continental shelf (OCS) oil development tracts off the coast. The sale, located in the northeast Gulf of Alaska from Icy Bay to Kayak Island, netted over 500 million dollars in bonus bids for the Department of the Interior, which administers the OCS program through the Bureau of Land Management (BLM). This is the first of nine scheduled sales on Alaska's OCS.

Shell Oil Company began exploratory drilling in the Icy Bay region on September 1, with Sedco 706, a semisubmersible drilling rig. In October, ARCO began exploratory drilling operations with the semisubmersible Ocean Ranger, recently transferred from the Bering Sea.

Sedco 706 is 330 feet high with its derrick upright, 245 feet wide, and 295 feet long. It provides living quarters for 96 men, and storage space sufficient to drill for several weeks without resupply. The drilling rig is held in place by anchors connected to computer controlled tension winches, which compensate for wind, waves, and current to keep the rig located over the undersea well.

Next on BLM's agenda is a sale scheduled for lower Cook Inlet, followed by a western Gulf of Alaska (Kodiak) sale. Cook Inlet could go on the auction block early next year, with the Kodiak sale following later in 1977.

OCS IMPACTS

In early 1976, the federal government estimated that OCS leasing would create 90,000 oil jobs in Alaska to be filled by trained personnel and that this would cost state and local governments in excess of $600 million to supply the necessary services and facilities to these new residents. This dollar figure did not consider families of the oilmen or the jobs created in the service industries which accompany the oil business. An additional 1.3 to 1.7 jobs will likely be created in service industries for each new oil job.

The Coastal Zone Management Act of 1972 (CZM) was amended this year to help states in planning and funding coastal energy development activities. The CZM amendments of 1976 created a $1.2 billion national impact fund. Eight hundred million dollars of the fund is in the form of loans for environmental and economic planning, schools, highways, hospitals, guaranteed bonds, etc.

The remaining $400 million is available as grants to be used as a back-up system for the loan fund. Money from this source will be distributed to states based upon a formula considering the number of offshore acres leased, the volume of oil and gas produced, population influx, etc.

The federal government's assistance to states coping with the onshore effects of OCS development is much more limited than for mineral resource development on federal lands contained within state boundaries. In this situation, the federal royalty from the resource is shared with the state from which it was extracted and can be used in any manner that state government chooses. The royalty from OCS petroleum development is not shared by the federal government with adjacent states. In the case of OCS resources, state and local governments must apply for impact monies for specific purposes and be able to prove that it is a reasonable request.

In addition to the burden of proof requirement, states receiving OCS impact monies must already have or be

(Continued on page 2)

(Continued from page 1)

making "reasonable progress" toward a coastal management plan as outlined in the CZM Act. Legislative support for development of such a plan for Alaska's coast has been minimal. The Legislature may have another look at coastal management legislation in the upcoming January session.

NEW ADMINISTRATION

Because of Jimmy Carter's election, many people in Alaska are now trying to assess the impact the new administration will make on the OCS lease schedule and procedures. To date, Carter has not been specific on the issue. He has, however, expressed some concern about the accelerated pace of lease sales and its impact on federal revenues from the leases.

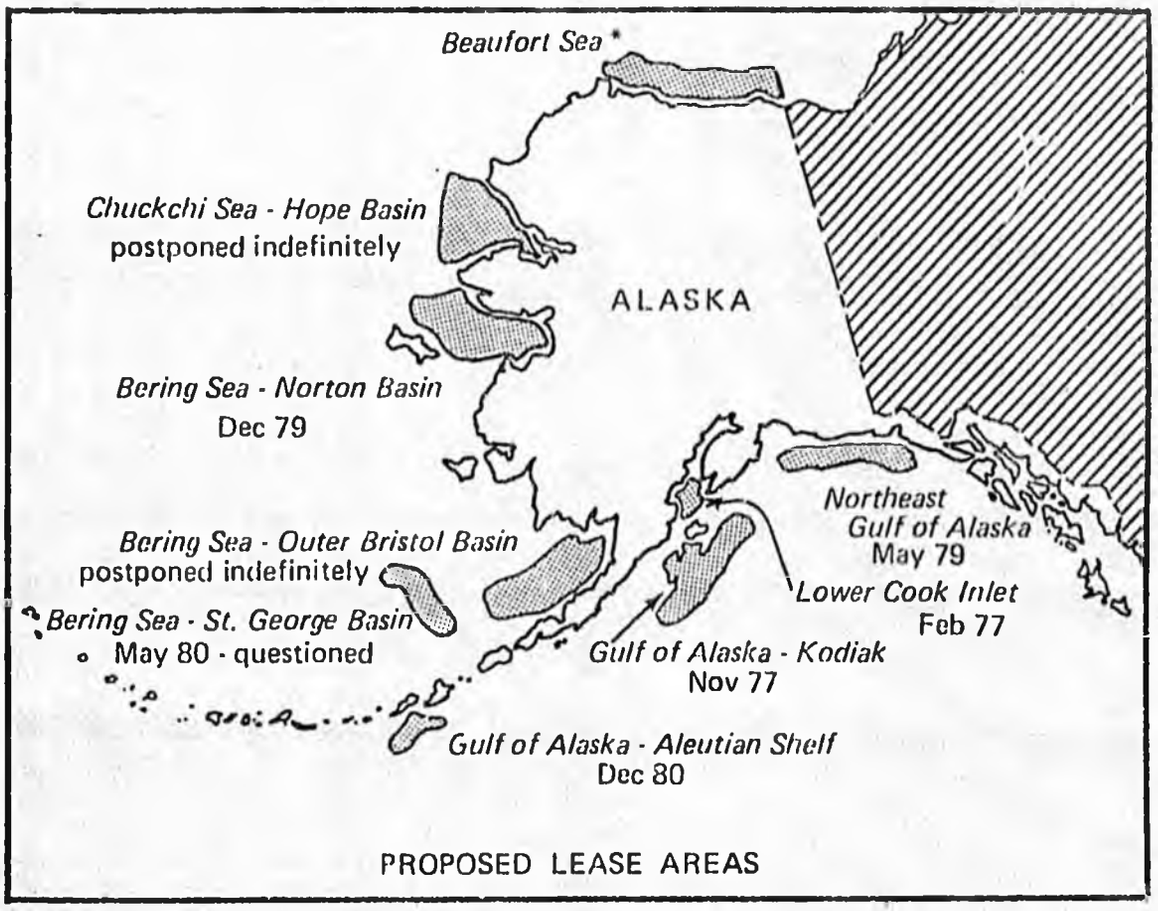
With a Democratic congress and president, chances seem better that some changes will be made in the OCS Lands Act, under which the OCS is administered. Senator Jackson (D-Washington) wants new amendments completed and signed by late spring. The amendments reportedly would consider states' interests to a much greater degree, and involve state and local governments in the process.

The State of Alaska has conducted an ongoing battle with the Department of the Interior over the presently proposed lease schedule and procedures. In a letter dated August 4, 1976, Governor Hammond submitted the State's proposal for an OCS lease schedule to Secretary of the Interior Thomas Kleppe. The Secretary had promised to reassess the Alaska OCS sale schedule, which presently calls for nine sales in three years. What actions the lame duck Ford Administration may take on this matter prior to January 20 are uncertain, although at press time negotiations were ongoing to dramatically revamp the present BLM schedule.

Hammond bases his schedule on a number of factors of importance to the people and environment of Alaska. His reasons for slowing down the sale pace include the cumulative effects which would result from the present accelerated lease schedule and the impact on communities and people unprepared for the rapid influx of large development. Hammond also wanted time for further study of the physical hazards and potential environmental risks, especially in the ice covered western and northern waters, and time to prepare the management sectors of state and local government to deal with the many implications of petroleum development on the frontier Alaska OCS.

Hammond's proposal, substantiated by considerable research by state agencies, would extend the schedule to six years, and would not include scheduled sales in the federal areas of the Beaufort Sea, Bristol Bay, or St. George Basin until further research and industrial technology are achieved. The state would agree to hold a joint state/federal lease sale in the shallow, inshore Beaufort Sea area in the fall of 1977 in place of a federal Beaufort Sea sale in the deeper, shear ice zone.

Many of the changes resulted from recommendations by Governor Hammond in his August letter to Interior Secretary Kleppe. The new sale dates reflect a compromise between the rapid schedule and Hammond's proposed delays. The Department of the Interior and the state disagreed on the need to complete environmental studies before scheduling a lease sale.



PROPOSED LEASE AREAS

Included in Interior's proposed new OCS lease schedule are changes brought about because of the state's insistence on a slower, more cautious pace in Alaska.

**The Beaufort Sea lease area is subdivided into at least three zones generally characterized by distance from shore, water depth, type of ice and anticipated ice motion. The leases for this area in the current schedule are: near shore, Mar. 78; less than 60 ft. water depth, Feb. 79; greater than 60 ft. water depth, not scheduled.*

OCS sale

OCS Impact

Anch News Jan 31, 1976

95,000 people due in oil migration

JUNEAU (AP) — Gov. Jay Hammond said Friday a new federal study indicated Alaska would carry a vast share of the population increase expected from accelerated development of oil resources on the outer continental shelf.

A report compiled by the Office of Management and Budget (OMB), Hammond said, showed that of the more than 147,000 persons who would be attracted by development off all states, nearly 95,000 would come to Alaska by 1985.

Such a migration of new residents would bulge Alaska's current population by more than 25 per cent.

Other figures from the OMB report, disclosed by Hammond at a news conference, projected rapid development of offshore oil and gas tracts nationwide would generate $951 million in additional government "infrastructure" in the next 10 years.

Of that total, $683 million was allocated to Alaska, more than seven times the cost of government services expected in any other region.

"This is just a working paper," Hammond said of the report. "Whether or not the figures are firm is debatable, but it is what the federal government is keying into their assessment of impact upon the state of Alaska.

"And, I think it is very dramatic in its revelation."

Bob Palmer, chief of staff to Hammond, said he had obtained the figures during a trip to Washington Monday. They are part of a report to be distributed to coastal states soon, he said.

A copy of the full report was not available.

Hammond has been an outspoken critic of Interior Department plans for conducting nine major lease sales off Alaska during the next three years, including one in the northeast Gulf of Alaska early this year.

A study conducted by the state last year concluded that costs associated with the leasing program would mean an additional $300 tax burden for each Alaska resident annually.

Interior Secretary Thomas Kleppe has delayed the gulf sale while he considers criticism by the Environmental Protection Agency and the President's Council on Environmental Quality leveled at an environmental impact statement on the sale.

Other figures from a portion of the report released by Hammond predicted peak employment in Alaska during the 10-year period would be 19,200 workers, with permanent employment set at 8,100.

Net additional new employment was projected to be 13,650 persons.

TABLE A

CAPITAL NEEDS FOR EXISTING AND NEW OIL AND GAS FIELDS
1975 THROUGH 1985
(Billions of Dollars)

	Area	Capital Outlays
1	Alaska - Onshore	$ 41.9
1-A	Alaska - Offshore	22.1

OCS Impact Aid

By Sen. Ted Stevens

President Ford recently signed the Coastal Zone Management Act Amendments of 1976 into law. This new government program will provide a $1,200,000,000 impact assistance fund for states and municipalities affected by outer continental shelf oil and natural gas development.

The Office of Coastal Zone Management, which is part of the National Oceanic and Atmospheric Administration, will be administering the impact assistance program. That office is presently drafting regulations which will serve as guidelines for the disbursement of funds. Draft regulations have been published in the Federal Register so that they may be viewed by the public, and the Office of Coastal Zone Management is soliciting comments from interested citizens and public groups in the formul ion of final regulations.

The Office of Coastal Zone Manage ent is particularly interested in Alaska problems. During the month of August the Coastal Zone Management Advisory Committee, the Citizens Advisory Committee to the Office of Coastal Zone Management, was in Alaska for a tour of areas of the state which potentially could be impacted by outer continental shelf oil and gas development. The members of the Advisory Committee went to Juneau, Yakutat, Anchorage, and Kenai. All of the members found the trip to be informative and they learned a great deal about Alaskan problems.

The Coastal Energy Impact Assistance program has an authorization level of $800 million in loans and $400 million in grants. The grants are to be used for planning, to meet the needs created by unavoidable ecological losses, and any other projects which are necessary and cannot be funded under the loan program. The $800 million loan program is for public facilities and services.

Under a series of amendments which I sponsored, the loans issued by the federal government can go either to the state or to the municipalities. The full faith and credit of the United States is pledged to these loans — not the credit of the state or municipality. Therefore, the complex system of referendums required for normal state or municipal indebtedness is unnecessary.

In order for a state or municipality to receive a loan, it must first set out a revenue schedule to the Secretary of Commerce in which the state or municipality assures the Secretary that income which the state or municipality would receive from the oil and natural gas development over a 20-year period would be sufficient to pay off the loan. Should that income fail to accrue for any reason, the Secretary must automatically forgive the balance of the loan indebtedness.

Many Alaskan communities will be interested in receiving planning grants from the Office of Coastal Zone Management. The Act provides for $50 million in planning grants, to be awarded to states and municipalities impacted by outer continental shelf oil and gas development. These are non-matching grants in which the federal government puts up 100% of the money. These monies can be used for any planning activities to meet the on-shore impa of outer continental shelf oil and natural gas activities. The Offi of Coastal Zone Management informs me that they are working as expeditiously as possible to see that planning grants are awarded to Alaskan communities at the earliest possible date. Since the Office of Coastal Zone Management is presently drafting regulations to implement the Act, it has not yet begun receiving grant applications.

The Coastal Zone Management Act Amendments of 1976 will be of substantial benefit to the Alaska fishing industry. In areas of the state which are impacted by outer continental shelf oil and natural gas development, impact assistance funds may be used to build harbor and dock facilities, breakwaters, aids to navigation, and other facilities of general benefit to the entire maritime community. I also expect that impact assistance funds may be used to build aquaculture facilities. In the unlikely event that a major oil spill occurs, an aquaculture facility could be used to offset any damage which was incurred to fish stocks. It is therefore essential that these facilities be built prior to the production of oil and natural gas. I have strongly urged the Office of Coastal Zone Management to include aquaculture facilities in its funding program.

In addition to impacts resulting from outer continental shelf oil and natural gas development, the coast energy impact fund can be used to meet the impacts resulting from the transportation of energy resources through the coastal zone. This means that state municipalities located in the coastal zone, such as Valdez, which are the transportation centers for oil, natural gas, or coal would also be eligible to receive funding. The city of Valdez is potentially eligible to receive funding as a result of the trans-Alaska pipeline project. Looking ahead a few years, in the event that Alaska ships coal to the southern 48 states, port facilities for the operati would also be eligible to receive impact assistance funds.

The Office of Coastal Zone Management expects to be finished drafting its regulations by April of 1977. Dr. Robert Knecht, Associate Administrator for Coastal Zone Management of the National Oceanic and Atmospheric Administration, has advised me that he expects the first funds from the impact assistance program to be available for states and municipalities sometime in April or May of 1977.

On May 17, 1971, Cornell University ornithologists announced what they said was the first successful rearing of a wild bird of prey hatched from an artificially inseminated egg.

In the bloody battle of Jutland, the German navy slugged it out with the British navy in the North Sea in 1916. It was the only major sea battle of World War I.

Anchorage Times

Young Raps Impact Aid

By BETTY MILLS
Times Washington Bureau

WASHINGTON — A bill to compensate coastal states for the adverse impact of offshore oil drilling would not provide adequate funds, Rep. Don Young, R-Alaska, says.

The House will consider legislation Friday which would provide $50 million in automatic state grants to meet the onshore impact of development on the outer continental shelf in the next two fiscal years. It also would authorize $125 million in discretionary funds administered by the secretary of commerce in the next five years.

In minority views submitted with the report on the bill, Young said the funding "is not sufficient to cover the costs that the local and state government will have to bear as a result of the federal development.

"This will leave the states in serious economic straits, especially in the more heavily impacted areas, from overcrowded schools and services, insufficient sewage systems, poor roads and higher state and local taxes," the congressman said.

Young said the per capita cost of offshore development from increased population, based on growth figures from the Alaska pipeline, would be $1,630 to the state government and $351 to the local government. The projected population growth directly attributable to oil development is 94,000 by 1985, according to estimates of the Office of Management and Budget. The total cost to state and local governments from offshore oil development would be $186,214,000 per year, Young said.

"While the revenue received from the Alaska pipeline was sufficient to meet much of the cost of impact funding, this is presently impossible to meet since no revenue is coming into the state as a result of OCS development," Young said.

The congressman said the authorization to coastal states must be increased.

"The state deserves the money for investment for other worthy projects, instead of underwriting the cost of a federal project," Young said. "The OCS is a federal project and should be a federal responsibility."

Next Three Years Hold Plans For Other Areas

Today's lease sale of tracts in the northeastern Gulf of Alaska is the first of nine federal outer continental shelf oil and gas lease sales planned off Alaska's shores during the next three years.

The accelerated leasing program is aimed at making the United States more energy self-sufficient, says Edward Hoffman, manager of the Alaska Outer Continental Shelf Office.

The tentative schedule calls for two more sales this year. Tracts in Lower Cook Inlet are to be leased this fall, possibly by October, and tracts in the western Gulf of Alaska, in the Kodiak area, are scheduled to be leased in December.

Other sale areas on the federal schedule include Bering Sea (St. George area), March 1977; Beauford Sea, October 1977; Outer Bristol Basin, December 1977; Bering Sea (Norton Basin), August 1978; Gulf of Alaska, Aleutian Shelf October 1978, and Chukchi Sea (Hope Basin), December 1978.

Offshore Alaska has an estimated petroleum potential of 60 billion barrels of oil and 340 trillion cubic feet of gas, according to the Alaska Outer Continental Shelf Office.

An estimated 40 per cent of the nation's "frontier areas" which are untouched by the drill lie off Alaska's shores. Another 40 per cent lie onshore, said Dr. V. E. McKelvey, director of the U.S. Geological Survey. But both are subject "to some of the worst operating conditions known on our planet," he said.

Offshore, drifting sea ice, 50- to 75-knot winds, 25-foot waves, protracted periods of darkness and occasional major earthquakes all present potential hazards, McKelvey pointed out in a Dallas speech in September.

"Onshore, temperatures reach well below zero and logistic problems are staggering. In addition, the entire area is 1,000 to 2,000 miles away from a major energy market. One does not have to look far to understand why this area has been left alone until now."

Nome should prepare for sales

NOME (AP)—The president of the Northwest Alaska Chamber of Commerce says it is time this Bering Sea community began preparing for upcoming oil and gas lease sales on the outer continental shelf.

Jack Carpenter announced formation of the chamber's OCS Planning Committee at a chamber meeting in Nome Friday.

He said OCS leasing will begin in the Nome area in about two years and its impact "should be dynamic."

Carpenter told the chamber that he spoke in Kotzebue last week with Patrick Dobey, manager of Alaska's Petroleum Department and head of the state's OCS leasing program.

He said Dobey quoted him some figures which indicate how significant that impact will be. For example, he said, "a dredge out there will cost $1,000 a minute, and they will have five such dredges going."

Carpenter said there is a possibility local businesses will be bought out by persons involved in oil exploration and development.

"These are the kinds of things we have to start looking at—the impact of these funds being spent in Nome," he said, adding he believes Nome can learn from the experiences of other communities.

Guest speaker at the meeting was Frank Murkowski, state chamber president and president of Alaska National Bank, who said the impact of the Alaska Native Claims Settlement Act on the state's business community has been significant. He noted most Alaska Natives are staying here and using the settlement funds to develop the state.

And he said while some Natives have made mistakes in their dealings with the business community, "by the same token, they are developing, and every time you make a mistake you look at your own life and you learn by it. And how many opportunities are you afforded because of that knowledge?"

N-M Dec 13 76

Kenai mayor testifies on Coastal Act

ANCHORAGE (AP)—The mayor of the Kenai Peninsula Borough has testified in Washington before a U.S. House subcommittee looking into regulations proposed for implementation of 1976 amendments to the Coastal Zone Management Act.

The Anchorage Times Washington Bureau reports Mayor Don Gilman told the House oceanography subcommittee Friday that Alaska needs money immediately to plan for offshore oil exploration and development.

Grants are available for such planning under the amendments passed by Congress this year. The office of coastal-zone management of the U.S. Department of Commerce has prepared draft regulations for implementation.

Gilman told the subcommittee the Borough is a microcosm of the issues and problems the nation faces in preparing for impact of drilling on the outer continental shelf (OCS).

He said the borough's population is expected to increase 50 per cent in the next seven years during preparation for lease sales in the northern Gulf of Alaska, lower Cook Inlet and the western gulf.

Gilman told the subcommittee, "Our present community facilities and services are either at or beyond their planned capacity."

He said increased population, whether temporary or permanent, cannot occur without severe impact unless funds are accessible for planning and providing needed services.

Some subcommittee members were critical of the draft regulations. Rep. Pierre Dupont, RDel., told assistant administrator for coastal zone management Robert Knecht he had "misconstrued the intent of Congress."

"I don't know how you think you have the authority to add things in your regulations that Congress did not provide," said Dupont, who will leave the House next month to become governor of Delaware. "Congress has once again been frustrated by the fourth branch of government—the bureaucracy."

this company expects added industry spending of $25-30 million for detail work.

The company says the most heavily mapped regions for reconnaissance are the mid-Atlantic, North Atlantic, off southern California, and in the eastern Gulf of Alaska and Lower Cook Inlet. More reconnaissance remains to be done in the South Atlantic, off northern California, in the Western Gulf of Alaska, Bering Sea, and Beaufort Sea.

Another company says the industry's spending to date for geophysical work amounts to about $35 million along the East Coast and $45 million off Alaska, with more multimillion-dollar programs required.

The company estimates about 70,000 line-miles of seismic data costing $25 million has been gathered off the East Coast since 1968 in programs involving group shoots and nonexclusive work by several contractors. This doesn't include spending by individual companies. Gravity, magnetic, and refraction-type surveys to date could add another $10 million to the total geophysical costs.

And future investments in frontier geophysical operations could pile still another $15-20 million on total costs, the company says.

It places industry's total outlay at $45 million for 150,000 miles of marine seismic off Alaska, with another 100,000 miles required at a cost of $50 million.

Several operators report difficulty in shooting off Alaska, particularly in the Gulf of Alaska and the Beaufort Sea.

Seismic-acquisition programs in the stormy gulf are subject to frequent and lengthy interruptions due to heavy seas and high winds. What's more, seismic data generally isn't of highest quality, because a thick layer of glacial till and large boulders obscures the Tertiary and Cretaceous objectives.

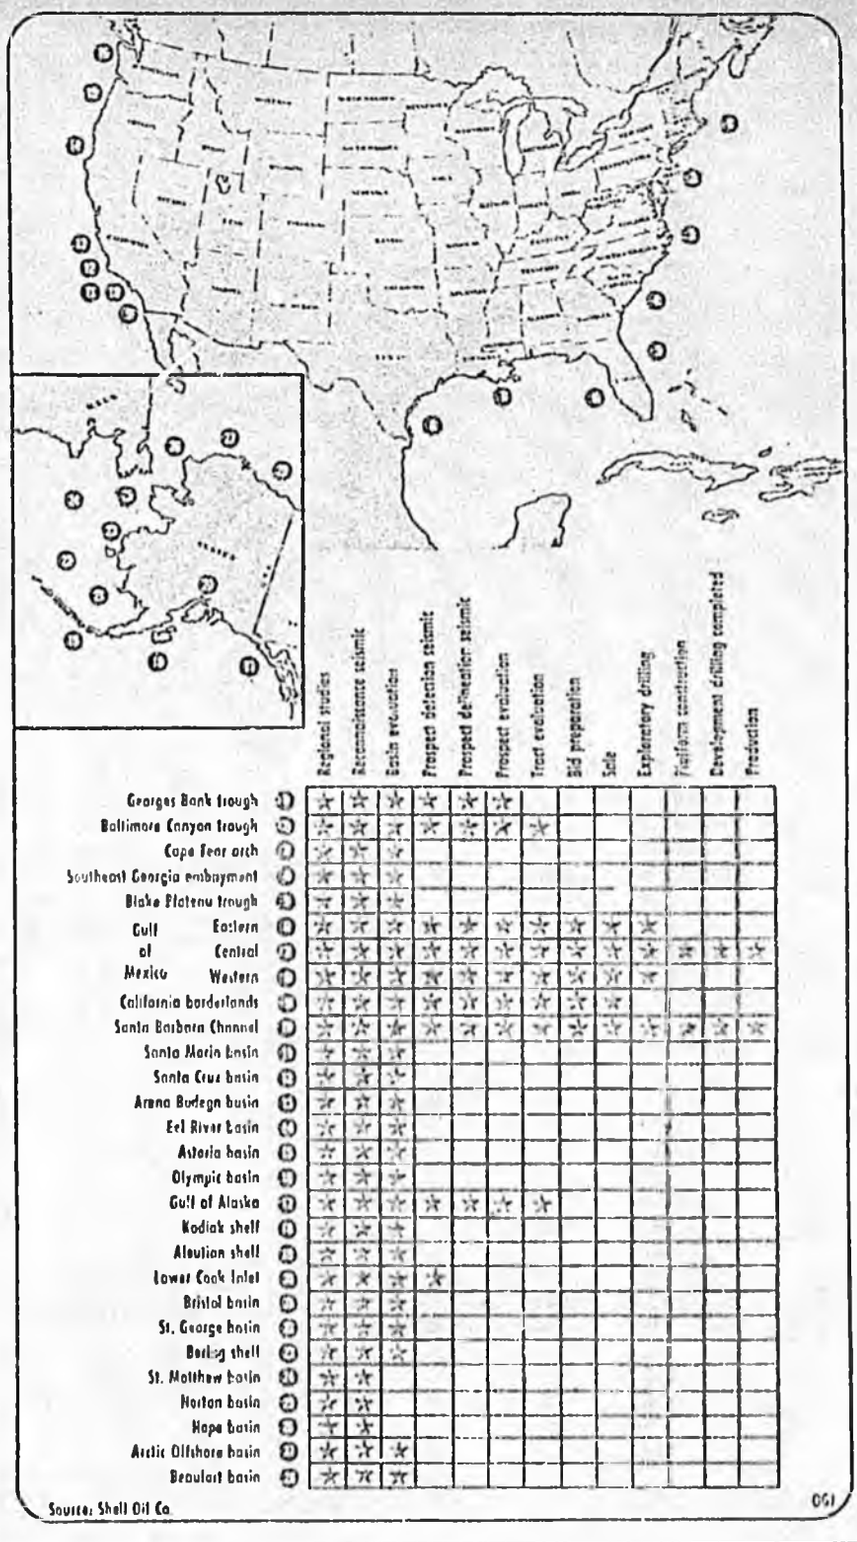
In the Beaufort Sea, shooting depends on pack ice moving out in the summer. And the ice hasn't cleared enough to permit seismic acquisition for a number of years. As a result, the federal portion of the Beaufort Sea shelf isn't well covered by seismic lines.

A major company says its offshore-frontier program has run into "no unusual shooting problems" except those related to Arctic ice, permit restrictions, currents which make it hard to keep cables aligned, and logistical problems in certain areas.

Action by areas. Structures involved in the first proposed sale of Gulf of Alaska tracts and in the Baltimore Canyon off the East Coast have been well delineated by numerous seismic surveys in the past several years, says Exxon's Jones. In fact, Jones says, these proposed-sale tracts are well explored up to the point of drilling.

He sees little if any additional seismic work being done in the Gulf of Alaska sale area and the Baltimore Canyon prior to sales. However, additional acquisition of in-fill data is likely after sales.

What's happening in Offshore U.S. basins



OIL & GAS JOURNAL JAN 19 '76

Jones believes companies will wait until they obtain leases before investing in more data. The first wells in each area, he predicts, will have considerable impact on subsequent seismic activity.

Esso Seismic Inc.'s Kirsten Bravo shot about 1,000 miles of seismic line last September in the Baltimore Canyon and Georges Bank for Exxon.

The Georges Bank area isn't far behind the Baltimore Canyon in the amount of seismic data available to companies, Jones tells the Journal. There may be a last-minute flurry of proprietary shooting in Georges Bank in the coming months if it appears the sale will come off in August as proposed.

Jones predicts considerable seismic activity in the South Atlantic next spring and summer. Not much seismic data have been gathered on the Southeast Georgia Embayment or the broad, deepwater Blake Plateau.

Jones expects a rapid buildup of group, speculative, and proprietary shooting within 600 ft of water on the Southeast Georgia Embayment. A gradual increase is predicted for the Blake Plateau, which isn't scheduled for a sale until mid-1978.

Because basins off northern California, Washington, and Oregon are believed by industry to be very poor petroleum prospects, Jones doubts there will be any rush to acquire new data there.

Very little seismic data are available in Offshore Alaska basins, other than in the Gulf of Alaska.

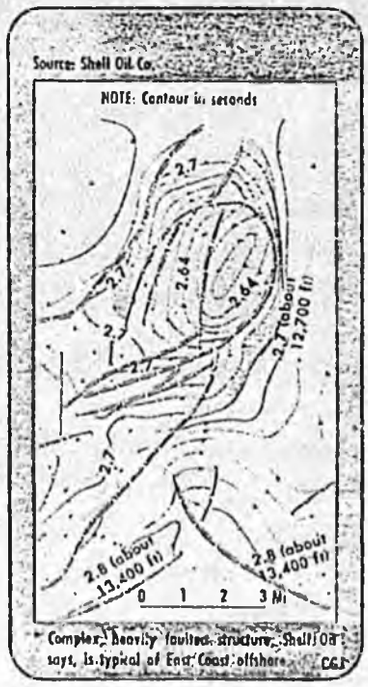
Industry is in the midst of an active exploratory effort in the Lower Cook Inlet, although acquisition programs there currently are shut down for the winter. Jones expects a spurt of shooting and possibly core or deep-stratigraphic drilling this summer.

The Kodiak shelf also should be an active area in the coming months, if it appears the proposed December sale will materialize. A very coarse grid of seismic data is available on Kodiak.

Although exploration on this shelf is still in an early stage, Jones believes industry can generate and interpret enough data in the coming months to be fully prepared for a December sale.

Seismic data in the Bering Sea consist of a very coarse grid over only a portion of the area, in the Bristol basin. Most of the current data was acquired beginning in the summer of 1973. Activity speeded up in the summer of 1974, and Jones predicts considerable shooting and possibly core drilling will take place in the next few summers.

Atlantic prospect*



Complex, heavily faulted structure, Shell Oil says, is typical of East Coast offshore. OGJ

USGS reconnaissance surveys indicate six or seven distinct basins in the Bering Sea, Jones reports.

The Exxon explorationist also foresees increased seismic activity in the unexplored Aleutian shelf, Norton basin, and Hope basin. The latter, he says, has been the scene of proprietary shooting by one or two companies.

Stratigraphic tests. The Sedco J semisubmersible is drilling the first of two Offshore East Coast stratigraphic tests (see cover photo) for a 31-company group led by Ocean Production Co. And more tests are planned in other regions as part of industry's program to collect the first subsurface information in offshore frontiers.

Spudded last Dec. 14, the initial East Coast test is projected to 16,000 ft. Site for the B-2 test is 73.6 miles off the New Jersey coast in the Baltimore Canyon (see map, OGJ, Oct. 20, 1975, p. 39).

The Ocean Production group also will use Sedco J to drill its second 16,000-ft test, designated G-1, more than 100 miles off the Massachusetts coast in the Georges Bank area.

Combined cost of the two operations is a little less than $18 million to determine porosity and permeability in Jurassic and younger sediments.

Among future work, Exploration Services Co. Inc., Ventura, Calif., proposes to drill a 12,000-ft stratigraphic test in Lower Cook Inlet beginning in March. Estimated cost is $5.5 million at a site in 19-14s-22w.

Exploration Services also is trying to generate 3,000-5,000-ft tests on the Kodiak shelf, Exxon's Jones reports.

West Coast sources say a second attempt may be made this summer to drill a stratigraphic test in the Gulf of Alaska, where mechanical problems halted a similar test last October. Last year's hole reached the 5,100-ft level — far short of its 16,500-ft goal — at a reported cost of $12 million.

Earlier deep stratigraphic drilling included two holes on the Outer Continental Shelf off South Texas. Drilled by two 32-company groups, the tests revealed poor characteristics in potential reservoirs. This poor showing was reflected in low bonuses offered in Feb. 4 and May 28, 1975, sales of federal leases.

Discouraging results from another stratigraphic test, this one drilled off southern California, drew part of the blame for the generally low level of bonuses offered at last December's federal lease sale off California (OGJ, Dec. 22, 1975, p. 15).

On-structure drilling has yet to take place in the frontiers. And only this can determine if known structures hold oil and gas.

Gulf's Carter believes results of on-structure drilling in the Gulf of Alaska will have a strong influence on predrilling evaluation of the Kodiak shelf, Bristol basin, and Bering shelf. Likewise, Baltimore Canyon drilling will determine to a great degree how much leasing and exploration Georges Bank, Southeast Georgia Embayment, and Blake Plateau will attract.

Drilling problems. Several companies surveyed by the Journal declare the Gulf of Alaska presents some of the frontier regions' thorniest problems in exploration, drilling, and production. Lesser problems are foreseen in most other areas of the offshore frontier.

"To be economic, a structure in the Gulf of Alaska will have to contain several hundred million barrels of reserves," Gulf's Carter says. He doesn't see gas as a viable exploration target because of enormous development costs.

Severe storms, strong currents, and

though its presence is widely known to the industry because of seismic work in the area.

It resembles a huge oval about 25 miles long and 10 miles wide, starting near the 3-mile line offshore and extending southwest into the center of the Icy Bay sale area.

"There is room here for another Prudhoe Bay field," says one company geologist. "But no one suggests that it will turn out to be another Prudhoe Bay. It's extremely rare to find a big structure filled with oil. What I am saying is that there is room here for another Prudhoe Bay. We just hope that it contains several billion barrels of oil.

"But if it's going to have anything big, it must have pay sections which are tremendously thick, and it certainly must have better porosity than the same formations onshore.

"Just because it is offshore, or downdip, doesn't mean it would have more porosity. That would not be a valid geological supposition. But we can reasonably expect some porosity. If we have that, we must also have the source beds to contribute the oil. Everything has to come together just right."

Operating costs. Companies preparing to bid on Gulf of Alaska leases have tempered their enthusiasm for the area in the past 2 years because of the great surge in offshore drilling and production costs.

The semisubmersible rigs which will be used for most of the drilling, plus other supporting services, will cost an estimated $100,000/day. This would mean that a well which took 100 days to drill would cost $10 million.

A shallow test may cost only $7 million, but if there is any trouble with the hole, the price tag of an exploratory well could rise to $15 million.

And finding oil is just the first step. Constructing platforms which meet the weather, ocean-bottom, and earthquake specifications will start at $100 million. Laying pipelines to a shore base, or constructing an offshore loading terminal, will add to the mounting costs.

Because of such prospective costs, companies are counting on reasonable crude prices to recoup their investments and make a profit.

"We couldn't go into the Gulf of Alaska for oil priced at $3 to $4/bbl," says one oil-company executive. "If we found a 5-billion-bbl field, we could make it on $5 to $6 oil. But if it's just a 1-billion-bbl field, we would need $10. We couldn't develop a 500-million-bbl field at today's oil prices."

Economics such as this will have a dampening effect on bids at the sale.

The rigs. Two semisubmersible rigs are being built by the Kaiser Shipyards near San Francisco specifically for use in the Gulf of Alaska. Others will be available from shipyards in Japan and other yards of Southeast Asia.

SUN OIL CO. estimates development of 100,000 b/d of production in the Gulf of Alaska would cost $500 million to $1.1 billion, depending on water depth.

That is based on estimated development costs ranging from $5,000 to $11,000 per daily barrel of production, depending on water depth, M. D. (Zeke) Noble says.

Noble, president of Sun's newly formed Sunmark Exploration Co., and J. Dwayne Taylor, an executive vice-president of Sun, spoke to the Houston Society of Financial Analysts on Mar. 17. Taylor described the purpose of Sun's recent reorganization.

Gulf of Alaska. In the face of such ferocious costs, how high must the price of oil be to support development.

Taylor says the price should be in the range of $14-16/bbl. And Noble says "a great deal of Gulf of Alaska potential would not be developed at today's prices." If the Gulf of Alaska sale occurs as scheduled on Apr. 13, Noble says, first production probably could not take place until 1981.

Sun also has revised upward its cost estimates for exploratory drilling in the Gulf of Alaska (see graph). A year ago, Sun estimated a 10,000-ft exploratory hole in 300 ft of water would cost about $6.5 million. Noble now estimates the same well would cost $8 million. He estimates a well on some of the known structures in deeper waters of the Gulf of Alaska would cost $9 million.

Gulf of Alaska, Atlantic wildcat costs*

Federal report says

Pipeline construction has sped deterioration of state's highways

ANCHORAGE (AP)—The federal Department of Transportation reports that trans-Alaska pipeline construction has speeded the deterioration of Alaska state highways—and says the federal government has no responsibility for repairs.

Alaska's Gov. Jay Hammond has fired off telegrams protesting that conclusion to Vice President Nelson Rockefeller, House Speaker Carl Albert, Transportation Secretary William Coleman and Federal Highway Administrator Norbert Tiemann.

Hammond noted the trans-Alaska pipeline was mandated by the U.S. Congress. This year's federal highways appropriations bill includes a section directing the Federal Highway Administration to study the need for special federal aid in building or repairing roads necessary for energy-related projects.

"This is another Catch-22," the governor stated. "Why should the study go forth if precedent has been established that there is no federal responsibility for impacts to highways used for the nation's energy needs?"

Coleman stated in his report to Vice President Nelson Rockefeller, president of the Senate, "This report of initial finding documents the fact that pipeline construction has accelerated deterioration of several state highways at a more rapid rate than highways not subjected to such traffic.

"The report further establishes that repair and restoration of the damaged highways is not a federal responsibility."

The report estimates some $300 million would be needed for reconstruction made necessary by pipeline construction.

The state sought $70 million from Congress for emergency repairs during the last session. That bill passed the Senate but was downed by the House.

In August, Sen. Ted Stevens, R-Alaska, said he believed the DOT study would indicate damage exceeded the $70-million figure, adding, "There is no question it is a federal responsibility."

Coleman said the department report is an interim study and makes no recommendation for a final solution to the problem.

MEMORANDUM

FROM: Mike Davis, Administrative Assistant

RE: Phone Conversation with Larry Powell, Major of Yakutat. - OCS IMPACT.

DATE: March 10, 1977

"We have had a direct impact since Sept. last year. The construction of the service base took place during the year preceding that."

We have five service boats servicing two rigs with service base.

Presently, some of the city services are impacted.

a. Water supplies
b. All the people working on the rigs move thru the airport. (There is an attempt to not have people in town. But, we are experiencing bad weather, so we can have anywhere from 15-25 people (or more) stuck in town.)

These demands should remain constant for the next two years (from Shell and Arco).

Exxon and Gulf will begin supplying their rigs with five service boats. Some of these will be based in Yakutat (which means a greater movement of people thru town).

We are looking for things to escalate...traffic thru the airport, the service base will need to be enlarged to handle the increased activity.

"Fact: We are faced with increasing our fire protection capability both onshore and offshore (due to the increased industrial activity). We will need to have a full time policeman (currently we have a trooper and a part-time policeman)."

"I would very much like a copy of the bill and background material." (sent 3-10-77).

RE: House Bill #219

Dear Representative Rudd:

House Bill 219, as proposed, clearly makes the developer of OCS resources liable for costs relative to the impacts generated from construction of shore-related facilities.

The principle of this proposed legislation has been long established in American municipalities, though normally called "off-site improvements", required as a result of significant development; commercial, industrial and housing.

The legislation, as proposed, is long overdue. The boroughs ought to be the agencies to establish such legislation, through their planning and zoning mandates; however, in the absence of borough action, then the State is obviously compelled to act.

The City of Kenai has been victimized by the absences of such legislation and, therefore, we are obliged to support this legislation, not only for our own protection, but for the greater good of the State.

If there are any problems in this proposed legislation, it is in Section 41.45.030 "Fees". The language is unclear and needs clarifying.

Our congratulations on the introduction and grateful support for the legislation.

For the Mayor and Council of the City of Kenai, Alaska, I am

Sincerely,

John E. Wise,
City Manager

February 24, 1977

TO: LISA
FROM: JUDITH

RE: HB 219

Sec. 41.45.030. FEE FOR SHORE FACILITIES PERMIT.

In arriving at the permit fee, gross impact cost and development revenue are the two factors being estimated as follows:

Step 1.

anticipated population increase
x
per capita costs of state and local government

= gross impact cost

Step 2.

estimated pertroleum taxes

general property taxes for onshore facilities

income taxes from residents in affected area

+ OCS and gas grants summed and discounted

= development revenue

Definition:

"discounted on a cash flow basis"

Money has a "time value", in the sense that it can be reinvested and earn future profits, a dollar of profit today is worth more to a corporation than a dollar of profit ten years from now. It is this truism which underlies the widespread corporate use of the discounted cash flow, or DCF, method of analysis for computing the rate of profit on different investments. As is implied by the name of the method, discounted cash flow analysis involves two basic elements: a cash flow of costs and profits over time, and discounting these flows by some factor to take into account the greater value of near money as compared to far money.

Step 3.

gross impact cost

- development revenue

= the fee for a shore facilities construction permit

1. Mike Davis should have some back-up information for us by Frieday which apparently includes a statement attesting to the constitutionality of this concept.

2. On advice from Jim Rhode of House Finace, I contacted Gregg Erickson from the Division of Research Services to let him know of the hearing on HB 219 for Monday. Mr. Erickson is an economist and he and his staff are apparently well versed regarding this bill; either himself or one of his staff will be on hand for the meeting.

MEMORANDUM March 14, 1977

SUBJECT: HB 219 Coastal Zone Development Permits (W.O. 3562)

TO: The Honorable Lisa Rudd
Chairman
House Committee on Community and Regional Affairs

FROM: Gregg K. Erickson
Director of Research

Jack Chenoweth
Staff Attorney

Introduction

As you requested, we have consulted with the sponsor of this legislation in an attempt to deal with some of the practical and legal problems that have been raised with it in testimony before your committee. In doing so we have developed an alternative approach for meeting the needs which we understand prompted the introduction of this legislation. After consultation with the sponsor, and as a practical matter related to the limited amount of time available, we have devoted most of our efforts towards developing this concept (which we might for shorthand call the "monopoly franchise approach") rather than the "permit approach" embodied in HB 219. If the committee wishes to proceed with the concept we have outlined here, we could draft legislation and have it before you for initial mark up by Wednesday morning. You may, of course, elect to stick with the "permit approach", and in this event we would shift our efforts towards resolving, insofar as we can, the technical problems that have been noted.

The legislative findings and declaration of purpose contained on page 1 of the bill delineate the needs that have prompted its introduction. As we understand them, these are the need for a mechanism which will insure that companies developing outer continental shelf (OCS) resources pay the net costs to the communities impacted by that development. In addition, it has been emphasized to us that the payment of these net costs should be at an early stage of the development when the community impact is at its most severe, and that there should be an equitable mechanism for sharing the payments among the state and local communities.

The Permit Approach

When one of us (Erickson) testified before you last week, some of the practical problems involved in implementing the bill as it is currently written were discussed. These are summarized as follows:

1. The *Estimation Problem.* In order to determine the fee to be charged for a permit, it would be necessary to look many years into the future and estimate both the costs and benefits derived from OCS development. These are obviously very difficult to determine. The biggest factor in the input is, of course, whether or not the exploration phase is successful. The possibility of future federal assistance adds additional uncertainty. Even if one could predict the unfolding of events with certainty, there would remain a great deal of room for subjective differences in the evaluation of the cost of those events. For example, a city with a high level of unemployment and substantially under-utilized coastal infrastructure (such as docks and staging areas) might evaluate the cost of OCS development as close to zero, whereas another community with stable employment and little room for physical expansion of facilities might find the same type of development very costly.

2. The *Allocation Problem.* In the initial phase of OCS development, at the time when these permit fees would be assessed, there would undoubtly be many companies involved in the exploration process. However, the most serious impact on the community will occur during the development phase. It is conceivable that one company could be responsible for all such development. It would probably be inappropriate to allocate all the OCS development costs imposed on a given community against the many companies involved in the exploration phase, when only one of them would derive the benefits from it.

3. The *Incidence Problem.* If and when one has been able to determine the net costs of OCS development, and who should pay them, a problem remains in fashioning a mechanism whereby that payment is extracted. Under the language currently contained in HB 219 it is possible that certain types of business organizations would be able to escape entirely the payment of the fees that this legislation is designed to assess. For example, the wharf run by a third party, financed only by wharfage charges would not appear to be covered. There would seem to be a strong incentive for this type of institutional arrangement to develop if this legislation were to be adopted in current form.

In addition to the practical difficulties adherent in this legislation, it also raises some major and serious legal issues. During the past week you have had the opportunity of hearing representatives of the oil

industry do this--at length. While we do not accept at face value all the legal arguments raised in this discussion, we do believe that legislation of this sort would be vulnerable to legal challenge on a number of points, including, among those summarized by Mr. Gene Wiles, the constitutional arguments touching upon equal protection and interference with interstate commerce.

Government Monopoly Franchise Approach

Because of the practical and legal problems associated with the bill as currently written, we examined other possible methods of fullfilling the purposes of this legislation as we understand them. In the course of this examination and our review of the surprisingly extensive literature that has accumulated recently on the coastal impact of OCS development, we have been struck by the fact that those areas that have been at least partly successful in dealing with OCS impact have been so by virtue of their ability to gain control over some vital component of the onshore infrastructure necessary to support offshore development. Probably the most distinct example where this mechanism has been used is in the Shetland Islands, where legislation was adopted which gave the county ownership in and effective control over the port and staging facilities necessary for the North Sea development. [1] In both Kodiak and Yakutat, similar though perhaps less successful efforts, based on patterns of land tenure, have been made to extract from OCS developers some of the onshore costs of their activities.

We would suggest that you consider creating by legislation a class of activities related to the onshore aspects of OCS development, the conduct of which would be reserved to and monopolized by the state. There are certain precedents for this approach. The legislation enacted by the British Parliament confirming broad authority in the Zetland County Council, (supra, note 1) serves as one model, though significant differences in the structures, functions, and powers of levels of government, and the differing constitutional bases between the British and American legal systems limit the comparison.

In the context of past American practice, the pre-eminent precedent may well be the Port of New York Authority, established in 1921 in a compact between the states of New York and New Jersey as a corporate and political body to serve as the means to "better [co-ordinate] the terminal, transportation, and other facilities of commerce in, about, and through the Port of New York" with broad powers to construct and maintain, directly or by lease, terminal and transportation facilities within the port district, but without necessarily impairing the authority of the respective states and their local governments to develop and improve transportation facilities and services. [2]

---

[1] *Zetland County Council Act, Elizabeth II, 1974 (chapter viii). See also Sagalkin, "Comparative Analysis of Planning Laws of Scotland and Alaska", Memorandum to Jessie Dodson, January, 1977.*

[2] *N.J.S.A. 32:1-1 et seq.*

Similar arrangements addressing coordination of marine, land, and air transportation within port areas have been adopted throughout the country. We suggest that a like approach initiated by the state in response to ever-increasing demands upon the transportation, ports, and other public facilities of the coastal areas--allowing for inclusion of affected local governments as partners with the state--would serve the dual purpose of improving coordination and development of facilities necessary for outer continental shelf petroleum activity while providing the means to assure that the net public costs of development are borne by the principal users of the affected facilities.

If you accept this approach, its implementation could be vested in a "Outer Continental Shelf Service Authority". Firms about to engage in outer continental development in an area, requiring new or increased onshore facilities, would provide the Authority with as detailed as possible specification of the sites and facilities they would like to have to supply those operations. In reponse to this initiative and after payment of a modest "earnest money charge" the Authority would form a "Regional OCS Facilities Corporation". If the proposed facilities are to be within the boundaries of any existing local government, the local government will automatically be a 50% partner in the regional facilities corporation. The corporation would then negotiate with the offshore developers concerning the terms and conditions under which the facility is to be built. The entire cost of the facility would be borne by the offshore developers, and, in addition, they would be required to pay a franchise fee. This fee would be a matter of free negotiation between the regional facilities corporation and the offshore developers, but it could not be higher than the present value of the net costs expected to be incurred in the community as a result of the OCS development over some reasonable span of time. By setting this upper limit on the franchise charge, one would hopefully avoid a successful legal challenge of the arrangement on the grounds that the fee was an arbitrary and undue burden on interstate commerce.

Although involving a lump sum component, the franchise fee could also contain within it specific mechanisms to provide for cost adjustments or continuing payments; clauses triggering such payments could be written into the franchise agreement. For example, if exploration is successful and development begins, such as a clause could require a second lump sum payment be negotiated.

The franchise payment receipts would be shared between the state and local government on a basis to be established in the legislation, perhaps in an arbitrary allocation, such as 50-50, or perhaps (with more difficulty) on the basis of some formula related to impact. In areas where no local government exists, the state would be the sole owner of the regional facilities corporation, but might share the fee with any local government subsequently obtaining jurisdiction over the facility site.

The legislation and the monopoly authority would not apply to existing facilities, but would apply to any significant expansion of those facilities. "Expansion" could be defined in terms of the amount of cargo or goods passing through them, or with respect to additional investment in them. Any such increase or additional investment would require the creation of a regional facilities corporation and the negotiation of a franchise fee.

All profits from the facility would go to the OCS operators to be shared among them in accordance with whatever arrangement they determined to be equitable. They, rather than the corporation itself, could be given the responsibility of operating and managing the facility.

In order to insure that the OCS supply facilities are sited in the most logical locations, corporation would have power of eminent domain, but this could only be exerised with the approval of both the state and local government co-owners.

Since the franchise fees would be a matter for negotiation between the developers and the governments, each individual community would have the opportunity to assess for itself, subject to the maximum limitations established in general terms in the legislation, the "franchise fee" necessary to compensate it for the expected onshore development costs. Thus, if a community wishes to encourage such development, it would be able to do so by setting relatively lower franchise fees.

Governance of the Authority would be by directors appointed by the governor subject to confirmation by the legislature. The chief executive officer of the authority would be the Commissioner of Community and Regional Affairs. The regional facilities corporations would be governed by boards appointed in equal numbers by the Commissioner of Community and Regional Affairs and the local government. The state members would be drawn from the authority's governing board. A majority of a corporation's directors would be required to approve establishment of or change in franchise fees or arrangements.

cc: The Honorable Charles Parr

HB 219

Statement, Parr, March 16, 1977

I am sorry that conflicting committee meetings did not permit me to be here during oil company testimony on HB 219. Over the weekend, however, I have listened to the tapes of that testimony and would like to offer a few comments.

Mr. Mathews of Exxon made quite a point of the fact that the North Sea was a case of rushed development whereas only 5% of the U.S. OCS had been developed over a number of years. Against his statement should be read the attached pages from the Baldwins' book: Onshore Planning for Offshore Oil: Lessons from Scotland. (Appendix 1)

The Exxon representative further indicated that very few jobs would be made available for Alaskans, that the bulk of the work force would be brought in to the rigs or platforms by air from the Lower 48, spend two weeks at work (beyond the three-mile limit) and fly home again. Two points: They don't intend to train and hire Alaskans-which would benefit our economy-and it seems unlekely that the state will collect any income tax from those workers who neither live nor work within the three-mile limit.

Also, the Committee should compare the above statements with that by Mr.Showalter of SOHIO, that the OCS development will help unemployment following completion of pipeline construction, hiring skilled workers who live in Anchorage.

Mr. Matthews and Mr. Wiles (Shell Oil) stated that the number of people will be small. It is up to the Committee to decide whether to accept their figures or those prepared by Mr. Waring and Mr. Trimble. My own preference is to assume the higher figures, require the companies to submit payrolls and other data, and give them a rebate if they have indeed been overcharged.

The Committee might also note that expansion of a water, wewer, electric power, or school systems does not happen overnight. The community simply cannot wait until the development phase hits to begin construction of needed facilities.

References were made to $1.6 billion (sic). A column by Senator Ted Stevens, which I furnished the Committee at its first hearing on HB 219, indicates

(1) a total of $1.2 billion, of which

(2) $800 million is for loans and

(3) $400 million is for grants, of which

(4) $50 million is for planning, the rest for unavoidable

ecological losses (fish?) and necessary projects which cannot be funded under the loan program.

It is hardly likely that Alaska will get the lion's share of the grant funds... .

Mr. Larry Vavra of Union Oil furnished information on the Collier plant in Kenai and its happy tax status. I should point out that the Collier plant has been paying only about 1/3 of what it should have paid in the North Kenai Fire Service Area. There has also been heavy (and uncompensated) impact on Keani and Soldotna, as Representative Malone can verify.

Mr. Wiles quoted the preparer of the Mathematerial Sciences Northwest study, "who spent more than three weeks in Scotland, Shetlands," to the effect that the "local authorities in Scotland, with the active cooperation of the oil companies and contractors had been able to effectively plan for on-shore development..." Some idea of the active cooperation may be gleaned from Appendix 2. (Baldwin, ibid).

A final point. Mr. Wiles discussed possible constitutional problems. Although not a lawyer, I'll venture the opinion that there are two sides to the case. See, for example, K & L Distributors, Inc. v. Murkowski, 486 P.2d 351(1971).

RE: Income Tax of OCS drilling rig employees

Transcript - Verbatim 3/7/77

Ose: "These 75 or whatever, that are being brought up then, the only revenue is through income tax?"

Matthews: "That's right, because they don't live in the state and they don't place any demand or services on the state".

Kelly: "Why are we receiving income tax on these people, I don't think we are, are we?"

Matthews: "It depends on how their residency is established with the company. If they are working for a company that is established and franchised with the State of Alaska, and they're paid out of Alaska, then essentially a portion of their income is subject to Alaskan taxation."

Kelly: "Is the Alaska Star subject to Alaska taxation?"

Matthews: "Yes sir, being it's maintained and operated by a company called North-Star Drilling Company in Anchorage."

I spoke with Mike McCormick, Chief, Audit Services, Department of Revenue and between corporate and individual taxation. The company has a legal obligation to withhold taxes on employees who are residents of the state. The state can tax individuals who are non-residents for income earned within the state. The state has no legal jurisdiction to tax income earned outside of the state.

Charles Prokop of Exxon, testimony before the Council on Environmental Quality, September 26-27, 1973:

"As production grows it would become necessary to have more and more personnel 'on location' until within a year or so a sizable community would develop near the producing area. If we keep our assumption of 200,000 B/D production as an example area, we could expect approximately 20 modest size business buildings, and two small hotels for temporary personnel and approximately 400 homes for the 600 people directly employed. A similar number would be expected to live outside the area in nearby cities with heavy emphasis still on Anchorage.

Of course, new supporting services would grow into the communities to serve the families of the employees, providing new jobs for those not directly associated with the industry. This could produce a community of near 2400 people and the churches, schools, recreation and service buildings accompanying a small population center. Land use would be approximately 6 square miles . . . .

There are several locations on the coastline of the Gulf which would accommodate sizable communities. At present Yakutat and Cordova are the only towns in the area under discussion. Neither is large enough to absorb even a part of the increased population, but either could be enlarged substantially should their positions be strategic. Yakutat would probably be the most ideally located of the two."

OIL INDUSTRY EMPLOYMENT IN SCOTLAND

TABLE 5.6 CHANGES IN OIL INDUSTRY EMPLOYMENT, MARCH 1973–DECEMBER 1974

	Mar. '73	*Jun. '73*	*Sep. '73*	*Dec. '73*	*Mar. '74*	*Jul. '74*	*Oct. '74*	*Dec. '74*

a. East Central is equivalent to the Firth of Forth region as described in Chapter 6.
b. No fresh figure was published for this quarter, therefore previous total has been carried forward.
c. The figures for West Central Scotland do not include workers engaged in rig construction work in Clyde shipyards, e.g. Marathon, Clydebank. In December 1974 workers in this category numbered 1935.

SUGGESTION FOR LEGISLATION...

Establish, in the department of community and regional affairs, an OCS assistance fund.

Authorized appropriations could not exceed 2% of the estimate of taxes payable by industry to the state (exclusive of municipal share) under AS 43.56: for FY 78, that appears to be an authorized appropriation of $ 3.2 - $ 3.4 million. In later years, that would rise, on an annual basis, to $ 4.0 - $ 4.5 million, corresponding, through the time, with intensive development of onshore OCS support facilities.

After allowing small amount for departmental administration, the balance available would serve as a source of grants and loans.

Up to one-half of the annual appropriation could go for grants: these would be for "non-capital" costs, i.e. internal administration, local government employee hire, planning and implementation of comprehensive plan, etc. The balance would be available by way of loan to local governments for planning and construction of capital improvements and for vehicle and equipment purchase (fire trucks or whatever). Repayment of the loan portion would be predicated on the assumption that, when industry development of facilities in the town blossomed, the development would add enough to the tax base of the municipality taxable under the local government authority ($ 1500 per capita under AS 29.53 and AS 43.56) to permit repayment on reasonable terms.

Loans could be forgiven if the development of facilities in the community did not occur as anticipated and the commissioner thought that enforced repayment would work a hardship. Loan forgiveness requests would have to be submitted to the Legislature for non-disapproval.

Automatically terminate the authority to grant and loan (but not the continuing obligation to repay) in seven years; if the program worked well, the Legislature could remove that provision at a later date.

Oil companies would pay no additional front end tax. The state would extend assistance on the assumption that oil development support facilities would be covered by the 20 mill special property tax levy against the property when the facility finds its way on to the tax rolls. Repayment of loan portion would be from the increase in assessed value of taxable property located in the community by the OCS development.

Assure that no portion of the funding were withheld for internal state government use: the needs are "out there"; the Department's past practices have convinced some of the House Republicans that too much of the available federal support is being held back at the state level.

This is an update of the 1974 $ 10,000,000 "pipeline impact" program, with lesser amount of funding annually, spread over the period in which OCS development may be reasonably anticipated, with emphasis on repayment where possible (i.e. capital project support in communities having real possibility of expanded property tax base). Some additional state front end money now by way of grant should assist local governments qualify for federal grant, loan and bond guarantee support. Also, if SB 220 flies, the grants could go toward implementation of planning obligations and opportunities of local governments under it.

IN THE HOUSE / SENATE _____

_____ BILL NO.

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act establishing in the Department of Community and Regional Affairs an Outer Continental Shelf Financial Assistance Fund; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. LEGISLATIVE FINDINGS AND PURPOSE. (a) The Legislature finds that activities which occur in the waters of the Outer Continental Shelf adjacent to the territorial waters of the state require the construction of support facilities in onshore areas of the state contiguous to the projects; that the siting, planning, construction and operation of new or expanded onshore facilities and activities associated with supply of outer continental shelf projects involve demands for public facilities and services which, initially, are beyond the ability of local governments to meet; that ~~XXXXXXXXXX~~ Congress has responded to the need to make available financial support and assistance to states and local governments affected, but that the nature of the Congressional response suggests direct assistance to Alaska communities to improve their eligibility for and capacity to use that assistance; that the contribution of revenues from industry by way of taxes and fees due local governments will occur ~~XXXXXXXXXX~~ principally through the recoupment of taxes levied

and collected from the petroleum industry under AS 43.56, but that ~~the~~ collection of the tax by units of local government will occur only after the ~~collection~~ inclusion of real and personal property on assessment rolls. ~~and/the/collected~~

(b) It is the purpose of this Act to provide a mechanism by which municipalities may be provided loans and grants to plan for and improve the delivery of public services and to determine the need for and initiate development of necessary public ~~services~~ facilities prior to the advent of significant ~~development~~ activity within the municipality attributable to the support of outer continental shelf facilities and projects.

* Sec. 2. AS 44.47 is amended by adding new sections to read:

ARTICLE . OUTER CONTINENTAL SHELF FINANCIAL ASSISTANCE.

Sec. 44.47.350. OUTER CONTINENTAL SHELF ASSISTANCE FUND. There is in the Department of Community and Regional Affairs the Outer Continental Shelf Assistance Fund to carry out the purposes of secs. 360-400 of this chapter. The fund may be used for no other purpose.

Sec. 44.47.360. POWERS AND DUTIES OF THE DEPARTMENT IN ADMINISTRATION OF THE FUND. (a) The Department shall

(1) make grants to municipalities for

(A) preparation and completion of comprehensive plans;

(B) implementation of comprehensive plans, whether or not prepared utilizing grants awarded under (A) of this paragraph, including, but not limited to, the adoption and enforcement of zoning and other land use controls reasonably related to shore facilities siting;

(C) municipal administration, including the exercise of general government powers authorized under AS 29.48.

(D) the acquisition of real property, or interests in real property, reasonably necessary to assure the implementation of a comprehensive plan adopted by the municipality; grants under this subparagraph are limited to the acquisition of real property in furtherance of concentration of outer continental shelf supply facilities within areas designated by the municipality in its comprehensive plan for industrial or related development and to the acquisition of necessary open space, park lands, watershed protection areas, or outdoor recreational facilities.

(2) make loans to municipalities for

(A) planning and construction of public facilities, whether or not the facilities ~~are~~ to be constructed are financed by direct municipal appropriation, general obligation bonds, loan or grant, and whether or not the completion of the facility contemplates use of bond guarantees available from an agency or instrumentality of the federal government under the Coastal Zone Management Act amendments of 1976;

vehicles and

(B) the purchase of/equipment reasonably necessary for the municipality to improve public safety ~~and protection~~ services.

(b) The Department shall adopt regulations to implement administration of this section.

Sec. 44.47.370. LIMITATIONS. (a) Grants and loans provided under sec. 360 of this chapter may not be used to reduce current municipal tax rates or to retire existing municipal bonded indebtedness.

(b) Grants made under sec. 360(a)(1) of this chapter may not exceed, annually, one-half of the total amount appropriated by the Legislature to the fund for a fiscal year.

(c) No loan may be made under ~~this~~ sec. 360(a)(2) of this chapter unless the commissioner is satisfied that the money is not otherwise avail-

able to the municipality.

Sec. 44.47.380. LOAN INDEBTEDNESS. (a) No interest may be charged on a loan to a municipality approved by the commissioner under ~~this~~ sec. 360(a)(2) of this chapter.

(b) ~~The~~ A loan approved by the commissioner shall be repaid by the municipality within 10 years of the first inclusion of ~~property~~ outer continental shelf support facilities within the municipality /subject to levy of the tax imposed by AS 43.56 on the assessment rolls prepared by the department of revenue or within 10 years of approval of the loan by the commissioner, whichever is later.

Sec. 44.47.390. LOAN FORGIVENESS. A municipality which has received a loan under ~~this~~ sec. 360(a)(2) of this chapter may ~~also~~ apply to the commissioner for forgiveness of ~~the~~ a loan, or any portion of the balance due. The commissioner may recommend that the loan be forgiven if he reasonably believes that the development of outer continental shelf support facilities within the municipality subject to the tax levied by AS 43.56 will not occur to the degree contemplated at the time the loan was approved and that repayment of the loan, or the remaining balance of the loan, would work a hardship on residents of the municipality. ~~A loan recommended by the commissioner for forgiveness shall be presented to the legislature within the first ten days of a regular legislative session.~~ A recommendation of forgiveness by the commissioner shall be presented to the legislature within the first ten days of a regular legislative session. A loan recommended for forgiveness by the commissioner shall be forgiven if, at the end of the legislative session in which a recommendation is presented, the Legislature has not adopted a concurrent resolution disapproving of forgiveness of the loan.

Sec. 44.47.400. FUND BALANCE. The legislature is authorized to appropriate annually to the fund established in sec. 350 of this chapter an amount not to exceed 2 per cent of the estimated receipts of taxes levied under AS 43.56 and returned to the state for inclusion in the general

* Estimated for FY 78: $3.2 million

fund for the fiscal year.

* Sec. 3. [redacted] Act. This Act expires June 30, 1984.

* Sec. 4. This Act takes effect July 1, 1977.

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPT. OF COMMUNITY & REGIONAL AFFAIRS

DIVISION OF LOCAL GOVERNMENT ASSISTANCE / POUCH B—JUNEAU 99811

March 4, 1977

Mayors of Coastal Municipalities:

Yesterday, I received a phone call from Chuck Cohen; who, as you know, is our representative in Washington D.C., with responsibility for doing research and technical analyses of the new Coastal Energy Impact Program. Chuck advised me that a supplemental appropriation for FY '77, as prepared by President Ford and amended by President Carter, and a budget for FY '78, have been presented to the Congress in the following amounts:

FY '77- $10 million - Formula Grants
$110 million - Facilities Loans
$0.00 - Planning
$0.00 - Environmental or Recreational Grants

FY '78- $13 million - Formula Grants
$143 million - Facilities Loans
$0.00 - Planning
$0.00 - Environmental or Recreational Grants

From the proposed appropriations the federal Office of Coastal Zone Management has tentatively proposed to allocate to the State of Alaska and its municipalities the following amounts:

FY '77 (Supplemental)
$700,000 - Formula Grants
$31,900,000 - Facilities Loans
$0.00 - Planning
$0.00 - Enviromental or Recreational Grants

FY '78 (Budget)
$3,200,000. - Formula Grants
$68,600,000. - Facilities Loans
$0.00 - Planning
$0.00 - Enviromental or Recreational Grants

The most obvious omission from the proposed budgetary figures, in our view point, is the lack of appropriations for planning which would ordinarily precede application for facilities loans or formula grants. In other words, it appears the federal administration is putting the "cart before the horse" by providing funding for facilities without any funding being provided for necessary planning. Therefore, this date, Kevin Waring, Director of Community Planning, is preparing a draft of a letter for Governor Hammond's signature to members of our congressional delegation in Washington strongly urging that they amend the proposed FY '77 supplemental and FY '78 budget figures to include funds for planning. By way of this letter we encourage each of you to likewise send letters or telegrams to members of the Alaska Congressional Delegation in Washington, expressing your concern for the need for funding of planning under the C.E.I.P. As in the past, we would appreciate receiving a carbon copy of any correspondence you might send to the congressional delegation. As we understand it, the supplemental appropriation bill and the FY' 78 budget are now in Congressional committees. It is imperative that, if you propose to make your wishes known to the Congressional Delegation, letters or telegrams be sent A.S.A.P.

One week ago today, the Coastal Management Policy Committee of Governor Hammond's Administration, authorized the Department of Community and Regional Affairs to take the lead in the development of the intrastate allocation formula process as provided for in the federal regulations which implement the C.E.I.P. I had earlier requested that Chuck Cohen prepare a draft intrastate allocation formula for our consideration and I expect to receive that first draft sometime next week. Also, while in Fairbanks this coming week Kevin Waring will meet with representatives of the Institute of Social and Economic Research at the University of Alaska, to see if the Institute is willing to also draft a formula for the proposed intrastate allocation. We will be contacting you in the very near future with our proposal. Any finally adopted intrastate allocation formula, as we envision it, will include municipal representation and input regarding the distribution of the federal allocation for formula grants grants and facilities loans made available to the State of Alaska.

We again urge you to contact our congressional delegation in Washington if you share our concern that money should be appropriated for Coastal Energy Impact planning. We also appreciate any comments or concerns you might have as to the manner in which our Department is proceeding in drafting a proposed intrastate allocation formula for the Coastal Energy Impact Program.

Sincerely,

Palmer

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPT. OF COMMUNITY & REGIONAL AFFAIRS

DIVISION OF COMMUNITY PLANNING / POUCH B – JUNEAU 99811

March 22, 1977

The Honorable Lisa Rudd
Alaska State Legislature
Pouch V
Juneau, AK 99811

Dear Representative Rudd:

As requested by the House Community and Regional Affairs Committee, this letter summarizes the amount and status of matching grants-in-aid allocated by the Division of Community Planning to local governments for OCS-related planning over the immediate past and current fiscal years.

To date, a total of $590.6 in matching grants has been awarded or reserved for local OCS planning. Grants were funded from the following federal and state program sources:

(A) Federal HUD 701 Comprehensive Planning Assistance Program;
(B) Two federal OCS Supplemental Planning grants the Division obtained through the federal office of Coastal Zone Management;
(c) Federal Economic Development Administration title IX OCS grant for economic adjustment planning; and
(d) State Oil Impact Program.

The following Table identifies the locality, grant amount and status of each local grant.

Locale	Grant Amount	Project Status
HUD 701		
1. City of Cordova	18.0	completed
2. City of Yakutat	24.0	completed
3. City of Yakutat	6.7	completed
4. North Slope Borough	9.0	completed
5. City of Sand Point	15.0	current
	$72.7	

Locale	Grant Amount	Project Status
OCZM/OCS I (Total Grant: $300.0)		
6. Kenai Peninsula Borough	60.0	completed
7. Kenai Peninsula Borough	25.0	pending
8. Kodiak Island Borough	36.0	completed
9. Kodiak Island Borough	12.0	current
10. Alaska Native Foundation	18.0	completed
	$151.0	
OCZM/OCS II (Total Grant: $250.0)		
11. North Slope Borough	40.0	pending
12. Unalaska	25.0	current
13. Kodiak Island Borough	50.0	current
	$115.0	
EDA Title IX (Total Grant: $300.0)		
14. Kodiak Island Borough	45.0	current
15. City of Seward	30.0	current
16. Cities of Kenai-Soldotna	30.0	pending
17. Cities of Homer-Seldovia	30.0	pending
18. City of Yakutat	33.0	current
19. City of Cordova	30.0	pending
	$198.0	
State Oil Impact Grant Program		
20. City of Yakutat	$53.9	completed

The OCZM/OCS Supplemental Grants and the EDA Title IX Grant represent new federal grant program funds which were obtained at the initiative of the Division of Community Planning to help local governments underwrite the cost of much-needed OCS impact planning. Of course, since all these federal programs require local matching contributions ranging from one-half to one-fourth of the grant amount, employment of these federal grant funds by local governments still means that substantial outlays of local funds are necessary. This has placed a serious financial squeeze on those local governments with small tax bases (e.g., Yakutat) or high mil rates (e.g., Seward at 25.0 mils) and has unfortunately hampered their ability to take quick advantage of matching grant funds available through the Division.

To summarize, better than half of the federal funds ($464.0 out $850.0) obtained by the Division specifically for OCS planning over these two years has been allocated to local agencies for locally sponsored projects. The bulk of the remainder has been allocated either to other State agency projects uniquely the responsibility of the State (e.g., drafting of Department of Environmental Conservation's oil tanker traffic regulations, Department of Highways' Gulf of Alaska regional transportation planning) or to special planning projects of common benefit to local and state governments alike (e.g., Marine Service Base

Study; Employment Forecast Model; OCS Bibliography; Management of OCS-Related Industrial Development Handbook). In my judgment, it is more sensible and economical to undertake this latter type of studies once under State sponsorship for universal use and reference, than to have them undertaken time and again by each separate local government.

I will be glad to provide any additional information on these matters that the Committee may request.

Sincerely,

Kevin Waring

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

The Department of Revenue estimates that the preparation of the income tax data required for estimating purposes would require the effort of two man-days. The preparation of the oil property tax data is estimated to require one man-week. It is assumed that the estimated costs could be absorbed.

IV. DATE 3/3/77 PREPARED BY Baerbel R. Sorensen 328

Analysis of HB 219 as Proposed February 15, 1977

The bill proposes to establish a shore facilities construction permit system, and to charge a permit fee based on the difference between "gross impact cost" and "development revenue" to be estimated by the Department of Community and Regional Affairs.

The "gross impact costs" are determined by multiplying the per capita costs of state and local government services in the area with the maximum anticipated population increase anticipated in conjunction with the offshore development in the area. "Development revenue" is to be determined by estimating petroleum property taxes, general property taxes, estimated income tax collections, and anticipated outer continental shelf oil and gas development grants.

The bill is unclear with respect to several items:

1. It appears that the permit fee to be assessed is aimed at covering costs of governmental services which will not be funded from other sources. The bill refers to per capita state and local government cost without specifically indicating which cost items are to be included, especially state costs.

2. It is unclear whether the permit fee assessed is supposed to reflect estimated total cost for the 20-year period, or whether it is to be based on the maximum impact at one point in time. The question of the 20-year coverage occurs because of the reference to the discounting of the cash flow on the revenue side. This implies that on the revenue side, the whole period will be taken into consideration.

3. In this connection, the question occurs why the inflationary impact is to be taken into account on the revenue side while no reference to this is made on the cost side.

4. If the permit to be assessed is to reflect the otherwise unfunded portion of state and local costs, all state and local revenue sources applicable should be incorporated. This would include a local sales tax, if applicable, school taxes, all excise taxes, license fees and other revenue sources, especially at the state level. However, most of these revenues, as well as some of the expenditure items, cannot yet be traced to specific localities. Because of this, the concept incorporated in the bill appears to be unworkable, at least in its present form.

219 - fees -
equal to gross impact costs
line 14 - what do they mean by land development -

- discounted on a cash flow basis -

franchise fee - stated comm. agreement - through a Land agreement (which board) power of eminent domain - city allegedly provides direct involvement & community and the planning function

- one approach through zoning planning power - vetoed PAH
- continuing payment schedule to retire the debt

[Alaska Industrial Development Act - differential involved
is this a possible model?]

2/26 Kevin's suggestions that local governments might wish to be available

Don Gilman – major of Kenai

Larry Farnam – Dick Nevai (major - Seward) - Johnny Johnson (city manager)

Oil companies – depreciate any impact – (IRA has their own projections)

- constitutional questions / ~~tax~~ a fee? and the questions.
- pay ~~taxes~~ everywhere – (nice feature of the bill

LISA's questions – how long are we looking at for income – no way to tell which

* - Waiving – annual fee – reapply each year – fixed fee to employment – force oil companies to disclose $ plan.

idea

- change statutes to include up front tax payments now as a credit against tax paid later. muni to withhold build. permits if project will create adverse impacts – criteria for issuing build, permit $ planning regs.

(franchise?)

7/28 Mr. Pann - grants for planning & other uses not for impacts — impacts to be estimated at $4 million. There will be no significant compensation from the fed. gov't & should be furnished by those who profit — consumers — through oil companies in turn passed to consumers not aimed at punitive tax on oil companies

- estimated increase in population comes from CRA / spread over 20 year period
- estimated cost of state & local gov't per capita /
- DOR be the one to estimate revenues

Mr. Kevin Waring - AK. has 1/2 of OCS and located out 3 miles — outside of our taxing jurisdictions — The extraction variations are part of the estimation process while dealing with hypotheticals — Exploration — Appraisal — Production — /

0 - 6 yrs.

1 yr - 18 months

5 - 8 years

suff. prod. to justify costs
500 - 700 million to build platform

characteristics of the field - where to put platform

/

LNG - wholly onshore facilities

Concrete - 300,000 pds. - earthquake problems either it - liquid base or hard pack. 1,000 - 1,500 employs for concrete platform

Erickson - Problem areas - 1) estimating impact (future costs are difficult) 2) allocation — those responsible are difficult to identify - 3) incidence problem - how to make them pay -

3/7 Introduction of background materials – red – yellow

Tom Matthews – man. of engineering – Anchorage – Exxon
immediate demand from oil devel. & to tax revenues
generated to state & local gov't –

(1) – questionably if OCS <u>ever</u> will inject

(2) assuming revenue credits –
"any person engaged in anything leased or contracted"
right of private infringement –

– The "real impacts" – what is happening? 20-yr
prop & discoveries done & SIMULTANEOUSLY is not reality
– The North Sea – leased <u>all</u> desirable acreage & 100
discoveries – 50 of these were <u>major</u> – correlation of
offshore rigs – ect. just not going to happen in Alaska –
Lease-sale 39 – all supported out of Seward & impacts
are: a) 30-acre tract – supply base
b) radio commun.
c) another tract at AK railroad
d) boats out of Seward & AK. docks – "Alaska-Star"
workforce – company & contract – 4 in Seward
8 local sub-contract
13 AK resid. – other
25 AK.

219 - fees -
equal to gross impact costs
line 11 - what go they mean by land development -

- discounted on a cash flow basis -

Franchise fee - stated comm. agreement - through a Local agreement (which board) power of eminent domain exercised collegially provides direct involvement & community and the planning function

- one approach through zoning planning power - vetoed PAM
- continuing payment schedule to retire the debt

[Alaska Industrial Development Act - differential involved - is this a possible model?]

2/26 Kevin's suggestions that local governments might wish to be available.

Don Gilman – major of Kenai

Larry Farnam – Dick Nevai – Johnny Johnson

workforce - company & contract - 4 in Seward
8 local sub-contract
13 ~~Ak~~ resid. - other
25 AK.

200 - total - 175 - out-of-state

limited amount of local employment, goods and services

long-term impacts - indeterminant

Santa Barbara - 1968 - now beg. to level. that lease comparable as an isolated case - Ak. situation -

5-8 yrs. to bring it on to production

Immediate major demands - non-existant

- 3% sales and use
- wharf fees (loading)
- prop. taxes (warehouse $
- benefits to employment

10,000 gal. a day of diesel fuel - 1¢ a gal. to state

1972 current rate of use that goes money to state.

1976 CZM Act - 1.6 bil. to states to counteract OCS

$ Ak. eligible to 35% of these funds

look at this and strings attached -

Pay a permit fee with no payback if nothing doesn't occur & based on data that assumes simultaneously events occur = drastic

construction phase - large build-up - modular - many people involved in construction phase

need for additional input - 3/4 mil. $ a month on goods & services

15-20 years before all lease area will be leased
9 out of 10 exploratory wells dry —
range of estimates — how to determine fee for permit —
OCS alleviate unemployment — ?? near impossibility of
determining fees & lack of data and federal impact
funds available — wide tie by would allow
for Alt. to dvel. its CZM plan —
- O don't think there is much ~~decision~~ incentive to
bring things (industry) in
- K petro-chemical & other dvel. in Cook Inlet
that would need to be segregated

#3 Mr. Wiles — Chevron U.S.A.
Gulf of Alaska's operators committee study — impacts —
— synopsis of economic report —
completed May 1975 & briefed officials
able to effectively plan after social & economic
impacts — recoverable reserves & rate of recovery
are unknowns — production stage employment will
go down — estimated impacts from various communities
[impact would not be great but benefits would be]
$30 mil. & 24 employees in Kenai

no figures the tr 3/4 mil. - with ad as to how those breakdown - Matthews didn't know
Question: California law that mandated impact -

3/8 Initial phase - no immediate demand - Matthew
-R 1977 development phase - a good time period other than 20 years - average in the 30yr period
Gulf of Alaska - 39 -
bulk of monies -
why CZM Act provide grants and loans
Permit fee system is CZM in California / none related to impacts - NOAA grant on OCS impacts
-O what construction are we about - 35 currently
demand for water - limited existing water supplies
No drink problem at dock water - additional
three bases -

Mr. Shewalter -
North Sea - California - how many people employed in Cook Inlet - how many employed then - now - services required - local sentiment of Kenai peninsula. How many Alaskans could receive full-time employment projections based on phase leasing schedules

3/9 Wiles continues — possible constitutionality question —

.030 — fee

Skelley, Mobil — case study - YAKATAT -
Mobil request water use

3/10 20 mil - right of way leasing bill — normal taxing level
Snider — look into % of amount of lease sale —

3/14 Larry Powell - Mayor of YAKATAT — community survey — 1975 - found that people were not interested in large scale build-up but some developments with restrictions & not destroying the quality of life
1976 — budget expenditures approaching 3X what happened in '73 & '74 — considerable costs
capital improvements — were not as great as anticipated for a comm. which encouraged development.
The community plan was integral to a good working relationship w YAKATAT community. More specifically what needs of community are —

Police facilities
Water facilities at capacity
Sewer facilities at capacity
Dock facilities need upgrading
Revenues not available until FY 1977

Airport has had considerable impact
Property values increase to private citizens & had a definite impact — 21 mills 1977 / 12 mills 1974
Attempts to get EDA Title IX and Title X for cap. improvements
13 billion assessed valuation
10,000 per capita income — now 13, - 15,
status in acres of village corporations
75% Native pop.
1,500 acres of Yakutat boundaries
$225,000 - FY 77 300 - 350, - FY 78 = $10,000
contribution to schools —
CETA grants for zoning — $10,000 + $40,000
Pipeline Grant — $53,000
control land situation to not allow for speculation from outside

3/15 Erickson – Chenoweth –

permit approach –

looked at the areas of OCS / guidging approval to a franchise - type of approach –

substantial precedence for franchise approach

negotiating a fee for the ~~negotiation~~ franchise between the community / area and the oil companies. Approach that stands reasonably good chance of success.

the ability of the authority to hold the monopoly

is it not possible for the local gov't to create it's own authority? Yes – accord. to JACK under AS 29 – away for marg. areas

do all local areas have control of tidelands like YAKATAT? – yes, if it is owned by locality.

no departure or local level from establishment

SB 224/CZM – coastal area but not immediate area of OCS

authority could: retain ownership – not necessary that land is in control (owned) by state or locality – right to exercise "eminent domain" –

"impact proport. to the value of the prop. ashore" — not intent of the sponsor

legislative research — planning & zoning

PAAA - "immediate impact" - in anticipation of demand
see Ted Stevens column -
there is no guarantee that Congress will appropriate the funds for OCS -

State had taxing capability in Valdez & for OCS
there is no taxing jurisdiction outside the 3-mile limit.

Lethin - municipality makes bargain w oil company - bases outside munic may not legally be
(Error - implied that they were paying more tax -
Is that true?)

Testimony that experts on risk & onshore development are Alaskan residents

No problem with statute system
the amt. of money will be ascertained by what the companies are planning are doing - phasing it in - (Erickson proposal)

~~Matthias~~

3/16 Hank Osbosky –
Federal Field Committee – Article 9 Comm. Law of the Sea – 44.9.719 –
Kevin Waring – Comm. & Rural Planning –
arriving at their own best estimates
Main Service Bases – done by C&RA –
Port Facility – level of exploration & development
Regional Transportation Needs for facilities – transportation infrastructure – "oil as a transportation industry"
Planning Concepts – details approaches of other states
Regional Planning Document – workforce, popul. growth
assessment of lands for industrial development.
The Mgmt of OCS related development – what demands are placed upon the local gov't – and the tools needed for
forecast model from Scotland – North Sea –
C&RA – preparation of local areas for potential impact
Kodiak Assessment Plan and Borough
Kenai Borough – assessment plan in works
→ fit together a comprehensive state plan for this areas

Kevin Waring (cont.) plan against the possibilities of development — FACTS:

The situation of grants:

no appropriations to implement CZM - 1972

31.9 million loans - loan entitlements not grants to Alaska -

Calif - N. Mexico - will be eligible for grants

No prospect of 600, mil. in grants funds -

costs of public services is 3 to 4 times higher than other states.

if uncertainty then it is far more equitable to place the risk, gambles and uncertainties upon the industry not the communities.

Rudd - where does the money come from for document publication

HUD -

CZM - funds for OCS

EDA - public facilities funds

General Fund -

50/50 funding split for state & local planning

Defined econometric model -

4 - 5 years - add'l employment growth 3,200
excluded some of the potential projects -

Berry - secure add'l revenues to support services
Menil League - franchise fee - support -
additional support to
indisputable that there will be a need for more services

Time frame from point of contact & out

- Authority - not to have legal power to sue -
- Purposes -
- Amendment to organic statute -
- Zoning option - mention this to LISA -

3/5 Mr. Weiss - mayor of Seward — Kenai
not meet the needs of sewage - schools -
Impact - hosp. - state highway - small local labor,
schools, sewers - (not an item or mini budget that will not be impacted)
able to identify all costs
and

Sinkelstein, Mark - attorney Atlantic Richfield -
- for simple ways of meeting the problem
- he recommends applying to state (local) to
get impact funds.

challenged subjective nature of the fees application
- appears to pit the state agency against the local community -
- questioned the option of the merit to elect not to put the permit -
- what happens during the repeal - Sec. 41.45.040.
- is the permit granted?
- Sec. 41.45.60 - within which time frame must the state take action to grant a permit? open discretion
- Sec. 41.45.070 - ratified to include a provision that there is opportunity to respond - with notice and not on a summary basis.
- Single request - have the locality make application

Schaefermeier, Darryl - Seward - recog. & supports the need for adequate funding -
- concern over impact as to the total magnitude of the bill
- clarification of "onshore" / definitions
- local government / defined (p. 1)
- Sec. 41.45.020. - line 17 - needs definition
- p. 3 line 5 - "adjacent community"
- stress the positive aspects of OCS impacts
- p. 4 l. 6 - how broad an area is going to be defined
- p. 4 l. 10 - when is it appropriate to notify affected parties

219 / 3/25 continued - Mr. Schaefermeyer - Seward

- p. 7 l. 5 — variance in muni & borough ordinances & this will cause additional problems / which will be the prevailing law under this bill.
- Recommendation to clarify the language regarding jurisdiction,
- Sec. 41.45.080. who should get fees involved because again the lack of definition — potentiality of adverse relationship
- p. 8 line 29 - define "community affected"
- Sec. 41.45.130. - penalties be a civil penalty can one levels this high of a fine as a misdemeanor
- front-end money — Anderson's questions
  - state receiving adequate funding by oil taxation & possibly set that aside in a separate fund to go to local community
  - difficult time in filing for grants -

Mr. Martins - Exxon attorney -
funds available through federal CZM
1/4 of a billion - alluded to -

- payment of property taxes — plus payment of permit fee — recommendation the option to recoup permit fee after p. taxes collected

- no provision for what the local gov't does with the money
- p. 8 l. 2 - standard multiplier - recommend. should be arrived at by the local communities
- Sec. 41.45.110. - DOI & Governor receive notification already by federal

idea:

- scrap - give local govt's authority to levy a fee & collect it directly
  - left to operate in the unorganized borough (state to collect - using the money (since they can't rebate it to unorganized area)
  - Scheme to have the authority to impose a special fee - & grant permit (employee)
  - strike the rebate provision
  - doesn't take care of city outside corporate limits - they would rely on state -

Charles Prokop of Exxon, testimony before the Council on Environmental Quality, September 26-27, 1973:

"As production grows it would become necessary to have more and more personnel 'on location' until within a year or so a sizable community would develop near the producing area. If we keep our assumption of 200,000 B/D production as an example area, we could expect approximately 20 modest size business buildings, and two small hotels for temporary personnel and approximately 400 homes for the 600 people directly employed. A similar number would be expected to live outside the area in nearby cities with heavy emphasis still on Anchorage.

Of course, new supporting services would grow into the communities to serve the families of the employees, providing new jobs for those not directly associated with the industry. This could produce a community of near 2400 people and the churches, schools, recreation and service buildings accompanying a small population center. Land use would be approximately 6 square miles . . . .

There are several locations on the coastline of the Gulf which would accommodate sizable communities. At present Yakutat and Cordova are the only towns in the area under discussion. Neither is large enough to absorb even a part of the increased population, but either could be enlarged substantially should their positions be strategic. Yakutat would probably be the most ideally located of the two."

OIL INDUSTRY EMPLOYMENT IN SCOTLAND

TABLE 5.6 CHANGES IN OIL INDUSTRY EMPLOYMENT, MARCH 1973–DECEMBER 1974

	Mar. '73	*Jun. '73*	*Sep. '73*	*Dec. '73*	*Mar. '74*	*Jul. '74*	*Oct. '74*	*Dec. '74*
Inverness and Easter Ross	1 840	1 795	2 040	3 205	4 175	4 375	3 520	4 025
Remainder of Highlands and Islands	50	65	50	85	395	930	1 365	1 565

West Central[c]	110	170	250	480	675	785	855	870
Total	4 100	5 140	5 650	8 610	11 275	13 615	14 140	16 230

a. East Central is equivalent to the Firth of Forth region as described in Chapter 6.
b. No fresh figure was published for this quarter, therefore previous total has been carried forward.
c. The figures for West Central Scotland do not include workers engaged in rig construction work in Clyde shipyards, e.g. Marathon, Clydebank. In December 1974 workers in this category numbered 1935.

RE: Income Tax of OCS drilling rig employees

Transcript - Verbatim 3/7/77

Ose: "These 75 or whatever, that are being brought up then, the only revenue is through income tax?"

Matthews: "That's right, because they don't live in the state and they don't place any demand or services on the state".

Kelly: "Why are we receiving income tax on these people, I don't think we are, are we?"

Matthews: "It depends on how their residency is established with the company. If they are working for a company that is established and franchised with the State of Alaska, and they're paid out of Alaska, then essentially a portion of their income is subject to Alaskan taxation."

Kelly: "Is the Alaska Star subject to Alaska taxation?"

Matthews: "Yes sir, being it's maintained and operated by a company called North-Star Drilling Company in Anchorage."

I spoke with Mike McCormick, Chief, Audit Services, Department of Revenue and between corporate and individual taxation. The company has a legal obligation to withhold taxes on employees who are residents of the state. The state can tax individuals who are non-residents for income earned within the state. The state has no legal jurisdiction to tax income earned outside of the state.

Sec. 41.45. . FEDERAL GRANT ASSISTANCE OFFSET. (a) Formula grants appropriated under sec. 308(c) of the Coastal Energy Impact Program (16 U.S.C. 1456a(c)) and received by the state for the purpose of reallocation to municipalities and communities in accordance with the provisions of that Act shall be applied to offset fees due under this chapter.

(b) If the department determines an allocation prior to payment of a fee by an applicant under this chapter, there shall be allowed as a credit against a fee payable by the applicant an amount determined by applying to the allocation for a municipality or community the ratio which the fee payable by the applicant bears to the estimated fees payabale by all applicants for facilities to be located in the municipality or community or within 10 miles of the municipality or community during the fiscal year.

(c) If the department determines an allocation subsequent to payment of a fee by a permit holder under this chapter, there shall be allowed, as a credit or refund, an amount determined by applying to the allocation for the municipality or community the ratio which the fee paid by the permit holder bears to the total of fees paid and the estimate of fees payable by all permit holders and applicants for facilities to be located in the municipality or community or within 10 miles of the municipality or community during the fiscal year. The permit holder may claim the amount computed in this subsection

(1) as a credit against any additional fee payable for the benefit of the municipality or community under this chapter; or

(2) if the permit holder reasonably anticipates no further activity in conjunction with a shore facility within the municipality or community or within 10 miles of the municipality or community which would require a subsequent permit or amendment of a permit for an existing facility, as a refund of the amount.

(d) Amounts refunded to a holder of a permit under (c)(2) of this section shall be withheld by the commissioner from payments due the municipality or community.

(e) In this section, "allocation" means the intrastate determination and allocation required to be made by the department under AS 44.47.050(19).

*Sec. . AS 44.47.050 is amended by adding a new paragraph to read:

(19) by regulation adopted in accordance with the Administrative Procedures Act (AS 44.62), provide for an intrastate allocation process for the determination and equitable allocation of financial assistance payable to municipalities and communities under sec. 308(g)(2) of the Coastal Energy Impact Program (16 U.S.C. 1456a(g)(2)).

EXAMPLE 1: Determination of allocation prior to payment of fees ...

The Department determines that, of the federal grant money available, the City of X is entitled to $ 100,000.

It is estimated that there will be five applications for permits to be issued in X during the same fiscal year, the applications and fees payable set out below:

A	$ 20,000	
B	$ 40,000	
C	$ 75,000	
D	$ 15,000	
E	$ 50,000	
	$ 200,000	Total permit fees payable

A may claim as a credit against the $ 20,000 fee payable the sum of $ 10,000:

$\frac{\$\ 20,000}{\$\ 200,000}$ = 10% x 100,000	= $ 10,000	and pays	$ 10,000
B may claim as a credit	20,000	and pays	20,000
C may claim as a credit	37,500	and pays	37,500
D may claim as a credit	7,500	and pays	7,500
E may claim as a credit	25,000	and pays	25,000
	$100,000		$ 100,000

In summary, the municipality receives $ 200,000

$ 100,000 from the allocation made by the Department

$ 100,000 from the payments by the applicants

EXAMPLE 2. Determination of allocation subsequent to payment of fee by one or more applicants; claim for credit or refund

The department determines that, of federal grant money available, the City of Y is entitled to $ 200,000.

Two permits have been issued, and two permit fees paid in full by the permit holders, amounting to total payments of $ 400,000:

A has paid $ 100,000

B has paid $ 300,000

During the fiscal year, the department determines, from advance reports which it receives, that 3 more permits will likely be issued:

C: estimated permit fee of $ 50,000

D: estimated permit fee of $ 35,000

E: estimated permit fee of $ 15,000

and that the total of all fees which will fall due during the fiscal year for the City of Y will be $ 500,000.

A may claim as a credit (against future fee payments) or a refund the sum of $ 40,000:

$$\frac{\$\ 100,000}{\$\ 500,000} = 20\% \times \$\ 200,000 = \$\ 40,000$$

B may claim as a credit (against future fee payments) or a refund the sum of $ 120,000:

$$\frac{\$\ 300,000}{\$\ 500,000} = 60\% \times \$\ 200,000 = \$\ 120,000$$

C, when it pays its fee, pays $ 30,000:

$$\frac{\$\ 50,000}{\$\ 500,000} = 10\% \times \$\ 200,000 = \$\ 20,000$$ credit against $ 50,000 or an actual payment of $ 30,000

D, when it pays its fee, pays $ 21,000:

$$\frac{\$\ 35,000}{\$\ 500,000} = 7\% \times \$\ 200,000 = \$\ 14,000$$ credit against $ 35,000 or an actual payment of $ 21,000

E, when it pays its fee, pays $ 9,000:

$$\frac{\$\ 15,000}{\$\ 500,000} = 3\% \times \$\ 200,000 = \$\ 6,000$$ credit against $ 15,000 or an actual payment of $ 9,000.

In summary:

The department provides, by way of credit or refund, $ 160,000 to the benefit of A and B:

to A	$ 40,000
to B	$ 120,000

It withholds this amount ($ 160,000) from the $ 200,000 allocation due the City of Y, and pays the City the difference ($ 40,000)

The City of Y

has received	$ 400,000	from A and B
will receive	30,000	from C
	21,000	from D
	9,000	from E
	40,000	of federal funds from the State
	$ 500,000	

The permittees have each paid (net after allowing for credits and refunds) 60% of the fee which they should have paid:

A	60% x $ 100,000	=	$ 60,000
B	60% x $ 300,000	=	180,000
C	60% x $ 50,000	=	30,000
D	60% x $ 35,000	=	21,000
E	60% x $ 15,000	=	9,000
			$300,000

which, together with the $ 200,000 of federal assistance, equals the $ 500,000 which the City of Y was entitled to under the permit fee formula.

RESPONSE TO COMMENTS RECEIVED DURING TESTIMONY ON FRIDAY, MARCH 25, WITH REFERENCE TO PROPOSED CSHB 219 --

Page 3, line 5: reference to "adjacent community or on the region" --

The term has no clearly understood reference unless one is provided in the bill. The committee may want to phrase a definition in terms of distance or mileage or, in keeping with the spirit of the bill, suggest or require that the department define the term by regulation. This could be done by incorporating the latter as a mandatory requirement in the section entitled "Administration, " AS 41.45.100(b) of the draft. [The term also appears, obliquely, at page 4, lines 2 and 3 and 6.]

Page 3, lines 21 and 22: reference to "health, welfare, and safety" --

The purpose of inclusion of the phrase was to allow the department to require evaluation of impact in the broadest possible terms with reference to any governmental function which an affected local government might perform under AS 29.

Page 3, line 28: correct to read :

(8) a resolution <u>of approval</u> of the governing body...

Page 4, line 10: Subsection (e) may be deleted; because applications are available for public inspection [subsection (c)], the department may provide copies to any interested party.

Page 4, lines 23 and 24: The formula could be made "tighter" by having it read:

(2) the estimate of the maximum anticipated population increase <u>within the municipality</u> attributable to employment...

Page 5: Sec. 40 of the draft.

With respect to the observation of Mr. Singletary, it was my intent that the issuance of a permit not be held up while the parties engage in hearings over whether the fee determined and tendered by the applicant was properly computed, but only if a fee, however determined, was not "promptly paid" [see sec. 60(1), following page].

Page 6, line 19:

estimated value of the facility <u>determined under sec. 30(a)(1) of this chapter</u> by more than 10 per cent;

Impact on <u>the</u> municipality or the region within a 10-mile radius

Page 6, line 23: Objection was made that there was no time frame within which the department would be required to rele e a permit. The provision could be amended to read:

Sec. 41.45.060. ISSUANCE OF PERMIT. The department shall issue a permit within 30 days of receipt of a complete application. The department may refuse to issue a permit...

Page 7, lines 1 - 11: Request that no permit be revoked or suspended without opportunity for a public hearing. Revise the section to read:

Sec. 41.45.070. REVOCATION OR SUSPENSION OF PERMIT. The department may revoke or suspend a permit issued under the provisions of this chapter if, after notice and hearing to all parties, the commissioner determines that

(1) the facility does not conform, in location, construction or operation, to applicable municipal ordinance or regulation; or

(2) an additional fee is due and payable under sec. 40(b) of this chapter or an additional fee and penalty are due and payable under sec. 50(b) of this chapter, and the holder of the permit has failed to pay the additional fee, together with penalty due, if any, within the time prescribed by law.

Page 7, line 15 and 16: Revise to read:

...to defray the costs of administration and enforcement of the provisions of this chapter.

Page 7, lines 25 - 27: Amend to read:

... for which a permit has been issued under this chapter <u>for compliance with the provisions of this chapter and the provisions of the permit application</u>.

[The purpose of the section is to require that some entity having the technical capacity to do so oversee operations of permittees in order to assure that the statements made by the applicant for permit reflect the later circumstances. If activity exceeds predictions, a supplementary permit fee may be levied.]

Page 8, line 2: One witness mentioned that "standard multiplier factors" vary among communities. I don't know whether this is true but, assuming it is, the paragraph could be amended to read:

(1) standard multiplier factors <u>determined by region and appli-</u>

cable to all communities within a region relating the number...

Page 8, lines 13 and following: In light of the fact that some of the information required under long-range reports must be provided to the Department of the Interior under the provisions of an OCS lease, the committee might want to consider a further subsection in sec. 110 authorizing return of this information in satisfaction of the requirements imposed in this section.

Page 9, lines 7 - 12: This is a CRIMINAL penalty intended for application to a party required to have a permit under this chapter and conducting operations without that permit. The CIVIL penalties in the bill are to be found in two places: the 10% penalty of sec. 50(c) [page 6, line 10] and the "double payment" provision of sec. 120 [page 9, lines 1 - 6].

Page 9: Add, to the definitions section, a standard definition of the term "municipality."

***

Page 2, line 16 and following: You have asked for clarification of the parties which would be required to apply for a permit. As section 20(a) is now written, the applicant would be a party "engaged in exploration, development or production under terms of a lease... in the offshore waters adjacent to the state," thus placing the burden squarely on the companies holding the leases. Should you want to require that actual contractors and/or operators (rather than the industry directly) bear the responsibility and attendant costs, it would be sufficient to rewrite sec. 20(a) to read:

(a) No person may construct a shore facility without first applying for and securing from the department a shore facilities construction permit and paying the fee provided in sec. 30 of this chapter.

You would, of course, rely on the definition of "shore facility" set out in the definitions section to distinguish between facilities for which a prior permit is required and those which would not. Using the language set out above, however, it would appear clearer that the contractor would carry the burden.

Sec. 41.45.060. ISSUANCE OF PERMIT. (a) The department shall issue a permit within 30 days of receipt of a completed application and payment of the permit fee. The department may refuse to issue a permit only if it finds that

(1) a fee due and payable by the applicant on an original application or an amended application has not been promptly paid; or

(2) the application does not contain, or is not supported by, written approval of the governing body of the municipality required by sec. 20(b)(8) of this chapter.

(b) If the area affected by construction of a shore facility is within one municipality and the municipality unreasonably withholds approval of an application for permit required by sec. 20(b)(8) of this chapter, the commissioner may waive the approval requirement and issue the permit.

Judith - Lisa didn't want this in committee members files - I caught it in time

D

Sec. 41.45.060. ISSUANCE OF PERMIT. (a) The department shall issue a permit within 30 days of receipt of a completed application and payment of the permit fee. The department may refuse to issue a permit only if it finds that

(1) a fee due and payable by the applicant on an original application or an amended application has not been promptly paid; or

(2) the application does not contain, or is not supported by, written approval of the governing body of the municipality required by sec. 20(b)(8) of this chapter.

(b) If the area affected by construction of a shore facility is within one municipality and the municipality unreasonably withholds approval of an application for permit required by sec. 20(b)(8) of this chapter, the commissioner may waive the approval requirement and issue the permit.

LISA,

JACK handed me this this morning to handle the North Slope Borough situation. Shall we duplicate and attach to his package of propose language changes for tomorow?

Also attached is the fiscal note - FYI.

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

CS HB 219 sets up a permit requirement for persons providing shore facilities in support of oil and gas exploration, development and production offshore Alaska and requires the Department of Community and Regional Affairs to receive and act upon permit applications according to standards set out in law and regulation. We anticipate that the actual number of permit applications to be processed will be limited at first (5-20 annually) and do not justify a full-time position. The limited staff time needed to administer the permits and fees can best be provided by adjusting staff priorities. However, administration of CS HB 219 also requires adoption of regulations, public distribution of data, and may require extensive public hearings. The Fiscal Note does allow for travel, public notices, distribution of data and other incidental costs as may prove necessary.

RE: Further clarification on the question of the North Slope Borough

Given that to single out the North Slope Borough is not feasible per se, how about language to the effect that:

If all local communities impacted are in one municipality and the municipality and the oil companies can not agree on onshore facility site and permit fee then the Department of C&RA would make the final site selection and ~~determine the fee~~ issue the permit.

LISA feels that the deal between the municipality and oil companies is cut well in advance of ~~permit~~ application for a permit and it is at this earliest stage of negotiation that a municipality such as N. Slope might really hold things up. Thanks. Judith

DRAFT OUTLINE 3/18/77 CSHB.219

CONTINENTAL SHELF SERVICE FACILITIES ACT

*Section 1. Legislative Findings and Purpose. Taken from page 1 of HB 219 with whatever changes are necessary to enhance chance of favorable judicial review.

*Section 2. Amend AS 44.47.050 to beef up "purposes" section of C & RA organic statute.

*Section 3. Adds new chapter (44.48)

Sec. 010. Creates Alaska Continental Shelf Services Authority in C & RA for the purposes of coordinating on-shore development related to outer continental shelf petroleum and mineral exploration activities, for purposes of assisting communities impacted by such development, and for the administration of the franchise requirements of this chapter.

narrowness of representation could prove to be a point of contention.

Sec. 020. The authority is to be governed by a committee composed of the commissioner (C & RA), the director of the Division of Community Planning (in C & RA), and the director of the Division of Local Government Assistance.

where is community authority

Sec. 030. No person may operate an "on-shore service facility" for continental shelf development without a franchise from the authority except as provided in sec. 100 of this chapter.

Sec. 040. The authority shall monitor the activities of the federal government and state government with respect to continental shelf exploration and leasing, prepare a quarterly report to the legislature and the governor on the potential need for continental shelf on-shore service facilities. When the board determines that service facilities are likely to be required in the near future, but in no case later than 90 days prior to the date at which the Department of Interior or other leasing authority proposes to receive bids on outer continental shelf tracts, the authority shall give notice of a hearing for the purpose of selecting a site or sites to serve the proposed continental shelf development. The purpose of the hearing shall be to solicit nominations of appropriate sites from interested communities and from continental shelf developers, operators of existing on-shore facilities, and other interested parties. The nominations shall contain 1) location of the proposed site, 2) the types of supply services expected to be required at this site, 3) the ownership of the land at and surrounding the site, 4) the capacity of the site to grow to meet the expected demands and an estimation of that expected demand and 5) such other information as the board may consider pertinent. In the case of facilities already in operation the board shall additionally solicit information concerning the current use of the facility and its ownership.

Sec. 050. The committee shall hold site selection hearings not less than 90 days nor more than 120 days after notice of those hearings have been distributed to all interested parties. Input shall be solicited from local communities in the area of the continental shelf development, prospective

users of the port facility including but not limited to holders of outer continental shelf leases, firms supplying the operations on those leases, local governments in the area of the proposed sites, representatives of fishing or other commercial activities who may be adversely impacted economically from the choice of a particular site or sites, and federal and state governmental experts on civil engineering, environmental science, or other technical matters which may relate to the port development.

Sec. 060. The committee shall determine, o the basis of the public hearing record, and any other relevant information available to it, the preferred site or sites for a continental shelf development facility or facilities. The criteria to be used by the committee in making this selection, in descending order of importance, are 1) minimize adverse economic and social impact on any community that may be adjacent to or coincident with the site, 2) minimize adverse environmental impact, 3) minimize the costs of facility development, minimize the expense of servicing OCS activities, and make the best use of existing port facilities, 4) maximize the likelihood that facilities will be useful for other purposes if and when OCS development tapers off.

Sec. 070. If the chosen site is in a borough, the borough may appeal the site decision to the governor who shall have 30 days to 1) affirm the decision, or 2) direct the board to give the issue further study, in which case the governor shall provide specific instructions as to what areas of concern should be looked into further. (If the site is in a city which is not itself included in a borough, the city has the same appeal right.) This appeal must be exercised within 30 days of the date of the initial site

choice decision. Other parties with a major interest in the siting decision including the prospective companies developing the OCS resource, land owners in the vicinity of the site, or others with similar interests may, within the 30 day period subsequent to the initial decision, request a rehearing by the board stating in that request the reasons why they believe an additional hearing is necessary.

Sec. 080. Once a final site selection decision is made a regional continental shelf facilities board shall be formed composed of the committee members or their designees (who must be on the C & RA staff) plus three members elected by the borough assembly (or the city council if there is no borough. If the city later becomes a part of a borough the new assembly elects new board members. The regional board is empowered to select a franchisee and negotiate the franchise fee.

If requested by a majority of the board members the Department of C & RA shall provide staff support to the board in its selection of the franchisee, and in the setting of the franchise fee. Four members of the board constitute a quorum, and actions of the board require an affirmative vote of four members.

Sec. 090. The franchise shall be awarded to firms actually engaged in continental shelf development unless the board determines that other ownership is in the best interests of the state and community; however, in the case where an approved site is an existing facility the franchise shall be awarded to the operator of the existing facility unless it is the board's decision that the operator does not have the technical or financial capability to promptly and efficiently meet the expected requirements for continental shelf supply services. In this case the board shall encourage the existing facility operator and prospective continental shelf developers to establish some form of joint venture to which the franchise then shall be awarded.

Sec. 109. Where a port exists at the approved continental shelf supply facility site the franchise and franchise fee shall not be required unless cargo directly destined for outer continental shelf development crossing the facility exceeds 25 per cent of all other cargo either in value or in tonnage over the period of one month. The facility operator shall periodically report to the board on the tonnage crossing its facility and shall not exceed the 25 per cent figure without first obtaining the franchise from the regional facilities board.

Sec. 110. The franchise fee shall be a matter of free negotiation between the board and the franchisee. The fee may be paid on the basis of any or all of the following: 1) an initial lump sum payment, 2) periodic payments of fixed amounts, 3) periodic payments based on the value of material moved across the franchise facility, 4) initial lump sum payment to be followed by a subsequent lump sum payment if and when activity reaches a specified level, or 5) any other method that reasonably relates fee payments to impact costs expected to be imposed upon the community by OCS development.

Sec. 120. The franchise fee shall be subject to reneogtiation each five years, and shall not exceed the cost to the community and state that have a reasonable probability of occurring during the five year period. These costs shall be net of any payments expected to be received for property taxes on the facility, and if the franchise fee includes a periodic payment, shall be net of the expected value of those periodic payments. After the initial five year period has lapsed the maximum permissible franchise fee during the second five year period shall be calculated in the same manner as was the maximum fee for the first five year period, except that the maximum

shall be increased by the net community costs incurred over the previous five year period in excess of those collected or defrayed by the franchise fee paid during that period, or alternatively, decreased by the amount that the actual monies paid were in excess of actual net costs incurred on the community. However, in no case shall a community be required to reimburse the franchisee for any "excess payments" except by means of credits against future franchise payments.

Sec. 130. The franchisee or prospective franchisee who believes that the fee proposed by the board is higher than permitted under sec. 120 may pay the fee under protest and appeal to the superior court, and such payment shall not prejudice the franchisee's rights in any way. No franchise shall be awarded, however, without payment of the fee, and a prospective franchisee who appeals an offer of the board to the court acquires no rights in the franchise, which the board may then award to another applicant on the same terms and conditions as were turned down by the initial prospective franchisee. Acceptance by a second applicant of the terms rejected by the initial prospective franchisee shall be prima facie evidence of the reasonableness of the proposed fee under the criteria established in sec. 120. The attorney general shall defend the board and the committee in any actions brought against it.

Sec. 140. If on renegotiation the board and the franchisee cannot agree the franchisee may pay the franchise fee proposed by the board under protest and appeal as provided under sec. 130 above. If the franchisee does not wish to make payment under protest then the local government may acquire by eminent domain the facilities of the franchisee at the approved site, or if the local government is not interested the state may so acquire them.

Sec. 150. Franchise payment shall be shared between the state and local government (if one exists) on the basis of 30 percent to the state and 70 per cent to the local government. If a local government should be formed or should expand to encompass an approved site subsequent to the collection of a franchise fee the local government shall receive 1.167 per cent of the previously collected fee for each month of the five year franchise period yet to run, counting from the effective date of the annexation or formation of the local government.

Sec. 160. The board shall have power of eminent domain, but this may be exercised only through unanimous vote of the board and only to acquire an approved site. Nothing herein requires the use of this power by the board.

Sec. 170. A franchise may not be sold or otherwise alienated to a non OCS operator without local government having right of first refusal, and the state the right of second refusal.

Sec. 180. Non discrimination in operation of the facility with respect to rates, terms and conditions charged to other users shall be a condition of the franchise.

Sec. 190. Nothing herein shall exempt a franchise facility from payment of property taxes or compliance with lawful zoning requirements. Neither shall a facility be entitled to any local services or special treatment by virtue of its franchise. The franchise is not necessary exclusive.

Sec. 200. Civil penalities shall be assessed for operation of an OCS service facility without a franchise. Penalties shall be based on the value of the cargo moved across the facility during any period when the facility did not possess but should have possessed a franchise. Owner of the cargo and the owner and/or operator of the facility shall be jointly liable for the civil penality.

Sec. 300. Definitions.

CITY OF PETERSBURG

P. O. Box 329 • Petersburg, Alaska 99833

March 30, 1977

Representative E.J. Haugen
Pouch V
Juneau, Alaska
99811

Dear Representative Haugen:

HB 219, if passed, would be detrimental to all Alaskan Communities in their development, planning and zoning, and economics.

HB 219 could and would retard development of any facilities in Alaskan communities and makes decisions by local authorities impossible.

Petersburg is vehemently opposed to this Bill in any form.

I am personally totally opposed to this Bill.

Sincerely,

Theodore M. Smith
Mayor, City of Petersburg

TMS/plc

CITY OF PETERSBURG IN THE STATE OF ALASKA CORPORATE SEAL APRIL 20, 1910

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPT. OF COMMUNITY & REGIONAL AFFAIRS

DIVISION OF LOCAL GOVERNMENT ASSISTANCE / POUCH B — JUNEAU 99811

October 20, 1977

Dear State Legislator:

Enclosed is the department's new regulation implementing the Coastal Energy Impact Program (CEIP). The CEIP is a federal grant and loan program designed to help coastal states and communities deal with the impacts of energy development.

Under the CEIP the state is given the primary responsibility for administration with the federal CEIP office providing technical assistance and funding. On April 4, 1977, Governor Hammond designated DCRA as the lead agency for the CEIP. Accordingly, DCRA has assumed the responsibility of preparing the federally mandated intrastate allocation process required to implement and administer this program. Local government officials and interested state agency personnel helped draft the guidelines that implement this process and we expect these parties to continue to be active in guiding this program.

This allocation process and the criteria used to rank applications has undergone a great deal of public scrutiny and will be subject to periodic revision. We feel that much will be learned in the initial year of operation and therefore we need the flexibility to go back and revise the CEIP application process to make it a more workable and useful program. Public input on any proposed changes will be encouraged and in some cases changes will probably be initiated by eligible CEIP applicants or other interested parties. The adoption of this regulation will afford us the flexibility to make needed changes to insure the maximum benefit from this program.

Sincerely,

Palmer McCarter
Director

DEPARTMENT OF COMMUNITY AND
REGIONAL AFFAIRS

Notice of Proposed Changes in the Regulations of the Department of Community and Regional Affairs

Notice is hereby given that the Department of Community and Regional Affairs, under authority vested by AS 44.47.160, proposes to adopt regulations in Title 19 of the Alaska Administrative Code to implement AS 44.47.050(14), as follows:

(1) Chapter 17 is created by adding new provisions as follows:

Section 10 - Coastal Energy Impact Program

19 AAC 17.010. Loans and grants shall be made in accordance with the provisions of this Department's "Coastal Energy Impact Program Policy Guidelines". Copies of the "Coastal Energy Impact Program Policy Guidelines" are available from the Department of Community & Regional Affairs, without cost.

Authority: AS 44.47.050 (14)
AS 44.47.100

Notice is also given that any person interested may present written statements or arguments relevant to the action proposed at Room 209, Community Building, Juneau, Alaska, before 4 o'clock p.m. on November 18, 1977.

Copies of the proposed regulation may be obtained by writing to: CEIP Coordinator, LGAD, Pouch B, Juneau, Alaska 99811.

The Department, upon its own motion or at the instance of any interested person may thereafter adopt the proposals substantially as described above without further notice or may decide to take no action on them.

DATE: October 14, 1977

/s/ Lee McAnerney
Commissioner

Senate Bill on Drilling

S.F. Chronicle #/15/77

New Offshore Oil Rules OKd

Washington

The Senate yesterday voted for a sweeping overhaul of the rules for tapping offshore oil and gas resources and gave Presidemt Carter the power to order exploratory drilling both in the seabed and on land.

A bill making major amendments in a 1953 law allowing the leasing of petroleum resources on the outer continental shelf was passed 59 to 18. The bill, setting new guidelines for offshore drilling, would:

• Direct the President to make an inventory of the nation's oil and gas resources and give him the power to order federal exploratory drilling on offshore and onshore land—either public or private. Federal agencies would do the exploratory drilling only if it was not being done by oil companies.

• Give the secretary of Interio- an almost unlimited number of bidding systems to choose from in awarding offshore oil and gas leases. An amendment by Senator John Glenn (Dem.-Ohio) would let the secretary use a bidding system not in the bill if it were not vetoed by either the House or Senate within 30 days.

• Reduce the number of leases that could be sold under "cash bonus" bids from two-thirds to one-half.

• Guarantee independent refiners access to offshore crude at world prices, and would require that pipelines carrying oil from the outer shelf be open to all producers on a nondiscriminatory basis.

• Give states more say in offshore matters, create a fund to pay for damage caused by oil spills and provide compensation for fishermen whose vessels or gear are damaged by offshore oil operations.

Senator J. Bennett Johnston (Dem-La.) called the Durkin amendment — which would give the President power to order exploratory drilling — "absolutely insane." Senator Clifford Hansen (Rep-Wyo.) called it a "ripoff" of the taxpayer and probably unconstitutional. The amendment was authored by Senator John Durkin (Dem-N.H.).

"I happen to think that it represents a clear invasion of the rights of the private property owner," Hansen said. "There would be lawsuits filed from one end of the country to the other."

Johnston said the amendment would result in a "multibillion dollar" program of exploration by a government oil company replacing independent drillers who now who "do 95 per cent of the exploratory drilling."

Senate Democratic Leader Robert Byrd of West Virginia told his colleagues the bill might do more to improve the nation's oil and gas supply than any other energy bill now pending in congress.

The bill, Byrd said, would increase the number of companies that could drill on the outer continental shelf while also increasing the government's ability to assess the nation's oil recsources.

The legislation now goes to the House, where similar legislation is pending before a special committee. The controversial senate amendments could run into trouble in the House. *United Press*

New offshore oil leasing plan

By ROSEMARY SHINOHARA
Daily News Staff Writer

Interior Secretary Cecil Andrus has announced a new offshore oil and gas leasing schedule through 1981 with six sales planned off Alaska, including a second sale in Cook Inlet.

The schedule, made public today, excludes two areas which Alaska officials suggested should be considered as marine sanctuaries, and three of four areas where the state said sales should be held off until Arctic ice experience and technology were developed.

Andrus said in announcing the schedule that it was prepared "in close consultation" with the affected coastal states. States were asked to respond to detailed questions about sales in their areas by July 15, and Alaska did so at great length.

The secretary had earlier announced a sale in Lower Cook Inlet in October of this year. That sale, supported by the administration of Gov. Jay S. Hammond, was originally scheduled for February of this year. But when Andrus became Interior secretary, he ordered it postponed.

Other sales on the latest planning schedule include:

—A federal-state near-shore

(Continued on page 2)

(over)

New oil leasing schedule

(Continued from Page 1)

Beaufort Sea sale in December of 1979.

—A Gulf of Alaska sale in June of 1980, and a Kodiak area sale in October of 1980.

—A second sale in Cook Inlet in March of 1981, and a sale in the Norton Sound area of the Bering Sea in December of 1981.

Two federal sales which had been proposed under prior Republican administrations, one at St. George Basin on the Bering Sea shelf and one in Bristol Bay, were not on the Andrus planning schedule.

Commissioner of Natural Resources Robert LeResche said Monday, "We're pleased with the schedule. . . . it was very responsive to our suggestions. Especially since they listed second sales in the North Gulf of Alaska and Cook Inlet. Our only disappointment is that the Beaufort Sea sale is not happening until late '79. We had asked that it be held in early 1979 in conjunction with a state sale."

The State of Alaska, in its comments to Interior last month, recommended that both the Bering Sea and Bristol Bay areas be considered as marine sanctuaries, and lease sales in them be postponed indefinitely.

The state also had recommended that sales in the Chuckchi Sea, the Norton Basin in the Bering Sea, in the ice shear zone and ice pack zone of the Beaufort Sea, all be delayed until adequate technology and experience is developed to ensure safe operations in Arctic ice conditions.

Particularly, the state recommended that in those four areas, sales should be put off until development in the near-shore region of the Beaufort Sea proved that exploration and development would be technologically successful.

Of the four areas, Andrus scheduled only the Norton Basin sale, and that one is the longest range sale on the planning schedule.

As for the second sale in Cook Inlet in 1981, the secretary said the three-year interval was intended to prove for "an orderly level of activity."

Senate Committee Favors Onshore Impact Funds

Arch. Times June '77

Times Washington Bureau

WASHINGTON — The Senate Energy Committee voted yesterday to give Alaska and other coastal states a greater share of the revenue from offshore oil and gas to help cope with onshore impacts of drilling.

The revenue sharing amendment was added to a broad outer continental shelf reform bill which passed the committee by a 12-4 vote.

According to a spokesman for Sen. J. Bennett Johnston, D-La., author of the amendment, Alaska probably will not benefit from the revenue sha ring plan until actual oil production starts in several years.

He said the amendment is aimed for the time being at compensating s tates where oil production is already under way — primarily in Louisiana and Texas.

Under the amendment, a $100 million fund would be set up and distributed each year to coastal states according to the amount of oil and gas produced or landed off their shores.

The money could be used in acco rdance with the state's approved coastzone management plan to help cope with the numerous onshore impactassociated with offshore drilling.

Meanwhile, House authors of the outer continental shelf bill are working on a completely different revenuesharing amendment which would give Alaska a far greater share of the oil profits and start the payments immediately.

Under the House version, which i s being drafted by Reps. William J. Hughes, D-N.J., and John Breaux, D-La., states would not have to wait foroil production to begin before qualifying for the impact assistance.

Rather, they could begin drawing money as soon as the first acreage of f their shores is leased to the oil companies — a step which has already be en taken in Alaska.

Instead of limiting the total impact fund to $100 million a year, the House version would set aside as much as $2 billion a year for the coastal sta tes, depending on the total amount of money received by the national treas ury from outer continental shelf oper ations.

Hughes, who met briefly with Pre sident Carter yesterday, reported th at the President does not favor the H ouse approach since it would funnel millions of dollars to coastal states merely because drilling is taking pla ce off their shores and not really because they need it.

Hughes conceded that he may ha ve to decrease the total amount of m oney which would be provided to coa stal states in order to avoid the app earance of a windfall which might causthe whole program to be defeated.

But he said the Johnston amendment as passed by the Senate committee is also unacceptable because it would not give Alaska the money it needs at this time to prepare for offshore drilling.

In addition to adopting the revenue sharing proposal, the Senate comsmittee also acted on two other important amendments to thebill.

First, the panel defeated an amen dment which would have authorized the secretary of Interior to engage in government-sponsored oil drilling.

The secretary already has that au thority under the law, and Secretary Cecil Andrus has announced that the government will begin an exploration program as earlyas next year.

By defeating the amendment, the committee did not take away the sec retary's authority to drill, but simpl yserved notice that it does not look favon government drilling, a committee spokesman explained.

In addition, the committee adopte d an amendment strongly opposed b y the oil industry which would require the use of bidding systems other than bonus bidding on one-third of all offshore acreage.

The oil industry has lobbied fierce ly against changing the bidding system and in favor of the status quo.

The House Outer Continental Shel f Committee is scheduled to begin vo ting on its version of the bill June 29, and it is obvious that there will be dif ferences which will have to be resolved in conference.

STATE OF ALASKA
DEPT. OF COMMUNITY & REGIONAL AFFAIRS
DIVISION OF COMMUNITY PLANNING
JAY S. HAMMOND, GOVERNOR
POUCH B — JUNEAU 99811

October 6, 1977

The Honorable Lisa Rudd
2827 Lore Road
Anchorage, Alaska 99507

Dear Lisa:

Enclosed are the materials on House Bill 219 which Rob Shoaf and I presented to the Community and Regional Affairs Committee in August. The materials are marked as Exhibits 1 through 8 and do not at this time represent departmental policy on this bill. The exhibits are summarized in the following paragraphs.

Exhibit 1. This exhibit shows the onshore and offshore employment assumptions used by this Department to forecast total OCS-related employment in the Northern and Western Gulf of Alaska. Also included are current population estimates for those coastal cities likely to be affected by exploration and commercial development of offshore petroleum resources. Please note that while none of the individual activities employ large numbers of people, the numbers of new jobs assumed would significantly contribute to the population of small cities which might be affected.

Exhibit 2. Exhibit 2 indicates the planning capabilities of those cities and boroughs which may be affected by leasing and development of offshore areas near their jurisdiction. While most of the muncipalities have a planning and zoning commission, very few actually have a professional planning staff.

Exhibit 3. Exhibit 3 lists the loans and grants available through the Coastal Energy Impact Program (CEIP). Available are planning grants, formula grants and credit assistance. All planning grant money must be used before formula grants become available. Planning grant requires a 20 percent match by local communities. The twenty percent match required could be financed through OCS permit fees.

Exhibit 4. Exhibit 4 lists the types of planning activities which can be funded through the CEIP program. Please note that CEIP funds are not currently available to finance the cost of negotiating with a potential developer or handling increased administrative costs resulting from rapid growth.

Exhibit 5. Exhibit 5 is a summary of the most recent version of House Bill 219. It contains a table which estimates the hypothetical revenues that would be generated from the proposed fee schedule.

Exhibit 6. Exhibit 6 is a brief outline of the merits of House Bill 219, its shortcommings as it is currently written, and suggested improvements which might be considered by the Committee.

Exhibit 7. Exhibit 7 is Rob's critical examination of two areas in the bill which he thinks may need further revision: local approval power and prior planning by the developer.

Exhibit 8. Exhibit 8 suggests examples of statutory language which might minimize problems raised in Exhibit 7.

I hope this information is useful to you and the Committee members. As I told you during our last meeting, I will be available to discuss the bill at the November Municipal League Meeting, or at another time if more convenient.

Looking forward to speaking to you soon.

Sincerely yours,

Lois

Lois Kramer
Planning Supervisor

I. Summary of HB 219

The onshore facilities construction permit bill was proposed in the Tenth legislature - First session by representative Parr and eighteen others. It is designed to provide municipalities affected by offshore energy development with a means of exercising control over the location and public costs of OCS related onshore development.

Under the bill, each facility must obtain a permit prior to beginning construction. Permits cannot be issued without local approval from the municipality where the facility will be located. Thus, local units are given a bargaining tool which can be used to negotiate over the location and types of OCS related facilities. If negotiation fails to satisfy local needs, municipal denial of project approval will bar issuance of the permit and prevent construction of the facility in that municipality.

Permit fees generated under the bill are to be used to plan for and minimize the public costs of the OCS related onshore development. Fee amounts are proportionate to the projected impacts of the facility. (see table 1) At least 50% of the fees will go directly to the municipality where the facility is being built. An additional 45% of the fees will benefit the municipality in the form of state assistance.

This 45% of the fees will be allocated among state agencies and the municipality by DCRA according to their relative responsibilities for the provision of public facilities and services necessitated by the development. State assistance will be in forms of planning, legal expertise, and the direct provision of services such as education, transportation, and health care.

HB 219 proposes two alternative fee schedules. One measure of fees is based on population growth and the cost of government. The alternative measure is based solely on the value of the proposed development. For each facility, the formula producing the highest fee is used.

Using the valuation measure of fees, the amount of revenues produced by a development is related to the size of the proposed facility. Facility value is roughly predictable by the stages of the oil extraction process. During exploration, support facilities on shore will be valued at $10 million or less. Based on a value percentage fee calculation, a $10 million facility would pay $250,000 in fees. (see table 1) If oil is discovered, shore processing facilities will have a much higher value. The very large processing facility at Valdez is valued at $1.2 billion dollars. Fees for a facility that size would be $6 million dollars. Although the scale of the terminal at Valdez represents the largest type of terminal which may be built to service offshore oil, it is obvious that processing facilities will generate large fees. Table 1 gives examples of fees produced by different sized production facilities.

(1) Preliminary planning for the consequences of new or expanded significantly affecting the coastal zone, including energy facilities

(i) analysis of government or private industry siting policies;

(ii) devising strategies for the public purchase of land or the establishment of other enforceable land-use controls for lands upon or near which energy development is to take place;

(iii) devising methods of protecting environmental resources, as defined in §931.72, threatened by the siting, construction, operation, or expansion of new or expanded energy facilities; or

(iv) conducting risk management studies, hazard analyses, emergency contingency planning and coordination studies, and assessment of mitigating measures for maintaining or improving public safety threatened by the siting, construction, expansion, or operation of new or expanded energy facilities.

(2) Planning for the consequences of a specific new or expanded energy significantly affecting the coastal zone, including facility

(i) study of and planning for economic, social, or environmental consequences of the siting, construction, expansion, or operation of a new or expanded energy facility such as

(A) increased population;

(B) changes in employment patterns, including those in fishing and tourism;

(C) changes in demand for public facilities, public services, and housing;

(D) local price inflation;

(E) changes in patterns of tax and user fee revenues or inter-governmental transfers;

(F) effects on fishing and tourism resources;

(G) effects on beaches, sand dunes, air quality, water quality, or other environmental or recreational resources;

(H) shoreline erosion;

(I) ecological effects; and

(J) effects on public safety.

(ii) conducting analyses required for state or local regulatory decisions related to energy facilities, including licenses, leases, permits, and zoning ordinances;

(iii) performing cost/benefit analyses or otherwise comparing the consequences of alternate energy facility sites or types;

(iv) devising strategies for recovering compensation from appropriate parties for any adverse effects caused by the energy facility involved;

(v) forecasting employment, population, public facility and public service needs and costs, and tax or user-fee revenues;

(vi) planning for the public facilities eligible for financing under Subpart E of this part;

(vii) study of and planning for the secondary consequences, including environmental and economic consequences, of alternative types and sites of public facilities eligible for financing under Subpart E of this part; and

(viii) study of and planning for the consequences of the phasing out of energy facilities.

(3) Carrying out projects necessary to administer assistance under Section 308, including;

(i) collecting data and analyzing information required in §§931.48 (a)(5) and 931.78(c)(4) for environmental impact assessment;

(ii) designing and carrying out an intrastate allocation process as described in Subpart J of this part; and

(iii) paying other reasonable costs of administering assistance under Section 308

July 5, 1977

House bill 219 provides an important boost to local preparation for OCS - onshore facilities. Developers are required to submit plans to the state three years in advance. This advance notice allows time for local assessment of the project and definition of a local policy in regard to the project. Advance reporting also requires the developer to disclose information which will assist municipal decision making.

Municipalities may use fees paid to cover planning and capital improvements costs. Independent legal assistance, land use and financial planners, and administrative assistance may be paid for out of the fees. Localities can use the planning process to control growth and establish a pattern for evaluating subsequent land use demands.

Status of the bill: HB 219 was not reported out of committee in the first session. Public hearings are being held to explain the bill and provide a channel for local input into the legislative process.

July 5, 1977

TABLE 1

REVENUES THAT THE FEES WILL GENERATE

EXPLORATORY STAGE

IF the facility is valued at $5 million fee = $100,000

IF the facility is valued at $20 million fee = $250,000

Most of the facilities built to service OCS exploration will cost $10 million or less. The assessed value of the service base at Yakutat is $5.5 million as of the first of 1977.

DEVELOPMENT AND PRODUCTION STAGE

IF the facility is valued at $500 million fee* = $2.5 million

IF the facility is valued at $750 million fee = $3.75 million

IF the facility is valued at $1 billion fee = $5.0 million

IF the facility is valued at $1.2 billion fee = $6.0 million

The oil terminal at Valdez will process 1.2 million barrels of oil per day and is valued at 1.2 billion dollars. If the largest possible find is made in the Northern Gulf, shore terminal capacity will need to be 650,000 barrels per day at a value of approximately $800 million. Also a larger discovery in the NOrthern Gulf would require a Liquified Natural Gas terminal with one billion cubic feet per day capacity at a value of approximately one billion dollars.

*These fees for the production stage are calculated at a straight one half percent. If the developer failed to provide three year advance information, the fees would double.

MERITS OF HB 219

1. Places municipalities in the driver's seat for any OCS-related shoreside development.

2. Creates a land management tool which is applied statewide and thus is not a disincentive to development.

3. Provides money to finance costs of local planning not presently covered by CEIP or other grants.

SHORTCOMINGS OF BILL AS CURRENTLY WRITTEN

1. Local approval or veto of a proposed facility need not be consistent with existing local or State plans.

2. Standards for permit evaluation are not specified. No procedural or substantive rights of developers are enumerated or protected.

3. HB 219 is not tied to the Coastal Management Act and its requirements.

4. Three years advance notice of construction plans may not be feasible in all cases.

SUGGESTED IMPROVEMENTS

1. To limit potential arbitrary uses of local approval or veto of a proposed facility by:

a. Requiring municipal decisions to be consistent with existing and emerging plans and policies under the Coastal Management Act;

or b. Establishing decision guidelines in the bill to ensure that a municipal approval or veto is to protect the public welfare and is consistent with Coastal Management policies;

or c. Grant municipalities the power to suspend a permit application for one year while a Coastal Management program is written.

Each alternative should clarify the procedural rights of the developer.

2. Make the advance planning requirement more flexible so that developers will not be penalized by changes in their plans caused by forces beyond their control.

STATE of ALASKA

MEMORANDUM

DEPARTMENT OF COMMUNITY AND REGIONAL AFFAIRS

Exhibit 7

The views of this memo do not reflect Departmental Policy

TO: Members of House Committee
Community and Regional Affairs

DATE: August 9, 1977

FILE NO:

TELEPHONE NO:

FROM: Robert Shoaf
Summer Intern

SUBJECT: HB 219

Our critical examination of HB 219 focuses on two major topics:

A. Local approval power
B. Prior planning by developers

A. Local approval power

Local approval power and permit fees are the two major features of the onshore facilities construction permit. A permit will not be issued without local approval. Municipalities are not required to have planning and zoning in place to make this local decision. Areas that do exercise land use controls do not have to make their decision inconsistent with existing municipal plans and ordinances.

Regardless of how the permit is classified, the local approval power is regulatory in nature and should be designed to protect private property rights. Private property uses cannot be abridged by government unless the public intervention is reasonably related to public welfare. Traditionally, to prevent arbitrary public intervention in private land use, police power controls established standards for intervention (by planning and zoning) in advance.

The Division of Community Planning feels that local approval power in HB 219 is an essential tool which will enable municipalities to manage OCS onshore development. However, municipal decisions must be directed to protect the public welfare. Furthermore, HB 219 should be coordinated with coastal planning under the Coastal Management Act.

Three alternatives are available to remove the arbitrary nature of local approval.

1. Prior planning

OCS onshore facilities siting decisions will be made in the context of coastal planning under Alaska's Coastal Management Act. Local decisions under HB 219 should adhere to approval District Coastal Management Programs. In municipalities where no management programs have been written, local decisions should be in accordance with any existing land use controls and with the principles and emerging plans of the Coastal Management Act.

It is not certain that District Programs under CMA will produce the type of specific standards needed to guide local development decisions. Additionally, not every municipality may be able to afford adequate, on going planning.

2. Guidelines in HB 219
To guide local decisons and to prevent arbitrariness the legislature can incorporate guidelines for municipal decision making in HB 219. Because of the comprehensive mandate for coastal planning in the Coastal Management Act, these guidelines should mirror the policies of CMA.

Guidelines could require that municipal evaluation of a onshore facility construction proposal consider the environmental, social and economic impacts of the project. Approval of a project could issue when a City Council or Municipal Borough found that these impacts were manageable. For example, a municipality could base its decision in part, on whether or not the necessary supportive public facilities and services will be available when the development is completed.

Evaluation of a proposal will require detailed assessment of the proposal and its effects on a municipality. A third alternative is to structure a municipality's use of this assessment period so that local land use plans are produced to serve as a guide for the municipal decision.

3. Interim Planning
This alternative grants municipalities the power to suspend construction of an onshore facility for a reasonalble time while District Coastal Management Programs are written and implemented. These programs would place the municipal decision in a more comprehensive framework than would the reliance on guidelines. Additionally, the municipal programs would serve as a guide for future management of OCS impacts, and as a basis for ongoing planning.

If a municipality chooses to approve a proposal without suspending construction pending implementation of a District Program, local approval should be based on positive findings that the impacts of the project are manageable.

In this alternative, HB 219 would only serve municipalities who have not yet written District Management programs.

B. Prior planning by developers
The requirement of three years advance notice of construction plans by developers (section 41.45.110, May 28, 1977 version) may not be feasible. Uncertainties not controlled by developers, such as Federal OCS leasing policies, may interfere with their ability to accurately project construction plans three years in advance.

When external factors dictate a change in plans for OCS onshore activities, developers should be able to change their plans without the excessive penalty of doubling the permit fee. To allow flexibility, the advance planning requirement might be reduced to two years, with changes in plans allowed with one years notice, unless waived by a municipality. Additionally, the Department of Community and Regional Affairs should determine what advance information is feasible in terms of progress of lease sales and exploration.

Statutory Language To Structure Municipal Decisions

local comp. plans

Alternative 1: Prior planning

"Local approval or denial of a permit shall be in accord with existing or emerging Coastal Management Programs, policies and guidelines."

Alternative 2: Guidelines

"Local permit approval may be granted by a City Council or Borough Assembly if it finds:

a. That the use will not materially endanger the public health or safety if located where proposed:

1. That the municipal water supply will be of sufficient quality and quantity to meet the increased demand attributable to the facility;
2. That the proposed use will not have an unreasonable impact of the coastal environment;
3. That the necessary supportive public facilities and services will be available as the demand for them attributable to the facility increases;
4. That associated land and water transportation will minimize degradation of waterfront uses.

b. That the proposed facility is in accord with existing plans and regulations;

c. That the use will not substantially injure the value of adjoining or abutting property, or is a public necessity;

d. That the use will not unreasonably disrupt the social and economic well-being of the municipality."

Alternative 3: Interim planning

HB 219 should specify whether the decision to utilize the moratorium or proceed immediately will be an administrative or legislative one.

Language to implement alternative three should be placed in a new section of the bill. The new section could state:

"Local Approval of an Onshore Facilities Construction Permit.

"When a developer of an OCS onshore facility requests local approval of its proposal, the municipal assembly or council shall meet to make one of two possible decisions.

"If the assembly finds that the project will be consistent with state and local plans then existing under Alaska's CMA [or consistent with enumerated standards], then local approval may be given.

"If the assembly finds that the proposal is not consistent with these guidelines [or will have a significant impact on coastal resources which is not adequately managed by present planning] or is not consistent with the local health, safety and welfare, then the assembly, by a majority vote, may choose to impose a two year moratorium on the proposal, during which time the municipality shall prepare a district coastal management program (See A.S. 46.35.030) to guide subsequent local decisions.

"If a municipality already has implemented a coastal management program, this section does not apply and the local permit decision shall be made in accordance with the policies and procedures of that plan.

"Once a moratorium is imposed, the municipality should contact the Department of Community and Regional Affairs to make arrangements to locate any funds needed for planning."

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPT. OF COMMUNITY & REGIONAL AFFAIRS

DIVISION OF COMMUNITY PLANNING / POUCH B – JUNEAU 99811

January 19, 1978

Where is attachment?

The Honorable Lisa Rudd
Representative
Pouch V
Juneau, Alaska 99811

Dear Representative Rudd:

This evaluation of oil terminal and service base sites in Kodiak Island Borough represents a major step in the preparation for offshore oil development which may occur in the Western Gulf of Alaska. The Department of Interior's OCS Lease Schedule now proposes a federal sale off Kodiak Island to take place in October 1980.

The study itself embodies many "firsts" for Alaska. It is the first time the State has joined with a borough and a Native Regional Corporation to design, monitor and review a project of this type. In addition, it is the first time that petroleum company opinions concerning OCS site preferences and industrial needs were solicited and obtained in advance of a siting decision. And finally, it is the first time that the method of decision-analysis has been used to organize and integrate the viewpoints of many interest groups for the purposes of site evaluation.

What is presented here is a useful working document providing basic description of sites considered, an evaluation of their development potential--advantages and disadvantages, and a ranking of the sites. The study suggests a way of thinking about site choices. We are advocating an approach to siting decisions that is firm as to purpose but flexibly open to alternative solutions. To accomodate the unknowns inherent in offshore oil exploration, several sites should be considered for future development, pending the outcome of exploratory activity.

While no absolute decisions need to be made at this time, the Kodiak Island Borough through its land use planning powers, can reserve sites which reflect a balance of viewpoints, are capable of meeting oil company needs, suitable in terms of existing laws and policies, and available for development.

We hope that the approach taken and the findings are of interest to you.

Sincerely,

Kevin Waring

Kevin Waring
Director

City of Kenai

January 10, 1978

Honorable Randy Phillips
House of Representatives
State of Alaska
Pouch V
Juneau, Alaska 99811

Dear Randy:

Enclosed is a draft of the ordinance you requested. As discussed, this is designed for introduction at the Borough level and should be understood that way.

Please call if we may further assist.

Sincerely,

Vincent O'Reilly, Mayor

VOR: sp

Enclosure

CC: Honorable Lisa Rudd
State of Alaska House of Representatives

"An ordinance providing for site planning and development permits and fees for the construction of major developments; industrial, commercial and resid. tial and providing for an effective date."
BE IT ENACTED BY THE BOROUGH ASSEMBLY OF THE KENAI PENINSULA:

Section 1. ASSEMBLY FINDINGS AND DECLARATION OF PURPOSE:
(a) The assembly finds that major development activities; industrial, commercial, residential impact the coastal zone of the Kenai Peninsula; that site planning is essential to prevent degradation of our coastal zone and provide for effective use of the coastal zone; that major developments involve demands for public facilities and services which, initially, are beyond the capacity of local governments to provide; that early knowledge of the location and magnitude of anticipated development will better allow the Borough and local government to plan the provision of public facilities and services before and during the period of development; that the planning and provision of public facilities and services in advance of construction generates a temporary demand for additional revenues to defray costs associated with extra ordinary municipal expenditures; and that there is a need to provide mechanism by which the local governments may receive information about projected developmental activity as a basis for sound public planning decisions and to obtain financial support in order to partially defray the costs of planning and initiating provision of necessary public facilities and services.
(b) It is the purpose of this ordinance to provide a mechanism by which to ensure that the location, construction and operation of

major development; industrial, commercial, residential, will produce minimal adverse effects upon the people of the Borough and affected local governments by providing for the exchange of information between parties involved and that the increase in demand for public services occurring as a result of development will be met by a contribution of revenue from the development responsible for the increase in demand.

Section II. SITE PLAN APPROVAL AND DEVELOPMENT PERMIT:

(a) No person shall proceed with a major development of the value, on completion, of more than one (1) million dollars without first applying for and securing from the Borough Planning Commission a site plan and development approval and paying the fee provided in Section III of this chapter.

(b) An applicant for site plan approval and development permit under this section shall file an application with the Borough Planning and Zoning department in a form which the Borough Planning and Zoning Commission and Assembly, by regulation, have prescribed. The application shall contain the following information:

(1) a description of the location and of the facility to be built at the location;

(2) an estimate of the value of the facility upon its completion;

(3) a summary of any studies or reports which have been made examining the economic impact of the construction and operation of the facility on the region; including, but not limited to, the applicant's estimate of the number of persons to be employed in the construction and operation of the facility during each year of the five-year period commencing with the submission of the application;

(4) a statement explaining the need for the facility;

(5) a description of any reasonable alternate locations for the proposed facility, a statement of the comparative merits and detriments of each location identified, and a statement of why the primary proposed location is best suited for the facility;

(6) any additional information which the department, by regulation, may require in order to fairly evaluate:

A. conformance of the proposed facility to applicable local laws and regulations;

B. the effects of the economic activity of the proposed facility on a municipality or service district within a twenty (20) mile radius of the proposed site(s);

C. the effects of the proposed facility on the public health, welfare and safety;

D. the capacity of the Borough and of municipalities affected by the proposed facility to provide necessary public facilities and services;

(7) any additional information which the applicant considers relevant.

(c) An application filed with the department shall be available for public inspection.

(d) An application shall be accompanied by proof of service of a copy of the application to the mayor or approved administrative official of each City or service district within a twenty (20) mile radius of a site at which any portion of the facility is to be located, both as primarily and alternatively proposed.

(e) The department may, by order entered after filing, require the applicant to serve notice of the application, and file proof of notice, on other persons as the department considers appropriate.

(f) The Borough Planning and Zoning Commission shall approve or deny the permit within 180 days of full and complete filing of permit application, including fees, except that on request of applicant, period of review may be extended up to an additional 360 days.

(g) The department shall require cities or service districts served with copies of permit application to recommend approval or disapproval of the permit within 120 days of service. No response shall be accepted as an approval of the application as it relates to that municipality or service district.

Section III. PERMIT FEE:

(a) At the time of filing an application for a permit under Section II of this chapter, the applicant shall pay a permit fee to the Borough Department of Finance.

(b) The fee payable under this section will be based upon the valuation of the proposed facility upon completion, with payment of two per cent (2%) of the estimated value up to $5,000,000; plus one per cent (1%) of the estimated value over $5,000,000 and up to $20,000,000; plus one-half of one per cent (.5%) of the estimated value over $20,000,000;

Section IV. APPEAL OF FEE:

(a) A city or service district which is within a twenty (20) mile radius of the development site may be entitled to receive a

portion of a site plan and development fee paid by an applicant under this chapter may appeal the determination of the amount of the fee. The governing body of the City or service district shall, within 30 days of receipt of written notice that an application has been submitted and a fee paid, file an appeal with the department setting out the reasons why it believes the fee paid has not been correctly computed.

(b) If a City or service district appeals the determination of the fee paid under (a) of this section, the director of the department shall, within 45 days after giving written notice to all parties, conduct a hearing on the matter. If, after the hearing, the director determines that the fee payable by the applicant has been incorrectly computed, he shall provide the applicant a written statement describing the error in computation and indicating the amount of the fee due. The applicant shall pay the additional amount of the fee within 30 days of receipt of the decision of the department director.

Section V. AMENDMENT OF PERMIT:

(a) A permit issued by the department under Section III of this Ordinance may be amended. An application for an amended permit shall be submitted in the manner provided for new applications in Section II of this Ordinance. If an amendment to an approved permit would result in a substantial change of an original permit, the amendment shall be treated as a new application and a supplemental permit fee shall be paid.

(b) If it appears to the director or to officials of a city or service district within a twenty (20) mile radius of the development site which may be entitled to receive a portion of a permit fee under this chapter that there will occur substantial change in the use of the facility from the activity described in the original application or an amended application for a permit, the director may call for a public hearing on the question. The director shall, within 45 days after giving written notice to all parties, conduct a hearing on the matter. If, after the hearing, the director determines that there has been substantial change in the use of the facility from the activity described in the original or amended application for an amended permit, he shall require the applicant to submit an application for an amended permit.

(c) An amended permit submitted by an applicant under an order of the director entered under (b) of this section shall be accompanied by payment of the increment in the fee due, together with a penalty payment of 10 per cent (10%) of the total amount of permit fees due for the facility.

(d) For purposes of this section, a change in the use of the facility for which a permit has been issued is "substantial" if the applicant or the director determines that the value of any changes or improvements in the facility would increase the estimated value of the facility by more than ten per cent (10%).

Section VI. REFUSAL OF PERMIT:

(a) The Borough Planning Commission, after public hearing, may refuse to issue a permit and approve the site plan, as presented or modified if it finds that:

(1) The proposed site and development plan is not consistent with the approved Coastal Zone Management Plan.

(2) A fee due and payable by the applicant on an original application or amended application has not been paid.

(3) A city or service district with a twenty (20) mile radius can demonstrate that the development will adversely affect the quality of life or is in violation of local law.

(4) The concept of development is inconsistent with other established development in the immediate area.

(5) The concept of development is inconsistent with or detrimental to publ health, safety and welfare.

(b) On denial of permit, fees paid shall be refunded to applicant less five per cent (5%) for administrative costs without interest.

Section VII. REVOCATION OR SUSPENSION OF PERMIT:

(a) The department may revoke or suspend a permit issued under the provisions of this chapter if:

(1) The facility does not conform, in location, construction or operation, to the details of the approved site plan; or

(2) after notice and hearing to all parties, the Director determines that an additional fee is due and payable under Section IV(b) of this chapter or an additional fee and penalty are due and payable under Section V(b) of this chapter, and

the holder of the permit has failed to pay the additional fee, together with penalty due, if any, within the time prescribed by law.

Section VII. DISPOSITION OF FEES AND PENALTIES:

(a) The Borough Department of Finance shall retain five per cent (5%) of the fees and penalties co-lected under this Ordinance to defray the costs of receipt, review of applications for permits and for the enforcement of the provisions of this chapter. Not more than thirty per cent (30%) of the fee shall be apportioned to a city or service district or combination thereof in which the proposed development is to be located or which are in a twenty (20) mile radius for operational expenses. The remaining sixty-five per cent (65%) or more shall be apportioned to a City or service district or combination thereof in which the proposed development is to be located or which are in a twenty (20) mile radius for capital improvements. Such capital improvement apportionments will be specific and funds so apportioned will be so dedicated. Determination of the amount(s) transmitted to a municipality or service district shall be subject to negotiation between the Department of Planning and Zoning and any affected cities or service districts relative to services provided and anticipated impact.

Section IX. MONITORING OF DEVELOPMENT:

(a) The department shall review and monitor the operation of all development for which a permit has been issued under this chapter.

Section X. PENALTIES FOR VIOLATION OF PROVISIONS OF THIS CHAPTER:

(a) A person who wilfully violates a provision of Sections I through IX of this chapter or any regulation adopted by the department under this chapter is guilty of a misdemeanor and, upon conviction, is punishable by a fine of not more than $1,000.00 for each violation. Each day of a continuing violation constitutes a separate offense.

(b) At the request of the director, the Borough attorney shall enforce this chapter and institute legal actions to accomplish its enforcement.

Section XI. DEFINITIONS:

In this chapter, unless the context otherwise requires:

(1) "Director" means the Director of the Department of Planning and Zoning.

(2) "Department" means the Department of Planning and Zoning.

Section XII.

This ordinance shall take effect on passage in accordance with law.

STATE OF ALASKA / JAY S. HAMMOND, GOVERNOR

DEPT. OF COMMUNITY & REGIONAL AFFAIRS

DIVISION OF LOCAL GOVERNMENT ASSISTANCE / POUCH B — JUNEAU 99811

October 20, 1977

Dear State Legislator:

Enclosed is the department's new regulation implementing the Coastal Energy Impact Program (CEIP). The CEIP is a federal grant and loan program designed to help coastal states and communities deal with the impacts of energy development.

Under the CEIP the state is given the primary responsibility for administration with the federal CEIP office providing technical assistance and funding. On April 4, 1977, Governor Hammond designated DCRA as the lead agency for the CEIP. Accordingly, DCRA has assumed the responsibility of preparing the federally mandated intrastate allocation process required to implement and administer this program. Local government officials and interested state agency personnel helped draft the guidelines that implement this process and we expect these parties to continue to be active in guiding this program.

This allocation process and the criteria used to rank applications has undergone a great deal of public scrutiny and will be subject to periodic revision. We feel that much will be learned in the initial year of operation and therefore we need the flexibility to go back and revise the CEIP application process to make it a more workable and useful program. Public input on any proposed changes will be encouraged and in some cases changes will probably be initiated by eligible CEIP applicants or other interested parties. The adoption of this regulation will afford us the flexibility to make needed changes to insure the maximum benefit from this program.

Sincerely,

Palmer McCarter
Director

DEPARTMENT OF COMMUNITY AND
REGIONAL AFFAIRS

Notice of Proposed Changes in the Regulations of the Department of Community and Regional Affairs

Notice is hereby given that the Department of Community and Regional Affairs, under authority vested by AS 44.47.160, proposes to adopt regulations in Title 19 of the Alaska Administrative Code to implement AS 44.47.050(14), as follows:

(1) Chapter 17 is created by adding new provisions as follows:

Section 10 - Coastal Energy Impact Program

19 AAC 17.010. Loans and grants shall be made in accordance with the provisions of this Department's "Coastal Energy Impact Program Policy Guidelines". Copies of the "Coastal Energy Impact Program Policy Guidelines" are available from the Department of Community & Regional Affairs, without cost.

Authority: AS 44.47.050 (14)
AS 44.47.100

Notice is also given that any person interested may present written statements or arguments relevant to the action proposed at Room 209, Community Building, Juneau, Alaska, before 4 o'clock p.m. on November 18, 1977.

Copies of the proposed regulation may be obtained by writing to: CEIP Coordinator, LGAD, Pouch B, Juneau, Alaska 99811.

The Department, upon its own motion or at the instance of any interested person, may thereafter adopt the proposals substantially as described above without further notice or may decide to take no action on them.

DATE: October 14, 1977

/s/ Lee McAnerney
Commissioner

CEIP FEDERAL ALLOTMENTS TO ALASKA FOR FY'77

LEGISLATIVE AFFAIRS AGENCY

MEMORANDUM

November 1, 1977

SUBJECT: House Bill 219, establishing a program of shore facilities building permits as a means of providing financial assistance to municipalities adversely affected by outer continental shelf activity.

TO: Representative Lisa Rudd

FROM: John B. Chenoweth
Legislative Counsel

You have asked for an interim review of state and federal action relative to financial assistance to local governments affected by continental shelf petroleum exploration and development, with a view toward considering the relationship between state and federal action and modification, revision or other action with respect to HB 219. What follows is divided into two parts to facilitate your review.

STATE ACTION

Since adjournment, Governor Hammond has signed into law the state's Coastal Management Act (Ch. 84, SLA 1977), and appointed the nine public members to serve on the coastal policy council.

Anticipating the first allocation of federal financial assistance in the form of grants and federal credit assistance under various subsections of the federal coastal energy impact program, sec. 308 of the federal Coastal Zone Management Act of 1972, the Department of Community and Regional Affairs has been active in the preparation of the necessary intrastate allocation process required by sec. 308(g)(2) of that Act.

The allocation process proposed by the department takes the form of policy guidelines for the implementation of the Coastal Energy Impact Program. With this memo is a copy of the policy guidelines in draft form together with a 20-page narrative describing the process. As I mentioned to you, I

believe, when you were in Juneau prior to Labor Day, the department has had a workshop on the draft with local government officials and had allowed until September 9th, to receive further comment. Thereafter, the department proposes to make necessary revisions in the guidelines and adopt them as the basis by which to evaluate applications for financial assistance.

I believe I also informed you that, in my opinion, the department has failed to proceed in the manner required by the state's Administrative Procedure Act in that it has not followed the process required for the adoption of administrative regulations for the program. The Department of Law has since informed Community and Regional Affairs that it should comply with the state's Administrative Procedure Act and, to that end, the Department has proposed the adoption of a one-section regulation incorporating the guidelines by reference.

The flow of financial assistance to Alaska under section 308 of the Federal Coastal Zone Management Act should commence very shortly. The Coastal Energy Impact Program provides five basic types of assistance: planning grants, environmental grants, development grants, credit assistance and repayment assistance. Alaska is due to receive an allotment of funds in each catagory based on its share of nationwide coastal energy development. The department has provided these figures by way of anticipated FY 77 receipts:

1. Planning Grants are available on an 80 percent federal/20 percent non-federal basis to help prepare for the consequences of all new or expanded energy activity in the coastal zone. Planning grants can be used to study and plan for the economic, environmental, or social impact due to the siting, construction, expansion or operation of energy facilities. Alaska has been alloted a total of $365,466 for this purpose for FY 77.

2. Environmental Grants, available on a 100 percent federal basis, are intended to prevent, reduce or repair damage to or loss of the valuable environmental or recreational resources due to coastal energy activity. Environmental grants may be used for impacts resulting from previous coastal energy activity which cannot be attributed to any one party. Alaska has been alloted $662,904 for this purpose for FY 77.

3. OCS Related Facility Grants, also called formula grants, are available on a 100 percent federal funding basis to plan for, mitigate the impacts of, and develop public facilities and services as a result of OCS related energy facility development. These funds may be expected to be the primary source of assistance to help municipalities prevent the unavoidable loss of environmental or recreational resources. A loss is unavoidable when the cost of prevention or repair cannot be assessed to a responsible party. Alaska has been alloted $1,178,643 in this catagory for FY 77.

4. Credit Assistance is available in the form of direct loans or guarantees of loans or bonds for the purpose of providing new or improved public facilities and services required as a result of coastal energy activity. Also available by way of such is repayment assistance, available to eligible applicants who cannot meet credit obligations because an anticipated revenue failed to materialize. Alaska has been alloted $48,612,973 for both credit and repayment assistance for FY 77.

CONGRESSIONAL INITIATIVES

US Senate-adopted legislation (S 9) and legislation offered in the House of Representatives (HR 1614) remain under study in House committee, with no likelihood of final adoption of either before year end.

The Senate-adopted legislation (S 9), entitled the Outer Continental Shelf Lands Management Act of 1977, amends the Coastal Energy Impact Program portion of the 1976 Coastal Management Act amendments

(1) by eliminating the requirement in sec. 308(b)(4)(i) that all loan and bond guarantee resources shall have been exhausted for formula grant projects and programs resulting from Outer Continental Shelf energy activity -- presumably allowing states the use of formula grant funds for new or improved public facilities and services without regard to examination of adequacy of alternative funding sources;

(2) by eliminating a requirement that such facilities and services be needed because of "new or expanded" activity in order to qualify for support -- opening the door to financial support for the resultant community impact caused by additional activities in conjunction to an existing plant or facility; and

(3) by increasing the funding authorization level by $25,000,000 annually after federal FY 77 which, if funded, should increase revenues available to Alaska: in this regard, the Coastal Management Office, Division of Policy Development and Planning, has offered the following projected revenue figures for Alaska:

(Federal)	FY 78	$ 5,000,000
	FY 79	7,050,000
	FY 80	8,750,000
	FY 81	22,320,000
	FY 82	21,820,000
	FY 83	14,920,000
	FY 84	15,170,000

for a total of $95 million dollars anticipated through the seven-year period.

Less certain, at least at the time the information was provided to me, is the course of HR 1614, in part because of the complexities of the amendatory language being proposed, and in part because of a change proposed in the manner of calculating assistance under the applicable formula. A computer run of the estimated payout to coastal states under the language of HR 1614 suggests payment of under $60 million to Alaska through the period. House consideration is complicated by the proposal of an amendment by Representative Breaux and others to change key portions of HR 1614 with respect to the operable formula, making the Coastal Energy Impact Program more nearly a "revenue sharing" assistance program not coupled to payment based upon oil and gas leases or oil and gas landed. Apparently the general revenue sharing approach is gaining some favor among the members of Congress; the Carter administration apparently remains opposed in principle. The committee considering the legislation did ask adoption of the Breaux amendments by way of request of the Rules Committee that the bill be scheduled for floor action; there was a move to table until next year (second session), and there will be no further action until January.

A copy of the bill, bearing the amendments offered in committee, is forthcoming from the Congressional Liaison, Office of Coastal Zone Management, in Washington, DC.

Enclosure

Testimony - Municipal Convention

Lynn Chrystal - Valdez

how did Valdez spend 5 million?
- sewer & water system
- school construction
- tight ≈ housing and schools - called short-term
- plane schedules were tight
  Polar Airlines
- shortages in grocery
- areas of town were not paved
- heavy truck traffic did tear-up the roads

FAVORS loan from GF
- should use state impact money -
- short-term impact GF

- municipality controls permit approval
- this speaks to known impacts the bill

does not dispute that impacts do take place

Valdez opposes the add'l layer of gov't by not allowing
Valdez did sell revenue bonds to oil companies
@ sale total of $12 million - now in permanent
20 mil tax - $6.6 million
Valdez operating budget & school > 10 million

DAVid Moffet – Petersburg –
strongly support Valdez in opposing as a "no growth bill"

– check file for Petersburg mayor's letter to Haugen – Mr. Theodore Smidt
– no council action

Kodiak Island Borough – Betty Wallin
mayor –

– water control
– money for input studies
– do have planning & zoning
– did a survey – 2,000 – 25% return
send copy of goals & objectives of Kodiak Island Borough

* – Additional effort to get Kenai INPUT

Carlson – FBKS. N.S. Borough

– couldn't get oil companies to tell them the impacts
– found that projections fluctuated enormously
– questions the purpose of the bill in requiring explanation & need for facility – he feels the need is obvious (i.e. OCS = need facility)
– noticed penalty for underestimation
requests reevaluation of

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPT. OF COMMUNITY & REGIONAL AFFAIRS

DIVISION OF LOCAL GOVERNMENT ASSISTANCE / POUCH B — JUNEAU 99811

October 20, 1977

Dear State Legislator:

Enclosed is the department's new regulation implementing the Coastal Energy Impact Program (CEIP). The CEIP is a federal grant and loan program designed to help coastal states and communities deal with the impacts of energy development.

Under the CEIP the state is given the primary responsibility for administration with the federal CEIP office providing technical assistance and funding. On April 4, 1977, Governor Hammond designated DCRA as the lead agency for the CEIP. Accordingly, DCRA has assumed the responsibility of preparing the federally mandated intrastate allocation process required to implement and administer this program. Local government officials and interested state agency personnel helped draft the guidelines that implement this process and we expect these parties to continue to be active in guiding this program.

This allocation process and the criteria used to rank applications has undergone a great deal of public scrutiny and will be subject to periodic revision. We feel that much will be learned in the initial year of operation and therefore we need the flexibility to go back and revise the CEIP application process to make it a more workable and useful program. Public input on any proposed changes will be encouraged and in some cases changes will probably be initiated by eligible CEIP applicants or other interested parties. The adoption of this regulation will afford us the flexibility to make needed changes to insure the maximum benefit from this program.

Sincerely,

Palmer McCarter
Director

DEPARTMENT OF COMMUNITY AND
REGIONAL AFFAIRS

Notice of Proposed Changes in the Regulations of the Department of Community and Regional Affairs

Notice is hereby given that the Department of Community and Regional Affairs, under authority vested by AS 44.47.160, proposes to adopt regulations in Title 19 of the Alaska Administrative Code to implement AS 44.47.050(14), as follows:

(1) Chapter 17 is created by adding new provisions as follows:

Section 10 - Coastal Energy Impact Program

19 AAC 17.010. Loans and grants shall be made in accordance with the provisions of this Department's "Coastal Energy Impact Program Policy Guidelines". Copies of the "Coastal Energy Impact Program Policy Guidelines" are available from the Department of Community & Regional Affairs, without cost.

Authority: AS 44.47.050 (14)
AS 44.47.100

Notice is also given that any person interested may present written statements or arguments relevant to the action proposed at Room 209, Community Building, Juneau, Alaska, before 4 o'clock p.m. on November 18, 1977.

Copies of the proposed regulation may be obtained by writing to: CEIP Coordinator, LGAD, Pouch B, Juneau, Alaska 99811.

The Department, upon its own motion or at the instance of any interested person, may thereafter adopt the proposals substantially as described above without further notice or may decide to take no action on them.

DATE: October 14, 1977

/s/ Lee McAnerney
Commissioner

STATE OF ALASKA
DEPT. OF COMMUNITY & REGIONAL AFFAIRS
JAY S. HAMMOND, GOVERNOR
DIVISION OF COMMUNITY PLANNING / POUCH B – JUNEAU 99811

October 6, 1977

The Honorable Lisa Rudd
2827 Lore Road
Anchorage, Alaska 99507

Dear Lisa:

Enclosed are the materials on House Bill 219 which Rob Shoaf and I presented to the Community and Regional Affairs Committee in August. The materials are marked as Exhibits 1 through 8 and do not at this time represent departmental policy on this bill. The exhibits are summarized in the following paragraphs.

Exhibit 1. This exhibit shows the onshore and offshore employment assumptions used by this Department to forecast total OCS-related employment in the Northern and Western Gulf of Alaska. Also included are current population estimates for those coastal cities likely to be affected by exploration and commercial development of offshore petroleum resources. Please note that while none of the individual activities employ large numbers of people, the numbers of new jobs assumed would significantly contribute to the population of small cities which might be affected.

Exhibit 2. Exhibit 2 indicates the planning capabilities of those cities and boroughs which may be affected by leasing and development of offshore areas near their jurisdiction. While most of the muncipalities have a planning and zoning commission, very few actually have a professional planning staff.

Exhibit 3. Exhibit 3 lists the loans and grants available through the Coastal Energy Impact Program (CEIP). Available are planning grants, formula grants and credit assistance. All planning grant money must be used before formula grants become available. Planning grant requires a 20 percent match by local communities. The twenty percent match required could be financed through OCS permit fees.

Exhibit 4. Exhibit 4 lists the types of planning activities which can be funded through the CEIP program. Please note that CEIP funds are not currently available to finance the cost of negotiating with a potential developer or handling increased administrative costs resulting from rapid growth.

Exhibit 5. Exhibit 5 is a summary of the most recent version of House Bill 219. It contains a table which estimates the hypothetical revenues that would be generated from the proposed fee schedule.

Exhibit 6. Exhibit 6 is a brief outline of the merits of House Bill 219, its shortcommings as it is currently written, and suggested improvements which might be considered by the Committee.

Exhibit 7. Exhibit 7 is Rob's critical examination of two areas in the bill which he thinks may need further revision: local approval power and prior planning by the developer.

Exhibit 8. Exhibit 8 suggests examples of statutory language which might minimize problems raised in Exhibit 7.

I hope this information is useful to you and the Committee members. As I told you during our last meeting, I will be available to discuss the bill at the November Municipal League Meeting, or at another time if more convenient.

Looking forward to speaking to you soon.

Sincerely yours,

Lois

Lois Kramer
Planning Supervisor

JA 5-2

(1) Preliminary planning for the consequences of new or expanded significantly energy facilities affecting the coastal zone, including

(i) analysis of government or private industry siting policies;

(ii) devising strategies for the public purchase of land or the establishment of other enforceable land-use controls for lands upon or near which energy development is to take place;

(iii) devising methods of protecting environmental resources, as defined in §931.72, threatened by the siting, construction, operation, or expansion of new or expanded energy facilities; or

(iv) conducting risk management studies, hazard analyses, emergency contingency planning and coordination studies, and assessment of mitigating measures for maintaining or improving public safety threatened by the siting, construction, expansion, or operation of new or expanded energy facilities.

(2) Planning for the consequences of a specific new or expanded energy significantly facility affecting the coastal zone, including

(i) study of and planning for economic, social, or environmental consequences of the siting, construction, expansion, or operation of a new or expanded energy facility such as

(A) increased population;

(B) changes in employment patterns including those in fishing and tourism;

(C) changes in demand for public facilities, public services, and housing;

(D) local price inflation;

(E) changes in patterns of tax and user fee revenues or inter-governmental transfers;

(F) effects on fishing and tourism resources;

(G) effects on beaches, sand dunes, air quality, water quality, or other environmental or recreational resources;

(H) shoreline erosion;

(I) ecological effects; and

(J) effects on public safety.

(ii) conducting analyses required for state or local regulatory decisions related to energy facilities, including licenses, leases, permits, and zoning ordinances;

(iii) performing cost/benefit analyses or otherwise comparing the consequences of alternate energy facility sites or types;

(iv) devising strategies for recovering compensation from appropriate parties for any adverse effects caused by the energy facility involved;

(v) forecasting employment, population, public facility and public service needs and costs, and tax or user-fee revenues;

(vi) planning for the public facilities eligible for financing under Subpart E of this part;

(vii) study of and planning for the secondary consequences, including environmental and economic consequences, of alternative types and sites of public facilities eligible for financing under Subpart E of this part; and

(viii) study of and planning for the consequences of the phasing out of energy facilities.

(3) Carrying out projects necessary to administer assistance under Section 308, including;

(i) collecting data and analyzing information required in §§931.48 (a)(5) and 931.78(c)(4) for environmental impact assessment;

(ii) designing and carrying out an intrastate allocation process as described in Subpart J of this part; and

(iii) paying other reasonable costs of administering assistance under section 308.

July 5, 1977

I. Summary of HB 219

The onshore facilities construction permit bill was proposed in the Tenth legislature - First session by representative Parr and eighteen others. It is designed to provide municipalities affected by offshore energy development with a means of exercising control over the location and public costs of OCS related onshore development.

Under the bill, each facility must obtain a permit prior to beginning construction. Permits cannot be issued without local approval from the municipality where the facility will be located. Thus, local units are given a bargaining tool which can be used to negotiate over the location and types of OCS related facilities. If negotiation fails to satisfy local needs, municipal denial of project approval will bar issuance of the permit and prevent construction of the facility in that municipality.

Permit fees generated under the bill are to be used to plan for and minimize the public costs of the OCS related onshore development. Fee amounts are proportionate to the projected impacts of the facility. (see table 1) At least 50% of the fees will go directly to the municipality where the facility is being built. An additional 45% of the fees will benefit the municipality in the form of state assistance.

This 45% of the fees will be allocated among state agencies and the municipality by DCRA according to their relative responsibilities for the provision of public facilities and services necessitated by the development. State assistance will be in forms of planning, legal expertise, and the direct provision of services such as education, transportation, and health care.

HB 219 proposes two alternative fee schedules. One measure of fees is based on population growth and the cost of government. The alternative measure is based solely on the value of the proposed development. For each facility, the formula producing the highest fee is used.

Using the valuation measure of fees, the amount of revenues produced by a development is related to the size of the proposed facility. Facility value is roughly predictable by the stages of the oil extraction process. During exploration, support facilities on shore will be valued at $10 million or less. Based on a value percentage fee calculation, a $10 million facility would pay $250,000 in fees. (see table 1) If oil is discovered, shore processing facilities will have a much higher value. The very large processing facility at Valdez is valued at $1.2 billion dollars. Fees for a facility that size would be $6 million dollars. Although the scale of the terminal at Valdez represents the largest type of terminal which may be built to service offshore oil, it is obvious that processing facilities will generate large fees. Table 1 gives examples of fees produced by different sized production facilities.

July 5, 1977

House bill 219 provides an important boost to local preparation for OCS - onshore facilities. Developers are required to submit plans to the state three years in advance. This advance notice allows time for local assessment of the project and definition of a local policy in regard to the project. Advance reporting also requires the developer to disclose information which will assist municipal decision making.

Municipalities may use fees paid to cover planning and capital improvements costs. Independent legal assistance, land use and financial planners, and administrative assistance may be paid for out of the fees. Localities can use the planning process to control growth and establish a pattern for evaluating subsequent land use demands.

Status of the bill: HB 219 was not reported out of committee in the first session. Public hearings are being held to explain the bill and provide a channel for local input into the legislative process.

July 5, 1977

TABLE 1

REVENUES THAT THE FEES WILL GENERATE

EXPLORATORY STAGE

IF the facility is valued at $5 million fee = $100,000

IF the facility is valued at $20 million fee = $250,000

Most of the facilities built to service OCS exploration will cost $10 million or less. The assessed value of the service base at Yakutat is $5.5 million as of the first of 1977.

DEVELOPMENT AND PRODUCTION STAGE

IF the facility is valued at $500 million fee* = $2.5 million

IF the facility is valued at $750 million fee = $3.75 million

IF the facility is valued at $1 billion fee = $5.0 million

IF the facility is valued at $1.2 billion fee = $6.0 million

The oil terminal at Valdez will process 1.2 million barrels of oil per day and is valued at 1.2 billion dollars. If the largest possible find is made in the Northern Gulf, shore terminal capacity will need to be 650,000 barrels per day at a value of approximately $800 million. Also a larger discovery in the NOrthern Gulf would require a Liquified Natural Gas terminal with one billion cubic feet per day capacity at a value of approximately one billion dollars.

*These fees for the production stage are calculated at a straight one half percent. If the developer failed to provide three year advance information, the fees would double.

MERITS OF HB 219

1. Places municipalities in the driver's seat for any OCS-related shoreside development.

2. Creates a land management tool which is applied statewide and thus is not a disincentive to development.

3. Provides money to finance costs of local planning not presently covered by CEIP or other grants.

SHORTCOMINGS OF BILL AS CURRENTLY WRITTEN

1. Local approval or veto of a proposed facility need not be consistent with existing local or State plans.

2. Standards for permit evaluation are not specified. No procedural or substantive rights of developers are enumerated or protected.

3. HB 219 is not tied to the Coastal Management Act and its requirements.

4. Three years advance notice of construction plans may not be feasible in all cases.

SUGGESTED IMPROVEMENTS

1. To limit potential arbitrary uses of local approval or veto of a proposed facility by:

a. Requiring municipal decisions to be consistent with existing and emerging plans and policies under the Coastal Management Act;

or b. Establishing decision guidelines in the bill to ensure that a municipal approval or veto is to protect the public welfare and is consistent with Coastal Management policies;

or c. Grant municipalities the power to suspend a permit application for one year while a Coastal Management program is written.

Each alternative should clarify the procedural rights of the developer.

2. Make the advance planning requirement more flexible so that developers will not be penalized by changes in their plans caused by forces beyond their control.

STATE of ALASKA

MEMORANDUM

DEPARTMENT OF COMMUNITY AND REGIONAL AFFAIRS

Exhibit 7

The views of this memo do not reflect Departmental Policy

TO: Members of House Committee Community and Regional Affairs

DATE: August 9, 1977

FILE NO:

TELEPHONE NO:

FROM: Robert Shoaf
Summer Intern

SUBJECT: HB 219

Our critical examination of HB 219 focuses on two major topics:

A. Local approval power
B. Prior planning by developers

A. Local approval power

Local approval power and permit fees are the two major features of the onshore facilities construction permit. A permit will not be issued without local approval. Municipalities are not required to have planning and zoning in place to make this local decision. Areas that do exercise land use controls do not have to make their decision inconsistent with existing municipal plans and ordinances.

Regardless of how the permit is classified, the local approval power is regulatory in nature and should be designed to protect private property rights. Private property uses cannot be abridged by government unless the public intervention is reasonably related to public welfare. Traditionally, to prevent arbitrary public intervention in private land use, police power controls established standards for intervention (by planning and zoning) in advance.

The Division of Community Planning feels that local approval power in HB 219 is an essential tool which will enable municipalities to manage OCS onshore development. However, municipal decisions must be directed to protect the public welfare. Furthermore, HB 219 should be coordinated with coastal planning under the Coastal Management Act.

Three alternatives are available to remove the arbitrary nature of local approval.

1. Prior planning

OCS onshore facilities siting decisions will be made in the context of coastal planning under Alaska's Coastal Management Act. Local decisions under HB 219 should adhere to approval District Coastal Management Programs. In municipalities where no management programs have been written, local decisions should be in accordance with any existing land use controls and with the principles and emerging plans of the Coastal Management Act.

It is not certain that District Programs under CMA will produce the type of specific standards needed to guide local development decisions. Additionally, not every municipality may be able to afford adequate, on going planning.

2. Guidelines in HB 219
To guide local decisons and to prevent arbitrariness the legislature can incorporate guidelines for municipal decision making in HB 219. Because of the comprehensive mandate for coastal planning in the Coastal Management Act, these guidelines should mirror the policies of CMA.

Guidelines could require that municipal evaluation of a onshore facility construction proposal consider the environmental, social and economic impacts of the project. Approval of a project could issue when a City Council or Municipal Borough found that these impacts were manageable. For example, a municipality could base its decision in part, on whether or not the necessary supportive public facilities and services will be available when the development is completed.

Evaluation of a proposal will require detailed assessment of the proposal and its effects on a municipality. A third alternative is to structure a municipality's use of this assessment period so that local land use plans are produced to serve as a guide for the municipal decision.

3. Interim Planning
This alternative grants municipalities the power to suspend construction of an onshore facility for a reasonalble time while District Coastal Management Programs are written and implemented. These programs would place the municipal decision in a more comprehensive framework than would the reliance on guidelines. Additionally, the municipal programs would serve as a guide for future management of OCS impacts, and as a basis for ongoing planning.

If a municipality chooses to approve a proposal without suspending construction pending implementation of a District Program, local approval should be based on positive findings that the impacts of the project are manageable.

In this alternative, HB 219 would only serve municipalities who have not yet written District Management programs.

B. Prior planning by developers
The requirement of three years advance notice of construction plans by developers (section 41.45.110, May 28, 1977 version) may not be feasible. Uncertainties not controlled by developers, such as Federal OCS leasing policies, may interfere with their ability to accurately project construction plans three years in advance.

When external factors dictate a change in plans for OCS onshore activities, developers should be able to change their plans without the excessive penalty of doubling the permit fee. To allow flexibility, the advance planning requirement might be reduced to two years, with changes in plans allowed with one years notice, unless waived by a municipality. Additionally, the Department of Community and Regional Affairs should determine what advance information is feasible in terms of progress of lease sales and exploration.

Statutory Language To Structure Municipal Decisions

Alternative 1: Prior planning

"Local approval or denial of a permit shall be in accord with existing or emerging Coastal Management Programs, policies and guidelines."

Alternative 2: Guidelines

"Local permit approval may be granted by a City Council or Borough Assembly if it finds:

a. That the use will not materially endanger the public health or safety if located where proposed:

1. That the municipal water supply will be of sufficient quality and quantity to meet the increased demand attributable to the facility;
2. That the proposed use will not have an unreasonable impact of the coastal environment;
3. That the necessary supportive public facilities and services will be available as the demand for them attributable to the facility increases;
4. That associated land and water transportation will minimize degradation of waterfront uses.

b. That the proposed facility is in accord with existing plans and regulations;

c. That the use will not substantially injure the value of adjoining or abutting property, or is a public necessity;

d. That the use will not unreasonably disrupt the social and economic well-being of the municipality."

Alternative 3: Interim planning

HB 219 should specify whether the decision to utilize the moratorium or proceed immediately will be an administrative or legislative one.

Language to implement alternative three should be placed in a new section of the bill. The new section could state:

"Local Approval of an Onshore Facilities Construction Permit.

"When a developer of an OCS onshore facility requests local approval of its proposal, the municipal assembly or council shall meet to make one of two possible decisions.

"If the assembly finds that the project will be consistent with state and local plans then existing under Alaska's CMA [or consistent with enumerated standards], then local approval may be given.

"If the assembly finds that the proposal is not consistent with these guidelines [or will have a significant impact on coastal resources which is not adequately managed by present planning] or is not consistent with the local health, safety and welfare, then the assembly, by a majority vote, may choose to impose a two year moratorium on the proposal, during which time the municipality shall prepare a district coastal management program (See A.S. 46.35.030) to guide subsequent local decisions.

"If a municipality already has implemented a coastal management program, this section does not apply and the local permit decision shall be made in accordance with the policies and procedures of that plan.

"Once a moratorium is imposed, the municipality should contact the Department of Community and Regional Affairs to make arrangements to locate any funds needed for planning."

LEGISLATIVE AFFAIRS AGENCY

M E M O R A N D U M

November 1, 1977

SUBJECT: House Bill 219, establishing a program of shore facilities building permits as a means of providing financial assistance to municipalities adversely affected by outer continental shelf activity.

TO: Representative Lisa Rudd

FROM: John B. Chenoweth
Legislative Counsel

You have asked for an interim review of state and federal action relative to financial assistance to local governments affected by continental shelf petroleum exploration and development, with a view toward considering the relationship between state and federal action and modification, revision or other action with respect to HB 219. What follows is divided into two parts to facilitate your review.

STATE ACTION

Since adjournment, Governor Hammond has signed into law the state's Coastal Management Act (Ch. 84, SLA 1977), and appointed the nine public members to serve on the coastal policy council.

Anticipating the first allocation of federal financial assistance in the form of grants and federal credit assistance under various subsections of the federal coastal energy impact program, sec. 308 of the federal Coastal Zone Management Act of 1972, the Department of Community and Regional Affairs has been active in the preparation of the necessary intrastate allocation process required by sec. 308(g)(2) of that Act.

The allocation process proposed by the department takes the form of policy guidelines for the implementation of the Coastal Energy Impact Program. With this memo is a copy of the policy guidelines in draft form together with a 20-page narrative describing the process. As I mentioned to you, I

believe, when you were in Juneau prior to Labor Day, the department has had a workshop on the draft with local government officials and had allowed until September 9th, to receive further comment. Thereafter, the department proposes to make necessary revisions in the guidelines and adopt them as the basis by which to evaluate applications for financial assistance.

I believe I also informed you that, in my opinion, the department has failed to proceed in the manner required by the state's Administrative Procedure Act in that it has not followed the process required for the adoption of administrative regulations for the program. The Department of Law has since informed Community and Regional Affairs that it should comply with the state's Administrative Procedure Act and, to that end, the Department has proposed the adoption of a one-section regulation incorporating the guidelines by reference.

The flow of financial assistance to Alaska under section 308 of the Federal Coastal Zone Management Act should commence very shortly. The Coastal Energy Impact Program provides five basic types of assistance: planning grants, environmental grants, development grants, credit assistance and repayment assistance. Alaska is due to receive an allotment of funds in each catagory based on its share of nationwide coastal energy development. The department has provided these figures by way of anticipated FY 77 receipts:

1. Planning Grants are available on an 80 percent federal/20 percent non-federal basis to help prepare for the consequences of all new or expanded energy activity in the coastal zone. Planning grants can be used to study and plan for the economic, environmental, or social impact due to the siting, construction, expansion or operation of energy facilities. Alaska has been alloted a total of $365,466 for this purpose for FY 77.

2. Environmental Grants, available on a 100 percent federal basis, are intended to prevent, reduce or repair damage to or loss of the valuable environmental or recreational resources due to coastal energy activity. Environmental grants may be used for impacts resulting from previous coastal energy activity which cannot be attributed to any one party. Alaska has been alloted $662,904 for this purpose for FY 77.

3. OCS Related Facility Grants, also called formula grants, are available on a 100 percent federal funding basis to plan for, mitigate the impacts of, and develop public facilities and services as a result of OCS related energy facility development. These funds may be expected to be the primary source of assistance to help municipalities prevent the unavoidable loss of environmental or recreational resources. A loss is unavoidable when the cost of prevention or repair cannot be assessed to a responsible party. Alaska has been alloted $1,178,643 in this catagory for FY 77.

4. Credit Assistance is available in the form of direct loans or guarantees of loans or bonds for the purpose of providing new or improved public facilities and services required as a result of coastal energy activity. Also available by way of such is repayment assistance, available to eligible applicants who cannot meet credit obligations because an anticipated revenue failed to materialize. Alaska has been alloted $48,612,973 for both credit and repayment assistance for FY 77.

CONGRESSIONAL INITIATIVES

US Senate-adopted legislation (S 9) and legislation offered in the House of Representatives (HR 1614) remain under study in House committee, with no likelihood of final adoption of either before year end.

The Senate-adopted legislation (S 9), entitled the Outer Continental Shelf Lands Management Act of 1977, amends the Coastal Energy Impact Program portion of the 1976 Coastal Management Act amendments

(1) by eliminating the requirement in sec. 308(b)(4)(i) that all loan and bond guarantee resources shall have been exhausted for formula grant projects and programs resulting from Outer Continental Shelf energy activity -- presumably allowing states the use of formula grant funds for new or improved public facilities and services without regard to examination of adequacy of alternative funding sources;

(2) by eliminating a requirement that such facilities and services be needed because of "new or expanded" activity in order to qualify for support -- opening the door to financial support for the resultant community impact caused by additional activities in conjunction to an existing plant or facility; and

(3) by increasing the funding authorization level by $25,000,000 annually after federal FY 77 which, if funded, should increase revenues available to Alaska: in this regard, the Coastal Management Office, Division of Policy Development and Planning, has offered the following projected revenue figures for Alaska:

(Federal)	FY 78	$ 5,000,000
	FY 79	7,050,000
	FY 80	8,750,000
	FY 81	22,320,000
	FY 82	21,820,000
	FY 83	14,920,000
	FY 84	15,170,000

for a total of $95 million dollars anticipated through the seven-year period.

Less certain, at least at the time the information was provided to me, is the course of HR 1614, in part because of the complexities of the amendatory language being proposed, and in part because of a change proposed in the manner of calculating assistance under the applicable formula. A computer run of the estimated payout to coastal states under the language of HR 1614 suggests payment of under $60 million to Alaska through the period. House consideration is complicated by the proposal of an amendment by Representative Breaux and others to change key portions of HR 1614 with respect to the operable formula, making the Coastal Energy Impact Program more nearly a "revenue sharing" assistance program not coupled to payment based upon oil and gas leases or oil and gas landed. Apparently the general revenue sharing approach is gaining some favor among the members of Congress; the Carter administration apparently remains opposed in principle. The committee considering the legislation did ask adoption of the Breaux amendments by way of request of the Rules Committee that the bill be scheduled for floor action; there was a move to table until next year (second session), and there will be no further action until January.

A copy of the bill, bearing the amendments offered in committee, is forthcoming from the Congressional Liaison, Office of Coastal Zone Management, in Washington, DC.

HB
232

CITY of BETHEL
P. O. Box 388 • Bethel, Alaska 99559
543-2297 — Area Code 907

March 28, 1978

Representative Steve Cowper
Chairing, House Finance Legislative Committee
Pouch V
Juneau, Alaska 99811

RE: Senate Bill No. 182, and House Bill No. 232, "AN ACT RELATING TO MUNICIPAL SALES TAX.

Dear Representative Cowper:

At the regular Bethel City Council Meeting of March 13, 1978, the Council passed Resolution No. 227, endorsing Senate Bill No. 182, and House Bill No. 232, "AN ACT RELATING TO MUNICIPAL SALES TAX." and encourages the State Legislature to pass and approve this legislation.

Although the City of Bethel has voted not to have the sale of intoxicating liquor under the local option this proposed legislation would give a municipality another option in administrating the necessary problems of alcohol. Since there exists such a variation in the size of communities in Alaska ranging from under 25, to a population of over 50,000, it seems quite difficult for the Alcohol Beverage Control Board to regulate each individual community. It is because of the varied sizes of communities in Alaska and the vast area in Alaska I believe that any legislation giving more local or regional control to the people that must inevitably live with the problems is the direction that the State must look at.

Going back to the two bills by giving a community the option to levy a higher sales tax on intoxicating liquor this could give each Community a revenue source that could eliminate many of the increased problems that arise from any community that does sell intoxicating liquor such as increased activity at the alcohol treatment centers, increased traffic problems, and increase social problems at home.

Sincerely,

Lyman Hoffman
City Manager

LH:lf

CITY OF BETHEL, ALASKA
RESOLUTION NO. 227

A RESOLUTION OF THE CITY OF BETHEL, ALASKA ENDORSING THE GOVERNORS REQUEST FOR AN ACT ENTITLED "AN ACT RELATING TO MUNICIPAL SALES TAX." IN THE FORM OF SENATE BILL NO. 182 AND HOUSE BILL NO. 232.

WHEREAS, these bills would enable a municipality to levey a sales tax at a higher rate on the sale of intoxicating liquor, and

WHEREAS, the City of Bethel has been dry since 1973, and has experienced numerous problems because of "bootleggers", and

WHEREAS, these bills would give the option to a municipality to provide regulations governing the barter, sale and possession of alcohol and the orderly conduct of business of selling intoxicating liquor.

NOW THEREFORE BE IT RESOLVED THAT The City of Bethel, Alaska endorses Senate Bill No. 182, and House Bill No. 232, "An Act Relating to Municipal Sales Taxes", and encourages the State Legislature to pass and approve this legislation.

PASSED, APPROVED AND ADOPTED BY THE CITY COUNCIL OF THE CITY OF BETHEL, ALASKA THIS 27 DAY OF March, 1978.

APPROVED BY:

MAYOR

ATTEST:

CITY CLERK

HB 232

February 18, 1977

The Honorable Hugh Malone
Speaker of the House
Alaska State Legislature
Juneau, Alaska 99811

Dear Mr. Speaker:

Under the authority of art. III, sec. 18 of the Alaska Constitution, and in accordance with AS 24.30.060(h) and the Uniform Rules of the Alaska State Legislature, I am transmitting a bill which would expand the authority of general law municipalities in imposing taxes on liquor.

This bill has been requested by the Interdepartmental Coordinating Committee on Alcoholism to give incorporated communities greater flexibility in using a sales tax to generate revenues needed to pay some of the costs created by the use of alcohol. Section 1 would amend AS 04.15.070(a) by removing its present prohibition against putting a tax on intoxicating liquor when other commodities are not taxed. Section 2 would amend AS 29.53.415(a) to authorize the taxing of a single class of commodity, and expressly permit a higher rate on intoxicating liquor. It also permits the setting of various rates within the ceiling on different classes of commodities.

Sincerely,

Jay S. Hammond
Governor

supplying of part of their home to others and who claim business deductions on their Alaska income tax return for that same part of their home are required to obtain an Alaska business license. 1960 Op. Att'y Gen., No. 20.

When an individual claims that part of his property is business property for income tax purposes, that same part of his property does not come within the meaning of the words "personal home" in §§ 1 and 15 of the business license regulations. 1960 Op. Att'y Gen., No. 20.

An individual may not claim a reduction of state income tax on the grounds that part of his home is business property and then escape the state business license tax on the basis that the same part of his home is not a business property but his personal home. 1960 Op. Att'y Gen., No. 20.

Educational, etc., institutions exempt when not "doing business."—The rule is that educational, religious, etc., institutions and hospitals need not pay the business license tax or the initial license fee as long as they refrain from doing "business" as defined in the business license act. 1960 Op. Att'y Gen., No. 25.

But there is no exemption of religious corporation when "doing business."—This section and AS 43.70.020 make no provisions for the exemption from the license requirement of a religious corporation which is doing business. 1960 Op. Att'y Gen., No. 25.

Thus, rents received by religious corporations are not exempted from the Alaska business license tax. 1960 Op. Att'y Gen., No. 25.

Use of indirect allocation formula. —Where most of the business activities of a company took place in Missouri, it being very difficult to directly allocate that portion of the company's profits or income which was derived from its Alaska operations, the company carried on enough activities in Alaska to become subject to state taxation and these activities could be taxed on an indirect allocation formula. 1959 Op. Att'y Gen., No. 22.

"Gross receipts" includes all receipts within state regardless of form. — The definition of "gross receipts" in this section indicates a clear legislative intent that, for the purposes of the act, gross receipts should include all of the taxpayer's receipts within the state, whether in the form of money or other valuable considerations. 1961 Op. Att'y Gen., No. 8.

No deduction from gross receipts of motor fuel excise taxes. — Oil companies may not deduct from their gross receipts federal or Alaska motor fuel excise taxes paid or collected on oil products sold for purposes of calculating taxable gross receipts under the Alaska Business License Act. 1961 Op. Att'y Gen., No. 8.

Applied in Ketchikan Spruce Mills v. Dewey, 17 Alaska 336 (1957).

Sec. 43.70.120. Short title. This chapter may be cited as the Alaska Business License Act. (§ 1 ch 43 SLA 1949)

in connection with the state's commercial fisheries shall first obtain a license on the basis of the following license taxes which are hereby levied.

(1) Salmon canneries, both shore-based and floating, shall pay an annual tax equal to three per cent of the value of the raw fish purchased or obtained for canning during the year. For the purpose of this license, the raw fish value of each kind of salmon is considered to be a dollar value equal to the average wholesale price obtained for the finished product by Alaska salmon canneries during the months of August, September, October, November and December of the last five years immediately preceding the license year. Salmon received by salmon canneries and diverted for purposes other than canning are valued at the average prevailing price on the fresh fish market for that fish and are subject to an annual license tax of one per cent of the value.

(2) Herring processing plants in the business of canning, curing, salting, freezing, or making meal or oil or other processed products including sale of bait herring by either processing plant or bait herring fisherman shall pay an annual license tax equal to one per cent of the value of the raw herring. The value of the raw material under this license is the actual price paid for the herring including indirect considerations such as fuel or supplies furnished by the processor or offsets to the cash value for gear furnished. This value applies to herring caught in company-owned or subsidized boats operated by employees of the processor or under lease or other agreement.

(3) Crab canneries, both shore based and floating shall pay an annual license tax equal to two per cent of the value of the raw crabs. The raw crab value for the purpose of this license is the actual price paid for the raw crab either by cash or its equivalent according to (2) of this section for herring processing plants.

(4) Clam canneries shall pay a license tax equal to two per cent of the value of the raw clams, with the value to be determined according to (3) of this section for crab canneries, on razor clams. Butter clams are taxed in the same manner at the rate of one per cent of the value of the raw clams.

(b) "Wholesale price" includes all receipts whether in the form of money, credits, or other valuable considerations received from the sale of the finished product without deduction for the cost of property sold, the cost of the material used, insurance costs, labor or service costs, label and labeling costs, transportation and storage cost, interest paid, taxes, losses, or any other expense except cash discounts allowed on sales not to exceed one and one-half per cent, commissions actually paid to independent brokers not to exceed five per cent, and swell allowance not to exceed one-tenth of one per cent.

(c) The person, firm, or corporation engaging or attempting to engage in the above lines of business who actually and physically cans or processes the above fishery resources shall be liable for and shall pay to the department the whole tax imposed by this section. In determining this tax liability the person, firm, or corporation may not deduct from the value of the raw fishery resources canned or processed the value of any raw fishery resources canned or processed for other persons, firms, or corporations, but shall include this as a part of the value of the raw product obtained for canning or processing. (§ 1 ch 82 SLA 1949; am § 1 ch 113 SLA 1951; am § 1 ch 146 SLA 1962; am §§ 1, 2 ch 84 SLA 1967)

Revisor's note. — Section 1 ch 113 SLA 1951 began "Subsection (a) of Section 1 of Chapter 82, Session Laws of Alaska 1949, is hereby amended to read as follows:" and after these words appeared subsection (a), incorporating the rate amendment, but eliminating a paragraph numbered (1) which appeared in ch 82 SLA 1949. Section 1 ch 146 SLA 1962 makes a similar amendment, again without mentioning the paragraph numbered (1). This paragraph appears in AS 43.75.010 as the last sentence of subsection (1) and is included in the revision on the assumption that there was no legislative intention to omit it.

Effect of amendment. — The 1967 amendment substituted "three per cent" for "six per cent" in the first sentence of subsection (a) (1), deleted "50 per cent of" preceding "the average wholesale price" in the second sentence of such subsection, inserted "the last five years immediately preceding" in such sentence, and added subsection (c).

A tax on the business of catching and canning salmon is not a property tax. Pacific Am. Fisheries v. Territory of Alaska, 2 F.2d 9 (9th Cir. 1924), aff'd, 269 U.S. 269, 46 S. Ct. 110, 70 L. Ed. 270 (1925).

"Canning" is activity of salmon cannery which is taxed.—Under this section the salmon cannery activity which is taxed is that of "canning," whether the raw fish are "purchased or otherwise obtained." Arctic Maid v. Territory of Alaska, 277 F.2d 120 (9th Cir. 1960), rev'd on other grounds in 366 U.S. 199, 81 S. Ct. 929, 6 L. Ed. 2d 227 (1961).

No discrimination in favor of local canners against freezer ships. — As between the tax laid on local canners by this section and those laid on "freezer ships," by AS 43.75.060 there is no discrimination in favor of the former and against the latter. Alaska v. Arctic Maid, 366 U.S. 199, 81 S. Ct. 929, 6 L. Ed. 2d 227 (1961).

...Since tax on freezer ships did not exceed six per cent.—No matter how the tax on "freezer ships" is computed, it did not exceed the six per cent tax on local canners imposed by this section. Alaska v. Arctic Maid, 366 U.S. 199, 81 S. Ct. 929, 6 L. Ed. 2d 227 (1961).

And any difference does not violate commerce clause.—If there is a difference between the taxes imposed on freezer ships and the taxes imposed on their competitors, they are not so "palpably disproportionate" as to run afoul of the commerce clause. Alaska v. Arctic Maid, 366 U.S. 199, 81 S. Ct. 929, 6 L. Ed. 2d 227 (1961).

For case discussing priority of claims for license taxes under prior law in a bankruptcy proceeding, see In re King Salmon Fisheries Co., 7 Alaska 97 (1923).

Constitutionality of former provisions taxing salmon canneries on basis of number of cases packed.—See Territory of Alaska v. Pacific Am. Fisheries, 7 Alaska 160 (1924), aff'd, 2 F.2d 9 (9th Cir. 1924), aff'd, 269 U.S. 269, 46 S. Ct. 110, 70 L. Ed. 270 (1925).

Applied in Schlothan v. Territory of Alaska, 276 F.2d 806 (9th Cir. 1960), cert. denied, 362 U.S. 990, 80 S. Ct. 1079, 4 L. Ed. 2d 1022 (1960); Territory of Alaska v. Arctic Maid, 16 Alaska 126, 140 F. Supp. 190 (D. Alas. 1956), aff'd, 366 U.S. 199, 81 S. Ct. 929, 6 L. Ed. 2d 227 (1961).

Sec. 43.75.020. Application for license. (a) Application for a license shall be filed with the Department of Revenue and accompanied by an initial fee of $25. A separate initial fee is required for each plant specified in the application covered by the license. The application shall contain the name of the applicant, the line of business to be licensed, place of business, and other facts which the department prescribes. The applicant shall state that he agrees to pay the license tax, and that he will make a return and pay the tax at the time provided by law.

(b) Upon receipt of the application in proper form accompanied by the initial fee, the department shall issue the license as of the date the application is filed or mailed, and the applicant may carry on the business from the date the application was actually made. (§ 2 ch 82 SLA 1949)

Sec. 43.75.030. Filing return and payment of tax. (a) A person subject to the tax shall file a return stating the value of raw fisheries products processed during the license year, computed as required by §§ 10—50 of this chapter, and such other information as the department prescribes by regulation. The return shall show the license number and shall be signed by the taxpayer or his authorized agent, under penalty of perjury. If a receiver, trustee, or assign is operating the property or business, he shall file the return for the person. A tax due on the basis of such a return shall be collected in the same manner as if collected from the person of whose business he has custody and control.

(b) The return shall be made on the basis of the calendar year to the Department of Revenue at Juneau before April 1 after the close of the calendar year.

(c) The department may prescribe regulations for the granting of a reasonable extension of time for filing and may grant an extension of time for filing.

(d) The tax shall be paid before April 1 after the close of the calendar year.

(e) Every person engaging or attempting to engage in a business for which a license is required under §§ 10—50 of this chapter shall keep such records, make such statements under oath, file such returns, and comply with such regulations as the commissioner of revenue may prescribe.

(f) When the department considers it is necessary, it may require a person, by notice served upon him, to file a return, make such statements under oath, or keep and display to it such records as it considers sufficient to show the tax for which the person is liable. If a person fails to file a return as prescribed by law or by regulation, or makes, wilfully or otherwise, a false or fraudulent return, the department shall make the return from the information which it can obtain. A return made by the department is prima

facie good and sufficient for all legal purposes. (§ 3 ch 82 SLA 1949; am §§ 2, 3 ch 146 SLA 1962)

Applied in Schlothan v. Territory of Alaska, 276 F.2d 836 (9th Cir. 1960), cert. denied, 362 U.S. 990, 80 S. Ct. 1079, 4 L. Ed. 2d 1022 (1960).

Sec. 43.75.050. Violations and penalties. (a) If a person fails to file a return within the time prescribed by law or regulation, unless the failure is due to reasonable cause and not to wilful neglect, five per cent is added for each 30 days or fraction of 30 days during which the failure continues, not exceeding 25 per cent in the aggregate. The amount added to the tax shall be collected at the same time, in the same manner and as a part of the tax. If the tax is paid before discovery of the neglect, the amount added shall be collected in the same manner as the tax.

(b) If the tax is not paid when due, a penalty of five per cent of the total amount of the tax deficiency shall be assessed, collected and paid in the same manner as if it were a tax deficiency.

(c) If a part of a deficiency in the tax is due to fraud with intent to evade tax, 50 per cent of the total amount of the deficiency, in addition to the deficiency, shall be assessed and collected.

(d) Interest upon the amount determined as a deficiency in the tax shall be assessed at the same time as the deficiency. The interest shall be paid upon notice and demand by the department, and shall be collected as a part of the tax at the rate of six per cent a year from the time prescribed for payment of the tax to the date the deficiency is paid.

(e) A tax under §§ 10—55 of this chapter and the penalties and interest on the tax are a lien prior, paramount, and superior to all other liens, mortgages, hypothecations, conveyances, and assignments, upon all the real and personal property of the person liable for the tax, and upon all the real and personal property used with the permission of the owner to carry on the business. The special remedy provided for the recovery of license taxes set out in §§ 10—55 of this chapter is not exclusive of other civil or criminal remedies provided by law for the recovery of license taxes.

(f) A person who wilfully fails to obtain a license, pay a tax, make a return, keep or display a record, or supply the information at the time required by law or regulation, in violation of §§ 10—55 of this chapter, is, in addition to other penalties provided by law, guilty of a misdemeanor, and upon conviction is punishable by a fine of not more than $1,000, or by imprisonment for not more than one year, or by both, together with the cost of prosecution.

(g) A person who wilfully makes and subscribes a return which he does not believe to be true and correct as to every material matter is guilty of a felony, and, upon conviction, is subject to the penalty prescribed for perjury.

Article 3. Taking of Fisheries Products Which Are Sold Outside Taxing Jurisdiction.

Section
100. Tax imposed on taking of fisheries products
110. Duty of taxpayer and payment of tax
120. Violations and penalties

Sec. 43.75.100. Tax imposed on taking of fisheries products. A person taking the fisheries products enumerated in §§ 10—50 or 60—90 of this chapter who sells the products to freezer ships, floating cold storages or floating canneries outside the taxing jurisdiction of the state is subject to the tax set out in §§ 10—50 of this chapter for the fisheries products enumerated in §§ 10—50 of this chapter, and is subject to the tax set out in §§ 60—90 of this chapter for the fisheries products enumerated in §§ 60—90 of this chapter. (§ 1 ch 190 SLA 1959)

Am. Jur. references.—11 Am. Jur., Commerce, § 119; 51 Am. Jur., Taxation, §§ 202, 206.

Sec. 43.75.110. Duty of taxpayer and payment of tax. A person subject to taxes under §§ 100—120 of this chapter shall make a return stating the value of raw fisheries products taken during the license year for sale to freezer ships, floating cold storages, or floating canneries outside of the taxing jurisdiction of the state computed as required by §§ 100—120 of this chapter, and other information to carry out the provisions of §§ 100—200 of this chapter as may be prescribed by the department. The return shall contain the license number and shall be signed by the taxpayer or his authorized agent, under penalty of perjury. If a receiver, trustee, or assign is operating the property or business, he shall make the return for the person. A tax due on the basis of such return shall be collected in the same manner as if collected from the person of whose business he has custody and control. The requirements for time and place of payment of tax, and the obligation to keep records and make the records available to the commissioner of revenue are the same as those prescribed in the business license tax law for salmon canneries. (§ 2 ch 190 SLA 1959)

Sec. 43.75.120. Violations and penalties. (a) The liability to file returns and pay interest and deficiency assessments, and the subjection of property to liens is the same as prescribed in the business license tax law for salmor canneries.

(b) A violation of §§ 100—120 of this chapter or the regulations issued under §§ 100—120 of this chapter is a misdemeanor subject to punishment as prescribed in the business license tax law for salmon canneries. (§ 3 ch 190 SLA 1959)

Article 4. General Provisions.

Section
130. Refund to local governments
135. Additional refund to boroughs and cities

Sec. 43.75.130. Refund to local governments. The commissioner of revenue shall pay to each organized borough and each city of the first, second, and third classes 10 per cent of the amount of tax revenue collected in the borough or city from taxes levied by §§ 10—90 of this chapter. (§ 6 ch 155 SLA 1962; am § 75 ch 69 SLA 1970)

Effect of amendment. — The 1970 amendment inserted "and each," deleted "incorporated or independent school district, and public utility district" preceding "10 per cent," and substituted "borough or city" for "municipality or district."

Legislative committee report.—For report on ch. 69, SLA 1970 (HB 564), see 1970 House Journal Supplement No. 2, p. 7.

Sec. 43.75.135. Additional refund to boroughs and cities. In addition to the payment allowed in § 130 of this chapter, the commissioner of revenue shall pay to each organized borough 10 per ment of the amount of tax revenue collected in the borough from taxes levied by §§ 10—90 of this chapter and shall pay to each city of the first, second, and third classes located in the unorganized borough 10 per cent of the amount of the tax revenue collected in the city from taxes levied by §§ 10—90 of this chapter. (§ 1 ch 89 SLA 1963; am § 1 ch 120 SLA 1969)

Effect of amendment. — The 1969 amendment, effective January 1, 1970, added the language beginning "and shall pay to each city."

Editor's note. — Section 2, ch. 89, SLA 1963, provides: "This Act applies retroactively to January 1, 1963."

Chapter 80. General Provisions.

Section
10. Accounts to be kept by persons subject to tax

Re: House Bill No. 256

Dear Representative Rudd:

House Bill No. 256, an Act relating to the raw fish tax was introduced in the House on February 23, 1977 and was referred to the House Community & Regional Affairs and Finance Committees.

For the consideration of the House Community & Regional Affairs Committee, I am enclosing a Fiscal Note prepared by Mr. P. A. Wall, Director, Administrative Services Division, Department of Revenue, Juneau concerning the proposed legislation.

Very truly yours,

R. D. Stevenson

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

The assumption is that CSHB 256 will be ammended with the result that AS43.75.135 is abolished, that AS43.75.130 is changed by deleting the first class city restriction thereby broadening the section to include second class cities and by increasing payments from 10 to 20 percent. The effect of the ammendment would be that each borough will be paid 20 percent of the Fish Tax Revenue collected in that borough and that each city (First or Second class) will be paid 20 percent of the Fish tax revenue collected in that city.

Boroughs received 489.9 from Fish Tax Revenues in FY 77. Sharing to Boroughs would have been 640.0, an increase of 150.0, if the ammendment were applied to FY 77. First class cities received 529.7 from Fish Tax Revenues in FY 77. Second class cities were not eligible for sharing in FY 77. Sharing to First and Second class cities would have been 715.6, an increase of 185.9, if the ammendment were

using these increase the effect upon the general fund would be a decrease of 336.0 in FY 79.

There is no additional cost in administering the Bill.

Borough powers: for education only?

by Bill Hartmann

A large public turnout packed the main school band room last Tuesday night during a special Borough meeting called to discuss what should be done concerning the new State attorney general's opinion concerning third class borough powers.

What the attorney general's opinion said was that the powers of a third class borough are limited to ONLY education. No service districts, or no powers of planning, zoning or platting may be exercised. This was in direct contradiction to an earlier attorney general's opinion, and went against what many in the Haines Borough understood as being the powers of the third class borough, of which Haines is the only one in the State.

At the invitation of the Borough Assembly, Jesse Dodson, special assistant to the governor, and Bruce Aronson of the Department of Community and Regional Affairs were in Haines to discuss the matter and what action Haines Borough officials should take.

The major problems that the attorney general's opinion poses for the Haines Borough is the withholding of some revenue sharing funds and the forbidding of any possibility of the Borough establishing fire service districts outside the City limits.

It was Mrs. Dodson's opinion that if the area needed more powers, it would have to form another form of government. This advice sparked a heated round of questions asking if, in effect, the State was trying to force Haines to form a second class borough. Although this was emphatically denied by the State officials, it was presented as one alternate solution to the present conflict.

It was pointed out by Mayor Gail Wallace that the City is acting illegally by extending fire services outside the City, and that this problem could have disastrous effects at any time. Fire Chief Frank Wallace stated that the department had a test run to enable people outside the City to obtain better insurance rates, but they are now told that these people must be within a service area to qualify.

Some people felt the best answer was to opt for forming a second class borough, the only additional mandatory powers being those of planning, platting and zoning. This would also permit the borough to form any necessary service areas without problem. Only those residents in the area would be taxed for the added service. The major objection to the second class borough expressed by public comment was not wanting planning or zoning outside the City. However, it was pointed out that the State could come in and plan and zone the borough if it wanted to, because any powers not granted to a borough automatically rest with the State. The State would then plan and zone the area and the area would pay for it eventually in some form.

Several more alternatives were discussed. One was to ask the legislature to pass a bill clarifying the powers of the third class borough. Another was to ask the legislature to initiate a class-action suit to determine: a) if the third class borough is legal, and, b) if the attorney general's opinion on borough powers is correct. Still further, the local borough could exercise the questioned powers and take the State to court if challenged.

Although no definitive action was taken at the meeting, the borough assembly will investigate questions raised at the meeting and then call another public meeting later. The Tuesday night meeting was ably chaired by Borough Mayor David Black, who along with other members of the Assembly and City made up the panel. The others, in addition to Dodson and Aronson were Mayor Gail Wallace, City Administrator Don Bockhorst, Councilmen Harold Hannon and Jon Halliwill, and Borough Assembly members Pat Jones, Erwin Hertz and Paul Swift.

House

OVERALL ECONOMIC DEVELOPMENT COMMITTEE
.CITY OF HAINES
Drawer D, Haines,Ak.
99827

Mar.4,1977

The Hon.Mike Miller
Majority Leader
State Legislature
Pouch V
Juneau,Alaska 99811

Dear Mike:

There has been a number of hearings regarding the 3rd Class Borough, the last of which had a good representation of the City and the outlying area. It was clear that the problems of a third class borough can only be corrected by having the Legislature take action to take the 3rd Class Borough Act off the books.

David Black Borough Chairman gave me a copy of your Mar.2nd letter with the copy of House Bill No.273. I seriously question par.(b) as been legal. While service areas would beable to excercise the powers of 2nd Class borough, as stated in the proposed bill, I could see such a hodgepodge of problems that would be unbelievable. Example: Service area A has zoning and planning, adjoining service area B, does not. The unplanned area could be a mishmash of shacks, trailers, no sewers etc. and effect the development of the adjoining area.

The Haines Chamber of Commerce went on record at the last meeting to ask the Legislature to disolve the Third Class Borough statute and require the 3rd Class borough to come a 2nd Class Borough. OR, have an election to determine whether the electrate desires to be 2nd,1st or unified.

The State has caused a Frankenstein with the 3rd Class Borough and the sooner they do away withit, the better it will be . Then, these areas which are getting a free ride will have to pay taxes like the rest of us. The Legislature put us in this spot, it is up to them to get us out of it.

Best regards,

OVERALL ECONOMIC DEVELOPMENT COMMITTE

MEMORANDUM January 26, 1977

SUBJECT: Third Class Boroughs - Work Order #3146

TO: Representative Charles H. Parr

FROM: Billy G. Berrier
Director, Legal Services Division

You have asked whether third class boroughs may exercise powers other than the areawide powers of education and tax assessment and collection. The statute on third class boroughs is ambiguous in this regard.

Third class boroughs were authorized by Ch. 156, SLA 1968. The relevant sections are AS 07.17.020 and the second sentence of AS 07.17.010. No change has been made in these sections except the second sentence of AS 07.17.010 became the second sentence of AS 29.41.010 in the revised municipal code adopted in 1972 and the phrase "and if" which appeared in that sentence was omitted as redundant. In my opinion this is only a matter of organization of material and has no effect on the legal meaning. This opinion was shared by the free conference committee on the revised municipal code where the changes were made. The committee report which the free conference meeting adopted stated on page 7 "Third class borough powers are unchanged." (Supplemental Report to Free Conference Committee Report on SCS CSHB 208 am S and CSHB 208 am (Revised Municipal Code) June 16, 1972.) The relevant present statute is AS 29.41.010(a) and (b). A copy of the 1972 Act, all amendments since that date that relate to this, the present law, and the material parts of the committee report are attached.

Since the 1968 Act adopted the provisions in question and these provisions have been unchanged since it is to that Act we must look if the meaning is ambiguous. It seems reasonably clear that the third class borough may not exercise areawide powers other than those enumerated. The limitation to the two named powers seems apparent when the bill is read in the context of the law existing at that time under which provision for three "mandatory" areawide powers and detailed means of arguing other areawide powers existed.

A distinct ambiguity is created by AS 07.17.020(b) relating to service areas. This term by 1968 had acquired a firm usage under the constitution and statute. (Sec. 5, art. X, Alaska Constitution). It refers to an area less than the whole area of the borough in which different and additional services are provided with power to tax within the area served only to pay for this service. No powers, other than the two areawide powers, have ever expressly been granted to third class boroughs. Service areas are an inappropriate device to utilize areawide powers. The sharp distinction between services performed on a service area basis or on a nonareawide basis (this is in the entire borough area outside cities) was clearly recognized early and was underscored by the provision that once a borough exercised an areawide power no city within the borough could exercise that power. (This was provided by AS 07.15.310 then and now is law as AS 29.33.010.) The differences were so clearly apparent in the law (as they still are) between areawide power and service area power that a claim that service area formation was considered necessary or useful in exercising areawide power strains creditability.

However, the service area is merely a device for providing services otherwise authorized to an area lesser in extent than the whole borough and having those services financed by the area served. The essential purpose is to eliminate the general rule in municipal law that taxes must be uniform throughout the municipality.

Following the usual rule of statutory construction that all parts of the law are presumed to have some effect, at least two creditable interpretations of the addition of the power to form service areas by a third class borough with no grant of powers exercisable on a service area basis are possible.

One is to interpret the second sentence of AS 07.17.010 (now in AS 29.41.010(a)) which provides:

> "Provisions of law relating to first and second class organized boroughs apply with respect to third class boroughs only if and to the extent they are consistent with this chapter."

as a grant to the third class boroughs of all powers, other than areawide powers, that could then or in the future be exercised by first or second class boroughs. This stretches the language of what on its face appears to be a procedural provision very considerably.

In my opinion a more plausible interpretation of the intent in allowing creation of service areas is to be found when section 2, article X of the constitution is considered. That section provides:

> "All local government powers shall be vested in boroughs and cities. The State may delegate taxing powers to organized boroughs and cities only."

A substantial effect of this provision was the abolition of the prestatehood independant school districts. The primary characteristic of the independent school district was that it possessed the power of education and of taxation and assessment over the entire area of the district. There is a slight distinction between the third class borough powers and that of the independent school district since the borough exercises its areawide power independent of the cities within it while the school district did not have this full independence of cities. This slight distinction may be and probably is, sufficient to avoid the constitutional mandate but it at best leaves an insecure constitutional foundation for a municipal government.

An obvious answer is to differentiate the structure. A reasonable way to do that is to create a mechanism by which the third class borough could exercise powers in addition to those granted but to reserve the actual grant of additional powers for consideration at a later date. The 1968 Act accomplished this.

Research has disclosed nothing materially helpful in determining intent of the legislature in 1968. Statements by legislators of what they understood the intent to be are not admissable as proof of the intent of the legislature. I find no committee reports on this point and the rejection of an amendment (one of a series) offered on the floor of the house to add new language reading:

> "except third class boroughs may not exercise additional areawide powers or powers in the area outside cities only." (House Journal 1968, page 808)

can be explained in too many ways to be helpful.

My conclusion is that the questions cannot be answered with that degree of certainty necessary. None of the suggested interpretations are in my opinion compelling although the argument that the service area is only a mechanism to exercise powers if additional powers are granted in the future and that no additional powers were granted by the 1968 Act appears more solidly based than the others.

Community & Regional Affairs Committee
Lisa Rudd, Chairman
Pouch V
Juneau, Alaska 99801

Re: HB 273

Dear Representative Rudd:

The Third ~~Class~~ Borough Committee met on March 7, 1977 to consider HB 273 and resolved that they are in favor of the bill as ~~written~~. My views, along with the views of other persons at the meeting, differed from that of the Third Class Borough Committee. Therefore, I will state my view of the bill as written and propose amendment thereto.

The original purpose of the proposed legislation was to clarify the law as already written with respect to powers of third class boroughs. The committee should look to this purpose as a guide in evaluating and amending HB 273. For this reason I am enclosing a letter addressed to myself from Daniel T. Saluri, an attorney at Fairbanks, dated February 3, 1977, and entitled Powers of Third Class Boroughs. The new legislation should not substantially alter the powers of third class boroughs, but rather should clarify those powers and supplement existing legislation with provisions providing for a smooth transition from second to third class status.

Enclosed please find a copy of HB 273 amended by me in such a way as to clarify existing third class borough powers and providing for an orderly transition from second to third class status. The second sentence of Subpart (a) of HB 273 should be deleted as it substantially limits the exercise of areawide borough powers, which third class boroughs presently have authority to exercise. Subsection (b) of AS 29.51.010 need not be amended. As amended by HB 273, service areas could not be established by voter petition and election. Again, HB 273 would substantially change the law rather than clarify existing law. I have added Subsection "(e)" for clarification purposes only. I believe that Subsection (b) as written makes provision for establishment of service areas in the manner provided for second class boroughs.

1.

There exists almost no legislation about transition from second class to third class status. AS 29.33.290 (c) provides that the new third class borough will succeed to the debts and obligations of the present borough and that the third class borough could levy and collect special charges or taxes for the purpose of continuing the same services in the new borough. That subsection also provides for "consultation" between the old and new boroughs for purposes of arranging an orderly and equitable transfer of power from the old to the new borough, including the transfer of existing services.

Transition would be facilitated by legislation allowing the new borough to continue to exercise powers exercised by the old borough at time of reclassification for a stated period of time, during which time the new borough would hold public hearings so that the people living in various areas of the borough could be given an opportunity to approve the continuation of these services on a service area basis. Elections could then be held by service area for approval of various borough services to be provided in each area. In this manner an immediate lack of services borough wide upon reclassification would be avoided and all areas of the borough would have the opportunity of continuing to receive services on an uninterrupted basis. This appears to be the general intent of AS 29.33.290.

I hope that these comments will be of some assistance to your committee.

Very truly yours,

Wolfgang Falke

Re: Powers of a Third Class Borough

Dear Mr. Falke:

Alaska law, Title 29, provides for classification of general law municipalities into five classes: First, Second, and Third Class Boroughs and First and Second Class Cities. AS 29.08.030. Provision is made for reclassification of a Second Class Borough to Third Class Borough and for the election of an assembly, "to serve as the combined assembly and school board of the Third Class Borough if reclassification is approved." AS 29.08.040(h).

The powers of a Third Class Borough are all those powers granted to general law municipalities under Title 29 and not limited by the special provisions therein specifically relating to powers of Third Class Boroughs. A Third Class Borough is a "municipality" by definition, §AS 29.78.10(8) and may exercise those powers applicable to all municipalities as provided by Chapter 48 of Title 29. This grant includes the exercise of whatever powers may be necessary to provide for enumerated public facilities and services, including sewers and sewage treatment facilities, flood control facilities, police protection, water and power utilities, transportation systems, libraries, recreation facilities, airport facilities, garbage and solid waste collection and disposal, and fire protection. AS 29.48.030.

Chapter 41 specially provides for the powers of Third Class Boroughs. It is provided that, with respect to education and tax assessment, those powers shall be exercised on an area-wide basis by a Third Class Borough in the same manner as provided for a Second Class Borough. The exercise of these two available powers is mandatory. AS 29.33.050 provides that each

first and second class borough constitutes a borough school district and establishes, maintains and operates a system of public schools on an area-wide basis. AS 29.33.030 and 29.53.010 provide for the levy of area-wide property tax by general law boroughs, regardless of their class. A general law borough includes a Third Class Borough. The third area-wide power provided for under Chapter 33 is zoning. AS 29.33.070. Only First and Second Class Boroughs are granted the zoning power under this Section. Only First and Second Class Boroughs may acquire additional area-wide municipal powers. AS 29.33.250. ! ?

The 1968 opinion of the Attorney General was that a Third Class Borough had only the area-wide powers of education and taxation in that only these two powers are referred to by Chapter 17 (now Chapter 41) and therefore the other general area-wide power, that of zoning, expressed by Chapter 15 (now Chapter 33) does not apply. That opinion held that the Third Class Borough had power to exercise non area-wide powers to the extent they are consistent with Chapter 17 (now Chapter 41), the Chapter providing that: "Provisions of law relative to First and Second Class Organized Boroughs apply with respect to Third Class Boroughs only to the extent they are consistent with this Chapter".

The area-wide power of zoning is not specifically denied by Chapter 41; however, it is not specifically designated. The Attorney General's opinion of 1968 therefore chose to conclude that Third Class Boroughs do not have zoning powers. The 1968 opinion does not cite or refer to the legislated general intent of Title 29 as expressed by AS 29.48.310, 29.48.320 and 29.48.330, which provide that a liberal construction shall be given to all powers and functions of boroughs conferred by Title 29; that unless otherwise limited by law, boroughs have all powers necessarily or fairly implied or incident to the object or purpose of all powers conferred in Title 29; and, that specific examples within an enumerated power or function conferred upon boroughs in Title 29 are illustrative of the object and not a limitation on or exclusion from the exercises of the power or function. It would seem from these provisions that a Third

Class Borough has whatever powers are consistent with law, i.e. the general powers conferred upon municipalities and the area-wide powers conferred upon boroughs, but only to such a degree as may be consistent with the object of Chapter 41. Even zoning, so long as it related to the education function, might be a function properly exercised on a area-wide basis by a Third Class Borough, in the same manner as First and Second Class Boroughs. For example, the zoning of areas around schools throughout the Borough should be a proper function of the Third Class Borough.

Non area-wide powers of a Third Class Borough are the same as those of First and Second Class Boroughs, only to the extent that they are consistent with Chapter 41, i.e., only so long as the exercise of such power may be consistent with the object of Chapter 41. The 1968 opinion of the Attorney General found that AS 29.41.010(b) relating to the establishment of service areas by Third Class Boroughs expanded the "object" of Third Class Boroughs as expressed by Chapter 41, to something beyond that relating directly to the area-wide education power. I would have to agree, not only because of the general construction provisions of Title 29 cited in the previous paragraph, and the provisions for general powers to all municipalities, but also because Subsection (b) is a specific expression of the additional power conferred, is not limited by Subsection (a) of that Section, and refers to AS 29.63.090 which provides for service areas to provide for "special services within a borough", which include, "services not provided on an area-wide basis within the borough". This power by definition must be in addition to the education power in that the education function is area-wide and Subsection (b) relates to services not on an area-wide basis within the borough.

In conclusion the law as written and as previously construed by the Attorney General provides for Third Class Boroughs and makes them different from First or Second Class Boroughs in that the only area-wide functions or powers to be exercised by Third Class Boroughs are those of education, taxation and possibly zoning; and that the exercise of these area-wide

powers is proper only to the extent that the same is consistent with the function of education and tax assessment. The Third Class Borough may exercise all additional powers that it has to create service areas for special services within the borough on a non area-wide basis and then only in the same manner as a Second Class Borough.

Your observation that a Third Class Borough is included within the legislative definition of municipality and that the general powers conferred to all municipalities are not mandatory and are not limited to exercise on a non area-wide basis is a point well taken. As noted previously, these powers include the "providing" of libraries and fire protection. The term "to provide the following public facilities and service" (emphasis added), as stated in AS 29.48.030, could very well be interpreted to include the establishment of the necessary facilities and the expenditure of monies by the borough for these capital expenditures, and the operation of such facilities on an area-wide basis once those facilities have been acquired.

To answer your question about the zoning powers of a Third Class Borough, I have already noted that a Third Class Borough does have some area-wide power to zone. A Third Class Borough, as a municipality, also has the power to provide for housing and urban renewal, rehabilitation and development, may establish building, housing and related codes, may provide for the abatement of public nuisances, and exercise other powers and functions affecting the health and welfare of inhabitants. AS 29.48.030 and 29.48.035. Because the Third Class Borough has some zoning authority, the State of Alaska, Department of Natural Resources, Division of Lands, would not become the zoning authority for the Third Class Borough. The Division of Lands has zoning authority only in areas of "unorganized borough where there is no political subdivision of the State with a zoning power". AS 38.05.37. A Third Class Borough is an organized borough, and therefore does not qualify as an "unorganized borough". Also, note that AS 38.05.37 assumes that all organized boroughs

have zoning powers, and has never been amended by the legislature to read otherwise.

Dear Ms. Rudd:

I would like to comment on HB-273 which I believe is presently before your committee.

Everyone I have talked to here in the Fairbanks area believes it is too restrictive being strictly confined to education. The language of the bill should include the possibility of any area to have a service area by majority vote of the people bwning property within the area.

Mr. Wolfgang Falke is personally carrying the wishes of the Fairbanks people to your committee to express our feelings in more detail.

Very truly yours,

Mark B. Ringstad

Re. House Bill No.273

The new legislation should not substantially alter the powers of Third Class Boroughs but rather should clarify existing powers. Also the Third Class Boroughs may have the powers-on a area wide bases to form-alter or abolish service areas for any borough wide services. And the right of the people to petition for additional services.

The new legislation should provide for the transfer of power from the old to the new borough in a orderly manor so that they could exercise powers existing, till the public could vote on approval of the continuation on a service area basis.

I feel this House Bill no.273 with the proper amendments should be passed and put into law soon as possiable. I feel a clear and concise law on the Third Class Borough will help other none classified boroughs to become Third Class Boroughs if they see fit. This is not a Fairbanks problem. This is a state wide problem, with towns such as Haines in mind.

I hope you as representatives of the people of Alaska are able to act on our wishes soon as you can.

Very truly yours,
Third Class Borough Member.
Dean G Barnard

MILLERS FALLS
ERASE
COTTON CONTENT

TO COMMITTEE MEMBERS CONCERNING H.B. 273

The question of the amount of government necessary to supply the services required by the residents of the area is frequently raised and there are always complaints about excessive taxes and governmental interference.

When the condition exists where large concentrations of people develop, a governmental body such as a town or city government is necessary to perform the daily tasks that the residents do not have time for. These tasks include police and fire protection, garbage collection, street cleaning, sewer and water systems and other social services requested by the majority plus taxation and collection to pay for these services. Within the limits of the town or city all residents share equally in whatever the elected government does or doesn't do because of the proximity of the residences. In these areas complaints of excessive government and taxes are seldom aimed at the local government body because most people realize that the services supplied are required to maintain a level of social relationship that they desire within their town.

In the areas away from large concentrations of people, towns and citys, the social relationship and the amount of government necessary to maintain the social relationship is changed. In these outlying areas what a resident does has no effect on his neighbors simply because he has no neighbors in the same sense as a town resident.

The town resident accepts local government and the cost of that government because he realizes that he cannot provide the same services at the same cost and he cannot be assured of protection of his property and his life unless his neighbors are subject to the same laws that govern his action. All town residents realize that any action by one directly affects the other, socially and economically. As a resident of the town he has ready access to all services provided by the government and is willing to pay for these services.

Conversely the outlying resident has little or no access to any services provided by the local government.

Since the North Star Borough is a second class borough, property is taxed at the same rate as town property in order to pay for services that only the town people can utilize.

At present approximately 40% of the North Star Borough population lives in towns that cover 3% of the total land area. Because of this concentration of people in two locations, Fairbanks and North Pole, 60% of the people are paying for services they are not able to utilize unless they live within several minutes drive from one of the towns where the bulk of the North Star Borough tax money is spent.

In addition to the general tax imposed by the borough government all residents of this North Star Borough must pay an additional tax to support the services they want for their area such as police protection, Fairbanks and North Pole, garbage collection,(Fairbanks and North Pole or by contract services areas,) Sewer and water systems, (Fairbanks and North Pole or by paying for installation of septic tanks and wells).

As stated above 60% of the residents of the North Star Borough are paying for services they cannot receive in addition to those services they desire. These residents have indicated a desire to express a choice between a second class borough and a third class borough in the form of a petition to place reclassifcation from a second to a third class borough on the ballot.

The petition signatures have in no way stated nor indicated that they want no government only that they want a government of which they can share the benefits equally. As a third class borough all service areas required or requested by the residents will be continued or formed for whatever class of service fits the needs and desires of those affected while being relieved of the tax burden that a second class borough government adds.

Respectfully,

Donald Fiscus

MEMORANDUM State of Alaska

TO: *Lee McAnerney*
Commissioner
Dept. of Community & Regional Affairs

DATE: *January 5, 1977*

FILE NO:

Avrum Gross
Attorney General

TELEPHONE NO:

FROM: *Rod Pegues*
Assistant Attorney General

SUBJECT: *Powers of third class borough*

This responds to your request for an opinionon on this subject of December 29, 1976. Pursuant to your request we have reviewed our informal opinion of August 8, 1968, on this subject and AS 29.41.

We agree with your views on the matter. The third class borough's sole function is to provide education. It is enpowered to levy and collect taxes, to borrow money, and to establish service areas to that end. It has no other function. It would be inconsistent with AS 29.41 for a third class borough to exercise a power of a first or second class borough which is not in furtherance of its assigned function and prescribed powers. Thus, in order to collect taxes, a third class borough obviously must possess the power to file tax liens and foreclose on them. To operate a school system, it must possess the power to acquire and manage property and enter into contracts. This is what the last sentence of AS 29.41.020, which constitutes the assembly the school board as well is conclusive on this point. It is irrefutable evidence of the legislature's intent that the third class borough has no other function.

The opinion on this subject of August 8, 1968, is in error on these points and is overruled.

Lee McAnerney
Commissioner

As you are undoubtedly aware, there is an effort being made by residents of the Fairbanks North Star Borough, a second-class borough, to reclassify that borough as a third-class borough. As a function of the reclassification process, the borough assembly must evaluate and issue findings relative to the ability of the borough to function subsequent to reclassification, AS 29.08.040(g) and AS 29.33.260. However, before it can perform that responsibility the assembly must know what the powers of a third-class borough are. The Fairbanks Borough Assembly believes, and we concur, that the powers of a third-class borough are not clearly defined in Title 29. Accordingly, this request for your opinion.

There is an unnumbered opinion dated August 8, 1968, signed by then Assistant Attorney General Robert E. Price which reaches certain conclusions relative to the powers of a third-class borough. Summarized, the opinion states that the only powers that can be exercised on an area-wide basis by a third-class borough are tax assessment and collection and education, but that the borough may on a service area or non area-wide basis, exercise all other municipal powers except planning and zoning, which may not be exercised at all. A copy of the subject opinion is attached.

Being somewhat familiar with Ch. 122, SLA 1968, I am inclined to disagree with the conclusions reached in the earlier opinion. As you know, the third-class borough concept was created for one purpose: to respond to the absence of a legal entity to assume the duties and responsibilities of the former Haines Independent School District which was dissolved in 1968. I do not believe that the Legislature intended to simply create another class of borough that was different from second and first-class boroughs only by virtue of the absence of the planning and zoning power and the inability to exercise powers on an area-wide basis. Moreover, it would seem that Mr. Price's conclusion that no municipal powers except education and tax assessment and collection may be exercised on an area-wide basis, is in direct conflict with Section 1, Article X, of the Alaska Constitution which calls for ". . . a minimum number of local government units . . ." Quite obviously, creation of a regional municipality lacking authority to provide services on a region-wide basis creates, not dissipates, the need for additional governmental structures.

After carefully and thoroughly reviewing the provisions of Title 29, pertaining to third-class boroughs, and it is my conclusion that third-class boroughs have

authority to exercise the education and tax assessment and collection powers only. It seems that the crux of this issue is the second sentence of AS 29.41.010(a), which provides that "Provisions of law relative to first and second-class organized boroughs apply with respect to third-class boroughs only to the extent they are consistent with this chapter." Because Chapter 41 mandates the exercise of the education and tax assessment and collection powers only, I read the subject sentence to mean that in exercising the education and tax assessment and collection powers, the third-class borough must operate substantially the same as a first or second-class borough. I do not, as Mr. Price apparently has, read the subject sentence to extend to the third-class borough all powers, duties, rights and responsibilities normally associated with first or second-class borough status so long as those powers, duties, rights and responsibilities are not in conflict with the provisions of Chapter 41.

AS 29.41.010(b) extends authority to third-class boroughs to establish service areas. This provision seems to me to mean that service areas may be established to provide a higher or lower level of education service than that provided on an area-wide basis; I do not read it to mean that a service area may be created to provide any municipal service.

Would you please review the 1969 opinion and AS 29.41, and let me know if you agree with my conclusions?

DEPARTMENT OF LAW
OFFICE OF THE ATTORNEY GENERAL / POUCH K, STATE CAPITOL — JUNEAU 99801

August 8, 1968

MEMORANDUM

RECEIVED
AUG 8 1968
LOCAL AFFAIRS AGENCY

TO: Larry Montgomery, Director
Local Affairs Agency
Office of the Governor

FROM: G. Kent Edwards
Attorney General

By: Robert E. Price
Assistant Attorney General

RE: Third Class Borough Law

This is in response to your memorandum of August 2 in which you requested the opinion of this department on several questions from John D. Gustafson, Presiding Officer of the Fairbanks North Star Borough Assembly. These questions are:

"1. Is a third class borough limited to the exercise of the two mandatory areawide powers of education and tax assessment and collection?

2. In what manner and to what extent may the third class borough exercise the power of flood control?

3. Would bonds be sold on an areawide basis or just on the established service area?"

ANSWER 1.

29.41.010
AS 07.17.020(a) states:

"The third class borough shall exercise the areawide powers of education and tax assessment and collection [as provided for second class boroughs in this title]" — IN THE MANNER

The reference in this section to the areawide powers the second class boroughs is to AS 07.15.310 (Scope of

29.33.010
— 370-330

27.33.030

Areawide Powers), AS 07.15.320 (Assessment and Collection) and
27.33.020 AS 07.15.330 (Education). The specific inclusion of Education (AS 07.15.330) and Tax Assessment and Collection (AS 07.15.320) as areawide powers of the third class borough infers the exclusion of other powers set out in AS 07.15 (Article 2. Scope of Areawide Powers), i.e., AS 07.15.340 (Planning and Zoning), 27.37.050 AS 07.15.350 (Additional Areawide Powers), and AS 07.15.360 (Dog Contro). See the discussion of the maxim "Expressio unius est exclusio alterius" in Southerland on Statutory Construction, Vol. II, § 4915. Therefore, the third class borough is limited to the exercise of the two mandatory areawide powers of education and tax assessment and collection.

ANSWER 2.

The third class borough may exercise the power of flood control either (1) on the basis of the exercise of the power of a second class borough in the area outside cities only or (2) on the basis of a service area, provided, that, in either case, the project complies with the statutory grant of power.

AS 07.17.010 states, in part: "Provisions of law relating to first and second class organized boroughs apply with respect to third class boroughs only if and to the extent they are consistent with this chapter."

First, on the question of non-areawide power of a third class borough, there is no explicit reference to it in AS 07.17. However, in accordance with the provision of AS 07.17.010 above cited, the third class borough has such non-areawide power becaus there is no apparent basis why this power would be inconsistent with AS 07.17. The third class power should comply with AS 07 - .15.720 (Powers of Second Class Borough) in its exercise of this power. A first class city has the authority for flood control under AS 29.10.117. On the authority of a borough to carry out a reclamation project, I attach to this memo for your considerati an informal opinion of the Attorney General on 12/30/65. It will be a technical question, of course, whether or not the borough ca undertake a flood control project through the use of a non-areawi power only.

Second, on the question of a service area of a third class borough, AS 07.17.020(b) states:

> "The third class borough may establish, operate, alter or abolish service areas as provided for second class boroughs in this title."

The reference to the power of second class boroughs over service

areas is to AS 07.15.050, which states:

> "(a) Service areas to provide special services within a first or second class borough may be established, operated, altered, or abolished by the assembly by ordinance.
>
> (b) The assembly may levy or authorize the levying of taxes, charges, or assessments in service areas to finance the special services. No special assessment may be levied except as provided by law for first class cities.
>
> (c) The assembly may provide for appointed or elected boards to supervise the furnishing of special services in service areas.
>
> (d) A new service area may not be established if the new service can be provided by an existing service area, or by annexation to a city, or incorporation as a city.
>
> (e) The assembly may delegate any of the powers prescribed in § 710 of this chapter to a service area. In a second class borough each delegated power must be approved by a majority of the qualified voters voting on the question who reside within the service area. The rate of taxation and the issuance of bonds shall remain subject to the approval of the assembly."

Further, on the same subject, the Alaska Constitution, Art. X, § 5 states:

> "Service areas to provide special services within an organized borough may be established, altered, or abolished by the assembly, subject to the provisions of law or charter. A new service area shall not be established if, consistent with the purposes of this article, the new service can be provided by an existing service area, by incorporation as a city, or by annexation to a city. The assembly may authorize the levying of taxes, charges, or assessments within a service area to finance the special services."

There is the inference in these quoted provisions that a service area may not encompass an area which is coterminous or substantially coterminous with the borough boundaries. The Final Report on Borough Government, prepared by the Alaska Legislative Council and the Local Affairs Agency and published in January, 1961, states, at p. 43: "The need may arise within a borough for services not required throughout its entire jurisdiction." Therefore, it was the thought of those who prepared the Borough Act of 1961 and the inference of the language of the provisions of that legislation itself that service areas were only to encompass an area less than the entire area of its jurisdiction. The provisions of the borough system in Alaska are unique and the decisions of other jurisdictions on the same question are not relevant to this opinion. Cf. McQuillin on Municipal Corporations, Vol. 14, § 38.52. See The Metropolitan Experiment in Alaska, edited by Ronald C. Cease and Jerome R. Saroff, 1968, pp. 11, 16, 42. It will be a technical question, of course, whether or not the borough can undertake a flood control project through the use of a service area which is not coterminous or substantially coterminous with the boundaries or area of the borough.

ANSWER 3.

AS 07.15.030 states in part:

> "First and second class boroughs may incur indebtedness in the same manner and to the same extent as first class cities
>
> * * *
>
> (3) on a service area basis for functions performed in a service area only; payment of debt principal and interest as well as other costs shall be limited to the service area, except that, subject to the election requirements of AS 07.30.010(b), the full faith and credit of the entire borough may be pledged to guarantee payment of principal and interest."

This provision is applicable to third class boroughs because it is "consistent", in accordance with the principle of AS 07.17.010, with the service area power of AS 07.17.020(b).

Therefore, third class borough service area bonds must limit payment of debt principal and interest as well as other costs to the service area.

Dear Editor:

In yesterday's front page news "3rd Class Election: Still no date", you (or who?) stated "The Third Class Borough Committee, which collected the signatures, has asked for a change in the law so that it specifically states that service areas for powers besides education are allowed."

This statement is far and away from the truth. The fact is that a Third Class Borough has the specific power to establish, operate, alter or abolish service areas in the same manner as provided for Second Class Boroughs to exercise those powers applicable to all municipalities (which include flood control, recreation, libraries, fire protection, etc.) There is no such thing as a service area for education. Education and tax assessment and collection must be exercised by a Third Class Borough on an area wide basis in the same manner as provided for Second Class Boroughs. This is the law, plain and clear!

The Third Class Borough Committee has asked its Fairbanks legislators to clarify the law, not to change it, so that the governor and his aides, his attorney general in specific, must agree with the law.

On January 5, 1977, the attorney general issued an opinion requested by the Department of Community and Regional Affairs. That opinion of the attorney general stated: "The Third Class Borough's sole function is to provide education."

It is impossible for me not to believe this opinion by our appointed attorney general was made with full knowledge that it was not according to law and would not be upheld by our courts. The sole function of the opinion was, and is, to mislead the residents of the Fairbanks North Star Borough and thereby discourage them from voting in favor of Third Class reclassification of the borough.

Can the attorney general do this? True, it is the function of the courts to interpret the law, but they won't until an actual case or controversy exists. As stated by Assistant Attorney General Rod Peguses on a recent television interview, an actual case or controversy will not exist until the Third Class Borough comes into existence and the State or some group attempts to prevent the new borough from exercising its municipal powers.

Because the court will not interpret the law until after an actual case or controversy has arisen, the only alternative method of enjoining the publication of this clearly erroneous opinion of the attorney general is to pressure our governor to require the attorney general to re-evaluate his opinion. This is why the Third Class Borough Committee went to Juneau. We wanted to make the legislator aware of the problem and to clarify existing legislation, not to change powers already existing in Third Class Boroughs.

Very truly yours,

FALKE WOLFGANG

Fairbanks, Alaska 99701

Dear Editor:

In response to Mr. Wm. F. Humpheries letter to the editor of 3-2-77: Under a third class borough what would become of the borough powers such as animal control and borough transit?

Under present law, those powers, as well as all municipal powers, will be continiued by the new third class borough in the same manner as they are provided by the second class borough.

Under a new third class borough administration of coarse there could, and I am confident that there will, become before the voters the question in which form the people wish to have those powers administered. Public hearings shall be held for each power in question to establish boundaries for service areas throu-out the borough and the people in each area and in each city then determen by vote if they wish to have those services to be continued. Sound's fair, doesn't it?

This is another reason why a third class borough indeed would be able to serve the people of Fairbanks and its souraunding areas so much better than our present administration.

Very truly yours,

Wolfgang Fahke

A couple questions

322 2nd St., Graehl
Fairbanks
March 2, 1977

Dear Editor:

Following are a couple of questions maybe you or someone on the Third Class Borough Committee could answer.

Under a third class borough what would become of important borough powers such as animal control (takes care of loose and vicious dogs), and borough transit? I think that many persons who now oppose public transportation because of the higher tax load, or other reasons, may be very glad to have borough transit around when President Carter's energy conservation proposals are unveiled and become law this Spring! I am quite sure oil companies will be ordered to make much more home heating oil and much less gasoline. I'm sure the President and Congress will feel that warm homes are more important than unrestricted private auto driving in Alaska and the U.S.A. Then borough transit will become much more important to many people than it is now.

FAIRBANKS NORTH STAR BOROUGH

Box 1267, Fairbanks, Alaska 99707

M E M O R A N D U M

TO: Butch Stein, Borough Assemblyman

FROM: Ronald A. Garzini, Staff Director RAG

SUBJECT: Third Class Borough

DATE: January 27, 1977

I have put together some things which you should be aware of when discussing the declassification of the Fairbanks North Star Borough from second to third class with our legislators. I have kept to the facts as well as I can with my obvious bias.

It appears that the major objections to the present second class Borough arise from zoning administration and enforcement and the expansion of the borough budget with no obvious increase in service. I think you could point out to our legislative delegation our efforts at straightening out our present zoning problems and, in fact, the impetus for the third class movement began at a zoning hearing where we were attempting to resolve some of the problems.

The spread sheet entitled "Initial Allocations of the Borough Budget" pretty well shows the percent dedicated to each program in the Borough. It's interesting to note that if you eliminate the programs that would not exist in a third class Borough, you would only remove 15% from the existing Borough budget. (Certainly over time that could change.)

Some specific thoughts are:

1. With a third class Borough, the mayor of the municipality is selected from the Assembly rather than elected at-large. I frankly think the people of the Fairbanks area prefer having a separately elected mayor who they can hold accountable for administration. I am sure you realize that with the workload the present Assembly has and the workload the present

School Board has, combining these two workloads would be unbelievably difficult. The Board/Assembly would be the Board of Equalization, School Board, tax collector, service area coordinator, and central treasurer, etc.

2. Assessment and Collection of Taxes

a. The third class borough assembly would hold the central treasury for Fairbanks local government. Having a board, whose primary function is education, hold the central treasury for municipal governments in an area is highly irregular and I'm sure it's not good management by any existing precedent.

b. We presently have fifteen service areas and three more underway. If a third class borough were to come into being, I predict we would have fifty service areas in short order and just dealing with the fifteen we have is becoming a major problem. We are presently working with ninety service area commissioners.

3. Education - The school board would cease to exist with a third class Borough and the workload of the school board/assembly would once again include handling their insurance, their engineering, data processing, assessing, and all the other functions we provide for education. I feel that these additional duties thrust upon the education function would prevent the elected body from spending the time they really should on educational matters. The Superintendent would have duties unheard of in municipal experience.

4. Flood Control - The Borough is obligated for the maintenance of the flood levee. We own all the land within the levee; we are obligated to 1% of the final cost of the project, and we are responsible for land acquisition, rights of way, relocation, and coordination. We are responsible for protecting the levy and works by controlling surface activity adjacent to them. A third class Borough service area for flood control would be phenomenally complex, extremely dull to the average citizen, and probably something the State of Alaska would unwillingly assume if a third class Borough were formed.

5. Planning and Zoning - The responsibility for subdivisions; i.e, platting, it appears, would go to the State Division of Lands. It would be interesting to see how third class Borough people would like to relate to state government types for approval of their subdivisions. My impression is that the only thing third class Borough people like less than Borough employees is state and federal employees. We are undertaking a major effort presently to relocate our landfill. We expect that the proper place for the landfill will turn out to be above the flood plain, outside the city. Presently the operation of our solid waste program runs about $300,000 per year. I assume the State of Alaska would not like to operate the landfill; I doubt if the City of Fairbanks would like to bear the capital expense, which we estimate at two million dollars, to establish a solid waste disposal system for the Fairbanks area.

There is need for planning coordination with the Highway Department and the State Division of Lands in the area of transportation and water and sewer planning, as well as hydrological and soils coordination with the appropriate state and federal agencies. We have a strong input into the development of state roads and trails within the Fairbanks area. I can't see the formation of a service area to provide a vehicle for local input; therefore, I assume the state, again, would have to bear the burden of determining what the public sentiment is through hearings and employee growth. The two cities would definitely need to create planning and zoning departments.

6. Animal Control - I cannot envision the Fairbanks area without an Animal Control program. With over 50% of the population now outside the City of Fairbanks, and with the majority of our collections now being outside the city limits, I personally don't think that having the city run an Animal Control program would be very effective. It would be like taking a cup of water out of a bowl. The dogs would just drift in from the outlying areas. We are presently catching 500 animals per month and expect this year, if present trends continue, to dis-

pose of 4,000 animals. Rabies is on the increase in Alaska and we expect to hold two free rabies clinics this year to do what we can to prevent rabies getting started in the interior.

7. Parks & Recreation - As Chairman of the Parks & Recreation Committee, I'm sure you are more aware than most of the level of recreation activity that the Borough has in the area. The City, which has a tax base one-third the size of the Borough's would be sore pressed to continue the level of service we now provide. In addition, a number of our activities in recreation have long term agreements in them. Specifically, Fairbanks Lions Park - the Lions are putting up $25,000 per year for four years for the Borough to develop the facility. Most of our BOR grants have a 25 year contract inherent with them (I wonder if we would have to give the money back.) An attached sheet shows an inventory of our park properties.

8. Solid Waste - We presently have a North Pole Solid Waste Transfer Station which has been extremely successful and well received; and we have a Salcha Landfill. I am sure that these would become individual service areas. Our main concern, however, lies with the current Fairbanks landfill which must be moved and the tax base of the City of Fairbanks would probably not be able to deal effectively with the capital costs of re-establishing a new landfill.

9. Air Pollution - We presently spend on air pollution only what we get from State and Federal agencies. Our program costs us nothing locally; therefore, eliminating it would save us nothing. However, the ability of local people to govern the air quality enforcement program and bring some local sensibility to it, we feel, is a highly desirable asset. Our local pollution control commission has the authority to grant variances from the regulations which we propose when the situation is appropriate. I have no doubt the State of Alaska or the Federal government would very quickly leap in and do just what we are doing or more in the way of air quality control.

10. Public Transportation has been voted on by the people in the Fairbanks area twice. It received approximately 55% of the vote in a borough-wide election, and approximately 60% in a city election. Our ridership and support from the public has increased dramatically. We presently plan starting July 1 to serve our rural areas where it is feasible. We have spent state grant money to buy equipment and I assume we would have to sell it. I also predict that we would have a transit service area, because the people appear to consistently vote yes in elections regarding transit.

11. Library - We expect this summer to open up the Fairbanks Regional Library which was overwhelmingly voted on by the people of Fairbanks. It is a beautiful structure, one which we should be proud of (fig trees and all). It is a 47,000 square foot building with a 5.9 million dollar cost and, I'm sure, an operating budget of at least three-quarters of a million dollars. Designed to serve all of Northern and Central Alaska, I frankly doubt that the City of Fairbanks can afford, with its current financial problems, to operate this facility. If they were to charge us to check out books, I doubt very many people would check out books at $1.50 apiece.

12. Local Service Roads. We currently receive, as a result of state bond issues, money for local borough roads. This funding level has averaged a half a million dollars per year and the Planning Commission and the Borough Assembly have a great deal to say about where and in what priority our roads are built. I assume the roads would continue to be built, however, I see state government being involved in this decision making process in our absence.

13. Finances - For the past couple of years, we have made a concerted effort to develop a substantial savings account so that we could deal with fire protection and the heavy cost of capitalization when area-wide or non-area-wide fire protection came to pass. Our billion dollar tax base is really the only hope the foothills have of meeting the capital costs of adequate fire

protection.

The City of Fairbanks is presently trying to establish user fees for the water and sewer system and finding it very difficult. Experience has shown that the costs of collecting user fees quite often exceeds the funds collected. For instance, our Parking Management Study shows that if the city took the parking meters out, they would actually save money. I can't imagine attempting to apply user fees to Parks and Recreation facilities, summer playgrounds, the landfill, the library, animal control; with the city establishing city resident rates and borough resident rates in an attempt to equitably share the burden for the level of service requested by our 60,000 citizens. We presently have a five year lease on our building and we are in our first year; the building would certainly be far to large for a third class Borough.

I think a great deal can be said at this time in the way of criticism of our present second class borough. It is certainly an inferior form of government for the Fairbanks area; it's a very unresponsive form of government for an area this size; suffice to say a third class borough would be worse. I personally view the only logical form of government for an area with our characteristics would be a first class borough or unified municipality. Within such a governmental structure, service areas could be designed so that people only paid for the level of service they receive; whereas a resident of the City of Fairbanks might receive a high level of service and a 20 mill tax rate, a resident of 50 Mile Steese Highway might well only have a 4 mill tax rate since he receives little service beyond education. A classic example of our problem is the fact that we presently have the financial ability to provide fire protection to the foothills, and it appears the the people want fire protection in the foothils, however, due to the innumerable problems - including the third class borough controversy - we are unable to do anything. Area-wide fire protection is the only sensible approach, however, our major concern is what will the reaction be of the city residents if we do what we really know we should do.

We should be doing something about roads outside the city limits also, and duplicating the city's public works staff is ridiculous. We already have too many managers and assistants, finance directors, attorneys, purchasing agents, labor relations experts, computers, etc. Financially, we're in excellent shape and looking to lowering taxes (since we have no power to provide services) while the city is laying off workers.

In conclusion, a third class borough with fifty service areas is not the solution, nor is continuing as we are. I hope this limited analysis is of some aid in your briefing.

Alaska State Legislature

POUCH Y, STATE CAPITOL
JUNEAU, ALASKA 99811
907 465-3800

Feb. 8, 1977

Mr. Richard Brown, Chr.
Third Class Borough Committee
SR Box 10657
Fairbanks, AK 99701

Dear Richard:

Your Fairbanks Caucus met Feb. 1, 1977, to discuss the problems confronting the Third Class Borough Committee.

We agreed with Senator John Butrovich -- the Attorney General's opinion notwithstanding -- that the legislative intent of Senate Bill 328 in 1968 was to establish a third class borough with service areas which could self-impose powers beyond education, tax assessment and collection.

We further agreed to seek legislation from two directions. First, Senator John Huber will draft a bill designed to allow local option on some areawide borough powers under Title 29, Chapter 33 (Areawide Borough Powers & Duties). His bill would permit voters in the borough to exempt themselves from Sec. 29.33.090 (Zoning). Next, Representative Charles Parr will draft a bill designed to clarify the authority of third class boroughs under Title 29, Chapter 41 (Powers of Third Class Boroughs). The idea would be to give the force of law to the intent expressed by Senator Butrovich in SB 328.

Both Senator Huber and Representative Parr have stated they will review drafts of their bills with our entire Fairbanks Caucus before introduction to allow co-sponsors. At that time, each of us will make individual decisions on the bills.

Thank you for appearing Jan. 28th at our caucus luncheon. We understand your concern on this matter.

Sincerely,

Sen. John Butrovich

Rep. Fred Brown

Sen. Glenn Hackney

Rep. Steve Cowper

Sen. John Huber

Rep. Charles Parr

Rep. Don Bennett

Rep. Sally Smith

Rep. Larry Carpenter

342

Questionnaires

1. Are people in your village talking about OCS? Yes -- 47%, No -- 42%, Don't know -- 11%

   If people in your village are talking about OCS, what kind of things are they saying?
   - --- "Evil to be unalterably opposed to"
   - --- Concern over fishing and industry locations
   - --- Concern over Washington, D. C. position on 200-mile fishing limit
   - --- Where will they drill and what about oil spills?
   - --- What about: health care, housing, economic impact, seafood?
   - --- Concern over life style impact, renewable resources, environment
   - --- "Don't want anything to do with OCS for fear of hurting subsistence"
   - --- "That ice too dangerous for industry -- don't want no drilling on our land"
   - --- "When will it come and what are we going to do?"

2. Have you been to any other meetings on OCS? Yes -- 35%, No -- 65%
   If you have been to other meetings on OCS, what type of information did you learn?
   - --- Few specifics
   - --- Yakutat information
   - --- "I just feel like I'm wasting my breath"
   - --- Mostly general information
   - --- Offshore drilling technical information
   - --- That there's lots of grave concern about being overwhelmed by development
   - --- Western civilization bullshit

3. Have you seen any slides or films on OCS? Yes -- 30%, No -- 70%

4. Have any of the following people visited your village recently to talk about OCS?

Federal government:	Yes -- 14%,	No -- 73%,	Don't know -- 13%
State government:	Yes -- 20%,	No -- 73%,	Don't know -- 7%
Regional corporation:	Yes -- 13%,	No -- 74%,	Don't know -- 13%
Oil company:	Yes -- 13%,	No -- 75%,	Don't know -- 12%
Other: (Borough planners, Kodiak Borough)	Yes -- 13%,	No -- 75%,	Don't know -- 12%

5. How do you feel about OCS in relation to the following?

		Good	.....	.....	Bad
a.	Jobs	29%	17%	29%	25%
b.	Profit to corporation	25%	25%	50%	
c.	Cultural impact	10%	5%	17%	68%
d.	Subsistence life style	9%		24%	67%

6. How would you rate your need for more information on the topics listed?

		Need info desperately	Would be very useful	Could use it	No need
a.	Offshore facility	40%	43%	13%	4%
b.	Joint venture arrangements	40%	34%	13%	13%
c.	How to stop OCS	36%	42%	11%	11%
d.	Onshore facilities	62%	25%	10%	3%
e.	Powers of a city (taxing, zoning, etc.)	45%	40%	15%	
f.	Funding sources	73%	21%	6%	

7. If it was your decision to go or not to go along with OCS development in your village area:
   - a. Do you need more information before deciding? Yes -- 95%, No -- 5%
   - b. Are you ready now to say yes, go ahead? Yes -- 2 responses, No -- 2 responses
   - c. Are you ready now to say no, we don't want it? Yes -- 2 responses, No -- 0 responses

8. Do you feel the state is doing enough to assist villages in OCS planning? Yes -- 17%, No -- 78%, Almost -- 5%

9. Who should use the available federal and state monies to develop an OCS plan for your area?

   Federal government -- 2%
   Regional corporations -- 29%
   State government -- 5%
   Subregional associations -- 16%
   Village -- 43%

10. Do you feel follow-up activities to the meeting would be useful? Yes -- 100%, No -- 0%

The State Affairs Committee has had SENATE JOINT RESOLUTION NO. 20 (requesting establishment of a Farmers Home Administration state office in Alaska) under consideration and the committee recommends it do pass. The report was signed by Senator Willis, Co-Chairman, and concurred in by Senators Kerttula, Huber and Ray. SJR 20

SENATE JOINT RESOLUTION NO. 20 was referred to the Rules Committee.

The Resources Committee has had SENATE BILL NO. 196 (regulation of shellfish pots) under consideration and the committee recommends it be replaced with COMMITTEE SUBSTITUTE FOR SENATE BILL NO. 196, entitled: SB 196

"An Act relating to the regulation of shellfish pots and buoys used in the taking of king crab."

and that the committee substitute do pass.

The report was signed by Senator Poland, Chairman, and concurred in by Senators Tillion, Croft, Huber, Meland, Colletta and Butrovich.

SENATE BILL NO. 196 was referred to the Rules Committee.

Fiscal note accompanying SENATE BILL NO. 196 appears in Senate Supplement No. 31 to today's journal.

The Community and Regional Affairs Committee has had SENATE BILL NO. 220 (management of coastal resources of the state) under consideration and a majority of the committee recommends it do pass with the following amendment: SB 220

Page 2, Line 28: Change "eight" to "nine"
Page 3, Lines 3 & 4: Delete "the area of the North Slope Borough and"
Page 3, Line 6: Add new section "(B) the North Slope Borough:" and reletter accordingly

The report was signed by Senator Orsini, Chairman, and concurred in by Senators Hackney and Willis. Senator Ferguson signed "no recommendation".

Letter of Intent by the Community and Regional Affairs Committee appears in Senate Supplement No. 31 to today's journal.

SENATE BILL NO. 220 was referred to the Finance Committee.

SB 220 The President stated the journal would reflect that Senator Ferguson dissents from the Letter of Intent by the Community and Regional Affairs Committee.

SB 227 The Resources Committee has had SENATE BILL NO. 227 (regulating procedures on appplications for permits for use of state's air, land, or water resources) under consideration and a majority of the committee recommends it be replaced with COMMITTEE SUBSTITUTE FOR SENATE BILL NO. 227 and that the committee substitute do pass. The report was signed by Senator Poland, Chairman, and concurred in by Senators Tillion, Meland, Butrovich and Colletta. Senator Huber signed "no recommendation".

SENATE BILL NO. 227 was referred to the Rules Committee.

CS HB 233 am The State Affairs Committee has had COMMITTEE SUBSTITUTE FOR HOUSE BILL NO. 233 amended (land under the Alaska Native Claims Settlement Act) under consideration and a majority of the committee recommends it be replaced with SENATE COMMITTEE SUBSTITUTE FOR COMMITTEE SUBSTITUTE FOR HOUSE BILL NO. 233, entitled:

"An Act relating to selection of state land and federal land withdrawal and classification; and providing for an effective date."

and that the Senate Committee Substitute do pass with the following amendment:

Page 2, Line 1: delete "Office of the Governor" and insert "Department of Natural Resources"

The report was signed by Senator Kerttula, Co-Chairman, and concurred in by Senators Huber and Willis. Senator Ray signed "no recommendation".

COMMITTEE SUBSTITUTE FOR HOUSE BILL NO. 233 amended was referred to the Resources Committee.

CS HB 234 am The State Affairs Committee has had COMMITTEE SUBSTITUTE FOR HOUSE BILL NO. 234 amended (special appropriation for Steering Council for d-2 lands) under consideration and a majority of the committee recommends it be replaced with SENATE COMMITTEE SUBSTITUTE FOR COMMITTEE SUBSTITUTE FOR HOUSE BILL NO. 234, entitled:

"An Act making special appropriations for the work of the Steering Council for Alaska Lands; and providing for an effective date."

AMENDMENT #1

OFFERED IN THE SENATE: BY: Resources Committee

Alaska Coastal Management Program
Division of Policy Development and Planning
Office of the Governor

SUBJECT: SB 220/HB 342: Fiscal Note

We have prepared a fiscal note for SB 220/HB 342. Since the bill will complement and augment an existing program, we have tried to present a basic understanding of the present and near future financial expectations of the Alaska Coastal Management Program, rather than just showing the expected increases that would result from passage and implementation of SB 220/HB 342.

We hope this information is useful and instructive to you, and please call on us for further explanation or clarification of the fiscal or any other aspects of the coastal program.

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

A. Assumptions.

1. Passage of the bill will make federal approval under section 306 of the Coastal Zone Management Act of 1972, and award of additional funding under that section, possible; and this should occur in June of 1978.
2. No increase in state cash appropriations will be needed to match the incoming federal grants. The larger federal grants can be matched with local participation and state agency in-kind services.
3. Only four new positions in state government (3 in CRA, 1 in DPDP) should be needed to implement the bill. Almost all of the bill's provisions can be met with the existing personnel now in place in various state agencies as a result of the existing Alaska Coastal Management Program (ACMP). The new positions will be needed because of the substantial new role of local governments and the needs of the new council.

III. Analysis, Continued

B. Program Summary.

The purpose of a fiscal note is usually to show what increases in state staff or expenditures can be expected as a result of legislation. In this case, SB 220/HB 342 would become the centerpiece of an existing program which began in the summer of 1974. The program, which is called the Alaska Coastal Management Program (ACMP) just as in the bill, has changed in many respects since it began, but the overall goal of wise use and protection of the coastal resources has never changed nor has the programmatic goal of federal approval under section 306 of the Coastal Zone Management Act of 1972 changed.

Analysis by the ACMP staff in the Office of the Governor, the Dept. of Law, and the federal Office of Coastal Zone Management shows that the proposed bill should make it possible for ACMP to be federally approved with little difficulty if the bill is enthusiastically administered. This approval would permit larger federal CZM grants to be made to the state. So, while the face sheet of this note is filled out according to the instructions for fiscal notes, we provide a more thorough look at the ACMP budget on the following charts. Grant application and BRU data, as well as ACMP staff experience and expectation have been melded to form general budget charts for fiscal years 1977, 78, and 79. The figures are reliable insofar as general allocations and magnitude; but they are not exact since there are many unknowns. The figures for FY 77 are also rough since they are drawn from two separate grant applications and a possible supplemental application.

The first chart might be thought of as the "pre-bill situation." Since FY 77 will end just after passage of the bill, there will be little of the bill reflected in the FY 77 chart. This is not awkward, since many of the bill's provisions were anticipated. The major difference from FY 77 to FY 78 and beyond will be the amount of local government involvement, which was only voluntary, and rather novel at the start of FY 77.

The second chart, for FY 78, is a projection of program development expenditures as the implementation of the bill begins. There is much to do: Local governments must be provided with enough funds to get their programs underway, and the Council will have quite a job in getting organized and establishing its guidelines and procedures. Additionally, the ACMP office will be pursuing approval of the program by the end of the fiscal year, and this will involve substantial time and money.

The third chart can be thought of as the first year of "regular" program administration. By this time the larger Sec. 306 grants will be available and local programs should be well underway. Also, some local governments may be done with developing their programs, and thus be eligble for administration grants with which to maintain their programs. This last topic

is not addressed in the proposed legislation, but making grants of CZM 306 funds for regular municipal and borough administration of local coastal programs is certainly permitted and encouraged in the national CZM program.

The first and second charts will be largely unchanged whether or not SB 220/HB 342 passes or not, except that the funds for local grants in the second (FY 78) chart might be less because the local demand would probably not be as high without the existence of a bill like SB 220/HB 342.

The third chart (FY 79) may not be valid at all if the bill does not pass because there is considerable uncertainty over whether ACMP could be federally approved without the help of SB 220/HB 342, or something similar.

Chart One-Fiscal Year 77.

Approximate ACMP Receipts:*

Federal:	$1,200,000
State Cash Appropriation:	250,000
TOTAL	$1,450,000

Approximate ACMP Expenditures:

ACMP Office Use...	
Public Participation	$ 200,000
Program Elements	100,000
Grant and Contract Adm.	50,000
Grants to Local Gov'ts	350,000
Assistance to Local Gov't	225,000
State Agency Projects	525,000
	$1,450,000

Chart Two-Fiscal Year 78

Approximate ACMP Receipts:*

Federal:	$1,200,000
State Appropriation:	250,000
TOTAL	$1,450,000

Approximate ACMP Expenditures:

ACMP Office Use...	
Public Participation	$ 225,000
Program Elements	75,000
Grant and Contract Adm.	50,000
Grants to Local Gov'ts	625,000
Assistance to Local Gov't	75,000
State Agency Projects	400,000
TOTAL	$1,450,000

Chart Three-Fiscal Year 79 (If approval under Sec. 306 of the Coastal Zone Management Act has been achieved, and the federal funding is thereby available.)

Approximate ACMP Receipts:*

Federal:	$2,000,000
State Appropriation:	250,000
TOTAL	$2,250,000

Approximate ACMP Expenditures:

ACMP Office Use:	
Public Participation:	$200,000
Program Elements:	75,000
Grant and Contract Adm	75,000
Program Development Grants to local government:	700,000
Program Administration Grants to local gov't:	600,000
Assistance to Local gov't:	100,000
State Agency Projects:	500,000
TOTAL	$2,250,000

* The receipts shown here are those monies under ACMP Office control only. The federal grants do require state matching shares, of which the annual ACMP appropriation is a part. The rest of the match is made up from local and state agency in-kind contributions to the program. Grants to local governments usually require that the local government contribute some value to its own program in cash or in kind, and this contribution is used as part of the overall match for the federal funds. The match ratio now is 4 federal dollars for every 1 state dollar. The state ususally has no trouble finding enough matching share, and this is why we do not expect to ask for any larger annual appropriation than $250,000 per year.

C. Personnel.

SB 220/HB 342 will cause a dramatic increase in local involvement in ACMP. Thus, we see the need of at least three mid-range planners in addition to the existing CRA staff to handle the increased demand for grants and services. All other aspects of SB 220/HB 342 have been forseen except the Alaska Coastal Policy Council, and the ACMP office will need a para-proffessional administrator to attend to the needs of the Council. All these people can easily be paid from the present program revenue.

SECTION-BY-SECTION ANALYSIS

SB 220 - HB 342

(An Act Relating to the Management of the Coastal Resources of the State)

In this analysis --

Council means the	Alaska Coastal Policy Council
Program means the	Alaska Coastal Management Program
District Program means the	District Coastal Management Program
Service Area means the	Coastal Resource Service Area

Area which Merits Special Attention	Defined in section 46.35.210(1)
Coastal Resource District	Defined in section 46.35.210(2)
Use of Direct and Significant Impact	Defined in section 46.35.210(5)
Uses of State Concern	Defined in section 46.35.210(6)

Major Economic Activity	Defined - 46.35.160(b)
Village	Defined - 46.35.180(d)

* Section. 1.

Sets out the legislative findings which show that

- The development of valuable resources which exist along Alaska's coast may outstrip the capabilities of coastal communities to deal with the impacts of accelerated development in the coastal areas; and that there is
- Great need for sound water and land use planning along the coast which would allow for development and use of the resources while at the same time protecting the natural and scenic values of the coast;

* Sec. 2

Sets out the legislative policy which provides that

- The coastal resources of the State should be preserved, protected, restored and enhanced as necessary, but also developed and used, for the benefit of this and future generations; that
- Coordinated planning and decision making among the various levels of governments and citizens of the State should be encouraged; that
- A management program, which would set out the State's policies, objectives and procedures regarding the coast should be developed; that
- Such a management program provide for the resolution of conflicts which may arise between public and private coastal resource activities as well as those which may have a <u>direct and significant impact</u> upon the coastal areas of the State; that

- Such a management program provide for participation by the public, local governments, and agencies of the State and Federal governments in the development and implementation of the program; that
- Such a management program utilize existing governmental structures and authorities; and finally that
- State agencies comply with the policies, and the guidelines and standards adopted by the Alaska Coastal Policy Council.

* Sec. 3

Adds new sections to Chapter 19 (Office of the Governor) of Title 44 (State Government) which would establish the Alaska Coastal Policy Council to carry out the State' policies.

Sec. 44.19.891

(a) Creates the Alaska Coastal Policy Council within the Governor's Office. The council would consist of 15 members; eight would be public members, appointed by the governor, and seven would be Administration members. The eight public members would have to be mayors, or members of assemblies or councils of incorporated local governments from one of eight designated coastal regions. The seven Administration members would be the Director of DPDP, and the Commissioners of the Departments of Commerce and Economic Development, Community and Regional Affairs, Environmental Conservation, Fish and Game, Natural Resources, and Transportation and Public Facilities.

(b) The public members would serve two year terms and could be reappointed. Their terms would be staggered.

(c) The Council would select co-chairmen from among its membership, one from the public members and one from the Administration designees.

(d) Members of the Council would be allowed to select one person as a permanent alternate to represent them at Council meeting.

(e) Four public members and three designated members would constitute a quorum.

However, one or more members would be able to hold hearings.

Decisions of the Council would be by majority vote of those present and voting.

(f) Council members would be entitled to per diem and travel expenses, and

(g) A vacancy among the public members would be filled by appointment of the Governor for the unexpired portion of the term.

Sec. 44.19.892

Sets out the powers of the Council, which would include

- Applying for and accepting of grants, contributions, and appropriations, including Federal monies which would become available for coastal planning and management.
- Contracting for services.
- Consulting and cooperating with all parties concerned with or having jurisdiction over coastal planning and management.

Sec. 44.19.893

Sets out the duties of the Council, which would include

- Developing guidelines and standards for the preparation and approval of the Alaska Coastal Management Program.
- Establishing continuing coordination among the various State agencies to facilitate the development and implementation of the Alaska Coastal Management Program, as well as
- Initiating an interagency program of comprehensive coastal resource planning for each of the eight coastal regions represented on the Council.
- Providing, on a continuing basis, data and information to Coastal Resource Districts to carry out their planning and management functions under the Alaska Coastal Management Program.
- Submitting annually to the Legislature those portions of the Alaska Coastal Management Program approved or amended by the Council during the preceding year.

Sec. 44.19.894

Designates the staff of the Office of Coastal Management within DPDP to be the staff to the Council in carrying out its duties.

* Sec. 4

Adds a new chapter to Title 46 (Water, Air and Environmental Conservation) to develop the Alaska Coastal Management Program.

Sec. 46.35.010

((a) (Provides that the Council approves the Alaska Coastal Management Program.)

(b) Provides that portions of the Alaska Coastal Management Program could be approved by the Council as they are developed.

(c) The Council would review the Program, and when appropriate revise it to

- Add newly approved District Coastal Management Programs;
- Intergrate newly approved District Coastal Management Programs, and/or revisions and amendments of District Coastal Management Programs with existing programs, and/or with plans developed by State agencies.
- Add new or revised State statutes, policies, regulations or other appropriate material.
- Review the effectiveness of implementation of District Coastal Management Programs.
- Consider new information acquired by the State and by Coastal Resource Districts.

(d) All reviews and revisions by the Council would have to be in accordance with the guidelines and standards adopted by the Council.

Sec. 46.35.020

Lists the eight objectives of the Alaska Coastal Management Program. They include

- The use, management, restoration and enhancement of the overall quality of the coastal environment.
- The development of industrial or commercial enterprises consistent with the social, cultural, historic, economic and environmental interests of the people.

- The orderly, balanced utilization and protection of the resources of the coastal areas consistent with sound conservation and sustained yield principles.
- The management of coastal land and water uses in such a manner that those uses which are dependent on a coastal location (economically and/or physically) are given a higher priority than those uses which do not require a coastal location.
- The protection and management of signficant historic, cultural, natural and aesthetic values, and natural systems or processes within the coastal area.
- The prevention of damage to or degradation of land and water (reserved for their natural values) as a result of inconsistent land or water usages (adjacent to that land).
- The recognition of the need for a continuing supply of energy to meet the requirements of the State and the nation, and
- The full and fair evaluation of all demands on the land and water in coastal areas.

Sec. 46.35.030

Provides for the creation of Coastal Resource Districts to develop District Coastal Management Programs. The District Coastal Management Program would be based on a comprehensive resource use plan, or a comprehensive statement of needs, policies, objectives and standards which would govern the use of the various resources in the Coastal Resource District. Each District Program would have to be consistent with the guidelines and standards of the Alaska Coastal Management Program, and would include

- The delineation of the boundaries of the Coastal Resource District.

  A listing or definition of land and water uses and activities which would be subject to a District Coastal Management Program.
- The policies and regulations which would be applied to the land and water uses and activities which would be subject to a District Coastal Management Program.
- A description of the uses and activities which would be proper and those which would be improper within the boundaries of a Coastal Resource District.
- The policy which would be applied, and the procedures which would be used to determine which proposals for land or water uses or activities would be allowed.
- The designation of areas in a Coastal Resource District which merit special attention, and the criteria which would be applied for their use.

Sec. 46.35.040

Specifies the duties of the Alaska Coastal Policy Council. Among these would be

- The development, identification and definition of guidelines and standards for use by Coastal Resource Districts and State agencies within six months of the effective date of this Act. (These guidelines and standards, developed by the Council, would essentially cover the same items listed in the previous section (46.35.030).)

  In addition, the guidelines and standards which would be developed by the Council would be used to measure the progress

Coastal Resources Districts are making in developing and implementing their own District Programs.

- The development of an ongoing program which would provide technical and financial assistance to the Coastal Resource Districts in the development and implementation of their District Programs.
- The review and approval of District Programs.
- The initiation of a process for identifying and managing, uses of State, regional and/or district concerns within specific coastal areas.
- The development of procedures and/or guidelines for coordination and cooperation with Federal agencies which manage and use Federal lands in coastal areas.

Sec. 46.35.050

Provides that Coastal Resource Districts would be required to complete and submit to the Council for approval a District Program within 30 months of the effective date of this Act, or within 30 months of certification of the results of a Coastal Resource District's organization, whichever would occur later.

Sec. 46.35.060

(a) Provides that if certain portions of a District Program submitted to the Council for approval were not in compliance with the provisions of the Act, the Council could still approve those portions which were consistent.

(b) Those portions of a District Coastal Management Plan which would or could not be approved by the Council because of deficiencies would be mediated. Such mediations would include public hearings in the affected Coastal Resource District, and meetings between the Council and Coastal Resource District officials to resolve the differences and correct the deficiencies.

(c) If differences could not be resolved by mediation the Council would then call for a public hearing, and the differences would be resolved in accordance with the Administrative Procedure Act (44.62). The Council would be required to enter its findings, and then could require that

- The affected District Program be amended to be consistent with the Act, or that
- The Program be revised to accommodate a use of State concern.

(d) Designates the Superior Court as the court which would have jurisdiction to enforce orders of the Council.

Sec. 46.35.070

(a) Provides for the standards the Council would have to follow in approving or disapproving a District Program. The Council must approve a District Program if it is consistent with the Act and the guidelines and standards adopted by the Council.

(b) Even if a District Program were not consistent, the Council would have to approve it if it were determined that strict adherence to the guidelines and standards

- would result in violation of another law, or

- would cause substantial harm to another value in the Coastal Resource District, or that
- the inconsistency is of a technical nature and would not result in substantial harm.

(c) This section also provides that the Council would have to approve a restriction or exclusion (of a District Program) of a use of State concern, if it found that
- The Coastal Resource District had consulted with the appropriate State agencies; that
- The restriction or exclusion was based on the fact that no suitable alternative site was available; and that
- The restriction or exclusion was based on an analysis which showed that the proposed use would have been incompatible with the proposed site.

(d) Under this section a decision by the Council would have to be made within 90 days.

Sec. 46.35.080

Provides that the Alaska Coastal Management Program would take effect upon adoption of a concurrent resolution by a majority of each house, or by a vote of the majority of each house at a time the houses are convened in joint session to confirm executive appointments.

Sec. 46.35.090

(a) Provides that District Programs (approved by the Council for a Coastal Resources District) which do not have planning and zoning authority would be implemented by the appropriate State agencies.

(b) Those Coastal Resource Districts who exercise planning and zoning authority would implement their own Programs (once they had been approved by the Council).

Sec. 46.35.100

(a) Deals with compliance and enforcement of District Programs. It provides that muncipalities and State agencies would administer land and water use regulations in conformity with approved Programs.

(b) The sections states that if it were found that a District Program was not being enforced, implemented or complied with, the Council would convene a public hearing to consider the matter. After the hearing the Council could order the affected Coastal Resource District and/or State agency to take the necessary actions to enforce, implement or comply with an approved District Program.

(c) In determining whether an approved District Program is being enforced, implemented or complied with by a Coastal Resource District which exercises planning and zoning authority, the Council would find in favor of the respective Coastal Resource District if

- Zoning or other regulations had been adopted or were being enforced;
- Variances had been granted which complied with the elements of the District Program, or which had been approved by the Council; and

- Procedures and standards of the Act had been followed and considered by the Coastal Resource District.

(d) In determining whether a State agency was enforcing, implementing, or complying with a District Program with respect to its exercise of regulations or control of the resources, the Council would find in favor of the State agency if the

- Use or activity for which the permit, license, or approval had been granted was consistent with the District Program, and if the
- Requirements imposed by State statute, regulation, or local ordinance applicable to the use or activity were consistent with the District Program.

((e) The Superior Court would have jurisdiction to enforce orders of the Council.)

Sec. 46.35.110

Would provide for the establishment of Coastal Resource Service Areas with powers granted to perform the duties required in this Act, in the unorganized borough.

Sec. 46.35.120

(a) Provides for the organization of Coastal Resource Service Areas in those Regional Education Attendance Areas which contain part of the coastline.

(b) The section further provides that the Commissioner of the Department of Community and Regional Affairs could, after public hearings, consolidate two or more REAAs into a single Coastal Resource Service Area if

- A substantial portion of the coastal area in question belonged to or was administered by the Federal Government; i.e., an area over which the State could not exercise control as to its use; or if
- There was the likelihood that an area in the unorganized borough which covered more than one REAA might be incorporated.

(c) The section also provides that a determination for a possible consolidation of two or more REAAs (for the above stated reasons) would have to be made prior to organizing a Service Area, but no later than six months after the effective date of the Act.

Sec. 46.35.130

(a) Provides for the three forms of organization of a Coastal Resource Service Area. It could be accomplished either by
- Submission of a petition to the Council by the number of voters equal to 15 percent of the number of votes cast in the last general election; or it could be accomplished by
- Submission of a resolution to the Council by a city council, or a traditional governing body of not less than 25 percent of the number of cities and villages located within the Service Area; or it could be done at the
- Direction of the Council whenever it appeared that a major economic development activity would occur in the Service Area. (Major economic activity is defined in Sec. 46.35.160(b)).

(b) The Lt. governor would conduct an election on the question of organization of a Service Area within 60 days (but no later than 90 days) after the receipt of a petition or resolution, or at the direction of the Council.

Sec. 46.35.140

(a) Provides that each Service Area would have an elected board which would have the same powers, duties and functions (to develop and implement a program) as those required of a Coastal Resource District.

(b) The Board would have seven members, which would be elected at large, except that

(c) The Commissioner of the Department of Community and Regional Affairs could (after consultation with residents of a Service Area) divide Service Areas into sections for the purpose of nominating and electing board members. (In accordance with AS 14.08.051(a)). Such division could also be requested in the petitions or resolutions submitted by Service Areas, or at the direction of the Council for organization of Service Areas as noted earlier. (Sec. 46.35.130(a))

Division into sections could also be proposed at any time by members of the respective Service Area boards. However, if such divisioning were to be proposed by a Service Area, it would have to be approved first by a majority of the qualified voters voting at the next regular election, or a special election called for that purpose.

If a division into sections for the purpose of nominating and electing board members were to be approved, it would take effect at the next regular election of Service Area board members.

(d) The term of office for Service Area board members would be three years. Board members could be reelected. Terms would be staggered.

(e) The Lt. governor would have to hold elections, with the first election to be held not less than 60 nor more than 90 days, after certification of the results of a Service Area organization election.

(f) Subsequent elections would be held annually on the same date as the election for board members of REAAs.

(g) Subsection (g) of this section provides for the appointment of a board member to fill a vacancy on a Service Area board. (According to AS 14.08.041(a))

(h) Recall of Service Area board members is subject to the same provisions as a recall for municipal officials. (Under AS 29.28.130 - 29.28.250).

(The Lt. governor would receive and review recall petitions, as well as conduct recall elections.)

Sec. 46.35.150

Provides that all elections in the Service Areas be administered by the Lt. governor as provided for in the Alaska Election Code. (In addition, it provides that the Lt. governor may adopt regulations as necessary, and that all election costs would be borne by the State.)

Sec. 46 35.160

(a) Provides for the organization of a Service Area at the direction of the Council whenever it appeared that a major economic development activity would occur in a Service Area, or in waters adjacent to a Service Area which had not been organized. The Council would have to hold at least one public hearing in the affected area before an election could be held by the Council.

((b) Defines "major economic development activity".)

Sec. 46.35.170

(a) Provides that if residents of a Service Area were to reject organization, and the Council found after public hearings that a major economic development activity was or would be occurring the Council could direct the Department of Community and Regional Affairs to prepare a District Program for submission to the Council and the Legislature.

(b) In addition, the Department of Community and Regional Affairs would complete a District Coastal Management Program for a Service Area which had been organized, but which had

- Failed to make substantial progress in preparing an approvable District Program within 18 months of organization, or which had
- Failed to submit for approval a District Program within 30 months of organization.

The preparation of a District Program by the Department of Community and Regional Affairs would be accomplished in consultation with the affected Service Area. The section further

provides that the District Program would reflect the expressed concerns of the residents of the Service Area to the maximum extent possible.

(c) However, subsection (c) provides that before the Department of Community and Regional Affairs could complete a District Program, the Council would be required to meet with members of the Service Area board to determine if they could complete a District Program on their own within the time frame established in subsection (b) of this section (i.e., 18 or 30 months).

Sec. 46.35.180

(a) Provides that a District Program would have to be submitted for review to each city or village within the Service Area before adoption by the board.

Within 60 days the council of a city, or the residents of a village could either approve, or enter their objections to the District Program.

(b) If a city or village failed to approve portions of the District Program, the governing body would have to advise the Service Area board (or the Department of C&RA) of its objections, as well as suggest alternatives.

The Service Area board would accept new material from a city or village (which would be consistent with the guidelines and standards adopted by the Council) and the District Program would be modified accordingly.

(c) Objections by a city council would be confined to elements of the District Program which would be within the corporate limits of the city. The objections of a village council would be confined to those elements of the District

Program which would be within the village and/or a two mile radius of the village.

((d) Defines "village".)

Sec. 46.35.190

(a) A city which is within the coastal area, but which is not part of a Service Area could include itself in that Service Area if its governing body consented to the inclusion.

(b) The initiation of mutual agreements and cooperative or joint administration of functions between a municipality and a Service Area is encouraged.

Sec. 46.35.200

Provides that upon adoption of the Alaska Coastal Management Program State departments, boards, and commissions would have to review their statutory authority, administrative regulations and applicable procedures to determine if any deficiences or inconsistencies existed which would prevent them from complying with the statewide Program. State agencies would be required to take whatever actions were necessary to insure that they would be in full compliance with the statewide Program. This would include the preparation and submission of recommendations to the Council for needed legislation within six months from the effective date of the Program.

Sec. 46.35.210

Contains the defintions' section (pp. 21, 22, 23, 24), which includes definitions of

(1) Area which merits special attention

(2) Coastal Resource District

(3) Use of direct and significant impact

(4) Uses of State concern

* Sec. 5

Adds a new section to Chapter 47 (Department of C&RA) of Title 44 (State Government).

The section provides for various kinds of assistance for the development, implementation and maintenance of District Coastal Management Programs by the Department of Community & Regional Affairs.

* Sec. 6

Provides that the Administrative Regulation Review Committee would have to review the administrative regulations adopted by the various executive departments dealing with the State's coastal areas. The Committee would have to make recommendations by January 20, 1979 for annulment of regulations which in the Committee's opinion would not meet the intent of the Alaska Coastal Management Program. These recommendations would have to be transmitted to the first session of the Eleventh Alaska Legislature.

* Sec. 7

Provides for an effective date clause.

TECHNICAL AMENDMENTS TO SB 220 and HB 342 --

Page 2, line 10: Between "coastal" and "of" insert "land and water"

RE: CZM

The following are the major changes made from the HCR 123 working draft FYI.

p.2 (6) new addition clarifies still further the policy of the state Coastal Zone Management program as the sole coordinating agency for coastal zone management in the state.

p.3 Membership includes specific appointments from local areas along the coast. This was one of the agreements as a result of HCR 123 and the efforts to get a blend of local and state-level control.

P.5 Line 23 (2) to include an interagency program of comprehensive coastal resource planning for each geographic region from which council appointments are selected.

p.6 Line 25 Reviews and revisions to the CZM program were previously to be done annually but [annually] was deleted in the new draft.

p.6 Line 26-28 (1) & (2) New language speaks to coordination with the district CZM programs.

p.10, Sec. 46.35.060.(b)
Gives greater powers to the Alaskan Coastal Policy Council to oversee and monitor district coastal management programs - once again an administration concern to maintain control at the state-level.

p.19, Sec.46.35.180. (a)
New language requiring greater local area input and approval by the area residents affected by a district coastal management program within 60 days after submission for review.

p.24, Sec. 44.47.095. Sec.5.
New section mandating review by the Administrative Regulation Review Committee of all state executive departments which affect the resources and use of the resources of the state's coastal area.

THE CITY AND BOROUGH OF JUNEAU
CAPITAL OF ALASKA
155 SOUTH SEWARD ST. JUNEAU, ALASKA 99801

DATE: March 30, 1977

FILE NO. SB 220/HB 342

SUBJECT: House Bill 342, Management of the Coastal Resources of the State

The Honorable Lisa Rudd, Chair
House Community and Regional
Affairs Committee
Pouch V
Juneau, Alaska 99811

Dear Representative Rudd:

The Legislative Committee of the City and Borough of Juneau has reviewed and considered HB 342 and supports the general approach taken in the bill to management of our coastal resources. The committee supports maximum local participation in the policy making and enforcement aspects of coastal resource management and to that end requests that minor changes be considered which would help maximize local government input, participation and response under the bill.

The membership of the Alaska Coastal Policy Council is made up of seven state department or division heads who have been appointed to their position by the governor or one of his appointees. In addition, the governor appoints eight persons of his choosing from various regions who are elected local government officials. Thus, the governor appoints all fifteen of the council members. The appointment of the eight elected local government officials is made without the advice and consent of either the legislature or the local municipalities. In order to insure that the viewpoint of local government is represented by local government members who reflect the policies of the local governments involved, the appointing power as to the public members should be shifted to the local governments involved. It could be completely shifted to the local governments if the language between lines 28 and 29 on page 2 and lines 1 and 2 on page 3 is deleted and replaced by the following language:

> (1) eight public members, who shall be the mayor or member of the assembly or council of a municipality shall be appointed. One public member shall be appointed from each of the following general regions:

Following line 24 on page 3, add the following language which would be a continuation of (1):

Initially, and upon a vacancy or upon or prior to the expiration of the term of an incumbent, public members shall be appointed for the term or unexpired term in the following manner:

(A) Upon notification to municipalities in a general region by the governor or the council of a vacancy or a prospective vacancy in the seat representing the general region, the assembly or council of each municipality therein may, by motion or resolution, nominate its mayor or a member of its assembly or council to fill the vacancy. Upon making such a nomination, the municipality shall notify the governor and each of the other municipalities within the region of its nomination. If, subsequent to the making of such nominations, a majority of the municipalities within the general region adopt resolutions selecting one of the nominees as the region representative, such person shall be deemed appointed to the council.

(B) The person appointed shall notify the governor, the council, and each municipality in the region of the appointment. The person selected shall include with such notice a copy of each of the resolutions selecting that person as the representative of the general region.

(C) If the governor has not received notification of an appointment under (A) and (B) within 90 days of the last date upon which notice to a municipality was sent by the council or the governor, the governor shall appoint a public member for that general region from among the nominations supplied him under (A).

The procedure suggested above could be altered, however, the two elements which are essential to this procedure are:

1. That the representative for the general region should be appointed by the municipalities which will be the front line for enforcement of the coastal resources management program, and

2. That in the event the municipalities are not able to agree, the governor be limited in his appointments to the public member seats to persons who have been nominated by municipalities.

Other references to the appointment of public members by the governor which appear in the bill should be deleted or changed to conform to the change proposed above. Lines 1 and 2 of page 5 should be changed to read as follows:

> (a)(1) of this section, the alternate designated under (d) shall serve until a replacement who shall serve for the unexpired portion of the term has been appointed in accordance with the procedures set forth in (a)(1) of this section.

Municipalities are the key to the implementation of the Alaska coastal management program. By providing municipalities with an opportunity to select their representatives for the council, the state will be taking a step in the direction of creating greater credibility of the state program, encouraging the fullest possible local input to and cooperation with the council and providing an environment in which local enforcement of the district coastal management program can be expected to be the most vigorous. In addition, allowing municipalities to select their representative in each general region will probably help insure a better balance on the council between those who represent state interests and those who most accurately reflect local needs and interest.

While the municipality has not taken a position relative to the following points I believe they are points which might be appropriate for committee discussion.

1. There appears to be a conscious effort not to specify which agency or body has the responsibility for developing the Alaska coastal management program. While it is the council which initially approves the program, it does not clearly appear that the council has any responsibility for developing or assembling the program. It develops guidelines for the preparation of the program; it reviews the program, and it approves the program in part or in whole. Section 46.35.010 on page 6 clearly gives the council the power to review the program but merely provides that the program be revised when appropriate without noting what body or agency has the revisory power. Subsection (c)(1) of subject section provides that the council add newly approved district management coastal programs to the Alaska coastal management program.

2. Proposed sections 60 and 70 set forth the procedure for council approval of district coastal management programs. Proposed section 80 provides that the Alaska coastal management program adopted by the council takes effect upon its approval by the state legislature. Thus, it would appear that district coastal management programs would, by their incorporation in the Alaska coastal management program, be subject to legislative approval Section 90, however, indicates that council approval is all that is needed for the district coastal management program of a district which exercises zoning or other resource control. Thus, while it is not really clear in the proposed legislation, it does appear that if the state is to be responsible for implementation of a district coastal management program, that program must be approved by both the council and the legislature while council approval is all that is necessary for a district which exercises zoning or other resource controls. If the foregoing reading is accurate as to legislative intent, then changes should be made to the language in section 10(c)(1) which appears to provide for the incorporation of approved district programs into the Alaska program which then receives legislative approval. In addition, the language at lines 12 and 13 on page 13 should be changed so that after the word "programs" in line 12 it would read "which have received final approval by the council or the legislature, as required, and are in effect." Language of this nature would help remove the ambiguity of whether or not both council and legislative approval are required for both state enforced and locally enforced programs. If, on the other hand, it is the intent of the legislature that district programs which are to be implemented through local zoning and other resource controls should be fixed in concrete through the mechanism of legislative approval, section 100 should be redrafted to remove the very strong implication that legislative approval is not needed except where state implementation is contemplated.

3. Returning to page 7, it does not appear in the list of objectives that the interests of the region or district are to be considered. If these are deemed appropriate for consideration, the addition of the phrase ", the region and the district" at the end of the sentance ending on line 18 on page 7 would incorporate such standards.

4. It would appear from reading section 30 starting on page 8, and in particular subsections (5) and (6), that implementation of the district coastal management program is contemplated through a mechanism which is

similar to conditional use procedures in conventional zoning programs. If it is contemplated that each use of land or water regulated under the district program is to be regulated as a conditional use, this aspect of the legislation could be subject to attack as many courts do not hesitate to overturn ordinances which purport to be zoning ordinances but under which all or almost all land uses are subject to the conditional use procedure. Such courts seem to balk at the idea that the legislative or regulatory body can decide on a case-by-case basis whether each or most uses under a general zoning will be allowed. Such an approach can be likened to spot zoning for each use. Of course, if there are sufficient standards that there is little discretion as to whether or not an application for a particular use is to be granted, such procedures are less vulnerable to attack.

5. At pages 10 and 11, the bill contemplates a mediation process which is to be utilized as to those district programs or parts thereof which are not approved by the council. The committee may want to consider whether it would be more appropriate to give the coastal resource district an opportunity to revise all or certain parts of its plan to bring it into compliance with council requirements before forcing the district into mediation. While the conventional concept of mediation involves a neutral third party who attempts to obtain agreement between the disputants, it appears that section 60(b) contemplates that the council itself acts as mediator. This appears to be something more akin to negotiation than mediation. However, it appears that in either event the coastal resource district is not in much of a position to resist changes requested by the council as the council has the ultimate authority to order the program amended. It must be admitted, however, that this is a commendable effort to provide a vehicle for the resolution of disputes between inferior and superior agencies prior to the superior agency invoking its power of a final and formal disapproval.

In closing, the municipality encourages the committee to increase or strengthen the authority and role of municipalities in the coastal resource management scheme.

Very truly yours,

Gerald L. Sharp
City/Borough Attorney

MEMORANDUM

TO: Senator Poland
Senator Orsini
Representative Rudd
Jack Chenoweth
Ron Lind
Fran Ulmer

DATE : March 25, 1977

SUBJECT: SB 220/HB 342: Fiscal Note

FROM: Murray Walsh
Alaska Coastal Management Program
Division of Policy Development and Planning
Office of the Governor

We have prepared a fiscal note for SB 220/HB 342. Since the bill will complement and augment an existing program, we have tried to present a basic understanding of the present and near future financial expectations of the Alaska Coastal Management Program, rather than just showing the expected increases that would result from passage and implementation of SB 220/HB 342.

We hope this information is useful and instructive to you, and please call on us for further explanation or clarification of the fiscal or any other aspects of the coastal program.

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

A. Assumptions.

1. Passage of the bill will make federal approval under section 306 of the Coastal Zone Management Act of 1972, and award of additional funding under that section, possible; and this should occur in June of 1978.
2. No increase in state cash appropriations will be needed to match the incoming federal grants. The larger federal grants can be matched with local participation and state agency in-kind services.
3. Only four new positions in state government (3 in CRA, 1 in DPDP) should be needed to implement the bill. Almost all of the bill's provisions can be met with the existing personnel now in place in various state agencies as a result of the existing Alaska Coastal Management Program (ACMP). The new positions will be needed because of the substantial new role of local governments and the needs of the new council.

III. Analysis, Continued

B. Program Summary.

The purpose of a fiscal note is usually to show what increases in state staff or expenditures can be expected as a result of legislation. In this case, SB 220/HB 342 would become the centerpiece of an existing program which began in the summer of 1974. The program, which is called the Alaska Coastal Management Program (ACMP) just as in the bill, has changed in many respects since it began, but the overall goal of wise use and protection of the coastal resources has never changed nor has the programmatic goal of federal approval under section 306 of the Coastal Zone Management Act of 1972 changed.

Analysis by the ACMP staff in the Office of the Governor, the Dept. of Law, and the federal Office of Coastal Zone Management shows that the proposed bill should make it possible for ACMP to be federally approved with little difficulty if the bill is enthusiastically administered. This approval would permit larger federal CZM grants to be made to the state. So, while the face sheet of this note is filled out according to the instructions for fiscal notes, we provide a more thorough look at the ACMP budget on the following charts. Grant application and BRU data, as well as ACMP staff experience and expectation have been melded to form general budget charts for fiscal years 1977, 78, and 79. The figures are reliable insofar as general allocations and magnitude; but they are not exact since there are many unknowns. The figures for FY 77 are also rough since they are drawn from two separate grant applications and a possible supplemental application.

The first chart might be thought of as the "pre-bill situation." Since FY 77 will end just after passage of the bill, there will be little of the bill reflected in the FY 77 chart. This is not awkward, since many of the bill's provisions were anticipated. The major difference from FY 77 to FY 78 and beyond will be the amount of local government involvement, which was only voluntary, and rather novel at the start of FY 77.

The second chart, for FY 78, is a projection of program development expenditures as the implementation of the bill begins. There is much to do: Local governments must be provided with enough funds to get their programs underway, and the Council will have quite a job in getting organized and establishing its guidelines and procedures. Additionally, the ACMP office will be pursuing approval of the program by the end of the fiscal year, and this will involve substantial time and money.

The third chart can be thought of as the first year of "regular" program administration. By this time the larger Sec. 306 grants will be available and local programs should be well underway. Also, some local governments may be done with developing their programs, and thus be eligible for administration grants with which to maintain their programs. This last topic

is not addressed in the proposed legislation, but making grants of CZM 306 funds for regular municipal and borough administration of local coastal programs is certainly permitted and encouraged in the national CZM program.

The first and second charts will be largely unchanged whether or not SB 220/HB 342 passes or not, except that the funds for local grants in the second (FY 78) chart might be less because the local demand would probably not be as high without the existence of a bill like SB 220/HB 342.

The third chart (FY 79) may not be valid at all if the bill does not pass because there is considerable uncertainty over whether ACMP could be federally approved without the help of SB 220/HB 342, or something similar.

Chart One-Fiscal Year 77.

Approximate ACMP Receipts:*

Federal:	$1,200,000
State Cash Appropriation:	250,000
TOTAL	$1,450,000

Approximate ACMP Expenditures:

ACMP Office Use...	
Public Participation	$ 200,000
Program Elements	100,000
Grant and Contract Adm.	50,000
Grants to Local Gov'ts	350,000
Assistance to Local Gov't	225,000
State Agency Projects	525,000
	$1,450,000

Chart Two-Fiscal Year 78

Approximate ACMP Receipts:*

Federal:	$1,200,000
State Appropriation:	250,000
TOTAL	$1,450,000

Approximate ACMP Expenditures:

ACMP Office Use...	
Public Participation	$ 225,000
Program Elements	75,000
Grant and Contract Adm.	50,000
Grants to Local Gov'ts	625,000
Assistance to Local Gov't	75,000
State Agency Projects	400,000
TOTAL	$1,450,000

Chart Three-Fiscal Year 79 (If approval under Sec. 306 of the Coastal Zone Management Act has been achieved, and the federal funding is thereby available.)

Approximate ACMP Receipts:*

Federal:	$2,000,000
State Appropriation:	250,000
TOTAL	$2,250,000

Approximate ACMP Expenditures:

ACMP Office Use:	
Public Participation:	$200,000
Program Elements:	75,000
Grant and Contract Adm:	75,000
Program Development Grants to local government:	700,000
Program Administration Grants to local gov't:	600,000
Assistance to Local gov't:	100,000
State Agency Projects:	500,000
TOTAL	$2,250,000

* The receipts shown here are those monies under ACMP Office control only The federal grants do require state matching shares, of which the annual ACMP appropriation is a part. The rest of the match is made up from local and state agency in-kind contributions to the program. Grants to local governments usually require that the local government contribute some value to its own program in cash or in kind, and this contribution is used as part of the overall match for the federal funds. The match ratio now is 4 federal dollars for every 1 state dollar. The state ususally has no trouble finding enough matching share, and this is why we do not expect to ask for any larger annual appropriation than $250,000 per year.

C. Personnel.

SB 220/HB 342 will cause a dramatic increase in local involvement in ACMP. Thus, we see the need of at least three mid-range planners in addition to the existing CRA staff to handle the increased demand for grants and services. All other aspects of SB 220/HB 342 have been forseen except the Alaska Coastal Policy Council, and the ACMP office will need a para-proffessional administrator to attend to the needs of the Council. All these people can easily be paid from the present program revenue.

THE FOLLOWING PAGES WERE TREATED AS
A UNIT IN THE ORIGINAL FILE.

THE ALASKA COASTAL MANAGEMENT PROGRAM

OVERVIEW

INTRODUCTION

The Alaska Coastal Management Program is a state-initiated effort, supported by federal funds, to coordinate programs affecting coastal resources at all levels of government. Its aim is to promote more effective and efficient use of governmental management responsibilities at state and local levels, strengthen citizen involvement, and develop stronger communications and coordination among local, state, and federal land managers.

INITIATION OF THE PROGRAM

In the summer of 1974, the State applied for federal funding under the terms of the national Coastal Zone Management Act of 1972. These funds were made available to Alaska and other coastal states to assist in the "development" of a program to achieve the ends listed above.

The first phase: The process of coastal program development began in the Department of Environmental Conservation with emphasis on uses of scientific information to promote wiser management decisions. This work was to (1) aid the formulation of resource plans within departments, (2) assist permit review processes, (3) provide a basis for making state decisions on resource allocation, and (4) serve as a foundation for resource management policy.

Current status: As the work proceeded, it became clear that many additional activities were needed for the program formulation process. Principle among these was the need to identify decision-makers at the local, state, and federal levels; determine how these individuals and agencies work together; and assess the effectiveness of authorities available to them in managing coastal resources. In addition, efforts were needed to increase the amount of technical and financial assistance provided to municipal governments for planning and management activities. With these and similar considerations in mind, the Governor designated his Division of Policy Development & Planning as lead agency in February 1975.

THE NATIONAL "COASTAL ZONE MANAGEMENT ACT"

Intent of the Act: The Coastal Zone Management Act of 1972 established broad national policies for the protection and wise use of coastal resources, and encourages states to further these policies by:

> " ... developing land and water use programs for the coastal zone, including unified policies, criteria, standards, methods, and processes for dealing with land and water use decisions of more than local significance." [Sec. 302(h), P.L. 92-583]

The coastal area was singled out due to its national importance, and in response to the disproportionate pressures of resource use and population being experienced there.

Implementation of the Act: While Congress recognized the need for all levels of government to seek wiser management of coastal resources, the state, as middleman between national and local interests, was designated to take the lead in promoting this effort.

Options in Authority: States are given considerable flexibility for achieving the intent of the federal Act. Where an overabundance of small local governments has spawned conflicting and piecemeal resource management, a state might choose to create regional decision-making bodies or increase the state's role in key decisions. In other areas, a state might best serve the intent of the Act by improving the efficiency and accountability of its existing state and local structures and regulatory processes. Other states might benefit from a streamlining effort, to create a single body or bodies responsible for managerial or regulatory functions which had become overly dispersed through years of single-purpose legislation.

Options in Timeframe: Additionally, states are given a broad time range within which to work. While a program must be "developed" within three years, each state can choose its own pace for making site-specific resource use decisions. Highly developed states might find it essential to formulate an actual "plan", in which permissible, restricted, and priority uses are mapped out along the entire coast. Others might wish to make these decisions for only the most critical areas by using new or existing laws to protect areas (such as state parks) and promote wise development (such as facility-siting). Still others might choose to institute only the process for making site-specific decisions as needed in the future. In these states, emphasis is placed on identifying the management decisions already in place, and ensuring that laws and policy development mechanisms are sufficient to handle future needs.

Options in Boundaries: The Act requires each state to identify its "coastal zone", so as to ensure effective management of activities affecting coastal waters and adjacent shorelands. Within this area, federal funds can be used to support state and local management authorities identified as part of the program. Some of these authorities may apply to only portions of the "coastal zone", such as the State tidelands permitting system, state game refuge designations, or borough zoning ordinances. While some authorities may apply inland as well, federal funds can only be used in the designated zone. Additionally, some states may choose to insititute a new regulatory tool or planning body with jurisdiction over this zone.

The "Carrot": Two elements of the federal Act encourage state participation. First, federal funds are available on a 2:1 matching basis for program design and implementation. These implementation funds follow the three years of program development. Second, states engaged in program implementation acquire a stronger role in federal decisions affecting activities in the coastal area. In addition, amendments to the Act now pending in Congress would provide millions of dollars of non-matching "OCS Impact Funds" to states and municipalities participating in coastal management and threatened by potential Outer Continental Shelf petroleum development. Such funds could be used to construct public facilities and provide services to meet the pressures caused by accompanying population increases. It should be noted that the Act only "encourages" state participation. No penalty or federally-conducted program occurs if a state chooses not to participate.

ALASKAN PROGRAM: ORGANIZATION, PURPOSE, CONTENT, BUDGET

ORGANIZATION

Coastal Management Policy Committee: Overall direction is provided by this committee, consisting of the Commissioners of Commerce & Economic Development, Community & Regional Affairs, Environmental Conservation, Fish & Game, Highways, Natural Resources, Public Works, and the Director of the Division of Policy Development & Planning.

Alaska Coastal Management Program Office (ACMP): This office, within the Division of Policy Development & Planning, responds to the guidance of the Policy Committee. It provides staff coordination among state agency efforts; and is responsible for ensuring that local governments, federal agencies, citizens, and other interests are involved in determining how Alaska will meet the intent of the federal Act. Five professional staff positions were established in July of 1975 to coordinate program development through 1977.

State Agencies: Most of the specific tasks and background work necessary in developing a coastal management program are carried out by state agencies and other organizations with expertise in various fields. These agencies include those represented on the Policy Committee.

Local Governments, Federal Agencies, Citizens, and Other Interests: While the state government is charged by the federal Act to take the lead in program development, it can only be successful by using the expertise and obtaining the advice of all those affected by coastal resource management.

PURPOSE

The State is addressing four major elements for improving the management of coastal resources in Alaska and meeting the intent of the federal Act. These are:

(1) Policy Review: to ensure that needed policies are in existance to assist local, state, and federal programs affecting coastal resources;

(2) Coordination of Management Activities: to coordinate existing management activities and recommend necessary administrative and legislative improvements at all levels of government;

(3) Public Participation in Decision-making: to strengthen the involvement of citizens in decisions affecting the use of coastal resources; and

(4) Support of Management with Information: to promote the development of a sound, interdisciplinary information base to support policy development, public participation, and management activities.

CONTENT

The State is addressing four main elements for improving the management of coastal resources in Alaska and meeting the intent of the federal Act. These elements coincide with the goals listed above, and are:

Policy Review
Coordination of Management Activities
Public Participation in Decision-making
Support of Management with Information

Policy Review: Existing policies must first be gathered and assessed before interested governmental agencies and citizens can suggest improvements to meet pressing issues. Policies will be extracted as expressed in the Alaskan Constitution, judicial decisions, state, federal, and local laws and regulations; functioning plans and programs, and other sources. Compilations of State laws and regulations, the Alaskan Constitution, and relevant judicial decisions were completed in December of 1975. The federal side will be completed in January 1976 and an overview of how local governments have exercized their authority will be completed in the spring. From this, policies will be extracted, comments solicited, and recommendations made. Additionally, the processes by which policies are formulated at all levels will be evaluated.

Coordination of Management Activities: The federal, state, and local legal summaries will provide the basis for work in this element. From this, existing management activities can be pin-pointed; the implementing bodies identified; and management practices and institutional relationships can be outlined. This provides the basis for identifying the key state and local authorities which constitute the legal framework of a "program" for managing coastal resources. In addition, a draft summary of these existing authorities and structures will be used in a preliminary review process beginning in July of 1976. Recommendations for intergovernmental coordination and administrative and legislative actions supplementing the legal framework can then emerge.

Public Participation in Decision-making: As public awareness must precede involvement, this has been the prime focus of activities to date. Two films were completed in January 1976 to stimulate interest in coastal area problems, and various information-distribution projects were initiated. Legislation was introduced by the Governor in January 1976 which, in addition to setting the tone for further program development, seeks to initiate assistance from local governments and citizens during Alaska's effort to meet the intent of the Congressional Act. Comment generated by the legislative hearings process of last Session and the interim has helped the Administration understand which approaches to coastal management Alaskans do not wish to follow, as well as pointing out the issues for which positive steps should be taken. Finally, while the range of interests must be involved in developing an Alaskan approach to coastal management, the program itself must ensure a strong public and intergovernmental role in resource management decisions. To accomplish this end, the legal summary previously mentioned points out the existing level of public involvement in numerous state and federal resource programs. An assessment and recommendations can then follow.

Support of Management with Information: During Alaska's three years of program development, emphasis is placed upon supplementing the existing information base to meet the most pressing management needs. This was the major focus of activity during the first year and a half of program development. Projects were completed and are continuing in state agencies to provide the primary management agencies with the information most needed in current management tasks. These projects include various resource and social inventories and impact studies, of a statewide or regional scale. Products of these efforts will be circulated in early 1976 to other government agencies and private groups with interest in their use.

BUDGET

From July 1974 through September 1975 Alaska received $600,000 from the U.S. Department of Commerce for program development. This was matched by $300,000 of donated services from state agencies. From October 1975 through September 1976 the State will receive $300,000 from the federal government, and will match this with $125,000 in cash and $325,000 in donated services. Alaska additionally will receive a special supplement to prepare for OCS impacts. This $300,000 grant will be matched by State cash and donated services, and local government services for passed-through funds.

FROM: JUDITH

RE: Update on Coastal Zone Management

For your information the following items are attached:

(a) Amendments adopted to date

(b) The most current fiscal note and the original

(c) Memorandum from Elke Kallab included in the members files regarding the proposed amendment to delete "regional and district". This was amended 4/13/77.

(d) Due to questions raised by some of the committee members regarding the composition of membership and selection process of the Council, a meeting was held to arrive at new language to meet those concerns.

Similar concerns were also raised in testimony by Roger Allington of Sealaska and Virginia del Piaz of the Alaska Conservation Society. Representative Miles had also prepared language to address these conerns. What is attached is Representative Miles' and Virginia del Piaz's proposed amendments which are in the members' files.

Jack Chenoweth and Elke Kallab prepared the next attachment and presented it at the meeting (4/14/77). Those in attendance were the following: Senator Poland, Senator Croft, Senator Tillion, Representative Anderson, Elke Kallab, Jack Chenoweth and myself. The proposal was not received too favorably as it changes the emphasis of selection of membership to the Council to be based on governmental unit and the majority preferred the geographical representation that is currently in the bill.

After much discussion the amendment adopted by Senate Resources was considered to be the best compromise. Rep. Anderson was not completely convinced but said that if he could not arrive at something better he would be willing to go with the language adopted by Senate Resources as he was hopeful that HB 342 would move out of House Community & Regional Affairs Committee on Monday. The adopted Senate amendment in question is attached.

The final attachments reflect your concerns with some portions of the bill which I discussed with Jack and Elke and prepared for your review.

AMENDMENTS TO HB 342 - ADOPTED 4/6/77

Page 2, line 10: Between "coastal" and "of" insert "land and water"

Page 4, line 8: Substitute "Transportation and Public Facilities" for "Public Works"

Page 5, line 14: After "coastal" delete "area"

Page 6, line 13: Amend to read: "The Alaska Coastal Management Program"

Page 7, line 17: Delete "historical", insert "historic"

Page 8, line 6: Delete "in meeting", insert "to meet"

Page 8, line 13: Amend to read:

...based upon a municipality's existing comprehensive plan or a new comprehensive resource use plan or comprehensive statement of needs...

Page 9, line 9: Amend to read:

(1) by regulation, adopt under the provisions of the Administrative Procedure Act (AS 44.62), within six months of the effective date of this Act, for the use of and application by coastal resource districts and state agencies for carrying out their responsibilities under this chapter, guidelines and standards for...

AMENDMENTS TO HB 342 - ADOPTED 4/13/77

Page 10, line 7: Delete ", regional and district"

STATE
of ALASKA

MEMORANDUM

TO: Recipients of Fiscal Note for
SB 220/HB 342

DATE : April 11, 1977

FROM: Murray R. Walsh
Deputy Coordinator
Alaska Coastal Management Program
Office of the Governor

SUBJECT: Additions to Fiscal Note

We were asked to define some of the budgetary terms used in the Fiscal Note for SB 220/HB 342, and I have added pages 5 and 6 to do that. Attached is a complete copy of the expanded note.

There may yet be other questions or uncertainties about this note and we will be happy to answer any inquiries or supplement the note even further.

Murray

THE LEGISLATURE OF THE STATE OF ALASKA

III. Analysis, Continued

B. Program Summary.

The purpose of a fiscal note is usually to show what increases in state staff or expenditures can be expected as a result of legislation. In this case, SB 220/HB 342 would become the centerpiece of an existing program which began in the summer of 1974. The program, which is called the Alaska Coastal Management Program (ACMP) just as in the bill, has changed in many respects since it began, but the overall goal of wise use and protection of the coastal resources has never changed nor has the programmatic goal of federal approval under section 306 of the Coastal Zone Management Act of 1972 changed.

Analysis by the ACMP staff in the Office of the Governor, the Dept. of Law, and the federal Office of Coastal Zone Management shows that the proposed bill should make it possible for ACMP to be federally approved with little difficulty if the bill is enthusiastically administered. This approval would permit larger federal CZM grants to be made to the state. So, while the face sheet of this note is filled out according to the instructions for fiscal notes, we provide a more thorough look at the ACMP budget on the following charts. Grant application and BRU data, as well as ACMP staff experience and expectation have been melded to form general budget charts for fiscal years 1977, 78, and 79. The figures are reliable insofar as general allocations and magnitude; but they are not exact since there are many unknowns. The figures for FY 77 are also rough since they are drawn from two separate grant applications and a possible supplemental application.

The first chart might be thought of as the "pre-bill situation." Since FY 77 will end just after passage of the bill, there will be little of the bill reflected in the FY 77 chart. This is not awkward, since many of the bill's provisions were anticipated. The major difference from FY 77 to FY 78 and beyond will be the amount of local government involvement, which was only voluntary, and rather novel at the start of FY 77.

The second chart, for FY 78, is a projection of program development expenditures as the implementation of the bill begins. There is much to do: Local governments must be provided with enough funds to get their programs underway, and the Council will have quite a job in getting organized and establishing its guidelines and procedures. Additionally, the ACMP office will be pursuing approval of the program by the end of the fiscal year, and this will involve substantial time and money.

The third chart can be thought of as the first year of "regular" program administration. By this time the larger Sec. 306 grants will be available and local programs should be well underway. Also, some local governments may be done with developing their programs, and thus be eligble for administration grants with which to maintain their programs. This last topic

is not addressed in the proposed legislation, but making grants of CZM 306 funds for regular municipal and borough administration of local coastal programs is certainly permitted and encouraged in the national CZM program.

The first and second charts will be largely unchanged whether or not SB 220/HB 342 passes or not, except that the funds for local grants in the second (FY 78) chart might be less because the local demand would probably not be as high without the existence of a bill like SB 220/HB 342.

The third chart (FY 79) may not be valid at all if the bill does not pass because there is considerable uncertainty over whether ACMP could be federally approved without the help of SB 220/HB 342, or something similar.

State Appropriation:	250,000
TOTAL	$2,250,000

Approximate ACMP Expenditures:

ACMP Office Use:	
Public Participation:	$200,000
Program Elements:	75,000
Grant and Contract Adm:	75,000
Program Development Grants to local government:	700,000
Program Administration Grants to local gov't:	600,000
Assistance to Local gov't:	100,000
State Agency Projects:	500,000
TOTAL	$2,250,000

* The receipts shown here are those monies under ACMP Office control only. The federal grants do require state matching shares, of which the annual ACMP appropriation is a part. The rest of the match is made up from local and state agency in-kind contributions to the program. Grants to local governments usually require that the local government contribute some value to its own program in cash or in kind, and this contribution is used as part of the overall match for the federal funds. The match ratio now is 4 federal dollars for every 1 state dollar. The state ususally has no trouble finding enough matching share, and this is why we do not expect to ask for any larger annual appropriation than $250,000 per year.

C. Personnel.

SB 220/HB 342 will cause a dramatic increase in local involvement in ACMP. Thus, we see the need of at least three mid-range planners in addition to the existing CRA staff to handle the increased demand for grants and services. All other aspects of SB 220/HB 342 have been forseen except the Alaska Coastal Policy Council, and the ACMP office will need a para-proffessional administrator to attend to the needs of the Council. All these people can easily be paid from the present program revenue.

D. Budgetary Terms Defined

The terms used in the three budget charts for the Program Summary in (B) above may not be familiar to everyone, so descriptions are provided below for better understanding of the Alaska Coastal Management Program activities and expenditures.

"ACMP Office Use" means the funds expended directly from the Alaska Coastal Management Program Office within the Division of Policy Development and Planning in the Office of the Governor. The other funds are spent by other state agencies or passed through to local governments. The ACMP Office applies for the entire amount and arranges contracts with the other state agencies. The next three terms are more specific activities undertaken by the ACMP staff.

"Public Paticipation" There are basically two objectives of public participation: The first and current effort is to learn as much as possible from the public about Alaskan coastal affairs, and in return to acquaint the public as much as possible with the nature of ACMP. The second objective, which will begin soon, is to enable thorough public review, understanding, and comment on the policies and other more specific details about the program, which have only now begun to solidify. Both objectives are pursued with a community workshop series, a monthly newsletter, a group of special interest representatives, an array of slide programs, brochures, films, etc, and by staff visits to communities and group meetings. There are presently two staff people working on public participation, with help from others. Much of the work is done by contractors. People from other state agencies assist as well.

"Program Elements" This refers to a series of tasks whose purpose is to lead to approval of ACMP under Section 306 of the federal Coastal Zone Management Act. Many of the duties that the Council would perform with passage of SB 220/HB 342 are complemented by ongoing program elements, which include assembling a unified policy base, defining land and water uses of state concern, listing and defining special areas in the coast which need extra attention in management, coordinating the array of state authorities, organizing the array of state procedures for better management, coordinating and consulting with federal agencies, and eventually producing a program document which unifies and describes all these elements. This work is done by two and a half staff people with some contracted assistance.

"Grant and Contract Administration" This is the task of applying for and managing the large sums of money that flow into the program. Grant applications require forcasting the often uncertain program needs over a year or more in the future, and balancing the many demands for the use of the funds. Then, a number of contracts with agencies and consultants must be consummated, coordinated, kept track of, reported on, and eventually audited. One and one-half staff people do this work. The grants are audited every year.

"Grants to Local Governments" The ACMP Office contracts with the Dept. of Community and Regional Affairs to provide funds for local planning efforts. Some of this activity is specifically related to planning for OCS development impacts on the communities, and the rest is for general coastal management planning. If the bill passes, this same mechanism would be used to support the local planning effort called for in the bill. A matching share is usually required of the local governments in return for grants, but this is only 20% of the value of the project and can be in-kind services as well as cash. When the ACMP is approved under section 306, we will be able to provide funds for administration of local programs as well as for the planning.

"Assistance to Local Governments" In addition to the direct grants, CRA assists local governments by providing individual and general staff and consultant assistance. Often, a local government will need help for a project, but the size of the project does not warrant hiring a local planner. The job may only take three months. In cases like this, CRA will provide professional staff assistance to the local government. In other cases, several local governments may be faced with the same kind of problem, and help can be provided to all with a CRA staff project or a consultant project. The product or report is then given to the local governments which need it. Whatever the situation, this form of assistance is basically just support to local planning by means other than direct grants. A final example is a project by two or local governments want to work together on a project, and CRA can relieve both of paperwork difficulties if a contractor is to be used.

"State Agency Projects" These are tasks undertaken by state agencies at the request of ACMP or at the agency's own initiative. In the former case, ACMP needed information on the biophysical relationship of the marine waters to the specifica uplands of Alaska. The Dept. of Fish and Game was contracted for this work. The result will assure adequate program coverage of the important processes of nature. In other cases, an agency may look ahead to its duties related to ACMP and ask for funds to conduct a study or inventory. In all cases, the ACMP Office assures that the project will be of value to ACMP and in most cases, also of value to local governments.

"Program Development Grants to Local Government" and " Program Administration Grants to local government" are both terms that are subsumed under "Grants to Local Government."

Coastal Management in Alaska: Reality or Rhetoric

Glenn Akins

There is a line from an old country song that goes, "If you can't hunt, don't howl; if you can't bite, don't growl." The same thought is expressed, perhaps better, on a hand-lettered sign in a Western Montana saloon. It reads, "Talk's cheap, but it takes a dollar to buy whiskey."

In the past two years, there has been a great deal of talk about coastal management here in Alaska. In some other states the discussions have extended over several years. The question before us all now is, "What has happened as a result of all the hearings, planning, and legislative battles?" In Alaska, or elsewhere, is coastal management for real, does it mean something? Is it all talk, or does it have "bite"?

This question was uppermost in the minds of representatives of the western states' coastal management programs who met in Juneau in August to ask each other, nervously, "Is coastal management taken seriously in your state?"

The consensus was that coastal management is working. Basically the intent of the original legislation is to reduce overlaps and conflict between the numerous state, local, and federal agencies responsible for coastal resources. The Coastal Zone Management Act assigned the role of developing an overall plan to the states, but provided for delegation of planning and enforcement to local governments, if the state so wished. Although the Act emphasizes striking a balance between conservation and development, its real purpose is to recognize that the coast is a "special place." Where land and water meet, there are special opportunities for economic development and special needs for environmental protection.

Using the federal program as a tool, some states have made remarkable progress in preserving and developing, in a more orderly fashion, their coastal areas. In Washington State the coastal program is being applied to tanker movement in Puget Sound, control of the entry of ocean vessels into residential Lake Washington, and consolidation of refinery development on the Olympic Peninsula. The Washington program resulted from state legislation. It has been actively supported by Governor Evans, and in June, 1976, became the first program to be approved by the U.S. Secretary of Commerce.

In Oregon, the state's plan is complete and is being reviewed by coastal citizens. Federal approval is expected soon. The program includes a detailed system for developing and preserving the state's 16 coastal estuaries. The South Slough of Coos Bay has been designated an Estuarine Sanctuary at the urging of many who live in the vicinity. State and federal funds have been used to buy the area's watershed.

In California over a million people voted to establish the state's coastal program in 1972. In August of 1976, the Legislature (with Governor Brown's support) voted to retain and implement the program. The California Coastal Plan will be carried out primarily by local governments.

California, Washington and Oregon have demonstrated "bite" in their coastal programs. And that has resulted most directly from cooperation between state and local governments. Hawaii and Alaska are still attempting to come up with a process acceptable to the wide variety of economic, cultural, and political groups which dominate the states' political lives. One thing is certain. The programs developed in Alaska and Hawaii will have to be broad in the issues addressed, and specific regarding the controls to be applied. Only then can the threat be removed from the promise.

The Alaskan Proposal

Alaskans are debating issues of major national and international significance. Offshore oil development, the national interest (d) (2) lands, surface mining, extended fisheries jurisdiction, Native land selections, coastal easements, and tanker traffic are just a few of the concerns before Alaska's citizens, the Governor, the Legislature, and Congress.

Is there an approach, a method, by which we could use the tool of coastal management to help resolve these issues without creating a host of new problems?

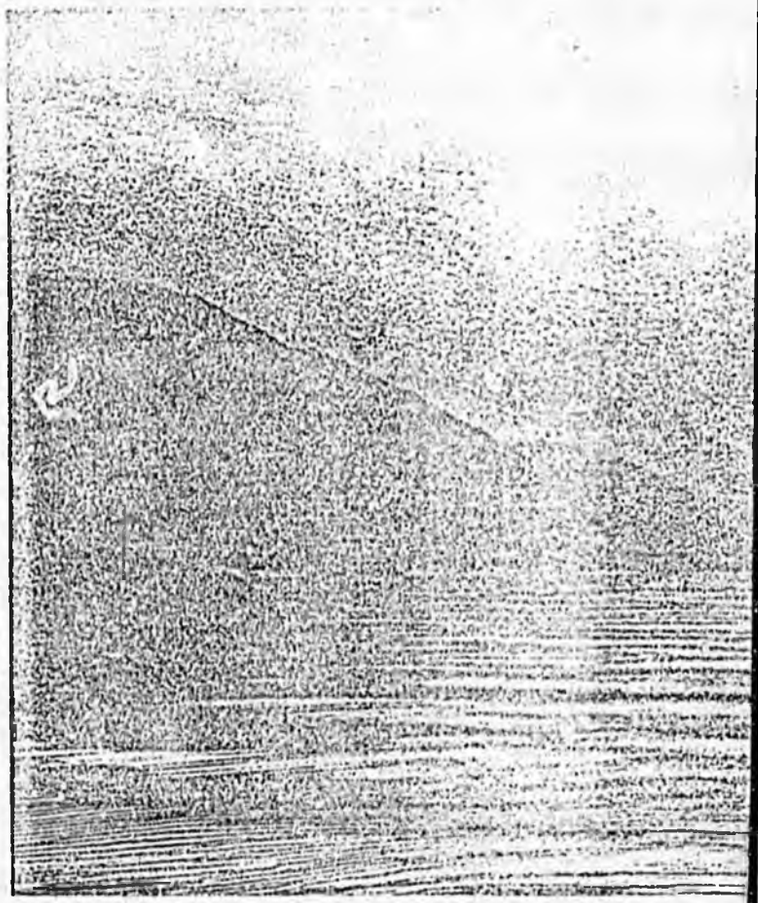
The answer is, clearly, yes. The period of preparation has been difficult. Misunderstandings have been created and not yet resolved. But those potentially affected by the federal offshore lease schedule, those requiring some predictability for making investments in coastal resource development are demanding action.

Action has not been forthcoming over the past two years. Three major coastal management bills have died in Committee. However, last session some progress was made. House Concurrent Resolution 123 passed, establishing a committee of four legislators and four representatives of the Administration. The Resolution came from the House Resources Committee and staff, and recommendations from ACS lobbyist Sharron Lobaugh. Final language was set in the Senate Resources Committee by Senator Katherine Poland and Commissioner Guy Martin.

The Administration looks to this joint committee to help frame new coastal legislation. Under the approach formulated by the cabinet-level Coastal Management Policy Committee the State hopes for a legislative proposal which would explain the following:

1) The Role of the State

The proposal would define those instances (such as the siting of a port or LNG plant) which would require some



direct action by the State, or response by a State agency. Attached would be a list of existing state laws and regulations which make up "coastal management". It would be possible to determine then that the siting of energy facilities was "in" the coastal program, and that limited entry, for example, was "out".

2) The Role of Local Governments

The shoreline is a "special place" in a political sense as well as an environmental one. While coastal and offshore waters fall under state and federal jurisdiction, the shoreline and uplands are primarily the concern of local governments and private landowners.

In recent years much has been made of the growing role of the State in land and water use management. But is is clear that most impacts of OCS development, forest practices, or similar decisions affect people in their immediate environment, their villages, cities, and boroughs. It is these localities which must be the focal point of management.

If a decision is truly "statewide" such as seeking alteration of the federal OCS lease schedule, then it is properly a State matter. If a decision affects several communities, it is "regional" and therefore a State, or perhaps better, a borough matter. If it affects only a village, then it is a concern only of that village, unless outside help is requested.

3) The Role of the Public

A legislative proposal should make clear that public participation is a requirement, not an option, for all decisions which involve impacts on local communities and use of public resources. Local governments conducting planning or coastal management efforts should be required to provide opportunities for public recommendations early in the program, not just in hearings at its end.

Environmental organizations and interest groups concerned with jobs and economic development have a special role. These groups should demand an accounting or estimate of environmental and economic consequences of policies, decisions, and proposals being set out at the State or local level. These groups should take the lead in examining how State programs are allocating funding and demand that a certain amount be provided for public review and input.

4) Procedures

At present, there is no complete or approved coastal plan, or program in Alaska. The State is currently attempting to develop one. Most of the detailed coastal planning is being prepared by state agencies such as the Department of Community and Regional Affairs and the Department of Fish and Game. Coordination of these efforts is the responsibility of the Coastal Management Policy Committee, chaired by Dr. Robert LeResche, Director of the Governor's Division of Policy Development and Planning (DPDP) and served by a small staff in DPDP.

Any legislative proposal for Alaska should provide for designation of a permanent lead agency and spell out how that agency will deal with local governments, federal agencies, and the resolution of disputes and appeals.

Alaska will submit a coastal management program for federal approval sometime in late 1977 or early 1978. The option for introducing legislation this upcoming legislative session or the next still remains open.

Where Do We Go From Here?

In the other Pacific Coast States, coastal management programs owe their existence to public support. In the end the programs serve those who captured them and made sure their interests were provided for. It surely will be no different in Alaska. A management program can serve equally well the public, the bureaucracy, special interests, or no one. Demanding a role, formal or otherwise, is the right, even the responsibility of any public or private group interested in coastal management.

The environmental impetus behind coastal management is not quite what it once was. The original federal legislation was triggered by the deterioration of the nation's estuarine waters. But the bill was modified before passage to a broader application, anticipating federal land use legislation. The 1976 Amendments further broaden the Act and introduce the administration of the $1.2 billion Coastal Energy Impact Fund. The old image of a state zoning plan of the coast, with precise and definite restrictions on wetlands and estuarine waters, with new controls for shorelines, has grown somewhat obsolete.

At the state level, the environmentalist perspective will be necessary to assure that management policies are developed which provide full consideration of public costs and benefits in major siting and development decisions.

But it is at the community and borough levels that major coastwide contributions can be made. Alaska is at a critical point in the formation of local management programs. An open-minded understanding and purposeful involvement of the environmental community in establishing local plans and ordinances is perhaps one of the most encouraging possibilities for sound management of Alaska's coastal resources in the future.

Providing accountability for management decisions is surely the principal benefit of a State coastal management program. In the coming months all Alaskans concerned about coastal resources should take a moment to assess the costs and benefits of supporting the State's coastal management effort. Much is available from the program, but the benefits will not be realized unless citizens and influential interest groups demand an accounting of those opportunities that are being seized and those that are being lost.

RECENT PROGRESS IN THE COASTAL PROGRAM

Since the last issue of the Alaska Currently, the Alaska Coastal Management Program has secured a third program development grant, and is now well underway with the tasks set out in the third year grant application. Some of these are:

1) Policy Development. This task is an effort to unite and aggregate the existing State policies on a variety of coastal issues, and, if necessary, to come up with new policy on issues where it is needed. The first step of aggregating State policy has been taken by Alaska Coastal Management Program staff and the result of the effort is now being examined and expanded by several State agencies. A draft set of policies will be available for public inspection at the end of April. After April, the results of public review and the public participation project will be added to the draft policies and a new draft will be circulated.

2) Public Participation. Aside from starting up publication of this newsletter, the public participation effort is undertaking two other projects. These are reviewed in the article in this issue entitled "Public Participation in Coastal Management."

3) Other Program Projects. Other program projects such as coastal zone boundary determination, wildlife inventory, land management system development, and identification of authorities are all proceeding on schedule. By the end of April, we expect to have a rough draft document that summarizes all of the current and past work projects and which unites them into a program framework.

4) Local Government. On the local government side, about a dozen local governments are close to completing grant arrangements and will be starting various coastal projects of their own in the near future. For fiscal 1977, grants will be awarded to the Municipality of Anchorage, City and Borough of Juneau, Kenai Peninsula Borough, Ketchikan Gateway Borough, North Slope Borough and the City of Unalaska. These grants will probably be extended into fiscal 1978. Others that have expressed interest in possibly undertaking a program are the City and Borough of Sitka, and the Cities of Dillingham. Kotzebue, Nome, Skagway and Wrangell. For more information on this, contact Mark Stephens or Paul Carr, Department of Community and Regional Affairs, Juneau.

Please contact Glenn Akins or Murray Walsh of the Alaska Coastal Management Program if you are curious about the details of any of these projects.

* * *

COASTAL MANAGEMENT LEGISLATION

It seems likely at publication time that a coastal management bill will be introduced in the legislature this year. The bill is the result of the work of a committee established by House Concurrent Resolution 123 during the last session.

The "123" Committee was chaired by Senator Kay Poland and DNR Commissioner Guy Martin. Other committee members included Senator Clem Tillion, and Representatives Sam Cotten and Nels Andersen, Commissioners Don Harris and Lee McAnerney, and Dr. Robert LeResche of the Governor's Office.

The Committee met during the fall and developed a draft coastal zone management (CZM) bill which was mailed to coastal communities and Native groups in late November, 1976. After review by state agencies, coastal communities, federal agencies and the Legislative Council, the Committee discussed final revisions to the bill before a possible introduction by the Senate Resources Committee.

The bill has three main parts. First, boroughs and organized communities (and service areas in the unorganized borough) are required to develop local coastal management plans for review and approval by the Alaska Coastal Management Council. The Council is composed of local and state government officials appointed by the Governor. Second, state agencies must issue permits and conduct regulatory activities consistent with approved local programs. Finally, the State will use coastal management guidelines and approved local plans to assure that federal agencies respect state and local views regarding protection and development of coastal resources.

At stake is the receipt of millions of dollars in federal funds for coastal planning and management for local governments and state agencies, and eligibility for local communities to receive grants and loans to offset impacts from offshore oil development. More importantly, the coastal management bill will establish a better means for coordinating the actions of the state and federal agencies and local governments in dealing with offshore and coastal resource development.

For further information, contact Glenn Akins, ACMP, 465-3574.

* * *

PUBLIC PARTICIPATION IN COASTAL MANAGEMENT

In order for coastal management to be effective, the public must be informed about resource decison-making to the maximum possible extent. As well, the public must be given every opportunity to comment on, criticize and be vocal in the decision-making process as it relates to uses of coastal resources. The rules and regulations published by the Department of Commerce pursuant to Section 305 of the Coastal Zone Management Act state that

> public participation is an essential element of development and administration of a coastal zone management program. Through citizen involvement in the development program, public needs and aspirations can be reflected in use decisions for the coastal zone, and public support for the management program can be generated.

-more-

How does this involve you? Currently, the Alaska Coastal Management Program staff is working on methods to solicit public input and encourage public participation in the development of a coastal management program for the State. We have settled for the time being on three ways to interact with the public.

First of all, workshops will be held around the State between now and the early part of summer. One is scheduled for Sitka on Saturday, March 12. We would like to hold as many as five or six other regional workshops, plus other evening sessions for persons that cannot attend the regional sessions.

The workshops will allow local citizen participation, giving them an opportunity to voice concerns about local issues that state and federal agencies are involved in. Letters have been sent to 35 coastal communities, asking if they would be interested in having a workshop in their area. Representatives of the Coastal Management Program and other state agencies would be present at these meetings.

As another means of informing the public, a "contact committee" is being organized. Members of this committee will be representatives of various major Alaskan interest groups. Letters of invitation to be a part of the contact committee have been sent to the Alaska Chamber of Commerce, the Alaska Municipal League, the Alaska Federation of Natives, the Alaska Center for the Environment, the Alaska Visitor's Association, the United Fishermen of Alaska, the Alaska Oil and Gas Association, the Alaska Miner's Association, the Alaska Logger's Association and the Alaska Rural Development Council. The contact committee won't function as a formal advisory body, but will be kept informed by mailings and personal contact with ACMP staff members as to state coastal management developments, so that committee members can keep their groups informed. We are open to suggestions for additional representation on the committee.

Our third public participation method will be the revamping of the Alaska Currently, a monthly newsletter that has been put out by ACMP staff in the past. It will serve as a medium not only for us to get information on current events to you, but for getting articles, editorials, information and viewpoints to as many other persons, groups, legislators and government agencies as possible. We invite interested persons to write to

Alaska Currently
Alaska Coastal Management Program
Pouch AD
Juneau, AK 99801

with comments about coastal management, so that others may share your concerns.

We here at ACMP are taking our responsibility for public participation very seriously. We hope you will help insure that our efforts are successful by attending workshops and by voicing your concerns to us, so that coastal management in Alaska will reflect your way of life.

* * *

ALASKA COASTAL INFORMATION CENTER

The Alaska Coastal Management Program is trying to establish an office that would provide information on request concerning management of coastal resources.

Only a well-informed public can cope adequately with the high-pressure tactics of large oil companies, rapid community growth, and other problems brought by coastal resource developments. The ACMP has recognized the need and demand for an information services center to facilitate decision-making on coastal zone issues and conflicts. Because of its recent commitment to active public participation, th ACMP staff also wants feedback from the public in coastal communities - an educated commentary usually has more impact than uneducated rhetoric or even impassioned pleas. Presently, the Alaska Environmental Information and Data Center (AEIDC) handles public and agency inquiries for information about the State of Alaska. But AEIDC is not funded to seek out public information requests.

The Office of Coastal Zone Management (OCZM) in Washington, D.C is currently funding the development of eight Regional Coastal Information Centers (RCIC's) for use by coastal states down south. However, no RCIC is planned for Alaska despite the fact that Alaska has over one-third of the total U.S. tidal shoreline.

Recently, however, the AEIDC has submitted a proposal for the development of an Alaska Coastal Information Center (ACIC). The ACIC would be part of the AEIDC in Anchorage, but would be primarily responsible to the Alaska Coastal Management Program staff in Juneau.

The ACMP staff feel this would be the most ideal situation possible. The ACIC would utilize the information retrieval equipment and expertise of the AEIDC, including their interdisciplinary scientific staff. Funds spent in setting up the ACIC would not be wasted, but rather would be used to supplement the job initiated by the AEIDC.

The ACIC would follow the lead of the AEIDC in publishing a comprehensive bibliography, but would concentrate on Alaska coastal zone information. It would also use the AEIDC referral file to redirect questions to experts (including "old-timers") who carry a wealth of current and historic knowledge about Alaska's coast in their heads. Bibliographies would be sent to communities for public distribution, and a monthly article in the Alaska Currently would keep users informed on new contacts, publications and other information sources available.

LEGISLATIVE AFFAIRS AGENCY

POUCH Y - STATE CAPITOL
JUNEAU, ALASKA 99811
907-465-3800

MEMORANDUM April 11, 1977

SUBJECT: Coastal Management Bill - HB 342

TO : The Honorable Lisa Rudd
Alaska State Representative

FROM : Elke Kallab
Research Analyst

You will recall that you and your Committee withheld approval last Thursday of one of the technical changes suggested by the staff (both Administrative and legislative) which occurs on page 10, line 7 of HB 342.

I am enclosing a memorandum by Jack Chenoweth to the HCR 123 Committee with attachments, dated October 6, 1976, which addresses itself to the very question of what should be the State's responsibilities in managing coastal areas and what should be left to local and/or regional governmental entities. I have marked the relevant section with red ink. I hope this material will be helpful to you in your upcoming deliberations regarding this particular change.

I would also like to mention that the earlier drafts of HB 342 did not include any reference to "regional and district" concerns. A copy of the work draft is enclosed for your information. The words were added at some later point without anyone knowing the reason for the addition.

POUCH Y - STATE CAPITOL
JUNEAU, ALASKA 99811
907-465-3800

MEMORANDUM

October 6, 1976

SUBJECT: Consideration of the Circumstances Under Which the State, Rather than a Community or Regional Government, Should Make Decisions Affecting Coastal Resources.

TO: Members of the Committee Established Under HCR 123 to Consider Coastal Zone Legislation

FROM: Jack Chenoweth, Legislative Counsel

At our September meeting, you asked that an effort be made to identify and discuss those elements of a coastal zone program which could be most beneficially handled at one or another of several levels of government. The attached is a first effort to respond to that request.

We would propose, at the outset, to differentiate between those matters wherein the state would have authority to "override" decisions taken by local government as to commitment of coastal zone resources and those which would be left in the first, if not exclusive, instance to a sub-state government unit (city, borough, or regional service area of the unorganized borough). Areas of state concern would be specifically identified in the statute; all other concerns and uses (i.e., those not identified) would be presumed to be left to the local entity.

A second enclosure examines one alternative structure for regional participation in the unorganized borough where no such structure now exists. We would not presume to determine that a particular concern would be better handled, say, at the level of a city government versus the regional (borough or regional service area) level, but suggest that these determinations could be taken care of in context between the city council or traditional council, on the one hand, and the regional entity on the other. The Kenai Peninsula Borough might defer a decision as to construction of a dock to the city or village affected; in another area, perhaps, the community might encourage recommendations or decisions concerning that same kind of facility from the regional service area board or borough planning commission.

Speediset © Moore Business Forms, Inc.

The intent of this first working paper is to give recognition to, and describe generally, the responsibilities and roles of each level of government. One caveat should be offered: this first draft does not contemplate any dilution or diminution of the authority of the several state agencies having responsibility for the issuance of permits in favor of decisions or recommendations which may be forthcoming from any local governments concerned. In some instances, the commitment of resources by local government at the present time might warrant such substitution. But, for most of the state, local and regional governments cannot now find the resources to initiate and sustain over time substitution and enforcement of local authority over those uses, authority which is left to the several agencies. Examination and possible redirection of authority to identify and adopt standards and enforce them should be a consideration as you review this discussion.

DIVISION OF DUTIES AND FUNCTIONS:

Boroughs, first class cities of the unorganized borough, and [new] regional service areas having a land use planning and land use control function would be recognized as having principal responsibility for the initiation and administration of the elements of a planning and management program. As to the greater number of functional concerns, a municipal or regional primary interest would be recognized, with state involvement generally limited to the review of locally-adopted management plans, issuance of permits consistent with plans adopted, and the definition of guidelines or, perhaps, standards of performance. The definition of what would constitute permissible land and water uses within the coastal waters, the determination of priority of uses in particular areas, and the development and enforcement of controls on use would be, first, placed at a substate level.

The state, in recognition of certain requirements, would retain authority to override or supersede as to approval for particular use, generally identified by category in state statute. The specific delineation would preclude state override as to all other uses or functions not listed. Those functions or concerns, and the rationale for their inclusion in the category, would include:

(1) Those uses tied to specific provisions of the state constitution, responsibility for which remains with the state:

- the identification and preservation of critical habitat areas;
- state-selected or state-owned lands;
- protection or guarantee of access to navigable waters;

(2) Those matters or uses which are of greater-than-regional impact, or which go to the development of a more viable or more balanced statewide economy:

- provision for interregional and state transportation needs;
- major economic development projects (industrial, petroleum, or mineral); supporting facilities and services, such as energy distribution systems;

(3) Those matters and concerns in the state-owned three mile limit but outside the jurisdiction of a municipality or region;

(4) Those matters and uses where federal constitutional or statutory concerns override:

- maintenance of nagivation aids;
- federally-owned lands;
- energy-facilities siting.

Except for these categories of uses or concerns, all other functions would recognize a regional or municipal primary interest. Chief among these, by way of example, would be:

- the general conservation of coastal and marine ecosystems;
- responsibility for waste disposal;
- maintenance of air and water quality;
- protection of environments in certain areas required for maintenance of traditional manners and lifestyles.

So, as to those "Uses of Direct and Significant Impact" identified by the Alaska Coastal Management Program on the attached pages, unless the particular activity contemplated could "fit" within one of the specific categories identified in statute as one of state concern, the determination of the local government (borough, first class city, or regional service area) as to whether to recognize or deny recognition of the use intended would follow from the local government's earlier determination of allowable uses, expressed in its land use plan and master program. As to those wherein a state override is recognized, no decision by the state to overturn a decision taken by a local government should be made in the absence of adherence to some review process, including provision for public hearing and judicial or legislative review.

USES OF DIRECT AND SIGNIFICANT IMPACT

Many uses and activities are conducted in Alaska's coastal area. Of these, the following are considered as having, or potentially having, a direct and significant impact on the coastal waters: (UDSI means a use or activity of direct and significant impact)

1. Any pier, dock, landfill, bulkhead, piling, jetty, groin, or other shoreline structure or defense work which serves more than two single-family houses.

2. Any dredging, dumping, or fill activity taking place at, or below zero feet (sea level).

3. Any commercial or industrial structure or any portion or appurtenance thereof which lies within 200 feet, (measured horizontally in all directions) of the Extreme High Tide line, or in, or over the marine waters themselves.

4. Any residential structure containing more than two dwelling units or any group of more than two single-family homes, or any plat or subdivision for more than five residential lots.

5. Any plat, plan, subdivision, or program for an industrial or commercial park, complex, or other form of such development.

6. Any water, sewer, gas, oil, electricity, or other type of utility or energy transport or transmission line or pipe which is in, on, or over the marine waters or part of which may fall within 200 feet of the Extreme High Tide line.

7. Any road, railroad, ferry dock, tramway, shipping lane or other transportation device or designation in the marine waters or within 200 feet of Extreme High Tide.

8. The leasing of land, or bedland, by any public or semi-public agency for the purpose of mining, drilling or any other form of mineral extraction whether exploratory or otherwise, is a UDSI, as is the actual conduct of any such mineral extraction activity.

9. The creation or expansion of any outfall into the marine waters, or into streams which feed marine waters where any detectable change in water quality could reasonably be predicted.

10. Forest and agricultural practices resulting in water quality problems or changes.

11. Any energy facility within one mile of Extreme High Tide.

"LOCAL GOVERNMENT" ORGANIZATION:

Provide for the [optional] [mandatory] establishment of regional service areas for coastal zone planning, preparation of a master plan, and use controls in coastal areas.

Provide for a representation mechanism: at the option of residents of the area involved, there could be a board for this purpose [if so, determine manner of selection, organization, etc.], or the elected educational service area board could perform in this capacity.

Allocation of authority in general:

(1) Boroughs (including unified governments);

(2) First class cities of the unorganized borough;

(3) Regional service areas established;

(4) The state, in conjunction with second class cities and traditional councils, where no regional service area served the unorganized borough.

Authority to devise and implement a master program, to prepare and maintain a comprehensive map and other elements of a general land use plan, to adopt and enforce use regulations, provide exceptions and to enforce (or secure state enforcement) of same; responsibility t serve as a clearinghouse for projects and permit applications in advance of approval by state agencies.

Reexamine powers presently granted to second class cities in this field, perhaps redefining or limiting these to provide for cooperative exercise with regional service area or borough assistance. Provide for regional service area delegation on a case- or village-basis of elements of responsibility to second class cities, following the provisions for same with respect to borough-city planning relationships as in AS 29.

Limitations on regional service area performance:

Regional service areas may not act in the area of planning or control without informing and securing the consent of

- the council of a second class city;

- the traditional governance structure of an unincorporated community, subject, perhaps, to the further requirement that there may be a village meeting or referendum in the community to resolve problems or conflicts;

- where necessary, the lands-in-trust (14(c)(3)) trustee of the Department of Community and Regional Affairs (AS 44.47.150(b)).

"Local Government" Organization
(continued)

Initial reliance on interlocal cooperative agreements among communities and/or between regional service area boards and cities within or adjacent to them. Mandatory use of interlocal agreements as to the exercise of extraterritorial jurisdiction (AS 29.48.037). Provide for authority for the transfer or assumption of functions among or between substate levels of government.

and implementation of district coastal management programs;

(3) undertake review and approval of district coastal management programs in accordance with this chapter;

(4) initiate, as necessary, a process for identifying and managing uses of state concern within specific areas of the coast;

(5) develop procedures or guidelines for consultation and coordination with federal agencies managing land or conducting activities potentially affecting the coastal area of the state.

Sec. 46.35.050. ACTION AND SUBMISSION BY COASTAL RESOURCE DISTRICTS. Each coastal resource district shall make substantial progress, in the opinion of the council, toward completion of an approvable district coastal management program and shall complete and submit to the council for approval its program within 30 months of the effective date of this Act, or within 30 months of certification of the results of its organization election, whichever is later.

Sec. 46.35.060. REVIEW AND APPROVAL BY COUNCIL. (a) If, upon submission of a district coastal management program for approval, the council finds that the program is substantially consistent with the provisions of this chapter and the guidelines and standards adopted by the council and does not arbitrarily or unreasonably restrict or exclude uses of state concern, the council may grant summary approval of the district coastal management program, or may approve portions of the district program which are consistent. An approved district coastal management program shall take effect upon adoption by the coastal resource district and approval by the council, except that programs prepared by coastal resource service areas under sec. 110 of this chapter or by the Department of Community and Regional Affairs under sec. 160 of this chapter shall be submitted for review by the legislature and shall take effect 45 days after the convening of a regular legislative session unless disapproved by a concurrent resolution adopted by a

Testimony on SB 220

Submitted to Senate Natural Resources Committee on March 29, 1977, at the request of Sen. Kay Poland, Chairwoman.

My name is Michael H. DeMan. I am the director of the Alaska Native Foundation's Village Management Assistance Program. I am by birth and choice a coastal Alaskan, and through my position at the Foundation, and previous work in state and local government, have traveled quite extensively in rural Alaska. The Foundation's involvement -- and mine -- with the coastal zone management, and its attendent OCS development issue, began last year. While ANF has limited resources to work with -- or perhaps because of that fact -- we try to stretch dollars as far as possible. And in dealing with coastal management and OCS -- we've seen our money go pretty far. We didn't look for the CZM/OCS issue -- rather it came to us, for two reasons:

1. As an organization working with villages, we received numerous questions about CZM and OCS from village leaders which we couldn't answer; so
2. ANF, together with the Alaska Native Human Resources project, set out to determine what CZM/OCS needs were not being met. Information and discussion seemed to be needed most strongly, so an OCS Awareness seminar was held in February. Funded in part by the State, the Kellogg Foundation and the BIA, more than 80 residents from coastal communities attended.

As a result of that Seminar and other work with the villages, ANF has come to the realization that CZM/OCS is only a portion of a much larger need for all of rural Alaska. The following

the alaska native foundation
515 "D" Street ■ Anchorage, Alaska 99501 ■ 274-5638

outline proposes a workable solution for government -- for all rural Alaskans.

1. There is a need for regional and sub-regional planning for rural Alaska (unorganized borough), which is not filled by an existing organizational structure.

2. This need could be met under the service area concept (Chapter 29-03-020) but it is unrealistic to expect existing small cities and villages to deal with major forces affecting their lives on an area wide basis. City annexation of lands in question is not the answer. The planning need is of a much broader nature.

3. The service area concept should be rewritten to allow cluster groups of communities to share planning and zoning administration and powers outside their respective cities. This would give service areas a structure to deal with such forces and concepts as: Coastal zone management, rural energy needs, economic development, large scale agriculture projects, inter-village transportation systems and communications, and other regional or sub-regional planning needs.

4. State and federal governments also need certain structures to interface with to make important decisions and determine policy directions. As the saying goes, what is everyone's responsibility, is no one's responsibility. So it is with the unorganized borough and planning.

the alaska native foundation
515 "D" Street ■ Anchorage, Alaska 99501 ■ 274-5638

5. The first step for rural Alaska is important. Too many times, the structure of present local governments has been super-imposed over an already totally mixed bag of organizations which evolved haphazardly to meet special situations. Although everyone agrees planning should come first, no one provides for it in a comprehensive non-burdensome way. We have that opportunity now.

6. Instead of forming planning structures and areas in reaction to government or private industry's ventures into rural life, which may overlap -- or which are designed for one purpose but used for another -- let's design planning structures and applications based on what is there now, in terms of inter-village relationships. All new projects emanating from without or within, then, would be able to deal with a planning organization which has defined goals, objectives, and responsibilities.

7. This service area should not be super-imposed, though outside guidance may be needed -- and welcomed. Rather, after careful development and pre-planning by the local people concerned, it should be voted upon by those people within the designated service area.

8. These service areas should then be allocated planning funds to cope with their priorities.

In order to accomplish the goal of development of a planning

the alaska native foundation
515 "D" Street ■ Anchorage, Alaska 99501 ■ 274-5638

structure for rural Alaska, the following must first take place:

1. Develop the boundaries of existing geographically-homogenous planning units, i.e., the cluster groups. An example would be the Nunivak-Nelson Island group of six villages.

2. Identify existing governmental, non-governmental, economic, and other applied boundaries presently in use in rural Alaska.

3. Define the rationale and purpose for each boundary.

4. Design a "Service Area Powers" concept, which allows a step-by-step approach to governmental responsibilities starting with overall planning. These service areas should not put additional strain on limited local expertise, which is already over-extended in many locations.

5. Re-examine the existing structure of the Department of community and Regional Affairs.

6. Identify money necessary to accomplish the above on a multi-year basis.

If these service areas are designed in a sound, effective way in close partnership with the people who will administer -- and in turn, be affected by such administration -- then sound decisions can be made in planning the physical, social and economic future of rural Alaskans.

the alaska native foundation
515 "D" Street ■ Anchorage, Alaska 99501 ■ 274-5638

I know this is a major proposal but coordination is vital for a rural people presently smothered by conflicting responsibilities, districts, jurisdictions, and general state overlap. Such coordination must come from you because you know the people best; you live there, and you make the laws.

VOLUME 6 NUMBER 3 FEBRUARY 15, 1977

VILLAGERS VIEW PROBLEMS OF OCS

In meetings, over coffee and in group discussions, they said again and again how much it reminded them of "the old days during the land claims struggle." Then it was the land, and a land freeze kept the situation in abeyance until a final decision could be made. Now there is talk of a new freeze, a "sea freeze," to not allow any oil development until a final decision is made on who controls the subsistence resources of off-shore areas.

With powers provided through ANSCA, Alaska's coastal residents have a chance at succeeding with this new cause: Managing the changes inherent in the planned development of Alaska's extensive Outer Continental Shelf petroleum reserves.

Representatives from 61 village corporations, 120 people in all, gathered at Anchorage's Ramada Inn, February 4-6, for a conference on OCS, sponsored by the Alaska Native Foundation with assistance from the Kellogg Project of the University of Alaska, the Dept. of Community and Regional Affairs, the Governor's Coastal Zone Management Office and the Bureau of Indian Affairs.

The conference, entitled the "Management of Change," focused on three major topics.

1) What changes can villages expect with OCS development?

2) What are the legal rights with regard to development which affects a community or region?

3) How can villages best use all resources to plan for and manage the change to the benefit of local residents?

Questionnaires filled out by conference partici-

OCS, *Cont. on p. 2*

LMAs TALK TRESPASS, NAVIGABILITY

Dan Alex of Eklutna was reelected chairman of the Land Manger's Association at its regular monthly meeting on February 4. The LMA adopted several by-laws changes designed to bring more village land managers and others directly concerned with Native land matters into the organization.

Lloyd Sutton, Native Liaison officer with BLM, reported on trespass on Native lands, and on efforts of BLM to deal with While BLM is making some creditable efforts in the matter of occupancy trespass (squatters), they fall short because of limited resources in the area of recreational trespass. Both types of trespass have become matters of grave concern to Native corporations on their land.

The complex issue of navigability and its effect on land entitlements was discussed in some depth. Phil Wallick, land manager for Calista, said that from 18% to 22% of Calista's land selections will be under water; it is easy to see the problem if they are forced to select very much of this underwater land. The village of Atmauthluak, he said, is the classic example, with 56% of the area under water.

There is need for a test case in Alaska to determine some ground rules for navigability.

The Land Managers looked at several bills on forest practices now in the state legislature and recommended that AFN support the concept of a Division of Forestry as proposed in HB 10.

Processing of Native groups should be done under the rules which applied at the time they made application for that status, and LMA recommended that AFN take some action in support of this policy.

The Association also asked that AFN vigorously campaign for a Native representative on the Easement Task Force.

* * *

EKLUTNA NOT CLASS REPRESENTATIVE

Eklutna, Inc. is definitely not to be considered the representative of the entire class of Alaska Native village corporations, says a U.S. District court judge.

In January, Eklutna had been served with a summons from the Alaska Public Easement Defense Fund naming their village corporation as representing the class in the easement lawsuit, although an earlier order had stipulated that they are not. In response to a letter asking for clarification, Judge James A. von der Heydt issued another order on January 31, 1977 affirming that: "...any reference to Eklutna's capacity as class representative is stricken...", and ordering that the plaintiffs mail a copy of the order to all village corporations served with the amended complaint.

From this point on, each village, including Eklutna, will represent only itself in the increasingly complicated easement lawsuit.

OCS, *Continued from page 1*

pants before the meetings began indicated that people in about half the coastal communities were talking about OCS, and while the other half felt a vague unease about the subject, they didn't know enough to discuss it. Several villagers had been to other meetings on OCS; few representatives of either state or federal governments, oil companies or other organizations had visited communities to talk about the subject.

Much of the conference looked specifically at how communities already impacted by OCS have dealt with it. Most affected so far is Yakutat, and many sessions were chaired by representatives from that area, namely Byron Mallott, Sam Demmert, Attorney Dave Wolf, and Vern Wiggins and Bob Sharp from Tryck, Nyman and Hayes, land planners for Yakutat. Also prominent were Kodiak and English Bay representatives, because these three communities together form specific role models for villages not yet hit by OCS: English Bay has chosen no development at all; Kodiak wants the economic benefits of development, and has formed a partnership with its villages and the borough, and like Yakutat, is trying for the two: To minimize the impact on its lifestyle and culture, and gaining financially.

Kay Poland, State Senator from Kodiak, outlined important legislation which would emphasize the importance of local and sub-regional control over OCS development.

Saturday featured representatives from the State, Federal government and oil industry. Ed Hoffmann, head of BLM's OCS office in Anchorage, said that new procedures may be on the way with the Carter Administration, with greater emphasis on public hearings in the affected regions.

State speakers Commissioner Guy Martin, Sandy Sagalkin, Glenn Akins, Kevin Waring and Jim Wiedeman discussed various roles of their agencies, passing on a good deal of information. But the villagers, through their questions at the sessions and in their questionnaires after the conference, had a message for the State, too. Few thought available monies should go to the State for planning for OCS (it should go to the regions and villages, they thought) and by a 4 to one margin, villagers thought the State hasn't done enough to assist local areas with OCS information and planning.

Somewhat skeptical (a few downright unfriendly) participants kept oil industry representatives Jim Hart of ARCO, Joe Homer from EXon and Waco Shelley of Mobil, busy answering questions on all facets of their companies' activities, from the technical end of OCS development to overall policy decisions and philosophy.

Speaking more directly to the questions of cultural impact and subsistence lifestyles were Anthony Vaska from KCC in Bethel, Linda Ellanna from Anchorage Community College and Pat Wennekens from the Arctic Environmental Information and Data Center.

Two view points on planning came during the banquet speeches: Eben Hopson, Sr., mayor of the North Slope Borough, urged closer planning and international legislation for peoples along the Arctic coasts, so they can control what happens off their shorelines. John Hope from the Juneau BIA office outlined funding available through the Indian Self Determination Act to villages for OCS planning.

During the three days, special "closed" sessions allowed only those people from affected areas to sit down together and discuss in depth specific information and ask questions about planning for their individual villages or areas. Nearly all participants found this to be an extremely effective method of dealing with the complicated and often-emotional OCS issue.

The questionnaires at the meetings' end showed villagers felt their communities were not ready to make any decisions on OCS yet, needing more information before deciding on any course of action. And they want to know more about OCS: It was unanimous that follow-up activities are needed, such as meetings and workshops in the villages and/or regions; additional funding for local areas to plan together and then develop the resources to carry out those plans. The goal is to manage--successfully--the changes that OCS development means for the lifestyles and futures of coastal village residents.

ANF plans follow-up information on the conference in the form of newsletters and a final report. If you are interested in receiving this material, let us know: Write ANF—OCS Information, 515 D Street, Anchorage, Alaska 99501

Other members of the board are: Boris Koshrak, Byron Mallott and Larry Merculieff.

Village Corporations

Acreage Entitlements; Enrollments; Regional 12(b) and 14(h)(8)

Editor's Note: The following tables show Village Corporations (including those under appeal and in litigation, and also those merged with their regions), their 14(a) entitlements, and figures for the regional allocations under 12(b) and 14(h)(8). These figures were published in the *Federal Register* on Feb. 2, 1977. They are subject to appeal to ANCAB for thirty days after that date.

SECTION 14(a)

Under provisions of ANCSA, the surface estate of 22 million acres will go to the village corporations. The original selection by the villages will be on the basis of provisions of Section 14(a) of the Act, which gives them land in accordance with the village's enrollment as of December 18, 1970. It is therefore important to know the exact enrollment of each village as of that date. The Act gave BIA till December 18, 1973 to come up with the figures, which it did but the figures were conditional on the correction of errors, results of enrollment appeals, etc. In mid-January final figures were sent to the regions by the Acting Director, along with the resultant entitlement figures for Section 14(a).

SECTION 12(b)

After selection of 14(a) entitlements by the villages, the balance of the 22 million acres is to be conveyed to eleven regions (excluding Sealaska and the 13th), on the basis of population, to be reconveyed to the villages on the basis of historic use, subsistence needs and population. The 12(a) acreage is also computed in the following tables.

SECTION 14(h)(8)

2 million acres were set aside by Section 14(h) for such purposes as cemeteries, historic sites, group selections, etc. The balance of the 2 million acres is to go to the regions on the basis of population, and these figures are computed in the following tables.

BANKER'S COMMENTS

Editor's Note: Written by Arnold Gietz, President and Chief Executive Officer of United Bank Alaska, this series tries to address not only the needs of companies and corporations, but of individuals also.

Management of a Business Enterprise

A prerequisite to success of a business enterprise is that it be growing, profitable, and well managed. This is valid whether the enterprise is a proprietorship, partnership, or corporation. This article will address only the area of management and further limit its scope to financial management.

Many new as well as established enterprises encounter serious difficulties through lack of adequate financial management. Probably the greatest single factor causing failure in new enterprises is the underestimating of the cost to be incurred prior to the business becoming profitable. When a business commences it has only an investment, expenses, and no income. It takes time to have income exceed expenses and this should be planned prior to opening a business. If this is not done, the business will falter and fail unless investors are willing to put up more money before any profits are realized.

United Bank Alaska lost over $300,000 during its first six months of operations and this was planned prior to opening the bank. In the second six months it recouped the loss and ended the year with a profit. This is cited only as a typical example of a new business. Had not the loss for the first six months been anticipated, the investors would have been requested to add additional capital to cover the loss. Generally an awkward situation, to say the least.

After a business has passed the break-even point and is profitable it will probably continue to grow. With growth comes a need for a larger investment in inventory, receivables, and possibly fixed assets. If retained earnings are inadequate to meet these needs, the business must look to borrowing and/or additional investment to finance the growth. Another alternative is leasing where capital is conserved and use of the equipment is possible without cost of ownership. Not all companies are eligible for leasing, but where eligible, it may be used on a sale-lease back basis which makes funds available for inventory and receivables or for acquiring new equipment.

Discuss your plans and forecasts with your banker and/or financial advisor before a problem exists and thereby avoid crisis and embarrassment.

ALASKA NATIVE MANAGEMENT REPORT

Anchorage, Alaska 99501

ADDRESS CORRECTION REQUESTED

DEC. 18, 1976 TO BE EASEMENT DATE

December 18, 1976 will be the cutoff date for the consideration of public easements across Native lands, according to a press release from the Bureau of Land Mangement. A directive from Ronald G. Coleman, Assistant Secretary of Interior, says that the reservation of streamside and periodic lakeside easements for recreational access to these waters will be based on use prior to that date, rather than the December 18, 1971 date desired by most Natives.

Most Natives believe that easements should be based on use at the time of the passage of the Alaska Native Claims Settlement Act, inasmuch as the Secretary of Interior was directed by that Act to "immediately" convey Native-selected lands.

Exceptions to Coleman's directive are: the 25-foot coastal easement, "present and future access to all public lands and resources", and in areas where Native land selections have not yet been made.

BLM is still actively seeking public information on access needs over Native-selected lands, according to the release.

Commented Byron Mallott, president of Alaska Federation of Natives, "It is just another erosion of our rights under the Act and points up the need to complete the interim conveyances as soon as possible."

IN BRIEF....

* *Correction:* Last issue we reported on the merger of four village corporations in the Doyon region, and mistakenly gave the name of the new corporation as MTNT, United. Its correct title is MTNT, Limited.

* Burton W. Silcock, co-chairman of the Joint Federal-State Land Use Planning Commission, will be leaving his post on the commission within a few weeks, due to his upcoming retirement from federal service.

* North Pacific Rim, the non-profit arm of Chugach Natives, Inc., has moved to a new location at 433 W. 9th Ave., Suite 200. This is at 9th and E streets. The phone number remains the same: 276-2121.

* On the subject of non-profits, Aleut League now goes by a new name: Aleutian/Pribilof Islands Association, Inc. Its office is located at 430 C Street, Suite 303, and the phone number is 278-3567.

PAYROLL TAX WORKSHOP

The Internal Revenue Service and the Small Business Administration will co-sponsor an Employer's Payroll Tax Workshop on Wednesday, March 2nd, from 9 a.m. to 1 p.m. in the former City Council Chambers located in the basement of the Loussac Library at 427 'F' Street in Anchorage.

The purpose of this workshop is to help employers understand payroll withholding record keeping. Detailed instructions and explanations will be given on how to prepare the various employer's tax forms and comply with depository requirements. Payroll recordkeeping systems will also be demonstrated.

Employers, bookkeepers and the general public are urged to attend. To register call IRS at 277-8741.

SOME DATES TO REMEMBER

February 23 Lower Cook Inlet Oil Lease Sale cancelled.

March 1 Cook Inlet Native Assn. (CINA) General Membership Meeting, election of five board members, CINA Bldg., 670 W. Fireweed, Anchorage

March 2. Payroll Tax Workshop. 9 a.m. to 1 p.m. Former City Council Chambers, basement of Loussac Library, 4th and F, Anchorage.

Juneau, Alaska

Re: House Bill No. 376

Dear Representative Rudd:

House Bill No. 376, an Act providing for property tax relief to homeowners and renters, was introduced in the House on March 21, 1977 and was referred to the House Community & Regional Affairs and Finance Committees.

For the consideration of the House Community & Regional Affairs committee, I am enclosing a Fiscal Note prepared by Mr. Gary L. Jenkins, Director, Audit Division, Department of Revenue, Juneau concerning the proposed legislation.

Very truly yours,

R. D. Stevenson
Special Assistant

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

Based on the experience of the State of Oregon which has implemented identical legislation, the above staffing would be required to handle the additional taxpayer assistance and return processing and audit. Currently, approximately 12% of their returns are claims for property tax refund with no Oregon tax due. In our case, this would mean that we would receive approximately 24,000 additional returns over what we would normally receive.

This bill would result in a substantial loss of revenue to the State. Based on the 1975 individual income tax returns filed there would be a loss of revenue of $37,600,000.

GEORGE M. SULLIVAN,
MAYOR

OFFICE OF HUMAN DEVELOPMENT
Senior Citizens Programs

April 20, 1977

The Honorable Lisa Rudd, Chairperson
Alaska State House of Representatives
Community and Regional Affairs Committee
Pouch V
Juneau, AK 99811

Dear Representative Rudd:

The Anchorage Municipal Senior Citizens Advisory Commission met today and voiced strong opposition to the fact that House Bill 376 would provide tax relief based on income limitations.

Sincerely,
Rose Palmquist/lb

Rose Palmquist, Chairperson

HB
377

100% of true value -

Does present law provide for penalties?
If so, is there any limitation?
It am[illegible] the opinion state shd. not set or limit or mandate penalties.

Introduced: 3/21/77
Referred: Community & Regional Affairs

IN THE HOUSE BY McKINNON

HOUSE BILL NO. 377

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to penalties for delinquent property taxes."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 29.53.180(a) and (b) are amended to read:

(a) If the taxpayer is required to pay the entire tax on the due date set by the assembly, a penalty not to exceed 10 per cent may be added to all delinquent taxes, except as provided in (d) of this section, and interest at the rate of eight per cent a year shall accrue upon all unpaid taxes, not including penalty, from the due date until paid in full. If the taxpayer is given the right to pay the tax in two installments and the first half is not paid when due, the entire tax becomes delinquent and penalty and interest accrue as follows:

(1) if the first half is paid when due, the second half is payable on the due date fixed by the assembly for the second half and if not paid is delinquent after that date;

(2) a penalty not to exceed eight per cent shall be added to all taxes delinquent until the due date fixed for payment of the second half, and interest at the rate of eight per cent a year shall be charged on the whole of the unpaid taxes, not including penalty, from due date until paid in full;

(3) after the due date for the payment of the second half, a total penalty of not more than 10 per cent may be added to all delinquent taxes, and interest at the rate of eight per cent a year shall accrue upon all unpaid taxes, not including penalties, from due date until date

paid in full.

(b) If the assembly imposes a penalty for the nonpayment of property taxes when due, or the late return of [personal] real property assessment forms, the rate of penalty or combined rates of penalty may not exceed 10 per cent of the tax due on the property concerned. The provisions of (d) of this section apply to limit the imposition of penalties for the nonpayment of [personal] real property taxes when due.

* Sec. 2. AS 29.53.180 is amended by adding a new subsection to read:

(d) No penalty may be added to a delinquent real [or personal] property tax if the assessed value of the real [or personal] property of the taxpayer reported in the annual assessment roll, exclusive of property or improvements to the property of the taxpayer first included in the annual assessment roll, exceeds by 30 per cent or more the assessed value of the property reported in the annual assessment roll or supplemental assessment roll for the previous assessment year.

not enacted

exclude assic. value & improv. made since last assess. ment

McK. suggests higher % age

{McCarter suggests use tax bill increase, rather than assessed value -

{Suggests 30% annual tax increase.

{Limit to residential property -

Cost to munis. —
