DRAFT
K. Hecht
Nov. 11, 1977

OVERVIEW OF THE REPORT

In 1975, Senate Bill 35 was passed by the Alaska Legislature.[1] That act led to the organization of 21 Regional Educational Attendance Areas (REAAs) in the Unorganized Borough of rural Alaska. This was followed by the election of school boards in January and February. 1975. The REAA Boards assumed their full powers in July 1 that same year. These few simple facts represent a great event in Alaskan history. It was seen by many as the culmination of a struggle for local control of education and the beginning of an opportunity to provide quality education for all Alaskan children.

This report reflects both the sense of completion and the excitement of initiation. The first purpose of the report is to complete an analysis process begun by the Center for Northern Educational Research (CNER) in 1973. It will fulfill CNER's obligation to follow up on the results of its 1974 report to the Alaska Legislature on Pre-Higher Education in the Unorganized Borough: Analysis and Recommendations.[2] As a follow-up study, this report examines the implementation of legislation which the 1973-74 research activities helped to generate.

The second purpose of this report is to describe the first year of operation of twenty-one regional school districts and elected school boards in rural Alaska. The impetus for this historic happening developed in rural Alaska with its mostly Native populations and grew in strength in

---

[1] SB35 or Senate Bill 35 is the popular name for State Laws of Alaska, Chapter No. 124 as amended by FCCS HCS CSSB 35, 1975.

[2] Darnell, Frank; Hecht, Kathryn, and Orvik, James. PRE-HIGHER EDUCATION IN THE UNORGANIZED BOROUGH: Analysis and Recommendations. Fairbanks, Alaska: University of Alaska, Center for Northern Educational Research, 1974.

the early seventies. Most often described as an issue of local control, this movement spoke to phasing out the Alaska State Operated School System (ASOSS) and obtaining control through school boards elected by and responsible to local communities. Local control was desired as a means--a means to improve the quality of education by making it more responsive to local needs. Therefore the passage of SB 35 and the creation of the REAAs can be viewed as the beginning of local control of education in rural Alaska.

The achievement of the means, as these events signified, does not necessarily assure the desired end--quality education. In speaking to this point as well as those mentioned above, CNER hopes to record significant events as well as focus constructive attention on the REAAs as the latest phase in Alaska's evolving educational system.

The REAAs constitute twenty-one different emerging educational systems, each influenced by a different set of conditions--cultural, economic and geographic. The diverse conditions encompass factors unique to the logging camps in southeast Alaska; the widely separated islands of the Aleutians; the vast areas of the interior; and the northwest coast. Local control was intended to allow educational development to adapt to these widely differing situations. The experiences of any one REAA could be predicted to be unique in at least some aspects. Ideally, therefore, a study of the first year should include a sub-study on each REAA. Limited staff and resources, coupled with the time and distances involved in Alaskan travel, did not allow this study even to approximate this ideal.

Two methods were selected to meet the report purposes within the limitations described above. First, CNER project staff sought data for

the report by direct means, such as questionnaires and a case study, and by collecting already existing public information such as board minutes and newspaper clippings. Second, CNER invited others in the state, who had investigated an aspect of REAA development, to contribute their findings to this report. This invitation was offered as a vehicle to more widely disseminate their findings, as well as a way of beginning to integrate statewide interests and findings. Those working on related studies within CNER made similar contributions to the report. This latter approach gave this report a far more comprehensive character than it would have had without such cooperation.

It must be stressed that this report is limited in scope and, consequently, it raises as many questions as it answers. It will be successful if it furthers interest and dialogue. Hopefully, it also will serve as a source of data upon which to design future studies.

The report is divided into four parts: introductory and background material, analysis of data collected by CNER for this report, contributed articles by others doing work related to the new districts, and a summary including a critical discussion of the report, legislative concerns, and future research needs.

The introductory and background section begins with this overview. It is intended to present a rationale for the study, its limitations, and the procedures used. Next, an historical perspective gives readers a contextual setting in which to view the materials to come--how the year under study fits in with the larger picture of educational change in Alaska. The time-line presents an ordering of events since CNER's earlier study and subsequent publication. The chronology begins in January 1974, at the time

CNER's Unorganized Borough report was presented to the legislature and takes the reader through the passage of SB 35 and up to the official start of the new REAAs in June 1976. To complete the introductory section, key persons who have been involved in the local control movement over the last five years were invited to write their perspectives on progress since 1974 as a way of emphasizing the incredible amount of change that has occurred in such a short time. Accomplishments and successes, as well as emerging issues, are highlighted in the conclussion to the introductory section, and are re-emphasized throughout the report.

The second section of the report includes information directly collected for the study and analyzed by the CNER staff. This contains the information obtained from the survey questionnaires sent to REAA board members and superintendents. Unfortunately, practical limitations required the use of mail questionnaires, which is known to be an inefficient way to collect data. REAA Board Minutes and Minutes of the State Board of Education were used as substantiating or secondary data sources for reviewing attitudes and issues. The analysis of these minutes also is presented in this section. The questionnaire survey and analysis of the minutes allows broad rather than in-depth coverage to all REAAs. Therefore, to balance this data with more in-depth information, a case study was done in one REAA. Conversations with parents, teachers, school administrators and board members were used to focus on what was called "perceived quality of education" and how it may or may not have been affected by the creation of the REAAs and their first working year.

The next section, called contributed chapters, contains input provided by others in CNER and statewide who have been working on related issues.

This allowed the study to go into many more areas than its limited resources would have permitted and also gives visibility to those doing work in the state who would not normally have had a vehicle to disseminate their information. One contributed chapter deals with the creation of REAAs as it affects and is affected by municipal development in the Unorganized Borough because this was an area emphasized in the earlier CNER study. The chapter was written by a staff member of the Department of Community and Regional Affairs.

A student from the University of Alaska-Southeast has conducted her own survey of the community school committees and her analysis is presented. An in-depth study of one REAA's new secondary education program was done as a dissertation. The article presented, based upon that study, provides coverage of this very important issue. From within CNER, a brief survey of the finance issues concerning REAA schools is presented by the principal investigator of the school finance study. An adjunct CNER staff member discusses the REAAs as related to BIA schools and current issues in school transfer policies. Other contributed chapters discuss teachers in the current pressing bilingual controversy as a local control issue.

The final chapter, which is intended as both a summary and a forecast; is presented in two parts. The first part briefly describes other studies concerning the REAAs and related issues which have been identified in the state. It also serves to raise additional issues not included in this report.

The major part of this final chapter is based upon a unique approach. Those contributing to the report plus a few selected persons were invited

to a seminar at CNER at the time the draft materials of the report were ready. This group was asked to review the materials as a whole and to discuss their contributions and the information provided the Center. They also were asked to discuss their mutual findings as they relate to possible need for additional or revised legislation and to other issues in need of further study. The transcript of this seminar was edited, and selected remarks are included in the final section of the report.

The report also includes an appendix with selected news clippings on the REAAs in their first year.

Final Draft

Progress on the Transfer of BIA Schools Since the Passage of SB 35

November 1977

It was viewed by some that one of the most significant aspects of SB 35 was the inclusion of Bureau of Indian Affairs schools within the boundaries of the Regional Education Attendance Areas. This was interpreted to be the final chapter in the history of Alaska's dual (Federal/State) system, anticipating the subsequent transition of the BIA federally operated schools into the Alaska State school system.

This view was further supported by the 1975-76 Annual Report of the Alaska Commissioner of Education. Reference is made to the dual system as follows:

> ...Currently underway are plans to integrate the State's remaining Bureau of Indian Affairs Schools with those under State jurisdiction. Seven schools operated by the BIA transferred to the new districts this summer.
>
> 'What we hope to see is really simple,' said Commissioner of Education Marshall Lind, 'a single system for all the state's youngsters. And it will be a system structured by state law and regulations, and guided by locally elected school boards.'
>
> The transfer of the seven Bureau of Indian Affairs schools was the first shift of that type to take place in about eight years. BIA schools at Kotzebue, Hooper Bay, Emmonak, Upper Kalskag, Lower Kalskag, and Kiana became a part of the state system. 'And those decisions were made by the people themselves and not by bureaucrats at either the State or Federal level,' Lind said. 'This was the beginning. They got the momentum going, and I am confident that it will continue.'

While the optimism expressed by the Commissioner is significant and evidences an attitude of receptivity toward transfer by the State, acting on behalf of and in conjunction with the REAAs, the actual situation with regard to unification of the systems does not appear to be as promising as he expressed. A review of information from both the files of the Department of Education and the Bureau of Indian Affairs assembled for a Task Force on the Transfer of BIA schools in early 1977 reveals that there are marked differences in State and Federal attitudes toward final accomplishment of unification or merger of the systems.

The following selected chronological listing of correspondence, exchanges of proposals, and opinions, provides a synopsis of events from the signing of SB 25 to the status as of August 1977. The listing is not intended to be all-inclusive but rather to be illustrative of both progress and concerns.

This chapter is abridged from the National Institute of Education Report, The Organization, Management and Financing of Alaska Native Education, by Don M. Dafoe, in press.

March 1975. The Governor signed SB 35, the Act providing for the elimination of the Alaska State-Operated School System and the establishment of 21 Regional Education Attendance Areas.

June 15, 1975. The Governor signed into law as Chapter 150, SLA 1975, an Act which related to the transfer of federal agency schools and provided that teachers who wished to transfer would be placed on the salary schedule at no less than his/her current salary; that a transferring teacher holding a valid Alaska certificate and having taught two or more years in the Federal school would be placed on tenure; that sick leave accumulated while teaching in Alaska could be transferred; and that credit toward retirement would be allowed on the basis of up to ten years credit on a buy-in arrangement (the same as for any teacher entering from outside Alaska).

January 1976. Draft letter from Chairman, State Board of Education, to Area Director of the BIA for discussion purposes. The letter pointed out that with the creation of the REAAs qualified voters in villages served by BIA schools are eligible to vote for and serve on REAA boards, citing the example of Kotzebue, where the BIA operated the school, having five seats on the REAA board. The letter then formally requested the transfer of eight schools in locations where the State is operating secondary programs. The letter also noted that the State Board has directed the Department staff to work with the BIA in addressing the problem of transition of the remaining BIA schools to state control.

February 2, 1976. Deputy Area Director's memorandum reported a meeting with the State Board of Education on January 30. The report noted that the Area Director had expressed concern that the commitment to local villages under the self-determination policies and regulations has made school transfer decisions more difficult. He felt that the REAA boards should have a voice in the transfer decisions, and suggested only two schools be transferred at this time. He agreed that REAA boards and BIA employees should be informed on discussions, progress, and plans.

March 19, 1976. Memorandum from Area Director to Commissioner of Indian Affairs. He noted that discussions are being held concerning school transfers and that one of the problem areas is the question of upgrading school facilities to meet State standards and the availability of Federal dollars for such purpose.

March 26, 1976. Letters from Area Director to REAA boards. He noted control of BIA schools within an REAA border hinges upon the board's desire to assume the responsibility. He suggested that any proposals for assumption of BIA school operations first be discussed with the affected community.

March 26, 1976. Memoranda from the Area Director to BIA day schools. The Director noted that under the Indian Self-Determination Act it would be possible for the Bureau to contract with Native tribal entities for school operations, but to date no such contracts had been entered into. However, he noted that they would not contract with an REAA, although direct transfers would be possible.

April 7, 1976. Commissioner Lind transmits a proposed Memorandum of Agreement to the Area Director. Essentially the proposal expressed the State's willingness to assume operational authority, where the REAA board has expressed willingness to accept the schools, to assume title to property or a use permit, if the schools are up to State standards, with the BIA agreeing to provide funding of the entire difference between funds received by the State under P.L. 874 and the state funding formula for the particular site on a declining basis over a five-year period. It also requested BIA funding to the extent available to provide upgrading of facilities and new facilities.

April 13, 1976. Letter from Area Director to the Chairperson of the Northwest Arctic REAA acknowledging receipt of the request for Kiana and Kotzebue day schools to be transferred to the district. (This transfer was later effected.)

April 16, 1976. Area Director responded to State proposal, objecting to several points;particularly those related to continued financing for operations and financing of capital improvements. The letter also noted that the BIA felt that perhaps the State proposal put undue pressure on the REAAs to assume responsibility for schools operated by the Bureau and noted that the Bureau was planning to continue operations.

May 1 and May 8, 1976. The Lower Yukon REAA submitted resolutions regarding the transfer of four schools.

November 1976. Yupiktak Bista stated its position on school transfers, citing the Indian Self-Determination Act under which, in their opinion, Native peoples could determine whether they wanted to contract to operate schools and the conflict with apparent authority given to the REAAs to take over schools. They expressed opposition to further transfers,citing the financial instability of the REAAs and the failure of the State to provide sufficient funds; stating that villages should not be asked to vote on transfer until the REAAs had proven themselves as viable educational districts.

November 16, 1976. The Area Director sent letters to all REAA boards asking that any requests for transfers of schools be submitted no later than January 1, 1977, and asking that village concurrence be gained prior to taking board action.

November 22, 1976. The Lower Kuskokwim REAA board adopted a policy of assuming operation of BIA day schools in each village where a district-operated high school program is established. When this action became known the villagers of Toksook became aroused and objected to the policy.

December 1976. The Area Director proposed a Memorandum of Agreement which ignored, and in effect rejected, the State's proposal for continued funding on a declining basis and the question of upgrading or replacing facilities. It did recognize the possibility of supplementing a transferred school's budget to prevent serious loss of programs, on a case-by-case basis, and proposed to proceed with procurement of supplies for the school program, including

lunch service and utility contracts for one year. Subsequently, the proposal was amended to a "final offer" of two-year funding for teacher aides, two-year funding of food service, and initial start-up costs for the year of transfer.

January 20, 1977. The Area Director in a letter to the Governor officially terminated the existing agreement between the Bureau and the State in school transfers (the 1968 Overall Plan) on the grounds that it was outmoded and in conflict with the Self-Determination Act and inappropriate under the new REAA school district statute. He indicated willingness to reopen negotiations.

January 21, 1977. Governor Hammond's letter to Interior Secretary Andrus. He referred to the Area Director's action in denying any special assistance to REAAs for schools already transferred because of the State's rejection of the BIA's "final offer," noting the Director's apparent intent to reprogram funds reserved for these six schools to other BIA programs. Requested a hearing to present the State's position.

January 26, 1977. Area Director's letter to Commissioner Lind stating that because of the Indian Self-Determination Act the BIA policy would be to require village concurrence before the Bureau would agree to transfer a school and that he was notifying the REAAs accordingly. (On February 24 the Commissioner responded to the Area Director agreeing, to the concept of village concurrence.)

The Report of the Task Force on Alaska School Transfer

As a result of Governor Hammond's letter to Secretary Andrus a Task Force was appointed by the Commissioner of Indian Affairs. The Task Force Report[1] referred to past efforts toward school transfers, noting that the State is legally obligated to furnish education to all its children, but stating that the Bureau should continue operating schools until a local community wants it to withdraw. Reference is made to the 1968 plan, termed as presently outmoded, and cites the REAA act and the Indian Self-Determination Act as the framework within which transfers must be considered. It states:

> ...In all instances Native American communities will be advised of their options either to (1) transfer their schools to the Regional Education Attendance Area, (2) contract with the BIA, or (3) remain under the Federal school system.

A Field Solicitor's opinion included in the reports noted that the Bureau is not legally required to transfer any school or schools upon request of the state, and that schools previously transferred would not have to be accepted back by the Bureau.

Positions stated in the Task Force report related to schools included:

1. The Bureau would agree to complete any scheduled funded capital improvements, but schools would be transferred on an "as is, where is" basis.

2. ESEA Title I program support could no longer be gained through BIA but could be sought through the Alaska Department of Education.

3. Native students transferred from BIA schools to REAA schools would become eligible for Johnson O'Malley support.

The report concluded with a listing of alternatives and noted their probable impact. Basically the options were as follows:

Option I. Schools be transferred on request of local communities with no BIA financial participation other than start-up costs.

Option II. BIA negotiate directly with the REAAs which had gained village concurrence for transfer through resolutions. (The impact statement noted that this would mean negotiating with seven REAAs rather than with the State.)

Option III. BIA would transfer schools to the State with (a) two-year funding for teacher aides; (b) two-year funding for food service programs; and (c) start-up costs as noted under Option I.

---

[1] "Report of the Task Force on the Transfer of the Bureau of Indian Affairs Schools to the State of Alaska" (Washington, D.C.: Office of the Commissioner, Bureau of Indian Affairs), March 25, 1977.

Option IV. In addition to Option III above, the BIA would reimburse the Department of Education for the amount of the State's payments in lieu of local revenue, computed at $575 for the 1977 school year.

Option V. The Bureau would accept the State position as stated in the Governor's letter of January 1977: fundamentally, that the Bureau provide financial assistance to the REAA districts for supplemental programs for two years; and that the BIA provide the State reimbursement for expenditures above and beyond normal State entitlement, less P.L. 874 funds, to be phased out for any transferred school over a five year period.

The Task Force Report also recommended that there be developed guidelines for school transfers in Alaska which could include methodology for assessing financial and program needs, guidelines for securing village concurrence, and means for measuring the impact on school operations subsequent to transfer.

Actions Following the Task Report

On May 5, 1977, Raymond Butler, Acting Deputy Commissioner of Indian Affairs, wrote to Governor Hammond stating that after consideration of the Task Force report the Bureau was proposing that the State and the Bureau move toward finalizing an agreement based on Option IV of the report "or some part of it."

On July 20, 1977, Governor Hammond responded to Mr. Butler, stating in the second paragraph:

> If my understanding is correct, the Option No. 4 of which you speak in your letter is in addition to the efforts of Senator Stevens to provide the difference between Public Law 874 payments and the foundation formula costs per pupil to the State of Alaska in a five-year phaseout program. Under this assumption, the state is pleased with your choice of options and I am sure we can proceed to finalize an agreement.

As yet there has been no official response from the Bureau to Governor Hammond's letter. The transfer program has "bogged down" again, however. Only one school may be transferred in 1977-78.

POLICY ISSUES

There appear to be several policy matters still to be resolved in connection with the transfer of schools and the future role of the Bureau in Alaskan education. The REAAs are so new that their operations are still not on firm ground and it is possible that there could be modifications to the present organizational pattern. For example, some communities might see fit to incorporate as first class cities and become city school districts, and some areas might organize as boroughs and become borough school districts. Two of these policy concerns are summarized below.

Policy Issue: Financing of Transferred Schools

> In view of the fact that there appears to be no legal question but that the State of Alaska has the responsibility to provide education for all its children and youth and has in the creation of the Regional Education Attendance Area districts (REAAs) included all areas now served by Federal schools without any exclusion clause, is the State justified in asking for reimbursement by the BIA on the basis of total State funding requirements on a five-year declining basis (100% the first year, 80% the second year, etc.) plus one-time transfer costs?

Financing school transfers has been the most evident problem for many years. The question of basic and supplemental program support, and the related question of financing the upgrading of present facilities and the provision of new facilities, has been dominant in discussions and proposals over the last thirty years and has far overshadowed any questions of curriculum, staffing, and program.

In asking full reimbursement for all the State cost of assumption of a transferred school by an REAA (Public School Foundation Act entitlement plus in-lieu of local tax payments) the first year and declining support for an additional four years, the State rationale appears to be based on the lack of a tax base for the support of rural schools and the point that total State support of schools in the REAAs raises the question of fiscal fairness with respect to support of schools in other districts. The phase-out of the special entitlement rate for federal funds under P.L. 874, now entering the third year, has increased the State's financial contribution. State officials also note that the State has already assumed a considerable amount of funding formerly provided by the BIA by providing full costs of the boarding home program and by the agreement under the Tobeluk case to provide secondary schools.

A very strongly related question of finance is the potential cost of upgrading transferred facilities to State standards, which is estimated to be as high as forty million dollars, and the projected need for construction dollars for elementary and secondary schools in the REAAs estimated at as high as three million dollars over the next five to ten years. (The Department of Transportation and Public Facilities is currently undertaking an appraisal of upgrading needs at 23 BIA school locations.)

The Bureau of Indian Affairs' position is that the Federal government has no legal obligation to finance schools which are transferred to the State--these schools, once they become part of the REAA operation, should be entitled to full support under State foundation entitlement and in-lieu payments as is any other school in the REAA. They note that the continuing operation of Federal schools in Alaska is not a legal obligation--it is not based on any reservation status or special treaties--but is instead only a "trust" responsibility.

Enabling legislation for the REAAs does not provide for them to hold title to real property--this is still in the hands of the State, which also assumes responsibility for the major maintenance and repair of existing school facilities and for new construction. Thus, the present policy of the Bureau to transfer title to schools, where such title is not affected by the Native Land Claims Settlement, on an "as is, where is" basis, relates directly to the State rather than to the REAA.

The question may well be asked if the time has come where the negotiations on transfer, particularly the financial questions involved, may not have to be undertaken directly at a higher level than the Department of Education and the Area Director's office. There is the related question of whether legislative assent by the Congress and the State should be sought. Some thought might well be given toward introduction of legislation at the Federal level which would constitute enabling legislation for culmination of the transfer effort, with authorization for appropriations to meet the transfers as well as perhaps resolving some of the uncertainties of the Indian Self-Determination Act as applied to Alaska. An appropriate resolution of the State Legislature accepting the agreed-upon terms would then be in order, or the State resolution could be in advance and seek Congressional concurrence and commitment.

Policy Issue: Application of the Indian Self-Determination Act to Native Education in Alaska

> Although the contracting for administration of Federally supported educational services, including the actual operation of village schools in Alaska, appears to be within the broad purview of the Indian Self-Determination Act, would such actions in Alaska be in the best interests of education for rural Alaska Natives?

It has been interpreted by Federal officials that the provisions of the Indian Self-Determination Act with regard to the contracting for services, including education, is within the scope and intent of the Act. The Act defines "Indian" tribes as "any Alaska Native village or regional or village corporation as defined or established pursuant to the Alaska Native Claims Settlement Act." However, this language does not adequately cover the question of tribal identification in Alaska. The regional non-profit corporations created by the Alaska Native Claims Settlement encompass, in at least several instances, more than one "tribe" as defined or interpreted by the Native people themselves. The writer has been told that even in the

case of village corporations there may be more than one tribe involved insofar as the Natives themselves perceive the tribal situation. As one Native leader expressed to the writer, "They try to tell us what is a tribe but we know our own tribal arrangements--they don't." So, depending on definition, and who is doing the interpreting, there could be as few as twelve or more than 400 tribes in Alaska.

Senator Gravel has proposed legislation that would designate the twelve non-profit regional corporations in Alaska as "tribes" for the purposes of the Act. Generally speaking, the Bureau of Indian Affairs has already recognized this definition in the contracting of services other than education to some regional non-profit corporations. There have been indications from some villages that they would not want a contract for their school operation to be handled by a regional corporation. Perhaps there is some concern that contracting is a hidden form of the old expressed policy of termination of all Bureau services or that the local control which they desire would become regional control. Among concerns on the part of the Bureau officials, probably shared by some villages, is that when a service is contracted, the contracting agency, such as a regional non-profit corporation, uses a substantial amount of the funds available for administration and overhead, resulting in less funds being available for the programs.

There have been tentative moves made on a regional level toward seeking a contractual relationship for operating schools. It is clear that the Bureau office in Juneau is not encouraging any one option and, thus far, there is no record of any individual village seeking contracting authority. However, the potential of contracting for school services introduces complexity to the school transfer picture.

FINAL DRAFT

Paul A. Goodwin
Nov. 11, 1977

Dick Mueller's REAA (?)

COMMUNITY PERCEPTIONS OF AN REAA: A CASE STUDY EMPHASIZING CULTURAL IMPLICATIONS

The establishment of local control of education was mandated by the legislation known as Senate Bill 35 (SB 35). The purpose of this paper is to examine and report on the effect of the legislation as perceived by the members of a rural community.

Financial considerations limited the scope of the research effort to sample rural opinion for this report. Although the questionnaires, board minutes and other means were used to collect information from all REAA's, the preferred method would have been to gather first-hand knowledge by visiting each REAA and all its communities. Since this was not possible, we chose to use a case study approach to supplement the information obtained from these other sources as well as to see what different types of responses or information could be collected in this way. Expense and time associated with visiting the greatly separated communities limited the case study approach to only one REAA and within that one REAA, travel was limited to the central community. However, the number of people from outlying areas traveling to the central community allowed us to obtain opinions from roughly 50% of all the communities located within the chosen REAA. Nevertheless, as the differences of opinion surrounding a given issue varies from community to community, all differences may not be thoroughly dealt with in this report.

In selecting an REAA for the case study, five criteria were considered: (1) the administrative seat must be located in a central community which is part of the REAA; (2) the REAA must contain a multi-

cultural population; (3) the REAA must contain a BIA school; (4) the REAA chosen for the case study should not be one that has been dealt with elsewhere in the overall study; and (5) the REAA must be convenient for travel.

The person chosen to conduct this case study and write this report was chosen on the basis of his person background, expertise in education, and recent activity in Native affairs. Raised in Kotzebue, Paul A. Goodwin is of partial Native Alaskan descent. A portion of his primary education was obtained in a boarding-home context; the remainder in schools located on the Kenai Peninsula. He did not attend high school, but is, nevertheless, expected to officially receive his Ph.D. degree in geophysics from the University of Alaska in May of 1978. Paul Goodwin has taught extensively at the University of Alaska, concentrating his attention on cross-cultural science courses. He is also a past President of the Fairbanks Native Association, Inc.

Concerning the results and how they were arrived at, the author spent five days in the REAA central community and talked with parents, teachers, administrators, and in some cases, bystanders, in the effort to assess the rural point of view concerning the issue of local control of education. Each individual rather than being "interviewed", was allowed to "free-associate", after introductory comments were given by the author. These introductory comments concerned the intent of this report. In an attempt to focus the conversations, three general questions were prepared: "Why did you and/or other members of the community think it necessary to have local control of education?"; "Did the legislation that set up the REAA adequately address your, or the community's, original concerns regarding education?"; and "How

has the establishment of local control of education affected the quality of education in your community or REAA?" Usually questions were asked as the responses to the above questions developed.

In virtually every case, the responses were offered freely and in the spirit of interest and concern. In many cases, a given respondent would relate his/her concerns regarding local control of education for well over an hour; in some cases for well over two hours. In all cases, the author attempted to maintain the integrity of the rural opinion concerning a given topic but interpretation of the responses have been added to unify the report. In that regard, this chapter is not so much concerned with exactly what was said, but with the meaning of what was said. What follows, then, is hopefully not just a codification of responses given, but a discussion of the core outstanding issues, as determined by the rather obvious common interest among the respondents. The paper is arranged so as to place the topic receiving the most response first. Thus, as one reads this report, topics will appear in the same order and, hopefully, with roughly the same emphasis, as was given them by the members of the rural community.

THE QUESTION AS TO WHY LOCAL CONTROL OF EDUCATION WAS DESIRED

The first question asked ("Why did you and/or other members of the community think it necessary to have local control of education?") received responses that strongly suggested a unanimous feeling in the community concerning the entire issue of local control--whether it be local control of education or local control of anything else. Everyone who was asked the question generally agreed that local control is the right way to handle education. Most people were not particularly in

agreement concerning why this should be the case. Hence, while soliciting opinions, one would hear that local control was originally considered necessary for a variety of reasons. Some would maintain that local control was primarily necessary to assure the timely maintenance of school facilities. Others would maintain that local control would provide for community input concerning the selection of teachers and administrators. Yet others felt that local control would simply make the school system, and particularly the administrators, "more responsive" to the community need and interest.

In spite of this diversity of opinion, one is able to discern a central theme linking all of the reasons given for the necessity for local control of education to a more general rural community concern: That concern being the reduction of the influence of what are perceived as culturally and socially irrelevant bureaucracies in favor of systems that are neither bureaucratic, nor culturally or socially irrelevant. Thus, one sees the rural community developing, for instance, a strong advocacy position with regard to local control of education, while at the same time seeing a partial abandonment of the Western concept of law.

To give examples, and to further clarify this point, the author suggests that education as well as law, in the Western context, must be highly bureaucratic and almost completely arbitrary. To overlay such systems onto a culturally different, rural community often results in situations that are, in a somewhat Alice-in-Wonderland sense, ludicrous.

For instance, the arbitrariness of Western law would have children selling lemonade on their front walk charge sales tax to their customers (some states have actually filed suit in such cases). In a Western urban community, assessing the full range of legal measures against such children

may be necessary to establish the "fairness" of the law. In the rural community, however, such arbitrariness is not well understood, and given the event-oriented character of the Native Alaskan cultures, it is certainly not understood in terms of fairness. Where the letter of the law is upheld in the rural community, racial, cultural or social animosities often develop. These animosities tend to leave the Alaskan society, as a whole, judicially in far worse shape than they would have been in had the society not built such culturally and socially irrelevant arbitrariness into the law in the first place (consider the problems that Alaska has always had with the "Bush Justice System").

In the case of education, cultural and social relevance is also an issue of considerable importance. It is an issue, however, that has had much attention drawn away from it, in the past, by the very nature of the bureaucracy that existed at the time: i.e., the bureaucracy associated with the State Operated Schools (SOS). Thus, as the community responded to the question of this section, the story about how the SOS administrators and teachers would pay little attention to education in lieu of "sitting at their desk filling out papers for Anchorage" (Anchorage is where the SOS administrative seat was located) was often heard. As with the necessity for the arbitrariness of law, the rural community does not well understand the necessity for an administrator or teacher spending large amounts of time "filling out papers for Anchorage."

Given this interpretation, one arrives at a culturally relevant perspective concerning the motivation that originally gave rise to the movement toward local control. That is to say, while people offer specific reasons, which presumably identify the motivation for local

control (e.g., "better maintenance of facilities"), what is probably closer to the case is that members of the rural community wish local control more for cultural reasons than for the rather pat, more mundane reasons that are almost always given in the standard interview situation. What these so-called cultural reasons are is beyond the scope of this brief report, but they seem similar to the motivating forces that prevailed during the development of the Alaska Native Land Claims Settlement Act of 1971 and, more recently, during the development of the Indian Self-Determination legislation as related to Alaska.

It would be incorrect, however, to assume that the impetus for local control of education is entirely an extension on the motivation behind local control in general. In point of fact, within the rural community there is a substantial regard for the quality of education. Although this regard for educational quality is left somewhat unarticulated, it is fairly easy to see that the concern for quality has been an important motivating factor in obtaining local control of education. Consider, for example, that many respondents felt that local control was necessary so as to provide for community input in the selection of teachers and administrators. Further questioning of the respondents concerning this point indicated that many of these people felt that if the community could control the hiring of, for instance, teachers, "education would get better." This point will be amplified further in another section. For now, suffice it to say that judging from this particular case, the concern for educational quality seemed to provide substantial impetus for the rural community to become involved in the issues surrounding local control of education.

BOARD TRAINING

The second question ("Did the legislation that set up the REAA adequately address your, or the community's, original concerns regarding education?") is somewhat more complicated than the first, in that it concerned problems that are currently a part of the community. For this reason there was no lack of opinion.

On the average, the rural community responded in the affirmative to the question. That is, most agreed that the REAA concept, and attendant legislation, did indeed address the original concerns regarding education. Whether the legislation adequately addressed the original concerns of the community regarding education is a questionable point. What follows, then, is the present author's attempt to duplicate the feeling of the respondents by attempting to duplicate the opinions surrounding the individual issues that made up given answers to the question.

While it was generally agreed that the establishment of the REAA did address many local problems associated with education, it was also generally agreed that the operation of the REAA resulted in the development of many more problems. The most outstanding of these problems is the concern regarding the overall competence of the newly formed Regional School Boards and Community School Committees.

Most of those who brought up the issue of board training stated that the majority of the members of the various boards simply did not know what it was that a board was supposed to do. Many respondents (including board members) supported their opinion by pointing out that some Regional Board members and many Community School Committee (CSC)

members were not literate; many respondents were of the opinion that the average school board member[1] had a very poor education. Consequently, they felt these board members could not be expected to deal effectively with the sorts of problems with which they were asked to deal. It is interesting to note that comments such as these were made by Natives and Caucasians, as well as by the educated and non-educated people of the community.

Given other evidence as well, it is assumed that the statements concerning the literacy and educational background of many of the school board members were essentially correct. One then naturally wonders why members judged unqualified were elected to the board.One also wonders how the function of a school board, made up of such members, is affected. The former query is dealt with in a later section. Concerning the latter query, it was found that from the point of view of many of the rural community, such a school board does not work very well at all.

For example, among the more common critical comments were: "... it is difficult to get a quorum because board members use the occasion of a school board meeting to party"; "Most board members just sit there and don't say anything while a few aggressive types dominate the whole meeting"; and "The board spends too much time on personnel matters, maintenance and other details while ignoring the important issues."

In most cases, it was difficult to find out exactly what they meant by something they said. For instance, what does a person mean

---

[1] It was often difficult to tell whether people were referring to the REAA Board or the Community School Committee or both. For this discussion, "Board" will be used in the singular, as the REAA Board, even though comments may apply to community boards as well.

when they say something like "... members use the occasion of a school board meeting to party"? In particular, what do they mean by "party"? What sort of behavior have they witnessed? Furthermore, in what ways do the "aggressive types" dominate the board?

Given the rather vague answers to the above questions, one is led to believe that perhaps rather than some first-hand experience concerning board competence, most were responding on the basis of peer pressures, or some other such process. Except for isolated events, most respondents could not affirm the behavior of any board member on the basis of first-hand knowledge. However, it was all too often assumed that if a given board member did not attend a meeting, that individual was "partying." It is not the purpose of this report to make a case for or against the contention that some board members party so much that quorums cannot be achieved. The fact is, rural school boards regularly hold meetings that are attended by a quorum. What should be understood about this particular community is that the matter of partying seems to have led to a general feeling that some of the board members are not competent. Even if the board were working perfectly, such assumptions by the community would tend to reduce its effectiveness.

To a lesser degree, the same is true of the community observation that a few aggressive individuals dominate the board. While it may be true that if one attended a given rural school board meeting, it would seem that a few dominate, the facts may be quite different. As one respondent realized and commented upon, the board method of governing (and, indeed formal education itself) is imposed onto a culture that, if left alone, would do it otherwise. The board, being comprised of culturally different people, thus arrives at many curious operational compromises

that allow it to function. One such compromise is the case where various board members meet informally, in some cases many times, to discuss issues before the formal meeting. When the formal meeting begins, it is not uncommon, especially for the Native people, to vote rapidly and unanimously on a given issue. Upon seeing such a process, many outsiders would tend to believe that at least some of the Native element of the board was easily influenced, if not downright disinterested. But as we have seen, this could very possibly be a judgment that while basically sound in a Western cultural sense, may be otherwise completely incorrect. Similar care must be taken in the judgment of other characteristics of rural school board operations.

For example, if one read the REAA Board minutes, one could be led to the conclusion that the board and administrative functions are interchanged. As one of the more common critical comments concerning the board under study has indicated, the board is said to be far too involved in matters that are usually considered administrative, while being far too little involved in educational policy and programs. This suggests that the administration handles educational policy and programs. Administrators are usually hired from outside the REAA and if they are in primary control of policy and programs, then the rural community would seem to have gained only a new administrative role in acquiring local control of education. On the face of it, the board has not exercised its authority to establish policy or programs that would affect educational quality. In any case, the reversal of board and administrative roles seems to suggest that the board does indeed need training. Many of the administrators that were questioned agreed with the implications attendant to the reversal of board and administrative roles in the rural community.

However, the rural school board members had a different opinion of all this.

From the point of view of a Native member, involvement in personnell matters, for instance, is unquestionably an appropriate role of a local school board. The reason for this was established by comparing the older SOS and BIA school systems with the present system. The author was told that whereas the SOS and BIA systems often solicited local input regarding the hiring of a new teacher (many local advisory school boards to SOS and BIA had been set up in Alaska), it was never the case that that new teacher had any sort of real committment to an employer-employee relationship with the community. According to many Native respondents, these teachers owed allegiance to 'Anchorage or Juneau" (i.e. the administration). Thus, it was said, those teachers could do more or less "anything they wanted to do" even if doing it was against the wishes of the community. In contrast, the present system allows the board to respond to local concern and, if warranted, fire a teacher. It was held that this new board power rendered the current group of teachers a good deal more responsive than the teachers of the past. Moreover, it was quite emphatically stated that this new responsiveness of the teachers would result in a higher quality of education for the children.

Further concerning the quality of education, one CSC Chairman responded that his group had become quite involved in the subject. When asked what sort of involvement this was, he explained that the CSC had recently begun changing the role of the local school principal. Back in the SOS days, and for a part of the REAA period of operation, the principal functioned largely as an "administrator of school business."

He meant that the principal was primarily concerned with reporting requirements, record keeping, letter writing, etc. (filling out papers for Anchorage). In changing the role of the principal, the CSC had in mind that the principal should be an "administrator of teachers" instead of an "administrator of business." That way, he said, the principal could teach as well as keep abreast of the quality of teaching in his school.

Continuing, the Chairman told of the CSC becoming involved in "minimum requirements testing." It seems that the CSC was toying with the idea of requiring all the graduates of the sixth and twelfth grades to take tests that would assess their actual academic capabilities. In this way, the school would be assured that the graduates of today "would not be like the ones who used to graduate around here." To add emphasis, the Chairman interjected that "all they ever used to do in school back in the old days was play basketball!"

Without belaboring the point, we should be able to see that while the boards may need training in the procedural or functional aspects of their role in education, little or no training is needed in the philosophical aspects. That is to say, the boards, clearly, have already assumed their appropriate role: that of being concerned about the quality and content of their children's education. However, this does not appear to be well understood by many of those in either the administration or the community. What often happens, then, is that many develop inappropriate feelings concerning the board's competence. However, as may be inferred, the major problem is not the board's competence, necessarily, but the different ways that the board looks at things. Because a particular board has one way of looking at something, and another board or admin-

istration has a different way of looking at the same thing, misunderstandings can occur.

The sort of training that might be offered a rural school board, then, should stress the relationships that should exist between boards, and between boards and administrations, if the system is to function effectively. Cross-cultural training, of an applied, non-theoretical nature, might be offered to the administrations as well as to the boards so as to develop the awareness needed for viable communication.

THE RELATIONSHIPS BETWEEN THE BOARDS AND BETWEEN THE BOARDS AND ADMINISTRATION

The relationships that exist between the Regional School Board and the Community School Committee (CSC) varies from one REAA to another (see report by S. Horton). Further, within an REAA, the relationship between one CSC and the Regional Board can be quite different from the corresponding relationship of another CSC. That this can occur is related to the fact that no firm guidelines exist that would define the relationships. Hence, within a given REAA, one CSC may dominate the educational affairs of the Regional Board and/or administration, while another will simply take what is given them.

When this topic came up, further questioning revealed that the lack of definition of the relationship between the Regional Board and the CSC was thought to be a weakness of the REAA system. When the suggestion was made that the State step in to establish firm guidelines, most respondents replied with an unequivocal no. They felt that the relationship could better be established by some scheme involving

board training.

Concerning the various boards and administration, another weak point was considered to be the lack of definition in the relationships between them. For example, was the local school principal answerable to the Regional Board or to the CSC or to the Superintendent? With regard to this particular relational problem, some within administration hinted that the State should develop guidelines. However, respondents in general again felt that this sort of problem could be dealt with most effectively by board training

Unfortunately, this perceived importance of board training is, many times, derived from considerations that are ill-defined. Consequently, no unanimous opinion can be obtained concerning the sort of board training the rural community feels that it needs. Some suggest that the board be given a "three R's" orientation concerning how a board works. Others suggest that this would be fine, but what is really needed is "more competent" people on the board, then training.

THE POLITICAL PROCESS IN THE CROSS-CULTURAL SETTING

To answer the question of how and why so-called incompetent board members were elected, one must examine the Western political process in its cross-culturally transplanted form.

Within the Western culture, it is a tacit assumption that the political process will select, from among many, the person best suited to fulfill the duties and responsibilities of a given office. To no small degree, this selection is accomplished by pitting one candidate for a given office against another. The candidate who is best able to express

himself, and who is then best able to manipulate the mass-media, is the candidate who is perceived by the populace to be the one most suited to fill the office. While this does not always work in a Western community, it works often enough that a popular faith in the system becomes established.

In the case of the REAA legislation, we have not only the legislation itself, but the political process, imposed on a culturally different environment. This suggests operational problems. In the case of the legislation, an operational mode can be established largely by definition. In other words, an REAA will operate according to fairly well defined rules and regulations. In the case of the election process, however, definitional considerations can only modestly affect the procedure; not the process. That is to say, while the State can impose a conformity on a rural election procedure (i.e., filing petitions, election judges, etc.), the State cannot impose conformity on the process.

Thus, in the rural community, one often sees unique variation on the theme of Western democracy, and in particular, on the theme of the election process. For instance, in the more traditional areas, a full slate of candidates may run for a given office, but it is often a foregone conclusion who will finally be elected. Members of important families, or those who are otherwise well known, are usually elected over those who may be technically better qualified to fulfill the responsibilities of the given office. For this reason, the election campaign is virtually non-existent in the more traditional areas of rural Alaska. It seems that the Western election process has been supplanted in the rural Alaskan community by the more culturally relevant oral tradition.

But what is the outcome of a culturally modified political process?

Will the new process result in a better or worse social condition for rural Alaska? In those cases where the new political process is found to better conditions, what can the State do to enhance the process?

In the opinion of the present author, if the first two questions were specifically asked of a given traditional community, the answer would be one that stressed self-determination. In other words the traditional community would not be so much concerned with the outcome of their particular brand of political process, as they would be with the thought that they could do it themselves. This is not to say that the traditional communities would not welcome a few State-initiated changes. In fact, in response to questions similar to the third kind, rural communities suggested such changes.

In particular, the changes suggested in the REAA under study were: (1) The State Election Office should devise means that would allow them to be better able to administer elections in a more timely fashion; and (2) The State Election Office should devise filing procedures, etc., that are more relevant to community understanding and circumstance.

These suggestions were given in view of the most recent school board elections. In some REAA's of Alaska, the elections were characterized as untimely and confusing (Interior Alaskan newspaper stories related to this issue are included). Concerning (1), many people stated that they did not know of the election until it was too late. With regard to (2), a few individuals thought the current filing procedure for school board seats to be essentially discriminatory. They apparently based their thinking on the feeling that most traditional candidates would not understand the necessity for obtaining a petition to run for a school board seat. Moreover, most of the would-be trad-

itional candidates would not be able to read or write and they would also not be familiar with the methods for completing a petition. It was said that when faced with the unfamiliarity associated with running for office, most traditionally oriented people would rather just forget the whole thing. In view of these considerations, one person suggested that a declared interest should be sufficient justification for placing a person's name on the ballot. Given the cultural context of local elections, this suggestion is not without merit.

THE RESURFACING OF THE ISSUE OF LOCAL CONTROL OF EDUCATION WITHIN THE REAA

Although this topic is not of overwhelming concern within the one REAA examined, mentioned of it occurred frequently enough to warrant its inclusion within this report. Moreover, the inclusion of the topic will add a different dimension to the previous discussion concerning the motivation for local control of education.

By way of preface, consider the previous section which examined the original motivation for local control. There, it was suggested the motivation for local control of education gained at least a portion of its momentum from the broader issue of self-determination. A case was made that further suggested that the self-determination issue was itself culturally motivated. Many of the opinions expressed by the members of the rural community tended to confirm these suggestions.

With SB 35, the rural communities have far less to worry about, insofar as they are concerned with an outside influence on local education. Nevertheless, in doing the field work for this report, it was more than

occasionally heard that the "administrative center of the REAA" was somehow deficient in its ability to administer local education. This is reminiscent of what all the rural communities were saying about Anchorage only a few years ago. Now, it seems the given REAA administrative center has assumed the role once exclusively held by the larger urban centers.

For example, comments received from residents of one village located toward the perimeter of the REAA examined, indicated that the REAA center was guilty of the same "unresponsiveness" now as was Anchorage in the old days. Of particular concern was the hot lunch program. According to the people questioned, their village had requested over and over again the equipment necessary to bring their school kitchen up to standard. As the weeks and months passed by, no equipment came. As a result, the village was forced to discontinue their hot lunch program.

Questioning these people further, it was found that while they considered building maintenance to be better now, it was not that much better than when SOS was doing it. The problems associated with maintenance centered around the length of time it took to get anything done. When asked why they thought it took so long to get things repaired, one individual stated that the administrative center "was too far away and the transportation was bad." But another interjected: "And those people up there are a different kind of people from us. We should be in the other region," implying that the "people up there" lacked an understanding of the needs of the community in question.

Continuing on the cultural theme, an older Native woman stated that she would not allow her children to attend high school "up there." One reason given for this attitude was that the people of the core city

spoke a different dialect of the Native language. Another person affirmed her statements and added that the local high school students attended school in a different REAA than the one in which the village was located. When asked why, family reasons were mentioned (another factor that should be considered is that the State pays for foster homes for boarding students. Consequently, if a student has family, or extended family, in an area with a high school, it is financially advantageous for both families involved to send the student there. However, the author does not feel that this is the primary motivation).

This curious way of looking at the REAA core surfaced again when the members of another village were questioned. In this case, however, the village was faced with the question of whether to keep their school BIA-operated or go with the REAA. In questioning a one-time CSC board member, it was found that the major concern of the village was how well the REAA could do as compared to the BIA. Apparently the BIA was making the local school a "model" and, as a result, was very responsive to the community. Since the village did not know if the REAA could do as well, they decided to adopt a "wait-and-see" attitude. When asked what sorts of things the REAA would have to do before they would join, all agreed that the REAA would have to demonstrate their ability in maintenance and responsiveness.

Cultural considerations entered into the conversation, but not in the explicit terms heard elsewhere. Nevertheless, the author felt that the cultural issue played some role in the village's decision to wait-and-see as subjects of a cultural nature were mentioned frequently.

All this raises the question as to what might be done to alleviate

these various problems. Unfortunately, it is not so easy as adjusting a few REAA boundaries. In the REAA studied for this report, one can identify two major language groups in addition to English. Also, some villages are largely traditional while some are either multi-cultural or largely Western. To adjust, therefore, REAA boundaries to account for all cultural variations possible, is out of the question. This leaves dealing with the problems themselves. In the opinion of the present author, this is the appropriate course of action. In the case of villages complaining of poor maintenance, better and faster communications between the administrative center and the local CSC would be of help. At least this way the village would be more aware of what problems there were in getting, for instance, their kitchen equipment. In the case of the village that adopted the wait-and-see position, such improved communication may represent an increased responsiveness on the part of the REAA center.

MISCELLANEOUS TOPICS

As might be expected, each person who responded to the inquiries that led to this report made their own unique contribution. Some, because they currently worked in or had worked in a Federal program, gave opinions and examples that reflected their experience within those programs. Others who had worked in a Native organization were able to offer valuable opinions concerning the role of these organizations in education.

Because each person's background was different, the supplementary comments were varied. They cannot all be included. However, a number

of these comments fit into three different categories. These categories are: (i) the Native corporations; (ii) the Federal programs (including the bilingual program);and (iii) the boarding home program. The remainder of this section will deal with each of these three categories one at a time.

The Native Corporations, whether profit or nonprofit, have become an integral part of the Native experience. It is not surprising, therefore, that Native corporations would somehow figure into education. What did come as a surprise in this case study was the way and the degree to which their influence was noted.

By way of explanation, the Native corporations have been formed, in one respect, to enhance the concept of local control. On the one hand, the profit corporations have been given money and land and the responsibility to manage those resources for profit. The profits made then work their way back to the Native share-holders of the corporation. On the other hand, the nonprofit corporation secures contracts and grants from various agencies to operate programs in the area where they are located. For instance, the Native programs operated by the BIA are more and more being taken over by the nonprofit corporations.

At the present time, the existence of the nonprofit corporations are of greater practical value to a rural community than the existence of the profit corporation. The reason for this is that nonprofits are locally based. They employ people in the community and provide for much practical training. In addition, the nonprofit corporations establish a feeling of self-determination for the Native population of a community. One way these corporations do this is to administer education

programs. As an example, the nonprofit corporation of a given region or community will often run the Federally funded Johnson O'Malley and Indian Education programs as well as the State funded Basic Education Program. In this way, the Native corporations quite substantially figure into education. But there is more to this.

When doing the case study, many Native people were approached. As they offered their opinions, the author often picked up a reference to one of the corporations. Sometimes it would be a reference to one of their family working for one; sometimes they would refer to their own employment experience. As the topic was followed up on, it was learned that these people have great expectations for their profit and nonprofit enterprises. They have corresponding expectations for the children who will one day work in and manage those enterprises.

Many times it was said that the children need good educations so that they could work in the corporations. It is interesting to note that while talking about the corporations, many referred to the need for a "three R's" education.

A reaction to the poor education of the past was many times one of adopting a hard attitude about the present educational efforts of the REAA. One young woman went so far as to condemn much of the existing school curriculum and many of the Federal programs as well. Condemning Federal programs was reasonably common, as people thought that there should be less emphasis on cultural enrichment and more emphasis on "education."

In all, it seemed that the employment market represented by the corporations acted as a strong stimulus for a good education. The Older Native person seemed to have felt this more than did the young. Pre-

sumably, the corporations represented a chance for their children and they did not want that chance lost because of a poor education.

The Federal Programs, as was mentioned in the last subsection, came under fire from the Native community. These programs were criticized relatively more by Natives who had not worked for the corporations than by other Native people who had, or by Caucasians. On the one hand, Federal programs represent support for many activities that employ Natives. Consequently, some Natives view these programs more in terms of the money they represent than in terms of their programmatic benefit. Most Caucasians of the community are usually involved in one program activity or another (at least the ones involved in this case study were). Many are educated and thus tend to view a program in terms of its more abstract benefits. The Native, who often had less formal education, tends to look at a program on the basis of its more obvious or practical benefit to the child. Thus, when no such benefits are seen, these people tend to be rather critical.

When talking to this latter group of people, the most commonly heard complaint was that the Federal programs concentrated too much on cultural matters. Particular criticisms centered around the bilingual education being offered in the schools and on the Johnson O'Malley (JOM) courses.

While criticism of the bilingual program was rather vague, and not too frequent, the author felt that those who did not like it would rather see it replaced by a more traditional Western curriculum. On a few occasions, comments like "the children are going to need English when

they grow up; not the Native language!" were heard. The JOM courses received much more criticism. The problem here is that often teachers from the lower forty-eight states would teach cultural courses to children who were a part of the local culture and who were thus familiar with it. As an example, one course was said to teach the youngsters how to snare rabbits while another taught camping; skills the children already possessed.

These criticisms suggest that the Federal programs should be modified as the educational needs of the REAA are identified. In this way, the Federal programs can become important alternatives for augmenting formal education.

The Boarding-Home Program in the next few years will be a thing of the past. Enough research has been done on this subject to indicate that the demise of the Boarding-Home Program is a much desired event. According to the relatively few comments given on this subject, the community strongly agrees. However, in talking with one familiar with the subject, the demise of the program will present many of the smaller villages with unexpected problems.

To paraphrase the problem: For many years the children of high school age have been sent to a boarding home program to complete their education. As the years went by, the villages got used to not having teenaged children about during the confining winter months. In the summer, the children would come home but the many activities would keep them busy. When the REAA's were established, new, small high schools were also established. Many of the students who would normally go away

to school stayed home. Some villages thus had a group of energetic teenagers with which to contend; a situation that many had not faced before. The lack of activity in the winter months caused these young people to become rather difficult. As a result, the villages were having trouble coping with their own children (the children were also having trouble coping with the new situation). Accordingly, some parents inquired as to the possibility of sending their children back to a boarding-home program.

Without additional comment, this problem was handled by not shutting down the local boarding home program immediately. In this way, those students who were used to attending high school away from home could continue to do so, if they wished, until they graduated. The choice was up to the student and the parents.

CONCLUDING COMMENTS

When one considers the enormous problems associated with transferring all educational responsibility from the State to the local level, it is a wonder that the REAA's are working as well as they are. This is not to say that there are no problems. Clearly, there are. But the problems are small compared to the magnitude of the task.

Consider that in the REAA examined for this case study, local communities were expected to : establish educational policy and programs; assume an administrative posture; and develop ways and means to establish local high schools. And, if that were not enough, all these new tasks were expected to result in a higher quality of education.

Yet, when the author visited the rural community to do this case study,

scarcely any reference was made of the enormity of the above-mentioned tasks. People did not view the transference of educational responsibility from the State to themselves as being a problem worthy of any particular concern. Rather, people simply accepted the responsibility and got on with business. Instead of hearing about how difficult the job was, what was heard was praise or criticism concerning some particular aspect of the job and how it was all going. If it was not an opinion on board training, or the quality of education, or the political process, then it was perhaps an opinion on some cultural feature associated with the issues.

In spite of the specific problems, virtually everyone questioned felt that the REAA was evolving in an appropriate direction. Some felt that it was evolving at an acceptable rate; others did not. The point is that everyone approached was optimistic and aware of education, and had at least a few comments to make about it. One seldom encounters such optimism or awareness in an urban area.

On that basis, the rural community seems to be too critical of itself. However, this is a healthy environment for change. In the opinion of the present author, the dissent and criticism along with the optimism and awareness cannot help but result in an educational system far better for the children than it has been in the past.

RURAL ALASKA GETS LOCAL CONTROL OF SCHOOLS

From SOS to REAA

Transition Largest Such Undertaking in U.S. History

21 School Districts Get 100 Schools; 15 Are New High Schools

By Jo Anne Wold

This week in the 21 newly created school districts across the state of Alaska from Angoon to Kotzebue, and from Adak to Bethel, school doors opened for the first time under local authority, classes began under local superintendents, with locally hired teachers, and under the direction of a locally elected school board.

The great decentralization, as well as the dismantling of the State Operated Schools (SOS), has occurred, and the era of Regional Education Attendance Areas (REAA) is underway.

No longer will village schools be dictated to by a state board and state superintendents. Area school boards will now make their own decisions on curriculum, development, teacher recruiting and the use of educational funds.

This transition from an appointed state board to locally elected school boards was the largest such undertaking in the history of the United States, according to officials of the State Board of Education in Juneau.

Dr. Marshall Lind, commissioner of education, said he would work very closely with the new boards. "We will provide whatever assistance we can," he said. "But we do not want to get in their way."

The Alaska constitution provides that every village with eight elementary age children must have a school, and that rural areas meeting the pupil requirement have the option of setting up their own secondary school.

This fall 15 villages will have a high school for the first time. Some high schools, such as Angoon where 55 students are enrolled, will have a full secondary school, while other villages, such as Greyling, will have one high school teacher offering supervised study or correspondence courses.

(continued)

REAA . . .

All-Alaska Weekly, September 10, 1976

In 1975 the landmark legislation passing control to local boards was approved by the state legislature. This year money was allocated to finance the new districts.

One hundred per cent of the new districts' education costs is paid by the state. In the North Star Borough School District, for example, 95 per cent of the basic education costs is funded by the state through the Public School Foundation (PSF). This year the PSF budget is $132.3 million.

In addition to receiving funds from PSF, the newly created REAA's have $40 million in funding from the state, as well as $100,000 for school board elections in rural areas.

During this period of transition and takeover of more than 100 SOS schools, there are more questions than answers, and, in some cases, more problems than solutions.

For example, the state department of education will not know until possibly late October how many new teachers have been hired by the new districts and how many students are being taught by the REAA's.

Teacher hiring in some areas was a hectic and chaotic situation. As the deadline day of school opening approached, some schools were still without enough teachers. Teacher job interviews, it was reported, were less than thorough.

Word of job openings passed via the grapevine with some teachers rushing to highway communities or flying (at their own expense) to villages for interviews. Some teachers, who filed applications in early spring, were hired one week before school started.

Teachers going to remote locations had to pack personal belongings, household goods and enough food to carry them through the nine month school year. Many of them, caught short of cash, had to borrow money to buy a large food supply and pay the freight costs.

The real rub came with housing for the increased school personnel. In most places teachers were told, "housing is tight. You will have to make your own arrangements." This resulted in some teachers sharing the same living quarters. Because of the

REAA . . .

—Continued from page 1

housing shortage, teacher couples were preferred.

One couple on a tour in Fairbanks heard of a teaching position in a nearby community. The man applied for it, received it, and they flew home to quit their jobs and sell their home in order to teach in Alaska. (The retirement pay here, four times greater than in their midwestern state, was the deciding factor, they said.)

Another problem is school buildings, especially for those communities where there has not been an elementary or secondary school.

The success of REAA hinges on the $59 million school bond proposal that will be on the ballot this November.

In addition to SOS schools, a number of Bureau of Indian Affairs schools (BIA) have been taken over by REAA. The largest one is the 700-student school in Kotzebue.

"We are vitally interested in this transition being a successful one," said Deputy Commissioner Nate Cole. "We are totally committed to local control of education. We put a lot of our department's resources into this decentralization."

When Cole was asked if he though REAA was a more expensive program than SOS, he said, "In my personal opinion, I do not believe it is.

"I base that on having done some analysis on SOS costs from its inception until its termination this year."

Meanwhile, at the Center for Northern Research (CNER) at the University of Alaska, Fairbanks, a study has been underway for the past year on the Public School Foundation program.

"One reason for the study will be to determine whether REAA is more or less expensive than SOS. Right now no one knows," said E. Dean Coon, assistant director of the center.

The study, due for completion next year, will also determine an equitable method of collecting and distributing state funds for schools. They will look at the validity of regional differences and make recommendations. Right now, for example, the Barrow school district gets 133 per cent more per student than the state spends per student in Anchorage.

On the subject of REAA funding no one is sure whether the money for REAAs is "too little, just right, or too much," Coon said.

This fall CNER will sponsor four regional workshops in Fairbanks to introduce reports and gather public opinion on public school funding.

Voters To Determine Bush Schools

By Sam Kito

THE RECENT OUT of court settlement by the State of Alaska resulted in a commitment by the state to enable elementary and secondary school age children in every bush village to continue their education at home.

This settlement is designed to stop the disruption of family life that existed in the past by forcing children to leave their village home to attend school. Sometimes children had to travel to Oklahoma, Oregon, Mt. Edgecumbe and Wrangell Institute.

Those students traveling to Wrangell Institute ranged from grade one through grade eight. Imagine for a minute, a parent with a six - year - old standing at the airport waiting to send his child to school for nine months to be raised without intimate parental guidance.

IT IS unfortunate that this litigation had to proceed to conclusion prior to a settlement being reached. The settlement is contingent upon the passage of the $39 million rural bond issue to face the voters in November. Of that amount, $20 million will initially be set aside to settle the Molly Hootch lawsuit.

Now that a settlement has been reached, passage of the Rural Construction Bond issue is essential to provide quality and responsive education in rural Alaska.

If the bond issue fails, Alaska Legal Services has reserved the right to continue the suit.

Even though the Supreme Court ruled that the state did not have a constitutional obligation to provide education in each community, it did reserve the right to review the progress of establishing schools to provide education in rural Alaska in the future.

THE NEGOTIATED settlement is a step in the right direction. The governor should be commended for recognizing that the Boarding Home Program and dormitories were expensive alternatives to providing local education.

The settlement could not have been completed by the governor and legal services if the legislature did not pass the rural bond issue. The legislative leadership recognized that a bond package had to be approved in order for negotiations to culminate in a settlement. The action of the leadership will be greatly appreciated by parents and children who will be able to attend school in their own community.

There has been a continued effort to move education closer to isolated communities, as the parents' voices become more vociferous and the Body Politic listened. Listening were elected politicians, educators, and native leaders.

Observe the move to regional high schools in 1965, the development of the successful area high school concept implemented early in this decade and the Boarding - Home Program. The regional high school concept built dormitories in Nome and Bethel. The dormitory scheduled for Fairbanks was not constructed and was not wanted by parents in rural Alaska because the area high school concept was developed.

ADDITIONALLY, the completion of local education in rural Alaska will be determined by the 21 local education districts created July 1, 1976, with the passage of Senate Bill 35. These newly - created districts will be afforded the opportunity to control education on a local level. They will determine how local communities will resolve parental concerns regarding how the negotiated settlement is to be implemented.

Now it is up to the voters to decide whether we will provide educational facilities in remote areas of the state that will comply with the negotiated settlement.

It is my hope that the Molly Hootch case will be permanently closed.

Sam Kito, a lifetime Alaskan, is president of the Alaska Federation of Natives.

The Anchorage Times, Sunday, September 26, 1976

AFN cites education problems

By JEANNE ABBOTT
Daily News Staff Writer

Less than two years after State-Operated Schools (SOS) were decentralized by the Alaska Legislature, the new rural school districts are finding unforeseen problems of organization. Native leaders at the Alaska Federation of Natives convention Friday spelled out such problems as substandard schools, limited budgets and social impact on village communities.

The decentralization of SOS created 21 rural education attendance areas (REAA) throughout Alaska to provide bush areas with local control over their schools.

"IT'S TRUE, WE do have local control over our schools and are practicing self determination," said Bob Clark of Dillingham.

"It's finally our system, and we have a hand in our own education. It's a milestone within the Native Alaska movement," said Bob Schaeffer of Kotzebue.

But, both Clark and Schaeffer pointed to a number of problems that have arisen during the past year as new school districts were forming:

—THE NEW DISTRICTS are taking over "substandard" Bureau of Indian Education schools. "These are schools the bureau has always resisted bringing up to par," Schaeffer said.

—The 21 new administrations have been expensive to put together and Schaeffer indicated all regions have budget deficits.

—More thought needed to be given to the impact on communities, when children who would normally attend school elsewhere will be educated at home, Clark said. "Do we have enough food? Will it mean more welfare?" he asked.

—THE NATIVE CULTURE needs to be instituted in the schools. "We need to develop a system a lot more flexible," said Clark.

—"The state would dearly love to make the REAAs into boroughs so they can be taxed. We're not taxed now, but if we're not careful, we will be," Clark said.

Since spring of 1975, the new rural districts have been organizing their administrations.

"The regional attendance areas are basically organized. It's time to deal with the thrust of the bill," Schaeffer said.

ANCHORAGE DAILY NEWS

Our views:

State schools

True to the intention of the celebrated Molly Hootch case, which directed the state to provide high school education within rural villages, plans are proceeding to do so with all due speed.

We are pleased to see the state Department of Education moving with the necessary dispatch to fulfill the court settlement. Since a $59 million bond issue for state schools was passed in the Nov. 2 election, the department has laid elaborate groundwork in preparation for construction. Most projects authorized by the bond will be under way during 1977, and many projects are expected to be completed by 1978.

So far, the department indicates that 20 to 30 new buildings, either kindergarten to 12th grade or grades 9 to 12, will be started next year. Additions will be made to approximately 20 other structures for secondary programs; 20 more will be upgraded to meet fire, safety and health codes. In all, that means 70 to 80 projects are already planned to serve bush students.

Not only is the department moving rapidly toward this construction, but it seems to be making every effort to get the local communities involved in how the schools should be built.

The establishment of 21 new rural school districts last year has made a big difference in the department's approach to the projects.

This month there will be a workshop in Anchorage for school boards, about 70 people, to train them in developing educational specifications. Out in the communities, staff from the Department of Education is helping districts with plans for programs and building design.

Meanwhile, the Department of Public Works has already hired site investigation teams in some districts to do surveys and make soil tests. The department is now advertising for architects, and hopes to coordinate district projects with an organized process of selection.

But here too, the local communities are able to get involved. Recent legislation provides that individual districts may administer school construction through a grant program if it does not want the Department of Public Works to have the responsibility. Districts using this option can select their own architects, and monitor their own construction projects.

It all means that local people will have a major say in where and how the local schools will be built. And, we are hopeful this will result in new buildings that are better fit to serve Alaska's villages.

Bond Issue Will Fund 70-80 School Projects

All-Alaska Weekly, December 3, 1976

The proposition to issue $59.6 million in bonds for new construction and remodeling of schools in Alaska passed on Nov. 2 and sixteen of the 21 new rural school districts which were formed as a result of the well-known and now-settled Molly Hootch case will come under the statewide construction project; and as a result some 2,780 students who have had to leave their home towns to receive a secondary education will now be able to attend school at home.

Of the total bond issue $20 million will go for rural secondary school construction. Some rural districts will be building new facilities, while others will be remodeling existing facilities to handle secondary enrollment.

Overall, 32 rural and urban districts throughout Alaska will be funded under the bond issue, and the total number of construction projects will number between 70 and 80. Construction will begin in some areas this summer, and all construction should be completed by December of 1978.

"We'd like to tell everyone in the state how grateful we are that the bond issue passed," said Katherine Hurley of Wasilla, president of the Alaska State Board of Education. "It was wonderful to see the support we had from all over the state, and that people really supported education for the rural areas.

"Even in the cities they did. Otherwise it would not have passed. This speaks well for the kind of issue that it was, and it shows that if you really have a need people will vote for it."

PLEASED BY OUTCOME

"Frankly, I'm very happy and pleased," said State Board of Education member Darwin Heine, of Fairbanks. "With things in kind of an unknown situation with the pipeline winding down, I wasn't too sure about any of the bond issues. I'm happy it came out as well as it did.

"As far as education in the state is concerned, we can now move forward with the commitments the Legislature, Department of Education, State Board of Education and Governor have made to all the people, particularly in the rural areas where there are minimal school facilities."

"I'm very pleased," said state board member Jan Hohman, of Nome. "I was rather worried. I didn't think the larger cities would go for it, although it's certainly needed in the rural areas.

"Our son is not that far from high school age. If you're a parent in the community and have to send your kids away after eighth grade, it really hits home. Passing the bond issue was the only fair thing to do.

"It's been totally unfair to send young children from their parents. I'm really excited the bond ixsue passed," Hohman said.

State Board member Thelma Langdon, of Anchorage, said, "I'm delighted the bond issue passed.

"I'm disappointed Anchorage didn't go for it as much as I was hoping (approximately 24,000 voted no and 20,000 voted yes), but the number of Anchorage people that did vote for it made if possible for the bond issue to pass."

Several key groups supported the bond issue in Anchorage, Langdon noted.

"Sue Linford, an Anchorage school board member, worked with several committees to support the bond," Langdon said.

"The campaign in Anchorage media-wise tipped the balance," said state board member Malcolm Roberts, of Anchorage. "Without that, the bond issue wouldn't have happened.

"I'm gratified that the bond issue passed because the schools are needed, and it reflected an understanding on the part of urban Alaskans for the very real needs of Alaska's children in smaller communities."

TURNING POINT

"The turning point was the TV campaign explaining the issue. We're meeting a very real problem. Children have been taken from their homes for decades. The TV spots clearly explained the importance of the bond issue," Roberts said.

Board member August Anderson, of Sitka, said he was "surprised for one, and happy for another. We apparently can see the sensitivity of the people. It's pretty clear how they all feel.

"It had to be done sooner or later. Passing the legislation for the Regional Education Attendance areas and not providing schools is like an empty lunch box. The funding is necessary to get some action.'"

Anderson said some persons he talked to had mixed reaction about the bond issue.

"Some said, the villages are dying, why preserve them. I say we are morally obligated to help our fellow man," Anderson said.

Board member Lt. Col. Terry Brown of Fort Richardson, said, "I'm very happy. I've been out to some villages and seen the need for schools, and needless to say I'm extremely happy to see the money passed by the voters. It shows a greater awareness than we were willing to anticipate of the need for improved school facilities in rural areas.

"The initial thought was that metropitan areas might defeat the bond issue, if it were to be defeated. There was a big effort to acquaint the public with the importance of the bond issue. It was a big education effort," Brown said.

(EXCERPT)

AVCP-Yupiktat Bista seek contracts to run twenty-eight schools

Tundra Times 12/8/76

According to Mr. Carl Jack, Executive Director of the Association of Village Council Presidents, Inc. and Yupiktak Bista, Inc., plans are underway to study the feasibility of AVCP, Inc. contracting for the operation of the 28 BIA schools in the AVCP (Bethel) Region. "The plan to do a feasibility study for the take over of the 28 BIA schools by AVCP is the result of concerns expressed by the people from the villages that currently have BIA schools" stated Carl Jack. "Their concern is whether the quality of Education will suffer when REAA's take over their schools due to a lack of adequate funding."

The current goal of the State Department of Education is to take over all BIA schools in the next three (3) years or by 1979. Further, the State Commissioner of Education is trying very hard to get the BIA to agree to keep funding the BIA schools even after REAA takes them over. Further the State Department of Education wants the BIA to keep paying for the following for 5 years after the REAA takes the BIA Schools over:

(a) AVEC costs (19 schools)
(b) Maintenance costs (32 schools)
(c) Hot Lunch Program (32 schools)
(d) New construction costs
(e) Take all Title monies and
(f) Operations including salaries, etc.

It is estimated that over the next 8 years, if the BIA schools are taken over by REAA's, that this will cost the AVCP region more money than the BIA Bethel Agency get to run the schools and other programs, due to the fact that the responsibility for paying for education will go from State to local government through Unorganized Borough concept that the State is working on.

The State of Alaska has been very reluctant to spend any of its general fund for bush education. The money from oil and other resources currently goes into the State general fund and currently the state is meeting their responsibility for bush education by two primary sources, one is through bond issues in which the public pays for it and the other is through BIA funding.

"The final decision for AVCP to take over the 28 BIA schools is contingent upon several factors: first is the full authorization by the AVCP delegates to undertake a feasibility study for the administration of the schools under contract with BIA. Second is the results of the feasibility study and third, which is probably more important than the first two is the consent from the villages for AVCP to administer the schools" Mr. Jack stated. "We have submitted a letter to the BIA notifying them of our intent to contract for these schools with copies to the Alaska Commissioner of Education and affected REAA Boards and Superintendents. This move we have taken is within the spirit of the Indian Self-Determination and Educational Assistance Act and as long as we intend to contract for these schools, the BIA cannot transfer them to the REAA's. If all goes well, AVCP will become the largest educational agency within the State of Alaska and will be able to maintain, if not escalate, the Federal support of the BIA schools." Mr. Jack further stated.

CARL JACK, Executive Director of the Association of Village Council Presidents, Inc. and Yupiktak Bista, Inc.

Tundra Times Wednesday, December 22, 1976

State to get tough on rural school design quality

by Bob Speed
Ketchikan Daily News

Richard H. Holden, deputy commissioner of the Public Works Department says the state is moving toward a "get tough now" policy on architectural quality in public schools.

His statement came Friday as part of the final presentation before the Alaska School Board meeting in Ketchikan three days last week.

Discussion centered on buck-passing by state agencies and private architects which resulted in construction of an inadequate school building in the village of Shismaref, near Kotzebue. Holden used the case as just one example of inadequate planning and inspection.

Board member Jan Hohman, of Nome, noted that children in Shismaref have no running water for showers after physical education classes and that the school sometimes doesn't receive enough power for both lights and heat at certain times of day. "So they have to decide whether they want to see or be warm," Mrs. Hohman said.

Architect Malcolm Roberts, appearing with Holden before the board, agreed that the situation in the village of fewer than 250 people "is a mess," saying "I think it's fortunate the Shishmaref thing didn't hit the press before the (state school constuction bond) election."

The answer, he said, lay in designing a set of prototype plans to standardize school construction in the future.

"You can't take three classrooms, take out some walls, put up a chalkboard, put a basketball net above that and put a wrestling mat on the wall to protect the blackboard and call it a multi-purpose room," he said, which is what happened in Shishmaref.

He said a school design must fit the needs of the local community it will serve, as well as the climate and geology of the area. He said a building code for school construction is now being formulated by the public works department, an effort applauded by the board. He said the code would reduce construction costs and prevent many mistakes common to non-standardized construction. The public works department is responsible for all school construction in the state, except when delegated to other agencies by the legislature.

Board member Beverly Horn said after the meeting that rural schools have enough problems without inadequate construction in the first place. She said the state has no money to replace buildings lost in fires or other calamities, adding that at least six bush schools have been lost to fire in the past five years. She said insurance is either prohibitively expensive for rural schools or nonexistent due to inadequate fire protetion facilities and training. She said children whose bush schools are destroyed and who live in communities where no other building is available for classes have little choice but correspondence study.

Another problem common to rural schools is vandalism, board members said. Holden said the best way to prevent vandalism is to get entire village populations involved in school construction, even if it's "moving rocks or laying carpet." He said pride in the finished product would be "the best deterrent."

Holden said the problems in the small town were examples of what should not be done, telling the board that blame ranged from the village itself, where decisions were made to alter building plans, to state agencies where people did not adequately inspect either the plans or construction when under way. He said he had fired one employe as a result of the Shishmaref boondoggle.

TRAVEL TROUBLE

Barbara Dirks of Akutan was fairly well determined to be at the recent Regional School Board meeting in Cold Bay. With this in mind, she arranged with the Coast Guard to be taken to Adak, hoping to catch a daily Reeve flight to Cold Bay. After 17 hours enroute, there was no flight from Adak, except to Anchorage, which she reached on Friday evening. She reserved a seat on the first Reeve flight the next morning. However, when Saturday morning came, the Electra was cancelled. She called Winship for a charter; it was cancelled because of weather. Finally she chartered with Orin Seybert and they started to Cold Bay. He touched down several times, reaching Cold Bay at 4:30 that afternoon. The meeting had concluded at 3:00 and Mrs. Dirks' 33 hours in transit availed her nothing as far as that meeting was concerned. She has now gone to Anchorage and will remain there until she comes to Sand Point for the meeting in February.

Other news in the region includes the cross-skiing program in False Pass and Nelson Lagoon, funded by Indian Ed. money. All of the equipment for a significant cross-country ski program has finally reached the villages. The only difficulty is that there is no snow.

TUNDRA DRUMS January 22, 1977

TOKSOOK ANGRY AT REAA TAKE-OVER

By Janet Shantz

A decision by the Lower Kuskokwim School District to take over the Toksook Bay BIA-operated school has caused widespread dissatisfaction in that community. People there say they don't want the LKSD.

In a letter to Al Weinberg, superintendent of the LKSD, and Joerene Hout, LKSD Board Chairperson, the Toksook Bay school board wrote that "every adult in this village opposes the transfer of the elementary school from the BIA to the State." The letter was signed by 100 villagers.

One of the villagers biggest complaints is that they were not consulted before the takeover decision was made. That decision came at the LKSD's November meeting in Platinum, where the board adopted the policy "that the District will assume the operation of BIA elementary schools in each village where a district-operated high school program is established."

Weinberg agreed that people are upset about the way the decision was made. But, according to him, it would have been difficult to have done it any other way. At the time the takeover decision was made, he said, they were under pressure from the Department of Education and plaintiffs in the Hootch case to get the construction phase of secondary programs under way. He said construction decisions could not be made without knowing who was going to operate the elementary schools. At the same time, the BIA in Juneau told the LKSD that they had to know by January first which schools the LKSD was going to take over in 1977-78. Weinberg said those deadlines gave the LKSD no time to publicize the takeover. He added, "I suppose we could have done more, but we didn't."

When the village learned of the takeover decision, they wrote in a December 17 letter to Weinberg and Hout that they didn't want the LKSD to take over the BIA school for these reasons;

"1. We find operation of the BIA school here to be superior to the operation of the state high school.

(Continued

A. The food program is better. The children receive more, and do not have to pay for it. Many times the family cannot afford to pay for the food the high school charges for.

B. We do not see the high school to be as equipped as the BIA school The high school has many expensive items that cannot be used, but the BIA school has more books for our children.

C. The BIA has and uses more full-time teacher aides from our village. This makes the BIA pupil-teacher ratio as good, if not better, than the state high schools.

2. We are very disturbed by your statements that the reason for LKSD take-over of the BIA 7th and 8th grades was for money reasons. We are concerned about our childrens education, not how much money you of the LKSD can get by counting our childrens heads.

3. If the state takes over the BIA elementary school, we are afraid there will be less money to keep our teacher-aides and cook with a job..."

Other letters were written to Hout and Weinberg asking that the LKSD decision be reconsidered. None of the letters were answered until January 6 because they both had gone out of town for about a month.

During that time, the frustrations of the Toksook people grew. They called a meeting of the five United Villages of Toksook on January 8, and specifically invited Hout to come to that meeting and answer their questions. Because she was still out of town, Richard Hazen, business manager of the LKSD. went in her place. The villagers there say he gave them no definite answers, and that sending no one would have been better than sending someone who could not give them answers. Hazen said that he "gave them as definite answers as he could."

The people of Toksook are under the impression that the lunch program that is now provided free in the BIA school, would cost them when the LKSD takes over. Weinberg said that low income families have never had to pay for lunch. "In all of the (LKSD) village schools, every student qualifies for free lunch except boarding students. And boarding students are given their lunch money by the school district." He said that the meal that the LKSD provides is a "Type B" lunch which does not differ significantly from the Type A lunch that the BIA provides. And he said local community school committees would have the option of upgrading that lunch with the budget that they are given.

Weinberg said that reasons for taking over elementary schools in villages where there is an LKSD secondary program is to achieve economies of scale. When a school system is under one organization space can be shared, as well as equipment and personnel. There would be no need to duplicate expensive facilities such as water and sewer systems. And he said that the transition between elementary and high school would be smoother because there would be one community school committee, one principal and one staff dealing with the education. According to Weinberg, it's "educationally more sound, and it's economical."

The LKSD does not have to take over elementary schools where a secondary program is established, but Weinberg said it is more cost effective that they do so. Cost effectiveness is important to Weinberg who said that "if education is cost effective, it assures that quality be maintained."

As for Toksook's reluctance to join the LKSD, Weinberg said "in my 7 years here there has been a cry for local control." Now that local control is a reality, people still prefer to leave decisions about their education to the federal government—to which they only have an advisory function."

But it appears that villages with BIA schools exercise a good deal of local control. As Bill Benton of the Bethel BIA office said, "The school boards are only advisory, but we listen." For example the final decision about whether or not a teacher is retained is made by the village. They also have the power to accept or reject programs. "We don't force anything down their throats anymore. We've come a long way," Benton said.

Weinberg said the BIA education program is a good one, and feels the LKSD can do equally well. He said change is difficult because people,"know about the BIA, have dealt with them and know what to expect. They are comfortable with that relationship, and are reluctant to give it up."

Will they have to give it up? If the village asks the BIA to stay—can they? Benton said, the situation is a "galloping mess" right now.

An informed source said that shortly after statehood, a memorandum agreement was entered into between the state Department of Education and BIA officials. That memorandum considered the eventual provision of all education by the state, and the transfer of that function from the BIA to the State Department of Education. A provision in that agreement requires that great efforts be made to gain the consent of villages before any transfer from the BIA to the state is made.

There are some who are now saying that no great effort was made to gain the consent of Toksook Bay before that transfer was carried out.

This is a question that affects more villages than Toksook Bay. Nunapitchuk, too, is scheduled to lose their BIA school because of their secondary education program. Kwigillingok, who is eligible for a high school under the Hoetch settlement, has withdrawn its request for one, in order not to lose its BIA elementary school, and a petition in Kipnuk is asking that the BIA elementary school not be transferred over to the LKSD.

The question of the state taking over the BIA schools will be talked about at the LKSD meeting in Kipnuk on Saturday, and it is the topic of a public hearing scheduled for January 29 in Bethel.

BIA SETS TAKE-OVER POLICY

Tundra Drums
2/5/77

The Lower Kuskokwim School District has repealed a policy that would have allowed tem to take-over certain BIA elementary schools. That action came at the LKSD Board meeting in Kipnuk on January 22.

The two-month old policy which caused an uproar at the village level stated "That the District will assume the operation of BIA elementary schools in each village where a district operated high school is established." When that policy was made public, it met with resistance from villages where people said they had not been consulted about the take-over before a decision was made.

Just a week after the LKSD rescinded its take-over policy, the BIA came out with a statement that said no school would be transferred unless the village agreed to it. These actions have virtually ensured that there will be no mandatory school transfers in the forseeable future.

The idea of school transfers is not new. A memorandum agreement was entered into between the State Department of Education and BIA officials just after statehood. That agreement considered the eventual transfer of all BIA schools to create a single education system. Negotiations to that end have continued since 1963.

The LKSD became involved in school transfers after Senate Bill 35 created Regional Education Attendance Areas, (REAA's) last year. That move was designed to bring local control into the school system.

After SB-35 became a reality, the BIA Area Director wrote to all of the newly elected REAA school boards. According to a statement made at the recent AVCP Convention, by Emil Kowalczyk, of the BIA office in Juneau, "In March of 1976, the Area Director wrote each of the newly elected REAA school boards of our willingness to coordinate operation of our BIA day schools with the Reaa's. Should the REAA desire to assume the ity for the control and operation of BIA day schools, this option was made available to them."

Based on that March letter the LKSD understood it had permission from the BIA to take-over schools, and came up with the take-over policy in November, that has been repealed.

The 1975 Indian Self-Determination Act has much to do with the policy that the BIA has now formulated. That Act guarantees that native people will be involved in decisions that affect them. Based on the Self-Determination Act, and village imput that resulted

village imput that resulted from the LKSD take-over decision, the BIA policy now states that there will be no transfers made without village agreement.

At the public hearing on January 29, it became clear that villages can have both the BIA elementary school and a state high school.

Al Weinberg, Superintendent of LKSD, said that there will be secondary programs in villages that are guaranteed one under the Hootch settlement. He said that he will recommend to the LKSD Board that construction in five villages begin this year. These are, Kipnuk and Akiak, because they were both named in Bond Issues in 1974 and 1976, Kwigillingok, because it has the most long standing request for a high school; Nunapitchuk, which presently has a secondary program underway in an inadequate facility, and Atmautaluk, which has a partial program.

As for the future, Joerene Hout, Chairperson of the LKSD Board said, "That the ultimate goal of the state is to have one education program."

But recent action by the state might not bear that out. Negotations between the BIA and the state for the transfer of schools ended on December 29. The BIA offered what has been called a "generous settlement," and the state turned it down. Because of that the BIA ended the negotations which had been going on since 1963, and declared all earlier agreements with the state null and void.

Included in the BIA offer to the state was a years supply of fuel, all the necessary supplies to begin the school year, funds to carry both the hot lunch and the teachers aide program for two years in all schools being transfered, to complete any new construction or major alterations that were scheduled and funded, and finally all buildings and real property were to be transfered at no cost to the state.

Why didn't the state accept the offer? Weinberg said he thought the state was holding out for a better offer. Another source suggested that the state is actually not ready to pick-up the costs of a single education system, and purposely caused the negotiations to be broken off.

Whatever it is that may be going on, the LKSD and BIA policies set recently seem to indicate that Alaska's dual education system will continue indefinatly.

Tundra Times 3/2/77

TT asks —

What kind of shape other REAA's are in

Just how are the Regional Education Attendance Area's (REAA) doing as they approach the end of their first year as independent school districts? Are they providing quality education to students while staying within their financial boundaries? Or are instructional services suffering due to lack of funds?

The Tundra Times contacted a number of the REAA's to find out if the problem confronting the Bering Straits School District is the exception or the rule for the new REAA's.

John Farley, Chairman of the Aleutian Region School District was confident that his schools will stay within their budgets. "We've been on top of the situation from the beginning. We're in the black now and hope to come out of the year within our budget." he said.

Funding Not Adequate

"Funding was not adequate," Farley continued. "In order to make it we had to cut transportation costs and minimize staffing in the administrative areas, but not in the teaching areas."

The Aleutian Region School District eliminated the hot lunch program from their budget at the beginning of the school year. "We realized we couldn't afford it and it was felt the communities didn't want it then," Farley said, "So far we've had no negative responses."

In the Bethel area the Lower Kuskokwim School District deals with the hot lunch program in another way. "We went from providing a Type A lunch (main course, potatoes, vegetable, dessert, milk) to providing a Type B lunch (soup, sandwich, fruit, milk)," said Richard Hazen, Business Manager for the REAA. "The meal is still nutritious and this has resulted in a savings of about $140,000 alone this year. The savings was not so much in the food as in the cost of personnel to prepare the meal." Hazen continued.

Jim Zuelow, Superintendent of the Iditarod School District said his schools also switched to the Type B lunch program.

"In general we look forward to ending the year with a balanced budget and our policy is to provide the best quality education with the resources we have." Zuelow said. "We are, though, concerned with the adequacy of the current financing system."

BIA Transfer

The Northwest Arctic School District not only assumed control of the state schools, but also picked up two Bureau of Indian Affairs schools. Mary Schaeffer, a board member of the REAA commented, "We'll make it through the year although we started out with a deficit. We've had to make cuts in maintenance and upgrading of schools, that will have to wait until we get more funding." she said.

"We would have been ok if we hadn't had to take over the two BIA schools. We didn't get any transitional funds from the BIA." said Mrs. Schaeffer.

Dennis Tiepelman, Executive Director of Mauneluk Association agreed with Mrs. Schaeffer and commented on the statewide situation. "Everybody came in with budget constraints and problems. We had to look closely at our funding and manage." he stated.

Robert Clark, Chairman of the Southwest Region School District commented his REAA was fortunate that their schools were close to the regional center (Dillingham). "We anticipated carry-over funds from last year and we had made plans to use the money to help us get through this year," Clark said, "But some regions ended last year with large deficits and we had to give the funds to them."

Careful Management

Clark went on to say that his REAA would make it through the year "with careful management and tightening of the purse strings."

It appears that, although the new school districts are operating on limited and carefully managed budgets, they are not sacrificing quality educational standards.

Perhaps feelings of the many involved in administering education in the rural areas were summed up best by Robert Clark when he stated, "things are a hell of a lot better than they were two years ago."

Sen. Stevens asks REAA food aid

3/2/77

Tundra Times

Concerned that three school districts have now discontinued hot lunch programs, Senator Ted Stevens today sent a telegram to Secretary of Agriculture Bergland requesting that additional federal support be furnished to the State.

"Unlike most other federal programs which realize the cost differential between Alaska and the lower 48, the Department of Agriculture does not provide any additional funds to our school districts.

"That means that the federal support may totally cover the cost of a lunch or hot breakfast in Mississippi while it would cover only half the cost in Alaska." Stevens said.

The Bering Straits School District recently joined with Fairbanks and Juneau in discountinuing the federally subsidized program.

Bering Straits REAA in cash crunch

Village students boycott classes over cutbacks

From Our Anchorage Bureau

Students in Shishmeref, White Mountain and Teller boycotted classes last week and effectively closed schools protesting the termination of 25 school employees and the elimination of the hot lunch program.

The sharp cutbacks were made by Superintendent Ron Hohman in an effort to reduce a projected June deficit of $600,000 for the Bering Straits Regional Education Attendance Area (REAA).

According to Hohman state funding to the REAA was insufficient at the beginning of the school year and they were forced to start out with a $900,000 deficit. Cuts made in administrative and other areas reduced the deficit to an estimated $599,000 and last weeks move terminating teacher aides, cooks, custodial personnel and cancelling the hot lunch program is expected to drop the deficit by another $142,000.

Hohman traveled to Juneau late last week to meet with Education Commissioner Marshall Lind and members of the State Legislature. The school district is seeking a supplemental appropriation to help balance out the year.

Following hearings held by the House Health, Education and Social Service Committee on the financial status of the REAA's Hohman appeared confident of the outcome. "We were very well received by the Committee," he said, "I'm very optomistic that corrective action will be taken."

Commissioner Lind disagrees with Hohman's allegations of inadequate state financing of the school district. "I see no legitimate grounds to support a request for a supplemental appropriation at this time," Lind said, "They need to take another close look at their total budget and report to the Department what the real deficit is."

The$60 million training exercise — snafus and foulups delay bush ed program

by John Greely

Juneau

Widespread confusion, coupled with bureaucratic foulups, pose a real danger to the scheduled start this summer of a $60 million expansion of rural high schools authorized by voters.

The construction program — designed to help end decades of school discrimination agianst Alaska's village residents — probably will get off to a feeble start.

However, the eventual success of the largest bond issue adopted by voters last November hinges once again on the ability of state and local officials to overcome a history of snafus that left many bush schools unbuilt or so badly constructed they are hardly habitable.

In the meantime, some state officials have begun to view the big construction program as something of a "training" exercise for local educators who increasingly are seeking to escape what they see as a paternalistic attitude of state government toward them.

The confusion and foulups stem from attempts by the state to do just that — give to the villages control they have never enjoyed over education of their children.

In 1975, the legislature disbanded the centralized State-Operated School System and created 21 new school districts. For some of the hundreds of villages touched by this move, it meant their first contact with local government of any kind.

It was an historic decision, one aimed at breaking a trend that had kept Native secondary education in the hands of mostly White bureaucrats many miles and cultures removed.

The trend had begun in Alaska 70 years earlier, in 1905, when the territory was empowered by Congress to create a dual school system for Whites and Natives.

The legislation, dubbed the Nelson Act, left it to the Bureau of Indian Affairs (BIA), to educate Native children by exporting them to boarding schools in other states. Those White or mixed-blood children leading a "civilized life" in the bush were sent to schools built by the territory's tobacco tax revenue or local donations.

Dozens of "Nelson schools" were erected, while many Native children left for schools in Oregon or Oklahoma, and many more stayed behind to forego a high school education.

Eventually, the BIA built three boarding schools in Alaska for Natives of high school age. The fourth and largest, Mt. Edgecumbe, was fashioned out of an old Naval air station at Sitka in 1947.

However, the forced airplaning of Native students to other states continued when their demands for schooling exceeded the capacity of the four federal boarding homes.

Aftger statehood in 1959, it took years for a fledgling government to recognize its responsibilities and extract them from BIA purview, a process that is unfolding still today at 44 schools operated by the federal agency.

Finally, in 1966, when nearly 900 students were being sent to high schools outside each year, the state acted.

But, the regional high schools built with state money in Nome, Kodiak and Bethel followed the same trend of territorial days, forcing Native kids to leave their families for nine months of each year.

The same consequences — disharmony in village families, drug and alcohol abuse, high drop-out rates and even suicides in the boarding schools — also followed in some cases.

It didn't take long for the state to realize the regional schools were largely failures, and in 1968, the first bond issue for construction of secondary schools in the villages was placed on the ballot. The $10 million issue passed easily.

Even with larger bonds — the $60 million of 1976 is the biggest single issue ever approved — being placed on the ballot and accepted by voters every two years after that, it was a slow and painful process to bring education closer to the villages.

For example, the state attempted to reach those children who didn't want or weren't allowed to leave home for an education by increasing its correspondence studies program tenfold.

The program worked in some cases, but the lessons often were irrelevant to village life or fell victim to untrained parents unable to supervise their children's formal education.

Soaring costs of erecting fully equipped schools in the bush — the price of an average school quadrupled in 10 years to more than $200 a square foot in 1976 — pointed to the biggest problem, however.

Too often, schools that were authorized in bond issues were delayed as the state borrowed from one project's budget to finish another.

Or worse, the schools that were built proved to be shoddy and a severe drain on local schools to maintain.

In the community of Tanana, for instance, a vocational building was erected last year, but school officials soon were outraged when they found overhead wiring made many of the machines unusable. A shower was installed dangerously close to the arc-welding machine, and students and instructors couldn't talk over the noise generated by the building's exhaust system.

The problem largely was one of supervising contractors in remote areas through periodic visits to the site.

But, there were problems at the other end as well.

Holy Cross, for example, wanted to start a high school program with a small addition to its existing grade school building. Funds for the $326,000 project were authorized by voters in 1974.

The job was not put out to bid in 1975. When bids were called in 1976, the lowest was 50 per cent too high, chiefly beause the state required the addition to be placed on pilings, local officials said.

No buildings have ever been placed on pilings in Holy Cross. (For a detailed look at troubles experienced on one school project, see accompanying story page 7.)

It was against this backdrop that the legislature concluded in 1975 that rural schools could be better built and administered at the local level.

So, creation of the vast Alaska Unorganized Borough School Districts was followed early in 1976 by separate legislation allowing local educators to receive construction grants from school bonds, or elect to have the state continue building their schools.

The legislation took effect last July, just as the 21 Regional Educational Attendance Areas (REAA), were moving out of their year-long transitional phase into full autonomy.

Continued

At the same time, lawyers were settling the celebrated "Molly Hootch" case, in which legal claims surrounding the rights of some 2,800 high school-aged children in 120 villages were argued for three years.

Although the Alaska Supreme Court ruled the state was under no legal duty to provide schools in all villages, it was an unanswered moral question nonetheless.

In September, lawyers on both sides agreed to a schedule for starting schools in each of the villages by the spring of 1979.

Meanwhile, more than half of the REAAs elected to take construction grants from the state, a move no one envisioned would be as complicated as it has turned out to be.

The legislature, leery of the building track record of the Department of Education, turned the $60 million over to the Department of Public Works last spring.

Thus, in order for districts to secure the money, they must pass inspection of two major state agencies — Education, where the guidelines of the Hootch settlement and basic curriculum questions are monitored, and Public Works, where approval of all designs and specifications, as well as the checkbook itself, rests.

Public Works, meanwhile, has been undergoing a major organizational shakeup in its now-defunct Division of Buildings. Two divisions, General Design and General Construction and Maintenance, replaced one.

Richard Holden, deputy commissioner of public works, said the split was made to create a "check" on state builders and to rid his agency of "cumbersome" procedures.

Holden's plan apparently has only just begun.

It was his job to issue guidelines for the construction grants to be disbursed. The rules went out in mid-December, when superintendents of the 21 new districts gathered in Anchorage for a conference.

The meeting apparently didn't make it clear that the state was retaining tight control over the grant projects, from selection of architects to the payment of bills.

In turn, superintendents unfamiliar with the state bureaucracy were shocked to learn that overhead — ranging from architectural fees to their expenses for attending the December conference — would eat up 15 to 30 per cent of their grant money.

Joe Cooper, superintendent of the Upper Railbelt REAA in Nenana, wrote to his legislator in January protesting "oppressive" state controls and high overhead. He was joined by a chorus of other educators who had applied for grants.

Cooper said he had an architect prepared to draw up plans for three school projects but that Holden had rejected his selection of firms.

In an interview, the deputy commissioner said Cooper's district had been in potential danger because the architect promised to supervise about $12 million worth of construction at sites 500 miles apart, "an impossible task."

Delays piled upon delays — at one point, public works officials had to recover several grant applications that had been forgotten in a file drawer — until the Senate Finance Committee called state officials in for a hearing on Feb. 18.

Holden explained that many of the protests lodged by local educators were unfounded or spawned of inexperience. Several suprintendents were demanding formal regulations for the grant program, but that would take months to push through official channels, he said.

Such overhead as architectural fees had not increased significantly, Holden said, but had just been truely identified for individual projects, rather than kept artificially low and camouflaged by borrowing from other budgets, as was the past practice.

Naturally, overhead on relatively small construction projects will eat up a proportionately greater share of money because they often require as much design and inspection work.

Educators holding a meager $500,000 for a school addition often fail to realize this, he said.

Holden explained his problems adequately, and the hearing apparently served its purpose. Between Feb. 9, when notices of the hearing went out, and late last week, $22 million worth of grant contracts were approved by Education and Public Works.

However, millions more are pending paperwork to be completed in Juneau and far flung villages.

That raises serious questions about whether bids can be let on many of the 30 school projects originally envisioned to start this summer. About half of the 70 jobs authorized by the $60 million bond are scheduled to begin in 1978.

It normally takes 45 to 90 days for a project to be bid after designs are completed, experts say. If contracts are not let until May or June, builders may have a tough chore acquiring materials in time to meet barge schedules critical in the delivery of goods to many villages.

In addition, some experts note that relatively small contracts offered in June generally draw higher bids than identical ones offered in March of each year because bidders are not interested in isolated, marginally profitable jobs until it fits into their other projects.

"I'm just guessing right now," said Tom Lunsford, director of general design, "but I think we can get 25 per cent (of the 30 projects) completed this year."

Senate finance chairman John Sackett, R-Galena, has called for another meeting on the situation March 15-16 here. Superintendents are expected to resume their pleas then that the grants be turned over to their school boards with no strings attached.

Such a radical step probably is not in the offing soon. A large chunk of the state's public works program is tied up in the school bonds.

However, Sackett's committee may give some thought to a suggestion by Cooper and other superintendents that simple after-the-fact auditing be used to replace many of the step-by-step approvals needed under existing guidelines.

Sackett said this week he and other legislators also were interested in possibly increasing the $20,000 ceiling over which all state contracts must go out to bid. That could free some school projects from the state papermill, he said.

In the meantime, Lunsford said, it will take time for local and state officials to learn their new and changing relationships.

"There are some of us," he said, "who see this entire $60 million bond as training."

Bilingual feud halts aid to bush schools

by Rodger Painter

A long-simmering battle between the State Department of Education and federal civil rights officials has quietly halted all federal funds to 21 rural Alaska school districts.

Formal notices that the state and bush school districts have failed to comply with federal demands for bilingual education programs were served on Feb. 4.

The action freezes all applications for 1977-78 school year federal dollars by the recently created Regional Educational Attendance Area (REAA) school boards. Also stopped were any "significant increases" in present programs.

State and federal spokesmen were unable to pinpoint the potential amount of aid affected by the order, but a senior official with the Office of Civil Rights (OCR), in Seattle said it involved "millions of dollars."

An administrative hearing on the matter has been scheduled for March 21, but both sides expressed hope an agreement would be worked out before then.

Although only the 21 REAA school districts are affected by the order, the Anchorage and Fairbanks schoo' districts also have been negotiating with OCR over bilingual education needs.

Virginia Balderrama, OCR branch chief for education in region X, which includes Alaska, declined to say whether Anchorage and Fairbanks would be cited for noncompliance as "we haven't made that determination yet.

"Anchorage and Fairbanks will be formally notified soon of their compliance status," Balderrama said.

State education officials and OCR have been sparring over who's responsible for bush school districts since initial contact on bilingual education was made in 1971.

The feds claim the Department of Education is responsible for conducting a "language characteristics" survey of students in the 21 rural districts. A model compliance plan could be drafted by the state after that, OCR says.

The federal case is based on two sections of the state constitution, several

- Continued -

state statutes, civil rights laws and a landmark court decision known as Lau.

The state responds that it is not legally responsible for either and is helping the REAAs on bilingual education only out of a "desire to assist the smaller districts."

A 30-page supportive brief by OCR for the March 21 hearing outlines a long negotiating process which started more than two years ago with a formal request for a survey.

At that time, bush education was under the control of the Alaska State-Operated School System (SOS), but it was in the process of being turned over to the Alaska Unorganized Borough School District. The latter agency existed for one year as a transitional vehicle for passing control to REAAs.

SOS made one attempt to conduct a survey — but everyone involved, including the state, doubted its accuracy. The survey showed 4,526 students with a primary language other than English and that 3,508 of them were enrolled in bilingual or bicultural programs.

Standard education tests conducted in 1970 showed fourth grade bush students were 1.4 years behind the national norm. In 1974, those same students, then in the eighth grade, fell to two years behind.

More startling statistics were supplied by a University of Alaska analysis of U.S. census figures. It showed half of the state's Native population had completed no more than the sixth grade, 21 per cent completed eighth grade, 14 per cent attended high school and only eight per cent were high school graduates.

The need for bilingual education in the bush is apparent; the only argument is who's responsible for getting the programs underway.

"Certainly, the department (of education) did agree. . .to assume the lead in developing a voluntary compliance plan on behalf of all districts in the state which did not choose to develop their own directly with OCR," state Assistant Atty. Gen. Ronald Lorensen said in a Feb. 22 letter responding to the notice of noncompliance.

"The department did not do so, however, as a result of any perceived legal responsibility on its part. . .but rather out of a desire to assist the smaller districts," Lorensen wrote, "and especially the newly emerging REAAs, in the difficult and time-consuming task of developing an identification and assessment plan and then carrying it out."

"It has always been our view that OCR would have to proceed against and show that each REAA was in noncompliance. . .if OCR were to seek to withhold any federal funds. . .," Lorensen said.

One informed observer close to the case said the state's position could be construed as an attempt to make clear the lines of responsibility for rural education for future dealings with the federal government. In effect, the state is trying to wash its hands of the matter to avoid future responsibility.

That observation has at least a small ring of truth, according to Sylvia Carlson, who handled most of the negotiations with OCR for the Department of Education. "If we give much more than we should, we're going to set precedents and lose more in the future," Carlson said.

Carlson conceded the state had assumed some responsibility in the matter but not to the extent pressed by the federal government. She blamed the log delays on a "lack of understanding of the Alaska situation on the part of some individuals involved on the federal level."

"Local control of education means something totally different in Alaska; it's not gerrymandering to get around desegregation," Carlson said. "For the first time in Alaska's history, Native people have a chance to decide things for themselves at the local level."

Part of the problem, she said, is that in a lot of bush communities it is not so much a bilingual situation as a "multi-lingual."

In addition, she said, there is the "village English" syndrome, where children pick up some of their Native language and some English but never become proficient at either. The result is a kind of pidgin English.

The Department of Education finally submitted a draft compliance plan in November 1976, after being served with a letter of noncompliance. It was rejected as unacceptable. A second draft compliance plan was submitted a month later. It also was turned down.

It appears that something may be worked out before the REAAs began experiencing serious money problems, but the long delays already have been causing some difficulty. The problem was dumped on the laps of the REAAs during their first year of operation when they already had enough headaches.

At least two districts are moving on their own to comply with the OCR mandate. An OCR spokesman said that would not in any way mitigate the state's responsibilities for the other districts.

James Zuelow, superintendent for the Iditarod School District, said his district is moving independently of the state and may have its own plan to submit soon.

Unlike most state officials, Zuelow strongly supported the federal mandate for bilingual education.

"Philosophically, I favor it because it forces schools to look at problems they should be facing but are not," Zuelow said. "I have questions about the strong federal role in education, but they are forcing recognition of the problems."

The Iditarod School District dosn't have "many problems with kids coming to school not speaking English," Zuelow said, but the language deficiencies show in "depressed academic scores." Students simply can't read text books written for their grade level, he said.

REAA's are in deep financial trouble

By NELLIE WARD
From Our Juneau Bureau

Citing maintenance and operation problems and lost funding due to takeover of BIA schools, superintendents of the Bering Straits and Northwest Arctic School Districts told the House Health Education and Social Services Committee last week that they are in deep financial trouble.

Seeking supplemental appropriations to bail the districts out of financial problems, Superintendents Homan and White represent two of three unorganized school districts in the state experiencing problems.

Senator Frank Ferguson (D–Kotzebue), appearing on behalf of the school districts charged that the legislature "has been waiting for four years for an equitable formula from the Department of Education and it has not yet come down and it probably won't for next year." Ferguson charged that had the districts had an equitable formula they probably would not be in the financial badlands that they are. An equitable formula would mean an increase in the instructional unit allotment and an increase for the two districts in area differential, for unique high costs of transportation and maintenance and operation.

Commissioner of Education Marshall Lind said that of the thirty-one city and borough districts and the twenty-one REAA's, only three are in trouble, one only seriously. He said that the Northwest problem arose from the take-over of BIA schools and the abundant federal funding lost in that take-over. With the take-over, large maintenance and operating budgets were lost to be absorbed by smaller department budgets. Lind said that the present formula will not sustain the type of hot lunch, teacher aide program and plant management offered by the Bureau of Indian Affairs. Lind said that he believes that the Northwest District has handled the cutbacks well by charging those that can afford to pay for hot lunches and reducing the number of teacher and aides to cost-efficient levels.

The Bering Straits District last week made cut-backs that eliminated approximately eighteen positions throughout the Bering Straits region, removal of the hot lunch program and custodians altogether. The reductions resulted in a mass boycott of classes region-wide in the Bering Straits schools. Teachers have, however, kept the doors open and are offering classes to those few that will attend.

Other problems areas that were voiced were the poor condition of state built and maintained schools. Commissioner of Public Works Richard Holden stated that the state's budget for maintenance of buildings remained the same while bonding propositions were passed in large numbers which spread the maintenance budget thin. Both Bering Straits and Northwest Arctic School District spent hundreds of thousands of dollars.

This past construction season to bring schools up to a better level of care. Heating systems and generators were rebuilt or replaced following histories of fires and destruction due to lack of maintenance. Commissioner Holden, testifying before the HESS committee said that it probably would take thirty million dollars, plus or minus five million, to bring the schools up to safe standards. He said that one third of the schools are okay, one third need work and one third could be "thrown away."

Commissioner Lind said that the problems of one district could not be pointed out and worked over in order to come up with a formula that would suit all other schools. He said that the root of the problem should be scrutinized and the formula should come from that. He cited problems with a data-gathering contract with the University for the delay in building a formula that would be equitable. Lind said that the department now has most, or part of the information that they need to proceed and will attempt to make progress as quickly as possible.

Studies completed by rural legislators have shown that if the foundation formula is increased for the rural areas, allowing for the area differential, additional costs involved with the state could push thirty million dollars the first year. Legislators are waiting now to see the governor's proposal for area differential.

Another problem area is the Alaska Village Electrification Corporation (AVEC) contract where the state subsidized the electrification of rural areas where schools were in need of power. The contract was written under the old state-operated school system and will not expire until March 1979. Commissioner Lind feels that education "has been saddled with the responsibility (of electrification) for too long." Alternate means to the present method of providing power and electrification funding are now being explored.

Tundra Times, Wednesday, March 9, 1977

Daily News-Miner, Fairbanks, Alaska, Thursday, March 17, 1977-

Students protest to raise teachers' pay

By DERMOT COLE
Staff Writer

Students at Anderson High School near Clear are planning to boycott classes Monday because they don't think their teachers are getting paid enough.

Bob Crowder, student body president, said 38 of the 48 students at the school have signed a petition saying they will not attend school unless the Upper Railbelt School Board agrees to sign a contract with the teachers.

The students had originally planned to stay out of school until a contract is signed, but a spokeswoman for the students said today that because the teachers might be blamed for a student boycott, it will only last one day.

A petition has also been circulating around town and, of the 115 families in Anderson, 102 have signed. The town has population of 370 and is five miles northwest of Clear Air Force Base.

Kay Carter, one of the parents involved, said there has been some talk about parents keeping elementary school students at home and setting up a picket line.

The teachers are among the 28 in the Upper Railbelt School District, which includes Healy, Cantwell, Anderson and Clear.

They have been without a contract since last spring, according to School Board member Ed Frye, who said negotiations are to resume Friday night. He said the teachers declared an impasse in January.

Frye said he could not discuss details of the negotiations, but Carter said the teachers are asking for a 10 per cent increase in base pay. She said the teachers now receive $13,400 and are asking for $14,700. She also said that the teachers are among the lowest paid in the state.

"The school district has the funds," she said, and added, "We don't know why they are not giving their teachers contracts."

Crowder said the students believe the teachers are entitled to a pay increase. The students are "determined to stay out of school," he added.

Frye said Wednesday he did not know of the students' petition and added, "I think that the parents are probably uninformed on the negotiations and the negotiations process."

No parents have contacted him regarding the situation, he said, although they may have contacted other board members.

Carter said the teachers have talked about a strike, but instead they decided to "first make the community aware and then the community would be behind them in sympathy."

Legislation would reimburse for school construction

From Our Juneau Bureau

House Bill 89 passed out of the Health Education and Social Services (HESS) Committee of the House last week provides that the State shall reimburse school districts within the organized borough, monies paid for school construction incurred before July 1, 1976 and 90 per cent of their payments after July 1, 1976 for principal and interest in loans and cash paid for construction debts. The original proposal by Sam Cotten, D-Eagle River, was to pay 80 per cent which would cost the state an estimated eleven million dollars for 1978. The state currently reimburses fifty percent of construction costs for organized borough school districts.

Representative Al Nakak, D-Nome, said that the state should be consistent in payments of this type and proposed that the amounts should be increased to one hundred per cent making amounts received by organized boroughs compatible with the unorganized boroughs.

Questions were raised by committee members that should the state pay 100 percent to the districts, where would the local control lie and where would the boundaries be drawn. The committee discussed "building a fence" around what should be considered basic education and the facilities required to support that program, in relation to reimbursement of construction dollars.

Eagle students build their own school

By WARD SIMS
Associated Press Writer

With hammers, nails, paint brushes and carpet tacks—plus a little help from the big folks—the 13 high school pupils in Eagle have pulled it off. They have built their own school.

It means they don't have to leave home to attend classes in another community, or to get their learning through correspondence courses.

Working through last summer and the first weeks of the current school year, the 13 high school pupils and adults of Eagle, pop. 105, turned a historic old courthouse into a school.

"I really had serious questions whether they could pull off a high school for 13 kids, but it's worked out very well," says Supt. Carl Peterson of the Alaska Gateway School District. "They had a fantastic time, and they're pleased with the children."

Eagle, on the Alaska-Canadian border 200 miles east of Fairbanks, was a trading center during the Klondike gold rush for miners and prospectors who objected to Canadian laws and taxes.

It actually consists of two villages, Eagle City and Eagle Village, about three miles apart on the Yukon River.

Ken and Judy Marlo, the teachers at Eagle, had a key role in the school project.

From the time school opened on Sept. 7 until the old Wickersham courthouse rang to the shouts of high school kids on a break from classes on Oct. 9, the high school was the Marlos' front room.

The courthouse, built around the turn of the century at Eagle City, needed substantial repairs to make it usable as a school.

The town anted up $7,000, and the local residents pitched in. Some of the labor was paid, but the bulk of the work was for free, and much came from the high school pupils.

"It was the first time that they had had the opportunity to go to school at home, and they certainly weren't going to miss it," said Louise Waller, a school board member from Eagle.

SCHOOL PROJECT—Thirteen students in Eagle, with some help from their elders, recently restored the historic Wickersham courthouse for use as a school, giving the small Alaskan town its first high school.

Civil Rights Office may pull REAA Funds

Tundra Times

4/20/77

The future of many federally funded education programs in Alaska may be in jeopardy unless state educators comply with specific provisions of the Civil Rights Act by June.

The Department of Health, Education and Welfare (HEW) has begun administrative enforcement proceedings against the Alaska State Department of Education and the Regional Education Attendance Area (REAA) because of their failure to comply with Title VI of the Civil Rights Act of 1964, and the HEW regulation implementing the law.

The Director of HEW's Office for Civil Rights in Washington, D.C. notified Alaska Education Commissioner Marshall Lind that, "due to the State's continued failure to submit an acceptable plan for identifying the language of, and providing services to, students whose primary or home language is other than English, the Office for Civil Rights would, under the law, have to begin administrative enforcement proceedings."

By taking this action HEW will allow the State and REAA's an opportunity to respond to the allegations before an administrative hearing is held in Anchorage on June 6.

HEW also notified the State and REAA's that although present committments to provide funding for ongoing programs are unaffected, they will defer approval of any new applications or significant increases in the funding of continuing programs.

The Office of Civil Rights has required during the last eleven months that the Department of Education submit a detailed action plan which:

-Describes in reasonable detail how the Department of Education and REAA's will determine the primary or home language of students and assesses the relative language ability of such students in English and other language (s);

-Set forth measurable, minimum standards according to which the REAA's will develop and implement educational programs to repond to the students needs; and

-Sets timeframes for development and implementation of REAA educational plans which will assure effective educational programs for students whose primary or home language is other than English.

Just how did the State find itself in this situation?

According to one educator actively involved in the State's bilingual education program, the problem began sometine ago within the structure of the Alaska State Operated Schools System (SOS).

The source confided that internal turmoil at SOS prevented the Department of Bilingual Education from coming up with the material, and that some superintendents did not respond to a bilingual survey sent out by SOS because they 'didn't feel it was worth anything."

Continuing, the source said bilingual education was not a priority of the State, "It's just another supplementary education program."

"SOS didn't have a committment to bilingual education. Anytime anyone went to Juneau to bargain for money they were willing to trade dollars marked bilingual programs for other programs."

According to Silvia Carlsson of the Department of Education (DOE), the state has submitted three different plans to the Office of Civil Rights since November and all have been rejected.

"It appears that the first plan was probably not adequate," she said. "When the second plan was rejected we decided we needed more help with the procedures and asked the Northwest Regional Education Laboratory (Portland) for assistance. They sent up two people and when the plan was finished we were confident we were headed in the right direction," Carlsson continued.

Submitting the latest plan, DOE has been verbally notified this plan has also been rejected.

Carlsson said they have received unofficial word that the Office of Civil Rights would not accept the plan until Bureau of Indian Affairs schools were brought into compliance. She maintains the state has no jurisdiction over the BIA schools and that BIA schools do not have to comply with state educational laws. Furthermore, the BIA schools are exempt from the Civil Rights Act.

DOE'S overall goal is to take an approved plan to each of the REAA's, let them rework it to fit their individual needs, and submit it as their educational plan. All of which must be completed within the next five weeks.

Should no acceptable plan be developed by the June 6 hearing, the Office of Civil Rights has the power to "stop the flow of every federal education dollar in the state for REAA's."

"No one has put down in black and white exactly what funds we're talking about," Carlsson said, "and we asked repeatedly for a list of programs."

Some programs which have been mentioned are: Title I of the Elementary and Secondary School Act; Title III of the Elementary and Secondary Act; Title IV, Indain Education; Johnson O'Malley; and PL-874-815 Funding to School Districts which have federal lands. These funds are for operational and construction expenses.

"We've been working with the Office of Civil Rights and HEW but we haven't been able to get anywhere. We don't disagree there is a problem, we're just not in agreement as to the formula to solve the problem."

Fairbanks Daily News-Miner 5/7/77

State unit delays decision on Railbelt recall election

The Alaska Board of Education, meeting in Fairbanks this week, decided it needs more information before it makes a decision on the petition for recalling three Upper Railbelt school board members.

Friday the board members asked Education Commissioner Marshall Lind to get them legal advice, saying the proceedings are without precedent in Alaska.

The question the board was concerned with was what the law requires regarding the charges and allegations to be placed on the recall ballot.

The petition claims that the board members have consistently voted against the will of the people and that they are incompetent. The board members have created a "turmoil" in the school district by taking uncompromising positions, the petition says.

The decision by the school board to buy a computer for the district was one of the bad decisions the board members made; another was establishing an administrative assistant's position to aid Supt. Larry Nyland, the petition charges.

The Upper Railbelt district includes schools in Anderson, Healy, Cantwell and Clear. The petition names Ed Frye, Gary Crabb and Ruby John as the board members to be recalled.

The statement of reasons for recalling, which is placed on the ballot, is to be as stated in the recall petition, according to the attorney general.

But state education board member Darwin Heine said he thinks the decision to by a computer or hire an assistant superintendent is a proper function of a school board.

Heine was concerned that any public body making an unpopular decision at a local level would be subject to recall if the state board sets a precedent by taking action for a recall election in the Upper Railbelt matter.

Lind said that after receiving advice from the attorney general's office he will call a special meeting as quickly as possible to dispose of the matter.

CSC CONCERNS OUTLINED

What questions should a regional school board ask itself as it develops policy for the community school committees? A small group of representatives from regional boards and the Department of Education met in Anchorage Tuesday and Wednesday to outline those questions. The meeting was the first step in developing materials for regional boards to use with their community school committees, according to Don McKinnon, school district relations specialist.

Alaska Advocate July 28, 1977

Bush schools 1 year after:

The headaches of independence

Unless the city cousins learn something from their rural cousins, we'll lose the battle, said a top bush educator.

by Mary Halloran

Juneau

After a year of independence, Alaska's 21 new bush school districts still face a basic, if more sophisticated, fight for control over the education of 9,000 village youngsters.

Funded completely by the state, the 200 elementary and secondary schools making up the system continue to wrestle with distant bureaucrats over dollars and sense.

Teachers are demanding more control over and asserting their rights in the classroom.

And, from Washington, D.C., a long battle over teaching Native languages in village schools—the federal government is threatening to withhold money if bilingual programs aren't started soon—has been inherited by the Natives themselves.

These were some of the expected problems when, as a product of a quiet revolution in Alaska education, the 21 new districts were opened a year ago.

They were carved from the state's huge unorganized territory—stretching from the Bering Sea to Metlakatla, from the upper Yukon to the end of the Aleutian chain—at a time when across the nation, schools were being closed and districts consolidated, with many facing financial disaster.

For several years, the vast territory was administered through State-Operated Schools (SOS) as one school system. It was an operation beset by difficulties and disagreements. At the core of the problems was the issue of control. Unlike the rest of Alaska's schools, the SOS district was not headed by an elected school board.

In 1975 legislation ended SOS and led to the creation of 21 new districts. Control shifted from an Anchorage-located administrative office to 21 district school boards elected by district residents.

During this first year of independent operation, the new districts faced a myriad of tasks. Many began without a district office, much less the paraphernalia of phones, adding machines and typewriters. Administrators, bookkeepers and clerical help had to be hired, policies set, teachers' contracts negotiated, books and supplies ordered, ad infinitum. This month the districts celebrated their first birthdays, having survived despite the high potential for mishap.

"The smoothness of the whole transition would have to go down as a major accomplishment," said Bill Overstreet, executive secretary of the Association of Alaska School Boards. "Those new boards have done as well as the city and borough boards have done. They've a lot of leadership out there, with a variety of experiences. That caused them to be damn good board members."

Overstreet was particularly pleased with the way the regional boards handled teacher contract negotiations. "These new boards, being new, have been much more appreciative of the concept of local control and much more reluctant to cave in to the unions. They didn't gain local control to give it away to the unions," he said.

Overstreet sees the issue of control continuing, citing legislation introduced last session that would make binding arbitration the final step in any grievance proceeding between district boards and teacher unions. The bill failed by one vote in the senate, with rural legislators making the difference in the outcome. The teachers' organization, NEA/Alaska, already has announced that passage of the bill will be its top priority for the coming session.

"So that question still hangs over our heads. Will our schools be governed by locally elected people or by appointed arbitrtors? Unless the city cousins learn something from their rural cousins, we'll lose the battle," said Overstreet.

Despite the general smoothness mentioned by Overstreet, the transition has had its rough spots. Lower Kuskokwim superintendent Al Weinberg said the biggest problem was the lack of proper preparation for the changeover. "We inherited a seven-million-dollar-a-year business without any proper administrative foundation," said Weinberg. He listed the lack of a district accounting system, insurance and provision for workmen's compensation as examples of major administrative hassles the new district found itself with last July 1.

Another district superintendent, Jim Zuelow of Iditarod Area schools, made similar observations. "I think everybody seriously underestimated what we needed to set up a business office." He explained that equipment and personnel records were inaccurate or missing. A further complication was that nobody knew how much it was going to cost to run a school at any specific site. The SOS accounting procedures did not give the new districts budget information for individual schools.

"The inaccurate and incomplete data we were given was used to develop our administrative systems, so now errors have been compounded. And it's going to cost us money to straighten it out," said Zuelow.

Despite the administrative hassles, both superintendents feel the transition has been a success. "There's absolutely no comparison in the effectiveness with which we operated this year," said Weinberg, who had worked

Continued

Bush schools...

seven years for State-Operated Schools. "We knew how much money we had, we knew where it was and could spend it when and where it was needed."

Another pleased with the changeover is June Nelson, Kotzebue resident and president of the Northwest Arctic school board. "On the whole, people know there sure is a better rapport and relationship. . .they can come in and talk about programs, what they want their kids to learn," she said.

Nelson added, "Funding has been the biggest problem, not in the amount of the lump sum we receive, but just that so many little things have happened to cut into it."

She mentioned on-going negotiations with the U.S. Office of Civil Rights in connection with the district's presumed noncompliance with federal bilingual education guidelines as one of the unexpected costs.

"That's been a special burden. To inherit a bag of worms, something like that has not been pleasant," she stated. The OCR action was initiated against the old SOS system.

An irony of the situation is that the federal agency is threatening to remove federal funds from school districts whose boards are now heavily drawn from Native groups. In effect, the Office of Civil Rights is chastising Native parents for not providing an OCR-approved version of bilingual education to Native youngsters.

Again the underlying issue, as one education official pointed out, is one of control. "The question is what role should the federal government play in how education works in Alaska?" The proceedings are now more than two years old and promise to carry on "indefinitely."

Nelson said federal regulations and accompanying auditors "hampered district operations." The Northwest Arctic district plans to handle the issue by reducing its reliance on federal funds.

It and other districts may be able to do just that, given the generous readjustment in the state's funding program made by the legislature in the recently ended session. Overstreet said passage of Senate Bill 212 "should resolve most of the new districts' problems." The bill establishes a funding floor for small schools and compensates for costs related to isolation. By 1979 the new districts will receive $10 million more than would have been allocated otherwise. City and borough districts likewise will receive an additional $10 million by 1979.

Despite the unexpected costs and budget vagaries of this year, all the districts except one finished in the black. The exception, Bering Straits, was bailed out by a special appropriation of $400,000, which Gov. Hammond cut to $150,000.

In his transmittal message, Hammond said the appropriation was "to reimburse costs for major maintenance of schools incurred by the REAA (district) which should rightly be covered by the state."

High maintenance costs stem from the condition of some of the buildings in the new districts. Inherited from the Bureau of Indian Affairs, the buildings were frequently substandard at the time of their transfer to the state and now incur disproportionate maintenance costs.

New construction has its problems, too.

Voters approved nearly $60 million for school construction across the state in the 1976 general election, shortly after the legislature allowed the new districts to receive building money in the form of grants from the state.

But, procedures set up by the Department of Public Works have been confusing and time-consuming for many local superintendents eager to get new construction going during the short building season. (*Advocate*, March 3.)

A running discussion between the districts and public works shows no signs of diminishing.

"I would like to see the Department of Public Works eliminated from the public school construction area . .They're obstructing us," says Carl Peterson, superintendent of the Alaska Gateway district.

"Any conceivable blunders the school districts might have done would be inconsequential compared to what we've gone through trying to move the bureaucracy," he said.

. Weinberg was more resigned, commenting, "We can't expect public works, which is responsible to the legislature, to write us a blank check. Construction's a complex task because of all the agencies involved. It's time-consuming and probably too expensive, but all those bureaucratic hoops are supposed to be safeguards."

This fall the new districts plan to concentrate on curriculum and program development. Most also want to work on the district boards' relationship with the Community School Committees, village advisory groups established under the 1975 decentralization law.

Despite the work and the problems, all seem sure the new way is better. Most think the real payoff is still in the future that one year is too soon to count successes or failures.

"We believe that we can eventually provide a better quality education to the kids," said Zuelow. "If we didn't believe that, we wouldn't be doing all this."

Whether the payoff comes in one year, five or ten, everybody's happier if for no other reason than that the problems and solutions are closer to home. As Superintendent Peterson said, "Generally, people here feel very good about the change. They have somebody they can go to and complain if they want to."

Mary Halloran is director of public information and publications for the Alaska Department of Education. She edits the monthly Alaska Education News.

(Tentative Title: REAA Superintendents Address the First Year)

At the October 1977 meeting of the Alaska Association of School Administrators a panel entitled: "REAA Report - The First Year Successes and Failures" took place. Superintendents from five REAAs spoke. Their comments included not only frank statements about both positive and negative aspects of their first year of REAA operation, but also some thoughtful comments on the difficulty of evaluating the situation and needs and opportunities for the future.[1]

The Difficulty of Evaluating the REAAs: Year One

"There is difficulty in evaluating. There was no control in the experiment--but all experiments. All of the state schools went at one time. We don't know what would have happened had some stayed in the state system a while longer. There was such a dynamic environment at the time. There were so many variables operating. It was not just the fact that we were going into a brand new school district, but at the same time we were asked to create new high school facilities, we were asked for bilingual programs....The whole thing occurred in such a dynamic movement of activity. It is hard to say what would have happened had it not all taken place at one time."

"I submit to you that whether something is a success or failure probably depends a lot on the perspective you have. For example, I think many of the local people who felt local control would mean full control of hiring and firing and the whole bit probably look at it as a failure. I think some of the teachers who hoped benefits were going to continue to escalate as they have in the past probably consider it a failure."

Educating the Public

"We had the problem of convincing the district that we were a local school district and convincing the teachers. I don't know that everybody really, really understands that at the present time--that we are a local school district and we have local control."

"Our role in the districts, stated in the most cynical way, was to provide jobs. One of the successes I would hope would be that perhaps we turned people around and got them to think about what they want out of school. Many of the people in our villages were so into the power aspect of getting a say in things that they really didn't know what to do once they got that say. One of our adult education roles was to try to get them to realize what real options they had and letting us contribute to implementing those options."

---

[1] These comments were selected and edited by Kathryn Hecht. Given difficulties of tape transcription, the quotes may not be exact but attempts were made to keep the meaning intact.

Board Members, Elections, and Training

"By creating these new districts, you create many, many more board members to elect. You're going to get some inept board members. You're going to get a lot less trained people than when you could pick five or ten of the best around the state. Now we've got hundreds of people on the boards and obviously you are going to get some with much less training. You need a lot of work done. This often causes a problem. I can't even get people to run for some of the seats. The matter of elections is a real difficulty for us. You've got people at one end of the district who don't know anything about the name or reputation of somebody at the other end, and they vote at large."

"They need to learn about the process of negotiating with teachers. If they don't, they can lose control in a hurry. I've had to be patient and try to be tough. I had to do a lot of talking and was becoming unpopular with some of my people. More needs to be done in teaching the people out in the villages as to responsibilities and negotiating and what to look for. Otherwise, the teachers can overpower them and we'd lose a lot of money."

Priorities: Facilities and Personnel

"One of the top priorities we had was to start a secondary school the first year. One of the main problems that had to be faced was not having adequate facilities. It meant we had to rent old houses and renovate them so we could carry on classes. The response on the part of the students was just wonderful."

"...I wasn't ready to take on adult eduation and the adult education I had to take on was how to train somebody to type, how to train somebody to keep books, how to train somebody to keep furnaces going, how to train somebody to even recognize a personnel record, let alone begin to make some kind of entry into it."

Improvement in the System/Opportunities for Improving Programs

"First of all, there was definitely some local autonomy. Not to the degree that some people wanted but certainly much more than what had been given under the state system. Now I think the people feel that the districts are much more responsive to them than someone out of Anchorage or Juneau. Secondly, I think there is great flexibility for a superintendent or a board to operate. We don't have all of the red tape to go through that an area superintendent used to have. The REAA can authorize things to happen very quickly. This I see is a very successful part of the program."

"The educational programs have a great opportunity for improvement. I think there is a lot of innovation, a lot of experimentation, that can take place now that probably couldn't under the state system. I think we can tailor our particular district's efforts towards the local needs of that district rather than looking at it from statewide perspective. We can really have an opportunity to build in some quality, try some different things. If it doesn't work we can easily get rid of it and try something else."

Political Pressures

"I think that there is less susceptibility in the political arena. It used to be that a citizen could get ahold of a legislator and change things immediately. This susceptibility has been reduced considerably. I think the local boards feel a pride in being able to run their own affairs and stand up against political pressures."

Overall Success

"I think overall it was a hell of a successful year. We're very pleased with local control, although there were some problems in terms of the logistics of setting up the districts. We've got a good situation, but I will never at any time mention it too publicly, particularly in Juneau because it is advantageous not to do so."

"In summary, as far as we the superintendents on the panel are concerned, it sounds to me that we are all happy with local control. We feel that the legislation was good. We feel like we have better operations and are doing a better job with kids than we were prior to the passage of the legislation."

PERSPECTIVES ON PROGRESS

In January, 1974, CNER issued a policy analysis study on delivery of pre-higher educational services in the unorganized borough to the Alaska Legislature.[1] At that time, the education of children in the unorganized borough and on military bases was controlled by a centralized administration in Anchorage (ASOSS), functioning independently of the State Department of Education and with policy decisions made by a board appointed by the Governor. As planning began for the follow-up study to the 1974 report, I was struck by one overwhelming thought--how much has changed in only four years!

That this perspective not be lost in the myriad of detailed issues discussed in the body of this report, letters were sent to a small group of people who have been involved in key roles in the changing rural education scene. The letter requested the recipients to send "their personal viewpoints on the emergence of the new school districts, the process by which they were created, how they are functioning, and an outlook for the future." The statements in italics are taken from the responses.[2]

The Process Which Led to the Establishment of the REAAs

> "SB35 was a perfect example of how things should work. It melded the University of Alaska, citizens, and legislators into a group which worked with amazing rapidity. First, the attendance at the meetings of the CNER advisory board was good, the matters considered were germane and to the point, and the timing of the legislation was perfect. The results were some very hard decisions, and particularly decisions about the implementation of the bill. There was actual legislation written, a first, and some preparation in the hearing process of the legislature. There was a good lobbying effort by very diverse interests, and the integrity of the bill was protected throughout its short life, between concept and actual passage of a bill. I was and am impressed by the process which created SB35; it ought to work again, if we could pick a project which is both necessary and political."

Overall Success of the 21 New Districts

> "The transition from the Alaska Unorganized Borough School District system of education in the unorganized borough to the Regional Educational Attendance Areas has occurred with little difficulty. Regional control of pre-higher education in the unorganized borough is now a reality."

---

[1] Darnell, Frank, Hecht, Kathryn A., and Orvik, James M. Prehigher Education in Unorganized Borough: Analysis and Recommendations. Fairbanks, Alaska: University of Alaska, Center for Northern Educational Research, 1974.

[2] Twenty-five letters were sent out in April, 1977. A follow-up letter was also sent. The quotes included here were based upon seven responses received by November 1, 1977.

"The passage of SB35 was a good piece of legislation, long overdue, which provides a political structure for the school boards to operate, and for some of the very remote areas, a political structure to cover issues in local government."

"The past year finds the 21 school districts functioning, for the most part, very successfully. The immense task of starting 21 new districts with untrained boards, administrators and staff has gone as smoothly as can possibly be expected for its initial stages."

"The issue was often reduced to a single argument, 'are they prepared for assuming local control?'...The assumption of local control was something that was easy for the new school boards, and they grasped it with authority and with an ability that was amazing....It is my opinion that they are functioning well, I am not always in agreement with all 21 priorities, but that also is an indication of their ability to think and function well."

"There was a staggering amount of work required to accomplish the transition from state control to regional control over educational services. With minor exceptions, the REAAs seem to be highly successful in providing needed educational services to children residing outside municipal school districts."

"In conclusion, I would like to say that I am extremely enthusiastic about the first year of implementation of SB35, and it is my belief that it has been a success...for all practical purposes there is a single financing system for the state schools for the first time in history. The state is also moving closer to a single school system as more and more BIA schools come under the control of the new districts."

Issues Identified

"In the area of staffing, some problems have come to light due to the lack of untrained administrators in Alaska, as well as sufficient secondary teachers for the small schools who can cover a broad curriculum area."

"There is some confusion over whether existing constitutional and statutory provisions were carefully adhered to in the drafting of SB35. One final confusing aspect, is the exact type of school districts created. Certainly, the REAAs are not municipal school districts, but then, are they service areas of the unorganized boroughs, or some other entity?"

"One of the areas that is still causing the districts a tremendous amount of problems is the financing of maintenance and utilities. As everyone knows, the State Operated School System went through a long period of little or no maintenance, so that many of the buildings are in need of extensive repairs. Many of the schools also had to assume the AVEC charges in electricity, and this particular area was not figured in the foundation formula that has been applied to the districts for the first operating year."

"The passage of SB35 also had hoped to bring about an updated agreement between the Bureau and the State of Alaska concerning 'An Overall Education Plan for Rural Alaska' formalized in 1963 and updated in State Department of Education on the 'Overall Education Plan' but no firm agreement has been reached."

"Negotiations have caused a great deal of concern, as for the first time these new districts are negotiating separately with their teachers and employees. It has been a learning experience in which the local boards have tried to establish their authority, which has created some problems that should solve themselves with time and understanding on the part of both labor and management."

"The exceptional problems (which have been well publicized) include lack of funds for Alaska Village Electrical Cooperative contracts in rural communities and a lack of state budgetary review. This lack of budgetary review may be due to no explicit statutory authority to the Department of Education."

"The Community School Committees that were created by SB35 are also an area of concern, as the duties of the CSC's have not been clearly outlined in each school. Each board is wrestling with the problem of how to make effective use of the CSC's and not delegate the authority that is statutorily theirs."

The Future of the REAAs

"As the new districts begin their second year of operation, I'm impressed by the commitment and concern they display."

"I think that the future for the 21 new school districts is good, providing we can keep the federal government and the state government out of their hair. The complete funding of educational needs in Alaska is not too far in the future. The danger lies in the fact that State government often dances to the drum of the federal government....That type of problem is where the future of the 21 new school districts will become clouded. Not by their own actions, but by a combination of state and federal regulations, which will tend to restrict their thinking into channels not of their own making."

"It is my conclusion that school systems ought to serve the society which surrounds them. This transcends simple considerations of either language or geography, and Alaska should capitalize on both the diversity of its population, and the fact that it represents such a wide variety of cultures in the delivery of its educational programs. Difference is not a problem until someone makes it so. Language is only a problem when it is not recognized. Culture without change will die, so, the matters relating to the future of how the 21 new school boards will fare relate largely to the matters of outside funding and outside influences."

"I realize that the movement for local control focused on that control as a means to improve the quality of education. But among the ends which I believe any study of the new districts should consider is not only the improved quality of education but also the death or diminishment of paternalism and racism. Personally, I see that change contributing substantially to a better life for kids."

MEMORANDUM

TO: Representative Thelma Buchholdt, Chairman
House HESS Committee

DATE: March 19, 1979

FROM: Ronald W. Hohman, President
Alaska Association of School Administrators

SUBJECT: Superintendent's Annual Legislative Fly In, Legislative Position Profile

PUBLIC SCHOOL FOUNDATION FORMULA

1. The Alaska Association of School Administrators voted without opposition to support the Finance Committee Substitute for Senate Bill 199 as offered by the Finance Committee on March 15, 1979. CS SB 199 (Finance) 3/15/79

2. The group also expressed concern about power equalization in any new bill before a statewide study could be completed.

3. The A.A.S.A. supports the concept of area differentials with a need for costs to be justified locally.

STUDENT TRANSPORTATION

A.A.S.A. supports 100% funding of D.O.E. approved transportation contracts between local education agencies and bus contractors.

IN LIEU OF LOCAL TAXES

51 school districts

The equity of State funding to school districts must be addressed. Reducing in lieu of local taxes compresses disparity.

Reducing in lieu of local taxes this year destroys forward funding concept.

Support existing in lieu of local taxes 100% with study to promote equity for action for next session.

UNEMPLOYMENT COMPENSATION

Most school classified employees are seasonal workers. As such the positions are advertised and filled on the knowledge that they exist from late August until early June. Allowing for the fringe benefits of this labor group is inconsistent with the certificated staff, and creates an inappropriate expenditure burden on the district and state budgets.

WORKMANS COMPENSATION

Large need for a definition of work related ailments.

TAX CREDITS

The association recognizes the dangers of any efforts which detracts from the principle of "Separation of church and state".

Tax credit for education is viewed as an encroachment upon is principle.

The association believes that the State meets its obligation to provide education through its system of public schools.

The association is opposed to any program of Tax Credit for education.

RECALL OF PUBLIC OFFICIALS

We support the original draft of HB 245 revising state statutes on the recall of public officials. Legislation is needed to:

1) balance the right of recall against a public official's right to defend their position,
2) make all state recall provisions more compatible with one another.

Specifically, any petition for the recall of a public official should clearly show:

1) that a successful recall will result in the removal of that official from office,
2) that only registered voters may sign the petition,
3) the charge against the public official, clearly stated,
4) the response of the public official to the charge,
5) by affidavit that the contents of the petition were not misrepresented by the person circulating it.

Such provisions would still preserve the right of recall. The public official, however, would have a fair opportunity to explain their position prior to the election. Such a law would be more consistent with some of the requirements for initiatives in Alaska and recall provisions in other states.

COMMUNITY SCHOOLS

The current law should at least be extended past July 1, 1979. Current funding levels enable districts to only help minimal programs operating, but at least current funding levels will keep community schools from dying in Alaska. We support the concept that the original community education legislation should be extended and that efforts should continue to fund community schools at the 2% of foundation level.

ACTIVITIES ASSOCIATION

The Activities Association needs to be a seperate and independent agency because:

1. Operating costs of the association will be lower without the control of state public employee rules.
2. Member schools and their school districts control the association. Thus, district control can be utilized in making policy.
3. An appeals committee of a cross section of interested persons can be developed rather than the State School Board acting as the appeals committee.
4. The new bill does clean up the language used in the present regulations.

GENERAL FUND BALANCE

School districts, as well as any monetary based organization, need an operating surplus. There are numerous logical and rationale arguements to support this principle. During recent months much review has been made on the school districts general fund balance surpluses. This review has allowed some to make an interpretation conflicting with successful and prudent management. Space here does not allow for explanations of each case. However, we do hope you will ask for our interpretations and explanations when the issue is timely. Audit reports can best be used as a drunk uses a lamp post, "for support rather than illumination", and that, "what a bikini bathing suit reveals is very suggestive - but what it hides is vital".

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPT. OF HEALTH AND SOCIAL SERVICES

OFFICE OF THE COMMISSIONER / POUCH H-01 – JUNEAU 99811

February 9, 1978

Document# House HESS #1

Honorable Charlie Parr
Chairman
HESS Committee
House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Chairman Parr:

This letter is in reply to your request for information regarding the Emergency Medical Services (EMS) program dated January 16, 1978.

The majority of the information which you requested can be found in the attachments. The Emergency Medical Services Section, Division of Public Health coordinates a statewide program that is attempting to improve EMS on a regional basis. The Regional Coordinators are responsible for the planning and implementation of improvements in their regions. Broad input is gained from regional and sub-regional EMS Advisory Councils. (Attachment number one indicates the regional boundaries and the name and address of each Regional Coordinator.)

In order to have the most comprehensive reply possible to your hypothetical cases, we asked the appropriate Regional EMS Coordinator to respond to the situations located in that region. Attachment number two is the response from the Southern EMS Region. It addresses situations 1, 2, 6, and 7. Attachment number three addresses those cases from the Interior EMS region, numbers 3 and 4. The Southeastern region response for case number 8 is attachment number four. The Southeast Coordinator added a ninth hypothetical case to your list, a broken femur and ruptured spleen in a logging camp. This was done because it is a significant problem for Southeast Alaska. Attachment number five describes situation number 5.

It is apparent from these responses that the major areas for improvement are the isolated places in Alaska. The current efforts and future plans of the program identify the rural and bush areas of the State as foci of funding.

The specific components of the EMS System that are or will be receiving priority attention include:

1. Training

   Good pre-hospital care has been shown in other state EMS programs to significantly impact on death and disability. The pre-hospital providers, including volunteer ambulance personnel and community health aides, have shown an unprecedented degree of enthusiasm for more training. This is proving to be a monumental task because the skills being taught need to be practiced in order to maintain proficency. In the sparsely populated areas, virtually every place outside of Fairbanks and Anchorage, there is simply not enough "business" to maintain the skills. Consequently, refresher training is extremely important on at least an annual basis, with monthly one-day seminars to supplement.

2. Communications

   In communications, the most serious shortcoming is citizen access. The second most important problem is ambulance to hospital communications. This fiscal year the Governor's Office of Telecommunications, using funds from EMS and the Criminal Justice Planning Agency, has contracted with a consultant to develop a statewide public safety communications plan. The consultant has some innovative ideas for improving access with greater use of CB channel 9.

3. Transportation

   By far and away the greatest problem in transportation is providing medically adequate air transport. Two distinct phases need to be dealt with: (a) village evacuations, and (b) hospital to hospital transfer of the critically ill. This is a very complex area and an in-depth study is needed before any solution can be reached. The other transportation problem is placing and replacing ground ambulances on the isolated highway sections.

4. Recordkeeping

   In order to realistically make decisions about resource allocation for a large program such as this accurate data is needed about the types of patients that are being encountered, where, and what is happening to them. A coordinated recordkeeping system is needed to provide that information.

As mentioned before, the program is impacting these problems on a regional basis. In the three years of the program's existence three regions have been funded: Southeastern, Nana, and Interior. The Interior program will probably be defunded during the next fiscal year due to the

federal funding strategy which places the type of planning grant they will be applying for as the lowest priority. Southeastern and Nana will probably be approved for second-year implementation grants. And, given adequate funding, the Southcentral part of the State (includes Southern, Bristol Bay, Bering Straits and Yukon Kuskokwim Regions) will undertake an intensive planning effort in preparation for implementation in the following year. For more detailed information on the history of the program, I've included a brief State program overview and a description of the federal program as attachments 6 and 7.

I hope this information is adequate. The Department welcomes the HESS Committee's interest in the EMS program and will be prepared for your planned hearings.

Sincerely yours,

Helen D. Beirne

Helen D. Beirne
Commissioner

FAIRBANKS, ALASKA 99701 (456-3978)

Transportation to more definitive treatment is normally provided by the local commercial air carrier. Agreements have been established, but there are times when aircraft are not available. Commercial air ambulance services in Anchorage are then contacted, although the Air Force Air Rescue Service must sometimes be used. Weather, such as high winds or clouds in the pass, greatly restrict inter-hospital transfers at times.

State, local, and commercial agencies are working closely to improve EMS activities. There is little federal activity in the area.

Situation #2 - Kodiak

A commercial fisherman problem would be reported on marine radio. The Coast Guard Rescue Center on Kodiak monitors this frequency and would launch a helicopter to bring in the sick fisherman. Of course, weather would be a limiting factor. The Coast Guard personnel are well trained but could not provide any surgical care for an appendicitis.

The Kodiak Hospital is well equipped and could preform this type of surgical procedure. Nursing staff is on full time and doctors are on call. There is a commercial activity in Kodiak called Alaska Emergency Medical Services, which offers medical equipment sets for fishing ships. They also have the capability of physician communication with ships, if necessary.

If more extensive treatment is required, the patient would be transported by air to Anchorage. The weather at Kodiak often restricts air evacuation, and the Mayor of Kodiak recently had to wait three days to be transported for cardiac problems. Transport to Anchorage is a frequent occurrence, but to the best of our knowledge, formal written transfer agreements are not prepared.

Certain agreements between Coast Guard and Kodiak activities have been developed. Federal, State, local, and commercial agencies are working together to improve the EMS system.

Situation #6 - Denali Highway

Communications along the Denali Highway are extremely poor. An emergency problem would be taken by messenger to Cantwell where the nearest phones are available. The Alaska State Troopers would receive the notification. There is a single EMT at Cantwell who has some medical equipment and tries to respond to local emergencies. The nearest ambulance service is at Healy, 40 miles to the north of Cantwell. This service is in the Interior Region and our knowledge is limited, but we believe they are well equipped and can provide certain Advanced Life Support techniques. There is also a Physician Assistant in Healy, while the closest doctors are in Fairbanks 149 miles north, or Wasilla 170 miles south. Obviously, communication with a doctor would be practically impossible. If State Trooper radios are available, they could operate through their repeater system and achieve a phone patch to the physician in Fairbanks. This would be a complex procedure and would "tie-up" the State Trooper system.

If the accident occurred a substantial distance off the highway, the evacuation would be considerably more difficult. Back country injuries would normally require a helicopter. This could be obtained from the Air Force, but again, communications would hinder the response time. If AF helicopters were used, the patient would be evacuated to Anchorage where the State's most sophisticated medical resources are available. Air Force pararescue personnel are well trained and equipped, and should be able to stabilize the patient while transporting. Ground transport would deliver the patient to Fairbanks, which also has a well equipped hospital.

Weather could delay transportation by ground or air. This hypothetical case takes place in a very lightly populated area on the border between two EMS regions. Little if any agreement exists.

Situation #7 - Sand Point

This patient would be taken directly to the local Baptist Mission Clinic where there is a registered nurse and some equipment. With only four miles of roads, there is little requirement for an ambulance, and transportation is provided by AST carryall or other available private vehicles. Most homes have telephones and almost three-quarters of the homes also have CB radios. Weather would have little effect on communications, but could complicate ground transportation.

The limited capability of the clinic, and seriousness of the patient, would require evacuation to the Thermal Unit at Providence Hospital in Anchorage. There are several small planes available at Sand Point which could be used to evacuate to Anchorage, or the patient could be taken to Cold Bay where the runway is large enough to receive jet ambulances. If a small private plane is utilized, treatment enroute would be minimal unless the nurse accompanied the patient. The availability of air transport equipment would also limit treatment. If a jet ambulance is used, treatment would be better since the aircraft would have nursing personnel and advanced medical equipment. Either plane could talk to a doctor through an FAA patch, which would take time to set up. Weather could greatly restrict air transportation.

Due to funding limitations and the huge area of the Aleutians, we have done very little to improve this area. Working agreements are unknown.

All of these cases demonstrate the lack of EMS facilities and the problems to be solved, before our citizens can depend on a truely effective EMS system. Great advances have been made, but even in the more densely populated areas, there are serious deficiencies.

Improvement of the system will require vast expenditures of money and the dedication of many persons. Given the premise that funds and personnel are available, I would envision a future EMS to include the following improvements.

MANPOWER/TRAINING

Without well trained manpower, no system will ever be adequate. We must continue to provide training for our volunteers and develop a professional body of personnel to provide Advanced Life Support (ALS) in remote areas. Skill decay will be a serious problem, which could be solved by rotating paramedics through the Anchorage EMS where there are significant numbers of responses. These paramedics could serve one week in a remote area, one week in Anchorage, and one week off. Paramedics should also receive training on air evacuation techniques and be available for air transports.

COMMUNICATIONS

The communication system must be improved, but this will be expensive. Initial access to the system should include the use of the nation-wide 9-1-1 emergency number in all telephone systems. Public safety agencies should monitor CB channel 9 to respond quickly to emergencies. Alaska has an unusually large number of CB radios and we should encourage their use. The current VHF system is already becoming crowded and in time will become overloaded. We should establish a UHF system with eight channels available for emergency traffic. Dispatch, ambulance/hospital, and hospital/hospital communications must be separated. A series of radio relay sites similar to the AST system must be established to insure communication along the highway system. Similar radio service should be available through a satellite relay system to provide communication with remote areas. If such a reliable communications system is developed, cardiac telemetry should be considered for use by advanced trained volunteer ambulance services and physician extenders in remote areas. Cardiac telemetry would also be useful between physicians in the smaller hospitals and specialists at the major hospitals. Of course, this could be accomplished over current land lines at considerably less cost.

TRANSPORTATION

Rapid evacuation to suitable care facilities is crucial to the patient. Current ambulance services sometimes take hours to transport a patient to health care facilities. Additional ambulance services must be established to provide 30 minute response time throughout the highway system. This will probably require the use of professional crews, since numerous areas do not have a population base large enough to establish volunteer crews. The ground ambulance service must be supported by a substantial air evacuation fleet. Both helicopters and fix wing aircraft should be located so that they could provide air evacuation from remote areas. Fast jet aircraft capable of operating on short runways should be available to transport from distant areas. All of these aircraft must be fully equipped and staffed by competent technicians.

FACILITIES

Foul weather often makes any type of transportation impossible. Health facilities should be upgraded to provide stabilization and care for at least three days. Even on the highway system, there are areas where it is 200 miles between health care facilities.

CRITICAL CARE UNITS

Most of Alaska is at least 1,500 miles from any other critical care facilities. Anchorage should develop units capable of caring for any of the critical situations. As our population continues to grow, the need for these units will expand.

OTHER

The other components of the EMS system will need to be addressed. This will require sufficient staffing of the State and Regional EMS Offices.

We are discussing a multimillion dollar program for the State, but I firmly believe this is what is necessary to assure our residents of adequate emergency care.

Sincerely,

Richard E. Pauley,
Executive Administrator

February 1, 1978

Mr. Tom Scott, Coordinator
Emergency Medical Services
Department of Health & Social Services
Pouch H-06C
Juneau, Alaska 99811

Dear Tom:

This letter is in response to Charlie Parr's request to gather data on the Emergency Medical systems present and future capabilities for responding to critically injured or ill patients. The Interior Region's response is to Mr. Parr's hypothetical case No. 3 and 4.

An elderly person in Allakaket suffers a heart attack.

Question: How is the emergency reported and to whom?

Answer: Allakaket is a small community in the northwest interior region. It has no internal system of telephones. When an emergency occurs, either in the town or in the bush, the village health aide or alternate is contacted by messenger in person. In town, of course, the messenger would simply run to the village health aide's home, however, from the bush, they would probably either get the village health aide to come to the scene of the accident by snow-go, or if the patient was immediately transportable, ship the patient in to the village health aide.

Question: Are the means of communication adequate?

Answer: In the case of this community, the means of communications are quite adequate. The only addition to this service could be the use of citizen's band radios that could be mounted on the snow-gos with a bay station in the village health aide's home.

Question: What is the anticipated date of upgrading?

Answer: There is no anticipated upgrading of the system in this community.

Question: Would bad weather reduce or nullify the adequacy of communications?

Answer: Only in the ability for the messenger to find his way to the village health aide's office.

Question: Where is the injured or sick person taken and by what means?

Answer: The injured or sick person is taken to the village health aide's home or the alternate village health aide's home.

Question: Are the means of transportation adequate?

Answer: For a community this small, the injured person is transported by carrying through the village or by snow-go from the bush. Adequacy of transportation is difficult to assess. This community is not large enough to make an ambulance useful or the upkeep justified.

Question: What is the anticipated date of upgrading the transportation system?

Answer: There is no anticipated upgrading of this system.

Question: Would bad weather reduce or nullify the adequacy of transportation?

Answer: The only problem with weather in this case would be the amount of time that an injured person could survive in sub-zero weather while being transported by litter or snow-go.

Question: If appropriate, can emergency medical care be given before or during transportation?

Answer: If the village health aide is not the initial responder, there is probably no ability to give other than basic first aid before transportation. Once the patient has been transported to the village health aide's clinic, the village health aide can give adequate advanced first aid care. This falls short of what is typically considered paramedical care.

Question: Are qualified personnel available?

Answer: The only qualified personnel in this village is the village health aide.

Question: Can the person giving the emergency medical care communicate with a physician while giving it?

Answer: Yes, by satellite to Tanana Hospital.

Question: If equipment (respirator, monitoring devices) is needed, is it available?

Answer: None of this equipment is available because this does not fall under the realm of the village health aide's training program.

Question: If not, what is the anticipated date of availability?

Answer: This is a very difficult question. Alaska Federation of Natives is now exploring the possibility of producing its own physician assistant training program to update medical services in the bush. However, there is a heated debate on the problem of skill decay rate in the field, i.e., can an individual trained to a high level of medical care be expected to retain his ability to do those procedures with an extremely low case load. Decay rate of medical skills in an underpopulated area is exceedingly high.

Question: Does the facility to which the injured or sick person is taken have qualified personnel or necessary equipment to give the required treatment?

Answer: The facility to which a patient would be taken from Allakaket would either be Tanana or Fairbanks. If the patient is taken to Tanana, most assuredly if this individual has a heart attack, his initial care and stabilization could be managed. They have doctors, a defibrillator and monitoring devices for electrocardiograph tracings. If the patient is to die ultimately, there would be no difference in outcome if the patient were sent to Tanana or Fairbanks for immediate care. More extensive follow-up care can be managed by sending the patient from Tanana to Fairbanks Memorial Hospital. In the renovations of the Fairbanks Memorial Hospital, we are anticipating the use of the Schwongantz Pulmonary Artery Wedge Pressure Monitoring devices. This would be an exceeding development in the management of failure related to a myocardial infarction.

Question: If not, have provisions been made for subsequent transfer to a facility which has capabilities?

Answer: Transfer agreements from Allakaket to Tanana and Fairbanks and the Anchorage Native Health Center have been worked out. These agreements are not purely medical. They primarily exist for financial reasons between the private sector and Alaska Native Health Service.

Question: Have all necessary agreements been made between agencies involved (federal, state, community, local, private)?

Answer: See previous question.

A child in Fairbanks suffers burns over most of the body.

Question: How is the emergency reported and to whom?

Answer: In the Fairbanks metropolitan area, the prefixes 452 and 456 are covered with the 911 emergency access code. Other prefixes in the area have their own emergency telephone number which dial directly to an emergency dispatcher.

Question: Are the means of communication adequate?

Answer: Yes.

Question: Would bad weather reduce or nullify adequacy of communication?

Answer: No.

Question: Where is the injured or sick person taken and by what means?

Answer: The sick person would be taken to Fairbanks Memorial Hospital Emergency Department. The patient would primarily be taken by ambulance and in the hypothetical case discussed above would be taken in the mobile intensive care unit ambulance.

Question: Are the means of transportation adequate?

Answer: Yes.

Question: Would bad weather reduce or nullify adequacy of transportation?

Answer: It would probably reduce the response time somewhat, however, bad weather does not negate the use of these emergency transportation vehicles.

Question: If appropriate, can emergency medical care be given before or during transportation?

Answer: Yes. Qualified EMT's and paramedics are available around the clock through the Fairbanks Fire Department. On a run such as the one described above, a paramedic would always be in charge.

Question: Can the person giving emergency medical care communicate with a physician while giving it?

Answer: Yes. Adequate means of communication through the ambulance to the hospital are tested and proven. Means of communication to individual physician's offices over special communication nets are available and have been used, however, are not used very frequently.

Question: If equipment (respirator, monitoring devices) is needed, is it available?

Answer: Yes.

Question: If not, what is the anticipated date of availability?

Answer: The mobile intensive care ambulance is well equipped and the only anticipated upgrading would be with change in types and methods of treating patients.

Question: Does the facility to which the injured or sick person is taken have qualified personnel or necessary equipment to give the required treatment?

Answer: Yes. Fairbanks Memorial Hospital has profiled itself at Level 3 for burn care. It has a qualified plastic surgeon who is in charge of the burn team. It has qualified nursing personnel for burn management also. It now has rooms which are available to be used for isolation for burn victims, however, after the renovations which are underway are finished, there will be a specific burn unit available. All necessary equipment is available for the treatment of this burn with the exception of hemodialysis. In the place of this, peritineal dialysis is used when necessary.

Question: Have provisions been made for subsequent transfer to a facility which has the capabilities?

Answer: No formal transfer agreements exist at this time, however, transfers for burns have occurred in the past. Informal transfer agreements do exist.

Question: Have all necessary agreements been made between agencies involved (federal, state, community, local, private)?

Answer: No.

Sincerely,

Joseph Marzucco, PA-C
EMS Coordinator

Southeast Region Emergency Medical Services Council

GENERAL DELIVERY
SITKA, ALASKA 99835

TELEPHONE 747-8005

February 5, 1978

Tom Scott, Acting Coordinator
State Office of Emergency Medical
Services
Pouch H
Juneau, Alaska 99801

Dear Tom:

Enclosed is the description of the current and future system response to hypothetical case #8 as requested by Commissioner Bierne. Since this case represents one for which we are already fairly well prepared and for which major changes are not planned, I have taken the liberty of adding a ninth hypothetical case. The area I have chosen, logging camp emergencies, is one in which changes are sorely needed and on which EMS will have a significant impact.

Yours Truly,

Laurel

Laurel Parker
Executive Director

RECEIVED
1978
EM

#8. A premature baby, (term 27 weeks) apparently suffering from congenital malformation is born in Juneau.

Present: While Bartlett Memorial medical staff perform an umbilical catheritization and take other measures to stabilize the infant, plans are made for transfer to another facility, Children's Orthopedic in Seattle or sometimes to Providence Hospital in Anchorage. This depends partly upon Alaska Airline's schedules and sometimes upon the parent's preference. The infant is transferred in a special infant transport incubator with oxygen, provided through the State Division of Public Health, and is accompanied en route by nurses and physicians as his condition requires.

Future: It is unlikely that Bartlett would aim to treat such a premature infant with congenital malformation in the foreseeable future. Cost for maintenance of an infant intensive care unit and availability of a perinatologist would not be justified by the incidence of cases. Transfer would therefore continue to be the general protocol, and changes in the above description would be limited to improved stabilization capability and to strengthened relationships with frequently used medical centers.

Efforts to improve stabilization capabilities include Bartlett's plans to procure an infant heart monitor; and by EMS, the provision of nursing in-service modules including one in neonatal emergencies, and physician exchange programs with frequently used medical centers such as Children's Orthopedic. This exchange program will also serve to strengthen relationships with referral centers along with provision to all Southeast physicians of the treatment protocols used by those centers. Such information will allow physicians to judge appropriate treatment techniques prior to transfer in accordance with the treatment the infant will be receiving after transfer. With the assistance of the physicians represented on our Board, we hope to publish transfer guidelines describing critical care services available within reasonable transportation time from our hospitals, specialists to be contacted, and ideal pre-transfer treatment protocols to be provided to all Southeast's physicians as an informational service.

At 10pm, at a small logging camp in Southeast Alaska, a man riding on a motorbike crashes into a log lying across the road, ruptures his spleen, and breaks his leg.

Since there is nobody with any more than very basic first aid training in camp, it is essential that the man be transported for medical help immediately. Although his broken leg is obvious, responders do not have the skills to assess that he has internal injuries to his abdomen. Since the fracture is to his femur, a traction splint should be applied but such a splint is not available anyplace in camp. OSHA requires that certain first aid supplies be kept in camp, but these requirements are extremely minimal and resupply throughout the season is uncertain. Traction splints are not included.

One logger tries to secure a piece of board to the leg, but feels extremely uneasy about this as he has never tried it before. Since a fractured femur causes the bone ends to push against one another, the man is in intense pain which will not be alleviated without traction. His internal bleeding, meanwhile, is causing him to go into progressively worsening shock, and his blood pressure falls dangerously. There is no blood pressure cuff in camp, so those trying to help are not aware of this drop.

While this is going on, two other loggers are trying to reach help over the radio. During the day, communication is possible through the Logger's Association radio system, but at night this is not monitored. It becomes apparent that communication is not possible and other measures must be taken.

Although the night is rainy and windy, these two men decide to risk taking a boat to a nearby community where there is a single side band base station with the Coast Guard frequency. As usual, atmospheric disturbance makes transmission very poor, but they are able to make contact. Meanwhile, the victim in the camp has become unconscious but this is not known to the two callers. When the Coast Guard operator asks what is the patient's condition, they respond that his leg is broken. They are not able to provide vital signs or other indicators which would have alerted the operator that the situation was critical.

Now the Coast Guard is in a quandary. If the man has an uncomplicated fracture, he will be safe until morning. Flying in such inclement weather, however, would be extremely risky to both crew and victim. Knowing, however, that when loggers get hurt they are generally very badly hurt and that they tend to understate problems, it is decided that a medical evacuation will be performed. If the call were coming from a village, the decision may have been otherwise as these requests tend to be overstated, and the Coast Guard pilots have performed life-threatening evacuations to find the "victim" waiting with baggage packed and an appointment for a routine physical.

When the Coast Guard chopper reaches the camp, they can find nowhere to land. They need a cleared area about 120' long, and after 30 minutes of searching, finally find a possible, though far from ideal, landing area almost half a mile away. Until they land, they cannot be sure that the surface is safe for their 22,050 lb. machine.

By the time the victim is loaded onto the helicopter, he is, needless to say, in extremely critical condition. (In reality, he probably would have died, but this would make too depressing a story). The corpsman on board removes the soggy blanket covering the victim and replaces it with a dry one. He has so much to do in trying to deal with the man's condition that he wishes he had additional medically trained men on board.

Once the plane finally lands in town, the victim is handed over to the ambulance service, who in turn, bring him to the hospital emergency room. By this time, however, information on the patient's condition has passed through several hands, and since the man is unconscious, the physician finds out nothing about the cause of injury. He wishes that someone would do something about the logging camps. If he weren't so busy dealing with cases such as this, he would like to do something himself.

EMS Impact On This System:

1. Lack of trained manpower in camp: We are providing logging camps with an intensive 40 hour Emergency Trauma Training course which covers not only stabilization techniques, but physical assessment. The man's leg would have been properly splinted, a pressure bandage would have been placed over his abdomen to retard internal bleeding, he would have been treated for shock, and the Coast Guard would have received more definitive medical information (history, vital signs, etc.).

2. Lack of equipment: We have put together trauma kits which contain the equipment essential to stabilization and for which training is given in the above mentioned course. These kits, specially designed for logging camps, fit on a yarder and are watertight. The blanket, therefore, would not have been soggy.

3. Communication: We are investigating two means whereby radio coverage could be extended to 24 hours a day, using the existing VHF system. One alternative would be to install a base station with the logger's frequency at the Coast Guard base which would be used after the Logger's Association receiving station closed in the evening and would be restricted to emergency use. Another alternative is to install a remote receiver at the local fire department/rescue service where calls are monitored already at all times. At night, calls would be automatically relayed here and again restricted to emergencies. Cost for either alternative would be surprisingly low.

4. Heliports: In order to land an HH3F helicopter, an area about 120' long needs to be cleared and kept free from obstruction. We have supplied information on landing requirements for these choppers to the State Division of Aviation with a prioritized list of communities and camps where needed for inclusion in their transportation plan.

5. Pre-hospital forms: We have designed, and had printed, forms to be used by first responders in out-lying communities. The forms include simple checklists which provide information on patient condition and action taken which medical providers need to know, and which serve as reminders to the responder. A carbon copy would accompany the patient through transfer and be provided to the physician upon ER arrival.

6. Training for Coast Guard Crew: We are presently giving an EMT course for

Coast Guard personnel at Air Station Sitka, and plan another. A PHS physician has agreed to write standing orders for those Coast Guard crew members who we will train in IV therapy.

Situation #5 A blue baby is born in Nome.

A so called "blue baby" born in the Norton Sound Regional Hospital in Nome would set in motion a pre-established system of life support and transportation to the Newborn Special Care Nursery at Providence Hospital. The attending physician would immediately follow the treatment protocols outlined in the High Risk Infant Transport Manual written by the Alaska Newborn Project and published by the State EMS Office in 1976. Simultaneously, a call would be placed via telephone to the head nurse of the Special Care Nursery. The head nurse would be prepared to give immediate advice on further care, notify the pediatrician on call and notify the transport coordinator who is jointly funded by the Indian Health Service and State Maternal and Child Health program.

The transport coordinator would assemble the transport team, arrange for the transfer to the airport of the transport incubator and team, and arrange the air transportation. Depending on how critical a factor time is, transport will be via either a commercial carrier such as Wien or Great Northern, or by charter jet, usually Troy air. The only weather that will affect the transport will be below IFR minimums at either Anchorage or Nome.

While the transport arrangements are being made, the pediatrician will be advising the Nome physician on proper stabilization techniques and gather patient information so that all appropriate resources will be ready to care for the infant upon its arrival at Providence.

The transport team will consist of at least a nurse from the special care nursey and in some instances the on-call pediatrician. The Anchorage Paramedics will transport the transport incubator and the team to the airport. Upon arrival in Nome one of the two commercial ambulances in Nome will pick up the team and take them to the hospital. The team will prepare the infant for transport and do some teaching of the local physician and nurses in the process

During the return flight the transport incubator will be positioned in the plane and draw power from the plane's power systems according to directions in The Transport Manual. There are directions for each type of aircraft normally used. The plane will be met by Anchorage Paramedics who will provide assistance as necessary. Upon arrival in the Special Care Nursery definitive treatment will begin, in this case blood transfusion.

Because of the Alaska Newborn Project there is a very well organized system of emergency care for newborns in distress. It is actually a model for what needs to be done in other areas of critical care. It is a truly cooperative effort of the State Division of Public Health, the Indian Health Service and the private medical community.

The major discrepancy that now exists is the lack of guaranteed availability of an adequately equipped jet for transport. The other area of need is training for rural hospital personnel in the care of the infant while awaiting the transport team.

This report was prepared by State Staff due to illness of Fran McAfee, the Regional Coordinator in Nome.

EMERGENCY MEDICAL SERVICES
PROGRAM OVERVIEW

January 1978

The State EMS program receives all of its grant funds from Region X, DHEW under the authority of PL 93-154 the EMS Systems Act of 1973. This Act provides funds for the development of Emergency Medical Services Systems on a regional basis. The purpose is to upgrade and organize the delivery of these services into a preplanned system that insures that the victim of an accident or serious illness receives the care most appropriate to his problem in the quickest possible manner. The elements of the system include the following:

1. Insure that an ambulance can be easily summoned in need. The primary focus here is to develop a 911 emergency phone number in every community in the State for the dispatch of all public safety elements.

2. Insure that once a call is received an ambulance can be quickly dispatched, and that provisions have been made for backup service if the primary unit is on a call. This is usually accomplished by means of a regional dispatch center and signed mutual aid agreements among operators.

3. Under medical direction insure that the victim's condition is stabilized at the scene and maintained during transport. This is accomplished by training all ambulance personnel to the Emergency Medical Technician (EMT) level and insuring that their vehicle is adequately equipped with medical supplies, rescue equipment, and 2-way voice communications with a hospital. In the rural communities the EMT is being given advanced training in how to start intravenous (IV) fluids for the control of shock due to blood loss. In these cases direct radio contact with a physician for medical control is the ideal. In larger communities the EMT-Paramedic is the preferred training level because they can treat heart attack victims with electric shock and controlled drugs.

4. Insure that the local medical facilities are adequately equipped and staffed with personnel trained to further stabilize the patient and when necessary, transfer to the most appropriate critical care facility, be it to a hospital, another institution in the state, or outside the state. This is achieved by categorizing facilities according to their ability to handle different types and severities of injuries, i.e. Homer Hospital can care for the moderately burned patient, and the burn center at Harborview Hospital in Seattle is the nearest facility to take care of major burns. The facilities are identified and a list of protocols are in place so that, hypothetically, a patient with a major burn in Homer would be treated according to burn care procedures developed by specialists and then transferred directly to Seattle (because the Anchorage hospital can only care for moderate burns). This hypothetical protocol would be accepted previously by each of the physicians involved as the best procedure to follow.

5. Insure proper rehabilitation facilities are available to return the severely injured patient to his full functioning capacity as soon as possible.

In support of the EMS system certain other functions are necessary. These include:

1. Ongoing basic training programs to insure an adequate supply of personnel, as well as refresher training programs to maintain high quality service delivery. Refresher and Continuing Education programs are especially important in Alaska. This is because our widely scattered population does not have enough serious accidents in any one locality for the providers to maintain high levels of skill. All of our providers, physicians, nurses and emergency medical technicians, need formal continuing education in the care of the critically ill and injured.

2. Public Information and Education programs are needed for two purposes. The first is to insure that people know how to call for help in the area where they live or are traveling. The second purpose is to provide information about what people can do for themselves and others when they are in need, e.g. first aid courses.

3. An important element in support is a good record-keeping and evaluation system. The systems approach requires that each element of the system is continually being evaluated as to its effectiveness in order to suggest areas for improvement. An example is evaluating EMT performance by analyzing ambulance run reports. EMT's are trained to follow certain protocols for certain types of injuries. By checking their performance areas of need for refresher training can be more easily identified. A computerized system that does this has been in operation for several years in western Pennsylvania with great success and low cost.

4. Finally, coordination efforts of the various state (Public Safety, Disaster Office, Community and Regional Affairs, Education, National Guard) and federal (Park Service, BLM, Coast Guard, Military branches, Indian Health Service) agencies that are directly involved in EMS activities in Alaska is vitally important to efficient utilization of resources.

The EMS Systems Act provides seed money to the states and regions on an incremental basis. The phases are:

(1) Feasibility studies and planning, 1 year (1202)
(2) Establishment and initial operation, 2 years (1203)
(3) Expansion and Improvement, 2 years (1204)

A 1976 amendment provides another year of planning money which can be used between 1203 and 1204.

The attached informational brochure from DHEW further explains the federal program.

The history of the State's involvement with this program can best be summarized with the following outline:

1971 EMS planner established in Office of Comprehensive Planning

Apr. 1974 Department of Health and Social Services applied for 1202 grant for planning;
AFN applied for 1202 grant for planning;
Mauneluk Association applied for 1204 grant for Search and Rescue.
All were not accepted based on lack of comprehensiveness. However, DHEW offered assistance for future grant application development.

Jan. 1975 Dr. David Boyd, National Director of EMS, and several other nationally recognized speakers attended meeting in Anchorage with interested groups.

Apr. 1975 Department of Health & Social Services submitted a 1203 grant. Tanana Chiefs Conference submitted a 1203 grant for Interior Region. Region X suggested that the applications be combined with State acting as lead agency for regional programs. Thus, funds for state office and EMT training were made available.

Jul. 1975 Department of Health & Social Services received grant ($450,000) to establish state office, statewide EMT training, provide implementation grant (first year 1203) to Tanana Chiefs Conference ($220,000), and provide salaries and travel for EMS coordinators in the other 7 EMS regions.

Nov. 1975 Legislative Budget and Audit approved revised program, and contracts were let. With three positions, Office of Planning & Research was charged with administering programs.

Jan. 1976 Charles Ramage was hired as Associate Coordinator. State submitted grant request for second year funding of Tanana Chiefs Conference Interior program, and first year funding of 1203 programs in six other regions. Ad hoc Advisory Council met.

Jul. 1976 State received a grant of $725,000 which provided funds for State office, EMT training, Tanana Chiefs Conference, and regional coordinator. Funds for the additional 1203 programs were not available due to the failure of Congress to extend the 1973 law. Charles Ramage became Coordinator,

Peggy Zufelt Associate Coordinator, Thomas Scott Health Planner - a full staff for the first time.

Aug. 1976 Congress passed $1.35 million appropriation for FY77 to Alaska Area Native Health Service for EMS implementation in the native health corporation regions.

Nov. 1976 Tanana Chiefs Conference turned Interior program back to State.

Jan. 1977 Using AANHS EMS money, corporations covered half of the coordinators' salaries in six regions. Northern Region Office, Divison of Public Health began administering Interior program for an interim period.

Apr. 1977 State submitted grant application for first year 1203 grants for seven regions and 1202 grant for Advanced Life Support planning for the Interior region.
Charles Ramage resigned as Coordinator. Thomas Scott appointed Acting Coordinator. Lynne Quist hired as Health Planner - temporary status.

May 1977 Legislature passed HB407 establishing the Department as the state agency responsible for developing emergency medical services in the state and establishing an eleven member advisory council consisting of seven providers and four consumers.

Jun. 1977 Program transferred from Office of Planning and Research to Division of Public Health

Jul. 1977 State was awarded $698,000 to support state office, EMT training and first year 1203 grants for Southeast ($175,000) and Maneluk Association ($68,000). The Interior program was extented one year in order to complete implementation of Basic Life Support using unexpended funds from FY77.

Aug. 1977 Dr. William Mills of Anchorage accepted position of EMS Medical Director.

Nov. 1977 State EMS Symposium drew over 150 participants. Mrs. Hammond announced Governor's appointments to new Advisory Council. Symposium provided stronger direction to program.

Accomplishments

- Active EMS Councils in every community in the State
- Full time EMS programs in each of the eight EMS regions with only four currently receiving support from the Department.

- 90% of all ambulance personnel are trained to at least the basic Emergency Medical Technician level. Three years ago it was less than 30%.

- A need for greater emphasis on emergency care skills has been recognized for the Community Health Aides. Thus, their training and equipment have been improved substantially.

- MAT-SU Borough has adopted Borough-wide ambulance powers, established new services at Talkeetna and Willow, purchased new vehicles, and has increased cooperation with services in Anchorage.

- Kenai Borough is considering following same direction as MAT-SU.

- An advanced EMT course aimed at the rural EMT has been developed and is in use statewide. This course teaches the administration of IV fluid therapy for control of shock.

- A substantial video tape library has been established by the Alaska Hospital Research and Education Foundation of continuing education materials in emergency and critical care medicine for circulation among all hospitals in the state.

- An Artic First Aid Film strip and accompanying printed materials have been developed. This resulted from the need to develope a first aid training medium that Alaska Natives can relate to. American Red Cross materials are based on verbal learning skills whereas Alaska Natives are more visually oriented.

- EMS subsidized the Alaska Emergency Department Nurses Association for their last two annual clinical symposia.

- EMS assisted the U of A school of Nursing in its successful efforts to develop and have funded a 40 hour emergency care course that will be taught in almost every rural hospital in the State.

- EMS has started the installation of an areawide communications system for the Interior road system. When completed all ambulances, including military vehicles, on the Interior Region highway system will have two way voice communication with Fairbanks Memorial Hospital.

- We are jointly funding with the Criminal Justice Planning Agency through the Governor's Office of Telecommunications a Communication Consultant who is developing a statewide Public Safety Communications Plan that will be area specific.

Problem Areas

The EMS program must address the total system from the moment a person perceives himself or is perceived by another to be in need of EMS to the point where he no longer requires services. Many actors and actions must transpire, especially in the case of a critically injured person. Two problems stem from this total systems approach.

(a) The sheer magnitude of the program requires very careful understanding of the problems and the solutions, and requires individuals who can relate to volunteer EMT's as well as to physicians.

(b) The vast majority of people think EMS is pre-hospital and that the only thing needed is the upgrading of training and equipment. The total systems concept and the team approach is difficult to understand, especially because traditionally there has been little if any communication or involvement between pre-hospital providers and in-hospital providers. Another problem is communication between rural physicians and specialists in the major centers regarding appropriate care for the critically injured.

The Alaska Native Health Service received a supplemental appropriation for FY 77 of $1.35 million and for FY78 of $2.0 million. These funds are for EMS only and are distributed in whole to each of the health corporations. Funds are used to support the regional programs in the region that we do not fund. One corporation, Maniluk dovetails the funds into a coordinated effort. However, in three of the regions, little cooperation exists. A problem has developed wherein the native cooperations often feel that they are not receiving a fair share of the "State's" money.

The EMS program is a medical care program. In other states it has been successful only where there was extensive physician leadership and involvement. During the first two years of this program physician involvement was next to nothing. So far this year we are beginning to gain support. Thanks to Dr. Fraser, three major regions have medical directors. However, much more active physician involvement is necessary to give the program a sound medical base.

When the program was initiated the State was divided into eight regions (see map). The eight region structure has proven to be less than effective in developing "total" EMS Systems. The Bush Areas send all critically injured patients to Anchorage for definitive treatment. We are now considering reducing the eight regions to three to conform to the HSA boundaries.

Finally, there is a lack of data for planning and evaluation. The EMS program is one federal program that realizes the importance of systematically evaluating how the system is functioning as well as planning the expenditure of funds based on demonstrated need. The development of a coordinated patient record keeping system is one of the mandated 15 components that has received little more than lip service. Planning is hampered by this lack of data.

Prospects

Up to this point the program has been one of haphazardly throwing grant applications together each year so that the feds can give us money, regardless of the quality of the application. The applications have really been the best that could be produced at the time by the people involved, with definite improvements in quality in each subsequest application. However, there has been little real planning and no long range planning.

This year we are developing a large range policy plan that lays out a funding strategy through FY 84 and estabishes status and systems goals for each region in the state. A draft has been developed and will be presented to the State EMS Advisory Council at their meeting of January 20-21, 1978 for their comments. It will then be circulated widely throughout the State for further comment, be reworked accordingly and then presented to the Council for final recommendations. We hope to be able to maintain the plan as a dynamic tool that will be reviewed and updated on an annual basis to provide the basis for EMS Systems development in the future.

Another major effort will be renewed cooperation between those state and federal agencies that have EMS responsibilities, especially the AANHS and the State Department of Public Safety. Both of these agencies spend funds on EMS systems development in the State.

We hope to have in place a Critical Care Committee of physicians specialists in the area of Burns, Trauma, Cardiac, Poison, High Risk Infants, Pychiatric, and Spinal Cord Injuries. The Committee will develop treatment and triage protocols for the critically injured. These will be used by providers at the various levels of care as guides for the stabilization and treatment of the patients.

Emergency Medical Services Systems Development: A National Initiative

DAVID R. BOYD

Abstract—The passage of the Emergency Medical Services Systems (EMSS) Act of 1973 by Congress has provided the mechanism and funds for communities to develop regional EMS delivery systems across the Nation. With the passage of the EMSS Act, the Congress mandated that emergency medical care programs funded with Federal dollars must address, plan, and implement a "systems approach" for the provision of emergency response and medical care. In the EMSS Act, some fifteen component requirements have been identified to assist system planners, coordinators, and operators in their attempts to establish comprehensive, areawide and regional EMS programs. These components are: manpower, training, communications, transportation, facilities critical care units, public safety agencies, consumer participation, accessibility to care, transfer agreements, standard medical record keeping, consumer information and education, evaluation, disaster linkage, and mutual aid agreements. Development of a national program, its projects, and progress, is the basis of this report.

INTRODUCTION

CONSIDERABLE improvements are now being made in the delivery of emergency medical care, with major advances the result of the development of a "systems approach" and the integration of standardized vehicles, communications and medical equipment, training programs, emergency facilities, and critical care unit capabilities. Advances in on-site care by physician agents (Emergency Medical Technicians-Ambulance and Paramedics) in radio telecommunications with medical professionals have been shown to be effective in improving patient care for a wide variety of emergency, critically ill, and injured patient categories, especially those suffering from acute myocardial infarction and major trauma. Pioneering programs [1] in Miami, FL. (Nagel); Nassau County, NY (Lambrew); Charlottesville, VA (Crampton); Seattle, WA (Cobb); and Illinois (Boyd) have illustrated the necessary systems design, treatment protocols, technical adaptations, facilities orientation, and organizational structure that are required for successful program development.

It is now quite apparent that significant improvements in emergency and critical care of all types of emergency patients can be realized if a sound integration of all of the essential components of an EMS system are logically structured and directed towards delivering ideal care to "real" *patients in need.* Heretofore, some debate has existed as to which component, or subsystem, is the most important. However, current consensus is that only a comprehensive EMS program, logically planned and staged, will develop and mature so that all patients in need will receive the most appropriate care in the prehospital, hospital, interhospital, critical care, and rehabilitative phases. An EMS system must then develop a sound sequence of comprehensive program activities on a regional basis if the needs of all potentially emergent patients are to be properly anticipated and receive adequate response.

Manuscript received May 7, 1976.

THE EMERGENCY MEDICAL SERVICES SYSTEMS ACT OF 1973

The passage of the Emergency Medical Services Systems (EMSS) Act of 1973 (P.L. 93-154) by Congress [2] has provided the mechanism and funds for communities to develop regional emergency medical services delivery systems across the nation. With the passage of the EMSS Act, the Congress mandated that the emergency medical care programs funded with Federal dollars must address, plan, and implement a "systems approach" for the provision of emergency response and medical care. In the EMSS Act, some fifteen component requirements have been identified to assist system planners, coordinators, and operators in their attempts to establish comprehensive, areawide and regional EMS programs. These components are listed below.

1) The provision of manpower.
2) Training of personnel.
3) Communications.
4) Transportation.
5) Facilities.
6) Critical care units.
7) Use of public safety agencies.
8) Consumer participation.
9) Accessibility to care.
10) Transfer of patients.
11) Standard medical record keeping.
12) Consumer information and education.
13) Independent review and evaluation.
14) Disaster linkage.
15) Mutual aid agreements.

The Division of Emergency Medical Services (DEMS), Department of Health, Education, and Welfare (HEW), the established Federal lead agency, has developed Program Guidelines in which under chapter III, [3] "Special Program Guidance," the clinical significance of the systems approach in developing an EMS system is described. While an EMS system must respond to all declared emergency calls within its appropriate geographic region (including the nonemergency

Printed in U.S.A. Annals No. 611V1003

80 percent, the truly emergent 15 percent, and the critical cases—5 percent), there has been a special identification of those well identified critical patient groups which demand a competent system for survival. It is to the survival of these critical patients (trauma, burns, acute cardiac, high risk and premature infants, poisonings, psychiatric, drug, and alcohol overdose) that a "system" conceptualization and initial system efforts must be directed in order to insure the development of a sound, medically competent, and comprehensive EMS system.

EMERGENCY MEDICAL CARE ISSUES

The central theme and intent of the EMSS Act is to develop systems of emergency medical care that would significantly decrease current death and disability rates. The goal of the national EMS program is to initiate regional planning and integration of the fifteen mandatory components so as to provide the essential and appropriate EMS emergency and critical care services for all emergency patients.

The current EMS patient problem is compounded by the 65 million citizens who enter the system each year. At least 80 percent of these patients cannot be considered "true medical emergencies." Another 15 percent are real emergencies which require urgent care (i.e., minor trauma, infectious diseases, and other acute general medical and surgical problems). The remaining 5 percent are the critically ill and injured patients. This last group was not salvageable only a few years ago, but today, these lives can be saved if initial, definitive, and rehabilitative care is given in time and the patient is moved through the regional system and provided essential medical care.

Specific planning of regional EMS response to these particular critical care categories assumes that in time all critical medical emergencies will receive better care, and will benefit from sound regional EMS systems planning and operations.

Likewise, certain local occupational and/or recreational hazards must also be addressed with a goal toward prevention. These special target patient groups provide each regional system with an opportunity to develop evaluation criteria for systems performance and patient outcomes (distribution and survival).

EMS SYSTEMS DEVELOPMENT

Each regional emergency medical service plan must include a description of the general and specific protocols for the emergent and nonemergent patients in its delivery system. It must also include a detailed explanation of care and triage patterns for critical groups by identifying the patient treatment needs as well as the involvement of the systems operational components (vehicles, telecommunications, manpower, facilities). These care patterns will depend upon the clinical patient demands, the sophistication of the transportation capability, the level of care during transportation, the communications coordination, the delivery to a categorized general hospital or designated critical care facility, and the migration into the rehabilitation phase. These patient care programs must be established with appropriate backup relationships by written arrangements among the various provider elements in order to insure a sound and competent regional EMS system.

When an individual becomes seriously ill or injured it is manifested in a specific way. Patients have accidents. They have heart attacks. They are burned. They have problems at birth. They are poisoned with alcohol, drugs, or other toxicants. They have emotional disturbances resulting in varying degrees of psychiatric instability. The planners of EMS systems must consider the general patient population and these easily identifiable and significant critical patient groups that exist within the geographic regional area. An indepth knowledge of the demography, epidemiology, and clinical requirements associated with these critical patient groups is mandatory to effective EMS planning and operations.

In many circumstances the initial patient access, response, and transportation considerations are general in nature until the severity of the patient's (diagnostic-specific) problem becomes clarified. As soon as this clarification develops, a rather specific patient treatment and triage plan must be activated to include the prehospital, hospital, interhospital phases, as well as the specialty care unit and later the specific rehabilitation services necessary for each illness and injury.

It is now a fairly well accepted position across the country that initial and definitive medical care for each of the target patient groups can be improved, and most of these patients can be salvaged by an effective EMS system. The design of an EMS system will need to include certain organizational and operational changes. There must also be additional adaptations of treatment in the prehospital, hospital, and interhospital phases with proper modification of existing and new technology that will enable paraprofessional, and professionals to successfully manage and treat all emergent problems at the scene and during movement through the system whether they occur in urban, metropolitan, rural, or wilderness areas [4].

The development of an EMS system usually starts with an initial upgrading of existing resources and then progresses through periods of increasing sophistication. That is, following the establishment of a basic life support (BLS) system within the region, there usually is a logical progression to the advanced life support (ALS) system due to the increasing capabilities of the EMS region.

BASIC LIFE SUPPORT SYSTEM

A BLS system includes all of the fifteen components. However, certain ones are more critical, at least early on. BLS services can be effectively provided by the integration of nationally accepted minimal standards for ambulance personnel (e.g., Emergency Medical Technician-Ambulance, EMT-A [5], ambulances of the Department of Transportation (DOT) specification [6], two-way voice medical communications (VHF or UHF band) [7], and standard equipment as recommended by the American College of Surgeons [8]). Effective placement of these vehicles, staffed by two EMT-A's, can provide emergency medical care with patient stabilization, airway clearance, hemorrhage control, shock management with MAST trousers [9], initial wound care, and fracture stabilization. Under medical control (physician directed), specific noninter-

ventive treatment in which the EMT-A's have been previously trained can be applied. The transportation subsystem must be developed in the context of a sound hospital/critical care unit categorization program. The categorization of the facilities [10], [11] (hospital emergency department, critical care unit, and rehabilitation center) [12] is a major aspect of any program and is critical in the initial development of a BLS system. It gives identification and direction to all mobile, communications, transportation, and manpower elements at even the basic level, and makes possible the sound conceptualization of a delivery system for all emergency patients, while also providing a standard for clinical impact and EMS process evaluation. Most communities have begun their EMS systems in this manner, causing a considerable increase in public awareness of the need for improved EMS.

ADVANCED LIFE SUPPORT SYSTEM

Most urban communities, and now even [13] some rural regions, have progressed to an ALS system. This involved a much more sophisticated level of EMS systems planning and operations with highly skilled field personnel, EMT-Paramedics, trained to successfully identify and aggressively treat life-threatening emergencies (shock, cardiorespiratory failure, and cardiac dysrhythmias) at the scene and enroute to the hospital. At the ALS level, mobile units are equipped with appropriate intravenous fluids, drugs, and usually with some form of bioelectrical communications (telemetry). This enables paramedics with proper physician backup to perform expert diagnosis, treatment, and triage of critical patients. The need for a sound categorization of facilities during the BLS period is quite obvious due to the requirements for a medical communications control facility, and standardized treatment and regionwide triage protocols that ensure a progressive and continued enhancement of critical care for patients from the field to initial care facilities and on to the definitive advanced care facility, as is appropriate for each individual case and locale.

The components of an ALS system are as outlined here. ALS is the more sophisticated and logical progression of BLS, in which extensively trained EMT-Paramedics can provide true resuscitation (CPR) and specific interventive measures (e.g., endotracheal or esophagogastric intubation), intravenous therapy, specific cardiac dysrhythmia detection, and control with drugs and electrocountershock. These life savings techniques administered by EMT-Paramedics are always undertaken, except in rare circumstances, under the direct control of a physician or physician-surrogate in contact by voice and EKG telemetry. Most urban and many metropolitan communities (over 50 000 population) have initiated these ALS prehospital mobile intensive care unit (MICU) programs and have realized a major impact on the trauma, cardiac, and other critical patients. In many parts of the country, this increased capability of critical care will need to be developed not only in the central metropolitan areas, but also, with a further extension of satellite critical care units, in outlying community hospitals. This restructuring and resource development approach will affect primary and secondary transportation, communications, and EMS manpower, all of which must be upgraded to meet their advanced level of care, particularly in the prehospital and interhospital phases of development. While most of the activity in the ALS system is currently in the metropolitan areas, an appreciation of the need for ALS and critical care services for the rural and outlying areas is now developing. A national goal will be to realize these essential emergency and critical care services for the rural emergency patient at the scene and during the long transportation periods to distant appropriate treatment facilities.

It is these health care aspects that must be stressed in EMS planning and operations with detailed narratives of what the emergency care situation is, how the proposed EMS system will respond to an emergency patient in a certain locale, and how the patient will be evaluated, treated, and transported to an appropriate hospital or critical care unit.

REGIONALIZATION OF EMERGENCY MEDICAL SERVICES

A regional EMS system is one that is geographically described by existing natural patient care flow patterns. It must be large enough in size and population to provide definitive care services to the majority of general emergency and critical patients. Where highly sophisticated medical resources are not available within the region, arrangements must be made for obtaining these patient care services in an adjoining region. Various counties and cities will need to be grouped together. Therefore, the region will tend to be much larger than previously considered by independent local governmental operations. Identifying the regional EMS delivery area, with its critical patient origin and distribution patterns, is the essential issue in defining regional boundaries.

The regional EMS operational and organizing unit must attempt to pull together the EMS services within the entire medical-geographic area. The planning and evaluation process must be based upon sound clinical considerations with state, local, and interjurisdictional relationships being maintained. In these EMS regions the provider elements within the appropriate geographical area will need to work together to solve mutual problems. An EMS Council should be developed with advisory input into these regional EMS programs and encouraged to maintain contact with other local, regional, and state health and public safety authorities. The EMS region must be contiguous with the adjoining regions. Regional planners must recognize that population in the fringe areas of a region may need to develop dual plans and allow for intercommunications with adjoining regional EMS plans and operations. A coordination mechanism also must be developed between intrastate and interstate regions.

The EMS system must be integrated through an appropriate regional organization so that the total EMS resources can be effectively utilized to meet the needs of the geographical area. The financial resources of the region must be sufficient and mobilized to develop and sustain the EMS system operation. The EMS system must be interfaced with the total health care delivery system for the region. The EMS system resources must be linked to local disaster organizations in order to respond to sporadic high intensity needs of a natural disaster within the regional service area and adjoining service areas.

EMERGENCY MEDICAL SERVICES SYSTEM COMPONENTS

The EMSS Act of 1973 requires that plans developed and systems established, expanded, and improved with funds under this Act, address the following components.

1) Manpower–An adequate number of health professionals, allied health professionals, and other health personnel, including ambulance personnel, with appropriate training and experience.

This means sufficient numbers of all types of personnel to provide EMS on a 24-h a day basis, 7 days a week, within the service area of the system.

The EMS system must emphasize recruitment of veterans of the Armed Forces with military training and experience in health care fields and of appropriate public safety personnel in such areas. The major manpower elements to be considered are as follows:

- First Responders–fire, police, and other public safety elements;
- Communicators–EMS/Resources Dispatcher;
- Emergency Medical Technician–Ambulance (EMT-A);
- Emergency Medical Technician–Paramedic (EMT-Paramedic);
- Registered Nurses–Emergency Department;
- Registered Nurses–Critical Care Units;
- Physician–Emergency;
- Physician–Specialty (medical, surgical, pediatric, psychiatry);
- EMS Systems Medical Director;
- EMS Systems Administrator;
- EMS Systems Coordinators.

2) Training–The provision of appropriate training (including clinical training) and continuing education programs which a) are coordinated with other programs in the system's service area which provide similar training and education and b) emphasize recruitment and necessary training of veterans of the Armed Forces with military training and experience in health care fields, and of appropriate public safety personnel including: police, firemen, lifeguards, park rangers, and other public employees charged with maintaining the public safety.

3) Communications–Provisions for linking the personnel, facilities, and equipment of the system by a central communications system so that requests for emergency health care services will be handled by a communications facility which a) utilizes emergency telephonic screening, b) utilizes or will utilize the universal emergency telephone number 911, and c) will have direct communication connections and interconnections with the personnel, facilities, and equipment of the system and with other appropriate emergency medical services systems.

The EMS communications system should include a command and control center which is responsible for establishing those communications channels and allocating those public resources essential to the most effective and efficient EMS management of the immediate problem. The center should have the necessary equipment and facilities to permit immediate interchange of information essential for the system's resource management and control. The essentials of such a command and control center are that a) all requests for system response are directed to the center; b) all system response is directed from the center; and c) all system liaison with other public safety and emergency response systems is coordinated from the center.

The EMS communications system must address access, allocation of resources, management (central dispatch), and medical control for BLS and ALS.

In most states a physician must assume legal responsibility for all care rendered in an emergency at the scene of an incident and enroute to the hospital. Such supervision may take one of several forms depending upon resources available and the configuration of the system in a particular area. In most states, BLS measures are considered to represent emergency first aid and do not require strict medical supervision although a physician remains responsible for the training and actions of nurses and emergency medical technicians rendering such care. When ALS is required, physician supervision becomes mandatory. In most systems, medical supervision is provided through the availability of voice communications between a physician and emergency medical technician in the field. The communications may rely solely on a telephonic link from the scene of the incident to the physician, but usually involves radio communications or a combination of radio and telephone linkages between the EMT in the field and the physician. Although it is generally agreed that medical supervision may best be given by a physician located in a hospital, it is often not practical to do so, especially in rural areas where frequency of utilization of the emergency rescue service is low, and inhospital physicians on a 24-h a day basis are not available. In such areas, the EMT must be patched to the physician, via dedicated phone lines, in the major hospital within the region.

In most urban areas, medical supervision is provided through a central base hospital resource. It is emphasized here that it is quite impractical in terms of available frequencies and from the standpoint of expense to have every hospital in an urban area providing medical supervision to ambulances bringing patients to each of these hospitals. Most importantly, personnel at each of the receiving hospitals cannot be expected to be familiar with the radio equipment and communications procedure with resultant communications failures. Furthermore, where multiple users are sharing a frequency, information may become interchanged which may lead to errors in diagnosis and treatment. Therefore, for urban areas it is imperative that medical supervision be regionalized and confined to one base hospital communications center as appropriate to the needs of the area.

Telemetry of biological signals, primarily of the electrocardiogram (EKG) has been found to be a useful adjunct to voice communications especially in the treatment of the acute cardiac emergency. The absolute need for telemetry of the EKG will vary from system to system, again, depending upon the level of training of available rescue personnel and the frequency of exposure of such personnel to the need to monitor the EKG. In programs which use volunteer rescue personnel, telemetry becomes a more important adjunct than in programs

utilizing highly trained full time EMT's with a high frequency of exposure.

Treatment protocols for each major emergency are an important aspect of medical supervision. They provide a basis for the training of all EMT's and afford the opportunity for standardization of training programs on a regional basis, establish a medical legal standard of care for the patient with an emergent problem and, through a standardized approach to the patient, facilitate cooperation between rescue personnel in approaching a given problem and allow for meaningful evaluation of training efforts and patient outcome. Such protocols can be simple or complex as required by the patient type and will be influenced by such factors as the level of training of available rescue personnel and the length of transport time to the nearest appropriate medical facility. These treatment protocols must be approved by a consensus of area physicians, based on available national standards and implemented on a regional basis.

The supervising medical resource facility must be responsible for notification of the other receiving associate hospital so that it will be aware of the problem and what has already been done in order to expeditiously assume responsibility for the care of the patient immediately upon arrival. Furthermore, this communications resource facility should be responsible for decisions that relate to transportation triage of a patient to a special care unit in accordance with previously developed patient transfer guidelines and agreements. It should have the capability of hospital-to-hospital communications for the purpose of determining Emergency Department capability and bed availability information which is necessary in effective coordination of patient disposition. There must of course be a linkage between this regional resource facility and the responsible unit for dispatching all emergency vehicles.

The communications element should include the following.

Access providing public interface system to emergency resource system:

- 911.
- Alternative single access number.

Resource management function:

- Central Dispatch.
- Coordination of EMS and other public services.

Medical Control:

- Medical communications to hospital for triage, diagnosis, and treatment.

Hospital to Mobile Unit:

- Basic voice.
- Basic voice/advanced biomedical telemetry.

Hospital to Hospital Unit:

- Basic voice.
- Relayed biomedical telemetry.

4) Transportation—This component shall include an adequate number of necessary ground, air, and water vehicles and other transportation facilities properly equipped to meet the transportation and EMS characteristics of the system area. Such vehicles and facilities must meet appropriate standards relating to locations, design, performance, and equipment, and the operators and other personnel for such vehicles and facilities must meet appropriate training and experience requirements.

The elements of transportation should include the following.

Ground—Basic Life Support Elements:

- Ambulance vehicles meeting DOT/GSA specifications and including equipment recommended by the American College of Surgeons, HEW/DOT.
- Radio communications providing two-way voice for vehicle control and for medical control and consultation.
- At least two EMT-A's on each ambulance.
- Locations permitting (for 95 percent of all calls) a maximum of a 10 min response time in metropolitan areas.
- Locations permitting (for 95 percent of all calls) a maximum of a 30 min response time in rural areas.

Ground—Advanced Life Support Elements:

- All elements of a ground Basic Life Support component, plus personnel trained to the EMS-Paramedic level must address specific clinical items in medical service plan.
- Extra communications to provide advanced biomedical telemetry.
- Extra equipment for critical care procedures.

Air:

- Helicopters
  —Primary response—unique use depending on geographic constraints.
  —Secondary response, 30–150 mi transport radius.
- Fixed Wing
  —Greater response for 150 mi transport radius
- Water
  —Special geographical considerations.
- Snow Mobile
  —Special geographical considerations.

5) Facilities—This component shall include an adequate number of easily accessible emergency medical service facilities which are collectively capable of providing service on a continous (24 h a day, 7 days a week) basis, which have appropriate standards relating to capacity, location, personnel, and equipment, and which are coordinated with other health care facilities of the system.

Categorization of the emergency capabilities of hospitals is an [14] established EMS systems concept [15]. Since the mid-1960's there has been considerable discussion about the need for the categorization of the general and specialty hospital emergency care capabilities on a regionalized basis. Medical professionals and organizations and interested health agencies have recognized and supported the need for adoption and implementation of EMS facility categorization. Unfortunately, little positive action has taken place in many states at the regional and local levels to implement programs that integrate the principles of established national categorization guidelines and that assess the individual hospitals' general and special care resources and potentials to effect sound regional EMS system development.

The concept of categorization of all emergency care facilities originates from the realization that emergency patients have varying magnitudes of injury and illness and that all hospitals have varying capabilities with which to provide adequate initial and/or definitive care. It is also realized that a categorization program must address the needs of all emergency medical patients and, therefore, deal with the growing numbers of nonemergent (primary care), truly emergent, and critically ill and injured patients. Effective categorization must involve all of the emergency receiving facilities and ascertain both the general (HORIZONTAL) and specialty (VERTICAL) care capability for all emergency patients. Categorization efforts should utilize the principles of established National Guidelines and in addition develop statewide criteria for implementation on a regional basis (CIRCULAR).

Categorization has relevance in urban, suburban, rural, and wilderness areas. The categorization concept will have additional significant effects on the utilization of EMS manpower and other EMS resources by eliminating duplication, providing additional data and information for improving EMS systems development, and should help check the spiraling costs of improved medical care. The basic purpose of categorization is to identify the readiness and capability of each hospital within a region to receive, diagnose, and treat all emergency patients, especially those with serious or critical injuries or illnesses, in an adequate and expeditious manner. Ambulance personnel, law enforcement and public safety officers, and the public must be knowledgeable of the designations of the hospitals within the region in order for the system to operate effectively and selectively utilize the appropriate hospital to which critically ill or injured patients are to be transported for treatment.

Elements for facilities consideration include the following.

- Regional categorization with accepted state or national criteria with at least one Category II hospital providing 24 h physician coverage in the emergency department in each EMS region.
- Regional EMS advisory groups to plan and carry out the categorization plan. These groups should include hospital administrators, physicians, nurses, other providers, and health system planners.
- Regional plans for mutual agreement of categories, use of critical care units, systems linkages (transfer agreements), and resource sharing.

6) Critical Care Units—This component requires providing access (including appropriate transportation) to specialized critical medical care units. These units should be in the number and variety necessary to meet the demands of the service area. If there were no such capabilities in the EMS region, then the system must provide access to such capabilities in neighboring regions.

Specialized critical medical care units should include trauma intensive care centers/units, burn centers/units, spinal cord centers, poison control and alcohol detoxification centers, coronary care units, high risk infant units, drug overdose and psychiatric centers, and others as appropriate.

A twofold issue here is the availability of critical care service units within the EMS region or in neighboring regions. Specialty care services should provide an adequate number of beds in the region or access to critical care units in neighboring areas. An operational plan for utilization of critical care units should be developed, including trained personnel, equipment and transportation, triage and interhospital treatment protocols. The EMS system should include the development of professional advisory groups (trauma, burn, cardiac, etc.) to work with EMS programs to insure that these critical services are being appropriately utilized and interrelate across political boundaries.

7) Public Safety Agencies—Provisions must be made for effective utilization of appropriate personnel, facilities, and equipment of each public safety agency in the area.

"Effective utilization" means the integration of public safety agencies into standard EMS and disaster operating procedures of the regional system. It also includes the shared use of personnel and equipment, such as helicopters and rescue boats, appropriate for medical emergencies.

Public Safety agency personnel are most frequently the first responders to an emergency patient. The EMS system must therefore work with these agencies to ensure the use of special equipment, proper training of staff, linked communications, and the development of cooperative operating procedures.

8) Consumer Participation—The EMS system must make provisions in its system management that persons residing in the area and having no professional training or experience may participate in the policy making for the system.

While there is no federally required percentage of consumer participation in EMS planning or advisory organizations, reasonable consumer representation should be provided. One approach would be to involve the committee of the advisory council of the local planning Agency which has consumer representation.

9) Accessibility to Care—The EMS system must provide necessary emergency services to all patients without prior inquiry as to the ability of the patient to pay.

The EMS system must not require evidence of the ability to pay prior to care for the services of ambulance, hospital, or critical care units. The system should provide the means to monitor for restrictive measures that may eliminate any person or group of people from equal quality of services within the region.

10) Transfer of Patients—The EMS system shall provide for transfer of patients to facilities which offer definitive follow-up care and rehabilitation as is necessary to effect the maximum recovery of the patient.

The transfer agreement is necessary to facilitate communication and cooperation of key professional providers (physicians) within the system. Actual letters that describe the transfer requirements for the critical target patients are essential contracts of regional EMS development. They not only open the radial lines of communications between the physician in the outlying area with a patient problem beyond his capability to the center physician with the necessary resources, but they also will establish the manner and mechanism by which

critical patients will be initially treated and retransported through the system. Only through this transfer agreement method will physicians at varying care capability levels come together and decide mutually on treatment, triage, educational, and evaluation protocols.

In urban areas, areawide prehospital treatment and triage protocols will have to be established by councils of key professional providers for the various specialty patient groups. These programs will necessarily "bypass" the nearest hospital as special critical cases are identified.

11) Standardized Patient Recordkeeping—Each EMS regional system shall provide for a standardized patient recordkeeping system which covers the treatment of the patient from initial entry into the system through his discharge from it, and shall be consistent with patient records used in follow-up care and rehabilitation of the patient [17].

The minimal patient records necessary for the EMS system are the dispatcher records, the ambulance records, the emergency department, and critical care records. In order to fulfill requirements of evaluation and reports to Congress, certain information must be available to be derived from these records.

- Patient identification information: the records must be designed so that the dispatcher record, ambulance record, and emergency department record on each patient can be compared for evaluation and management purposes.
- Patient access information: How did the patient access the system (arrive at emergency department)?
- Timing of ambulance services: response time, time at scene, and travel time to hospital.
- Patient condition: at scene, upon arrival in emergency department, and critical care unit.
- Patient treatment: at scene, during transport, in hospital.
- Patient diagnostic and treatment services: at emergency department, in hospital, and critical care unit.
- Disposition of patient: discharged, referred for outpatient care, referred to another hospital, admitted, died.
- Condition of patient: at discharge from emergency department, in hospital, and critical care unit.

12) Public Information and Education—The EMS system shall provide programs of public education and information for all people in the area so they know about the system, how to access it, how to use it properly, and how to pay for it. Successful systems operation depends not only upon the organizers, but also the participants. Continued support, particularly in the arena of competition for dollars, requires community commitment. To secure that commitment, the EMS system must keep its public informed. Programs should stress the general dissemination of information regarding appropriate methods of medical self-help and first-aid and the availability of CPR training programs, and other preventive oriented resources.

13) Independent Review and Evaluation—Each EMS system must provide for a) periodic, comprehensive, and independent review and evaluation of the extent and quality of the emergency health care services provided in the system's service area and b) submission to the Secretary of the reports of each such review and evaluation.

It is intended that such review and evaluation be periodic and comprehensive so that changes in emergency health care can be determined. The evaluation should be conducted by a qualified organization other than the grantee project personnel.

There is no intention to require sophisticated and expensive research oriented evaluation from funds granted under Sections 1203 and 1204. What is required is that persons not associated with the project conduct a review and evaluation of the extent and quality of the services provided. As a minimum the reviewer should have available:

- a description of the EMS resources, capability and performance measures at the start of the period being evaluated;
- a description of the interventions brought about during the period to include both clinical and EMS components;
- a description of the EMS resources, capability, and performance measures of the period being evaluated;
- clinical output or impact evaluations of death and disability should include the clinical patient target groups.

14) Disaster Linkage—The EMS system must have a plan to assure that the system will be capable of providing emergency medical services in the system's service area during mass casualties, natural disasters, or national emergencies.

The EMS system is not the regional health disaster organization. It is the emergency medical program that will work with other agencies during a disaster to provide emergency medical care. The EMS system must have links to the local, regional, and state disaster plans, and participate in exercises to test disaster plans at least biannually.

15) Mutual Aid Agreements—Each EMS system must provide for the establishment of appropriate arrangements with EMS systems or similar entities serving neighboring areas for the provision of emergency medical services on a reciprocal basis where access to such services would be more appropriate and effective in terms of the services available, time, and distance.

Arrangement among EMS regional systems and similar entities serving neighboring areas must be written agreements, signed by individuals authorized to act for the respective parties with respect to such agreements, and reviewed and reevaluated at least once a year. Such agreements should cover the exchange of service coverage, communication linkages, licensure and certification, and reimbursement.

EMS SYSTEMS MANAGEMENT

National experience with public and private funds has demonstrated that a few strategic factors are paramount to successful operations and management of an EMS system effort. The following elements must be addressed in order to develop and maintain an integrated total EMS system.

- Action Plan for EMSS Area—A comprehensive and detailed and progressive plan must be created for establishment, operation, and expansion of the EMS system.

- Lead Agency—A lead agency must be identified as the responsible operations unit for the EMS system including grants management control and operations coordination of the involved community and regional organizations and resources.
- Financial Support—Appropriate means of financial support for initial and continued EMS operations must be considered. Such financial support may be derived from various Federal programs, state and local funds, general revenue sharing funds, third party payments, and direct payments from patients.

The intent of the EMSS Act is to fund EMS projects on a multigovernmental and multicommunity basis. At the present time there are a few regions in the country where an "ideal" appropriate regional health authority exists. Such an organization or special health consortium must be developed usually with reliance on the established state health office (or major Metropolitan Health Agency) with its established management and regulatory capability for successful program initiation and support.

EMS LEGISLATION

The Emergency Medical Services Systems Act of 1973 called for "a study to determine the legal barriers to effective delivery of medical care under emergency conditions," [18]. The report of the Committee on Interstate and Foreign Commerce of the House of Representatives (H.R. Rep. No. 601, 93rd Cong., 1st Sess. 19 (1973)) stated that "legal barriers include situations where existing state laws prevent appropriate emergency services as well as situations where the absence of needed legislation fails to encourage and require such services." The report described some of the legal barriers which were included in testimony before the Committee, including: restrictive licensing laws, absence of laws requiring ambulance personnel to have adequate training, absence of laws requiring adequate design and equipment for ambulances, and inadequacies of state "Good Smaritan" laws.

The study revealed that the absence of enabling legislation at the state level rather than the presence of specific legislation provisions which preclude delivery of service, represent the major "legal barriers" to the development of regional systems of emergency medical care. Because of this, state legislatures should enact comprehensive laws to create and control the many components of the areawide emergency medical services system. State legislation should address the following areas:

- Definition of an areawide EMS system.
- Creation of a state governmental unit to plan, develop, and coordinate EMS activities in the state, emphasizing areawide systems with intersystem cooperation and including interstate cooperation.
- Ambulance services, including licensing of ambulances and ambulance services; standards for vehicle design, equipment for medical care and for communication; and personnel.
- Personnel, including definition of categories of personnel involved in EMS, training, and certification requirements, and explicit definitions of which services the various categories are authorized to perform under specific circumstances.
- Emergency medical facilities, including a requirement for participation in areawide systems and a requirement for systemwide categorization of hospitals by the level of care they can provide.
- "Good Samaritan" legislation.
- Responsibility for providing care, including responsibility of the general public, health professionals, ambulance services, and hospital emergency facilities.
- Financial responsibility for care, defining who is responsible for paying for care provided.

National program efforts will focus on how to assist state legislatures in implementing such legislation that will encourage the development of regional EMS systems. The EMS system will be enhanced and placed on more solid foundations by the enactment of adequate EMS legislation by state legislatures.

EMS SYSTEM EVALUATION

At this time it is impossible to determine how many lives are being saved and the amount that disability is being reduced because of EMS systems. To date, evaluation of the emergency medical care programs have been geared toward the survey approach, resources documentation, and data on subsystems (e.g., transportation, training, etc.). Essential data must be obtained to evaluate the clinical effectiveness of regional EMS systems. There must be developed new methodologies for "tracking" and evaluating emergency medical care for specific patient groups, e.g., trauma, burns, etc., within the system. These analyses will allow programmatic decisions as to the appropriateness of utilization of facilities, personnel, equipment, clinical treatment, and cost effectiveness.

The following should be the basic ingredients for the development of an evaluation strategy. It is appreciated that at present the "state of the art" of systems evaluation is rather primitive across the country. This is consistent with the relative development stage of most EMS systems at this time. As EMS projects grapple with the multiple components and organizational changes, they must also comprehend the basic precepts of evaluation methodology [19].

The following are basic to an evaluation strategy.

a) Development of a descriptive narrative of the organization's operational components, and "clinical systems" design and implementation. A key evaluation task for each program will be that of the narrative description of the relative systems changes implemented and perceived as the EMS system develops. This essential evaluation component cannot be overlooked and is essential for subsequent steps b), c), and d), described below.

b) Structural analysis and resource development. In this area one must describe some of the key implementation aspects (radio-installed, ambulances placed, etc.) that are well identified phonemena of an EMS program. These will be necessary in the area of organization and management, at least the six clinical tracer and impact groups, and at least one parameter for each of the fifteen components.

This inventory assessment will describe these key structural phenomena and provide some guidance as to the quality of

each parameter, (implementation of 911, dispatch, categorization). Much of this data will include resources data for program information sources. Of these parameters within each of these areas some will be of state or national signifiance.

c) EMS activities or processes. Those structural components now implemented (e.g., communications, 911 dispatchers, ambulances, trauma units, etc.) all have activity levels which can be counted using operations data; for instance, counting trauma victims admitted to a specialized designated trauma unit, or the numbers of calls via the 911 access number. With this approach even during the initial years, a program will be capable of monitoring the very basic process elements of the system and will be able in future years to develop ratios, indices, and correlations among or between systems components.

Rates of utilization and appropriate clinical and cost benefit data can subsequently be developed. Section c) will also have some parameters of national significance but more importantly this data will be most useful to the actual operation, management, and development for each system.

Again, this type of basic information is necessary and relates to section d).

d) Patient outcome and program impact. In this section, critical clinical questions must be enunciated in the evaluation strategy, and the evolution from simple to complex evaluation approaches will parallel each system's growth and maturity. There are at least four types of impact evaluation essential to documentation of a comprehensive and successful system.

1. Compliance studies. As the program narratives are developed (section a), resources developed (section b), and activity levels counted (section c), the effect of these on critical patient groups will be seen. The care of a patient at the scene, transport to a facility following a described program narrative (e.g., critical major trauma, sent to a trauma center) can be counted at the center and with surveys for similar patients in nondesignated facilities will give patient "fit" or compliance to a prior "care system" set. The first such patient and all subsequent patients "test" the system in this tracer method.

In the initial years of most programs, this simple analysis is possible and will relate to patient "systems" compliance and later outcome effectiveness.

2. Death and disability impact can be measured by national norms, peer judgments, or using newly developed indices or morbidity.

Interest here will obviously be along the lines of hard data (e.g., lives, deaths), and these can only be attributed to the system's effectiveness if in fact the patient was responded to and "processed" appropriately through the system according to established protocols.

3. As EMS systems mature, studies of death and disability on regional bases will be possible and necessary to show that these changes in death risk for a certain emergency are operative throughout the entire geographic region. So far only two such papers have appeared in the literature.

4. And finally, the evaluation of treatment effects, therapy alternatives, program options, phases of implementation, and other experimental studies, will be possible in regional programs as the level of maturity and sophistication progresses, sound BLS and ALS systems.

This very basic but progressive evaluation strategy will provide a graduated experience in evaluations methodology for newly developing EMS programs.

Peer review has achieved great national importance among physicians in the United States in the past several years, consequent upon Federal legislation mandating PSRO and hospital quality assurance programs. Emergency medical care also requires peer review, not only from the standpoint of physician performance but also with nursing and EMT-A and EMT-Paramedic personnel. Professional and paraprofessional alike should critique the delivery of their specialized services within the system on a regular basis. Likewise, emergency room personnel have a responsibility to review overall performance of their colleagues, in order to upgrade care, identify deficiencies in training or equipment, and to rectify any errors which inevitably will creep into the EMS system.

DEVELOPMENT OF REGIONAL EMS SYSTEMS

During the first two years of the Program, 235 of the 300 state designated EMS Regions have received funding under the Emergency Medical Services Systems Act of 1973. One hundred and ten of these regions, serving a population of 77 000 000 are in some phase of operational development: 83 are developing a BLS capability under Section 1203, and 27 are developing an ALS capability under Section 1204. In addition, 125 regions covering a population of 87 500 000 have prepared plans for the development of regional systems under Section 1202.

A year-by-year summary of activity follows.

Fiscal Year 1974

Eighty-five grants covering 126 regions and serving a population of 88 200 000 were awarded in the amount of $17 000 000.

Section of Act	Number of Grants	Number of Regions	Dollar Amount	Population Served
1202	53	90	$ 2 250 000	63 000 000
1203	21	27	10 400 000	18 900 000
1204	11	9	4 350 000	6 300 000
Total	85	126	$ 17 000 000	88 200 000

Fiscal Year 1975

One hundred and sixteen grants, covering 174 regions and serving a population of 121 800 000 were awarded in the amount of $32 242 800.

Section of Act	Number of Grants	Number of Regions	Dollar Amount	Population Served
1202	56	82	$ 4 617 800	57 400 000
1203	49	66	19 500 000	46 200 000
1204	11	26	8 125 000	18 200 000
Total	126	174	$32 242 800	121 800 000

Extensions were also approved during fiscal year 1975 for 18 regions that were awarded grants in fiscal year 1974: 17 under Section 1203 and 1 under Section 1204.

Fiscal Year 1976

Fifty two grants covering 63 regions and serving a population of 44 100 000 were awarded in the amount of $29 115 300.

Section of Act	Number of Grants	Number of Regions	Dollar Amount	Population Served
1203[1]	41	51	$21 836 475	35 700 000
1204	11	12	7 278 825	8 400 000
Total	52	63	$29 115 300	44 100 000

Because of constraints in the current Act, no new regions will be planned or new systems will begin operations during fiscal year 1976.

Training

Section 776 of the Act provided funds for training during fiscal year 1974 only. Under this section, 76 grants and 2 contracts were awarded in the amount of $6 666 869. These awards provided training for 36 350 individuals:

Discipline	Number of Trainees
EMT (Basic and Advanced)	25 000
Emergency Department Nurses	4000
Emergency Department Physicians	1200
EMS Administrators/Coordinators	150
Other	6000
Total	36 350

Under other authorities, the Health Resources Administration continued to fund applications for EMS training during fiscal year 1975. They awarded 9 grants in the amount of $813 191 under Section 772, health professions special grants and contracts, and 39 grants in the amount of $4 432 492 under Section 792, grants to improve the quality of training for allied health professions.

Research

In fiscal year 1974, five grants and 14 contracts were awarded in the amount of $3 311 000 under Section 1205. In fiscal year 1975, 14 grants and four contracts were awarded in the amount of $4 444 474 under Section 1205. These awards supported research in the four major categories described in Section 1205 (a).

Category	Dollar Amount
I. Medical Techniques	$1 022 766
II. Methods	3 657 995
III. Devices	2 181 326
IV. Delivery	892 476
Total	$7 754 474

[1] Funding limited to second year awards under Section 1203, and first and second year awards under Section 1204.

DISCUSSION

The time has come in this country when a strong positive force must coordinate all of the excellent, well developed medical resources and available technology to impact upon and improve patient care services for all emergency patients. The EMS problem was identified in 1966 by the National Research Council in "Accidental Death and Disability: the Neglected Disease of Modern Society," [20] and is now an accepted soluble nationwide medical problem.

The heretofore frequently isolated islands of excellence have often been separated by areas of confusion and fragmentation into single component emergency care efforts. In addition, there are many communities where emergency care is poor because of disarray, even disrepair, in terms of providing a system of emergency care, especially in the rural, the wilderness, and inner city areas. Previous local, state, and Federal initiatives have addressed single components or those parts of a system that seemed to represent the most acute and obvious need at the time. It is now apparent that a system must include all of the 15 components and is no more effective than its weakest links. Further development of one or two of the chosen strong links will not make the chain stronger and will not create a better system of care for the critically ill or injured victim. The "nonsystems" approach has been due to a combination of local ignorance, provincial prerogative, and lack of guidance by the Federal Government. The passage of the EMSS Act of 1973 now provides an opportunity to establish health priorities for emergency medical care at the local, regional, state, and national levels of our society, and to foster the development of a comprehensive and sound EMS systems approach that will affect all communities, especially the rural, the economically depressed, and the medically underserved areas.

ORGANIZATIONAL RESPONSIBILITIES

It is now quite obvious that an EMS system must incorporate a certain well identified and credible organizational unit to coordinate all of the various provider, community, and governmental interests. This unit must be the focal point for ensuring the system's integration from a systems access, a first responder's identification [1], communications coordination, patient transportation (primary and secondary), initial hospital, critical care facilities as well as linkages into rehabilitation. While no individual organization has the responsibility for all of these components, the operations unit must coordinate these many activities of the EMS system and must represent the professionally and publicly supported EMS Services Council for policy development, advice, grievances, and resources utilization.

CRITIQUE OF EMERGENCY AND CRITICAL CARE DELIVERY

It is now well recognized that patients are still being lost unnecessarily because of systems failure, not simply because of neglect of injuries or severity of medical problems. Prior to

current trends in management, many emergency cases were, more or less justifiably, treated conservatively because of the attitude that they were too "sick" to get well. Now that well established techniques of resuscitation and emergency medicine and surgery have been disseminated, an extremely aggressive approach in prehospital and hospital care phases is being shown to salvage lives. This sophisticated, aggressive, and coordinated approach to emergency care is not without significant cost and demands in terms of emergency medical services resources, especially manpower. Only by a consolidation of experience, personnel, vast medical resources, operating rooms, intensive care, X-ray, blood banks, etc., on a regional basis can such a program be developed and supported by the civilian community.

The concept of adequate emergency medical care requires an organizational responsibility which provides sound planning for the prehospital and hospital critical care services; and must engender community and region wide patient triage with well established, practical, and refined medical care plans that involve the care at the scene during transportation, in hospitals, and critical care phases of patient services. The whole aggressive systems approach must be without weaknesses or gaps, and continually needs to be reassessed and evaluated to assure optimal operation.

FEDERAL INVOLVEMENT IN EMS DEVELOPMENT

A large body of representatives from the many interested professional medical and health groups appeared in Washington in 1971, and testified at the Congressional Hearings on the Emergency Medical Services Systems Development Act of 1972, unanimously supporting the critical need for improvement of care of emergency patients. They also indicated that such care should and would be improved by the systems approach. Much of this testimony was given by witnesses from organizations who stated that they were convinced that the following pertains. "An environment now exists in the nation for the development of comprehensive total emergency medical services systems on a regional and statewide basis. The lack of provision for emergency illness, accidental death, and disability can no longer be classified as an insoluble health problem, as medical expertise and technology are available in this country which can easily be applied to this previously neglected situation." The essence of the opinions and precepts stated by those interested in the national EMS problem was that the "neglected disease of modern society" could now be effectively handled by efficient utilization of expert care principles and by organizing and improving, in each community across the nation, the existing and developing EMS resources and care capabilites. It was obvious that Federal direction would be an essential catalyst for a national EMS systems development program.

This organized systems approach to the care of emergency victims has been proven already in some areas. It has also been proven that by such a systems approach, a more effective return on the current and future investments of Federal dollars can be anticipated.

EMS AS A COMPONENT OF THE TOTAL HEALTH CARE DELIVERY SYSTEM

The coordination of established medical services and public safety efforts brings the emergency medical care program to an interface with community service activities heretofore outside the scope of established medical practice. Community involvement by a wide spectrum of the public, private, and governmental entities gives an emergency medical service system a new dimension to health care that has not previously been a major consideration in American medical practice. An additional result of the regional EMS system effort will be the demonstration of how other essential nonemergent health services and programs might be stylized similar to EMS on a geographic and service demand basis. Some experience already suggests that programs such as blood, organ transplantation, and rehabilitation services as well as quality assurance programs might be enhanced by regional systems models.

The national EMS system effort will improve the quality of care for the critically injured and ill citizens across the country. Due to its unique characteristics, emergency medical care provides a rare opportunity for experience in many other phases of health care delivery. It is anticipated that the "ripple effect" in the EMS effort may extend beyond the limits of acute care phases to many functional component areas.

The success of any EMS system is dependent upon the wisdom of its leadership and appropriate integration of resources, operations management, and financial planning into an effective program. The major task of the Division of Emergency Medical Services is to provide current and timely technical assistance and guidance by communicating results of lessons learned from established and ongoing operational EMS projects.

FORESTRY

UNITED STATES DEPARTMENT OF AGRICULTURE
FOREST SERVICE
P.O. Box 1628, Juneau, Alaska 99802

1870

January 19, 1978

Senator Kay Poland
Alaska Senate
Pouch V
Juneau, Alaska 99811

Dear Ms. Poland:

The Forest Service currently has 137 enrollees working in Alaska in the nonresidential part of the Young Adult Conservation Corps Program. We plan to have 588 young people between the ages of 16 and 23 gainfully employed in the YACC Program by September 30, 1978. Additional YACC jobs in Alaska will be provided by U.S. Department of the Interior agencies, and by the Alaska Department of Natural Resources with Federal grant funds.

By location, the number of nonresidential enrollees (those who live at home) that we now have hired are:

Anchorage	53
Angoon	2
Cordova	6
Hoonah	3
Hydaburg	4
Juneau	12
Kake	3
Ketchikan	11
Metlakatla	5
Klawock	3
Palmer	7
Seward	10
Sitka	6
Wasilla	10
Yakutat	2
Total	137

Residential YACC camps, where enrollees live in Government housing, will be operated by the Forest Service in Wrangell, Cordova, Seward, and Kenai. The Wrangell camp is being activated this week with the arrival of the first 20 enrollees. We plan to open the Cordova camp in April, and the

Seward and Kenai camps in June. When fully activated, we will have 120-150 enrollees at Wrangell, and 50 enrollees each at Cordova, Seward, and Kenai.

Assistance with publicity and recruitment for the Program has been given to us by the Alaska Department of Labor, the Governor's Manpower Division, the Tlingit-Haida Central Council, the Tanana Chiefs, and the Southeastern and Rural Alaska Community Action Programs. Their cooperation has been most helpful in getting the Program on its way.

Once our residential YACC camps are in operation, we hope that you will be able to visit one of the centers. Our camp personnel will be available to explain the Program to you, and show you some of the project accomplishments.

During your stay in Juneau, while the current legislature is in session, you are welcome to stop by my office to discuss this or other Forest Service programs with me, or members of my staff.

Sincerely,

JOHN A. SANDOR
Regional Forester

FIDC

DR. WILLIAM R. WOOD
EXECUTIVE VICE PRESIDENT

FAIRBANKS INDUSTRIAL DEVELOPMENT CORPORATION
Phone 907 452-5400 619 Eleventh Avenue Fairbanks, Alaska 99701

March 14, 1977

Senator Kay Poland
Chairman, Resources Committee
Pouch "V", State Capitol Building
Juneau, Alaska 99811

Dear Senator Poland:

Here are the materials concerning Alaska's Interior Forests which I mentioned to you. For the best run down on this, I suggest conferring with Mr. John Galea of the U. S. Forestry Service. His office is located in Anchorage and his address is: 121 West Fireweed Lane, Suite 205, Anchorage, Alaska, 99503.

We are just now beginning to learn some of the facts about the Alaska's Interior Forests. The article by Hutchison and Schumann, which I marked with a paper clip is quite revealing. It appears that the Interior Forests can produce 634 cubic feet per acre as compared with that of Minnesota at 574 cubic feet per acre. This is on a sustained yield basis. The total volume potential is greater than that of Wisconsin, Michigan, and Minnesota combined.

The Fairbanks Industrial Development Corporation has spent some $20,000.00 this year through the office of the USDA regional forestry service of Portland for a market feasibility study for a "Structural Particleboard Plant" to be located somewhere in the rail belt area. Since the target selected was the rim of the Pacific countries, the study indicated we may be five or more years away from a sound project. This week, we are having a meeting for score or more of sawmill operators in Interior Alaska. Other forestry specialists will also participate in this meeting.

The prospects for making wise use of Interior Alaska Forests were never better. Harvesting and processing may be developing slowly, but the future is bright. Incidentally, agriculture and timber development work very well together in the Interior Valleys. The situation is somewhat like the old New England farms where the woodlot provides seasonal employment and income that dovetails with that of the crop lands.

Sincerely yours,

Bill Wood

Corporation
619 Eleventh Avenue
Fairbanks, Alaska 99701

Dear Dr. Wood:

Thank you very much for sending me the material on Alaska's Interior Forests which we had discussed. Yesterday at a meeting for the Logger's Convention, I had the privilege of hearing Mr. John Galea speak, and he gave a slide show which was most interesting.

It is my belief Alaska's timber industry will really be reaching the important place it should in our economical development within the next ten years, and hopefully, the legislature will be able to communicate with and assist the industry as it grows.

I would greatly appreciate your keeping me advised in matters that you feel are pertinent.

Sincerely

Kay Poland

WESTERN STATES LEGISLATIVE FORESTRY TASK FORCE

1107 - 9th Street

Sacramento, California
95814

February 10, 1977

The Honorable Hugh Malone
President of the Senate
Pouch "Y"
Juneau, Alaska 99811

Dear Mr. President:

This letter is to acquaint you with and to invite your participation in the Western States Legislative Forestry Task Force. This bipartisan Task Force was formed in 1974 and consists of four state legislators appointed from each of the states of California, Oregon, Washington, Idaho and Montana. It is charged with monitoring federal and state forestry issues and with advocating the interests of the member states in forest policy.

Policy resolutions are adopted after public testimony is taken at Task Force meetings, which are held about six times a year. Resolutions are then sent to federal agencies having jurisdiction over public forest lands and to Congressmen from the five western states. They are followed up in whatever manner promotes action.

For example, frequent contact was made last year with members of Congress to promote increased federal payments to local governments for services rendered to users of public timber lands within their jurisdictions. In this manner, the Task Force, along with other groups, helped to bring an estimated $86 million to local governments in the member states.

An explanation of this and other Task Force actions are summarized in our Annual Report, a copy of which is enclosed for your review. An agenda and minutes for the latest meeting, together with enabling legislation for Task Force participation from the state of Idaho, are also included.

contd.

Task Force operations are funded entirely by the legislatures of the five states. Shares of the total budget have been determined for the coming biennium on the basis of a formula that emphasizes equally benefits received and ability to pay. This formula is explained on page 17 of the annual report. Should legislators from Alaska decide to participate in the Task Force, an adaptation of the formula suggests that Alaska's cost would be about 7.6% of the budget adopted for support of Task Force staff, or about $5800 for the coming biennium. Travel expenses of members would be additional.

The Legislatures of the member states have found the benefits of the Task Force have far outweighed the small supporting cost. For this reason we urge you to consider joining with your fellow legislators from major timber producing states to form a stronger voice to speak for our states in matters of forest policy.

With your membership the Task Force would represent states containing about 70% of the soft wood growing stock in the United States. We would have access to a sizeable block of votes in Congress that would be a force to be reckoned with both in Congress and by federal agencies.

Sincerely,

J. Wilson Steen

OF COUNSEL
GEORGE KAUFMANN, ESQ.
(D.C. BAR ONLY)

HOWARD TRICKEY, ESQ.
(D.C. BAR ONLY)

Port Graham Timber Sales

Mr. Michael C.T. Smith
Director
State Division of Lands
323 E. Fourth Avenue
Anchorage, Alaska 99501

Dear ~~Mr. Smith~~ Mike:

As you know, I was very disappointed by the failure of the Legislature to act favorably on S.B. 545. The communication from Mr. Tubbs certainly played a part in the failure of the Legislature to enact this measure. Genuine uncertainty about the effect of the bill as precedent for other situations besides Port Graham was another factor.

In your letter of May 18 to Senator Poland, you indicated that passage of S.B. 545 could involve as much as $918,000 of State receipts received between December 18, 1971 and April 15, 1976.

One element that requires research before the 1977 session is that there is a great difference, from a policy standpoint, in my judgment, between revenues obtained from the State through the extraction or removal of valuable resources, and revenues received as permits or rental recipts which do not diminish the present or future value of the Native patentee's equity interest or fee simple estate.

I believe we agree that Port Graham is the outstanding case where some legislative relief, or judicial relief, should be provided. Without attempting to recite all of the reasons again, I do point out that the primary resource value at Port Graham is timber; that the State under the contract with Southcentral Timber Co., Inc. received stumpage fees from and after 1967 until 1976; that the timber was not reappraised in 1972 by the State, and that a reappraisal would have resulted in a higher stumpage fee; that the lands were applied for in 1974 after the passage of the 1971 Claims Act; and the delay of the interim conveyances until December, 1975, was through no fault of the village corporation.

Obviously, if no timber had been taken, the value of the lands conveyed to Port Graham would be much higher than is the actual case today. Under the actual circumstances that prevail at Port Graham, the stockholders of the village corporation may have to wait several generations before the timber stands, where cutting has occurred by Southcentral Timber Development Company, can be again developed commercially. Even this hope for future development generations ahead assumes that State management was not inimical to the area and to the health of the forest in particular, from an

environmental point of view.

My judgment is that the Senate Resources Committee, including its chairperson, Senator Poland, Senator Chancy Croft, and others, gave fair consideration to S.B. 545, but were handicapped by lack of timely information. I only hope that the matter can be rectified for 1977 based on the research done to date and additional research which should distinguish between revenues derived from activities that diminished the value of the equity interest or fee simple estate and, on the other hand, revenues derived from activities which are not damaging to land values.

Sincerely,

Joe P. Josephson

FOREST SERVICE

Forestry
inc.
- Lands

1560

January 19, 1977

The Honorable Kay Poland
Pouch V
State Capitol Building
Juneau, Alaska 99811

Dear Senator Poland:

I hope you will find the enclosed Smokey Bear pocket planner useful. Although forest fire prevention is not a problem in Southeast, it is a very large problem in the Interior. I share with you the feeling of loss over the many millions of acres of valuable forest and range lands burned over in past years by wildfire.

We are entering the third century of our Nation, and greater demands than ever before will be placed on our valuable renewable resources. Alaska has been and is steadily moving forward to take its rightful place as a storehouse and supplier of these natural resources for the United States and the Pacific Rim countries. The wilderness, scenic and recreation values are unsurpassed and there is a rapidly increasing influx of visitors to Alaska. The National Forests of Alaska had nearly 2 million visitor days of recreation use this past year.

The Forest Service in Alaska is actively working with the State on numerous cooperative programs. The most important cooperative effort to be undertaken in 1977-1978 is the assessment of the Renewable Resources of the State. This is part of the National Assessment authorized by the Resources Planning Act (PL 93-378). A complete assessment of Forest, Range, and related renewable resources is to be completed by December 1979.

Cooperative land-use planning efforts are underway and we recently signed a cooperative agreement with the State to implement the Sikes Act which provides for intensive cooperative wildlife habitat improvement programs. Various resource studies are ongoing in cooperation with the University of Alaska and other State agencies. Our research facilities at Juneau and Fairbanks are currently conducting inventory and research projects in the Interior and Southeast. Through our State and Private Forestry program, we provide technical advice and assistance to forest landowners. This program will be especially important as Native land selections are consummated.

The Forest Service is already engaged in several cooperative forestry assistance programs with Native corporations and villages. If we can aid you in securing background information and natural resource data, please do not hesitate to call on us.

My best wishes as you commence your deliberations and for the New Year. Hopefully, every Alaskan will help make 1977 safe from wildfire.

Sincerely,

JOHN A. SANDOR
Regional Forester

RESOLUTION IN SUPPORT OF MULTIPLE-USE
LAND CLASSIFICATION OF NATIONAL INTERST
LANDS IN INTERIOR ALASKA

The Alaska Loggers Associations represents the Forest Industry in Alaska. Its membership is represented in the Southeastern, Southcentral and Interior forested areas of our State.

ALA is very interested, and vitally concerned, about upcoming congressional land classification decisions affecting national interest lands in Alaska, brought about by the Alaska Native Claims Settlement Act.

Commercial forest land in Interior Alaska includes over 22.5 million acres. Tree species, size and growing conditions compare favorably with, and in some areas exceed, commercial forests managed in our own Lake States, Western Manitoba and Ontario Canada and the Scandinavian counties of Norway, Finland and Sweden. Successful forest products industries as well as other wildland and recreation activities have co-existed, on these lands mentioned, for hundreds of years. The State of Minnesota, with a smaller forest land base than what is found in interior Alaska has over 60,000 people employed in its timber and forest products industry and maintains many high quality outdoor activities.

The Alaska Loggers Association is on record in support of multiple-use land management. ALA strongly favors public lands in interior Alaska be classified for their multiple use values and placed under the jurisdiction of an established land management agency dedicated for this purpose

Memorandum

To: Sen. W.I. Palmer, Chairman
Special Senate Committee on Fisheries

From: Michael M. Whitehead
Administrative Assistant

Re: Forestry Section, State Division of Lands

During the past legislative session, one of the charges to this Committee was a review of the impact of logging on salmon habitat and production. In conducting this review, priority was placed on logging practices on State lands as correspondence and reports from individuals indicated that serious abuses of adequate management practices were taking place. Having inspected most of timber sales in the Haines area and the Windy Bay-Rocky Bay sale on the Kenai Peninsula, it is fortunate that the majority of these sales have not involved salmon producing waters, for the management practices have been less than adequate. The majority of the sales have involved upland areas. Poor timber management practice on these upland areas could ultimately effect salmon habitat and production, though this would be very difficult to document.

Based on field inspections, interviews with the District Foresters involved, and with administrative personnel in the State Forester

office, there is a need for legislative review of all phases of forest management and administration on State lands.

There are three major factors which are contributing to less than adequate forest management. Much of the following information will require further documentation prior to formal review because it has been outside of the present charge to this Committee. Until such time as a formal review is initiated, I would recommend that this information be kept confidential to facilitate access to documentation.

Disposal Orientation

The majority of past and present inadequacies in the management program are a function of the disposal orientation of the Division of Lands. I am attaching a copy of a memorandum written in 1968 which requests the Area Managers to "undertake an agressive program in your area with emphasis on disposal." The State Forester has indicated that he does not feel that his section is disposal oriented at this time. It may be more appropriate to say that there is not as much emphasis on disposal as in the past. The past emphasis is a current causative factor in that the District Foresters can not adequately administer the sales within their areas. The foresters which I've dealt with feel that movement from a disposal orientation which dominated all other considerations has taken place. However, it appears that the most recent large sale (SC-275, West Side Salvage) was a rush job resulting in inadequate layout, planning or inventory work being accomplished

prior to the sale. This typifies most of the sales in previous years, especially those involving large acreages. Many of the problems in the Haines area have resulted from the disposal philosophy and resulting rush sales. The number of sales completed was greater than the available staff could properly administer which has led to poor road layout and construction, poor cutting practices, and inadequate supervision of contractual requirements.

Another problem resulting from the disposal orientation in the Haines area is that of exceeding the allowable cut. The annual allowable cut figure of 20 million board feet (MBF) was established as early as 1964 and yet during the period 1961-1971 there was an over-cut of approximately 40 MBF. During the peak period of timber harvest in 1967-1970, the annual commercial harvest varied between 28.7 MBF and 45.3 MBF. The annual allowable cut has been reduced to 19.5 MBF to amortize the overcut over the remaining 89 years in the estimated 100 year rotation. The Haines District Forester has indicated that an annual allowable cut of 19.5 MBF is still in excess of that which should be cut to maintain sustained yield management. This is because all commercial timber stands are used as an inventory base upon which the allowable cut is determined without regard for lands which will be disposed of in the future, buffer zones, intensive management areas, recreational or other multiple-use areas. Also, cottonwood is included in the forest inventory and accounts for approximately 9% of the commercial timber. During the 1961-1971 period,

cottonwood accounted for about 1.4% of the harvest, allowing for an over-cut of 7.6% on spruce and hemlock. This practice is still in effect. The Haines District Forester feels that an annual allowable cut of approximately 13 MBF would be more realistic and this has been substanciated by the Timber Management Forester.

It would appear that a disposal philosophy has over-shadowed the Constitutional requirement for sustained yield management. It should be noted that requests for timber sales from the industry are often the determining factor in the decision to make a sale. This has been verified for several of the Haines timber sales and Mr. Sundt's allegation regarding the Icy Cape (White River) sale is correct according to a District Forester. It is somewhat ironical that the industry, who encouraged this type of management, will most likely be adversely impacted, especially in the Haines area. Approximately one-half of the annual production from this area is from National Forest. It has been indicated that the Forest Service does not anticipate increasing timber production in the area, and there will be a delay in planned sales because of the preparation of environmental impact statements on lands in roadless areas. In all probability, the industry will be requesting additional sales on State lands at a time when the State is attempting to reduce the annual allowable cut.

In 1971, an analysis of the forestry organization and programs of the State was conducted at the request of Charles F. Herbert, Commissioner of the Department of Natural Resources. The study

team consisted of personnel from the U.S. Forest Service and the Montana and Minnesota Forestry Departments. Their recommendations, and the lack of implementation by the State Foresters office, point out another area of apparent inadequacy--that of poor administration and lack of leadership.

Land-Use Planning

The study report states:

> "It also became immediately apparent that the sound plans for forest protection and management could not be established and quantified until it was known what the long-range land use plans would be for state lands.... Again, the basis for beginning the management of this resource is to establish with reasonable accuracy through land use planning, the forest lands that may logically be expected to be managed on a sustained yield basis. Any forest industry seeking to harvest timber and manufacture forest products in the state must be assured a continuous predictable supply of raw materials." (emphasis added)

The State Forester has indicated that the classification of lands is not far enough along as far as management is concerned. The Timber Management Forester stated that there is little support from "up the line" for land-use planning, which would allow for revised, dependable allowable cut figures. He felt the State, and especially his department, was far behind in this regard. He indicated that his present work load was a factor, but it would seem that land-use planning should receive a much higher priority. The study report continues:

> "...The lack of classification or determination of the lands to be hald (sic) under State Administration is posing many problems to the District Managers.
>
> Lacking this basic information on land retention and overall use plans has forced them to adopt a "policy of accommodation". Although they all have a good knowledge of the lands under their administration and the long-range use that they feel is desirable, they are frequently

> placed in an indefensible position when requested to make timber sales, long-term leases, or outright sales of ther property. Further, management of this type leads to special interest classifications, which will prohibit or make difficult the multiple-use of lands in the future...
>
> The purposes of this recommendation were in essence provided for in Division Order #112 dated October 19,1966, but to date have not been carried through."

It should be noted "this recommendation" was for land-use planning and "to date" was April 1971.

Policy and Guidelines

The study report states:

> "The general guides for District Managers are given in Division Order #112 dated October 19, 1966. These are very broad and give the District Managers a wide latitude for independent action. While they enjoy this autonomy, this review indicated they would welcome more positive management direction. This will, in part, be met by the preceeding land use planning recommended..., but they also desire to be more informed on current thinking in the central office with a better understanding of how well they are performing."

I am enclosing the results of this recommendation which were requested from the Timber Management Forester. He indicated that these policies and guidelines were initiated on his own and were worked on as "time allowed". The emphasis is on general administrative considerations rather than positive management direction.

In addition, both the study report and/or District Foresters indicated a great need for developing contractual cutting standards, specifications for road construction, standards for timber harvesting, guidelines for contract administration, and guidelines for sales preparations. The lack of these guidelines has contributed significantly to the current situation.

Memorandum
Sen. W.I. Palmer

As a result of discussions with the forestry staff, there are additional concerns which should be reviewed:

(1) Research: Is the research base adequate to support the management practice? At this point, it appers that Mr. Sundt's allegation regarding regeneration rates on the Windy Bay-Rocky Bay sale is accurate and may be indicative of a broader problem.

(2) Utilization: Are the present contractual requirements for utilization of timber adequate? Forestry personnel feel that requiring greater utilization may be appropriate.

(3) Illegal removal of timber for State lands as alleged in Mr. Sundt's letter. Information received from staff members indicate little or no check scaling is done to ensure proper payment to the State.

(4) Adequacy of the present staffing level in relation to the volume of timber being cut.

I have attempted to outline broad areas of concern rather than deal with problems on specific sales. I do have some specific details, but as indicated, additional documentation should be obtained.

Senator Bob Palmer, Chairman
Senate Resources Committee
Alaska State Legislature
Pouch V
Juneau, Alaska 99801

Dear Bob:

An informant - apparently an authoritative one - recently discussed a situation with me that might merit your investigation. It concerns the Division of Lands Branch of Forestry, and amounts to a pretty solid roundhouse swing at the whole operation. The criticisms were

a) That the Branch, concerned for years almost exclusively with timber sales, has used very questionable economics to rationalize many of its contracts. The Yakataga sale was cited.
b) That the basic inventory data used to establish allowable cuts (timber cruise volumes, site index, growth rates) are poor and unprofessionally collected.
c) That actual logging shows under state contracts are not well supervised, resulting in shoddy logging, erosion, cut timber left in the woods, etc. Haines and Yakataga shows were mentioned specifically

I know nothing about this first-hand. If you think your Committee would want to question Keenan or Sachek, it might be well to contact Branch people like Tom Wade (forester stationed in Haines) and Ray Settles (forest protection man in Anchorage) as well. Reportedly they have not been happy with some of the state's forest management. Further investigation could indicate these criticisms are not substantiated, of course.

I understand Jack Hession, Dave Hickock, and other Anchorage people have looked into this a bit.

Sincerely yours,

Bob

Senator W. I. "Bob" Palmer
Pouch V
Juneau, Alaska 99801

Dear Senator Palmer:

Please excuse my delay in replying to your inquiry regarding mismanagement of State forest lands. I have been busy with other matters and wished to give my reply to you the thought and attention it deserves.

The problem is not so simple as a few cases of logging abuse, although such cases do exist. The basic problem is in the organization of State forestry personnell and in the philosophy of the State Forester.

You may remember that shortly after statehood, in the initial organization of the Division of Lands, Roscoe Bell hired Earl Plourde as State Forester. It's pretty well agreed within the forestry profession that Plourde was a visionary, and perhaps ahead of his time in some respects. He predicted a rapid development of Alaskan Forests and he worked diligently to bring this about within the framework of good forest practices. It soon became evident that forestry could go nowhere without land to manage on a long term basis, and thus began the conflict between Forestry, which was management oriented and championed by Plourde, and Lands, which was disposal oriented and run by Joe Keenan. There was constant bickering and jockeying for position, and Roscoe Bell would neither settle anything in favor of one side or the other, nor step in and firmly tell them to quit fighting.

Plourde's two main assistants were Ted Smith in charge of Parks and Recreation, and Bill Sacheck, in charge of Management and Protection. Plourde could never see the tremendous importance that parks were to achieve, and as a consequence Smith succeeded in divorcing his section from forestry and proceeding on his own. Parks and Recreation has since achieved the Division status which it deserves, although it can still be argued that the split should never have taken place since there are certain management and protection functions which must be duplicated with Parks and Forestry as separate sections.

Sacheck was unhappy working under Plourde. I believe it was a personal thing but it manifested itself in attempts to obstruct and undermine the program. For example Sacheck once hired a forester whom he despised "as a joke on Plourde". That forester is still with the State and in my opinion is a good man, but

Sacheck's motive in hiring him could certainly not be considered in the best interests of the organization he was supposed to be working for.

Once in an argument with Sacheck I was espousing forest management and he stated that no forests in the state outside of Southeastern were worth managing. The talk then swung to fire protection and he gave the opinion that we should protect nothing, and let it all burn. I told him then that he was certainly the only Management and Protection Officer who believed in neither management nor protection ! This man is now our State Forester.

Roscoe Bell was aware of the strong frictions within his Division and began to think of some type of reorganization as the solution. Sacheck became his Special Assistant and campaigned successfully for a plan which would leave Plourde and all other branch chiefs as mere staff advisors with no line authority. Meantime we had a change of administration and commissioners. Tom Kelly knew nothing about timber but was pleased at the prospect of officiating at the forthcoming Shuyak timber sale, which could not hope to rival his later oil lease sale but was at that time to be the largest State sale to date. Our timber didn't sell, happily as later events were to prove, but Kelly apparently felt he had lost stature, and in a fit of pique he transferred Plourde to an untenable position which forced his resignation.

Sacheck was made State Forester, his main qualification being that he was anti-Plourde, and ironically he inherited the crippled organization structure he had been instrumental in creating.

I hope I have not bored you with this long discourse, a good share of which was petty "office politics", but I wished to make clear how a potentially vital forestry program fell into the hands of a second-rate administrator and lost its momentum. Sacheck never had creative plans but made his way by being negative. He is firmly ensconsed and has the typical bureaucratic attitude that "if you don't stick your neck out, your head is safe". There are no forestry programs initiated except as reactions to outside pressure. For example, no attempt was made to discover whether Rocky-Windy Bay was regenerating itself, until last year when I understand some outside inquiries were instituted, possibly by yourself. At that time a token effort was made to assess the situation but no satisfactory conclusion was reached, at least from what I have been able to discover. That is a huge cutover area and deserves more attention, but a Division forester told me the other day "All we do now is fill out forms".

I have worked as a logger and from my contacts within the industry I believe there are areas within the state from which millions of feet of timber have been illegally removed. I won't go into any more detail on this matter but will simply state that under a strong forestry organization with proper leadership this wouldn't have happened.

In my opinion the Icy Bay sale was also badly mishandled. It began with a request from the Japanese for a sale of 100MM feet

in White River. The State cruised it and was preparing to offer it but got some rumbles from other large timber firms who, as you may know, constitute a sort of monopoly in Southeastern and didn't think they wanted any competition in the Icy Bay area. The State Forester immediately scrapped his plans for White River and "entertained proposals" from the industry at large. The original Japanese firm submitted their White River plan but someone else asked for twice the amount in Icy Bay. Naturally the larger proposal was accepted, in spite of very limited inventory statistics for the area upon which to base an allowable cut. A new cruise was made, somewhat lengthy due to the fact that the cruise party, led by the Forest Management Officer, spent a whole week cruising in the wrong place and didn't realize it until their pilot picked them up and apologized for setting them down at the wrong river.

When the auction was held nobody showed up except the original Japanese group who didn't want 200 MM feet in Icy Bay but wanted 100 MM feet at White River. They bid the appraised price and were eventually awarded the sale after some unexplained hesitation on the part of Commissioner Kelly. I should think that at that point, in the interests of conservative forest management, the original 100 MM feet in White River should have been offered as an alternative, since that's what the Japanese wanted in the first place. To my knowledge this was not done, and the 200 MM foot sale is now being logged with as little supervision as Rocky-Windy Bay has received.

I am aware that my criticism of the Division of Lands can be construed as "sour grapes". Prior to Plourde's resignation I was his chief assistant and bumped heads constantly with Sacheck. One of Sacheck's first official acts as State Forester was to remove me completely from all contact with forestry work and have me placed in a position for which I was eminently unqualified. An attempt was then made to discredit me on the basis of poor attitude and performance but that backfired and I eventually worked my way back into forestry. I survived the pressures placed upon me and resigned voluntarily in disgust at the aimlessness of the Division of Lands and its Forestry section. I have been much happier doing constructive work than I ever was simply filling out forms.

To summarize my recommendations I shall quote from the termination interview form which I completed when I resigned from the Division 2½ years ago. Under the heading "Suggestions on how to improve the unit..." I wrote, "Remove forestry from the Division of Lands and place it under the leadership of a strong, competent State Forester who has as his goal the creation, protection, and management of a system of State Forests, and make it possible for land to be evaluated and classified for that purpose".

We need first of all a leader of stature, vision, and principles. I believe such a person could be enticed from one of the other states that already possesses a good forest program.

Beyond that Forestry needs the power to classify and manage land. Not just for timber but for watershed, recreation, etc..

The total need for public land cannot be satisfied simply by a system of parks, which are very limited, single-use withdrawals. I have long held the view that on all State highway construction projects we should reserve large stretches of frontage and the land behind for public use. One mile out of every ten or perhaps every five could be so reserved and posted as "State Forest-Open to Public Use", but instead the Division of Lands consistently sells every available foot and we have strip private ownership with no public access to vast areas on either side. Drive the new highway from Anchorage to Talkeetna and you'll see what I mean. I've seen people from "outside" aghast at this but the practice continues.

I apologize again for perhaps being too lengthy and I can only hope you will take the time to read and digest my remarks and will realize their validity. It has long been my wish that someone in a position to change the system would take an interest in what has become an orphan profession in this State. I believe you are sincere in your interest and I wish you success. I would be happy to talk with you at any time and to answer any further questions which might arise.

Sincerely,

Art Sundt

Re: Management of State Timber

Dear Senator Palmer:

This office has received three questions from Commissioner Herbert which you have raised, with instructions to reply directly to you.

First Question: That the branch, concerned for years almost exclusively for (with) timber sales, has used questionable economics to rationalize many of its contracts? Reference was made to the Yakataga sale.

Answer: The State has a sale in the Yakataga area, specifically the Icy Cape No. 1 timber sale, Contract No. SC-182. Before we can answer the question, however, we need clarification as to what is meant specifically by the term "questionable economics".

Second Question: That the basic inventory data, (site index, growth rates) used to establish allowable cut are poor and unprofessionally called?

Answer: The individuals on our staff involved with allowable cut computations and who make decisions concerning allowable cuts are all graduate foresters from forestry schools and colleges recognized as some of the best such schools in the nation. These individuals have considerable training and experience in resource inventory procedures and apply modern concepts of field plot sampling, aerial photo interpretation, statistical analysis, and automatic data processing (computer programs) in making allowable cut determinations.

In most of our resource inventory projects, which supply the data used in allowable cut determinations, we have joined with the U.S. Forest Service, Institute of Northern Forestry, Forest Survey of Alaska, to collect and analyze the data obtained. This is done in either of two ways: 1) a cooperative project is set up where the State and the Forest Service work together in undertaking and completing all phases of the project or 2) the State undertakes the project alone and compares the results with Forest Survey data for similar timber in adjacent stands or stands in close proximity. By working cooperatively with other forest management agencies, such as the U.S. Forest Service, we establish a system of checks and balances, thereby avoiding serious errors in our computations.

We feel that the Forest Service personnel in Forest Survey are highly competent in the field of resource inventory. They are specialists in that field who do this type of work exclusively. They are all graduate foresters with many years of experience represented on their staff.

For your information, several of our published inventory reports are enclosed together with other reports and related memorandum showing allowable cut determinations. If you have questions about allowable cut as determined for any specific area, we would be pleased to answer them and to explain the procedures and techniques used.

Third Question: That the actual logging shows under State contracts are not very well supervised, resulting in shoddy logging, erosion, cut timber left in the woods, etc. Reference was made to Haines and Yakataga.

Answer: State personnel concerned with the development and disposal of State timber sales and the administration of such sales are again, all graduate foresters, many of whom have years of experience in the management and sale of timber. It is our practice to enforce the State's timber sale contracts and to supervise these contracts in the field. Our district and field forester make frequent visits to the State's sales and submit periodic inspection reports. Whenever contract violations or poor logging practices are observed corrective action is taken. Such action is frequently initiated by written notice which is followed up when necessary with suspension and possibly termination of the contract if compliance is not obtained.

Much of the State's timber, particularly in the areas cited, is overmature. The timber contains a large amount of defect and is adding very little if any volume. In many stands the volume of new growth each year may be less than the volume lost by decay resulting in a net loss of volume. The total yield is being reduced, not only because of volume loses in the existing stands, but also because it will take longer to establish new healthy stands for the next cutting cycle. Prolonging the harvest of these overmature stands is poor resource management.

The cutting of overmature timber usually results in large amounts of defective, unmerchantable, timber left on the ground. To the "uneducated" and "inexperience" this timber left after cutting out the merchantable wood often has the appearance of a log and the cry is "waste". It is however, unreasonable to expect a logger or purchaser to remove and attempt to utilize a piece of wood that is not merchantable by any recognized standard. A similarity would be our inability to utilize waste material from fish canneries for useable products such as pet food or fertlizer.

Contracts for the sale of State timber specify utilization standards established by the Puget Sound Log Scaling and Grading Bureau of Tacoma, Washington. These standards are recognized and accepted by both

industry and the U.S. Forest Service in Alaska. State contracts specify that all No. 3 logs, the lowest sawlog grade established by the Bureau, be utilized. For both spruce and hemlock a No. 3 log may be six (6) inches in diameter on the small end and may contain as much as sixty-six and one-third (66 1/3) percent defect.

The State does not require the utilization of so called pulpwood, logs or timber which contain more than 66 1/3 percent defect. The main reason is due to labor and transportation costs which make the utilization of such wood uneconomical. As with U.S. Forest Service sales, the utilization of pulpwood is optional.

The State's contracts and regulations contain numerous provisions for collecting penalties and damages resulting from "shoddy" logging practices or utilization. Loggers will not leave much merchantable timber in the woods when they know they will have to pay for it twice if they leave it and only once if they take it. Our contracts also contain numerous provisions for the protection of streams, construction and use of roads, prevention of and control of fire, and prevention of erosion. A copy of a sample contract from one of our recent sales is enclosed with significant sections bracketed.

Also enclosed is a copy of our MEMORANDUM OF UNDERSTANDING with the Department of Fish and Game. This memorandum was initiated in 1968 by field personnel from both departments who felt the need for mutual cooperation in the administration of State timber sales for the protection of the fish and wildlife habitat. This was the first such memorandum between the two departments.

Poor logging practices are a matter of degree. We admit that some loggers do a better logging job than others. We maintain, however, that we know of no State timber sale where logging practices do not comply with contract specifications or where corrective action has not been taken. We know of no State timber sale where the timber has not been utilized as specified in the contract or where corrective action has not been taken. We have no erosion problems on State timber sales where corrective action has not been taken.

Sincerely,

F. J. KEENAN, Director

February 24, 1972

Honorable Robert Palmer
Chairman, Senate Resources Committee,
Alaska State Legislature,
Capitol Building,
Juneau, Alaska 99801

Dear Senator Palmer:

I have received a letter from your staff concerning information concerning alleged mismanagement of State forest lands and abuses in logging practices. One of the reasons that Lynn Canal Conservation, Inc., was formed was to gather facts on management of State forests and logging practices in this area. We are presently taking pictures and cataloging information on this subject.

I believe if you confronted Mr. Sacheck, Forestry Director in the State Division of Lands with questions concerning the actual harvesting of timber with the allowable annual cut you will find a substantial overcut, in the State forests. In the Haines area the annual allowable cut was determined to be 20 mbf, which included the cottonwood, not harvested at this time, and areas which should be excluded as recreational sites. This determination was made in 1964 and remains as the basis of the State's timber cut. When the actual act is added, it exceeds the allowable by a substantial amount, each year. Assuming the 20 mbf is a reasonable estimate for an allowable cut, it goes without saying that the State is overharvesting the timber in the Haines area. At the present time, the State Divison of Lands is not bound to multiple use concepts like the Department of Agriculture, so it is felt that other uses of the State forests other than harvesting, are not properly considered. The State administration is industry oriented because they are in dire need of income. As a result conservation matters have second priority.

LAW OFFICE OF
RICHARD C. FOLTA
POST OFFICE BOX 37
HAINES, ALASKA 99827

Gateway Building
Haines, Alaska
766-5555

Skagway, Alaska
983-2219

The reason that the forests are being overcut is to maintain the production of the sawmills. The question that needs to be answered is whether our forests can support the present mills. From what information that I now have, I seriously question whether the Haines-Skagway area can continuously support two mills that Haines now has. Yet I think the majority of the Haines residents would rather have the jobs than worry about the overharvesting, especially when the physical evidence of overcutting is not yet evident.

The forestry people have adopted the policy of clear cutting from the Forest Service without any independant study to see if in fact the idea is feasible for State forests, which are different from Forest Service forests areas in certain respects. I would like to see a requirement for public hearings for State policies such as the Forest Service has, so that the public is aware of what is going on. Upon our request, the Forestry Department has indicated that they will have hearings this spring on the proposed land use plans designed for this area.

At this time I don't have pictures of logging practices, however when the snow is off the ground, they can be obtained.

Last night a public hearing was held on H. B. #614 in Haines, with Representative Morgan Reed, Fred Robards of the Fish and Wildlife Service and State Fish and Game people. The persons in attendance opposed the bill because they feel it will hinder development, that enough laws are on the books now and they questioned the motives of Reed in authoring this legislation. The upshot of it all was that Reed admitted that the bill was "window dressing" to stop Federal legislation that might be forecoming and that due to the opposition, he would sit on the bill or withdraw it. Mr. Robards point was the passage or non-passage of a bill would show to the people of the south 48 the concern or non-concern for a national bird and that he was felt that existing laws do not protect the perch trees by the river. Perhaps by administrative code action, this regulation could be implemented without going through the bill procedure.

I think the difficulty lies in the listing of priorities. A small minority of us here feel that the Chilkat concentration of eagles, reportedly the largest in the world, is a uniqueness that needs protection as a long run asset of the area and for the people in the lower "49". Apparently a majority feel that the jobs now appeal of the logging and ore development of a shorter term are number one. Perhaps they can all co-exist

LAW OFFICE OF
RICHARD C. FOLTA
POST OFFICE BOX 37
HAINES, ALASKA 99827

Gateway Building
Haines, Alaska
766-5555

Skagway, Alaska
983-2219

if assurances can be made that the developments will not impair the scenic and fish and wildlife of the area. One of those assurances would be a surface stripping law similar to what West Germany and the State of Pennsylvania have. The companies are required to replace the countours of the land and replant the area or areas concerned. Unfortunately this law would be considered uneconimical most likely for the Klukwan iron ore proposal.

Unfortunately the word conservation has a bad connotation for many in Alaska including Haines. For voicing my opinions, I have had economic sanctions imposed upon me by persons in Haines. Haines, as well as other southeast towns are heavily reliant on the lumber or pulp industry, and those who claim that not all is well in the industry from an environmental standpoint, are considered threats to the community.

Very truly yours,

Richard C. Folta

MY OVERRIDING CONCERN IN THE WHOLE TIMBER ISSUE IS THAT NO JOBS BE LOST. AS YOU KNOW THERE HAS BEEN A CONTROVERSY FOR YEARS OVER THE BEST USE OF CERTAIN AREAS OF THE TONGASS NATIONAL FOREST. I HAVE BEEN AWARE OF THIS CONTROVERSY SINCE I FIRST BEGAN SERVING IN PUBLIC OFFICE. MY PURPOSE IN GETTING INVOLVED AT THIS TIME IS TO SEEK A FINAL SOLUTION TO END LITIGATION OVER TIMBER SALES THAT IS COSTLY AND HURTS EVERYONE.

MY VIEW IS THAT THERE IS SUFFICIENT LAND AND RESOURCES IN THE TONGASS TO SATISFY REASONABLE DEMANDS OF ALL THE THE COMPETING RESOURCE-INTERESTS. I RECOGNIZE THAT THE FISHING INTERESTS, THE TIMBER INDUSTRY, THE MINING INDUSTRY, THE CONSERVATIONISTS AND THE NATIVES HAVE LIGITIMATE CONCERNS. I HAVE BEEN WEEKING AN ACCOM-MODATION WITH THE VARIOUS GROUPS TO SEE IF WE CAN GET AN AGREEMENT ON THE AREAS IN THE TONGASS THAT SHOULD BE REVIEWED FOR POSSIBLE INCLUSION IN THE WILDERNESS SYSTEM. THERE HAVE BEEN STUDIES IN THE PAST, BUT NONE HAVE BEEN COMPREHENSIVE ENOUGH TO PROVIDE ADEQUATE, UNBIASED DATA ON WHICH TO MAKE SUCH JUDGMENTS. ONCE WE GET A

STUDY OF THESE AREAS AND EVERYONE HAS AN INFORMATION BASE FROM WHICH TO OPERATE WE WILL BE ABLE TO MAKE A DETERMINATION OF THEIR FUTURE BEST USES.

THE AMENDMENT THAT I PROPOSED EXCLUDED ALL AREAS CURRENTLY BEING LOGGED AND ALL AREAS SCHEDULED FOR LOGGING IN THE FORTHCOMING SEASON. THIS ASSURES THAT LOGGING OPERATIONS WILL NOT BE JOEPARDIZED AND THAT NO JOBS WILL BE LOST.

MY GOAL IN SEEKING THE STUDY OF CERTAIN AREAS IN QUESTION IN THE TONGASS IS TO PROVIDE THE NECESSARY INFORMATION TO MAKE AN INTELLIGENT DECISION ON THE BEST USE OF THE RESOURCES. WITH THIS APPROACH I FEEL CONFIDENT WE CAN END THE CONSTANT CONFRONTATION WITH EVERY INDUSTRY ACTIVITY IN THE FOREST.

I WAS EXTREMELY ENCOURAGED BY THE WILLINGNESS OF THE REPRESENTATIVES OF THE VARIOUS INTERESTS GROUPS, ALASKA LUMBER AND PULP, ALASKA FISH AND GAME DEPARTMENT, CONSERVATIONISTS, AND SEALASKA, TO SIT DOWN AND DISCUSS THE WHOLE ISSUE.

THE REASON FOR HASTE, WHICH CONTRIBUTED TO THE PUBLIC MISUNDERSTANDING THAT HAS OCCURRED, WAS THAT THE SENATE AGRICULTURE AND FORESTRY COMMITTEE AND THE SENATE INTERIOR COMMITTEE WERE HOLDING THE FINAL MEETINGS TO COMPLETE ACTION ON THE BILL TO REFORM FOREST MANAGEMENT PRACTICES. IT BECAME CLEAR THAT, AS THE LEGISLATION WAS DEVELOPING, ALASKAS PROBLEMS WOULD BE LEFT UNRESOLVED. I MET WITH THE REPRESENTATIVES OF THE INTERESTS GROUPS LATE MONDAY ON MY RETURN FROM ALASKA SO I COULD ATTEMPT TO GET THIS STUDY IN THE TIMBER BILL WHICH I COSPONSORED. I REGRET THAT BECAUSE OF THE SPEED OF THE ACTION ON THE BILL, WHICH WAS APPROVED BY THE COMMITTEE THE NEXT DAY, I DID NOT HAVE THE OPPORTUNITY TO FULLY INFORM YOU OF THE SITUATION.

WHILE I FELT THE TIMBER BILL MIGHT SERVE AS A VEHICLE TO RESOLVE THE CONFLICT OVER RESOURCE USES IN THE TONGASS, I WAS ADVISED THAT IT SHOULD INSTEAD BE CONSIDERED IN OTHER LEGISLATION BEFORE THE INTERIOR COMMITTEE. I INTEND TO PURSUE THAT COURSE AND

HAVE BEEN ASSURED THAT A HEARING WILL BE HELD IN THE EARLY SUMMER ON MY PROPOSAL TO RESOLVE THIS CONFLICT. BASED ON THE DISCUSSIONS THAT I HAVE HAD WITH THE REPRESENTATIVES OF THE USER

GROUPS OF THE TONGASS, IM CONVINCED A COMPROMISE CAN BE REACHED

AND THERE WILL BE NO ECONOMIC DISLOCATION.

WHILE THERE WAS HASTE IN INTRODUCING MY AMENDMENT FOR A STUDY OF CERTAIN AREAS IN THE TONGASS, THERE WAS EQUAL HASTE BY THE DETRACTORS OF MY PROPOSAL IN SCREAMING ABOUT THE DAMAGE IT WOULD CAUSE WHEN THAT IS NOT THE CASE. THE CONFUSION ABOUT MY POSITION ON THIS ISSUE HAS RESULTED FROM A MISSREPRESENTATION BY A FEW IRRESPONSIBLE ELEMENTS OF THE TIMBER INDUSTRY, BOTH IN THEIR CONVERSATIONS AND THROUGH NEWSPAPER INTERVIEWS.

I WANT TO CLEAR UP THE FALSE IMPRESSION THAT MY AMENDMENT WOULD SEAL OFF AREAS OF THE TONGASS AND FORCE THE CLOSING OF LOGGING CAMPS. THIS KIND OF FEAR-MONGERING SERVES NO USEFUL PURPOSE AND FAILS TO SOLVE THE PROBLEMS. I BELIEVE WE HAVE AN OPPORTUNITY TO WORK OUT A

COMPROMISE THAT WILL PROVIDE A LASTING SOLUTION TO THE CONFLICT OVER

THE BEST USE OF THE TONGASS NATIONAL FOREST. I WILL BE WORKING TOWARD THIS END. I AM SENSITIVE TO YOUR CONCERNS AND WOULD WELCOME YOUR THOUGHTS ON THIS MATTER.

MIKE GRAVEL

(GRAVEL M/NA/NA/NU/GWA 088394/350/X/GRAVEL).

UNITED STATES DEPARTMENT OF AGRICULTURE
FOREST SERVICE
P.O. Box 1628, Juneau, Alaska 99802

March 12, 1976

Dear Friend: Senator Kay

After 42 years of association with the Forest Service, I have decided to hang up my "float coat" and head back to the Lower 48 on March 30, 1976, and retire from my present job as Regional Forester.

The 5 years spent in Alaska have been enjoyable. There have been some real challenges and real opportunities during this time. There have been some battles won and lost, but all in all the experience has been gratifying and I wouldn't have missed it for the world.

During this time, the Forest Service has adopted some environmental changes in management, too many say some, not enough say others. This leads us to believe we are not too far off of where we should be. We know we can't satisfy everyone when we work with a fixed or reducing land base but an expanding public demand for its goods and services.

It has been stimulating to work with the people of this great State, with your openness, frankness, "can do" attitude, optimistic outlook, and drive to make your State better than your counterparts down below. You have the individualism and optimism of youth, a trait that is fast disappearing in "old world" circles.

I want to thank you for all the assistance and support you have given the Forest Service over the years and both of us during the last five. You have made Patty's and my stay in Alaska memorable, a time we will always remember with a warm feeling.

My successor will be John Sandor, no stranger to Alaska. John had two previous tours, one as District Ranger in Ketchikan and one on the Regional Forester's staff in Juneau. I hope you will continue the same close working relationships with him that you have with me.

After April 5, 1976, my new address will be 32 Manzano Court, Novato, California 94947. I will keep up on Alaska affairs and wish you well in your future endeavors.

Sincerely, We really appreciate the support you have given us.

Charley

Alaska's Timber Resource

A Summary

The State of Alaska has 16 percent of the forest land in the United States, or 119 million acres. These forest lands include over 28 million acres of commercial timber lands that, along with the remaining 91 million acres of forest lands provides important interrelationships with wildlife habitat, recreation, watersheds and the utilization of timber and mineral resources. This mixture of renewable natural resources provides a sound basis for land use planning and management opportunities under the principals of Multiple Use.

Recognized regional economic and geographic differences have essentially resulted in the identification of two distinct forest areas in Alaska. These are separated into the coastal and interior regions.

Coastal Region: This region makes up all of the Southcentral and Southeastern coastal portion of Alaska. Commercial forest lands comprise up to 5.3 million acres of this region's 13 million acres of forest land. Productive timber growing site qualities are similar to those of the Pacific Northwest forests.

Coastal commercial forests presently contain a total net volume of 135 billion board feet of predominately over mature forests.

Timber processing mills located in the Coastal Region include two pulp mills with a combined capacity of processing over 450,000 tons of pulp annually. A third pulp mill is being considered that will increase the pulp producing capacity of the Coastal Region by 50 percent.

In addition, there exists over 12 major active sawmills that annually produce over 440 million board feet of lumber. The lumber and cant production level reported during the period 1967-1974 has increased on an average of 16% per year.

Research shows that areas now being harvested, can under management, provide twice as much recoverable volume in the next rotation. One may then project that under multiple-use management, the coastal forests of Alaska should sustain twice the industry being planned for, in the present old growth stands.

Interior Region: Alaska's Interior commercial forest lands have received little recognition. Yet, this region's 106 million acres of forest lands include 22.5 million acres of commercial timber lands.

If the commercial forest area could be sustained and managed for timber production on a pulpwood economy, the estimated allowable annual cut, on a 100 year rotation, would amount to about 4.5 million cords of pulpwood annually. By comparison, the Lake States Region (Michigan, Minnesota and Wisconsin) in 1963 cut about 3.7 million cords of pulpwood.

The interior forests of Alaska are analogous both in species composition and properties to those of the Lake States. The physiographic and climatic conditions are also quite similar. It is reasonable to assume that the Interior forests of Alaska could sustain a forest products industry comparable to that of the Lake States. Parallels could also be drawn between Finland, Norway, Sweden and interior Alaska. All three of these boreal countries support a thriving forest products industry under like conditions.

These interior commercial forest areas have the productive capability of sustaining at least 10 pulpmills of the 500-tons-per-day class.

The equivalent annual allowable cut of sawtimber amounts to 900 million board feet. The interior wood-using economy, if developed, will provide an excellent opportunity for integrated lumber and pulp production.

The total recoverable timber volumes found in Alaska's interior can be greatly increased under intensive management through shorter rotations and periodic removal of suppressed and inferior trees.

The interior's 83.3 million acres of non-commercial forest land under present classification can provide an additional 4.6 million acres of forests that suppor' a total growing stock of 1.1 billion cubic feet. Included in this growing stock are 2.8 billion board feet of sawtimber.

Six interior sawmills reported processing 13 million board feet of lumber and cants in 1974.

New concepts of converting logs and wood fibre into lumber, particle board and sheeting panels along with advanced logging systems and equipment development, presently in use, will enhance the attractiveness of the forest products industry in Interior Alaska.

Projecting the productive potential of Alaska's commercial forest land will show substantial increases in the job economy. Existing lumbering and pulping activities result in the employment of five employees for every million board feet of logs processed. Introducing dry lumber processing and remanufacturing of lumber products can add an additional 20 employees for every million board feet of logs processed. The present wood industry in Washington and Oregon employs 28 people for every million board feet processed.

Throughout the history of Alaska, the forest has played a key and important role in this State's development. Coastal forests provided timber and planks for ships built by early Russian explorers. Native trees provided pilings and float logs for canneries and fish traps.

Interior forests provided real economic benefits in supplying fuel for river steamers, logs for cabins and crossties for the State's railroad system. Recent oil exploration in the Arctic region made use of interior forest logs for pilings, support pads for drilling operations and blocking for the oil pipeline.

Substantial information is available that describes scenic beauty, the abundant wildlife and pristine wilderness that abounds in Alaska. The need to identify and maintain a balance of these natural quality ecosystems is without question.

The identity of the forest biome in interior Alaska should not be taken lightly. The economic climate in this State is changing rapidly. Oil development activities have and will continue to make other resources more readily available. Development and use of resources from private, Native and State lands will follow. The Road to the North Slope has made the timber of the Yukon and Porcupine valleys accessible. The need for core National Forest is essential to help insure orderly management and development of the total interior Forest resource, through principals of Multiple-Use. National Forest have historically, through cooperation with neighboring land owners, provided land management assistance and valuable research contributions that resulted in orderly development on local and national levels.

As our Nation's need for energy, goods and services continues to increase, Alaska's total forest land will be looked upon to provide, not only recreational amenities, but also critical renewable, raw materials. Alaska's interior forests stand today much like our mid-eastern and western forests stood in the 1800's. Not yet reachable, but available for use, provided they are recognized for their multiple use characteristics and opportunities.

SOCIETY OF AMERICAN FORESTERS

Alaska Section

P.O. Box 432
Douglas, Alaska 99834

May 15, 1975

Honorable Jay S. Hammond
Governor of Alaska
Pouch A
State Capitol Building
Juneau, Alaska 99811

Dear Governor Hammond:

We wish to reconfirm a position by the Alaska Section of the Society of American Foresters, in encouraging establishment of a Division of Forestry within the Department of Natural Resources.

In 1967 we stated our concern in the form of the enclosed resolution. Governor Hickel responded in a letter dated June 28, 1967, which mentioned such a move was not justified at that time because of a rather modest forestry workload. We were pleased, though, that the Administration intended to keep it in mind for future action.

Significant new events have occurred since 1967 to strengthen this direction. The enclosed summary of recent developments exemplifies an accelerated and growing forestry program in Alaska. More jobs are being provided through new industrial operations throughout the state, and the forest economy has a stable future outlook.

Alaska's 375 million acres are one-third forest covered and over one-half forest or forest related land. Much of the selected 44 million acres of new private land under the Alaska Native Claims Settlement Act will fall into this category. Also, additional selections under the Statehood Act will add substantial new forest land acreage to the current significant changing land ownership pattern.

Environmental concerns and movements have reached Alaska in full force. To many, Alaska is the great environmental battle of the century. Pressures will be strong to preserve large blocks of wilderness and to demonstrate the best possible management practices on the land base that is left to provide economic growth.

The State Forester plays a key role in demonstrating sound management practices on state lands administered for protection and utilization of forest resources. He is also responsible for extending forest management leadership and technical assistance to private landowners throughout the state. Much of this public service is accomplished through cooperative

forestry programs with the U.S. Forest Service. The State Forester's organization should be commensurate with these important land management responsibilities. It should also be capable of meeting the demands of a fast-growing forestry industry and profession in Alaska.

Consistent with our professional interest in this matter, are the findings of a 1970 "Study of the Alaska Forestry Organization and Programs" by Ross L. Stump, Earl J. Adams, and Robert B. Griffes. You may be familiar with the management report which was presented April 13, 1971 to Commissioner Charles F. Herbert. Specifically, Recommendation A.2. deals with Division status for Forest Management and Protection. Analysis rationale for the four recommendations pertaining to Organization is given on pages 7-11 of the report. This quote from the report seems pertinent: "In view of the potential timber production programs, the need for better management guidance, and the pending transfer of the fire protection from the Bureau of Land Management to the state, the Study Team feels Forest Management and Protection warrants Divisional status."

We believe the time is definitely here to justify Forestry being raised to the level of Division status in the State. We urge you to have the organizational change implemented this year.

Sincerely,

ROBERT C. JANES
Chairman, Alaska Section

FACT SHEET

FORESTRY GROWTH IN ALASKA

1967-1975

1. Twelve major Native regional corporations and over 200 Native village corporations presently are in the process of selecting 44 million acres of new private land. The Natives face a major problem in gearing up to provide the needed natural resource management skills at both technical and professional levels. The State Forester's organization is extremely important for technical assistance at this particular point in time.

2. In 1967, the volume of State timber under timber sale contract was 258.6 mm bfm. Today it's 850.0 mm bfm - an increase of 229% in seven years.

3. In 1967, the volume of timber cut from State timber sales was 46 mm bfm. At $3.60/mbm payment for all species, this yielded $165,600 receipts to the State. Volume cut in 1974 was 51 mm bfm. At $7.34/mbm payments, receipts were $374,340. This is an increase in value of 126% in seven years.

4. Bug-killed timber has a considerable impact on the volume of timber under contract. The State's Westside Salvage Timber Sale, near Cook Inlet, was sold in 1975. This spruce beetle infested area covers 223,000 acres. A 10-year contract provides for the salvage of 285 mm bfm white spruce and 140 mm bfm other species. In 1975 the volume cut will approximate 30-40 mm bfm, increasing substantially

the cut of 51 mm bfm in 1974. Current insect detection surveys indicate active infestations to the north near Beluga Lake, and it is quite possible another sale will take place to help prevent another major spruce beetle epidemic. Industrial activity in the area has resulted in a new sawmill and dock facilities at Tyonek.

5. Timber sale activity in the interior has been developing rapidly. In 1973, the Louisiana Pacific Corporation purchased Kenai Lumber Company of Seward. This company has been purchasing cants from sawmills located along the rail belt as far north as Fairbanks. An increased demand for State timber has resulted, and a corresponding increase in the Cook Inlet, Matanuska-Susitna Valley, and Tanana Valley areas.

6. Timber inventory work has been steadily increasing since 1968, and the State has been cooperating with the U.S. Forest Service in the State-wide Forest Survey Program. During 1975, 13,000,000 acres of forest land in the Tanana Valley will be completed, providing a sound base for timber management plans and allowable annual cut determinations for a sustained yield of the timber resource. In the Susitna Valley area, 2,500,000 acres have been completed. Forest Survey plans for the next 2-3 years call for 243,000 acres in the Yakataga area and a re-survey of State land in the Haines-Skagway locality.

7. In 1967, State fire control presuppression costs were $145,000 and suppression costs were $188,000. In 1974 presuppression costs were $425,000 and suppression costs approximately $500,000. This

178% increase of expenditures in seven years shows there is a critical wildland fire problem in the State. And as the Bureau of Land Management phases out their fire protection coverage in the interior, the State will have a substantially larger responsibility to meet.

8. Federal grants for cooperative forestry programs have increased from $97,800 for 1967 to $432,400 for fiscal year 1976. This growth of 342% was mostly for cooperative fire control; however, cooperative forest management programs have also grown. A tree seedling distribution program now exists, providing 10,000-15,000 seedlings annually to landowners in the southcentral region of the State.

9. Establishment of a State tree nursery is underway at the Palmer Plant Materials Center. The objective is to develop a containerized seedling greenhouse and nursery, with an initial capacity of producing 50,000-60,000 seedlings per year. These will be purchased by private and Federal landowners for conservation practices, as well as a source for State projects. The facility will also provide for tree cone collection, seed processing, and seed storage.

10. The U.S. Forest Service budget for the Alaska Region has experienced a growth of 215% in eight years. For fiscal year 1967, it was $5,430,000; for fiscal year 1975, it is $17,121,000. Permanent full-time personnel have increased from 266 to 394 at present.

11. The Forestry Incentives Program, administered by the U.S. Agricultural Stabilization and Conservation Service, provides new

opportunities to Alaska landowners. Cost-sharing projects are on the move for forestry practices such as planting trees and improving a stand of forest trees. The State Forester plays an important role in promoting practices by eligible landowners. With regional and village Native corporations becoming eligible, the current grant level of $5,000 for Alaska is expected to make a significant jump.

12. The Alaska Section of the Society of American Foresters has increased from 125 members in 1967 to 236 at present. This 12-13% annual increase reflects a growing profession in Alaska which exceeds the national average growth of the Society's 19,000 members. New opportunities in Alaska will continue to attract foresters to the State. A new Chapter has been formed at Sitka. Other Chapters exist at Ketchikan, Juneau, Anchorage and Fairbanks.

WALTER J. HICKEL
GOVERNOR

STATE OF ALASKA
OFFICE OF THE GOVERNOR
JUNEAU

June 28, 1967

Mr. Robert C. Janes
Secretary-Treasurer
Society of American Foresters
Alaska Section
Box 1628
Juneau, Alaska

Dear Mr. Janes:

I appreciate your sending me the resolution passed by the Alaska Section of the Society of American Foresters, which I have received with great interest.

A preliminary approach to the establishing of a Division of Forestry within the Department of Natural Resources has recently been taken. The area offices of the Division of Lands in Juneau and Anchorage are now under the management of Foresters.

The four trained Foresters on the staff seem adequate to handle the problems in view of the present status of the industry. The future growth of the timber industry will no doubt, demand a reorganizing of the present setup into a division. A District Forestry Office near Wasilla was abandoned because of complete lack of work for the District Forester. It is difficult in some areas to stimulate enough interest for the State Forester to conduct a timber workshop.

I assure you that this subject is of concern to me and until such time as some of the present problems in the timber industry are solved, the present organization appears to be the most economically feasible.

With warm personal regards.

Sincerely yours,

Walter J. Hickel

June 9, 1967

Honorable Walter J. Hickel
Governor of Alaska
Pouch A, State Capitol
Juneau, Alaska

Dear Governor Hickel:

Enclosed is a copy of a resolution unanimously passed by the Alaska Section of the Society of American Foresters at their annual statewide meeting in Petersburg on June 2, 1967.

We feel the situation is serious enough to warrant your immediate attention. Our 125 members in Alaska hope you see fit to implement the organizational change expressed in our resolution.

Sincerely yours,

R. C. Janes

Robert C. Janes

RESOLUTION ADOPTED BY

SOCIETY OF AMERICAN FORESTERS, ALASKA SECTION

ANNUAL MEETING, PETERSBURG, ALASKA JUNE 2, 1967

BE IT RESOLVED BY THE ALASKA SECTION OF THE SOCIETY OF AMERICAN FORESTERS:

WHEREAS the Interior part of Alaska has about 22½ million acres of commercial timber land supporting about 14 billion cubic feet of merchantable timber; and

WHEREAS a large portion of these resources are in private ownership for which the State is obligated to furnish technical assistance; and

WHEREAS the manufacturing capacity for both hardwoods and softwoods is on the threshold of expansion at an accelerated rate; and

WHEREAS the problems of establishing new industry within the State are of a complex and technical nature that require a workable organization of professional Foresters; and

WHEREAS the forested areas acquired by the State furnish the habitat for a large portion of our wildlife within Alaska and needs wise management; and

WHEREAS the State is responsible for the fire protection on State and private lands within the State which will eventually require an expanded fire organization; and

WHEREAS each acre of forested land is a potential recreation area in some form and should not be ignored; and

WHEREAS the constitution of the State of Alaska stated under article 8, section 4 that". . . Forests. . . and all other replenishable resources belonging to the State shall be utilized, developed and maintained on the sustained yield principle,. . .";

NOW, THEREFORE, BE IT RESOLVED that the Alaska Section of the Society of American Foresters recommends that the State of Alaska raise the present Branch of Forestry in the Division of Lands, Department of Natural Resources to at least full Division status; and

BE IT FURTHER RESOLVED that the proposed new Division of Forestry be adequately staffed and financed to accomplish the afore mentioned responsibilities; and

BE IT FURTHER RESOLVED that the Secretary of this section of the Society of American Foresters be instructed that copies of this resolution be sent to the Governor of Alaska, and the Commissioner of Natural Resources.

R. C. Janes

ALASKA LUMBERMEN'S ASSOCIATION

P.O. Box 979 Ketchikan, Alaska 99901

February 15, 1974

The Honorable Kathryn Poland
State of Alaska Senate
P. O. Box 45
Kodiak, Alaska 99615

Re: Independent Timber Sale Shortage
Tongass National Forest

Dear Senator Poland:

The Alaska Lumbermen's Association has received many questions from throughout Alaska on the highly publicized independent timber sale shortage in the Tongass National Forest, which the Association has stated threatens the future of the timber industry in Southeast Alaska unless early solutions to the shortage are found.

Enclosed for your information are the most commonly raised questions, together with our answers.

We hope this information is helpful to your understanding of the timber sale shortage problems presently confronting the timber industry in Southeast Alaska.

Sincerely

ALASKA LUMBERMEN'S ASSOCIATION

By
C. L. Cloudy, Counsel

CLC:bh
enc.

QUESTION: Has there been a recent increase in the productivity of the sawmill industry in the Tongass National Forest and, if so, is not this circumstance the real cause of the current timber supply shortage?

ANSWER: Yes, there has been a recent increase in sawmill productivity. In fact, assuming the availability of timber, 1974 sawmill production is expected to exceed 1972 production in excess of fifty percent. In terms of the increased timber harvest demand, however, the 666 million board feet annual harvest required by the entire timber industry exceeds its 1972 requirements by only eighteen percent. Consequently, whatever effect sawmill productivity increases may have on timber supply, the effect must be analyzed in the light of an eighteen percent harvest demand increase, rather than a fifty percent production increase.

The real cause of the current timber supply shortage, however, is not the increase in sawmill productivity--rather, it is the almost total collapse of the Forest Service independent sales program which took place over the three year period 1971-1973. Until 1971, the Forest Service had been pursuing an ongoing independent sales program of at least seven years' duration which, if it had continued, would have been more than capable of supporting the sawmill expansion which took place during 1972-1973. In point of fact, the expansion of 1972-1973 was the result of advance industry planning which was based upon that historically proven seven year capability of the Forest Service sales program to support such an expansion. During the seven year period, 1964-1970, the Forest Service sold 2 billion 213 million feet in independent timber sales, which averages out to the equivalent of 316 million feet per year. During the three year period 1971-1973, however, they sold only 192 million feet, which averages out to the equivalent of 64 million feet per year. In order for industry to survive under this reduced program, it not only would have had to forego the sawmill expansion in question, but it would have had to reduce its annual harvest by almost 150 million board feet under what it needed in any event without any sawmill expansion. By way of further contrast, industry's harvest demands of 666 million board feet per year could have been met by simply increasing the nual volume averages formerly available under the 1964-1970 pro-, am by less than five percent.

QUESTION: Since 1970, three new export sawmills specializing in the sawing of hemlock lumber for the Japanese market have been brought into production in Southeast Alaska. Was the Forest Service aware, or made aware, of the plans for this expansion before it took place?

ANSWER: Yes. In fact, all during the 1960's the Forest Service, both on the Regional level in Juneau, and the Chief's level in Washington, D.C., repeatedly urged industry to develop a market in Japan for Alaska hemlock lumber. Although this market was slow to develop, industry kept the Forest Service fully advised of its progress and its expectations at all times. Industry assumed (mistakenly, as it turned out) that inasmuch as the Forest Service had recommended the development of these markets, the Forest Service would have maintained the ongoing sales program necessary to supply the sawmills in question.

QUESTION: Is the timber sale shortage in any way related to the fact that both Ketchikan Pulp Company and Alaska Lumber and Pulp Co., Inc. have increased the daily capacity of their respec-

tive pulp mills?

ANSWER: No. Both mills were required to construct pulp plants with a minimum design capacity of 525 tons per day. Through 1973, both mills have produced less pulp since they commenced initial operation than this initial design capacity was capable of producing. Daily capacity has been increased in each mill, with the result they will undoubtedly produce more pulp over the next ten years than they did over the previous ten years. However, most, if not all, of this increased capacity will be supplied by technological improvements which give a higher volume of pulp recovery per thousand board feet of raw material than the mills were originally capable of obtaining. Consequently, neither pulp mill has increased its raw material demands to such an extent as to create a timber shortage.

QUESTION: The Forest Service has stated that the timber industry in Southeast Alaska has suddenly increased its processing capacity to such an extent that they are now capable of processing 900 million board feet of logs per year, which capacity exceeds the annual allowable cut of the Tongass National Forest by 90 million feet. What is the present processing capacity of the Southeast Alaska timber industry?

ANSWER: It is not 900 million board feet. It does approximate 666 million board feet. The Forest Service statement is based upon their "observation" that the ability of industry to "triple shift" the processing mills creates this capacity. The fact of the matter is that the two pulp mills have been on triple shift since they commenced operations: their product requires a continuous process of manufacture, and consequently, they must remain in constant operation so long as they are producing pulp. The ability of the pulp mills to triple shift, therefore, has nothing to do with whatever increase in capacity the timber industry has achieved. As to the sawmills, of the eight export mills in operation, only one of them is capable of triple shifting its operation, and this is the new cull and defect sawmill located at Ketchikan Pulp Company's pulp mill at Ward Cove, Alaska. This latter sawmill operates in conjunction with the pulp mill, and seeks to recover whatever marketable lumber may be found in the pulp logs, and necessarily operates on the same work shifting as the pulp mill.

QUESTION: How much timber needs to be harvested each year to meet the present capacity demands of the Southeast Alaska timber industry, and is the Tongass National Forest capable of supplying these demands?

ANSWER: Industry requires an annual harvest of 666 million board feet per year. 336 million board feet per year are available from the long-term allotment sales held by Ketchikan Pulp Company, Alaska Lumber and Pulp Co., Inc., and Alaska Wood Products, Inc., and 330 million per year must come from independent sales outside of these allotments. The annual allowable cut in the Tongass National Forest is 820 million board feet per year. It is obvious, therefore, that the industry presently requires less than the harvest capacity of the Tongass National Forest.

QUESTION: The Forest Service now hopes to sell 298 million board feet of independent timber sales in fiscal 1975, and 461 million board feet in fiscal 1976. These plans represent an increase over original plans of 130 million board feet in 1975, and 224 million board feet in 1976. Will these sales wipe out the

shortage and avoid production cutbacks?

ANSWER: No. Despite these increases, the volume of independent sale timber ready to harvest will continue its decline into 1975, and will commence a slow ascent in 1976 (88 million board feet will be available in 1975: a shortage of 242 million feet; 130 million board feet will be available in 1976: a shortage of 200 million feet; 222 million board feet will be available in 1977: a shortage of 118 million feet). These shortages will occur despite the fact that the opening inventories of uncut independent sales in the years 1974, 1976, and 1977 will exceed the harvest requirement of 330 million board feet by a substantial margin.

The reason for this seeming paradox is the fact that merely because timber has been sold, and therefore becomes part of the inventory available for harvest, does not mean that the timber can be harvested. One and one-half to two years elapse from the date a timber sale is purchased to the date the purchaser can start logging. This delay is caused by the time required by the purchaser to obtain as many as twelve Federal and State permits, to constuct roads, to lay out camp sites, to meet initial environmental safeguard requirements, to construct log dumps, etc. None of these activities can take place until after the timber has been purchased, and no logging can commence until after all of these activities have been completed.

Consequently, neither the independent sales scheduled for 1975 and 1976, nor the hoped for increases announced by the Forest Service, will be ready to log in time to head off the shortages forecasted for 1975, 1976, and 1977. Even during 1974, despite the fact that on paper at least, industry has 330 million feet of independent sales ready to harvest, it is most unlikely that this harvest can be attained, due to the logistical complexities involved in attempting to maintain the 1974 logging activity on independent sales at the 330 million board feet level while, at the same time, getting ready to face the realities of reducing such activity to the 1975 level of 88 million board feet. As a result, mill operations have already been curtailed in 1974, and more will follow.

QUESTION: If there is such a timber sales shortage, why are logs exported from Southeast Alaska instead of being processed locally?

ANSWER: There are three sources of logs from which logs may legally be exported from Southeast Alaska without being processed locally, namely, (1) Annette Island Indian Reserve, (2) privately owned lands, and (3) National Forest lands. The timber on Annette Island is administered by the Bureau of Indian Affairs, and the Bureau permits this timber to be exported without processing, despite the long and vigorous opposition of this policy by the Alaska Lumbermen's Association and the Alaska Loggers Association, Inc. The timber on privately owned lands is subject to disposal at the pleasure of the land owner. The timber industry, as such, and contrary to the situation in Washington and other states, owns very little private land of any significance. Timber on National Forest lands may not be exported without processing, unless there is no local processing demand.

The only National Forest export in Southeast Alaska is cedar, for which there is an extremely limited local processing demand. Export of this specie is limited to that which exceeds the local demand. The local processing demand for this timber is limited,

due to the fact that the timber is of extremely poor quality, and there simply is no great market for the lumber, either inside or outside of Alaska. Aside from cedar, the timber from Metlakatla and private lands is exported simply because the owner will not sell this timber at a price low enough to enable the local mills to process the timber at a profit. In order to acquire the cutting rights to this timber, the mills would have to compete with a log export market price which equals or exceeds the market price of the finished local product. As a result, industry has little effective voice in making these logs available for local use.

QUESTION: Industry has complained about the increased cost of logging in Southeast Alaska brought on by new environmental standards being imposed by the Forest Service. Aside from the fact that increased costs mean decreased profits for industry, what effect does this have upon the general economy of Southeast Alaska?

ANSWER: Two major areas of economic concern to Southeast Alaska are involved. In the first place, the imposition of the new standards further extends the time required for the Forest Service to ready a prospective timber sale area for sale, and at the same time further extends the time it takes the purchaser to get to the actual business of logging after he purchases the sale. As a result, the timber sale shortage will extend over a longer period of time than originally anticipated, with extended adverse economic impact upon Southeast Alaska. In the second place, the cost of meeting the new standards has to come out of the value of the trees being harvested. Twenty-five percent of whatever the purchaser pays the Federal Government for these trees is returned to Alaska for local government use in the area within which the harvest took place. As environmental costs increase, the value of the tree decreases under what it would have been without these costs, thus reducing the return to the State and local governments.

QUESTION: What is industry's understanding as to why the Forest Service did not maintain its independent sale program to keep pace with industry expansion?

ANSWER: Several factors combined to produce this result. In 1972 the Sierra Club sued the Forest Service, charging them with failure to comply with the Environmental Protection Act on new timber sales. Although this suit did not directly include Alaska, the Forest Service was made aware that Alaska would be included unless the Forest Service terminated its sale activity pending the outcome of the suit. Consequently, sale activity in 1971 and 1972 dwindled into insignificance. The suit was settled by compromise in late 1972, with the understanding that the Forest Service would develop new environmental standards and apply them to each sale. Unfortunately, for Alaska, the funding and manpower required to overcome this slowdown in 1971-1972, and the funding and manpower required to implement the new standards, far exceeded the assignment of funds for Alaska. In addition, prior to the onset of environmental standards, the Forest Service was geared to providing a two or three year backlog of independent sales at the most. As a result, even a temporary disruption in sale activity had a sudden and adverse consequence.

QUESTION: Has the Forest Service offered sales within the past several years which have not been purchased, and if so, how can industry justify this in view of the sale shortage now claimed?

ANSWER: Yes. In June of 1972, the Forest Service offered four sales totalling 106.3 million feet, for which there were no bids received. These were salvage sales hurriedly put together, and assigned stumpage values in excess of what the economics of the sale could afford, and involved unrealistic and uneconomical conditions of sale. These matters were pointed out to the Forest Service, with the result that one of the sales was dropped by the Forest Service as being totally unloggable, and two others were completely redesigned and sold under different terms than the original offering. Industry takes little comfort in the suggestion that the shortages can be avoided if industry is willing to operate at a loss.

QUESTION: It has been pointed out by the Ketchikan Area Offices of the Forest Service on numerous occasions, in response to the industry requests for increased sale activity, that the Ketchikan area annual harvest is at maximum levels now, and cannot be increased, and that the capacity of the Ketchikan area mills far exceeds the harvest capacity of the Ketchikan area. What does this have to do with the shortage?

ANSWER: Nothing. The capacity of the Ketchikan area mills does in fact exceed the harvest capacity of the Ketchikan area; however, this poses no threat to the Ketchikan area harvest, nor does it establish that the industry is guilty of over expansion. Mills in Southeast Alaska are capable of utilizing the raw material of the Tongass National Forest without regard to the location of either the mill or the logging operation. The Tongass National Forest, as a whole, has the harvest capacity to support the existing mills. The mere fact that the harvest capacity of a local area has been exceeded by the mill capacity of the mills located within that area does not mean that the Tongass National Forest lacks the capacity to supply those mills.

QUESTION: The Forest Service has related the current timber sale shortage in part to recent expansion of the sawmill industry, and the sawmill expansion in turn to the desire of industry to capitalize on the sudden increase in the demands of the Japanese market in 1973. What is the connection between the 1973 Japanese market and the current sale shortage?

ANSWER: None. Japan has been short of timber ever since the end of World War II. Their need to import timber is not a new or recent circumstance. Alaska lumber competes for its share of the Japanese market, and when purchased by the Japanese replaces a source previously looked to for supplying the specific use to which the Alaska lumber is placed. This market has been slowly developed over the past eighteen years. Market acceptance of this product was completed before 1973, and before the "sudden" housing boom in Japan. With or without the curtailment of exports from the Pacific Northwest to Japan, and with or without the housing boom of 1973 in Japan, the sawmills which went into production in 1973 would have gone into production in any event (short of a market collapse). Industry intends, and has long intended, to develop markets for its products up to the full allowable cut of the Tongass National Forest. The mill expansion of 1973 is nothing more or less than the natural progression toward that goal.

QUESTION: Why does not the Southeast Alaska timber industry sell its lumber product in the domestic United States instead of in Japan?

ANSWER: Simply because the domestic United States markets

do not consider the product worth enough money to enable the processors to operate at a profit. This situation has existed for over forty years, and until such time as the domestic United States becomes a net importer of timber (as is Japan), the situation is not likely to change. It has often been incorrectly stated that if the Jones Act was repealed, our timber products would find a profitable United States domestic market. This, however, is not the case. Our competitive disadvantage arises out of many other factors than shipping rates, which include higher logging costs, higher costs of accommodating to environmental standards, higher processing costs, and higher percentage of defect in the raw material. Often overlooked in this regard, is the fact that the United States imports fifty percent to seventy percent more lumber from Canada in any given calendar month than Southeast Alaska exports to Japan in an entire calendar year. Almost all of this import is used East of the Mississippi River. The reason for this import is that Canadian mills can produce and deliver the end product for less money than can the mills in Oregon, Washington, and California. If the mills in the Western United States cannot compete with Canada, it is most obvious that Alaska has no chance of entering the domestic United States market in the foreseeable future.

QUESTION: Are the other areas of the United States faced with the same timber sale shortage problem as Southeast Alaska?

ANSWER: No. Despite the fact that, as everyone generally is aware, a severe domestic lumber supply shortage developed in the United States during 1972-1973, this shortage is unrelated to Alaska's problem. In the United States, only fifty-two percent of the soft wood saw log volume is in National Forest ownership. In Washington and Oregon, only thirty-two percent and forty-seven percent respectively is in National Forest ownership. To whatever extent the domestic United States lumber supply shortage of 1972-1973 may have been related to a timber sale shortage, it is obvious that many other factors than who owned the raw material were involved. In Southeast Alaska, however, over ninety percent of Southeast Alaska's soft wood saw log volume is in National Forest ownership. If there is a timber sale shortage in Alaska, therefore, the only significant factor involved is National Forest ownership. So long as the ownership in question has the harvest capacity to meet the shortage, the problem becomes one of forest management by the Forest Service.

QUESTION: How does the Tongass National Forest rank generally in relation to other National Forests?

ANSWER: The Tongass National Forest is the largest National Forest in the United States, and is within the administrative area of Region 10 of the Forest Service headquartered in Juneau. Bearing in mind that there are nine such Regions throughout the United States, the other eight of which contain from fourteen to nineteen separate National Forests, it is noteworthy that the annual harvest in the Tongass National Forest alone exceeds the total annual harvest in five out of those eight Regions. Despite this fact, Alaska's Region 10 ranks last in Federal fundi (in 1971, for example, the closest Region on the ladder above Alaska received $18,000,000.00 more than A'a a).

QUESTION: What is mea the term "independent timber sale"?

ANSWER: The term refers to the sales of timber made by the

Forest Service in the Tongass National Forest which are independent of the existing long-term allotment contracts (that is, other than, the long-term contracts held by Alaska Lumber & Pulp Co., Inc. for its pulp mill, Ketchikan Pulp Company for its pulp mill, and Alaska Wood Products, Inc. for its sawmill). With regard to the long-term allotment contracts, the Forest Service releases for cutting each year a maximum of 336 million board feet. Inasmuch as industry requires 666 million board feet of harvest per year, the additional 330 million board feet must come from short-term sales independent of the allotment contracts.

QUESTION: Why can't industry merely shut down its sawmills for several years and allow the Forest Service time to catch up on its sales program?

ANSWER: There are a number of reasons which make this solution totally unrealistic as opposed to industry's proposed solution of an immediate large scale increase in sales.

First and foremost is the fact that the high cost of logging and processing in Alaska makes it absolutely mandatory that industry sell the end product for the highest possible price. At present, approximately fifty percent of the fiber volume in the Southeast Alaska timber harvest can be sawn into export lumber and sold for a much higher return than if the entire volume was converted into pulp. If the sawmills are shut down, the entire harvest will have to be converted into pulp. If this takes place, the pulp mills will not be able to operate at a profit, and loss operations will sooner or later force a closure of these mills.

Secondly, assuming the pulp mills can weather out the storm until the sawmills are able to resume operations, there is absolutely no assurance that the sawmills will still have a market for their product at such time as they have logs available to process. It seems rather obvious that the Japanese market will not stand around waiting for the sawmills to get back into operation. The Japanese will be forced to look to other raw material sources and, in so doing, as they did in Alaska, will be required to make long-range commitments to these other sources. Once this takes place, the reentry into the Japanese market by Southeast Alaska lumber will be extremely difficult, time consuming, and expensive. This will further delay a return to full saw/pulp integrated use of the timber harvest, and further increase the risk of a complete industry collapse.

Finally sawmill shutdown will cause a dissipation of the skilled sawmill labor pool developed by the Southeast Alaska sawmill industry over the years, as well as a disruption of a significant portion of the skilled logging labor pool developed by the Southeast Alaska logging industry over the years. Loss of jobs will cause these skills to move elsewhere, either in pursuit of the oil pipeline opportunities, or in pursuit of such other opportunities as are available outside of Alaska. As and when logs become available in sufficient supply to warrant resumption of sawmill operations, and companion logging operations, the labor pool necessary to these operations will have to be again developed from scratch. This will further add to the delay of the return to full saw/pulp integrated use of the timber harvest, and further compound the risk of a complete industry collapse.

Almost all of this could be avoided if enough money and manpower were allotted to the administration of the Tongass National Forest. Industry frankly fails to see how anyone could seriously

consider shutdown and curtailments as an acceptable alternative.

QUESTION: If the timber industry in Southeast Alaska collapses as the industry has claimed it will unless an early solution of the timber sale shortage is found, what will be the effect upon the Southeast Alaska economy?

ANSWER: There are many ways of looking at the economic impact of an industry upon a given area. At the risk of over simplification, the loss to the Southeast area is probably most easily appreciated with reference to direct industry employment and indirect employment dependent upon industry payrolls. During 1972, out of a total Southeast Alaska census population of forty-two thousand five hundred sixty-five, approximately seventeen thousand five hundred people were gainfully employed. Of these, in excess of three thousand were directly employed by the timber industry, and an additional two thousand five hundred to three thousand five hundred people were dependent upon industry payrolls for their employment. Industry, therefore, foresees a job loss in excess of eight thousand employees in the event of an industry collapse.

UNITED STATES DEPARTMENT OF AGRICULTURE
FOREST SERVICE
P.O. Box 1628, Juneau, Alaska 99802

March 12, 1976

Dear Friend: Senator Kay

After 42 years of association with the Forest Service, I have decided to hang up my "float coat" and head back to the Lower 48 on March 30, 1976, and retire from my present job as Regional Forester.

The 5 years spent in Alaska have been enjoyable. There have been some real challenges and real opportunities during this time. There have been some battles won and lost, but all in all the experience has been gratifying and I wouldn't have missed it for the world.

During this time, the Forest Service has adopted some environmental changes in management, too many say some, not enough say others. This leads us to believe we are not too far off of where we should be. We know we can't satisfy everyone when we work with a fixed or reducing land base but an expanding public demand for its goods and services.

It has been stimulating to work with the people of this great State, with your openness, frankness, "can do" attitude, optimistic outlook, and drive to make your State better than your counterparts down below. You have the individualism and optimism of youth, a trait that is fast disappearing in "old world" circles.

I want to thank you for all the assistance and support you have given the Forest Service over the years and both of us during the last five. You have made Patty's and my stay in Alaska memorable, a time we will always remember with a warm feeling.

My successor will be John Sandor, no stranger to Alaska. John had two previous tours, one as District Ranger in Ketchikan and one on the Regional Forester's staff in Juneau. I hope you will continue the same close working relationships with him that you have with me.

After April 5, 1976, my new address will be 32 Manzano Court, Novato, California 94947. I will keep up on Alaska affairs and wish you well in your future endeavors.

Sincerely, We really appreciate the support you have given us.

Charley

C. A. YATES

Alaska's Timber Resource

A Summary

The State of Alaska has 16 percent of the forest land in the United States, or 119 million acres. These forest lands include over 28 million acres of co. ercial timber lands that, along with the remaining 91 million acres of forest lands provides important interrelationships with wildlife habitat, recreation, watersheds and the utilization of timber and mineral resources. This mixture of renewable natural resources provides a sound basis for land use planning and management opportunities under the principals of Multiple Use.

Recognized regional economic and geographic differences have essentially resulted in the identification of two distinct forest areas in Alaska. These are separated into the coastal and interior regions.

Coastal Region: This region makes up all of the Southcentral and Southeastern coastal portion of Alaska. Commercial forest lands comprise up to 5.3 million acres of this region's 13 million acres of forest land. Productive timber growing site qualities are similar to those of the Pacific Northwest forests.

Coastal commercial forests presently contain a total net volume of 135 billion board feet of predominately over mature forests.

Timber processing mills located in the Coastal Region include two pulp mills with a combined capacity of processing over 450,000 tons of pulp annually. A third pulp mill is being considered that will increase the pulp producing capacity of the Coastal Region by 50 percent.

In addition, there exists over 12 major active sawmills that annually produce over 440 million board feet of lumber. The lumber and cant production level reported during the period 1967-1974 has increased on an average of 16% per year.

Research shows that areas now being harvested, can under management, provide twice as much recoverable volume in the next rotation. One may then project that under multiple-use management, the coastal forests of Alaska should sustain twice the industry being planned for, in the present old growth stands.

Interior Region: Alaska's Interior commercial Forest lands have received little recognition. Yet, this region's 106 million acres of forest lands include 22.5 million acres of commercial timber lands.

If the commercial forest area could be sustained and managed for timber production on a pulpwood economy, the estimated allowable annual cut, on a 100 year rotation, would amount to about 4.5 million cords of pulpwood annually. By comparison, the Lake States Region (Michigan, Minnesota and Wisconsin) in 1963 cut about 3.7 million cords of pulpwood.

The interior forests of Alaska are analogous both in species composition and properties to those of the Lake States. The physiographic and climatic conditions are also quite similar. It is reasonable to assume that the Interior forests of Alaska could sustain a forest products industry comparable to that of the Lake States. Parallels could also be drawn between Finland, Norway, Sweden and interior Alaska. All three of these boreal countries support a thriving forest products industry under like conditions.

These interior commercial forest areas have the productive capability of sustaining at least 10 pulpmills of the 500-tons-per-day class.

The equivalent annual allowable cut of sawtimber amounts to 900 million board feet. The interior wood-using economy, if developed, will provide an excellent opportunity for integrated lumber and pulp production.

The total recoverable timber volumes found in Alaska's interior can be greatly increased under intensive management through shorter rotations and periodic removal of suppressed and inferior trees.

The interior's 83.3 million acres of non-commercial forest land under present classification can provide an additional 4.6 million acres of forests that support a total growing stock of 1.1 billion cubic feet. Included in this growing stock are 2.8 billion board feet of sawtimber.

Six interior sawmills reported processing 13 million board feet of lumber and cants in 1974.

New concepts of converting logs and wood fibre into lumber, particle board and sheeting panels along with advanced logging systems and equipment development, presently in use, will enhance the attractiveness of the forest products industry in Interior Alaska.

Projecting the productive potential of Alaska's commercial forest land will show substantial increases in the job economy. Existing lumbering and pulping activities result in the employment of five employees for every million board feet of logs processed. Introducing dry lumber processing and remanufacturing of lumber products can add an additional 20 employees for every million board feet of logs processed. The present wood industry in Washington and Oregon employs 28 people for every million board feet processed.

Throughout the history of Alaska, the forest has played a key and important role in this State's development. Coastal forests provided timber and planks for ships built by early Russian explorers. Native trees provided pilings and float logs for canneries and fish traps.

Interior forests provided real economic benefits in supplying fuel for river steamers, logs for cabins and crossties for the State's railroad system. Recent oil exploration in the Arctic region made use of interior forest logs for pilings, support pads for drilling operations and blocking for the oil pipeline.

Substantial information is available that describes scenic beauty, the abundant wildlife and pristine wilderness that abounds in Alaska. The need to identify and maintain a balance of these natural quality ecosystems is without question.

The identity of the forest biome in interior Alaska should not be taken lightly. The economic climate in this State is changing rapidly. Oil development activities have and will continue to make other resources more readily available. Development and use of resources from private, Native and State lands will follow. The Road to the North Slope has made the timber of the Yukon and Porcupine valleys accessible. The need for core National Forest is essential to help insure orderly management and development of the total interior Forest resource, through principals of Multiple-Use. National Forest have historically, through cooperation with neighboring land owners, provided land management assistance and valuable research contributions that resulted in orderly development on local and national levels.

As our Nation's need for energy, goods and services continues to increase, Alaska's total forest land will be looked upon to provide, not only recreational amenities, but also critical renewable, raw materials. Alaska's interior forests stand today much like our mid-eastern and western forests stood in the 1800's. Not yet reachable, but available for use, provided they are recognized for their multiple use characteristics and opportunities.

SOCIETY OF AMERICAN FORESTERS

Alaska Section

P.O. Box 432
Douglas, Alaska 99834

May 15, 1975

Honorable Jay S. Hammond
Governor of Alaska
Pouch A
State Capitol Building
Juneau, Alaska 99811

Dear Governor Hammond:

We wish to reconfirm a position by the Alaska Section of the Society of American Foresters, in encouraging establishment of a Division of Forestry within the Department of Natural Resources.

In 1967 we stated our concern in the form of the enclosed resolution. Governor Hickel responded in a letter dated June 28, 1967, which mentioned such a move was not justified at that time because of a rather modest forestry workload. We were pleased, though, that the Administration intended to keep it in mind for future action.

Significant new events have occurred since 1967 to strengthen this direction. The enclosed summary of recent developments exemplifies an accelerated and growing forestry program in Alaska. More jobs are being provided through new industrial operations throughout the state, and the forest economy has a stable future outlook.

Alaska's 375 million acres are one-third forest covered and over one-half forest or forest related land. Much of the selected 44 million acres of new private land under the Alaska Native Claims Settlement Act will fall into this category. Also, additional selections under the Statehood Act will add substantial new forest land acreage to the current significant changing land ownership pattern.

Environmental concerns and movements have reached Alaska in full force. To many, Alaska is the great environmental battle of the century. Pressures will be strong to preserve large blocks of wilderness and to demonstrate the best possible management practices on the land base that is left to provide economic growth.

The State Forester plays a key role in demonstrating sound management practices on state lands administered for protection and utilization of forest resources. He is also responsible for extending forest management leadership and technical assistance to private landowners throughout the state. Much of this public service is accomplished through cooperative

forestry programs with the U.S. Forest Service. The State Forester's organization should be commensurate with these important land management responsibilities. It should also be capable of meeting the demands of a fast-growing forestry industry and profession in Alaska.

Consistent with our professional interest in this matter, are the findings of a 1970 "Study of the Alaska Forestry Organization and Programs" by Ross L. Stump, Earl J. Adams, and Robert B. Griffes. You may be familiar with the management report which was presented April 13, 1971 to Commissioner Charles F. Herbert. Specifically, Recommendation A.2. deals with Division status for Forest Management and Protection. Analysis rationale for the four recommendations pertaining to Organization is given on pages 7-11 of the report. This quote from the report seems pertinent: "In view of the potential timber production programs, the need for better management guidance, and the pending transfer of the fire protection from the Bureau of Land Management to the state, the Study Team feels Forest Management and Protection warrants Divisional status."

We believe the time is definitely here to justify Forestry being raised to the level of Division status in the State. We urge you to have the organizational change implemented this year.

Sincerely,

R. C. Janes

ROBERT C. JANES

RCJ:tw

FACT SHEET

FORESTRY GROWTH IN ALASKA

1967-1975

1. Twelve major Native regional corporations and over 200 Native village corporations presently are in the process of selecting 44 million acres of new private land. The Natives face a major problem in gearing up to provide the needed natural resource management skills at both technical and professional levels. The State Forester's organization is extremely important for technical assistance at this particular point in time.

2. In 1967, the volume of State timber under timber sale contract was 258.6 mm bfm. Today it's 850.0 mm bfm - an increase of 229% in seven years.

3. In 1967, the volume of timber cut from State timber sales was 46 mm bfm. At $3.60/mbm payment for all species, this yielded $165,600 receipts to the State. Volume cut in 1974 was 51 mm bfm. At $7.34/mbm payments, receipts were $374,340. This is an increase in value of 126% in seven years.

4. Bug-killed timber has a considerable impact on the volume of timber under contract. The State's Westside Salvage Timber Sale, near Cook Inlet, was sold in 1975. This spruce beetle infested area covers 223,000 acres. A 10-year contract provides for the salvage of 285 mm bfm white spruce and 140 mm bfm other species. In 1975 the volume cut will approximate 30-40 mm bfm, increasing substantially

the cut of 51 mm bfm in 1974. Current insect detection surveys indicate active infestations to the north near Beluga Lake, and it is quite possible another sale will take place to help prevent another major spruce beetle epidemic. Industrial activity in the area has resulted in a new sawmill and dock facilities at Tyonek.

5. Timber sale activity in the interior has been developing rapidly. In 1973, the Louisiana Pacific Corporation purchased Kenai Lumber Company of Seward. This company has been purchasing cants from sawmills located along the rail belt as far north as Fairbanks. An increased demand for State timber has resulted, and a corresponding increase in the Cook Inlet, Matanuska-Susitna Valley, and Tanana Valley areas.

6. Timber inventory work has been steadily increasing since 1968, and the State has been cooperating with the U.S. Forest Service in the State-wide Forest Survey Program. During 1975, 13,000,000 acres of forest land in the Tanana Valley will be completed, providing a sound base for timber management plans and allowable annual cut determinations for a sustained yield of the timber resource. In the Susitna Valley area, 2,500,000 acres have been completed. Forest Survey plans for the next 2-3 years call for 243,000 acres in the Yakataga area and a re-survey of State land in the Haines-Skagway locality.

7. In 1967, State fire control presuppression costs were $145,000 and suppression costs were $188,000. In 1974 presuppression costs were $425,000 and suppression costs approximately $500,000. This

178% increase of expenditures in seven years shows there is a critical wildland fire problem in the State. And as the Bureau of Land Management phases out their fire protection coverage in the interior, the State will have a substantially larger responsibility to meet.

8. Federal grants for cooperative forestry programs have increased from $97,800 for 1967 to $432,400 for fiscal year 1976. This growth of 342% was mostly for cooperative fire control; however, cooperative forest management programs have also grown. A tree seedling distribution program now exists, providing 10,000-15,000 seedlings annually to landowners in the southcentral region of the State.

9. Establishment of a State tree nursery is underway at the Palmer Plant Materials Center. The objective is to develop a containerized seedling greenhouse and nursery, with an initial capacity of producing 50,000-60,000 seedlings per year. These will be purchased by private and Federal landowners for conservation practices, as well as a source for State projects. The facility will also provide for tree cone collection, seed processing, and seed storage.

10. The U.S. Forest Service budget for the Alaska Region has experienced a growth of 215% in eight years. For fiscal year 1967, it was $5,430,000; for fiscal year 1975, it is $17,121,000. Permanent full-time personnel have increased from 266 to 394 at present.

11. The Forestry Incentives Program, administered by the U.S. Agricultural Stabilization and Conservation Service, provides new

opportunities to Alaska landowners. Cost-sharing projects are on the move for forestry practices such as planting trees and improving a stand of forest trees. The State Forester plays an important role in promoting practices by eligible landowners. With regional and village Native corporations becoming eligible, the current grant level of $5,000 for Alaska is expected to make a significant jump.

12. The Alaska Section of the Society of American Foresters has increased from 125 members in 1967 to 236 at present. This 12-13% annual increase reflects a growing profession in Alaska which exceeds the national average growth of the Society's 19,000 members. New opportunities in Alaska will continue to attract foresters to the State. A new Chapter has been formed at Sitka. Other Chapters exist at Ketchikan, Juneau, Anchorage and Fairbanks.

WALTER J. HICKEL
GOVERNOR

STATE OF ALASKA
OFFICE OF THE GOVERNOR
JUNEAU

June 28, 1967

Mr. Robert C. Janes
Secretary-Treasurer
Society of American Foresters
Alaska Section
Box 1628
Juneau, Alaska

Dear Mr. Janes:

I appreciate your sending me the resolution passed by the Alaska Section of the Society of American Foresters, which I have received with great interest.

A preliminary approach to the establishing of a Division of Forestry within the Department of Natural Resources has recently been taken. The area offices of the Division of Lands in Juneau and Anchorage are now under the management of Foresters.

The four trained Foresters on the staff seem adequate to handle the problems in view of the present status of the industry. The future growth of the timber industry will no doubt, demand a reorganizing of the present setup into a division. A District Forestry Office near Wasilla was abandoned because of complete lack of work for the District Forester. It is difficult in some areas to stimulate enough interest for the State Forester to conduct a timber workshop.

I assure you that this subject is of concern to me and until such time as some of the present problems in the timber industry are solved, the present organization appears to be the most economically feasible.

With warm personal regards.

Sincerely yours,

Walter J. Hickel

enclosure

RESOLUTION ADOPTED BY

SOCIETY OF AMERICAN FORESTERS, ALASKA SECTION

ANNUAL MEETING, PETERSBURG, ALASKA JUNE 2, 1967

BE IT RESOLVED BY THE ALASKA SECTION OF THE SOCIETY OF AMERICAN FORESTERS:

WHEREAS the Interior part of Alaska has about 22½ million acres of commercial timber land supporting about 14 billion cubic feet of merchantable timber; and

WHEREAS a large portion of these resources are in private ownership for which the State is obligated to furnish technical assistance; and

WHEREAS the manufacturing capacity for both hardwoods and softwoods is on the threshold of expansion at an accelerated rate; and

WHEREAS the problems of establishing new industry within the State are of a complex and technical nature that require a workable organization of professional Foresters; and

WHEREAS the forested areas acquired by the State furnish the habitat for a large portion of our wildlife within Alaska and needs wise management; and

WHEREAS the State is responsible for the fire protection on State and private lands within the State which will eventually require an expanded fire organization; and

WHEREAS each acre of forested land is a potential recreation area in some form and should not be ignored; and

WHEREAS the constitution of the State of Alaska stated under article 8, section 4 that". . . Forests. . . and all other replenishable resources belonging to the State shall be utilized, developed and maintained on the sustained yield principle,. . .";

NOW, THEREFORE, BE IT RESOLVED that the Alaska Section of the Society of American Foresters recommends that the State of Alaska raise the present Branch of Forestry in the Division of Lands, Department of Natural Resources to at least full Division status; and

BE IT FURTHER RESOLVED that the proposed new Division of Forestry be adequately staffed and financed to accomplish the afore mentioned responsibilities; and

BE IT FURTHER RESOLVED that the Secretary of this section of the Society of American Foresters be instructed that copies of this resolution be sent to the Governor of Alaska, and the Commissioner of Natural Resources.

Re: Independent Timber Sale Shortage
Tongass National Forest

Dear Senator Poland:

The Alaska Lumbermen's Association has received many questions from throughout Alaska on the highly publicized independent timber sale shortage in the Tongass National Forest, which the Association has stated threatens the future of the timber industry in Southeast Alaska unless early solutions to the shortage are found.

Enclosed for your information are the most commonly raised questions, together with our answers.

We hope this information is helpful to your understanding of the timber sale shortage problems presently confronting the timber industry in Southeast Alaska.

Sincerely

ALASKA LUMBERMEN'S ASSOCIATION

By C. L. Cloudy, Counsel

CLC:bh
enc.

QUESTION: Has there been a recent increase in the productivity of the sawmill industry in the Tongass National Forest and, if so, is not this circumstance the real cause of the current timber supply shortage?

ANSWER: Yes, there has been a recent increase in sawmill productivity. In fact, assuming the availability of timber, 1974 sawmill production is expected to exceed 1972 production in excess of fifty percent. In terms of the increased timber harvest demand, however, the 666 million board feet annual harvest required by the entire timber industry exceeds its 1972 requirements by only eighteen percent. Consequently, whatever effect sawmill productivity increases may have on timber supply, the effect must be analyzed in the light of an eighteen percent harvest demand increase, rather than a fifty percent production increase.

The real cause of the current timber supply shortage, however, is not the increase in sawmill productivity--rather, it is the almost total collapse of the Forest Service independent sales program which took place over the three year period 1971-1973. Until 1971, the Forest Service had been pursuing an ongoing independent sales program of at least seven years' duration which, if it had continued, would have been more than capable of supporting the sawmill expansion which took place during 1972-1973. In point of fact, the expansion of 1972-1973 was the result of advance industry planning which was based upon that historically proven seven year capability of the Forest Service sales program to support such an expansion. During the seven year period, 1964-1970, the Forest Service sold 2 billion 213 million feet in independent timber sales, which averages out to the equivalent of 316 million feet per year. During the three year period 1971-1973, however, they sold only 192 million feet, which averages out to the equivalent of 64 million feet per year. In order for industry to survive under this reduced program, it not only would have had to forego the sawmill expansion in question, but it would have had to reduce its annual harvest by almost 150 million board feet under what it needed in any event without any sawmill expansion. By way of further contrast, industry's harvest demands of 666 million board feet per year could have been met by simply increasing the annual volume averages formerly available under the 1964-1970 program by less than five percent.

QUESTION: Since 1970, three new export sawmills specializing in the sawing of hemlock lumber for the Japanese market have been brought into production in Southeast Alaska. Was the Forest Service aware, or made aware, of the plans for this expansion before it took place?

ANSWER: Yes. In fact, all during the 1960's the Forest Service, both on the Regional level in Juneau, and the Chief's level in Washington, D.C., repeatedly urged industry to develop a market in Japan for Alaska hemlock lumber. Although this market was slow to develop, industry kept the Forest Service fully advised of its progress and its expectations at all times. Industry assumed (mistakenly, as it turned out) that inasmuch as the Forest Service had recommended the development of these markets, the Forest Service would have maintained the ongoing sales program necessary to supply the sawmills in question.

QUESTION: Is the timber sale shortage in any way related to the fact that both Ketchikan Pulp Company and Alaska Lumber and Pulp Co., Inc. have increased the daily capacity of their respec-

tive pulp mills?

ANSWER: No. Both mills were required to construct pulp plants with a minimum design capacity of 525 tons per day. Through 1973, both mills have produced less pulp since they commenced initial operation than this initial design capacity was capable of producing. Daily capacity has been increased in each mill, with the result they will undoubtedly produce more pulp over the next ten years than they did over the previous ten years. However, most, if not all, of this increased capacity will be supplied by technological improvements which give a higher volume of pulp recovery per thousand board feet of raw material than the mills were originally capable of obtaining. Consequently, neither pulp mill has increased its raw material demands to such an extent as to create a timber shortage.

QUESTION: The Forest Service has stated that the timber industry in Southeast Alaska has suddenly increased its processing capacity to such an extent that they are now capable of processing 900 million board feet of logs per year, which capacity exceeds the annual allowable cut of the Tongass National Forest by 90 million feet. What is the present processing capacity of the Southeast Alaska timber industry?

ANSWER: It is not 900 million board feet. It does approximate 666 million board feet. The Forest Service statement is based upon their "observation" that the ability of industry to "triple shift" the processing mills creates this capacity. The fact of the matter is that the two pulp mills have been on triple shift since they commenced operations: their product requires a continuous process of manufacture, and consequently, they must remain in constant operation so long as they are producing pulp. The ability of the pulp mills to triple shift, therefore, has nothing to do with whatever increase in capacity the timber industry has achieved. As to the sawmills, of the eight export mills in operation, only one of them is capable of triple shifting its operation, and this is the new cull and defect sawmill located at Ketchikan Pulp Company's pulp mill at Ward Cove, Alaska. This latter sawmill operates in conjunction with the pulp mill, and seeks to recover whatever marketable lumber may be found in the pulp logs, and necessarily operates on the same work shifting as the pulp mill.

QUESTION: How much timber needs to be harvested each year to meet the present capacity demands of the Southeast Alaska timber industry, and is the Tongass National Forest capable of supplying these demands?

ANSWER: Industry requires an annual harvest of 666 million board feet per year. 336 million board feet per year are available from the long-term allotment sales held by Ketchikan Pulp Company, Alaska Lumber and Pulp Co., Inc., and Alaska Wood Products, Inc., and 330 million per year must come from independent sales outside of these allotments. The annual allowable cut in the Tongass National Forest is 820 million board feet per year. It is obvious, therefore, that the industry presently requires less than the harvest capacity of the Tongass National Forest.

QUESTION: The Forest Service now hopes to sell 298 million board feet of independent timber sales in fiscal 1975, and 461 million board feet in fiscal 1976. These plans represent an increase over original plans of 130 million board feet in 1975, and 224 million board feet in 1976. Will these sales wipe out the

shortage and avoid production cutbacks?

ANSWER: No. Despite these increases, the volume of independent sale timber ready to harvest will continue its decline into 1975, and will commence a slow ascent in 1976 (88 million board feet will be available in 1975: a shortage of 242 million feet; 130 million board feet will be available in 1976: a shortage of 200 million feet; 222 million board feet will be available in 1977: a shortage of 118 million feet). These shortages will occur despite the fact that the opening inventories of uncut independent sales in the years 1974, 1976, and 1977 will exceed the harvest requirement of 330 million board feet by a substantial margin.

The reason for this seeming paradox is the fact that merely because timber has been sold, and therefore becomes part of the inventory available for harvest, does not mean that the timber can be harvested. One and one-half to two years elapse from the date a timber sale is purchased to the date the purchaser can start logging. This delay is caused by the time required by the purchaser to obtain as many as twelve Federal and State permits, to constuct roads, to lay out camp sites, to meet initial environmental safeguard requirements, to construct log dumps, etc. None of these activities can take place until after the timber has been purchased, and no logging can commence until after all of these activities have been completed.

Consequently, neither the independent sales scheduled for 1975 and 1976, nor the hoped for increases announced by the Forest Service, will be ready to log in time to head off the shortages forecasted for 1975, 1976, and 1977. Even during 1974, despite the fact that on paper at least, industry has 330 million feet of independent sales ready to harvest, it is most unlikely that this harvest can be attained, due to the logistical complexities involved in attempting to maintain the 1974 logging activity on independent sales at the 330 million board feet level while, at the same time, getting ready to face the realities of reducing such activity to the 1975 level of 88 million board feet. As a result, mill operations have already been curtailed in 1974, and more will follow.

QUESTION: If there is such a timber sales shortage, why are logs exported from Southeast Alaska instead of being processed locally?

ANSWER: There are three sources of logs from which logs may legally be exported from Southeast Alaska without being processed locally, namely, (1) Annette Island Indian Reserve, (2) privately owned lands, and (3) National Forest lands. The timber on Annette Island is administered by the Bureau of Indian Affairs, and the Bureau permits this timber to be exported without processing, despite the long and vigorous opposition of this policy by the Alaska Lumbermen's Association and the Alaska Loggers Association, Inc. The timber on privately owned lands is subject to disposal at the pleasure of the land owner. The timber industry, as such, and contrary to the situation in Washington and other states, owns very little private land of any significance. Timber on National Forest lands may not be exported without processing, unless there is no local processing demand.

The only National Forest export in Southeast Alaska is cedar, for which there is an extremely limited local processing demand. Export of this specie is limited to that which exceeds the local demand. The local processing demand for this timber is limited,

due to the fact that the timber is of extremely poor quality, and there simply is no great market for the lumber, either inside or outside of Alaska. Aside from cedar, the timber from Metlakatla and private lands is exported simply because the owner will not sell this timber at a price low enough to enable the local mills to process the timber at a profit. In order to acquire the cutting rights to this timber, the mills would have to compete with a log export market price which equals or exceeds the market price of the finished local product. As a result, industry has little effective voice in making these logs available for local use.

QUESTION: Industry has complained about the increased cost of logging in Southeast Alaska brought on by new environmental standards being imposed by the Forest Service. Aside from the fact that increased costs mean decreased profits for industry, what effect does this have upon the general economy of Southeast Alaska?

ANSWER: Two major areas of economic concern to Southeast Alaska are involved. In the first place, the imposition of the new standards further extends the time required for the Forest Service to ready a prospective timber sale area for sale, and at the same time further extends the time it takes the purchaser to get to the actual business of logging after he purchases the sale. As a result, the timber sale shortage will extend over a longer period of time than originally anticipated, with extended adverse economic impact upon Southeast Alaska. In the second place, the cost of meeting the new standards has to come out of the value of the trees being harvested. Twenty-five percent of whatever the purchaser pays the Federal Government for these trees is returned to Alaska for local government use in the area within which the harvest took place. As environmental costs increase, the value of the tree decreases under what it would have been without these costs, thus reducing the return to the State and local governments.

QUESTION: What is industry's understanding as to why the Forest Service did not maintain its independent sale program to keep pace with industry expansion?

ANSWER: Several factors combined to produce this result. In 1972 the Sierra Club sued the Forest Service, charging them with failure to comply with the Environmental Protection Act on new timber sales. Although this suit did not directly include Alaska, the Forest Service was made aware that Alaska would be included unless the Forest Service terminated its sale activity pending the outcome of the suit. Consequently, sale activity in 1971 and 1972 dwindled into insignificance. The suit was settled by compromise in late 1972, with the understanding that the Forest Service would develop new environmental standards and apply them to each sale. Unfortunately, for Alaska, the funding and manpower required to overcome this slowdown in 1971-1972, and the funding and manpower required to implement the new standards, far exceeded the assignment of funds for Alaska. In addition, prior to the onset of environmental standards, the Forest Service was geared to providing a two or three year backlog of independent sales at the most. As a result, even a temporary disruption in sale activity had a sudden and adverse consequence.

QUESTION: Has the Forest Service offered sales within the past several years which have not been purchased, and if so, how can industry justify this in view of the sale shortage now claimed?

ANSWER: Yes. In June of 1972, the Forest Service offered four sales totalling 106.3 million feet, for which there were no bids received. These were salvage sales hurriedly put together, and assigned stumpage values in excess of what the economics of the sale could afford, and involved unrealistic and uneconomical conditions of sale. These matters were pointed out to the Forest Service, with the result that one of the sales was dropped by the Forest Service as being totally unloggable, and two others were completely redesigned and sold under different terms than the original offering. Industry takes little comfort in the suggestion that the shortages can be avoided if industry is willing to operate at a loss.

QUESTION: It has been pointed out by the Ketchikan Area Offices of the Forest Service on numerous occasions, in response to the industry requests for increased sale activity, that the Ketchikan area annual harvest is at maximum levels now, and cannot be increased, and that the capacity of the Ketchikan area mills far exceeds the harvest capacity of the Ketchikan area. What does this have to do with the shortage?

ANSWER: Nothing. The capacity of the Ketchikan area mills does in fact exceed the harvest capacity of the Ketchikan area; however, this poses no threat to the Ketchikan area harvest, nor does it establish that the industry is guilty of over expansion. Mills in Southeast Alaska are capable of utilizing the raw material of the Tongass National Forest without regard to the location of either the mill or the logging operation. The Tongass National Forest, as a whole, has the harvest capacity to support the existing mills. The mere fact that the harvest capacity of a local area has been exceeded by the mill capacity of the mills located within that area does not mean that the Tongass National Forest lacks the capacity to supply those mills.

QUESTION: The Forest Service has related the current timber sale shortage in part to recent expansion of the sawmill industry, and the sawmill expansion in turn to the desire of industry to capitalize on the sudden increase in the demands of the Japanese market in 1973. What is the connection between the 1973 Japanese market and the current sale shortage?

ANSWER: None. Japan has been short of timber ever since the end of World War II. Their need to import timber is not a new or recent circumstance. Alaska lumber competes for its share of the Japanese market, and when purchased by the Japanese replaces a source previously looked to for supplying the specific use to which the Alaska lumber is placed. This market has been slowly developed over the past eighteen years. Market acceptance of this product was completed before 1973, and before the "sudden" housing boom in Japan. With or without the curtailment of exports from the Pacific Northwest to Japan, and with or without the housing boom of 1973 in Japan, the sawmills which went into production in 1973 would have gone into production in any event (short of a market collapse). Industry intends, and has long intended, to develop markets for its products up to the full allowable cut of the Tongass National Forest. The mill expansion of 1973 is nothing more or less than the natural progression toward that goal.

QUESTION: Why does not the Southeast Alaska timber industry sell its lumber product in the domestic United States instead of in Japan?

ANSWER: Simply because the domestic United States markets

do not consider the product worth enough money to enable the processors to operate at a profit. This situation has existed for over forty years, and until such time as the domestic United States becomes a net importer of timber (as is Japan), the situation is not likely to change. It has often been incorrectly stated that if the Jones Act was repealed, our timber products would find a profitable United States domestic market. This, however, is not the case. Our competitive disadvantage arises out of many other factors than shipping rates, which include higher logging costs, higher costs of accommodating to environmental standards, higher processing costs, and higher percentage of defect in the raw material. Often overlooked in this regard, is the fact that the United States imports fifty percent to seventy percent more lumber from Canada in any given calendar month than Southeast Alaska exports to Japan in an entire calendar year. Almost all of this import is used East of the Mississippi River. The reason for this import is that Canadian mills can produce and deliver the end product for less money than can the mills in Oregon, Washington, and California. If the mills in the Western United States cannot compete with Canada, it is most obvious that Alaska has no chance of entering the domestic United States market in the foreseeable future.

QUESTION: Are the other areas of the United States faced with the same timber sale shortage problem as Southeast Alaska?

ANSWER: No. Despite the fact that, as everyone generally is aware, a severe domestic lumber supply shortage developed in the United States during 1972-1973, this shortage is unrelated to Alaska's problem. In the United States, only fifty-two percent of the soft wood saw log volume is in National Forest ownership. In Washington and Oregon, only thirty-two percent and forty-seven percent respectively is in National Forest ownership. To whatever extent the domestic United States lumber supply shortage of 1972-1973 may have been related to a timber sale shortage, it is obvious that many other factors than who owned the raw material were involved. In Southeast Alaska, however, over ninety percent of Southeast Alaska's soft wood saw log volume is in National Forest ownership. If there is a timber sale shortage in Alaska, therefore, the only significant factor involved is National Forest ownership. So long as the ownership in question has the harvest capacity to meet the shortage, the problem becomes one of forest management by the Forest Service.

QUESTION: How does the Tongass National Forest rank generally in relation to other National Forests?

ANSWER: The Tongass National Forest is the largest National Forest in the United States, and is within the administrative area of Region 10 of the Forest Service headquartered in Juneau. Bearing in mind that there are nine such Regions throughout the United States, the other eight of which contain from fourteen to nineteen separate National Forests, it is noteworthy that the annual harvest in the Tongass National Forest alone exceeds the total annual harvest in five out of those eight Regions. Despite this fact, Alaska's Region 10 ranks last in Federal funding (in 1971, for example, the closest Region on the ladder above Alaska received $18,000,000.00 more than Alaska).

QUESTION: What is meant by the term "independent timber sale"?

ANSWER: The term refers to the sales of timber made by the

Forest Service in the Tongass National Forest which are independent of the existing long-term allotment contracts (that is, other than, the long-term contracts held by Alaska Lumber & Pulp Co., Inc. for its pulp mill, Ketchikan Pulp Company for its pulp mill, and Alaska Wood Products, Inc. for its sawmill). With regard to the long-term allotment contracts, the Forest Service releases for cutting each year a maximum of 336 million board feet. Inasmuch as industry requires 666 million board feet of harvest per year, the additional 330 million board feet must come from short-term sales independent of the allotment contracts.

QUESTION: Why can't industry merely shut down its sawmills for several years and allow the Forest Service time to catch up on its sales program?

ANSWER: There are a number of reasons which make this solution totally unrealistic as opposed to industry's proposed solution of an immediate large scale increase in sales.

First and foremost is the fact that the high cost of logging and processing in Alaska makes it absolutely mandatory that industry sell the end product for the highest possible price. At present, approximately fifty percent of the fiber volume in the Southeast Alaska timber harvest can be sawn into export lumber and sold for a much higher return than if the entire volume was converted into pulp. If the sawmills are shut down, the entire harvest will have to be converted into pulp. If this takes place, the pulp mills will not be able to operate at a profit, and loss operations will sooner or later force a closure of these mills.

Secondly, assuming the pulp mills can weather out the storm until the sawmills are able to resume operations, there is absolutely no assurance that the sawmills will still have a market for their product at such time as they have logs available to process. It seems rather obvious that the Japanese market will not stand around waiting for the sawmills to get back into operation. The Japanese will be forced to look to other raw material sources and, in so doing, as they did in Alaska, will be required to make long-range commitments to these other sources. Once this takes place, the reentry into the Japanese market by Southeast Alaska lumber will be extremely difficult, time consuming, and expensive. This will further delay a return to full saw/pulp integrated use of the timber harvest, and further increase the risk of a complete industry collapse.

Finally sawmill shutdown will cause a dissipation of the skilled sawmill labor pool developed by the Southeast Alaska sawmill industry over the years, as well as a disruption of a significant portion of the skilled logging labor pool developed by the Southeast Alaska logging industry over the years. Loss of jobs will cause these skills to move elsewhere, either in pursuit of the oil pipeline opportunities, or in pursuit of such other opportunities as are available outside of Alaska. As and when logs become available in sufficient supply to warrant resumption of sawmill operations, and companion logging operations, the labor pool necessary to these operations will have to be again developed from scratch. This will further add to the delay of the return to full saw/pulp integrated use of the timber harvest, and further compound the risk of a complete industry collapse.

Almost all of this could be avoided if enough money and manpower were allotted to the administration of the Tongass National Forest. Industry frankly fails to see how anyone could seriously

consider shutdown and curtailments as an acceptable alternative.

QUESTION: If the timber industry in Southeast Alaska collapses as the industry has claimed it will unless an early solution of the timber sale shortage is found, what will be the effect upon the Southeast Alaska economy?

ANSWER: There are many ways of looking at the economic impact of an industry upon a given area. At the risk of over simplification, the loss to the Southeast area is probably most easily appreciated with reference to direct industry employment and indirect employment dependent upon industry payrolls. During 1972, out of a total Southeast Alaska census population of forty-two thousand five hundred sixty-five, approximately seventeen thousand five hundred people were gainfully employed. Of these, in excess of three thousand were directly employed by the timber industry, and an additional two thousand five hundred to three thousand five hundred people were dependent upon industry payrolls for their employment. Industry, therefore, foresees a job loss in excess of eight thousand employeees in the event of an industry collapse.

MUNICIPAL TAX COMP.

STATE OF ALASKA
THE LEGISLATURE

LEGISLATIVE AFFAIRS AGENCY

POUCH V · STATE CAPITOL
JUNEAU, ALASKA 99811
907-465-3800

MEMORANDUM

April 28, 1978

SUBJECT: Municipal Tax Comparisons (W.O. #5437)

TO: The Honorable Charles Parr

FROM: Deborah Behr (DB) and John Williams JW
Research Analyst Research Analyst

You have asked that we prepare information comparing some fiscal capacity, bonded indebtedness, and local effort indicators that will relate the municipalities of the Kodiak Island Borough, Dillingham, Nome, Petersburg, and Wrangell to equivalent municipalities in the state. Our analysis is divided into four portions: (1) comparisons of property values and property taxing rates; (2) sales taxing rates and revenues; (3) bonded indebtedness and tests to compare present indebtedness to debt capacity; and (4) a summary of local taxation, including a comparison of local tax liability to personal income.

Our data is primarily obtained from Alaska Taxable 1977, prepared by the state assessor, Department of Community and Regional Affairs (CRA). Sales tax revenues were obtained from the 1977 Municipal audits on file with the Dept. of CRA (when 1977 audits were not available, 1976 sales tax revenues were obtained from the 1976 audits and escalated by an appropriate percentage). Per capita income data was compiled from information available from the Bureau of the Census (1974 income data) and adjusted with income data purchased from the National Planning Data Corporation (1976 income data). Municipal populations are those used by the Local Government Assistance Division of the Department of CRA for the state aid to local governments program (revenue sharing).

The cities and boroughs which were selected to compare the five cities (listed above) against, are the Bristol Bay Borough, Haines Borough, City and Borough of Juneau, Ketchikan Gateway Borough, Mat-Su Borough, City and Borough of Sitka, Cordova, King Cove, Nenana, Pelican, Skagway, and Unalaska. This group contains all municipalities in the state with education responsibilities except those with oil and gas properties and cities that do not nave a property tax.

The 17 cities included in the analysis (including the five requesting additional educational support) are generally comparable. Remarkable externalities which should be considered when looking at the following tables are the considerable seafood industry properties and sales in Unalaska (the largest commercial fishing port in the U. S. in terms of value of catch); the railroad property located in Skagway; the seafood industries located in Kodiak, Petersburg, Ketchikan, Sitka, Cordova, King Cove, and Pelican; and the timber industries located in Wrangell, Ketchikan, and Sitka. Those locations will generally show a larger tax base because of the industrial concentration in the respective municipalities.

The sales taxation analysis is not as specific as the other data because of the significant variations used by municipalities in the application of a sales tax. It is additionally much more difficult to determine the residential contribution to municipal sales taxes (as compared to property taxes) since tourism, purchases by non-residents at regional trade centers, and the specific application of sales taxes to particular transactions will tend to diminish the out-of-pocket contribution of residents of a given municipality. Our analysis is concerned with local fiscal capacity and local effort. Non-resident contributions to a municipal sales tax will artificially escalate the local effort of those municipalities which receive significant sales tax revenues from non-residents unless a means could be developed to back out non-resident contributions to municipal sales taxes.

PROPERTY VALUES, TAXATION, AND REVENUE

PROPERTY VALUE, TAXATION, AND REVENUE

The two following charts present information on municipal property taxation, property values, and revenues. Assessed values are those determined and used by municipalities for property taxation purposes. Full and true values are determined by surveys conducted by the state assessor. Differences between assessed and full and true value are attributable to (1) optional exemptions utilized by municipalities, and (2) slight differences between assessed and market values of property.

Taxing rates shown are the area-wide rate only. Differential rates in service areas or tax zones are not shown. When determining revenues derived from property taxes, total liability was determined for all property taxes within a municipality (including city tax liability for cities within boroughs).

The chart entitled "Comparison of Property Value and Property Tax Revenue" presents information standardized to an average index value of 100. The average municipal per capita property value for the 17 municipalities is determined and assigned an index value of 100. The same computation is made for municipal per capita tax revenues. The index numbers are useful for demonstrating the relative degree of taxation each municipality imposes on the per capita property value in the municipality. For example, a municipality whose index number for per capita tax revenue is less than its index number for per capita property value is taxing a rate less than the average for the 17 cities included; and a municipality whose per capita tax revenue index number is greater than its property value index number is taxing at a rate greater than the average.

PROPERTY VALUE, TAXATION, AND REVENUE

	Population	Assessed Property Value ($Thousands)	Full & True Property Value ($Thousands)	Per Capita Assessed Value	Per Capita Full Value	Area-Wide 1/ Property Tax Rate (Assessed)	Area Wide Property Tax Rate (Full & True)	Property 2/ Tax Revenue	Per Capita 3/ Property Tax Revenue	Property Tax Revenue From 1 Mil (Full & True)
Kodiak Island Borough	7,901	$160,554.9	$174,701.5	$20,321	$22,111	7.23	6.664	$2,517,419.5	$318.62	$174,702

SALES TAX RATES AND REVENUE

SALES TAX RATES AND REVENUE

Because of the tremendous variances in the imposition of sales tax ordinances (transactions covered by the tax, limits imposed on sales exceeding a ceiling level, exemptions from taxation, etc.), it is difficult to compare the relative effort that each municipality has undertaken. The fact that sales tax revenues are not derived solely from the pocketbooks of residents of the municipality further complicates the matter. The only conclusions that can generally be drawn from the table is that similar communities with dramatically different per capita revenues from similar taxing rates probably apply their sales taxes quite differently. A community which comparatively receives less than a similar community could <u>generally</u> be considered to have untapped potentials for incremental revenues from a sales tax.

SALES TAX RATES AND REVENUE

	Sales Tax Rate (%)	Sales Tax Revenue	Per Capita Sales Tax Revenue
Kodiak Island Borough	0 - 3	$ 862,599	$ 109.17

DEBT CAPACITY ANALYSIS WITH REGARD TO SCHOOL CONSTRUCTION NEEDS: INTERCOMMUNITY COMPARISON

DEBT CAPACITY ANALYSIS WITH REGARD TO SCHOOL CONSTRUCTION NEEDS: INTERCOMMUNITY COMPARISON

Debt capacity was analysized by utilizing Mr. David Rose's, executive director of the Alaska Municipal Bond Bank Authority, two "rules of thumb" as general guidelines for determining the debt capacity of a community. Those "rules of thumb" are:

Rule #1: The maximum general obligation bonded debt of a community should not exceed 15%.

Rule #2: Per capita general obligation debt should not exceed $2,000.

The chart entitled "Comparison of Debt Capacity of Selected Alaska Cities" analysizes the debt capacity (as estimated by the two rules of thumb) of the five selected communities with the debt capacity of 12 similar Alaska locations.

Using Rule #1

The average of the communities in the sample had debt up to 37.9% of its maximum recommended debt limit. A similar percentage was calculated for each community included in the review. Index numbers were also calculated to compare the relative position of each community's debt percentage to the sample average. If both are equal, the community had incurred debt at 37.9% of its maximum capacity and its index number would be listed a 1.00. Index numbers higher than 1.00 reveal debt incurring percentage higher than the average. Index numbers lower than 1.00 reveal debt percentage less than the average. Only Petersburg, Haines,

and King Cove have incurred debt in compairson to its maximum at a rate higher than the average of the communities included in the sample.

Using Rule #2

The average of the communities had debt up to 35.9% of the $2000 maximum per capita limit. Again percentage and index numbers were calculated for each community in the sample to make cross-community comparisons. Petersburg ranked first in all the communities included in the sample.

Debt Capacity Compared to School Needs

The final three charts attached list the debt capacity utilizing the two different methods of analysis. The charts then compare that maximum debt with the requests for school construction in each community. The analysis finds that with the current 50% local match requirement for schools construction, only Dillingham and Petersburg would require a state subsidy, if the remaining maximum capacity of each town was utilized for school construction. If the local match for school construction is reduced to 20%, only Petersburg would require a state subsidy, if its remaining maximum debt was utilized for school construction.

COMPARISON OF DEBT CAPACITY OF SELECTED ALASKA CITIES

SUMMARY OF MUNICIPAL TAXING EFFORT

SUMMARY OF MUNICIPAL TAXING EFFORT

The two charts summarize the capacity for taxation and how heavily the municipalities are drawing from their municipal capacity. Since taxes are paid from income, we have compared the average citizen's municipal tax liability in each municipality to the average citizen's income in the same municipality. The final column on the first chart shows local tax liability as a percentage of income.

The chart entitled "Local Effort Summary" uses index numbers to further compare the municipalities' taxing effort as measured by the percentage of resident income dedicated to local taxes. The average of the 17 communities' tax revenues (per capita) is determined and assigned an index value of 100. An average is also determined for the percentage of income that is consumed by local taxes for the 17 communities. The average (5.12%) is assigned an index value of 100.

SUMMARY OF MUNICIPAL TAXING EFFORT

	Total Local Tax Revenue ($ Thousands)	Per Capita Tax Revenue	Per Capita Income	Local Taxes as a % of Income
Kodiak Island Borough	$ 3,380.0	$ 427.80	$ 8,565	4.99

HB
28

School bill

P.O. Box 700
Anchorage, Alaska
January 28,1977

Dear Editor:

Attached is the bill I wish you could run for us. The following information will give you some background on the problem.

BY SWANSON

HOUSE BILL NO. 28

Section 1. AS 14.03.080 is amended by adding a new subsection to read:

(f) If a public school is located within two miles of the residence of a pupil enrolled in a centralized correspondence program provided under AS 14.07.020(9) and transportation provided under AS 14.09.010 is available from that pupil's home to the school, the parents of the pupil shall remit to the regional educational attendance area or the city or borough school district the amount of money which that area or school district would have received had the pupil attended the public school. The commissioner shall determine the amount to be remitted to the area or district in accordance with AS 14.08.121 or AS 14.17.021, respectively.

Two years ago, a bill was passed by the Senate allowing all or any desiring student to enroll into the Correspondence Study Course as an alternative to the public school system even if the student lives in an urban area.

A large number of students, with parents' consent, have enrolled in the alternative program which, in some cases, have cause fund reduction to some schools.

Mr. Swanson, the sponsor of HB-28, is receiving pressure from five of his school board superintendants of his area. Their stated problems are, as an example, a school (that he refused to name) has a man living outside the school in a trailer giving POT to the students during their recess. A lot of these kids pass out upon returning into class to a warm temperature from the cold of the outside area. This caused a problem for that school, because some of the children enrolled into Correspondence Study. Of course the bill he is proposing does nothing to correct the school problem.

It appears he is trying to sacrifice the whole Correspondence program because of a few isolated problems.

All concerned parents should be urged to write their representatives immediately!

Luther L. Jones
Member of the Advisory
Committee for
Corr pondence Study

...want to say

AN Times FEB 3, 77

Home Pupils May Pay District

By DENNIS JOHNSON
Times Staff Writer

Most Anchorage students in the state's correspondence study program would pay $2,100 to $2,200 in lost state aid to the local school district under a bill set for introduction in the House next week.

It amends the funding section of the correspondence program to require students living within two miles of a school or school bus route and taking correspondence classes to pay their school district the equivalent of state aid which would go to the district if they attended regular public schools.

Rep. Leslie "Red" Swanson, D-Nenana, said yesterday he will introduce the legislation in the House early next week.

The state aid ranges from $2,100 to $2,200 per student in Anchorage and up to $3,500 per student elsewhere in the state.

"This is legalized blackmail," said M.Sgt. Luther Jones of Elmendorf Air Force Base, who has three children in the correspondence program. He said the majority of correspondence students in the Anchorage would be directly affected since they live within two miles of a school or school bus route.

Of the 441 students in the statewide program, 125 of them are in Anchorage, Jones said. And of the 125 students here, 115 live within the two-mile limit, he said.

Swanson said the bill is being introduced to get correspondence students living near schools back into them. "We can't ask the taxpayer to support two school systems," he said yesterday via telephone from Juneau.

The correspondence program goes back to territorial days, said program director Wanda Cooksey. However, in 1975 the state legislature amended the eligibility requirements to include all students, not just those in outlying areas, she said.

Correspondence study accommodates students who are continually traveling with their parents or who want an alternative to regular schools, Ms. Cooksey said.

"What I'm trying to do is go back to the original law," Swanson said. He said correspondence study is causing deterioration of the schools in his area, which includes Delta Junction, Ft. Yukon, Tok, Nenana and the Railbelt School District.

"I met with these regional superintendents last fall and correspondence study was one of the problems they discussed," Swanson said. He said students in the alternative program are influencing their friends to drop out of school and take correspondence study.

"Between 122 and 196 kids (in the program) could be going to bona fide schools," he said.

Nat Cole, state Department of Education deputy director, said he is familiar with Swanson's bill but he doubts if the bill's wording would solve the problems Swanson mentioned.

Cole said some method of controlling program entry is needed for students who have the option of attending a regular school. However, he did not give specific solutions. The Department of Education was opposed to the legislation opening the program to all students in 1975, he said.

Currently, the state cannot stop students from entering the program if they enroll by the end of the first quarter, said Ms. Cooksey. She said if a students want to enter after that, approval must be obtained from the commissioner of education.

The central program headquarters is in Juneau, although 18 of the 52 state school districts have local programs, she said. The Anchorage program is administered from Juneau.

The Department of Education also has requested $210,000 for additional correspondence program administrative costs, Swanson said. Cole said the request is to accommodate increased correspondence enrollment.

Swanson called the request unnecessary.

Parr

March 11, 1977

STATEMENT REGARDING CENTRALIZED CORRESPONDENCE PROGRAM FUNDING PROCEDURES

Prepared by the Parent Advisory Committee

Centralized Correspondence study students can not participate fully in many programs because they are, by definition, not enrolled in a district school. They especially do not qualify for funds such as local taxes or in lieu of local taxes, funds for students not on a public transportation route, PL 874 (Federal Impact) funds, distance equalization funds, etc. This discriminatory situation means that of all students in the State, only Centralized C/S students are funded at a bare foundation level. Students enrolled in a district C/S program have the same needs exactly, yet they are eligible for and do receive all of the special funds.

Possible to request info from DOE regarding these program areas?

HB 28

MINUTES OF HOUSE HESS COMMITTEE

April 5, 1977

The meeting was called to order by Chairman Parr at 3:05 p.m. Those present: Parr, Phillips, Chatterton, Bennett, Nakak, Cotten & Beirne with Mrs. Buchholdt coming in later.

Absent: Ose.

Mr. Parr announced to the committee that a group of correspondence students were present from various places in Alaska and asked Mrs. Wanda Cooksey from the Department of Education to introduce the students.

HB 390

Chairman Parr then announced that HB 390 would be first on the agenda and asked Representative Lethin to speak on the bill. Mr. Lethin said that he had introduced the legislation at the request and was supported by the Literacy Project and the money applied for would be spent for the project. Said he had wanted to make sure that this money was earmarked specifically for that Project. There was discussion as to what the program is and how it operates and the need for the money. Questions wereasked as to whether it is a non-profit organization, how it got started and how long it has been operating. Mr. Lethin said it has been going for several years, that it is a non-profit organization and is being done all over the nation.

Eula Ruby spoke from the sidelines stating that the project has been operating for 3 years, that it started out small with 3 volunteers and now it has grown to where they have had to turn students away. She stated they work with the most illiterate adults.

Action

Mr. Phillips moved to pass the bill out of committee. There being no objection, the motion carried.

HB 28

Swanson

Next on the agenda was HB 28 and Mr. Swanson spoke on the bill. Mr. Swanson said the program was originally initiated for students that had no way of going to school. He stated 3 years ago the statute was amended by the legislature so that it was open to anyone to take the courses, regardless of where they live. He stated he had been asked to introduce this legislation by some of the REAA's in his district. He stated after consulting with the Dept. of Education he had taken the information to the attorneys to draft the legislation. He said he felt the Area Boards or the Department of Ecucation should have some measure of control over the program. He stated there are about 441 students enrolled in the progam, 245 are in rural Alaska where there are no schools at all but the others could go to public schools.

Mr. Swanson stated in parts of his district there is a correspondence program where there is a director in the district and where some children live right on the school bus route and others live within half a mile of the school. He stated there were 7 on correspondence and felt they were being used to build a bureaucracy.

Questions were asked of Mr. Swanson as to how he came up with the figure in the bill of having to live 2 miles or more away from transportation or a school.

Questions were asked regarding the 2 types of studies, where the local school board in the REAA has to approve the one and if in a Centralized Program, the Commissioner of Education has to approve the applicant.

Next to testify was Dr. Cole from the Department of Education.

Cole

Dr. Cole stated that the law provides that a parent is not compelled to send a student to school who lives 2 miles from a school or 2 miles from a bus route. He stated 2 years ago the option was created by members of the legislature, wherein parents could put their children on correspondence courses no matter where they lived. Said the Department opposed it then and they still think there is a problem with this type of option.

Mr. Parr asked of Mr. Cole in the instance where the Commissioner determines the tuition rate, what "ball park" figure are we talking about? Mr. Cole stated it could cost somewhwere around $2750 per child. Mr. Cole said the Department had a hard time with the tuition portion of the bill, said this is letting someone buy an empty seat in the school house and he really had a hard time with this.

Discussion was had regarding the fact that a child can still take correspondence study if he doesn't qualify for the programs by paying tuition (under the bill). Mr. Cole felt the Dept. might be able to support the bill if the tuition portion were eliminated.

Mr. Parr said there appears to be more and more parents who are putting their children on correspondence study or sending them to private schools. Said there seems to be a rising dissatisfaction with the public schools and felt that there was a problem with the way the schools are being run or something. Wondered if we had the right to prevent them from this program.

Mrs. Wanda Cooksey, Administer of the Centralized Correspondence Study Program spoke to the amendements that were suggested by some of the parents of children presently on the program.

Cooksey

Mrs. Cooksey said it was the Advisory Committee's opinion that they would like to see the problems worked out through the Department of Education, if possible, and not through legislation. If legislation has to happen, then they recommended the amendments, but they would prefer to handle the problems in other ways.

There was discussion about wiping out the decentralized program all together.

Mrs. Cooksey was asked if she thought the amendments proposed were good ones and she stated the bill would be better with the amendments than without them.

There was discussion as to whether a school district received money for children on correspondence study programs.

Mrs. Cooksey was asked if academically, evidence showed that correspondence students profited as much as regular school students from public schools. Mrs. Cooksey said she would say "yes" because there was no way a correspondence student could make it if they couldn't read. She also said the children that go through the correspondence study program prove to be real responsible. There was discussion as to whether the courses were now mostly on casette tapes and it was brought out that the potential to do this was there but still are mostly written.

Ranney

Next to testify on HB 28 was Steven Ranney from Taku Harbor. Mr. Ranney said that he is in 10th grade this year and taking a correspondence course. Stated that last year he went to highschool and felt he learned much more from the correspondence study program than he had in high school. Said he was in the centralized program, felt it was much more demanding than high school was. Stated he is taking an English course and there are more than 50 written assignments. Questions were asked of Mr. Ranney as to how far he lives from an available school, how he got his assignments, through the mail, etc. and whether he required help from his parents. Said he had required very little help from his parents.

Geraghty

Next to testify was Mr. Jim Geraghty from Tokeen. Mr. Geraghty questioned if this bill were passed, if the handicapped students who are unable to go to schools would then be unable to take the correspondence study program. He further asked about schools such as Craig where the schools are non-accredited and wondered if the students who wished to take accredited study courses would be unable to do so.

McKinnon

Next to testidy was Margaret McKinnon, Registrar for the Centralized Correspondence Study Program. She stated they do have quite a few secondary students who are old enough to not go to school but who do choose to take the correspondence study program and finish their high school education. She felt a school board may not tend to approve this type of situation

and felt if a student was determined enough to take a correspondence study program and finish his education he should have the opportunity to do so.

HB 28 was held over for further consideration.

Chairman Parr told the Committee HB 212 was next and asked the committee's pleasure on it as to whether they wanted to hear testimony or wanted to wait on it due to the lateness of the day. Mr. Nakak asked if Mr. Cole could perhaps go over the breakdown on the fiscal note. Mr. Cole was asked to walk the committee through each section of the fiscal note which he did.

There was much discussion as to the cost differential, the isolation factor.

Mr. Nakak proposed an amendement to the Committee Substitute which would put the 5% differential back in. Mr. Cotten said he was not prepared to do anything with the bill and Mr. Nakak asked that the bill be held over.

Mr. Cole was asked to give the committee figures for putting the 5% back in.

The meeting adjourned at 5:30. p.m.

Honorable Charles H. Parr
Alaska House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Sir:

The Copper River School District would like your cooperation in opposing HB 28 in the original and amended version. We still feel that this bill would:

1. Eliminate parent's right of choice for the education of their children.

2. Increase the number of drop-outs in the 15-18 year old students.

3. Impose an extra financial burden on religious and minority groups.

Thank you for taking the time to read our expressions.

Very sincerely,

Paul Weir

January 12, 1978

Mrs. Cheryle Wolf
Executive Director
Gateway Council on Aging
Box 7751
Ketchikan, Alaska 99901

Dear Cheryle:

Representative Charlie Parr from Fairbanks, who chairs the House Health, Education and Social Services committee, intends to hold a one-day public meeting in Ketchikan on Saturday, January 21st, starting at 9:00 AM in the City Council Chambers. He was courteous enough to advise me of his intention the other day. He indicated that, time permitting, he would like to have a brief presentation from local citizens concerning the necessity and/or desirability of constructing a Pioneers Home in Ketchikan.

Because his time is limited, I think the presentation should be short, hard-hitting and factual. Testimony should be limited to brief presentations by those people who are knowledgeable on the subject. I have in mind such individuals as yourself, Pat Teague, Bob Gore, Lew Williams and perhaps one or two others of your choice.

If you can get together with these individuals and come to a consensus, then it would be my thought you should write immediately to Representative Parr and advise him that you are ready, willing and able to testify and that you would appreciate a brief amount of his committee's time on the day in question.

Best regards,

Robert H. Ziegler, Sr.

ALASKA MEMORANDUM

DEPARTMENT OF PUBLIC WORKS

TO: Vernon L. Perry
Director
Division of Pioneers' Benefits
Department of Administration

DATE : January 25, 1977

FROM: George Porter, P.E.
Assistant Director
Division of General Construction
and Maintenance
Juneau

SUBJECT: Ketchikan Pioneers' Home

Based on a bond issue of $5,000.000.00 and the following computations a unit of approximately 39 beds could be constructed.

Bond Issue	$5,000,000.00	
10% Equip. & Furnishing	500,000.00	
	4,500,000.00	
Design Fee	270,000.00	6% of 4,500,000.00
Public Works	270,000.00	6% of 4,500,000.00
Construction Contingency	225,000.00	5% of 4,500,000.00
Available for Constr.	3,735,000.00	

Land to be provided at no cost according to Vernon Perry.

Cost per bed Anchorage @1975 bid prices $54,000.00

Use 15% escalation per year to bid opening in March, 1980.
54,000 x 2.01 = $108,613/bed

Number of beds $\frac{3,735,000}{108,613} = 34.4$

Use 39 beds

Will require about 18 months to construct.

cc: Wallace DeBoff, Construction Engineer II

Kevin Waring, Director
Division of Community Planning
Department of Community & Regional Affairs
Pouch B
Juneau, Alaska 99810

Dear Mr. Waring:

Attached herewith is a draft report providing options and policy recommendations for administration of the Elderly Housing Bond Fund. As of this writing the field surveys, which are being done by local organizations on a voluntary basis, have not all been returned, and this section of the report is the least complete. There is included a very cursory analysis of some of the major points of interest that seem to be emerging from the survey thus far, and this section will be further developed during the next week.

There are a few other topics in the report which will be expanded further, including sections on services for the elderly which should be provided with housing, the management section, and the discussion of rehabilitation.

This draft is for review and comment. As soon as comments are received from your office, the final drafting of the report will proceed. Some sections of the report are still a little rough, including the placement of tables. These will of course be ironed out in the final drafting.

Looking foreward to your comments.

Sincerely,

Michael B. Jones

MBJ/mj

Elderly Housing Management 40

Summary, findings of the Survey. 44

INTRODUCTION

In 1976 the State Legislature and the voters of Alaska clearly established their support to provide better housing for elderly Alaskans. The State Legislature authorized the placing of a proposition before the public in the 1976 general election of bond issue to establish a $7.5 million elderly housing loan fund, to be administered by the Department of Community and Regional Affairs. It is significant to note that the voters passed this bond issue by a substantially greater margin than any other bond issue which passed.

Neither the authorizing legislation nor the bond proposition provide any clear direction as to how the funds should be used to provide elderly housing. This lack of direction provides substantial flexibility to the Department. This report will analyze the various options available to the Department in administering the fund, providing guidance as to the kinds of housing assistance which elderly persons are most interested in, and mechanisms for leveraging other mortgage and subsidy funds so that as many elderly housing units as possible can be produced through the elderly housing bond fund.

To provide the kind of guidance and options that the state was looking for, we began with the following kinds of exporations:

(1) We administered a survey of elderly persons in selected communities throughout the state to determine the kinds of housing preferences they have. The information sought was qualitative rather than quantitative. We did not attempt to measure or infer the total elderly housing need statewide, nor in fact in any community. We did talk with elderly people about the kind of housing and related assistance they feel they need. We did this in four different kinds of communities selected throughout the state:

(a) urban areas.

(b) regional centers

(c) small towns

(d) villages

We suspected that elderly people living in these kinds of situations might have different kinds of housing needs and preferences, and wanted to varify whether our hunch was true. If so, there would certainly be policy implications in administratic of the fund. (See Appendix for further discussion of / methodology.)

It would seem a wasted effort to reinvent the wheel, so we took a look at the kinds of elderly programs developed and administered by other states, to see whether there might be some ideas that would be workable for our situation in Alaska.

If the state bond fund were all to be spent directly elderly housing production, the remaining $6.2 million could be expect to yield about 110 houses. There are other funding sources for elderly housing, federal, state and private, which can provide either mortgage assistance or rent subsidy. We conducted a thorough exploration of these programs, considering such factoras as availability, depth of subsidy, program limitations and flexibility. The result of this exploration is the development of several possible financing strategies which would allow the construction of many more elderly housing units.

Since management is an important part of providing elderly housing, we took a look at some of the elderly housing projects in Alaska to gain some insight into the kinds of management arrangements that are needed and seem to work best, and average per unit management costs for projects of various sizes, operated by various kinds of sponsors. This investigation results in a set of recommendations for management.

Various types of studies of the needs and situations of elderly people in Alaska have been conducted during the

past decade. We obtained copies of these studies and reviewed them for information important to our research effort. A list of these reports appears in Appendix .

Following consideration of these various factors and information, we developed for the Department a set of recommended goals and policies for administration of the fund. We attempted to provide in the report sufficient information regarding various financing and subsidy programs to be a useful resource to communities attempting to see elderly housing developed for their own senior citizens.

PROGRAM GOALS AND POLICIES RECOMMENDATIONS

The only program goal and policy inferred in the statute authorizing the bond sale is the general goal of providing better housing for elderly people in Alaska. How that might be done is not indicated. The funds may be made available as loans or grants or a combination of both to eligible sponsors, including municipalities, non-profit and public corporations and housing authorities.

Based on the findings of this report, the following goals and policies are recommended to the Department.

(1) The Fund should be used in such a way as to generate the largest possible number of units within a reasonably short period of time (two to three years), while funding projects in such a way that the rent structures will accomodate low and moderate as well as higher income elderly persons. This infers that grants should be provided only when essential to project feasibility, and that other funds should be generated or captured whenever possible to extend the effect of state funding. The magnitude of grants should bear some relationship to the number of elderly people served, so that one or two projects do not receive a disproportional share of the fund. It would be well to have a contract with the sponsor/owner providing for partial or total recovery of the grants should government subsidy become available to the project at some future time.

(2) Within basic criteria of reasonable cost, projects should respond in their design to the expressed preferences and desires of elderly people within the community. It should be understood and accepted that this policy may result in projects that are somewhat more complex to develop than large multifamily structures. One clear finding of the survey is that there are great differences in the preferences of elderly people in various parts of the state regarding the kind of living situation they would prefer. It is recommended that project sponsors be required to demonstrate that substantial participation in planning by the elderly to be served has taken place, or will take place.

(3) Althouth limited time remains for project development for construction during the coming summer (1977), there may be proposals forthcoming which are sufficiently advanced to achieve construction this summer. The Department should be prepared to move rather quickly in such cases

(4) The order in which proposals come to the Department may not represent those communities most in need of elderly housing assistance. It is recommended that the Department undertake an elderly housing needs assessment to determine the relative need for elderly housing in various communities throughout the state. This information would serve to inform the Department when communities with substantial need are being left out as proposals come in. Such information could also serve as the market analysis for funding applications.

It is further recommended that when the Department becomes aware that a community having a significant elderly housing need is not advancing a proposal, a staff person be sent to assess the true interest of the elderly in that community for improved housing, and to directly initiate projects when that seem required.

(5) The HUD Section 8 rent subsidy program is by far the most significant program available for reducing rents to a level which low income elderly persons can afford. The program is capable of subsidizing up to 95% of the contract rents for elderly families and persons, and that commitment can be given for 20 years with most projects, and up to 40 years for projects financed through a state housing finance corporation. However, there is a serious problem of availability of Section 8 funds in Alaska. To compound this problem from the perspective of the elderly housing bond fund, projects financed through HUD Section 202 and FmHA Section 515 have priority for Section 8 commitments. It is strongly recommended that the state mount a strenuous campaign for increased Section 8 allocations for Alaska.

(6) For purposes of speeding up projects development and leveraging other federal, state and private financing, it is recommended that a portion of the Fund be earmarked for use as seed loans for such initial project development

work with developer/sponsors to assess the need for services, and to use its good offices in obtaining commitments from state and federal agencies, as well as local organizations, for the provision of services.

costs as surveys, site optioning and planning, schematic designs, engineering, legal fees, market analyses, the preparation of development budgets and documents required to obtain financing commitments. Such loans would be recoverable in the project development budgets at the time of loan closing.

(7) The survey, and other data we were able to obtain, indicate that a high per centage of elderly Alaskans presently own their own homes, and a high per cent in some communities would prefer assistance with home repair to moving to a newly provided home. The advantages of providing loans and grants for home repair is that the per unit cost of elderly housing assistance will be lower than for new construction, and many elderly persons would receive the assistance of their choice. The disadvantages are that such a scattered program is difficult to administer, and that the improved homes might be used as elderly housing only as long as the original program participant is occupying it. In balance, the need and preference for home repair is stated by a sufficiently high per cent of people interviewed that the Department should make provisions for such a program.

(8) It is important that some services be provided with elderly housing programs, depending upon the expressed needs of the elderly to be served. Rather than having the sponsor bear the cost of providing needed services at expense to the operating budget, it is recommended that the Department

OTHER PROGRAM RESOURCES FOR USE WITH THE STATE BOND FUND

If we assume that the remaining bond funds are spent directly for the construction of new elderly housing at an average development cost of $56,000 per unit (a new limit proposed for HUD Section 202 elderly housing in Alaska), the remaining $6.2 million would build approximately 110 units of elderly housing. Elderly tenants could be charged what they could afford to pay (25% of adjusted incomes for rent and utilities has become a standard payment in government programs), and the revenue generated could then be applied to building up a revolving loan fund for the development of future elderly housing.

Utilizing this direct financing scheme perhaps has the advantage of potentially getting the funds out most quickly without having to bother with the regulations and red tape of other agencies. However, it has the disadvantage of using up the resource very quickly to produce a limited amount of housing. This section of the report will explore devices by which the State Elderly Housing Bond Fund can leverage federal, state and private mortgage financing and subsidies to stretch the bond fund to produce many more units of elderly housing. These options are presented first as federal, state and private program descriptions, followed by a section on potential elderly housing sponsors, followed by a section on strategies for combining various financing and subsidy resources.

HUD Section 8 Rent Subsidy. This program refers to Section 8 of the Housing and Community Development Act of 1974, and provides that the federal government, through HUD, may make direct rent subsidy payments of behalf of low income families to the owner of rental housing. HUD's definition of family includes single elderly and handicapped persons. The program has the capacity to directly subsidize up to 90% of the contract rents for low income families, and up to 95% of the contract rents for elderly families and persons. The program requires that tenants pay 25% of their adjust incomes for housing, including utilities. Adjusted income is computed by subtracting 10%, (for the elderly), then $300 per dependent from the gross income. The depth of subsidy is very substantial, and the flexibility of the program with regard to sponsorship makes this the most valuable and important subsidy resource for the Bond Fund.

Section 8, however, has its own limitations in that the allocations for Alaska mya be inadequate to meet the need. There is a national allocation, dependent upon congressional appropriation, and this allocation is divided among the ten HUD regional offices, and is then sub-allocated among the states. The present funding situation in Alaska with respect to Section 8 allocations is shown in Table 1. It is estimated that the total present allocation would

subsidize approximately 43 new housing units.

Another limitation is that Section 8 has mortgage and income limits which are too restrictive for some parts of the state, given the high construction costs and incomes in some parts of the state. There is probably not a problem with respect to income limits for the elderly, however, the mortgage limits will definitely be limiting in some parts of the state. As an example, repeated attempts to obtain Section 8 commitments for Barrow have failed owing to the high rents that must be charged to amortize the project debt. The present mortgage and contract rent limitations (soon to be revised) are listed in Table 2.

It is recommended that the Department undertake an analysis of the mortgage limits and rent structures of various communities throughout the state to determine the workability of Section 8 rent limitations published in the federal register for Alaska. In cases in which the published limitations are found to be too restrictive, it is recommended that the Department mobilize a state effort to have the limits increased as necessary in various parts of the state to insure workability of the program throughout the state.

Another matter of concern to the Department with respect to utilization of Section 8 rent subsidies in conjunction with the Bond Fund is that is that the Secretary of HUD has determined that HUD Section 202 funded projects will have first priority for Section 8 commitments, and that FmHA

Section 515 funded projects will have second priority. The present demand for Section 8 subsidies for such funded projects presently exceeds the availability by a substantial margin.

A major asset of the Section 8 program is its flexibility with respect to sponsorship. The program is open not only to municipalities, non-profit and public corporations and housing authorities, but to private motivated developers as well.

TABLE 1

STATUS OF SECTION 8 FUNDING ALLOCATION FOR ALASKA

FY '77 allocation	$1,199,371
Carryover from FY '76	163,921
Present total allocation	$1,363,292
Committed	1,101,864
Approximate available	$ 261,428

Assuming a per unit average subsidy of $6,000, it is estimated that the present approximate available funding would subsidize some 43 new rental housing units.

Farmers Home Administration (FmHA) Section 515 Rental Housing. The Farmers Home Administration, a part of the Department of Agriculture, administers a program of direct government loans to eligible sponsors for the development of rental housing in rural communities. Rural is defined as communities with populations of twenty-thousand or less that are not "bedroom communities" or urban areas. Nonprofit sponsors may obtain direct government financing for elderly housing at 1% interest for a period of fifty years. The savings in debt service are passed on to the tenants in the form of lower than market rents. In addition, there is a memorandum of agreement between the Secretaries of HUD and Agriculture which provides for joint processing of FmHA Section 515 and HUD Section 8 applications. This technique reduces the processing time that would be required if the sponsor were to seek commitments under each program separately, and provides priority to Section 515 for Section 8 program reservations (second to HUD Section 202 funded projects).

Project mortgages are limited to $1.5 million, which, assuming an average total development cost of $56,000 per unit, would produce only about 26 units. It is possible to develop larger projects by using more than one project mortgage, and the national office has authority to increase the limit.

Tenants pay 25% of their adjusted incomes for rent, not including utilities. Eligibility is limited to families or

elderly persons with adjusted incomes not exceeding $23,400 per year.

Eligible sponsors also eligible for assistance through the Bond Fund include nonprofit and public corporations, municipalities and housing authorities, provided that their bylaws permit them to engage in housing development. Profit motiviated developers, individuals and partnerships are eligible as sponsor/developers under FmHA regulations, but are not eligible for the full interest subsidy.

The funding situation for Section 515 in Alaska is presently very inadequate. The present allocation to the state is approximately $3 million, and approximately $5 million in applications and pending.

This program can be a substantial resource for elderly housing development in Alaska. especially considering that most Alaskan communities are rural by FmHA's definition. It is recommended that the Department undertake efforts to have the allocation for Alaska increased, and that the proposed revolving seed loan fund (see page) be used in part to stimulate the development of FmHA Section 515 elderly housing.

HUD Low Rent Conventional Public Housing. This program has been around since the Housing Act of 1937, and ~~is the~~ has been the major program of subsidized housing provided by housing authorities. There has been a substantial decline in the use of this program during the past five years, a response of HUD and the Congress to a growing number of troubled projects around the country. The Carter administration, however, seems prepared to increase the production of conventional public housing.

The significance of this program for elderly housing in Alaska is that the depth of subsidy enables the lowest income families to be served. The state can assist in the development of this program by (1) funding market analyses that will measure and justify the need for the program, and (2) making available seed loan funds for initial development costs, which would be recovered in the project development budgets.

Housing authorities are /the only eligible sponsors for this program.

HUD Section 202 Elderly Housing. This program is derived from the Housing Act of 1974, and provides for direct government loans to nonprofit sponsors for the construction of elderly housing. The nationwide competition for these funds is very strong. Only through the intervention of our congressional delegation was the Tlingit-Haida Regional Housing Authority able to obtain a Section 202 financing commitment for 93 units of elderly housing through the FY '76 funding allocation.

Alaska has been given an FY '77 allocation of $1.96 million, which can be expected to produce approximately 42 units of housing. As of this writing, a substantial portion of these funds may to to the Tlingit-Haida Regional Housing Authority to insure the feasibility of their 93 unit project, leaving funding for approximately 7 units of additional elderly housing.

Financing under HUD Section 202 is available to nonprofit sponsors for a period of 40 years, and carries priority for Section 8 allocations for a period of 20 years.

Alaska Housing Finance Corporation. This agency can potentially play a very significant role in assisting the financing of elderly housing in Alaska. The AHFC has authority to market tax exempt bonds, and to lend the proceeds to mortgage lenders, nonprofit, limited divident and public corporations, and directly to individual owner/occupants. The AHFC usually acts as a mortgage invester, purchasing mortgages from lending insitutions so that they have more funds to lend for housing development. Using this scheme, banks and other mortgage lenders service the loans that are made.

There are several potential strategies for combining the resources of the Bond Fund and the AHFC, which are discussed in the next section.

TABLE PRESENT FUNDING STATUS BY FEDERAL HOUSING PROGRAM

Program	FY '76 Funding Allocation.	Obligated	FY '77 funding Allocation	Obligated	Net Available	Approximate No. Units.
HUD Section 8 Rent Subsidy			$1,199,371 + 163,921* $1,363,292	$1,101,864	$261,428	43
FmHA Section 515 Rental Housing	$3,447,540	$3,447,540	$3,000,000	Estimate $5 million in applications pending.		
HUD Section 202 Elderly		$2,800,000 (From Reg. X)	$1,961,324	None	$1.961 million	35 (At $56,000 each)
Low Rent Public Housing			$2,267,800 694,690* $2,962,490	None	$2.963 million	50
HUD Indian Mutual Help	$24.51 million (loan authority)	Program reservations, but no contracts	$1,767,912	None	$1,768 million	29
BIA HIP	$2 million	$2 million	$2,210,500	$2,210,500	None	

*FY '76 carryover

TYPES OF HOUSING SPONSORS

The federal government makes various martgage loan programs available to public, nonprofit and limited dividend sponsors on the one hand, and profit motivated sponsors on the other. The guiding principle is that government subsidy may be used for the direct benefit of low-income and elderly tenants, but may not directly contribute to the profit of the private developer. Both government and private financing sources require the profit motivated developer to pay the market interest rate, while public, nonprofit and limited dividend sponsors are eligible for programs which provide below market interest rate loans and other subsidies. Such developers in turn pass the savings in debt service on to the tenants in the form of reduced rents, thus making available rental housing that low and moderat income families and persons on fixed incomes can afford.

This section will examine the various types of housing sponsors, discuss the questions of project financing, development, ownership and management.

TABLE ELIGIBILITY OF VARIOUS SPONSORS FOR GOVERNMENT PROGRAMS

SPONSOR	HUD SEC. 8	HUD SEC. 202	FmHA SEC. 515	CONVENTIONAL PUBLIC HOUSING	ALASKA HOUSING FINANCE CORP.
Municipality	Qualifies as "Public Housing Agency", may sponsor.	Specifically prohibited.	May if a corporation and authorized in bylaws	No, housing authority only.	Yes
Housing Authority	Same as above	No	Same as above	Yes	Yes
Nonprofit corporation	Yes	Yes	Yes	No	Yes
Limited divident corporation	Yes	No	Yes	No	Yes
Cooperative	Yes	Yes	Yes	No	
Private, profit	Yes	No	Yes (no interest subsidy)	No	No

POTENTIAL ROLES OF VARIOUS TYPES OF DEVELOPER/SPONSORS OF ELDERLY HOUSING

TYPE OF SPONSOR	FINANCING	DEVELOPMENT	MANAGEMENT
Municipalities	May generate financing through bond sale, may receive loan or grants from Elderly Bond Fund.	May lease property to private developer, or contract for development, or develop by conventional or turnkey methods.	May manage directly, or contract out management, or lease to private developer who manages.
Housing Authortiy	May generate financing through bond sale, may receive loans or grants from Elderly Bond Fund, may borrow through AHFC or commercially.	May develop conventionaly or by turnkey methods.	May manage directly as part of management program for other housing, or may contract management to local entity.
Nonprofit corporation	Eligible for low interest government financing, and receive loans and grants from Elderly Bond Fund, plus AHFC.	May develop by conventional or turnkey methods.	May manage directly or contract management.
Private profit	Private mortgage financing.	Develops directly.	May manage, or contract management.

Municipal Sponsors. Municipal governments are permitted various roles in the financing, development and management of elderly housing under federal programs, and are prohibited from participating in others. Tables and set out these possibilities and limitations.

With respect to financing, in addition to eligibility for participation in the Elderly Housing Bond Fund, municipalities have bonding authority with which to generate project revenues. such bond sales might be secured by a pledge of the tax base of the community, or with Section 8 Rent Subsidy commitments, or through the pledge of an underwriting fund established by the Bond Fund. Municipalities may also avail themselves of the services of the Municipal Bond Bank. Conventional borrowing is probably prohibited to municipalities for periods exceeding a year without public referendum.

While municipalities could develop elderly projects using either conventional or turnkey methods, it is much more likely that they would be interested in working through an agent. Housing authorities, for example, have traditionally acted as agents to municipalities (through cooperation agreements) in the development of low income and elderly housing. When municipalities generate the financing, however, they may exercise more direct control in the process. One development scheme, for example, would be a partnership between a municipality, wherein the municipality obtained the financing, possibly through a combination of grants and loans or bond sale, and

in turn made financing and land available to a private developer through loan, lease, sale and other contractural agreements. The municipality might in effect act as the developer's banker, in an arrangement wherein the developer would own and manage the project. Lease agreements might be substituted.

With respect to municipalities and management, the feeling of most city managers we have talked with is that municipalities have their hands full with their present responsibilities for providing and maintaining facilities and services, and that they would rather see management provided by other entities. The management role is open to municipalities under most programs.

Regional Native Housing Authorities: In 1971 the Alaska State Legislature passed enabeling legislation for the creation of 13 native housing authorities, 12 regional and one statewide. Since that time regional housing authorities have been established for most regions of the state, and a number of them have undertaken substantial development programs with HUD funding. For example, the Tlingit-Haida Regional Housing Authority has constructed and has under management 360 units of village housing, has under development 93 units of elderly housing, and is developing other projects as well. The A.V.C.P. Housing Authority serving the Bethel region has developed 81 units of village housing, has an additional 92 units under development, and is developing non-HUD funding housing for the City of Bethel. The Bering Straits Regional Housing Authority has developed 120 units of village housing, and is presently developing 20 units of elderly housing for the City of Nome. And so forth.

As these regional housing authorities have grown, there has begun to evolve a working agreement between them and the Alaska State Housing Authority that ASHA will serve the more urban communities of the state, and the regional housing authorities will serve the more rural communities within their jurisdictions. There is a further tacit understanding that ASHA will not develop where a regional housing authority is capable and interested and has the support of the community involved.

This evolution of regional native housing authorities is making them perhaps less native and more regional in character in that they are prepared to serve the housing needs of all of the people of their regions, regardless of race

The regional housing authorities are potentially a very significant sponsor and developer of elderly housing. Because of their regional character they are, on the one hand, closer to the communities they serve than a single, statewide authority located in Anchorage, while on the other hand serving enough communities to gain some economies of development and management. Their infrastructure especially gives them advantage for working in the small communities and villages of the state.

With respect to financing, regional housing authorities may market tax exempt bonds to raise housing development revenues. For purposes of developing elderly housing, such bonds may be secured by evidence of Section 8 Rent Subsidy Commitments, a pledge of the proposed underwriting fund, or Section 12 of the Housing Act of 197 which secures housing authority notes sold for Section 8 evelopment with the full faith and credit of the U.S. Government. Housing Authorities may also receive loans and grants through the Elderly Housing Bond Fund. Other HUD insured loans programs are available to them.

In addition to these financing mechanisms, regional housing authorities may sign Annual Contributions Contracts

(ACC's) with HUD, securing note sales for low income and elderly housing development with the full faith and credit of the government, plus a pledge of annual contributions for full repayment of the principal and interest on the notes by the government. This is the mechanism by which public housing in the United States is financed, and such projects may be built entirely for the elderly, with all of the special design features that may be desired. The limitation of the program, however, is that the funding allocations for Alaska under this program are very limited. Funding presently available can be expected to generate a little less that 50 units.

For purposes of developing HUD Section 202 and FmHA Section 515 elderly projects, regional housing authorities may establish associated nonprofit corporations, and provide to such corporations the expertise they have in project development and management.

Nonprofit Sponsors: Several government subsidized rental programs for low income families and the elderly require sponsorship by a nonprofit corporation, including:

HUD Section 202

HUD Section 221(d)3

FmHA Section 515

Preferential financing is available to nonprofit sponsors for these and other government assisted programs through such provisions as:

Interest rates as low as 1%;

Financing periods as long as 50 years;

Financing of 100% or more* of project development costs.

The nonprofit sponsor in turn passes the lowered cost of debt service on to the tenants in the form of below market rents.

Nonprofit sponsors may be local, regional or statewide in jurisdiction, and there are examples of large, nonprofit statewide housing developers and sponsors in some states. Nonprofit corporations may be organized as essentially arms of cooperatives, church organizations, housing authorities and other organizations. It is important that nonprofit housing sponsors be single-purpose housing agencies, and not broadly purposed organizations that also undertake housing development and sponsorship. Multi-purpose housing sponsors

---

* FmHA Sec. 515 provides 102% financing to nonprofit sponsors, the additional 2% being used for initial operating costs.

have generally not worked out well, as non-housing related problems can damage the effectiveness of the organization to develop and manage housing. Single purpose nonprofit housing sponsors are required by FmHA for Section 515* and HUD Section 202 sponsorship.

---

*FmHA Section 515 may be sponsored by others, but only nonprofit sponsors receive the maximum interest subsidy.

Limited Divident Sponsors: Limited dividend corporations have some of the feature of both profit and nonprofit corporations. They are limited by federal law to a net net profit of 6% on their investments. For purposes of housing sponsorship, the rents would be adjusted so that the profit of the corporation did not exceed the 6% limit.

Limited dividend corporations are entitled to some of the preferential financing options available to nonprofit corporations. They are easy to set up, and can be attractive to investors for purposes of obtaining tax benefits as well as the limited profit.

Profit motivated sponsors: Profit motivated developers have been active in the development of housing and other care facilities for the elderly in Alaska and throughout the nation. Although they are not directly eligible for interest subsidies, they can obtain FHA insured mortgages for project financing, and can obtain Section 8 Rent Subsidy commitments to reduce the rents charged in their projects. Such developers usually have the expertise it takes to put a project together that municipal and nonprofit housing sponsors often do not have. There are various working relationships possible between municipalities and nonprofit sponsors on the one hand, and profit motivated developers on the other. Some of these are explored in the section on municipal sponsors.

Cooperatives, churches, fraternal organizations, and unions as project sponsors:

FINANCING STRATEGIES

Between the various financing and subsidy sources and possible sponsors, there exist a variety of financing strategies which can extend the state's Elderly Housing Bond Fund to produce more houses.

(1) The Bond Fund can be used to underwrite bond sales to generate mortgage funds. Municipalities, housing authorities and the AHFC may all sell tax exempt bonds to raise revenues to finance elderly housing. Bonds sole for elderly housing development may be secured in several ways, depending upon the nature of the entity offering the bonds. Municipalities may pledge the tax base of the community, and may avail themselves of the services of the Municipal Bond Bank, options not available to the other two types of agencies. Section 8 Rent Subsidy commitments may be offered as bond security. It appears that housing authorities can obtain a pledge of the full faith and credit of the government for bonds sold specifically for Section 8 project development.

However, in cases in which these types of security are either impossible or impractical to obtain, another source of security must be offered to make the bonds marketable. In such cases, the pledge of an underwriting fund sufficient to pay the first year debe service on bonds sold will be sufficient. The ratio of bond funds generated to the amount pledged as security can be substantial, for example, 20:1. Thus, if the

Department were to pledge $100,000 of the Elderly Bond Fund as an underwriting fund, the amount generated could be expected to be about $2 million. The interest rate on tax exempt bonds depends in part upon the kind of security provided. The most recent bonds sold by the AHFC were written at an interest rate of %, and were underwritten in the same way as described above, with funds from the state Department of Revenue.

Proceeds of the bond sale would be used either to finance part or all of elderly housing project costs, or as a mortgage investment fund to purchase such mortgages from banks and other lending institutions. If the fund were used for direct financing, then the Department would be responsible for servicing the loans. If the fund is used for mortgage investment, then other lending insitutions would deal directly with housing developers and sponsors and would be responsible for loan servicing. The latter arrangement will increase the loan interest rate the the borrower slightly. However, not only will this arrangment spare the Department of loan servicing requirements, the participating lending institution can be expected to provide construction financing to the sponsor/developer since they would be handling the term financing.

In the strategy of generating mortgage financing through bond sale, time is an important factor. The Department can expect that about three months will be required to go to

market with a bond sale. Bone counsel and other fees will be involve.

In is not necessarily recommended that the Department pursue this course of financing at this time, as the Alaska Housing Finance Corporation has such a program ongoing. It is recommended that the Department establish a working relationship with the AHFC for the development of loan funds and bond sales as necessary.

(2) A portion of the Bond Fund can be set aside as a revolving seed loan fund to expedite project developments. Such a fund has been operated nationally by the Housing Assistance Council (HAC) out of Washington D.C. for several years, and very successfully. By providing loan funds (at 2% interest) to cover the initial development costs of housing projects, HAC has stimulated the development of thousands of units of housing nationwide for low income families. (They have provided loan funds for two housing projects in Bethel.) Initial development costs include:

obtaining site control (land optioning)
site planning
schematic design
engineering fees
legal fees

Other costs as necessary may be included to complete the work necessary to obtain financing commitments. These costs are included in the project development budgets and are recovered at the time of loan closing.

It is recommended that the Department establish a similar revolving loan fund to expedite the development of elderly housing projects, whether or not financed through the elderly housing bond fund. This technique serves to quickly establish the feasibility of proposed projects, and expedites planning and design work and obtaining financing commitments. Municipalities, public and nonprofit organizations and housing

(4) Loans and grants for elderly housing rehabilitation. The AHFC operates a loan program for housing rehabilitation on an experimental basis when such loan funds are available. The loan limit is $15,000, and it is generally expected that the borrower will perform the work him/herself. The interest rate varies between 8 and 9 per cent. The borrower indicates the monthly payments he/she wishes to make, and the term of the loan is calculated at the established interest rate to determine how many years/months are required to repay the loan amount. The program has been quite successful, but limited in funding.

The Department might consider making a portion of the bond fund available on a similar basis, either working through the AHFC or independently. Our survey indicates that there is a substantial need for elderly housing rehabilitation, especially in the smaller and more rural communities of the state. The Department might make grants available to supplement the AHFC loan fund as necessary, considering the cost of the work required and the income of the applicant in each case.

authorities should be eligible for seed loans under such a program.

(3) The Department may make grants available to establish project feasibility. It is not likely that it will be possible to obtain all of the subsidy from the federal government necessary to develop elderly housing on the scale needed, and still be able to reach lower and moderate income elderly persons. It can be expected that grants will be required to some extent to insure the feasibility of some projects, given such variables as income levels of families to be served, project development costs, maximum mortgage limits of federal programs that may be used.

When grants are made, it is recommended that an agreement be entered into requiring that the sponsor repay a portion or all of the grant if other subsidies are able to be obtained in the future.

Obtaining financing and subsidy commitments for project feasibility is not easy. There is a general rule that the amount of paper work and time required for project financing are directly proportional to the amount of subsidy in the project. Sponsor/developers will tend to see in the grant provision of the bond fund an easy way out of this problem. It is recommended that grants be used sparingly, to stretch the bond fund as far as possible.

ELDERLY HOUSING MANAGEMENT

Development is only one part of the job of providing better housing for the elderly. After projects are completed they must be managed for years into the future. Management includes a number of responsibilities, such as:

(a) collecting and accounting for rent payments;

(b) repaying the project mortgage;

(c) providing and possibly paying for utilities;

(d) maintaining the facilities in good repair; and

(e) providing various services needed by the elderly residents.

The cost of management is a very real part of the budget, and must be identified during the initial feasibility analysis and budgeted for. The cost of management will vary with such factors as:

(a) the distance of the sponsor's headquarters from the project (ie., travel and per diem costs);

(b) the size of the project;

(c) how compact or scattered the project is;

(d) whether any management services can be provided gratis by other community organizations;

(e) the range of services provided to the tenants.

Some examples of Per Unit Month (PUM) administrative and management costs for Alaskan projects are provided in Table The information is incomplete as many project sponsors have not accurately identified such costs in their projects.

Generally speaking, the cost of management for elderly housing is lower than for other rental projects, owing to the fact that elderly people tent to take better care of their living environment.

Factors that tend to drive up the cost of administration and management are as follows:

(a) If the owner is headquartered a considerable distance from the project;

(b) If the project(s) under management are very small.

(c) If a full range of services is administered by the owner.

There are ways of lowering administration and management costs, including:

(a) Find a local organization that can provide some of the management services required through their own resources. (For example, in Yakutak the local health organization provides services for the tenants of the elderly sixplex project developed by the Tlingit-Haida Regional Housing Authority.)

(b) Make use of state and federal funded programs to provide services (such as hot meals), relying upon local agencies and organizations for services delivery.

(c) It may be cheaper to contract for some services, such as janitorial, than to put a person on the staff payroll.

It is recommended that the Department require a management plan as part of project feasibility statements provided by the developer/sponsor. While including senior citizens in the planning and design process, the developer/sponsor should also determine the range of services needed by the elderly people to be served. Design of the management program should include an effort, perhaps facilitated by the Department, to obtain commitments from other organizations and agencies for resources and services needed. Administrative and management services to be provided by the sponsor should then be identifiable. If this PUM cost seems too high, the Department should assist the sponsor in explore alternative methods of management that might reduce costs. If this effort proves impossible to reduce management costs below an acceptable level, the Department should consider exploring whether another sponsor might be in a position to provide management services for lower cost.

Sponsor	Location	# Units	PUM	Services Included
Tlingit-Haida Regional Housing Authorit	Yakutat	6	$27.75*	contracted janitorial work
ASHA	Anchorage (Eastchester)	96	$87.51	Salaries, tenant services, general expenses, maintenance, materials
ASHA	Low rent program, Scattered thru the State	705	$83.68	Administration; tenant services; maintenance, labor and materials; contract costs such as snow removal and pest control.

* figures taken from 1975 operating budget

SUMMARY OF FINDINGS OF THE SURVEY

As of this writing all of the survey forms have not come back from the communities surveyed. Of those that have come back, however, we have made an initial analysis of the information contained, and the following trends are emerging.

Choice of living situations: It was interesting to note that in no community surveyed did a majority of the respondants indicate a preference for multi-family living. In the smaller communities of the state the overwhelming preference is for single family dwellings. For such people, individual houses was the first choice, and clustered cottages was the second choice. Among elderly people living in more urban communities (Fairbanks), clustered cottages was the first choice.

It is significant to note that, according to the 1970 census, more than 70% of persons in Alaska between the ages of 60 and 69 own their own homes. The Alaska Comprehensive Study on Aging* indicates that 63% of elderly Alaskans were living in their own homes. In this same study, 71% of the respondants expressed a preference for living in single family housing rather than multi-family housing.

Need for Rehabilitation: The expressed need and preference for housing rehabilitation rather than new housing varied from community to community, without much pattern, except that there was generally expressed a greater preference for housing rehabilitation in smaller than larger communities. The variables are probably the condition of the

respondant's housing, and their expectation.

To the question "What kind of assistance" with housing do you need, preliminary results are as follows:

Community	# Respondants	%	Type of Assistance
Ft. Yukon	4	50	new home
		50	home repairs
Wrangell	12	42	new housing
		25	rent supplement
		16	home repairs
Kodiak	7	42	new housing
		29	home repairs
		14	rent supplement
Fairbanks	7	29	new housing
		29	home repairs
		29	rent supplement
		13	other

On the need for home ownership: One of the survey questions was, "How important is home ownership to you?" The preliminary findings are as follows:

Community	Very Important	Important	Not Important
Ft. Yukon		100%	
Wrangell	33%	17%	50%
Kodiak	47%	24%	18%

It is apparent that response to this question varies significantly from community to community, and that the preference for home ownership is high.

Following is a tally of responses to questions dealing with resident satisfactionwith housing situation.

What do you like most about your present home?

Ft Yukon (4)	Kodiak (16)
(2) location (1) its new and warm (1) all he owns	(13) convenience to downtown (4) view (3) comfort (3) cost (3) neighborhood
Wrangell (12)	**Fairbanks (16)**
(6) convenience to downtown (2) privacy (2) low rent (2) not much	(6) quiet (3) convenience to down-town (3) independence (2) view (2) gardens

What would you like to change?

Ft Yukon (2)	Kodiak (9)
(1) nothing (1) fix windows	(7) nothing (5) would like television (5) poor heating (2) closer to town (2) too small
Wrangell (10)	**Fairbanks (13)**
(3) "more comforts (2) get ride of the stairs (2) closer to downtown (2) larger	(5) nothing (2) simple repairs (2) more fire and safety features

Michael Davis
HOUSE/HESS
Pouch V
Juneau, Alaska 99801

Dear Michael,

I have not been able to produce any of the data pertinent to the Pioneer's Home, as we dicussed on the phone last week. I have referred your request to David Robinson of the Gateway Office on Aging. They have recently completed a proposed Comprehensive Plan on Aging which they will be forwarding to you.

Sincerely,

Stephen Reeve
Planning Director

Asha will be constructing a 50 unit apartments

We (Mungle) will be constructing a 12 unit apartment.

There is a need for care facility - prohibitive costs have kept us from this.

No market data on these facilities

Sitka does have a Bethel care facility for aged

There is a need for facilities - but how much I can't say.

(Gerontology Study for Alaska by Plotnik)

Tribal govt - people want to live in communities they live in

117 units constructed this summer in South East

AGING NEEDS ASSESSMENT SURVEY

Before we start, let me tell you what this questionnaire generally covers. First we'll get basic demographic information, then we'll discuss housing, transportation and social activities, health and diet, income and expenses, and finally, specialized needs, as you see them, of the elderly.

I want to assure you that all information you give me here will be held in confidence, that it will be used only for the purposes of this survey and that your answers will be used in combination with many other people aged 60 and over throughout the state.

STARTING TIME _____

CHECK ONE: Male ( )1
Female ( )2 11

1. Let's begin with some basic demographic information: Could you please tell me into which of these age groups you fall . . . READ:

60-64 ( )1
65-69 ( )2
70-74 ( )3
75-79 ( )4
80-84 ( )5
85-89 ( )6
90 or more ( )7 12

2. (ASK ONLY IF NOT OBVIOUS) What is your race or ethnic descent?

American Indian ( )1
Black/Negro ( )2
Chinese ( )3
Japanese ( )4
Filipino ( )5
Korean ( )6
Spanish descent ( )7
White, not of Spanish descent ( )8
Other: _____ ( )9 13

3. Do you speak a language other than English as your main language?

Yes ( )1 ← ASK Q. 3a.
No ( )2 14 ← SKIP TO Q. 4

3a. What language do you speak? DO NOT READ. "X" ONLY ONE.

Chinese ( )1
Filipino ( )2
French ( )3
German ( )4
Hebrew/Yiddish ( )5
Italian ( )6
Japanese ( )7
Korean ( )8
Spanish ( )9
Other: _____ ( )0 15

4. What is your marital status now?

Married ( )1
Separated ( )2
Divorced ( )3
Widowed ( )4
Never married ( )5 16

5. Are you a veteran (or the wife (widow) of a veteran)?

No ( )1
Don't know ( )2
→ GO ON TO Q.6

Veteran ( )3
Wife ( )4
Widow ( )5 17
→ ASK Q. 5a

5a. During what period did you (your husband) last serve in the Armed Forces?
IF SERVICE COVERS MORE THAN ONE PERIOD, GET LAST DATE SERVED.

DO NOT READ. "X" ONLY ONE

Before 1910 (Spanish-American War) ( )1
1911-1920 (World War I) ( )2
1921-1930 ( )3
1931-1940 ( )4
1941-1946 (World War II) ( )5
1947 or later ( )6
Don't know ( )7 18

6. What was the highest grade in school that you completed? DO NOT READ.

Never attended school ( )1
Grade school attended ( )2
Grade school completed ( )3
Attended high school ( )4
Completed high school ( )5
Attended college, business or trade school ( )6
Completed college, business or trade school ( )7
Graduate work ( )8
Don't know ( )9 19

7. How many years have you been living in this neighborhood (area)?

Less than one ( )1
One - two ( )2
Three - five ( )3
Six - ten ( )4
Eleven or more ( )5
Don't know ( )6 20

8. Not counting people you live with, how many adults in this neighborhood do you know well enough to stop and talk to? Would you say you know:

None ( )1
One or two ( )2
Three or four ( )3
Five to nine ( )4
Ten to fifteen ( )5
More than fifteen ( )6
Don't know ( )7 21

9. DO NOT ASK: IN WHAT KIND OF STRUCTURE IS RESPONDENT LIVING?

ASK Q. 9a ← Single family dwelling ( )1
Apartment or duplex ( )2
Trailer or mobile home ( )3
SKIP TO Q. 12 ← Rooming house or hotel ( )4
ASK Q. 9a ← Other: _____ ( )5 22
(specify)

9a. Who lives in this household with you?

PROBE: Anyone else? DO NOT READ. "X" ALL THAT APPLY.

SKIP TO Q. 10 ← Live alone ( )1
ASK Q. 9b & 9c ← Live with spouse/cohabitee ( )2
Live with children ( )3
Live with brothers/sisters ( )4
Live with grandchildren ( )5
Live with other relatives ( )6
Live with friends ( )7
Other: _____ ( )8 23
(specify)

9b. How many people live in this household, including yourself?

Two ( )1
Three ( )2
Four ( )3
Five ( )4
Six ( )5
Seven or more ( )6 24

9c. How many of those people, including yourself, are 60 years old or older?

One ( )1
Two ( )2
Three ( )3
Four or more ( )4 25

THIS SECTION, Q. 10 - Q. 11, FOR HOME, APARTMENT, TRAILER RESPONDENTS ONLY.

10. Do you own your home (apartment, trailer), are you buying it, do you rent, or do you live rent-free?

ASK Q. 10a ← Own ( )1
Buying ( )2
SKIP TO Q. 11 ← Rent ( )3
Rent free ( )4 26

10a. How much do you think this house and land (apartment/trailer) would sell for if you sold it today? If you're not sure, just take a guess.

DO NOT READ.

Under $5,000 ( )1
$5,000 - 14,999 ( )2
$15,000 - 24,999 ( )3
$25,000 - 34,999 ( )4
$35,000 - 49,999 ( )5
$50,000 - 64,999 ( )6
$65,000 - 79,999 ( )7
$80,000 - 99,999 ( )8
$100,000 or more ( )9
Don't know ( )0
Refused ( )A 27

11. How many rooms are there in this house (apartment/trailer), not counting bathrooms, halls, or porches?

One ( )1
Two ( )2
Three ( )3
Four ( )4
Five ( )5
Six or more ( )6 28

THIS SECTION FOR EVERYONE

12. Do you think the structure of this house (apartment/trailer/building) . . . READ 1-3:

ASK Q. 12a ← Needs minor repairs ( )1
Needs major repairs ( )2
SKIP TO Q. 13 ← Needs no repairs ( )3
Don't know ( )4 29

12a. Is there some problem that keeps these repairs from getting done?

ASK Q. 12b ← Yes ( )1
SKIP TO Q. 13 ← No ( )2
Don't know ( )3 30

12b. What is the problem? DO NOT READ. "X" ALL THAT APPLY.

Can't afford it ( )1
Physical problems, can't do the job, etc. ( )2
No way to transport materials ( )3
Don't know how to do type of repair ( )4
Landlord/manager won't do repair ( )5
Other: _____ ( )6 31-34

13. What kind of kitchen do you have in this house (apartment)? Do you have . . . READ:

A private kitchen just for members of your household ( )1
A kitchen that you share with others ( )2
Some cooking equipment, such as a hotplate, or ( )3
No kitchen facilities at all? ( )4 35

14. Do you have in this house (apartment/trailer/building) . . . READ 1-3:

A telephone for you or your household's private use	( )1	
A telephone you share with others	( )2	
No telephone	( )3	
Don't know	( )4	36

15. Are there any ways in which this is not a good place for you to live?

ASK Q. 15a ← Yes	( )1	
No	( )2	
SKIP TO Q. 16 ← Don't know	( )3	37

15a. What are they? DO NOT READ. "X" ALL THAT APPLY.

Problems with landlord	( )1	
Housing too expensive	( )2	
Needs repairs	( )3	
Design problems with house (can't climb stairs, etc.)	( )4	
House/yard too much to care for	( )5	
Need care or supervision	( )6	
Don't like neighbors	( )7	
Neighborhood too dangerous	( )8	
Location inconvenient	( )9	
Too noisy	( )0	
Refused	( )A	
Other: _____	( )B	38-41

16. Suppose you could live in any type of place you wanted. Which of the following would you like best: READ 1-4:

A single family home	( )1	
An apartment or duplex	( )2	
A trailer or mobile home	( )3	
A hotel, rooming house, or other group setting	( )4	
Don't know	( )5	42

17. Would you prefer to live in housing specifically for older people?

Yes	( )1	
No	( )2	
Don't know	( )3	43

18. Would you prefer some type of housing where some care--for example meals or health care--was available?

Yes	( )1	
No	( )2	
Don't know	( )3	44

19. Are you on a waiting list for any type of housing?

Yes	( )1	
No	( )2	
Don't know	( )3	45

20. Have you ever lived in a nursing home?

ASK Q. 20a & 20b ← Yes	( )1	
No	( )2	
SKIP TO Q. 21 ← Don't know	( )3	46

20a. How many months were you there?

20b. How much of that time was in this past year?

	cc48 20a	cc49 20b
Less than one month	( )1	( )1
Two-three months	( )2	( )2
Four-six months	( )3	( )3
7-11 months	( )4	( )4
(one year+)12-23 months	( )5	--
(two years+)24 or more months	( )6	--
Don't know	( )7	( )7
None	--	( )8

21. All in all, how safe do you feel in this neighborhood (area); would you say you feel . . . READ 1-3:

ASK Q. 21a ← Safe some of the time ( )1
Safe all of the time ( )2
SKIP TO Q. 22 ← Unsafe at all times ( )3
Don't know ( )4 50

21a. What particular times or places make you feel unsafe?
DO NOT READ. "X" ALL NAMED.

At night ( )1
Out-of-doors, in general ( )2
Specific place named ( )3
Other:_____ ( )4
No particular place/Don't know ( )5 51-53

22. How many blocks or miles are most of the places where you usually shop?

23. How far is the nearest bus stop?

	cc54 Q.22	cc55 Q.23
1 block or less	( )1	( )1
Over 1, up to 3 blocks	( )2	( )2
(Half mile) 4-6 blocks	( )3	( )3
7-9 blocks	( )4	( )4
(10-15 blocks) One-1½ mile	( )5	( )5
Two-4 miles	( )6	( )6
5 miles or more	( )7	( )7
Don't go out at all	( )8	--
Don't know	( )9	( )9

24. How many times a week do you usually go out to do things like shopping, visiting friends, going to the doctor or bank?

IF UNABLE TO GIVE AN AVERAGE FIGURE, PROBE:

How many times did you go out to do these things last week?

Not at all/never ( )1
Once/week ( )2
Twice ( )3
Three-four ( )4
Five-seven ( )5
Eight or more ( )6
Don't know ( )7 56

25. How do you get to places you wish to go; do you ever . . . READ TRAVEL OPTIONS:

26. Which of those ways of getting around do you use most often?
DO NOT READ, ACCEPT ONE ONLY:

Travel Options	Q.25--Ever Use Yes	No	cc	Q.26--Most Often
Walk?	( )1	( )2	57	( )1
Drive a car?	( )1	( )2	58	( )2
Ride with someone you live with?	( )1	( )2	59	( )3
Ride with friend or relative who doesn't live with you?	( )1	( )2	60	( )4
Take a bus?	( )1	( )2	61	( ) 5
Take a taxi?	( )1	( )2	62	( ) 6
Pay someone to take you?	( )1	( )2	63	( ) 7
Use a community or church transportation service?	( )1	( )2	64	( ) 8
Anything else? Specify: _____	( )1		65	( ) 9

None, never go out ( ) 0
Don't know ( ) A 66

27. Do problems with transportation ever keep you from doing things you want to do?

ASK Q. 27a ← Yes ( )1
SKIP TO Q.28 ← No ( )2
Don't know ( )3 67

27a. What problems are these? DO NOT READ. "X" ALL THAT APPLY.

No car, car in disrepair, can no longer drive, can't drive	( )1	
Costs too much	( )2	
Physical problems: steps too high, etc.	( )3	
Too far to transit	( )4	
No transit/transit doesn't go where I want to go	( )5	
Others: _____	( )6	68-70

_____

28. Do all, some, or none of your relatives live nearby? By nearby, I mean within an hour or so from here.

All	( )1	
Some	( )2	
None	( )3	
Don't know	( )4	71

29. How many times a week do you visit with friends or relatives, either in person or on the phone?

None	( )1	
1-2	( )2	
3-6	( )3	
7 or more	( )4	
Don't know	( )5	72

30. Do you take part in the activities of any clubs, organizations, or religious groups?

Yes — ASK Q. 30a & 30b	( )1	
No — SKIP TO Q. 31	( )2	
Don't know — SKIP TO Q. 31	( )3	73

30a. How often do you take part in these activities? Would you say:

Several times a week	( )1	
Several times a month	( )2	
Several times a year	( )3	
or, Almost never	( )4	
Don't know	( )5	74

30b. Are any of the groups you belong to specially for older people?

Yes	( )1	
No	( )2	
Don't know	( )3	75

31. Are you registered to vote?

Yes — ASK Q. 31a	( )1	
No — SKIP TO Q. 32	( )2	
Don't know — SKIP TO Q. 32	( )3	76

31a. Did you vote in the recent (primary)(general) election?

Yes	( )1	
No	( )2	
Don't know	( )3	77

END CARD 1 80
SAME AS CARD 1 1-10

32. Now I have a few questions about your health. Compared with others your age, would you say your health is . . . READ 1-3:

Better than average	( )1	
About average	( )2	
Worse than average	( )3	
Don't know	( )4	11

33. In the past year, how many times have you seen a doctor or other health professional, such as a nurse or medic? Do not count any times when you were hospitalized.

None	( )1	
Once	( )2	
3-4 times	( )3	
5-6 times	( )4	
7-8 times	( )5	
9-10 times	( )6	
11-12 times	( )7	
13 or more times	( )8	
Don't know	( )9	12

34. In the last five years, is there anything a doctor has advised you to do for your health, that you were unable or unwilling to do?

ASK Q. 34a ←	Yes ( )1	
	No ( )2	
SKIP TO Q. 35 ←	Don't know ( )3	13

34a. What was it that you were advised to do? DO NOT READ. "X" ALL THAT APPLY.

Get more rest	( )1	
Quit smoking	( )2	
Quit drinking	( )3	
Get exercise/physical therapy	( )4	
Lose weight	( )5	
Follow-up visits	( )6	
See a specialist	( )7	
Special diet	( )8	
Take medication	( )9	
Go to hospital/have operation	( )A	
Other _____ (specify)	( )B	14-17

35. Do you have any chronic illnesses or health or dental problems?

IF NOT SURE, PROBE: By that I mean, illness, health or dental problems which have continued for a long time.

ASK Q. 35a. ←	Yes ( )1	
	No ( )2	
SKIP TO Q. 36 ←	Don't know ( )3	18

35a. What are they? DO NOT READ. "X" ALL THAT APPLY.

Anemia	( )01	
Arteriosclerosis (hardening of the arteries, cholesterol)	( )02	
Arthritis, bursitis, rheumatism	( )03	
Back trouble, other bone, joint, or muscle problems	( )04	
Cancer or leukemia	( )05	
Circulation problems (blood clots, phlebitis)	( )06	
Dental/periodontal disease	( )07	
Diabetes	( )08	
Glandular disorders (thyroid/other)	( )09	
Gynecological problems (female problems)	( )10	
Heart trouble	( )11	
Hernia	( )12	
High Blood pressure (hypertension)	( )13	
Liver disease (hepatitis)	( )14	
Loss of (use of) limb	( )15	
Low blood pressure	( )16	
Nervous system disorders (Parkinson's Disease, cerebral palsy)	( )17	
Polio (effects of)	( )18	
Respiratory problems (emphysema, asthma)	( )19	
Ulcers, gall bladder, stomach or other digestive problems	( )20	
Stroke (effects of)	( )21	
Tuberculosis	( )22	
Urinary tract (kidney, bladder, prostate)	( )23	
Visual problems (cataracts, glaucoma)	( )24	
Other: (specify) _____	( )25	19-28

36. How many different kinds of prescription drugs do you take, if any?

None, take no prescription drugs	( )1	
1-2	( )2	
3-4	( )3	
5 or more	( )4	
Don't know	( )5	29

37. Whenever you have to take pills or medicine, can you do this without any help, do you need some help or are you totally unable to take pills or medicine by yourself?

Take without help	( )1	
Need some help	( )2	
Unable to take without help	( )3	
Don't know	( )4	30

38. Do you regularly receive special nursing care ordered by a physician, such as changing dressings or irrigations?

Yes	( )1	
No	( )2	
Don't know	( )3	31

39. When was the last time you saw or talked to a dentist about your teeth--how many months ago?

1-2 months	( )1	
3-5 months	( )2	
6-8 months	( )3	
9-12 months	( )4	
1-2 years	( )5	
Over 2 years	( )6	
Have never seen dentist	( )7	
Don't know	( )8	32

40. Is there anything that keeps you from getting the kind of medical or dental care you would like to have?

ASK Q. 40a ←	Yes	( )1
	No	( )2
SKIP TO Q. 41 ←	Don't know	( )3 40

40a. What is that? DO NOT READ. "X" ALL THAT APPLY.

No doctor available in vicinity	( )1	
Can't afford medical care	( )2	
Have difficulty getting transportation	( )3	
Don't know where to go	( )4	
Can't get there because of physical condition	( )5	
Problems with medicare/medicaid/welfare	( )6	
The doctor(s) won't accept me as a patient	( )7	
Other: (specify) _____	( )8	41-44

41. During the last year, were you ever hospitalized?

How many days in the last year? ← ASK ←	Yes	( )1
RECORD BELOW THEN ASK Q.42	No	( )2
GO ON TO Q. 42 ←	Don't know	( )3 45

42. (Other than when you were hospitalized) during the last year were you ever so sick that you had to be confined to bed?

How many days? ← ASK ←	Yes	( )1
RECORD BELOW	No	( )2
SKIP TO Q. 43 ←	Don't know	( )3 46

	cc. 47 Q. 41 Hospital	cc. 48 Q. 42 In-bed (non-hospital)
1-6 days	( )1	( )1
7-30 days	( )2	( )2
31-90 days (1-3 months)	( )3	( )3
91-180 days (4-6 months)	( )4	( )4
181 days or more	( )5	( )5
Don't know	( )6	( )6

43. Is there someone who could help you out if you became sick or disabled --someone such as a friend or a member of your family?

ASK Q. 43a ← Yes ( )1
No ( )2
SKIP TO Q.44 ← Don't know ( )3 49

43a. Is this someone who would take care of you for as long as was needed, or just for a short time, or someone who would help you out now and then (for example things like taking you to the doctor or fixing meals occasionally)?

As long as was needed ( )1
Short time ( )2
Now and then ( )3
Don't know ( )4 50

44. I'm going to read you a list of day-to-day activities. For each one, please tell me if you can do it without help, with some help either from another person or from a device like a cane, or if you are unable to do it at all.

How about _____; are you able to _____without help, with help or not at all? REPEAT FOR EACH ACTIVITY.

NOTE: IF RESPONDENT DOES NOT DO ACTIVITY, ASK: Could you (do activity)?

FOR EACH ACTIVITY NEEDING HELP, ASK Q. 44a.

44a. Do you need help from another person, or from a device like a cane, walker or glasses to _____?

Activity	Q. 44--Can do? Without Help	Unable to do	Do with Help	Q. 44a--Kind of help? Person	Device	
Dial(ing) the telephone & use of directory	( )1	( )2	( ) →	( )3	( )4	51
Go(ing) for walks outside	( )1	( )2	( ) →	( )3	( )4	52
Climb(ing) stairs	( )1	( )2	( ) →	( )3	( )4	53
Clean(ing) the house	( )1	( )2	( ) →	( )3	( )4	54
Bath(ing)	( )1	( )2	( ) →	( )3	( )4	55
Cut(ting) your toenails	( )1	( )2	( ) →	( )3	( )4	56
Prepar(ing) your meals or snacks	( )1	( )2	( ) →	( )3	( )4	57
Eat(ing)	( )1	( )2	( ) →	( )3	( )4	58
Dress(ing) yourself	( )1	( )2	( ) →	( )3	( )4	59

45. What devices do you use to help you in your day-to-day activities--things like dentures, glasses, canes or hearing aids? Any others?

Use no devices ( )1
Cane ( )2
Crutches ( )3
Brace ( )4
Walker ( )5
Wheelchair ( )6
Handrails ( )7
Magnifying glass ( )8
Dentures ( )9
Glasses ( )0
ASK Q. 45a. ← Hearing aid ( )A
Artificial limb(s) ( )B
Volume control on phone ( )C 60-63

45a. Using (device) , how well are you able to (get around) (see) (hear) (eat) Would you say well or not too well?

	Well	Not too well	
Dentures	( )1	( )2	64
Glasses	( )1	( )2	65
Hearing aid	( )1	( )2	66
Artificial limb(s)	( )1	( )2	67
Volume control on phone	( )1	( )2	68

46. How much exercise and physical activity do you get compared to others your age? Would you say. . . READ 1-4:

A great deal ( )1
A moderate amount ( )2
Not very much ( )3
or, none ( )4
Don't know ( )5 69

47. Now I'd like to talk with you about your diet. Who usually prepares your main meal of the day? DO NOT READ. "X" ONLY ONE.

Self ( )1
Member of household ( )2
Friend or relative ( )3
Paid domestic ( )4
Nutrition program ( )5
Provided by residence ( )6
Restaurant ( )7
Don't have a main meal ( )8
Other: (specify) _____
_____ ( )9
Don't know ( )0 70

48. Think back to what you ate yesterday. I'm going to read you a list of different kinds of food, and I'd like you to tell me whether or not you ate each one yesterday. Did you have any. . . READ?

	Yes	No	Don't Know	
Meat, fish, or poultry?	( )1	( )2	( )3	71
Milk, cheese, or other dairy products?	( )1	( )2	( )3	72
Vegetables?	( )1	( )2	( )3	73
Fruits or fruit juice:	( )1	( )2	( )3	74
Bread or cereal?	( )1	( )2	( )3	75

49. Was that a typical day for you?

Yes ( )1
No ( )2
Don't know ( )3 76

50. Are there times when you don't get enough of the right kinds of foods?

ASK Q.'s 50a & 50b ← Yes ( )1
SKIP TO Q. 51 ← No ( )2
Don't know ( )3 77

50a. How often does that happen? Would you say: READ 1-3:

Very often ( )1
Sometimes, or ( )2
Not too often ( )3
Don't know ( )4 78

50b. What is the main reason you don't eat those foods? DO NOT READ. "X" ONLY ONE.

Too expensive ( )1
Don't know how to prepare ( )2
Transportation problems ( )3
Inadequate cooking facilities ( )4
Don't like them ( )5
Too much trouble ( )6
Other: (specify) _____
_____ ( )7
Don't know ( )8 79

END CARD 2 80

SAME AS CARD 1 1-10

51. In the last 5 years, has a doctor told you that you need a special kind of diet?

ASK Q.s 51a & 51b ←	Yes ( )1	
	No ( )2	
SKIP TO Q. 52 ←	Don't know ( )3	11

51a. What kind of diet was that? DO NOT READ. "X" ALL THAT APPLY.

Diabetic	( )1	
Low Calorie	( )2	
Low sodium (salt free)	( )3	
Low Cholesterol	( )4	
Allergy diet	( )5	
High calorie (weight gain)	( )6	
Diet for digestive problems (ulcers, constipation, etc.)	( )7	
Other: (specify) _____		
_____	( )8	
Don't know	( )9	12-14

Unemployment insurance or compensation	( )1	( )2	( )3	( )4	32
Supplementary Security Income--SSI (Old Age Assistance, Aid to the Blind, Aid to the Disabled, Welfare)	( )1	( )2	( )3	( )4	33
Help from children or other relatives	( )1	( )2	( )3	( )4	34
Other _____					
_____	( )1	( )2	( )3	( )4	35

59. Have you had any trouble in applying for or in receiving SSI or Social Security payments?

ASK Q. 59a. ← Yes ( )1
No ( )2
SKIP TO Q. 60 ← Haven't tried ( )3
Don't know ( )4 36

59a. What kind of trouble was that? DO NOT READ. "X" ALL THAT APPLY.

Checks late ( )1
Checks too small ( )2
Too complicated, don't understand ( )3
Got cut off ( )4
Other: (specify) _____
_____ ( )5 37

60. Please tell me about how much income you (and your husband/wife) receive altogether each month; We don't need the exact amount, just stop me when I read the category into which your monthly income falls...READ 1-9:

$0-$99 ( )1
$100-$199 ( )2
$200-$299 ( )3
$300-$399 ( )4
$400-$499 ( )5
$500-$599 ( )6
$600-$699 ( )7
$700-$799 ( )8
$800 and up ( )9
Refused ( )0
Don't know ( )A 38

61. Do you and your (husband/wife) have any financial assets you could draw on in an emergency, for example, real estate, stocks, bonds, insurance policies, savings account?

Yes ( )1
No ( )2
Refused ( )3
Don't know ( )4 39

62. (Not counting your wife/husband), how many dependents do you now have, that is, how many people depend on you now for half or more of their support?

(No others) None ( )1
One ( )2
Two ( )3
Three ( )4
Four ( )5
Five or more ( )6
Don't know ( )7
Refused ( )8 40

Now I'd like to ask where your money goes. The following questions refer to actual expenses. If you do not know the exact figures, an estimate or average is sufficient.

IF RESPONDENT IN HOTEL/ROOMING HOUSE, GO TO Q. 63 & 63a.

ALL OTHERS, REFER BACK TO Q. 10, PAGE 3: IF "OWNS", GO TO Q. 65

IF "BUYING", GO TO Q. 64 & 64a.

IF "RENT', GO TO Q. 63 & 63a.

IF "RENT FREE", GO TO Q. 66

63. How much do you (and your husband/wife) spend each month for rent? DO NOT READ.

Less than $50	( )1	
$51-74	( )2	
$75-99	( )3	
$100-124	( )4	
$125-149	( )5	
$150-174	( )6	
$175-199	( )7	
$200-249	( )8	
$250-299	( )9	
$300-399	( )0	
$400 or more	( )A	
Refused	( )B	
Don't know	( )C	41

63a. IF RESPONDENT LIVES IN HOUSING FOR THE ELDERLY OR GOVERNMENT SUBSIDIZED HOUSING, ASK:

Is the amount of rent you pay based on the amount of your income?

Yes	( )1	
No	( )2	
Don't know	( )3	42

SKIP NOW TO Q. 66

64. What is your monthly mortgage payment? DO NOT READ.

Less than $50	( )1	
$51-74	( )2	
$75-99	( )3	
$100-124	( )4	
$125-149	( )5	
$150-174	( )6	
$175-199	( )7	
$200-249	( )8	
$250-299	( )9	
$300-399	( )0	
$400 or more	( )A	
Refused	( )B	
Don't know	( )C	43

64a. Does your mortgage payment include taxes and insurance?

Interviewer Name _____ No. _____ 45-47

BEFORE LEAVING HOME SHOW BACK SHEET TO RESPONDENT AND SAY:

You can get any information about services available by marking this sheet for the Area Agency on Aging. Simply circle the number of services you are interested in, fill in your name and address, and I will give to my supervisors who will forward it, or you may mail it in this envelope.

DEMONSTRATE AND HELP RESPONDENT IF NECESSARY.

RESPONDENT MAY MAIL THE REQUEST HIM/HERSELF, OR INTERVIEWER CAN LEAVE ATTACHED AND RETURN TO SUPERVISOR. IF RESPONDENT WISHES TO MAIL, REMOVE BACK SHEET AND LEAVE WITH PROVIDED ENVELOPE.

AFTER LEAVING HOME, FILL IN FOLLOWING:

1. Respondent lives ("X" ONE):

On farm or ranch	( )1	
In country, not on farm or ranch	( )2	
In small town (less than 25,000 people)	( )3	
In city pop. 25,000 to 99,999	( )4	
In suburb of large city	( )5	
In large city 100,000 or more	( )6	48

2. In general, does dwelling (complex) seem in:

Good repair	( )1	
Minor disrepair	( )2	
Major disrepair	( )3	
Can't tell	( )4	49

3. Did respondent live in housing for the elderly:

Yes	( )1	
No	( )2	50

4. Did respondent have any of the following ("X" ALL THAT APPLY):

Blindness	( )1	
Deafness	( )2	
Missing limbs/Loss of limb use	( )3	
Obesity	( )4	
Palsy, shakes, tremors	( )5	
Speech impediments	( )6	
Other: _____	( )7	51-53

5. Did respondent have significant difficulty in understanding or responding to the questions?

Yes	( )1	
No	( )2	54

6. Was a proxy used for the respondent in this interview? (i.e. was respondent unable to answer, so someone else did)

SKIP TO Q. 8 ←	Yes	( )1	
ASK Q. 7 ←	No	( )2	55

7. If another person was present during interview, was respondent influenced in his answers by other person?

ASK Q. 7a & 7b ←	Yes	( )1	
SKIP TO Q. 8 ←	No (not influenced/ no other person present)	( )2	56

7a. (IF YES) What was that person's relationship to the respondent?

Spouse	( )1	
Child	( )2	
Brother or sister	( )3	
Grandchild	( )4	
Other relative	( )5	
Friend	( )6	
Other: (Specify) _____	( )7	57

7b. How did that person influence the respondent's answers?

Inhibiting	( )1	
Expanding on answers	( )2	58

8. Was there anything unusual about the respondent or the responses that we should know about?

_____

_____

_____

_____

Gateway Office on Aging
Room 316 N.B.A. Building
P.O. Box 7751
Ketchikan, Alaska 99901

TESTIMONY January 21, 1978
HOUSE COMMITTEE ON HEALTH, EDUCATION AND SOCIAL SERVICES

SUBJECT: HB 41 - Pioneers Home in Ketchikan

I am Cheryle Wolf, program director of the Gateway Office on Aging in Ketchikan, Alaska. I want to thank you for your willingness to listen to testimony pertaining to a Pioneers Home in Ketchikan. I am here today to testify in favor of House Bill 41 - a Pioneers Home in Ketchikan.

The Alaska Comprehensive Study on Aging, 1972 (Department of Health and Social Services) shows that the percentage of elderly residents in Ketchikan per population base is larger than anywhere else in the state of Alaska -- yet Ketchikan is without a Pioneers Home.

In the Spring of 1973 the Ketchikan Community Council was awarded a grant by the Alaska Humanities Forum to conduct an assessment survey of the needs of local senior citizens. The Council established a Senior Citizens Committee to conduct the survey designed on an interviewer/interviewee style. Assisting the Senior Citizens Committee were such local organizations as the League of Women Voters, Methodist Women, Pioneers Auxiliary, and the Golden Age Club. The two hundred thirty-seven (237) completed

questionnaires showed health care as one of the main concerns of senior citizens.

In November 1977 the Gateway Office on Aging via its Senior News, a monthly newsletter published by the Ketchikan Governing Board on Aging, Inc., mailed out three hundred fifty (350) questionnaires. Twenty-five percent (25%) of the questionnaires were completed and returned to the Gateway Office on Aging -- all requesting a Pioneers Home in Ketchikan.

What is being said through these surveys and questionnaires is that the need to have a Pioneers Home in Ketchikan does exist. For the record, Ketchikan is the only community to conduct a survey of the elderly at the local level.

A Pioneers Home in Ketchikan would serve three basic purposes by 1) providing long term nursing care at a cost to the resident that is substantially less expensive than services currently available at the existing facility ($275 per month or less depending upon financial status in a Pioneers Home as opposed to $55 per day at Island View Manner -- currently the only available nursing facility in Ketchikan), 2) alleviating the demand for affordable housing for seniors, and 3) meeting the need for increased social interaction and involvement to reduce loneliness found so prevalent among the elderly.

Pioneers Homes legislation provides that any individual who is

1) destitute and in need of the aid or benefit of the Home because of physical disability or other cause or 2) is sixty-five (65) years of age or older and who has lived in Alaska fifteen (15) years immediately preceeding application is entitled to admission to a Pioneers Home. In this type of human services economics must play an insignificant role. Pioneers Homes are not intended to make a profit. Pioneers Homes are intended to be a true home where Alaska's older residents may live out their last years in comfort and relatively free of loneliness, worries, difficulties and hardships.

I urge you to support House Bill 41 -- to quickly move this Bill out of committee and to actively support its passage in the House. I also urge you to actively support the passage of a Pioneers Home Bond Issue.

Thank you.

MEMORANDUM

TO: Members of the House HESS Committee

FROM: Rocky MacKinnon

DATE: February 17, 1977

RE: HB 99; changes & effects

Change	Sec. 1 AS 47.30.270(a), page 1, line 12, adds spouse to the list of persons liable for the cost of care of the mentally ill.
Effects	More money might be received by the State of Alaska for care of the mentally ill. The spouse will be liable for payment, even after a divorce is granted (see appendix 1).
Change	Sec. 1 AS 47.30.270(a), page 1, lines 23-26, enables the department to obtain information to determine ability to pay.
Effects	The department can impose full liability if financial information is not supplied. The department should be able to make a fair determination with the information supplied. (See appendix 3).
Change	Sec. 1(a), page 2, lines 3-18, drops the $50.00 per month ceiling on all but the severely mentally ill, or those institutionalized for a period exceeding 12 months.
Effects	Insurance companies will be required to pay more than $50.00 per month if the costs are over $50.00 per month. Since most insurance policies cover a maximum of 12 months, individuals can be required to pay a maximum of $50.00 after insurance runs out. The ability to pay will be determined in a fair way and those determinations can be appealed (see appendix 2).
Change	Sec. 3(f), page 3, lines 10-11, adds patient or spouse to the list of persons to notify in case of delinquent payment.
Effects	30 days after notification of delinquent payment the department may proceed to collect costs due.

STATE
of ALASKA

MEMORANDUM

TO: Jerry L. Schrader, M.D.
Director
Division of Mental Health &
Developmental Disabilities

DATE : February 18, 1977

FROM: Thomas R. Branton
Assistant Director
Division of Mental Health &
Developmental Disabilities

SUBJECT: Accounts Receivable A.P.I.

The following information describes the state of the accounts receivable to the State for service provided by Alaska Psychiatric Institute. The information describes the situation of the accounts for which there has been determined to be an existing legal obligation. Dollar amounts reflect the impact of payments received on account for the month of January, 1977. Not reflected is the receivables resulting from service provided during January, 1977 i.e. current with January receipts but not January billings.

There are currently 224 open accounts at A.P.I. with a full value worth of $735,837.34.

Individual patient and parent or guardian personal liability outstanding is $8,078.53. Twenty-four of these cases are limiting their payment under the $50/month maximum liability statute. The remainder are determined "ability to pay" liability.

Insurance coverage from carriers as Blue Cross, Veterans, Medicare and similar group and private carriers which have been billed amount to an as billed account receivable of $410,781.49. Some unknown percent of this amount will be discounted by the carrier prior to payment. The $410,781.49 is at 100% billed cost.

Payments due through the office of Public Assistance for covered patients of medicaid eligibility total $316,977.32. This consists primarily of the regular December billing and in-process billings for service provided by the recently established ICF Unit.

Not reported in the total accounts receivable figure is an estimated $56,000.00 amount of billings which, during the past years, have been referred to the Quality Control and Collection agency within the Department. They estimate no more than six to seven thousand dollars of this total will be collected.

Legitimate accounts where liability has been clearly established and no intent to pay is shown are currently aged 90 days and referred to Collection for appropriate action. So long as the account is "alive" it is held at A.P.I.

TRB:en

cc: Roxy E. Pomeroy

This is a summary of a long distance telephone conversation I had with Max Gruenberg, a member of the Mental Health Advisory Council, regarding HB 99, on February 16, 1977. Because of a limited time factor, he requested that I relay his thoughts to the Committee.

1. The additional revenues received by the state would be a "drop in the bucket".

2. There are a higher proportion of people in API either from the bush or with low incomes and many of these people do not have insurance.

3. He thinks the whole law should be repealed, using the arguement that criminals don't have to pay for jail, so why should the mentally ill?

4. He doesn't think "spouse" should be added because a spouse is burdened enough just being married to a mentally ill person, why cause more grief?

5. He questions the constitutionality when differing between length of time under care, and amount paid, (a maximum payment of $50.00 is allowed after a person is "in" for at least 12 months).

6. He questions the part about a lien against the state illegal over what is due the Federal Govt. (?) (Don't ask me to explain, he's a LAWYER)

Rocky

POSITION PAPER/Department of Health and Social Services

HOUSE BILL 99

'An Act relating to liability for expense of hospitalization of mentally ill individuals; and providing for an effective date."

This bill is at the request of the Department. Under current legislation the State is cut off from substantial third party payment sources for care given in cases hospitalized under AS 47.30. This bill gives adequate protection against extraordinary changes being made for care of developmental disability cases yet allows the State to claim up to full care costs for acute psychiatric care.

We would propose that House Bill 99 be amend d to read:

PAGE 1 Line 16 insert after. . .the department if the patient is hospitalized in a state hospital, or by the hospital, if a patient is hospitalized in a private hospital.

Line 17 insert after. . .department if the patient is hospitalized in a state hospital, or the hospital, if the patient is hospitalized in a private hospital, . . .

Line 20 insert after. . .The department or private hospital. . .

Line 25 insert after. . .and treatment in a state hospital. . .

Line 28 insert at front of line. . .or the private hospital. . .

PAGE 2 Line 1 insert new sentence after. . .department order. A private hospital may be reimbursed by the department or its designee for the cost of care and treatment of a patient hospitalized under sections 10-340 of this chapter, only when it shows that it has determined ability to provide for payment by procedures approved by the department or its designee, that it has issued an order of payment to the patient or the person responsible for payment within six months after the date on which the charge was incurred, and that it has exhausted other sources of payment. . . .

Line 12 insert after. . .department or a private hospital, . . .

Line 13 insert after. . .department or a private hospital . . .

Line 18-19 insert between paragraph. . .Sec. 2. AS 47.30.270 (c) is repealed.

This proposed amendment places the burden of determination of ability to pay on the hospital where the service is provided as a prerequisite to billing the State for service.

The fiscal impact of this bill is not totally predictable. Under the present law where patient liability is limited and the spouse is not required to pay,

POSITION PAPER/Department of Health and Social Services

insurance recovery is limited. During the first six months of Fiscal Year 1977 when 52 cases were billed, a total of $91,236 was collected, however, only 18 of the 52 cases paid more than $50/month, determined to be the limit of their liability or the liability of their insurance carrier. Without the amended change we predict more patients will limit their payment to $50/month and third party payments will further be reduced.

We recommend the passage of this bill when amended as proposed.

POLICY FOR PAYMENT OF LIABILITY FOR MENTAL HEALTH SERVICES

Revised 1/3/75

Persons Liable

Liability for the cost of care and treatment for mental health services shall be assumed by the patient or his legal representative, or his parents if he is under 18, in that order, individually or collectively. In those cases in which dependency cannot be established, the Division will make a reasonable effort to identify, contact and request payors, in the prescribed order, to participate in the payment for cost of care and treatment.

Amount of Liability

Amount of liability assumed by the responsible payor or payors will be based on their individual ability to pay as determined by the Division, up to the actual cost of care and treatment, but not over $50.00 per month for the liable parent according to the 1974 amendment to AS 47.30.270.

Any liable parent who refuses or fails to pay the amount determined by the Division, or refuses to submit, or willfully misrepresents the information upon which determination is based, will be liable for the total of the remaining actual cost of care not to exceed $50.00 per month. Any unpaid amount, either determined by the Division or actual cost, will constitute a lien in favor of the state against all property of the patient and will be processed according to applicable Alaska Statutes. Any unpaid liability of the parent will, in the event of the parents death, be discharged or collected from the patient. No claim lies against the assets or estate of the deceased parent.

Waiver of Liability

A waiver of liability for cost of care and treatment may be granted when the medical, psychological and social factors in the patient's case indicate that payment would be detrimental to the patient's rehabilitation.

It is not expected that these factors can be reduced to some absolute formula but rather will constitute a professional clinical judgment.

The request for a waiver will be initiated by the social worker assigned to the case and will require the authorization of the Director of the Division of Mental Health or his designee(s).

SECTION II

LIABILITY DETERMINATION

LIABILITY DETERMINATION

DEFINITION

The determination of liability for the cost of care and treatment for mental health services is a process which relates an individual's ability to pay to an equitable amount of liability. As defined by the Division of Mental Health, the amount of liability determined by this process is an annual liability payable over a twelve-month period, but in no case will the total amount paid exceed the actual cost of care.

To better understand the process, it is appropriate to compare the resulting amount of the process with the deductible amount of a typical health insurance program. Under such a deductible program, an individual is liable for the cost of care up to a stated limit, after which the insurance carrier will pay additional service costs. The annual liability amount established by the Division in many ways represents the deductible amount for the cost of mental health services provided by the Division. Costs for care and treatment above the annual liability amount, not covered by a third-party payor, will be paid by the Division. Unlike usual health insurance programs, however, which typically have a fixed limit for all persons covered by the program, the annual liability amount determined by the Division will vary based on the individual's ability to pay.

APPROACH

The process for determination of liability involves essentially four steps:

1. Identification of persons liable to pay for or contribute to the cost of care and treatment for mental health services.
2. Collection of information influencing the person's ability to pay.
3. Determination of the amount of liability to be paid based on evaluation of the person's ability to pay.

4. Redetermination of liability at periodic intervals.

The approach is defined to comply with the provisions of AS 47.30.270 as amended and its supporting regulations. The reader should be thoroughly familiar with these provisions.

CONSIDERATIONS AND PROCEDURES:

1. General considerations:

   a. Special consideration should be made of the prospective nature of the determination process for persons liable other than the patient or his legal representative. That is, parents are not liable for costs of care and treatment prior to the order by the Division to pay and then not to exceed $50.00 per month. Accordingly, effort should be made to expedite the determination process for these persons. A recommended period for completion is 21-30 days from the date of admission of the patient.

   b. All determinations may be appealed. Procedures for fair hearings are defined in Appendix A of this manual.

   c. The amount of liability is an annual amount to the Division of Mental Health. In the case of readmissions within the annual period for which the liability was determined, or transfers from other institutions within the annual period, no determination should be made until the annual date. In the case of transfers, the initial institution will continue the billing until the end of the annual period. The redetermination of liability will be made by the institution in which the patient resides.

2. Identification of liable persons:

   a. Upon a new admission to the mental health facility, the admitting officer or other responsible person should assist the patient or his representative in completing the admitting form and financial questionnaire. Particular attention should be placed on identification of those persons liable for cost of care including the patients legal representative and both parents, spouse and adult children, unless they and the legal representative are, by the 1974 amendment, not included as among those persons liable. Additionally, any third party payors (e.g., Medicare, Veterans, Blue Cross) for which the patient may be eligible should be identified.

   b. Admitting information should be obtained as soon as possible, preferably at time of admission. A maximum of 72 hours from time of admission should be observed.

3. Collection of financial information:

   a. In the event that the patient is determined to be unable to pay for the full cost of care, the remaining persons liable identified on the admitting form should be requested to prepare and submit financial information so that their ability to pay may be determined. The requesting letter should be mailed together with the financial questionnaire and a copy of the statement for payment for mental health services.

   b. Returned information should be evaluated for reasonableness. Although the process is essentially a "declaration" approach in that full verification of all information is not mandatory to making the ability to pay decision,

the evaluator, at his discretion, may require [illegible] information from the person liable to support data submitted on the questionnaire.

c. The date of the requesting letter should be the same date the letter is mailed. The date for return of the information being requested should be 14 days after the date of the letter.

d. All mailings should be sent through registered mail with return receipt requested.

4. Determination of liability:

a. Persons liable not returning all requested information have been deemed, by their default, to be able to pay the remaining full cost of care and treatment. In such event, the evaluator should review the case with the social worker assigned to the case to determine the possible effect of an Order to Pay of the person liable on the rehabilitative needs of the patient. Should the social worker determine that payment will be detrimental to the patient's rehabilitation, supporting documentation should be prepared and submitted to the authorized person at the Division for final determination.

b. The determination of ability to pay will be made considering the following income factors:

1) Gross monthly family income. This is not takehome pay, but gross income before any deductions. All sources of income should be considered, including wages, rental income, pension, etc.

2) Unusual monthly expenses which will be limited to:

a) Child care expenses necessary for employment.

b) Court ordered obligations paid monthly.

c) Reasonable union dues.

d) Contributions to retirement plans.

e) Reasonable expenses for special work clothing and/or equipment.

f) Unusual health care expenses, in excess of 3% of gross income.

g) Any other major unusual expense affecting family income for a number of months which originates from events over which the family can exercise no control.

3. Assets of the family, adjusted to a monthly amount, with the following limitations or disregards:

i. The value of the house for shelter of the family.

ii. The land on which the house is located.

iii. Income-producing real property which is regarded as income.

iv. Reasonable means of transportation.

v. Tools or equipment necessary for employment.

c. The resulting amount of family income and 6% of assets divided by 12 will establish an adjusted gross monthly income. This amount will be used in establishing the annual liability from the Annual Liability Table (Exhibit A), taking into consideration family members dependent on the income. The annual liability table was derived from a formula established by the State of California and takes into consideration normal living allowances for various

levels of income based on statistics compiled by the U. S. Bureau of Labor Statistics. The amounts calculated have been adjusted to reflect the cost of living in Alaska.

d. The monthly payment amount is calculated by dividing the annual liability amount by 12, not to exceed $50.00 per month for liable parents.

e. Upon evaluation of the liable person's ability to pay, the rehabilitation evaluation summary will be prepared and forwarded to the social work supervisor. The returned summary will be considered in view of any increases or decreases recommended.

f. A determination summary must be prepared in duplicate for each determination. The summary must be signed by the person making the determination and by his immediate supervisor. A copy of the summary and all supporting information must be placed in the liable person's financial file if a liability amount has been determined.

g. The order to pay should be prepared immediately upon approval of the determination. The order must be signe by the evaluator and, together with copies of the determination summary and the annual liability table, mailed to the person liable. Copies of the order must be placed in the liable person's financial file and one sent to patient accounting.

h. Determinations should be made for each person liable in the order described in the statute. The order to pay should not be sent until a determination and order have been sent to any prior persons liable.

5. Redeterminations will be made at periodic intervals as defined in the regulations. Essentially, the process is the same as that used during the initial determination. Refer to paragraph 1.c. above for additional considerations.

Re:

Case No.:

Dear :

As you know, your (relationship), (name of patient), was admitted to the (name of facility) on (date of admission) and continues to receive care at the Hospital. To help pay for the cost of care and treatment, which last year averaged $ _____ __ per day for each patient, Alaska State Statute (AS 47.30.270 as amended 1974) provides in part:

1. "A patient, or his legal representative acting in a representative capacity, or his parents if the patient is under the age of 18, shall pay or contribute to the payment of the charges for the care or treatment of the patient when hospitalized...in the manner and proportion which the department finds is not detrimental to the patients rehabilitation and which is within their ability to pay" ... "Notwithstanding the amount of the charge determined to be due, parents may not be required to pay more than $50.00 a month for each child"..."The department may make necessary investigations to determine the ability to pay and may require sworn statements of income by the parents "

2. "The amount of liability for care and treatment not paid by the patient or responsible payor constitutes a lien in favor of this State against all property of the patient."

As parent of the patient, you are requested to complete the forms enclosed so that we may determine your ability to pay towards

the cost of care and treatment. The information must be returned on or before (date). Without this information we will assume you are able to pay the full cost.

If the patient has insurance coverage, please complete and forward the necessary forms signed by the responsible persons. We will submit the completed claims to the insurance company.

Enclosed is a copy of the Division policy concerning ability to pay. This policy should answer many questions you may have about your responsibility. You should keep this copy for your files.

Remember, please return the requested information on or before (date).

Sincerely,

Relationship:

Re: (Patient Name)

Case No:

Dear :

As permitted by Alaska State Law AS 47.30.270 as amended, the Division of Mental Health has completed the determination of your ability to pay for the cost of care and treatment of (name of patient) at (name of facility). In addition to any insurance coverage for which (name of patient) is eligible, the Division has established a limit of $ _____ as your responsibility for the cost of care during the coming year.

Enclosed is a summary of the determination. Your ability to pay is based upon your adjusted monthly family income and assets, family size, and insurance coverage for the patient. The amount of $ _____ from line 14 of the enclosed summary represents the upper limit of your personal responsibility for the cost of care during the coming year. The costs incurred above this limit not covered by insurance will be paid by the Division of Mental Health. Further, should actual cost of care be less than this upper limit, your responsibility will be limited to the lesser amount.

You are encouraged to pay the amount as soon as possible. However, as noted on line 14 of the enclosed summary, a monthly payment of $ _____ must be made during the next 12 months. For your convenience, we will bill you each month for this amount or if you prefer, you may ask for special arrangements by contacting A/R Mgr at (phone).

In the event that care and treatment continue beyond (annual redetermination date), your ability to pay will be reevaluated. However, you may request an evaluation before that time should any changes occur which affect your ability to pay.

Thank you for your cooperation. Please contact us if you have any questions regarding your responsibility.

Sincerely,

ORDER TO PAY (B)

Re: (Patient Name)

Case No:

Dear :

Our records indicate we have not received your Financial Questionnaire which was sent you on (date of letter). As stated in the letter, which you received on that date, without the information provided on the questionnaire, the Division of Mental Health will assume you are able to pay the full cost of care and treatment for (name of patient) at (name of facility).

You will receive your first billing during the coming month.

Enclosed is an additional copy of the questionnaire. If you have not already done so, you may wish to complete the form and return it by (date). This will allow the Division to make its determination of your ability to pay before your first billing.

Sincerely,

HB99

January 21, 1977

Speaker of the House
Alaska State Legislature
Juneau, Alaska 99811

Dear Mr. Speaker:

Under the authority of art. III, sec. 18 of the Alaska Constitution, and in accordance with AS 24.30.060(b) and the Uniform Rules of the Alaska State Legislature, I am transmitting a bill relating to the liability for expenses of hospitalization of mentally ill persons admitted to hospitals under AS 47.30.

AS 47.30.270 now imposes liability on the patient, his legal representative when acting in a representative capacity, and his parent if the patient is under 18. Before the 1974 amendments to AS 47.30.270, liable persons were the patient, his spouse, his parents, and his adult children. While agreeing that the relation between adult children and their parents is often too tenuous to provide socially justifiable grounds for liability in this situation, the Department of Health and Social Services believes that it is reasonable to reinstate spousal liability for expenses of hospitalized mental patients. The bill therefore adds spouses to the persons liable for patients' expenses of hospitalization.

why

is it commonly felt spouses are able to pay?

The bill removes the general $50-per-month ceiling on parental liability for minor children which was added to the statute in 1974. In its place, the bill establishes two classes of patients to whom the $50 monthly ceiling applies: (1) mentally deficient and severely mentally retarded patients hospitalized under AS 47.30, effective from the beginning of their hospitalization or institutionalization; (2) other mentally ill patients when their hospitalization lasts for more than an aggregate period of 12 months. The term "mentally deficient and severely mentally retarded" is chosen because it is part of the definition of "mentally ill individual" in AS 47.30.340(10). For

what is this?

For patients who are not severely mentally retarded and for whom hospitalization lasts less than an aggregate period of 12 months, liability is determined on the basis of the ability of the patient or responsible person to provide for payment and the non-detrimental effect of such payments on the rehabilitation of the patient. no ceiling?

The phrase "ability to pay" in the current statute is changed to "ability to provide for payment" in order to specifically include an individual's applicable insurance coverage in determining his ability to pay the cost of care.

The statute formerly required that orders of payment addressed to parents be prospective in effect and relate only to charges incurred after the order. Rather than extending this prospective treatment to spouses as well as parents, the provision for the prospective order is removed and parents and spouses are treated in the same manner as a patient or his legal representative in the current statute: an order of payment must be issued against any of them within six months after the date on which the charge was incurred. The single method of issuing orders of payment is intended to simplify administration.

The bill attempts to balance the state's interest in reimbursement for short-term hospitalization (i.e., less than an aggregate period of 12 months) when the ability to pay exists -- usually through family-plan insurance policies, many of which now cover mental illness -- and the parents' interest in freedom from enormous liabilities for children who are receiving long-term care in hospitals or institutions.

The bill also permits the commissioner, in his discretion, to impose full liability for the patient's actual cost of care on the patient or legal representative or spouse or parent who refuses to provide income information to assist the Department of Health and Social Services in its determination of ability to pay. The department has experienced problems in this area without having any available sanctions for non-cooperation. How? When? Why? How much $??

The bill provides for an immediate effective date.

Sincerely,

Jay S. Hammond
Governor

FAIRBANKS NORTH STAR BOROUGH
Box 1267, Fairbanks, Alaska 99707

February 16, 1977

The Honorable Charles Parr
State Representative
State of Alaska
Pouch V
Juneau, Alaska 99811

Dear Charlie:

I appreciate your asking my opinion on HB 109. As you know, I've spent considerable time in the past three years looking at this very subject. I have enclosed a copy of a report I presented to the assembly which will give you some insight to the committee's feeling at that time.

I would also note that I currently chair the state-wide committee that was appointed by the Alaska School Board Association and the Alaska Municipal League to examine the relationships between school boards and borough assemblys. This committee met once last year but because of various problems has not been able to meet this year although we intend to meet again. It would be my feeling that if the legislature were to step in and pass HB 109 it would probably be more detrimental to the relationship between school boards and assemblys than beneficial. As you know, many school boards and borough assemblys in the state currently enjoy close working relationships. This proposed law might harm those relationships by the fact that one dissident member could totally destroy the relationship which took years to develop. While I agree there needs to be changes, I can not believe one sweeping change like this is the answer.

The current local situation has improved 100 percent in the last 90 days and in fact the borough and school board are looking at combining many of their programs in order to provide more efficient service at a lower tax dollar cost. Again, this sweeping change would only take one dissident member to change what it has taken years to build.

If I might make a suggestion as to something the legislature could do that would be beneficial, I would suggest the state legislature pass a bill requiring school boards and borough assemblys to have a minimum of four work sessions per year. The key in our local situation seems to

be that when the borough assembly and school board finally sat down as two elected bodies without being inhibited by administrators, they discovered they could work together and had many common goals. Our first two meetings were without any administrators or press and everything came out on the table. Many areas of common interest were discovered and a possitive approach was taken towards those interests. Therefore, I believe that maybe we need to nudge those areas that are not meeting together. It would be a positive step if tne legislature would pass such a bill.

Again I thank you for soliciting my comments and I hope it has been of some help to you. If I can be of further assistance please don't hesitate to call.

Very truly yours,

Phil A. Younker
Presiding Officer
FNSB Assembly

PAY:lh

REPORT

Task Force to Study the Feasibility of Consolidation of Departmental Efforts Between the School District and the Borough General Government

BACKGROUND:

1. At the regular assembly meeting of May 22, 1975, Younker, seconded by Bettisworth, moved that a task force be formed to study the feasibility of consolidation of departmental efforts between the school district and the borough general government. The task force would be charged with reviewing the following areas and submitting recommendations and time schedules: (1) accounting; (2) custodial; (3) maintenance. The committee will be composed of two assembly persons, two school board members, school district business manager, borough comptroller and borough attorney.

The purpose of the study was to make a determination on the following items:

A. The legality of this move ← Study Report does not properly address this issue!
B. The desirability of this move
C. If the desired improvement to the buildings and the grounds could be achieved by this move
D. If there would be savings to the taxpayers on either a long term or short term basis or both

2. On motion by Gustafson, seconded by Stringer, funds allocated for school buildings and grounds maintenance program were transferred from the school budget to borough general government budget at special assembly meeting of May 29, 1975.

Membership in this task force consisted of Assemblyman Phil Younker, Chairperson, and Assemblyman Harry Reimer. The school board was invited to send representatives (see attached letter) and the borough attorney, engineer and comptroller were invited to provide necessary data from their respective departments. The school board officially chose not to participate (see attached letter).

The borough staff members attended all the formal meetings but the school board elected not to participate when invited. However, Mr. Movius attended one meeting that never was called to order due to a mixup in the scheduling. Mrs. Mendenhall and Mr. Chuck Wallace attended the last meeting. Mrs. Mendenhall stated that the school board was not interested in such a move and that she felt the board was doing a good job and should be left alone to do it. She also stated that the school district was setting up a preventive maintenance program now and could do the job better than the general government. A letter requesting information on the school district's preventive maintenance program was sent to the school board (see attached letter) but, to date, no answer has been received.

RECOMMENDATIONS:

Accounting -

It was determined that the accounting function should not be moved.

A. There would not be any apparent savings nor would this move necessarily improve either the general government's or the school district's accounting progress.

B. The school district uses guidelines set up by the state department of education which are not compatible to the general government's accounting programs; therefore, it would still require two separate operations.

C. The combining of the accounting would require total agreement between the general government and the school board. At this time such agreement does not exist. For reasons A & B above

D. It would be our recommendation that if, in the future, the general borough government and the school district administration are housed in one borough office building it might be feasible to have one computer large enough to handle both operations rather than two separate computers. Excellent Idea - Also Purchasing

Buildings and Grounds Maintenance -

It would be our recommendation that there could be a real improvement to the buildings and grounds by the general government taking over the maintenance of the buildings and grounds based on the following:

A. For the past ten years at least there has been no preventive maintenance program in effect in our school district.

B. Preventive maintenance will cause a saving to the taxpayer on a long term basis and will cause the buildings and ground conditions to improve by the very fact that maintenance is on a preventive basis rather than a fix-it-on-a-emergency basis. (This is a recognized fact in both the public and private sectors which are maintaining large physical facilities.) I hope the assembly remembers this at budget time

C. The legality of the borough general government performing the maintenance hinges on the determination of major and minor maintenance. Such a determination can either be agreed on by the assembly and school board or at the extreme could be determined in the courts as it has been hinted that the school administration has set monies aside to fight such move if it happens. It is no "hint" as far as I'm concerned. If the assembly moves unilaterally there will be a battle.

The problem that the borough assembly recognized was that monies appropriated for maintenance are often used for other purposes by the school district. This is not to criticize the school district since their foremost obligation is the education of our children. The school district is currently charged with minor maintenance and the janitorial work of the buildings. The assembly is charged with the major maintenance of the buildings. The problem then is that when minor maintenance and/or specifically preventive maintenance is deleted by the school district due to a lack of funds most often these items become major maintenance items and the assembly then has to budget money again to do major repairs or maintenance that could have been prevented had the problem been taken care of originally. This also could result in monies being appropriated twice for the same item. This paragraph says it well except for last sentence which is a speculative comment, and points out that when confronted with priorities the education related expenses will fare better than custodial expenses, as they should.

to end be all! + discuss w/ Cust. mnt and custodial time and major lab. comp. & major equip

This, then, presents the problem of what is maintenance and at what point does it become major maintenance rather than minor maintenance.

We feel the answer is Preventive Maintenance Agree 100%

A. Preventive maintenance will eliminate this problem since it is designed to maintain the buildings and grounds in a state of being unimpaired; unbroken condition; sound and as near perfect condition as possible.

B. Maintenance then should be determined as that that is necessary to:

1. Insure the safety of all people using the buildings and grounds;
2. Insure the integrity of the buildings and grounds;
3. To accept the liability of responsibility of 1 and 2 above.

To explore this in more depth:

Maintenance must be based on needs and not on a balance of what is spent on each facility. | Clarify

Maintenance must be based on needs and not changes in design for convenience. (Changes in design for convenience should be a capital improvement.) | Specific Example?

Maintenance needs cannot be traded off for wants. | Clarify

RECOMMENDATIONS:

We would recommend that after reading this report each assemblyman and school board member give close consideration to the following changes: 1) the borough general government would operate the maintenance of the school buildings and grounds, and 2) the school district would maintain the janitorial staff. Most of all, a general philosophy of what maintenance is should be agreed on by both sides.

← As defined by whom

A. Maintenance is based on needs, not wants and desires;
B. Maintenance is that work necessary to insure the safety of those people using the facilities;
C. Maintenance is that work necessary to insure the integrity of the buildings and grounds;
D. That the maintenance department be ready to accept the liability of responsibility of A, B and C above.

Some advantages and disadvantages we see in such a move are as follows:

ADVANTAGES:

A. The general government can set up a preventive maintenance program and will most likely more readily fund the program since they can be assured that the monies will not have to be used for other programs.

Speculative

B. The assembly often sees items in the board's budget for maintenance and then, a year or so later, sees the same items in the borough general government budget as major maintenance projects. By transferring the maintenance function to the borough administration, the assembly will recognize that the board no longer has this area in their budget to cut. It also means the school board can delete a large section of their budget which would make it easier to get their budget passed. Speculative - Specific plans?

C. From experience, a school district that is currently operating under such a program as we are suggesting has found that vandalism is down in the schools because when an outside department is handling the maintenance they can be more hard-nosed about vandalism than is often possible for school personnel to be. ? hard nosed with whom ?

D. By setting up a preventive maintenance program there will be a saving to the taxpayer in the long run. It would be our opinion that the condition of the buildings today will require an all-out effort the first two or three years in getting the maintenance program to a point where a preventive maintenance program could function efficiently. Agree

E. The general government can set priorities based on needs - not desires - and maintain these priorities easier than the school district because they are not involved in the educational function. Bull shit - see no reason why one government body can do something easier than another for the reason given

F. The head of the maintenance program should play a very active role in the design and construction of all new facilities to insure as much standardization as possible in all mechanical and physical features. This will reduce the cost of maintenance. Could not agree more

DISADVANTAGES OR PROBLEMS IN OPERATION:

A. The school board and school administration will have to give up a portion of their responsibility. Most public bodies are reluctant to give up this responsibility factor even when it is best for all involved. True - likewise it appears that the assembly has a similar problem.

B. The custodial people will need to have their responsibilities outlined and they must be made to adhere to this job distribution. ← Touchy on the problem How does this distribution become satisfactorily accomplished? By whom?

C. The school district and the general government must set up a system to insure that work orders are processed and get to the correct people as smoothly and quickly as possible. (The school district might want to have the head custodian be the key information center for all maintenance requests.) Possible Duplication and another layer of administration - The point here is to have someone in the distr

D. Custodians will not do maintenance work. There may be a period of adjustment for this. However, the school district can begin to hire more women as custodians and the pay rate for custodians will not reflect any requirements that they have any mechanical ability. would be telling someone in the boro govt what is needed.

COMMENTS:

Assemblymen Younker and Reimer visited the Kenai Peninsula Borough where such a program now exists. Any conclusions? My understanding is there is a difference of opinion as to the success of their program.

The school board members we talked with stated that they would not take the maintenance program back again.

The school administration stated that they were satisfied with the operation now and would not want to take over maintenance again.

A building principal said he liked the program as it is now.

The custodians and maintenance personnel that we talked with like the system now.

It was generally agreed that the buildings are in better condition than they were before.

Vandalism decreased in schools during the school year.

The program now operates on a preventive maintenance program where each building is on a scheduled maintenance program with a check off list.

In the maintenance department they have such items as a portable boiler that can be moved to any school building and hooked up in a matter of hours preventing serious freeze-up problems. They have portable power plants for the same purpose.

2 Excellent ideas

Once again it would be our recommendation that the school board and assembly give close consideration to such a change and that a joint work session be set up to discuss this matter in full before action is taken.

Agree

Ideas for discussion

1. a P.M. program is desirable

2. Assuming the Boro Gen Govt takes over mtnce
   a) who is going arbitrate all the Q's as to what's custodial and what's mtnce?

3. b) who does the school bitch to when for any reason a mtnce item is not done in a timely or satisfactory manner

(maintenance)

3. The proposal adds another administrative function to the Boro general govt without eliminating one (custodial) from the School District. If we are going to do something like what is proposed lets do it with the idea of eliminating not adding to administrative cost

SUBJECT: Bills relating to borough assembly and school board

TO: Representative Charlie Parr

FROM: Billy G. Berrier, Director of Legal Services BGB

You have asked for a list of statutes relating to powers the borough assembly has with respect to education or to school boards and the citation to each.

There are several specific statutes that deal with the relationship, but it is possible in the context of the amendment made in HB 109 that virtually any power of a municipality could be affected to a certain extent.

It would appear that such a reading was not intended, but in light of Macauley v Hildebrand 491 Pac.2nd 120 (Alaska 1971) which held that education is a state power delegated to a municipalities saying:

> "This constitutional mandate for pervasive state authority in the field of education could not be more clear. First, the language is mandatory, not permissive. Second, the section not only requires that the legislature 'established' a school system but also gives to that body the continued obligation to 'maintain' the system. Finally, the provision is unqualified; no other unit of government shares the responsibility or authority. That the Legislature seen fit to delegate certain educational functions to local school boards in order the Alaska schools might be adapted to meet the varied conditions of different localities does not diminish this constitutional mandate of state control over education."

the literal reading may not be the proper reading of the statute.

The specific statutes I have found are:

(1) AS 14.12.030 governing body of city or borough

may increase school boards from five to seven members.

(2) AS 14.12.110 single body as assembly and school board if school population is 500 pupils or less and if approved by the voters.

(3) AS 14.12.020 if treasury is centralized municipality obtains surety bond for treasurer.

(4) AS 14.14.050 municipal audit includes schools.

(5) AS 14.14.060 relationship between board and assembly. Primary statute on division of responsibilities.

(a) Assembly may require central treasury.

(b) Assembly may require central accounting, but only if school board consents.

(c) Budget submission and appropriation.

(d) Assembly determines location of school buildings after considering board recommendations.

(e) Sets out functions of board and assembly in school design.

(f) School board provides routine maintenance for school buildings, assembly provides rehabilitation major repair and construction.

(6) AS 14.14.065 relationship between city council and school board in city district is same as between borough assembly and school board.

(7) AS 29.23.070 the municipal attorney is the legal advisor of the school board, but the board may hire independent counsel.

(8) AS 29.53.580 meetings of "all municipal bodies" shall be public.

(9) AS 29.28. Elections

(10) AS 29.41.010 third class borough assembly and school board as same body.

(11) AS 29.58. Municipal debts (bonds) Relates since this is how schools are financed.

(12) AS 29.63 special assessments, public property, including state-owned may be assessed.

ANCHORAGE ASSEMBLY

February 17, 1977

Honorable Charles Parr
Chairman
Health, Education & Social Services Committee
Pouch V - State Capitol
Juneau, Alaska 99811

Dear Charlie:

You have requested comments relative to House Bill 109 introduced by Representative Duncan.

This is the same bill that was brought forth and killed during the last session. In my opinion it deserves a similar fate this year. I could be facetious and say that Mr. Duncan has a typographical error in his bill and that it should have read "The School Board has only those powers with respect to education or to Borough School Boards that are granted by statute." Obviously, there is no typographical error, but you could expect that Borough Assemblies would ask for the substitute wording presented above.

I feel that Mr. Duncan's bill will tend to create disharmony between school boards and Assemblies and that an attempt is being made to have the State act as policeman and arbitrator in issues and conflicts which should be solved at the local level.

I would urge that your committee not take further favorable action on this bill.

Sincerely,

David A. Rose
Chairman - Anchorage Assembly

RE: House Bill 109 - An Act Relating to the Relationship Between the Borough School District and the Borough

Dear Chairman Parr,

We, the undersigned members of the Kodiak Island Borough Assembly, wish to join the other members of the Alaska Municipal League in vigorous opposition to House Bill 109 respecting relationships between borough school districts and general borough government. We find the terms of the proposed legislation offensive and injurious to the working relationship of local municipalities.

SUBJECT: House Bill 109

Representative Charles H. Parr
State House of Representatives
State Capitol - Pouch V
Juneau, Alaska 99811

Dear Representative Parr:

The Assembly of the Juneau City-Borough has considered House Bill 109 at some length. We support the intent to delineate the representative responsibilities of elected local officials. Some concern was expressed that the City-Borough might be precluded from operating educational and recreational programs for adults and children after school without the concurrence of the Board under a strict interpretation of the law. If you perceive this to be a problem, we would be amenable to an amendment that would reserve the right of the municipality to conduct such programs.

Sincerely,

W. D. Overstreet

W. D. Overstreet
Mayor

CITY AND BOROUGH OF JUNEAU SCHOOL DISTRICT
P.O. BOX 808 • DOUGLAS, ALASKA 99824

March 11, 1977

The Honorable Charles Parr
House of Representatives
Capitol Building, Room 110
Juneau, Alaska 99811

Dear Representative Parr:

I am writing to support House Bill 109 which would more clearly delineate the relationship between a borough school district and a borough. In my opinion, the bill, if enacted into law, would very clearly limit the powers of borough assemblies to those functions which are granted only by State statute. This legislation would provide Borough School Boards with a clearly stated law to back them up when borough assemblies attempt to interfere with internal matters of the board or school district operations.

I urge your support of House Bill 109. Thank you for you consideration of my views on this matter.

Sincerely yours,

Mrs. Norma J. Peterson

Dear Representative Parr:

The board of education of the Ketchikan Gateway Borough School District wishes to express its support of House Bill No. 109.

There is a very definite need for clarification of the borough assembly/school board relationship. It was the unanimous expression of the board that this bill would do much to provide that needed clarification.

Yours truly,

February 16, 1977

Mr. Charles H. Parr
Chairman
Health, Education & Social Ser. Committee
Pouch V
Juneau, Alaska 99811

Dear Mr. Parr:

Thank you for your letter of February 9, 1977 concerning HB 109.

The Matanuska-Susitna Borough School Board strongly urge passage of this bill. We feel that the bill does not substantially change the existing relationship between school boards and municipal governing bodies. The bill simply clarifies the intent of the law and amplifies the division of responsibilities.

The School Board's position is that "good fences make good neighbors." The Matanuska-Susitna School District has experienced, on several occasions, an extension of municipal powers into the domain of the school board. This lead to a court case on one occasion.

I am enclosing a opinion of the Attorney General on the issue of the propriety of "Borough providing for election of School Board Members by District." The opinion clearly points out the unlawfulness of the Borough Assembly attempting to create election districts for School Board members.

Please note in the legal opinion the wording in the next to last paragraph. This wording closely parallels the amendment you are discussing in HB 109.

Our District will be available for any additional testimony or information that you may need on this subject. Thank you for soliciting our comments.

Sincerely,

Fremont L. Hotchkiss

Fremont L. Hotchkiss
School Board President

October 31, 1974

Dr. Marshall L. Lind, Commissioner
Department of Education
Pouch F
Juneau, Alaska 99801

SUBJECT: Propriety of Borough Providing for Election of School Board Members by District

Dear Dr. Lind:

You have asked whether, in light of AS 29.23.310, a second-class borough may properly enact an ordinance which provides for the election of borough school board members by districts rather than election of all members at large. We conclude that it may not.

AS 29.23.310 provides as follows:

Each borough and city school district has a school board. Members are elected at the regular election held annually on the first Tuesday of October, unless a different election date or interval of years is provided by ordinance, for three-year terms and until their successors take office. All board members are elected at large, but school zones for the election of borough school boards may be established, altered, or abolished as provided by §100 of this chapter (Emphasis added).

As you have pointed out, the difficulty in interpreting AS 29.23.310 arises from the fact that AS 29.23.100[1], to which it makes reference, was repealed (§16 Ch. 118 SLA 1972)

1/AS 29.23.100 read as follows:

(a) The borough assembly may, by ordinance adopted without weighted voting, establish, alter, or abolish sections for the election of assemblymen in the area outside home rule and first class cities, except that sections may not be abolished unless a majority of the assemblymen outside home rule and first class cities approve. If it establishes sections, members representing the area outside home rule and first class cities represent the sections in which they reside. The ordinance must state whether assemblymen are elected by all voters outside home rule and first class cities or only by the voters of the section in which they reside. The number of sections equals the number of assemblymen representing the area outside home rule and first class cities. Section boundaries are established in such a way as to provide, insofar as possible, clarity of boundaries, compactness of an area, approximately equal population representation among sections, and homogeneity of interest.

(b) Borough sections shall be reapportioned in the manner prescribed in §90 of this chapter for reapportionment of the assembly.

shortly after it became effective in September of 1972 under the provisions of §17 CH. 118 SLA 1972.[2] The effectiveness of the repealer had been conditioned by the Legislature on either a finding by the Alaska Supreme Court that the then Sec. 4 of Article X of the Alaska Constitution was in violation of the U. S. Constitution's "one man - one vote" requirement or on the adoption of an amendment to the state's constitution eliminating those parts of Sec. 4 of Article X which specified city and non-city representation on borough assemblies. Such an amendment to the Alaska Constitution was adopted and became effective on October 13, 1972.

The general rule of statutory construction with respect to interpretation of a statute which incorporates a repealed statute by reference is to treat the incorporating statute as including the provisions of the repealed law as they read when the incorporating statute was enacted. Sands, Sutherland Statutory Construction, §23.32, Vol. 1A, p. 278 (4th Ed., 1972). That rule cannot be applied in the present case, however, because AS 29.23.100, the repealed section which would normally still be read as a part of AS 29.23.310, provided for an unconstitutional method of establishing election districts in that it provided for representation of home rule and first class cities on the borough assembly (or school board)without regard to their population. This would have made it possible for an assemblyman representing a home rule or first class city to exert an amount of influence on the borough assembly disproportionate to the city's population when compared with the overall population of the borough as represented by the other members. Such disproportionate influence is constitutionally invalid under the "one man - one vote" rule first enunciated by the U. S. Supreme Court in Reynolds v. Sims, 377 US 53 (1964). The "one man - one vote" requirement applies to popularly elected school boards, as well as other legislative bodies. Hadley v. Junior College District, 397 US 50 (1970). As a result, AS 29.23.100 cannot be given any legal effect.

2/Sec. 17, Ch. 118 SLA 1972 (as amended by Sec. 9, CH. 147 SLA 1972) reads as follows:

Secs. 10 - 16 of this Act take effect upon the condition and at the time that the Supreme Court of the State of Alaska finds that sec. 4, art. X of the Constitution of the State of Alaska as it relates to representation of cities on borough assemblies is in violation of the Constitution of the United States or an amendment to the Constitution of the State of Alaska relating to assembly representation and consistent with the provisions of secs. 10 - 16 of this Act becomes effective, whichever occurs earlier.

Since AS 29.23.100 is unconstitutional and therefore cannot be incorporated into AS 29.23.310, a borough assembly cannot, on its own initiative, establish a method of dividing the borough into zones or districts for the election of school board members. The Alaska Supreme Court, in discussing its decision of Macauley v. Hildebrand, 491 P. 2d 120 (Alaska 1971) in Jefferson v. State of Alaska, (Opinion No. 1084, September 27, 1974), pointed out that while generally the home rule powers of municipalities in Alaska are to be broadly applied, this is not the case in matters relating to public education:

> ...the language of the state constitution mandating maintenance of a school system by the state vested the legislature with pervasive control over public education. Thus, home rule municipalities (are) precluded from exercising power over education unless, and to the extent, delegated by the state legislature,.....Jefferson, supra, at 19.

While a second-class borough is a general law municipality (AS 29.08.020) rather than a home rule municipality (AS 29.08.010), it is clear that a general law municipality does not have any greater powers than a home rule borough, and in general its powers are less. In the absence of a valid delegation of authority by the Legislature to general law municipalities to alter the mandatory effect of AS 29.23.310 that "all board members are elected at large", then, such a municipality may not, whether by assembly action or local referendum, enact an ordinance changing that requirement. Because the scheme of repealed AS 29.23.100 violates the federal constitution and, impliedly, the state's constitution, it is not a valid delegation of authority by the Legislature to general law municipalities to alter the mandatory effect of AS 29.23.310. Until the Legislature acts validly to delegate its authority over the composition of and the representation on borough school boards, election of school board members must be at large within the borough.

Sincerely,

NORMAN C. GORSUCH
ATTORNEY GENERAL

Re: HB 109

Dear Mr. Parr:

I am writing on behalf of the Anchorage School Board to express our support for HB 109.

It is our understanding that this bill is intended to clarify the relationship between school boards and municipal assemblies by establishing that all implied powers relating to public education are reserved for the school board rather than for the assembly. We believe that this concept is sound. We are aware that our Constitution has established education as a statewide function and responsibility (see Article VII, Section 1). We are also aware that the school boards act as the legislature's agent in carrying out these responsibilities. The proposed bill would avoid any confusion which may currently exist in establishing the line of authority and responsibility.

Our support of the concept of this bill must be tempered by two concerns. First, we fear that the bill as currently drafted may be viewed as limiting all implied governmental powers regarding education rather than as allocating those powers to the school boards. We would suggest that the bill be redrafted to more clearly indicate its actual intent since it would be impossible to carry out public educational programs in this state without all the power and authority which is reasonably implied from those powers specifically enumerated in Title 14 and Title 29. Should you desire, we would be willing to prepare for your consideration a proposed redraft which would more clearly indicate the true intent of this proposal.

Our second concern is that our support of this bill not be viewed as a slap at the Municipality of Anchorage. We feel that the school district and the municipal government in Anchorage currently enjoy a very good working relationship. Unfortunately, however, this situation does not exist in a number of other jurisdictions in the state, nor has it always existed here. Thus, our support at this time arises from the soundness of the concept and our concern for other school boards in the state and not from any difficulty which this board is currently experiencing.

Sincerely,

Vincent H. Casey

HOUSE BILL NO. 109

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the relationship between the borough school district and the borough."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

Section 1. A.S. 29.33.050 is amended to read:

Section 29.33.050. Education (a) Each borough constitutes a borough school district and establishes, maintains, and operates a system of publi schools on an area-wide basis as provided in A.S. 14.14.060. The borough school board has all necessary and implied powers to establish, maintain and operate the system of public schools, except those powers which are specifically reserved by statutes to the borough assembly.

(b) A military reservation with an organized borough is not part of the borough school district until the military mission is terminated or until inclusion in the borough school district is approved by the Department of Education. However, operation of the military reservation schools by the borough school district may be required by the Department of Education under A.S. 14.14.110. If the military mission of a military reservation terminates or continued management and control by the state operated schools is disapproved by the Department of Education, operation, management and control of schools on military reservations transfers to the borough school district in which the military reservation is located.

HB
152

POSITION PAPER / Department of Health and Social Servic

HOUSE BILL 152

"An Act relating to a mental health advisory council; and providing for an effective date."

We endorse this legislation and believe that it is required to meet the mandated council requirements of Public Law 94-63. Public Law 94-63 results in $700,000 in federal funding for the community mental health programs in Anchorage, Kodiak, and Ketchikan and has the potential for federal funding of community mental health programs in Juneau and Fairbanks in the next few years.

The legislation also guarantees adequate mental health representation on the State Health Coordinating Council established by Public Law 93-641. Under the present guidelines of selection of State Health Coordinating Council membership, the general membership of the State Health Coordinating Council would not meet the requirements of Public Law 94-63.

Aside from statutorily providing a funding base for this council, this legislation is also important to provide the necessary citizen manpower and energy to provide a check and balance on the development of mental health programs in this state. They now have advisory input into the community mental health services granting process which would be less meaningful if they were not statutorily designated. They also input into the state plan, state regulations and are actively involved in providing input into a revised mental health statute, a task that is made urgent by the present cloud of unconstitutionality overhanging those statutes.

The Division of Mental Health and Developmental Disabilities respects and values this council's advice and believes its services are well worth the investment. Although we are concerned about the proliferation of councils, this council will serve multiple purposes and, consequently, avoids duplication and in that sense is cost efficient.

MENTAL HEALTH ADVISORY COUNCIL

RESOLUTION

76 34: 11/21/76

Be it resolved that the Mental Health Advisory Council requests the Commissioner of Health and Social Services to initiate a study of forms currently in use, particularly those distributed in the bush or to citizens outside the State Government. The Council recommends that the Department establish a procedure for the review and revision of such forms on a regular periodic basis together with a program seeking out and encouraging comment and criticism of governmental forms by State employees and citizen consumers with respect to the following points:

1. The Simplification and legibility of such forms.

2. The elimination of needless duplication.

3. Translation into native dialects and major foreign languages utilized in Alaska.

4. Training of personnel to assist citizens in filling out the forms.

5. Clarification and shortening the format.

6. Standardization of forms for use by multiple agencies.

7. The protection of the citizen's right to privacy.

8. Obtaining local input for the consideration of local factors.

HB 152

February 1, 1977

The Honorable Hugh Malone
Speaker of the House
Alaska State Legislature
Juneau, Alaska 99811

Dear Mr. Speaker:

Under the authority of art. III, sec. 18 of the Alaska Constitution, and in accordance with AS 24.30.060(b) and the Uniform Rules of the Alaska State Legislature, I am transmitting a bill which creates a new Mental Health Advisory Council. The former council, created in 1975 (see AS 47.30.605), was to exist only until the Statewide Health Coordinating Council (SHCC) was created. Sec. 2, ch. 121 SLA 1975. The SHCC was created by sec. 2, ch. 275 SLA 1976, effective September 27, 1976, and was to assume the responsibilities of the Mental Health Advisory Council set out in AS 47.30.-605(b), among others.

The state is currently receiving some $700,000 in federal funds for mental health services under the Community Mental Health Centers Act, P.L. 94-63. The federal act requires that the state plan designate a state mental health advisory council. P.L. 94-63 and the implementing guidelines of the U.S. Department of Health, Education, and Welfare require that the state advisory council be composed of certain classes of persons involved in the mental health area.

For example, the council is to consist of representatives of nongovernmental organizations, state agencies concerned with mental health, and both consumers and providers of mental health services. A majority but not more that 60% of the members must be nonproviders of mental health services and not less than 40% must be providers of direct and indirect mental health services. The council's composition must reflect the

social, economic, linguistic, racial, ethnic and geographic composition of the state. The consumer members must include persons who have been users of public mental hospitals or community mental health centers as well as representatives of patient organizations and advocacy groups in the mental health area. A public process for selecting members should be used to the extent possible.

The Statewide Health Coordinating Council cannot meet these compositional requirements if it is to serve its purpose as a comprehensive health planning body. It appears, therefore, that a state mental health advisory body must exist to meet the requirements of P.L. 94-63 as long as the state is receiving federal funds under the Act.

The Division of Mental Health wishes to recreate the council by statute since it believes that funding for members' expenses would be difficult to obtain otherwise. To accomplish this, AS 47.30.605 is repealed and re-enacted, with the new subsections (a), (c), and (d) reading essentially as they did before their repeal at the time the Statewide Health Coordinating Council was created by ch. 275 SLA 1976. Subsection (b) of sec. 605, which was not repealed when the SHCC was created, continues the council's functions as they are currently set out in sec. 605 except that: 1) institutional mental health services as well as community services are specifically included in its area of concern; and 2) the council is designated as a subcommittee of the Statewide Health Coordinating Council to represent the mental health area. These additional functions would not affect the council's compliance with requirements under P.L. 94-63.

Sincerely,

Jay S. Hammond
Governor

MENTAL HEALTH ADVISORY COUNCIL

RESOLUTION

76-24 Proposed Legislation.

The Alaska State Community Mental Health Advisory Council urges the enactment of the following legislation by the State of Alaska:

AN ACT AMENDING THE COMMUNITY MENTAL HEALTH SERVICES ACT

Section 1. Section 2, Ch 121 SLA 1975 is repealed.

Section 2. AS 47.30.605 is amended to read as follows:

Mental Health Advisory Council. (a) There shall be a Mental Health Advisory Council appointed by the Governor to advise and assist the department in initiating and implementing mental health services. The council consists of twelve appointed voting members who are interested and knowle able in mental health. No more than four members should be providers of direct mental health services.

(b) The council shall

(1) advise the division on the state mental health plans before implementation of these plans.

(2) periodically review all mental health services in the state, reports of which shall be prepared and submitted to the governor, the legislature, the department, and the Statewide Health Coordinating Council;

(3) conduct independent investigations and studies as may be necessary;

(4) recommend rules, regulations and standards and legislation for the administration of community and mental health centers and institutional mental health services;

(5) encourage coordination of community mental health services on a regional basis with each other and with institutional mental health care to insure nonduplication, nonfragmentation and efficiency.

(6) act as a subcommittee of the Statewide Health Coordinating Council in the area of mental health to assist that Council in meeting its responsibilities under federal and state law.

(c) The council shall meet at the call of the chairman, but shall meet at least once quarterly.

(d) Members of the council are not entitled to a salary, but are entitled to per diem, reimbursement for travel, and other expenses authorized by law for other boards (1 Ch 121 SLA 1975).

The Chairman is directly to contact the governor, commissioner of health and social services, and members of the legislature pursuant to this Resolution.

Max F. Gruenberg, Jr.
Chairman
Mental Health Advisory Council

HB

183

Marshall Lind

Board members are from:

Rome, Cochabamba, Sofia, 2 from Dandenong, Victoria, Fairbanks, Cordova

MOST of the members did not have strong objections, or opinions on changing the membership from 7 to 9.

However, there was a great deal of concern for the section dealing with the 2 Regional

Reasons

1. Further fragment the area
2. PSA comprises about 1/9 of the students. This would give 1/3 the representation to PSA
3. One coming from each federal district already provides for rural representation

Language in 2a and considered

to represent all distants would

or could be a language change

Katherine Hensley

HB 1083

That would be an unusual proportion (of board members) to that area of the state.

In view of the costs, and Gov. austerity program I don't see a real need to add another member right now.

"It would be out of proportion" with only 7000 students in the RSA's

I don't think we need to further polarize the state. I could see legislation would would require one person to be from a rural (small community) area (Currently there is none.)

Dear Steve:

Several people have come to me about a concern regarding the University of Alaska problem. They thought that the University was under some control of the State Board of Education. I told them it is Bd. of Regents. The concern is this:
Why was Max Hullinger removed from his job and allowed to stay on as an assistant to the new Vice Pres. for finance? And why is Hiatt being allowed to remain as a special consultant to the Board of Regents? According to these people, the citizens of the State are secretly being "taken". The allegation is that Pres. Hiatt not too long ago made the statement that the only reason he accepted the U. of A. job was because of the retirement benefits after 5 years. I'm told that by allowing Hiatt to remain until June of 1978 he can retire at $20,000/year for life. Is this true? If so, shouldn't the people of the State be made aware of it? Is this why Hullinger is still on the payroll too?
The circumstantial evidence seems to be: Why would anyone want to come in as the new president while the old one is still employed, of all things, as a consultant to the Board of Regents - - the boss of the president.
On another matter - - H.B. 183 to enlarge the State Bd. of Education from 7 to 9 members and with three of the nine to be from the REAA's is a very poor bill. Our State Board of Education meets in Juneau March 24 - 25. Hopefully this bill will NOT be acted on before we can testify to the House and Senate HESS committees. I will plan to appear at your noon luncheon on Friday to speak to the bill if there is serious consideration being given to it.

Sincerely,

Darwin Heino

GEORGE M. SULLIVAN, MAYOR

MUNICIPAL HEALTH COMMISSION

March 24, 1978

Charles Parr, Chairman
House Health, Education &
Social Services Committee
Pouch V
Juneau, Alaska 99811

Dear Mr. Parr:

The Municipal Health Commission has reviewed and made a recommendation on HB 206 that is presently in your committee.

The Municipal Health Commission is a 33 member, community based group of concerned citizens. The Commission reviews community health issues, grants, problems, and legislation and makes recommendations to the Municipal, State and Federal governments and legislative bodies, the general public, and the Regional Health Systems Agency. The Commission membership must meet rigid legal requirements that assure broad demographic and occupational representation as well as a consumer majority.

Attached is the review and recommendation on HB 206 as approved by the Municipal Health Commission on March 22, 1978. We hope that your committee will consider our review and recommendation before making a decision on this bill.

Thank you very much.

Sincerely,

Gari Andreini, Chairman
Municipal Health Commission

Attachment

March 22, 1978

LEGISLATIVE REVIEW & RECOMMENDATIONS OF THE MUNICIPAL HEALTH COMMISSION

1. BILL NUMBER AND TOPIC: HB 206 Public Health Services in Municipalities.

2. WHAT IS THE CURRENT STATUS OF THE BILL? Presently in House Committee on Health, Education and Social Services. WHAT IS THE TIME FRAME FOR INFLUENCING THE BILL'S OUTCOME BY THE COMMITTEE OR COMMISSION? This legislative session.

3. WHAT DOES THE BILL DO? Provide a mechanism for organized Municipalities and Boroughs to obtain health powers from the State.

4. WHOM DOES IT AFFECT? Residents of an organized Borough or Municipality within the State of Alaska.

5. HOW MUCH DOES IT COST? Unable to determine.

6. IS IT DIRECTED TO A SPECIFIC GEOGRAPHICAL AREA? Yes. WHERE? Organized Boroughs and Municipalities with the State.

7. IS IT DIRECTED TO A SPECIFIC GROUP? No.

8. WHAT ARE ITS STRENGTHS? Guarantees State funding for health programs provided by the Municipality, and streamlines accountability.

9. WHAT ARE ITS DRAWBACKS, WEAKNESSES? 1) The level of funding appears ambiguous implying that it is on either a decreasing formula of 10% a year or static from the time Health Powers are granted. 2) It is hoped that the legislative intent would be that the Municipality or Borough be responsible and accountable for the comprehensive health programs. In addition, by making the Municipality or Borough responsible and accountable for health programs, the State should deal only with these governing units and not with any of their specific sub-contractors.

10. IS THE IDEA NEW? No. ARE THERE ANY PRECEDENTS? No.

11. HOW WOULD THIS BILL AFFECT THE ANCHORAGE HEALTH SERVICES PLAN? Would strengthen the Anchorage Health Services Plan by allowing implementation at the local level.

12. WHAT IS THE COMMITTEE'S RECOMMENDATION? The committee recommends conditional approval based on the following:

    1. That the ambiguous wording on funding levels Section 18.10 031 Grants (a)(1) be changed to reflect static or increasing funding levels.

    2. That the legislative intent be that Municipalities or Boroughs be responsible and accountable for the comprehensive health programs, and that the State deal only with these local governmental units, and not with their sub-contractors.

Re: House Bills 206 and 207

Dear Sir,

The Bush Medicine Committee of the Alaska State Medical Association at a recent meeting has evaluated pending House bills 206 and 207 relating to public health services in minicipalities and unorganized boroughs. After due consideration of many factors pertaining to these bills, we would like to go on record as supporting passage of House bill 206 authorizing ninety percent funding for municipalities in providing their own public health services, and would like to register our nonsupport of House bill 207 related to local public health service administration in unorganized boroughs. We feel that the quality of medical care in unorganized boroughs would diminish with passage of this bill; the record of excellence established by State agencies seems unsurpassable, and any changes in the current status with regard to bush preventive medicine measures seems only likely to reduce the level of service provided to residents of these areas. Municipalities, however, seem more capable of providing both funding and local expertise, and we would, therefore, urge passage of House bill 206 which allows this to transpire.

We hope you will carefully consider our recommendations when evaluating testimony regarding passage of these bills.

Sincerely,

Richard F. Buchanan, M.D.

DEPARTMENT OF HEALTH & SOCIAL SERVICES

SUPPORTIVE INFORMATION SHEET

HB 206 - Public Health Services in Municipalities
HB 207 - Contracts for Local Health Services

1. WHAT IS THE PURPOSE OF THE LEGISLATION?

   This legislation permits the orderly delegation of authority and responsibility of specific public health functions from the Department of Health & Social Services, to local public health districts or municipalities voluntarily requesting the responsibility.

2. IS THIS LEGISLATION AN ATTEMPT TO DECENTRALIZE SPECIFIC PUBLIC HEALTH FUNCTIONS THAT ARE NOW IN EXISTENCE OR TO PROVIDE A MEANS TO DECENTRALIZE FUTURE PUBLIC HEALTH FUNCTIONS?

   The purpose is to decentralize both present and future public health functions handled by the department. It is in direct response to the increased consumer interest and the wish of local communities to become more involved in public health programs and decisions which affect their local public health care.

3. ARE THE RESPONSIBILITIES OF THE PUBLIC LAW 93-641 HEALTH SYSTEMS AGENCIES THE SAME AS THOSE FOR THE HEALTH DISTRICTS CREATED UNDER THIS ACT?

   Health Systems Agencies have a responsibility for health planning, resource development, and for review of plans submitted by the health districts. They are not responsible for the implementation and delivery of public health services.

   The local public health service area boards have the overall responsibility for the delivery of public health services. This also includes determining the need, developing a plan for submission to the health systems agency and overseeing the implementation of the public health service area plan.

4. WHAT IS THE MEANING OF THE TERM BASIC PUBLIC HEALTH SERVICES?

   Basic public health services refer to the basic elements (public health nursing and environmental health) which fulfill the minimum requirements of preventive public health services, which may be carried out at the local level.

MUNICIPALITY OF ANCHORAGE

March 9, 1977

TESTIMONY PRESENTED BY ROBERT A. "BERT" HALL BEFORE THE HESS COMMITTEE OF THE HOUSE OF REPRESENTATIVES.

Mr. Chairman, members of the House HESS Committee, my name is Bert Hall; I am the Director of the Department of Health and Environmental Protection for the Municipality of Anchorage.

We have been studying very carefully House Bills 206 and 207 and have accomplished some analysis of the potential impacts, both positive and negative, of that legislation upon the Municipality. Our prime concern is obviously with H.B. 206 since, by definition, we would be excluded from consideration under H.B. 207.

The testimony we offer today, especially any statistics, are intended to be preliminary in nature with dollar figures used only for illustrative purposes. We are attempting to document some accurate reflection of the history of our past experiences in joint funding public health services in the Anchorage area.

Let me begin by stating that we believe that there needs to be established a formal and equitable system for the orderly delegation of state authority to municipalities and for the authorization of grants to local governments to assist in providing public health services. We agree with the stated purpose - to provide and safeguard the health of the general public. However, if our understanding of the system suggested in H.B. 206 as it would apply to the Municipality of Anchorage is accurate, then we have some real problems endorsing the legislation without amendment.

Since the Municipality of Anchorage has the only history of joint governmental funding of public health services in Alaska, perhaps it would be helpful to review briefly our past experiences.

As early as 1926 the City of Anchorage employed a sanitarian and a nurse to look after some of the health and sanitation problems for the community. Over the years various combinations of efforts by the city and adjacent utility districts with assistance from the Territory and the State have maintained an agency to provide public health services.

For about ten years the Greater Anchorage Area Borough Health Department operated as a district agency serving Anchorage and the metropolitan area technically under State authority, and financed by a combination of local, State and Federal funds. A succession of health officers brought variations in emphasis, but for the most part the services included general sanitation and public health nursing.

The assumption of health powers by the Borough in 1964 brought no significant changes in services for several years, though steadily the local agency grew in experience and assumed many responsibilities once carried almost wholly by the State. Even yet the Department lacks some of the most important services such as: Laboratory, Child Guidance, Nutrition and Health Education. Of these only laboratory services are available through the Southcentral Regional Laboratory operated by the State Department of Health and Social Services.

The Department of Health and Environmental Protection's responsibilities include the full scope of health powers, including environmental, since no other official agency of local government has such powers assigned.

"The scope of health is considered to be a state of complete physical, mental and social well being, and not merely the absence of disease or infirmity". This definition has been adopted by the World Health Organization, the American Public Health Association, The Alaska Public Health Association, and by most official health agencies throughout the Country. The practical boundaries of health functions assumed by Federal, State and local official and voluntary agencies are more often defined by limits of resources and recognized needs than by definition of public health which states that "public health includes those services and functions which the people can better provide for themselves collectively rather than as individuals". This definition also implies that as needs change services change to meet them.

As noted above the Department of Health Environmental Protection has grown and has assumed many of the State's public health responsibilities. In recognition of the assumption of these State responsibilities the State gave the Department in fiscal year 1970-71 the amount of $265,000. Included in this amount was $125,000 for Alaska Crippled Children's Association and Alaska Retarded Citizen's Association thus leaving $140,000 for public health services. The $125,000 for ACCA and ARCA was for the provision of

exceptional children's programs. The $140,000 was for the provision of communicable disease control, vital statistics collection, environmental sanitation, health education, promotion of individual health and collection and preparation of laboratory samples.

We, the local health authority were expected to accomplish many specific tasks, including the following:

We would provide immunizations for all citizens without charge,
We would perform chest x-rays,
We would provide diagnostic consultation for TB and for venereal diseases,
We would accomplish epidemiological investigations where appropriate.

In the environmental health area;

We would inspect public facilities: eating and drinking establishments, grocery stores, bakeries, etc.; housing and mobile home communities, schools, hospitals, nursing homes, swimming pools, etc.
We would respond to complaints and public nuisances,
We would deal with most matters of pollution, especially water and sewer.

To promote individual health;

We would provide for visits of the Public Health Nurse in the home,
We would conduct family planning clinics,
We would conduct classes for expectant parents and run well child clinics,
We would provide consultation to child care centers.

Additionally, we would provide certain limited laboratory services, and the services of the physician.

All of these and many more would be provided in the basis of total health needs.

When the first contract was signed in 1970, it was agreed that the State support would allow for the provision by the Municipality of a proportionally greater amount of services than would have been provided if no contract or grant existed.

It should be pointed out that there was little rhyme nor reason regarding the dollar amount included. The contract instead was a document intended to legally transfer the line item budget amount.

For the next fiscal year, 1971-72, the contract was renegotiated to a total amount of $500,000, $140,000 was earmarked for ACCA and ARCA, the exceptional children's programs... $100,000 was dedicated to environmental health and $260,000 to public health. The total amount budgeted for these services by the Municipality for that period was $1,391,000. The State's share of that budget was therefore, 25.9%. It is my belief that that contract was the first sincere attempt to share reasonable costs.

I have studied all of the contracts since 1971. All are basically the same; all use the same words, all have the same conditions, all have the same scope - and unfortunately all have the same dollar amount.

Meanwhile, the population of Anchorage has grown about 50%, services have been expanded to meet the recognized needs; inflation has eaten away at the purchasing power or service delivery capability of the $360,000 we received from the State for the provision of the public health services described above.

Attached is a graph which illustrates the growth of the true costs and shows also the level of State support.

The true cost of delivering public health services in Anchorage for the present year is $2,930.170. The Municipality is receiving $335,430 in other revenue. The State is still contributing $360,000 which means that its share is now only 13.9%. If the 1971-72 proportion of State investment was interpolated to today's budget then the State would be paying $754,000 for its share of public health services and a total of $894,000, recognizing that the $140,000 was legislatively intended for passthrough projects.

House Bill 206 provides under Section 18.10.031(1) for a grant to a Municipality in an amount equal to 90% of the State budget for public health services furnished by a Municipality in that fiscal year; the same level of basic grant support shall be provided in subsequent fiscal years. In order to get this grant the Municipality must only agree to maintain the same level of public health services as furnished by the Department in the fiscal year preceding application for the grant. There is also a hold harmless clause which we cannot interpret.

Under House Bill 206, will the State be willing to go 90% of the true cost of delivering public health services in Anchorage or is it the intent of the State to continue paying the Municipality $360,000 as provided under Section 18.10.031(d)? Herein lies our major problem with the legislation.

Up until this time the Municipality of Anchorage has provided the public health services in the Anchorage area which are the historic delegated responsibility of the State. The State, through House Bill 206 would contract with local governments and under H.B. 207 create health entities to contract with where no local government exists for the delivery of public health services. In other areas of the State the local residents will only have to pay 10% of the true cost of the delivery of public health services; H.B. 207 provides that where local governments do not exist federal monies can be used to match the State contribution.

Today in Anchorage, the local taxpayers directly pay for 86.1% of the cost of providing public health services as well as their share of State taxes. The people in other communities are not directly paying for any public health services.

In essence, we are questioning whether or not the base figure which would be used to calculate a 90% support for 1980, and would be reflected in all future years, bears any relationship to the true costs as would be the case elsewhere in the State.

Another major concern is the potential disincentive that may be built into the Bill. If a local government knew that it would get 50% support for a new program a few years down the road, why expand services for less support? Someone might even conclude that local autonomy might not be worth spending 85%-90% of the costs with local funds when the basic services could be provided by the State at 100% support if no agreement existed.

A final concern relates to the lack of a clear mechanism for providing for State support of any dramatic increase in needs which comes into being with little warning. In a similar vein, there appears to be no opportunity for passing along any major availability of new health dollars that may come to the State from one source or another.

Thank you.

IN THE HOUSE

BY THE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

HOUSE BILL NO. 206

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to public health services in municipalities; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 18.10 is amended by adding new sections to read:

CHAPTER 10. LOCAL PUBLIC HEALTH SERVICES [UNITS AND DISTRICTS].

ARTICLE 1. MUNICIPALITIES.

Sec. 18.10.011. PURPOSE. The purpose of secs. 11 - 71 of this chapter is to promote and safeguard the health of the general public by orderly delegation of state authority to municipalities and authorizing of grants for comprehensive public health services to local governments.

Sec. 18.10.021. ELIGIBLE MUNICIPALITIES. (a) The following municipalities are eligible for the transfer of responsibility and the receipt of financial grants under secs. 11 - 71 of this chapter:

(1) cities which are within an organized borough and have public health powers;

(2) unified municipalities established under AS 29.68.240 - 29.68.440, in the municipal area in which public health powers are authorized, whether area-wide or in less than the entire area of the municipality;

(3) organized boroughs, in the borough area in which public health powers are authorized, whether areawide or in the borough area outside cities only or in a service area established for public health

Pub Health nursing
sanitation

purposes under AS 29.63.090 or by home rule charter.

(b) Nothing in secs. 11 - 71 of this chapter otherwise restricts or prohibits the combining of two or more municipalities as a single entity for the purposes of secs. 11 - 71 of this chapter, upon mutual agreement for cooperative or joint administration of functions.

Sec. 18.10.031. GRANTS. (a) The commissioner may make grants to the governing bodies of municipalities designated in sec. 21 of this chapter to assist in paying costs of provision of comprehensive public health services under a plan of service as required by regulations adopted under sec. 61 of this chapter. Application for a grant must be submitted, no later than April 1 preceding the fiscal year for which the grant is sought, in the form and with information which the department by regulation prescribes. The grant has two elements:

(1) if the municipality agrees to maintain the same level of public health services as furnished by the department in the fiscal year preceding application, the department shall provide an initial grant to the municipality in an amount equal to 90 per cent of the state budget for public health services furnished in the municipality in that fiscal year; the same level of basic grant support shall be provided in subsequent fiscal years;

$ 1,3 M - Amch

(2) in addition to grant money under (1) of this subsection, if the municipality expands public health services or initiates new programs beyond those provided in the fiscal year preceding application, and they are included in the approved health services plan, the department shall provide 50 per cent of the cost of the additional services or programs to the extent permitted by funds appropriated for that purpose.

(b) A grant is authorized under this section only if

(1) application is made on a state fiscal-year basis and

has been approved by the appropriate health systems agency, and

(A) the governing body of the municipality has submitted to the commissioner a plan for the provision of comprehensive health services and has had the plan initially approved by him; or

(B) in those cases in which a plan of services has been initially approved, the commissioner upon his annual review of the plan determines that it and the activities undertaken under it continue to meet requirements established for these plans;

(2) the governing body of the municipality agrees to maintain local operating expenditures for public health services at a level at least equal to the level of support as of July 1, 1977; a municipality must, as a minimum condition of compliance with secs. 11 - 71 of this chapter, assume responsibility for maintenance of the local health center within the municipality;

(3) the governing body matches with revenue or in-kind contributions which are not derived from state or federal sources, except under the provisions of AS 43.18.010,

(A) 10 per cent of the amount necessary to maintain the level of public health services provided by the department in the fiscal year preceding application;

(B) 50 per cent of the cost of the services or programs additional to those provided in the fiscal year preceding application;

(4) the commissioner determines that public health services proposed under the plan cannot be provided more efficiently through a single entity combining with one or more entities as provided in sec. 21(b) of this chapter.

(c) The department shall establish by regulation, a method, consistent with state accounting procedures, for determining the value of contributions made in kind by municipalities.

(d) Nothing in secs. 11 - 71 of this chapter redu e grants provided to municipalities to which responsibility for h . th services have been transferred before the effective date of this Act.

Sec. 18.10.041. EXPENDITURE OF FUNDS. Funds received by a municipality under secs. 11 - 71 of this chapter shall be expended only for the purpose described in the plan of service which has been approved by the commissioner.

Sec. 18.10.051. PRORATION. If amounts appropriated by the legislature are insufficient to meet the costs of matching grants calculated under secs. 11 - 71 of this chapter, the amount available shall be allocated pro rata among eligible municipalities.

Sec. 18.10.061. REGULATIONS. The commissioner shall adopt regulations necessary to implement secs. 11 - 71 of this chapter, covering such subjects as

(1) requirements for the development of a plan of service by a municipality;

(2) minimal standards of service;

(3) procedures for the application, revision, and approval of grants to municipalities, which include a detailed allocation formula;

(4) municipal health program evaluation;

(5) qualifications of health personnel.

Sec. 18.10.071. DEFINITIONS. In secs. 11 - 71 of this chapter

(1) "commissioner" means the commissioner of the Department of Health and Social Services;

(2) "department" means the Department of Health and Social

Services;

(3) "health systems agency" means an entity organized and operated in accordance with sec. 1521(b) of the Public Health Service Act (which section was added by P.L. 93-641), and engaging in health planning and development functions in a specified health service area of the state;

(4) "local health center" means a facility containing one or more offices, examining rooms, and clinic space for health programs.

* Sec. 2. AS 18.05.040(a)(4), AS 18.10.010 - 18.10.050, and 18.10.260 - (b) are repealed.

* Sec. 3. AS 18.10.031 in sec. 1 of this Act takes effect on July 1, 1980. The remainder of this Act takes effect immediately in accordance with AS 01.10.070(c).

DEPARTMENT OF HEALTH & SOCIAL SERVICES

SUPPORTIVE INFORMATION SHEET

HB 206 - Public Health Services in Municipalities
HB 207 - Contracts for Local Health Services

1. WHAT IS THE PURPOSE OF THE LEGISLATION?
   This legislation permits the orderly delegation of authority and responsibility of specific public health functions from the Department of Health & Social Services, to local public health districts or municipalities voluntarily requesting the responsibility.

2. IS THIS LEGISLATION AN ATTEMPT TO DECENTRALIZE SPECIFIC PUBLIC HEALTH FUNCTIONS THAT ARE NOW IN EXISTENCE OR TO PROVIDE A MEANS TO DECENTRALIZE FUTURE PUBLIC HEALTH FUNCTIONS?
   The purpose is to decentralize both present and future public health functions handled by the department. It is in direct response to the increased consumer interest and the wish of local communities to become more involved in public health programs and decisions which affect their local public health care.

3. ARE THE RESPONSIBILITIES OF THE PUBLIC LAW 93-641 HEALTH SYSTEMS AGENCIES THE SAME AS THOSE FOR THE HEALTH DISTRICTS CREATED UNDER THIS ACT?
   Health Systems Agencies have a responsibility for health planning, resource development, and for review of plans submitted by the health districts. They are not responsible for the implementation and delivery of public health services.

   The local public health service area boards have the overall responsibility for the delivery of public health services. This also includes determining the need, developing a plan for submission to the health systems agency and overseeing the implementation of the public health service area plan.

4. WHAT IS THE MEANING OF THE TERM SELECTED PUBLIC HEALTH SERVICES?
   Selected public health functions refer to the basic elements (public health nursing and environmental health) which fulfill the minimum requirements of preventive public health services, which may be carried out at the local level.

5. WHAT IS THE MEANING OF THE TERM COMPREHENSIVE PUBLIC HEALTH SERVICES? (HB 206)

   Comprehensive public health services are those services which complement, support, and extend beyond the basic elements to meet the health needs in a municipality.

6. IS THE TERM PUBLIC HEALTH SERVICES LIMITED TO PUBLIC HEALTH NURSING AND SANITATION?

   No, other programs under the jurisdiction of the department may be added. A major consideration is the cost effectiveness of the service when it is provided at the local level.

7. WHAT IS THE DIFFERENCE BETWEEN A PUBLIC HEALTH DISTRICT AND LOCAL HEALTH SERVICE AREA? (HB 207)

   A public health district is a general descriptive term which includes the organized boroughs, and cities without health powers and the local public health service areas.

   Local public health service areas are found in organized and unorganized boroughs and created for the purpose of assuming responsibility for specific public health functions.

8. COULD THERE BE MORE THAN ONE LOCAL PUBLIC HEALTH SERVICE AREA WITHIN A REGIONAL EDUCATIONAL SERVICE AREA? (HB 207)

   With few exceptions there will be only one local public health service area within a Regional Education Attendance Area. In some cases, two or more Regional Education Attendance Areas may combine to provide the necessary population base for a local public health service area.

9. WILL ALL PUBLIC HEALTH DISTRICTS BE REQUIRED TO ASSUME RESPONSIBILITY FOR THE PUBLIC HEALTH SERVICES IN THEIR AREA? (HB 207)

   No. Where the health district does not exercise it's option to assume it's public health responsibility, the state will continue to provide the basic public health services as in the past.

10. WILL A PUBLIC HEALTH DISTRICT HAVE THE OPTION TO REQUEST A CONTRACT FOR ONLY CERTAIN SELECTED PUBLIC HEALTH SERVICES? (HB 207)

    Yes. The intent of the legislation is for each public health district to provide all aspects of specified core services. However, based upon a review of the health needs of the area, a service may be dropped but not certain aspects of a service.

11. WHY WERE THE REGIONAL EDUCATIONAL ATTENDANCE AREAS SELECTED AS THE BOUNDARIES FOR LOCAL PUBLIC HEALTH SERVICE AREAS? (HB 207)

    AS 29.03.020, covering Service Areas in the unorganized borough, stipulates that new service areas may not be established if there are existing service areas that can be utilized. In keeping with this statutory mandate, the Regional Educational Attendance Areas created under AS 14.08.031, (a), (b) were utilized.

12. WHAT IS THE RELATIONSHIP BETWEEN THE PUBLIC LAW 93-641 HEALTH SERVICE AREA BOUNDARIES AND THE LOCAL PUBLIC HEALTH SERVICE AREA BOUNDARIES? (HB 207)

    The boundary of a local public health service area, or the boundaries of a combination of more than one local public health service area, will generally conform to the Health Service Area boundaries.

13. WHAT IS THE RELATIONSHIP BETWEEN THE NATIVE HEALTH CORPORATION BOUNDARIES AND THE LOCAL HEALTH SERVICE AREA BOUNDARIES? (HB 207)

    The boundary of a local public health service area, or the boundaries of a combination of more than one local public health service area, will generally conform to the native health corporation boundaries.

14. WHY HAS THE MINIMUM POPULATION FIGURE OF 6,000 BEEN SET AS REQUIREMENT FOR EACH LOCAL PUBLIC HEALTH SERVICE AREA? (HB 207)

    Experience nation-wide has found a minimum of 50,000 population was required to ensure cost effectiveness in rendering basic public health services to a geographic area. In Alaska 6,000 seemed more appropriate because of the distances involved and travel requirements needed to serve the vast, sparsely populated areas.

15. WHY DOES THE LEGISLATION ONLY INCLUDE PROVISIONS FOR THE DEVELOPMENT OF LOCAL PUBLIC HEALTH SERVICE AREA BOARDS IN THE UNORGANIZED BOROUGHS? (HB 207)

    The legislation is concerned with the development of local public health service area boards in unorganized boroughs because the organized boroughs, municipalities, and cities already have duly elected governing bodies to handle the assumption of health powers.

16. WHY IS AN ELECTED BOARD REQUIRED, WOULD NOT AN APPOINTED BOARD SUFFICE?

    Only elected boards can represent the wishes of the people of an area; also only an elected board can enforce the health regulations as delegated by the state.

17. WILL THE ELECTION OF BOARD MEMBERS BE HELD DURING REGULAR STATE ELECTIONS?

    Yes. Except for the first election of board members, which will be held not less than 60 days or more than 90 days after the establishment of local public health service areas, board members shall be elected annually the first Tuesday of October with the election of local school board officials.

18. WHY IS THERE NEED TO INCLUDE PROVISIONS FOR BOTH GRANTS (HB 206) AND CONTRACTS (HB 207) IN THE LEGISLATION?

    Grants may be given only for comprehensive public health services to municipalities, who have governing boards composed of duly elected government officials. Contracts are given for specific public health services to a governing body of a public health district, who then may sub-contract with a private health corporation.

19. MAY THE 10% MINIMUM MATCHING FUNDS REQUIRED OF HEALTH DISTRICTS BE IN "IN KIND SERVICE"? (HB 207)

Yes.

20. HOW WILL SERVICES BE PROVIDED TO PUBLIC HEALTH DISTRICTS THAT DO NOT QUALIFY FOR GRANTS OR CONTRACTS?

The state will continue to provide direct basic public health services to all areas not assuming local public health responsibilities.

21. WHY IS IT NECESSARY FOR THE STATE TO IMPOSE A SET OF REGULATIONS AND STANDARDS WHEN PUBLIC HEALTH SERVICES ARE DECENTRALIZED?

The intent of the legislation is to provide a means for the decentralization of core public health services. The regulations are for the establishment of guidelines and requirements for the operation of these public health services and for the enforcement of delegated statutory public health powers. The standards are needed to set the minimum requirements for personnel, accounting procedures, fiscal matters, performance and accountability.

22. WILL THE REGULATIONS CREATE STANDARDS AND REQUIREMENTS BEYOND THOSE PRESENTLY REQUIRED FOR STATE RUN PROGRAMS?

No. The regulations will not be more restrictive than present standards and requirements now being followed by the Department of Health & Social Services. Public health districts may choose to develop regulations which are more but not less stringent than state regulations.

LEGISLATIVE RECOMMENDATIONS
OF THE
CITIZEN'S PARTICIPATION CONFERENCE

February 23-24, 1977

Juneau, Alaska

SOCIAL SERVICE DELIVERY

High Priority

SB 54 — "An act relating to adoption assistance for hard to place children in foster homes".

SB 106 — Children's Laws and related Judicial proceedings

HB 63 — Guardians of incapacitated persons

AMENDMENTS: (1) That no agent of Social Service be granted guardianship with the exception of relatives who may be employed as such.
(2) That a yearly review of guardianship be required.

Moderate Priority

HB 193 — Child Care Licensing

Other Recommendations

(1) That a state-wide investigation into foster care be initiated due to alleged incidents of child abuse.
(2) That a state resolution be passed supporting the Indian Children Act (SB 3777) in Congress.

STATEMENT OF THE CPC COMMITTEE ON HEALTH AND SOCIAL SERVICES IN REGARD TO HB 206 AND 207:

The CPC Committee on Health and Socail Services has resolved that the effective delivery of public health services is an activity of crucial importance to the health, safety and well being of all residents of Alaska. The committee also feels that the decentralization of the actual delivery of health services is a key element in accomplishing this goal and should be afforded the highest possible priority.

However, the present level of available health services thoughout the State is woefully inadequate.

Therefore, although it supports the general concept of decentralization embodied in HB 206 and 207, the Committee on Health and Social Services recommends a "Do not pass" on both bills because the statutory framework for health care delivery which they create inadequately addresses the following considerations:

1. The 90% grant provision is inadequate and would tend to inhibit the incentive of the municipalities to seek local control;

2. The 50% grant provision for new or expanded programs is also inadequate and this increased burden could not be met by many of the rural municipalities. It would consequently decrease the ability of the local community to expand or initiate needed health services;

3. There needs to be the stipulation and clarification of the type and degree of technical assistance provided for the municipalities;

4. A provision should be included to allow for the escalation of grant support in conjunction with the rise in costs;

5. HB 207 contains a 6,000 population requirement that is an unnecessary obstacle for the decentralizing of health services in districts not served by local governments, and it should be decreased.

POSITION PAPER/Department of Health and Social Service

POSITION PAPER

ON

HOUSE BILL 206

"An act relating to public health services in municipalities; and providing for an effective date."

House Bill 206 authorizes the Department of Health and Social Services to delegate State mandated public health responsibilities to eligible municipalities desiring to assume local public health delivery functions. In addition, House Bill 206 provides a grants mechanism to assist such municipalities in paying the costs of providing the public health services assumed under an approved plan of service.

House Bill 206 permits local autonomy in the operation of public health programs along standards set by the Department. As local communities develop increased sophistication in their manpower pool (medical and administrative professionals), local autonomy and control becomes desirable from a standpoint of the ability to respond to local situations and the interpretation of local problems. Nationally there is great variability in public health responsibilities with the spectrum ranging from Alaska, where Anchorage represents the only local governmental unit which has assumed full public health responsibilities through an established local health department, to a number of states where every subdivision (county) has local health authority. The purpose of this act is to permit and to economically assist municipalities in assuming this responsibility.

Several factors in Alaska encourage the adoption of a mechanism permiting the local assumption of public health activities in Alaska. The great distances in the State have encouraged geographic, population, and economic differences; giving a unique flavor and characteristic to each major metropolitan community. Increasing local concern about health issues combined with increasing population and an expanding tax base encourages both the philosophical interests and the economic feasibility of the local development of public health programs. The state has endorsed the concept of local, consumer-oriented health planning (Chapter 275, SLA 1976), it seems only logical to similarly endorse local health delivery as well.

Achieving local autonomy over public health delivery in Alaska is admittedly not an easy or automatic process. The traditionally low density population, the absence of a reliable tax base and the communication and transportation difficulties present in many Alaskan communities have made the adoption of locally sponsored health services difficult. As a result, the centralized services provided by the Department of Health and Social Services, Division of Public Health and its regional offices and field stations are relied upon almost exclusively. Recognizing that Alaska's unique characteristics often work against the effective provision of locally sponsored health services, the State is not eager to mandate the assumption of public health services by local entities. Thus House Bill 206 provides for the purely voluntary assumption of responsibility for local health services, appreciating the fact that not all communities having local health powers will wish or be able to avail themselves of this opportunity, at least immediately.

POSITION PAPER/Department of Health and Social Services

Even those communities choosing to assume responsibility for the delivery of public health services will need financial assistance. House Bill 206 recognizes the necessity for economic assistance to local municipalities who elect to assume responsibility for the delivery of public health services. The Bill establishes a grants mechanism to provide 90 per cent of the State money budgeted for local public health services conducted in the participating municipality for the fiscal year preceding application and to continue to provide this sum of money in each subsequent fiscal year. The bill also provides an incentive for participating municipalities to expand the public health services offered by providing State funds to match 50 per cent of the cost of additional services. Any decrease in services offered will be prevented by a maintenance of effort clause.

Applications for grants will be subject to the approval of the appropriate regional health systems planning agency as a precaution against the duplication or fragmentation of services. To assure that federal and state standards for comprehensive health services are maintained, House Bill 206 requires participating municipalities to follow an approved health services plan. The Department of Health and Social Services will necessarily monitor the activities conducted under this plan to assure quality, quantity continuity and comparability of services. The Department will provide technical and consultative assistance to the local entities as well. In addition, the State will continue to provide basic public health services to areas not choosing to assume local health responsibilities. The State will also continue to provide those specialized statewide services such as vital statistics, laboratory services, etc., which are not economically feasible to offer on a local basis.

House Bill 206 should be considered as companion legislation to House Bill 207, "An Act relating to contracts for local health services." As HB 206 permits the assumption of public health services by organized political subdivisions with public health powers, HB 207 authorizes contractual arrangements for selected public health services in areas of the State not served by local governments with public health powers. In any governmental activity there is a continued changing balance between the advantages of local control of the services (local responsiveness, local recruitment of personnel, local coordination) and the advantages of centralized control (decreased administrative costs, centralized administration including fiscal accounting and recruitment, and the more effective utilization of specialized personnel). These bills permit but do not mandate local assumption of these responsibilities and permit a latitude desirable, we believe, for Alaska. The enactment of both bills will provide a mechanism whereby the responsibility for providing public health services may be delegated to local entities throughout the State, thus meeting the objective of decentralizing the delivery of public health services in Alaska.

The Department of Health and Social Services endorses House Bill 206.

Recommended By: Robert H. Fraser — Robert H. Fraser, M.D. — Date: 2/23/77

the Local Public Health Services legislation has been divided equally between the two fiscal notes. Should either of these bills fail to pass, the entire administrative cost should be assigned to the bill which is enacted.

From 1980 on, this staff will continue to provide technical assistance, review grant applications for new and continuing grants, and monitor for compliance with existing laws and regulations. Since the largest and most complex area to administer will be the unorganized borough, 1/3 of the cost of administering the Local Public Health Services legislation has been assigned to this bill, and 2/3 to the Public Health Districts HB 207 beginning in FY-1980.

Assuming all municipalities and major cities will qualify, apply for, and receive grants by the initial grant year of 1980, and that they would assume both the Nursing and Environmental Health programs, the positions assigned to those communities at that time would be phased out and the staff presumably would be hired by the communities. As the grants to communities for basic public health services equivalent to existing services is to be equal to 90% of the cost of existing programs for the year preceding the initial grant, the reduction in State programs should result in a 10% surplus which would be used to provide the funds necessary to support the 50% match for the implementation of new programs.

Existing Central and Regional Nursing and Environmental Health staff will be utilized in administration and in providing technical assistance to assure program compliance and uniformity of professional stardards.

Form No. 06-5224 (4/4/75)

HB 206

February 11, 1977

The Honorable Hugh Malone
Seaker of the House
Alaska State Legislature
Juneau, Alaska 99811

Dear Mr. Speaker:

Under the authority of art. III, sec. 18 of the Alaska Constitution, and in accordance with AS 24.30.060(b) and the Uniform Rules of the Alaska State Legislature, I am transmitting a bill which would authorize the voluntary formation of public health districts in organized boroughs which do not have public health powers and in the unorganized borough, with which the state could contract for the provision of selected public health services. These districts could in turn subcontract, if they desired, with private health corporations in their areas for the actual performance.

These districts in the unorganized borough would be coterminus with the regional educational attendance areas established under AS 14.08.031, and would be administered by locally elected boards. Similar contracts could be entered into with the assemblies of organized boroughs which do not have health powers, and with cities in the unorganized borough. Contracting entities would be required to match ten per cent of the total amount of the contract with revenue or in-kind contributions.

Private health corporations, especially those in which Alaska Native people are active, are eager to perform some of the services which are now being provided by the state, and this measure is intended to further this aim, by providing a level of local administrative authority through which the contracts can be administered under the supervision of the Department of Health and Social Services.

Sincerely,

Jay S. Hammond
Governor

cc: Budget and Management

From 1980 on, this staff will continue to provide technical assistance, review grant applications for new and continuing grants, and monitor for compliance with existing laws and regulations. Since the largest and most complex area to administer will be the unorganized borough, 1/3 of the cost of administering the Local Public Health Services legislation has been assigned to the "public Health Districts" bill and 2/3 to this bill from FY 1980 on.

The first year in which contracts may be entered into will be 1980. It is assumed that all attendance areas will be represented by Public Health Districts and that all districts will qualify for contracts and assume both the Nursing and Environmental Health programs for their districts. The positions assigned to those districts would be phased out and the staff presumably would be hired by the district. These contracts will be granted at 90% of the cost of basic public health services equivalent to existing services (Public Health Nursing and Environmental Health staff costs) for the Public Health District for the year prior to the contact year. The apparent 10% savings resulting will be utilized to support the cost of transportation and per diem for the Board members

Existing Central and Regional Nursing and Environmental Health staff will be utilized in administration and in providing technical assistance to assure program compliance and uniformity of professional standards.

HB

207

MINUTES OF HOUSE HESS COMMITTEE MEETT

April 22, 1977

The meeting was called to order by Chairman Parr at 3:45 p.m. due to a late Session in the House. Present: Mr. Parr, Mr. Nakak, Mr. Phillips, Mr. Ose, Mr. Chatterton; Mr. Bennett came in late.

Absent: Cotten, Buchholdt and Beirne.

HB 206 & 207

Nakak

Chairman Parr said HB 206 & 207 would be on the agenda and Mr. Nakak spoke on the bills. Mr. Nakak said he had requested that these pieces of legislation be brought before the commitee again because of interest on a Regional level and from other sources in the State. Said he had distributed letters and a separate sheet which lists recommendations which were enclosed in letters he had received but had put them on a separate sheet so that they could be shown as recommendations separately. Said he had other letters of interest and support from other entities. Mr. Nakak went through several of the letters. Mr. Nakak said he had been actively involved in the activities going on in the N.W. territory of Alaska and if there were a Board for every activity which it required, he said a Community such as White Mountain which has about 115 to 120 people, the people of that community could serve on at least 37 Boards which have Regional impact. Said he didn't feel the creation of another Board would be necessary to provide this service. Said there is the Norton Sound Corporation which has a Board, they have gone from the area of contracting health services in the total area to management and ownership of what was the Maynard McDougal Memorial Hospital and its now called the Regional Hospital. Said he felt confident that in recognizing their capability of serving as the health service agency in the area and the direct provider of health services via operation of the hospital, that another board need not be created to service the total area. Also called attention to a letter from the Cordova Community Hospital wherein they state their opposition of duplicating the services. He said another service Norton Sound Health Service recommended to him was if there is concern with regulatory powers being given up by the Public Health Nurse, that is not an area in which the Norton Sound Health Corporation wants to take over. If the concern from the State is that they do not want to give up this police power, their recommendation is that the state retain this power and contract with the health corporation for delivery of that same service.

Peters

Mr. Peters said the State felt that in the first place this is a private corporation which has a particular function for particular members in an area. Said one of the concerns was that it would treat all of Alaskans alike. Said they are not sure in using public money whether the state has the power to contract with every private organization. Said they felt

more comfortable with one that represented all the population of a particular area.

After much discussion back and forth between Mr. Nakak, Mr. Peters and Lois Jund, from the Department of Health and Social Services, Mr. Nakak asked that he and Mr. Peters be allowed to meet and see if amendments could be made for the proposed legislation and asked the committee's consideration in holding the bills over again.

Mr. Parr then asked them to look at page 5, line 21 (HB 207) "governing body may subcontract with a private health corporation serving a public health district to carry out the services. Private health corporation may serve equally all the residents in the area presenting themselves for assistance or services? He said when you look at the definition of private health corporation, it includes but is not limited to a regional health corporation serving a geographic region established under the Alaska Native Claims Settlement Act which is the Norton Sound Corporation. He asked that this be looked into since he felt this was saying that the legislature could establish an artificial creation called a health district which is really nothing but a service area and give it the power to contract when the state istself can't contract. Also said he felt this bill (207) doesn't say anything about the powers except on page 3, line 25. Said he felt what they were saying here was the powers of the local district board would be those which the department would give it by regulations. Said he questioned whether that was authorized constitutionally because as he understood the way the bill read they were making it parallel with the service areas in the Borough and the service areas in the Borough do not have any power --the Borough Assembly has to pass an ordinance.

Both bills were held over until Mr. Nakak and Mr. Peters could go through them together and try to amend them.

HB 413

Action

Chairman Parr announced that HB 413 would be next and that Mr. Swanson had asked to testify but needed to be called and it would be a few minutes. After the members looked through the bill, Mr. Chatterton moved to pass the bill out with a "Do Pass" recommendation without hearing further testimony. There being no objection the motion carried.

Chairman Parr announced to the Committee that the Governor had come in with another nominee for the Board of Regents, a Mr. Webber and said the committee would be having an interview with him at one of the meetings.

The meeting adjourned at 4:30 p.m.

MINUTES OF HOUSE

HEALTH, EDUCATION, & SOCIAL SERVICE COMMITTEE

March 9, 1977

The meeting was called to order at 3:00 p.m. by Chairman Parr

Those present: Parr, Bennett, Nakak, Chatterton, Seversen, Beirne, Cotten & Phillips. Mr. Ose came in later.

HB 206 & 207

Chairman Parr announced two bills before the committee today. HB 207 and HB 206. Mr. Bennett stated he would have to leave early and would appreciate it if the committee would hold off on action on the bills until a later date.

First to testify was Mr. Burt Hall, Director of the Department of Health and Environmental Protection for the municipality of Anchorage. He said they have been studying very carefully of both bills and have accomplished some analysis of the potential impact, both positive and negative of the legislation on the municipality and the people in the area He stated their prime concern was with HB 206 since by definition they would not be considered under the other bill. He said the testimony he was going to offer today, especially the statistics would be preliminary in nature with any dollar figures used primarily for illustrative purposes. He began that they believe there needs to be established a formal and equitable system for the orderly delegation of state authority to municipalities and for the authorization of grants to local government to assist in providing basic health services. His testimony was read and he advised the committee that he would get us a copy of his testimony the next day and a copy of this will be placed in the two bill files.

Mr. Hall showed two charts he had made up showing the basic services of public health that are provided by the Dept. in Anchorage over the years and shows the state's investment or share of the services. He stated copies would be made of the charts for distribution after the meeting. Mr. Hall stated the true cost for distributing public health services for the present year is 2.9 million dollars. The municipalities receives $335,000 in other revenue and the state is still contributing $360,000 which means that it's share is now 13.9 per cent.

He stated by way of summary they are questioning whether or not the base figure which would be used to calculate a 90 per cent support for 1980 with or without the hold harmless clause and could go on for a long time. Whether it bears any true relationship to the true cost as would be considered elsewhere in the State,

He said a final concern related to the lack of a clear mechanisim for providing for state support of recognized needs which might come into being over a short period of time. He felt the 90% clause limitations could be extremely devastating.

Mr. Nakak asked Mr. Hall when he related to costs in Anchorage if he were making an illusion that costs other than in Anchorage are not real costs. Mr. Hall said, No, it was their understanding that in HB 206 the state now provides a percentage support not by percentage, but provides a modest amount of the true cost. The true costs in Anchorage are roughly 2.9 million dollars for the services we are talking about and the local government pays 82 or 83 percent and the state picks up the rest. In HB 207 it provides for the state to pick up 90 percent of the true costs. It's just a matter of making a comparison about how much state support goes into a different area. He personally felt anyone who assumes health powers ought to assume health responsibility. With that ought to go a willingness to pick up some additional load for the privilege and responsibility of doing that.

Mr. Parr asked about section 031 in the bill where it says 90 per cent of the state budget for public health services furnished in the municipality in that fiscal year; and felt it would be more than the $500,000 they were talking about. Mr. Hall said he felt that was open to some interpretation and would like to agree with him. He said they do have a laboratory and do opt under their contract to do inspections in environmental health. Mr Parr asked what the costs to operate the laboratory would be. Said its services are not exclusively for the municipality. Mr. Parr said the bill doesn't say that, anything about whether the services are furnished.

There was disussion as to the municipalities putting in money in order to get local control of their own health services and what an appropriate amount would be. Mr. Hall said if he were pressed he would say not less than 25 per cent. Parr asked if the budget were 2.9 million for the health service cost in the Anchorage municipality for this year, how much would the state come in with and how much from the local municipality. Mr. Hall said it doesn't add to 100. He is suggesting that the state should not to be less than 25 per cent and the responsibility of the municipality to come up with the rest, some of which would be local tax, others by third-party payments, etc. There was quite a bit of discussion on this matter.

Mr. Parr said we now have an adjustment in our education program based on an essence on real property values, and asked if he thought an adjustment in the formula was needed to allow for the wealth of the municipality concern? Hall said he agreed that a consideration should be worked in some way.

Mr. Hall said Anchorage has benefited from revenue sharing . Funds which can be worked into the kinds of programs that they are counting on their side of the ledger of an investment. Said they were not unaware of that contribution of the state but Anchorage is the only municipality that has had this kind of system established over a period of time and felt they have just really begun to dig. Saic they wanted to alert the committee to the fact that they would be going home and doing their homework and trying to dig into some of the questions that are being asked.

Mr. Parr informed Mr. Hall they would appreciate anything he could furnish the committee later in writing.

Mr. Chatterton asked about line 15 on page 4 on the section covering regulations. Item 4, said(he presumed) they were going to set up the regulation for a basic public health program. Then he said on page 2, line 19, says the same level of basic grants support. Mr. Chatterton asked what was basic and what was not basic? And what's going to be 90% of what's basic. Mr. Chatterton said Mr. Hall had said we were getting $500,000 of which $140,000 travels on through state funds for basic health services. Do we get any more funds from the state for the general arena of health services? Mr. Hall said they got a considerable amount of additional dollars. And explained the sources where they got these additional money but said what they are talking about in the bill are the basic services as defined here by interpretation and regulations-the basic services described in the bill itself and asked about the definition section. There was discussion as to what the state actually furnishes for public health services in Anchorage.

Mr. Phillips said his notes on the bill showed on line 18 he has "existing local budget" written in.

Mr. Parr asked Mr. Hall if he felt we really gained anything by going through this routine of 206 and 207? Are we really going to furnish better health protection, or having the same health protection with less money, or what are we really going to gain? Mr. Hall said the major gain we would achieve is have a formal system for state shared responsibility in a definite list of certain services. Mr Parr felt this could be done through revenue sharing.

Mr. Hall said they must be in fault in Anchorage, whether it be the legislators or the government, he doesn't know how they allowed the figure of $500,000 to remain so low over the years when the costs keep going up and the responsibility keep going up. Mr. Hall thought the mechanisim and equaity that would have to be established in the process of the hearings and legislative debate of who gets what in the process, there would be required the establishment of a plan. Felt this was significant.

Felt there should be a plan to have goals and have objectives that budgets can be built toward and that can be measured and evaluate the effectiveness of what they are doing. He didn't feel this could be provided without this type of legislation.

Mr. Parr stated the only ones they are concerned about are the receipients of the bill and if they are going to profit from it fine, but if they aren't he can't see why they go through the drill.

Mr. Hall felt there was a protection that is inherent if the bill passes. Said if they saw that the bill was going to pass they would move as strongly as they can to see whatever base is established is brought to an appropriate amount which is up and in that context it would be more state money for Anchorage and then they could provide more services.

Mr. Nakak thought the figure could be cut because the figure was so inflated to begin with, and felt Mr. Hall's assumption that it would be raised could be a wrong one.

Next to testify was Mr. Charles Oxereok, Divisional Director, Human Services Division, Alaska Federation of Natives Inc. Spoke to some of the current health problems of the Alaska natives in the rural level in the development of health services and its inter-relationship to HB 207. He too read his testimony and informed the committee that he would mail a copy of it to them. It was his feeling that the people are being neglected by the Health & Social Services program. He felt many of the problems they are having can be alleviated by placing an emphasis of preventative health care at the state level. He said in HB 207 does not call for indirect costs to be recognized by state government, does not call for advanced payments for the contract of regulations. Said in some instances the rural areas do not get a chance to get a grant. He said the population area is too high and said there are only 2 cities in Alaska where the population is 6,000. Said this should be reduced to at least 1,000. Said HB 207 is designed to deteriorate the current unity of the Regional Health organizations already providing health services in the rural areas. Said he hoped the committee would prevent some of the mistakes made by prior legislatures. Said one of the recommendations was to give advance notice of the Association of Regional Health directors to hold 3 hearings within the HSA bonding lines. He asked that this piece of legislation have a regional hearing conducted in those areas because he felt the notice was too far short to conduct a comprehensive testimony and indepth study of this piece of legislation.

Mr. Parr informed Mr. Oxereok that these bills had been up before and that both the Anchorage and Fairbanks legislative offices had been notified. Oxereok said the Alaska Federation of Natives should be notified because most of the communities do not utilize the legislative offices and most of them do not know they even exist.

Mr. Parr asked where he got the figure of 85,000 natives that he had used, because the one he usually heard was 60,000. Oxereok said the 60,000 is the state estimated figure and 85,000 comes from the Alaska Native enrollment office of BIA.

Mr. Parr then asked about his statement of being neglected by the State and yet did say the Indian Health Service is furnishing the medical services. He said they wouldn't want the state to duplicate the services already being received so he assumed he wanted the state to do something else. Wondered what.

Oxereok said what he was trying to point out was that the State has always relied on the Indian Health Service to provide the health services, now is the time for the State of Alaska to get involved in some of the native health services.

Mr. Parr asked about his statement that the State doesn't cotract with the Regional health organizations. He said there was a contract between the State andTanana Chiefs.

Mr. Parr asked if he said also that the health system agency boundaries don't match the native corporation boundaries. Mr. Parr thought they were going to match these up.

Mr. Parr then asked if he felt the 6,000 figure was too high what he thought an appropriate figure would be. Mr. Oxereok felt 1,000 would be more appropriate.

Next to testify was Conrad Baines, Jr., Executive Director of Seoutheast Alaska Health Corporation. He said his comments are directed only to HB 207. He said he felt the concept within 207 is a good concept to authorize contract agreements for public health services. Said he has attended several meetings since the idea started and met with some of the state staff on this bill several times but still there are many things unclear to him. It is unclear as to who can apply for contracts. He thought the law exluded native organizations, in rural areas especially. Said the 6,000 population figure is clearly discriminatory to rural areas. Thinks the idea is good but the state contracting process has many weak areas. Thought it should be revamped to reorganize so that the state can have one central procurement arm. Said the question Mr. Parr brought up about Tanana Chiefs was a contract for federal funds, EMS but the same idea was objectionable by Tanana Chiefs in that there was no cash advance and indirect costs were not an allowable item. Another concern is in regard to REAA boundaries. Felt they were drwan for education purposes.

Another concern was that it was unclear as to financial and over-all impact of the law. Can't figure out who will apply for contracts. Felt it would be shifting around of the personnel already existing. Said he had 2 points for suggestion in re-writing the bill. Said he felt there should be some amounts put in for rural areas. Felt someone is trying to make a simple process complicated in this bill. Felt the main intent was to give the state authority to contract with any corporation for health services. Said the way it is written it excludes this. Felt the bill is looking for is to add authority for the State to contract any entity such as the Federal Government.

Next to testify was Dr. Frazer, Director of Public Health. He said from a standpoint of historical perspective, it is natural for groups of people to want to control their own destiny.. Said they continually see, in the progress of society, the continuing progression between centralized and local control The purpose of these bills is to provide the municipalities and smaller groups with the ability to assume responsibilities for their public health services. Felt some of the statements that were made shows there is confusion between preventive services, public health services, and direct patient care. These bills provide potential for local communities like Anchorage and local areas to assume their public health responsibilties. Said the reason for going the Board route is they are enforcing state regulatory powers frequently, enforcing regulations and conducting services in accordance with regulations that the Commissioner will develop and therefore is the necessity for a responsible group.

There was discussion as to what the function of the Board would be.

Mr. Chatterton called attention to page 6, line 8 on the bill and asked about the 10%. Mr. Chatterton felt what they are getting now isn't costing them anything for 3 or 4 people but if the bill is enacted they will have to pay 10%.

Mr. Parr asked Dr. Frazer what besides "local control" do we gain from this bill? Mr. Frazer said the potential gain is through local control and perhaps the addition of local funding, self-determination in the direction of new programs in the area he wishes to advocate and incur. Might be more emphasis in family planning or immunization. There would be a little more option to directing the program to local problems.

Mr. Parr asked if he was saying that the amount of money wouldn't increase, that they would get better service for the same money? Dr. Frazer thought there was a whole spectrum of possibility ranging from poor service because of difficulty

in losing a central recruitment to the other end of the scale an increase idividualized program in an area which ismore effective. Did feel there was some gambel in this, going all the way from a disaster to a great success but felt the potential for local control permits this range.

Mr. Chatterton then asked him if he understood him correctly in saying that someone else could do his job more effectively then he can.

Mr. Parr said Section 151 does say the governing body may subcontract with a private health corporation serving a public health system. And there was discussion on this.

Mr. Parr asked Dr. Frazer to comment on the 6,000 figure and there was discussion on this.

Mr. Parr asked Dr. Frazer if both bills passed and became law what the total number of districts are that would be affected. Dr. Frazer thought maybe 25.

Mr. Parr said obviously there is a need supervision. Said this could be done in 2 ways. One, is by a number of reports coming in monthly and the other one by actually getting out and traveling to see what is going on. Which would they plan to follow up on this?

Dr. Frazer said the question of implementing these bills was addressed in a fiscal note and would require additional staff to draw up the regulations and implement them. Said he could speak from previous experience, when there is a problem they go out and work with the local facility and feels the personal dialogue and consultant basis has some advantages.

There was discussion on the grants and how they are made. and the authority for making them.

Next to testify was Mrs. Osterback from Sand Point and said she represented from Adak down to Perryville and said in her district they aren't benefited at all from the State Department of Public Health. Said they presently do not have a public health nurse, no village built clinics, They have a doctor come out from the ANS hospital 2 a year and a dentist 1 a year. She said people eligible for medicaide can't benefit from it because there is no one there that can sign the coupons. She said they had a nurse at Sand Point but is from the Baptist Mission.

Mr. Parr asked Mrs. Jund if she could check into the program of the medicaid benefits so the checks could be signed there.

Next to testify was Lois Jund, Deputy Commissioner for Program Management. She said there seemed to be a great deal of confusion expressed today and said they are talking about basic public health services in most areas, that will only be the public health nursing program and environmental health program. She said Anchorage is not covered by the 90/10 clause in HB 206, they are covered by 18.10.031(d). She said the Anchorage area has an enriched program and are providing many services from their area that State doesn't provide from State level.

Mrs. Jund said the statement made earlier she believed from Mr. Hall that they are putting in money and other areas aren't is not a true statement. Other municipalities do contribute in cash or in time. There is no formula at this time and that is what this bill is trying to do so that all municipalities and all areas are treated equal. She elaborated on the amounts of money Anchorage is getting.

The meeting adjourned at 5:15 p.m.

MINTUES OF MEETING OF

HOUSE, HEALTH, EDUCATION & SOCIAL SERVICES COMMITTEE

February 23,1977

The meeting was called to order at 3:00 p.m. by Chairman Parr. Members present were:

Mr. Parr, Mr. Bennett, Mr. Chatterton, Mr. Severseen, Mr. Phillips, Dr. Beirne, Mr. Nakak, Mr. Cotten and Mr. Ose came in later.

Chairman Parr announced to the committee that he had received a telephone call from the Public Health Officer in Fairbanks who had heard that this committee was going to meet in Tok. Mr. Parr said he knew nothing of such a meeting but if any members were planning to attend he would pass the phone number on to them.

Mr. Parr said the first bill on the agenda would be HB 206 which is a Governor's bill and asked Dr. Lois Jund, Deputy Commissioner for Program Management for the Department of Health and Social Services to testify. Dr. Jund stated she had worked on this bill for the last 2 years and gave some background on the 2 bills which were introduced as one bill last year (HB 596). She stated there has been a great deal of clamor throughout Alaska for local control of health services. Felt there should be a provision purely voluntary for those regions and municipalities that wish to assume responsibility for their own local health services that we have a mechanism whereby this can be accomplished. HB 206 deals only with health services and municipalities and provides that upon application in accordance with the approved health plan for that area, the state would provide 90% of what it had spent the preced , fiscal year in that area for the provisions of health services. The municipality would have to put up 10% of the cost so that the level of services would be the same, there is a maintenance of effort provision. She stated the advantages of both bills is that there would be local control and it would reduce the state payroll.

Mr. Cotten asked what size the board would be. Said he had noticed it was a Governor's bill and he recalls another bill that the Governor was against because it calls for an elected board.

Dr. Jund further stated she had received one phone call with regard to HB 207 indicating that they liked the present form, and has received one letter from the North Slope Borough on HB 206 which she read into the record and which supported the bill.

There was discussion as to what the additional cost will be to the tax payer, whether or not there will be sufficient expertise in the municipalities to administer the program, what decisions do the locals make once the authority is transferred and how much money are we talking about.

Mr. Chatterton asked what the exact figure was of the 1977 fiscal budget for public health services and was told 8 million dollars.

Mr. Chatterton called attention to page 2, starting on line 16 "year preceding application, the department shall provide an initial grant to the municipality in an amount equal to 90 per cent of the state budget for public health services furnished in the municipality". He asked what municipalities would qualify, what the line item budget would be for that municipality and asked how this would affect Anchorage and Fairbanks.

Dr. Jund said that in Anchorage right now, there is no formula but after statehood somewhere along the line, the legislature appropriated a certain amount of money for the Anchorage health department which is now up to $500,000 per annum. Not all of this money goes to health, some is reserved for ARCO and ACCA. If Fairbanks elects to choose this bill, they will get 90% of $140,000.

Mr. Chatterton then asked to make a statement which was "I came into this committee meeting hoping that I could, for the first time, vote for one of the administration's bills and after this lousy presentation, I don't believe I can."

Mr. Bennett asked about the effect the malpractice lawsuits might have.

Mr. Parr asked whether Anchorage is now getting money under the proposed formula in #206 or only getting a lump sum which the legislature appropriates. He also said the cost of the REAA's as opposed to the cost of the SOS is almost an identical figure and he didn't understand why it should cost any more, it might cost the same, but questions the need for extra staff in the office in Juneau. He said extra staff was not added in the Dept. of Education for the REAA's.

There was much discussion on the decentralization aspect and the fact that a non-elected body will have to approve the plans which are submitted.

Mr. Bennett asked which area the impetus of the bill came from. He said if this is a petition from 800 or 900 people he looks at the legislation in one light but it if is a

departmental thing, or municipality, he looks at it completely different.

Next to testify was Mr. Sam Coxson representing the Anchorage Municipality. He called attention to page 2, line 16 through 19. He felt the language should be reviewed and would like to see it read "the department shall provide a grant to the municipality in an amount equal to 90% of the existing local budget for public health services furnished in the municipal.ty for that fiscal year."

Mrs. Jund called his attention to the language on page 4, Mr. Cosson then asked about the language on page 3, paragraph 4,. He wanted to know if they were essentially talking about combining service areas?

Mrs. Jund said this would apply to very small areas.

Mr. Coxson stated he would be glad to supply the committee with any written information the committee might want from Anchorage.

Mr. Parr asked if the Municipality of Anchorage was in favor of or against the bill. Mr. Coxson said he was not in a position to say.

Mr. Cotten asked if they would be interested in coming up with a position on the bill and commenting on what sort of increase they feel the state ought to give to them under the same provisions of this bill. Mr. Coxson said the bill is presently being reviewed and felt they should have a position on it in a week. Mr. Coxson said they would like to look at the possible add-on programs, what new programs they might consider, what the impact of that might be.

Mr. Parr asked Mr. Coxson to come back with some kind of position on it.

Mr. Parr informed the committee the bills were before them. Mr. Nakak said that he wasn't prepared to act on either piece of legislation at the time and asked to withhold action on them until further testimony comes in. There being no objection, both bills were held in committee.

Mr. Parr called the committee's attention to the memorandum regarding the meeting with members of the Dept. of Education on Friday evening at 7:30 in our meeting room.

The meeting adjourned at 4:40 p.m.

HB 207

February 11, 1977

The Honorable Hugh Malone
Speaker of the House
Alaska State Legislature
Juneau, Alaska 99811

Dear Mr. Speaker:

Under the authority of art. III, sec. 18 of the Alaska Constitution, and in accordance with AS 24.30.060(b) and the Uniform Rules of the Alaska State Legislature, I am transmitting a bill which would amend AS 18.10, relating to health units and districts. It would replace the provisions of the chapter enacted in 1949, and the last of the provisions of the chapter enacted in 1955, with a system for encouraging municipalities with health power to administer health programs on the community level by authorizing financial grants to those which accept that responsibility, and to expand the provision of services.

A municipality which agreed to maintain the same level of public health services as furnished by the Department of Health and Social Services in the prior fiscal year would be eligible on application for a grant of ninety per cent of the state budget for public health services furnished in the municipality in that fiscal year, with the same level of basic grant support being provided in subsequent fiscal years. Then if such a municipality expanded or initiated new services, the department would grant fifty per cent of the cost of the additional services, within the limit of its appropriations.

The Department of Health and Social Services would have authority to evaluate the health needs of municipalities throughout the state under uniform guidelines, and respond to health problems at the local level by

using local powers. State efforts would be coordinated with local input to determine what needs are not being met in each area and priorities would be set for the best use of available funds.

This bill should go a long way toward updating the provision of health services in Alaska municipalities.

Sincerely,

Jay S. Hammond
Governor

From 1980 on, this staff will continue to provide technical assistance, review grant applications for new and continuing grants, and monitor for compliance with existing laws and regulations. Since the largest and most complex area to administer will be the unorganized borough, 1/3 of the cost of administering the Local Public Health Services legislation has been assigned to this bill, and 2/3 to the "Municipalities" bill beginning in FY-1980.

Assuming all municipalities and major cities will qualify, apply for, and receive grants by the initial grant year of 1980, and that they would assume both the Nursing and Environmental Health programs, the positions assigned to those communities at that time would be phased out and the staff presumably would be hired by the communities. As the grants to communities for basic public health services equivelant to existing services is to be equal to 90% of the cost of existing programs for the year preceding the initial grant, the reduction in State programs should result in a 10% surplus which would be used to provide the funds necessary to support the 50% match for the implementation of new programs

Existing Central and Regional Nursing and Environmental Health staff will be utilized in administration and in providing technical assistance to assure program compliance and uniformity of professional standards.

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)
These fiscal notes are analogous to notes prepared for Bill #596B for ninth legislative session.
Administrative staff necessary for implementation of this bill will include the following positions.

1. PFT Local Health Services Program Administrator (range 23)
2. PFT Accounting Systems Analyst (range 19)
3. PFT Administrative Assistant (range 16)
4. PFT (2) Clerk Typist III (range 8)

Much of the initial work will be in development of regulations, standards, manuals, and guidelines common to both "Municipalities" and "Public Health Districts" bills. Therefore, the cost of the first two years of implementing the Local Public Health Services legislation has been divided equally between the two fiscal notes. Should either of these bills fail to pass, the entire administrative costshould be assigned to the bill which is enacted.

NORTON SOUND HEALTH CORPORATION

Delegate of Alaska Federation of Natives

P. O. Box 966 Nome, Alaska 99762 443-2261

April 14, 1977

Representative Alfred C. Naknek
District 22
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Representative Naknek:

We have been informed by Lois Jund that House Bill 206 and 207 is likely to have difficulty in committee and could use as much support as possible. We basically support these two bills but wish some modification from the present form.

House Bill 207 requires the election of a local board who may in turn sub-contract with a regional health corporation. There is, however, nothing in the bill from preventing the board in providing the services itself, thus again, creating two agencies providing basically the same services to the same population. This is the situation presently in our district with Norton Sound Health Corporation providing services and the State Public Health Nurses providing services to the same population. This creates framentation of patient care.

We recommend that the State be allowed to contract directly with the health corporation bypassing an intermediate board. The attorney general states they cannot contract the Public Health Nurses regulatory powers. We therefore recommend that the State retain this regulatory powers but contract for services.

The other possibility might be for the State to recognize the regional health corporation board as a local health board. It may be that the board would have to meet certain requirements to insure broad representation..

Please call if there is any questions or if it is anticipated that the bills will be coming before the committees for hearing.

Sincerely,

Jeanette Morton

Jeanette A. Morton
Director
Health Care Services

JM:da

HOUSE BILL 207

RECOMMEND:

1. The State should be allowed to contract directly with the Health Corporations bypassing an intermediate board.

2. The State retain the regulatory powers of the Public Health Nurses but contract for the services avoiding duplication of services.

3. The State recognize the Regional Health Boards as local health boards.

Alaska State Legislature

Senate

JUNEAU, ALASKA

February 25, 1977

TO: Charlie Parr, Chairman
House HESS Committee

Glenn Hackney, Chairman
Senate HESS Committee

FROM: Senator Frank Ferguson FRF RE: HB 207

Attached is a copy of a letter from Norton Sound Health Corporation concerning HB 207, which is presently in the House HESS Committee. I hope that both the House and Senate HESS Committees will consider the arguments in this letter carefully in their review of HB 207.

FRF:kh

NORTON SOUND HEALTH CORPORATION

Delegate of Alaska Federation of Natives

P. O. Box 966 Nome, Alaska 99762 443-2261

February 18, 1977

Senator Frank Ferguson
Pouch V
Juneau, AK 99801

Dear Senator Ferguson:

Norton Sound Health Corporation would like to take a position on the proposed Bill regarding local health services to be introduced at the request of the Governor. The act is entitled "An Act Related to Contract for local Health Services".

The Bill provides for the election of local Public Health Service Area Boards. The Board Members are to be elected at large by qualified voters.

HB 207

The problem we have is that the election of another Board dealing with Health matters for a small population with limited resources creates a potential for disagreement, and fragmentation. This Board would have authority only over public health matters such as Public Health Nursing and possibly sanitation services. It would seem more appropriate to utilize an existing Health Board that is representative of the people in the region to enable comprehensive health planning.

There are already several health boards doing planning and trying to coordinate efforts. These include the Health Systems Agency Board for the region, also the Native Health Board in addition to the local Health Corporation Boards.

The proliferation of boards in the bush, many of which are very narrowly focused, is a problem. We recently ascertained that the citizens of White Mountain (about 125 people) are eligible to sit on about 39 boards and committees. When one realizes that about 50% of this population is adolescent and makes allowances for adults unable to meanfully participate on a board it becomes apparent how fragmented things are becoming.

Our suggestion is to allow a board already existing that represents the citizens of the region to contract for services from the state, rather than create a new board for a limited scope of work. As the legislation is proposed the corporation could contract with the local board of health but the local board might also develope a limited scope of service itself or it may contract with another agency.

The argument for the election of the new board is that part of the services to be contracted have regulatory functions. Our suggestion is

that the state retain the regulatory function to itself and allow the corporations to contract for services. With health resources limited it would seem we need to look for a comprehensive coordinated delivery system rather than separate components that may duplicate and fragment health care.

If we can answer any questions or clarify any position please contact us. We would be very interested in hearing from you the status of the bill and any comments you might have.

Sincerely,

Jeanatte Morton

Jeanatte A. Morton

Prime Sponsor (First Legislator Named)

33-001 (Rev. 10/76)

the Local Public Health Services legislation has been divided equally between the two fiscal notes. Should either of these bills fail to pass, the entire administrative cost should be assigned to the bill which is enacted.

From 1980 on, this staff will continue to provide technical assistance, review grant applications for new and continuing grants, and monitor for compliance with existing laws and regulations. Since the largest and most complex area to administer will be the unorganized borough, 1/3 of the cost of administering the Local Public Health Services legislation has been assigned to the Municipalities HB 206 and 2/3 to this bill from FY 1980 on.

The first year in which contracts may be entered into will be 1980. It is assumed that all attendance areas will be represented by Public Health Districts and that all districts will qualify for contracts and assume both the Nursing and Environmental Health programs for their districts. The positions assigned to those districts would be phased out and the staff presumably would be hired by the district. These contracts will be granted at 90% of the cost of basic public health services equivalent to existing services (Public Health Nursing and Environmental Health staff costs) for the Public Health District for the year prior to the contract year. The apparent 10% savings resulting will be utilized to support the cost of transportation and per diem for the Board members.

Existing Central and Regional Nursing and Environmental Health staff will be utilized in administration and in providing technical assistance to assure program compliance and uniformity of professional standards.

POSITION PAPER/Department of Health and Social Services

POSITION PAPER
ON
HOUSE BILL 207

"An Act relating to contracts for local health services; and providing for an effective date."

House Bill 207 authorizes the Department of Health and Social Services to delegate certain state mandated public health responsibilities to local public health districts in areas not served by local governments with public health powers and establishes contractual arrangements to provide state financial assistance to such districts.

Just as House Bill 206 proposes to establish a grants mechanism for the voluntary assumption of public health services by the organized political subdivisions in Alaska; House Bill 207 would establish contractual arrangements for the delivery of selected public health services in areas not served by local governments with public health powers. The enactment of both bills will provide a means whereby the delivery of public health services may be decentralized throughout the state.

House Bill 207 is designed primarily for cities and areas within the unorganized borough which desire local autonomy over public health service delivery. The bill establishes a process whereby local public health service areas may be created by the legislature within the boundaries of Regional Educational Attendance Areas (REAA) when a majority of the voters of an REAA so determine. In order to meet the minimum population figures of 6,000 persons per health district established as a result of cost-effective considerations, two or more contiguous REAAs may combine as a single local public health service area. For those cities in the unorganized borough which are not in a local public health service area a minimum population figure of 2,000 persons has been established.

Each local public health service area, or a combination of such areas, then elects a Local Public Health Service Area Board which serves as the governing body of the public health district similarly to the way in which a city or borough assembly assumes authority over public health services in a municipality with health powers. Although admittedly a somewhat complex process, the above procedure permits local community participation in public health programs to be achieved in the unorganized borough in the absence of locally elected governing bodies with the ability to assume health powers.

The governing body of the local public health service area may then enter into contractual arrangements with the Department of Health and Social Services for the provision of specific public health services. The governing body of a local public health service area may in turn subcontract with a private health corporation serving its area to actually deliver the public health services described in its health services plan. As with the proposed delegation of health powers to municipalities in House Bill 206, such contracts will be subject to the approval of the appropriate regional health systems planning agency as a precaution against the duplication or fragmentation of services. As with the municipalities, local public health service areas will be required to follow an approved health services plan to assure that federal and state standards for the delivery of health services are maintained. The Department of Health and Social Services will necessarily monitor the activities conducted under this plan to assure the quality, quantity, continuity and comparability of services and to otherwise provide technical and consultative assistance

to the local public health service areas. In addition, the state will continue to provide basic public health services to areas not choosing to assume local health responsibilities. The state will also continue to provide those specialized statewide services such as laboratory services, vital statistics, etc., which are not economically feasible to offer on a local basis.

Recognizing the factors present in Alaska which mitigate against the effective provision of locally sponsored health services--low population density, insufficient tax revenues, communication and transportation obstacles, etc.--House Bill 207 provides for the purely voluntary assumption of responsibility for local health service delivery by local entities. Communities choosing to participate in the program will understandably need financial assistance. House Bill 207 provides that the governing body of the public health district need match only 10 percent of the amount of the contract awarded and that amount may include in-kind contributions from the district. Federal funds received from Indian Self-Determination Act allotments (P. L. 93-638) are not exempted as a source of matching funds.

House Bill 207 was conceived as a means of permitting the objective of local autonomy over health matters to be achieved, where desired, within areas of Alaska unorganized politically. In so doing, this bill and House Bill 206, designed to apply to municipalities with health powers, adheres to the well-established national concept of local autonomy over public health functions, reserving state activities to functions of a statewide nature and to advising and evaluating local services. Even though Alaska's unique characteristics may make it economically difficult for every area to adopt the full range of public health services in every case, the steadily evolving interest in and awareness of local health issues on the part of consumers indicates the need for providing a means by which local community participation in specific public health programs may be organized. The Department of Health and Social Services supports House Bill 207.

Dear Mr. Parr,

Thank you for your letter of March 31, 1977 regarding HB 206 and 207. With the work load you people have it is really gratifying to know that our letters of support or non-support are read - and answered.

You stated that if we could improve HB 206 you would not hesitate to support its passage. The concept of the bill is great and I'm not sure what changes would be made. As I understand it the bill would allow localities to administer their own health programs but that these programs would be controlled by the State through the grant mechanism. The professional requirements and licensing of the workers in the programs would remain with the State - i.e. Public Health Nurses would still have to meet the State requirement for Public Health Nurses. The only difference would be that the Public Health Nursing program would be administered by the locality - which is in the best position to know its needs. The same criteria would be true of all programs.

Rep Don Bennett also opposed the passage of these bills, I've attached a copy of my reply which is a little lengthy.

Again, the concept of these bills, especially 206 is very good. If some changes are necessary maybe they can be done in the HESS committee but the bills certainly warrant positive action.

Sincerely yours,

J. Emery Thibodeau
Hospital Administrator

April 5, 1977

Don Bennett, Representative
Pouch V State Capitol
Juneau, Alaska 99811

Dear Don,

Thank you very much for replying to my letter of March 24th concerning HB 206 and 207. With the work load you people have it's really gratifying to know that our letters of support and/or non-support are read - and answered.

With regards to HB 206 and 207, I still support t em and hope that the legislators will give their support also, What you had to say in your letter regarding "suave grantsmanship" rather than trained professionals has, and may continue to be, all to true. I believe that this problem will be on the decline however.

HB 206 and 207 does not take control away from the State, but they do allow for local administration if it is warranted. The State would have complete control over the grant and still would continue to monitor the program along the approved program guidelines. The actual administration of the program, however, would be done on a locality basis, but only if the locality so choses and the State so approves. By administration I mean the hiring of personnel, acquiring working space, purchasing supplies, conducting meetings and all the other numerous jobs it takes to make a health system work. The State would still supply the major supervision through regional offices, training programs, on-site evaluations, state wide coordination and direct help in implementation of a health program.

The benefits of this type of system are (1) local pride in a program which results in greater participation, (2) the integration of programs at the local level bypassing a dual system approach, (3) greater supervisor control by the state due to the decrease in "red tape" administrative burdens, (4) savings to the state due to decreased personnel and support costs plus the addition of local monies to the programs, (5) the ability of local programs to raise money by charging fees for service.

The Cordova Community Hospital

The State will not lose anything except a lot of headaches.

There are probably less than twenty places in Alaska that are presently qualified to run their own program, this would be determined by the State however. If these places were allowed to administer their own programs I am sure they would be happy to do so.

I was just downstairs reviewing your letter with the State Social Worker and the Clinical Psychologist - who is funded by a state grant. We are all working together for a common goal, in the same town but under two systems. The problems were obvious when the Social Worker made reference to what her supervi ors office in Anchorage would say about a certain thing, her supervisors office in Anchorage is pretty far away and can't effectively make day to day decisions for Cordova - when she was only here once to interview applicants for the job.

We have in town what we like to refer to as an integrated health care system, the components with their control bases are noted below.

Program	Administrative Control	Control base
Hospital	City	Cordova
Nursing Home	City	Cordova
Doctors Clinic	Private	Cordova
Emergency Medical	City	Cordova
Social Services	State	Anchorage
Public Health	State	Juneau
Eligibility	State	Valdez - Juneau
Mental Health	City	Cordova
Alcoholism	City	Cordova

The Mental Health program is a grant from the State to administer our own program but that grant is controlled by the State and we report to the State.

The same is true of the Alcoholism Program except the grant is controlled by the Federal Government.

All of the above programs operate out of one facility except the eligibility worker and are in constant daily contact regarding patient care and other matters. It makes sense if they were all administratively supervised by a common group or person.

We do have a providers committee which is intended to give direction and control - and it does - to the total program goals. The Providers Committee meets monthly on a regular basis with interim meetings as needed. During these meetings monthly evaluations and program performance are discussed, along with discussions regarding particular patients who are served by more than one program, which is quite common.

Another problem with the State workers, that doesn't personally concern us but could effect the program, is the independence of each State division and their inability to interact in basic matters. The State Public Health Nurse has a car and her own private secretary who is paid by the State, the State Social Worker has neither of these and must use her own car and we provide her with a secretary. If these programs were under local administration these problems would be quickly resolved.

Well, this is fairly lengthy but we still believe that HB 206 and 207 is a must and HB 207 a good possibility. These bills do not allow a take over by non-profit organizations but they do allow local governments, if they so chose, to administer the health programs in their area - with the permission of the State.

Sincerely yours,

J. Emery Thibodeau
Hospital Administrator

Re: House Bills 206 and 207

Dear Sir,

The Bush Medicine Committee of the Alaska State Medical Association at a recent meeting has evaluated pending House bills 206 and 207 relating to public health services in minicipalities and unorganized boroughs. After due consideration of many factors pertaining to these bills, we would like to go on record as supporting passage of House bill 206 authorizing ninety percent funding for municipalities in providing their own public health services, and would like to register our nonsupport of House bill 207 related to local public health service administration in unorganized boroughs. We feel that the quality of medical care in unorganized boroughs would diminish with passage of this bill; the record of excellence established by State agencies seems unsurpassable, and any changes in the current status with regard to bush preventive medicine measures seems only likely to reduce the level of service provided to residents of these areas. Municipalities, however, seem more capable of providing both funding and local expertise, and we would, therefore, urge passage of House bill 206 which allows this to transpire.

We hope you will carefully consider our recommendations when evaluating testimony regarding passage of these bills.

Sincerely,

Richard F. Buchanan, M.D.
Chairman, Bush Medicine Committee
of Alaska State Medical Association.

LEGISLATIVE RECOMMENDATIONS
OF THE
CITIZEN'S PARTICIPATION CONFERENCE

February 23-24, 1977

Juneau, Alaska

SOCIAL SERVICE DELIVERY

High Priority

SB 54 — "An act relating to adoption assistance for hard to place children in foster homes".

SB 106 — Children's Laws and related Judicial proceedings

HB 63 — Guardians of incapacitated persons

AMENDMENTS: (1) That no agent of Social Service be granted guardianship with the exception of relatives who may be employed as such.
(2) That a yearly review of guardianship be required.

Moderate Priority

HB 193 — Child Care Licensing

Other Recommendations

(1) That a state-wide investigation into foster care be initiated due to alleged incidents of child abuse.
(2) That a state resolution be passed supporting the Indian Children Act (SB 3777) in Congress.

STATEMENT OF THE CPC COMMITTEE ON HEALTH AND SOCIAL SERVICES IN REGARD TO HB 206 AND 207:

The CPC Committee on Health and Socail Services has resolved that the effective delivery of public health services is an activity of crucial importance to the health, safety and well being of all residents of Alaska. The committee also feels that the decentralization of the actual delivery of health services is a key element in accomplishing this goal and should be afforded the highest possible priority.

However, the present level of available health services thoughout the State is woefully inadequate.

Therefore, although it supports the general concept of decentralization embodied in HB 206 and 207, the Committee on Health and Social Services recommends a "Do not pass" on both bills because the statutory framework for health care delivery which they create inadequately addresses the following considerations:

1. The 90% grant provision is inadequate and would tend to inhibit the incentive of the municipalities to seek local control;

2. The 50% grant provision for new or expanded programs is also inadequate and this increased burden could not be met by many of the rural municipalities. It would consequently decrease the ability of the local community to expand or initiate needed health services;

3. There needs to be the stipulation and clarification of the type and degree of technical assistance provided for the municipalities;

4. A provision should be included to allow for the escalation of grant support in conjunction with the rise in costs;

5. HB 207 contains a 6,000 population requirement that is an unnecessary obstacle for the decentralizing of health services in districts not served by local governments, and it should be decreased.

NORTON SOUND HEALTH CORPORATION

Delegate of Alaska Federation of Natives

P. O. Box 966 Nome, Alaska 99762 443-2261

February 18, 1977

Representative Al Nakak
Pouch V
Juneau, Alaska 99801

Dear Representative Nakak:

Norton Sound Health Corporation would like to take a position on the proposed Bill regarding local health services to be introduced at the request of the Governor. The act is entitled "An Act Related to Contract for local Health Services."

The Bill provides for the election of local Public Health Service Area Boards. The Board Members are to be elected at large by qualified voters.

The problem we have is that the election of another Board dealing with Health matters for a small population with limited resources creates a potential for disagreement, and fragmentation. This Board would have authority only over Public Health matters such as Public Health Nursing and possibly sanitation services. It would seem more appropriate to utilize an existing Health Board that is representative of the people in the region to enable comprehensive health planning.

There are already several Health Boards doing planning and trying to coordinate efforts. These include the Health Systems Agency Board for the region, also the Native Health Board in addition to the local Health Corporation Boards.

The proliferation of boards in the bush, many of which are very narrowly focused, is a problem. We recently ascertained that the citizens of White Mountain (about 125 people) are eligible to sit on about 39 boards and committees. When one realizes that about 50% of this population is adolescent and makes allowances for adults unable to meanfully participate on a board it becomes apparent how fragmented things are becoming.

Our suggestion is to allow a board already existing that represents the citizens of the region to contract for services from the State, rather than create a new board for a limited scope of work. As the legislation is proposed the Corporation could contract with the local Board of Health but the local Board might also develope a limited scope of service itself or it may contract with another agency.

The argument for the election of the new board is that part of the services to be contracted have regulatory function. Our suggestion is

that the state retain the regulatory function to itself and allow the corporations to contract for services. With health resources limited it would seem we need to look for a comprehensive coordinated delivery system rather than separate components that may duplicate and fragment health care.

If we can answer any questions or clarify any position please contact us. We would be very interested in hearing from you the status of the bill and any comments you might have.

Sincerely,

Jeanette A. Morton
Director of Health Care Services

JAM/dh

DEPARTMENT OF HEALTH AND ENVIRONMENTAL PROTECTION
MUNICIPALITY OF ANCHORAGE

March 9, 1977

TESTIMONY PRESENTED BY ROBERT A. "BERT" HALL BEFORE THE HESS COMMITTEE OF THE HOUSE OF REPRESENTATIVES.

Mr. Chairman, members of the House HESS Committee, my name is Bert Hall; I am the Director of the Department of Health and Environmental Protection for the Municipality of Anchorage.

We have been studying very carefully House Bills 206 and 207 and have accomplished some analysis of the potential impacts, both positive and negative, of that legislation upon the Municipality. Our prime concern is obviously with H.B. 206 since, by definition, we would be excluded from consideration under H.B. 207.

The testimony we offer today, especially any statistics, are intended to be preliminary in nature with dollar figures used only for illustrative purposes. We are attempting to document some accurate reflection of the history of our past experiences in joint funding public health services in the Anchorage area.

Let me begin by stating that we believe that there needs to be established a formal and equitable system for the orderly delegation of state authority to municipalities and for the authorization of grants to local governments to assist in providing public health services. We agree with the stated purpose - to provide and safeguard the health of the general public. However, if our understanding of the system suggested in H.B. 206 as it would apply to the Municipality of Anchorage is accurate, then we have some real problems endorsing the legislation without amendment.

Since the Municipality of Anchorage has the only history of joint governmental funding of public health services in Alaska, perhaps it would be helpful to review briefly our past experiences.

As early as 1926 the City of Anchorage employed a sanitarian and a nurse to look after some of the health and sanitation problems for the community. Over the years various combinations of efforts by the city and adjacent utility districts with assistance from the Territory and the State have maintained an agency to provide public health services.

For about ten years the Greater Anchorage Area Borough Health Department operated as a district agency serving Anchorage and the metropolitan area technically under State authority, and financed by a combination of local, State and Federal funds. A succession of health officers brought variations in emphasis, but for the most part the services included general sanitation and public health nursing.

The assumption of health powers by the Borough in 1964 brought no significant changes in services for several years, though steadily the local agency grew in experience and assumed many responsibilities once carried almost wholly by the State. Even yet the Department lacks some of the most important services such as: Laboratory, Child Guidance, Nutrition and Health Education. Of these only laboratory services are available through the Southcentral Regional Laboratory operated by the State Department of Health and Social Services.

The Department of Health and Environmental Protection's responsibilities include the full scope of health powers, including environmental, since no other official agency of local government has such powers assigned.

"The scope of health is considered to be a state of complete physical, mental and social well being, and not merely the absence of disease or infirmity". This definition has been adopted by the World Health Organization, the American Public Health Association, The Alaska Public Health Association, and by most official health agencies throughout the Country. The practical boundaries of health functions assumed by Federal, State and local official and voluntary agencies are more often defined by limits of resources and recognized needs than by definition of public health which states that "public health includes those services and functions which the people can better provide for themselves collectively rather than as individuals". This definition also implies that as needs change services change to meet them.

As noted above the Department of Health Environmental Protection has grown and has assumed many of the State's public health responsibilities. In recognition of the assumption of these State responsibilities the State gave the Department in fiscal year 1970-71 the amount of $265,000. Included in this amount was $125,000 for Alaska Crippled Children's Association and Alaska Retarded Citizen's Association thus leaving $140,000 for public health services. The $125,000 for ACCA and ARCA was for the provision of

exceptional children's programs. The $140,000 was for the provision of communicable disease control, vital statistics collection, environmental sanitation, health education, promotion of individual health and collection and preparation of laboratory samples.

We, the local health authority were expected to accomplish many specific tasks, including the following:

We would provide immunizations for all citizens without charge,
We would perform chest x-rays,
We would provide diagnostic consultation for TB and for venereal diseases,
We would accomplish epidemiological investigations where appropriate.

In the environmental health area;

We would inspect public facilities: eating and drinking establishments, grocery stores, bakeries, etc.; housing and mobile home communities, schools, hospitals, nursing homes, swimming pools, etc.
We would respond to complaints and public nuisances,
We would deal with most matters of pollution, especially water and sewer.

To promote individual health;

We would provide for visits of the Public Health Nurse in the home,
We would conduct family planning clinics,
We would conduct classes for expectant parents and run well child clinics,
We would provide consultation to child care centers.

Additionally, we would provide certain limited laboratory services, and the services of the physician.

All of these and many more would be provided in the basis of total health needs.

When the first contract was signed in 1970, it was agreed that the State support would allow for the provision by the Municipality of a proportionally greater amount of services than would have been provided if no contract or grant existed.

It should be pointed out that there was little rhyme nor reason regarding the dollar amount included. The contract instead was a document intended to legally transfer the line item budget amount.

For the next fiscal year, 1971-72, the contract was renegotiated to a total amount of $500,000, $140,000 was earmarked for ACCA and ARCA, the exceptional children's programs... $100,000 was dedicated to environmental health and $260,000 to public health. The total amount budgeted for these services by the Municipality for that period was $1,391,000. The State's share of that budget was therefore, 25.9%. It is my belief that that contract was the first sincere attempt to share reasonable costs.

I have studied all of the contracts since 1971. All are basically the same; all use the same words, all have the same conditions, all have the same scope - and unfortunately all have the same dollar amount.

Meanwhile, the population of Anchorage has grown about 50%, services have been expanded to meet the recognized needs; inflation has eaten away at the purchasing power or service delivery capability of the $360,000 we received from the State for the provision of the public health services described above.

Attached is a graph which illustrates the growth of the true costs and shows also the level of State support.

The true cost of delivering public health services in Anchorage for the present year is $2,930.170. The Municipality is receiving $335,430 in other revenue. The State is still contributing $360,000 which means that its share is now only 13.9%. If the 1971-72 proportion of State investment was interpolated to today's budget then the State would be paying $754,000 for its share of public health services and a total of $894,000, recognizing that the $140,000 was legislatively intended for passthrough projects.

House Bill 206 provides under Section 18.10.031(1) for a grant to a Municipality in an amount equal to 90% of the State budget for public health services furnished by a municipality in that fiscal year; the same level of basic grant support shall be provided in subsequent fiscal years. In order to get this grant the Municipality must only agree to maintain the same level of public health services as furnished by the Department in the fiscal year preceding application for the grant. There is also a hold harmless clause which we cannot interpret.

Under House Bill 206, will the State be willing to go 90% of the true cost of delivering public health services in Anchorage or is it the intent of the State to continue paying the Municipality $360,000 as provided under Section 18.10.031(d)? Herein lies our major problem with the legislation.

Up until this time the Municipality of Anchorage has provided the public health services in the Anchorage area which are the historic delegated responsibility of the State. The State, through House Bill 206 would contract with local governments and under H.B. 207 create health entities to contract with where no local government exists for the delivery of public health services. In other areas of the State the local residents will only have to pay 10% of the true cost of the delivery of public health services; H.B. 207 provides that where local governments do not exist federal monies can be used to match the State contribution.

Today in Anchorage, the local taxpayers directly pay for 86.1% of the cost of providing public health services as well as their share of State taxes. The people in other communities are not directly paying for any public health services.

In essence, we are questioning whether or not the base figure which would be used to calculate a 90% support for 1980, and would be reflected in all future years, bears any relationship to the true costs as would be the case elsewhere in the State.

Another major concern is the potential disincentive that may be built into the Bill. If a local government knew that it would get 50% support for a new program a few years down the road, why expand services for less support? Someone might even conclude that local autonomy might not be worth spending 85%-90% of the costs with local funds when the basic services could be provided by the State at 100% support if no agreement existed.

A final concern relates to the lack of a clear mechanism for providing for State support of any dramatic increase in needs which comes into being with little warning. In a similar vein, there appears to be no opportunity for passing along any major availability of new health dollars that may come to the State from one source or another.

Thank you.

NORTON SOUND HEALTH CORPORATION

Delegate of Alaska Federation of Natives

P. O. Box 966 Nome, Alaska 99762 443-2261

file

April 14, 1977

Representative Alfred C. Naknek
District 22
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Representative Naknek:

We have been informed by Lois Jund that House Bill 206 and 207 is likely to have difficulty in committee and could use as much support as possible. We basically support these two bills but wish some modification from the present form.

House Bill 207 requires the election of a local board who may in turn sub-contract with a regional health corporation. There is, however, nothing in the bill from preventing the board in providing the services itself, thus again, creating two agencies providing basically the same services to the same population. This is the situation presently in our district with Norton Sound Health Corporation providing services and the State Public Health Nurses providing services to the same population. This creates framentation of patient care.

We recommend that the State be allowed to contract directly with the health corporation bypassing an intermediate board. The attorney general states they cannot contract the Public Health Nurses regulatory powers. We therefore recommend that the State retain this regulatory powers but contract for services.

The other possibility might be for the State to recognize the regional health corporation board as a local health board. It may be that the board would have to meet certain requirements to insure broad representation..

Please call if there is any questions or if it is anticipated that the bills will be coming before the committees for hearing.

Sincerely,

Jeanette Morton

Jeanette A. Morton
Director
Health Care Services

JM:da

HOUSE BILL 207

RECOMMEND:

1. The State should be allowed to contract directly with the Health Corporations bypassing an intermediate board.

2. The State retain the regulatory powers of the Public Health Nurses but contract for the services avoiding duplication of services.

3. The State recognize the Regional Health Boards as local health boards.

DEPARTMENT OF HEALTH & SOCIAL SERVICES

SUPPORTIVE INFORMATION SHEET

HB 206 - Public Health Services in Municipalities
HB 207 - Contracts for Local Health Services

1. WHAT IS THE PURPOSE OF THE LEGISLATION?

   This legislation permits the orderly delegation of authority and responsibility of specific public health functions from the Department of Health & Social Services, to local public health districts or municipalities voluntarily requesting the responsibility.

2. IS THIS LEGISLATION AN ATTEMPT TO DECENTRALIZE SPECIFIC PUBLIC HEALTH FUNCTIONS THAT ARE NOW IN EXISTENCE OR TO PROVIDE A MEANS TO DECENTRALIZE FUTURE PUBLIC HEALTH FUNCTIONS?

   The purpose is to decentralize both present and future public health functions handled by the department. It is in direct response to the increased consumer interest and the wish of local communities to become more involved in public health programs and decisions which affect their local public health care.

3. ARE THE RESPONSIBILITIES OF THE PUBLIC LAW 93-641 HEALTH SYSTEMS AGENCIES THE SAME AS THOSE FOR THE HEALTH DISTRICTS CREATED UNDER THIS ACT?

   Health Systems Agencies have a responsibility for health planning, resource development, and for review of plans submitted by the health districts. They are not responsible for the implementation and delivery of public health services.

   The local public health service area boards have the overall responsibility for the delivery of public health services. This also includes determining the need, developing a plan for submission to the health systems agency and overseeing the implementation of the public health service area plan.

4. WHAT IS THE MEANING OF THE TERM BASIC PUBLIC HEALTH SERVICES?

   Basic public health services refer to the basic elements (public health nursing and environmental health) which fulfill the minimum requirements of preventive public health services, which may be carried out at the local level.

Revised 3/10/77

HOUSE BILL 207

RECOMMEND.

1. The State should be allowed to contract directly with the Health Corporations bypassing an intermediate board.

2. The State retain the regulatory powers of the Public Health Nurses but contract for the services avoiding duplication of services.

3. The State recognize the Regional Health Boards as local health boards.

HB
290

POSITION PAPER/Department of Health and Social Services

Department of Health and Social Services
Position Paper
House Bill 290

Section I. House Bill 290, creating a Hospital and Health Care Center fund within the Department of Public Works is in conflict with AS 18.20.140 - AS 18.25.120 which provides that the Hospital and Medical Facility Construction program will be administered by the Department of Health and Social Services. The intent of the statute is clearly stated in Section 18.25.030 and Section 18.25.080. These sections are quoted as follows:

> Section 18.25.030 states it is the intent of sections 10 - 30 of this chapter to provide financial aid to municipalities, communities and associations for which an attempt at complete financing by themselves of a necessary project would entail great hardship. It is also intended that the department utilize the money authorized under sections 10 - 30 of this chapter so far as can be arranged to assist the municipalities, communities and associations in matching funds with the federal government under applicable federal law for hospital assistance.
>
> Section 18.25.080 states it is the intent of sections 70 - 110 of this chapter to assist communities and areas in developing and improving health service facilities by the purchase, construction, renovation, or establishment of hospitals, health centers, or clinics, or quarters for personnel, and the purchase of furnishings, supplies and equipment and making the other expenditures necessary to carry out the purpose of sections 70 - 110 of this chapter. Assistance is to be given in areas which would otherwise be denied adequate facilities, because the taxable values are limited in scope and an attempt at total community financing of a project would cause hardship or prevent its realization. It is also intended that the department utilize the money authorized under sections 70 - 110 of this chapter so far as can be arranged to assist municipalities in matching funds with the federal government under federal law.

All of the Federal construction programs administered by the Department of Health and Social Services have complex developmental, accounting and reporting requirements. To have State matching funds administered by another Department would seriously jeopardize project development and construction.

The department administers the following Federal Hospital and Medical Facilities Construction programs:

1. Title XVI of P.L. 93-641, the Health Planning and Resource Development Act. This Act replaced the Hill-Burton Construction program.

2. The Developmental Disabilities Services and Facilities Construction Act. (P.L. 91-517)

3. The Community Mental Health Centers Construction Act. (P.L. 88-164)

POSITION PAPER/Department of Health and Social Services

4. Section 232 of National Housing Act (Long Term Care Facility Construction Loans).

5. Section 242 of National Housing Act (Hospital Construction Loans).

6. Farmers Home Administration (Hospital Loan Program).

7. Economic Development Administration and Indian Health Service Funds.

The Bill confines itself to hospitals and health care projects owned by or to be constructed by municipalities or the State. No mention is made of facilities owned or constructed by nonprofit organizations. The department feels that a construction fund for hospitals and medical facilities should include nonprofit as well as public facilities.

Section 1 (a) line 10
The words Department of Public Works should be changed to read Department of Health and Social Services

Section 1 (c) should be changed to read
All facilities shall be built in accordance with applicable Federal construction regulations, State and Local building codes including the obtaining of required permits. The Commissioner of Health and Social Services shall provide the project sponsor with a copy of any Federal Regulations and State Building Code applicable to the project.

Section 2 (a) and (b) should be deleted
This section is not applicable to projects administered by the Department of Health and Social Services

Section 3 should be deleted
This section is not applicable to Department of Health and Social Services projects as payment procedures have been established.

Section 4 should be deleted
Technical assistance is provided to all project sponsors by personnel of the Department of Health and Social Services and in the case of Federally assisted projects, by the staff of the regional office of Facilities Engineering and Construction.

Section 5 (a) should be changed to read
Title acceptable to the department to a suitable project site shall be vested in the owner of the facility before work is begun on the site.

Section 5 (b) should be deleted
Maintenance of a health facility should be the responsibility of the owner.

The department supports House Bill 290 with the above changes.

Re: House Bill No. 290

Dear Mr. Parr:

House Bill No. 290, an Act creating the hospital and health care center fund, was introduced in the House on March 1, 1977 and was referred to the House Health, Education and Social Services and Finance Committees.

For the consideration of the House Health, Education and Social Services Committee, I am enclosing a Fiscal Note prepared by Mr. Jim Edenso, Deputy Commissioner, Department of Revenue, Juneau concerning the proposed legislation.

Very truly yours,

R. D. Stevenson
Special Assistant

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

This notes enumerates a portion of the fiscal impact of HB 290 upon Treasury Management, specifically the need to add clerical staff if HB 290 becomes law. Potential loss of investment income, while real, is entirely dependent upon market conditions and is not calculable.

Every sale of State bonded debt is a composite of numerous authorizations, one of which could be for the construction of hospital and health care centers. Sale proceeds are presently commingled for investment purposes, and are accounted for under the State Bond Construction Fund. Income from the investment of sale proceeds is used for the payment of debt service.

The subject Act would require the segregation of bond sale proceeds into separate funds, and the return of income to the fund in which principal is deposited. Segregation of proceeds would preclude commingled investment and prevent the Department of Revenue from obtaining the most favorable rates available. Segregation would further increase the accounting task exponentially, and would require the addition of staff.

MINUTES OF HOUSE

HEALTH, EDUCATION & SOCIAL SERVICES COMMITTEE

March 18, 1977

The meeting was called to order by Chairman Parr at 3:05 p.m.

Those present: Parr, Nakak, Cotten, Ose, Bennett, Beirne, and Mr. Phillips came in later.

Absent: Chatterton, Buchholdt.

HB 290

Chairman Parr announced the first order of business would be HB 290 and asked Mr. Swanson to speak on his bill.

Mr. Swanson asked to discuss 291 first and then 290. Said HB 291 is a bond issue that is a partial bond issue that the Governor just vetoed the whole bond issue out of the program last year and there was a multitude of projects in it which included a lot of alcoholic centers and alcohol money and he felt if they stayed strictly with a bond issue that dealt with health versus a self-imposed sickness, that this bond issue would have a better chance of moving. Said he held it sacred and dear to him to protect the people that can't help being sick where he doesn't have a lot of feeling about people that are sick with a self-imposed sickness. Said the bill he has proposed deals strictly with people that are unfortunate enough to get sick and the facilities to take care of them. Said the Fairbanks bond issue last year called for $300,000 for the addition on their family service center, the Cordova Health and family service center called for $300,000, the Sitka Community Hospital addition was 3 million dollars, the Nenance Health Center and family service center was $200,000 and this year he added Tok Health and Family Service Centers for $200,000. The Bethel Health and Social Services was in there last year for 1 million dollars and the Ketchikan General Hospital Island View Manor wing was in for a million and a half. Said he would suggest an amendment that item No. 5, the Tok Health and FAmily Service Center be eliminated. Said he had put the Tok facility in anotherpiece of legislation and is already in the budget so far.

Mr. Swanson said he was extremely interested in a health and family service center and felt a facility of this kind, especially for small communities that were large enough where they could get a physicians assistant to serve these places. Felt the money spent for this type of facility would be well spent.

Mr. Swanson then spoke on 290. Said he introduced the bill for 1 reason, where there is a health and family service center approved in a bond issue. On page 2, (c) on line 1, said (after reading the whole section) that he deliberately put that in to specifically put some local control in allowing this grant money to go to a community or municipality. He told the committee and gave an example of what happens to a small project that goes to a community in the area of a school building in the transfer of funds. He said last year they gave 1 million 60 thousand dollars for a school at Anderson and enacted a piece of legislation that governed the transfer of those moneys and allowed the Dept. of Public Works to promulgulate all the rules and regulations and gave a brief rundown of what it cost the City of Anderson before they got the money. Mr. Swanson said he would make a copy of the facts he gave and make it available to the committee.

Mr. Ose asked if there was personnel to operate the buildings after they are finished. Mr. Swanson felt a mutual agreement could be worked out with the cities.

Mr. Swanson said he wanted to address both bills because they were companion measures. Mr. Parr said"but 290 could be passed and a different bonding bill could go through for health facilities."

Mr. Swanson hoped that what is on the books today and the transfer of these grants be taken, regardless of the REAA, and apply this philosophy to them -- could save 30 - 40 percent of the money that is going to be wasted in paper shuffling.

Dr. Beirne asked why Mr. Swanson wanted all the buildings to be built by the DPW instead of leaving it up to the municipalities. Mr. Swanson said the bill addresses itself to that by mutual agreement in that the municipality can assume all of the responsibiliti of building the facility. (line 13, page 2).

Next to testify was Mr. Richard Holden, Deputy Commissioner of Public Works. Said it was the Dept's position that this money is going to the wrong dept. Felt it should be going to Dept. of Health & Social Services. He said they were the people statutorily charged with this responsibility. He said he thought Mr. Edenso had problems with the constitutionality of a dedicated GO Bond fund as outlined in the bill, and presumably if the fund were to be created in the Dept. of Health & Social Services, it would be the responsibility of the Dept. of Transportation and Public Facilities to construct such projects unless using the previous statute (SB 398 of the last session). The Commissioner of that Dept. wanted to grant funds to a local political subdivision to assume local control Said they have been running into quite a number of problems in granting funds to REAA's and although some of the district superintendent in the REAA's dispute this,

Mr. Holden didn't think it was necessarily that the Dept. of Public Works was over bearing. He said the numbers Mr. Swanson quoted show a misconception on the part of the people who gave him those numbers. He said the numbers he quoted came from a budget prepared by the Dept. of P.W. assuming it would do the design and construction of the Anderson school. Said since the funds were granted to the Upper Railbelt School District, those funds he quoted should be spent by the school district to assure that quality design and quality construction is maintained. Said he thought the Supt. who gave Mr. Swanson those numbers assumed that the Dept. of PW was going to charge him for running his architect.

Mr. Parr asked that in a case under 398 where the municipalities was going to build a building, there is no charge from Public Works. Mr. Holden said there is a charge.If the facility as contained in this bill is owned by the State, then it is a duty of the Dept. which is otherwise responsibile for designing construction to insure that the building is built properly. To that extent, the Dept. would insure that the grantee would be properly equipped to administrer a design. That it was properly equipped to administer construction.

Said normally when the DPW or its successor agency builds things of this kind, they are built by hiring a private firm to design adn a private contractor to construct. Obviously it is a state building.

Mr. Holden said the Dept. had another problem with the bill, Page, 2, Sec. (c) line 4,--Said it seemed to the Dept. that a responsible local government agency which was willing to assume control of the construction project could send off to the Uniform Building Code people and buy their own code. On line 11, instead of saying the Dept. shall provide he felt it should read the Dept. may. Page 3, line 3. Compensation for that assistance has to come from projects, said they don't have funds to provide the assistance. Said they would have to charge a project budget to the tune of 1 - 1 1/2 percent. Said line 7 they had a problem with also.

Mr. Parr asked Mr. Holden if he was objecting to the wording of Sect. 5 of the bill. Mr. Holden said he wasn't objecting to the language as laid out here but procedurally there are lots of problems particularly until the land claims is settled.

Mr. Parr said he read section 5 to mean that unless the Dept is satisfied that there is clear title to the land, nobody can put the first concrete block down. Mr. Holden said this was what they wanted.

Mr. Holden felt that they should be the lead agency.

Mr. Parr asked Mr. Holden where in the bill he got the indication that the Dept. is the one to decide whether or not there should be a hospital. He said the way he understood the intent of the bill was that the legislature appropriated money on a bond issue and the voters had ratified it. The voters have

said
/there will be a hospital or health care facility. Said he didn't understand Mr. Holden's point because the voters have already decided whether there should be one. Mr. Holden said Mr. Swanson stated that illnesses he was funding for here, people who were physcially sick. He said his point was that they aren't now equipped to decide whether the plans that came in were for clinic or alcoholism center. Said the DPW doesn't know that when they look at plans. Mr. Parr felt if it was their responsibility to build state buildings it was there responsibility to have the people to decide this. Mr. Holden said normally what happens is the funds for the specific program purpose are vested in the Dept. which is equipped to handle this.

Next to testify was Mr. Jim Edenso, Deputy Commissioner for the Department of Revenue. He said his Dept. opposes HB 290. He said in its current form it is attempting to establish precedent which does'nt exist in the current management policy of the state Dept.of Revenue and also for Administration. He said Sec. 1, (b), line 26 on page 1. the objections they had to that is that the act creates a separate bond construction fund for the proceeds of hospital and health care authorizations. A separate bond is not necessary to properly account for the proceeds of general obligation bond sales and establishes a dangerous precedent. He said bond proceeds are invested in on a co-mingle basis by the Dept. of Revenue. He said segregation of these proceeds into separate funds would preclude co-mingle investment and prevent the Dept. of Revenue from obtaining the best return available on management of such funds. He felt there were some constitutional problems with the bill. He said he believes the state constitution prohibits the dedication of funds. He said his recommendation to the Governor should this bill pass would be to veto the bill on the strength of the inclusion of paragraph (b) Sec. 1 on the first page.

Mr. Parr asked what money is being talked about in investing here? Are we talking about drawing some kind of interest on that money until we would pay a contractor? Mr. Edenso said that was correct, the money they were referring to would be obtained from a bond sale based upon the position of the voters in the state and any bond resolution that they pass on.

Next to testify was Lois Jund, Deputy Commissioner of Health and Social Services. Said she wasn't going to testify as to the constituionality of this bill. She said they don't really feel this legislation is necessary, and gave a little background. Said the proposed bill is actually in conflict with the statute on the book (AS 18.20.140 through AS 18.25.120) which provides that the hospital and medical facilities construction program will be administered by the Dept. of Health & Social Services.

She said there was a reason for this in that hospital construction standards tie in very closely with certification and licensing which is also under the Dept.'s jurisdiction and also with medical facilities planning. She said at the present time under the present statutes, the Dept. of Health and Social Service can do just about everything that is in HB 290. Said they do provide technical assistance on all projects under the Aid to Communities. The only they don't do is have a fund and she just heard that is somewhat unconstitutional so she doesn't feel there is a great necessity for the bill. She said one of the reasons it goes through their Dept. is so that they can take advantage of Hill Burton Construction funds. She said Public Works has really constructed very few of these facilities. She said in most instances the municipalities themselves have hired their own architects and enginners.

There was discussion as to whether the purpose of the bill was to cause expeditious procedures in order to get these health care facilities in the various locations. There was also discussion about the lack of state responsibilities to provide emergency care throughout the state, such as along the highway.

Mrs. Jund said she wondered if they were aware of the present statute, actually 2 statutes, Sec. 18.20.080 with attendant regulations which provides for hospital construction. Said they also have regulations on nursing homes 7 AAC 12.020. She said the other statute is assistance for community health facilities. She further stated that the Department is very actively working on emergency medical services for various communities.

Next to testify was Sharron Osborn who gave a little background on the EMS situation in Alaska. Said most of the money has been federal money and that money is earmarked for planning , not implementation. Said they have a statewide plan going in now that is developed at the regional level. So this year they will be getting implementation money. Said she would be glad to make the plan available which is presently being prepared and should be finalized the 1st week in April.

The bills were held over and no actic as taken on them.

Mr. Parr said he had received a note from the Speaker about the confirmations and he read the list he had received that were assigned to the Hess Committee. Said he felt it was the committee's feeling that we would only interview the Regent's candidates and Mr. Bennett was interested in the Nursing Home Administrators. Said he felt it was a waste of time and money in having some of the people come down to be interviewed when it wasn't necessary. Said he would suggest

on the professional ones, that he would be happy to write a letter to the associations and asked if the nominee had their concurrence.

The meeting adjourned at 4:30 p.m.

HB
291

POSITION PAPER/Department of Health and Social Services

HOUSE BILL 291

"An Act providing for the issuance of general obligation bonds in the amount of $6,500,000 for the purpose of paying the cost of constructing and equipping hospitals and health and family care centers; and providing for an effective date."

The Department of Health and Social Services has analyzed the projects enumerated in House Bill 291 individually, as set forth below. Although the Department recommends deleting entirely some of the projects proposed, it also recommends increasing other appropriations to provide adequate funds for constructing and equipping the facilities deemed necessary. The amended total, as proposed by the Department, would be $7,670,000.

In addition, the Department recommends deleting the reference to the "Department of Public Works" in line 24, page 1. The justification for this recommendation may be found in the Department's position paper on House Bill 290.

1. Fairbanks Health and Family Service Center ($300,000):

   This project should be deleted as a discussion with the Fairbanks City Manager indicates that the City funded and has completed the needed addition to the health center.

2. Cordova Health and Family Service Center ($300,000):

   This project should be deleted as the City of Cordova has recently modernized its hospital and included space for a health and family service center within the facility.

3. Sitka Community Hospital ($3,000,000):

   The original estimate for this project was $8,000,000. Funding to be as follows:

Federal Funds	$ 700,000
State Bond Funds	4,970,000
Local Funds	2,330,000
Total	$ 8,000,000

   The Department does not have federal funds available for this project. Although Congress did appropriate some construction funds for the 1977 fiscal year, the funds are being held by the Department of Health, Education and Welfare and their release appears doubtful. Should the funds be released, the amount the State would receive is also unknown, but indications are that Alaska would not receive its total $1,000,000 entitlement. If the federal funds are not allocated to the States, the total funds needed for the Sitka project would be $5,670,000. It is recommended there should be further

communications with representatives of the community regarding this project. It has been reported to the Department that the community is not interested in replacement of the hospital at this time.

4. Nenana Health and Family Service Center ($200,000):

As the City of Nenana is located on a main highway and the distance to the nearest medical facility is approximately 60 miles, the Department strongly supports the construction of this facility. In view of its location on the highway and the emergencies that will be encountered, the Department recommends that the estimated construction cost be increased to $300,000 to provide the needed facility plus equipment.

5. Tok Health and Family Service Center ($200,000):

This is a community owned facility staffed by the Tanana Valley Physicians Clinic in Fairbanks. Utilization of the clinic is steadily increasing due to Alcan highway traffic and increased utilization by patients from surrounding villages. The U.S. Coast Guard has moved twenty-five personnel and families to Tok who will depend on the clinic for medical care. The existing clinic building is inadequate for the volume of medical care being handled and adequate space is not available for emergencies and treatment of serious multiple injuries. The Department recognizes the importance of medical care being readily available to the residents of the Tok area, but is concerned about establishing a precedence by the State providing facilities for private profit-making organizations.

6. Bethel Health and Social Services Facility ($1,000,000):

This project should be deleted as a new public health center has recently been completed and a prematernal home now under construction is nearing completion.

7. Ketchikan General Hospital and Island View Manor Nursing Home Wing ($1,500,000):

The Department is currently working with the City of Ketchikan Hospital personnel and the project architect in developing plans for the modernization of this facility. Funds amounting to $1,000,000 were appropriated by Chapter 132 SLA 1974 for modernization of the nursing home wing. No funds were appropriated for modernization of the hospital although modernization would increase efficiency and improve patient care. The Department strongly supports the increase in funds for this project.

Subject to the above changes, the Department supporst House Bill 291.

MEMORANDUM

TO: Members of the HESS Committee

FROM: Rocky Plotnick

DATE: January 18, 1978

SUBJECT: HB 296

During the 1977 session HB 341 was passed and the wording is identical to HB 296 EXCEPT the definitions. Currently, Alaska Law covers physicians, nurses, and persons certified by a hospital as competent to take blood samples. HB 296, which we are considering today, would specify chiropractors, dental hygienists, dentists, dispensing opticians, optometrists, pharmacists, physical therapists, podiatrists, psychologists, psychological associates, and hospitals. I have included copies of HB 341 (AS 09.65.095), the definitions for current law, (AS 08.64 and AS 08.68), and the definitions for HB 296, (AS 09.55.560 (1)). If enacted, the wording of HB 296 will have to be changed.

HB 296

establishes by a preponderance of the evidence that the provider has failed to inform the patient of the common risks and reasonable alternatives to the proposed treatment or procedure, and that but for that failure the claimant would not have consented to the proposed treatment or procedure.

(b) It is a defense to any action for medical malpractice based upon an alleged failure to obtain informed consent that

(1) the risk not disclosed is too commonly known or is too remote to require disclosure;

(2) the patient stated to the health care provider that he would undergo the treatment or procedure regardless of the risk involved or that he did not want to be informed of the matters to which he would be entitled to be informed;

(3) under the circumstances consent by or on behalf of the patient was not possible; or

(4) the health care provider after considering all of the attendant facts and circumstances used reasonable discretion as to the manner and extent that the alternatives or risks were disclosed to the patient because he reasonably believed that a full disclosure would have a substantially adverse effect on the patient's condition. (§ 37 ch 102 SLA 1976)

Effective date. — Section 51, ch. 102, SLA 1976, makes this section effective May 29, 1976, in accordance with AS 01.10.070(c).

Editor's note. — Section 47, ch. 102, SLA 1976, provides: "Sections 33 — 38 of this Act apply to all causes of action for medical malpractice which have not been filed in a court of this state before the effective date of this Act."

Sec. 09.55.560. Definitions. In §§ 530 — 560 of this chapter

(1) "health care provider" means a chiropractor licensed under AS 08.20; a dental hygienist licensed under AS 08.32; a dentist licensed under AS 08.36; a nurse licensed under AS 08.68; a dispensing optician licensed under AS 08.71; an optometrist licensed under AS 08.72; a pharmacist licensed under AS 08.80; a physical therapist licensed under AS 08.84; a physician licensed under AS 08.64; a podiatrist; a psychologist and a psychological associate licensed under AS 08.86; and a hospital as defined in AS 18.20.130, including a governmentally owned or operated hospital;

(2) "board" means an arbitration board established under § 535 of this chapter;

(3) "panel" means an expert advisory panel established under § 536 of this chapter. (§ 37 ch 102 SLA 1976)

Effective date. — Section 51, ch. 102, SLA 1976, makes this section effective May 29, 1976, in accordance with AS 01.10.070(c).

Editor's note. — Section 47, ch. 102, SLA 1976, provides: "Sections 33 — 38 of this Act apply to all causes of action for medical

POSITION PAPER/Department of Health and Social Services

POSITION PAPER

ON

HOUSE BILL NO. 296

"An act relating to the civil liability of health care providers."

House Bill 296 amends AS 09.65 - Miscellaneous Provisions of the Code of Civil Procedure by adding a new section providing health care providers protection against civil or criminal action liability suits arising out of battery for taking a blood sample. The new section stipulates the two governing conditions; namely, that the sample is taken at the request of a police officer with proper authority, and that excessive or unreasonable force was not used.

Hospital and medical laboratories are frequently requested by enforcement officers or the courts to take blood samples for legal purposes, especially for blood alcohol or drug determinations. The blood specimen is then submitted to another laboratory for analysis. In the provision of this service as a collector of a blood sample, the health care provider under present law is liable to civil suit. As a consequence, many of the health care providers are reluctant to cooperate with the authorities in taking a blood sample for legal purposes.

A recent court decision in the "Lower 48" ruled that the health care provider could not be made liable in a civil or criminal action arising out of battery if there was a court order or if the requesting arresting officer had a search warrant and if there was no use of excessive or unreasonable force. Health care providers in Alaska could therefore quote the precedent decision in the event of a criminal or civil action suit, but this would consume considerable time and effort as the suit would have to be brought into court.

Enactment of House Bill 296 would give statutory recognition to the protection of the health provider in this specific area and would prevent many time-consuming nuisance suits.

There will be no fiscal impact upon the Department of Health and Social Services if House Bill 296 is enacted.

The Department of Health and Social Services supports this legislation.

Re: House Bill 296

Dear Mr. Parr:

On looking over House Bill 296 which has been referred to your committee I notice that the title refers only to civil liability of health care providers, while section 1 mentions "civil or criminal" action.

Therefore to comply with Article II, Section 13 of the State Constitution and AS 24.30.020 which require that "the subject of each bill . . . be expressed in its title", we suggest that Page 1, Line 6 be amended to insert "and criminal" between "civil" and "liability".

Thank you for your consideration.

Sincerely,

AVRUM M. GROSS
ATTORNEY GENERAL

By: Richard L. Peter
Richard L. Peter
Assistant Attorney General

The 1977 amendment, effective May 18, 1977, in subsection (a), added "Except as provided in this section" to the beginning of the subsection, substituted "a municipality" for "an incorporated borough, city, or other public corporation of like character," and deleted "or for an injury to the rights of the plaintiff arising from some act or omission of the unit of local government" from the end of the subsection. In subsection (b), the amendment substituted "A municipality" for "An incorporated borough, city or other political subdivision" at the beginning of the subsection and substituted "it" for "the incorporated borough, city or other political subdivision" at the end of the subsection. The amendment also rewrote subsection (c) and added subsections (d) and (e).

Editor's note. — Section 4, ch. 37, SLA 1977, effective May 18, 1977, provides: "This Act applies to all legal actions filed after the effective date of this Act."

Legislative committee reports. — For report on ch. 19, SLA 1975 (FCCS HCSSB 53), see 1975 House Journal, p. 144. For report on ch. 215, SLA 1975 (HCS CSSB 257 am FCC), see 1975 House Journal, p. 1455.

Sec. 09.65.090. Civil liability for emergency aid. (a) A person at a hospital or any other location who renders emergency care or emergency counseling an injured, ill, or emotionally distraught person who reasonably appears to the person rendering the aid to be in immediate need of emergency aid in order to avoid serious harm or death is not liable for civil damages as a result of an act or omission in rendering emergency aid.

(b) This section does not preclude liability for civil damages as a result of gross negligence or reckless or intentional misconduct. (§ 1 ch 32 SLA 1967; am § 1 ch 119 SLA 1971; am § 38 ch 102 SLA 1976)

Effect of amendment. — The 1976 amendment, effective May 29, 1976, rewrote subsection (a) and deleted the second sentence of subsection (b) which read "Gross negligence means reckless, wilful, or wanton misconduct."

Editor's note. — Section 47, ch. 102, SLA 1976, provides: "Sections 33 — 38 of this Act apply to all causes of action for medical malpractice which have not been filed in a court of this state before the effective date of this Act."

Sec. 09.65.095. Liability for administration of blood test. (a) No civil or criminal action arising out of battery may be brought against a health care provider for the act of taking a blood sample if the sample is taken

(1) at the request of a police officer when the arresting officer has a search warrant or court order authorizing the taking of the blood sample; and

(2) without the use of excessive or unreasonable force.

(b) As used in this section,

(1) "health care provider" means a nurse licensed under AS 08.68, a physician licensed under AS 08.64, and a person certified by a hospital as competent to take blood samples;

(2) "hospital" means a hospital as defined in AS 18.20.130(1), including a governmentally owned or operated hospital.

(c) Nothing in this section shall be construed to prohibit recovery of damages incident to the improper or negligent withdrawal of blood. (§ 1 ch 80 SLA 1977)

Sec. 08.64.170. License to practice medicine or osteopathy. (a) No person may practice medicine, podiatry, osteopathy or acupuncture in the state unless he is licensed under this chapter, except that

(1) a physician assistant may examine, diagnose or treat persons under the supervision, control, and responsibility of either a physician licensed under this chapter or a physician exempted from licensure under § 370 of this chapter;

(2) a physician-trained mobile intensive care paramedic may render emergency lifesaving service; and

(3) a person licensed under AS 08.36 may perform acupuncture in the regular practice of dentistry, subject to the regulations of the Board of Dental Examiners.

(b) Repealed by § 4 ch 101 SLA 1974.

(c) A chiropodist practicing in the state on May 16, 1972 is exempt from this section.

(d) A podiatrist practicing in the state on March 26, 1976 is exempt from this section, and shall be issued a license without examination if application is made within one year of the effective date of this act. (§ 35-3-81 ACLA 1949; am § 4 ch 148 SLA 1970; am § 1 ch 5 SLA 1972; am § 1 ch 21 SLA 1974; am §§ 3, 4 ch 101 SLA 1974; am §§ 1, 2 ch 24 SLA 1976)

Effect of amendments. — The first 1974 amendment, in subsection (a), substituted "medicine, osteopathy or acupuncture" for "medicine or osteopathy" in the introductory language and added a sentence which has been designated by the revisor as paragraph (3).

The second 1974 amendment designated the provisions of subsection (a) as subsection (a)(1), added paragraph (2) of that subsection, and repealed subsection (b).

The 1976 amendment inserted "podiatry" in the introductory language of subsection (a) and added subsection (d).

Legislative committee report. — For report on ch. 5, SLA 1972 (SCS CSHB 34), see 1971 House Journal, pp. 250, 251.

C.J.S. references. — 53 C.J.S. Licenses §§ 32 to 39; 70 C.J.S. Physicians and Surgeons §§ 8 to 14.

Sec. 08.64.180. Application for license. A person who desires to practice medicine, osteopathy or acupuncture in the state shall apply in writing to the department for a license. (§ 35-3-85 ACLA 1949; am § 1 ch 22 SLA 1960; am § 4 ch 143 SLA 1968; am § 3 ch 77 SLA 1969; am § 2 ch 21 SLA 1974)

Effect of amendment. — The 1974 amendment substituted "medicine, osteopathy or acupuncture" for "medicine or osteopathy."

Legislative committee report. — For report on ch. 143, SLA 1968 (HB 707), see 1968 House Journal, p. 836.

by the physician-trained mobile intensive care paramedic. (§ 14 ch 101 SLA 1974)

Sec. 08.64.367. Prescription or administration of laetrile by physicians. (a) No physician may be subject to disciplinary action by the State Medical Board for prescribing or administering amygdalin (laetrile) to a patient under his care who has requested the substance unless the State Medical Board in a hearing conducted under the Administrative Procedure Act (AS 44.62) has made a formal finding that the substance is harmful.

(b) No hospital or health facility may interfere with the physician-patient relationship by restricting or forbidding the use of amygdalin (laetrile) when prescribed or administered by a physician and requested by a patient unless the substance as prescribed or administered by the physician is found to be harmful by the State Medical Board in a hearing conducted under the provisions of the Administrative Procedure Act (AS 44.62). (§§ 1, 2 ch 227 SLA 1976)

Sec. 08.64.368. Permits for isolated areas.

Repealed by § 27 ch 148 SLA 1970.

Editor's note. — The repealed section derived from § 3, ch. 93, SLA 1965.

Article 5. General Provisions.

Section
370. Persons not affected
380. Definitions

Sec. 08.64.370. Persons not affected. This chapter does not apply to

(1) officers in the regular medical service of the armed services of the United States or the United States Public Health Service while in the discharge of their official duties;

(2) a physician or osteopath, who is not a resident of this state, who is asked by a physician or osteopath licensed in this state to help in the diagnosis or treatment of a case;

(3) the practice of the religious tenets of a church;

(4) Repealed by § 13 ch 127 SLA 1974.

(5) a person while serving as a student, intern, resident physician, or fellow at a hospital, clinic, or medical facility in the state;

(6) a physician in the regular medical service of the United States Public Health Service or the armed services of the United States volunteering his services without pay or other remuneration to a hospital, clinic, medical office, or other medical facility in the state. (§ 35-3-97 ACLA 1949; am § 4 ch 93 SLA 1965; am § 26 ch 77 SLA 1969; am §§ 23, 24 ch 148 SLA 1970; am §§ 1, 2 ch 88 SLA 1972; am § 13 ch 127 SLA 1974)

Effect of amendment. — The 1974 amendment repealed paragraph (4).

Legislative committee report. — For report on ch. 127, SLA 1974 (SCSHB 817 am S), see 1974 House Journal, p. 657.

Sec. 08.64.380. Definitions. As used in this chapter

(1) "board" means the State Medical Board;

(2) "practice of medicine" or "practice of osteopathy" means

(A) maintaining an office or place of business for the purpose of treating the sick or injured for pay; or

(B) the public display of one's name and the letters "M.D.", "M.B." or "D.O." or the words "physician" or "osteopath" or "osteopathic physician", or "osteopathic surgeon", or "osteopathic physician and surgeon", or a specialist designation such as "surgeon" or "dermatologist", "psychiatrist", or the like; or

(C) the assumption or promulgation of a title which tends to show that the person is willing or qualified to diagnose or treat the sick or injured; or

(D) for a fee prescribing, directing or recommending for the use of a person, a drug or medicine for the treatment, cure or relief of a disease, infirmity, bodily injury or defect; or

(E) for a fee performing a surgical operation for the cure, relief or reduction of disease, bodily injury, deformity, or defect; or

(F) Repealed by § 1 ch 117 SLA 1971.

(3) "unprofessional or dishonorable conduct" means

(A) a violation of the provisions of AS 11.15.060 or regulations lawfully adopted by the State Medical Board concerning abortion procedures and practice;

(B) habitual overuse of alcoholic beverages or depressant, hallucinogenic or stimulant drugs, as defined in AS 17.12.150(3), or addiction to the use of narcotic drugs as defined in AS 17.10.230(13);

(C) conviction of an offense involving moral turpitude;

(D) advertising professional services to the public except for notice of opening, closing, or removing practice, and except for directories listing physicians in a community on a uniform and nondiscriminatory basis, containing only factual, truthful descriptions of physicians and their services;

(E) making untruthful or fraudulent statements in the application for examination, or deceiving or cheating during the examination for license, or procuring a license by deceit or fraud;

(F) violating the Controlled Substances Act (P.L. 91-513; 84 Stat. 1242) or any other federal law pertaining to medical practice and drugs;

(G) violating the principles of medical ethics of the American Medical Association and of the Alaska State Medical Association;

(4) Repealed by § 27 ch 148 SLA 1970.

(5) "department" means the Department of Commerce.

(6) "acupuncture" means a medical practice to cure disease or relieve pain, alter function or induce anesthesia by piercing portions of the body with needles;

(7) "physician-trained mobile intensive care paramedic" means a person who

(A) has successfully completed the advanced first aid course prescribed by the board;

(B) is trained by a licensed physician

(i) to carry out all phases of cardio-pulmonary resuscitation,

(ii) to administer drugs under written or oral authorization of a licensed physician,

(iii) to administer intravenous solutions under written or oral authorization of a licensed physician; and

(C) has been examined and certified as a physician-trained mobile intensive care paramedic by the board or by the board's designated representatives;

(8) "emergency lifesaving service" means medical assistance given to a person whose physical condition, in the opinion of a reasonably prudent person, is such that his life is endangered;

(9) "practice of podiatry" means the medical, mechanical, and surgical treatment of ailments of the foot, the muscles and tendons of the leg governing the functions of the foot, and superficial lesions of the hand other than those associated with trauma; the use of preparations, medicines, and drugs as are necessary for the treatment of these ailments; the treatment of the local manifestations of systemic diseases as they appear in the hand and foot, except that

(A) a patient shall be concurrently referred to a physician or osteopath for the treatment of the systemic disease itself;

(B) general anaesthetics may be used only in colleges of podiatry approved by the State Medical Board and in hospitals approved by the joint commission on the accreditation of hospitals, or the American Osteopathic Association; and

(C) the use of X ray or radium for therapeutic purposes is not permitted. (§§ 35-3-94, 35-3-38 ACLA 1949; am § 27 ch 77 SLA 1969; am § 3 ch 103 SLA 1970; am §§ 25 — 27 ch 148 SLA 1970; am § 9 ch 32 SLA 1971; am § 1 ch 117 SLA 1971; am § 4 ch 85 SLA 1972; am § 4 ch 21 SLA 1974; am §§ 12, 13 ch 101 SLA 1974; § 1 ch 127 SLA 1975; am § 4 ch 24 SLA 1976)

Cross reference. — As to malpractice actions, see AS 09.55.530 — 09.55.560.

Effect of amendments. — The first 1974 amendment added paragraph (6).

The second 1974 amendment added subparagraph (C) to paragraph (3) and added paragraphs (7) and (8).

The 1975 amendment added the language beginning "and except for directories listing physicians" to the end of paragraph (3) (D).

The 1976 amendment added paragraph (9).

Legislative committee report. — For report on ch. 32, SLA 1971 (HB 111 am), see 1971 House Journal, p. 138.

The statutory definition of practicing medicine or surgery is very broad and within the literal meaning of the words

of a bachelor's degree. If after the annual review the board believes that the appointee has not made satisfactory progress toward award of a bachelor's degree, the department may dismiss the appointee, notwithstanding the provisions of AS 39.25.170.

(c) The executive officer shall:

(1) perform the administrative duties as required by the statutes and the department,

(2) carry out regulations and policy decisions, consistent with law, made by the Board of Nursing, and

(3) assist the board in the conducting of examinations, educational programs, preparation of minutes and other board administrative work.

(d) Repealed by § 1 ch 129 SLA 1974. (§ 1 ch 47 SLA 1967; am § 1 ch 81 SLA 1969; am § 2 ch 67 SLA 1973; am § 1 ch 129 SLA 1974; am § 49 ch 213 SLA 1976)

Effect of amendment. — The 1973 amendment added the second, third, fourth and fifth sentences of subsection (b).

The 1974 amendment repealed subsection (d).

The 1976 amendment substituted "Department of Commerce and Economic Development" for "Department of Commerce" in subsection (a).

Sec. 08.68.120. Bond.
Repealed by § 3 ch 59 SLA 1966.

Sec. 08.68.130. Disposition of fees.
Repealed by § 3 ch 59 SLA 1966.

Sec. 08.68.140. Applicability of Administrative Procedure Act. The board shall comply with the Administrative Procedure Act (AS 44.62).

Sec. 08.68.150. Expenses. Members of the board are entitled to the per diem and travel expenses allowed by law. (§ 7 ch 90 SLA 1957)

Article 2. Examination and Licensing.

Section
160. License required
165. Malpractice insurance
170. Qualifications of professional nurse applicants

240. Nurses licensed or holding temporary permits under previous law
250. [Repealed]
251. Lapsed licenses
260. Inactive nurses
270. Grounds for denial, suspension or revocation
275. Limits or conditions on license; discipline

Sec. 08.68.160. License required. A person practicing or offering to practice professional or practical nursing in the state shall submit evidence that he is qualified to practice, and shall be licensed under this chapter. (§ 1 ch 90 SLA 1957)

of court. The injunction proceeding is in addition to other penalties and remedies provided in this chapter. (art VIII ch 90 SLA 1957)

Article 5. General Provisions.

Section
400. Exceptions to application of chapter
410. Definitions

Sec. 08.68.400. Exceptions to application of chapter. (a) This chapter does not apply to

(1) a qualified nurse licensed in another state employed by the United States Government or a bureau, or agency, or division of the United States Government while in the discharge of his official duties;

(2) nursing service given temporarily in the event of a public emergency or disaster;

(3) the practice of nursing by a student enrolled in a nursing education program accredited by the board when the practice is in connection with the student's course of study; or

(4) the practice of nursing by a nurse enrolled in an approved refresher course.

(b) For purposes of this section the word "nurses" includes professional and practical nurses, and "nursing" means professional and practical nursing. (art IX ch 90 SLA 1957; am § 10 ch 129 SLA 1974)

Effect of amendment. — The 1974 amendment added paragraph (4) to subsection (a).

Sec. 08.68.410. Definitions. As used in this chapter

(1) "board" means the Board of Nursing;

(2) "licensed professional nurse" is equivalent to the common title registered nurse;

(3) "licensed practical nurse" is equivalent to the title licensed vocational nurse;

(4) "practical nursing" also means vocational nursing;

(5) "practice of professional nursing" means the performance for compensation of observation, care and counsel of the ill, injured, or infirm, or the maintenance of health or prevention of illness of others, the supervision and teaching of personnel; or the administration of medications and treatments prescribed by a licensed physician or dentist which require substantial specialized judgment and skill based on knowledge and application of the principles of biological, physical, and social science; but the foregoing do not include acts of medical diagnosis, or the prescription of medical therapeutic or corrective measures unless authorized by regulations promulgated jointly by the State Medical Board and the Board of Nursing and as implemented by the Board of Nursing;

(6) "practice of practical nursing" means the performance for compensation of selected acts in the care or prevention of illness, and in the care of the ill, injured, or infirm under the direction of a licensed professional nurse or a licensed physician or a licensed dentist not requiring the substantial specialized skill, judgment and knowledge required in professional nursing;

(7) an "accredited nursing education program" is a program having curricula and standards which meet the requirements established by the board;

(8) "endorsement" is the licensing or registering of an applicant without examination through the acceptance of a license or registration issued by any state or territory after a comprehensive examination which is equivalent to the examination offered in this state, and providing the applicant meets all other qualifications required by law;

(9) "advanced nurse practitioner" means a registered professional nurse who by virtue of specialized education and experience, has become certified to perform acts of medical diagnosis, and prescription of medical, therapeutic or corrective measures as authorized by regulations promulgated under (5) of this section. (§ 2 ch 90 SLA 1957; am § 5 ch 37 SLA 1970; am § 3 ch 67 SLA 1973; am §§ 11, 12 ch 129 SLA 1974)

Effect of amendments. — The 1973 amendment added the language beginning "unless authorized" to the end of paragraph (5).

The 1974 amendment substituted "state or territory" for "state, territory, or foreign country" near the middle of paragraph (8) and added paragraph (9).

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPARTMENT OF LAW

OFFICE OF THE ATTORNEY GENERAL

POUCH K — STATE CAPITOL
JUNEAU 99811

March 10, 1977

Representative Charles H. Parr
Chairman
Committee on Health, Education and
Social Services
Alaska House of Representatives
Pouch V
Juneau, Alaska 99811

Re: House Bill 296

Dear Mr. Parr:

On looking over House Bill 296 which has been referred to your committee I notice that the title refers only to civil liability of health care providers, while section 1 mentions "civil or criminal" action.

Therefore to comply with Article II, Section 13 of the State Constitution and AS 24.30.020 which require that "the subject of each bill . . . be expressed in its title", we suggest that Page 1, Line 6 be amended to insert "and criminal" between "civil" and "liability".

Thank you for your consideration.

Sincerely,

AVRUM M. GROSS
ATTORNEY GENERAL

HB
340

ALASKA NATIVE COMMISSION ON ALCOHOLISM AND DRUG ABUSE

750 East Fireweed Lane
Anchorage, Alaska 99503

April 27, 1977

House HESS Committee
Representative Charles Parr, Chairman
Pouch V
Juneau, Alaska 99811

Dear Mr. Parr and Committee:

The Alaska Native Commission on Alcoholism and Drug Abuse respectfully requests to officially go on your committee record as having endorsed and supported in good conscience, the existing House Bill 340, introduced as of March 11, 1977.

We have reviewed the bill in its entirety, section by section; and comfortably respect the professional insight of the Legislature in their objective evaluation of this bill's merits.

Optionally, this should provide for the arrangements of personnel, facilities, and technology within pre-arranged channels of communication and transportation for the effective and coordinated delivery of consistent and sequential alcoholism/drug treatment care and continuity thereof, by appropriate geographical areas, as established under recognition of Public Law 93-641, with the on-going regional development of Health Systems Agencies and Planning Groups, and Regional Native Health Organizations.

This should further organize the response capabilities of existing treatment and health services for the survival of the acutely ill alcoholism/drug dependant patient, and provide accessability to quality recovery of patients requiring these services.

It is with this interest and the commitment of our constituents, the Native Commonwealth of Alaska, that the Alaska Native Commission be given the credability and consideration for such on endorsement. It further would be most difficult for us to consider any novel revisions under a proposed HB-340, without the benefit of review and comment by all affected rural health entities and communities. With this we remain,

Respectfully yours,

George Barril

George Barril, Executive Director

GB/aw
cc: Governor, Jay S. Hammond
Commissioner, Francis F. Williamson
Coordinator, Robert Cole, S.O.A.
Senator, Mike Colletta, Chairman, Special Committee on Alcoholism

Amended in HB 340

Sec. 47.37.010. Declaration of policy. It is the policy of the state that alcoholics and intoxicated persons should not be criminally prosecuted for their consumption of alcoholic beverages and that they should be afforded a continuum of treatment so they may lead normal lives as productive members of society. (§ 1 ch 207 SLA 1972)

Purpose of the legislature in enacting this chapter. — See Peter v. State, Sup. Ct. Op. No. 1112 (File No. 2185), 531 P.2d 1263 (1975).

This chapter establishes a comprehensive program for the treatment of alcoholism as a disease. Peter v. State, Sup. Ct. Op. No. 1112 (File No. 2185), 531 P.2d 1263 (1975).

Public drunkenness should not be made the subject of criminal sanctions. — See Peter v. State, Sup. Ct. Op. No. 1112 (File No. 2185), 531 P.2d 1263 (1975).

This chapter does not make drunkenness a defense to criminal liability for nonalcoholic substantive offenses committed by one under the influence of liquor. Peter v. State, Sup. Ct. Op. No. 1112 (File No. 2185), 531 P.2d 1263 (1975).

This chapter repealed by implication 13 AAC 02.175(c), which prohibits a person from being upon or along a highway while under the influence of an intoxicating liquor. Peter v. State, Sup. Ct. Op. No. 1112 (File No. 2185), 531 P.2d 1263 (1975).

There is an irreconcilable conflict between this chapter, a principal purpose of which is to decriminalize public drunkenness, and 13 AAC 02.175(c), making it a misdemeanor to appear upon or along a highway or street in an intoxicated condition. Peter v. State, Sup. Ct. Op. No. 1112 (File No. 2185), 531 P.2d 1263 (1975).

Sec. 47.37.020. Office of alcoholism. An office of alcoholism is established in the department. The office shall be headed by a coordinator appointed by the commissioner. The coordinator shall be a qualified professional who has training and experience in the organization and administration of treatment services for persons with medical-social problems. The coordinator is in the classified service. (§ 1 ch 207 SLA 1972)

Sec. 47.37.030. Powers of office. The office may

(1) plan, establish, and maintain treatment programs as appropriate;

(2) make contracts necessary or incidental to the performance of its duties and the execution of its powers, including contracts with public and private agencies, organizations, and individuals, to pay them for services rendered or furnished to alcoholics or intoxicated persons;

(3) solicit and accept for use a gift of money or property or a grant of money, services, or property from the federal government, the state, or a political subdivision of it or a private source, and do all things necessary to cooperate with the federal government or any of its agencies in making an application for a grant;

(4) administer or supervise the administration of the provisions relating to alcoholics and intoxicated persons of any state plan submitted for federal funding under federal health, welfare, or treatment legislation;

(5) coordinate its activities and cooperate with alcoholism programs in this and other states, and make contracts and other joint or

cooperative arrangements with state, local, or private agencies for the treatment of alcoholics and intoxicated persons and for the common advancement of alcoholism programs in this and other states;

(6) keep records and engage in research and the gathering of relevant statistics;

(7) do other acts necessary to implement the authority expressly granted to it;

(8) acquire, hold, or dispose of real property or any interest in it, and construct, lease, or otherwise provide treatment facilities for alcoholics and intoxicated persons; however, the office shall encourage local initiative, involvement and financial participation under grants-in-aid whenever possible in preference to the construction or operation of facilities directly by the office. (§ 1 ch 207 SLA 1972)

Sec. 47.37.040. Duties of office. The office shall

(1) develop, encourage, and foster statewide, regional, and local plans and programs for the prevention of alcoholism and treatment of alcoholics and intoxicated persons in cooperation with public and private agencies, organizations, and individuals, and provide technical assistance and consultation services for these purposes;

(2) coordinate the efforts and enlist the assistance of all public and private agencies, organizations, and individuals interested in prevention of alcoholism and treatment of alcoholics and intoxicated persons;

(3) cooperate with the division of corrections in establishing and conducting programs to provide treatment for alcoholics and intoxicated persons in or on parole from penal institutions;

(4) cooperate with the Department of Education, school boards, schools, police departments, courts, and other public and private agencies, organizations and individuals in establishing programs for the prevention of alcoholism and treatment of alcoholics and intoxicated persons, and preparing curriculum materials for use at all levels of school education;

(5) prepare, publish, evaluate, and disseminate educational material dealing with the nature and effects of alcohol;

(6) develop and implement, as an integral part of treatment programs, an educational program for use in the treatment of alcoholics and intoxicated persons which includes the dissemination of information concerning the nature and effects of alcohol;

(7) organize and foster training programs for all persons engaged in treatment of alcoholics and intoxicated persons;

(8) sponsor and encourage research into the causes and nature of alcoholism and treatment of alcoholics and intoxicated persons, and serve as a clearinghouse for information relating to alcoholism;

(9) specify uniform methods for keeping statistical information by public and private agencies, organizations, and individuals, and collect and make available relevant statistical information, including number

of persons treated, frequency of admission and readmission, and frequency and duration of treatment;

(10) advise the governor in the preparation of a comprehensive plan for treatment of alcoholics and intoxicated persons;

(11) review all state health, welfare, and treatment plans to be submitted for federal funding, and advise the commissioner on provisions to be included relating to alcoholism and intoxicated persons;

(12) assist in the development of, and cooperate with, alcohol education and treatment programs for employees of state and local governments and businesses and industries in the state;

(13) utilize the support and assistance of interested persons in the community, particularly recovered alcoholics, to encourage alcoholics to voluntarily undergo treatment;

(14) cooperate with the Department of Public Safety and the Department of Highways in establishing and conducting programs designed to deal with the problem of persons operating motor vehicles while intoxicated;

(15) encourage hospitals and other appropriate health facilities to admit without discrimination alcoholics and intoxicated persons and to provide them with adequate and appropriate treatment;

(16) encourage all health and disability insurance programs to include alcoholism as a covered illness;

(17) submit to the legislature an annual report covering the activities of the office. (§ 1 ch 207 SLA 1972)

Sec. 47.37.050. Interdepartmental coordinating committee. (a) An interdepartmental coordinating committee is created, composed of the coordinator and the commissioners of health and social services, education, highways, labor and public safety. The committee shall meet at least twice annually at the call of the commissioner of health and social services who is its chairman. The committee shall provide for the coordination and exchange of information on all programs relating to alcoholism, and act as a permanent liaison among state departments engaged in activities affecting alcoholics and intoxicated persons. The committee shall assist the commissioner of health and social services and the coordinator in formulating a comprehensive plan for prevention of alcoholism and for treatment of alcoholics and intoxicated persons.

(b) In exercising its coordinating functions, the committee shall assure that the appropriate state agencies

(1) provide all necessary medical, social, treatment, and educational services for alcoholics and intoxicated persons and for the prevention of alcoholism, without unnecessary duplication of services;

(2) cooperate in the use of facilities and in the treatment of alcoholics and intoxicated persons;

(3) adopt approaches for the prevention of alcoholism and the treatment of alcoholics and intoxicated persons consistent with the policy of this chapter. (§ 1 ch 207 SLA 1972)

foster home, group home, institution or other place for the regular reception or care of children under 16 years of age, or (2) engage in the business of receiving or caring for children under 14 years of age, with or without compensation, in a nursery in which five or more children not related by blood or marriage, or legal adoption, to the owner, operator or manager of the business are lodged. (§ 3 ch 17 SLA 1951; am § 3 ch 42 SLA 1973; am § 3 ch 253 SLA 1976)

Effect of amendment.
The 1976 amendment, effective July 1, 1976, deleted "nursery" preceding "institution or other place" in clause (1) and in clause (2), substituted "14 years of age" for "16 years of age," "five or more children" for "a child," and "are lodged" for "is lodged or boarded" and inserted "in a nursery."

Chapter 37. Uniform Alcoholism and Intoxication Treatment Act.

Section
80. Qualifications of board members
170. Treatment and services for intoxicated persons and persons incapacitated by alcohol
250. Nonapplicability

Sec. 47.37.010. Declaration of policy.

Quoted in In re S.D., Sup. Ct. Op. No. 1255 (File No. 2530), 549 P.2d 1190 (1976).

Sec. 47.37.080. Qualifications of board members. Of the nine members

(1) two shall be persons who are licensed to practice medicine in the state, one of whom shall be certified in psychiatry by the American Board of Psychiatry and Neurology or eligible for that certification, except that if a psychiatrist is not available a clinical psychologist may be appointed;

(2) one shall be a practicing attorney who has been admitted to the practice of law by the state supreme court;

(3) two shall be persons who have evidenced an interest in the problems of alcoholism and who have knowledge of the social problems encountered in the rehabilitation of alcoholics;

(4) one shall be a public health nurse;

(5) one shall be a representative of the liquor industry;

(6) one shall be from the public at large;

(7) one shall be a social worker. (§ 1 ch 207 SLA 1972; am § 1 ch 72 SLA 1976)

Effect of amendment. — The 1976 amendment rewrote this section.

Sec. 47.37.060. Advisory board on alcoholism. There is established in the Department of Health and Social Services an advisory board on alcoholism. (§ 1 ch 207 SLA 1972)

Editor's note. — Section 3, ch. 207, SLA 1972, provides: "Because the provisions in this Act relating to the Advisory Board on Alcoholism (AS 47.37.060 — 47.37.120) are identical to the provisions in AS 44.29.030 — 44.29.090 which are repealed in sec. 2 of this Act, nothing in this Act requires the appointment of a new board."

Sec. 47.37.070. Composition. The advisory board on alcoholism consists of nine members appointed by the governor. (§ 1 ch 207 SLA 1972)

Revisor's note (1972). — In ch. 207, SLA 1972, AS 47.37.070 — 47.37.270 were designated AS 47.37.062 — 47.37.310.

Sec. 47.37.080. Qualifications of board members. (a) Two members shall be persons who are licensed to practice medicine in the state, one of whom shall be certified in psychiatry by the American Board of Psychiatry and Neurology or is eligible for that certification, except that if a psychiatrist is not available, a clinical psychologist may be appointed.

(b) One member shall be a practicing attorney who has been admitted to the practice of law by the supreme court of the State of Alaska.

(c) One member shall be a person who has evidenced an interest in the problems of alcoholism and who has knowledge of the social problems encountered in the rehabilitation of alcoholics.

(d) One member shall be a public health nurse.

(e) One member shall be a representative of the liquor industry.

(f) One member shall be a member of Alcoholics Anonymous.

(g) One member shall be from the public at large.

(h) One member shall be a social worker. (§ 1 ch 207 SLA 1972)

Sec. 47.37.090. Term of office. (a) The members of the board initially appointed under § 80(a) of this chapter serve terms of four years.

(b) The member initially appointed under § 80(b) of this chapter serves a term of three years.

(c) The member initially appointed under § 80(c) of this chapter serves a term of two years.

(d) The members initially appointed under § 80(d)—(h) of this chapter serve terms of four years. Subsequent terms for all board members are four years.

(e) A vacancy occurring in the membership of the board shall be filled by appointment of the governor for the unexpired portion of the vacated term.

(f) Board members serve at the pleasure of the governor. (§ 1 ch 207 SLA 1972).

Sec. 47.37.100. Compensation, per diem, or expenses. Members of the advisory board on alcoholism are not entitled to a salary, but are entitled to per diem, reimbursement for travel and other expenses authorized by law for other boards. (§ 1 ch 207 SLA 1972)

Sec. 47.37.110. Duties. The board shall act in an advisory capacity to the commissioner in the following matters:

(1) special problems affecting mental health which alcoholism may present;

(2) educational and research activities conducted by the office in respect to the problems presented by alcoholism;

(3) social problems which affect rehabilitation of alcoholics;

(4) legal processes which affect the treatment and rehabilitation of alcoholics;

(5) a program of public relations concerning the problem of alcoholism conducted by a department of the state government or by an organized group whose purpose is the rehabilitation of alcoholics. (§ 1 ch 207 SLA 1972)

Sec. 47.37.120. Alcoholism program coordinator. The alcoholism program coordinator shall carry out the development and implementation of a comprehensive program dealing with the treatment of, research on and education concerning alcoholic problems as they affect the state. (§ 1 ch 207 SLA 1972)

Sec. 47.37.130. Comprehensive program for treatment; regional facilities. (a) The office shall establish a comprehensive and coordinated program for the treatment of alcoholics and intoxicated persons. Subject to the approval of the commissioner, the coordinator may divide the state into appropriate regions to conduct the program and establish standards for the development of the program on the regional level. In establishing the regions, consideration shall be given to the city and borough lines and population concentrations and when feasible, programs shall be established with maximum local community involvement.

(b) The program of the office shall include

(1) emergency treatment provided by a facility affiliated with or part of the medical service of a general hospital;

(2) inpatient treatment;

(3) intermediate treatment; and

(4) outpatient and follow-up treatment.

(c) The office shall provide adequate and appropriate treatment for alcoholics and intoxicated persons admitted under §§ 160—190 of this chapter within the limits of available state and federal funds.

(d) The office shall maintain, supervise and control all facilities operated by it subject to the regulations of the department. The administrator of each facility shall make an annual report of its activities to the coordinator in the form and manner the coordinator specifies.

(e) If possible, the office shall coordinate the activities of the program with all appropriate public and private resources.

(f) The coordinator shall prepare, publish, and distribute annually a list of all approved public and private treatment facilities.

(g) The office may contract for the use of any facility as an approved public treatment facility if the coordinator, subject to the regulations of the department, considers this an effective and economical course to follow. (§ 1 ch 207 SLA 1972)

Sec. 47.37.140. Public and private treatment facilities. (a) The office shall establish standards for facilities before their approval as public or private treatment facilities, and fix the fees to be charged for the required inspections of those facilities. The standards shall concern only the health conditions to be met and standards of treatment to be afforded patients.

(b) The office shall inspect, on a regular basis, approved public and private treatment facilities at reasonable times and in a reasonable manner.

(c) The office shall maintain a list of approved public and private treatment facilities.

(d) Each approved public and private treatment facility shall file with the office on request, data, statistics, schedules, and information which the office reasonably requires. An approved public or private treatment facility that without good cause fails to furnish any data, statistics, schedules, or information as requested, or files fraudulent returns of them, shall be removed from the list of approved treatment facilities.

(e) The coordinator, after holding a hearing under the provisions of the Administrative Procedure Act (AS 44.62), may suspend, revoke, limit, restrict, or refuse to grant an approval for a treatment facility, for failure to meet its standards.

(f) Upon petition of the office and after a hearing held upon reasonable notice to the facility, the district court may issue a warrant to an officer or employee of the office authorizing him to enter and inspect at reasonable times, and examine the books and accounts of an approved public or private treatment facility refusing to consent to inspection or examination by the office or which the office has reasonable cause to believe is operating in violation of this chapter. (§ 1 ch 207 SLA 1972)

Sec. 47.37.150. Acceptance for treatment. The coordinator shall promulgate regulations for the admission of persons into the treatment program, considering available treatment resources and facilities, for the purpose of early and effective treatment of alcoholics and intoxicated persons. In establishing the regulations the coordinator shall be guided by the following standards:

(1) if possible a patient shall be treated on a voluntary rather than an involuntary basis;

Supplement

Sec. 47.37.170. Treatment and services for intoxicated persons and persons incapacitated by alcohol. (a) An intoxicated person may come voluntarily to an approved public treatment facility for emergency treatment. A person who appears to be intoxicated in a public place and to be in need of help or a person who appears to be intoxicated in or upon a licensed premise where intoxicating liquors are sold or consumed who refuses to leave upon being requested to leave by the owner, an employee or a peace officer may be taken into protective custody and assisted by a peace officer or a member of the emergency service patrol to his home, an approved public treatment facility, an approved private treatment facility, or another appropriate health facility. If all of the preceding facilities, including the person's home, are determined to be unavailable, a person taken into protective custody and assisted under this subsection may be taken to a state or municipal detention facility in the area.

(b) A person who appears to be incapacitated by alcohol in a public place shall be taken into protective custody by a peace officer or a member of the emergency service patrol and immediately brought to an approved public treatment facility, an approved private treatment facility, or another appropriate health facility or service for emergency medical treatment. If no treatment facility or emergency medical service is available, a person who appears to be incapacitated by alcohol in a public place shall be taken to a state or municipal detention facility in the area, if that appears necessary for the protection of the person's health or safety.

(i) A person taken to a detention facility under (a) or (b) of this section may be detained only (1) until a treatment facility or emergency medical service is made available, or (2) until he is no longer intoxicated or incapacitated by alcohol, or (3) for a maximum period of 12 hours, whichever occurs first. A detaining officer or a detention facility official may release a person who is detained under (a) or (b) of this section at any time to the custody of a responsible adult. A peace officer or a member of the emergency service patrol, in detaining a person under (a) or (b) of this section and in taking him to a treatment facility, an emergency medical service or a detention facility, is taking him into protective custody and he shall make reasonable efforts to provide for and protect the health and safety of the detainee. In taking a person into protective custody under (a) and (b) of this section, a detaining officer, a member of the emergency service patrol or a detention facility official may take reasonable steps to protect himself, including a full protective search of the person of a detainee. Protective custody under (a) and (b) of this section does not constitute an arrest and no entry or other record may be made to indicate that the person detained has been arrested or charged with a crime, except that a confidential record may be made which is necessary for the administrative purposes of the facility to which the person has been taken or which is necessary for statistical purposes where the person's name may not be disclosed.

(j) For purposes of (b) of this section, "incapacitated by alcohol" means a person who, as the result of consumption of alcohol, is rendered unconscious or has his judgment or physical mobility so impaired that he cannot readily recognize or extricate himself from conditions of apparent or imminent danger to his health or safety. The definition in AS 47.37.270(8) applies to other portions of this chapter.
(am §§ 1—4 ch 101 SLA 1976)

Effect of amendment. — The 1976 amendment substituted the language beginning "or a person who appears to be intoxicated" and ending "taken into protective custody and assisted" for "if he consents, may be assisted" and inserted "a member of" preceding "the emergency service patrol" in the second sentence of subsection (a), added the third sentence of that subsection, rewrote subsection (b), and added subsections (i) and (j).

As the rest of the section was not affected by the amendment, it is not set out.

Legislative committee report. — For report on ch. 101, SLA 1976 (CSSSSB 336 am H), see 1976 House Journal, p. 555.

Sec. 47.37.250. Nonapplicability. (a) Nothing in this chapter affects a statute, ordinance, or regulation relating to (1) drunken driving, driving under the influence of alcohol, or other similar offenses involving alcohol and the operation of a vehicle, aircraft, boat, machinery, or other equipment, (2) the sale, purchase, dispensation, possession, or use of alcoholic beverages at specified times and places or by a particular class of persons, including prohibitions against drinking intoxicating beverages in specified public places, or (3) being upon the traveled portion of a highway so as to be a hazard to the motoring public.

(b) Nothing in this chapter affects AS 11.70.030, relating to the defense of voluntary intoxication. (§ 1 ch 207 SLA 1972; am § 1 ch 186 SLA 1976)

Effect of amendment. — The 1976 amendment deleted "or" from the end of clause (1), added "including prohibitions against drinking intoxicating beverages in specified public places, or" to the end of clause (2), and added clause (3).

Chapter 45. Alaska Longevity Bonus.

Section
10. Persons who may qualify for longevity bonus

Sec. 47.45.010. Persons who may qualify for longevity bonus. (a) A person who is 65 years of age or over, who was domiciled in the territory on or before January 3, 1959 and who has maintained a continuous domicile in the territory or state for 25 years may apply to the commissioner of administration for qualification to receive a monthly bonus of $125.
(am § 1 ch 33 SLA 1976)

(2) a patient shall be initially assigned or transferred to outpatient or intermediate treatment, unless he is found to require inpatient treatment;

(3) a person shall not be denied treatment solely because he has withdrawn from treatment against medical advice on a prior occasion or because he has relapsed after earlier treatment;

(4) an individualized treatment plan shall be prepared and maintained on a current basis for each patient;

(5) provision shall be made for a continuum of coordinated treatment services, so that a person who leaves a facility or a form of treatment will utilize other appropriate treatment and facilities. (§ 1 ch 207 SLA 1972)

Sec. 47.37.160. Voluntary treatment of alcoholics. (a) An alcoholic may voluntarily apply for treatment directly to an approved public treatment facility.

(b) Subject to regulations promulgated by the coordinator, the administrator in charge of an approved public treatment facility may determine who shall be admitted for treatment. If a person is refused admission to an approved public treatment facility, the administrator shall, if possible, refer the person to another approved public treatment facility.

(c) When a patient receiving inpatient care leaves an approved public treatment facility, he shall be encouraged to consent to appropriate outpatient or intermediate treatment. If it appears to the administrator in charge of the treatment facility that the patient is an alcoholic who requires help, the office shall arrange for assistance in obtaining supportive services and residential facilities. (§ 1 ch 207 SLA 1972)

Sec. 47.37.170. Treatment and services for intoxicated persons and persons incapacitated by alcohol. (a) An intoxicated person may come voluntarily to an approved public treatment facility for emergency treatment. A person who appears to be intoxicated in a public place and to be in need of help, if he consents, may be assisted by a peace officer or the emergency service patrol to his home, an approved public treatment facility, an approved private treatment facility, or another appropriate health facility.

(b) A person who appears to be incapacitated by alcohol shall be taken into protective custody by a peace officer or a member of the emergency service patrol and immediately brought to an approved public treatment facility for emergency treatment. If no approved public treatment facility is readily available he shall be taken to an emergency medical service customarily used for incapacitated persons. The peace officer or a member of the emergency service patrol, in detaining the person and in taking him to an approved public treatment facility, is taking him into protective custody and he shall make every reasonable effort to protect his health and safety. In taking the person into protective custody, the

detaining officer may take reasonable steps to protect himself. Protective custody does not constitute an arrest under this section and no entry or other record shall be made to indicate that the person has been arrested or charged with a crime.

(c) A person who voluntarily appears or is brought to an approved public treatment facility shall be examined by a licensed physician as soon as possible. After the examination, he may be admitted as a patient or referred to another health facility. The approved public treatment facility which refers him shall arrange for his transportation.

(d) No person who, after medical examination, is found to be incapacitated by alcohol at the time of his admission or to have become incapacitated at any time after his admission, may be detained at a facility after he is no longer incapacitated by alcohol. No person may be detained at a facility if he remains incapacitated by alcohol for more than 48 hours after admission as a patient, unless he is committed under § 180 of this chapter. A person may consent to remain in the facility as long as the physician in charge considers it appropriate.

(e) A person who is not admitted to an approved public treatment facility, is not referred to another health facility, and has no funds, may be taken to his home, if any. If he has no home, the approved public treatment facility shall assist him in obtaining shelter.

(f) If a patient is admitted to an approved public treatment facility, his family or next of kin shall be promptly notified. If an adult patient who is not incapacitated requests that there be no notification of next of kin, his request shall be granted.

(g) Peace officers or members of the emergency service patrol who comply with this section are acting in the course of their official duty and are not criminally or civilly liable for it.

(h) If the physician in charge of the approved public treatment facility determines it is for the patient's benefit, an attempt shall be made to encourage the patient to submit to further diagnosis and appropriate voluntary treatment. (§ 1 ch 207 SLA 1972)

Section does not violate 4th amendment. — While a statute countenancing an unreasonable search would be in violation of the 4th amendment to the United States Constitution and the similar Alaska Const., art. I, § 14, the provisions of this section constitute no such violation. Peter v. State, Sup. Ct. Op. No. 1112 (File No. 2185), 531 P.2d 1263 (1975).

An officer transporting a person incapacitated by drink has a valid reason to make a limited search for possible weapons which might be used to injure him. Peter v. State, Sup. Ct. Op. No. 1112 (File No. 2185), 531 P.2d 1263 (1975).

Items held subject of illegal search and seizure. Where under this chapter, defendant should have been taken to a treatment facility or an emergency medical service, and where at that point the police would normally release him from custody and thus would not have direct access to items in the possession of the intoxicated person, any items that were revealed or came into the possession of the police officer solely as a result of a more detailed search performed when defendant was placed in jail were the subject of an illegal search and seizure and should be suppressed. Peter v. State, Sup. Ct. Op. No. 1112 (File No. 2185), 531 P.2d 1263 (1975).

Sec. 47.37.180. Emergency commitment. (a) An intoxicated person who (1) has threatened, attempted to inflict, or inflicted physical harm on another or is likely to inflict physical harm on another unless committed, or (2) is incapacitated by alcohol, may be committed to an approved public treatment facility for emergency treatment. A refusal to undergo treatment does not constitute evidence of lack of judgment as to the need for treatment.

(b) The certifying physician, spouse, guardian, or relative of the person to be committed, or any other responsible person, may make a written application for commitment under this section, directed to the administrator of the approved public treatment facility. The application shall state facts to support the need for emergency treatment and be accompanied by a physician's certificate supporting the need for emergency treatment and stating that the physician has examined the person sought to be committed within two days before the certificate's date.

(c) Upon approval of the application by the administrator in charge of the facility, the person may be brought to the facility by a peace officer, a health officer, a member of the emergency service patrol, the applicant for commitment, the patient's spouse, the patient's guardian, or any other interested person. The person shall be retained at the facility to which he was admitted, or transferred to another appropriate public or private treatment facility, until discharged under (e) of this section. However, no person may be detained under this section for more than 48 hours unless a district or superior court judge has reviewed and approved the commitment application.

(d) The administrator in charge of an approved public treatment facility may refuse an application if in his opinion the application and certificate fail to sustain the grounds for commitment.

(e) When on the advice of his medical staff the administrator determines that the grounds for commitment no longer exist, he shall discharge a person committed under this section. No person committed under this section may be detained in a treatment facility for more than five days. If a petition for involuntary commitment under § 190 of this chapter has been filed within the five days and the administrator in charge of an approved public treatment facility finds that grounds for emergency commitment still exist, he may detain the person until the petition has been heard and determined, but no longer than 10 days after filing the petition.

(f) A copy of the written application for commitment and of the physician's certificate, and a written explanation of the persons' right to legal counsel, shall be given to the person within 24 hours after commitment by the administrator, who shall provide a reasonable opportunity for the person to consult with legal counsel. (§ 1 ch 207 SLA 1972)

Sec. 47.37.190. Involuntary commitment of alcoholics. (a) After a hearing initiated by petition of his spouse or guardian, a relative, the certifying physician, or the administrator in charge of an approved public treatment facility, a person may be committed to the custody of the office by the superior court. The petition shall allege that the person is an alcoholic who habitually lacks self-control in using alcoholic beverages and that he (1) has threatened, attempted to inflict, or inflicted physicial harm on another and that unless committed is likely to inflict physical harm on another; or (2) is incapacitated by alcohol. A refusal to undergo treatment does not constitute evidence of lack of judgment as to the need for treatment. The petition shall be accompanied by a certificate of a licensed phyisican who has examined the person within two days before submission of the petition, unless the person whose commitment is sought has refused to submit to a medical examination, in which case the fact of refusal shall be alleged in the petition. The certificate shall set out the physician's findings in support of the allegations of the petition.

(b) After the petition is filed, the court shall fix a date for a hearing no later than 10 days after the date the petition was filed. A copy of the petition and of the notice of the hearing, including the date fixed by the court, shall be served on (1) the petitioner; (2) the person whose commitment is sought; (3) the next of kin of the person whose commitment is sought; (4) the administrator in charge of the approved public treatment facility in which the committed person has been committed for emergency care, and any other person the court considers appropriate. A copy of the petition and certificate shall be delivered to each person notified.

(c) If, not less than two days before the date fixed for the hearing, the person sought to be committed or his counsel or advisor files a written request with the superior court, the court shall summon and impanel a jury of six adult residents of the judicial district in which the court officiates, preferably from the court's jury list or the last voters list, if available, to hear and consider evidence concerning the condition of the person sought to be committed. (§ 1 ch 207 SLA 1972)

Sec. 47.37.200. Hearing on petition for involuntary commitment of alcoholics. (a) At the hearing required under § 190(b) of this chapter, the court or the jury, if requested under § 190(c) of this chapter, shall hear all relevant testimony, including, if possible, the testimony of at least one licensed physician who has examined the person whose commitment is sought. The person whose commitment is sought shall be present unless the court believes that his presence is likely to be injurious to him, in which case the court shall appoint a guardian ad litem to represent him throughout the proceeding. The court may examine the person in open court, or if advisable, examine him out of court. If the person has refused to be examined by a licensed physician, he shall be given an opportunity to request examination by a court-appointed

licensed physician. If he fails to request a medical examination and there is sufficient evidence to believe that the allegations of the petition are true, or if the court believes that more medical evidence is necessary, the court may issue a temporary order committing him to the office for a period of not more than five days for purposes of a diagnostic examination.

(b) If after hearing all relevant evidence, including the results of any diagnostic examination by the office, the court or the jury finds that grounds for involuntary commitment have been clearly established, the court shall issue an order of commitment to the office. No court may order the commitment of a person unless it determines that the office is able to provide adequate and appropriate treatment for him.

(c) A person committed under §§ 190 — 200 of this chapter shall remain in the custody of the office for treatment for a period of up to 30 days. At the end of the 30-day period, he shall be discharged automatically unless the office, before the expiration of the period, obtains a court order for his recommitment upon the grounds set out in § 190(a) of this chapter for a further period of up to 90 days. If a person has been committed because he is an alcoholic likely to inflict physical harm on another, the office shall apply for recommitment if after examination it is determined that the likelihood still exists.

(d) A person recommitted under (c) of this section who has not been discharged by the office before the end of the 90-day period shall be discharged at the expiration of that period unless the office, before expiration of the period, obtains a court order on the grounds set out in § 190(a) of this chapter for recommitment for a further period not to exceed 90 days. If a person has been committed because he is an alcoholic likely to inflict physical harm on another, the office shall apply for recommitment if after examination it is determined that the likelihood still exists. No more than two recommitment orders may be permitted under (c) and (d) of this section.

(e) Upon the filing of a petition for recommitment under (c) or (d) of this section, the court shall fix a date for hearing no later than 10 days after the date the petition was filed. A copy of the petition and of the notice of hearing, including the date fixed by the court, shall be served on (1) the petitioner; (2) the person whose commitment is sought; (3) the next of kin of the person whose commitment is sought; (4) the original petitioner under § 190(a) of this chapter, if different from the petitioner for recommitment; (5) any other person the court considers appropriate. Section 180(c) of this chapter applies to hearings for recommitment under this section. At the hearing the court or the jury shall proceed as provided in (a) of this section.

(f) The office shall provide adequate and appropriate treatment for a person in its custody. The office may transfer a person in its custody from one approved public treatment facility to another if the transfer is medically advisable.

(g) A person committed to the custody of the office for treatment shall be discharged at any time before the end of the period for which he has been committed if either of the following conditions is met:

(1) when an alcoholic committed on the grounds of likelihood of infliction of physical harm on another is no longer considered an alcoholic or the likelihood of his infliction of physical harm no longer exists; or

(2) when, in the case of an alcoholic committed on the grounds of the likelihood of infliction of physical harm on another, either

(A) further treatment will not be likely to bring about significant improvement in the person's condition, or

(B) treatment is no longer adequate or appropriate.

(h) The court shall inform the person whose commitment or recommitment is sought of his right to contest the application, be represented by counsel at every stage of the proceedings relating to his commitment and recommitment, to have counsel appointed by the court or provided by the court, if he is unable to obtain counsel, and to a jury trial, if requested, as specified in § 190(c) of this chapter. If the court believes that the person needs the assistance of counsel, the court shall require, by appointment if necessary, counsel for him regardless of his objection. The person whose commitment or recommitment is sought shall be informed of his right to be examined by a licensed physician of his choice. If the person is unable to obtain a licensed physician and requests examination by a physician, the court shall employ a licensed physician for the examination.

(i) If a private treatment facility agrees with the request of a competent patient or his parent, sibling, adult child, or guardian to accept the patient for treatment, the administrator of the public treatment facility shall transfer him to the private treatment facility.

(j) A person committed under this chapter may at any time seek discharge from commitment by writ of habeas corpus under AS 12.75. (§ 1 ch 207 SLA 1972)

Sec. 47.37.210. Records of alcoholics and intoxicated persons. (a) The registration and other records of treatment facilities shall remain confidential and are privileged to the patient.

(b) Notwithstanding (a) of this section, the coordinator may make available information from patient's records for purposes of research into the causes and treatment of alcoholism. No information may disclose a patient's name. (§ 1 ch 207 SLA 1972)

Sec. 47.37.220. Visitation and communication of patients. (a) Patients in any approved treatment facility under this chapter shall be granted reasonable opportunities for adequate consultation with counsel, and for continuing contact with family and friends including the use of telephone facilities, consistent with an effective treatment program.

(b) No mail or other communication to or from a patient in any approved treatment facility may be intercepted, read, or censored. (§ 1 ch 207 SLA 1972)

Sec. 47.37.230. Establishment of emergency service patrol. (a) The office and cities and boroughs may establish emergency service patrols. An emergency service patrol consists of persons trained to give assistance in public places to persons who are intoxicated. Members of an emergency service patrol shall be capable of providing first aid in emergency situations and shall be capable of transporting intoxicated persons to their homes and to and from public treatment facilities.

(b) The coordinator shall promulgate regulations for the establishment, training, and conduct of emergency service patrols. (§ 1 ch 207 SLA 1972)

Sec. 47.37.240. Payment for treatment. (a) A patient in an approved treatment facility, or the person obligated to provide for the cost of treatment of a person committed under this chapter, is liable to the office for the cost of maintenance and treatment of the patient in accordance with rates established by the coordinator.

(b) The coordinator shall promulgate regulations governing financial ability that take into consideration the income, savings and other personal and real property of the person liable for the cost and maintenance of the patient. (§ 1 ch 207 SLA 1972)

Sec. 47.37.250. Nonapplicability. (a) Nothing in this chapter affects a statute, ordinance, or regulation relating to (1) drunken driving, driving under the influence of alcohol, or other similar offenses involving alcohol and the operation of a vehicle, aircraft, boat, machinery, or other equipment, or (2) the sale, purchase, dispensation, possession, or use of alcoholic beverages at specified times and places or by a particular class of persons.

(b) Nothing in this chapter affects AS 11.70.030, relating to the defense of voluntary intoxication. (§ 1 ch 207 SLA 1972)

This section refers only to the sale, purchase, dispensation or use of alcoholic beverages. Peter v. State, Sup. Ct. Op. No. 1112 (File No. 2185), 531 P.2d 1263 (1975).

And not to being intoxicated at "specific times and places". — See Peter v. State, Sup. Ct. Op. No. 1112 (File No. 2185), 531 P.2d 1263 (1975).

A construction to expand the nonapplicability section to include anyone intoxicated on a highway would have the effect of emasculating the statute. Peter v. State, Sup. Ct. Op. No. 1112 (File No. 2185), 531 P.2d 1263 (1975).

Sec. 47.37.260. Application of Administrative Procedure Act. Except as otherwise provided in this chapter, the Administrative Procedure Act (AS 44.62) applies to and governs all administrative action taken by the coordinator under this chapter. (§ 1 ch 207 SLA 1972)

Sec. 47.37.270. Definitions. In this chapter

(1) "alcoholic" means a person who habitually lacks self-control in using alcoholic beverages, or uses alcoholic beverages to the extent that his health is substantially impaired or endangered, or his social or economic function is substantially disrupted;

(2) "approved private treatment facility" means a private agency meeting the standards prescribed in § 140(a) of this chapter and approved under § 140(c) of this chapter;

(3) "approved public treatment facility" means a treatment agency operating under the direction and control of the office or providing treatment under this chapter through a contract with the office under § 130(g) of this chapter and meeting the standards prescribed in § 140(a) of this chapter and approved under § 140(c) of this chapter;

(4) "commissioner" means the commissioner of health and social services;

(5) "coordinator" means the coordinator of the office of alcoholism;

(6) "department" means the Department of Health and Social Services;

(7) "emergency service patrol" means a patrol established under § 230 of this chapter;

(8) "incapacitated by alcohol" means a person who is unconscious or has his judgment otherwise so impaired that he is incapable of realizing and making a rational decision with respect to his need for treatment, as evidenced objectively by extreme physical debilitation, physical harm or threats of harm to others or chronic inability to hold regular employment;

(9) "incompetent person" means a person who has been adjudged incompetent by the appropriate court;

(10) "intoxicated person" means a person whose mental or physical functioning is substantially impaired as a result of the use of alcohol;

(11) "office" means the office of alcoholism within the Department of Health and Social Services;

(12) "treatment" means the broad range of emergency, outpatient, intermediate, and inpatient services and care which may be extended to alcoholics and intoxicated persons, including diagnostic evaluation, medical, psychiatric, psychological, and social service care, vocational rehabilitation and career counseling. (§ 1 ch 207 SLA 1972)

Quoted in Peter v. State, Sup. Ct. Op. No. 1112 (File No. 2185), 531 P.2d 1263 (1975).

Chapter 40. Purchase of Services.

Section	Section
10. Purchase of services	50. Services
20. Licensing and supervision	60, 70. [Repealed]
30. Required accounting procedures	80. Definitions
40. Determination of full cost of services	

Repeaked in HB 340

Sec. 47.30.470. Powers and duties of department. The department shall:

(1) ascertain and keep current a list of all institutions in the state which have available facilities for the care and treatment of alcoholics;

(2) encourage the development and advancement of standards of treatment of alcoholics in institutions;

(3) promote and encourage educational activities to make the public aware of the effects of intemperate use of alcoholic beverages, and promote and encourage the education of the general public about scientific facts regarding alcoholism;

(4) utilize whatever facilities and services are available or can be made available through community organization for carrying out the purposes of this section,

(5) engage in research and educational activities that will aid in the understanding of alcoholism and in the treatment of alcoholics;

(6) administer a community grant-in-aid program for alcoholism;

(7) submit an annual report concerning alcoholism in Alaska and the grant-in-aid program within 10 days after the convening of the legislature in each regular session. (§ 2 ch 163 SLA 1966; am §§ 1, 3 ch 101 SLA 1970)

Revisor's note (1970). — In ch. 101, SLA 1970, effective July 1, 1970, paragraph (7) of AS 47.30.470 was not given an AS designation and just appeared as § 3 of that act.

Chronic alcoholism is no defense to a charge of public intoxication. Johnson v. City of Fairbanks, 6 Alas. L.J. No. 11, p. 321 (Oct., 1968).

Stated in Peter v. State, Sup. Ct. Op. No. 1112 (File No. 2185), 531 P.2d 1263 (1975).

Sec. 47.30.475. Grant-in-aid program. (a) A nonprofit corporation, a city or borough government, or other political subdivision of the state, or a combination of these, is eligible for grant-in-aid funds under this section. Applications shall be sent to the department.

(b) The department shall award grants under this section with the advice of the Advisory Board on Alcoholism, in the interest of providing or developing a comprehensive program of alcoholic rehabilitation and prevention. Grants will be awarded on a competitive basis. The department shall consider the amount of money that is available for all applications and whether an application would contribute to the wise development of a comprehensive program.

(c) Grants shall be awarded in a ratio of 75 per cent state money to 25 per cent community money, except that in communities designated as poverty areas the ratio shall be 90 per cent state money to 10 per cent community money, for the purposes of providing staff and limited improvement, renovation or new construction of facilities for alcoholic detoxification, rehabilitation or "half-way house" care. No grant for improving, renovating or constructing may exceed $50,000 except when there is a lack of applicants for available money and then only with the

approval of the Advisory Board on Alcoholism. The department is not required to award all money available under this program, or the full percentages specified in this subsection, when another source of money is available or could reasonably be made available to the applicant.

(d) Money used by the applicant to qualify for state money may be from any source other than the state. The cost of developing an application is not reimbursable from the grant. The value of real property to be used directly in conjunction with the grant may be used in calculating the required amount of community money, as allowed by regulations of the department. (§ 2 ch 101 SLA 1970; am § 1 ch 126 SLA 1975)

Effect of amendment. — The 1975 amendment, in subsection (c), substituted the language beginning "except that in communities" and ending "10 per cent community money" for "for the purpose of providing staff, and in the ratio of 75 per cent state money and 25 per cent community money" in the first sentence, inserted "staff and" in that sentence, and substituted "percentages" for "percentage" in the third sentence.

Sec. 47.30.477. Grant-in-aid program regulations. The department shall adopt regulations implementing § 475 of this chapter. The regulations shall provide for the method of application, the time for consideration of applications, the processing of applications, the type of record keeping, the requirements for reporting the progress and statistics regarding the program, the notification of the applicant as to the action taken on the application, and the issuance of licenses for facilities receiving grants-in-aid under § 475 of this chapter. The department shall also establish the necessary forms of application and may adopt other regulations considered necessary to meet the requirements of health and safety and the orderly administration of the grant-in-aid program. (§ 2 ch 101 SLA 1970)

Sec. 47.30.480. Judicial notice. The superior courts of this state may take judicial notice of the fact that an alcoholic is suffering from an illness and is in need of proper medical, advisory or rehabilitative treatment. (§ 2 ch 163 SLA 1966)

Sec. 47.30.490. Acceptance of funds. The department may accept on behalf of the state and deposit, apart from other public funds, grants from the federal government or gifts or contributions from other sources to assist in carrying out the purposes of § 470 of this chapter. (§ 2 ch 163 SLA 1966)

Sec. 47.30.500. Definitions. In §§ 470—490 of this chapter

(1) "department" means the Department of Health and Social Services;

(2) "alcoholism" means a condition related to alcohol and concerns a physical compulsion which exists, coupled with a mental obsession;

(3) Repealed by § 2 ch 207 SLA 1972.

(4) "poverty area" means a district in which 15 per cent or more of the population, based on the 1970 census data, polls under 125 per cent of the Community Services Administration poverty guidelines. (§ 2 ch 163 SLA 1966; am § 6 ch 104 SLA 1971; am § 2 ch 126 SLA 1975)

Effect of amendments. — The 1971 amendment substituted "Department of Health and Social Services" for "Department of Health and Welfare" in paragraph (1).

The 1972 amendment repealed paragraph (3).

The 1975 amendment added paragraph (4).

Chronic alcoholism, per se, cannot be plead as a defense to the charge of being drunk in public, disorderly conduct, or any other crime. City of Fairbanks v. Johnson, 5 Alas. L.J. No. 12, p. 260 (Dec., 1967).

It cannot be concluded on the current state of medical knowledge, that chronic alcoholics in general suffer from such an irresistible compulsion to drink and to get drunk in public that they are utterly unable to control their performance of either or both of these acts and thus cannot be deterred at all from public intoxication. Vick v. State, Sup. Ct. Op. No. 539 (File No. 987), 453 P.2d 342 (1969).

Defendant was not entitled to be relieved of accountability for the offense of public drunkenness because of his habits and drinking pattern in the use of alcoholic beverages. To impose a sentence of imprisonment upon conviction of that offense is not the imposition of cruel and unusual punishment in violation of the federal and state constitutions. Vick v. State, Sup. Ct. Op. No. 539 (File No. 987), 453 P.2d 342 (1969).

Article 5. Community Mental Health Services.

Section
520. Legislative purpose
530. Duties of department
540. Eligible local community entities
550. Cost-sharing formula; limitations
560. Funds for local programs
570. Eligible costs; maintenance of local effort
580. Comprehensive services
590. Patient rights and the confidential nature of records and information
600. Applicability to existing programs
605. Mental Health Advisory Council
610. Definitions
620. Short title

Effective date of article. — Section 3, ch. 121, SLA 1975, provides: "This Act takes effect July 1, 1975."

Editor's note. — Section 2, ch. 121, SLA 1975, effective July 1, 1975, provides: "Upon the creation of the Statewide Health Coordinating Council, as required by the National Health Planning and Resource Development Act of 1974, PL 93-641, sec. 605(a), (c) and (d) of this Act are repealed and the duty specified under sec. 605(b) of this Act shall be assumed by the Statewide Health Coordinating Council."

Sec. 47.30.520. Legislative purpose. It is the purpose of the legislature in enacting the Community Mental Health Services Act to assist local communities in planning, organizing and financing community mental health services through locally developed, administered and controlled community mental health programs. It is further intended to better utilize existing resources at both state and local levels in order to:

Sec. 44.29.010. Commissioner of Health and Social Services. The principal executive officer of the Department of Health and Social Services is the commissioner of health and social services. (§ 12 ch 64 SLA 1959; am § 2 ch 104 SLA 1971)

Am. Jur. and C.J.S. references. — 25 Am. Jur., Health, §§ 3 to 41, 48; 42 Am. Jur., Public Funds, § 57; 48 Am. Jur., Special or Local Assessments, § 1 et seq. 39 C.J.S. Health, § 1 et. seq.

Sec. 44.29.020. Duties of department. The Department of Health and Social Services shall administer the state programs of public health and social services, including: (1) maternal and child health services; (2) preventive medical services; (3) public health nursing services; (4) sanitation and engineering services; (5) nutrition services; (6) health education; (7) laboratories; (8) mental health treatment and diagnosis; (9) management of state institutions; (10) medical facilities; (11) old age assistance; (12) aid to dependent children; (13) aid to the blind; (14) child welfare services; (15) general relief; (16) licensing and supervision of child care facilities; and (17) probation and parole supervision. (§ 12 ch 64 SLA 1959; am § 3 ch 104 SLA 1971; am § 47 ch 71 SLA 1972)

Effect of amendment. — The 1972 amendment substituted "public health and social services" for "public health and welfare" near the beginning of this section.

Legislative committee report. — For report on ch. 71, SLA 1972 (HCSSB 383 am H), see 1972 House Journal, p. 898.

Article 2. Advisory Board on Alcoholism.

Section
30—90. [Repealed]

Secs. 44.29.030—44.29.090.
Repealed by § 2 ch 207 SLA 1972.

Editor's note. — The repealed article derived from § 1, ch. 163, SLA 1966; §§ 1—6, ch. 132, SLA 1967; §§ 4, 5, ch. 104, SLA 1971.

Article 3. Advisory Board on Drug Abuse.

Section
100. Advisory board on drug abuse
110. Composition
120. Term of office
130. Compensation, per diem, and expenses
140. Duties
150. Drug abuse program coordinator

Sec. 44.29.100. Advisory board on drug abuse. There is established in the Department of Health and Social Services an advisory board on drug abuse. (§ 1 ch 198 SLA 1972)

Sec. 44.29.110. Composition. The advisory board on drug abuse shall consist of 12 members, broadly representative of all drug-related fields, who are known for their experience or interest in drug abuse and who shall be appointed by the governor. (§ 1 ch 198 SLA 1972)

Sec. 44.29.120. Term of office. (a) Members of the advisory board on drug abuse shall be appointed for overlapping terms of three years.

(b) Of the 12 initial appointees four shall be appointed for one-year terms, four for two-years terms, and four for three-year terms.

(c) Subsequent terms for all board members are three years.

(d) A vacancy occurring in the membership of the board shall be filled by appointment of the governor for the unexpired portion of the vacated term.

(e) Board members serve at the pleasure of the governor.

(f) The governor shall replace any members who by poor attendance or lack of contribution to the board's work demonstrate their ineffectiveness as board members. (§ 1 ch 198 SLA 1972)

Sec. 44.29.130. Compensation, per diem, and expenses. Members of the advisory board on drug abuse are not entitled to a salary, but are entitled to per diem, reimbursement for travel and other expenses authorized by law for other boards. (§ 1 ch 198 SLA 1972)

Sec. 44.29.140. Duties. The board shall act in an advisory capacity to the commissioner of health and social services in the following matters:

(1) special problems affecting mental health which drug abuse or addiction may present;

(2) educational research and public informational activities conducted by the Department of Health and Social Services and others in respect to the problems presented by drug abuse;

(3) social problems which affect rehabilitation of drug users and addicts;

(4) legal processes which affect the treatment and rehabilitation of drug users and addicts;

(5) development of programs of prevention, treatment and rehabilitation for drug abusers and addicts;

(6) review of applications and subsequent recommendations to the commissioner of health and social services on use of funds for grants for local drug abuse projects and programs;

(7) evaluation of effectiveness of drug abuse programs in the state. (§ 1 ch 198 SLA 1972)

Sec. 44.29.150. Drug abuse program coordinator. The drug abuse program coordinator shall carry out the development and implementation of a comprehensive program to prevent and treat the use and abuse of drugs as they affect the people in Alaska. The comprehensive program may include educational activities, research, grants for treatment centers, or any other activities considered effective

for prevention or treatment. The drug abuse coordinator is appointed by the governor. (§ 1 ch 198 SLA 1972)

Chapter 31. Department of Labor.

Article
1. Organization (§§ 44.31.010 — 44.31.020)
2. Employment Advisory Commission (Repealed)

Article 1. Organization.

Section
10. Commissioner of labor
20. Duties of department

Sec. 44.31.010. Commissioner of labor. The principal executive officer of the Department of Labor is the commissioner of labor. (§ 13 ch 64 SLA 1959; am § 1 ch 93 SLA 1960)

Am. Jur. and C.J.S. references. — 31 Am. Jur., Labor, §§ 748, 749, 751 to 755; 35 Am. Jur., Master and Servant, § 136; 42 Am. Jur., Public Administrative Law, §§ 8 to 250; 42 Am. Jur., Public Officers, § 30; 49 Am. Jur., States, Territories and Dependencies, § 52.

55 C.J.S. Manufacturers § 1 et seq.; 98 C.J.S. Work and Labor § 1 et seq.

Sec. 44.31.020. Duties of department. The Department of Labor shall:

(1) enforce the laws, and adopt regulations under them concerning employer-employee relationships, including the safety, hours of work, wages, and conditions of workers, including children;

(2) accumulate, analyze and report labor statistics;

(3) operate systems of workmen's compensation and unemployment insurance; and

(4) gather data reflecting the cost of living in the various election districts of the state upon request of the director of personnel under AS 39.27.030 — 39.27.040. (§ 13 ch 64 SLA 1959; am § 1 ch 93 SLA 1960; am § 2 ch 226 SLA 1970; am § 112 ch 127 SLA 1974)

Effect of amendment. — The 1974 amendment deleted "women and" preceding "children" near the end of paragraph (1).

Article 2. Employment Advisory Commission.

May 4, 1977.

The Hon. Charles Parr,
Chairman, House Health, Education & Social Services Committee,
Pouch V,
JUNEAU, Ak 99811.

Dear Representative Parr,

Further to my recent telegram on the subject of the bill in favor of the combination of the Advisory Boards on Drug Abuse and Alcoholism under the heading of one single advisory board, I have pleasure in indicating, in the following observations, my sentiments concerning the propriety of the amalgamation of these, and perhaps other, Boards. I am a private practitioner in the above specialties, and have taken a special interest in the origination and treatment of alcoholism since 1969, while working in anesthesia brings me virtually daily in contact with the application of narcotics, and requires some knowledge of the action of other pharmacological agents, especially vis-à-vis their influence on the behavior of anesthetics. Anesthesia is again, also coming more to the fore in the resuscitation of persons suffering from forms of shock, dehydation, and many types of overdose from medicinal and other agents.

At first sight, the bill is attractive for a number of reasons. It is taxonomically neat, in including in one unit, the Advisory Boards concerned with the problems caused by the use of abuse originally of substances classified as drugs (which tacitly to many implied narcotics), and currently by the utilization of any chemical which may give rise to dangerous physical, social and other consequences. Since alcohol would come into that category, it would seem superficially logical to deal with alcoholism under a combined Board identified with Drug or Chemical or Substance Abuse, by reasoning which is somewhat enhanced by claims from its proponents, of the increasing statistics of combined abuse and cross-addiction and tolerance. The momentum of the thrust toward some form of mixing of the Boards is further augmented by a philosophy that there is a basic psychiatric or psychological disturbance, with the implication that the ideal would be a trilogy of three Boards under the auspices of Mental Health, an idea very possibly fostered by the development of such federal agencies as ADAMHA, with implied pressures at the state level toward the adoption of a standardized and similar title. Not the least influence in this direction may be the First Lady's involvement with Mental Health in the new Administration.

Stanley Austin, M.D.

Internal Medicine
Anaesthesia Services

501 'E' Street
Anchorage, Alaska 99501
Tel (907) 279-8275

However, I believe that the constitution of a Board for Drug Abuse & Alcoholism, or for a trilogy of these Boards under the one title of Mental Health, might not turn out to be the ideal council that it would, at first sight, promise to become. To my mind there appear to be a number of factors which might obviate the smooth functioning of the combined Board which has been proposed.

I will not bore you with a repetition of the differences in development, personality, duration, prognosis and other facets of alcoholism and addiction to central nervous systems pharmaceuticals, except to note that in the treatment of opiate and alcohol dependence the goals are clearly different, one in the substitution of a less addicting for a much more harmful agent, the other being rapid withdrawal and total sobriety, and to note that sudden withholding of certain medical nervous system depressants may cause convulsions. My main concern is that, while personally being acquainted with the medical utilization of narcotics and barbiturates, and with the treatment of alcoholism, and therefore being personally very interested, and willing to serve on such a combined Board, it might be a difficult undertaking to establish a combined Board of officers with a complete understanding of the problems involved in alcoholism, non-alcoholic habituation and perhaps mental disease as well. I would indicate that at nearly every meeting of the Advisory Board on Alcoholism there are definite differences of opinion on a wide range of aspects of the problem, ranging from the amount of funding appropriate to a program to questions of legislation, legality and interdepartmental proprieties. One is inclined to wonder how much more tensions might rise on a combined Drug Abuse and Alcoholism Board, especially when, I gather, the finally constituted Board would be responsible for deciding the appropriations for all the Abuse and Alcoholism programs in the State.

Should the final Board be reconstituted under the final title of Drug Abuse, Alcoholism and Mental Health, or perhaps more correctly Mental Disease (or Psychiatry)? I think that doing so would imply the assumption, which consumed some odd ten years ago some millions of federal funds for research, that all alcoholics and users of euphoriants are the victims of an underlying psychiatric condition. My understanding is that this has not been shown to be so, although it is considered that most opiate abusers are suffering from some form of depression. However, some studies in Washington would indicate that an underlying psychiatric disturbance is no more common in primary alcoholics than among the remainder of the non-alcoholic public.

Again, if such a proposed Board were constructed, it would be faced with twice the load of duty and responsibility, and perhaps find it necessary to ~~quiton~~ assemble as frequently as the total number of Boards that it would replace, are currently meeting. One of our members, one of them more knowldgeable ones, has indicated that he would find it impossible

Stanley Austin, M.D.

Anchorage, Alaska 99501
Tel (907) 279-8275

-ble to maintain an attendance at all the meetings that might result from the the recombination fof the Boards. I think that if the trendgenerated in this way from the restructuring of the Boards were to continue, it might conceivably eventuate in the withdrawal of the busier professionals, with perhaps the emergence of a"rubber stamp" type of organization, an undesireable move int the face of the increased expertise that might be a tacit prerequisite for membership on a Board of this final type.

After noting the interpersonal psychodynamics and the parliammetary maneuvering generated at the time of the introduction to each other of the Alcoholism and Drug Abuse Boards, at the time nearly two years ago when the amalgamation was first directly proposed, my feeling is that because of the underlying differences in concepts and causology, it would be an unwise step to restructure more than one of this sort of Board into one unit, and that it would enkindle, as I mentioned in the POM telegram, more problems and difficulties than it would solve, and I would seriously doubt that this unification would in the long run be particularly economical.

Yours sincerely,

Stanley Austin

Stanley Austin M.D.

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

This bill would combine the offices of Alcoholism and Drug Abuse, and would also combine their respective Advisory Boards. The proposed budget for a new Office of Alcoholism and Drug Abuse is attached, and in total equals the sum of the two budgets originally submitted by the Governor for the two separate offices. These original budgets were reduced by $40.8 by the Governor's Budget Review Committee in anticipation of the proposed merger. The combined budget therefore carries forward the savings of $40.8, but, if adopted, would not affect the total Governor's budget as originally submitted.

HB 340

March 11, 1977

The Honorable Hugh Malone
Speaker of the House
Alaska State Legislature
Juneau, Alaska 99811

Dear Mr. Speaker:

Under the authority of art. III, sec. 18 of the Alaska Constitution, and in accordance with AS 24.30.060(b) and the Uniform Rules of the Alaska State Legislature, I am transmitting a bill which would combine the Office of Alcoholism and the Office of Drug Abuse into a single agency. It would also extend the alcoholism grant-in-aid program to drug abuse treatment facilities. The bill also clarifies present ambiguities and incorporates all drug and alcohol treatment statutes into AS 47.37, the Uniform Alcoholism and Intoxification Treatment Act, which would then lose its uniformity with legislation of other states but would be better suited to the facts of Alaska life. Although AS 47.37 will no longer be the Uniform Act, since it will include drugs other than alcohol, the non-criminal approach of the Uniform Act will be retained.

Qualifications for membership on a new joint advisory board would be changed to satisfy the requirements of the federally-created State Health Coordinating Council of which the board would constitute a committee.

The bill would move non-duplicative portions of AS 47.30.470 - 47.30.500 to chapter 37 of that title, and repeal the remainder. AS 47.37.475(c) now authorizes grants to non-profit corporations and political subdivisions "in a ratio of 75 per cent state money to 25 per cent community money"; the attached bill would include profit-making corporations. A preference would be given to applications from communities which devote local government revenues generated by the sale of intoxicating liquor to the treatment of alcoholism.

It is anticipated that the changes proposed by this measure would reduce operating costs of the combined agencies, and lower the amount and number of grants-in-aid by encouraging the investment of private capital. The bill would also repeal AS 44.29.100 - 44.29.150 which contains the present brief authority for a drug treatment program.

Sincerely,

Jay S. Hammond
Governor

BUDGET SUBMISSION

1 Definition Statement

STATUTORY BASIS: AS 47.37.010-270
AS 47.37.470-500
AS 47.37.060-069
AS 44.29 Section 1 Article 3

GOALS: The primary goals of this BRU are:
1) The prevention, treatment and control of alcohol and drug abuse in Alaska; and
2) the reduction of alcohol and drug related costs on units of State government, individuals, and local communities.

DESCRIPTION: The Office of Alcoholism and Drug Abuse is responsible for administration of grants to local alcoholism and drug abuse programs, encompassing outpatient counseling, detoxification, halfway houses, 15-30 day residential treatment, methadone maintenance, and education and referral services. "Administration" includes program and financial planning, coordination of programs, plus regulating and evaluating local programs. In addition, the goal of prevention of abuse and related problems is pursued through on-going analysis of alcohol and drug impacts, leading to periodic policy and legislative recommendations aimed at reducing the incidence of abuse. Finally, prevention is pursued through a public information campaign, funds for which are requested in HB 241 (SB 158).

RATIONALE FOR THIS PROGRAM:*	OBJ. NO.	RELATED BUDGET YEAR OBJECTIVE(S):
As of January, 1977, our best estimates on the extent and nature of alcohol impacts is contained in the Interdepartmental Coordinating Committee (ICC) report. A sample of findings is as follows: 1) "Alcohol dependence" was judged to be a significant contributing factor in 45% of child neglect cases reported to state social workers in 1975. 2) The Division of Public Assistance estimates that in 15% of all AFDC cases, alcohol contributes significantly to such eligibility factors as lowered income or one parent absent or incapacitated.		In general, the goal of the Alcohol and Drug Abuse program is to reduce the incidence of alcohol and drug related problems and costs. Specific objectives concerning reduction of problem indicators have not been developed basically for two reasons: 1) Though there is broad consensus in State government that current drug and alcohol problems are unacceptably high, there is no consensus concerning what level of drug and alcohol problems would be "acceptable" and therefore constitute a legitimate target. 2) We do not presently have a management information system capable of reporting most problem

RATIONALE FOR THIS PROGRAM.*	OBJ. NO.	RELATED BUDGET YEAR OBJECTIVE(S):
3) Approximately 30% of law enforcement effort in the Department of Public Safety is traceable to alcohol-related offenses, including OMVI, disorderly conduct, and a significant portion of violent crime. 4) Further impact of alcohol on society is evident from the following figures on catastrophic accidents: a) According to the Fire Marshal, approximately 30% of deaths due to fire were alcohol-related in 1975. (10 of 31) b) According to the Coast Guard, approximately 60% of deaths by boating accident in 1975 were alcohol-related. (30 of 47) c) According to the Alaska Traffic Safety Bureau, 46% of traffic fatalities in 1975 were alcohol-related. 5) A report done for the Office of Alcoholism in 1973 estimated that there were 15,610 alcoholics in Alaska at that time. The figure was derived by the Jellinek formula based on cirrhosis death rates. 6) A recent needs assessment concluded that there are at least 700 individuals addicted to opiate derivatives in the Anchorage area. This figure is based primarily on information from municipal police. The 35 methadone maintenance slots in Anchorage were used last year to capacity, though advertising of the program is primarily word of mouth. 7) Amphetamine use in the Fairbanks area is observed to be extremely high by people working long hours and operating dangerous machinery.		indicators each year such that legitimate comparisons can be made with prior years. Per capita alcohol consumption can be monitored each year with some precision, and may serve as a proxy measure for alcohol problems generally. However, even this is not available for other drugs for which sale is often illegal. Monitoring the involvement of alcohol and other drugs in the area of crime, for example, would require a routine reporting system established for the police at least, and would need to rely on police participation and judgment criteria consistent through time. Estimation formulas for, say, the number of alcoholics in a society produce order of magnitude estimates based on such data as cirrhosis death rates. Use of cirrhosis rates entails a significant lag between changes in the size of an alcoholic population and detection of change by use of the formula. We presently have no reliable way of knowing whether and to what extent Alaska's alcoholic population is changing from year to year. Until some of these data problems are overcome, we are left with one-time snapshots of alcohol and drug impacts, but little basis for setting annual targets such that marginal changes in problem indicators can be measured.

2 Analytic Statement

Special Definitions:

Alcoholism means the condition of being physically and/or psychologically addicted to ethyl alcohol.

Alcohol Abuse means the condition of consuming ethyl alcohol to the extent that either physical/mental damage to the user can or does occur or that the user has ingested ethyl alcohol to such extremes that he poses a threat to himself or others.

Alcohol-related event (e.g., "crime", "child abuse", etc.) means behavior acted out by a human being under the influence of ethyl alcohol which common sense, observation, and statistical analysis has determined would probably not have occurred, had the individual not been under the influence.

Under the Influence means having one's mood and/or behavior altered to a visible degree as a result of the ingestion of ethyl alcohol. Visible may mean: 1) as determined by blood-alcohol content, urinalysis or similar clinical methods or, 2) as agreed upon as a result of direct observation by one or more persons.

Addiction: a condition caused by a substance which has the following characteristics:

a. tolerance to the substance develops, more is needed to attain some results and avoid withdrawal.
b. physical symptoms occur when the substance is withheld abruptly.

Drug Abuse is the use of drugs to the extent that they interfere with physical, mental or social functioning.

Multidrug Abuse is the abuse of more than one drug.

Methadone: a synthetic narcotic which prevents the onset of symptoms of withdrawal from opiates. There is no euphoria, no needle, no nodding connected with taking this drug instead of heroin.

Methadone Maintenance: a treatment for heroin addicts which replaces a low dose of methadone for heroin while the addict is being rehabilitated, gets a job, finishes his (her) education, re-establishes contact with family, then the replacement drug is gradually withdrawn.

In the absence of a functioning management information system, the key proxy measure we wish to establish this year for the extent of alcohol-related problems is per capita consumption. Due to the time lag in receiving data, the Form 3 will show the most recent three years for which data is available, in this case 1973-1975.

BRU Alcohol and Drug Abuse BRU CODE _____ REVISED _____

02-1002

FY 76 client statistics from local alcoholism treatment programs were too often incomplete to be useful in the aggregate. Spot checks on FY77 client reports indicate that they are much improved. However, FY 77 data has not yet been aggregated due to a variety of delays, including coding and keypunch delays. State Office plans for FY 77 call for 3000 existing cases of alcohol addiction and abuse to be treated through the community grant-in-aid program as follows:

1. Diagnoses of the 3,000 cases of alcohol addiction and/or alcohol abuse.
2. Emergency care to 2,000 cases of public inebriance.
3. In-patient care to 1,500 cases of alcohol addiction and abuse.
4. Out-patient care to 1,000 cases of alcohol abuse and addiction.
5. Aftercare and follow-up to 3,000 cases of alcohol abuse and alcoholism.
6. Counseling to 1,000 spouses and children of abusers and addicts.
7. Rehabilitate at least 750 of the 3,000 alcohol addicts and abusers treated through the system.

BRU Alcohol and Drug Abuse BRU CODE _____ REVISED _____

OBJ. NO.	ALTERNATE STRATEGIES WEIGHED IN PROCESS OF FORMULATING THIS BUDGET PROPOSAL.	CY AUTH	MAINT.	BY REQUEST AGCY	BY REQUEST GOV.	BY LEG. APPROP.
	Alternative A Reduce alcohol abuse and related problems by reducing per capita alcohol consumption. There is a considerable body of research (summarized in the ICC report) indicating that the incidence of excessive drinking increases and decreases in direct proportion to per capita alcohol consumption. Per capita consumption may be reduced in several ways, including price increases and restrictions on advertising, both of which are being pursued through legislation this session. Alternative B Reduce per capita alcohol and drug consumption and/or abuse through educational efforts conducted through media and/or the schools. Alcohol and drug abuse education has been carried out primarily through workshops and the distribution of films and literature. Additional funds ($416.0) requested in HB 241 would be used primarily to finance state involvement in media education (stressing information rather than dramatizations), and would also finance development of an alcohol education curriiculum for the public schools. Alternative C Treatment and rehabilitation of alcoholics through outpatient counselling, halfway house services, and/or 30 day residential treatment may reduce the number of individuals suffering from alcohol dependence. Detoxification services are funded as a protective measure for those incapacitated by alcohol; and as a (hopefully) early screening system allowing local treatment and counseling programs to make contact with those in need of help. Most of the State's effort has traditionally been in this area. This alternative is an appropriate way to help existing alcoholics. It is not a

OBJ. NO.	ALTERNATE STRATEGIES WEIGHED IN PROCESS OF FORMULATING THIS BUDGET PROPOSAL.	CY AUTH	MAINT.	BY REQUEST AGCY	BY REQUEST GOV.	BY LEG. APPROP.
	prevention strategy and does not, by itself, appear to significantly affect the incidence of most alcohol-related problems in areas such as crime and personal injury accidents throughout Alaskan society. Alternative D The State's primary approach for the individual abusing drugs other than alcohol (aside from legal sanctions) has been a somewhat comparable array of treatment and rehabilitation services. These range from counseling to methadone maintenance for heroin addicts. Alternative E Provide recreational alternatives where they are presently scarce. The idea is that drug use can be diminished as other and more satisfying means of fulfilling human need, or filling leisure time, become accessible. Recreational activities such as dances, skiing parties, and trips have been provided in areas such as Petersburg (when kids help raise the money), and the local police believe that a subsequent drop in alcohol and drug related offenses occured as a result. The Office Of Alcoholism and Drug Abuse plans to be involved in all of these alternative strategies in FY 78. In future years budgets, we expect to quantify State involvement in these various alternatives, and hope eventually to develop criteria for comparing the cost-effectiveness of each.

JUSTIFICATION: AS 47.37.040 states that the Office of Alcoholism shall

1) Develop and encourage statewide, regional and local plans and programs for prevention and treatment of alcoholism and provide technical assistance and consultation services for these purposes; and

2) coordinate the efforts of all public and private agencies interested in prevention and treatment of alcoholism.

The National Institute of Alcohol Abuse and Alcoholism (Department of Health, Education and Welfare) required as a condition of the Pipeline Impact Response Project Grant award that two consultants be hired, subject to NIAAA approval, to assist in the implementation, development, and supervision of the Pipeline Grant program.

This position will serve a dual function as a Regional Alcoholism Program Coordinator for the southcentral region and a supervisor of the federal Pipeline Grant funds disbursed to local community programs. The personnel requirement initially was handled on a contract basis and then temporary hire status in FY 76. RP 77-55 established the permanent position in FY 77. This position is one-quarter funded by the Federal grant with an equivalent amount of Federal funding used to partially support several existing positions in the office which perform work on this grant.

BRU Alcohol and Drug Abuse BRU CODE _____ REVISED _____

13 PERSONAL SERVICES REQUEST FOR NEW POSITION

The Regional Alcoholism Program Coordinator position is essential to supervise services provided by the office to state-funded alcoholism and drug abuse programs within the assigned region. The position will be responsible for the operation of the regional office and supervision of two Health Facilities Surveyors, a Grant Administrator and a Clerk Typist II. Duties of the position will include responsibility for compliance of the programs with State and Federal requirements; training and assistance to the programs in the areas of prevention, treatment, financial management, and third party reimbursement; and extensive work with local community leaders, State employees in related fields, other public and private agencies and organizations, and various concerned citizens to work toward comprehensive treatment, education, and prevention programs in each local area.

TOTAL	41,833		41,833		BRU COMPONENT Administration

JUSTIFICATION:

This position would supervise a federally funded management unit, comprised of this and three other positions: Cost Accountant, Research Analyst III, and Clerk Typist III. The federal "Alcohol Information System" grant is available to states adopting The Uniform Alcoholism and Intoxication Act. In Alaska, the grant amounts to $120,000 and has been used during the past two years to fund a major research effort concerning economic, human, and social impacts of alcohol in Alaska, legal provisions on all levels of government relating to alcohol sales and use, and an attempt to set up traceable indicators of alcohol impacts through time. The project was accomplished by hiring on contract and temporary assignments. It is requested that the federally funded management unit be established with permanent positions for the duration of the federal grant. FY 78 grant should equal $120.0. FY 79 funding is unknown.

FY 78 projects anticipated for this unit include: 1) Implementation of a system to routinely monitor alcohol impacts through time. 2) Determine the potential for third-party reimbursement for local treatment programs and determine what local programs must do in order to qualify and collect payments. Assist programs in meeting these requirements. 3) Preparation of required reports and State Plan. 4) Plans developed for both federal and state authorities (e.g. the budget) have not been successful in identifying management objectives concerning alcohol impacts in such a way that State office activities can be properly evaluated. The management unit will attempt to incorporate research results

BRU Alcohol and Drug Abuse BRU CODE _____ REVISED _____

JUSTIFICATION:

RP 77-57 provided interim approval for establishment of an Associate Coordinator position in Anchorage for the Office of Drug Abuse, funded on a federal grant from The National Institute of Drug Abuse (NIDA). The Associate Coordinator position was primarily involved in program evaluation in FY 77. For FY 78 we request that the position be reclassified as a Health Facilities Surveyor, which is the same range, and continue to perform program evaluations in the field. Federal funds from NIDA will be available in FY 78 to fund this position.

FY 78 Maintenance - 01 Component

Field/Administrative Travel

Travel is required for office personnel to conduct site visits of all State funded local programs for inspection, evaluation, monitoring, and technical assistance. This function is essential to ensure compliance with State and Federal standards, guidelines, and regulations as well as to assist the local programs in providing quality alcoholism services. In addition the Office must maintain a careful knowledge of each program so that decisions on funding are based on the effectiveness and efficiency of the program.

Legislation submitted this year would combine The Governor's Advisory Board on Alcoholism with The Advisory Board on Drug Abuse. Travel funds are budgeted for quarterly meetings of the combined Board. Travel savings of $10.3 are realized due to the combination of boards.

BRU Alcohol & Drug Abuse BRU CODE _____ REVISED _____

The Office of Alcoholism and Drug Abuse is responsible for coordinating alcoholism and drug abuse educational and preventive efforts. Reference books, journals, pamphlets and other relevant literature is made available to State Office staff and program personnel throughout the state on a request basis. In the absence of physician training funds, films on crisis intervention and handling drug overdoses are rented and made available to physicians.

480 Stationery and Office Supplies $7,600

General office materials and supplies, including tapes for Advisory Board meetings and public hearings, and newspaper subscriptions.

BRU Alcohol and Drug Abuse BRU CODE _____ REVISED _____

490 Other Supplies, Materials, and Parts $5,100

Instructional kits such as developing Understanding of Self and Others have been supplied to teachers on request, the "Coping With Series" have also been made available as funds allowed. Films and tapes have been purchased for school and community organizations as educational materials are needed.

EXPLANATION: FY 78 Maintenance - 02 Component

AS 47.30.470 provides for the department to award grants to communities for providing or developing a comprehensive program of alcoholism treatment and prevention.

Pipeline Impact Response Project grant funds will decrease in FY 78 to $494,854.

NIAAA Formula Grant funds will remain at the current level of $200,000.

State General Funds are increased by $53,500 to allow for projected population increase and subsequent alcoholism services requirements in Anchorage and Fairbanks. These funds are required to maintain current service levels for the increased population. The Anchorage Municipality Planning Department anticipates a 5%

BRU Alcohol and Drug Abuse BRU CODE _____ REVISED _____

population increase for FY 78 and Fairbanks is projecting a 4% increase, despite a Statewide projection of 0% population increase. An additional SGF increase of $31,100 is required for inflationary increases for program costs, bringing the total of State General Funds to $1,941,300.

FY 77 Grants:

Program	Grant Awards
Alaska Labor & Management Employee Affairs	$ 200,000
Municipality of Anchorage	790,580*
Barrow Council on Alcoholism	74,780
City of Bethel	138,456
Copper River Native Association	67,108
City of Dillingham	27,435
Fairbanks Native Association	318,239
City/Borough of Juneau	60,746
City of Ketchikan	103,474
Kodiak Council on Alcoholism	123,771
Mauneluk Association (Kotzebue)	49,205
National Council on Alcoholism/Alaska Region	107,182
Norton Sound Health Corporation (Nome)	114,393
Petersburg Council on Alcoholism	39,375
Seward Council on Community Services	51,736
Sitka Council on Alcoholism	78,388
City of Unalaska	38,645
Upper Tanana Regional Council (Tok)	15,070
Valdez Alcoholism Commission	60,576
Wrangell Council on Alcoholism	35,293
City of Yakutat	17,327
Total	$2,511,779**

*Of the $790,580 initially recommended for Anchorage, $750,581 has been obligated to date. An additional $39,999 will be awarded to Anchorage for the month of September.

**$70,000 was transferred to the Administration Component by RP 77-26X. Letters have been sent to the local

BRU Alcohol and Drug Abuse BRU CODE _____ REVISED _____

alcoholism programs informing them that there are unobligated funds available and requesting that they submit applications. These funds will enable them to regain operating funds requested on their initial FY 77 applications that were justified but for which there were not sufficient funds. It is anticipated that these funds will be granted by 3/31/77.

EXPLANATION: FY 78 Maintenance - 03 Component

MAINTENANCE

DIRECT AID TO LOCAL PROGRAMS: On recommendation of the State Advisory Board on Drug Abuse 10 drug abuse programs were funded on the basis of criteria outlined in the Alaska State Plan for Drug Abuse Prevention (the Grant to the Municipality is treated as 1 grant although five drug abuse programs are funded through the grant). Because no additional funds were available, all programs funded were on-going programs which had demonstrated a capability to provide care to persons affected by drug dependencies.

Following are drug abuse programs funded in FY 76 and the funds requested:

BRU Alcohol and Drug Abuse BRU CODE _____ REVISED _____

18 LANDS GRANTS MISCELLANEOUS

02-1018

Program Title	FY 77-Amount Received	FY 77-Requested*
Nome Walk-In Center	66,000	78,174
Dillingham District Drug Abuse Program	22,704	31,032
Gateway Borough, Schoenbar Junior High	21,483	22,648
Ketchikan Youth Advocate Program	13,738	15,900
Petersburg Youth Program	18,700	21,177
Municipality of Anchorage funded as a block grant		
Includes funding for the following programs:	381,149	405,183
Future House Narcotic Drug Treatment Center Open Door Clinic Family House		
Fairbanks Drug Treatment Center	66,000	118,921
Fairbanks Native Association	21,000	31,022
Division of Drug Abuse, Fairbanks	70,000	72,210

*These figures reflect the request for funds from those programs which were funded in FY 77. In some instances, the level requested could not be funded because of lack of funds. The amounts requested do not necessarily reflect program needs as programs had been warned previously that no additional funds were available and therefore reduced requests accordingly. This list does not reflect requests from programs not funded.

BRU Alcohol and Drug Abuse BRU CODE _____ REVISED _____

18 Explanation

It is anticipated that there will be a 5% increase in the population in Anchorage and a 4% increase in Fairbanks. Because of these projected increases and because all funded programs are meeting demonstrated needs and have received positive evaluations, additional funds are required to meet the expected population increases.

$14,100

Additional maintenance funds for programs are to be used to allow for inflationary increases for program costs and to allow programs to serve clients in need of services. These additional funds include $64,700 in federal funds received through an increase in the Formula Grant provided by the National Instituted on Drug Abuse.

$74,400

PMS REP CHARLIE PARR

HESS COMMITTEE

JUN

PLEASE ACCEPT THE FOLLOWING STATEMENT AS TESTIMONY CONCERNING SB242/ HB340 (ALCOHOLISM AND DRUG ABUSE ACT). THE NATIONAL COUNCIL ON ALCOHOLISM-ALASKA REGION SUPPORT THIS BILL IF THE FOLLOWING CHANGES ARE MADE:

1. WHEREVER REFERENCE IS MADE TO THE TERMS ALCOHOLICS, DRUG ADDICTS, ALCOHOL ABUSERS, AND DRUG ABUSERS, ALL MUST BE MENTIONED FOR PURPOSES OF CONTINUITY. THEY ARE FOUR DISTINCT GROUPS OF INDIVIDUALS.

2. THE STATE OFFICE OF ALCOHOLISM AND DRUG ABUSE SHOULD PROVIDE NO DIRECT SERVICES TO CLIENTS OR THE GENERAL PUBLIC. ALL TREATMENT, EDUCATIONAL MATERIAL, EDUCATIONAL PROGRAMS AND TRAINING PROGRAMS SHOULD BE CONTRACTED FOR (47.37.040 SEC. 5, 6, 7, 8).

3. 47.37.030 SEC 3 SHOULD ESTABLISH EQUAL REPRESENTATION FROM PERSONS WITH INTERESTS IN THE PROBLEMS OF DRUG AND ALCOHOL ABUSE (TWO FROM DRUG ABUSE AND TWO FROM ALCOHOL ABUSE).

4. 47.37.200 (B) SEC (B) WE QUESTION THE ADVISABILITY OF THE STATEMENT,"...TREATMENT FACILITY WHICH IS ABLE TO PROVIDE ADEQUATE AND APPROPRIATE TREATMENT..." THE IMPLICATION APPEARS TO BE THAT TREATMENT IS INADEQUATE AND/OR INAPPROPRIATE IF A PERSON DOES NOT RECOVER. THIS IS A DANGEROUS IMPLICATION AS LITTLE OR NO HARD DATA IS KNOWN CONCERNING CAUSES/CURES/EFFECTIVE TREATMENT MODALITIES FOR ALCOHOL OR DRUG ABUSE.

5. 47.37.310 (A) IT IS APPROPRIATE TO GIVE STATE (TAXPAYERS') FUNDS TO PROFIT-MAKING CORPORATIONS? WE DO NOT SUPPORT THAT CONCEPT.

6. 47.37.310 (D) WE GREATLY OBJECT TO ALL COMMUNITY MATCH CONTRIBUTIONS MANDATED TO IN CASH. AS A FORMER CITY MANAGER, I KNOW THIS IS NOT POSSIBLE. A PORTION OF THE MATCH COULD BE MANDATED AS CASH, BUT NOT THE ENTIRE AMOUNT.

WE HAVE BEEN UNABLE TO REVIEW ANY OTHER LEGISLATION CONCERNING ANY DRUG/ALCOHOL REORGANIZATION EFFORT AND URGE YOU DO NOT ACT ON ANY UNTIL APPROPRIATE AGENCIES HAVE HAD OPPORTUNITY FOR REVIEW.

THANK YOU FOR YOUR CONSIDERATION OF THIS MATTER.

SINCERELY YOURS,

SUZANNE W. PERRY, EXECUTIVE DIRECTOR
NATIONAL COUNCIL ON ALCOHOLISM-ALASKA REGION

Municipality of Anchorage

MEMORANDUM

THURSDAY APR 21 1977

DATE: April 20, 1977

TO: Robert (Bert) Hall, Director
Health & Environmental Protection

FROM: Behavioral Health Manager

SUBJECT: House Bill No. 340.

House Bill No. 340. An act relating to treatment of alcoholism and drug abuse for all purposes establishes a uniform drug abuses act which includes alcohol as a major addicitive drug. This legislation has great merit. Section 2 - AS 47.37.010, Declaration of Policy is inclusive and needed. There should be a semantic consistancy in the policy and throughout the bill and terminology which should be used is "alcoholics, alcohol abusers, drug addicts, and drug abusers."

Section 4, AS 47.37.030. The powers of the office is broadened and strengthened by spelling out that treatment programs include prevention, training and rehabilitation.

Section 5, AS 47.37.040. The expanded duties of the office addresses in (7), (10), and (15) will facilitate a much stronger approach to early intervention and ultimate treatment of both the licit and illicit drug users.

Page 2, Line 24, and all subsequent notations with a reference to alcoholism and drug abuses should be changed to alcohol[ism] and drug abuses.

Section 6, AS 47.37.050. Amended to mandate that all departments become involved in the drug abuse problem and the quarterly meetings rather than twice per year should create a continuance of interest and promote more effective programing.

Section 7, AS 47.37.360. It would be desirable that intent be written that the new advisory board retain at least two of the more knowledgeable members of each of the present advisory boards for alcoholism and drug abuse to maintain a continuity of past and present activities and to assure equal attention is given to the programing for both areas.

There should also be some of the present staff members of the office of drug abuse retained for continuity of programing during the transition period.

Section 9, AS 47.37.080. (1) Reinstate all deleted material on lines 22 to "except" on line 24. It is believed that one physician with a greater emphasis in the field of psychiatry is necessary on the board.

Section 15, AS 47.37.140. Establishment for Standards of licensing as addressed in this section and licensing rather than approval is essential for adequate programs to be developed and maintained. The present difficulty in obtaining approval of facilities dilute the efforts on the part of effective programs in providing quality service.

Section 17, AS 47.37.160 (d). Line 7 - 9 delete (except for diagnosis and referral, alcoholism treatment programs shall be separate and distinct from treatment programs for drug addicts.) This statement is too dictatorial and possibly destructive to effective programing.

Section 25, AS 47.37.170 (h). This section dealing with involuntary commitment is considered to be essential in cases where reason is so impaired by drug abuse that the individual cannot make a knowledgeable decision concerning his well being or may be inadvertently harmful to others.

Representative Fred Brown
House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Fred,

Attached is a suggested revision of HB 340 (SB 242), a bill relating to the treatment of substance abusers.

The primary focus of the proposed legislation is the combining of the offices of drug abuse and alcoholism--a concept that we support wholeheartedly. Additionally, it is a concept that has gained national support and is currently being implemented by many states.

Unfortunately, we cannot support the bills as they presently stand. While the combination of offices does have the potential for better resource allocation and improved service delivery, such benefits are not apparent within the existing proposed legislation.

Using the recently passed community mental health center legislation as a model (a model we believe to be exemplary), we have attempted to re-draft HB 340 so it too will assure local participation and control. Additionally, as communities implement the integration of human service delivery components (as appropriately required by the Community Mental Health Centers Act), the present HB 340's focus on centralization would prevent consolidation and eliminate any meaningful local authority and flexibility.

We respectfully request that you consider the attached proposal, hold hearings as appropriate, and contact us as required.

Sincerely,

Paul Pesika, Coordinator

Rep. Charles H. Parr
Pouch V
Juneau, Alaska 99811

Dear Rep. Parr: RE: House Bill 340

I have recently obtained a copy of House Bill 340 which I understand is identical to Senate Bill 242 that I would appreciate the opportunity of testifying in regards to.

I, the other staff members, and members of Alaska Family House basically support the idea of consolidating the drug abuse and alcoholism programs. Our particular program has not faired well in terms of support by the past State Office of Drug Abuse. Consequently, we feel that any change for us and our addict population would be better than the existing situation.

On Page 1, Section 47.37.020 wherein it states that the coordinator shall be a qualified professional, I ask the question why not consider a paraprofessional? There are many individuals who have actually been there themselves that have the necessary educational background to fill such a position.

On Page 7, Section 47.37.080 qualification of Board members and following that it lists where the nine members should come from and what kind of people they should be. Herein I strongly recommend that you have at least one or two exaddicts that have successfully completed treatment on that Board. They could add invaluable input to the other seven Board members. A recovered alcoholic should also be on that Board. I think that it behooves the legislature to finally put somebody on the Board that can give the other Board members the kinds of information that they need to adequately address the decision making processes that are necessary if this Board is in fact going to rehabilitate addicts and/or alcoholics.

Capt. George Weaver, *APD*

My next question is, I have never seen the "appropriate standards" established under Section 140A of this chapter. I do not have those standards and wonder if I could get a copy of them.

On Page 11, Section F, there is the following statement: "No treatment facility may be operated in the State without a license and no facility may receive State funds under a contract or grant made unless it is licensed as a public treatment facility". In regards to the first half of that sentence, "no treatment facility may be operated in the State without a liscense", I do not know who wrote this section of the Bill, but that language does preclude Alcoholics Anonymous, and it would preclude the Alaska Family House structure. We are not licensed now and we do not want to be licensed. Our whole concept is "the family" structure. We are an anti-program that stresses such things as self-help, the work ethic, and making the best out of bad situations as done in everyday life. The day that the Alaska Family House program is licensed, there will be psychiatrists here, nutritionalists here, volumes of paperwork that must be done, never ending reams of forms to be filled out, a fantastic increase in the cost per day of our clients, the need for more staff, and we will see the end of the addict helping addict concept. My next statement in regards to the last half of that sentence which reads "and no facility may receive State funds under contract or grant made unless it is licensed as a public treatment center", I am very glad that this was not law in 1973 when Alaska Family House was first founded or it wouldn't be here. My next question in regards to this statement is, what constitutes a treatment facility? What do you do about the situation where three or four or five individuals rent an apartment or a house and "treat" themselves with the AA type concept or the addict helping addict concept? Is that classified as a treatment facility?

On Page 13, Section B wherein it states, subject to regulations adopted by the Department "if a person is refused admission to a licensed or public treatment facility, the administrator shall if possible refer the person to another licensed appproved public or private facility". My question in regards to that is simply, why? Why couldn't this individual be referred to an unlicensed treatment facility such as an AA group or Alaska Family House or to that apartment where the four people decided to band together to do something about their alcoholic and/or drug addiction problem?

On Page 14, Section D, there is a sentence that reads "except for diagnosis and referral, alcoholism treatment programs shall be seperate and distinct from treatment programs for drug addicts". Again, I wonder why? I have had alcoholics in Alaska Family House that have gotten a lot of good out of the program working right along with the addicts. I have also seen many addicts that participate in AA and get something out of it. Why, by law and legislation myst these two people with basically the same problem, i.e., chemical dependancy, be seperated through the legislative process? It is my opinion that if it works, do it. Again, I have seen drug addicts use alcohol programs, a multitude of treatment centers, religion, and all kinds of things to change and simply ask the question why exclude anything that might work. In that same paragraph there is a sentence of "no person addicted to an opium derivative may be treated except at a licensed

drug addiction center". Again a person addicted to an opium derivative should be allowed to seek treatment anywhere he or she feels that there is some help.

On Page 22, Section 47.37.220, wherein it states visitations and communication of patients. "Patients in any licensed treatment facility under this chapter shall be granted reasonable opportunities for adequate consultation with counsel." We can agree with that wholeheartedly as the right to counsel is imperative and means that the individual must have some problems or there would be no question of counsel. That sentence does, however, continue with the words, "and for the continuing contact with family and friends including the use of telephone facilities consistant with an effective treatment program". I have seen many addicts who have members of their immediate family using drugs. Most addicts that I have seen come into this program have nothing but addict friends. It is imperative that the addict in treatment be seperated from the addict still using. No matter if they are related or "friends". If that is not done you will invariably have two addicts using and not one in treatment.

In regards to Section B of that same Section, wherein it states that "no mail or other communication to or from a patient in a licensed treatment facility may be intercepted, read or censored", again you have problems in that area. We do in fact open mail here at Alaska Family House. Each resident who comes in signs a waiver allowing us to do that and you would not believe the drugs we have intercepted, plans to bring drugs into the program, pornography, and other seriously upsetting information. At Family House and most other major therapeutic communities such as Delancey Street in California and Habilitat in Hawaii, there is an initial black out period that is important. Most therapeutic communities are and must be drug free at all times. All avenues of its coming into the facility must be constantly explored investigated and halted wherever possible. These particular sections would totally tie our hands at Alaska Family House.

In regards to again on Page 22, this time Section 37AS47.37.24A, most clients, which we prefer over the word patient, have no funds and we are concerned that some people with funds might decide to delay treatment until they have expended their revenues (probably by the purchase of more drugs and possibly O.D.) and also pass the time when the urge for treatment has passed.

On Page 24, numbers 13 and 14, wherein drug addict and drug abuser are being defined, I have known many barbituate addicts but very few barbituate drug abusers. Another point is, what of methadone and other synthetics that are even more addictive than opium derivatives? They too should be classified as drug addicts.

On Page 24, Section D, last sentence wherein it says all community match contributions to grants shall be in the form of cash and I wonder why not goods and services? If we get a $100 worth of canned vegetables from BiLo, isn't that the same as $100 cash in so far as the program is concerned?

In closing this correspondence, I again would appreciate an opportunity to verbally testify in front of your committee and again we wish to state that we can support the concept of joining the drug and alcohol Boards. I would, however, not like to see legislation passed that would make treatment less accessible and that would make our jobs here at Alaska Family House more difficult then they are presently.

For the past three years, we have been involved in an almost constant fight with a very small group of bureaucrats that are constantly thinking in terms of new forms, new requirements, new criteria that in fact takes away from the treatment process. Most of these ideas are gleened from Federal guidelines and recommendations through the National Institute of Drug Abuse, etc. Most of those programs are no longer even in existence. One of the things that attracted me personally to the State of Alaska was the possibility of working directly with people without the tons of bureaucratic redtape, licensing requirements, etc., etc., that is the trend in the lower 48. I would hope that Alaska would not get sucked into that kind of mentality.

If I can be of any further assistance in regards to this matter, please feel free to contact me by phone (907-279-5502) or by mail.

Sincerely,

Terry M. Stahlman

RE: HB 340

We will have a meeting regarding HB 340 Thursday night. It will begin at 7:30p.m. and we will be able to receive long distance intercom calls. The phone number is Zenith 7000. Please try to hang on to your bills for the meeting.

POSITION PAPER/Department of Health and Social Services

POSITION PAPER ON HOUSE BILL 340

"An Act relating to the treatment of alcoholism and drug abuse; and providing for an effective date."

This bill is recommended by the Department of Health and Social Services. The bill proposes to accomplish several things, among them the following:

1. Adds both "drug addicts" and "drug abusers" to the types of persons to be afforded treatment under the provisions of AS 47.37. (Throughout the Act.)

2. Creates a combined "Office of Alcoholism and Drug Abuse." (020)

3. Empowers the combined office to review and comment on all state plans involving provisi for alcoholics and dru abusers. (030)

4. Empowers the combined office to have access to alcohol and drug related records systems of other agencies of state government except when expressly prohibited by law. (030-6)

5. Instructs the office to reorganize and implement a coordinated Manpower Training Program for all persons involved in the provision of treatment services to alcoholics and/or drug abusers. (040-7)

6. Adds the Regional Health Systems Agencies and the State Health Coordinating Council to the list of agencies to whom the Office and the Board is advisory for the purposes of the preparation of an annual combined State Plan for the provision of services to drug abusers and alcoholics. (040-11)

7. Requires the Office to monitor the admission of alcoholics to hospitals in conformance with existing federal law. (040-15)

8. Adds the following agencies to the Interdepartmental Coordinating Committee: "The Commissioner of Revenue," "The Commissioner of Community and Regional Affairs," "The Director of Traffic Safety," "The Director of Criminal Justice Planning," "The Department of Law," "The Division of Planning and Policy Development," The Division of Budget and Management," and "The Alaska Court System." Requires the committee to meet quarterly for the purpose of supervising the implementation of an annual Interdepartmental Plan for the amelioration of alcohol and drug abuse problems. Ties the plan to the existing plan requirements of other affected agencies. (050-A)

9. Collapses the existing separate advisory boards for alcoholism and drug abuse into one combined advisory board for the combined office, and specifies the membership categories. (080.1-5)

10. Redefines the position of the Coordinator to include responsibility for drug abuse as well as alcoholism. (120)

11. Adds to the requirements for the preparation of an annual plan for the prevention, treatment, and control of alcoholism and drug abuse. (130.A-E)

12. Redefines the responsibility of the office to include "licensure" of facilities and programs, instead of the existing "approval." (Brings the statute into conformance with other similar statutes.) (140)

13. Defines situations under which the state may allow the creation of combined treatment programs for the treatment of certain alcoholics and drug abusers. (160-D)

14. Compels the administrator of a licensed facility to initiate emergency or involuntary committment proceedings on certain clients, under certain conditions. (170.H)

15. Mandates that persons who attempt to commit, commit, or threaten physical harm to another under the influence of alcohol, be charged under an appropriate criminal statute and taken into criminal custody. (180)

16. Insists that the courts commit persons only to licensed public or private treatment facilities (190)

17. Defines both "licensed public," and licensed private" treatment facilities/programs. (270. 2&3)

18. Adds definitions of "drug addicts" and drug abusers" for the purposes of the Act. (270. 13&14)

19. Adds definitions of "cross addicted persons" and troubled employees" for the purposes of the Act. (270. 15&16)

20. Adds a new "grant-in-aid statute" which includes "profit making corporations" in the list of agencies eligible for state grants-in-aid. (Article 2-300 & 310)

21 Keeps the appropriations for grant-in-aid for alcoholism and drug abuse separate. (310-B)

22. Allows the Office to let grants of up to $50,000 at a match rate of fifty per cent for the purposes of construction or purchase of facilities. (310-C)

23. Mandates that all local "match" for grants-in-aid, be in the form of cash. (310-D)

24. Insists that all programs eligible for funding under state grants-in-aid must meet all state licensure standards and that they be able to demonstrate successful collection of patient fees. (310-E & F)

25. Repeals AS 44.29.100-150, and AS 47.30.470-500. (Existing drug abuse statute and the current alcoholism "grant-in-aid" statutes, respectively.)

This Act was written in order to comply with past joint resolutions of the legislature and the recommendations of the Governor's Efficiency Review Team.

Document# House HESS #5

Honorable Charlie Parr
H. & S.S. Committee Chairman
House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Representative Parr:

Mr. Cole, in the State Office of Alcoholism; Mike Waltnie and Rae Ann Hickling, from Anchorage; and Ms. Hilburn, in the State Office of Drug Abuse have discussed proposed changes in this bill. The proposed changes are:

...Page 1, Line 26 ... Add the word "abuse" after the word "drug"

...Page 4, Section 10 ... Should read: "Coordinates with Local Communities, the Regional Health Systems agencies, and the State Health Coordinating Council on the Preparation of an Annual Comprehensive Plan for the Prevention, Treatment and Control of Alcohol and Drug Abuse; to be Submitted to the Commissioner and the Citizens of the State of Alaska for Review and to the Governor for Approval."

...Page 5, Line 20 ... Delete the word "intoxicated", add the word "drug abusing."

...Page 7, Section 9 ...(47.37.080) Should be amended to read: "Of the nine members, no person having a monetary interest in the outcome of the recommendations of the Board shall serve as a Board Member." (All other language should be deleted.)

...Page 9, Section 47.37.110 ... The following changes are proposed:

110... Duties.. add "The State Health Coordinating Council" after the word "Commissioner"

110 (1) Add the words "and physical" between "Mental" and "Health"

110 (3) Should read: "Social factors which affect the causation, treatment and rehabilitation of alcoholism and drug abuse"

110 (4) Should read: "Legal processes and legislation which affect the rehabilitation and treatment of alcoholics and drug abusers"

110 (5) Should read: "Programs of public relations, prevention and education concerning the problem of alcoholism and drug abuse conducted by a department of state government or by any organized group"

...Page 10, Section 130; Lines 13-15 ... Delete the words "and when feasible"; include an amended sentence to read: "Programs shall be established with maximum local community and native health corporation involvement."

Section 130 (D)... Delete

...Page 14... Delete (D) ... Replace (D) with the following:
"Based upon local determination of need, there may be alcoholism treatment programs, drug abuse treatment programs, or integrated treatment programs for both alcoholism and drug abuse. There may be integrated prevention programs for all forms of substance abuse. All State and Federal laws and regulations relating to requirements for methadone maintenance for persons addicted to an opiate derivative shall be strictly adhered to by all affected treatment facilities licensed or funded by the office. There shall be state regulations which establish standards for licensure for all classes of treatment programs."

...Page 25, Lines 3 & 4 ... Should read: "Grants will be awarded on the basis of demonstrated need and the merit of the application. In considering applications for alcoholism programs, the department shall, if all other factors are equal, give preference to applications in political sub-divisions which devote local government revenues generated by the sale of intoxicating liquor to the treatment of alcoholism."

...Page 25, Section "D".. Should be amended to read: "All community match contributions to grants shall be in the form of cash, except grants to "poverty" communities for the first three years of state grant support may meet the match requirements through the provision of in-kind contributions."

...Page 24, Section 310, Line 21: Delete (A) "Profit making corporation" from the list of eligible entities for grants in aid support.

...Page 27, Section 43, Line 29: Should have included the following definitions:

..."Drug Abuser"... means a person who misuses a drug or drugs to the detriment of his/her health and social well-being.

..."Cross Addicted Person"... means a person who is addicted to more than one class of drugs.

(Note: Existing AS 47.37 definitions of "Alcoholic", should be retained. All references to "Drug Addicts" should be stricken from the language of the bill.)

All of the above changes have been found acceptable by the Southeast Alaska Alcoholism Program Managers, the Petersburg Youth Council and the Petersburg Alcoholism Board, as well as the persons mentioned from the drug field in the first paragraph in this memo.

The Department would like to suggest one more addition to the bill which might facilitate the plan to reorganize the offices. That provision would read as follows:

"There shall be created a "Technical Advisory Panel" to advise the

Coordinator and the Advisory Board on all matters having to do with the impact of office policy on the administration of local programs. The Advisory Panel shall be composed of two alcoholism program managers, two drug abuse program managers, and one representative each from the "Alaska Native Commission on Alcoholism and Drug Abuse" and "The National Council on Alcoholism - Alaska Region."

This Panel shall meet quarterly with the Governor's Advisory Board on Alcoholism and Drug Abuse and the Coordinator for the purpose of discussing issues which impact on the administration of local programs.

Travel and Per Diem: Should read the same as the "Travel and Per Diem" provisions for the Governor's Advisory Board.

Your consideration of the proposed charges will be greatly appreciated.

Sincerely yours,

By Robert L. Cole

Francis S.L. Williamson
Commissioner

MINUTES OF HOUSE HESS COMMITTEE

April 28, 1977

(EVENING)

The meeting was called to order by Chairman Parr at 7:35 p.m. Present: Mr. Parr, Dr. Beirne, Mr. Nakak, Mr. Chatterton, & Mr. Ose. Mr. Phillips, Mrs. Buchholdt and Mr. Bennett came in later.

Absent: Mr. Cotten.

HB 340
Kleinfelter

Mary Kleinfelter called in first on the conference telephone that was sat up regarding HB 340 which was the agenda for the evening. She called to object to HB 340 as she felt the alcoholic and drug addict are 2 entirely different and separate problems. She said she was familiar with both problems and doesn't think they should be combined. She also said she objected to the State giving monies to any private profit making organizations. She stated she is presently working for a treatment center but also had been on heroine herself.

Walti

First to testify in person was Mike Walti who operates the narcotic drug treatment center in Anchorage. Said he had come down here to testify on the bill thinking it was definitely sure to pass and then in the Senate HESS meeting the day before he was surprised to find out that it was not a definite thing. He said he did not want the merger. He felt at some point in the "great beyond" there will be a combination of the two but didn't think they were ready for it yet. He said the differences in the clientelle he found were the generational differences. He said a lot of people are middle aged or older. He said the only way it could be changed is when the people in the fields share some of their experiences which they don't do now. Said he hoped this bill did not pass out of committee at this time. Mr. Walti said he had problems with parts of the treatment provision in the bill and also problems with the term "drug-addict". When asked if the combination did go through what characteristics he would like to see he said he would like to see someone in the drug field included in the office somehow.

Vollin

Next to call in on the conference telephone was Danny Vollin who was representing himself from Anchorage. He too objected to the bill in that he felt the alcoholic and drug abuser were 2 completely different problems.

Walti

Mr. Walti went on to say that he would support the licensing section of the bill. Said this means consumer protection for the people that come to the program. Said it would also be necessary for the collection of 3rd-party payments when and if they became available.

Mr. Walti said the section on the Advisory Board in the bill bothered him also. Felt all it should say was "that the Advisory Board consist of 9 members appointed by the Governor". Thought perhaps should specify that 3 members of the board should have an income of $12,000 or less. With regard to the portion on the civil commitment which he had spoken on the telephone last week to, he said he had changed his mind on that section.

Goodwin

Next to testify was Mr. Paul Goodwin, President of the Fairbanks Native Association and runs the largest alcoholic program in the State of Alaska. Said he had no major or substantial objections to the package other than the objection that he would not like to see both programs under one Board. Said he would disagree to putting drug abuse and alcoholism under the Mental Health services. He said he really had not had time to study this bill and as far as he was aware of neither had anyone else he had talked to.

Forest

Sister Forest from Anchorage called in on the conference telephone at this time. She too objected to the bill in that the people involved have 2 different types of problems. Said she was speaking for herself as a counsellor and as a worker in an Anchorage Center., Studio Club.

Gold

Next to testify was Dr. Frank Gold, registered psychologist and director of Fairbanks Drug Treatment Center and who was responsible for the proposed committee substitute.
He too felt that nothing should be done with the bill at this time if possible--just let it lie. He said the reason for rushing with the committee substitute was that all indications during the last year or so was that there was no way to stop the bill. He said he knew Paul Peska in Fairbanks felt the same way. He said in preparing the committee substitute he had followed the bill that the administration had put out as well as the existing Community Health Center Act. He said when they sat down and drew up the committee substitute it was done with a great deal of emotion. He said there are problems when talking about both alcoholics and drug abusers in a single agencies. Once they are stabilized, then you are talking about basically very similar types of problems. He did state that Fairbanks had very professional counsellors but didn't feel this was true in the rest of the state.

Mondale

At this point George Mondale, Coordinator of the Ketchikan Alcoholic Program called in on the conference phone. Said he spoke in favor of HB 340 but was opposed to the Committee Substitute in that it is the feeling that the proposed CS would undermine the intention of most of the people. Said he thinks it is unthinkable to have a substance abuse problem. Said he thought the citizens of our State have an increasingly

difficult time relating with what the State is trying to do. Said putting it under the title of Substance Abuse would really confuse them.

Gold — Mr. Gold continued with his testimony. Said he thought more focus should be brought in putting more authority in the hands of the communities. He felt a good pattern to draw up a bill from was the Mental Health bill that was passed 2 years ago by the legislature. Mr. Gold said he did not think any of the drug abuse facilities had received this bill and therefore had not had a chance to look it over.

Stoner — Next to testify was Mr. Tom Stoner, presently acting as Field Deputy for the Alaska Native Commission and handles both alcoholics and drug abusers. He said his organization was very comfortable with the potential merits in HB 340 and agreed with Mr. Cole's proposed amendements. Said they have been comfortable with the existing statute. Said if a merger did take place he felt there would be discreet program management in the separate areas. Said one recommendation he would make would be that drug abuse and alcoholism would be represented by a technical panel which could provide expertise to a combined board that would be responsible to the Commissioner with recommendtions.

Nugen — Next to testify was Mr. Leonard Nugen, Director of the Studio Club, Alcohol Rehabilitation Center. Said he has looked over HB 340 and there are some things he agrees with and some that he doesn't. Said he did not want to see the combining of the 2 advisory boards. Said they did need standards to license by. Said another thing that concerned him was the profit making section. He also said the part in the bill that refers to where a patient is brought to a treatment center and the center cannot help the person, it is up to the center to find another place to put the person, didn't think that was right. Felt there should be a way to hold people, alcoholics especially. Also felt that a lot of good counsellors could be people without a degree. Mr. Nugen said he had no problems with the existing statute but thought it could be better and especially liked the idea of being licensed.

Hickling — Next to testify was Rae Ann Hickling, Executive Director of the Anchorage Council on Drug Aid. Said the people she represents are opposed to the combination of the 2 offices. She said she was party to the Committeee that made changes to HB 340 from Mr. Cole's office. Said she was in favor of licensing.

The meeting adjourned at 9:30 p.m.

MINUTES OF HOUSE HESS COMMITTEE

April 21, 1977

(EVENING)

The meeting was called to order by Chairman Parr at 7:40 p.m. Present: Mr. Parr, Mr. Bennett, Mr. Chatterton, Mr. Phillips, Mrs. Buchholdt with Mr. Cotten coming in a few minutes later.

Absent: Mr. Nakak, Mr. Ose, & Dr. Beirne.

HB 340

Chairman Parr said HB 340 was on the agenda and asked Lois Jund, Deputy Commissioner of Program Management of the Department of Health & Social Services to testify first.

Jund

Ms. Jund said the bill is a bill requested by the Governor in response to recommendation made by both the former legislature as well as the Governor's Efficiency Review Team to combine the offices of Alcoholism and Drug Abuse which at the present time are contained in separate statutes which calls for an Office of Alcoholism, an Office of Drug Abuse, a coordinator for each of these offices and 2 advisory boards. She said in their opinion it was essential that they have some legislation combining the 2 offices since the fiscal year '78 budget is predicated on a combined office. She said at the present time they have an advisory board for Drug Abuse consisting of 12 members and an Alcoholism Board of 9 members and this bill calls for a combined Board of 9. She said she was charged by the Commissioner of Health & Social Services to work with the 2 offices to prepare a bill that would be satisfactory to both offices. Said there has been some input but not extensive input from the Advisory Boards not on the specific bill but on the issues of combining the offices.

At this point Ms. Jund gave a brief overview of the sections of the bill and said Mary Beth Hilburn of the Office of Drug Abuse and Mr. Robert Cole of the Office of Alcoholism were present to answer any question.

Ms. Jund said in the case of Alcoholism, they have just recently surveyed many of the programs because the regulations will go into effect July 1. Said this is important from the standpoint of third-party payments. Said Mr. Cole has had some discussions with Blue Cross and if a treatment center is licensed under this statute, then they would be eligible for reimbursement for Blue Cross. This would pertain to Va, BIA and other third party payers. Said it keeps the appropriations for grant in aid for alcoholism separate and this is by federal mandate. Said they have written to the NIAAA and NIDA and have received their approval for the combining of these 2 offices which she said is a State option.

Ms. Jund said they had sat down with one of the providers and Mr. Cole had worked out some proposed alternative language that had caused problems with some of the individuals.

Mr. Chatterton asked about lines 15 and 16 on page 1. He wondered if it was the intent to remove from criminal prosecution any drug addict or any drug abuser. Ms. Jund said not from the consumption of alcoholic beverages or drugs. Mr. Chatterton asked if under present statutes the use of drugs is illegal in this state. Mr. Peters asked to address the statement and said that was something they were concerned about in the Attorney General's office but said on closer examination of the statutes, they found that the statutes could not prohibit either the consumption or addiction to drugs and cited a Supreme Court case relative to this. Said it was very difficult though to take the step from addiction, to consumption, to possession.

Mr. Parr questioned line 20, page 1 --alcoholism-drug problems. Ms. Jund said she thought this was used in the broad sense.

Mr. Parr asked Ms. Jund if she had other changes besides the combination of the agencies. Ms. Jund stated the position paper pointed out the major things the bill proposes to accomplish. She stated she would ask Mr. Cole and Mrs. Hilburn to walk them through the bill.

Mr. Parr asked if there was a substantive difference in saying "approval of licensure". Ms. Jund said this makes it formalized and brings it in line with what they are doing in all other programs. Mr. Cole addressed this question.

Mr. Parr then asked about page 2, line 25, if something had been added which had no direct relationship to the merger of the 2 offices. Mr. Cole explained they had attempted to do a state-wide research and planning effort during the past year and in one instance it took them 3 1/2 months to get information which should have been available in 3 1/2 minutes. He said they were concerned that it would make a stronger case for having access to the information if it wasn't prohibited.

Mr. Chatterton asked about lines 1 and 2 on page 2 wherein he felt a sizeable expansion of the Department's powers had been made. Mr. Cole said there has always been made indirect mention to training programs. Mrs. Hilburn said prevention has always been one of the activities, particularly in the Office of Drug Abuse.

Cole

Mr. Cole then spoke to the differences in the law instructing the office to organize and implement a coordinated manpower training program for all persons involved in the provision of treatment services to alcoholics and drup abusers. Said that is a stronger statement than they have ever had in their law before. (No. 7, page 4, line 10.) He stated the reason for putting this in was that there is a real shortage of persons trained to provide treatment services in these areas and in spite of the fact they have had a number of attempts to construct training programs in the past, they have had difficulty in getting them coordinated.

Gold

At this time, Frank Gold called in on the conference telephone from Fairbanks. Said he was one of the two authors of the substitute or suggested revision to HB 340. Said the problems they found with the bill were simple. Said last year the Legislature passed a Community Mental Health Services Act which included comments about drugs and alcoholism to be included under the Community Health Centers. Said the way HB 340 was originally written it created a conflict. He said programs are most accountable when they are held accountable to an immediate public, not the centralized antagonists in Juneau. Said the bureaucracy is responsible to the Commissioner and to the Governor--not to who they deal directly with the way people involved in providing services are. Said they were concerned about the cost of administration. Said it would tend to be rather high in centralized organization. He said he had gathered from testimony last night at Senator Hackney's meeting that there was a concern about a provider on the Board and said they recognized that when they wrote the suggested revision. Felt a decision maker on the Board by a lay-board in particular obviously takes education. Felt they needed people that should be educated to the field they are sitting in review of. Said their general concern was that they saw the Community Mental Health Center's Act from last year as an exemplary piece of legislation and sees this bill being opposed to it and actually creating a bureaucratic structure that is more complex and more tightly bound to Juneau than the present State Office of Drug Abuse and the State Office of Alcoholism. He then requested, if possible, that additional hearings be held a week from this date when many member providers from various parts of the state will be in Juneau and could be available for public testimony at this time.

Mr. Cole asked Mr. Gold to elaborate on the specific manner in which he felt the current legislation, as proposed, is so opposed with the Community Mental Health Center's Act.

Mr. Bennett asked Mr. Gold for his feelings in reference to alcohol which an alcoholic gets via a total legal transition which the government taxes as opposed to an addict who gets a totally illegal status. Do you find there is so much of a difference that it would have an effect in treating the patient in lumping them together?

Mr. Gold said not all people involved in drug abuse get there illegally, said some of them get it very legally with prescriptions. Said they had included most of the drug abusers in the revised HB 340 they wrote.

Mr. Bennett asked if the treatment of the 2 various types of patients so much a like that it is a common bond that they should be in the same situation. Gold said with competent counsellors, once the individual is stablized they would confront the same trend of problems.

Mr. Chatterton asked Mr. Gold what his definition of drug was. Also if he would include glue sniffing and gasoline sniffing, which Mr. Gold said he would not.

Walti

Next to call in was Mr. Michael Walti, has a graduate degree of social work and for the last 3 years has operated a narcotic drug treatment center which is the largest center in the State of Alaska. Said at the present time they are serving 15 addicts in Anchorage. Said he was calling to testify on the bill. Said he was disappointed that program input wasn't sought by the drafters of the bill during the initial stages. Felt they could have ironed out a lot of problems. Said it seems a good 50-60 percent of the bill could have been done by Department regulations. Said he had a hand in providing information for the substitute bill. Said problems with the original bill he had were many fold and said he would go into the basic differences between the 2 bills as they see them. Said he supports the second bill where they had substituted the concept of substance of the use. Said it seemed there were a couple of reasons for combining the two offices, only on e of which was to save some money. He said in the bill there is a provision for a service provider. Said this is something they, in the field have talked about for some time. Said he would like to see a provider on the Advisory Board . He said the second version provides for civil commitment of any intoxicated person. Under the original bill it was only for people intoxicated by alcohol. Said in the first bill there is no provision for out-patient treatment of cross-addicts meaning someone with drug and alcohol problems. Said in the second revision of the bill which they support they do provide for being able to treat this type of individual. Felt there has been misconception about the kind of people that seek treatment from a Methadone treatment facility and said the one they run in Anchorage is very different from the ones that are run "outside". Said they are dealing, for the most part, with a working class group of people and at any point of time, depending on the season, between 70 and 80 percent of their people are employed full time and exmployed at fairly skilled jobs. Said they do not have a heavily criminalized group of people for treatment. Said a lot have been criminals when they come for treatment but after stablizied do cease their criminal activity. Said this is about 90 percent of the people on their program. Said combining people with alcoholism problems with hard core addicts the same treatment does not apply at least with their treatment in Anchorage.

Mr. Walti thought it was a mistake if you are going to have a civil commitment process for intoxicated persons to limit it to alcohol only, felt it could be expanded to include people who are intoxicated with any substance.

Mr. Cole said he didn't have any trouble with at least 2 of the points Mr. Walti raised. He said the provision of out-patient care for cross-addictions he felt they had taken care of. Mr. Peters said this was originally a Uniform State Act, drafted under the model of a uniform commission's act for several states, it was heavy, entirely alcohol and heavy on state-operated institutions. Said we have no state operated institutions but was trying to do the least damage to it as possible.

Hilburn

Mrs. Hilburn spoke to the service providers on the Boards. She said they have had service providers on their advisory board and she said programs feel if there is a provider or doctor connected on the advisory board that they are getting special treatment.. Said there is always the conflict--is my program being treated as credibly as the one that has the doctor on the Board. Said she thinks this causes a real problem. Said the Board works very hard to make good judgments.

Mr. Chatterton asked if Mrs. Hilburn would be opposed to putting this in. She said she would.

Coyne

Next to call in was Mr. Tom Coyne, in Ketchikan, Director of the Halfway House there. Said the only thing he was concerned with was changing the name to somthing like Office of Substance. Said he would like to see HB 340 go through but doesn't want amendments like he has heard of like to change the Office of Alcoholism to the Office of Substance. Said he always drank liquor or took a drug, never took any "substance". Said there was enough problem with getting people to get to these offices without confusing them to what office they are going to.

Mr. Cotten asked about the Alcoholism Advisory Board, the qualifications for the board members and how it breaks down. Mr. Cole explained the current qualifications.

Mrs. Buchholdt asked about page 4, asked if the people are not trained to do these programs would the state send them out to school? Mr. Cole said this could be done but what he always wanted to do was get the existing staff training capabilities that do exist together for the purpose of drafting a long-term manpower development plan for people working in these areas in Alaska.

There was discussion as to some problems that have come about in trying to treat alcoholics and drug abusers in the same facilities.

Mr. Chatterton asked about the expansion of manpower. Mr. Cole said it would not necessarily be the expansion of manpower in their office and wasn't their intent- what they were looking for, and might be guilty of, was trying to see that there is a training program somehwere in the state that addresses this.

There was discussion about the admission of people to the hospitals and some of the problems that have arose for not admitting ones that did need help.

Mr. Chatterton asked if they would have objection of leaving the word "encourage" in. Mr. Cole said he would have no trouble with this.

Mr. Chatterton then asked what a "troubled employee" was. Mr. Cole spoke to this.

The next section to be taken up was the Interdepartmental Coordinating Committee and Mr. Cole spoke to the changes that have been made. Said most of the persons were added to the committee at the request of the Governor, informally, and it seemed a reasonable thing to do.

The next section was the Advisory Board. Mrs. Buchholdt asked if this board was just for drug and alcoholism or for all of the different areas of Social Services Programs. Mr. Cole said not this particular one.

Rookes

Mr. John Rookes from Petersburg called in on the conference phone. He said he was Director of the Petersburg Council on Alcoholism. Said he had been the director since the program began, a little over 4 years ago. He said he would like to voice objections to the bill. No. 1, had had the experience of working under the offices as set up in Washington where it didn't work out well. Said he found from experience of 14 years to alcholics and drug abusers, that you can't even treat them together for therapy reasons because they look down on one another, one says "I'm not as bad as you" and the other says "you haven't been anywhere." Said another thing is they are trying to make drug abuse an illness the same as alcoholism and there seems to me some question how you legislate an illness. Thinks the American Medical Association should have the jurisdiction of describing an illness and not the legislator. He said he had written evidence prior to this to the National Council on Alcoholism to the Office of Drug abuse, to the Office of Alcoholism and to the Commissioner's office. Said he did not want to see this bill go through. Mr. Parr said the committee would like to have copies of the written statements. Mr. Rookes did say that Mr. Cole had this information also.

Next to be discussed with the Committee was the Qualifications of the Board. Mr. Cotten said he seemed to be going toward having no dedication at all on memberships of the Boards. Said he thought this was how the Drug Abuse Board worked right now and asked how Mrs. Hilburn liked it. She said it worked fine. There was much discussion as to who should be on the Board.

Gallagher

Next to testify on the bill was Jean Gallagher who is working as the Regional Technical Assistant for Alcoholism Programs for the Tlingit & Haida Central Council. Said the purpose of her position with the Central Council is to assist local communities in developing local alcoholism programs. Said her main reason was that she was concerned that HB 340 was going to get passed through and she wanted to alert the committee that there were several people that she knows in the region that do want to testify on this bill. Said some of the people would include the program people in the region, also asked the committee to get some input from both of the Advisory Boards. Said there is another State group called the Alaska Native Commission on Alcohol and Drug Abuse would also like to provide some input to the discussions. Said there will be a meeting on Saturday, in Sitka that will include all of the regional alcoholism program directors and assumed that this bill will be discussed at length there so she wanted to alert the committee that it was her personal feelings she wanted them to have as much input as possible on the bill before they made any decisions on it. Mr. Parr informed her there was another meeting on this bill next Thursday.

Mr. Phillips spoke up and said he had received a phone call this afternoon asking that the bill be held over until they had a chance to take a better look at the bill.

Hickling

Next to testify was Rae Ann Hickling, Executive Director of the Anchorage Council on Drug Aid. She said they treat a wide variety of people from about 5 years of age on up into their 60's. Said she had come down specifically to work on the bill for a variety of reasons, one being that she has never been sold on the merging of the 2 programs. Said she felt there were some things in the bill that would make it hard for her to treat her drug abusing client population. Said she fully supported the stand the bill has taken on licensing. Said she felt this was very needed in the state at this time. She said on page 14 where it speaks to the idea you can't treat a drug abuser or drug addict and alcoholism in the same facility. Said she found this very odd since most opiate users start on alcohol. She said 95% of all opium addicts use a lot of alcohol. She said if she can't treat both problems she is not helping that individual. She said she had sat down and worked out a compromise with Mr. Cole and the compromise means they could treat opiate addicts and alcoholics in the same facility should it be so licensed. Said she hoped the committee would take a look at this and make some changes in it.

Next Ms. Hickling spoke about her concern with the composition of the Board. Said she doesn't like boards to be composed of "have tos". Said she agreed that the Board should not be slanted toward all providers or all consumers, has to be some sort of equilibrium but made more towards health care providers and health care consumers. Said she didn't believe program people should serve on any boards. She said she would like to see the Board members compensated for child care assistance while at the board meetings.

Ms. Hickling then spoke about where the bill talks about grants ~~and~~ in aides. Said one of the biggest problems the communities have is coming up with a "cash match". Thought when talking about starting programs in communities could talk about "in kind match" and give them 2 or 3 years to start the program and show the community what they can do before you ask them for actual cash. She said Mr. Cole had changed some wording in the law which she thought he would be happy to share with the committee which talked to giving them 3 years to build up a cash match in a community and after that time they would have to start demonstrating some kind monetary interest in the program.

Next to be taken up was the Section on Comprehensive Program for Treatment. Mr. Cole said in Section 130, page 10, line 7, 8 and 9, said this has already been done and are in conformance with the Health services areas and with the native health corporation districts . He said with regard to line 28, they don't have any facilities that are currently operated by the Department although the law does provide there can be those they don't have any plans for doing this.

Mr. Cole talked about Centralization. Said 2 years ago there were frequent abuses of the state's money at the local level in some communites. Said there were numerous instances in the past where the program managers got themselves in the situations where the programs weren't being operated in basic state law rule and regulations with regard to even grant and aide regulations which was a problem. Said instances where patient's rights and help have been jeopardized. Said he feels they can demonstrate they have saved the public money by having some measure of investment of administration within the office in the last couple of years as well as protecting the public's health safety and welfare and patients safety and welfare. Said he would really be uncomfortable with the notion of simply passing out the money.

Mr. Cole said on page 14, line 7 they do have proposed changes for this section that would meet the objections Ms. Hickling spoke to.

Mr. Chatterton said starting on this page he would need an "enlightening program" and thought it a good place to stop.

The meeting adjourned at 10:00 p.m.

Municipality of Anchorage

MEMORANDUM

DATE: April 27, 1977

TO: Charles Parr, Chairman
Health, Education & Social Services

FROM: Behavioral Health Division, Department of Health & Environmental Protection

SUBJECT: House Bill No. 340

House Bill No. 340. An act relating to treatment of alcoholism and drug abuse for all purposes establishes a uniform drug abuses act which includes alcohol as a major addictive drug. This legislation has great merit. Section 2 - AS 47.37.010, Declaration of Policy is inclusive and needed. However, there should be a semantic consistancy in the policy and throughout the bill and terminology which should be used is "alcoholics, alcohol abusers, drug addicts, and drug abusers."

Section 4, AS 47.37.030. The expansion of the powers of the office broadens and strengthens the law by spelling out that treatment programs include prevention, training and rehabilitation.

Section 5, AS 47.37.040. The expanded duties of the office addresses in (7), (10), and (15), will facilitate a much stronger approach to early intervention and ultimate treatment of both the licit and illicit drug users.

Page 2, Line 24, and all subsequent notations with a reference to alcoholism and drug abuses should be changed to alfohol[ism] and drug abuses.

Section 6, AS 47.37.050. This amendment to mandate that all departments become involved in the drug abuse problem and the quarterly meetings rather than twice per year should create a continuance of interest and promote more effective programing.

Section 7, AS 47.37.360. It would be desirable that intent be written that the new advisory board retain at least two of the more knowledgeable lay members of each of the present advisory boards for alcoholism and drug abuse to maintain a continuity of past and present activities and to assure that equal attention is given to the programing for both areas.

There should also be some of the present staff members of the office of drug abuse retained for continuity of programing during the transition period.

Section 9, AS 47.37.080. (1) It would seem that one M.D. would be sufficient. (3) Four should be lay persons who have interested a knowledge in either one or both fields. (This may be the category to assure that at least two of each of the present boards are incorporated into the new one. (4) Three [one] shall represent persons choosen from the following categories of professionals.

(a) Protective Services - i.e. criminal justice, police probation, etc.

(b) Primary health providers, i. e. Emergency medical services, Health Aids, Providers, etc..

(c) Secondary Health Providers, i.e. Social worker, nusery, counselors, etc.

(5) Delete (These people will be able to repr3sent their views adequately through public and private testimony and will carry significant w4ight without being on the voting membership of the board.

Section 17, AS 47.37.160 (d) Line 7-9 delete [except for diagnosis and refrerral, alcoholism treatment programs shall be separate and distinct from treatment programs for drug addicts.] This statement is too dictatorial and possibley destructive to effective programing. Many of these activities can be coordinated effectively wiht proper planning and education.

Section 25, AS 47.37.170 (h). This section dealing with involuntary commitment is considered to be essential in cas4s where reason is so impaired by drug abuse that the individual cannot make a knowledgeable decision concerning his well being or may be inadvertently harmful to others.

Helen D. Beirne

Helen D. Beirne, Ph.D.
Behavioral Health Manager

HDB:epw

proposed CS HB 340

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*Section 1. AS 47.37 is amended to read: CHAPTER 37. ALCOHOLISM AND DRUG ABUSE

*Sec. 2. AS 47.37.010 is amended to read:

Sec. 47. 37. 010. DECLARATION OF POLICY. It is the policy of the state that individuals physically addicted to and/or abusing chemical substances should not be criminally prosecuted for their consumption of these substances but should be afforded a continuum of treatment so they may lead normal lives as productive members of society.

*Sec. 3. AS 47.37.020 is amended to read:

Sec. 47.37.020. OFFICE OF SUBSTANCE ABUSE. An office of substance abuse is established in the department. The office shall be headed by a coordinator appointed by the commissioner. The coordinator shall be a qualified professional who has training and has completed two years of direct-service experience in the organiza-tion and administration of treatment services for persons with problems resulting from the abuse of alcohol and other drugs. The coor-dinator is in the classified service.

*Sec. 4. AS 47.37.030 is amended to read:

Sec. 47.37.030. PURPOSE OF THE OFFICE. It is the purpose of the legislature in amending CHAPTER 37 (ALCOHOLISM AND DRUG ABUSE) to assist local communities in planning, organizing, and financing locally developed, administered, and controlled substance abuse programs. It is further intended to better utilize existing resources at both state and local levels in order to:

(1) develop and implement plans for initiating maximum substance abuse services based on demonstrated need for services in each geographical planning area, as well as regionalized comprehensive substance abuse services;

(2) improve the effectiveness of existing substance abuse services;

(3) integrate the substance abuse programs within a unified human service delivery system;

(4) provide a means for participation by local communities in the determination of the need for and the allocation of substance abuse resources;

(5) establish a uniform ratio of local and state government responsibility for financing substance abuse services;

(6) provide a means of allocating state substance abuse service funds according to community needs;

(7) encourage the full use of existing public or private agencies, facilities, personnel, and funds to accomplish these objectives; and

(8) prevent unnecessary duplication and fragmentation of services and expenditures.

*Sec. 5. AS 47.37.040 is amended to read:

Sec. 47.37.040. DUTIES OF THE OFFICE. The office shall

(1) define and develop standards for various levels and qualities of substance abuse service;

(2) provide fiscal and professional technical assistance in planning, organizing, developing, implementing, and administering local substance abuse services;

(3) develop budgets, receive and distribute state appropriations and funds in accordance with the provisions of sections 010 through 340 of this chapter;

(4) establish standards of education and experience for professional, technical and administrative personnel employed in substance abuse services;

(5) assist the community in establishing the organization and operation of substance abuse services;

(6) develop a standardized system for measuring and reporting to the department the types, quantities, and quality of services; and a cost accounting system which will demonstrate the cost of various levels and qualities of care;

(7) provide each local community planning and services delivery entity with statistics, reports, and other data relevant to development of indices indicating the need for substance abuse services, or relevant to evaluating the effectiveness of existing services;

(8) review each local community plan and require each plan to include

(A) an affirmative showing that the most effective and economic use will be made of all available public and private resources in the community including careful consideration of

the most effective and economic alternative forms and patterns of services;

(B) a five-year projection of needs, services and resources; and

(C) adequate provisions for review and evaluation of services provided in the local community;

(3) prepare an annual comprehensive, state-wide plan that utilizes the locally-developed community plans for the prevention, treatment, and control of substance abuse;

(10) adopt regulations and establish priorities, after consultation with local communities affected and in conjunction with a state substance abuse advisory board, which are necessary to carry out the purposes of sections 010 through 340 of this chapter;

(11) facilitate the planning, establishment, and maintenance of locally developed, administered, and controlled prevention, training, treatment, and rehabilitation programs;

(12) solicit and accept for use a gift of money or property or a grant of money, services, or property from the federal government or private sources, and do all things necessary to cooperate with the federal government or any of its agencies in making an application for a grant;

(13) make contracts and other joint or cooperative arrangements with state, regional, and local entities or organizations to improve the substance abuse services in this and other states;

(14) provide substance abuse service programs with professional, competent, technical assistance and consultation;

(15) cooperate with the division of corrections in establishing programs to provide treatment for substance dependent individuals in or on parole from penal institutions;

(16) support the Department of Education in the, its preparation of curriculum materials at all levels of education;

(17) encourage the development and maintenance of 'troubled employees' programs in Alaska;

(18) cooperate with the Department of Public Safety and the Division of Highways in their establishing and conducting programs designed to deal with the problem of persons operating motor vehicles while under the influence of alcohol or other drugs;

(19) monitor the admissions of hospitals and other appropriate health facilities in compliance with federal law which requires that the office ensure they they admit without discrimination alcoholics and intoxicated persons and provide them with adequate and appropriate treatment;

(20) encourage all health and disability insurance programs to include alcohol and other forms of drug dependence as covered illnesses;

(21) submit to the legislature an annual report summarizing the activities of the office.

*Sec. 6. AS 47.37.050 is amended to read:

Sec. 47.37.050. INTERDEPARTMENTAL COORDINATING COMMITTEE. (a) An interdepartmental coordinating committee is created, composed of the coordinator, the director of the division of mental health, the commissioner of the department of

health and social services, and the commissioners of education, revenue, public safety, community and regional affairs, and the attorney general, representatives from the Criminal Justice Planning Agency, the Division of Budget and Management, the Alaska Court System, and the Division of Planning and Policy Development. The committee shall meet at least quarterly at the call of the commissioner of health and social services who is its chairman. The committee shall act as a permanent liaison among state departments engaged in activities affecting substance abuse as a component of human services. They shall be responsible for insuring the linkage required for the successful and cost-effective implementation of the related departmental state plans, with particular emphasis given to coordination among the division of social services, the division of mental health, the division of vocational rehabilitation, and the division of corrections, and this office of substance abuse.

(b) In exercising its coordinating functions, the committee shall assure that the appropriate state agencies shall provide at the local level

(1) necessary medical, social, treatment, and educational services for substance abusers and for the prevention and control of substance abuse without unnecessary duplication of services;

(2) cooperate in the planning and implementation of effective systems of enforcement, adjudication, treatment, and rehabilitation appropriate to the local conditions as well as to the humane and professional provision of services to substance abusers;

(3) recommend mechanisms for the integrated and coordinated prevention, treatment, and control of substance abuse consistent with the policy of this chapter.

*Sec. 7. AS 47.37.060 is amended to read:

Sec. 47.37.060. ADVISORY BOARD ON SUBSTANCE ABUSE. There is established in the Department of Health and Social Services an advisory board on substance abuse. This advisory board shall function as a committee of the state health coordinating council, and three representatives of it shall serve as ex-officio members of the interdepartmental coordinating committee.

*Sec. 8. AS 47.37.070 is amended to read:

Sec. 47.37.070. COMPOSITION. The advisory board on substance abuse consists of nine members appointed by the governor.

* Sec 9. Sec. 47.37.080 is amended to read:

Sec. 47.37.080. QUALIFICATIONS OF BOARD MEMBERS. Of the nine members, no more than three of which shall be providers of substance abuse services,

(1) one shall be a person who is licensed to practice medicine in the state;

(2) one shall be a person who is licensed to practice psychology in the state;

(3) one shall be a practicing attorney who has been admitted to the practice of law by the state supreme court;

(4) six shall be persons who have evidenced an interest in the problems of substance abuse, one of which shall be a current provider of substance abuse services;

(5)three of the above nine members shall also represent local/regional human service advisory boards.

*Sec. 10. AS 47.37.090 is amended to read:

Sec. 47.37.090. TERM OF OFFICE. (a) The member of the board initially appointed under sec. 80(1) of this chapter serves a term of three years.

(b) The member initially appointed under sec. 80(2) of this chapter serves a term of three years.

(c) The member initially appointed under sec. 80(3) of this chapter serves a term of three years.

(d) Two members initially appointed under sec. 80(4) of this chapter serve terms of one year; two members appointed under sec. 80(4) of this chapter serve terms of two years; two members initially appointed under sec. 80(4) of this chapter serve terms of three years. Subsequent terms for all board members are three years.

(e) A vacancy occurring in the membership of the board shall be filled by an appointment by the governor for the unexpired portion of the vacated term.

(f) Board members serve at the pleasure of the governor.

*Sec. 11. AS 47.37.100 is amended to read:

Sec. 47.37.100. COMPENSATION, PER DIEM, OR EXPENSES. Members of the advisory board on substance abuse are not entitled to a salary, but are entitled to per diem, reimbursement for travel and other expenses authorized by law for other boards.

*Sec. 12. AS 47.37.110 is amended to read:

Sec. 47.37.110. DUTIES. The board shall advise and assist the commissioner in the initiating and implementing of community substance abuse services. They shall also review and approve the Alaska State plan for substance abuse prevention, treat-

ment and control on a yearly basis--reports of which shall be submitted to the governor, the legislature, the department and the State Health Coordinating Counil. Grants and contracts shall be reviewed and recommended for funding by this board to and from state, local, and private agencies.

*Sec. 13. AS 47.37.120 is amended to read:

Sec. 47.37.120. SUBSTANCE ABUSE COORDINATOR. The substance abuse coordinator shall work with communities to develop and implement local, comprehensive programs dealing with the prevention, treatment and control of, research on, and education concerning substance abuse problems, as they affect the people of Alaska.

*Sec. 14. AS 47.37.130 is amended to read:

Sec. 47.37.130. COMPREHENSIVE PROGRAMS FOR TREATMENT; REGIONAL PROGRAMS. (a) The office shall assist in the establishment of comprehensive and coordinated locally-developed substance abuse programs. The commisioner shall divide the state into planning regions congruent with each local community mental health center's area of jurisdiction. (b) Plans and regulations adopted under sections 010 through 340 of this chapter shall allow local programs sufficient administrative and program flexibility so that local community substance abuse programs may be joined with other programs such as community mental health centers, and other human service operations.

*Sec. 15. AS 47.37.140 is amended to read:

Sec. 47.37.140. PUBLIC AND PRIVATE TREATMENT FACILITIES. (a) The department shall establish standards in regulations for facilities before their licensure as public or private treatment facilities. These standards shall be adopted following the review and recommenda-

tion of the proposed standards by local advisory boards, the state advisory board, ---following statutorily required public hearings.

(b) Regulations may be developed by the department following the adoption of licensure standards.

*Sec. 16. AS 47.37.150 is amended to read:

Sec. 47.37.150. ACCEPTANCE FOR TREATMENT. The department shall establish standards for the admission of persons into treatment programs, considering available treatment resources and facilities, for the early and effective treatment of substance abusers.

*Sec. 17. AS 47.37.160 is amended to read:

Sec. 47.37.160. VOLUNTARY TREATMENT OF SUBSTANCE ABUSERS. (a) A substance abuser may voluntarily apply for treatment directly to a licensed public or private treatment facility.

(b) Subject to regulations adopted by the department, the administrator in charge of a licensed public or private treatment facility may determine who shall be admitted for treatment.

(c) All federal and state laws and regulations relating to the provision of services to substance abusers shall be strictly adhered to by all substance abuse programs funded by the office.

*Sec. 18. AS 47.37.170 is amended to read:

Sec. 47.37.170. TREATMENT AND SERVICES FOR PUBLICLY INTOXICATED PERSONS. (a) An intoxicated person may come voluntarily to a licensed public or private treatment facility for emergency treatment. A person who appears to be intoxicated in a public place and to be in need of help or a person who appears to be intoxicated in or upon a licensed premise where intoxicating liquors are sold or consumed who refuses to leave upon being requested to leave by the

owner, an employee or a peace officer may be taken into protective custody and assisted by a peace officer or a member of the emergency service patrol to his home , licensed public treatment facility, a licensed private treatment facility, or another appropriate health facility. If all of the preceding facilities including the person's home are determined to be unavailable, a person taken into protective custody and assisted under this subsection may be taken to a state or municipal detention facility in the area.

(b) A person who appears to be physically incapacitated by any substance in a public place shall be taken into protective custody by a peace officer or a member of the emergency service patrol and immediately brought to a licensed public treatment facility, a licensed private treatment facility, or another appropriate health facility or service for emergency medical treatment. If no treatment facility or emergency medical service is available, person who appears to be physically incapacitated by any substance in a public place shall be taken to a state or municipal detention facility in the area, if that appears necessary for the protection of the person's health or safety.

(c) A person who voluntarily appears or is brought to a licensed public or private inpatient treatment facility shall be examined by a licensed physician within 24 hours. After the examination, he may be admitted as a patient or referred to another health facility. The licensed public or private inpatient facility which refers him shall arrange for his transportation.

(d) No person who, after medical examination, is found to be physically incapacitated by any substance at the time of his admission or to have physically become incapacitated at any time after his admission, may be detained at a facility after he is no longer physically incapacitated by that sub-

stance. No person may be detained at a facility if he remains physically incapacitated by any substance for more than 72 hours after admission as a patient, unless he is committed under sections 180 or 190 of this chapter. A person may consent to remain in the facility as long as the physician or administrator in charge considers it appropriate.

(e) A person who is not admitted to a licensed public or private treatment facility, is not referred to another health facility, and has no funds, may be taken to his home, if any. If he has no home, the licensed public or private treatment facility shall assist him in obtaining shelter.

(f) If a patient is admitted to a licensed public or private treatment facility, his family or next of kin shall be promptly notified. If an adult patient who is not physically incapacitated requests that there be no notification of next of kin, his request shall be granted.

(g) Peace officers or members of the emergency service patrol who comply with this section are acting in the course of their official duty and are not criminally or civilly liable for that compliance.

(h) If the examining physician or the administrator in charge of the licensed public or private treatment facility determines it is for the patient's benefit, he shall initiate either an emergency commitment procedure under sec. 180 of this chapter or an involuntary commitment proceeding under sec. 190 of this chapter, whichever is appropriate in his professional judgment.

*Sec. 19. AS 47.37.180 is amended to read:

Sec. 47.37.180. EMERGENCY DETENTION AND COMMITMENT. (a) An intoxicated person who has threatened, attempted to inflict, or inflicted physical harm on another may be charged under an appropriate criminal statute, taken into custody, and transported to a state or

municipal detention facility. A person who is physically incapacitated by any substance may be committed to a licensed public or private substance abuse treatment facility for emergency treatment. A refusal to undergo treatment does not constitute evidence of lack of judgment as to the need for treatment.

(b) The certifying physician, spouse, guardian, or relative of the person to be committed, or any other responsible person, may make a written application for commitment under this section, directed to the administrator of the licensed public or private substance abuse treatment facility. The application shall state facts to support the need for emergency treatment and be accompanied by a physician's certificate supporting the need for emergency treatment and stating that the physician has examined the person sought to be committed within two days before the certificate's date.

(c) Upon approval of the application by the administrator in charge of the facility, the person may be brought to the facility by a peace officer, a health officer, a member of the emergency service patrol, the applicant for commitment, the patient's spouse, the patient's guardian, or any other interested person. The person shall be retained at the facility to which he was admitted, or transferred to another appropriate public or private treatment facility, until discharged under (e) of this section.

(d) The administrator in charge of a licensed public or private treatment facility may refuse an application if in his opinion the application and certificate fail to sustain the grounds for commitment.

(e) When, on the advice of his medical staff, the administrator determines that the grounds for commitment no longer exist, he shall discharge a person committed under this section. No person committed under this section may be detained in a treatment facility for more

than five days. If a petition for involuntary commitment under AS 47.37.190 of this chapter has been filed within the five days and the administrator in charge of a licensed public or private treatment facility finds that grounds for emergency commitment still exist, he may detain the person until the petition has been heard and determined, but no longer than 10 days after filing the petition.

(f) A copy of the written application for commitment and of the physician's certificate, and a written explanation of the person's right to legal counsel, shall be given to the person within 24 hours after commitment by the administrator, who shall provide a reasonable opportunity for the person to consult with legal counsel.

*Sec. 20. AS 47.37.190 is amended to read:

Sec. AS 47.37.190. INVOLUNTARY DETENTION AND COMMITMENT. (a) After a hearing initiated by petition of his spouse or guardian, a relative, the certifying physician, or the administrator in charge of a licensed public or private treatment facility, a person may be committed to the custody of an appropriate licensed private or public substance abuse treatment agency by the superior court. The petition shall allege that the person is a substance abuser who habitually lacks self-control in using a particular substance or combination of substances, that unless committed is likely to inflict physical harm on himself or another or is physically incapacitated by a substance or combination of substances. A refusal to undergo treatment does not constitute evidence of lack of judgement as to need for treatment. The petition shall be accompanied by a certificate of a licensed physician who has examined the person within two days before submission of the petition, unless the person whose commitment is sought has refused to submit to a medical examination, in which case the fact of refusal shall be alleged in the petition. The certificate shall

set out the physician's findings in support of the allegations of the petition.

(b) After the petition is filed, the court shall fix a date for a hearing no later than 10 days after the date the petition was filed. A copy of the petition and of the notice of the hearing, including the date fixed by the court, shall be served on(1) the petitioner; (2) the person whose commitment is sought; (3) the next of kin of the person whose commitment is sought; (4) the administrator in charge of the licensed public or private treatment facility in which the committed person has been committed for emergency care, and any other person the court deems appropriate. A copy of the petition and certificate shall be delivered to each person notified.

*Sec. 21. AS 47.37.200 is amended to read:

Sec. AS 47.37.200. DETENTION AND COMMITMENT PROCEDURE

(a) At the hearing required under sec. 190(b) of this chapter, the court or the jury, if requested under sec. 190(c) of this chapter, shall hear all relevant testimony, including, if possible, the testimony of at least one licensed physician who has examined the person whose commitment is sought. The person whose commitment is sought shall be present unless the court believes that his presence is likely to be injurious to him, in which case the court shall appoint a guardian ad litem to represent him throughout the proceeding. The court may examine the person in open court, or if advisable, examine him out of court. If the person has refused to be examined by a licensed physician , he shall be given the opportunity to request examination by a court-appointed licensed physician. If he fails to request a medical examination and there is sufficient evidence to believe that the allegations of the petition are true, or if the court

believes that more medical evidence is necessary, the court may enter a temporary order committing him to a licensed public or private treatment facility in which he is being held under sec. 170 of this chapter for a period of not more than five days for purposes of a diagnostic examination.

(b) If after hearing all relevant evidence, including the results of any diagnostic examination by the licensed public or private treatment facility, the court or the jury finds that grounds for involuntary commitment have been clearly established, the court shall issue an order of commitment to the licensed facility. No court may order the commitment of a person except to a licensed public or private treatment facility which is able to provide adequate and appropriate treatment for him.

(c) A person committed under secs. 190 - 200 of this chapter shall remain in the custody of the licensed facility for treatment for a period of up to 30 days. At the end of the 30-day period, he shall be discharged automatically unless the facility administrator or physician, before the expiration of the period, obtains a court order for his recommitment upon the grounds set out in sec. 190(a) of this chapter for a further period of up to 90 days. If a person has been committed because he is a substance abuser likely to inflict physical harm on himself or another, the facility administrator or physician shall apply for recommitment if after examination it is determined that the likelihood still exists.

(d) A person recommitted under (c) of this section who has not been discharged by the facility before the end of the 90-day period shall be discharged at the expiration of that period unless the facility administrator or physician, before expiration of the period, obtains a court order on the grounds set out in sec. 190(a) of this chapter

for recommitment for a further period not to exceed 90 days. If a person has been committed because he is a substance abuser likely to inflict physical harm on himself or another, the facility administrator or physician shall apply for recommitment if after examination it is determined that the likelihood still exists . No more than two recommitment orders may be permitted under (c) and (d) of this section.

(e) Upon the filing of a petition for recommitment under (c) or (d) of this section, the court shall fix a date for hearing no later than 10 days after the date the petition was filed. A copy of the petition and of the notice of hearing, including the date fixed by the court, shall be served on (1) the petitioner; (2) the person whose commitment is sought; (3) the next of kin of the person whose commitment is sought; (4) the original petitioner under Sec. 190(a) of this chapter, if different from the petitioner for recommitment; (5) any other person the court considers appropriate. Section 180(c) of this chapter applies to hearings for recommitment under this section. At the hearing the court or the jury shall proceed as provided in (a) of this section.

(f) The licensed public or private treatment facility shall provide adequate and appropriate treatment for a person in its custody. The licensed facility may transfer a person in its custody to another licensed facility if the transfer is medically advisable.

(g) A person committed to the custody of a licensed public or private treatment facility for treatment shall, if he is a substance abuser committed on the grounds that he is likely to inflict physical harm on himself or another, be discharged at any time before the end of the period for which he has been committed if either of the following conditions is met:

(1) he no longer demonstrates the likelihood that he will inflict physical harm on himself or another; or

(2) treatment is no longer adequate or appropriate.

*Sec. 22 AS 47.37.210 is amended to read:

Sec. 47.37.210. RECORDS OF SUBSTANCE ABUSERS

(a) The registration and other records of treatment facilities shall remain confidential and are privileged to the patient as per existing federal and state regulations regarding confidentiality of client records.

(b) Notwithstanding (a) of this section, the coordinator may make available information from patient's records for purposes of research into the causes and treatment of substance abuse. No unique client identifying information shall be disclosed.

*Sec. 23 AS 47.37.220 is amended to read:

Sec. 47.37.220. VISITATION AND COMMUNICATION OF PATIENTS

(a) Patients in any licensed treatment facility under this chapter shall be granted reasonable opportunities for adequate consultation with counsel, and for continuing contact with family and friends including the use of telephone facilities, consistent with an effective treatment program.

(b) No mail or other communication to or from a patient in a licensed treatment facility may be intercepted, read, or censored.

*Sec. 24 AS 47.37.230 is amended to read:

Sec. 47.37.230. ESTABLISHMENT OF EMERGENCY SERVICE PATROL (a) The office shall facilitate and cities and boroughs may establish emergency service patrols. An emergency service patrol consists of persons trained to give assistance in public places to persons who are intoxicated. Mymbers of an emergency service patrol shall be capable of providing first aid in emergency situations and shall be capable of transporting intoxicated persons to their homes and to and from public and private treatment facilities.

(b) The department, with the review and recommendation of the interdepartmental coordinating committee, shall promulgate regulations for the establishment, training, and conduct of emergency service patrols.

*Sec. 25 AS 47.37.240 is amended to read:

Sec. 47.37.240. PAYMENT FOR TREATMENT. (a) A patient in a licensed treatment facility, or the person obligated to provide for the cost of treatment of a person committed under this chapter, is liable to the licensed treatment facility which provided the treatment for the cost of maintenance and treatment of the patient in accordance with rates established by the treatment facility.

(b) The office shall promulgate regulations governing financial ability that take into consideration the income, savings and other personal and real property of the person liable for the cost and maintenance of the patient.

*Sec. 26 AS 47.37.250 is amended to read:

Sec. 47.37.250. NONAPPLICABILITY. (a) Nothing in the chapter affects a statute, ordinance, or regulation relating to (1) driving under the influence of any intoxicating substance, or other

similar offenses involving any substance and the operation of a vehicle, aircraft, boat, machinery, or other equipment, (2) the sale, purchase, dispensation, possession, or use of alcoholic beverages at specified times and places or by a particular class of persons, including prohibitions against drinking intoxicating beverages in specified public places, or (3) being on the traveled portion of a highway so as to be a hazard to the motoring public.

(b) Nothing in this chapter affects AS 11.70.030 relating to the defense of voluntary intoxication.

*Sec. 27 AS 47.37.270 is amended to read:

Sec. 47.37.270. DEFINITIONS. In this chapter

(1) "licensed private treatment facility" means a private agency which does not receive grants-in-aid from this office, but meets the limited standards prescribed in sec. 140(a) of this chapter for private facilities licensed under sec. 130(1) of this chapter;

(2) "licensed public treatment facility" means a treatment agency providing treatment under this chapter through a grant from or contract with the office, meeting all of the standards prescribed in sec. 140(a) of this chapter, and licensed under sec. 130(f) of this chapter;

(3) "commissioner" means the commissioner of health and social

services.

(4) "coordinator" means the coordinator of the office of substance abuse;

(5) "department" means the Department of Health and Social Services;

(6) "emergency service patrol" means a patrol established under sec. 230 of this chapter;

(7) "physically incapacitated" means a person who is unconscious or has his judgment otherwise so impaired that he is incapable of realizing and making a rational decision with respect to his need for treatment, as evidenced objectively by extreme physical debilitation, c physical harm or threats of harm to others;

(8) "incompetent person" means a person who has been adjusged incompetent by the appropriate court;

(9) "intoxicated person" means a person whose mental or physical functioning is substantially impaired as a result of the use of any substance;

(10) "office" means the office of substance abuse within the Department of Health and Social Services;

(11)"treatment" means the broad range of emergency, outpatient, intermediate, and inpatient services and care which may be extended to substance abusers and intoxicated persons, including diagnostic evaluation, medical, psychiatric, psychological, and social service care, vocational rehabilitation, and career counseling;

(12) "substance abuser" means a person addicted to or misusing any licit or illicit drug(s), such as central nervous system depressants, sedative hypnotics, anti-depressants, tranquilizers, stimulants, hallucinogens, etc.

(13) "troubled employee" means workers whose performance has been

affected by the use of any substance.

*Sec. 28 AS 47.37 is amended by adding new sections to read:

ARTICLE 2. GRANTS-IN-AID

Sec. 47.37.300. POWERS AND DUTIES OF DEPARTMENT. The department shall:

(1) administer a community grant-in-aid program for substance abuse;

(2) submit an annual report concerning the grant-in-aid program within 10 days after the convening of the legislature in each regular session.

Sec. 47.37.310. GRANT-IN-AID PROGRAM. (a) A profit-making corporation, a non-profit corporation, a city or borough government, or other political subdivision of the state, or combination of these, is eligible to receive funds and administer local programs under sections 010 through 270 of this chapter.

(b) The department shall award funds under this chapter with the advice of the advisory board on substance abuse, in the interest of facilitating the development of local, comprehensive programs for the prevention, treatment, and rehabilitation of substance abusers. Separate budgets shall be submitted for alcohol services and other substance abuse services. Funds will be awarded on a competitive basis. In considering applications for grants/contracts the department shall, if all other factors are equal, give preference to applicants who have integrated substance abuse programs within a unified human service delivery system. Priority shall be given to those applicants who demonstrate the existence of a comprehensive local program unifying the components of alcohol and other drug services and community mental health services.

(c) The department shall purchase the services by participating 75% of the eligible costs of the services to be furnished under the plan subject to the availability of state funds to the department for implementing sections 010 through 270 of this chapter. In districts designated by the department as poverty areas, the department shall purchase the services by participating in 90% of the eligible costs.

(d) The contracts/grants for services provided for in sections 010 through 270 of this chapter shall be reviewed, revised if necessary, and approved at the expiration of each contract year. A contract shall be approved if the department finds that the community entity has complied with its plan, section 010 through 270 of this chapter, and any applicable regulations adopted by the department. Expenditures for the purchase of services shall be made in accordance with the approved contract, budgets and program projections.

(e) The department shall adopt regulations specifying the types of services and programs which are eligible for state participation. These regulations shall include (1) a provision including 50% of the cost of capital expenditures as eligible costs where state funding will allow; and (2) a requirement that the community entity contractor or applicant agrees as a condition of contract approval that it will not supplant existing local fund support of substance abuse services, in any year in which it contracts with the department, at a level that is at least equal to the local funding support in the previous year.

(f) No program is eligible for funding under this section unless it conforms to the standards adopted under the provisions of sec. 140 of this chapter, or in the case of a new program, the department de-

termines that the program will be able to conform to those standards within a period of time to be specified in the initial grant application.

(7) Eligible local community entities shall conform to a state cost accounting system showing the true cost of services rendered, collect fees for services according to a schedule based on an analysis of reasonable ability to pay, and provide that no person shall be refused services because of inability to pay for those services.

Sec. 47.37.320. GRANT-IN-AID PROGRAM REGULATIONS. The department shall adopt regulations and establish priorities, after consultation with local communities affected and in conjunction with the state substance abuse advisory board, which are necessary to carry out the purposes of sections 010 through 310 of this chapter. The regulations shall provide for the method of application, the time for consideration of the applications, the processing of applications, the type of record keeping, the requirements for reporting the progress and statistics regarding the program, the notification of the applicant as to the action taken on the application, and the issuance of licenses for facilities receiving grant-in-aid under section 310 of this chapter. The department shall also establish the necessary form of application and may adopt other regulations considered necessary to meet the requirements of health and safety and the orderly administration of the grant-in-aid program.

Sec. 47.37.330. JUDICIAL NOTICE. The superior courts of this state may take judicial notice of the fact that a substance abuser who is physically dependent on alcohol or other drugs is suffering from an illness and is in need of proper treatment as defined in sec. 47.37.270(11).

Sec. 47.37.340. DEFINITIONS. In secs. 300 - 350 of this

chapter, "poverty area" means an area in which 15% or more of the population, based on the most recent US Bureau of the Census figures, is under 125 percent of the Community Services Administration poverty guidelines.

*Sec. 28. AS 44.29.100 - 44.29.150 and AS 47.30.470 - 47.30.500 are repealed.

*Sec. 29. This Act takes effect July 1, 1977.

April 7, 1977

Representative Charles Parr
House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Charlie,

Attached is a suggested revision of HB 340 (SB 242), a bill relating to the treatment of substance abusers.

The primary focus of the proposed legislation is the combining of the offices of drug abuse and alcoholism--a concept that we support wholeheartedly. Additionally, it is a concept that has gained national support and is currently being implemented by many states.

Unfortunately, we cannot support the bills as they presently stand. While the combination of offices does have the potential for better resource allocation and improved service delivery, such benefits are not apparent within the existing proposed legislation.

Using the recently passed community mental health center legislation as a model (a model we believe to be exemplary), we have attempted to re-draft HB 340 so it too will assure local participation and control. Additionally, as communities implement the integration of human service delivery components (as appropriately required by the Community Mental Health Centers Act), the present HB 340's focus on centralization would prevent consolidation and eliminate any meaningful local authority and flexibility.

We respectfully request that you consider the attached proposal, hold hearings as appropriate, and contact us as required.

Sincerely,

Paul Pesika, Coordinator

Frank J. Gold, EdD

HOUSE BILL NO. 340

**********(suggested revision)**********

For an Act entitled: "An Act relating to treatment of alcoholism and drug abuse; providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*Section 1. AS 47.37 is amended to read: CHAPTER 37. ALCOHOLISM AND DRUG ABUSE

*Sec. 2. AS 47.37.010 is amended to read:

Sec. 47. 37. 010. DECLARATION OF POLICY. It is the policy of the state that individuals physically addicted to and/or abusing chemical substances should not be criminally prosecuted for their consumption of these substances but should be afforded a continuum of treatment so they may lead normal lives as productive members of society.

*Sec. 3. AS 47.37.020 is amended to read:

Sec. 47.37.020. OFFICE OF SUBSTANCE ABUSE. An office of substance abuse is established in the department. The office shall be headed by a coordinator appointed by the commissioner. The coordinator shall be a qualified professional who has training and has completed two years of direct-service experience in the organiza-tion and administration of treatment services for persons with problems resulting from the abuse of alcohol and other drugs. The coor-dinator is in the classified service.

*Sec. 4. AS 47.37.030 is amended to read:

Sec. 47.37.030. PURPOSE OF THE OFFICE. It is the purpose of the legislature in amending CHAPTER 37 (ALCOHOLISM AND DRUG ABUSE) to assist local communities in planning, organizing, and financing locally developed, administered, and controlled substance abuse programs. It is further intended to better utilize existing resources at both state and local levels in order to:

(1) develop and implement plans for initiating maximum substance abuse services based on demonstrated need for services in each geographical planning area, as well as regionalized comprehensive substance abuse services;

(2) improve the effectiveness of existing substance abuse services;

(3) integrate the substance abuse programs within a unified human service delivery system;

(4) provide a means for participation by local communities in the determination of the need for and the allocation of substance abuse resources;

(5) establish a uniform ratio of local and state government responsibility for financing substance abuse services;

(6) provide a means of allocating state substance abuse service funds according to community needs;

(7) encourage the full use of existing public or private agencies, facilities, personnel, and funds to accomplish these objectives; and

(8) prevent unnecessary duplication and fragmentation of services and expenditures.

*Sec. 5. AS 47.37.040 is amended to read:

Sec. 47.37.040. DUTIES OF THE OFFICE. The office shall

(1) define and develop standards for various levels and qualities of substance abuse service;

(2) provide fiscal and professional technical assistance in planning, organizing, developing, implementing, and administering local substance abuse services;

(3) develop budgets, receive and distribute state appropriations and funds in accordance with the provisions of sections 010 through 340 of this chapter;

(4) establish standards of education and experience for professional, technical and administrative personnel employed in substance abuse services;

(5) assist the community in establishing the organization and operation of substance abuse services;

(6) develop a standardized system for measuring and reporting to the department the types, quantities, and quality of services; and a cost accounting system which will demonstrate the cost of various levels and qualities of care;

(7) provide each local community planning and services delivery entity with statistics, reports, and other data relevant to development of indices indicating the need for substance abuse services, or relevant to evaluating the effectiveness of existing services;

(8) review each local community plan and require each plan to include

(A) an affirmative showing that the most effective and economic use will be made of all available public and private resources in the community including careful consideration of

the most effective and economic alternative forms and patterns of services;

(B) a five-year projection of needs, services and resources; and

(C) adequate provisions for review and evaluation of services provided in the local community;

(9) prepare an annual comprehensive, state-wide plan that utilizes the locally-developed community plans for the prevention, treatment, and control of substance abuse;

(10) adopt regulations and establish priorities, after consultation with local communities affected and in conjunction with a state substance abuse advisory board, which are necessary to carry out the purposes of sections 010 through 340 of this chapter;

(11) facilitate the planning, establishment, and maintenance of locally developed, administered, and controlled prevention, training, treatment, and rehabilitation programs;

(12) solicit and accept for use a gift of money or property or a grant of money, services, or property from the federal government or private sources, and do all things necessary to cooperate with the federal government or any of its agencies in making an application for a grant;

(13) make contracts and other joint or cooperative arrangements with state, regional, and local entities or organizations to improve the substance abuse services in this and other states;

(14) provide substance abuse service programs with professional, competent, technical assistance and consultation;

(15) cooperate with the division of corrections in establishing programs to provide treatment for substance dependent individuals in or on parole from penal institutions;

(16) support the Department of Education in the, its preparation of curriculum materials at all levels of education;

(17) encourage the development and maintenance of 'troubled employees' programs in Alaska;

(18) cooperate with the Department of Public Safety and the Department of Transportation ~~Division of Highways~~ in ~~their~~ establishing and conducting programs designed to deal with the problem of persons operating motor vehicles while under the influence of alcohol or other drugs;

(19) monitor the admissions of hospitals and other appropriate health facilities in compliance with federal law which requires that the office ensure they they admit without discrimination alcoholics and intoxicated persons and provide them with adequate and appropriate treatment;

(20) encourage all health and disability insurance programs to include alcohol and other forms of drug dependence as covered illnesses;

(21) submit to the legislature an annual report summarizing the activities of the office.

*Sec. 6. AS 47.37.050 is amended to read:

Sec. 47.37.050. INTERDEPARTMENTAL COORDINATING COMMITTEE. (a) An interdepartmental coordinating committee is created, composed of the coordinator, the director of the division of mental health, the commissioner of the department of

health and social services, and the commissioners of education, revenue, public safety, community and regional affairs, and the attorney general. Included too are representatives from the Criminal Justice Planning Agency, the Division of Budget and Management, the Alaska Court System, and the Division of Planning and Policy Development. The committee shall meet at least quarterly at the call of the commissioner of health and social services who is its chairman. The committee shall act as a permanent liaison among state departments engaged in activities affecting substance abuse as a component of human services. They shall be responsible for insuring the linkage required for the successful and cost-effective implementation of the related departmental state plans, with particular emphasis given to coordination among the division of social services, the division of mental health, the division of vocational rehabilitation, the division of corrections. and this office of substance abuse.

(b) In exercising its coordinating functions, the committee shall assure that the appropriate state agencies shall provide at the local level

(1) all necessary medical, social, treatment, and educational services for substance abusers and for the prevention and control of substance abuse without unnecessary duplication of services;

(2) cooperate in the planning and implementation of effective systems of enforcement, adjudication, treatment, and rehabilitation appropriate to the local conditions as well as to the humane and professional provision of services to substance abusers;

(3) recommend mechanisms for the integrated and coordinated prevention, treatment, and control of substance abuse consistent with the policy of this chapter.

*Sec. 7. AS 47.37.060 is amended to read:

Sec. 47.37.060. ADVISORY BOARD ON SUBSTANCE ABUSE. There is established in the Department of Health and Social Services an advisory board on substance abuse. This advisory board shall function as a committee of the state health coordinating council, and three representatives of it shall serve as ex-officio members of the interdepartmental coordinating committee.

*Sec. 8. AS 47.37.070 is amended to read:

Sec. 47.37.070. COMPOSITION. The advisory board on substance abuse consists of nine members appointed by the governor.

* Sec. 9. Sec. 47.37.080 is amended to read:

Sec. 47.37.080. QUALIFICATIONS OF BOARD MEMBERS. Of the nine members, no more than three of which shall be providers of substance abuse services,

(1) one shall be a person who is licensed to practice medicine in the state;

(2) one shall be a person who is licensed to practice psychology in the state;

(3) one shall be a practicing attorney who has been admitted to the practice of law by the state supreme court;

(4) six shall be persons who have evidenced an interest in the problems of substance abuse, one of ~~which~~ whom shall be a current provider of substance abuse services;

(5)three of the above nine members shall also represent local/regional human service advisory boards.

*Sec. 10. AS 47.37.090 is amended to read:

Sec. 47.37.090. TERM OF OFFICE. (a) The member of the board initially appointed under sec. 80(1) of this chapter serves a term of three years.

(b) The member initially appointed under sec. 80(2) of this chapter serves a term of three years.

(c) The member initially appointed under sec. 80(3) of this chapter serves a term of three years.

(d) Two members initially appointed under sec. 80(4) of this chapter serve terms of one year; two members appointed under sec. 80(4) of this chapter serve terms of two years; two members initially appointed under sec. 80(4) of this chapter serve terms of three years. Subsequent terms for all board members are three years.

(e) A vacancy occurring in the membership of the board shall be filled by an appointment by the governor for the unexpired portion of the vacated term.

(f) Board members serve at the pleasure of the governor.

*Sec. 11. AS 47.37.100 is amended to read:

Sec. 47.37.100. COMPENSATION, PER DIEM, OR EXPENSES. Members of the advisory board on substance abuse are not entitled to a salary, but are entitled to per diem, reinbursement for travel and other expenses authorized by law for other boards.

*Sec. 12. AS 47.37.110 is amended to read:

Sec. 47.37.110. DUTIES. The board shall advise and assist the commissioner in the initiating and implementing of community substance abuse services. They shall also review and approve the Alaska State plan for substance abuse prevention, treat-

ment and control on a yearly basis--reports of which shall be submitted to the governor, the legislature, the department and the Comprehensive Health Advisory Council. Grants and contracts shall be reviewed and recommended for funding by this board to and from state, local, and private agencies.

*Sec. 13. AS 47.37.120 is amended to read:

Sec. 47.37.120. SUBSTANCE ABUSE COORDINATOR. The substance abuse coordinator shall work with communities to develop and implement local, comprehensive programs dealing with the prevention, treatment and control of, research on, and education concerning substance abuse problems, as they affect the people of Alaska.

*Sec. 14. AS 47.37.130 is amended to read:

Sec. 47.37.130. COMPREHENSIVE PROGRAMS FOR TREATMENT; REGIONAL PROGRAMS. (a) The office shall assist in the establishment of comprehensive and coordinated locally-developed substance abuse programs The commisioner shall divide the state into planning regions congruent with each local community mental health center's area of jurisdiction. (b) Plans and regulations adopted under sections 010 through 340 of this chapter shall allow local programs sufficient administrative and program flexibility so that local community mental health programs may be joined with other programs such as community mental health centers, and other human service operations.

*Sec. 15. AS 47.37.140 is amended to read:

Sec. 47.37.140. PUBLIC AND PRIVATE TREATMENT FACILITIES. (a) The department shall establish standards in regulations for facilities before their licensure as public or private treatment facilities. These standards shall be adopted following the review and recommenda-

tion of the proposed standards by local advisory boards, the state advisory board, and the legislature--following statutorily required public hearings.

(b) Regulations may be developed by the department following the adoption of licensure standards.

*Sec. 16. AS 47.37.150 is amended to read:

Sec. 47.37.150. ACCEPTANCE FOR TREATMENT. The department shall establish standards for the admission of persons into treatment programs, considering available treatment resources and facilities, for the early and effective treatment of substance abusers.

*Sec. 17. AS 47.37.160 is amended to read:

Sec. 47.37.160. VOLUNTARY TREATMENT OF SUBSTANCE ABUSERS. (a) A substance abuser may voluntarily apply for treatment directly to a licensed public or private treatment facility.

(b) Subject to regulations adopted by the department, the administrator in charge of a licensed public or private treatment facility may determine who shall be admitted for treatment.

(c) All federal and state laws and regulations relating to the provision of services to substance abusers shall be strictly adhered to by all substance abuse programs funded by the office.

*Sec. 18. AS 47.37.170 is amended to read:

Sec. 47.37.170. TREATMENT AND SERVICES FOR PUBLICALLY INTOXICATED PERSONS. (a) An intoxicated person may come voluntarily to a licensed public or private treatment facility for emergency treatment. A person who appears to be intoxicated in a public place and to be in need of help or a person who appears to be intoxicated in or upon a licensed premise where intoxicating liquors are sold or consumed who refuses to leave upon being requested to leave by the

owner, an employee or a peace officer may be taken into protective custody and assisted by a peace officer or a member of the emergency service patrol to his home, a licensed public treatment facility, a licensed private treatment facility, or another appropriate health facility. If all of the preceding facilities including the person's home are determined to be unavailable, a person taken into protective custody and assisted under this subsection may be taken to a state or municipal detention facility in the area.

(b) A person who appears to be physically incapacitated by any substance in a public place shall be taken into protective custody by a peace officer or a member of the emergency service patrol and immediately brought to a licensed public treatment facility, a licensed private treatment facility, or another appropriate health facility or service for emergency medical treatment. If no treatment facility or emergency medical service is available, a person who appears to be physically incapacitated by any substance in a public place shall be taken to a state or municipal detention facility in the area, if that appears necessary for the protection of the person's health or safety.

(c) A person who voluntarily appears or is brought to a licensed public or private inpatient treatment facility shall be examined by a licensed physician within 24 hours. After the examination, he may be admitted as a patient or referred to another health facility. The licensed public or private inpatient facility which refers him shall arrange for his transportation.

(d) No person who, after medical examination, is found to be physically incapacitated by any substance at the time of his admission or to have become physically incapacitated at any time after his admission, may be detained at a facility after he is no longer physically incapacitated by that sub-

stance. No person may be detained at a facility if he remains physically incapacitated by any substance for more than 72 hours after admission as a patient, unless he is committed unders sections 180 or 190 of this chapter. A person may consent to remain in the facility as long as the physician or administrator in charge considers it appropriate.

(e) A person who is not admitted to a licensed public or private treatment facility, is not referred to another health facility, and has no funds, may be taken to his home, if any. If he has no home, the licensed public or private treatment facility shall assist him in obtaining shelter.

(f) If a patient is admitted to a licensed public or private treatment facility, his family or next of kin shall be promptly notified. If an adult patient who is not physically incapacitated requests that there be no notification of next of kin, his request shall be granted.

(g) Peace officers or members of the emergency service patrol who comply with this section are acting in the course of their official duty and are not criminally or civilly liable for that compliance.

(h) If the examining physician or the administrator in charge of the licensed public or private treatment facility determines it is for the patient's benefit, he shall initiate either an emergency commitment procedure under sec. 180 of this chapter or an involuntary commitment proceeding under sec. 190 of this chapter, whichever is appropriate in his professional judgment.

Sec. 19. AS 47.37.180 is amended to read:

Sec. 47.37.180. EMERGENCY DETENTION AND COMMITMENT. (a) An intoxicated person who has threatened, attempted to inflict, or inflicted physical harm on another may be charged under an appropriate criminal statute, taken into custody, and transported to a state or

municipal detention facility. A person who is physically incapacitated by any substance may be committed to a licensed public or private substance abuse treatment facility for emergency treatment. A refusal to undergo treatment does not constitute evidence of lack of judgment as to the need for treatment.

(b) The certifying physician, spouse, guardian, or relative of the person to be committed, or any other responsible person, may make a written application for commitment under this section, directed to the administrator of the licensed public or private substance abuse treatment facility. The application shall state facts to support the need for emergency treatment and be accompanied by a physician's certificate supporting the need for emergency treatment and stating that the physician has examined the person sought to be committed within two days before the certificate's date.

(c) Upon approval of the application by the administrator in charge of the facility, the person may be brought to the facility by a peace officer, a health officer, a member of the emergency service patrol, the applicant for committment, the patient's spouse, the patient's guardian, or any other interested person. The person shall be retained at the facility to which he was admitted, or transferred to another appropriate public or private treatment facility, until discharged under (e) of this section.

(d) The administrator in charge of a licensed public or private treatment facility may refuse an application if in his opinion the application and certificate fail to sustain the grounds for commitment.

(e) When, on the advoce of his medical staff, the administrator determines that the grounds for commitment no longer exists, he shall discharge a person committed under this section. No person committed under this section may be detained in a treatment facility for more

than five days. If a petition for involuntary commitment under sec. 190 of this chapter has been filed within the five days and the administrator in charge of a licensed public or private treatment facility finds that grounds for emergency commitment still exist, he may detain the person until the petition has been heard and determined, but no longer than 10 days after filing the petition.

(f) A copy of the written application for commitment and of the physician's certificate, and a written explanation of the person's right to legal counsel, shall be given to the person within 24 hours after commitment by the administrator, who shall provide a reasonable opportunity for the person to consult with legal counsel.

*Sec. 20. AS 47.37.190 is amended to read:

Sec. AS 47.37.190. INVOLUNTARY DETENTION AND COMMITMENT. (a) After a hearing initiated by petition of his spouse or guardian, a relative, the certifying physician, or the administrator in charge of a licensed public or private treatment facility, a person may be committed to the custody of an appropriate licensed private or public substance abuse treatment agency by the superior court. The petition shall allege that the person is a substance abuser who habitually lacks self-control in using a particular substance or combination of substances, that unless committed is likely to inflict physical harm on himself or another, or is physically incapacitated by a substance or combination of substances. A refusal to undergo treatment does not constitute evidence of lack of judgement as to need for treatment. The petition shall be accompanied by a certificate of a licensed physician who has examined the person within two days before submission of the petition, unless the person whose commitment is sought has refused to submit to a medical examination, in which case the fact of refusal shall be alleged in the petition. The certificate shall

set out the physician's findings in support of the allegations of the petition.

(b) After the petition is filed, the court shall fix a date for a hearing no later than 10 days after the date the petition was filed. A copy of the petition and of the notice of the hearing, including the date fixed by the court, shall be served on(1) the petitioner; (2) the person whose commitment is sought; (3) the next of kin of the person whose commitment is sought; (4) the administrator in charge of the licensed public or private treatment facility in which the committed person has been committed for emergency care, and any other person the court deems appropriate. A copy of the petition and certificate shall be delivered to each person notified.

*Sec. 21. AS 47.37.200 is amended to read:

Sec. AS 47.37.200. DETENTION AND COMMITMENT PROCEDURE (a) At the hearing required under sec. 190(b) of this chapter, the court or the jury, if requested under sec. 190(c) of this chapter, shall hear all relevant testimony, including, if possible, the testimony of at least one licensed physician who has examined the person whose commitment is sought. The person whose commitment is sought shall be present unless the court believes that his presence is likely to be injurious to him, in which case the court shall appoint a guardian ad litem to represent him throughout the proceeding. The court may examine the person in open court, or if advisable, examine him out of court. If the person has refused to be examined by a licensed physician , he shall be given the opportunity to request examination by a court-appointed licensed physician. If he fails to request a medical examination and there is sufficient evidence to believe that the allegations of the petition are true, or if the court

believes that more medical evidence is necessary, the court may issue a temporary order committing him to a licensed public or private treatment facility in which he is being held under sec. 17[illegible] of this chapter for a period of not more than five days for purposes of a diagnostic examination.

(b) If after hearing all relevant evidence, including the results of any diagnostic examination by the licensed public or private treatment facility, the court or the jury finds that grounds for involuntary commitment have been clearly established, the court shall issue an order of commitment to the licensed facility. No court may order the commitment of a person except to a licensed public or private treatment facility which is able to provide adequate and appropriate treatment for him.

(c) A person committed under secs. 190 - 200 of this chapter shall remain in the custody of the licensed facility for treatment for a period of up to 30 days. At the end of the 30-day period, he shall be discharged automatically unless the facility administrator or physician, before the expiration of the period, obtains a court order for his recommitment upon the grounds set out in sec. 190(a) of this chapter for a further period of up to 90 days. If a person has been committed because he is a substance abuser likely to inflict physical harm on himself or another, the facility administrator or physician shall apply for recommitment if after examination it is determined that the likelihood still exists.

(d) A person recommitted under (c) of this section who has not been discharged by the facility before the end of the 90-day period shall be discharged at the expiration of that period unless the facility administrator or physician, before expiration of the period, obtains a court order on the grounds set out in sec. 190(a) of this chapter

for recommitment for a further period not to exceed 90 days. If a person has been committed because he is a substance abuser likely to inflict physical harm on himself or another, the facility administrator or physician shall apply for recommitment if after examination it is determined that the likelihood still exists . No more than two recommitment orders may be permitted under (c) and (d) of this section.

* (e) TO BE INCLUDED AS IS

(f) The licensed public or private treatment facility shall provide adequate and appropriate treatment for a person in its custody. The licensed facility may transfer a person in its custody to another licensed facility if the transfer is medically advisabile.

(g) A person committed to the custody of a licensed public or private treatment facility for treatment shall, if he is a substance abuser committed on the grounds that he is likely to inflict physical harm on himself or another, be discharged at any time before the end of the period for which he has been committed if either of the following conditions is met:

(1) he no longer demonstrates the likelyhood that he will inflict physical harm on himself or another; or

(2) treatment is no longer adequate or appropriate.

*Sec. 22 AS 47.37.210 is amended to read:

Sec. 47.37.210. RECORDS OF SUBSTANCE ABUSERS

(a) The registration and other records of treatment facilities shall remain confidential and are priveliged to the patient as per existing federal and state regulations regarding confidentiality of client records.

(b) Notwithstanding (a) of this section, the coordinator may make available information from patient's records for purposes of research into the causes and treatment of substance abuse. No unique client

identifying information shall be disclosed.

*Sec. 23 AS 47.37.220 is amended to read:

Sec. 47.37.220. VISITATION AND COMMUNICATION OF PATIENTS (a) Patients in any licensed treatment facility under this chapter shall be granted reasonable opportunities for adequate consultation with counsel, and for continuing contact with family and friends including the use of telephone facilities, consistent with an effective treatment program.

(b) No mail or other communication to or from a patient in a licensed treatment facility may be intercepted, read, or censored.

*Sec. 24 AS 47.37.230 is amended to read:

Sec. 47.37.230. ESTABLISHMENT OF EMERGENCY SERVICE PATROL (a) The office of [illegible] facilitate and cities and boroughs may establish emergency service patrols. An emergency service patrol consists of persons trained to give assistance in public places to persons who are intoxicated. Members of an emergency service patrol shall be capable of providing first aid in emergency situations and shall be capable of transporting intoxicated persons to their homes and to and from public and private treatment facilities.

(b) The department, with the review and recommendation of the interdepartmental coordinating committee, shall promulgate regulations for the establishment, training, and conduct of emergency service patrols.

*Sec. 25 AS 47.37.240 is amended to read:

Sec. 47.37.240. PAYMENT FOR TREATMENT. (a) A patient in a licensed treatment facility, or the person obligated to provide for the cost of treatment of a person committed under this chapter, is liable to the licensed treatment facility which provided the treat-

ment for the cost of maintenance and treatment of the patient in accordance with rates established by the treatment facility.

(b) The office shall promulgate regulations governing financial ability that take into consideration the income, savings and other personal and real property of the person liable for the cost and maintenance of the patient.

*Sec. 26 AS 47.37.250 is amended to read:

Sec. 47.37.250. NONAPPLICABILITY. (a) Nothing in the chapter affects a statute, ordinance, or regulation relating to (1) driving under the influence of any intoxicating substance, or other similar offenses involving any substance and the operation of a vehicle, aircraft, boat, machinery, or other equipment, (2) the sale, purchase, dispensation, possession, or use of alcoholic beverages at specified times and places or by a particular class of persons, including prohibitions against drinking intoxicating beverages in specified public places, or (3) being on the traveled portion of a highway so as to be a hazard to the motoring public.

(b) Nothing in this chapter affects AS 11.70.030, relating to the defense of voluntary intoxication.

*Sec. 27 AS 47.37.270 is amended to read:

Sec. 47.37.270. DEFINITIONS. In this chapter

(1) "licensed private treatment facility" means a private agency which does not receive grants-in-aid from this office, but meets the limited standards prescribed in sec. 140(a) of this chapter for private facilities licensed under sec. 130(f) of this chapter;

(2) "licensed public treatment facility" means a treatment agency providing treatment under this chapter through a grant from or contract with the office, meeting all of the standards prescribed in sec. 140(a) of this chapter, and licensed under sec. 130(f) of this chapter;

(3) "commissioner" means the commissioner of health and social

services.

(4) "coordinator" means the coordinator of the office of substance abuse;

(5) "department" means the Department of Health and Social Services;

(6) "emergency service patrol" means a patrol established under sec. 230 of this chapter;

(7) "physically incapacitated" means a person who is unconscious or has his judgment otherwise so impaired that he is incapable of realizing and making a rational decision with respect to his need for treatment, as evidenced objectively by extreme physical debilitation, or physical harm or threats of harm to others;

(8) "incompetent person" means a person who has been adjusged incompetent by the appropriate court;

(9) "intoxicated person" means a person whose mental or physical functioning is substantially impaired as a result of the use of any substance;

(10) "office" means the office of substance abuse within the department of Health and Social Services;

(11)"treatment" means the broad range of emergency, outpatient, intermediate, and inpatient services and care which may be extended to substance abusers and intoxicated persons, including diagnostic evaluation, medical, psychiatric, psychological, and social service care, vocational renabilitation, and career counseling;

(12) "substance abuser" means a person addicted to or misusing any licit or illicit drug(s), such as central nervous system depressants, sedative hypnotics, anti-depressants, tranquilizers, stimulants, hallucinogens, etc.

(13) "troubled employees" means workers whose performance has been

affected by the use of any substance.

*Sec. 28 AS 47.37 is amended by adding new sections to read:

ARTICLE 2. GRANTS-IN-AID

Sec. 47.37.300. POWERS AND DUTIES OF DEPARTMENT. The department shall:

(1) administer a community grant-in-aid program for substance abuse;

(2) submit an annual report concerning the grant-in-aid program within 10 days after the convening of the legislature in each regular session.

Sec. 47.37.310. GRANT-IN-AID PROGRAM. (a) A profit-making corporation, a non-profit corporation, a city or borough government, or other political subdivision of the state, or combination of these, is eligible to receive funds and administer local programs under sections 010 through 270 of this chapter.

(b) The department shall award funds under this chapter with the advice of the advisory board on substance abuse, in the interest of facilitating the development of local, comprehensive programs for the prevention, treatment, and rehabilitation of substance abusers. Separate budgets shall be appropriated for alcohol services and other substance abuse services. Funds will be awarded on a competitive basis. In considering applications for grants/contracts the department shall, if all other factors are equal, give preference to applicants who have integrated substance abuse programs within a unified human service delivery system. Priority shall be given to those applicants who demonstrate the existence of a comprehensive local program unifying the components of alcohol and other drug services and community mental health services.

(c) The department shall purchase the services by participating in 75% of the eligible costs of the services to be furnished under the plan subject to the availability of state funds to the department for implementing sections 010 through 270 of this chapter. In districts designated by the department as poverty areas, the department shall purchase the services by participating in 90% of the eligible costs.

(d) The contracts/grants for services provided for in sections 010 through 270 of this chapter shall be reviewed, revised if necessary, and approved at the expiration of each contract year. A contract shall be approved if the department finds that the community entity has complied with its plan, section 010 through 270 of this chapter, and any applicable regulations adopted by the department. Expenditures for the purchase of services shall be made in accordance with the approved contract, budgets and program projections.

(e) The department shall adopt regulations specifying the types of services and program costs eligible for state participation. These regulations shall include (1) a provision including 50% of the cost of capital expenditures as eligible costs where state funding will allow; and (2) a requirement that the community entity contractor or applicant agrees as a condition of contract approval that it will not supplant existing local fund support of substance abuse services, in any year in which it contracts with the department, at a level that is at least equal to the local funding support in the previous year.

(f) No program is eligible for funding under this section unless it conforms to the standards adopted under the provisions of sec. 140 of this chapter, or in the case of a new program, the department de-

termines that the program will be able to conform to those standards within a period of time to be specified in the initial grant application.

(g) Eligible local community entities shall conform to a state cost accounting system showing the true cost of services rendered, collect fees for services according to a schedule based on an analysis of reasonable ability to pay, and provide that no person whall be refused services because of inability to pay for those services.

Sec. 47.37.320. GRANT-IN-AID PROGRAM REGULATIONS. The department shall adopt regulations and establish priorities, after consultation with local communities affected and in conjunction with the state substance abuse advisory board, which are necessary to carry out the purposes of sections 010 through 310 of this chapter. The regulations shall provide for the method of application, the time for consideration of the applications, the processing of applications, the type of record keeping, the requirements for reporting the progress and statistics regarding the program, the notification of the applicant as to the action taken on the application, and the issuance of licenses for facilities receiving grant-in-aid under section 310 of this chapter. The department shall also establish the necessary form of application and may adopt other regulations considered necessary to meet the requirements of health and safety and the orderly administration of the grant-in-aid program.

Sec. 47.37.330. JUDICIAL NOTICE. The superior courts of this state may take judicial notice of the fact that a substance abuser who is physically dependent on alcohol or other drugs is suffering from an illness and is in need of proper treatment as defined in sec. 47.37.270(11).

Sec. 47.37.340. DEFINITIONS. In secs. 300 - 350 of this

chapter, "poverty area" means an area in which 15% or more of the population, based on the most recent US Bureau of the Census figures, is under 125 percent of the Community Services Administration poverty guidelines.

*Sec. 28. AS 44.29.100 - 44.29.150 and AS 47.30.470 - 47.30.500 are repealed.

*Sec. 29. This Act takes effect July 1, 1977.

Juneau, Alaska 99811

STATE OF ALASKA
DEPT. OF HEALTH AND SOCIAL SERVICES
OFFICE OF THE COMMISSIONER
JAY S. HAMMOND, GOVERNOR
POUCH H 01 – JUNEAU 99811

February 1977

Speaker of the House
President of the Senate

We are pleased to present to you this Annual Report on the State Office of Alcoholism Program covering operation of the Program during FY 1976. We have attempted to provide you with a comprehensive overview of our office structure, policies and new directions. Special focus has been directed toward descriptions of individual community programs.

If more information is desired concerning the alcohol programs in Alaska or the State Office of Alcoholism, we will be pleased to honor the request.

Respectfully submitted,

Francis S. L. Williamson

THE OFFICE

THE OFFICE

The State Office of Alcoholism was established in 1967, when the legislature appropriated $25,000 for the development and implementation of an alcoholism program. The Governor designated the Department of Health and Social Services as the single state agency responsible for the administration of the State Plan for Alcoholism. The mission of the office is to implement the provisions of AS 47.37 so as to accomplish "the reduction in incidence and severity of alcoholism and alcohol abuse, and its related social consequences."

Authority establishing the State Alcoholism Program is cited as AS 47.30.460-500. Additional authority includes the Grant-in-Aid program, whereby the Office of Alcoholism gives monetary aid to local alcoholism projects (AS 47.30-474-.477); The Governor's Advisory Board on Alcoholism (AS 47.30.060-069); and the Uniform Alcoholism and Intoxication Treatment Act (AS 47.37.10-210).

The State Office does not deliver direct services to alcoholics or alcohol abusers; rather, the Office provides services to agencies throughout the State who themselves provide direct services. The State Office is the coordinating, regulatory and evaluative body for the State effort. It administers the State Grant-in-Aid program and the associated reporting and monitoring systems. The Office provides technical assistance to communities, and is the focal point for coordination statewide.

Local control over the local alcoholism programs is the intent and policy of the Department and of the State Office which exerts sufficient control over those local endeavors to establish and maintain appropriate standards and to guarantee adequate linkages and continuity of care for the benefit of the client. This control is obtained through the Grant-in-Aid process and its attendant application, reporting, monitoring and evaluation systems.

The Office provides staff services to the Governor's Advisory Board on Alcoholism and maintains a degree of liaison with statewide organizations whose objectives are similar. It is headed by a coordinator appointed by the Commissioner of the Department of Health and Social Services.

GOVERNOR'S ADVISORY BOARD ON ALCOHOLISM

AS 47.37.070 authorizes the Governor's Advisory Board on Alcoholism. This board has nine members appointed by the Governor to four-year staggered terms.

Throughout FY 76, the Board played an active role in the development of policy for the implementation of legislation and the administration of programs related to alcohol abuse problems. With the staff of the Office of Alcoholism acting in an advisory capacity to the membership, the Board reviewed, evaluated and assisted in determining the direction of activities for the Office.

Individually and collectively, the Board has been instrumental in assisting the Office to develop its program effectiveness and efficiency as it seeks to meet the needs of local communities and the entire state in the resolution of problems related to alcohol abuse.

The membership has provided an important advocate role in support of the Office's proposed budget request to both the Administration and the Legislature.

In combined meetings with the Governor's Board on Drug Abuse and a statewide conference with representatives from Drug Abuse, Mental Health and Alcoholism, the membership has provided essential input in behalf of policy problems related to alcohol abuse programs in the planning activities of the ADAMHA project known as "State Plan Development."

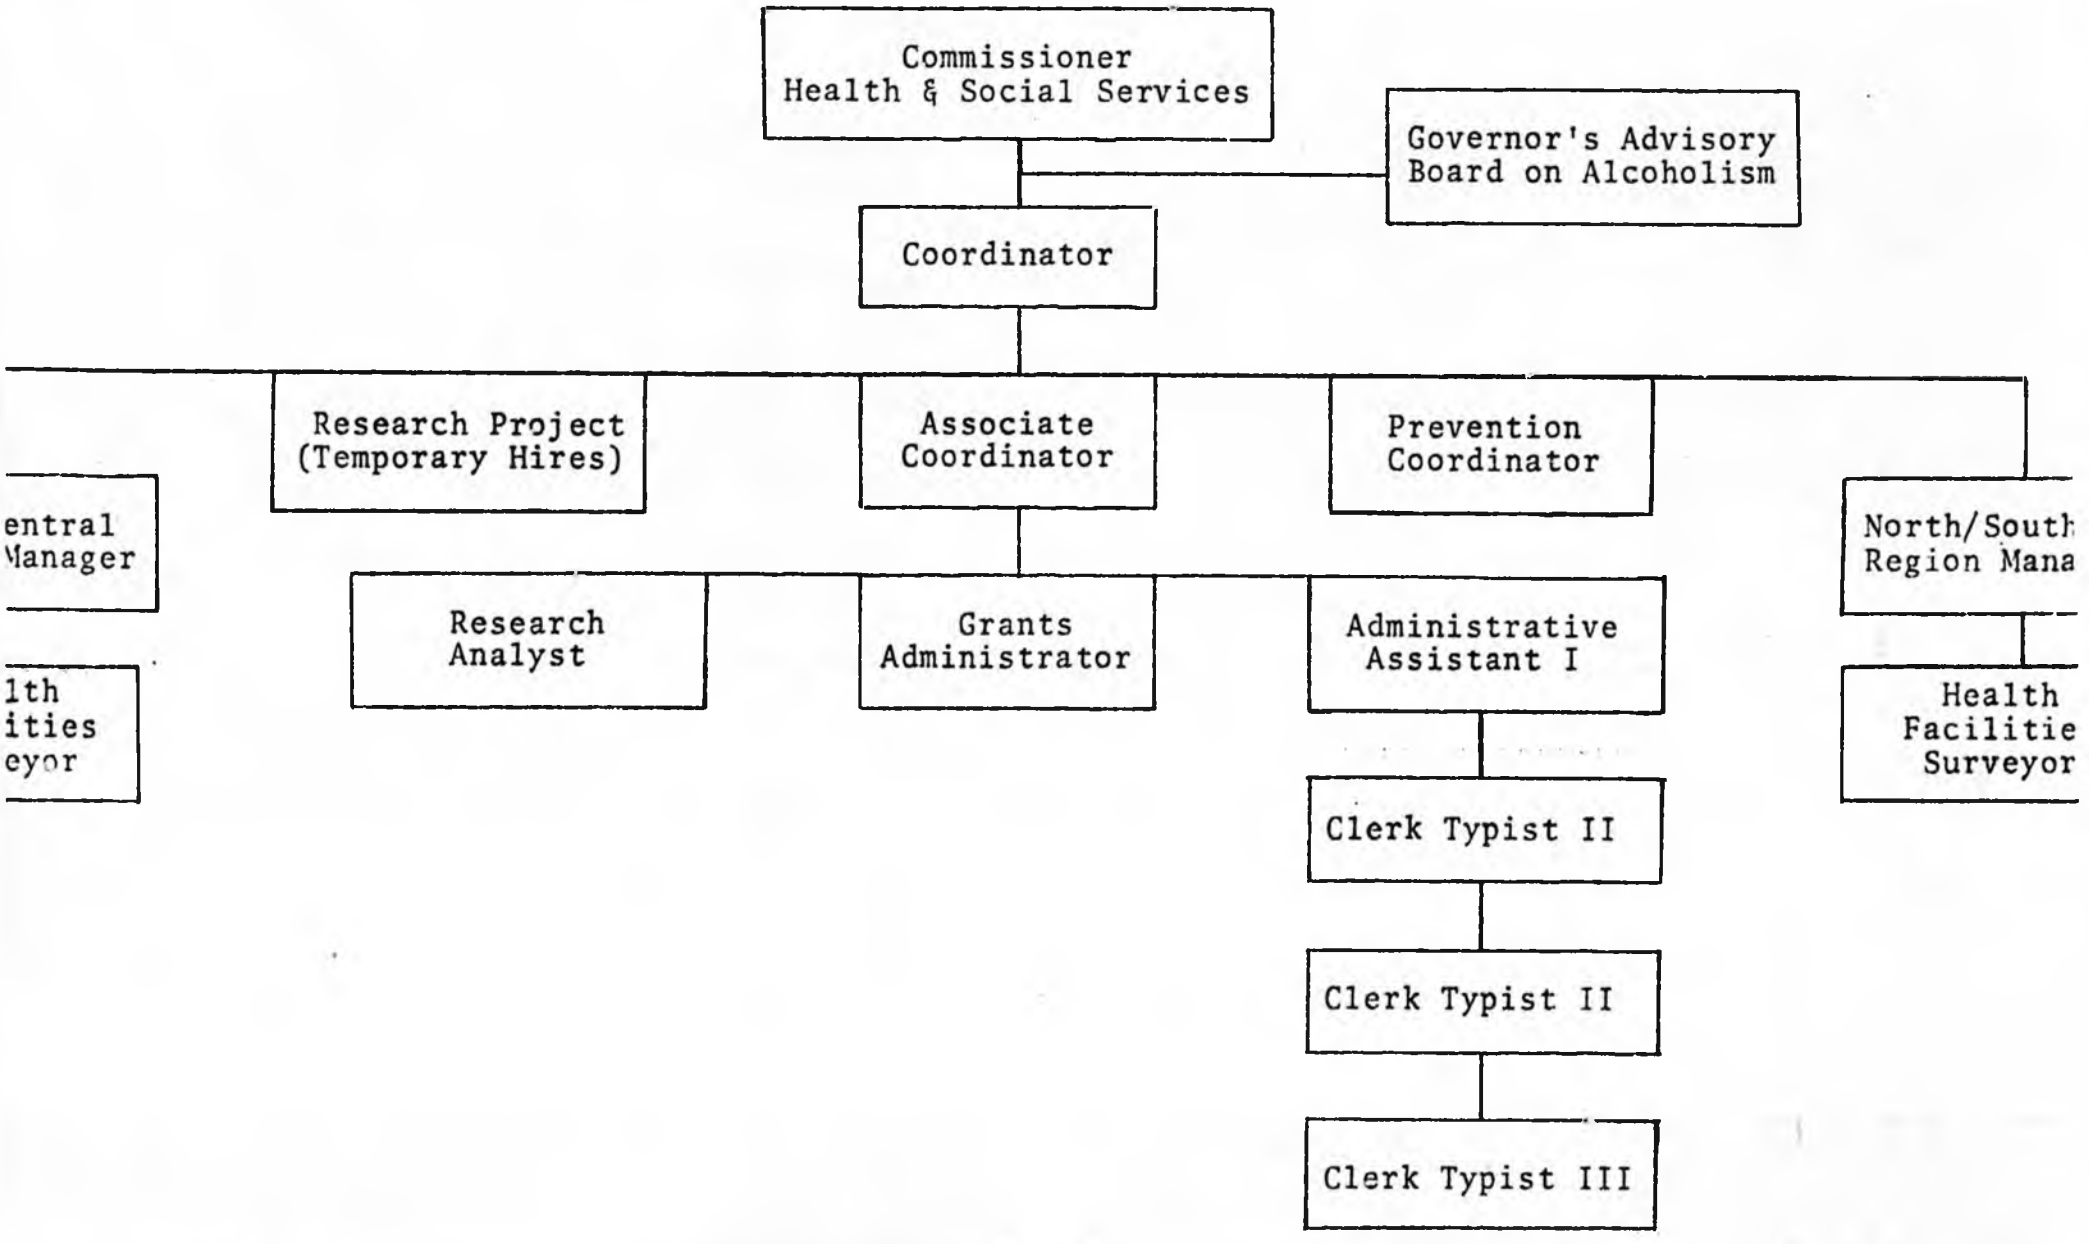
ORGANIZATIONAL CHART FY 1976



STATE PLAN

In 1973, the Office of Alcoholism completed development of the Alaska State Plan for the Reduction of Alcoholism and Alcohol Abuse. The plan was published in April of that year and has been updated annually.

The objective of the Plan is to present a coordinated comprehensive program for the orderly development and provision of needed alcoholism prevention, treatment, and rehabilitation programs for the State. In order to attain this objective, the Plan:

1. Presents information about alcohol problems in Alaska;

2. Describes the resources available for implementation of the Plan;

3. Suggests a program for the concerted utilization of these resources to accomplish specific yearly objectives;

4. Serves as a base for action, coordination and communication by and among persons and organizations implementing these objectives;

5. Fulfills Federal requirements pertaining to state plans;

6. Establishes the opportunity for continuity of effort over the years as an historical document, as a work plan, and as a legitimate base for planning.

REGIONS AND DISTRICTS

As part of the State Plan, a region and district service-area concept was developed around the existing transportation net. Alaska has a vast expanse of land, limited population, and lack of roads. Therefore, the time and cost of air transportation, rather than miles, were taken as the critical factors in identifying three major regional areas for service delivery. Their corresponding centers in Fairbanks, Anchorage, and Juneau offer a range of alcoholism treatment facilities, from information and referral, to emergency services, to rehabilitation, to transitional (half-way house) living, to out-patient care.

Further examination of the contemporary transportation net identified 22 district centers which act as collecting points for the surrounding communities. Each of these satellite stations relates to one of the three regional hubs.

At the village or small community level, there should be at least one alcoholism counselor, providing out-patient diagnosis, counseling, education and referral services for one or a number of villages or communities. When a client is in need of services which the counselor is unable to provide, he is referred to the nearest center where such services are available. This might be at the district center in the case of limited treatment or at a regional center in the case of extensive rehabilitation.

EVALUATION AND MONITORING

Alcoholism programs across the country vary in size and scope. They vary in treatment philosophy, they vary by the population they serve, and they vary by location. Nevertheless, there are certain basic principles common to all such programs. For that reason, basic standards have been established on a national basis to indicate how such programs should operate, no matter what their variation.

Through NIAAA funding, the Alcoholism Division of the Joint Commission on Accreditation of Hospitals developed a set of national standards for the accreditation of alcoholism programs. Because of their scope, national standards are not subject to fragmentation by inconsistencies in state or local laws or regulations.

Public hearings were held in five areas of the state during March, 1976 to discuss adoption of standards. In December, 1976 the standards as set forth by the Joint Commission on Accreditation of Hospitals (JCAH) were adopted by Alaska. Urban programs throughout the state have until July 1, 1977 to comply with these standards. A less stringent set of program standards will be developed for less potentially sophisticated programs in smaller communities.

In order to be accredited, alcoholism programs must meet certain minimal or basic criteria, which help to insure a high quality of care. Besides providing an objective evaluation of a program's services, some of the advantages of accreditation are that it provides a form of recognition that is respected by health professionals and consumers, it can help raise the level of professional performance, it attracts qualified professionals who wish to work in and for programs that are known to offer services of recognized quality, it provides an incentive for the continual upgrading of a program's services, and it identifies, for the public, programs and services of quality in the field of alcoholism.

Evaluators perceive their role as analysts and teachers, rather than as inspectors and judges. Their function is not to find shortcomings in order to mete out punishment, but rather to act as consultants to programs, helping them to identify both their strong and weak points, and to provide guidelines to correct their weaknesses.

In addition to the evaluation program of the SOA there exists also a program for monitoring expenditures of programs funded through grants from the State. Payment request and expenditure reports are reviewed on a quarterly basis to ensure compliance with the Grant-in-Aid program.

INTERAGENCY COORDINATING COMMITTEE

The reduction of alcoholism, alcohol abuse and alcohol-related problems is a priority goal for Governor Hammond's administration. Alaska Statute 47.37.050 creates a state level "Interdepartmental Coordinating Committee" (ICCS). This coordinating committee is charged with assisting the Commissioner of Health and Social Services and the Coordinator of the State Office of Alcohol and Alcohol Abuse in formulating a comprehensive plan for the prevention of alcoholism and for treatment of alcoholics and intoxicated persons.

Membership on the committee includes the Commissioners of Health & Social Services (Chairman), Highways, Education, Labor and Public Safety. The Coordinator of the Office of Alcoholism serves as an ex-officio member. To complete the review of policy, the Governor included the Attorney General, Commissioner of Community and Regional Affairs, and representatives of the Criminal Justice Commission, ABC Board, and Governor's Office.

The first intensive ICC effort will be directed towards a series of management, treatment, prevention and control policy recommendations to the Governor. These will be translated into appropriate administrative, legislative, and budgetary proposals to be presented to the legislature for their consideration. To assist in the realization of this goal, the governor has attempted to use already existing tools. The ICC is such a tool.

BUDGET & EXPENDITURES

THE BUDGET

The Office of Alcoholism administered a budget totaling $3,000,800 for FY 76. The following table divides this sum according to source and function:

	SGF	NIAAA	Title IVA & XVI	Program Receipts	Total
Admin - general	70,600	-0-	135,000	-0-	205,800
Projects:					
Prevention		25,000			25,000

FUNDING SOURCES

AIS PROJECT

In FY 75, the Alaska State Office of Alcoholism was awarded Special Incentive Grant monies through NIAAA. These funds are granted to states as a means of assisting them in implementing the Uniform Alcoholism and Intoxication Treatment Act. Funding is based on $100,000 per qualified State, plus ten per cent of the Formula Grant monies to which they are entitled. On this basis, Alaska was granted $120,000 for FY 75 and FY 76 each.

The goal of this project is to provide the State of Alaska with a formative, but comprehensive "Alcoholism Information System." The grant allows the State to obtain essential information on the relationship between alcohol use and abuse. The project is expected to continue through the end of FY 78 with annual funding of $120,000.

The project has been prepared under the direction of Dr. Dennis Kelso; completion is expected in February, 1977 and will appear in five published volumes. These volumes are briefly described below:

VOLUME I: The Economic Impact of Alcoholism and Alcohol Abuse in Alaska, 1975

Volume I investigates and describes the economic impact on Alaska of alcoholism and alcohol abuse. Major goals of the volume include the identification and estimation of financial benefits deriving from the sale and consumption of beverage alcohol, and determination of the economic cost of alcoholism and alcohol abuse for the state as a whole.

VOLUME II: An Analysis of State Legislation Pertaining to Regulation and Control of Beverage Alcohol and Alcoholism and Alcohol Abuse, Alaska, 1975

Volume II identifies and analyzes all Alaska legislative statutes and administrative codes which are in any way concerned with the sale and consumption of beverage alcohol, or with alcoholism or alcohol abuse problems.

VOLUME III: Alcoholism and Alcohol Abuse Programs, Services Delivery System, Alaska, 1975

Volume III presents the findings of an analysis of the major elements of the alcohol services delivery system in Alaska. Statewide and local organizations providing direct and indirect alcoholism services are described with respect to their various administrative and programmatic dimensions.

VOLUME IV: Social Systems Indicators of Alcoholism and Alcohol Abuse in Alaska, 1975

Volume IV assembles and discusses a range of current data and information regarding the social impact on Alaska of alcoholism and alcohol abuse. The data compiled are regarded as conventional social system indicators, and are discussed accordingly.

VOLUME V: Executive Summary: Descriptive Analysis of the Impact of Alcoholism and Alcohol Abuse in Alaska, 1975

As an executive summary, Volume V synoptically treats the findings contained in the four primary volumes preceding it. Additionally, it integrates various portions of these findings to provide alternative descriptions of the impact on Alaska of alcoholism and alcohol abuse. Overall policy-level recommendations extrapolated from the study's findings are suggested for more effective implementation of Alaska's Uniform Alcoholism and Intoxication Treatment Act.

PIPELINE GRANT

The trans-Alaska oil pipeline is the largest private construction project ever undertaken. Since the beginning of construction in April, 1974, thousands of construction workers, their families, support staff, technical personnel, and entrepreneurs have been drawn to Alaska, with the total new population expanding to as high as 39,000 people.

Construction camps are situated along the 790 miles of pipeline corridor, and the major urban centers of Anchorage and Fairbanks grew at an increasing rate. As the population of impacted areas increased, the need for alcoholism services increased. The camps themselves experience a special kind of alcohol abuse and alcoholism problem - expecially in the near endless dark of winter - and have their own need for services.

There are three principal types of pipeline impact on the need for alcoholism services: a) increased demand for services resulting from population increases caused by the pipeline, b) the need for services for workers on the line, and c) increased stress on existing community populations. These impacts have been adequately described in a document intitled "Pipeline Impact Project for Alcohol Abuse and Alcoholism", prepared in October 1974 by the Office of Alcoholism.

The purpose of the Pipeline Impact Grant was to provide a coordinated response to increased statewide problems of alcohol abuse and alcoholism generated by construction of the Trans-Alaska Oil Pipeline. Prevention and treatment efforts are directed towards impact-related problems in the work camps and towards those impact-related problems in pipeline corridor communities and urban centers, to which people and problems gravitate.

The goal of this special project is the amelioration of alcohol abuse and alcoholism problems attendant upon pipeline construction and, in particular, the extension of care to those individuals (pipeline personnel and corridor community residents) th impact-related alcohol problems.

The Pipeline Grant is expected to continue until the end of FY 78. The grant for FY 76 was $650,000. Of this total, $538,600 was awarded as direct grants to six projects: ALMEA, Copper River, Seward, Barrow, Anchorage and Valdez. The remaining $111,400 was for administrative costs which included the salaries and travel for two program managers.

FORMULA GRANT

The federal government awards a sum of money based on population to each state which has a State Plan. Alaska has adopted the Alaska State Plan for The Reduction of Alcoholism and Alcohol Abuse and is thereby entitled to a maximum annual grant of $200,000. The State need not match these funds, but they must guarantee that these funds will not be used to supplant state or local funding for particular projects.

In FY 76, the total was divided and awarded as community grants; none was allocated for administrative costs. The grants were generally awarded to smaller programs which have difficulty coming up with a catch match. For example, federal regulations which allow the use of volunteer services as an "in-kind" contribution for matching purposes permit the funds to go to programs which rely on a volunteer work force and need to use that for matching purposes.

STATEWIDE SERVICES

STATEWIDE SERVICES

The office of alcoholism is the legislated lead agency for the development and provision of alcoholism services in Alaska. Other agencies within Alaska concerned with and taking action against alcohol problems include two programs which are statewide in nature, receive State funds, and are subject to SOA monitoring and evaluation. They are: The National Council on Alcoholism - Alaska Region, and Alaska Labor Management Employee Affairs, Inc.

NCA-AR

The National Council on Alcoholism-Alaska Region (NCA-AR) is a private non-profit corporation dedicated to the goal of the adoption by Alaskans of a positive, supportive and knowledgeable attitude toward the solution of the problems of alcoholism and alcohol abuse. The Council has its office in Anchorage.

Funding Source	
State General Fund	$ 64,576
Title	14,902
Direct Federal Grant	656,680
	$736,158

The project objectives of NCA-AR fall into two categories: education and consultation.

EDUCATION

The Council serves as the public relations/alcohol information arm of alcohol programs in Alaska. To this end, they prepare and distribute news releases, photos, films and tapes. Feature items about alcohol are developed and released. Mailing lists of organizations and persons concerned with alcohol programs are developed and maintained. Assistance is given to radio and television stations in the development and presentation of programs concerning alcoholism.

The office conducts a State Alcoholism Forum as a training program for the public, for their own board, and for other related groups. They also monitor and provide information regarding pertinent legislation at local, state and federal levels.

CONSULTATION

A large function of the office is to assist other alcoholism programs in the areas of personnel management, financial management, and general administrative functions. They provide program consultation to all chartered chapters, and continue the development of Export Packages for chartered chapters.

Assistance upon request is given to all alcoholism programs on publicity and other public relations matters.

ALMEA

Funding Source	
Pipeline Impact	$200,000

Alaska Labor and Management Employee Affairs, Inc. (ALMEA) is a state-wide, non-profit corporation founded by the Alaska Chapter of Associated General Contractors and the major labor unions of Alaska. The program has a broad approach embracing industrial alcoholism under the concept of a "Troubled Employee Program", including drug abuse, mental illness, and other employee problems. Alcohol accounts for approximately 80% of the problems dealt with.

ALMEA's objective is to mobilize managers, superintendents, safety representatives, foremen, job stewards, and business agents in a cooperative effort to detect and refer personnel with early symptoms of drinking problems. If medical treatment is not indicated, an alcoholism program is recommended by the Occupational Alcoholism Specialist, with the concurrence of the employees' immediate supervisors in Labor and Management.

ALMEA's specific objectives are: prevention, referral, individual contact and counseling, and education and training.

Other alcohol-related programs, though statewide in nature, do not receive SOA monies. These programs are described briefly below.

THE ALASKA NATIVE COMMISSION ON ALCOHOLISM AND DRUG ABUSE

The Commission was formed to focus special attention on alcohol problems of Alaska Natives, and to provide technical input and quality control to program development relating to Alaska Natives and Native communities. The ANCADA Board of Directors is comprised of representatives of each of the 12 Native regions and six Native members-at-large. As ANCADA develops its expertise, it is strengthening its role from one of "after-the-fact" advisor to that of planner, developer, and coordinator.

STATISTICAL REVIEW

DATA COLLECTION SYSTEM

The Data Collection System of the State Office of Alcoholism, like many other data systems in Alaska, is quite young; as such, it has yet to be fully developed. During Fiscal Year 1976, the SOA began direct operation of data collections, which previously was operated by the Center for Alcohol and Addiction Studies, University of Alaska, Anchorage, under contract from the State Office. This first year of operation proved to be a valuable learning experience for the Office and for the alcoholism programs required to report their activities to the SOA.

During this year, the SOA was able to monitor and evaluate the data collections system on a much closer level than previously. The system was found to have some major deficiencies, a few of which were corrected by the addition of a Monthly Activities Report required from each program during the last half of FY 76.

During FY 76, the data collection system relied most heavily for information on the "Data Base Form for Alcoholism Problems," a client-oriented form which contains both demographic and treatment data. This form has proved to be inadequate and confusing, but neither time, money, or personnel were available to develop a new system, so it was used during all of FY 76. At the end of the year, the Data Base Form was coded, keypunched, and computerized and some simple counting of the occurrences of a number of variables was performed by the computer.

When the computerized tallies were examined, it became obvious that the alcoholism programs were underreporting. The SOA received information on only 3,500 clients. Some programs were not computerized because they do not submit the Data Base Form: Copper Center, Valdez, ALMEA, and Barrow because they are pipeline programs and have different reporting requirements; Bethel is not included because their records were confiscated when there were some internal problems with that program. So five programs were not a part of the computer tally. This reduces the total number of clients known to have received services, but we also know that the other 15 or so programs served more than the reported 3,500 clients during the year.

Because of the obvious deficiencies in the data collection system, in terms of accuracy and completeness of reporting by the alcohol programs, and the type and format of the data collected, a number of long range and short range goals have been developed. These goals are all directed toward developing a data system that is more accurate in depicting the number and types of services given to clients by programs, and more useful in making management decisions by the SOA and the alcohol programs. The long range goals require research into the specific needs of the SOA and the programs. The goals are as follows:

1. A complete revision and simplification of the "Data Base Form for Alcohol Related Problems" is necessary for a more accurate reflection of the status and progress of a client in a program.

2. Revision of the Monthly Activities Report so as to more accurately reflect the activities of a program during a month.

3. Revision of the computer program now based on the data base form to include those programs which do not submit the data base form.

4. Computerization of the Monthly Activities Report in order to provide a comparison to the data base form.

5. Development of a process by which the computer may generate routine reports for the use of both the SOA and the programs.

The research into and planning for these goals has begun. Revision of the Monthly Activities Report is nearly ready for implementation. The projected date for implementation of the revised data base form (or some similar instrument for the gathering of client statistics) is July 1, 1977. The other goals do not have specific implementation dates, but the aim is for sometime during Fiscal Year 1978.

COMMUNITY PROGRAMS

COMMUNITY SERVICES

A total of 20 communities had alcoholism projects funded under the state grants-to-communities programs in 1976. In order to encourage a cooperative, coordinated delivery system of all services available in the community, only single grant applications were accepted from those communities. In addition to those community projects, the SOA funds two projects which are statewide in nature; one is oriented toward prevention and public education and the other toward operating an occupational alcoholism program.

Alcoholism treatment services which involve direct patient contact or care are of six general types. The Office of Alcoholism has classified them for licensing purposes according to the following definitions:

1. Information and referral service: Program which provides educational materials and general information on alcoholism and alcohol abuse, limited counseling, screening and referral to appropriate helping agency.

2. Emergency intoxication shelter or "sleep-off": Temporary non-treatment facility providing minimal or limited protection and care for intoxicated person during the time required to eliminate the alcohol from the system.

3. Detoxification service: In-patient treatment facility staffed and equipped to provide medical and social services for intoxicated persons suffering from the effect of a single entended drinking episode or the long-term debilitating effects of chronic drinking.

4. Rehabilitation center: Intermediate residential care for alcoholics who are not in an acute condition, providing treatment and research, counseling, therapy, evaluation, initial vocational and educational screening, board and room.

5. Halfway house: Transitional group living for persons returning from alcoholism rehabilitation or other parts of the health care system; largely self-administered with a minimum of paid staff, and relying on community resources for continued after-care rehabilitative programs.

6. Out-patient service: Out-patient treatment for alcoholics and related individuals by medical and social service personnel, providing diagnostic evaluation, therapy, social casework, and referral to other community services.

Some alcoholism projects are equipped and staffed to offer only one type of service, some offer several types of services within the same facility. And, of course, a number of services which involve no state funding, such as Alcoholics Anonymous, are available to the person with alcohol-related problems.

ANCHORAGE

Since the beginning of fiscal year 1973, public and private agencies operating alcoholism treatment facilities in Anchorage have been funded under a unified grant. The grantee is the Greater Anchorage Area Borough Health Department, which has responsibility for management and coordination of the total program. Each of the participating agencies retains its own administration, program and development authority, as well as its own unique characteristics and selective client appeal. They all work towards a coordinated network of services with interrelationships designed for effective prevention, early intervention, treatment, and rehabilitation. The GAAB Comprehensive Alcohol Treatment Program attempts to provide services for the entire alcoholic and problem drinker population of the Greater Metropolitan Area, as well as the itinerant alcoholic who gravitates to the Anchorage area. In addition, an intensive effort has been aimed at prevention and education among youth and young adults.

One benefit of the unified approach has been the identification of the specific resources of each facility and the ability to apply the full range of treatment modalities to the needs of the individual alcoholic. The patient is now able to enter the treatment system at whatever point seems optimal for success in his individual case.

A description follows of each individual project subcontracting for state funds under the Greater Anchorage Area Borough Health Department in 1976.

ALASKA NATIVE BROTHERHOOD HALFWAY HOUSE

The ANB Halfway House is a transitional facility within the community and, as such, provides guidance, supervision, and personal services relating to the areas of adjustment which enable the alcoholic to move into independent living conditions. After initial screening, each individual is required to attend group therapy twice weekly. Room and board is provided to the client on a seven-day week basis. There is 24-hour supervision and a program designed to assist the client in overcoming alcohol addiction within the facility. Each individual coming into the ANB Halfway House has come out of a detoxification program as well as an individual treatment program and is ready to move into an aftercare facility. Each individual client is encouraged to find employment; supportive counseling and group therapy is arranged to help him adjust to the work environment and prepare him to move into independent normal living conditions upon completion of the Halfway House program.

ALASKA PSYCHIATRIC INSTITUTE RE-EDUCATION UNIT

The Re-Education Unit provides an intensive inpatient rehabilitation program with the primary method of treatment being group therapy. Inpatient group therapy averages forty-seven man-hours a week. Post-discharge therapy averages six hours per week. Each patient is expected to attend the scheduled group meetings with a goal of the patient learning to share his feelings and experiences with the group and to be a motivating force in helping others share their feelings and experiences to overcome alcoholism and alcohol abuse. Each individual client being admitted to the program goes through a screening process and is provided a psychological diagnostic evaluation prior to admission. There are also subsequent staffings held on a weekly basis following the patient throughout this therapeutic program. The Re-Education Unit also provides medical services throughout the treatment program and then subsequent referral services for ongoing follow-up into the Comprehensive Alcoholism Treatment Program.

ANCHORAGE COUNCIL ON ALCOHOLISM

The Anchorage Council on Alcoholism is a charter chapter of the National Council on Alcoholism--Alaska Region. It functions as a vital referral and outreach component of the Comprehensive Alcoholism Treatment Program. It provides the public with up-to-date information on alcoholism. It is involved in referrals to appropriate alcoholism treatment facilities, education, and alcoholism prevention. It develops contacts with existing groups and organizations, high school and college personnel, professionals, retired persons, and interested citizens. It attempts to utilize all available educational aides and to develop literature specifically aimed at the needs of the Greater Anchorage Area Borough. It aims to provide information regarding the disease of alcoholism to the public with early intervention and prevention as one of its goals. The Anchorage Council's telephone is manned on a 24-hour basis to provide a referral point for individuals in need of alcoholism treatment and alcoholism information.

CHRISTIAN, METHODIST, EPISCOPAL WALK-IN CENTER

On September 10, 1973, the CME Church was awarded a contract for $85,000.00 by the Borough Assembly to provide a 24-hour Walk-In Center for the indigent alcoholic and alcohol abuser. The original implementation of the Uniform Alcoholism and Intoxification Treatment Act in October of 1971, plus the lack of funding at the State level for the Act, dictated the implementation of detoxification to the Social Development Center, located at International Airport on Point Woronzof. Because of the long distance between the facility and the core of the area of downtown Anchorage, several technical problems were created relating to the pick-up of individuals incapacitated by alcohol. These individuals had to be held in the lobby of the police station as a holding room. The Loussac Library, the Alaska Native Medical Center waiting room and other public places had been utilized by intoxicated individuals seeking shelter and averson from routine habitation of liquor dispensing establishments. Therefore, the alternative of CME Walk-In Center was funded to provide a drop-off point in the core of the downtown Anchorage area.

CME provides temporary shelter to the inebriate. It offers basic hygienic services, secondary nourishment, sleep-off facilities and the opportunity for entrance into appropriate local rehabilitative resources to the off-the-street indigent alcohol abuser through a motivational counseling unit. Arrangements with the Anchorage Police Department were made to receive incapacitated alcohol abusers who were under protective custody. The CME Walk-in Center is the primary pick-up station for any incapacitated inebriates. The Center also provides a temporary controlled and supervised shelter for the off-the-street indigent alcohol abuser, with a capacity for up to 200 individual clients per day. At the initial point of intake, a determination is made whereby alcohol victims may be referred to appropriate treatment facilities or benefit from other treatment resources. It provides a screening and holding station and emergency shelter. A motivational counseling unit is also made available whereby the indigent alcohol abuser can avail himself of the opportunity to find immediate remedial resources for various problems he may have or have encountered. Individual counseling is provided on an as-needed basis. The CME Walk-In Center is operated on a 24-hour day basis, seven days a week.

SALVATION ARMY GRADUATE HOUSE

For several years, the Salvation Army was the primary treatment facility of alcoholism within the State of Alaska. The Rehabilitation Program of the Salvation Army is a 52-bed facility that moves clients through work stations within the Salvation Army domain and prepares them to move into the Graduate House which is a residential treatment, community-based, peer-group oriented facility.

The Graduate House provides a capacity of 14 beds for individual treatment in the Halfway House setting. Services are related to those areas of adjustment which enable the alcoholic to move into independent normal living conditions on a short-term, one to twelve months supportive program. The Halfway House provides shelter, food service, individual counseling, group counseling and referral to other facilities as indicated. Treatment and discharge programs are planned for clients on an individual basis.

SOCIAL DEVELOPMENT CENTER, INC.

The initial program of the Social Development Center is detoxification. The detoxification program is administered at the Center as a limited sleep-off program. The client is given bed rest while being attended by a registered nurse and a detoxification orderly. The client also receives counseling while he is in detoxification, and plans are formulated as to his future care. Educational films on alcoholism and group sessions are available for persons in detoxification and referrals are made to other treatment facilities in the event the client does not elect to stay in the rehabilitative program at the Center.

If the client elects to become involved in the treatment program at the Center, he is screened by a panel of two staff members and two clients in the rehabilitation program to determine his sincerity to do something about his alcoholism. If accepted into treatment, the client can commit himself into the program for a period of thirty to sixty days. Ongoing weekly evaluations are made by the entire staff of all clients who are in treatment. Motivational counseling and group therapy are the prime focus aspects of the rehabilitation treatment plan. Group sessions are held daily by various group facilitators. Alcoholics Anonymous groups meet three times a week at the Center and one-to-one counseling is provided as needed. The Center also has, as an integral part of their treatment plan, the formation of a crafts shop; occupational therapy is also a vital part of the treatment plan. Referrals are made following the rehabilitation program for halfway house treatment or assistance in the community for continuing use of alcoholism treatment staff.

STUDIO CLUB

This facility is a Halfway House which provides halfway care and residential treatment for both men and women. It is a community-based, transitional residential facility (peer-group oriented.) It provides 24-hour supervision, room and ten days board in a supportive, non-drinking environment. Clientele are alcoholics moving out of other treatment facilities who have been provided detoxification and short-term intensive inpatient treatment. For the first thirty days each client is required mandatory attendance at group therapy, individual counseling and other therapy sessions outside the facility as arranged in conjunction with the Comprehensive Alcoholism Treatment Program. After the thirty-day period, the client has the option to further attend these meetings and other therapy sessions as they pertain to his individual treatment plan. He is required to financially support his own room and board after the initial ten days by finding some type of gainful employment to meet these ends, but continues to be involved in an individual treatment plan worked out in conjunction with the facility with his active participation.

BARROW

The extraction of oil and other minerals from the Prudhoe Bay area has had serious social repercussions on the people of Barrow and villages in its region. Many local people have taken advantage of the expanded opportunities for employment which has increased their economic power. Because of the "one week on, one week off" scheduling, people have a great deal of free time. This time and additional purchasing power has resulted in a staggering increase in liquor sales. With that increase has come an increase in alcohol-related problems. Approximately 50% of the 3,768 persons residing in the Borough are in need of services to some extent. Virtually all arrests in the year previous to this program were somehow alcohol related.

Through State Pipeline Impact funding to the Barrow Council on Alcoholism, programs have been started which:

1. Provide counseling services for the substance abuser.

2. Survey available community resources and educational materials for the alleviation and prevention of substance abusers.

3. Train and develop a volunteer auxiliary to amplify the director's efforts and to form a care group of staff for future programs.

In FY 76 emphasis focused on educating the population to become aware of their alcohol and drug problems.

FUNDING

P.I. $ 54,730

BETHEL

Bethel is the largest community in Southwestern Alaska with a population of 3,100. It is located on the banks of the Kuskokwim River and is accessible only by boat or by air. It is the main trade and transportation center for an area of 155,000 square miles encompassing 52 villages and a total population of 15,000 people, 90% of whom are Eskimo.

The alcohol program in Bethel offers a variety of treatment programs: Information and referral, detoxification, and rehabilitation. Early case-finding techniques are being developed to aid in the identification of persons with alcohol problems before gross symptoms present themselves. The program has attempted to foster a sense of cultural identity and self-esteem through involvement in traditional crafts and industries as a rehabilitation activity. After appropriate testing for vocational aptitude by the Kuskokwim Community College vocational training is provided. Suitable boarding facilities are found for those clients who would benefit from removal from the home atmosphere.

COPPER RIVER NATIVE ASSOCIATION INC.

Copper River is one of six communities that received a special "pipeline grant" through the State Office of Alcoholism to deal with increased problems of alcohol abuse and alcoholism generated by construction of the trans-Alaska Oil Pipeline. The program received a 55,000 dollar grant in FY 76. Although there are other counseling services in the area they are mainly concerned with the pipeline workers themselves, while the Copper River Native Association Inc. is primarily aimed at the Native population and other members of the population who have been adversely affected by pipeline activities in the region.

The program delivers direct services in the form of counseling, information and referral. Counseling is performed on a one-to-one basis, and is accomplished by traveling to various villages at least once every two weeks. The stated goals of the program are as follows:

1. To continue the efforts in combating alcoholism through a preventive education program in the Copper River Area;

2. To provide counseling services in alcoholism to the communities of Chistochina, Copper Center, Gukona, Gulkana, Tanlina/Glennallen and Chitina;

3. To provide information and referral service in alcoholism to the Copper River Area.

P.I. $ 55,000

DILLINGHAM

Educating the members of the Dillingham Community and twelve outlying communities as to the effects of alcohol abuse was one of the main goals of the Dillingham program in 1976. Target groups for information and referral services, and out-patient counseling were juvenile alcohol abusers, and middle-aged abusers. Efforts were also concentrated on coordinating all alcohol-related resources in the community--PHS Social Workers, Regional Technical Assistant, and Bristol Bay Health Corporation.

FAIRBANKS NATIVE ASSOCIATION/COMPREHENSIVE ALCOHOLISM PROGRAM

The Fairbanks Native Association/Comprehensive Alcoholism Program is committed to providing alcoholism treatment services and public information of alcoholism and alcohol related problems to the Fairbanks North Star Borough population. The objective of the program is to provide a therapeutic environment with professional staff designed to treat all aspects of alcoholism and alcohol abuse and enable the individual to return to productive community life.

The alcoholism program consists of three service components and one medical facility. These are: a halfway house, rehabilitation center, detoxification unit and an emergency alcoholism service center.

The Rehabilitation Center is both a residential treatment center housing thirty clients and an out-patient treatment center. The Rehabilitation Center is staffed on a 24-hour basis. The residential program consists of classes, group therapy, individual counseling, Alcoholics Anonymous, and recreational activities. The outpatient treatment program is aimed at providing services to those unable to engage in a residential or day treatment program. Each program is worked out on an individual basis, but includes discussion groups, counseling, and group therapy. All rehabilitation programs take a realistic approach to therapy emphasizing the development of coping strategies to deal with life situations.

GALENA AAA PROJECT

Galena is an Athabascan fishing village of less than four hundred in the summer and five hundred in the winter, situated on the bank of the Yukon about two hundred miles west of Fairbanks. It is a comparatively new village, the city council having been formed less than five years ago, yet it supports a full high school, a new water plant, a new jail, a well-staffed health services clinic, a public housing development and an active community hall which is operated by the Galena Alcoholism Program and serves mainly as a prevention/alternative-to-drinking recreation program.

The city council applied for funds for the alcoholism program in 1973. More and more young people were attaching themselves to alcohol to fill the void left by not having to do the subsistence chores like packing water and chopping wood that had been such an important part of Athabascan adolescence. The alcohol program was tailored to reach into the heart of the Galena abusive drinking culture and focus on the primary cause of alcoholism, that is, nothing else to do. The program was awarded $14,000 in FY 76.

Thus, the Galena program is rooted in the service of "prevention/alternatives-to-drinking/recreation", with counseling and other rehabilitation services offered as secondary services due to the traditional revulsion of formal counseling by Alaskan natives.

The program is perceived as highly successful by the village people. They report a noticeable decline in street fighting, in child neglect and abuse, in number of bottles strewn about, in young people taking up the liquor habit, in drunks suffering from accidents, and so on. There is an apparent concensus that Galena has enjoyed a remarkable turnabout due to the new way of life provided by the activities and services of the "AAA" program.

JUNEAU

ALCOHOLISM CENTRAL AGENCY

In 1976 the Juneau Alcoholism Central Agency (ACA) branched out into a multi-directional approach to the problem of alcoholism in Juneau. The services of the Agency were available to any individual seeking help, information, or education, relative to alcohol or alcohol abuse. The various components of the ACA worked together in such a way that the newly interviewed client seeking help or otherwise contacted was processed from initial point of contact through the various stages essential to a proper diagnosis, treatment and rehabilitation. The program consisted of the following services:

1. A full day treatment center for individual, group and family counseling;

2. An Alcohol Information School which provided a driver's education service for OMVI traffic offenders;

3. A Crisis Center which operated on a 24-hour basis as a walk-in and sleep-off facility;

4. A Law and Criminal Justice program which included an Alcohol Information School, Court Referral Agency, and group counseling at the Southeast Regional Correctional Institution;

5. An occupational program for the early identification of problem drinkers in the work place;

6. The provision of Halfway House services through a contractual agreement with the Gastineau Manor Halfway House.

KODIAK

The Kodiak Council on Alcoholism is the basic coordinating agency for the prevention and treatment of alcoholism on Kodiak Island. It works closely with all interested agencies and organizations in coping with alcohol abuse and alcoholism. In March 1976, the Kodiak Council received accreditation from the Joint Commission on the Accreditation of Hospitals. The Kodiak Alcohol Program operated on three levels in FY 76:

1. Information and Education Center which includes maintaining film, tape and literature libraries. The Center also serves as a "drop-in" facility for the public and clients. Referral and Consultation services are available on a scheduled basis. The Center is used on a regular basis by such other groups as Alcoholics Anonymous and T.O.D.A.Y. (Team of Drug Alcohol Youth)

2. Hope House Alcoholism Treatment Facility which is a four-week residential treatment program extending into a 60-day halfway house program and aftercare.

3. Sleep-off Facility includes beds for ten individuals; free coffee, tea, and hot chocolate; shower and laundry facilities; and the continual care of trained personnel on duty.

KOTZEBUE - MAUNELUK, INC. (HOPE CENTER)

Hope Cente located on the main artery of Kotzebue, has been operational since 1970. It serves clients mainly as a "prevention/recreational alternative to drinking. The philosophy of Hope Center is to develop a program of prevention and treatment consistent with positive traditional Eskimo values that also reflect the realities of changing present-day lifestyles. Target groups include alcohol abusers and families in the community and outlying villages.

The center is serving a daily average of 25 clients who come to watch TV or play cards and other games. Kotzebue is lacking adequate recreational facilities, and the center serves as a viable alternative to drinking.

NOME - NORTON SOUND HEALTH CORPORATION

In general, the Nome Alcoholism program is one of the most highly functioning programs in the state, largely because of its comprehensive design. The alcohol/mental health program is rooted in a network of primary case counselors based in the twelve surrounding villages who are tightly integrated into a total, overall continuum of care plan for delivery of services. The program is unique in many aspects. It is operated by a Native regional health corporation, and the alcohol program is totally integrated with the mental health program. All staff are provided eight weeks per year of highly technical in-service training by the program's director.

The overall program goal is a 20% reduction each program year in:

1. Deaths due to suicide.
2. Deaths due to excessive drinking.
3. Days spent in hospital due to mental illness, alcohol or drug abuse.

The alcoholism program had a total budget of $126,121 in FY 76, $85,430 of this state funds and $40,691 of in-kind contributions.

An on-site evaluation conducted by the State Office of Alcoholism in March of 1976, found the Nome project to be extremely receptive to the need of its clients. Program people in the villages and in Nome provide twenty-four hour emergency counseling and transportation services with 100% medical back-up.

PETERSBURG COUNCIL ON ALCOHOLISM

The goal of the Petersburg Council on Alcoholism is to "initiate, foster, and operate programs designed to alleviate and prevent alcohol and other dangerous drug abuse in the Petersburg area." Adult alcoholism is the prime focus. However, there is a highly-functioning youth center directly across the alley from the alcoholism center, and both programs work toward similar objectives for the two target groups, youth and adults.

The following services are offered by the program:

1. Information, education, and referral
2. Out-patient
3. Prevention
4. Community planning development.

In 1975, a twenty-eight foot commercial trolling vessel was donated to the program. The boat was donated to be used in the rehabilitation process and the clients have painted and insulated it and equipped it with additional trolling gear. The boat has proved to be a valuable therapy tool in enabling clients to obtain recreation, as well as obtaining fish and game.

The State Office of Alcoholism conducted an on-site evaluation of the Petersburg program in December of 1975. It was found that the program was integrated into the community and no major problem existed.

SEWARD COUNCIL ON COMMUNITY SERVICES

The Seward Council on Community Services is located in the heart of downtown Seward, adjacent to City Hall. The Council has both an Alcoholism Unit and a Mental Health Unit. Comprehensive Alcoholism services are offered through the Council, including alcoholism education, a drop-in center, silent drinkers program, and counseling. There were no other alcoholism services offered in Seward in FY 76. The Council reports that people are augmenting their use of available services for more than just crisis situations. More and more family members are frequenting the center to receive aid in helping relatives with alcohol-related problems.

SITKA COUNCIL ON ALCOHOLISM AND OTHER DRUG ABUSE, INC.

The Sitka Council on Alcoholism and Other Drug Abuse, Inc. serves the Greater Sitka Borough whose population is approximately 7,000. Its basic philosophy is that alcoholism is a complex disease affecting body, mind and spirit. Because the illness expresses itself differently in each individual, treatment must be tailored to meet individual needs.

The Council's purpose is to provide information referral, education, out-patient and in-patient services for the treatment and prevention of alcoholism and alcohol and drug abuse for the people of Sitka and outlying areas. The approaches used are 30-day in-patient treatment, one-to-one counseling, halfway house residence, Alcoholics Anonymous, or a combination of these.

There are three separate facilities:

1. Information and Referral and Out-patient Counseling Center
2. Alcoholism Therapy Services is a rehabilitation unit at the Mt. Edgecumbe Hospital funded through a federal PHS grant and administered by the Sitka Council.
3. Aurora's Watch, the halfway house.

TOK (UPPER TANANA REGIONAL COUNCIL ON ALCOHOLISM, INC.)

The Tok Alcoholism Program provided outpatient counseling treatment to about 100 clients in Tok and in surrounding villages of Northway, Mentasta, Tetlin, Dot Lake and Tanacross. By December 1976 the program began expanding into the area of recreation in the town's new community hall.

Although State Office of Alcoholism granted only $13,700 for FY 76, the Federal Government through NIAAA has been funding and will be funding the program at ab ut $114,000 per year for six years from 1972.

Services provided include: Drop-in, individual and family counseling, information and referral.

Tok's program centered around outpatient counseling services, which are offered in five village counselors' homes and/or the village community hall, and in the small, new administrative building in Tok.

UNALASKA ALCOHOLISM PROGRAM, INC.

Unalaska is a picturesque fishing village located in the Aleutian Islands. It has a population of 750 year round, with an influx of about 24% during fishing season.

The Unalaska Alcoholism Program was incorporated in 1974 for the purpose of initiating, fostering, and operating programs to alleviate and prevent alcoholism. Aside from an alcoholism program at St. Paul, this is the only alcoholism program on the Aleutian chain. It is the focal point for both the Aleutian and Pribilof Islands, serving a population of approximately 8,000 persons located in 29 communities.

The basic goal of Unalaska Alcoholism Program, Inc. is to provide a non-judgemental setting in which clients can learn to cope with normal day to day stresses without resorting to alcoholism. The services offered are education, prevention, recreation, emergency sleep-off, non-medicated detoxification, out-patient and referral. Follow up and referral are also an integral part of the program. A three year follow up program has been instituted whereby frequent contact is maintained with the client either by phone, personal contact, or a visit to the center by the client. An emergency shelter handles detoxification and in-patient clients. A recreational center was established for the purpose of prevention and social reintegration.

Development of the alcoholism program has been successful for Unalaska. The program would like to expand its services to meet the needs of the Aleutian chain villages. Ideally, each community would establish its own alcoholism program and use Unalaska Alcoholism Program, Inc. as an information and training base for the chain.

VALDEZ ALCOHOLISM COMMISSION

The Valdez Alcoholism Commission officially began in October of 1975. Originally a small town of under one thousand persons, Valdez rapidly increased in population to over four thousand due to the influx of pipeline personnel and their families. In addition, another four thousand employees of pipeline contractors are employed and reside across the bay from Valdez at the Terminal Camp Site. These people are also being serviced by the over crowded city facilities. The town received a special "pipeline grant" of $65,260 in FY 76 to deal with increased problems of alcoholism and alcohol abuse generated by this increase in population.

The present program is limited to an educational referral center. There has been wide-spread distribution of alcohol related materials in the community, thus creating an awareness of the services offered by the agency. The initial goal of coming into contact with the schools has been realized. A Drivers Alcohol Information School (DAIS) for driving while-intoxicated offenses and all alcohol related offenses has been started. A local AL-ANON group has been established, as well as an AL-Ateen group. FY 77 plans include increased counseling services.

FUNDING

P.I. $65,260

WRANGELL

The Council of Alcoholism and related Drug Dependencies in Wrangell's stated purpose is to reduce the incidence of alcohol abuse and alcoholism in the community and to teach family members how to cope with the alcoholic. Their overall objective is to help people who want help with alcohol related and drug related problems.

The Wrangell program offers a variety of services. The drop-in center is available for individual and group counseling both day and evening, and also offers weekly AA meetings. There is a 24-hour crisis intervention counseling service. Educational programs, information, and referral, out-reach counseling and consulting services are also an integral part of the program.

The council offers a comprehensive program to the community. The school education program is especially well developed and effective. This program is presented to all junior and senior high school students for approximately one week. It is well accepted by the students and the community as a whole, and is a highly visible educational service.

YAKUTAT ALCOHOLISM PROJECT

Although the Yakutat Alcoholism Program is funded as an information referral out-patient program, many diversified services are offered. Clients are counseled on a one-to-one basis in the office, on the street, or whenever they call on the phone at any hour of the day or night. AA meetings are held once a week, and an arts and crafts workshop meets at least that often. There is an established teen-age level group where movies are shown, sometimes on a nightly basis. All of these various services compliment each other well.

Because the Alcoholism program is an integral part of community activities, the program is involved in almost all aspects of community life. The Native Health Corporation recognizes the Alcoholism program as a valuable entity to the community. The program maintains a totally involved operating relationship with other local related agencies, such as the police, courts, school system, AA, AL-ANON, health center, Welfare, etc.

Dear ~~Don~~,

Attached is a suggested revision of HB 340 (SB 242), a bill relating to the treatment of substance abusers.

The primary focus of the proposed legislation is the combining of the offices of drug abuse and alcoholism--a concept that we support wholeheartedly. Additionally, it is a concept that has gained national support and is currently being implemented by many states.

Unfortunately, we cannot support the bills as they presently stand. While the combination of offices does have the potential for better resource allocation and improved service delivery, such benefits are not apparent within the existing proposed legislation.

Using the recently passed community mental health center legislation as a model (a model we believe to be exemplary), we have attempted to re-draft HB 340 so it too will assure local participation and control. Additionally, as communities implement the integration of human service delivery components (as appropriately required by the Community Mental Health Centers Act), the present HB 340's focus on centralization would prevent consolidation and eliminate any meaningful local authority and flexibility.

We respectfully request that you consider the attached proposal, hold hearings as appropriate, and contact us as required.

Sincerely,

Paul

Juneau, Alaska 99811

Dear Rep. Parr: RE: House Bill 340

I have recently obtained a copy of House Bill 340 which I understand is identical to Senate Bill 242 that I would appreciate the opportunity of testifying in regards to.

I, the other staff members, and members of Alaska Family House basically support the idea of consolidating the drug abuse and alcoholism programs. Our particular program has not faired well in terms of support by the past State Office of Drug Abuse. Consequently, we feel that any change for us and our addict population would be better than the existing situation.

On Page 1, Section 47.37.020 wherein it states that the coordinator shall be a qualified professional, I ask the question why not consider a paraprofessional? There are many individuals who have actually been there themselves that have the necessary educational background to fill such a position.

On Page 7, Section 47.37.080 qualification of Board members and following that it lists where the nine members should come from and what kind of people they should be. Herein I strongly recommend that you have at least one or two exaddicts that have successfully completed treatment on that Board. They could add invaluable input to the other seven Board members. A recovered alcoholic should also be on that Board. I think that it behooves the legislature to finally put somebody on the Board that can give the other Board members the kinds of information that they need to adequately address the decision making processes that are necessary if this Board is in fact going to rehabilitate addicts and/or alcoholics.

My next question is, I have never seen the "appropriate standards" established under Section 140A of this chapter. I do not have those standards and wonder if I could get a copy of them.

On Page 11, Section F, there is the following statement: "No treatment facility may be operated in the State without a license and no facility may receive State funds under a contract or grant made unless it is licensed as a public treatment facility". In regards to the first half of that sentence, "no treatment facility may be operated in the State without a liscense", I do not know who wrote this section of the Bill, but that language does preclude Alcoholics Anonymous, and it would preclude the Alaska Family House structure. We are not licensed now and we do not want to be licensed. Our whole concept is "the family" structure. We are an anti-program that stresses such things as self-help, the work ethic, and making the best out of bad situations as done in everyday life. The day that the Alaska Family House program is licensed, there will be psychiatrists here, nutritionalists here, volumes of paperwork that must be done, never ending reams of forms to be filled out, a fantastic increase in the cost per day of our clients, the need for more staff, and we will see the end of the addict helping addict concept. My next statement in regards to the last half of that sentence which reads "and no facility may receive State funds under contract or grant made unless it is licensed as a public treatment center", I am very glad that this was not law in 1973 when Alaska Family House was first founded or it wouldn't be here. My next question in regards to this statement is, what constitutes a treatment facility? What do you do about the situation where three or four or five individuals rent an apartment or a house and "treat" themselves with the AA type concept or the addict helping addict concept? Is that classified as a treatment facility?

On Page 13, Section B wherein it states, subject to regulations adopted by the Department "if a person is refused admission to a licensed or public treatment facility, the administrator shall if possible refer the person to another licensed appproved public or private facility". My question in regards to that is simply, why? Why couldn't this individual be referred to an unlicensed treatment facility such as an AA group or Alaska Family House or to that apartment where the four people decided to band together to do something about their alcoholic and/or drug addiction problem?

On Page 14, Section D, there is a sentence that reads "except for diagnosis and referral, alcoholism treatment programs shall be seperate and distinct from treatment programs for drug addicts". Again, I wonder why? I have had alcoholics in Alaska Family House that have gotten a lot of good out of the program working right along with the addicts. I have also seen many addicts that participate in AA and get something out of it. Why, by law and legislation myst these two people with basically the same problem, i.e., chemical dependancy, be seperated through the legislative process? It is my opinion that if it works, do it. Again, I have seen drug addicts use alcohol programs, a multitude of treatment centers, religion, and all kinds of things to change and simply ask the question why exclude anything that might work. In that same paragraph there is a sentence of "no person addicted to an opium derivative may be treated except at a licensed

drug addiction center". Again a person addicted to an opium derivative should be allowed to seek treatment anywhere he or she feels that there is some help.

On Page 22, Section 47.37.220, wherein it states visitations and communication of patients. "Patients in any licensed treatment facility under this chapter shall be granted reasonable opportunities for adequate consultation with counsel." We can agree with that wholeheartedly as the right to counsel is imperative and means that the individual must have some problems or there would be no question of counsel. That sentence does, however, continue with the words, "and for the continuing contact with family and friends including the use of telephone facilities consistant with an effective treatment program". I have seen many addicts who have members of their immediate family using drugs. Most addicts that I have seen come into this program have nothing but addict friends. It is imperative that the addict in treatment be seperated from the addict still using. No matter if they are related or "friends". If that is not done you will invariably have two addicts using and not one in treatment.

In regards to Section B of that same Section, wherein it states that "no mail or other communication to or from a patient in a licensed treatment facility may be intercepted, read or censored", again you have problems in that area. We do in fact open mail here at Alaska Family House. Each resident who comes in signs a waiver allowing us to do that and you would not believe the drugs we have intercepted, plans to bring drugs into the program, pornography, and other seriously upsetting information. At Family House and most other major therapeutic communities such as Delancey Street in California and Habilitat in Hawaii, there is an initial black out period that is important. Most therapeutic communities are and must be drug free at all times. All avenues of its coming into the facility must be constantly explored investigated and halted wherever possible. These particular sections would totally tie our hands at Alaska Family House.

In regards to again on Page 22, this time Section 37AS47.37.24A, most clients, which we prefer over the word patient, have no funds and we are concerned that some people with funds might decide to delay treatment until they have expended their revenues (probably by the purchase of more drugs and possibly O.D.) and also pass the time when the urge for treatment has passed.

On Page 24, numbers 13 and 14, wherein drug addict and drug abuser are being defined, I have known many barbituate addicts but very few barbituate drug abusers. Another point is, what of methadone and other synthetics that are even more addictive than opium derivatives? They too should be classified as drug addicts.

On Page 24, Section D, last sentence wherein it says all community match contributions to grants shall be in the form of cash and I wonder why not goods and services? If we get a $100 worth of canned vegetables from BiLo, isn't that the same as $100 cash in so far as the program is concerned?

In closing this correspondence, I again would appreciate an opportunity to verbally testify in front of your committee and again we wish to state that we can support the concept of joining the drug and alcohol Boards. I would, however, not like to see legislation passed that would make treatment less accessible and that would make our jobs here at Alaska Family House more difficult then they are presently.

For the past three years, we have been involved in an almost constant fight with a very small group of bureaucrats that are constantly thinking in terms of new forms, new requirements, new criteria that in fact takes away from the treatment process. Most of these ideas are gleened from Federal guidelines and recommendations through the National Institute of Drug Abuse, etc. Most of those programs are no longer even in existence. One of the things that attracted me personally to the State of Alaska was the possibility of working directly with people without the tons of bureaucratic redtape, licensing requirements, etc., etc., that is the trend in the lower 48. I would hope that Alaska would not get sucked into that kind of mentality.

If I can be of any further assistance in regards to this matter, please feel free to contact me by phone (907-279-5502) or by mail.

Sincerely,

Terry M. Stahlman

Document# House HESS #5

Honorable Charlie Parr
H. & S.S. Committee Chairman
House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Representative Parr:

Mr. Cole, in the State Office of Alcoholism; Mike Waltnie and Rae Ann Hickling, from Anchorage; and Ms. Hilburn, in the State Office of Drug Abuse have discussed proposed changes in this bill. The proposed changes are:

...Page 1, Line 26 ... Add the word "abuse" after the word "drug"

...Page 4, Section 10 ... Should read: "Coordinates with Local Communities, the Regional Health Systems agencies, and the State Health Coordinating Council on the Preparation of an Annual Comprehensive Plan for the Prevention, Treatment and Control of Alcohol and Drug Abuse; to be Submitted to the Commissioner and the Citizens of the State of Alaska for Review and to the Governor for Approval."

...Page 5, Line 20 ... Delete the word "intoxicated", add the word "drug abusing."

...Page 7, Section 9 ...(47.37.080) Should be amended to read: "Of the nine members, no person having a monetary interest in the outcome of the recommendations of the Board shall serve as a Board Member." (All other language should be deleted.)

...Page 9, Section 47.37.110 ... The following changes are proposed:

110... Duties.. add "The State Health Coordinating Council" after the word "Commissioner"

110 (1) Add the words "and physical" between "Mental" and "Health"

110 (3) Should read: "Social factors which affect the causation, treatment and rehabilitation of alcoholism and drug abuse"

110 (4) Should read: "Legal processes and legislation which affect the rehabilitation and treatment of alcoholics and drug abusers"

110 (5) Should read: "Programs of public relations, prevention and education concerning the problem of alcoholism and drug abuse conducted by a department of state government or by any organized group"

...Page 10, Section 130; Lines 13-15 ... Delete the words "and when feasible"; include an amended sentence to read: "Programs shall be established with maximum local community and native health corporation involvement."

Section 130 (D)... Delete

...Page 14... Delete (D) ... Replace (D) with the following: "Based upon local determination of need, there may be alcoholism treatment programs, drug abuse treatment programs, or integrated treatment programs for both alcoholism and drug abuse. There may be integrated prevention programs for all forms of substance abuse. All State and Federal laws and regulations relating to requirements for methadone maintenance for persons addicted to an opiate derivative shall be strictly adhered to by all affected treatment facilities licensed or funded by the office. There shall be state regulations which establish standards for licensure for all classes of treatment programs."

...Page 25, Lines 3 & 4 ... Should read: "Grants will be awarded on the basis of demonstrated need and the merit of the application. In considering applications for alcoholism programs, the department shall, if all other factors are equal, give preference to applications in political sub-divisions which devote local government revenues generated by the sale of intoxicating liquor to the treatment of alcoholism."

...Page 25, Section "D".. Should be amended to read: "All community match contributions to grants shall be in the form of cash, except grants to "poverty" communities for the first three years of state grant support may meet the match requirements through the provision of in-kind contributions."

...Page 24, Section 310, Line 21: Delete (A) "Profit making corporation" from the list of eligible entities for grants in aid support.

...Page 27, Section 43, Line 29: Should have included the following definitions:

..."Drug Abuser"... means a person who misuses a drug or drugs to the detriment of his/her health and social well-being.

..."Cross Addicted Person"... means a person who is addicted to more than one class of drugs.

(Note: Existing AS 47.37 definitions of "Alcoholic", should be retained. All references to "Drug Addicts" should be stricken from the language of the bill.)

All of the above changes have been found acceptable by the Southeast Alaska Alcoholism Program Managers, the Petersburg Youth Council and the Petersburg Alcoholism Board, as well as the persons mentioned from the drug field in the first paragraph in this memo.

The Department would like to suggest one more addition to the bill which might facilitate the plan to reorganize the offices. That provision would read as follows:

"There shall be created a "Technical Advisory Panel" to advise the

Coordinator and the Advisory Board on all matters having to do with the impact of office policy on the administration of local programs. The Advisory Panel shall be composed of two alcoholism program managers, two drug abuse program managers, and one representative each from the "Alaska Native Commission on Alcoholism and Drug Abuse" and "The National Council on Alcoholism - Alaska Region."

This Panel shall meet quarterly with the Governor's Advisory Board on Alcoholism and Drug Abuse and the Coordinator for the purpose of discussing issues which impact on the administration of local programs.

Travel and Per Diem: Should read the same as the "Travel and Per Diem" provisions for the Governor's Advisory Board.

Your consideration of the proposed charges will be greatly appreciated.

Sincerely yours,

By Robert L. Cole

Francis S.L. Williamson

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

This bill would combine the offices of Alcoholism and Drug Abuse, and would also combine their respective Advisory Boards. The proposed budget for a new Office of Alcoholism and Drug Abuse is attached, and in total equals the sum of the two budgets originally submitted by the Governor for the two separate offices. These original budgets were reduced by $40.8 by the Governor's Budget Review Committee in anticipation of the proposed merger. The combined budget therefore carries forward the savings of $40.8, but, if adopted, would not affect the total Governor's budget as originally submitted.

Document # General #32

March 24, 1977

RECEIVED 3-25-77

Honorable Charles H. Parr
House Representative
Capital Building - Room 110
Juneau, Alaska 99801

Dear Representative Parr:

We have reviewed both the letter and application you recently received from Henrietta Nugen, Assistant Director, of the Anchorage Alcohol and Drug Rehabilitation Center, Inc. (Studio Club). In response to that letter, we are enclosing as Attachment A the documentation provided to legislators previously contacted by the Studio Club. This material was prepared by the Municipality of Anchorage Health Department to inform all concerned of the on-going communications and negotiations between the Municipal Health Department, the Salvation Army, and the Studio Club in their effort to reach a satisfactory agreement that would include the Studio Club's Half-Way House services in the Municipality's comprehensive alcoholism program. This material should provide a clear description of what has occurred in the negotiation process; however, Staff of the Office of Alcoholism will be happy to answer any questions or clarify any issues you may have regarding this material.

Briefly, the Municipality of Anchorage is and has been the recipient of State Office of Alcoholism grant and/or contract funds since 1974. The Municipality has sub-contracted funds received from this office to the various alcoholism service providers in the Anchorage area. In 1975, the Greater Anchorage Area Borough Comprehensive Alcoholism Program received a conditional one year accreditation from the Joint Commission on the Accreditation of Hospitals. In December of 1975, evaluators from the State Office of Alcoholism conducted a comprehensive evaluation of all the sub-contractors providing services under the grant to the Municipality and noted several major deficiencies in the service delivery system. In March of 1976, the evaluators from the JCAH conducted a follow-up evaluation of these sub-contractors to determine the progress made in correcting the previously noted areas requiring up-grading. The result of that site visit was the loss of their JCAH accreditation. At that point, the Municipal Health Department began an intensive effort to review, evaluate, and reorganize the

provision of alcoholism services in Anchorage. The result of these efforts was the decision to sub- ontract grant funds received from the SOA to a single contractor. They requested proposal bids and the proposal accepted by the Municipality was the one offered by the Salvation Army. This was accomplished by September, 1976.

Under this arrangement, the Salvation Army is responsible for providing direct services for a walk-in-center, emergency service patrol, non-medical detoxification, 30-day in-patient rehabilitation, aftercare, and long-term care services. Grant funds were also provided for the Salvation Army to sub-contract for the provision of Information and Education Services and Half- Way House services to complete the comprehensive program. They were successful in sub-contracting with the Anchorage Council on Alcoholism for educational services and, as you are aware, unsuccessful in reaching an agreement with the Studio Club for Half-Way House services.

The position of this Department has been one which supports the Municipality's right and responsibility to govern its own affairs. As a home rule municipality that has accepted the responsibility of the area's health powers, the State Office of Alcoholism has supported the Municipal Health Department's right to decide how a comprehensive system of alcoholism services can best be provided and who can best provide those services.

It is also the position of the Office and the Department that to grant funds directly to a service provider, by-passing the Municipal system, would seriously undermine and jeopardize the Municipality's rights, as well as set a dangerous precedent for other home rule governments. Funds are available for the operation of the Studio Club through a sub-contract arrangement with the Salvation Army.

In regard to Ms. Nugen's remarks regarding the funds available for supplemental awards to currently funded programs, these funds became available as a result of the de-funding of the City and Borough of Juneau's Alcoholism Central Agency in January, 1977. The total amount of State General Funds available is $71,100. Of this amount, $10,000 is committed to the City and Borough of Juneau for the purpose of planning and reorganizing their alcoholism services and $10,000 is committed to fund the Cook Inlet Council on Alcoholism. The Cook Inlet Council is a new program in that it has not received financial support from this office in the past. However, at the May, 1976, funding meeting the Governor's Advisory Board on Alcoholism recommended the funding of their application "upon the availability of funds." Those funds have not been available until this time. The remaining $51,100 is to be awarded as supplemental funds to the following community programs: Bethel, Dillingham, Gastineau Manor (Juneau), Kodiak, Ketchikan, Kotzebue, Nome, Petersburg, Sitka, Tok, Unalaska, Wrangell, and Yakutat. Each program

was advised that the maximum available to their program would be $3,930.

The decision to make these funds available to current grantees as a supplement to their initial award was based primarily on two factors. The first was that it did not appear reasonable to fund new programs considering that funding would only be available for April, May, and June, 1977, and that no committment could be made to continue funding in FY 78.

The second factor in determining who should be eligible for these funds was the consideration that the initial applications from currently funded grantees were cut in the award process due to insufficient funds to meet all of their needs. In order to meet the increasing operating costs of our grantees, no funds were allowed for training of staff or for purchase of needed equipment. It is probable that training and equipment funds will again have to be viewed as "luxury" items in FY 78. Therefore, it was felt that the additional funds available at this time would enable our grantees to meet some of their needs in these areas.

In addition to the State General Funds available for Supplemental funds, we are anticipating approval from the Legislative Budget and Audit Committee for the expenditure of $109,000 in NIAAA Pipeline Impact funds unexpended in FY 76. Of this amount, $65,300 is already committed to the Municipality of Anchorage by Board recommendation during the May, 1976, funding meeting. The balance is considered available to the Anchorage Labor and Management Employee Affairs (ALMEA), Barrow Council on Alcoholism, Copper River Native Association, Seward Council on Community Services, Valdez Commission on Alcoholism, Municipality of Anchorage and the Fairbanks Native Association. These programs, with the exception of the Fairbanks Native Association, are current NIAAA Pipeline Impact Grant funds. Fairbanks is deemed eligible for these funds in that they do fall within the geographic boundaries stipulated in the grant. Studio Club could be included as eligible for these funds through the Municipality of Anchorage's eligibility. However, they have not been considered eligible for a direct grant from this source for the same reasons they are not being considered eligible for State General Funds: (1) Funds are available for the operation of Studio Club through the grant to the Municipality of Anchorage (2) the Office of Alcoholism is supportive of the Municipality's home rule authority in health matters and feels that a direct grant to the Studio Club, by-passing the Municipal system would be inappropriate. Therefore, supporting the Municipality's Home Rule Authority health powers, and recognizing that Anchorage had made a legitimate attempt to negotiate a sub-contract with Studio Club and concern with grantees' needs in other communities, an application for supplemental funding was not sent to the Studio Club.

The procedure to be followed in awarding all grants from the Office is as follows: (a) applications are received and reviewed by SOA staff and recommendations are prepared for presentation to Governor's Advisory Board members. (b) Board members receive copies of all applications for their individual review (c) a Board meeting is scheduled to present SOA recommendations to the Board and give the applicant an opportunity to present their application to the Board and SOA staff, and answer any questions regarding their program. (d) the Board recommends approval or disapproval of the application and the level of funding for the program.

If there are differences between the recommendaton of the Board and the Office, every attempt is made to resolve those differences and arrive at a unified recommendation at that meeting. At no time does the Office disregard or ignore the Board's recommendations, and no one from the Office has ever advised Ms. Nugent or any other applicant or grantee that the "Office of Alcoholism will place monies where they please." In the event a unified recommendation could not be achieved, the matter would then be brought to my attention for a further attempt to reach a resolution, however, in the end, the final decision would be made by myself as Commissioner, in line with the statute authority granted to the Department under AS 47.30.477 and Title 7, Chapter 28, Section 10.030 of the Administrative Code.

We hope this will clarify any questions you may have concerning Studio Club or the Office of Alcoholism. If you have any questions, please contact me at your convenience. Thanks very much for your interest in this matter.

Sincerely yours,

Lois M. Lund

LEGISLATIVE AFFAIRS AGENCY

M E M O R A N D U M March 8, 1977

SUBJECT: Confirmation of University of Alaska President (Work Order #3480)

TO: Representative Hugh Malone
Speaker of the House

Representative Steve Cowper

FROM: Richard A. Bradley
Legislative Counsel

You have requested a bill requiring legislative confirmation of the president of the University of Alaska. Under the constitution (art. VII, §3), the president is appointed "in accordance with law" by the board of regents. Unless unusual legal problems exist, a simple change in the law at AS 14.40.170(a)(1) will accomplish your request. You also requested a memorandum of law on the points raised.

In our view, the bill you propose raises questions in two areas:

(1) Whether the mandate to the board of regents to "appoint the president of the university" "in accordance with law" allows the legislature to require confirmation of the president.

(2) Whether the legislative confirmation case, Bradner v. Hammond, 553 P.2d 1 (Alaska 1976) has any implications for this situation.

The first question involves the construction of art. VII, §3 of the constitution. The section provides:

> The University of Alaska shall be governed by a board of regents. The regents shall be appointed by the governor, subject to confirmation by a majority of the members of the legislature in joint session. The board shall, in accordance with law, formulate policy and appoint the president of the university. He shall be the executive officer of the board. [Emphasis added]

The constitution explicitly requires confirmation of the regents; the president is appointed by the regents "in accordance with law." This language gives the legislature the authority to establish standards or procedures which the regents must comply with or follow in appointing the president; in my opinion, it authorizes the legislature to require, by law, a legislative confirmation of the appointment of the president by the board.

The legislature has apparently not sought to establish by law any procedures or conditions for the board to follow or to meet in its appointment of the president. Review of AS 14.40.120-14.40.270, an article entitled "Board of Regents and President" indicates that the board presently exercises full and unconditioned discretion in its responsibility for the appointment of the president. The only statutory provision on this subject restates the constitutional grant of authority:

> The Board of Regents shall: (1) appoint the president of the university by a majority vote of the whole board,... [AS 14.40.170(a)].

It is clear that the legislature could establish qualifications which the board would have to follow in making the appointment. It may constitutionally require that the president have certain academic degrees, that the president have certain experience, that the recruitment of the president be carried out in a specified fashion, or that the president meet other statutory qualifications it sets. It is also my opinion that the legislature can establish a requirement that the appointment by the board be subject to legislative confirmation.

A grant of authority from a state constitution to a legislature for its implementation or execution of a program required in general terms by the constitution typically occurs by the use of the phrase "in accordance with law" or "by law." See, e. g., art. II, §4: A vacancy in the legislature shall be filled...as provided by law" and art. IV, §1: The jurisdiction of courts shall be established by law." When the constitution gave the board of regents the authority to appoint the president of the university "in accordance with law," the writers of the constitution intended that the legislature set the conditions and qualifications of the president. That he be confirmed by the legislature is an appropriate condition established by the legislature "in accordance with law."

Accordingly, I believe that the constitution of the State of Alaska authorizes the legislature to require the appointment of the president by the board of regents be subject to legislative confirmation.

The remaining question is whether Bradner v. Hammond, supra, poses any difficulties for legislative confirmation of the president of the university. In my judgment, the law of that case poses no difficulty for a law requiring legislative confirmation.

The first and perhaps the most direct reason is that the litigation known as Bradner v. Hammond undoubtedly would not have occurred if the provisions in art. III of the constitution dealing with executive appointments had had language stating that appointments of executive officers should be made "in accordance with law." The significant legal fact arising out of the process of executive appointments in the principal departments [except for the department's "head"] is that the constitution is silent; in such a case, the supreme court in Bradner was forced to determine "the maximum parameters of the delegation of executive appointive authority through the legislative confirmation function" [Bradner, supra, at 7]. The court concluded that the legislative confirmation function "will not be inferred in the absense of an express constitutional provision," [Bradner, supra, at 7]. In my judgment, a provision providing that "deputy commissioners and the directors of the divisions in the principal executive departments will be appointed in accordance with law" would have reversed the supreme court's opinion.

Additional reasons why Bradner is not apropos to this situation may be stated. Chapter 82 SLA 1975, the law challenged by the governor in Bradner, was concerned only with appointments to the principal executive departments. Whatever the university's legal status* it seems clear beyond doubt that the university is not a principal executive department nor is it a "regulatory or quasi-judicial agency" [art. III, §26]. The appointment of the president is not prerogative of the governor under art. III but the responsibility of the board of regents, "in accordance with law," under art. VII.

I am of the opinion that there are no constitutional provisions limiting the legislature in the exercise of its discretion to require legislative confirmation of the appointment of the president of the university. Accordingly, attached you will find a bill responsive to your request.

*Art. VII, §§ 2 and 3, Alaska Constitution and see University of Alaska v. National Aircraft Leasing Ltd., 536 P.2d 121 (Alaska 1975); see also Billy G. Berrier's opinion of March 1, 1977 to Chairman Sackett of the Senate Finance Committee on that question.

HB 344 60

MINUTES OF HOUSE HESS COMMITTEE

April 4, 1977

The meeting was called to order by Chairman Parr at 3:05 p.m. Members present: Parr, Nakak, Chatterton, Ose and Phillips with Dr. Beirne and Mr. Cotten coming in later.

Absent: Bennett & Buchholdt

Committee Substitute for HB 205 was passed around for signature.

Bills before the committee today were: HCR 36, HB 360, HB 361, HB 362, BH 363 and HB 344. Chairman Parr announced that Mr. Larry Peska from Legislative Audit was present to answer any questions. Mr. Parr also announced that there were two Committee Substitutes before the committee, one that he had made up and one that Representative Miles had prepared, both regarding HB 361.

Both Committee Substitutes were gone over Section by Section and discussed. There was discussion by the members and those present as to how the federal monies for the University are presently handled. Mr. Parr felt there would be a lot of grant money the University would lose if it was run through the State. Mr. Peska stated most of the grants are being passed through the State now. Mr. Chatterton stated there were a lot of grants that were not federal and said some of the corporations etc. that make grants to the University now would not be so eager to make them to the State.

There was discussion as to the transfer of funds within the University now.

With reference to bringing the University under the State accounting guidelines, there was much discussion as to whether the word "Shall" should be used or "may". It was the feeling that the Commissioner of Administration should not run or manage the university, just maintain the accounting procedure.

HB 361 Action

With reference to HB 361,Mr. Ose moved that line 24 be amended to read after the word "Alaska' insert "and"and change the word "setting" to "set." There being no objection the motion carried.

HB 361 Action — Mr. Parr moved on line 27 to delete the word " "comptroller" and insert "Board of Regents". There being no objection the motion carried.

HB 361 Action — Mr. Chatter moved to adopt Mr. Miles Section 7 of his committee substitute in place of Mr. Parr's. There being no objection the motion carried.

HB 361 Action — Mr. Chatterton moved to pass out HB 361 as a committee substitute as amended. There being no objection, the motion carried.

HB 362 Action — Mr. Parr asked the committee' pleasure of HB 362. Mr. Ose moved to pass it out of committee. There being no objection the motion carried.

HCR 36 ACtion — Mr. Parr asked the committee's pleasure on HCR 36. Mr. Chatterton moved to table the bill. There being no objection, the bill was tabled.

HB 344 Action — Mr. Parr asked the committee's pleasure on HB 344. Mr. Chatterton moved that it be passed out with indidividual recommendations. After discussion Mr. Chatterton withdrew his motion and offered a motion to table the bill. Mr. Phillips objected. After discussion on the bill, a vote was taken and the motion to table the bill passed.

HB 360 Action — The next bills before the committee were HB 360 and HB 363. With reference to HB 360, Dr. Beirne said he was not sold on a manager team. Mr. Phillips spoke in favor of it . Mr. Chatterton then moved to table HB 360 and 363. Dr. Beirne seconded the motion. After discussion on the motion, Mr. Chatterton eliminated HB 363 from his motion. The motion to table HB 360 carried.

HB 363 Action — The next bill before the committee was HB 363. Mr. Ose moved to pass the bill out. There being no objection, the motion carried.

Mr. Parr announced to the Committee that a piece of legislation has been introduced by Lisa Rudd asking the Regents not to rehire Hiatt. He said he had heard by the grapevine that they weren't going to keep him on anyway but just wanted to alert the committee that there was the possibility of another bill regarding the University coming before the Committee.

Mr. Parr then passed a breakdown by district on a fiscal note to the committee regarding HB 212 which will be before them at the meeting tomorrow and asked the committee to look it over before the next meeting.

The meeting adjourned at 4:40 p.m.

HB
360

University of Alaska

Office of the President

Special Report to the Legislature of the State of Alaska

The appointment of a three-member management team to help rebuild the internal management systems of the University of Alaska was announced today by President Charles O. Ferguson.

The team will "assemble in Fairbanks next Wednesday and immediately get down to work," Ferguson said.

Two of the team members are Dr. Armen Sarafian, president of La Verne College in California, and Leonard Prose of New York, a partner in the national and international accounting firm of Main Lafrentz & Co.

Several persons are under consideration for the third position on the team and Ferguson said he expects to make the final appointment by next Wednesday.

The university president said he was guided by recommendations of the university's Board of Regents, legislators and the state administration in arriving at the team concept and in his selection of team members.

The team's role, he said, will be to evaluate and monitor the university's management systems and make reports and recommendations to the regents on needed improvements in the design and operation of these systems working with and through the president.

"Situations may arise," he said, "wherein it will be necessary for the management team to have direct access to the Board of Regents."

With Prose will come a task force from Main Lafrentz which will concentrate its efforts on the university's financial systems, Ferguson said. Other consultants may be retained by the management team to look at such areas as grants and contracts and budget development and reporting, he added.

The financial details of employing the management team are now being worked out and will be submitted to the regents for final approval, Ferguson said.

The State Department of Administration is now developing new accounting and policy guidelines under which the university will operate and the university will work with the department to implement these guidelines, the president said.

Prose, director of management services for Main Lafrentz's eastern region, is in charge of computer operations in the New York office and in this capacity supervises

- over -

a staff of systems analysts and programmers performing consulting and auditing services for clients and operating an in-house computer.

Recently Prose has directed the design and implementation of a computer system for Colgate University and a computer auditing system for U.S. Navy food services. He has also directed a survey of the State of Vermont's management procedures and the design of a computer system for registration of students and grade processing at New York's College of Insurance.

Sarafian, president of La Verne College for just over a year, was brought in by the institution's board of trustees to deal with an internal financial crisis, said Ferguson. The college had a slumping enrollment and faced a $1 million budget deficit. This year the college had a 36 per cent enrollment increase and will enjoy a budget surplus, he said.

In addition to serving as La Verne president, Sarafian is adjunct professor at the University of Southern California where he teaches higher education management and administration, curriculum development and instruction. He also serves on the State of California's Community College Finance Committee and is a former member of a select committee charged with developing a master plan for higher education in California.

3/16/77/2

MEMORANDUM OF AGREEMENT
BETWEEN
THE UNIVERSITY OF ALASKA BOARD OF REGENTS
AND
THE ALASKA STATE LEGISLATURE

I. Fiscal Management Team.

The Management Team will consist of three full-time individuals working within the University administration as full-time fiscal managers. Two of the three members shall be Alaskans. The individuals selected shall have qualifications in mamagement and finance, shall be outside the University structure, and shall have demonstrated competence in the organization and management of large organizations. The Management Team will be chosen by the Board of Regents. The Legislature as a body, or through delegation to the Legislative Budget and Audit Committee, shall approve the Regents' selections. The Management Team will be a temporary operation to assist the University of Alaska correct its financial management problems, and will terminate on June 30, 1978.

The Management Team shall have four functions: to study, identify, recommend, and implement needed changes in the administration of the University of Alaska. Areas of concern that shall be considered include management procedures, staffing personnel of the central administration, FY 78 and FY 79 budget documentation, fiscal administration, business practices, and physical plant management.

The Management Team shall report, in writing, directly to the Board of Regents and shall send copies of all recommendations in writing to the Legislature and the President, or Acting President, of the University. The Management Team will work withing the administration of the University of Alaska to implement those recommendations adopted by the Board of Regents.

II. University of Alaska.

The Board of REgents will have the sole authority to decide which recommendations shall be implemented and to direct the implementation of those recommendations subject to spending approval by the Legislative Budget and Audit Committee. The Board of Regents shall meet monthly while the Management Team is in existence to consider its studies and recommendations. The Regents must act on each recommendation presented by the Management Team. The Board of Regents shall file a monthly report to the Legislature with copies to the Management Team and the President of the University on the status of all recommendations. This monthly report shall delineate what action has been taken on each recommendation and the reasons for that action. If no action is taken on a recommendation the reasons shall be stated. A cumulative status of the implementation of all recommendations shall also be contained in each monthly report.

III. The Legislature.

The Legislature shall have the responsibility of providing adequate appropriations to fund the operations of the University of Alaska, the Management Team, and the Board of Regents. The Legislature shall implement necessary remedial legislation to improve the University of Alaska system.

In conformity with the proposed legislative intent of the House Finance Committee for the FY 78 budget, the Legislative Budget and Audit Committee shall monitor the recommendations of the Management Team, the Board of Regents' monthly status report on recommendations, the implementation of those recommendations for which funding has been approved, and the monthly financial status reports of the University. Based on the FY 78 budget documentation provided by the Management Team and the Board of Regents, the Legislative Budget and Audit Committee shall approve a base-line for the preparation of the University's FY 79 budget request.

March 30, 1977

Dr. Hugh Fate, President
Board of Regents
University of Alaska

Dear Dr. Fate:

This letter is meant to serve as a memorandum of understanding between the Legislature and the Board of Regents as to the methods by which the Regents undertake to resolve the management crisis at the University of Alaska.

While President Ferguson is a capable person, he cannot do this job alone. The Regents will therefore retain temporary specialists to find out what steps must be taken, and in appropriate cases to see that these recommendations are in fact adopted within the University system. All these specialists will be hired by the Regents, and will be answerable only to the Regents, although it is understood that they will necessarily have to work with the President.

The specialists will make their recommendations directly to the Regents, with copies to the Legislative Budget and Audit Committee. Recommendations shall be made on at least a monthly basis, and the Board shall act on each recommendation within 30 days of receipt. Contracts for the specialists may be signed by the University, but funding will be available only upon approval by the Committee. The Regents should bear in mind that "consultants" often have no stake in achieving the objective and that implementation is probably more important in this instance than recommendations.

Representatives of the Budget and Audit Committee, including members, staff, and contractual employees, shall have direct access to any information related to the management of the University and shall have the right to interview and examine the records of any employee of the University. The Legislative Auditor shall have the same right of access as exists with respect to every other State agency.

The Board of Regents will have the sole authority to decide which recommendations are to be implemented, and to direct the implementation subject to funding by the Legislative Budget and Audit Committee. All policy disagreements between the President and any specialists shall be reported to the Regents for resolution, and the Budget and Audit Committee (or its authorized representative) shall be notified of any such disagreements.

The Regents will file a monthly report, preferably approximately ten days before the monthly meeting of the Budget and Audit Committee, with the Chairman of that Committee or

his designate. The Budget and Audit Committee will notify the Board of Regents from time to time as to what information must be contained in the report.

The Regents shall designate the Chairman of the Regents' Finance Committee to oversee the implementation of the recommendations approved by the Board.

The Legislature in the meantime is considering certain legislation relating to the management of the University of Alaska, including (but not limited to) requiring the Regents to retain a Comptroller directly under their jurisdiction, placing the University under the Executive Budget Act and the Fiscal Procedures Act, and requiring the University to conform its payroll and accounting systems to those of the State of Alaska.

If these conditions are in accordance with the Board's understanding, please sign this letter in the bottom left-hand corner and return it to me. We believe the Board and the Legislature will be able to work closely together in this effort, and we look forward to the task.

Very truly yours,

Agreed:

John Rader
President of the Senate

Dr. Hugh Fate, President
Board of Regents
University of Alaska

Hugh Malone
Speaker of the House

Edward Rasmuson
Chairman, Finance Committee
Board of Regents

George Hohman, Chairman
Budget & Audit Committee

John Sackett, Chairman
Senate Finance Committee

Steve Cowper, Chairman
House Finance Committee

the governor shall issue a proclamation of reapportionment and redistricting. An accompanying statement shall explain any change from the plan of the board. The reapportionment and redistricting shall be effective for the election of members of the legislature until after the official reporting of the next decennial census.

Enforcement

SECTION 11. Any qualified voter may apply to the superior court to compel the governor, by mandamus or otherwise, to perform his reapportionment duties or to correct any error in redistricting or reapportionment. Application to compel the governor to perform his reapportionment duties must be filed within thirty days of the expiration of either of the two ninety-day periods specified in this article. Application to compel correction of any error in redistricting or reapportionment must be filed within thirty days following the proclamation. Original jurisdiction in these matters is hereby vested in the superior court. On appeal, the cause shall be reviewed by the supreme court upon the law and the facts.

ARTICLE VII

HEALTH, EDUCATION, AND WELFARE

Public Education

SECTION 1. The legislature shall by general law establish and maintain a system of public schools open to all children of the State, and may provide for other public educational institutions. Schools and institutions so established shall be free from sectarian control. No money shall be paid from public funds for the direct benefit of any religious or other private educational institution.

State University

SECTION 2. The University of Alaska is hereby established as the state university and constituted a

body corporate. It shall have title to all real and personal property now or hereafter set aside for or conveyed to it. Its property shall be administered and disposed of according to law.

Board of Regents

SECTION 3. The University of Alaska shall be governed by a board of regents. The regents shall be appointed by the governor, subject to confirmation by a majority of the members of the legislature in joint session. The board shall, in accordance with law, formulate policy and appoint the president of the university. He shall be the executive officer of the board.

Public Health

SECTION 4. The legislature shall provide for the promotion and protection of public health.

Public Welfare

SECTION 5. The legislature shall provide for public welfare.

ARTICLE VIII

NATURAL RESOURCES

Statement of Policy

SECTION 1. It is the policy of the State to encourage the settlement of its land and the development of its resources by making them available for maximum use consistent with the public interest.

General Authority

SECTION 2. The legislature shall provide for the utilization, development, and conservation of all natural resources belonging to the State, including land and waters, for the maximum benefit of its people.

Common Use

SECTION 3. Wherever occurring in the natural state, fish, wildlife, and waters are reserved to the people for common use.

Sustained Yield

SECTION 4. Fish, forests, wildlife, grasslands, and all other replenishable resources belonging to

Sec. 14.40.290. Property and funds generally. (a) The University of Alaska shall hold all property acquired by it. The Department of Administration, upon requisitions by the Board of Regents signed by its president and secretary, shall pay to the treasurer of the Board of Regents all federal land grant college funds coming into the possession of the Department of Administration and subject to requisition by the Board of Regents and shall disburse federal funds in aid of land grant colleges in accordance with the federal statute providing for disbursement.

(b) All funds appropriated by the legislature for the building, conduct, maintenance and support of the University of Alaska shall, on requisition by the Board of Regents signed by its president and secretary, be paid by the Department of Administration to the treasurer of the Board of Regents. The treasurer of the Board of Regents shall disburse these funds on properly drawn vouchers signed by its president and secretary, or by such other administrative officer as the Board of Regents delegates to perform these services. (Sec. 37-10-4 (a)--(c) ACLA 1949; (c) repealed Sec. 1 ch 38 SLA 1968)

Sec. 14.40.295. Working capital reserve fund. (a) There is established in the treasury of the University of Alaska the University of Alaska working capital reserve fund. The fund consists of money appropriated by the legislature for the purpose of providing current working capital for the University of Alaska and is not available for appropriation by the Board of Regents.

(b) A quarterly report of all activity of the working capital reserve fund shall be submitted to the Legislative Budget and Audit Committee. (Sec. 1 ch 50 SLA 1973)

Sec. 14.40.300. Creation and appointment of comptroller. The Board of Regents may create the office of comptroller of the university, fix the salary and determine the duties of the office. The Board of Regents may fill the office. (Sec. 37-10-4- (d) ACLA 1949)

Sec. 14.40.310. Fiscal year. The fiscal year of the University of Alaska begins on July 1 and closes at midnight on the following June 30. (Sec. 37-10-4 (e) ACLA 1949; am Sec. 3 art VI ch 82 SLA 1955)

Sec. 14.40.320. Requisitions on funds. Requisitions on federal funds and state appropriations shall be based upon estimates of the amounts required quarterly. (Sec. 37-10-4 (f) ACLA 1949)

Sec. 14.40.330. Inventory of property. The Board of Regents shall maintain or cause to be maintained a perpetual inventory of all permanent property of the university. (Sec. 37-10-4 (g) ACLA 1949; repealed and reenacted Sec. 2 ch 38 SLA 1968)

Sec. 14.40.340. Applicability of bid practices to University of Alaska. The competitive bid practices set forth in AS 37.05.230 apply to the University of Alaska, except that the provisions of that act do not apply in those cases where the work is to be performed substantially by students enrolled in the university. Where the term "purchasing agent" is used in AS 37.05, it means the comptroller of the university. (Sec. 1 ch 86 SLA 1957)

Sec. 14.40.350. Board of Regents authorized to lease lands. The Board of Regents may execute leases for mining, agriculture, or other purposes to the lands granted for the benefit of an agricultural college and school of mines for Alaska by the Act of Congress approved March 4, 1915, for such time and at such rent or royalty as may seem just and as provided by law. (Sec. 37-10-11 ACLA 1949)

Sec. 14.40.360. Board of Regents authorized to select and to sell or lease lands granted by Act of Congress. The Board of Regents may select the lands granted to Alaska by the Act of Congress approved January 21, 1929, and may sell or lease them and deposit the proceeds in the state treasury in conformity with that Act. (Sec. 37-10-13 ACLA 1949)

Sec. 14.40.370. Books of account and statement of trust funds. The Board of Regents shall have suitable books of account kept in which there shall be recorded each gift, the essential facts of the management of the gift, and the expenditure of the income. A statement of all trust funds shall be included in the annual report to the governor. (Sec. 37-10-22 ACLA 1949)

HB 360

MINUTES OF HOUSE HESS COMMITTEE

April 4, 1977

The meeting was called to order by Chairman Parr at 3:05 p.m. Members present: Parr, Nakak, Chatterton, Ose and Phillips with Dr. Beirne and Mr. Cotten coming in later.

Absent: Bennett & Buchholdt

Committee Substitute for HB 205 was passed around for signature.

Bills before the committee today were: HB 36, HB 360, HB 361, HB 362, BH 363 and HB 344. Chairman Parr announced that Mr. Larry Peska from Legislative Audit was present to answer any questions. Mr. Parr also announced that there were two Committee Substitutes before the committee, one that he had made up and one that Representative Miles had prepared, both regarding HB 361.

Both Committee Substitutes were gone over Section by Section and discussed. There was discussion by the members and those present as to how the federal monies for the University are presently handled. Mr. Parr felt there would be a lot of grant money the University would lose if it was run thrcugh the State. Mr. Peska stated most of the grants are being passed through the State now. Mr. Chatterton stated there were a lot of grants that were not federal and said some of the corporations etc. that make grants to the University now would not be so eager to make them to the State.

There was discussion as to the transfer of funds within the University now.

With reference to bringing the University under the State accounting guidelines, there was much discussion as to whether the word "Shall" should be used or "may". It was the feeling that the Commissioner of Administration should not run or manage the university, just maintain the accounting procedure.

HB 361 Action

With reference to HB 361,Mr. Ose moved that line 24 be amended to read after the word "Alaska' insert "and"and change the word "setting" to "set." There being no objection the motion carried.

HB 361 Action — Mr. Parr moved on line 27 to delete the word " "comptroller" and insert "Board of Regents". There being no objection the motion carried.

HB 361 Action — Mr. Chatter moved to adopt Mr. Miles Section 7 of his committee substitute in place of Mr. Parr's. There being no objection the motion carried.

HB 361 Action — Mr. Chatterton moved to pass out HB 361 as a committee substitute as amended. There being no objection, the motion carried.

HB 362 Action — Mr. Parr asked the committee' pleasure of HB 362. Mr. Ose moved to pass it out of committee. There being no objection the motion carried.

HCR 36 ACtion — Mr. Parr asked the committee's pleasure on HCR 36. Mr. Chatterton moved to table the bill. There being no objection, the bill was tabled.

HB 344 Action — Mr. Parr asked the committee's pleasure on HB 344. Mr. Chatterton moved that it be passed out with indidividual recommendations. After discussion Mr. Chatterton withdrew his motion and offered a motion to table the bill. Mr. Phillips objected. After discussion on the bill, a vote was taken and the motion to table the bill passed.

HB 360 Action — The next bills before the committee were HB 360 and HB 363. With reference to HB 360, Dr. Beirne said he was not sold on a manager team. Mr. Phillips spoke in favor of it . Mr. Chatterton then moved to table HB 360 and 363. Dr. Beirne seconded the motion. After discussion on the motion, Mr. Chatterton eliminated HB 363 from his motion. The motion to table HB 360 carried.

HB 363 Action — The next bill before the committee was HB 363. Mr. Ose moved to pass the bill out. There being no objection, the motion carried.

Mr. Parr announced to the Committee that a piece of legislation has been introduced by Lisa Rudd asking the Regents not to rehire Hiatt. He said he had heard by the grapevine that they weren't going to keep him on anyway but just wanted to alert the committee that there was the possibility of another bill regarding the University coming before the Committee.

Mr. Parr then passed a breakdown by district on a fiscal note to the committee regarding HB 212 which will be before them at the meeting tomorrow and asked the committee to look it over before the next meeting.

The meeting adjourned at 4:40 p.m.

BY THE HEALTH, EDUCATION AND SOCIAL SERVICES COMMITTEE

CS FOR HOUSE BILL NO. 381

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act making a special appropriation to the Department of Education, division of libraries and museums, to provide grant funds for the construction of comfort station facilities at the Colony Village Museum and Tourist Center and the agricultural museum at the Tanana Valley Fairgrounds; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. The sum of $46,000 is appropriated from the general fund to the Department of Education, division of libraries and museums, to be available for a capital improvement grant for construction of a comfort station for women and children at the Colony Village Museum and Tourist Center located at mile 40, Glenn Highway and owned and operated by the Alaska State Fair Historical, Educational and Arts Foundation, Inc., a nonprofit corporation.

* Sec. 2. The sum of $45,000 is appropriated from the general fund to the Department of Education, division of libraries and museums, to be available for a capital improvement grant for the construction or improvement of comfort station facilities serving the agricultural museum operated by the Tanana Valley Fair Association and located on the Tanana Valley Fairgrounds.

* Sec. 3. The unexpended and unobligated portion of this appropriation lapses into the general fund June 30, 1978.

* Sec. 4. This Act takes effect July 1, 1977.

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

A two person part time staff to handle the administrative and clerical supporting function to the claims review committee would involve an Administrative Assistant III (part time) and a Clerk Typist III (part time). Offices would be located in Juneau.

No provision has been made in the above for claims. This is normally included in the Governor's requested budget. The Request for FY 78 is $450,000.

An inflation figure of 5% annually was utilized in computation of future fiscal years.

IV. ATTACHMENTS

V. DATE: 5/20/77 PREPARED BY: Don Kemp

Don Kemp, Acting Director
Division of Public Assistance

Original: Legislative Finance
Budget and Management

ISSUES: Housing,employment, the handicapped, daycare, minority business, Landlord-tenant mediation, utility "phantom" taxes, credit, property taxes, oil taxes.

HOUSING ISSUES

Redlining.

The issue here involves banks and savings and loan associations discriminating against neighborhoods which are considered low-income or deteriorating, particularly when it comes to financing rehabilitation of older residential buildings, older homes, or the purchase of single family units. A bank may view a financing request in a poor neighborhood as a bad investment because the area seems to be deteriorating, even though the credit standing of the individual requesting the financing is good. However, this process becomes a self-fulfilling prophecy, as a lack of residential development drives out those residents who have an interest in the neighborhood and would comprise a strong community, and leaves the area in a continued state of deterioration. The coalition would first need to research the extent to which such redlining occurs in Anchorage, by talking with people in areas such as Mountain View, Fairview, and Government Hill who have tried to obtain financing and been unsuccessful. If we decided that a problem indeed exists, then we may want to petition the Department of Revenue to adopt a rule requiring local banks to disclose their investment patterns on a neighborhood by neighborhood basis. If we petitioned the agency in this way, they would have to decide within 30 days to accept, reject, or hold a hearing on our proposal. If a hearing date were set, we would then come forth with testimony and evidence of redlining practices. Should a disclosure regulation show that systematic redlining is indeed occurring in certain areas, then we would want to consider further strategies for pressuring financial institutions into providing more financing in these neighborhoods.

Linda Arms Apartments.

While there are several low-income housing units which could be studied, there is a timely situation surrounding the recent HUD proposals for the disposition of the Linda Arms Apartments in Fairview. It appears that the buildings, which are now owned and managed by HUD, will undergo major redesign and rehabilitation, and possibly be sold to the Alaska State Housing Authority (ASHA). The aspects of this issue which may interest the coalition would be the involvement of minority businesses and contractors in the rehabilitation work; the input of tenants and area residents into design, management, and rent levels; and the manner in which the relocation of current residents is carried out while the buildings undergo rehabilitation. We still need to talk with more people from HUD and ASHA, and study their programs and regulations to determine the best way for interested parties to become involved in the project. The coalition may wish to lend its support to an ad hoc tenants organization which now exists at Linda Arms, in order that the residents' needs are heeded, and that the stipulations of the HUD Uniform Relocation Act are enforced.

Use of HUD Block Grants.

HUD provides funding to the Municipality through its Block

Grant Program, which is to be directed toward improvements in low-income neighborhoods, such as property acquisition for parks, street improvements, rehabilitation of publicly-owned residential dwellings, and removal of architechtural barriers. The Planning and Zoning Department of the Municipality solicits input from various neighborhood and citizen's groups to make recommendations for the use of Block Grant funds. It would be appropriate for the coalition to examine the uses to which Block Grant funds have been put in the past, and the current recommendations for their use which are under consideration. There will be a public hearing on this subject in May, in which we could become involved. It is important for these funds to be utilized in low-income neighborhoods, and for them to be directed toward needed services and facilities.

Architechtural Barriers.

Several people have noted that the characteristics of buildings which make it difficult for handicapped people to get around on their own is a definite problem in Anchorage. Barrier-free buildings and transportation facilities are of the utmost importance to the handicapped. The Federal government recently approved the institution of a $25,000 tax credit to employers and transportation services which alter their buildings, entranceways, etc., to make them accessible to the handicapped. However, making the public aware of the availability of this option, and having them utilize it, is the next barrier to be crossed on the local level. We might also wish to push the Assembley to adopt ordinances for removal of architechtural barriers, and for the institution of barrier-free codes in new buildings. In addition, the HUD Block Grant Program, which is administered through the Municipal Planning Department, has specific provisions for funding the removal of architechtural barriers. We would have to become actively involved in the hearing process through which the Planning Department solicits and prioritizes recommendations from the community for the use of HUD Block Grant money.

Senior Citizen Housing.

Homemakers Services

We are currently gathering information on the unique housing problems of senior citizens. Within the next two weeks, we expect to have contacted several resource people on the subject, and are looking at some studies and research which have been done. At that time we can present you with a more thorough assessment of this issue. In the meantime, any resources and information any of you can provide will be appreciated.

EMPLOYMENT ISSUES

Discrimination and Affirmative Action.

Several people have suggested that serious discrimination problems exist for minorities and women, particularly in the State and Municipal governments. As a recent report from the General Government Subcommittee of the State Senate Finance Committee shows, 81% of the positions in State government which pay $20,000 and over are filled by men; a mere 3.7% of these positions are filled by minorities. The report also points out that there are wide variations between different Departments of the State as far as each one's commitment to affirmative action

hiring is concerned. The coalition might want to advocate that the Municipal Assembley conduct a similar survey to assess the extent of the progress made in city level affirmative action. We could also ask that the Municipality do a hard review of its internal employment practices, backing up our request with data from an inquiry conducted by the Assembley. In addition, some input into having the Municipality define and expand the powers of the Equal Rights Commission woudl be valuable for the purpose of instituting affirmative action in the Municipal government and local businesses. At this point, the Commission's budget allotment is apparently too meager to maintain an adequate staff, and the Commission's caseload is backing up. In general, the Commission needs the "teeth" -- through budgetary commitments, and general support from the rest of the Municipal government -- to make some substantive inroads into the affirmative aciton and discriminaiton area. Finally, we might want to promote that the Municipality and the State -- by means of an ordinance, and through the Department of Administration-- require contractors bidding on public projects to disclose their equal employment opportunity practices.

already in contract boiler plate forms

HANDICAPPED ISSUES

Architectural Barriers.

Included with housing issues.

Employment.

Discrimination in employment is a problem for handicapped people, and involves issues such as training, employer awareness, etc. The Opportunities for the Handicapped Commission of the Municipality recently completed a survey, in conjunction with the Department of Labor, assesssing the extent to which handicapped individuals are utilized by employers in the city of Anchorage. We are currently studying this survey, and also talking with individuals who are knowledgeable in the area of employment for the handicapped. We will have more of the specifics of this issue ready at the upcoming coalition meeting, which we will present at that time.

TAX ISSUES

Renters' Tax Credit;

ok

Unlike Alaska, the states of Oregon and California have a tax credit for renters. This works within the state income tax system, and the amount of the credit is a function of income and rent paid. Currently in Alaska, a tax break is enjoyed by resident home owners who can claim mortgage interest paid as a deduction. The Coalition might want to promote legislation to this effect.

Tax Reform;

The biggest tax reform issue is the continuing debate over a

proper oil and gas tax policy.

The largest producing area in Alaska is Prudhoe Bay whose reserves represent the largest oil field in North America. This single discovery will soon be moving six billion dollars worth of oil to market annually. Oil company profits from the field have been conservatively estimated at 98 billion dollars.

Much of the profitability of the field is windfall to the oil companies. The world-wide price of oil was around $2 a barrel when Prudhoe Bay was first discovered in 1968. Then in 1973 the OPEC oil cartel began pushing prices up to their present level of about $13.50 a barrel. Current royalty agreements and severance tax laws are designed to provide Alaskans with around 24% of the net proceeds from production off the field, but unfortunately, the oil companies have inflated the costs of transporting the oil to market, thereby cheating Alaskans out of our fair share of the revenue. For example, Sohio has inflated tanker, pipeline, and field costs to a point where the state only receives 36 cents a barrel in royalty payments for each barrel of oil produced, a mere 2.6% of the sale price of the oil.

Another hot issue is the state income tax for the oil industry. Recent studies by the Department of Revenue indicate that the large oil companies pay only 2.5% to 3% in state income taxes, while Alaska corporations and wage earners pay the full 9.5% rate. The oil corporations are able to avoid the payment of State of Alaska income taxes by "transfer pricing" which shifts profits from Alaska to other states for tax purposes in transactions where the oil companies are selling a product or service from one subsidiary to another.

Both of these practices shortchange the Alaskan taxpayers hundreds of millions of dollars a year. Proposals for changing the method of computing production taxes and the state corporate income tax are currently before the legislature, and promise to be issues next year as well. The importance of the oil tax issue is overwhelming. Many important social reforms in housing, education, and social services can only be financed through state revenues. Tax relief to tenants, property owners and wage earners won't be meanignful without a replacement source of revenue. Furthermore, economic development proposals such as the development of the fisheries and other renewable resources cannot be accomplished without substantial new revenues. For all of these needed programs, oil revenues are vital.

Naturally, the oil industry is using all of its power to persuade legislators and other policy makers not to enact

new tax reform measures. So far, the oil industry has been very successful in its efforts. This is due, in large part, to the lack of grass roots support for a tougher policy towards the oil industry.

MINORITY BUSINESS

There is an organization in Anchorage, the Minority Business Task Force, which has formed to promote minority business in general, and in particular the adoption of a ordinance by the Municipality requiring that at least 15% of municipal contracts be let to minority contractors. The adoption of this ordinance, and the adherence to its provisions by the City would be a positive step given the negative impact of racial discrimination in the business realm.

Also, minority businesses, especially contractors, face harsh obstacles in the necessary dealings with the established lending institutions whose standards for the qualification for business loans and contract performance bonds reflect racial and economic discrimination.

This issue is an important one in light of the Coalition's objective of economic justice. The best resolution of this issue would prompt a reduction in minority unemployment and therefore improve the economic conditions of minorities in the community, and would also cut into racial discrimination which is still very much with us.

A number of important groups within the community are already aligned with this effort. We hope to have representatives from these groups as well as at least one from AMBTF at our next meeting. We should really get together on this one.

LANDLORD-TENANT DISPUTE MEDIATION

At the CRA sponsored Citizen Participation Conference in February, it was made clear that especially the poor and the elderly have problems with landlords. Currently, the Housing and Community Services is the only organization, besides the small claims court and Alaska Legal Services, which is any way involved with the landlord-tenant problem. And this involvement by Housing and Coomunity Services is strictly an educational and referral service.

Years ago, the Anchorage CAP program ran a tenant's rights operation which offered counseling and education. When the CAP folded, the needed service was no longer available. The Citizens' Housing Action Coalition (CHAC) pushed for new program to provide this service. When the rent review

boards were set up during the pipeline boom, they were expected to deal with no-cause evictions but didn't in any meaningful way. The Consumer Protection Agency within the Attorney General's Office is not authorized to deal with landlord-tenant problems in a mediatory way.

In a needs assessment and feasibility report released in October of 1977, the Alaska Judicial Council affirms the need of a dispute mediation center to deal with landlord-tenant problems among others. There are numerous programs of this sort in operation throughout the country which have been developed in response to inadequacies of the court system to handle these. There is every reason to expect that such a program would be as effective in Alaska as elsewhere.

While the study has already been done and recommendations made, there is one aspect of the recommendation that the Coalition might want to look into. Essentially it is that such a center for mediation can be operated or sponsored by either the court system or by a private, non-court affiliated agency. The report acknowledges the respective benefits and problems. Whether the Council's recommendation is followed will depend upon input. The Colaition might want to examine this aspect of the matter more fully and make a recommendation. One way or another, the Coalition should support the establishment of a dispute mediation center.

DAY-CARE

Some time back the League of Women Voters in conjunction with numerous other groups exerted a very concentrated and admirable effort toward the development of quality child-care facilities and a funding program to support these. The large group divided itself into two sub-groups, each with a special task;

A. an educational task force - which worked on four problems;
   1. the scarcity of day-care homes and centers
   2. the tremendous cost of providing quality day-care
   3. the cost of paying to receive day-care
   4. the great need of training and on-going supervision and support of day-care personnel

B. a legislative task force - which worked on
   1. establishing a state day-care subsidy program

Thanks to this large effort, there is now a state Day Care Assistance Program which provides subsidy payment to providers based on the income of parents using the facilities. The program was also designed to provide loans to those establishing centers for the purpose of upgrading property to meet code requirements for this special purpose, and for the purchase of necessary equipment. Anchorage has also seen an increase in the number of licensed day-care facilities as a consequence of this effort. But the need for more and improved quality day-care is still with us.

We are informed by the City that there is a serious need to develop more family day-care homes (as opposed to larger centers) and small neighborhood centers since these, when well regulated, are preferable for very young children . Some of the issues needing to be addressed in order to expand the small program are;

1. a shortage of licensors
2. providing additional resources and staff to assist the small programs
3. review of the zoning laws to permit the establishment of small neighborhood centers where there is need

Additionally, it is rumored that there may be a move on the part of the larger centers to require an increase in the per-child subsidy provided by the Day Care Assistance Program, and to reduce the staff/child ratio. The reason for this is reported to be that the centers are not making it financially.

Any good evaluation of these expected requirements/demands should entail a definition of "making it". Like all businesses, child care centers are entitled to a decent profit. The argument is expected to be that with the current level of per-child subsidy, $250 per month per child maximum, and with the code required staff/child ratios the centers cannot afford to operate. There is a difference of course between not making enough money to pay operating expenses and make a decent profit, and not making as much profit as would be possible if the children were allowed to endure a reduced staff requirement.

The quality of care in the centers is a direct function of both the amount of subsidy and of the ratios. The younger the children the more this is true since younger children require more individual attention. The ratio of staff to children affects the quality and quantity of interaction between the children and their care-givers. Were the operators of the day-care centers to ask that these ratios be changed to permit fewer staff persons, the burden of proof is on them to show that the quality

of care will not suffer, a burden virtually impossible to meet unless these operators propose to exclude the very young children from the centers.

It may well be true that the subsidy should be increased. State and municipal regulations do not address the qualifications of care-givers with respect to training and education. If a care-giver is 18 or older, alive, and without the burden of past criminal record or emotional disturbance, he/she is qualified. These are very minimal requirements. Women in particular are presumed to be qualified simply by virtue of their sex. Hypothetically, an increase in the per-child subsidy would permit an improvement or maintenance of present quality by enabling centers to retain their current staff levels and/or to hire persons of more specific qualification. This is some reason to be supportive of an increase provided that data indicate a need. Given the importance of the function of day-care, any increase in subsidy should be tied to quality considerations.

There is a direct link between the number and quality of child-care facilities, and the economic condition of women with children, since they cannot work without these facilities. Good day-care is a vital social service, the quality and quantity of which should be promoted by the Coalition.

Coalition for Economic Justice

March 22, 1978

Dear Thelma,

Though it's been a while since we've been in touch about what's happening with the Coalition, I'm glad to be writing to you now to say that we've accumulated a lot of good information about issues suggested for the Coalition to work on. People in the community have been most cooperative about giving us information. We're ready, now, to select issues and I hope you'll make every effort to attend our meeting. We've included an outline of information on all of these issues. We need your attention to this information in order that the best possible decisions be made.

Once we have a decision about starting issues, we'll need to formalize the Coalition. Of course we can't do all of this at the next meeting. So we'll need to schedule a meeting shortly after this one to attend to formalizing business.

In addition to myself and Sara Tifft, a new Coalttion staff person who's been great to work with the past month, we hope to have others at the meeting who've contributed to our information who'll be able to give you further details in order to facilitate your deciding.

It promises to be a most interesting meeting and will be held Tuesday, March 28th, from 5:15 to 7:00 p.m., at the Community Center at 325 E. 3rd Avenue, in the first floor conference room.

Again, without your participation and input the Coalition cannot be effective. With your participation, we can go far toward improving the quality of life for large numbers of people. You DO make a difference. If it should happen that you've made a previous commitment for this time, please send someone from your organization in your place.

Sincerely,

Linda Trafford, CEJ Coord.

April 4, 1977

Legislature
Document#General #31

The Honorable Charles Parr
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Representative Parr:

Re: Catastrophic Illness

We welcomed the recent opportunity of discussing with you some of the concerns of the Catastrophic Illness Committee which have developed during our deliberations promulgating regulations by which the Committee may implement the legislation. We have attempted to develop regulations applicable to Alaskans but following many of the concepts expressed in regulations utilized in Rhode Island and Maine. We have held hearings in Anchorage, Fairbanks, and Juneau regarding the regulations and have reacted favorably to some of the constructive criticisms received. Concern has been expressed by Alaska Legal Services concerning the floor of $1,000, below which no claim will be considered by the Catastrophic Illness Committee. Concern has also been expressed regarding the grey area between the level of income under which medical costs are covered under the GRM Program, or categorical situations covered under Medicaid, and the floor of the Catastrophic Illness Regulations. We recognize this grey area but feel that the Catastrophic Illness legislation was not designed to fill all the gaps and that the legislature may need to react to this gap subsequently or to encourage medical assistance to continue to utilize a program of medical exceptions in these circumstances.

The Committee does wish to alert the Legislature that the level of funding projected for this legislation will probably be inadequate. Since it is new legislation, the $300,000 projected for this present year may be adequate. However, we feel that for the next fiscal year the $450,000 projected will probably be considerably short of the need and that the budget may more realistically be more than $1,000,000. Accurate projections are impossible to obtain as we have no prior experience to guide our deliberations.

In view of the projected budget override, the legislature may wish to guide us through the legislative process and there may be a number of alternatives that could be considered in your deliberations. One alternative would be to raise the floor of minimal medical expenses that would be considered by the Committee. Certainly if the floor was raised to $5,000, as an example, the number of claims under this legislation would be considerably reduced. Criticism would be generated, however, by advocate groups concerned with the protection of lower income situations and the hiatus between GR Med and Catastrophic Illness coverage would be further increased.

A second alternative might be to limit the Catastrophic Illness coverage to categorical diseases which could be considered as Catastrophic Illnesses. This could further be limited to diseases that are not totally incapacitating but require a continuing level of medical support beyond the means of ordinary income if an individual is to remain productive. The rational of this limitation would be that these are individuals who need additional support to continue working and the alternative is perpetuation of an invalid state because they could not earn enough money to meet the medical expenses, and if they are working they would not be covered under Medicaid or one of the other assistance programs. Diseases which could be considered under this category would be hemophilia, progressive degenerative neurologic conditions requiring continuing levels of medical support, conditions under which a person may continue to be productive such as multiple sclerosis. The additional costs for chronic renal dialysis not covered under the Federal Medicare Program would be included, as would chronic pulmonary disease requiring home or ambulatory oxygen, and blood dyscrasias such as leukemia which now has an improved prognosis if appropriately treated, but is a disease in which the treatment program is extremely costly. While the Committee feels this is a possible approach, we do not feel it is realistic. If the Committee was left latitude in designating illnesses to be covered, it is our impression that there would be a number of potential lawsuits against this type of regulation.

Thank you for your consideration of the concerns of the Catastrophic Illness Committee and we would appreciate any assistance you could offer us in resolving the problem areas of this program.

Sincerely,

Robert Fraser

Robert I. Fraser, M.D.

TAPE #48
HH285

MINUTES OF HOUSE HESS COMMITTEE

May 6, 1977

The meeting was called to order by Chairman Parr at 3:15 p.m. Members present: Mr. Parr, Mr. Nakak, Mr. Chatterton, Mr. Phillips & Dr. Beirne.

Absent: Mr. Bennett, Mr. Ose, Mr. Cotten and Mrs. Buchholdt.

HB 409

Thomas

Chairman Parr announced HB 409 was on the agenda and Michael Thomas an attorney from a local law firm testified on behalf of the American Council of Life Insurance. He said he also worked closley on matters such as HB 409 with the Health/Association of America. Two concerns with regard to Section 255 were: He felt it was clear in context that the benefits provided for applied only to needy persons as opposed to all persons. Said they believed this because Article 2 in which the statute is found, is entitled General Relief Assistance and he read Sec. 120. Stated "needy person" was defined in Sec. 300. Said they felt it was fairly clear that Sec. 255 fell within these perimeters and the eligibility under that section is limited to persons who are needy. He said the second concern was that the catastrophic illness committee established by Sec. 255 should not be given so much latitude that they can, by regulation, discourage individuals and employers from buying insurance or in other ways providing for disability hospitalization. Felt there was very wide insurance coverage in the state at the present time. Said the committee had been made available some copies of provisions that had been enacted in Rhode Island to meet some of the problems that are inherent in undertaking to provide limited assistance to citizens who can't otherwise get private health insurance Said this was made available as an example of a fairly c fully drafted set of provisions which take into consideration what the proper degree of state liability might be and what the proper interface might be between state program, private insurance and other government programs.

He said they have drafted some suggested language which should be in the folders. He said with regard to the specific language of 409, said this goes in the opposite direction from the rest of the Chapter on relief assistance. Said this language would be to repay the people who give assistance and prohibit recoupment by the STate against the person, his estate or other people who do not contribute to the medical needs. He said

that the Association has costed the regulations that have been suggested by the Dept. under Sec. 255 without this amendment and they estimate $375,000 per year, plus or minus 25 per cent. Said that is without intermediate care facilities being covered. He said if the legislature intends a program under Section 255 to benefit all persons and not just the needy, then he felt the statute really needs very extensive revision and expansion to provide for the kinds of considerations and that it ought to be studied over the interim to make certain that all incentive to insure or take advantage of other programs or access is given to the state treasure is not taken away. He said in that event, Section 255 should be repealed or its effective date should be put off until such time as the legislature can make a definitive statement as to what it wishes to have covered.

There was discussion as to 3rd party sources and who the third party would be. Discussion on the limitations for life insurance.

Mr. Thomas was asked if the Association would have any objection if it were mandated that every company which sold group health plans offer catastrophic health insurance? Mr. Thomas said there was a problem with this.

..rnold

Next to testify was Elizabeth Arnold from the Attorney Genera'ls Office. She said she agreed with Mr. Thomas' statement wherein he said they need guidance from the legislature. Said there is extremely little guidance in the statute or in terms of legislative intent. She said it seemed the fundamental issue was "who was intended to be covered". She told of public hearings they had had on the subject. She elaborated on the fact that if it is intended for the needy person, their medical bills are already covered under general relief. Said she didn't know why this particular section was even put in. She said even if there isn't a constitutional problem about the catastrophic committee acting as it has acted because of the statute and major implications as it was interpreted, the regulations are ce vulnerable to attack than if they clearly set out what tastrophic illness was, what groups would be covered and how ne funding was to work and is the committee expected to stay within the appropriation, etc. She felt either the statute should be repealed and the concept dropped and the committee should continue paying off the people whom they have obligated money, or the statute should be seriously over-hauled. Felt outside experts should be brought in , the experience of other states who have had this type of legislation should be studied, if they don't repeal the section, the committee needs some kind of amendment

to at least indicate what group is to be covered and if they are expected to stay within the appropriation or whether they can expect to receive a supplement.

Mr. Phillips said it was his understanding that this law was supposed to apply to the middle class people and not just the needy people.

Mr. Chatterton felt it was necessary to have something in the statute.

Mr. Nakak said he doesn't feel a means should be used to decide whether someone should qualify for catastrophic illness assistance.

Frazier

Next to testify was Dr. Frazier with the Division of Public Health. Said a lot of his testimony was already presented by Ms. Arnold. Said he thought the decision that the committee is left with is what facilitated action can occur now that we enable the committee to operate during the next year or should the whole legislation be discarded. Said there was concern about the over-ride on the budget He said their experience so far is that 11 cases have been approved with an authorization of $53,284. 14 applications have been denied, additional 10 were not considered because they were not qualified. 35 applications are pending. Said it is a new program and hasn't been heavily advertised and still not sure how the expenditures will run in another year. Said for this fiscal year it looks like they won't expend but about half of the funds and they don't know what will happen next year. Said he felt that the guidelines that have been drawn up by the committee demand a sufficient amount as the applicant's share, that it won't discourage the purchase of insurance. Said they do need guidelines from the legislature as to whether they should continue the activities of the committee, whether they need to limit expenditures to the amount budgeted or whether the legislature would consider favorably a supplemental request if this becomes necessary.

After much discussion Ms. Arnold said she would like to submit by Monday, something in writing, in moving this out of this chapter, deciding where it should be put, not doing a major revision but including what the determination of eligibility in addition to allowable costs levels and what reimbursements should be made by the committee. Felt this would be a help to the committee in determining who is going to be covered.

Mr. Chatterton objected in that he felt some action should be taken on the bill due to the lateness in the Session.

Mr. Parr said they could meet the next day after the Session and take the bill up again if Ms. Arnold could come back with the draft by then.

Action

Mr. Chatterton moved that on Line 9, page 1, strike the words "amended to read" and replace with "repeal". After much discussion a vote on the motion showed it to fail.

Mr. Parr said the bill would be brought up again on the next day right after the Session adjourned.

The meeting adjourned at 4:45 p.m.

TAPE #32 HHESS

MINUTES OF HOUSE HESS COMMITTEE

April 15, 1977

The meeting was called to order by Chairman Parr at 3:30 p.m. Those present were: Parr, Chatterton, Buchholdt, Phillips, Bennett.

Absent: Nakak, Ose, Cotten & Beirne.

Chairman Parr announced that HB 409 would be taken up and asked Mrs. Buchholdt to speak on her bill. She told the committee her reasons for introducing the bill, the main one being trying
HB 409 to correct problems that have occurred with people she knows in Anchorage who have had an illness and had to sell their homes and all in order to pay the medical bills. She said she would be happy to expand the bill.

Next to testify was Dr. Robert Fraser, Director, Division of Public Health. Dr. Fraser said the Department's concern with the
Fraser bill is with the budgetary restriction. He said they do recognize the present bill does penalize people who have made the effort to meet their costs by going into debt, borrowing money for relatives, etc., and are sympathetic with them.

Mr. Parr informed the committee that he had met with Dr. Fraser and Mrs. Jund (from the Department) a few weeks back regarding this bill. He said this bill had been before the House last year and explained why it did not pass then. Said the committee would have to take a look at this bill and use it as a vehicle to resolve some of the problems facing the Dept. of Health & Social Services. He gave his views as to several alternatives.

There was discussion by members as to what a catastrophic illness was, whether to one person it would be catastrophic and to another person it might not be, depending on their financial status and how they defined catastrophic illness.

Dr. Fraser said the committee on catastrophic illness first met in November and their initial problem was regulations. They felt the fewer regulations they had would be best but said the Attorney General's office told them this would get them into trouble and that they need regulations and a formula to go by. Said they have processed the applications that have been forwarded to them, they have made disposition on roughly $100,000 worth of claims, Said a number of claims have been denied, utilizing the formula.

Mr. Bennett said he would be very apprehensive if they started identifying the give or take 100 different disease conditions. Said you could get into a combination of other conditions. Said perhaps basing it on a scale based on income which has a financial value you could identify he thought perhaps was the only way to halfway be reasonable about it.

Dr. Fraser said they have approved approximately 6 applications, denied about 15 and have about 15 or 20 that did not qualify due to the low amount of their bills. Said they had 25 pending that they had requested more information on. Dr. Fraser was asked by Mr. Chatterton how long it would take them to act on the ones they are waiting information on. Dr. Fraser said depending on how quickly they got their information back they had requested but if they got it back within the next 2 weeks they could have them processed within the next 2 months.

Mr. Parr asked Dr. Fraser what the budget called for for this year. Dr. Fraser said they had asked for $300,000 for this year. He said they had no previous experience to go on so just had to judge as what to ask for.

Dr. Fraser said much of their guidance in drawing up regulations was on the experience of the State of Maine. Said in trying to project the amount they need in Alaska is hard because of some very expensive problems, said a premature infant may have bills up to $35 or $40 thousand dollars. Someone in a skilled nursing facility for a period of time, 10 patients in that category would utilize the entire budget.

There was then much discussion as to the possibility of the state buying insurance for this type of illness through an insurance company.

Next to testify was Jim Pfeiffer, Deputy Director for the Division of Insurance and a member of the Catastrophic Illness Committee.
Pfeiffer Said the way he understood the bill it would allow payments to be made to the person who made the original payments. Said the original bill contemplated payment to medical providers only, but now payment can be paid to a relative, friend,or whoever paid the medical provider. Said he would oppose that type of amendment. Said the original bills intent was to provide a source of funds for persons suffering a catastrophic illness who had no other fund and source available. He said if a person could tap a friend or relative he didn't believe the state should absorb that cost Said he felt this would add and compound the problems of the committee. Said he thought the administratio of such an amendment would be difficult.

There was much discussion with Mr. Pfeiffer regarding a group insurance policy for the entire state of Alaska as to what the preimiums would be etc.

Mr. Parr asked if it would possible to structure a program to match the amount of money instead of matching the money to the program. Mr. Pfeiffer said it was an approach that had a great deal of logic. Said he has sent these regulations to Blue Cross and they had indicated from their already existing records in the State to try to come up with an answer. Mr. Parr informed Mr. Pfeiffer there wasn't much point in having legislation that would offer false hope to people and then not funding it. Said it would make more sense to have something on the books that would be funded by the legislature so the people would know the money was there if they qualified but said he had no idea what would be appropriated but presently doesn't see the 1.2 million being there even with the oil money.

Mr. Bennett asked if they had a dollar figure to provide a program like the one they had discussed that would have a true catastrophic coverage. Pfeiffer said they have not but the closest thing is what he has asked Blue Cross to do. Mr. Parr asked that he furnish us the material when he got it from Blue Cross.

Mr. Parr said for personal policies, he understood Blue Cross policies have a dollar limit. Mr. Heueisen said most policies covered up to a quarter of a million dollars. State employees policy is $250,000 maximum (lifetime) per individual. There was discussion on the different types of policies.

Mr. Parr asked the Committee to hold off action on the bill until we received the information requested from Mr. Pfeiffer back.

The meeting adjourned at 4:50 p.m.

STATE of ALASKA

MEMORANDUM

DEPARTMENT OF COMMERCE AND ECONOMIC DEVELOPMENT

TO: The Honorable Charles H. Parr
State House of Representatives

DATE: May 4, 1977

FILE NO.

TELEPHONE NO.

FROM: James E. Pfeifer
Deputy Director
Division of Insurance

SUBJECT: Catastrophic Illness Legislation

Since another commitment prevents me from testifying before your committee on Friday, May 6, 1977, I present the following written comments:

At your April 15, 1977 committee meeting you requested information as to the anticipated cost which could be attached to the catastrophic illness legislation as currently reflected in the regulations drafted by the Catastrophic Illness Committee.

I have contacted the Health Insurance Association of America (HIAA) and Blue Cross of Washington and Alaska for assistance in cost projections. Neither source was willing to place much reliance on cost projections because of the unavailability of the necessary statistics.

With the understanding that these projections will be viewed as very rough estimates, I present the following:

The HIAA projected an estimated maximum cost of $657,000 for the fiscal year beginning July 1, 1977. This estimate considers substantial intermediate care confinements which is an area of coverage of great concern to HIAA and one which can significantly impact costs.

A copy of a letter from HIAA is attached to this memorandum. Mr. Charles D. Kuhnen, Counsel, raises a number of valid questions and concerns about the legislation and regulations. I should point out that one of his major concerns is that the Catastrophic Illness Committee may have exceeded its authority in defining the legislation as being available for all of the people of Alaska. Even if one determines that the legislation was not intended to be limited to needy persons, the fact that it is included as a part of the statutes governing general relief assistance for needy persons raises a number of questions. I refer you to Mr. Kuhnen's letter for further details.

Blue Cross developed its projections by examining the experience of a large group plan in Alaska. Costs were related to an assumed population group which would be eligible for the program. In other words, Alaskans covered under other programs (such as Medicare, Medicaid, private insurance coverage, the military, Native Health Act, ecc.) would be excluded.

On the assumption that 10 percent of Alaska's population would be eligible, the total cost would be estimated at $1,418,000. Blue Cross acknowledges that the 10 percent estimate could be high. Even if one

cuts it in half, however, the cost would be over $700,000, well above the appropriation.

Because of the magnitude of these projections as well as the wide variance, it appears prudent to me that the HESS Committee should take a position on this matter in the current session. If the HESS Committee is satisfied with the scope of the current regulations, then an additional appropriation probably would be required.

On the otherhand, if your commitee believes that the regulations do not fall within the intent of the law, then more specific direction should be given to the Catastrophic Illness Committee.

You should be aware that our committee is now reviewing and approving claims on a regular basis. As of this date, claims totaling $53,000 have been approved. This number may appear small but you must consider that the committee has been approving claims only for about two months and more importantly, this program is not yet well known in the State. Pending claims on hand yet needing further information could well double the total above.

If I can provide further information or assistance, please advise.

Re: Alaska Catastrophic Medical Care Costs Law; Proposed Regulation; H.B. 409

Dear Mr. Pfeiffer:

You have asked for our comments about the proposed regulation of the Catastrophic Illness Committee, which is intended to implement AS 47.25.255, and for any cost estimate we might have for the catastrophic illness plan set out in the regulation.

The proposed regulation shows that the Committee gave considerable thought and study to the problems involved in developing such a plan. We have several suggestions for you to consider, based on the insurance experience of our companies, on the experience of the plans in Maine and Rhode Island, and on my own experience working with the Arizona Legislature to try to establish a workable plan for that State. In this letter I will mention some of our serious concerns, leaving details and other suggestions for a later letter.

THE STATUTE

We have one very fundamental difference with the Catastrophic Illness Committee. This is over the meaning of the statute itself. To us, the statute quite clearly authorizes the payment of catastrophic illness benefits for needy persons who are eligible for general relief assistance. The proposed regulation, to the contrary, would make all residents of the State eligible for catastrophic illness benefits.

All of the statutory signs point in the direction of our interpretation. AS 47.25.255 is contained in Title 47, chapter 25, Article 2. Title 47 is the title covering welfare, and social services and institutions. Chapter 25 is entitled "Destitute and Needy Persons". Article 2 deals with general relief assistance for needy persons. All of the sections in Article 2, including the catastrophic illness section, are governed by the first section (47.25.120) of that Article. Section 120 says that financial "assistance" may be given under §§120-300 of chapter 25 to a "needy person" who is eligible under regulations of the Department of Health and Social Services. Over and over again, the provisions of Article 2 tie all of the sections (120-300) of that Article together.

Thus, all of the sections of Article 2 are to be read together, and should be read as dealing with financial "assistance" for "needy persons".

Section 220 provides that the total amount paid in "assistance" to a recipient constitutes a claim against the recipient and his estate. It directs the courts to allow such a claim against the recipient's estate. So catastrophic illness payments, like other assistance for the needy, are recoverable by the State should the needy person or his estate have the resources to repay them.

To me, it would be a mere quibble to say that catastrophic illness payments are not subject to this provision because those payments are made to the provider of services on behalf of the needy person, rather than to the needy person himself. Section 190 allows for assistance payments to be made to a guardian, and I would guess that in practice the State may make other assistance payments to third parties on behalf of a needy person. For the purposes of §220, the needy person would still be the "recipient".

Section 255 itself exhibits its connection with other parts of Article 2. It specifically exempts the catastrophic illness program from the provisions of sections 230 and 240. It does not give the Catastrophic Illness Committee authority to determine who is eligible for catastrophic illness benefits, but only allows the Committee to determine allowable costs and levels of reimbursement. Eligible persons would be the needy who are eligible for general relief assistance under §120.

Section 255 was added to Article 2 by Chapter 221, Laws of 1976, the bill being Senate Bill 542. The Title to the Act supports the above analysis.

It refers only to medical assistance for needy persons. The Act does not indicate that it was intended to enact a State catastrophic insurance program for all of the people of Alaska.

The journals of the House and Senate are not, as far as I can determine, available here in Chicago. I do not know how the catastrophic section of S.B. 542 was explained. If the bill had been intended to provide for a State catastrophic insurance program for all of the citizens of Alaska, I would have expected that it would be much debated and publicized. As far as I know, it did not receive such notice.

And the mere two sentences that the Legislature devotes to catastrophic insurance argues against it being considered a broad State catastrophic insurance program. Had it been considered to be so, would the Legislature have left it to a committee of three persons (the Catastrophic Illness Committee) to say what that program would be? Would the Legislature have left it to the Catastrophic Illness Committee to undertake any program it saw fit, without any direction from the Legislature as to scope or detail, even though such a program could cost millions of dollars or else fail to deliver what it promised? Most unlikely. Although I must say that the Committee has, in this proposed regulation, shown remarkable restraint. If the statute was really intended to give the committee a free hand, it could have developed a regulation which would have made the State, for all practical purposes, the sole health insurer in Alaska. The Committee could do this by making the threshold amount and required out-of-pocket expense low enough so that people no longer found it economical to pay premiums for private health insurance.

What I suspect the Legislature intended to do was provide catastrophic medical cost benefits for some of the people the Medicaid law describes as the "medically needy", without going to the expense that would be required to participate in the full program for the "medically needy" under Medicaid. I don't pretend to understand much about the Medicaid law, but two publications I have read say that Alaska participates in the Medicaid program for the "categorically needy", not in the Medicaid program for the "medically needy". If this is so, a catastrophic program for the medically needy could be adopted which would cost less than the medically needy program under Medicaid. It may be argued that the Department of Health and Social Services could already provide medical assistance to persons eligible for general relief assistance under Article 2. But this argument overlooks the requirement that a person liable for the

support of a needy person was required to participate in covering the needy persons medical needs under §§230 and 240, and that the amount of temporary assistance that could be given under §250 was limited to $80 per month. Chapter 221 of the Laws of 1976 removed the requirements of §§230 and 240 for needy persons with catastrophic illnesses, and make an exception to the $80 limit in §250 in the case of assistance for medical care.

Recommendations. If the Legislature meant to do what my analysis shows that it did in fact do, then, in view of the different interpretation made by the Catastrophic Illness Committee, it would be a good idea for the Legislature to amend §255 to prescribe more explicitly what it intended.

If the Legislature intended to delegate to the Catastrophic Illness Committee the power to adopt a State catastrophic illness program for all Alaskans, paid for by the State, we think it would be wise for the Legislature to amend pending H.B. 409 to postpone the effective date of AS 47.25.255 long enough so the Legislature can develop and enact the program it wants. The delegation of such power to the Catastrophic Illness Committee may very well be an unconstitutional delegation of legislative authority, most particularly since the legislature provided no guidelines whatsoever to the Committee. And, in any event, it seems unfair to the Committee members to place the entire burden of deciding on such an important program on them.

If the Legislature had in mind neither of the above interpretations, it would appear necessary now to amend AS 47.25.255 to clarify what was intended by it.

PROPOSED REGULATION: OUT-OF-POCKET EXPENSE REQUIREMENTS

Many Alaska residents now have coverage, paid for by themselves or their employers, for health care expenses This coverage may be provided under health insurance policies, Blue Cross-Blue Shield plans or other prepaid service plans, or under plans provided by noninsured entities. Such policies or plans often do protect against catastrophic losses. In recent years insurers have been increasing the maximum benefits they now provide, so that coverage is available, particularly under group plans which constitute 75% to 80% of the health insurance

business up to limits of $250,000, or $1,000,000, or sometimes without a maximum overall dollar limit. It is interesting to know that increasing the limits generally costs less than securing separate coverage for catastrophic health care expenses.

We estimate that 248,000 Alaska residents under age 65 are covered for hospital expenses, 250,000 for medical expenses, 142,000 for major medical expenses. The major medical figure is for residents covered under insurance policies issued by insurance companies, and does not include any similar coverage furnished by the Blues. These are December 31, 1975 figures, the latest available from our statistics department. Persons age 65 and older are generally covered under Medicare, and are not included in the above figures.

Insurers do not want to be put out of the health care expense insurance business by a State plan for the general population. We think that your State government would not wish to use State funds to pay for health care costs for persons who have adequate insurance coverage, not to encourage people (or their employers) to drop their insurance coverage because of a State plan. This latter possibility could happen if you are not careful enough about the way you set the threshold amount and the out-of-pocket expense deductibles under the State plan.

Rhode Island has a catastrophic illness plan that contains provisions which encourage people to retain their insurance coverage. Under the Rhode Island law, the dollar amount of the out-of-pocket expense requirement decreases when the person has insurance coverage. Thus, for a person with no nonstate plan, there is a stated or percentage of income out-of-pocket expenditure required. The out-of-pocket expenditure amount is less for a person who has a basic nonstate plan, and is even less for a person with a major medical plan. Enclosed is a copy of the Rhode Island law that includes this graded out-of-pocket expense requirement.

You may wish to consider the Rhode Island requirements or something similar to them.

INTERMEDIATE CARE FACILITIES

We are very much concerned about the regulation proposing to pay for confinements in intermediate care facilities. These facilities are mostly

engaged in providing long-term custodial or semi-custodial care for the elderly.

Medicare does not cover confinement in intermediate care facilities. Medicaid does cover such confinements. Information from the State of Maine is that 40% of the benefit cost of that State's Medicaid program is for intermediate care facility confinements.

This information about Maine came from John Fickett, who is Director of the Division of Medical Assistance of the Maine Department of Health and Welfare. His Division administers Maine's Medicaid program and its catastrophic illness program. The Maine catastrophic illness program does not cover intermediate care facility confinements, and Mr. Fickett says he would advise any other State adopting a catastrophic illness program to omit coverage for such confinements.

OTHER PROBLEMS

As I told you by phone, the proposed regulation needs some additional work. One significant omission is that it does not contain a statement of what health care services are to be covered. This is just as important as listing the exclusions, if not more so.

We think the list of exclusions should be expanded somewhat.

The provisions concerning application of the out-of-pocket expense requirements when there are two or more catastrophic illnesses in the same family needs to be given more thought. This will be difficult to apply, particularly when the twelve-month benefit periods overlap, but begin at different times.

I will comment in more detail on these and other problems in a later letter.

COSTS

For a number of reasons it is very difficult to estimate the probably cost of the plan contained in the proposed regulation. One problem is that the regulation itself needs to be more definitive of the services covered, and of the benefit periods, and of the matters mentioned above. Also we have no up-to-date information on the distribution of the Alaska population by income and family size, and very little information about health care facilities.

In order to make anything more than a general guesstimate, our actuary would need to have a more definitive plan and considerably more information.

His rough estimate, from what information we have including your explanation of a number of points that are not clear in the proposed plan, is about $.90 (plus or minus 25%) per Alaska resident for the fiscal year beginning July 1, 1977, or about $375,000 ± 25% for a population of about 413,000. If intermediate care facility confinements are covered, and if there is a substantial amount of covered intermediate care confinements in Alaska, the figure could be as much as 40% higher on that account.

As with any insurance program, claim costs are likely to run significantly above ~~below~~ such costs in later years, when the program is better known to eligible claimants. Also the costs of health care services are continuing to rise at a high rate, and the rate of this increase will have a substantial effect on future costs.

Sincerely,

Charles D. Kuhnen
Counsel

Catastrophic Illness Committee
Pouch H-06
Juneau, Alaska 99811

RE: Comments on Proposed Catastrophic Illness Regulations.

Dear People:

Pursuant to Commissioner Williamson's notice of Febr ry 2nd, 1977, I am submitting the comments contained in this letter for the Committee's consideration. The catastrophic illness program has the potential for providing substantial benefits to many of our clients. The draft regulations, however, contain a number of provisions which, if not revised, may adversely effect the substantive and procedural rights of a number of eligible persons and involve the Committee in protracted litigation.

Before commenting on specific sections of the proposed regulations, I would like to point out that one of their most serious shortcomings is that they fail to require that the catastrophic illness program be publicized. There is, thus, a real danger that the program will become a secret benefit which will--like the Medicaid program--be unused by large numbers of eligible persons. This eventually is manifestly contrary to the legislative intent behind AS. 47.25.255; it can be avoided if the Committee adopts a requirement that posters publicizing the availability of benefits and applications be displayed in the emergency rooms and entrance areas of state licensed hospitals and of public buildings. A similar requirement has been placed on the Violent Crimes Compensation Board and has contributed significantly to the success of its efforts.

I. COMMENTS ON SPECIFIC PROPOSALS

7 AAC 48.030 There are two sources of potential difficulty in this section. The first lies in its requirement that applications be made "in the manner prescribed" on the application form. Though the form and "instructions relating to the use of the form" are expressly excluded from coverage of the rule-making provisions of the State Administrative Procedure Act (AS.44.62.010 et seq), an attempt to use the instructions as a vehicle for substantive rule-making would be clearly violative of the Act's terms. For example, an instruction on the form requiring applications to be submitted

within a certain time period after medical treatment is received would undoubtedly constitute a "regulation" as defined in AS. 44.62.640(a)(2) and, thus, be subjected to the procedural requirements in AS. 44.62.040--.290.

The second difficulty lies in subsection (d)'s provision stating that no application will be considered unless medical bills related to the catastrophic illness total more than $1000. It seems that the Legislature intended two elements to be present for an illness to be considered "catastrophic"--a medical element and an economic element. Though it may be possible to set up objective medical standards for determining whether an illness has sufficient physical or mental impact to be considered catastrophic, whether its economic impact rises to the level of a catastrophy is a purely subjective measurement. For some persons medical bills totaling $500. may constitute a catastrophy while other persons might be able to absorb expenses totaling many thousands of dollars without assistance. Arbitrarily setting a cut-off point for the economic element of the definition of a catastrophic illness will exclude an entire class of people whose medical bills are less than $1000. but are suffering a disastrous economic impact from the illness due to the fact that their expenses are very high in relation to their income.

There is a high probability that such a classification violates the right to equal protection of the law granted these class members by the Alaska Constitution. When dealing with a regulation of an economic nature, such a violation exists if the classification does not bear a "fair and substantial relation to the purpose sought to be advanced" by the legislative scheme. Issacson v. Rickey, Alaska Supreme Court Opinion No. 2550 (1976).

A regulatory classification excluding persons whose medical bills are less than $1000 from the coverage of AS. 47.25.255 does not bear a fair and substantial relation to the legislature's purpose in passing that statute. The catastrophic illness law was directed at helping all persons who suffer a serious economic impact as a result of severe medical problems. As has already been pointed out, this impact can exist when expenses are less than $1000.

In response to this criticism it might be argued that people whose incomes are so low that bills of less than $1000. represent a serious impact would be covered by the Medicaid or General Relief Medical Assistance Program. This argument ignores the fact that GRM and Medicaid eligibility requirements are quite restrictive and the benefits of those programs are not available to large numbers of poor people.

Alternatives to the arbitrary cut-off point do exist. The Committee could, for example, develop a formula similar to that proposed in 7 AAC 48.070(a). The purpose of this formula would be to determine at what point a persons financial resources are inadequate to meet medical expenses. Such a formula should not be adopted without public input. See comments to 7 AAC. 48. 070(a), infra.

An even better alternative to the arbitrary cut-off point would be to adopt a formula similar to that used by the State of California to determine medical indigency. That formula is contained in California Welfare and Institutions Code §14.005.7 (copy attached). If applied in Alaska's catastrophic illness program it would operate as follows:

> Step 1--The Committee would determine the amount by which the applicant's income exceeded the GRA and GRM standard of need
>
> Step 2--The Committee would determine the value of resources not excluded under 7 AAC 48.070(c).
>
> Step 3--The value of the excess income derived under Step 1 and the resources described in Step 2 would be added. The sum obtained would then be compared to the applicant's medical bills. If the total bills exceeded the sum of the above-described assets there could be a finding that the illness had had a catastrophic economic impact.

7 AAC.48.050. The exclusion in subsection (e) of psychological or psychiatric treatment not required by court order is overbroad. It is quite possible that a person may suffer emotional difficulties which are severe enough to intervere with his ability to support himself or his family but which would not justify court-ordered treatment. Severe depression or persistent anxiety may, for example, interfere with a person's ability to hold a job. The definition of excluded psychological or psychiatric treatment should be narrowed so that such persons will be given the benefit of AS 47.25.255 (unless they can receive help from public agencies of programs in their community).

7 AAC.48.070(a). It is unacceptable for the formula which will determine what benefits people receive to be devised without public comment. Whatever formula is suggested will not relate solely to the Committee's internal affairs but will directly affect the public. It is, thus, a "regulation" as defined in AS.44.62.640 and must be adopted pursuant to the Administrative Procedure Act. If the Committee fails to utilize the Act's rule-making procedures and promulgating the formula the first person whose benefits are denied or reduced as a result of its application will have a cuase of action based on the illegality of the procedure

used to adopt it.

Any proposed formula should be based upon net, not gross, income, for a formula based upon gross income would ignore the applicant's necessary non medical expenses and, thereby, underestimate the true impact of medical bills.

7 AAC.48.070(c). The main shortcoming of this section is that it does not exclude restricted property such as Native Allotments or Townsite lots from consideration as assets. This realty is restricted property which under federal law and regulations is held in trust by the Secretary of the Interior and is not freely alienable. It, thus, cannot be liquidated to meet medical expenses. 43 USC. §§270-1, 732-733; 43 CFR. §2561.3.

The subsection also fails to exclude the Alaska Longevity Bonus from consideration as income. This failure contravenes the purpose of the Longevity Bonus Statute, as set forth in AS.47.45.170.

In light of the foregoing, the following language should be added to the subsection:

> "(8) Money received from Alaska Longevity Bonus Fund.
>
> "(9) Lands held pursuant to the Allotment Act of 1906 [43 USC. §270-1 et seq].
>
> "(10) Lands described in restricted deeds issued by the Townsite Trustee, U.S. Department of the Interior."

It is also suggested that § .070(5) be changed to read, "one thousand dollars of liquid assets not otherwise excluded by this subsection". In light of the definition of "liquid assets" in 7 AAC. 18.130 (8). such a change would clarify the apparent intent of clause (5).

7 AAC.48.080(b). See discussion of $1000. cut-off point, supra.

7 AAC.48.080(d). This subsection appears to allow the Committee to consider the overall availability of catastrophic illness funds in deciding individual cases. AS.47.25.255 does not grant the Committee such discretion. By passing the statute the state has undertaken to grant all persons suffering from catastrophic illness benefits of the legislative scheme. The Committee cannot shirk this responsibility to individual applicants by considering the overall availability of funds.

7 AAC.48.080(e). This provision is ambiguous. The "other factors or circumstances" should be specified.

7 AAC. 48.090-.110 There is little reason for interposing the reconsideration procedure between the decision of an application and the fair hearing which is required as a matter of procedural due process. Though it might be said that a reconsideration may serve to narrow issues on appeal, the issues which will arise as the result of adverse decisions on applications will most likely revolve around narrow factual questions anyway (e.g; the applicant's income, the nature of his assets, the character or impact of his illness). Furthermore, requiring a reconsideration will have the effect of clogging the Committee's calendar with disputed matters that could be expeditously resolved by hearing officers and could affect its ability to deal efficiently with new applications.

The most significant arguements against having a reconsideration prior to a fair hearing is that, as structured in the proposed regulation, the reconsideration will have a chilling effect on the exercise of the right to a hearing by many low income people in the state. In order for the reconsideration to be obtained, the applicant must submit a detailed written statement along with supporting documentation. A substantial portion of the state's low income population is not used to expressing arguments in writing. The reliance on written statements of grounds by proposed §.090 will discourage a number of people in this category from pursuing meritorious appeals.

Another defect with the proposed regulations relating to appeals procedures is that they do not require applicants to be notified regarding their due process rights when adverse decisions are rendered. As was recognized in Aguchak v. Montgomery Ward Co., Inc., 520 P.2d 1352 (Alaska 1974), applicants' procedural due process rights will only be protected if the notices regarding the Committee's decision are reasonably calculated to apprise them of these rights.

To remedy this shortcoming I propose that the following provisions shall be added:

> "All information describing hearing rights and procedures and rights to representation shall be printed in boldface type on the front or facing page of the notice informing the applicant of the Committee's decision. In addition, the front or facing page of the notice shall indicate that those unable to hire legal counsel to represent them may be able to obtain assistance from Alaska Legal Services Corporation."

The provision of section 100 incorporating the Department's regulations regarding welfare and food stamp fair hearings by reference could cause problems. Though many of the procedures re-

lating to welfare fair hearings can be easily adapted to appeals from the Committee's decisions, others may be wholly inappropriate. It is suggested that a thorough review be made of these procedures so that those which conflict with the goals of the catastrophic illness program will not be inadvertently adopted.

My final comment on the proposed appeals procedure concerns the 30 day limit for seeking review contained in section 110. This period will normally give applicants ample time to request a hearing. but a provision stating that the limit can be extended or waived for good cause would serve the ends of justice by assuring that hearing rights are protected when the failure to make a timely request results from circumstances beyond the control of the applicant (e.g. a representative's negligence or inability to understand hearing procedures). Also, the regulation should specifiy that a request for a haring will be deemed made upon a dispatch. This will protect the rights of persons who live in areas of the state where mail service is erratic.

7 AAC. 48.130(3). The arbitrary nature of the $1000 cut-off point in the definition of "catastrophic illness" has already been discussed. It should also be noted that the limitation of the definition to a single illness conflicts with §. 070(b).

II. CONCLUSION

By the comments contained herein, Alaska Legal Services does not waive any objection to the final regulations adopted by the Catastrophic Illness Committee. I hope, however, that these suggestions provide the Committee with some assistance in devising workable and fair rules. Thank you for the opportunity to participate in the rule-making process.

Sincerely,

ALASKA LEGAL SERVICES CORPORATION

§ 14005.7 Medically indigent adult and family persons eligible for health care service

The following medically indigent adult and family persons are eligible for health care service under Section 14005:

(a) A medically indigent adult person whose monthly income in excess of the amount required for maintenance established pursuant to Section 14005.12 (exclusive of any amounts considered exempt as income under other provisions of this code pertaining to public assistance recipients) is not sufficient to provide for the cost of health care or coverage less any amount by which the value of his other resources, owned by him alone, or in combination with his spouse, exceeds the value established in accordance with Section 14006, or a reasonable portion of such value thereof as may be determined in accordance with standards established by the director; or

(b) A medically indigent family person in a family whose monthly family income in excess of the amount required for maintenance established pursuant to Section 14005.12, by family size (exclusive of any amounts considered exempt as income under other provisions of this code pertaining to public assistance recipients) is not sufficient to provide for the cost of health care or coverage less any amount by which the value of the family's other resources exceeds the value established in accordance with Section 14006, or a reasonable portion of such value thereof as may be determined in accordance with standards established by the director.

RE: Comments on Proposed Catastrophic Illness Regulations.

Dear People:

Pursuant to Commissioner Williamson's notice of February 2nd, 1977, I am submitting the comments contained in this letter for the Committee's consideration. The catastrophic illness program has the potential for providing substantial benefits to many of our clients. The draft regulations, however, contain a number of provisions which, if not revised, may adversely effect the substantive and procedural rights of a number of eligible persons and involve the Committee in protracted litigation.

Before commenting on specific sections of the proposed regulations, I would like to point out that one of their most serious shortcomings is that they fail to require that the catastrophic illness program be publicized. There is, thus, a real danger that the program will become a secret benefit which will--like the Medicaid program--be unused by large numbers of eligible persons. This eventually is manifestly contrary to the legislative intent behind AS. 47.25.255; it can be avoided if the Committee adopts a requirement that posters publicizing the availability of benefits and applications be displayed in the emergency rooms and entrance areas of state licensed hospitals and of public buildings. A similar requirement has been placed on the Violent Crimes Compensation Board and has contributed significantly to the success of its efforts.

I. COMMENTS ON SPECIFIC PROPOSALS

7 AAC 48.030 There are two sources of potential difficulty in this section. The first lies in its requirement that applications be made "in the manner prescribed" on the application form. Though the form and "instructions relating to the use of the form" are expressly excluded from coverage of the rule-making provisions of the State Administrative Procedure Act [AS.44.62.010 et seq], an attempt to use the instructions as a vehicle for substantive rule-making would be clearly violative of the Act's terms. For example, an instruction on the form requiring applications to be submitted

within a certain time period after medical treatment is received would undoubtedly constitute a "regulation" as defined in AS. 44.62.640(a)(2) and, thus, be subjected to the procedural requirements in AS. 44.62.040--.290.

The second difficulty lies in subsection (d)'s provision stating that no application will be considered unless medical bills related to the catastrophic illness total more than $1000. It seems that the Legislature intended two elements to be present for an illness to be considered "catastrophic"--a medical element and an economic element. Though it may be possible to set up objective medical standards for determining whether an illness has sufficient physical or mental impact to be considered catastrophic, whether its economic impact rises to the level of a catastrophy is a purely subjective measurement. For some persons medical bills totaling $500. may constitute a catastrophy while other persons might be able to absorb expenses totaling many thousands of dollars without assistance. Arbitrarily setting a cut-off point for the economic element of the definition of a catastrophic illness will exclude an entire class of people whose medical bills are less than $1000. but are suffering a disastrous economic impact from the illness due to the fact that their expenses are very high in relation to their income.

There is a high probability that such a classification violates the right to equal protection of the law granted these class members by the Alaska Constitution. When dealing with a regulation of an economic nature, such a violation exists if the classification does not bear a "fair and substantial relation to the purpose sought to be advanced" by the legislative scheme. Issacson v. Rickey, Alaska Supreme Court Opinion No. 2550 (1976).

A regulatory classification excluding persons whose medical bills are less than $1000 from the coverage of AS. 47.25.255 does not bear a fair and substantial relation to the Legislature's purpose in passing that statute. The catastrophic illness law was directed at helping all persons who suffer a serious economic impact as a result of severe medical problems. As has already been pointed out, this impact can exist when expenses are less than $1000.

In response to this criticism it might be argued that people whose incomes are so low that bills of less than $1000. represent a serious impact would be covered by the Medicaid or General Relief Medical Assistance Program. This argument ignores the fact that GRM and Medicaid eligibility requirements are quite restrictive and the benefits of those programs are not available to large numbers of poor people.

Alternatives to the arbitrary cut-off point do exist. The Committee could, for example, develop a formula similar to that proposed in 7 AAC 48.070(a). The purpose of this formula would be to determine at what point a persons financial resources are inadequate to meet medical expenses. Such a formula should not be adopted without public input. See comments to 7 AAC. 48. 070(a), infra.

An even better alternative to the arbitrary cut-off point would be to adopt a formula similar to that used by the State of California to determine medical indigency. That formula is contained in California Welfare and Institutions Code §14.005.7 (copy attached). If applied in Alaska's catastrophic illness program it would operate as follows:

> Step 1--The Committee would determine the amount by which the applicant's income exceeded the GRA and GRM standard of need
>
> Step 2--The Committee would determine the value of resources not excluded under 7 AAC 48.070(c).
>
> Step 3--The value of the excess income derived under Step 1 and the resources described in Step 2 would be added. The sum obtained would then be compared to the applicant's medical bills. If the total bills exceeded the sum of the above-described assets there could be a finding that the illness had had a catastrophic economic impact.

7 AAC.48.050. The exclusion in subsection (e) of psychological or psychiatric treatment not required by court order is overbroad. It is quite possible that a person may suffer emotional difficulties which are severe enough to intervere with his ability to support himself or his family but which would not justify court-ordered treatment. Severe depression or persistent anxiety may, for example, interfere with a person's ability to hold a job. The definition of excluded psychological or psychiatric treatment should be narrowed so that such persons will be given the benefit of AS 47.25.255 (unless they can receive help from public agencies of programs in their community).

7 AAC.48.070(a). It is unacceptable for the formula which will determine what benefits people receive to be devised without public comment. Whatever formula is suggested will not relate solely to the Committee's internal affairs but will directly affect the public. It is, thus, a "regulation" as defined in AS.44.62.640 and must be adopted pursuant to the Administrative Procedure Act. If the Committee fails to utilize the Act's rule-making procedures and promulgating the formula the first person whose benefits are denied or reduced as a result of its application will have a cuase of action based on the illegality of the procedure

used to adopt it.

Any proposed formula should be based upon net, not gross, income, for a formula based upon gross income would ignore the applicant's necessary non medical expenses and, thereby, underestimate the true impact of medical bills.

7 AAC.48.070(c). The main shortcoming of this section is that it does not exclude restricted property such as Native Allotments or Townsite lots from consideration as assets. This realty is restricted property which under federal law and regulations is held in trust by the Secretary of the Interior and is not freely alienable. It, thus, cannot be liquidated to meet medical expenses. 43 USC. §§270-1, 732-733; 43 CFR. §2561.3.

The subsection also fails to exclude the Alaska Longevity Bonus from consideration as income. This failure contravenes the purpose of the Longevity Bonus Statute, as set forth in AS.47.45.170.

In light of the foregoing, the following language should be added to the subsection:

> "(8) Money received from Alaska Longevity Bonus Fund.
>
> "(9) Lands held pursuant to the Allotment Act of 1906 [43 USC. §270-1 et seq].
>
> "(10) Lands described in restricted deeds issued by the Townsite Trustee, U.S. Department of the Interior."

It is also suggested that § .070(5) be changed to read, "one thousand dollars of liquid assets not otherwise excluded by this subsection". In light of the definition of "liquid assets" in 7 AAC. §48.130 (8). such a change would clarify the apparent intent of clause (5).

7 AAC.48.080(b). See discussion of $1000. cut-off point, supra.

7 AAC.48.080(d). This subsection appears to allow the Committee to consider the overall availability of catastrophic illness funds in deciding individual cases. AS.47.25.255 does not grant the Committee such discretion. By passing the statute the state has undertaken to grant all persons suffering from catastrophic illness benefits of the legislative scheme. The Committee cannot shirk this responsibility to individual applicants by considering the overall availability of funds.

7 AAC.48.080(e). This provision is ambiguous. The "other factors or circumstances" should be specified.

7 AAC. 48.090-.110 There is little reason for interposing the reconsideration procedure between the decision of an application and the fair hearing which is required as a matter of procedural due process. Though it might be said that a reconsideration may serve to narrow issues on appeal, the issues which will arise as the result of adverse decisions on applications will most likely revolve around narrow factual questions anyway (e.g; the applicant's income, the nature of his assets, the character or impact of his illness). Furthermore, requiring a reconsideration will have the effect of clogging the Committee's calendar with disputed matters that could be expeditously resolved by hearing officers and could affect its ability to deal efficiently with new applications.

The most significant arguements against having a reconsideration prior to a fair hearing is that, as structured in the proposed regulation, the reconsideration will have a chilling effect on the exercise of the right to a hearing by many low income people in the state. In order for the reconsideration to be obtained, the applicant must submit a detailed written statement along with supporting documentation. A substantial portion of the state's low income population is not used to expressing arguments in writing. The reliance on written statements of grounds by proposed §.090 will discourage a number of people in this category from pursuing meritorious appeals.

Another defect with the proposed regulations relating to appeals procedures is that they do not require applicants to be notified regarding their due process rights when adverse decisions are rendered. As was recognized in Aguchak v. Montgomery Ward Co., Inc., 520 P.2d 1352 (Alaska 1974), applicants' procedural due process rights will only be protected if the notices regarding the Committee's decision are reasonably calculated to apprise them of these rights.

To remedy this shortcoming I propose that the following provisions shall be added:

> "All information describing hearing rights and procedures and rights to representation shall be printed in boldface type on the front or facing page of the notice informing the applicant of the Committee's decision. In addition, the front or facing page of the notice shall indicate that those unable to hire legal counsel to represent them may be able to obtain assistance from Alaska Legal Services Corporation."

The provision of section 100 incorporating the Department's regulations regarding welfare and food stamp fair hearings by reference could cause problems. Though many of the procedures re-

lating to welfare fair hearings can be easily adapted to appeals from the Committee's decisions, others may be wholly inappropriate. It is suggested that a thorough review be made of these procedures so that those which conflict with the goals of the catastrophic illness program will not be inadvertently adopted.

My final comment on the proposed appeals procedure concerns the 30 day limit for seeking review contained in section 110. This period will normally give applicants ample time to request a hearing. but a provision stating that the limit can be extended or waived for good cause would serve the ends of justice by assuring that hearing rights are protected when the failure to make a timely request results from circumstances beyond the control of the applicant (e.g: a representative's negligence or inability to understand hearing procedures). Also, the regulation should specifiy that a request for a haring will be deemed made upon a dispatch. This will protect the rights of persons who live in areas of the state where mail service is erratic.

7 AAC. 48.130(3). The arbitrary nature of the $1000 cut-off point in the definition of "catastrophic illness" has already been discussed. It should also be noted that the limitation of the definition to a single illness conflicts with §. 070(b).

II. CONCLUSION

By the comments contained herein, Alaska Legal Services does not waive any objection to the final regulations adopted by the Catastrophic Illness Committee. I hope, however, that these suggestions provide the Committee with some assistance in devising workable and fair rules. Thank you for the opportunity to participate in the rule-making process.

Sincerely,

MINUTES OF HOUSE HESS COMMITTEE

April 15, 1977

The meeting was called to order by Chairman Parr at 3:30 p.m. Those present were: Parr, Chatterton, Buchholdt, Phillips, Bennett.

Absent: Nakak, Ose, Cotten & Beirne.

Chairman Parr announced that HB 409 would be taken up and asked Mrs. Buchholdt to speak on her bill. She told the committee her reasons for introducing the bill, the main one being trying
HB 409 to correct problems that have occurred with people she knows in Anchorage who have had an illness and had to sell their homes and all in order to pay the medical bills. She said she would be happy to expand the bill.

Next to testify was Dr. Robert Fraser, Director, Division of Public Health. Dr. Fraser said the Department's concern with the
Fraser bill is with the budgetary restriction. He said they do recognize the present bill does penalize people who have made the effort to meet their costs by going into debt, borrowing money for relativ.. etc., and are sympathetic with them.

Mr. Parr informed the committee that he had met with Dr. Fraser and Mrs. Jund (from the Department) a few weeks back regarding this bill. He said this bill had been before the House last year and explained why it did not pass then. Said the committee would have to take a look at this bill and use it as a vehicle to resolve some of the problems facing the Dept. of Health & Social Services. He gave his views as to several alternatives.

There was discussion by members as to what a catastrophic illness was, whether to one person it would be catastrophic and to another person it might not be, depending on their financial status and how they defined catastrophic illness.

Dr. Fraser said the committee on catastrophic illness first met in November and their initial problem was regulations. They felt the fewer regulations they had would be best but said the Attorney General's office told them this would get them into trouble and that they need regulations and a formula to go by. Said they have processed the applications that have been forwarded to them, they have made disposition on roughly $100,000 worth of claims, Said a number of claims have been denied, utilizing the formula.

Mr. Bennett said he would be very apprehensive if they started identifying the give or take 100 different disease conditions. Said you could get into a combination of other conditions. Said perhaps basing it on a scale based on income which has a financial value you could identify he thought pehaps was the only wa. to halfway be reasonable about it.

Dr. Fraser said they have approved approximately 6 applications, denied about 15 and have about 15 or 20 that did not qualify due to the low amount of their bills. Said they had 25 pending that they had requested more information on. Dr. Fraser was asked by Mr. Chatterton how long it would take them to act on the ones they are waiting information on. Dr. Fraser said depending on how quickly they got their information back they had requested but if they got it back within the next 2 weeks they could have them processed within the next 2 months.

Mr. Parr asked Dr. Fraser what the budget called for for this year. Dr. Fraser said they had asked for $300,000 for this year. He said they had no previous experience to go on so just had to judge as what to ask for.

Dr. Fraser said much of their guidance in drawing up regulations was on the experience of the State of Maine. Said in trying to project the amount they need in Alaska is hard because of some very expensive problems, said a premature infant may have bills up to $35 or $40 thousand dollars. Someone in a skilled nursing facility for a period of time, 10 patients in that category would utilize the entire budget.

There was then much discussion as to the possibility of the state buying insurance for this type of illness through an insurance company.

Next to testify was Jim Pfeiffer, Deputy Director for the Division of Insurance and a member of the Catastrophic Illness Committee.
feiffer Said the way he understood the bill it would allow payments to be made to the person who made the original payments. Said the original bill contemplated payment to medical providers only, but now payment can be paid to a relative, friend,or whoever paid the medical provider. Said he would oppose that type of amendment. Said the original bills intent was to provide a source of funds for persons suffering a catastrophic illness who had no other fund and source available. He said if a person could tap a friend or relative he didn't believe the state should absorb that cost Said he felt this would add and compound the problems of the committee. Said he thought the administratio of such an amendment would be difficult.

There was much discussion with Mr. Pfeiffer regarding a group insurance policy for the entire state of Alaska as to what the preimiums would be etc.

Mr. Parr asked if it would possible to structure a program to match the amount of money instead of matching the money to the program. Mr. Pfeiffer said it was an approach that had a great deal of logic. Said he has sent these regulations to Blue Cross and they had indicated from their already existing records in the State to try to come up with an answer. Mr. Parr informed Mr. Pfeiffer there wasn't much point in having legislation that would offer false hope to people and then not funding it. Said it would make more sense to have something on the books that would be funded by the legislature so the people would know the money was there if they qualified but said he had no idea what would be appropriated but presently doesn't see the 1.2 million being there even with the oil money.

Mr. Bennett asked if they had a dollar figure to provide a program like the one they had discussed that would have a true catastrophic coverage. Pfeiffer said they have not but the closest thing is what he has asked Blue Cross to do. Mr. Parr asked that he furnish us the material when he got it from Blue Cross.

Mr. Parr said for personal policies, he understood Blue Cross policies have a dollar limit. Mr. Heueisen said most policies covered up to a quarter of a million dollars. State employees policy is $250,000 maximum (lifetime) per individual. There was discussion on the different types of policies.

Mr. Parr asked the Committee to hold off action on the bill until we received the information requested from Mr. Pfeiffer back.

The meeting adjourned at 4:50 p.m.

AS 47.05.030

7 AAC 48.030. APPLICATIONS FOR ASSISTANCE. (a) All applications for financial assistance under this chapter must be made on a form authorized by the committee, and in the manner prescribed on it.

(b) Application forms will be available at Regional Health Offices of the Division of Public Health, or may be obtained by writing to the committee at Pouch H06, Juneau, Alaska 99811.

(c) Applications may be filed by a person who has suffered a catastrophic illness or by a parent, spouse, or legal guardian of that person; or by any other interested party with the written consent of the person who has suffered a catastrophic illness.

(d) No application will be considered unless the total medical bills related to the catastrophic illness are more than $1,000 in a 12 month period after all sources of third party payment have been exhausted.

(Eff. / /1977, Register)

Authority: AS 47.05.010
AS 47.25.255

7 AAC 48.040. RESIDENCY OF APPLICANT. Applicants must be residents of the State of Alaska at the time of application and at the time the catastrophic illness for which state aid is sought occurred.

(Eff. / /1977, Register)

Authority: AS 47.05.010
AS 47 25.255

7 AAC 48.050. SERVICES EXCLUDED FROM COVERAGE. The following services and charges are excluded from coverage under this chapter:

(a) Dentistry and optometry unless prescribed by a licensed dentist or physician as medically necessary as the result of an injury or illness;

(b) Elective medical or surgical procedures;

(c) Drugs and medications not prescribed by a licensed physician;

(d) Services received as a result of a normal pregnancy;

(e) Psychological or psychiatric treatment unless required by court order and not available from public agencies or programs;

(f) Chiropractic services;

(g) Services not of a medical nature.

(Eff. / /1977, Register)

Authority: AS 47.05.010
AS 47.35.255

7 AAC 48.060. REQUIRED DOCUMENTATION; INVESTIGATION. Each application will be reviewed by the committee or its designee for completeness of information, including required documentation of medical expenses, gross income and assets. The committee or its designee may return the application for more complete information to the person who is applying and may investigate any portion of an application.

(Eff. / /1977, Register)

Authority: AS 47.05.010
AS 47.25.255

7 AAC 48.070. CALCULATION OF APPLICANT'S SHARE. (a) A formula adopted by the committee shall be utilized in determining the applicant's share of total medical bills related to a catastrophic illness, based on annual gross income, number of dependents and amount of assets. This formula may be revised by the committee from time to time and shall be made available to persons who request it by writing to the committee at Pouch H06, Juneau, Alaska 99811;

(b) For the purposes of applying the formula to determine the applicant's share, multiple catastrophic illness occuring within a 12 month period to the applicant or other members of the applicant's family shall be treated as one catastrophic illness;

(c) In applying the formula to determine the applicant's share, the total gross income and the total assets of the family of an applicant may be considered; the following assets will be excluded:

(1) a home providing shelter for the applicant and the land on which it is situated;

(2) one automobile or truck, not used for business purposes;

(3) tools, equipment and vehicles required in a trade or business;

(4) ordinary household and personal effects;

(5) $1,000 of liquid assets;

(6) all non-liquid assets unless such exclusion would bring about an inequitable result; however, all income derived from such property will be taken into consideration in determining the recipient's gross income;

(7) inalienable shares in a Native Corporation created pursuant to the Alaska Native Claims Settlement Act, P.L. 92-203, 43 U.S.C. 1601 et seq., during the period of their inalienability as specified in the act.

(d) Assets received as custodian, guardian, conservator or trustee for another are not considered assets of the custodian, guardian, conservator or trustee himself.

(Eff. / /1977, Register)

Authority: AS 47.05.010
AS 47.25.255

7 AAC 48.080. STANDARDS FOR REIMBURSEMENT TO PROVIDERS. The amount that the committee reimburses providers for medical services rendered to a person who has suffered a catastrophic illness shall not be greater than 100% of the total unpaid bills related to the catastrophic illness and must be determined by the following standards:

(a) Medical bills related to a catastrophic illness will be considered for 12 month periods. The initial 12 month period begins with the date of the first charges incurred because of the illness, but no charges incurred before July 1, 1976, will be considered;

(b) The committee may not reimburse a provider if the applicant's total bills related to the catastrophic illness are less than $1,000 in any 12 month period described in (a) after all sources of third party payment have been exhausted by the applicant or by someone acting on behalf of the applicant;

(c) The committee may not reimburse a provider for the applicant's share of the total medical bill, as determined by the formula referred to in section 70 of this chapter;

(d) The committee may consider the availability of catastrophic illness funds;

(e) The committee may consider any other factors or circumstances which it determines to be relevant in an individual case.

(Eff. / /77, Register)

Authority: AS 47.05.010
AS 47.25.255

7 AAC 48.090. RECONSIDERATION OF DECISION BY COMMITTEE. The committee shall promptly notify an applicant of its decision with written reasons for the amount of the award or for a finding of non-eligibility. An applicant who is dissatisfied with a decision of the committee may apply to the committee for reconsideration within 30 days of receipt of the decision. The request for reconsideration must include a written statement of grounds for reconsideration and any supporting documentation which was not available to the committee for its original decision. Witnin 30 days of receipt of a request for reconsideration, the committee shall affirm, amend or reverse its original decision. The committee shall promptly notify the applicant of its decision upon reconsideration with written reasons for its action.

(Eff. / /77, Register)

Authority: AS 47.05.010
AS 47.25.255

7 AAC 48.100. FAIR HEARING. An applicant who is dissatisfied with the committee's decision upon reconsideration may request a fair hearing in accordance with the procedures established by the Department of Health and Social Services at 7 AAC 49.020 -- 7 AAC 49.250.

(Eff. / /77, Register)

Authority: AS 47.05.010
AS 47.25.255

7 AAC 48.110. FINALITY OF DECISIONS. Decisions as to catastrophic illness awards are final (a) 30 days after receipt by the applicant of the committee's decision unless a reconsideration is requested during this time; or (b) 30 days after receipt of the committee's decision upon reconsideration unless a fair hearing is requested during this time; or (c) after denial or dismissal as provided by 7 AAC 49.110; or (d) 15 days after receipt of the hearing authority's decision if that decision is not appealed during this time as provided by 7 AAC 49.230; or (e)

after the decision of the director on appeal as provided by 7 AAC 49.240.

(Eff. / /77, Register)

Authority: AS 47.05.010
AS 47.25.180
AS 47.25.255

7 AAC 48.120. REIMBURSEMENT TO CATASTROPHIC ILLNESS FUND. If the applicant or a provider is recompensated from any other source for medical bills which have been paid by the catastrophic illness fund, the state shall have the right to reimbursement for the amount paid from the fund. As a condition of application for catastrophic illness funds an applicant shall sign an agreement to this effect. As a condition of payment from the fund a provider shall sign an agreement to this effect.

(Eff. / /77, Register)

Authority: AS 47.05.010
AS 47.25.255

7 AAC 48.130. DEFINITIONS. In this chapter

(1) "applicant" means a person who has suffered a catastrophic illness:

(2) "applicant's share" means the amount of the total medical bill related to the catastrophic illness which the committee determines that the applicant can reasonable be expected to pay based on income, assets, and number of dependents;

(3) "catastrophic illness" means a single illness or injury which results in medical expenses of over $1,000 during a 12 month period, after all other sources of third party payment have been exhausted;

(4) "committee" means the Catastrophic Illness Committee;

(5) "elective medical or surgical procedures" means treatment which is not immediately essential to the life or health of a person;

(6) "family" means two or more persons related by blood or marriage or adoption living as one economic unit;

(7) "fund" means the catastrophic illness fund;

(8) "liquid assets" means assets which can be readily converted to cash;

(9) "non-liquid assets" means all assets not covered by (6);

(10) "provider" means a licensed physician, pharmacist, dentist, or other health services worker who has provided services not excluded by section 50 of this chapter to an applicant as a result of a catastrophic illness, or a licensed hospital, clinic, skilled nursing home, intermediate care facility or health maintenance organization which has provided these services;

(11) "third party payments" means payments of medical expenses related to a catastrophic illness by sources other than the applicant or the catastrophic illness fund, including, but not limited to state and federal medical assistance programs; private health insurance; employment-related health insurance; military health insurance; Workmen's Compensation; Violent Crimes Compensation; Indian Health Service of the U.S. Department of Health, Education and Welfare.

Dear Thelma:

Enclosed is a copy of a letter sent to Joe McKinnon and certain documents which may be of interest to you.

The Catastrophic Illness law is a good one and with all the meney spent by the state for so many things I don't know of a better way to spend state money.

Anything you can do to help keep it a good law will be appreciated.

Clifford E. Warren

Chapter No. 221

AN ACT

Relating to medical assistance for needy persons; and providing for an effective date.

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 47.07.020(b) is amended by adding a new paragraph to read:

(6) persons in a medical or intermediate care facility whose income while in the facility does not exceed 300 per cent of the supplemental security income benefit rate under title XVI of the Social Security Act but who would not be eligible for an optional state supplementary payment if they left the hospital or other facility.

* Sec. 2. AS 47.07.030 is amended to read:

Sec. 47.07.030. MEDICAL SERVICES TO BE PROVIDED. Medical services to be offered to eligible persons include inpatient hospital, outpatient hospital, laboratory and X-ray, inpatient psychiatric hospital for persons age 65 or older and persons under age 21, skilled and intermediate nursing home, physician, home health care services, early periodic screening diagnosis and treatment of persons under 21 years of age, clinic services, treatment of speech, hearing and language disorders, and reasonable transportation to and from the point of medical care. No additional services may be provided unless approved by the legislature.

* Sec. 3. AS 47.07.080 is amended by adding a new paragraph to read:

(3) "clinic services" means services which are restricted to state-approved outpatient community mental health services which receive grants under AS 47.30.520 - 47.30.620 and state-operated mental health clinics.

* Sec. 4. AS 47.25.250 is amended to read:

Sec. 47.25.250. TEMPORARY RELIEF. When a needy person is not entitled to assistance under secs. 120 300 of this chapter and has no relatives in the state liable for his support under secs. 230 and 240 of this chapter, the needy person may receive temporary assistance in the form and amount which the department considers necessary. Temporary assistance for needs other than transportation and medical care may not exceed $80 per person per month.

* Sec. 5. AS 47.25 is amended by adding a new section to read:

Sec. 47.25.255. CATASTROPHIC ILLNESS. Notwithstanding the provisions of secs. 230 and 240 of this chapter, the department shall reimburse providers of medical care for costs incurred in the treatment of persons suffering catastrophic illness. The determination of allowable costs and levels of reimbursement shall be made by the Catastrophic Illness Committee, consisting of a medical review officer from the Department of Health and Social Services, a member appointed by the governor who has suffered a catastrophic illness, and a representative of the Department of Commerce and Economic Development appointed by the governor.

* Sec. 6. Section 1 of this Act takes effect immediately in accordance with AS 01.10.070(c).

* Sec. 7. Sections 2, 3, 4 and 5 of this Act take effect July 1, 1976.

Approved by governor: June 20, 1976
Actual effective date: Sec. 1: June 21, 1976; Secs. 2, 3, 4 and 5: July 1, 1976

Dear Mr. Freedman:

We understand that your State passed some type of catastrophic health plan during the last year and we would appreciate receiving any information concerning this program.

As you may know, Rhode Island began such a program in January, 1975. For your information, I am enclosing a copy of our CHIP Manual. Any information you may wish to exchange will be appreciated.

Sincerely,

Brian E. Keeler

CATASTROPHIC HEALTH INSURANCE PLAN

POSITION PAPER/Department of Health and Social Se

CS HB 409

An Act relating to catastrophic illness; and providing for an effective date.

The Catastrophic Illness Committee has been working under an existing, one paragraph statute, AS 47.25.255, for six months and has encountered many problems in attempting to formulate regulations and policies with the inadequate guidance supplied by the Statute. CS HB 409 answers three of the major problems encountered:

1. It removes the Catastrophic Illness statute from the chapter on needy persons eligible for general relief and creates a new chapter on Catastrophic Illness assistance in AS 47. This reflects the intent of the legislature to assist persons of middle income rather than low income persons eligible for other forms of public assistance;

2. It specifically gives the Committee the power to determine eligibility for catastrophic illness assistance in addition to allowable costs and levels of reimbursement and to establish reasonable classifications of persons based on certain criteria which is set out in the bill; and

3. It expresses the intent of the legislature that the Committee remain within its appropriation rather than return to the legislature requesting a supplemental appropriation. In order to do so, the Committee is instructed to establish priorities.

The Department views this bill as a "bandaid" approach to Catastrophic Illness assistance, which will make it possible for the Committee to function until next year. Without the changes in its authorizing statute, the Committee could be subject to legal attack for giving assistance to the "non-needy" and for exercising powers which have not been delegated to it.

The Department of Health and Social Services supports this bill.

MEMORANDUM

May 27, 1977

SUBJECT: State Health Insurance (W.O. #4206)

TO: The Honorable Thelma Buchholdt

FROM: Sharman Haley SH
Research Analyst

Carter's National Health Insurance Proposal

The Carter Administration has not developed a comprehensive health insurance proposal. An advisory committee was recently established to evaluate the alternative approaches to national health insurance, and they are currently taking testimony in several cities across the country.

During the campaign, Carter promised national health insurance with the following provisions:

1. universal and mandatory coverage, implemented in stages based on priorities of need and financial feasibility;
2. comprehensive and uniform benefits with emphasis on preventive medicine;
3. financing by payroll taxes and general tax revenues;
4. cost and quality controls, uniform standards and set rates;
5. maximum personal interrelationship between patient and physician, consumer choice of provider, and basic concern for the dignity of the person, unrelated to wealth or income;
6. incentives for improved delivery of services, for increased productivity, for redistribution of health personnel, and

resources for the development of alternative delivery systems;

7. consumer representation in development and administration.

Carter estimated the cost of implementing this program at $10 billion of new federal expenditures. It is not clear what his reasoning was to arrive at such a low figure, since he has not proposed a plan that can be costed out. One comprehensive mandatory plan that has been cost estimated is the Health Security Act, and the estimate of new federal expenditures for that plan is $80 billion.

There were 23 different national health insurance proposals before Congress last year, but none are moving now.

State Approaches

Two national organizations have developed model state health insurance legislation. The Conference of Insurance Legislators proposes a comprehensive health care program with universal voluntary coverage, regulated by the state, but administered by private carriers and financed by consumers. The National Association of Insurance Commissioners proposes a catastrophic health care program financed by the state. We have requested copies of these two models.

There are five states that have passed and implemented state health insurance. In Rhode Island, Maine, and Minnesota, the state provides financial assistance for catastrophic health expenses. In Hawaii, Connecticut and Minnesota, again, the state regulates private comprehensive health coverage to insure quality and availability and to control costs. No state directly subsidizes comprehensive health insurance for its residents, because it appears to be prohibitively expensive.

Hawaii: Every employer in Hawaii is required to offer a qualified health care plan to his/her employees and to pay at least half the premium. Qualified plans must meet state minimum standards. Small employers with fewer than eight employees whose share of the premiums would exceed 1.5% of their payroll, when that excess is greater than 5% of the employer's income from the business are entitled to a state subsidy for the remainder of the premium. This statute took effect in 1975, and though several employers applied for state assistance, none were found to be eligible.

Connecticut: The Connecticut comprehensive health care plans statute insures the universal availability of comprehensive health care insurance contracts meeting state minimum standards, at standardized premiums. The Health Reinsurance Association is created with mandatory membership of all carriers in the state to pool risk for the mandated coverage. The premium rates vary by sex and age, and for group contracts by geographical area, as well. Sample quarterly premium rates are in Table I.

Table I - Sample Quarterly Premium Rates for Connecticut Comprehensive Health Care Plans

Individual/ /Group*	30-year old Female	60-year old Male
Deductible $200	$114.57/ /$103.11	$243.15/ /$218.82
$500	$ 85.92/ /$ 77.34	$182.37/ /$164.13
$750	$ 74.46/ /$ 67.02	$158.04/ /$142.23

* Rate for Hartford, New Haven and Fairfield region.

Minnesota: The Minnesota statute requires all health insurance carriers to offer health coverage which meets minimum state standards, and requires employee health benefits to meet minimum standards. It also establishes a state comprehensive health plan available to any resident who is rejected, restricted, or limited in their health coverage from the private sector. This state plan is offered by all carriers and reinsured by an association of carriers, in which membership is mandatory, to pool the profits and losses of high risk coverage.

This comprehensive health insurance statute in Minnesota took effect in January of this year. There are now 12 law suits pending challenging the law. Interstate employers complain that when Minnesota law requires a high standard of health benefits for employees, the employer must offer the same high benefits to its employees in other states. Thus, the law has impact beyond the borders of the state and may be unconstitutional.

Minnesota also has a Catastrophic Health Expense Protection Act under which the state pays 90 percent of a resident's health care expenses after the resident's out-of-pocket expenses exceed (a) 40 percent of his/her household income under $15,000, 50 percent of his/her household income between $15,000 and $25,000, plus 60 percent of his/her household income in excess of $25,000; or (b) $2,500; whichever is greater. This statute does not take effect until July 1 this year, so its fiscal impact is not known. On the basis of very crude estimates, it was budgeted for $18 million over the two year budget period, plus $50,000 for administration.

Rhode Island: Rhode Island's catastrophic health insurance statute has been in effect for three years. For the 85 percent of Rhode Island's residents who have private health coverage which meets minimum standards,

the state will pay costs of health care beyond the limits or coverage of the private insurance and above $500 or 10 percent of the resident's income. For the other 15 percent who do not have private insurance, the state will pay costs over $5,000 or 50 percent of the resident's income. The program is not well known yet. Of the 300 to 400 applications to the state for payment of health bills received each year, only half are found to be eligible. The annual state expenditure for the coverage is running $1,500,000 per year.

A health resources development fund is established not only to pay catastrophic costs but to make grants, loans, or contracts for the improvement of health facilities, services or education.

The statute also authorizes state regulation regarding consumer protection, quality of health coverage, universal availability, and rates.

Maine: The Maine catastrophic illness statute provides that the state will pay all remaining eligible health care expenses when the resident's out-of-pocket expenses reach 20 percent of the resident's net income, plus $1,000. For residents whose net worth exceeds $20,000 and such net worth includes cashable assets, 10 percent of such cashable assets are added to the out-of-pocket expenses threshold.

Considerations for Alaska

Although Alaska has a Catastrophic Illness Committee, it has not been given clear guidelines nor adequate funding.

The state approaches which have been tested elsewhere which you may want to consider for Alaska include:

1. state minimum standards for comprehensive health plans offered by private carriers;
2. mandatory availability of such plans to all state residents regardless of age or physical condition;
3. mandatory membership of all health insurance carriers in a reinsurance association to pool risk;
4. regulation of premium rates and provider reimbursements;
5. comprehensive health benefits mandated for all employees, with at least 50 percent of the premiums paid by employers;

All of the above provisions combined would still leave some people without comprehensive coverage. Self-employed, part-time or non-working people with adequate incomes would have a choice whether or not to purchase coverage, and some would choose not to. Self-employed, part-time, unemployed and non-working people with low incomes, however, could not afford to purchase private health insurance. People in this category might include farmers, homesteaders, miners, independent truckers, fishermen, small family business people, widows, retired people not eligible for Medicare, lots of low paid part-time workers (mostly women) and, of course, all their dependents. In addition, there are large numbers of seasonally employed people in Alaska who would only have coverage part of the year, such as loggers, cannery workers, and tourist industry employees. Public Health Services, Medicaid, and Medicare provide coverage for large sectors of low income Alaskans, plus General Relief-Medical and other state programs provide piecemeal health services for eligibles, but we are still far from comprehensive coverage for all.

The only way for the state to insure universal coverage is to subsidize it to the tune of millions of dollars.

Before we can proceed to draft a state comprehensive health insurance plan for Alaska, some policy decisions must be made:

1. Coverage - is enrollment voluntary or mandatory, and for whom is the coverage targeted?
2. Benefits - which expenses will be covered?
3. Financing - what portion will the state or employers pay? How much in premiums, deductibles, or co-payments must the consumer pay?
4. Cost and Quality Control - how will rates or standards of care be set?
5. Administration - what is the role of private carriers? What is the role of the state?

There will be a seminar on state health insurance plans on Friday, July 29, in Washington, D. C., sponsored by the Georgetown University Health Policy Center. There will be four forums: (1) political planning for enactment of state health insurance; (2) administrative aspects; (3) benefit coverage and eligibility; and (4) the cost of state health insurance, and looking ahead to national health insurance. Reservations or inquiries should be directed to: Jordan Braveman, Director of Policy Analysis, Georgetown University Health Policy Center, 3520 Prospect Street, N.W., Washington, D. C. 20057. He can also be reached by phone at (202) 625-3092.

We will be happy to meet with you at your earliest convenience to discuss these questions.

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

A two person part time staff to handle the administrative and clerical supporting function to the claims review committee would involve an Administrative Assistant III (part time) and a Clerk Typist III (part time). Offices would be located in Juneau.

No provision has been made in the above for claims. This is normally included in the Governor's requested budget. The Request for FY 78 is $450,000.

An inflation figure of 5% annually was utilized in computation of future fiscal years.

Dear Steve:

Enclosed is the Commission's comments concerning House Committee Substitute for Senate Bill 50 pending before the House Finance Committee. Because of the extraneous material now contained in what has been a very important measure, the Commission has grave reservations about the legislation, particularly Section 5 of the bill, and desires to call its concern to your and the Committee's attention.

If you or the other members of the Committee have any questions about our position, please do not hesitate to contact us. I will be in Juneau over the weekend of May 13-15 and would be pleased to make myself available should you desire it.

Cordially,

Stuart C. Hall

State of Alaska
Dept. of Health & Social Services
Catastrophic Illness Program
Pouch H-06
Juneau, Alaska 99811

Gentlemen:

I offer the following comments on the proposed regulations to be promulgated by your committee.

I preface my specific comments by stating that it is my belief that the Catastrophic Illness (AS 47.25.255) statute was enacted by the Alaska State Legislature to help those citizens of the State of Alaska who have suffered catastrophic illness, and who were financially injured by such illness.

Further, that the intent of the legislature was that such persons did not have to be at the poverty level to receive assistance, but were to have their medical costs paid by the State so that they could continue to lead normal lives and continue to be wage earners, or continue operating their businesses so that they would not become a burden to the State, and assume at least part of continuing medical expenses.

While it is understood that eligibility should not be given to the wealthy, neither is eligibility predicated on the person's need to sell all his assets, and to disregard his liabilities. He should be allowed to retain reasonable assets so that he could continue to live a reasonably normal life and continue to make his living. Certainly it was not legislative intent that AS 47.25.255 be considered as a means of paying off the medical profession's bad debts.

Proposed Regulations

7 AAC 48.050 Services Excluded from Coverage (C)
This paragraph infers that Laetrile is excluded. The use of Laetrile has been legalized in the State of Alaska and is being prescribed and used by Alaska physicians. Dr. Ernesto Contreras of Mexico also is a licensed physician. By international ethics or agreements, treatments by foreign doctors are honored in this country.

Please Note that this paragraph indicates that all prescribed drugs or medications (not just Laetrile) are to be paid for under the Catastrophic Illness statute.

7 AAC 48.070 Calculation of Applicant's Share

(b) Does this paragraph mean that applicants will not receive payment until after 12 months? If so, there will be problems with the medical providers demanding payment, or refusing services.

(c) (1) "Note" that Clifford E. and June C. Warren sold their home to pay medical and other bills.

(3) "Note" that liquid assets and working capital are needed to run a business. Without these assets tools, equipment, vehicles, etc. are of no use and your business is bankrupt and your source of income is eliminated.

(5) One thousand dollars of liquid assets will not sustain a business, nor will it last very long for living expenses: rents, payments, utilities, transportation costs, food, clothing, etc. etc. etc. $1,000 is far too low an amount to be excluded nowadays; that is almost the poverty level.

7 AAC 48.080 Standards For Reimbursement To Providers

There is nothing in the Catastrophic Illness statute that indicates that only unpaid bills will be paid. The statute is intended to help Alaskan citizens injured by catastrophic illnesses. People who have paid their medical bills to the point of severe financial damage should, and I believe are intended, to be compensated. There would be no equity for one person to sell his liquid and non-liquid assets (home, life insurance, etc.), as we did to meet our obligations, and practically bankrupting our business and means of livelihood, while another person keeps his home and other liquid or non-liquid assets, etc. etc., not meeting his obligations and then having the State pay his unpaid bills. This would be inequitable.

The statute does not limit payments to unpaid bills. Warren Painting Co., Inc. was the provider of the majority of June Warren's medical services in the sense that these bills were paid for by the company by selling its liquid and non-liquid assets. It is my interpretation of the Catastrophic Illness statute that the provider was to receive the payment to insure that payments were for medical costs, and money could not be obtained under false pretenses. The medical providers, such as doctors, hospitals, etc., can be paid and in return reimburse those who paid them. Prescription drugs and laboratory tests are cash on the line (unless you pay more at a clinic for the laboratory tests), and being vital to treatment, have to be paid for in cash.

(a) Nothing in the statute says you have to leave unpaid bills for 12 months, nor is there a time limit on the length

of time as to when the medical bills will be paid. There is nothing in the statute limiting payments to those incurred after July 1, 1976. The statute was intended to help those injured by catastrophic illness before or after July 1, 1976. The only criterion should be the person's liquid financial position at the time of application, and were the medical costs bona fide, etc. etc.

(b) Again the twelve month period question arises. Does this mean the bills remain unpaid for twelve months? It should be that bills are not paid until $1,000 worth are accumulated. The third party payment is understandable regarding third party payments from Medicare, medical insurance, etc., but what is meant by someone acting on behalf of the applicant? If it is meant that some other individual, company, etc. helping an applicant, then that is wrong as they have no moral or legal obligation to do so and are entitled to be repaid.

(c) The statute does not contemplate a formula, but if such formula is allowed the one proposed is wrong as far as amount of liquid assets. First of all, liquid assets should not be considered as liquid assets until liabilities are taken into consideration. Secondly, no formula should start below $5,000, as this amount will be needed to pay applicant's living and miscellaneous expenses, etc., and then only for a short period of time.

If it is shown that an applicant has a weekly or monthly income in an amount above that needed for a reasonable standard of living or payment of bills and miscellaneous medical expenses, and the liquid assets are surplus, then perhaps the formula is justified. But not until then.

(d) The statute gives no authority for a split-the-pot determination. There is an additional $2,542,100.00 available to the committee, as listed under the Component Budget Summary of the State Health and Social Services Department, which also states under (B), Legislative Intent:

> "A supplemental appropriation is to be requested if actual costs exceed the appropriation."

If funds are short, it is requested that the $2,542,100.00 be used, and if needed, additional funds be requested from the legislature.

(e) It is hoped the committee will take into consideration the particular factors regarding our application as presented to it.

7 AAC 48.130 Definitions

(10) (11) A provider can also be a non-responsible

Summary

It is my belief that the legislative intent, being to help Alaskans who suffered catastrophic illnesses, does not allow regulations that thwart that intent.

Legislative intent was not to force Alaskans to the poverty level, or be financially disabled to the degree that they could not continue to earn a living, meet their obligations, live reasonably well, etc. before their eligibility is recognized.

It is not believed that it was legislative intent to penalize those Alaskans who meet their obligations by selling their non-liquid assets (homes, etc.), while others are to be helped by the State who retained their non-liquid assets (homes, etc.), and left their medical and other bills unpaid. It is not believed that eligible Alaskans are required to wait a year before their medical bills are paid. The Catastrophic Illness statute does not show legislative intent to allow costs only after July 1, 1976. Such prior costs are part of the current Catastrophic Illness, and need to be paid if the intents and purposes of the law are recognized and adhered to.

The Catastrophic Illness law is one of the best laws passed by the legislature to help Alaskans suffering catastrophic illness to live a reasonably normal life, continuing or allowing spouses to continue to earn their own living, paying at least in part their medical bills and not becoming a burden on the State. It is requested that in the light of my comments that the Catastrophic Illness Committee will revise their proposed regulations so that the legislative intent is carried out and equity can be maintained between all applicants applying.

Yours truly,

Clifford E. Warren

7 AAC 48.030. APPLICATIONS FOR ASSISTANCE. (a) All applications for financial assistance under this chapter shall be made on a form authorized by the committee. The information required by the committee shall be supplied in full by the applicant or the applications may not be considered. Additional sheets may be used, as necessary.

(b) Application forms, along with the formula used to calculate the applicant's share, described in section 70 of this chapter, shall be available at Offices of the Division of Public Assistance, at Regional Health Offices of

the Division of Public Health, at state licensed hospitals, or by writing to the committee at Pouch H06, Juneau, Alaska 99811.

(c) Applications may be filed by a person who has suffered a catastrophic illness or by a parent, spouse, or legal guardian of that person; or by any other interested party with the written consent of the person who has suffered a catastrophic illness.

(d) No application shall be considered unless the total medical bills related to the catastrophic illness are more than $1,000 in a period not to exceed 12 months after all sources of third party payment have been exhausted.

(e) A poster publicizing the availability of benefits under this chapter shall be supplied to hospitals licensed in the state of Alaska for display in a public area. The poster shall also be supplied for display in appropriate public buildings throughout the state according to the availability of appropriations for catastrophic illness.

(Eff. / /77, Register)

Authority: AS 47.05.010
AS 47.25.255

7 AAC 48.040. RESIDENCY OF APPLICANT. Applicants shall be residents of the state of Alaska at the time of application and at the time the catastrophic illness for which state aid is sought occurred.

(Eff. / /77, Register)

Authority: AS 47.05.010
AS 47.25.255

7 AAC 48.050. SERVICES EXCLUDED FROM COVERAGE. The following services and charges are excluded from coverage under this chapter:

(a) Dentistry and optometry unless prescribed by a licensed dentist or physician as medically necessary as the result of an injury or illness;

(b) Elective medical or surgical procedures;

(c) Drugs and medications not prescribed by a licensed physician;

(d) Services received as a result of a normal pregnancy;

(e) Private psychological or psychiatric treatment or private alcoholism treatment, unless not availble from public agencies or programs;

(f) Chiropractic services;

(g) Services not of a medical nature;

(h) Medical services currently provided to persons in the custody of the Division of Corrections;

(i) Residential care in a skilled nursing home or intermediate care facility for more than 90 days, if the committee finds such exclusion to be necessary based on the availability of catastrophic illness funds and the need of other applicants.

(Eff. / /77, Register)

Authority: AS 47.05.010
AS 47.25.255

7 AAC 48.060. REQUIRED DOCUMENTATION; INVESTIGATION. Each application shall be reviewed by the committee or its designee for completeness of information, including required documentation of medical expenses, gross income and assets. The committee or its designee may return the application for more complete information to the person who is applying and may investigate any portion of an application.

(Eff. / /77, Register)

Authority: AS 47.05.010
AS 47.25.255

7 AAC 48.070. CALCULATION OF APPLICANT'S SHARE. (a) A formula adopted by the committee shall be utilized in determining the applicant's share of total medical bills related to a catastrophic illness, based on annual gross income, number of dependents and amount of assets. This formula shall be provided along with the application form and shall also be made available to persons who request it by writing to the committee at Pouch H06, Juneau, Alaska 99811;

(b) For the purposes of applying the formula to determine the applicant's share, multiple catastrophic illness occuring within a 12 month period to the applicant or other members of the applicant's family shall be treated as one catastrophic illness;

(c) In applying the formula to determine the applicant's share, the total gross income and the total assets of the family of an applicant may be considered; the following assets shall be excluded:

(1) a home providing shelter for the applicant and the land on which it is situated;

(2) one non-commercial vehicle;

(3) tools, equipment and vehicles required in a trade or business;

(4) ordinary household and personal effects;

(5) $1,000 of liquid assets;

(6) all non-liquid assets unless such exclusion would bring about an inequitable result; however, all income derived from such property shall be taken into consideration in determining the recipient's gross income;

(7) inalienable shares in a Native Corporation created pursuant to the Alaska Native Claims Settlement Act, P.L. 92-203, 43 U.S.C. 1601 et seq., during the period of their inalienability as specified in the act.

(8) Alaska longevity bonus;

(9) any other assets specifically restricted for the use of the recipient by state or federal law.

(d) Assets received as custodian, guardian, conservator or trustee for another are not considered assets of the custodian, guardian, conservator or trustee himself.

(Eff. / /77, Register)

Authority: AS 47.05.010
AS 47.25.255

7 AAC 48.080. STANDARDS FOR REIMBURSEMENT TO PROVIDERS. The amount that the committee reimburses providers for medical services rendered to a person who has suffered a catastrophic illness shall not be greater than 100% of the total unpaid bills related to the catastrophic illness and shall be determined by the following standards:

(a) Medical bills related to a catastrophic illness shall be considered for periods not to exceed 12 months. The initial 12 month period begins with the date of the first charges incurred because of the illness, but no charges incurred before July 1, 1976, shall be considered;

(b) The committee may not reimburse a provider if the applicant's total bills related to the catastrophic illness are less than $1,000 in any period not to exceed 12 months described in (a) after all sources of third party payment have been exhausted by the applicant or by someone acting on behalf of the applicant;

(c) The committee may not reimburse a provider for the applicant's share of the total medical bill, as determined by the formula referred to in

section 70 of this chapter;

(d) The committee shall reimburse hospitals and other institutions at the rates and in the manner established by existing provider agreements with the department of health and social services. Physicians, dentists, and all other providers shall be reimbursed at rates not less than those set out at 45 Code of Federal Regulations 250.30(b)(3)(i)(A);

(e) The committee may consider the availability of catastrophic illness funds;

(f) The committee may consider any other factors or circumstances which it determines to be relevant in an individual case.

(Eff. / /77, Register)

Authority: AS 47.05.010
AS 47.25.255

7 AAC 48.090. RECONSIDERATION OF DECISION BY COMMITTEE. The committee shall promptly notify an applicant of its decision with written reasons for the amount of the award or for a finding of non-eligibility. An applicant who is dissatisfied with a decision of the committee may apply to the committee for reconsideration within 30 days of receipt of the decision. The request for reconsideration shall include a written statement of grounds for reconsideration and any supporting documentation which was not available to the committee for its original decision. Within 30 days of receipt of a request for reconsideration, the committee shall affirm, amend or reverse its original decision. The committee shall promptly notify the applicant of its decision upon reconsideration with written reasons for its action. Information describing hearing rights and procedures shall be printed in bold-face type on the written notification of decision.

(Eff. / /77, Register)

Authority: AS 47.05.010
AS 47.25.255

7 AAC 100. FAIR HEARING. An applicant who is dissatisfied with the committee's decision upon reconsideration may request a fair hearing in accordance with the procedures established by the department of health and social services at 7 AAC 49.020 -- 7 AAC 49.250.

(Eff. / /77, Register)

7 AAC 48.100
7 AAC 48.110
7 AAC 48.120
7 AAC 48.130

Authority: AS 47.05.010
AS 47.25.255

7 AAC 48.110. FINALITY OF DECISIONS. Decisions as to catastrophic illness awards are final (a) 30 days after receipt by the applicant of the committee's decision unless a reconsideration is requested during this time; or (b) 30 days after receipt of the committee's decision upon reconsideration unless a fair hearing is requested during this time; or (c) after denial or dismissal as provided by 7 AAC 49.110; or (d) 15 days after receipt of the hearing authority's decision if that decision is not appealed during this time as provided by 7 AAC 49.230; or (e) after the decision of the director on appeal as provided by 7 AAC 49.240. Time limits for appeal may be extended or waived for good cause. Request for a hearing shall be deemed made upon dispatch.

Authority: AS 47.05.010
AS 47.25.180
AS 47.25.255

7 AAC 48.120. RECOVERY FROM A COLLATERAL SOURCE. If the applicant or a provider is recompensated from any other source for medical bills which have been paid by the catastrophic illness committee, the state shall have the right to reimbursement for the amount paid by the committee. As a condition of application for catastrophic illness assistance, an applicant shall sign an agreement to this effect. As a condition of payment by the committee a provider shall sign an agreement to this effect.

(Eff. / /77, Register)

Authority: AS 47.05.010
AS 47.25.255

7 AAC 48.130. DEFINITIONS. In this chapter

(1) "applicant" means a person who has suffered a catastrophic illness;

(2) "applicant's share" means the amount of the total medical bill related to the catastrophic illness which the committee determines that the applicant can reasonably be expected to pay based on income, assets, and

number of dependents;

(3) "catastrophic illness" means a single illness or injury which results in medical expenses of over $1,000 during a period not to exceed 12 months, after all other sources of third party payment have been exhausted;

(4) "committee" means the Catastrophic Illness Committee;

(5) "elective medical or surgical procedures" means treatment which is not essential to the life or health of a person;

(6) "family" means two or more persons related by blood or marriage or adoption living as one economic unit;

(7) "liquid assets" means assets which can be readily converted to cash;

(8) "non-liquid assets" means all assets not covered by (7);

(9) "provider" means a licensed physician, pharmacist, dentist, or other health services worker who has provided services not excluded by section 50 of this chapter to an applicant as a result of a catastrophic illness, or a licensed hospital, clinic, skilled nursing home, intermediate care facility or health maintenance organization which has provided these services;

(10) "third party payments" means payments of medical expenses related to a catastrophic illness by sources other than the applicant or the catastrophic illness committee, including, but not limited to state and federal medical assistance programs; private health insurance; employment-related health insurance; military health insurance; Workmen's Compensation; Victims Crimes Compensation; Indian Health Service of the U.S. Department of Health, Education and Welfare, awards in legal actions.

7 AAC 48.030. APPLICATIONS FOR ASSISTANCE. (a) All applications for financial assistance under this chapter shall be made on a form authorized by the committee. The information required by the committee shall be supplied in full by the applicant or the applications may not be considered. Additional sheets may be used, as necessary.

(b) Application forms, along with the formula used to calculate the applicant's share, described in section 70 of this chapter, shall be available at Offices of the Division of Public Assistance, at Regional Health Offices of

the Division of Public Health, at state licensed hospitals, or by writing to the committee at Pouch H06, Juneau, Alaska 99811.

(c) Applications may be filed by a person who has suffered a catastrophic illness or by a parent, spouse, or legal guardian of that person; or by any other interested party with the written consent of the person who has suffered a catastrophic illness.

(d) No application shall be considered unless the total medical bills related to the catastrophic illness are more than $1,000 in a period not to exceed 12 months after all sources of third party payment have been exhausted.

(e) A poster publicizing the availability of benefits under this chapter shall be supplied to hospitals licensed in the state of Alaska for display in a public area. The poster shall also be supplied for display in appropriate public buildings throughout the state according to the availability of appropriations for catastrophic illness.

(Eff. / /77, Register)

Authority: AS 47.05.010
AS 47.25.255

7 AAC 48.040. RESIDENCY OF APPLICANT. Applicants shall be residents of the state of Alaska at the time of application and at the time the catastrophic illness for which state aid is sought occurred.

(Eff. / /77, Register)

Authority: AS 47.05.010
AS 47.25.255

7 AAC 48.050. SERVICES EXCLUDED FROM COVERAGE. The following services and charges are excluded from coverage under this chapter:

(a) Dentistry and optometry unless prescribed by a licensed dentist or physician as medically necessary as the result of an injury or illness;

(b) Elective medical or surgical procedures;

(c) Drugs and medications not prescribed by a licensed physician;

(d) Services received as a result of a normal pregnancy;

(e) Private psychological or psychiatric treatment or private alcoholism treatment, unless not availble from public agencies or programs;

(f) Chiropractic services;

(g) Services not of a medical nature;

(h) Medical services currently provided to persons in the custody of the Division of Corrections;

(i) Residential care in a skilled nursing home or intermediate care facility for more than 90 days, if the committee finds such exclusion to be necessary based on the availability of catastrophic illness funds and the need of other applicants.

(Eff. / /77, Register)

AS 47.25.255

7 AAC 48.060. REQUIRED DOCUMENTATION; INVESTIGATION. Each application shall be reviewed by the committee or its designee for completeness of information, including required documentation of medical expenses, gross income and assets. The committee or its designee may return the application for more complete information to the person who is applying and may investigate any portion of an application.

(Eff. / /77, Register)

Authority: AS 47.05.010
AS 47.25.255

7 AAC 48.070. CALCULATION OF APPLICANT'S SHARE. (a) A formula adopted by the committee shall be utilized in determining the applicant's share of total medical bills related to a catastrophic illness, based on annual gross income, number of dependents and amount of assets. This formula shall be provided along with the application form and shall also be made available to persons who request it by writing to the committee at Pouch H06, Juneau, Alaska 99811;

(b) For the purposes of applying the formula to determine the applicant's share, multiple catastrophic illness occuring within a 12 month period to the applicant or other members of the applicant's family shall be treated as one catastrophic illness;

(c) In applying the formula to determine the applicant's share, the total gross income and the total assets of the family of an applicant may be considered; the following assets shall be excluded:

(1) a home providing shelter for the applicant and the land on which it is situated;

(2) one non-commercial vehicle;

(3) tools, equipment and vehicles required in a trade or business;

(4) ordinary household and personal effects;

(5) $1,000 of liquid assets;

(6) all non-liquid assets unless such exclusion would bring about an inequitable result; however, all income derived from such property shall be taken into consideration in determining the recipient's gross income;

(7) inalienable shares in a Native Corporation created pursuant to the Alaska Native Claims Settlement Act, P.L. 92-203, 43 U.S.C. 1601 et seq., during the period of their inalienability as specified in the act.

(8) Alaska longevity bonus;

(9) any other assets specifically restricted for the use of the recipient by state or federal law.

(d) Assets received as custodian, guardian, conservator or trustee for another are not considered assets of the custodian, guardian, conservator or trustee himself.

AS 47.25.255

7 AAC 48.080. STANDARDS FOR REIMBURSEMENT TO PROVIDERS. The amount that the committee reimburses providers for medical services rendered to a person who has suffered a catastrophic illness shall not be greater than 100% of the total unpaid bills related to the catastrophic illness and shall be determined by the following standards:

(a) Medical bills related to a catastrophic illness shall be considered for periods not to exceed 12 months. The initial 12 month period begins with the date of the first charges incurred because of the illness, but no charges incurred before July 1, 1976, shall be considered;

(b) The committee may not reimburse a provider if the applicant's total bills related to the catastrophic illness are less than $1,000 in any period not to exceed 12 months described in (a) after all sources of third party payment have been exhausted by the applicant or by someone acting on behalf of the applicant;

(c) The committee may not reimburse a provider for the applicant's share of the total medical bill, as determined by the formula referred to in

section 70 of this chapter;

(d) The committee shall reimburse hospitals and other institutions at the rates and in the manner established by existing provider agreements with the department of health and social services. Physicians, dentists, and all other providers shall be reimbursed at rates not less than those set out at 45 Code of Federal Regulations 250.30(b)(3)(i)(A);

(e) The committee may consider the availability of catastrophic illness funds;

(f) The committee may consider any other factors or circumstances which it determines to be relevant in an individual case.

7 AAC 48.090. RECONSIDERATION OF DECISION BY COMMITTEE. The committee shall promptly notify an applicant of its decision with written reasons for the amount of the award or for a finding of non-eligibility. An applicant who is dissatisfied with a decision of the committee may apply to the committee for reconsideration within 30 days of receipt of the decision. The request for reconsideration shall include a written statement of grounds for reconsideration and any supporting documentation which was not available to the committee for its original decision. Within 30 days of receipt of a request for reconsideration, the committee shall affirm, amend or reverse its original decision. The committee shall promptly notify the applicant of its decision upon reconsideration with written reasons for its action. Information describing hearing rights and procedures shall be printed in bold-face type on the written notification of decision.

AS 47.25.255

7 AAC 48.120. RECOVERY FROM A COLLATERAL SOURCE. If the applicant or a provider is recompensated from any other source for medical bills which have been paid by the catastrophic illness committee, the state shall have the right to reimbursement for the amount paid by the committee. As a condition of application for catastrophic illness assistance, an applicant shall sign an agreement to this effect. As a condition of payment by the committee a provider shall sign an agreement to this effect.

7 AAC 48.130. DEFINITIONS. In this chapter

(1) "applicant" means a person who has suffered a catastrophic illness;

(2) "applicant's share" means the amount of the total medical bill related to the catastrophic illness which the committee determines that the applicant can reasonably be expected to pay based on income, assets, and

number of dependents;

(3) "catastrophic illness" means a single illness or injury which results in medical expenses of over $1,000 during a period not to exceed 12 months, after all other sources of third party payment have been exhausted;

(4) "committee" means the Catastrophic Illness Committee;

(5) "elective medical or surgical procedures" means treatment which is not essential to the life or health of a person;

(6) "family" means two or more persons related by blood or marriage or adoption living as one economic unit;

(7) "liquid assets" means assets which can be readily converted to cash;

(8) "non-liquid assets" means all assets not covered by (7);

(9) "provider" means a licensed physician, pharmacist, dentist, or other health services worker who has provided services not excluded by section 50 of this chapter to an applicant as a result of a catastrophic illness, or a licensed hospital, clinic, skilled nursing home, intermediate care facility or health maintenance organization which has provided these services;

(10) "third party payments" means payments of medical expenses related to a catastrophic illness by sources other than the applicant or the catastrophic illness committee, including, but not limited to state and federal medical assistance programs; private health insurance; employment-related health insurance; military health insurance; Workmen's Compensation; Violent Crimes Compensation; Indian Health Service of the U.S. Department of Health, Education and Welfare, awards in legal actions.

DEAR Thelma -

I support your stand RE-garding the amendment to the CATASTROPHIC illness bill (HB409).

FAMILIES in NEED should RECIEVE AID before they become bankrupt. I APPRECIATE your position on human rights.

Sincerely,
Rick

P.S. I have not been REINSTATED in the DAY CARE PROGRAM, they say no funds yet.

Mrs. Thelma Buckholdt.
State Representative.

Dear Mrs. Buckholdt:

Thank you, Thelma, for letting me know about HB. 409. It is good to know that we have Representatives that still think of others in trouble. Most people do not think of, or care about the tremendous Hospital & Doctor Bills that occur during a Catastrophic illness, and that there are many that are financially unable to meet these demands. Think Glad there are some who do think & act on these things.

Yes, I heartily approve of Bill HB-409. Thank you again for including us on your mailing list. We remain supporters of you. Sincerely

Vernon + Helen Gilbert.

Introduced: 3/29/77
Referred: Health,Education & Social Services and Finance

BY BUCHHOLDT,BEIRNE,BRADLEY, COTTEN,GARDINER,MCKINNON, OSTERBACK AND RUDD

IN THE HOUSE

HOUSE BILL NO. 409

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to catastrophic illness; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 47.25.255 is amended to read:

Sec. 47.25.255. CATASTROPHIC ILLNESS. Notwithstanding the provisions of secs. 230 and 240 of this chapter, the department shall reimburse providers of medical care for costs incurred in the treatment of persons suffering catastrophic illness. <u>If (1) costs of a catastrophic illness were paid by the person suffering the illness or by a parent, spouse, child or other person related by blood to that person; (2) debt was incurred to pay all or part of the cost; and (3) the debt has not been fully repaid, the person paying the costs shall be reimbursed the allowable cost to the extent of any payment made by that person.</u> The determination of allowable costs and levels of reimbursement shall be made by the Catastrophic Illness Committee, consisting of a medical review officer from the Department of Health and Social Services, a member appointed by the governor who has suffered a catastrophic illness, and a representative of the Department of Commerce and Economic Development appointed by the governor.

* Sec. 2. This Act takes effect immediately in accordance with AS 01.10.-070(c).

(OVER)

There is no doubt that the bill on the reverse is a good bill and well intended as far as it goes but in my mind it only scratches the surface.

Anyone that is il and much more so for one with any form of catastrophic illness, has their recovery seriously hindered and in some cases,blocked, by the opressing fear of the financial strain. To provide aid only after having already"spent a high percentage of their income and other resources" is much too late to remove the worry and strain caused by seeing their financial security go even if there is good reson to beleive that all or part will ,hopefully,be returned to them.

My only income is from Disability payments (Workmans Compensation) made by the insurance company,the state and social security. These alow me to live-no more-just live. If I were to suffer a heart attact and require both in-hospital and later in-home care the costs would be beyound my ability to cover. However,at the onset of the condition one could by simple math compute my income and my outgo and see that I would not be able to stand up under the ectra cost load. If the bill were inclusive enough payments could begin at the onset to defer costs over and above my ability to pay. The expenses would be coveeed,and above all my mind put to rest so that I could devote all my energy to getting well and not worrying about money problems which in the case given (heart) might initself cause another attact.

In summary I am trying to say...do not wait until the horse is gone before locking the barn . Your bill helps and makes the original bill much more livable but it still misses the mark. It will have to be reworked again at another date. Cannot it be done all at one time? Too much can happen to a person if you step in to help after the fact. I can see no reason,if this type of help is going to be given, that the help cannot be made to begin at the begining.

Maybe I read the bill wrong and if so disregard my comments but at this time I have the syrong feeling that the bill as ammended (proposed) still has a long way to go before it is able to meet the original intent and the full intent of the ammendment and the good people that drafted it.

My heartfelt thanks for your efforts to help us that for one reason or another are not quilified to fully help ourselves. God will love you for your thoughts and efforts.

Sincerely,

Robert L. Merrill

Thelma Bucholdt
Alaska House Of Representatives
Pouch V
Juneau, Alaska

Dear Thelma,

In response to your telephone call this week regarding HB 409 I wish to make the following observations:

The catastrophic legislation that was passed last year resulted in a mere $300,000 fund being established to pay for such illnesses. Since that bill was retroactive to July 1, 1976 for reimbursement purposes, the $300,000 will be depleted before it ever addresses cases in 1977.

I understand that only $450,000 is being appropriated for 1978. I don't know if that survived the budget or not. A catastrophic illness will probably average $30,000 per case. We are talking about taking care of 10 to 15 patients. Anyone with a lick of common sense can see that in reality - we don't even have catastrophic care! Lets quit giving lip service to something that is a hoax.

To furtheraugment that hoax by adding the three items you suggest in HB 409 only confuses the issue more. What has to be done, Thelma, is for legislators to better understand the true number of catastrophic cases in Alaska and a projection of those dollar amounts along with the conditions pertaining thereto. We provided some figures to the Dept. of H & SS last year. We would be glad to do this again. These figures would not include what hospitals write off for bad debts, plus charity care, plus other payment denials and deficits they encounter. It would reflect the dollar amounts of catastrophic cases. The Medicaid program should have a good basis, too. All the money they spent for "medical exceptions" beyond Medicaid and GR Med could have fallen into this category. In fact the two sources could be compared. It would look more like $1,200,000 from our experience.

If Alaska is going to take credit for providing catastrophic illness funds then lets do it! Lets not pretend and give our residents false hope. This has been a problem for some time and we endorsed several attempts in past years to get catastrophic care passed in the legislators. We were glad to see it was. But thoroughly disappointed in the unrealistic approach to funding. Many people, such as Mr. Malasarte, are caught in that lack of action by previous legislators. We can't go back and pick up all those people - we will be doing well to provide for those who are getting trapped today. If we don't correct this funding problem; next year we will have that many more Malasarte's.

Let me know how we can help!

Sincerely,

Marion K Lampman
Executive Director

RE: Catastrophic Illness

Some ideas for eligibility requirements:

1. All insurance has to be used up first.
2. A family is allowed one vehicle.
3. A family is allowed to keep one place of residence if it occupies that place.
4. There will be a ceiling of $20,000. per year per family.
5. 90% of liquid assets (stocks, bonds, land) must be used first.
6. If any money is received from the Violent Crime Compensation Board, it must be used first.
7. The order of priorities shall be:
   a. People in need of treatment so they can continue, or be restored to "normal".
   b. People with a prognosis of "no improvement".
   c. Terminal cases.

These are only suggestions. Any constructive criticism is welcomed. Please send comments to Charlie Parr or Rocky MacKinnon in House HESS. 465-3777 or 465-3797.

HB 409, Catastrophic Illness will be heard Friday, May 6 at 3:00p.m. in room 112 of the Capitol Building.

Thelma Buchholdt
State Representative
Pouch V
Juneau Alaska 99811

Dear Thelma:

Received your letter of Ap. 18, 1977 enclosing House Bill 409.

One of the greatest complaints in this country today by the majority of the people is that when it comes to medical care, legal services, etc. the rich get it because they can afford it, the poor get it for nothing, while the average citizen cant afford it, goes without it, or goes into debt for it.

When the Alaska State Legislature enacted the Catastrophic Illness law I thought, not only for June and I but for the majority of the people of this state, that the legislature had recognized the rights and needs of the people in these areas. But it appears at this stage that the Catastrophic Illness Committee is going to turn the law into another ripoff to pay off the medical professions' old, bad debts and it will not help the people suffering catastrophic illness and the large medical expenses accruing.

Catastrophic illness starts when you have medical expenses above five or ten thousand dollars and do not have medical insurance. There are many reasons why some people do not have medical insurance including the fact that they cannot obtain any.

Certainly people with large liquid assets should not benefit from the catastrophic illness program, but those with small or no liquid assets or with fixed assets needed to live a reasonable normal life or maintain a business so that they may continue to earn a living, pay at least part of the medical bills, and not become a burden on the state under welfare should be helped. The fact that a person has liquidated his assets to pay his medical bills and placed his livlihood and business in jeopardy should be recognized. It is unjust for one person to do this while another keeps his assets (in particular fixed assets) and does not pay his medical bills but has the state pay them for him.

A person or company who has liquidated assets to pay medical bills should be reimbursed by the state to the degree that he or his company can regain the former position as to his home and business. The present catastrophic illness law allows this to be done.

If the catastrophic illness law is only allowed to pay after medical bills of five or ten thousand or more are incurred those people having medical insurance will continue to keep that insurance, but those people needing help to maintain their normal lives and continue in business will be helped.

Certainly people with high incomes should not need the help from the state and can pay their medical bills in most cases, even then there are circumstances that would warrant helping them.

Enclosed is an article from the paper showing that (allowing for the increased cost of living in Alaska) a family needs over $20,000. per year to live a normal life.

I wont go into the subject much further as many of the other thoughts are contained in my letter to the Catastrophic Illness Committee regarding their proposed regulations.

With many people still having and maintaining their medical insurance there will not be too many applying for state help under the law, but supposing it did cost ten or twelve million (which I doubt) to help those suffering catastrophic illness -- this is peanuts compared to programs the state is paying hundreds of millions for and which are much less needed. As an example, the ten or twelve million being spent by the federal and state governments on alcoholism, etc., etc., etc.

If I am able to and if I can be of any help I will come to Juneau, not only for June and I, but for the many people of the state who need and deserve help.

Thank you very much for your interest and your help.

Sincerely,

Clifford E. Warren

MINUTES OF HOUSE HESS COMMITTEE

April 15, 1977

The meeting was called to order by Chairman Parr at 3:30 p.m. Those present were: Parr, Chatterton, Buchholdt, Phillips, Bennett.

Absent: Nakak, Ose, Cotten & Beirne.

Chairman Parr announced that HB 409 would be taken up and asked Mrs. Buchholdt to speak on her bill. She told the committee her reasons for introducting the bill, the main one being trying
HB 409 to correct problems that have occurred with people she knows in Anchorage who have had an illness and had to sell their homes and all in order to pay the medical bills. She said she would be happy to expand the bill.

Next to testify was Dr. Robert Fraser, Director, Division of Public Health. Dr. Fraser said the Department's concern with the
Fraser bill is with the budgetary restriction. He said they do recognize the present bill does penalize people who have made the effort to meet their costs by going into debt, borrowing money for relatives, etc., and are sympathetic with them.

Mr. Parr informed the committee that he had met with Dr. Fraser and Mrs. Jund (from the Department) a few weeks back regarding this bill. He said this bill had been before the House last year and explained why it did not pass then. Said the committee would have to take a look at this bill and use it as a vehicle to resolve some of the problems facing the Dept. of Health & Social Services. He gave his views as to several alternatives.

There was discussion by members as to what a catastrophic illness was, whether to one person it would be catastrophic and to another person it might not be, depending on their financial status and how they defined catastrophic illness.

Dr. Fraser said the committee on catastrophic illness first met in November and their initial problem was regulations. They felt the fewer regulations they had would be best but said the Attorney General's office told them this would get them into trouble and that they need regulations and a formula to go by. Said they have processed the applications that have been forwarded to them, they have made disposition on roughly $100,000 worth of claims, Said a number of claims have been denied, utilizing the formula.

Mr. Bennett said he would be very apprehensive if they started identifying the give or take 100 different disease conditions. Said you could get into a combination of other conditions. Said perhaps basing it on a scale based on income which has a financial value you could identify he thought perhaps was the only way to halfway be reasonable about it.

Dr. Fraser said they have approved approximately 6 applications, denied about 15 and have about 15 or 20 that did not qualify due to the low amount of their bills. Said they had 25 pending that they had requested more information on. Dr. Fraser was asked by Mr. Chatterton how long it would take them to act on the ones they are waiting information on. Dr. Fraser said depending on how quickly they got their information back they had requested but if they got it back within the next 2 weeks they could have them processed within the next 2 months.

Mr. Parr asked Dr. Fraser what the budget called for for this year. Dr. Fraser said they had asked for $300,000 for this year. He said they had no previous experience to go on so just had to judge as what to ask for.

Dr. Fraser said much of their guidance in drawing up regulations was on the experience of the State of Maine. Said in trying to project the amount they need in Alaska is hard because of some very expensive problems, said a premature infant may have bills up to $35 or $40 thousand dollars. Someone in a skilled nursing facility for a period of time, 10 patients in that category would utilize the entire budget.

There was then much discussion as to the possibility of the state buying insurance for this type of illness through an insurance company.

Next to testify was Jim Pfeiffer, Deputy Director for the Division of Insurance and a member of the Catastrophic Illness Committee.
Pfeiffer Said the way he understood the bill it would allow payments to be made to the person who made the original payments. Said the original bill contemplated payment to medical providers only, but now payment can be paid to a relative, friend,or whoever paid the medical provider. Said he would oppose that type of amendment. Said the original bills intent was to provide a source of funds for persons suffering a catastrophic illness who had no other fund and source available. He said if a person could tap a friend or relative he didn't believe the state should absorb that cost Said he felt this would add and compound the problems of the committee. Said he thought the administration of such an amendment would be difficult.

There was much discussion with Mr. Pfeiffer regarding a group insurance policy for the entire state of Alaska as to what the preimiums would be etc.

Mr. Parr asked if it would possible to structure a program to match the amount of money instead of matching the money to the program. Mr. Pfeiffer said it was an approach that had a great deal of logic. Said he has sent these regulations to Blue Cross and they had indicated from their already existing records in the State to try to come up with an answer. Mr. Parr informed Mr. Pfeiffer there wasn't much point in having legislation that would offer false hope to people and then not funding it. Said it would make more sense to have something on the books that would be funded by the legislature so the people would know the money was there if they qualified but said he had no idea what would be appropriated but presently doesn't see the 1.2 million being there even with the oil money.

Mr. Bennett asked if they had a dollar figure to provide a program like the one they had discussed that would have a true catastrophic coverage. Pfeiffer said they have not but the closest thing is what he has asked Blue Cross to do. Mr. Parr asked that he furnish us the material when he got it from Blue Cross.

Mr. Parr said for personal policies, he understood Blue Cross policies have a dollar limit. Mr. Heueisen said most policies covered up to a quarter of a million dollars. State employees policy is $250,000 maximum (lifetime) per individual. There was discussion on the different types of policies.

Mr. Parr asked the Committee to hold off action on the bill until we received the information requested from Mr. Pfeiffer back.

The meeting adjourned at 4:50 p.m.

CATASTROPHIC ILLNESS

PUBLIC HEARING

ANCHORAGE (3/2/77)

Dr. Fraser introduced the meeting and reviewed Committee's intent with description of legislative intent. He also reviewed with those present the regulations with comments as to changes and intent of committee in promulgating each particular regulation. (Line 21 - 135).

Comments and/or questions from the group as follows:

Mary Tomasiewicz, Easter Seal Society: (line 145) "I'd like to say that we're very happy to see these rules and regulations. It's going to save a lot of agencies a lot of time because when people talk with one agency to find out where they can get they're bills paid, they're told that there isn't a resource they keep calling all others, so I think with this it will certainly make it easier for agencies. One of the things that I do ask is under the definition of providers it mentions hospitals, clinics and I'm just wondering under clinics, would something like the Alaska Treatment Center be considered and also the Speech and Hearing Center in Fairbanks for speech therapy, also there's physical therapy and occupational therapy at the Center? Would some of the care provided by the Municipality--are they to be considered a provider?" Dr. Fraser indicated that the Treatment Center would be covered. Mrs. Tomasiewics clarified the Municipality to mean that agencies Home Health Care Program--Dr. Fraser indicated that they would. "It's (referring to Home Health) not listed as that type of facility and I'm just wondering about that. The other thing I am __?__ is the dentistry. We get many calls from senior citizens for dentures. If they do cost over $1000 and financially I am sure they would be covered under this-- I'm not sure that dentures are always due to either a __?__ would relate to because of an injury or illness and is /that excluded? Is that to be considered as something that is provided" Dr. Fraser: "This is something that the Committee, of course, will consider, but my own reaction is probably not because one of the things that is __?__ apparent is that the funding of this program is going to mean that the Committee is very limited .... There are lots of groups that are not intended to be considered in this legislation and I think that it is the perogative of people who feel that additional things should be covered or that additional programs should be considered is to notify their legislators and the Department." Mary Tomasiewics: "I'll start with you by saying that I feel that this is one of the needs."

Judy Sharpe and Fred Gladden/ Providence Hospital, Judy Sharpe, Spokeswoman: Submitted concerns in writing (see attached) (Line 207) (Fantastic, more should submit written comments, then testify) Mrs. Sharpe read her written comments aloud, making the following questions: "..Your creating a program which I think is really good, but you can hurt a lot of people by offering them an additional hope and then not being able to respond to many peoples needs." Dr. Fraser indicated her statement as valid, however Committee limited by

(#27)

legislative intent and limited appropriation in implementation; if it is obvious that the expenditures are going to be in excess, then perhaps the legislature will be requested to either give a supplemental appropriation or change the legislation. Dr. Fraser indicated the recognition of the Committee that 10 patients in a nursing home for a year could well use up the appropriation. Judy Sharpe: "I think perhaps it should be identified right from the start with the Legislature that this is a great program, but not realistic to do any sort of real good..." Medical Exception subject discussed:: (line # 257): "... we have attempted (Judy Sharpe) to get the figures on how much is spent on Medical exceptions for the last year and wern't able to come up with anything, but it wouldn't surprise me if the medical exceptions alone were more than your authorized operating budget for the first year." Dr. Fraser indicated intent of Catastrophic Illness/was not to eliminate medical exceptions and discussed tenuous legislative setup for medical exceptions.... Dr. Fraser indicated where Committee looks at an application referred to Committee by PA and it does not qualify for Catastrophic Illness, the application will be bounced back to PA. Judy Sharpe: (line #309) - "Are the costs for administering the CI program to come out of $300,000 budget?" Dr. Fraser: At present there are costs for administration. Incurred Expenses (#4 on attached memo) (line 328) - "... if so, to what extent?" Dr. Fraser: "Within the terms of the CI program guidelines will continue to pick up the expenses after the guidelines have been fulfilled" Judy Sharpe: "So that a patient could ~~seek~~ apply to CI for expenses that are in the future, getting a determination" Dr. Fraser: "But during the 12 month interval. Now for the second year or ongoing problem, bills will be considered from the beginning of the illness in a particular year and continue for a 12 month period. If the illness continues for a second 12 month period, there would be a similar deductable and a similar responsibility on the part of the patient and then CI would pick up the additional expenses." Believe Dr. Tower: "Is there any provision whereby a person can get assurance that his costs will be covered before the incurred expense?" Judy Sharpe: "We've dealt with many patients that need to have rehab and when they find out what it's going to cost, just say no way, go home phsycally dehabilatated and never going to get any better because they can't afford and refuse to take the risk..." Income level discussed. (line # 382) Makeup of Committee/(line # 405). Recommendation of Committee include member from provider community, Dr. Fraser pointed out that to keep administrative expense down, committee would have to be kept localized. Criteria to evaluated the effectiveness discussed (line #442). Dr. Fraser indicated he could not answer that (refer to #8 of memo attached).

Marion Lampman, Alaska Hospital Association: (line 463) "...I'd like to go back to about a year when we had our mid-year meeting in Juneau, which was last March, We had a number of our administrators present some case studies and this problem really came to the surface of the need for such ~~xxxxx~~ legislation. Subsequently, we did a rough survey for Dr. Chalmers. I looked some of those old figures back up and we estimated at that time

cases that were current amounted to $648,000 and that's just hospitals... and what they had on the books at that time and of patients that really were in a catastrophic illness medically ... As you see these applications come in and as you get a better handle on it, let us help you to get some more money for this program." End of side 1.

"... Every time some more deficiencies rise in the funding of such programs, hospitals are reminded that they owe so much for charity care and I don't think that collectively that that was ever intended to be 50% of their revenue and it's getting out of hand..."

Shirley Harmon, Alaska HOmemakers, Home Health Aide Service: (line 13) Referenced definition of 'provider' - "...Whether a private non-profit agency, whether it's Alaska Homemaker-Home Health agency or another, is also included as a provider..." Dr. Fraser indicated the intent of the Committee when drawing up the regulations, that this type of expense would be considered and not excluded. Ms. Harmon ~~asked~~ suggested that this be clarified in the definition of provider.

Daisy Van Nortuick, Alaska Hospital and Medical Center: (line #53) -- concern with medical exceptions. "... we were told there is no more funds available until catastrophic illness comes through. Is this in fact right, or is it wrong? Is there funds for medical exceptions at this time, still?" Dr Fraser indicated it a matter of interpretation and reiterated as above discussion. Indicated his inability to answer any detailed questions on operation of PA. Ms. Van Nortuick directed questions relative to limited budget (line 120) -- ..."if you run out of funds in Oct or Nov, could the people you have under consideration then, would they be carried over into the next year or would it be cut off...?" Dr. Fraser indicated the possibility of requesting a supplemental appropriation. ~~possibly Shirley Ms. VanNortuick??~~ (line #143) ? Helen Beirne? Person of unknown determination:/ "... I think what we're talking about is the $300,000 for this year and 6 months of this year have already passed, so we're now up against another legislative session where they will be looking at this again as to whether it's going to be more than $300,000, whether they will accept that or not. We're also looking at have covered as a precedence in this, the Violent Crimes Commission, which in a sense is sort of a catastrophic type of illness and they do know that over the years that Violent Crimes has increased to about $350,000 now, over a 3 or 4 year period; so that was one of the reasons they put in the $300,000. They didn't know. I don't think there was any anticipation however, that the medical exception would be cut out at that time, even though we knew two million had been turned back in prior to this bill being enacted that had not been expended through various medical assistance programs, it had been reverted back into the general budget. This bill went back through much easier because that had reverted back. The reason the $300,000 is because nobody knows any different, and so I think the Department cannot stand up and say what are we going to do, what we really have to say is are we going to bring enough facts before the legislature have it increased. The other thing I would say is that the CI concept is really for

catastrophic illnesses and how we are going to determine that is what they are attempting to do here and I can understand their problem, because we can say a stroke is a catastrophic illness and it is. My concern is the formula I read here to me addresses people who are not in the category which was intended. I thought the intent was that these would be the citizens who fell in an area where they would not be eligible for welfare and let me say that the example looks to me that that's a person who would fall under something other than CI, we're talking about the gross income of $6200..." "I think the intent was that these probably were the middle income people, pay their taxes -- support many, many concepts of people who are not capable or have not for some environmental reason or whatever, have not paid taxes, now they"re suffering an injury or CI which forces them for all purposes under welfare unless they have some assistance. As I look at the example, a person who only has a income of $6200 is a person who probably is in a category that would fall under a categorical. Because last year, the formula we had was based on somebody with $10,000 but they couldn't even work with it because they said a $10,000 income with this kind of a deficit would throw them down into a welfare category." Pointed out by Dr. Tower that Medicaid has not medical deductable in their provisions in Alaska, and other categorical programs (AFDC or Aid to the Disabled) would cover medical wo what Committee has done is to take this down to the lowest level. There is no other program to cover it. Helen Beirne -- "I feel that the formula -- I would like to have seen the example addressed to a middle income individual, $6200 person is not going to be paying taxes really, however, I realize they need assistance." Dr. Fraser discussed Committee's attempt relative to the formula. Helen Beirne: "... I think your formula addresses the other category... but I think that probably the people who ask questions her, the questions their asking are legitimate questions, but I don't think we can expect an answer right now. I am surprised that general relief went down as this came in"(above, she is referring to medical exceptions, not general relief). Medical exception legislation again discussed. "... whatever authorized (believe this is Marion Lampman speaking???) the medical exception anyway? (line 220) I'm guessing, but ... so you're trying to do two things with this piece of legislation... if this is truly a catastrophic bill, you just can't make it all things to all people... so maybe you ought to raise the limit, and I think what Helen is saying is very good, the lower incomes need to be put into a different category and maybe we have to go to the legislators or whereever and battle that they be covered under the GR Med..." (line 245) (Who is speaking here??? male.) "I just might point out one of the problems that we've had in trying to identify the adequacey of the CI Program is to identify exactly how much was expended toward the exception under the GRM program. We contacted the DHSS, they could not tell us how many dollars were expended under the GRM exception program and we wanted to get a handle on those costs to see exactly what the appropriateness of this $300,000 level would be. And apparently it's dumped into the general fund, there's no identification as to how the costs have been incurred or how the money's been expended." Helen Beirne:

(Line 260)
"As I recall what came before the committee (HESS); we couldn't get an answer either because I do believe it was jumbled up together, but it seemed to be very minimal. Now, during the course of the year, I have submitted several people that have fallen into certain categories of what I thought was categorical or CI and in a couple of cases they have said these people don't own a home, whatever might be the reason, the baby was a congenital defect baby, they fall under certain other areas, so many of these things will be picked up that we have been calling CI. ... An awful lot has to be worked out still, and I think it's going to take a year to work out. I hope something isn't
(line 281)
eliminated in theprocess of transition." "The other thing about the Committee, the Committee was made by Statute and it was made with the idea that it could be expedited. I think the idea was that probably there might be conflict of interest by getting people on who were from hospitals and so forth; they felt they would bring in just a very small group who could sit down at regular intevals at a minimum of cost and that the $300,000 would not have to be expended on administrative costs." Marion Lampman: "... what happened to the figures that we, the Hospital Assn when this was all polled by all the hospitals, was submitted--what happened to the $648,000 that was reserved figures?" Helen Beirne: "I think the feeling of the Committee (HESS) was that the idea was not to pay the debts of hospitals--the idea was to establish a program which would have a firm base and grow, and not to go retroactively and talk about what debts there were at the present time owed to hospitals. We did that 6 years ago when revenue sharing was brought into effect... I think that one of the things that could be done this year now that there's been more activity on this that that could be resubmitted and the HESS Committee could look at it again after a year of activity, or should we say inactivity?"

Line 323-- Dave Pritz, Office of Vocational Rehabilitation: "I guess I have a different outlook on this. A couple of things that have been said really confuse. One of them is it locks as though we just hatched the first egg or something and it really kind of surprised me because a program like this, as I understand it, is operable in 14 states, and it would seem to me uncharacteristic of Alaska that we benefit by finding out how it's doing in those 14 states and how much it's costing them. From the comments I hear, it would seem to indicate that it's the first CI bill ever to happen and nobody knew or had any ballpark figures." Dr. Fraser referred to other states, some of which required a tie-in with a qualified insurance program. Dave Pritz: "And secondly, I was wondering, questions have been raised ... concerning the subject of what used to be medical exceptions being tossed into this category of CI, and no real answer has been given to this question." D. Pritz referred to PA people in audience who might be able to address this question, Garth Patterson and John Lappo. Briefly discussed -- nothing new here!!!

Line 396-- Rick Jarvis, Office of Vocational Rehabilitation: "I am [illegible] a clients of mine who have disabilities that require large medical expenses each year,

such as hemophiliacs... Would you be able to cover them?" Dr. Fraser answered appropriately. Rick Jarvis referred to a particular case for which he had an interest. Dr. Fraser referred to guidelines of regulations. End of tape 1.

Tape # 2:

Question relative to liquid assets raised by Rick Jarvis. Discussed briefly by Dr. Fraser. Line 15-- Helen Beirne discussed hemophiliacs and experience with few other states from which HESS Committee got information relative to a workable formula. (Line #51) Marion Lampman further discussed $648,000 figure. (Line 75) Grace Dillon, CI person: Related her personal experience -- kidney problem. Kidney renal dialysis relationship with SSI. Discussion ensued relative to other forms of treatment which can be recieved at home, like renal dialysis. Garth Patterson, Division of PA: (Line 141) -- Recommend add under exclusions of consideration of assets, change "one automobile or truct" to "one non-commercial vehicle". Other comment re "GRMed Exception is not a program, it is an exception to a program; and I could propose a CI Exception program. There is always an exception. Gayle McKenzie, CI person, gives her personal story. (Line 151) Line 210: Helen Beirne: "...It indeed this program got started, would everybody say we're not going to buy insurance because the State will pay for it all. This is a very vital concern because once it becomes known, everything above and beyond what your capable of paying ... that makes it then something else other than CI, it makes it a national health insurance, so we had some problems here ..." Dr. Fraser indicated that there is feeling by many that Legislature might look at bill and make a requirement of having CI insurance a pre-requisite to this program. Helen Beirne: "You mean/go back and pull one of those/bills out that was written better and get it passed instead of this one that slipped through." Line 234: Dr. Tower raised question relative to coverage of transportation costs. Discussion ensued on costly travel to outside facilities as well as local travel, i.e., Bethel to Anchorage. Garth Patterson (or Rick Jarvis): "Under the definition where "physician recommends therapy" whether it's speech or whatever, maybe that could be considered. It would be worth investigating." Someone pointed a case where a quadraplegic was transported outside and the cost was $7000, which points out validity of problem. Pointed out by Dr. Tower that there can be no pre-authorization under CI. Dr. Tower: " ... It's going to come up quite a bit. With a person whose gone down to Virginia Mason, I'm thinking particularly of/babies, undre private means until the family w-s completely wiped out." (Helen Beirne) Line #320, "Dr. Fraser, when does this come before the Committee (HESS) in terms of funding? Are there enough figures to present to them to have an increase in the $300,000? That was an arbitrary figure, based really on nothing." Dr. Fraser indicated that Committee was going to run through what they had and hopefully be able to come up with some projected figures. Line #329, Rick Jarvis (possibly Fred Gladden) (??): "I'd just like to make one comments as far as maybe pulling togehter the illusions or x comments that have gone

on this evening. I don't know that in every case the provider is necessarily concerned with payment being rendered, as far as the hospital is concerned, we're not looking at payment to the hospitals in this case, your right, Hill Burton is a legal obligation that we have, but at the same time, I think that the provider in many cases is the best position to speak on behalf of the patient for the population being served, and that's the intent behind us being here today. We'll not in allprobability see much of that money, but we at the same time, are in a very definiteposition to crystalize some of the situations that we encount on a daily basis and bring that to your attention and it's not." Line 366-- Helen Beirne: "...right now the Violent Crimes Commission has actually put a limit on what can be paid. Although that this isn't the way we really desire it, it might be that a limit would haveto be put on. And certainly if your're suffering from a CI, it's better to have $10,000 paid or nothing paid .... As I recall, that formula originally said there could be up to $10,000 paid and the way it was written, of course, if they had insurance that paid up to $10,000, that eliminated them from getting $10,000 from the Violent Crimes Commission. So that was changed, so that $10,000 above insurance and third party payments. Believe it is raised now to $15,000. If it appears just one illness might absolutely wipe out everything for people who might only have $5,000. I just don't know how nigh this could go, but that is something. We'd like to think that everybody could get paid whether they had $30,000 or $50,000, but if they can't maybe there has to be a limit set on it so that it can be stretched further"

Further discussion ensued on this subject. End of Anchorage meeting.

PROVIDENCE

POSITION STATEMENT: PROPOSED CATASTROPHIC ILLNESS REGULATIONS

We support the concept of a catastrophic illness program to help Alaskans defray burdensome medical expenses resulting from major illness or injury. For those citizens without adequate insurance coverage and for those not eligible for assistance through existing state or federal programs, an ironic dilemma can result: A person can end up medically sound but financially destroyed by lengthy or intensive medical treatment. For many, recovery from the financial burden becomes an impossible or life-long task, requiring a drastic alteration of goals and lifestyle and depletion of every resource for which the individual has worked. For too many people, the stress and anxiety of a major illness or trauma is outweighed by the anxiety caused by the bills accumulated because of the illness. For these citizens, the Catastrophic Illness program offers hope.

However, we would like to identify several areas of concern:

1) If the proposed operating budget is $300,000 for the first year, the program's effectiveness is immediately seriously stunted. In the current age of sophisticated and costly medicine, it is all too easy for a patient to have a $25,000 hospital bill, $15,000 in physician fees and $10,000 in skilled nursing home care leading to recovery. Only a handful of claims of this nature would deplete the year's budget, leaving out hundreds of other valid claimants. Although this may seem to be an extreme example, it unfortunately can happen. And there are many more less dramatic cases of accumulated bills beyond the patient's means. To create an effective program which will reach people, the State must make a serious commitment of financial support. Otherwise the program cannot offer any hope to the majority of applicants.

2) Furthermore, we are aware that the Department of Health and Social Services has eliminated another financial assistance program (General Relief Medical Assistance - Medical Exception) at the same time it is creating the Catastrophic Illness program. All applications for GRM-Medical Exception are being referred for action to the Catastrophic Illness program. The limited budget and the closure of another viable resource program make it seem less and less likely that the Catastrophic Illness program can make a serious impact.

3) Are the costs of administering the program to come out of the $300,000 budget? If so, the limited resources would be further dissipated by administrative costs.

4) The proposed regulations appear to deal only with incurred expenses. Consideration should be given to those people who need further major medical treatment but who cannot assume the financial burden and therefore refuse treatment. A good example of this problem is the stroke patient who requires extensive rehabilitation to achieve the highest level of recovery but who refuses because of lack of resources. Will the program assist this person? If so, to what extent? And further, will the budget be able to handle the costs?

5) Item 7 AAC 48.030(d) It is our opinion that if the budget is going to be so severely limited, perhaps it would be appropriate to raise the base limit for application from $1,000 to a higher amount. This could be one method of reaching true catastrophic victims. Further, the program regulations could better serve the applicant by considering the total episode from onset to finish rather than restricting it to a 12-month period.

6) Further clarification of 7 AAC 48.080(d) (the Committee may consider the availability of catastrophic illness funds;) is requested. What does this mean?

7) What is the make-up of the Committee? We feel it should include a representative from the provider area (i.e., nursing home, hospital).

8) What criteria will be used to evaluate the effectiveness and worth of the program? What mechanism will be used to correct any deficiencies?

110. Finality of decisions
120. Recovery from collateral source
130. Definitions

7 AAC 48.010. COMMITTEE MEETINGS. The Catastrophic Illness Committee shall meet twice a month on dates which the committee establishes.

(Eff. / /77, Register)

Authority: AS 47.05.010
AS 47.25.255

7 AAC 48.020. CONFIDENTIALITY. The confidentiality provisions of 7 AAC 37.020 -- 7 AAC 37.130 are adopted by reference and made applicable to this chapter.

(Eff. / /77, Register)

Authority: AS 47.05.010
AS 47.05.020
AS 47.05.030

7 AAC 48.030. APPLICATIONS FOR ASSISTANCE. (a) All applications for financial assistance under this chapter shall be made on a form authorized by the committee. The information required by the committee shall be supplied in full by the applicant or the applications may not be considered. Additional sheets may be used, as necessary.

(b) Application forms, along with the formula used to calculate the applicant's share, described in section 70 of this chapter, shall be available at Offices of the Division of Public Assistance, at Regional Health Offices of

the Division of Public Health, at state licensed hospitals, or by writing to the committee at Pouch H06, Juneau, Alaska 99811.

(c) Applications may be filed by a person who has suffered a catastrophic illness or by a parent, spouse, or legal guardian of that person; or by any other interested party with the written consent of the person who has suffered a catastrophic illness.

(d) No application shall be considered unless the total medical bills related to the catastrophic illness are more than $1,000 in a period not to exceed 12 months after all sources of third party payment have been exhausted.

(e) A poster publicizing the availability of benefits under this chapter shall be supplied to hospitals licensed in the state of Alaska for display in a public area. The poster shall also be supplied for display in appropriate public buildings throughout the state according to the availability of appropriations for catastrophic illness.

(Eff. / /77, Register)

Authority: AS 47.05.010
AS 47.25.255

7 AAC 48.040. RESIDENCY OF APPLICANT. Applicants shall be residents of the state of Alaska at the time of application and at the time the catastrophic illness for which state aid is sought occurred.

(Eff. / /77, Register)

Authority: AS 47.05.010
AS 47.25.255

7 AAC 48.050. SERVICES EXCLUDED FROM COVERAGE. The following services and charges are excluded from coverage under this chapter:

(a) Dentistry and optometry unless prescribed by a licensed dentist or physician as medically necessary as the result of an injury or illness;

(b) Elective medical or surgical procedures;

(c) Drugs and medications not prescribed by a licensed physician;

(d) Services received as a result of a normal pregnancy;

(e) Private psychological or psychiatric treatment or private alcoholism treatment, unless not availble from public agencies or programs;

(f) Chiropractic services;

(g) Services not of a medical nature;

(h) Medical services currently provided to persons in the custody of the Division of Corrections;

(i) Residential care in a skilled nursing home or intermediate care facility for more than 90 days, if the committee finds such exclusion to be necessary based on the availability of catastrophic illness funds and the need of other applicants.

(Eff. / /77, Register)

Authority: AS 47.05.010
AS 47.25.255

7 AAC 48.060. REQUIRED DOCUMENTATION; INVESTIGATION. Each application shall be reviewed by the committee or its designee for completeness of information, including required documentation of medical expenses, gross income and assets. The committee or its designee may return the application for more complete information to the person who is applying and may investigate any portion of an application.

(Eff. / /77, Register)

Authority: AS 47.05.010
AS 47.25.255

7 AAC 48.070. CALCULATION OF APPLICANT'S SHARE. (a) A formula adopted by the committee shall be utilized in determining the applicant's share of total medical bills related to a catastrophic illness, based on annual gross income, number of dependents and amount of assets. This formula shall be provided along with the application form and shall also be made available to persons who request it by writing to the committee at Pouch H06, Juneau, Alaska 99811;

(b) For the purposes of applying the formula to determine the applicant's share, multiple catastrophic illness occuring within a 12 month period to the applicant or other members of the applicant's family shall be treated as one catastrophic illness;

(c) In applying the formula to determine the applicant's share, the total gross income and the total assets of the family of an applicant may be considered; the following assets shall be excluded:

(1) a home providing shelter for the applicant and the land on which it is situated;

(2) one non-commercial vehicle;

(3) tools, equipment and vehicles required in a trade or business;

(4) ordinary household and personal effects;

(5) $1,000 of liquid assets;

(6) all non-liquid assets unless such exclusion would bring about an inequitable result; however, all income derived from such property shall be taken into consideration in determining the recipient's gross income;

(7) inalienable shares in a Native Corporation created pursuant to the Alaska Native Claims Settlement Act, P.L. 92-203, 43 U.S.C. 1601 et seq., during the period of their inalienability as specified in the act.

(8) Alaska longevity bonus;

(9) any other assets specifically restricted for the use of the recipient by state or federal law.

(d) Assets received as custodian, guardian, conservator or trustee for another are not considered assets of the custodian, guardian, conservator or trustee himself.

(Eff. / /77, Register)

Authority: AS 47.05.010
AS 47.25.255

7 AAC 48.080. STANDARDS FOR REIMBURSEMENT TO PROVIDERS. The amount that the committee reimburses providers for medical services rendered to a person who has suffered a catastrophic illness shall not be greater than 100% of the total unpaid bills related to the catastrophic illness and shall be determined by the following standards:

(a) Medical bills related to a catastrophic illness shall be considered for periods not to exceed 12 months. The initial 12 month period begins with the date of the first charges incurred because of the illness, but no charges incurred before July 1, 1976, shall be considered;

(b) The committee may not reimburse a provider if the applicant's total bills related to the catastrophic illness are less than $1,000 in any period not to exceed 12 months described in (a) after all sources of third party payment have been exhausted by the applicant or by someone acting on behalf of the applicant;

(c) The committee may not reimburse a provider for the applicant's share of the total medical bill, as determined by the formula referred to in

section 70 of this chapter;

(d) The committee shall reimburse hospitals and other institutions at the rates and in the manner established by existing provider agreements with the department of health and social services. Physicians, dentists, and all other providers shall be reimbursed at rates not less than those set out at 45 Code of Federal Regulations 250.30(b)(3)(i)(A);

(e) The committee may consider the availability of catastrophic illness funds;

(f) The committee may consider any other factors or circumstances which it determines to be relevant in an individual case.

(Eff. / /77, Register)

Authority: AS 47.05.010
AS 47.25.255

7 AAC 48.090. RECONSIDERATION OF DECISION BY COMMITTEE. The committee shall promptly notify an applicant of its decision with written reasons for the amount of the award or for a finding of non-eligibility. An applicant who is dissatisfied with a decision of the committee may apply to the committee for reconsideration within 30 days of receipt of the decision. The request for reconsideration shall include a written statement of grounds for reconsideration and any supporting documentation which was not available to the committee for its original decision. Within 30 days of receipt of a request for reconsideration, the committee shall affirm, amend or reverse its original decision. The committee shall promptly notify the applicant of its decision upon reconsideration with written reasons for its action. Information describing hearing rights and procedures shall be printed in bold-face type on the written notification of decision.

(Eff. / /77, Register)

Authority: AS 47.05.010
AS 47.25.255

7 AAC 100. FAIR HEARING. An applicant who is dissatisfied with the committee's decision upon reconsideration may request a fair hearing in accordance with the procedures established by the department of health and social services at 7 AAC 49.020 -- 7 AAC 49.250.

7 AAC 48.120. RECOVERY FROM A COLLATERAL SOURCE. If the applicant or a provider is recompensated from any other source for medical bills which have been paid by the catastrophic illness committee, the state shall have the right to reimbursement for the amount paid by the committee. As a condition of application for catastrophic illness assistance, an applicant shall sign an agreement to this effect. As a condition of payment by the committee a provider shall sign an agreement to this effect.

7 AAC 48.130. DEFINITIONS. In this chapter

(1) "applicant" means a person who has suffered a catastrophic illness;

(2) "applicant's share" means the amount of the total medical bill related to the catastrophic illness which the committee determines that the applicant can reasonably be expected to pay based on income, assets, and

number of dependents;

(3) "catastrophic illness" means a single illness or injury which results in medical expenses of over $1,000 during a period not to exceed 12 months, after all other sources of third party payment have been exhausted;

(4) "committee" means the Catastrophic Illness Committee;

(5) "elective medical or surgical procedures' means treatment which is not essential to the life or health of a person;

(6) "family" means two or more persons related by blood or marriage or adoption living as one economic unit;

(7) "liquid assets" means assets which can be readily converted to cash;

(8) "non-liquid assets" means all assets not covered by (7);

(9) "provider" means a licensed physician, pharmacist, dentist, or other health services worker who has provided services not excluded by section 50 of this chapter to an applicant as a result of a catastrophic illness, or a licensed hospital, clinic, skilled nursing home, intermediate care facility or health maintenance organization which has provided these services;

(10) "third party payments" means payments of medical expenses related to a catastrophic illness by sources other than the applicant or the catastrophic illness committee, including, but not limited to state and federal medical assistance programs; private health insurance; employment-related health insurance; military health insurance; Workmen's Compensation; Violent Crimes Compensation; Indian Health Service of the U.S. Department of Health, Education and Welfare, awards in legal actions.

(Eff. / /77, Register)

Authority: AS 47.05.010

For an Act entitled: "An Act relating to catastrophic illness; and providing for an effective date".

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*Section 1. AS 47 is amended by adding a new chapter to read:

Chapter 08. CATASTROPHIC ILLNESS ASSISTANCE.

Sec. 47.08.010. REIMBURSEMENT OF PROVIDERS. According to the provisions of this chapter, the Department of Health and Social Services Catastrophic Illness Committee shall reimburse providers of medical care for unpaid costs incurred in the treatment of a person suffering an illness or accident which results in financial catastrophic to the person or his family as defined in regulations adopted by the Committee.

Sec. 47.08.015. CATASTROPHIC ILLNESS COMMITTEE. There is created the Catastrophic Illness Committee, consisting of a medical review officer from the Department of Health and Social Services, a member appointed by the governor who has suffered a catastrophic illness, and a representative of the Department of Commerce and Economic Development appointed by the governor, and necessary administrative staff.

Sec. 47.08.020. POWERS AND DUTIES OF COMMITTEE. The Catastrophic Illness Committee shall determine eligibility, allowable costs and levels of reimbursement. It shall adopt regulations, make reasonable classifications of persons according to the size of family, family income and assets, and health care coverage from all other sources. Other sources include, but are not limited to, state and federal medical assistance programs, private health insurance, employment-related health insurance, military health insurance, workmen's compensation, violent crimes compensation, and Indian Health Service. In order not to exceed the budget appropriated by the legislature, the committee shall establish priorities for those eligible for assistance under this chapter. The committee

may not make reimbursement for costs incurred before July 1, 1976.

Sec. 47.08.025. NOTICE. The Catastrophic Illness Committee shall seek the assistance of medical providers to assure that the public is aware of the catastrophic illness program.

*Sec. 2. AS 47.25.255 is repealed.

*Sec. 3. This Act takes effect immediately in accordance with AS 01.-10.070 (c).

Catasrophic Illness program:

This program has no budget for staff of its own. It has, therefore, been "robbing from Peter to pay Paul". There needs to be money in some budget to cover the expenses of the project.

There is a lack of understanding as to what limit catastrophic illness has. The committee has reviewed all applications and has found many medically needy but not eligible for G.R. medical and other programs. They are also not needy enough to qualify for C.I.

What needs to be done to provide a measure of assistance to these people?

Is that what the program needs to do or should it be used as a last resort?

Does the program belong in Public Health or Public Assistance. Public Health feels that it is a total money program and should remain in Public Assistance. I do to.

It is to early to judge if there's enough money available or not for the project.

MONTHLY BREAKDOWN OF EXPENDITURS FOR FY 77 CATASTROPHIC ILLNESS PROGRAM ---$300,000 Appropriation

IN THE HOUSE BY THE FINANCE COMMITTEE

SENATE CS FOR CS FOR HOUSE BILL NO. 409

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to catastrophic illness; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 47 is amended by adding a new chapter to read:

CHAPTER 8. CATASTROPHIC ILLNESS ASSISTANCE.

Sec. 47.08.010. REIMBURSEMENT OF PROVIDERS. According to the provisions of this chapter, the Department of Health and Social Services shall reimburse providers of medical care for unpaid costs incurred in the treatment of a person suffering an illness or accident which results in financial catastrophe to the person or his family.

Sec. 47.08.020. CATASTROPHIC ILLNESS COMMITTEE. There is created the Catastrophic Illness Committee, consisting of a medical review officer from the Department of Health and Social Services, a member appointed by the governor who has suffered a catastrophic illness, and a representative of the Department of Commerce and Economic Development appointed by the governor.

Sec. 47.08.030. NOTICE. The committee shall enlist the assistance of medical providers in making the public aware of the catastrophic illness assistance program.

Sec. 47.08.040. APPLICATIONS FOR ASSISTANCE. An application for financial assistance under this chapter may be filed by a person who has suffered catastrophic illness or by a parent, spouse, or legal guardian of that person, or by any other interested party with the written consent of the person who has suffered the catastrophic illness.

Sec. 47.08.050. SERVICES EXCLUDED FROM COVERAGE. Annually, the committee shall determine in light of appropriated funds and expected need the medical expenses reimbursable under this chapter, except that the following are not reimbursable:

(1) dentistry and optometry unless prescribed by a licensed dentist or physician as medically necessary as the result of the injury or illness;

(2) elective medical or surgical procedures;

(3) drugs and medications not prescribed by a licensed physician;

(4) services received as a result of a pregnancy or birth without unusual complications;

(5) private psychological or psychiatric treatment or private alcoholism treatment, unless not available from public agencies or programs;

(6) chiropractic services;

(7) services not of a medical nature;

(8) medical services currently provided to persons in the custody of the division of corrections;

(9) costs incurred before July 1976.

Sec. 47.08.060. CALCULATION OF APPLICANT'S SHARE. (a) As frequently as necessary the committee shall adopt, in light of appropriated funds and expected need, a formula to be used in determining the applicant's share of total medical expenses incurred as a result of a catastrophic illness, based on the applicant's annual gross income, number of dependents, amount of assets, and forthcoming third-party payments, all considered in light of the requirement that the applicant's share will be paid to the provider on a payment schedule covering a period of at least three years.

(b) For the purposes of applying the formula to determine the applicant's share, multiple catastrophic illness occurring within a 12-month period to the applicant or other members of the applicant's family shall be treated as one catastrophic illness.

(c) In applying the formula to determine the applicant's share, the total gross income and the total assets of the family of the applicant may be taken into account, with the following exceptions:

(1) the applicant's permanent place of abode;

(2) one noncommercial vehicle;

(3) tools, equipment, vehicles and other assets required in a trade or business;

(4) ordinary household and personal effects;

(5) $1,000 of liquid assets; Reason in business needs much more liquid assets to run business not enough for person not in business

(6) all nonliquid assets unless such an exclusion would bring about an inequitable result; however, all income derived from such property shall be taken into consideration in determining the recipient's gross income; Should be resonable limits on properties not used in business.

(7) inalienable shares in a Native corporation created under the Alaska Native Claims Settlement Act, P.L. 92-203; 43 U.S.C. 1601 et seq., for the period of their inalienability as specified in the Act;

(8) Alaska longevity bonus payments;

(9) any other assets specifically restricted for the use of the recipient by state or federal law.

(d) Assets received by the applicant as a custodian, guardian, conservator, or trustee for another are not considered assets of the custodian, guardian, conservator, or trustee himself.

(e) The applicant's share shall be reduced in the amount of any premiums paid for disability insurance or a prepaid medical plan up to $500 if incurred in the 12-month period beginning with the occurrence of

the injury or the onset of the illness.

(f) Notwithstanding the provisions of this section, the committee may waive payment of an applicant's share when the catastrophic illness is the proximate result of an immunization required by law.

Sec. 47.08.070. STANDARDS FOR REIMBURSEMENT TO PROVIDERS. The amount that the committee reimburses providers for medical services rendered to a person who has suffered catastrophic illness may not be greater than 100 per cent of the total unpaid bills related to the catastrophic illness and shall be determined by the following standards:

(1) Only unpaid medical expenses for periods not to exceed 12 months, and related to catastrophic illness, may be considered. The initial 12-month period begins with the date of the first charges incurred because of the illness.

(2) The committee may not reimburse a provider if the applicant's total medical expenses related to the catastrophic illness are less than $1,000 in any period not exceeding 12 months described in (1) of this section after all sources of third-party payment have been exhausted by the applicant or by someone acting on behalf of the applicant.

(3) The committee may not reimburse a provider for the applicant's share of the total medical expenses; moreover, a reimbursement to the provider shall be conditioned on the provider's agreement that the provider enter into a payment schedule with the applicant which will result in full liquidation of the applicant's share. Payment schedules may not be for a term of less than three years.

Sec. 47.08.080. RECONSIDERATION OF DECISION BY COMMITTEE. The committee shall promptly notify an applicant of its decision with written reasons for the amount of the award or denial. An applicant who is dissatisfied with a decision of the committee may apply to the committee

for reconsideration within 30 days of receipt of the decision. The request for reconsideration must include a written statement of grounds for reconsideration and any supporting documentation which was not available to the committee for its original decision. Within 30 days after receipt of a request for reconsideration, the committee shall affirm, amend, or reverse its original decision. The committee shall promptly notify the applicant of its decision upon reconsideration with written reasons for its action. Information describing hearing rights and procedures must be furnished with the written notification of denial.

Sec. 47.08.090. HEARING. An applicant who is dissatisfied with the committee's decision upon reconsideration may request a hearing in accordance with procedures established under AS 47.25.180.

Sec. 47.08.100. FINALITY OF DECISIONS. Decisions as to catastrophic illness awards are final

(1) 30 days after the applicant receives the committee's decision unless a reconsideration is requested during that time;

(2) 30 days after the applicant receives the committee's decision upon reconsideration unless a hearing is requested during that time;

(3) 15 days after the applicant receives the hearing authority's decision if that decision is not appealed to the director during that time;

(4) upon being notified of the decision of the director if an appeal is taken to the director under AS 47.25.180;

Sec. 47.08.110. EXTENSION OF TIME LIMITS. Time limits for reconsideration or for requesting an appeal may be extended, at the discretion of the committee, upon application or upon the committee's own motion. A request for reconsideration or for a hearing shall be con-

sidered made on the date when the request is dispatched rather than the date when it is received by the committee.

Sec 47.08.120. RECOVERY FROM A COLLATERAL SOURCE. If the applicant or a provider receives payment from any other source for medical expenses which have been paid by the committee, the applicant or provider is liable to the committee in the amount of that payment. An application may not be con[illegible]ered by the committee unless the applicant agrees to this provision. A provider may not be paid by the committee under this chapter unless the provider agrees to this provision.

Sec. 47.08.130. REGULATIONS. The department may adopt regulations, in accordance with the Administrative Procedure Act, which establish rates of reimbursement to providers for medical expenses incurred, as well as other regulations necessary to carry out the purposes of this chapter.

Sec. 47.08.140. DEFINITIONS. In this chapter

(1) "applicant" means a person who has suffered a catastrophic illness and is applying for assistance under this chapter or is the subject of an application for assistance under this chapter;

(2) "applicant's share" [illegible]eans the amount of the total medical expense related to the catastrophic illness which the committee determines the applicant can reasonably be expected to pay based on income, assets, and number of dependents under sec. 60 of this chapter;

(3) "catastrophic illness" means illness or injury which result in medical expenses of over $1,000 during a period not to exceed 12 months, after all other sources of third-party payment have been exhausted;

(4) "committee" means the Catastrophic Illness Committee, created under sec. 20 of this chapter;

(5) "elective medical or surgical procedures" means treatment

which is not essential to the life or health of a person;

(6) "family" means two or more persons related by blood or marriage or adoption living as one economic unit;

(7) "liquid assets" means assets which can be readily converted to cash;

(8) "medical expense" means any financial obligation incurred in the course of treatment of illness as prescribed by a physician, including bills for ancillary services, patient transportation, transportation of a medical or family escort when reasonably necessary, or living expenses while receiving outpatient treatment in a community to which the applicant is not reasonably able to commute from his permanent place of abode;

(9) "nonliquid assets" means all assets which are not liquid assets;

(10) "permanent place of abode" means a dwelling, or a dwelling unit in a multiple dwelling, including lots and outbuildings or an appropriate portion of these, which are necessary to convenient use of the dwelling unit;

(11) "provider" means a licensed physician, pharmacist, dentist, or other health service worker or a licensed hospital, clinic, skilled nursing home, intermediate care facility or health maintenance organization which has provided services not excluded by sec. 50 of this chapter to an applicant as a result of a catastrophic illness;

(12) "third-party payments" means payments of medical expenses related to a catastrophic illness by sources other than the applicant or the committee, including but not limited to state and federal medical assista e programs, private health insurance, employment-related health insurance, military health insurance, workmen's compensation, violent crimes compensation, Indian Health Service of the United States Depart-

ment of Health, Education and Welfare, and awards in legal actions.

* Sec. 2. AS 47.25.255 is repealed.

* Sec. 3. This Act takes effect immediately in accordance with AS 01.10.-070(c).

Net Income should not be Considered unless over $10,000

Cliff Warren

Thelma Buchholdt,

Please review this revised draft of HB 409. Commissioner Beirne has received a copy of this revision today and we will be meeting later in the week to discuss it. We spoke on the phone today and have reached tentative agreement. A revised fiscal note is forthcoming to support the bill. Basically we are asking for a full-time admin asst and clerk typist rather than a half time position.

Comments from your office are welcomed. You will be advised of our next meeting sometime later this week.

Sincerely

Barbara O. Bowns
Chairman of Catastrophic Illness Committee
364-2121 x 142, D.O.T.

For an Act entitled: "An Act relating to catastrophic illness; and providing for an effective date".

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*Section 1. AS 47 is amended by adding a new chapter to read:

Chapter 08. CATASTROPHIC ILLNESS ASSISTANCE.

Sec. 47.08.010. REIMBURSEMENT OF PROVIDERS. According to the provisions of this chapter, the Department of Health and Social Services Catastrophic Illness Committee shall reimburse providers of medical care for unpaid costs incurred in the treatment of a person suffering an illness or accident which results in financial catastrophic to the person or his family as defined in regulations adopted by the Committee.

Sec. 47.08.015. CATASTROPHIC ILLNESS COMMITTEE. There is created the Catastrophic Illness Committee, consisting of a medical review officer from the Department of Health and Social Services, a member appointed by the governor who has suffered a catastrophic illness, and a representative of the Department of Commerce and Economic Development appointed by the governor, and necessary administrative staff.

Sec. 47.08.020. POWERS AND DUTIES OF COMMITTEE. The Catastrophic Illness Committee shall determine eligibility, allowable costs and levels of reimbursement. It shall adopt regulations, make reasonable classifications of persons according to the size of family, family income and assets, and health care coverage from all other sources. Other sources include, but are not limited to, state and federal medical assistance programs, private health insurance, employment-related health insurance, military health insurance, workmen's compensation, violent crimes compensation, and Indian Health Service. In order not to exceed the budget appropriated by the legislature, the committee shall establish priorities for those eligible for assistance under this chapter. The committee

may not make reimbursement for costs incurred before July 1, 1976.

Sec. 47.08.025. NOTICE. The Catastrophic Illness Committee shall seek the assistance of medical providers to assure that the public is aware of the catastrophic illness program.

*Sec. 2. AS 47.25.255 is repealed.

*Sec. 3. This Act takes effect immediately in accordance with AS 01.-10.070 (c).

AGENDA

9:00 a.m. WELCOME AND OPENING REMARKS

Verne Horn - Director, Health Policy Center
Jordan Braverman - Conference Coordinator
Lewis Butler - Moderator

9:30 a.m. CROSSING THE LEGISLATIVE HURDLE: POLITICS AND PLANNING FOR STATE HEALTH INSURANCE

- Determining the need
- Assessing state capabilities
- Developing the benefits
- Establishing eligibility standards
- Analyzing the costs
- Reassuring friends and placating foes

PANEL:

The Honorable Donald D. H. Ching, Majority Leader, Hawaii State Senate and sponsor of Hawaii's health plan.

Keven McKenna, Attorney-at-Law and former aide to Governor Philip Noel during passage of Rhode Island's plan.

Larry Fredrickson, Counsel, Minnesota Senate Health, Welfare and Corrections Committee and chief drafter of Minnesota's plan.

The Honorable Sam A. McConnell, Jr., Chairman, House Rules Committee and sponsor of catastrophic health insurance in Arizona.

Joseph McLean, Research Director of Joint Committee on Health Benefits and Health Services in Massachusetts State Legislature and involved in unsuccessful attempts to enact a state health plan.

11:30 a.m. IMPLEMENTATION AND ADMINISTRATION: MAKING A STATE HEALTH INSURANCE PLAN WORK

- Finding the right agency
- Hiring the staff and finding the experts
- Integrating with other departments
- Determining eligibility
- Controlling quality and costs
- Assessing the impact

PANEL:

Brian Keeler, Chief, Division of Health Insurance, Rhode Island Department of Health.

John Fickett, Director, Medical Assistance Division and Catastrophic Illness Program, Maine Department of Human Resources.

Joseph C. Mike, Commissioner of Insurance, State of Connecticut.

Paul Farseth, Outgoing Supervisor of Minnesota Catastrophic Health Expense Program, Department of Public Welfare.

The Honorable Donald D. H. Ching, Majority Leader, Hawaii State Senate.

1:00 p.m. LUNCH

2:00 p.m. WHAT DOES IT ALL MEAN?: THE IMPLICATIONS OF RECENT STATE ACTIVITY IN MEDICAID AND CATASTROPHIC ILLNESS PROTECTION

- Providing protection in the absence of a federal commitment
- Administrative innovations
- Financial and administrative pitfalls
- National policy and state discretion
- Practical problems

PANEL:

The Honorable John G. Veneman, former Counselor to Vice President Rockefeller, Under Secretary of DHEW, and California State Assemblyman.

Keven McKenna, Attorney-at-Law, Providence, Rhode Island.

Keith Weikel, Administrator, Medicaid Division, Health Care Financing Administration.

Beverlee Myers, Professional Staff Member, Subcommittee on Antitrust and Monopoly, United States Senate.

Bonnie Lefkowitz, Office of the Assistant Secretary for Planning and Evaluation, DHEW.

4:00 p.m. CLOSING REMARKS

Georgetown University
Health Policy Center Publications

(A) Health Programs in the States: A Survey. Published in cooperation with the Eagleton Institute of Politics, this report discusses and documents provisions and procedures of health care programs in the 50 states (40 pages; $3.25).

(B) Paper Victories and Hard Realities. This legal and programmatic analysis of the landmark Supreme Court decision, *O'Connor v. Donaldson*, resulted from a working conference held by the Health Policy Center. It covers: the decision, establishing the right to liberty for mentally ill persons who can live safely outside an institution; "right to treatment"; alternate systems for mental health care; civil commitment statutes; "dangerousness"; and federal mental health programs (144 pages; $4.25).

(C) State Health News. A bi-weekly publication, this newsletter reports developments, innovations and problems in state health legislation. Special issues focus on particular issues of significance to state and local health policymakers: e.g., the proposed Michigan Health Planning Code, Certificate of Need Regulations, etc. (4-6 pages; $10/year).

(D) The Legal Status of Physician Extenders in Thirteen Southern States. This study conducted by the East Tennessee Research Corporation examines the laws, regulations and guidelines governing physician assistants and nurse practitioners. Discussion of each state's legislative provisions is followed by analysis and recommendations (61 pages; $2.00).

(E) A Legislator's Guide to the Medical Malpractice Issue. Published jointly with the National Conference of State Legislatures, this booklet contains: an analysis of state and federal legislative activity, five state case studies, and papers from various interest groups (88 pages; $3.25).

(F) Catalogue: Washington Health Newsletters. This compilation lists 40 Washington-based newsletters by title, publisher, frequency of publication, price, subject, and unique features (6 pages; $1.00).

(G) Strategies for Long-Term Care. This paper surveys financing, administration, and institutions, community-based facilities, and individual home settings. It addresses characteristics and needs of the population at risk, inter-governmental relationships, and includes recommendations for action (38 pages; $2.00).

(H) Death and Dying: An Examination of Legislative and Policy Issues. This report is based on a conference co-sponsored with the American Association for the Advancement of Science. It explores the legislative, ethical, demographic, medical and public policy ramifications of death and dying issues (68 pages; $3.50).

(I) Model Medical Practice Act. This model act is designed to ensure physician competency. Originally developed by the Health Policy Center, the act was refined at a conference co-sponsored with the Bureau of Health Manpower, DHEW. Representatives of various federal agencies participated in the meeting (22 pages; Free).

(J) Health Expenditures by State Governments. This report examines information on state health spending compiled largely by the Bureau of the Census. It shows that the percentage of overall state health expenditures compares favorably with the percentage of overall federal health expenditures (23 pages; $2.25).

(K) Drug and Alcohol Abuse Programs in the States. This survey examines the pros and cons of state legislative activity surrounding ten major drug/alcohol abuse issues. The book is scheduled for publication in August 1977.

(L) Implementing Protection and Advocacy Systems for the Developmentally Disabled. This forthcoming report grew out of a conference designed to consider how best states can meet federal protection and advocacy requirements.

(M) State-Initiated Catastrophic/Comprehensive Health Insurance Plans. A forthcoming conference proceedings, this report will review the implications of such plans for both the private and public sectors.

(N) Medicaid Reimbursement of Primary Health Clinics. This forthcoming report is based on a nationwide survey of state Medicaid clinic reimbursement practices. An analysis of the findings is due for publication in August 1977.

THE IMPLICATIONS OF STATE-INITIATED CATASTROPHIC/ COMPREHENSIVE HEALTH INSURANCE PLANS

A Seminar Sponsored by

Georgetown University Health Policy Center

Friday, September 16, 1977

SPEAKERS

The Honorable Donald D. H. Ching is the Majority Leader of the Senate of the State of Hawaii. He is a graduate of the University of Hawaii and the George Washington University Law School. Since 1967 he has been on the Senate Health Committee, first as Chairman, then Vice Chairman and presently as a member. He is also presently Chairman of the Military and Civil Defense Committee and Vice Chairman of the Transportation Committee in the Hawaii Senate. In addition to his legislative duties, Senator Ching serves as a Director of the Hawaii Medical Service Association.

Brian E. Keeler is presently Chief of the Division of Health Insurance, Rhode Island Department of Health and is responsible for the administration of the Rhode Island Catastrophic Health Insurance Plan. The Division also regulates health maintenance organizations and acts as a clearinghouse for health insurance information. Mr. Keeler, a graduate of Siena College in New York State, was associated with the Aetna Life and Casualty Company for ten years prior to assuming his present position and served as chairman of the Health Care Committee of the Health Insurance Association of America in the formulation and promotion of a national health insurance plan.

Larry Fredrickson is Counsel to the Senate Health, Welfare and Corrections Committee in the Minnesota State Legislature. Mr. Fredrickson, a graduate of Macalester College and New York University Law School, prior to his present position, was engaged in private law practice, worked with Interstudy as research attorney in Minneapolis and served as Director of Minority Research in the Minnesota State Senate. He was intimately involved in formulating the state health insurance law that became effective in Minnesota in January 1977.

PANELISTS

Sam A. McConnell, Jr. is Chairman of the Rules Committee in the Arizona House of Representatives and serves as a member of the House Banking and Insurance, Health, and Appropriations Committees. A pharmacist by profession and graduate of Butler University in Indiana, Mr. McConnell is a member of the Health Insurance Benefits Advisory Council of the Department of Health, Education, and Welfare, an advisor to the Secretary of HEW on Medicare and Medicaid and a former member of the Governor's Committee on Problems of the Aged. He is presently serving his sixth term in the Arizona House of Representatives and is President-elect of the National Association of Retail Druggists.

Joseph P. McLean is Research Director of the Joint Committee on Health Benefits and Health Services in the Massachusetts State Legislature. He also serves as Legislative Director to Senator Daniel J. Foley, Chairman of the Insurance Committee in the Massachusetts Senate. A graduate of Siena College in New York State, Mr. McLain has also served as Legislative Director in the Offices of the Massachusetts Senate President and Senate Majority Whip. Author of various health care statutes in Massachusetts, Mr. McLain presently is a lecturer at the Institute for Governmental Science at the University of Massachusetts and a member of the University of Massachusetts Health Policy Growth Study Committee.

John E. Fickett is Director of the Medical Assistance Program (Medicaid) and the Catastrophic Illness Program in the Department of Human Resources of the State of Maine. A graduate of the Gordon Divinity School, both on the bachelor and master's levels, Mr. Fickett also has a master's degree in Social Work from Boston College. A former minister, Mr. Fickett is a member of the American Society for Public Administration and is listed in Who's Who in the East, Who's Who in Government, Who's Who in Religion and in the Dictionary of International Biography.

Joseph C. Mike is the Commissioner of Insurance for the State of Connecticut. Prior to his present appointment, he served as Deputy Commissioner of Insurance from April 1975 to May 1977. A graduate of Providence College, Commissioner Mike has also been associated with the Aetna Life and Casualty Company and also

served two terms from 1971 to 1975, as Councilman-at-Large for the City of Bristol, Connecticut. He has been a member of various city boards including the Bristol Veterans Committee, Bristol Retirement Board, City Council Salary Committee, Council on Human Needs, Bristol Day Care Center and the Bristol Jaycees. On a statewide basis, Commissioner Mike has served on the Connecticut Commission for Hospitals and Health Care and on the Teachers Retirement Board and has been responsible for the regulation of Connecticut's Health Maintenance Organizations and the implementation of Connecticut's Health Care Act. He also serves on the Commission for Hospital and Health Care Malpractice Task Force and the Product Liability Tort Reform Task Force. He has also been on the Board of Directors of the Connecticut Association of Local Legislators and various organizations that assist in the activities of teenagers. Mr. Mike is a member of the Bristol Young Democrats and a member of a Military Intelligence Detachment of the U. S. Army Reserve.

John G. Veneman is Vice President and Manager of the Washington office of Braun and Co. as well as Executive Advisor to the Georgetown University Health Policy Center. His past experience in government has included serving as Counselor to Vice President Nelson A. Rockefeller, Under Secretary of HEW during the Nixon Administration, member of the California Assembly as well as Chairman of the Assembly's Committee on Revenue and Taxation, and a member of various standing Assembly committees including Finance and Insurance, Social Welfare and Agriculture. In 1967 he was selected as the Most Outstanding Legislator in the Assembly by the Capitol Press Corp. Mr. Veneman has served on the Board of Trustees of the Urban Institute, the American Social Health Association, the Citizens Conference on State Legislatures and the San Francisco Public Schools Commission.

MODERATOR

Lewis Butler is Co-Director of the Health Policy Program at the University of California at San Francisco as well as an Adjunct Professor of Health Policy at the University. A graduate of Princeton University and Stanford University Law School, Mr. Butler has served as an HEW Assistant Secretary for Planning and Evaluation from 1969 to 1971 in the Nixon Administration, as Visiting Faculty member at the School of Law and Earl Warren Legal Institute at the University of California at Berkeley, as a Director of the Peace Corps in Malaysia as well as an attorney engaged in the private practice of law. He is a member of the Institute of Medicine of the National Academy of Sciences, a member of the Advisory Panel on National Health Insurance to the Subcommittee on Health of the House Committee on Ways and Means, Chairman of the Advisory Board, HEW Fund for the Improvement of Post-Secondary Education and Director or Trustee of the John Hay Whitney Foundation, Abelard Foundation and California Tomorrow as well as President of the Rosenberg Foundation. He has also served on the San Francisco Public Schools Commission, the Technical Advisory Committee of the Carnegie Commission on Higher Education, and was Founding Director and President of the Planning and Conservation League.

Georgetown University Health Policy Center

AN OVERVIEW OF THE HEALTH POLICY CENTER

AN OVERVIEW

OF THE

HEALTH POLICY CENTER

GEORGETOWN UNIVERSITY

WASHINGTON, D. C. 20057

MAY 1977

This overview is designed to summarize activities in each of the major operational areas of the Health Policy Center:

- Research
- Seminars, Workshops and Conferences
- Network of Correspondents
- Library and Other Documentary Resources
- Publications

Information on Center personnel concludes the document.

GEORGETOWN UNIVERSITY HEALTH POLICY CENTER

The Georgetown University Health Policy Center (HPC) was established in January 1975 through a grant from the Robert Wood Johnson Foundation to assist state, county and municipal governments in formulating and implementing health care policies. The Center provides for the improvement of national health policy development by focusing on the needs, capacities, activities, and problems of state and local governments in carrying out health programs. Its constituency includes: local, state and national legislators, health care officials at all levels, professional health care associations, and private groups concerned with state interests in health policymaking.

RESEARCH

The Center undertakes both short and long term research in response to current pressing state health policy concerns and requests from individuals and organizations in the health policy-making community. In selecting issues for study, we consider such factors as: upcoming state and national health legislation; the volume and nature of requests for technical assistance; issues voiced by the Center's Network of Correspondents; the possibility of impact on developing legislation; the uniqueness of the issue; and the type of attention the issue is receiving elsewhere.

Research is planned to provide states and localities with practical timely information that they cannot or do not receive from other organizations and agencies. Thus our research and policy analysis efforts focus on: analyzing innovative state health programs; examining the impact of proposed federal legislation on state and local governments; reviewing and comparing existing state health programs and proposals; drafting model state legislation; and developing policy position papers discussing alternative approaches to critical health care issues. Most studies lead to workshops, conferences and/or publications.

Research efforts have dealt with such topics as:

- The implications of alternative national health insurance proposals for state and local governments
- Medical malpractice
- Implications of the MAC drug program
- Developmental disability legislation
- A Model Medical Practice Act
- The Health Maintenance Organization Amendments of 1976
- Primary health care delivery
- Quality assurance programs
- Rural health care
- Mental health legislation
- Litigation and the mentally disabled
- State perspectives on health block grants for personal services
- Long-term care
- Medicaid reform
- Death and dying legislation
- Abortion
- State health planning
- Mid-level medical personnel

Current research efforts include:

- A study of Reimbursement of Primary Health Clinics under State Medicaid Programs involving a nationwide survey of state Medicaid directors. The study is aimed at determining whether and if so how states reimburse primary health clinics as independent health care providers. It also seeks data on the reimbursement of primary health practitioners. Generated by an increasing number of requests from state and federal policymakers concerning this type of direct Medicaid reimbursement and the serious lack of reliable information in this area, the study was also fueled by recent Congressional hearings on clinic reimbursement under Medicare. An analysis and report of the findings are due for publication in August 1977.

- An evaluation of State Standards for the Delivery of Public Health Services. This study involves: (1) the collection and comparative analysis of existing or developing state standards; (2) an in-depth survey of 10-12 carefully selected health departments and (3) a seminar for representative public health providers and consumers focusing on proposed federal standards for the delivery of local public health services, and the capacity of local governments to provide such services. Concern over the setting of federal standards governing public health programs, the relationship between these programs and national health insurance, and the strong interests of state and local health officers motivated this research project.

- A survey of Drug and Alcohol Abuse Programs in the States. This study surveys state legislative activity in response to the following drug/alcohol abuse issues: Organization of State Drug/Alcohol Abuse Efforts; Alcohol and Highway Safety; Legal Drinking Age; Decriminalization of Marijuana and Public Intoxication; Credentialing of Drug and Alcohol Abuse Programs and Personnel; Mandatory Health Insurance Coverage for Drug Abuse and Alcoholism Treatment; Earmarked Alcoholic Beverage Tax; Implications of Title XX for Drug/Alcohol Abuse Programming. An additional chapter in the forthcoming publication of this study deals with the extent and nature of the drug/alcohol abuse problem in the United States, and major federal legislation in the area. The issues were selected on the basis of their importance to upcoming state legislation. Each is discussed in terms of the significance of the issue, the need for legislation, and the pros and cons of alternative courses of legislative action. The study is due for publication in July 1977.

- An analysis of The Legal Framework in which the Developmental Disability Protection and Advocacy Systems Required by States Must Operate. The paper examines the Developmental Disabilities Assistance and Bill of Rights Act of 1975, the legislative history of relevant sections, and the regulations, guidelines, and legal opinions issued by the Department of Health, Education and Welfare on implementing these protection and advocacy systems.

- An examination of State Catastrophic and Comprehensive Health Insurance Plans. Prepared for participants at a Health Policy Center seminar, this paper examines the political organizations, and administrative experiences of the five states that have adopted plans: Hawaii, Rhode Island, Connecticut, Maine and Minnesota. The paper covers: benefit coverage and eligibility, administration and financing as well as the history, characteristics, and problems of definition associated with "catastrophic" health plans.

- Participation in the New Coalition Task Force on Medicaid Reform, which has involved: (1) Preparation of a policy option paper summarizing major ideas and research on Medicaid and presenting policy alternatives for intergovernmental financing of Medicaid. The paper, "Federal/State Financing of Medicaid," exploring such concepts as equity, program rationale (health or welfare), ability of various levels of government to pay intergovernmental relations and centralization vs. decentralization, was presented to the Task Force in January 1977. (2) Preparation of a cost analysis of options presented in the paper. (3) Participation in a seminar convened to review and analyze federal proposals on cost containment. A summary of contents and recommendations was provided to DHEW. (4) Review and editing for the Task Force of papers dealing with eligibility and institutional reimbursement. The New Coalition is a group composed og voernors, mayors, state legislators, and county elected officials.

Other recent studies prompted by national debate over issues that will inevitably impact on state and local jurisdictions include the following.

- Comprehensive Health Insurance: Initiatives by State Government. This study surveys types of state health insurance plans already enacted and discusses the rationale for the state movement, the proposals of leading organizations on this issue (the National Association of Insurance

Commissioners and the Conference of Insurance Legislators), cost control measures, and the future of state plans.

- The MAC Drug Program. Implications for State Governments. This analysis of the maximum allowable costs controversy surrounding the establishment of cost limits on prescription drugs clarifies the issues of this potentially far-reaching program. The aims, implementation problems, advantages, disadvantages, and implications of the MAC program for state and local government are examined.

- Aerosols and the Earth's Ozone Layer: Issues for State Governments. The background and present issues surrounding legislation banning aerosol sprays propelled by fluorocarbons are discussed in this study. It covers federal legislation initiated as a result of the findings and recommendations of the National Academy of Sciences and discusses legislative options available to state governments.

- Health Maintenance Organization Amendments of 1976: Implications for State and Local Governments. This report covers the history, objectives, and provisions of the 1973 HMO Act and the HMO Amendments of 1976. A summary of the implications of these Amendments for state and local governments is included.

- Community Mental Health Centers: Implications for State and Local Government. This study examines the present status and future implications of community mental health centers as they will impact on state and local government. In view of President Carter's establishment of a national Mental Health Commission, community centers may receive renewed impetus and importance in the delivery of health care services and this paper examines the historical background of the issue, analyzes the impact of the Community Mental Health Center Act itself, examines the scope of the mental illness problem, public financing of such centers, and their implications for local and state governments.

- National Health Insurance Bills of the 94th Congress: Implications for State and Local Government. This series of papers examines key national health insurance bills that were introduced in the 94th Congress by such organizations as the AFL-CIO, the American Medical Association, the American Hospital Association, the Health Insurance Association of America and Senators Long and Ribicoff's Catastrophic Health Insurance Bill. Those aspects of the bills that impact on state and local government are noted and analyzed.

SEMINARS, WORKSHOPS AND CONFERENCES

To air the variety of viewpoints concerning health policy and program developments, the Center sponsors a number of meetings each year. Meeting size and composition vary, according to the purpose of the meeting. Seminars range from small working sessions designed to explore policy options and/or define state legislative interests, to large forums designed to communicate policy concerns to a wide audience. And, when there is a commonality of interests, sponsorship is shared with other organizations and agencies.

Whether large or small, most meetings are characterized by a "how-to" theme. One area in which the Center is uniquely capable of providing a practical service is the identification of federal legislation requiring states to meet certain standards as a condition for receiving federal funding. It has been our experience that, all too often, little technical assistance is offered to states to assist in compliance. Our upcoming seminar on the implementation of state advocacy systems for the developmentally disabled is one example of how the Center can fill this void and provide a much-needed service to states.

Scheduled for May 27, 1977, this meeting deals with The Implications of State Protection and Advocacy Systems Designed to Protect the Rights of the Developmentally Disabled. This one-day seminar will bring together federal and state policymakers, as well as consumers, to discuss the best means of implementing these systems. Designed to safeguard the human and civil rights of the developmentally disabled (DD), the systems are required to be "in effect" by October 1, 1977, if states are to continue receiving federal DD moneys following that date. The shortage of time and federal technical assistance, however, has made state compliance with this requirement especially difficult.

The seminar is therefore timely and will produce findings and recommendations designed to be of immediate practical value to the states. The proceedings are scheduled for publication and distribution in August 1977, and will include an analysis of the relevant federal legislation, regulations, and guidelines; a study of what forms advocacy can and should take; a paper on what should constitute compliance with the federal legislation; and a case study of how an advocacy system actually is implemented and functions on the state level. Speakers/authors include:

- Jim Stearns, Policy Analyst and developmental disabilities specialist for the Georgetown University Health Policy Center.
- Stanley Herr, Visiting Scholar at Harvard Law School, specializing in disability law and the mentally retarded with emphasis on advocacy issues.
- Neil Mickenburg, Director of Vermont's Developmental Disabilities Advocacy Project and past Director of Minnesota's Developmental Disabilities Advocacy Project.

- Ronald Neufeld, Director of Developmental Disabilities Technical Assistance System, University of North Carolina

- James Paul, Director of Training, Developmental Disabilities Technical Assistance System, University of North Carolina

In July 1977 the Center plans to hold a seminar on State-Initiated Catastrophic/Comprehensive Insurance Plans. Dealing with an issue of growing importance in the area of health care financing, this conference will examine the growth and implications of state-enacted comprehensive insurance programs for the private sector--such as the health insurance industry--and the public sector. The implications for federal national health insurance plans will be of particular interest. The proceedings of the seminar will be published in the fall of 1977. Speakers/authors will include:

- The Honorable Donald D. H. Ching, Majority Leader of the Hawaii State Senate

- Brian E. Keeler, Chief of the Division of Health Insurance, Rhode Island Department of Health and Administrator of Rhode Island Catastrophic Health Insurance Plan

- Larry Fredrickson, Counsel to Senate Health, Welfare and Corrections Committee, Minnesota State Legislature

Past Health Policy Center conferences have been concerned with the following topics:

- MEDICAL MALPRACTICE: Held in May 1975, in Washington, D. C., in conjunction with the National Conference of State Legislatures, this seminar attracted a number of state legislators and other public officials from across the country to address the critical issue of availability of malpractice insurance coverage. During three days of activity, the participants addressed the value of federally mandated malpractice legislation, reviewed case studies of malpractice legislation introduced in California, Idaho, Indiana, New York, and Wisconsin, and analyzed the presentations of physicians, lawyers, insurance commissioners, and consumer advocates concerned with resolution of this crisis.

- HEALTH ISSUES OF 1976: Recognizing the increasing responsibilities imposed on state and local governments in the health policy field, the Georgetown University Health Policy Center sponsored this seminar to determine the immediate health care issues facing states and localities. The Health Issues of 1976 Seminar, held in Palm Beach, Florida, on November 9-12, assembled a number of state,

local and federal officials to identity issues and evaluate alternate approaches and/or solutions. In addition to targeting issues, this conference represented an attempt to review and analyze the changing role of government in health care and the magnitude of the problems being addressed by state and local expenditures.

- LITIGATION AND THE MENTALLY DISABLED: On June 26, 1975, the Supreme Court decided the case of O'Connor v. Donaldson proclaiming a constitutional right to liberty for mentally ill individuals. The Court ruled that mentally disabled persons cannot be confined involuntarily if they are not dangerous and can live safely in the outside world. The Health Policy Center, on December 8, 1975, sponsored a one-day working session focusing on the effect of the decision upon state and local programs for the mentally disabled. The participants developed analyses of the legal and programmatic effects of the case. In attendance were state legislators, county supervisors, and city councilmen as well as program administrators from the three levels of government. A major publication, "Paper Victories and Hard Realities," resulted from the meeting.

- MEDICAID AND RELATED STATE HEALTH ISSUES: Held in December in Phoenix, Arizona, and co-sponsored by the National Conference of State Legislatures and the Public Services Laboratory of Georgetown University, this seminar presented to over one hundred state legislators various facets of state-federal relationships and government financing mechanisms for medical care.

- COMPETENCE, RELICENSURE AND CONTINUING MEDICAL EDUCATION: On January 16, 1976, the Health Policy Center convened an "Issue of the Month" round table discussion to discuss issues related to continuing medical education.

- WORKING SESSION TO DRAFT A MODEL MEDICAL PRACTICE ACT: This working session in Febraury 1976 grew out of the Center's concern over the absence of any ongoing physician competence assurance, and the need to develop more satisfactory legislation to assure physician competence.

- A HEALTH BLOCK GRANT FOR PERSONAL SERVICES: THE STATE PERSPECTIVE: In February 1977, a seminar was convened to discuss the Ford Administration's proposal to consolidate federally funded health programs into a single block grant, and examine its implication for the states.

- MEDICAID: A STATE AND LOCAL PROBLEM: In March 1976, a seminar was convened to review the background and objectives of Medicaid and its status 10 years later. The paper that resulted from this seminar includes a summary of major Medicaid issues and suggested reforms.

- COMPETENCY IN THE MEDICAL PROFESSION: A joint conference, sponsored by the Health Policy Center, in cooperation with the Department of Health, Education and Welfare Bureau of Health Manpower, was held to refine a Model Medical Practice Act, which had been developed earlier by the Center.

- STRATEGIES FOR LONG-TERM CARE: In May 1976, a seminar was convened to discuss one of the major current public policy problems in the human services area: how to finance, administer, and provide long-term care services in large institutions, community-based facilities and individual home settings. The paper that resulted from the conference addresses characteristics and needs of the population at risk, long-term care financing, and intergovernmental relationships, and includes recommendations for action.

- DEATH AND DYING: AN EXAMINATION OF LEGISLATIVE AND POLICY ISSUES: Held in June 1976, this joint conference was sponsored by the American Association for the Advancement of Science and the Health Policy Center. The speakers included: Dr. Conrad Taeuber, Director of the Center for Population Research, Kennedy Institute; Mr. Sidney Rosoff, Director of the Society for the Right to Die; Dr. Robert Veatch, Senior Associate of the Institute of Society, Ethics and the Life Sciences; and Dr. Andre Hellegers, Director of the Joseph and Rose Kennedy Institute for the Study of Human Reproduction and Bioethics. The participants examined demographic, legal, public policy, and ethical aspects of death and dying issues.

NETWORK OF CORRESPONDENTS

The Network of Correspondents consists of an individual in each state selected on the basis of his/her knowledgeability of state health care developments and position in the state health structure. On retainer with the Center, the Correspondents supply up-to-date information on proposed health legislation, legislative and study committee reports, municipal and state budgets, judicial and executive activity, key state people in health policy formulation, and other pertinent health care developments. In turn, the Center provides the Correspondent with the Center's newsletter, STATE HEALTH NEWS, various Center reports and papers, and technical assistance on a variety of issues. Members of the Network of Correspondents include: legislative leaders and staff, program and bureau directors, local health program officers, health media representatives, and academically based health researchers.

The Network has been used to provide the Center with a broad sample of state and local reaction to President Ford's health block grant proposal. Correspondents were also used to provide state and local reaction to some of the pressing problems with the Medicaid program, and to 1976 legislation in the U. S. Senate (S. 3205) aimed at solving fraud and abuse problems in Medicaid.

More recently, the Correspondents have provided a broad sample of state reactions to proposed regulations under Section 504 of the Rehabilitation Act; to the Administration's hospital cost containment proposal; and to newly established federal regulations pertaining to certificate of need under P. L. 93-641. They have also provided the names of resource persons in community health care around the country; identified persons in their state who were particularly knowledgeable about rural health care; identified state programs to provide better rural health care; and determined for the Health Policy Center whether their state licensed community health clinics.

In the fall of 1976, the Network of Correspondents division began focusing attention on publication of the Center's newsletter--STATE HEALTH NEWS. This publication is an effort to communicate to Correspondents and many others some of the significant and innovative developments in health at the state level. Previously, no convenient vehicle had existed for the Health Policy Center to share the information collected from interested groups and individuals across the country. Reactions to this new publication have been extremely favorable. The format calls for most news items to be covered in short articles. Those items warranting more lengthy treatment are presented in "Special Feature' issues.

LIBRARY AND OTHER DOCUMENTARY RESOURCES

The Library of the Health Policy Center contains a unique collection of some 600 books and 100 periodicals concerned with health policy formulation and implementation. A full-time Librarian maintains this up-to-date resource--circulating timely information to the staff, assisting in Center research efforts, and providing reference services to numerous organizations and people outside the Center. The Library is open to the public as well as the staff.

Another resource is a comprehensive collection of state health legislation, obtained on an ongoing basis through a contract with Commerce Clearinghouse. While the sheer bulk of this resource is staggering--estimates call for more than 8,000 health bills to be introduced around the country in 1977--it is an excellent barometer of emerging state and local health concerns. The immediate availability of the actual text, moreover, has enabled the Center to provide its constituents with reliable and complete information on new legislation. For ease of retrieval, bills are filed according to topic, state, house of origin, and date of introduction. This resource, too, is open to the interested public.

PUBLICATIONS

Publications are guided by a concern for the practical. The fact that the genesis of many Center activities is a request, or pattern of requests, for insight into the effects of particular health policies reinforces this concern. Special papers, books, directories, and our newsletter, STATE HEALTH NEWS, are all aimed at providing timely and informative answers to such questions as: What works? What doesn't work? Why? How can states use this? Where can we turn to find out more about the issue?

Our publications list includes the following titles:

Health Programs in the States: A Survey. Published in cooperation with the Eagleton Institute of Politics, this report discusses and documents provisions and procedures of health care programs in the 50 states (40 pages; $3.25).

Paper Victories and Hard Realities. This legal and programmatic analysis of the landmark Supreme Court decision, O'Connor v. Donaldson, resulted from a working conference held by the Health Policy Center. It covers: the decision, establishing the right to liberty for mentally ill persons who can live safely outside an institution; "right to treatment"; alternate systems for mental health care; civil commitment statutes; "dangerousness"; and federal mental health programs (144 pages; $4.25).

State Health News. A bi-weekly publication, this newsletter reports developments, innovations and problems in state health legislation. Special issues focus on particular issues of significance to state and local health policymakers: e.g., the proposed Michigan Health Planning Code, Certificate of Need Regulations, etc. (4-6 pages; $10/year).

The Legal Status of Physician Extenders in Thirteen Southern States. This study conducted by the East Tennessee Research Corporation examines the laws, regulations and guidelines governing physician assistants and nurse practitioners. Discussion of each state's legislative provisions is followed by analysis and recommendations (61 pages; $2.00).

A Legislator's Guide to the Medical Malpractice Issue. Published jointly with the National Conference of State Legislatures, this booklet contains: an analysis of state and federal legislative activity, five state case studies, and papers from various interest groups (88 pages; $3.25).

Catalogue: Washington Health Newsletters. This compilation lists 40 Washington-based newsletters by title, publisher, frequency of publication, price, subject, and unique features (6 pages; $1.00).

Strategies for Long-Term Care. This paper surveys financing, administration, and institutions, community-based facilities, and individual home settings. It addresses characteristics and needs of the population at risk, intergovernmental relationships, and includes recommendations for action (38 pages; $2.00).

Death and Dying: An Examination of Legislative and Policy Issues. This report is based on a conference co-sponsored with the American Association for the Advancement of Science. It explores the legislative, ethical, demographic, medical and public policy ramifications of death and dying issues (68 pages; $3.50).

Medicaid: A State and Local Problem. A review of Medicaid and its status ten years later, the paper summarizes major Medicaid issues and suggested reforms (9 pages; $2.00).

Model Medical Practice Act. This model act is designed to ensure physician competency. Originally developed by the Health Policy Center, the act was refined at a conference co-sponsored with the Bureau of Health Manpower, DHEW. Representatives of various federal agencies participated in the meeting (22 pages; Free).

A Health Block Grant for Personal Health Services: The State Perspective. This paper describes the Ford Administration's proposal to consolidate federally funded health programs into a single block grant, and examines implications for the states. Seven possible state positions are outlined (16 pages; $2.00).

Health Expenditures by State Governments. This report examines information on state health spending compiled largely by the Bureau of the Census. It shows that the percentage of overall state health expenditures compares favorably with the percentage of overall federal health expenditures (23 pages; $2.25).

Drug and Alcohol Abuse Programs in the States. This survey examines the pros and cons of state legislative activity surrounding ten major drug/alcohol abuse issues. The book is scheduled for publication in August 1977.

Implementing Protection and Advocacy Systems for the Developmentally Disabled. This forthcoming report grew out of a conference designed to consider how best states can meet federal protection and advocacy requirements.

State-Initiated Catastrophic/Comprehensive Health Insurance Plans. A forthcoming conference proceedings, this report will review the implications of such plans for both the private and public sectors.

Medicaid Reimbursement of Primary Health Clinics. This forthcoming report is based on a nationwide survey of state Medicaid clinic reimbursement practices. An analysis of the findings is due for publication in August 1977.

PERSONNEL

Center staff members combine an overall understanding of health policy issues with in-depth knowledge of particular health areas. All have extensive backgrounds in research, writing, policy analysis and/or health project administration, as the attached resumes will indicate.

The full-time Center staff is supplemented by part-time Research Associates, work-study students, Summer Interns, and Consultants.

The Research Associates are top-level graduate students who have academic and/or professional backgrounds in health. They work a minimum of 15 hours a week and provide the major back-up support for Center program activities.

Work-study students for Georgetown University assist in carrying out essential routine work of the Center.

Summer Interns are generally advanced students seeking work experience in a health policy-related organization or agency. Drawn from institutions across the United States, the Summer Interns receive academic credit for their work. A weekly seminar is offered, providing interns with an opportunity to meet and exchange views with health policymakers.

Policy guidance is provided by an Executive Committee composed of national leaders in health policy formulation:

- Jack Veneman, former Under Secretary of the U. S. Department of Health, Education, and Welfare, and recently Special Assistant to Vice President Nelson D. Rockefeller. Mr. Veneman now serves as a Consultant for Braun and Company.
- Robert Ball, Senior Scholar of Institute of Medicine, National Academy of Sciences, former Director of Social Security Administration
- Larry Lewin, President of Lewin and Associates, health and welfare specialist
- The Honorable John Milton, State Senator from Minnesota
- Arthur F. Quern, Acting Director of the Illinois Department of Public Aid
- William R. Roy, MD, St. Francis Hospital, former Congressman from Kansas

VERNE HORN

Verne Horn is Director of the Georgetown University Health Policy Center, a national service organization sponsored by the Robert Wood Johnson Foundation to assist state and local governments in formulating and implementing health policies and programs. The Center's program includes publication of reports, directories, books and a newsletter; provision of technical assistance to health policymakers; maintenance of a Network of Correspondents in all states, and the organization of conferences and workshops on health policy issues.

Prior to his present position, Mr. Horn served as:

- Consultant to the California State Senate Office of Research and San Diego County, responsible for participating in a comprehensive review of tax-supported health programs in San Diego County.

- Project Director of an Office of Economic Opportunity sponsored project to provide technical assistance to neighborhood health centers throughout the country. His overall administrative responsibilities included direction of a bi-lingual clearinghouse program and development of national conferences on health care issues.

- Executive Director of the Neighborhood Health Organization of Southeast San Diego, where he assisted in developing an innovative plan of pre-paid health insurance through collaborative efforts by a consumer-oriented non-profit corporation and private physicians, and increased health training opportunities for community residents.

- Assistant Director, Field Operations, for the National Urban Coalition, responsible for organizing community health task forces and non-profit advisory boards, organizing group practice facilities, improving insurance procedures and coordinating federal health services.

- Western Regional Field Director, American Public Welfare Association, responsible for reviewing state welfare plans to determine eligibility standards and procedures, developing management information systems for state and county welfare departments, and developing pilot programs emphasizing outreach, evaluation, and eligibility of marginal income recipients.

- Community Action Consultant for California State Office of Economic Opportunity, responsible for coordinating program resources, providing staff training, and management reorganizations.

Mr. Horn earned a BS in Political Science from Loyola University, Los Angeles, an MPH in Health Administration and Planning from the University of California, Berkeley, and has done additional graduate work in public administration, finance and economics at the University of Southern California.

DEBORAH JANE CARR

Deborah Carr serves the Georgetown University Health Policy Center as Director of Program Services. Her responsibilities include assessing requests and administering responses for technical assistance, conference planning and management, liaison activities, conducting health policy research, and providing consultation in a variety of health policy and program areas.

Ms. Carr's previous positions include:

- Assistant Project Director of a nationwide technical assistance project sponsored by the Office of Health Affairs, Office of Economic Opportunity. She was responsible for assessing and assigning specialists to respond to technical assistance requests from neighborhood health centers in such areas as: comprehensive health care, program planning and development, and information and fiscal management. In addition, she planned and conducted health conferences and assisted in founding and operating a health information clearinghouse and bi-lingual services facility.

- Senior Technical Assistance Specialist on a Department of Health, Education and Welfare project to provide technical assistance in administration and training to Region III Work Incentive Programs.

- Assistant Project Director of a technical assistance project to develop and implement internship programs for administrators of 20 Black colleges. Designed to enhance institutional fund-raising capabilities, the program was conducted with Florida A&M University.

- Consultant to the Director of Sign of the Times, a unique creative arts community center serving Northeast Washington. Ms. Carr developed and carried out a fund-raising program, developed administrative controls, and provided overall policymaking and management assistance.

- Assistant Project Director of a Department of Labor evaluation of an employer-sponsored day care center, where she conducted background research and planned the evaluation and analysis effort.

- VISTA Volunteer Trainer, assigned to organize the Great Lakes Region VISTA Training Center and help design the curriculum serving 1300 trainees. Ms. Carr's duties included: teaching Volunteers, conducting staff and trainee orientations, developing special materials, evaluating candidates for community agency placement, and preparing administrative and financial reports.

- Intern with the Manpower Assistance Project, sponsored by the Ford Foundation to provide training to community action people in manpower development.

Ms. Carr earned a BA in History from Newton College, and did postgraduate work at Harvard University, Austro-American Institute, Massachusetts College of Art, and Boston Museum School of Art.

GARY JAMES CLARKE

Gary Clarke is Director of the Georgetown University Health Policy Center's Network of Correspondents and Editor of State Health News. In addition to reorganizing and coordinating the Network information system consisting of health policy specialists in each state and publishing a bi-weekly newsletter, Mr. Clarke conducts research on health programs and legislation and has administered three projects aimed at evaluating state legislature health committee staffing.

Prior to joining the Health Policy Center staff, Mr. Clarke was:

- Instructor with the Eagleton Institute of Politics, Rutgers University, and staff member of a Ford Foundation funded project to assist five state legislatures in researching, drafting, holding public hearings, testifying, and writing committee reports on health legislation. Major work was done in the areas of health manpower regulation, certificate of need, rate regulation, genetic disorders, lead poisoning, and home health needs of the elderly.

- Assistant Administrative Analyst with the Office of the Legislative Analyst, California State Legislature, where he was responsible for reviewing and writing budget and legislative analyses of all state-sponsored health and retirement programs for state, county, and municipal employees and other minor state agencies. He testified on these matters before the Senate Finance and Assembly Ways and Means Committee.

- Consultant to the National Governor's Conference on health planning and national health insurance legislation. His work included analysis of the effect of this legislation on state governments and drafting of statements for Governors' testimony. Mr. Clarke drafted an alternate bill (HR 15908) representing the position of a coalition of state, county, and city interests in health planning legislation.

- Consultant to TransCentury Corporation for the evaluation of the Experimental Health Services Delivery Systems (EHSDS).

- Author of numerous publications and articles on state health planning and health care (see attached listing).

Mr. Clarke received his AB in Economics and Political Science from the University of California; his MA in Political Science from Rutgers University; and is presently studying law at the National Law Center, George Washington University.

G. J. Clarke

JORDAN BRAVERMAN

Jordan Braverman is Director of the Division of Legislative and Policy Analysis for the Georgetown University Health Policy Center. He is responsible for reviewing and analyzing health policy/program issues and developments generated by the federal government, Congress, state and local governments, trade associations, public interest groups, etc., with an emphasis on their implications for state and local health policy-making. His work has resulted in a series of papers on proposed and current health legislation.

Prior to this position, Mr. Braverman was:

- Director of Public Policy Research for the Pharmaceutical Manufacturers Association, where he was responsible for preparing staff position papers on domestic and international socioeconomic issues affecting the American pharmaceutical industry, and maintaining liaison with government agencies, commissions and private organizations concerned with the pharmaceutical industry.

- Research Associate and Assistant to the Director of the American Pharmaceutical Association, responsible for writing staff papers on such topics as health insurance, population, hunger and malnutrition, the environment, manpower problems, hospital care, nursing homes, neighborhood health centers, community mental health centers, health maintenance organizations, Medicare, Medicaid, Model Cities, and comprehensive health planning and regional medical programs.

- Economist for the Public Health Service, Department of Health, Education and Welfare, where he prepared special studies for the Division of Medical Care Administration and the Health Economics Branch on health care institutions and planning.

- Economist, National Blue Cross Association, where he directed a nationwide study on private and public financing of as well as quality of care in long-term institutions. As a member of an advisory committee to the Council on State Governments, Mr. Braverman helped formulate a model state health care act.

- Management Consultant to EBS Management Consultants, Inc. and Herbert L. Bogen, responsible for special studies on federal revenue-sharing programs and analyzed socioeconomic data related to urban problems.

- Planning Assistant to the City Government of Quincy, Mass., where he prepared an economic base study on "The Economy of Quincy, Massachusetts."

Mr. Braverman earned an AB in Social Relations from Harvard University, an MS in National and International Economics from Georgetown University, and an MPH in Medical Care Administration from Yale University. A list of his publications is attached.

JAMES C. STEARNS

James Stearns serves the Georgetown University Health Policy Center as Health Policy Analyst. He is involved in analyzing the impact of federal legislation on state and local governments and conducting investigative research on major health policy issues. He has provided extensive consultation to the Carter Transition Team on developmental disability issues, and continues to provide technical assistance to the Department of Health, Education, and Welfare as Vice-Chairman of the National Advisory Council for the Developmentally Disabled. In addition, Mr. Stearns serves on the Government Affairs Committee of the United Cerebral Palsy Association and the Committee to Further Careers for Disabled Scientists of the American Academy for the Advancement of Science.

Mr. Stearns' previous positions include:

- Law Clerk for the Georgetown University Health Policy Center, responsible for preparing memoranda to aid states in complying with federal court decisions delineating the rights of the mentally ill and retarded.

- Law Clerk with the Office of Employee Benefit Security, Department of Labor, where he was responsible for preparing issue papers on proposed regulations designed to implement the Employee Retirement Income Security Act.

- Researcher for the Presidential Task Force on Workers' Compensation, responsible for recommending ways in which attorneys could assist clients in recovering benefits without litigation.

- Co-Founder and Student Director of a Youth Counseling Center in Laconia, New Hampshire, with administrative duties including fund raising; representing the Center before state and local agencies; serving as liaison with law enforcement officials, and counseling clients, mainly drug users and runaways.

- Press Aide to U. S. Senator Thomas J. McIntyre (D-NH), responsible for drafting press releases and editing campaign publications.

Mr. Stearns earned an AB in Government from Dartmouth College, where his work as a Senior Fellow on the impact of federal programs on the physically disabled resulted in his testimony before a Senate Subcommittee. He also received an MA in Government from Victoria University of Manchester, England; and a JD from the Georgetown University Law Center.

JANET LEE DINSMORE

Janet Dinsmore serves the Georgetown University Health Policy Center as Editor/Writer, responsible for editing and designing all Center publications, including policy position papers, conference reports, brochures, special studies, annual reports, etc. She also conducts research and assists in providing technical assistance.

Prior to joining the Center, Ms. Dinsmore was:

- Senior Research Associate for (1) an Office of Education study on black leaders' attitudes toward vocational education; and (2) a project involving provision of instructional media and graphic design assistance to the Department of Labor, Region II. The projects involved research, writing, and the publication of training materials. Other responsibilities included preparation of company reports, proposals and publications.

- Proposal Writer for the national office of the U. S. League of Women Voters, responsible for writing proposals to the federal government, foundations, corporations, unions and individuals on: energy, land use, housing, campaign financing, government and election processes, environmental quality, public interest litigation, and urban problems.

- Technica Writer for A. L. Nellum and Associates, where she wrote or edited proposals and reports on: health services, Medicaid, manpower development, housing, corrections, community action, and youth training programs.

- Editor/Research Associate of the ERIC Clearinghouse on Higher Education, where she administered all research and writing activities; trained abstractors and research assistants; and edited or conducted original studies on a broad range of issues affecting colleges and universities.

- Associate Editor of Educational Record, quarterly professional journal of the American Council on Education, a national research and service association devoted to higher education administration. Responsibilities included reviewing all manuscripts, editing the publication, and a book resulting from Council's annual conference, Whose Goals for American Higher Education? She also served on the Council's Commission on Academic Affairs.

- Assistant Editor of Middle East Journal, a scholarly journal concerned with the Middle East. In addition to editing and doing production work, she wrote a chronology of social, economic and political events in 26 countries for each issue.

- Writing Consultant to federal government and private agencies.

Janet Dinsmore received a BA in English from American University. A list of her publications is attached.

Death and Dying: An Examination of Legislative and Policy Issues (Editor). Washington, D. C.: Health Policy Center, Georgetown University, 1977.

PAMELA DAWN DECKER

Pamela Decker is Administrative Assistant to the Director of the Network of Correspondents, and also serves as Assistant Editor of the Health Policy Center's newsletter STATE HEALTH NEWS. She is responsible for coordinating information-gathering activities of the Network, and assisting in the overall production of the newsletter--from planning and design to writing, editing, printing, and distribution.

Previously, Ms. Decker was:

- Research Assistant for the Health Policy Center on a "Model Committee Staff Project." Ms. Decker wrote and edited major portions of the Final Evaluation Report, and analyzed health legislation from 1970-1976 in 16 states. As Research Assistant for a Legislative Professional Staffing Project, she analyzed state legislative responses to drug and alcohol issues and assisted in writing a forthcoming publication on state drug/alcohol abuse programs.

- Assistant Coordinator and Reporter for the Patriot-News Publishing Co., Harrisburg, Pa., responsible for analyzing legislation, interviewing public officials, writing public affairs articles, and conducting public opinion surveys. Ms. Decker also coordinated public service projects, and assisted in promotional activities, advertising design, brochure preparation, and filmstrip production.

- Staff Assistant to the Capital Area Youth Forum, Harrisburg, Pa., where she organized a conference for 1000 senior high school students from 35 schools modeled on the 1960 White House Conference on Children and Youth. Responsibilities included interviews, news reporting, and a variety of public relations assignments.

- Author of research studies and publications in public affairs (see attached listing).

Ms. Decker earned a BA in English/Journalism from Shippensburg State College, and an MA in American Government and Political Science from Georgetown University.

P. D. Decker

PUBLICATIONS

State Health News. (Assistant Editor) Georgetown University Health Policy Center (Washington, D. C.: October, 1976, continuing)

Newspaper in the Classroom: It's Elementary!, a teacher's handbook for using the newspaper in the elementary classroom, published by the Patriot-News Co., 1974.

"Greatest tool to help students become better informed citizens," feature article in PNPA Press (Pennsylvania Newspaper Publishers Association magazine), 1974.

General and feature news articles for the Patriot, the Evening News, and the Sunday Patriot News, Patriot-News Co., 1972-1974.

Special assignment reporter to the International Science and Engineering Fair, Notre Dame University, South Bend, Indiana, 1974.

MARY PATRICIA O'DELL

Patricia O'Dell is the Librarian for the Georgetown University Health Policy Center. She is responsible for maintaining a specialized collection of approximately 400 books and 90 periodicals on aspects of federal, state, and local health policymaking; preparing bibliographies on new acquisitions; and assisting staff research efforts.

Ms. O'Dell previously served as:

- Law Librarian for the Georgetown University Law Center Library, where she supervised up to 30 assistants in addition to performing normal duties associated with the administration of a specialized library.

- Library Intern with The American Banker's Association Library, responsible for cataloging a special collection dealing with banking law and history.

- Teacher of English with the Robert Frost Intermediate School and with the Fairfax County Public Schools.

- Administrative Assistant to the Director of the Speech and Hearing Center, The George Washington University, responsible for maintaining financial records, monitoring preparation of federal grant proposals, and supervising schedules of graduate students.

- Program Director of U. S. Army Service Clubs, APO Europe, responsible for planning and coordinating service club activities and supervising personnel.

Ms. O'Dell earned a BA in English from American University and an MLS from the College of Library and Information Services, University of Maryland.

CAROLYN BROOKS POWELL

Technical Assistance/Seminar Coordinator

As Technical Assistance/Seminar Coordinator, Carolyn Powell participates in the coordination and administration of support services for the Center's activities. She was formerly Technical Assistance Coordinator for a nationwide comprehensive health technical assistance project, a position involving maintaining close liaison with health specialists, varied reporting requirements; and administrative support to the Project Director. Ms. Powell was Administrative Assistant to the Executive Vice President of A. L. Nellum and Associates, a management consulting firm, and served the firm as Assistant Technical Assistance Coordinator of a Department of Labor Welfare Incentive Program.

Ms. Powell received a BS in Business Education from North Carolina Central University.

SALLY T. HOLLAND

Executive Assistant/Office Manager

The Center's Executive Assistant/Office Manager, Sally Holland is responsible for coordinating administrative support services and ensuring that the office runs efficiently. She formerly served as Office Manager and Administrative Assistant of a social and economic consulting firm, where she performed a variety of technical and administrative functions, including the coordination of services delivered to Peace Corps trainees and their families in Malawi, Africa. Ms. Holland was an Executive Secretary with the National Medical Association Foundation, Galaxy, Inc., and various offices of the Navy Department.

Ms. Holland received a BA in English from Howard University.

1977 RESEARCH ASSOCIATES

Patricia Kalmans is assigned to the Division of Legislative and Policy Analysis. Prior to joining the Center, Ms. Kalmans worked with the East Tennessee Research Corporation providing legal and technical assistance to community organizations on the development of health care programs. She also served as a member of the Advisory Panel on National Health Insurance to the House Ways and Means Committee, U.S. Congress; the Regional Advisory Group of the Tennessee Mid-South Regional Medical Program; and as a consultant to the Bureau of Community Health Services, DHEW. Working with the Vanderbilt Health Law Project, she analyzed state and federal health legislation. During her tenure as Family Advocacy Specialist for Family and Children's Services, Nashville, Ms. Kalmans organized a successful move to modify the Tennessee Food Stamp Law; organized the first mid-South conference on child abuse; and initiated an alternative juvenile justice program and continuing education program for paraprofessionals.

Ms. Kalmans received her BA in Political Science from Vanderbilt University; and is presently enrolled in the Georgetown University Law Center.

Ellen Miyasato is a Research Associate in the Division of Program Services, assisting in research and analysis of health policy issues affecting state and local legislation, as well as in program activities such as conferences, seminars, and technical assistance services. She formerly worked as Research Associate with the Population Law Center in San Francisco where she was responsible for assembling background information on litigation involving intergovernmental aspects of the health care system. Her focus there was on the impact of federal health laws on hospitals.

Ms. Miyasato has pursued study on the legal ramifications of the health care system on both the undergraduate and graduate levels. She received a BA in Government from Wesleyan University and is currently pursuing study in state and local health policies as a student in the Georgetown University Law Center.

Assigned to the Network of Correspondents, Sandra Manners is responsible for facilitating interaction among state health policymakers through the identification and reporting of emerging health policy issues. Before joining the Center, she conducted research on health legislation as a Law Clerk. She previously worked as a Medical Reference Librarian for George Washington University; as a Staff Research Associate in the Bio-Engineering Department, Medical School, University of California, San Diego; and as a

Pre-Medical College Aide with Columbia-Presbyterian Hospital, New York. Ms. Manners also managed the Women's Clinic and worked as a full-time Community Board Member of the Beach Area Free Medical Clinic--a position including active involvement in both the medical and administrative activities of the Clinic.

Ms. Manners received her BA in Biology from New York University; took pre-doctoral work in Physiology from George Washington University; and is presently enrolled in the Georgetown University Law Center.

1977 SUMMER INTERNS

John Luehrs is a PhD candidate in Political Science, Washington University, St. Louis, Missouri. His general field of study is political science, with a concentration on public policy formulation and analysis. Mr. Luehr's background includes experience in research methods and analytical techniques, primarily statistics, and the application of statistical analysis to public policy issues.

John Ragland is sponsored by Duke University Health Policy Internship Program, and the Association of American Medical Colleges. He will work at the Center from May 23 to July 29, 1977. Mr. Ragland's area of concentration at Duke was public policy sciences. His particular interest is legislative policy development.

HEALTH POLICY CENTER CONSULTANTS

Valerie J. Bradley is President of the Human Resources Research Institute, a consulting firm specializing in state and federal health/mental health issues. Ms. Bradley was formerly Vice President and Director of Policy Development for Arthur Bolton Associates where she worked extensively with state governments in evaluating their mental health and mental retardation programs. Her legislative background includes work for the California State Assembly Office of Research and Legislative Reference Service; and for the New Jersey Legislature. Ms. Bradley has lectured for the Centers for Training in Community Psychiatry, Los Angeles; the McGeorge School of Law; California Hospital Association; National Association for Mental Health; and the New Jersey Association of Mental Health. She has served as a consultant to numerous state legislatures, and authored some 15 legislative analyses on health policies and children's issues for state agencies and legislatures.

Melvin L. Bergheim has served as Director of the Energy Staff of the National League of Cities and U. S. Conference of Mayors since 1976 and as a senior policy analyst for NLC and USCM since 1969. He was previously Deputy Executive Director of the U. S. Conference of City Health Officers; Vice Mayor and City Councilman for six years of Alexandria, Virginia; Director of Research on Civil Disorders; and Project Director for Urban America, the Potomac Institute, and Governmental Affairs Institute. Mr. Bergheim has been a reporter for the Washington Post, The Providence Journal-Bulletin and Congressional Quarterly, and published a number of studies on local government issues.

Patricia Kelley Gualtieri is presently completing a study of Drug and Alcohol Abuse Programs in the states for publication by the Health Policy Center. Formerly, she served as Associate Director of Evaluation for a long-term comparative study of staffing on legislative committees. Ms. Gualtieri was first Assistant, then Deputy Director of the Bureau of Drug Rehabilitation for the Commonwealth of Virginia. As one of the five participants in the Governor's Intern Program, Ms. Gualtieri worked with the Commonwealth's Department of Mental Health and Mental Retardation, Bureau of Drug Rehabilitation, and Governor's Council on Narcotics and Drug Abuse. She has been a consultant to the National Institute on Drug Abuse and the White House Counference on the Handicapped.

Harry S. Freeman currently directs an NIMH contract project to provide technical and financial management assistance regarding third-party reimbursement to Community Mental Health Centers. He also assists the Health Policy Center in budget planning and management. Mr. Freeman previously provided financial management assistance to Comprehensive Health Centers under an OEO Office of Health Affairs contract, and directed several SBA and OMBE projects aimed at improving the management of small businesses throughout the United States. He served as Vice President of the Greater Washington Business Center, and Assistant Director of the Washington Council for Equal Business Opportunity.

SURVEY OF EXISTING HEALTH INSURANCE PLANS

I. BACKGROUND

Both federal and state consideration have been given to the need to provide better and more comprehensive health insurance coverage to the American public. As of the end of 1975, only five states had passed legislation addressing this problem, although it is reported that 12 other states have considered bills. At the federal level, there are a number of national health insurance plans under consideration but the immediate prospect of passage is considered poor unless a compromise is achieved.

In National Health Insurance: Benefits, Costs, and Consequences (Brookings Institution, 1975; probably the best and clearest book on the subject), Karen Davis suggests three primary goals for a health insurance system:

(1) ensuring access to care;
(2) eliminating financial hardship; and
(3) limiting the rise in health care costs.

In addition she sees three supplementary goals which are requisites of any acceptable plan:

(1) equitable financing;
(2) easy to understand and administer; and
(3) acceptable to providers and the public.

Within the structures of these six fairly clear-cut goals, there are a multiplicity of approaches that might be successful. For example, more than 20 bills have been introduced in the last two Congresses for the implementation of a national health insurance plan. To properly evaluate a plan, recognizing cognizable alternatives and necessary tradeoffs, Ms. Davis identifies eight basic questions in the provision of national (or state) health insurance:

(1) Who should be covered?
(2) What should be covered?
(3) Should patients share in costs?
(4) How should the plan be financed?
(5) What role should private insurers and government have?
(6) What role should consumers have?
(7) How should hospitals, physicians, and other providers be paid?
(8) How should the plan change over time?

It is clear that these questions cannot be answered for the nation or any state without reference to considerable amounts of evaluative and informational data. Chief among these would be analysis of the effects of past programs, an honest evaluation of the strengths and weaknesses of the current health system, and data on health needs. There is also a need to evaluate the basic public policy behind extensions of health insurance, to determine which goals are most important to the state and its citizens. Finally concern must be shown, not just for the most desirable program, but also for the ability of the federal or state governments to sustain an adequate level of financing over a period of years. No matter how favorable the public benefits derived from a plan, the spector of later cutbacks or elimination for fiscal reasons holds an enormous threat to any comprehensive plan.

From this multiplicity of options, a recent conference paper (see Attachment A: New Jersey State Health Insurance Conference Background Documents) initially singled out five that seemed representative of directions possible plans might take:

(1) Minimum specified benefits and other standardization of health insurance policies--This is the easiest to regulate and least expensive to implement and may result in cost savings, but could also be regressive in that it might make it more difficult for the poor and near-poor to obtain insurance and result in downgrading of present policies to the minimum;

(2) Mandatory insurance pool--A pool of all insurers would be required to offer benefits at specified premiums to individuals and groups unable to obtain coverage. While this is a potentially expensive method (subsidies might be required), it is a possible mechanism for extending coverage to high risk or low income groups through the existing private industry structure;

(3) Catastrophic insurance--While providing coverage only against extraorderinary expenses, this type of plan can provide relief for the most ruinous health care situations of prolonged illnesses and accidents. Eligibility may be determined by a set expense level or by a floating measure based on income and assets. One problem is the apparent tradeoff between administrative costs and regressive sources of financing (administrative problems are largest for a catastrophic plan tied to income levels, which would be the most progressive and equitable);

(4) Extensions of Medicaid--At a reasonable administrative cost, Medicaid coverage could be extended to selected additional groups such as the unemployed. Other costs (depending on availability of federal matching funds) might be high and only certain groups could be helped through this type of program.

(5) Comprehensive state supported health insurance system--This would provide maximum coverage, and better coordination and control of the health care system, but costs are much higher than other approaches and implementation would probably be more difficult.

These five options do not exhaust the possibilities but are representative of different plans being considered.

II. NATIONAL HEALTH INSURANCE (NHI)

NHI has been under consideration for several years and numerous bills have been introduced (for a comparative survey of provisions of major bills introduced in the last Congress, see the Davis book referred to above). Prospects for passage of any bill this session are considered uncertain at best. This is attributed to the lack of Congressional consensus on any particular plan and President Ford's threatened veto of any health insurance programs likely to increase the federal budget.

As an alternative the President has suggested a catastrophic health insurance plan for the elderly which would be administered through Medicare. The program would place an upper limit on personal expenses of $500 per year on hospital charges and $250 on physicians' services. However, co-insurance charges and higher deductibles up to these maximums would mean most elderly persons would spend as much or more on health care. Consequently, the program has been sharply attacked as a cost saving program at the expense of the elderly sick ($2 billion is "saved" while only about $500 million in new expenses will be incurred, the difference will be paid by the recipients on previously covered medical services) which would benefit only one out of every thousand Medicare recipients (see Attachment B: Comments of Senator

Kennedy, Congressional Record, January 21, 1976, S 278.) Prospects for passage of the Ford plan are not considered good.

III. STATE HEALTH INSURANCE

As noted, five states have adopted some form of state health insurance. The programs vary considerably in approach and format and have met with mixed success in implementation. (See Attachment C.)

A. ARIZONA (plan repealed by Legislature after this paper was written)

The original Arizona plan, passed in 1974, required companies writing health insurance policies to provide coverage for catastrophic medical costs, unless the insured declines such coverage. Catastrophic insurance would cover unreimbursed medical costs exceeding five thousand dollars incurred during a two-year period. However, this plan was never implemented because of serious deficiencies in the structure and details of the Act. Reportedly new efforts are underway in Arizona to pass a revised bill along the same lines.

The advantages of a plan such as this are its coverage (all residents willing to pay a 1975-estimated premium cost of about $10 per month for a family of three or four), its administrative simplicity, and its ability to combat the most ruinous health care expenses. However, the plan's weakness is its limited benefits (only about 6,000 out of 2.2 million persons will ever spend $5,000 on medical costs of one illness), and its failure to increase access to health care (a deductible of $5,000, even if $4,000 of insurance payments are included as in the 1975 bill, is too high). (Figures cited are from Attachment D: Arizona Republic, 2/24/75, page 1, discussing the bills introduced in 1975.)

B. CONNECTICUT

In July 1975, Connecticut enacted a Comprehensive Health Care Act. This plan requires insurers to make available to all persons under 65 a standardized comprehensive health insurance policy covering specified minimum benefits. Included benefits are hospital services, physicians' services, prescription drugs, part payment for treatment of mental conditions, skilled nursing facility care, home health agency visits, and numerous other lesser benefits. Three deductible levels are available and a 20% co-payment provision will be in all plans. However, a ceiling on cost sharing expenditures is set at $1,000 per person and $2,000 per family.

The Act was to become effective April 1, 1976, but technical inconsistencies (such as no authority to draft regulations prior to the effective date) will delay implementation (new legislation is before the legislature to correct these deficiencies). The program provides no new benefits, but rather requires the availability of certain types of coverage for those able to pay. The required package is very comprehensive, but will probably not seriously alter coverage for anyone already on a good group coverage plan. Thus, it is expected that demand for the new policies will be primarily from individuals or small-employer groups. Further, the cost of the premium will probably be high, making it out of the reach of unemployed and low-income persons not already covered by health insurance.

Because of Connecticut's fiscal situation, this program was considered to be the extent of action possible at this time. Certainly an advantage of this approach is its lack of cost and its ability to improve health insurance coverage for a segment of the population. On the other hand, significant portions of the population will still not be able to afford adequate health insurance and the program does nothing to attack rising health care costs.

C. HAWAII (See Attachment E: Congressional Record)

The program in Hawaii mandates health insurance coverage for nearly all employed persons. However, it does not cover dependents. While deductibles, co-insurance, and other cost-saving devices are permissible, the law requires thorough and near-total coverage of basic and catastrophic health costs. The program is to be employment-based with costs to be paid by the employer or shared with the employee. The employee portion of the cost is limited to half the premium cost, not to exceed 1.5 percent of wages. Provisions are made for state subsidization of those small employers who would be heavily burdened by the costs of this program. The law specifies that passage of a mandatory NHI, or a voluntary NHI with substantially similar benefits, will terminate the program.

The advantages of such a program are its coverage of a broad segment of the population, its comprehensive benefits, and its potential for improved health planning and more efficient delivery of health care services. However, employment-based plans leave a significant population unserved that may not be covered by other programs. In addition, employer/employee premium payments, especially when mandatory, are a highly regressive form of financing since the employee will ultimately bear the burden of costs: either by lower cash wages or smaller than expected raises. This represents a much higher share of income for low income workers and is thus regressive. Further, in marginal industries and for minimum wage workers the effect can be to reduce total employment.

The Hawaii program has been in effect since January 1, 1975, and appears to be working fairly well. The main problems appear to be occasional employer non-conformance and negotiating whether out-of-state plans (from insurers with branch offices in Hawaii) are in substantial conformity with the Act's requirements. The base-line plans for evaluating conformity have been in Hawaii Medical Services Association #4 plan and the Kaiser #1 plan.

D. MAINE

The Maine program establishes a "catastrophic medical expense fund," partially funded through a cigarette tax, to aid all persons suffering catastrophic medical expenses and not otherwise eligible for aid through federal programs. The state will provide assistance for additional medical costs in excess of $1,000 after the following resources have been exhausted:

(1) any health insurance coverage;
(2) 20% of the family's net income before taxes;
(3) 10% of the excess of the family's net worth over $20,000.

Reimbursement is directly to the provider and no federal funding is provided for the program.

This is an extremely limited program because of the high deductibles. However, this is also why opposition to the program has apparently been low--the rationale being offered that eligibility standards being so high means that only those clearly in trouble are aided. Further the program does fill two "holes" under the federal SSI program by potentially covering major but less than year-long disabilities and preventing total "wipe-out" of families with small total assets. The main disadvantage of the program is readily apparent--inadequate coverage because of high deductibles. Clearly many persons suffering disastrous medical losses are not covered.

E. RHODE ISLAND

The Rhode Island plan, effective January 1, 1975, provides for a state catastrophic health insurance fund to pay excessive unreimbursed health care costs. Eligibility for payments is based on a sliding scale designed to encourage persons to maximize their private insurance coverage.

Type of Coverage	To Be Reimbursed Individual Expenses Must Be the Larger of:
(1) Qualified plans, to include Basic Hospitalization and Major Medical	$500 or 10% of Income
(2) Qualified Basic Plan, but no Major Medical	$1,250 or 25% of Income
(3) Not a qualified plan	$5,000 or 50% of Income

Insurers must make available qualified plans for all individuals and employers must make a qualified plan an option under any health benefits provided. Rates for the minimum qualified plan are to be regulated by the State. Insurers may form a reinsurance pool for the coverage of qualified health policies. The catastrophic payments are to be funded out of general revenues.

The Rhode Island program (CHIP) is the most sophisticated of the state efforts. The program was geared to provide support for the average working person with about $10,000 income and it has apparently been successful in this regard. The poor are not generally eligible because they would "spend down" their income to the Medicaid level before they would qualify for the state program. An ancillary success of the program is the referral structure required by the Act. Originally intended as a screening program so that CHIP would be the bottom-line payor of last resort, it has expanded into a social services placement service with referrals to programs such as food stamps and vocational rehabilitation.

On the other hand, CHIP is partly regressive in its financing. While the state financing is from general revenues, it is still up to employers/employees to pay for most of the insurance coverage. This has the same weakness as the Hawaii plan. The plan also anticipates future budgeting troubles because of certain coverage areas (e.g., Psychiatric benefits are about 19% of payments and this is expected to increase) and some technical

problems (e.g., apparently patients in state mental hospitals can switch to private hospitals and have CHIP pay the bills).

F. OTHER STATES

A number of other states have considered bills implementing some form of state health insurance. In many cases these bills are modeled after one of the five state plans described above or the National Association of Insurance Commissioners' proposed model bill (see Attachment F) or the Conference of Insurance Legislators' model bill (there were two drafts; for the later one see Attachment G). In some cases the bills were introduced but no serious consideration was given to them. Reportedly 12 states had bills introduced in 1975 (excluding Connecticut which enacted its plan in 1975): California, Florida, Massachusetts, Minnesota, New Mexico, Ohio, Oklahoma, Oregon, Texas, Washington, and Wisconsin.

Of these states considerable effort has been expended in Minnesota to pass a bill. The first effort was made in 1973 and bills have been refined since then. The Governor backed a catastrophic bill on the Rhode Island model last year, but is taking no position this year. There are three bills being considered, the most comprehensive being the House bill, HF 1910. This Bill has four major provisions covering: (1) types of health insurance policies which must be written; (2) establishment of a poor risk state pool; (3) creation of initial state regulation of hospital and insurance rates; (4) provision of catastrophic coverage for medical expenses with a high deductible (expected to primarily benefit families in the $10,000-$13,000 income bracket). There is generally less concern about coverage of the poor because Minnesota has fairly liberal Medicaid eligibility provisions and also provides general relief benefits to persons with income a fixed percentage over Medicaid.

The advantages of the Minnesota bill will be greater standardization and availability of insurance policies. Opposition from the insurance industry focuses on their preference for a voluntary risk sharing pool: from the labor unions on their belief that cost controls are needed; and from the business community because of the additional costs involved. Prospects for the bill are uncertain--it has the strong support of the leadership but the 1975 legislative session is a short one. (Minnesota bill passed in 1976).

IV. CONCLUSIONS

Until the principles of full-scale health coverage are universalized in a national program, it is important that state efforts be cognizable in terms of the most important state health needs as well as the available resources. There is probably no single "correct" approach for a state to take.

How then should a state proceed? The goals and basic questions considered by Karen Davis (and briefly discussed earlier) are a good starting place. Consensus on the application of these goals is important although it may not be possible for a state (as opposed to the federal government) to maximize the Davis goals. It is likely that state policies and constraints will require further modification. The same applies to the basic questions she poses, although these may help to focus on two or three general approaches most appropriate to particular state needs.

On a more practical level, a conversation with Mr. Brain Keeler, Head of the Rhode Island CHIP Program, suggested a number of important planning considerations.

(1) Identify the strengths and weaknesses of the present state health system and plan accordingly. The adoption of model plans or other states' plans is likely to result in fundamental weaknesses in implementation. The preparation of a comprehensive program based on evaluation of present needs and future directions can also serve as a legitimizing force in implementing the final plan.

(2) Carefully identify revenue resources to assure that a health insurance plan can be maintained. Public expectations can build up quickly and make it very difficult to cutback or eliminate a program the state cannot afford. Consideration should be given to funding all or part of the program out of special revenues, such as the Maine tax on cigarettes.

(3) Incremental phasing-in of the program may be called for. Not only does this avoid problems of expectations, but it improves the chances for sound fiscal planning, good management, and smooth operation. For example, it might be preferable to start with day or dollar limits or caps on certain types of benefits until the real costs of higher or non-existent limits can be more firmly established and unintended inclusions can be eliminated.

(4) The importance of technical details in a state health insurance program cannot be overestimated. Not only usual details like oversight authority must be considered, but also questions of interlock with Medicare and Medicaid, possibilities of unexpected costs, and problems of cost and quality controls.

STATE GOVERNMENT AND MODEL HEALTH INSURANCE PLANS AS OF NOVEMBER, 1976

Plan	National Assn. of Insurance Commissioners (NAIC)	Council of Insurance Legislators (COIL)	Connecticut	Hawaii	Maine	Rhode Island	Minnesota
Coverage	Comprehensive	Comprehensive	Same as COIL plan, with one substantive difference: Instead of flat $200 deductible, individuals given choice of three: $250, $500, and $750.	Comprehensive	Catastrophic	Essentially catastrophic	Comprehensive catastrophic
Availability	All employers and private health insurers must offer state plan as alternative; firms must insure those who can't get or aren't eligible for private insurance	All insurers required to offer state plan as an option, through state insurance pool if necessary		All employers must make health insurance available to meet basic minimum coverage standards	All state residents covered; extent of coverage based on whether individual has private insurance policy	All state residents covered; extent of coverage based on whether individual has private insurance policy	State association of private insurers must make coverage available to anyone rejected by two private firms; state-funded catastrophic plan also; all employers with more than 10 employes must make coverage available.
Deductible	Option 1: $200 per person. Option 2: Choice of $200, $400, or $750 per person	$200 per person		According to private policies	When individual's out of-pocket health expenses exceed 20% of gross adjusted income, state pays rest.	From $500 to $5,000, depending on whether or not individual has private insurance.	[illegible] "levels" of deductibles to be [illegible] on gradually
Funding	Premiums	Premiums		Premiums	State cigaret tax; no premium	State revenues	Comprehensive coverage paid by premium; catastrophic by state
Co-payment	Option 1: 20% co-payment. Option 2: No co-payment. Both options provide that when policy holders' out-of-pocket expenses equal 10% of gross adjusted income, insurance will pay all additional health expenses	20% of costs over deductible, up to maximum of $1,000 out of pocket expenses per person		According to private policies	None	None	Private carriers will determine with approval of state.
Structure	Insurance conducted by private carriers under guidelines of "state health care commission" with broad representation. Commission required to review hospital costs; if unsatisfactory, commission has option of enacting review rules for physicians' costs	Coverage for uncompensated hospital care by state assessment of private insurers to pool reimbursement costs. Some mechanism established to review hospital costs; peer review, as currently exists, required for physicians.		Not really state health insurance, but a set of legal requirements to expand the private insurance market to all employed persons	Run by state government	Run by state government	Private insurers must submit comprehensive plan; state will handle catastrophic coverage

THE COST OF STATE HEALTH INSURANCE PROGRAMS

By
Jordan Braverman
Director, Policy Analysis
Georgetown University Health Policy Center

The cost of state health insurance plans to the jurisdictions which enacted them is only now becoming discernable. Knowledge is still minimal due to the relative newness of some programs and the legal structure in which others have been framed. For example, there is a minimal of state administrative expense and no state beneficiary payments in Hawaii and Connecticut since these programs are not operated by the states. Rather, the health insurance laws in these two states mandate that private health insurers must offer all or certain segments of the resident population health insurance benefits according to the criteria established by state law after certain requirements on the part of the residents are met in terms of health care expenses and other guidelines. Hence, most of the state's program costs, except assuring that the private health insurers are adhering to the law, are absorbed by the private carriers. Minnesota's program, effective on January 1, 1977, did not become operational till July, 1977 so that no cost experience is as yet available from that state. Although the Minnesota Department of Public Welfare requested $23 million for state payment of catastrophic health insurance expenses, estimates by other state officials indicated that the biennial cost of the state health insurance plan would be lower. The Minnesota State Legislature eventually approved a biennial budget of $17 million for the program. Consequently, the states that can offer utilization

experiences, however minimal they may be, are limited to Maine, whose program became effective in 1974 and Rhode Island, whose program became effective in 1975.

The state legislature in Maine has appropriated $800,000 per year for its state health insurance program, part of which is financed by a state cigarette tax. The program's standards were designed to match the public funds appropriated. As of October, 1976, Maine had 244 eligible recipients and another 306 individuals were in the process of becoming eligible.

As far as Rhode Island is concerned, benefit payments were 69 percent higher in the second year of the state's catastrophic health insurance plan (CHIP) than in the first. During 1976, the state paid $858,565 in benefits to 150 families. Emotional disorders led the list of disabilities. Claimants received state health plan aid for cerebrovascular disorders, cancers, cardiac and kidney conditions. The state health department stated that 43 percent of the families aided by the state health plan were Medicaid recipients. Although the average expenditure for Medicaid patients was lower than the overall average, they qualified earlier for state health plan benefits because they were required to make smaller out-of-pocket expenditures. The state noted that 57 families who received state health plan aid in 1976 had Blue Cross coverage, 65 had Medicare coverage, 14 had commercial insurance and 14 had no insurance. In 1975, the plan paid benefits for 189 individuals. The average expenditure was $4,544, about 16 percent above 1975 when 114 persons received benefits.

Although no sweeping conclusions can be drawn from the cost data available, it would appear that as these state health insurance programs progress more people will continue to qualify for them at ever increasing expense to the state. Only time will be the ultimate judge as to whether or not a state will be able to continue to pay for such costs in addition to all of its other social responsibilities if no national solution is found for bringing health care costs under control.

STATE COMPREHENSIVE/CATASTROPHIC HEALTH INSURANCE PLANS: AN OVERVIEW

by
Jordan Braverman
Director, Policy Analysis
Georgetown University Health Policy Center

For almost a decade, the establishment of a national health insurance program in the United States has dominated our health dialogue. Yet, in terms of Congressional action, national health insurance has remained only a dialogue. With the convening of the 95th Congress in January 1977, a whole gamut of national health insurance plans has been or will be reintroduced, ranging in philosophy and intent from a catastrophic illness concept to a mixed public-private approach to a wholly public program.

Meanwhile, the costs of health care continue to escalate. During fiscal 1976, 8.6 percent of our Gross National Product or $139 billion was spent on health care services--an amount exceeding the expenditures of every other nation in the world for this same social service. The costs of financial protection against the incidence of ill health are now beyond the means of millions of Americans, especially those whose income is less than $10,000 per year.

As the federal government continues to study and debate the issue of national health insurance, states have begun to assume the initiative by enacting their own health insurance programs for those living within their political jurisdictions. So far, five states have enacted health insurance plans of varying scope: Hawaii,

Rhode Island, Minnesota, Maine, and Connecticut. Some plans are designated as "comprehensive" in character, while others are more limited and catastrophic in their intent. In addition, other states are considering similar legislation. Thus, it is possible to foresee that one day instead of there being one uniform national health insurance plan covering all citizens in all states, there may be 50 diverse plans in each of our 50 jurisdictions. Thus, it is the purpose of this paper to explore the problem of state health insurance plans, especially catastrophic insurance and the various problem areas attendant to their creation including their administration, organization, financing, eligibility and benefit determination, to name but a few topics. However, before examining these various issues, it may be of interest to briefly describe their historical evolution.

BACKGROUND

Much has been written in recent years about the enactment of state health insurance programs in Hawaii, Rhode Island, Minnesota, Maine, and Connecticut, and the possibility that similar legislation may be enacted by other state governments. These activities are not really new initiatives. Rather, they represent an extension of state government into the traditional preserve of private industry--an intrustion that can be traced as far back as the 1950s.

Traditionally, states have confined themselves to scrutinizing insurance rates; determining whether insurers have adequate capitalization and reserves; setting taxes and exemptions for the industry; and performing similar functions. Policy benefits were of concern only to the insurer and the insured. But beginning with Massachusetts in 1956, states have gradually assumed the role of informing insurers what their health policies must include, and to whom benefits must be provided, sometimes with little thought given to two questions: what will it cost, and how can it be reasonably administered?

State involvement in health insurance has increased steadily over the years. Twenty years ago, for example, the Massachusetts legislature ruled that coverage of physicially handicapped and mentally retarded dependents must extend beyond the health contract's age limitations. In 1965, the state of New York followed Massachusetts with extended dependent coverage, and by 1970, 14 other states had taken similar courses of action with about one-half of the jurisdictions requiring extended coverage for the physically handicapped and the mentally retarded. California, Louisiana, North Carolina, and Texas led the vanguard of states requiring coverage of newborn infants from the moment of birth. Most of this legislation was passed in the early 1970s, with more than two-thirds of the states now beginning such coverage.

Many states now stipulate that if a policy covers specialized services (dental restorations following accidents, emergency eye

care, psychiatric treatment) when provided by a medical doctor, the policy must also pay for the same services when they are administered by a health specialist operating within the scope of his license (i.e., an optometrist, dentist, or psychologist). In addition, about 11 states now require coverage for the treatment of mental or nervous conditions--coverage that varies widely. Even the issue of unemployment has not been overlooked; states like Oklahoma, Illinois and Minnesota now require health insurance coverage for terminated employees to continue for varying periods of time.[1/]

In some instances, state laws apply only to commercial insurance coverage, specifically excluding Blue Cross and Blue Shield contracts. Other laws add requirements to Blue Cross and Blue Shield enabling acts or charters. Still others apply equally to commercial carriers and Blue Cross plans.[2/] Thus, in view of the historical involvement of state government and the slowness of federal activity in the national health insurance area, it is not surprising that a few states have begun mandating catastrophic or comprehensive state health insurance payments to place a lid on their residents' health payments.

Mandated state health benefits, however, have caused considerable controversy among various groups. Many insurers, for example, are concerned that mandated benefits will drastically increase the number of providers eligible for payment, and the level of payments to all providers. They argue that additional rate hikes will be forced on a public already concerned with high health care costs.

Private corporations, unions, and the federal government itself are also beginning to realize that benefits established in a patchwork nature may seriously affect the administration of regional and national health plans that may not include all the benefits required by individual states.

Unions, for example, believe that such actions are the responsibility of the bargaining table, not the state legislative assembly. While many group contracts cover individuals living in one state--subject to one set of mandated benefits--some very large groups (i.e., auto workers or steelworkers) negotiate health contracts on a regional or national basis. Such contracts may exclude benefits that a state requires in all contracts within its particular jurisdiction, or, conversely, include Michigan or Pittsburgh home-office-state-requirements that are not characteristic of other states. To minimize such problems, a general understanding (albeit with exceptions) has evolved that conventional multi-state group coverage is regulated by a single state--the one in which the master policy is delivered. Thus, an auto worker's policy that delivers services in Michigan would conform to Michigan requirements, even if the covered workers live and work in Ohio and California. However, a few states do impose specific requirements regardless of where the master contract is delivered.

These are just some of the issues raised by state mandated health benefits. However, before discussing additional specific problems raised by these mandated programs and the five

state health insurance plans presently in existence, it may be of interest to examine briefly the concept of catastrophic health insurance and some of the problems associated with that concept.[3/]

CATASTROPHIC HEALTH INSURANCE--A DEFINITIONAL PROBLEM

The term "catastrophic" as it applies to health insurance has rasied many perplexing questions. As one example, a grave medical expense problem for one individual may not be any problem at all for an individual at a different income level. According to a recently published study by the U. S. Congressional Budget Office, two measures have been most frequently used to define and delimit a catastrophic expense. One measure has been large absolute expenditures; the other has been expenditures that are large in relation to an individual's income.[4/] The first definition is used in traditional private insurance plans and in a number of public programs modeled on private insurance. The second standard of measurement--expenditures that are large relative to an individual's income--has been used only by government. This is the basis for allowing federal tax deductions for those medical expenses exceeding three percent of adjusted gross income.[5/]

While there are three major sources of financial assistance available to consumers in helping them meet their medical needs--namely private health insurance, public programs and tax subsidies--significant coverage problems still remain. The most outstanding include: (1) uneven coverage (an estimated 18 million Americans are totally unprotected); (2) the failure of private and public

EXHIBIT 1

Status of catastrophic coverage in the U.S. (for fiscal 1978)

1. Unprotected	18 million people—uninsured, not eligible for aid from noninsurance sources
2. Least adequate protection	19 million people—families with incomes of less than $10,000 holding only individual private policies
3. Less than adequate protection	26 million people—the aged and disabled on Medicare
4. Less than adequate protection	38 million people with basic hospital coverage, no major medical insurance
5. Adequate protection	24 million people—covered by Medicaid
6. Good Protection	103 million people—major medical, comprehensive major medical, members of HMOs

(Categories 2,3,4 overlap)

—Source: Congressional Budget Office

insurance plans to include certain types of services or to insure them adequately; (3) the inadequacy of some insurance plans in covering high expenses (an estimated 37 million Americans have plans that do not adequately cover high expenses or long hospital stays); and (4) the ineffectiveness of tax subsidies in assisting low-income families.[6/]

The lack of adequate basic insurance coverage for almost one-third of the families whose incomes are below the national median and the failure of both public and private health insurance programs to cover certain types of services have resulted in two kinds of catastrophic out-of-pocket expenses: the cost of long-term care for the aged; and average or normal expenses that consume an unreasonable proportion of a low-income family's resources.[7/] Although 103 million persons have major medical insurance, and programs such as Medicare and Medicaid cover part of the costs incurred by the elderly and the medically indigent, both groups still experience high out-of-pocket expenses for non-hospital services, as well as for those aspects of their hospitalization not covered by private insurance or public medical care programs.[8/]

These are some of the issues, along with the failure of the federal government to enact thus far a national health insurance plan, which have prompted states to enact their own insurance plans. This paper will now examine the experiences of the five states that have enacted such programs.

CHARACTERISTICS OF STATE HEALTH PLANS

In deciding to adopt a state health insurance plan for its residents, a state government must consider many questions. First, how does it initially determine the need for a state health insurance program? What kinds of criteria should be used to decide whether a plan should be limited to catastrophic illness costs or be more comprehensive in scope? How does it decide whether a plan should be mandatory or voluntary for its citizens? And if the plan is voluntary, how does the state proceed in marketing it to the public?

Another question that arises deals with the relationship of the state plan to private insurance carriers such as Blue Cross, Blue Shield, and commercial insurers, as well as to HMOs and Medicaid and Medicare beneficiaries. In addition, what effect will any potential national health insurance program have upon the state plan? What if the state plan is broader in scope than the initial national health insurance program? Will the state plan just supplement those benefits not covered by the national health insurance plan? What if the state plan is narrower than any initial national health insurance program? Will the state dissolve its own plan in favor of the national health insurance program? And what kind of legislative obstacles must be overcome to get such a plan enacted in the first instance?

Thus far, it would appear that at least five states have answered some of these questions to their own satisfaction. They

Plan	National Assn. of Insurance Commissioners	Council of Insurance Legislators (COIL)	Connecticut	Hawaii	Maine	Rhode Island	Minnesota
Coverage	Comprehensive	Comprehensive	Same as COIL plan, with one substantive difference: Instead of flat $200 deductible, individuals given choice of three: $250, $500, and $750.	Comprehensive	Catastrophic	Essentially catastrophic	Comprehensive/ catastrophic
Availability	All employers and private health insurers must offer state plan as alternative; firms must insure those who can't get or aren't eligible for private insurance.	All insurers required to offer state plan as an option, through state insurance pool if necessary.		All employers must make health insurance available to meet basic minimum coverage standards.	All state residents covered.	All state residents covered; extent of coverage based on whether individual has private insurance policy.	State association of private insurers must make coverage available to anyone rejected by two private firms; state-funded catastrophic plan also. All employers with more than 10 employes must make coverage available.
Deductible	Option 1: $200 per person. Option 2: Choice of $200, $400, or $750 per person.	$200 per person.		According to private policies.	When individual's out-of-pocket health expenses exceed 20% of gross adjusted income, state pays rest.	From $500 to $5,000, depending on whether or not individual has private insurance.	Three "levels" of deductibles to be phased in gradually.
Funding	Premiums	Premiums		Premiums	State cigaret tax; no premium	State revenues	Comprehensive coverage paid by premiums; catastrophic by state
Co-payment	Option 1: 20% co-payment. Option 2: No co-payment. Both options provide that when policyholder's out-of-pocket expenses equal 10% of gross adjusted income, insurance will pay all additional health expenses.	20% of costs over deductible, up to maximum of $1,000 out-of-pocket expenses per person.		According to private policies.	None	None	Private carriers will determine, with approval of state.
Structure	Insurance conducted by private sector, under guidelines of "state health care commission" with broad representation. Commission required to review hospital costs; insurance commissioner has option of enacting review rules for physician costs.	Coverage for uninsurables handled by state association of private insurers to pool reinsurance costs. Some mechanism established to review hospital costs; peer review, as currently exists, required for physicians.		Not really state health insurance, but a set of legal requirements to expand the private insurance market to all employed persons.	Run by state government.	Run by state government.	Private insurers must handle comprehensive plan; state will handle catastrophic umbrella coverage.

Source: "State Health Insurance Plans: Tiptoeing in Back Door," American Medical News, November 8, 1976, p. 8.

include Maine, Rhode Island and Minnesota which have enacted catastrophic health insurance programs, and Hawaii and Connecticut which have enacted plans that are more comprehensive than the catastrophic illness approach.

RHODE ISLAND

The state of Rhode Island decided in April 1974 that a catastrophic health insurance plan was needed for the average working person whose income was about $10,000 per year. Under the program, effective January, 1975, Rhode Island pays the costs of eligible health services after a person has incurred a specified amount of medical expenses. The program encourages the purchase of private health insurance including that of major medical whether it be from Blue Cross and Blue Shield, commercial insurers or through Health Maintenance Organizations. This encouragement is fostered by varying the amount of the deductible that the individual must meet prior to the state plan becoming effective. The amount of the deductible is tied to the kind of private health insurance that an individual purchases. Thus, the deductible would be smallest for an individual or family with qualified health insurance coverage that also includes major medical, larger for the individual or family which has qualified health insurance coverage without major medical and largest for an individual who does not have qualified health insurance coverage at all. The same incentives apply to Medicare beneficiaries who purchase private health insurance as supplementary coverage to Medicare benefits. The program requires

all insurance carriers to offer a qualified policy that meets minimum standards and minimum benefits as specified by the state. The rates for such insurance must be approved by the state as well. The program provides for the establishment of a reinsurance pool and all carriers writing qualified health insurance policies may participate in the pool. There is also mandatory participation in the pool if the insurance commissioner deems such participation to be necessary.[9/]

MAINE

In distinct contrast to Rhode Island, the state of Maine in 1974 merely established a catastrophic medical expense fund that was partially financed through a cigarette tax to aid all persons who were experiencing catastrophic medical expenses and who were not otherwise eligible for aid through federal programs. The plan has a very high deductible that must be met prior to its assisting those in need and opposition to the state program has been small on the theory that the eligibility standards are very high and that only those truly in trouble will be aided. The program covers major but less than one-year long disabilities and prevents the total wipe out of families with small assets. The plan terminates when any similar program on the federal governmental level becomes effective.[10/]

CONNECTICUT

Connecticut, on the other hand, has enacted a more comprehensive health insurance program than either Maine or Rhode Island and the plan became effective on April 1, 1976. The plan requires private

insurers to offer Connecticut residents a wide range of benefits, including protection for catastrophic illness with a lifetime maximum of $1 million per individual. A choice of three deductibles--$200, $500, and $750--is available to individuals and groups. A Health Reinsurance Association insurance pool for hign risk insureds is included. The plan guarantees that no one in the state has to pay more than $1,000 per year in out-of-pocket medical expenses as a covered individual or $2,000 per year as a covered family.[11/]

HAWAII

Like Connecticut, the state of Hawaii also enacted a comprehensive health insurance plan but back in 1974. Unlike Connecticut, the Hawaii plan only pertains to those who are employed in the state rather than to all of the state residents. The law requires that companies offer workers acceptable prepaid health care plans similar to Kaiser or Blue Shield programs. Employers must pay at least 50 percent of the costs; employee contributions are limited to a percentage of their wages. The Hawaii Department of Labor and Industrial Relations administers the program. A seven man advisory council--appointed by the Director of the Department--assists in determining whether a prepaid health care plan qualifies. The council members represent the medical and public health professions, consumer interests and the prepaid health care field. The law specifies that the new program will terminate upon the passage of a federal voluntary health insurance program that provides for health care on a basis that is at least as favorable as that provided by the state program.[12/]

MINNESOTA

The latest state health insurance plan to have become operational is that of Minnesota, effective January 1, 1977. Employers in this state must include qualified catastrophic protection in the health insurance programs which their companies offer. Following a $150 deductible, the qualified basic plan pays 80 percent of the first $3,000 per year and 100 percent thereafter, to a lifetime maximum of $250,000. Starting March 1, 1977 the state welfare department will pay 90 percent of yearly medical costs for any person whose incurred expenses exceed 40 percent of household income up to $15,000, plus 50 percent of that between $15,000 and $25,000, plus 60 percent of that over $25,000 or $2,500, whichever is greater.[13/]

BENEFIT COVERAGE AND ELIGIBILITY

In considering the scope of benefit coverage and program eligibility, a state must examine various alternatives and options in terms of the financing available and the capability of administering the program as well as the goals it seeks to attain through the program's establishment. For example, one important question relates to the scope of benefit coverage. Should such coverage be limited to specific age groups, be univeral for all state residents, or be delimited by income range or personal asset valuation? Should the benefit coverage include categorical welfare groups, the unemployed, uninsurables, employer groups, Medicaid and Medicare recipients or beneficiaries of other federal health

programs such as military personnel and their dependents. What about benefit coverage for state residents who work outside the state and out-of-state residents who work within the state? After eligibility determination, the state must decide if it wishes to limit its program to those benefits that embrace the cost of catastrophic illness or establish a program that is much broader in scope than that kind of insurance, as already noted. In the latter case, how does the state determine the kind, priority and extent of benefit coverage?

In answering some of these questions several states adopted the following regulations. The state of Rhode Island's catastrophic health insurance plan covers persons who have resided in the state for at least three months but excludes anyone who moved to the state primarily to obtain benefits. In addition, state benefits to otherwise eligible persons are payable, generally, only if services are not available under other programs. Applicants for benefits are screened to determine possible eligibility for other benefits. The law specifically gives precedence to benefits provided under federal programs such as those for military personnel and for the aged, poor and indigent. The state Medicaid program also takes precedence. The law does not specify the types of services that are reimbursable under the catastrophic program but does note that some services will be excluded or covered only under given conditions or to a limited extent. The restrictions cover such services and items as prescription drugs, chiropractic care, psychological therapy and social

counseling only if they are prescribed as being medically necessary; and cover only up to 50 percent of the costs for outpatient psychiatry care; covers dental care and optometry only if they are required because of an injury or serious illness; covers eyeglasses, hearing aids and related aids only if they are medically necessary for rehabilitation; covers cosmetic surgery only if it is needed to repair an injury; and excludes custodial and domiciliary care and non-prescription drugs.[14/]

In view of the recent advent of state health insurance plans, Rhode Island is one of the very few states to obtain any utilization experience. During 1976, the state paid $858,565 in benefits to 150 families. Emotional disorders led the list of disabilities. Claimants also received state aid for cerebrovascular disorders, cancers and cardiac and kidney conditions. The state health department notes that 65 of the families (43 percent) aided by the state plan were Medicare recipients. The department also stated that 57 families who received state aid in 1976 had Blue Cross, 14 had commercial insurance and 14 had no insurance. Under the Rhode Island plan, a family qualifies as a unit and the catastrophic definition is determined by financial loss rather than by type of illness. Once a family has qualified for the state plan more than one person can get state assistance benefits. Benefits are only available after the claimant has exhausted all health insurance coverage and met certain levels of out-of-pocket expenditures. After qualifying, a claimant can maintain eligibility by incurring out-of-pocket

medical expenses that equal or exceed 25 percent of the first year deductible. In 1976 the plan paid benefits to 189 individuals. The average expenditure was $4,544, about 16 percent above the 1975 expenditure when 114 persons received benefits.[15/]

In order to qualify for the Rhode Island Catastrophic Health Insurance Plan, a person who has private health coverage which has been certified as a qualified program must have accumulated out-of-pocket expenses totaling either $500 or 10 percent of their allowable income, whichever is greater. Medicare beneficiaries with a qualified plan must meet a flat $500 deductible. Persons with less coverage than provided by a qualified program will have to make a larger out-of-pocket expenditure in order to receive state financial coverage. For example, a person with no health insurance must spend either $5,000 or 50 percent of his allowable income, whichever is greater, before becoming eligible. Any benefit that is covered under a qualified program, as defined in the CHIP Act, would be covered under the state financial coverage in full. Thus, it would appear, as in the case of Rhode Island, that those who might not be able to afford the purchase of health insurance must meet the highest form of deductible in order to qualify for the state's health insurance program and in this sense deductibles are regressive since individuals who may need to be protected the most against health care costs through insurance must also bear the greatest personal cost burden before the state's plan becomes effective for them.

On the other hand, a person in Maine must incur medical bills in excess of the following deductibles in order to qualify for benefits through the state's catastrophic illness program:

(1) $1,000

(2) 20 percent of annual income before taxes

(3) 10 percent of net worth over $20,000 if the excess over $20,000 is in the form of cashable assets

The individual is responsible for bills up to the previous amount. Costs in excess of this amount are payable by the Maine Department of Human Services. Eligibility for the Catastrophic Illness program is for a period of a year and can be retroactive for up to 12 months. Out-of-state providers of medical care within 15 miles of the Maine/New Hampshire border and within five miles of the Maine/Canada border are routinely reimbursed. This helps people living in these areas to maintain their usual pattern of health care services. Persons visiting Maine or temporarily from out-of-state are covered for emergency services. All other out-of-state medical services require prior authorization. The Catastrophic Illness program will pay for the following services when medically necessary. These include ambulance services, durable medical equipment, inhalation services, inpatient hospital services, laboratory and x-ray services, outpatient hospital services, ophthalmologist services, physical therapy, physician services, prescription drugs, and skilled nursing services.[16/]

In Hawaii the state mandated health insurance plan is compulsory and workers cannot waive the protection provided by the law. A worker is covered as soon as he has had four or more consecutive weeks of employment. If an employee is not able to work because he is sick, protection continues for three months following the month in which he became ill. All employers with one or more regular employees are covered by the law except the following: government employees, agricultural seasonal employees, employees who work less than 20 hours a week or whose monthly wages are less than 86.67 times the prevailing state minimum hourly wage, employees covered by a federal program or receiving public assistance, individuals who depend on prayer or spiritual means for healing, individuals in family employment, and insurance and real estate salesmen or brokers paid solely on commission.

If an individual works concurrently for more than one employer, the one who pays the most wages will be the principal employer and will be responsible for providing health care coverage. The employee, however, may select a different principal employer if he works at least 35 hours weekly for an employer who does not pay the most wages. If he works for a government agency and a private employer, the former will be deemed the principal employer. If an employee's dependents are themselves employed, they may choose to be covered under the plan at their own place of employment. As far as benefits are concerned, the employer's prepaid group health plan meets the requirements of the law if it provides health care benefits equal to, or medically

reasonably substitutable for, the benefits offered by prepaid health plans of the basic types, such as the Kaiser Foundation Health Plan, commercial insurers or non-profit plans such as the Hawaii Medical Services Association--plans that have the largest number of subscribers in the state, as already has been noted.

The Director of the Department of Labor and Industrial Relations, with the advice of an advisory group, determines whether a plan complies with these standards. Exceptions are permitted when the plan is deemed to provide sound health benefits at a premium commensurate with the benefits after taking into account coinsurance features, deductibles, limitations on reimbursability, and dependents' benefits.

The plan's protection must include hospital benefits of at least 120 days confinement in each calendar year; outpatient hospital care; surgical and diagnostic benefits; home, office, and hospital visits by a physician; and maternity benefits (applicable to employees with at least nine months' coverage before delivery).

Employees are free to bargain collectively for different prepaid health care coverage or for a different allocation of the costs. Employers are in compliance with the law if they provide health care services under a collective bargaining agreement and if the services are provided for employees not covered by such an agreement.[17/]

As far as the state of Connecticut is concerned, its comprehensive health care plan requires insurers to make available to all persons under 65 a standardized health insurance policy covering specified minimum benefits. Included benefits are hospital services, physician services, prescription drugs, partial payment for treatment of mental conditions, skilled nursing home facility care, home health agency visits such as ambulance services, physical therapy, oxygen, anesthetics, diagnostic x-rays and laboratory tests and other lesser benefits. Three deductible levels are available--$200, $500 and $750 as already has been noted--and a 20 percent co-payment provision will be in all the plans. However, a ceiling on cost sharing per year is set at $1,000 per individual and $2,000 per family. However, although a person is eligible for the various benefits under the state health plan, benefits for pre-existing conditions that exist within six months of effective date of the plan coverage and pregnancies that exist on the effective date of the plan are not covered.[18/]

The state of Minnesota has four plans available under its comprehensive state health insurance program and three of the plans are tied to variable out-of-pocket expenses and the fourth plan is concerned with Medicare beneficiaries. In addition, Health Maintenance Organizations may be used in those areas of the state where an HMO has agreed to make coverage available and has been selected as a writing carrier. A plan is certified as a number one plan if it meets the requirements established by the laws of the

state and provides for payment of 80 percent of the covered expense in excess of a deductible which does not exceed $1,000 per person. A health coverage plan shall be certified as a number two plan if it meets the requirements of the state of Minnesota and provides payment of 80 percent of the covered expenses in excess of a deductible which does not exceed $500 per person. Any plan which provides benefits to persons age 65 years or more may be certified as qualified Medicare supplement plan if the plan is designed to supplement Medicare and provides coverage of 50 percent of the deductible and co-payment required under Medicare and 50 percent of the charges for services covered under the state plan which are not covered by Medicare. The coverage shall include a limitation of $1,000 per person on total annual out-of-pocket expenses for the covered services. The coverage may be subject to a maximum lifetime benefit of not less than $100,000. A number three plan is certified as such when the minimum benefits are equal at least to 80 percent of the cost of covered services in excess of an annual deductible which does not exceed $150 per person. The coverage shall include a limitation of $3,000 per person on total annual out-of-pocket expenses for services covered under this plan. The coverage may be subject to a maximum lifetime benefit of not less than $250,000. Covered expenses as in the case of number one and two plans shall be the usual and customary charges for the following services and articles when prescribed by a physician. These include such benefits as hospital services, prescription

drugs, limited nursing homes services, home health agency services of 180 visits per year, oxygen, anesthetics, protheses, rental or purchase of durable medical equipment, diagnostic x-rays and laboratory tests, physical therapy services, oral surgery, physician services, other than outpatient mental or dental, for diagnosis and treatment of injuries or illnesses, and beginning in 1980, subject to appropriate deductibles, coinsurance and maximum lifetime limitation provisions, services for well-baby care, physician services for routine checks and annual physicals, and multiphasic screening and other diagnostic testing.[19/]

ADMINISTRATION AND FINANCING OF STATE HEALTH INSURANCE PLANS

In considering the administration and financing of any state health insurance plan, state government must consider many questions. First, does the government have the ability and capacity in terms of finances and manpower to operate such a program, as already noted? What kind of cost and quality controls should be incorporated into the program to make it economically feasible and manageable? What kind of audit and accountability procedures should be included in the program so as to avoid the kind of fraud and abuse problems that presently plague Medicaid and Medicare? Should the financing of benefit coverage be phased in by legislative schedule or by the executive branch's administrative decision, if the program is initially limited in its benefit scope? What are the advantages and disadvantages of each of the latter choices? What kind of reimbursement methods are most equitable under the program and how is the method equitably

determined for the providers of health care services who are participating in the program? These are some of the important questions that arise when considering the establishment, administration and financing of a state health insurance program.

In answering some of these questions, the state of Maine, as already noted, established a catastrophic medical expense plan that was partially funded through a one mill cigarette tax increase. An annual minimum amount of $800,000 per year was appropriated for the program by the state government. All participating providers of medical service and supplies agree to accept the payment received from the Maine Catastrophic Illness Program as full reimbursement for services rendered according to state program requirements. No additional charge is to be demanded from the program's beneficiaries for a service or supply covered by the program.[20/]

As far as the state of Rhode Island is concerned, catastrophic illness payments are made out of general revenues. The Rhode Island Department of Health Administration administers the program with private health insurers serving as fiscal intermediaries for the payment of benefits. However, despite the use of general revenues to fund the program, it is still up to employers/employees to pay for most of the insurance coverage. The State Department of Business Reuglation establishes the minimum standards--applicable to all health insurance contracts in the state--that are designed to standardize and simplify benefits; eliminate misleading or confusing provisions and limited coverages of little value; eliminate deceptive selling

practices; add coverages in the public interest; promote efficient management of health service; and make qualified plans available to all persons regardless of age, sex, occupational status or medical condition. After the standards are issued, each carrier files a sample contract with the Department. The contract is available to the Rhode Island Consumer Council. If the Council requests a hearing, it will be held to review the contract provisions. The Department may approve, disapprove or modify a contract and, as necessary, all other carrier contracts will be modified to conform with the decision. Insurers must offer the same plan to all persons. Also, they must offer the same coverage to all employers regardless of the characteristics and the number of their employees. The carriers are required to promote efficient management and reimburse only those which are certified by the Department of Health. Insurers operating for profit and self-insured organizations may enter into arrangements to form a reinsurance pool. The pool will spread the losses among the insurers in proportion to the number of persons covered under qualified policies. These agreements must be approved by the State Department of Business Regulation and the Department which, after a hearing, may require all insurers to participate in the pool. In addition, carriers must submit to the State Department of Business Regulation their proposed rates or rating formulas for health insurance. The Department will provide hearings for the public and for representatives of the carrier and the Rhode Island Consumer Council. At the hearings the carriers will be required to prove that the

proposed rates are appropriate for the coverage provided, consistent with the proper conduct of the carrier's business and in the public interest. The Department is authorized to approve, disapprove, or modify proposed rates. Providers of health services must be certified by the Department of Health as a condition of participation in the program. They must meet existing laws and regulations and agree to provide services without regard to race, religion, sex, age or occupational status. Service providers must also offer services at costs, charges or rates that are equitable, non-discriminatory and in the public interest. The State Department of Business Regulation (after a hearing) will be able to disallow payments made by a carrier to a non-certified provider or one engaging in discriminatory practices against insurers. This, in summary, is the essence of the Rhode Island Catastrophic Health Insurance Plan.[21/]

In contrast to Rhode Island, the program in Hawaii only mandates coverage for almost all employed persons, as already noted, while not covering dependents. While deductibles, coinsurance and other cost-saving devices are permissible, the law requires thorough and near total coverage of basic and catastrophic health costs. The program is employment-based with costs to be paid by the employer or shared with the employee. The employee portion of the cost is limited to half the premium costs, not to exceed 1.5 percent of his wages. Provisions are made for state subsidization of those small employers who would be heavily burdened by the costs of this program. The state uses funds from general revenues and penalty

fines to subsidize the premiums of an employer with less than eight employees if the employer's share exceeds 1.5 percent of total wages payable to employees and the amount of the excess is greater than 5.0 percent of the employer's income before taxes that are directly attributable to the business. A formula in the law determines income for this purpose. A special premium supplementation fund is used to pay the subsidy for an employer's share of a premium that exceeds the limits specified above. Employer's penalty fines for failure to comply with the law are deposited in the special fund.[22/]

As already noted, Connecticut's state health insurance plan became effective on April 1, 1976. The program has incorporated several mechanisms in order to control its costs. One is three sets of deductible options--low, middle and high--that are available for individual choice and which already have been discussed. The amount of deductible that is chosen may not be greater when a service is rendered on an outpatient basis than when the service is offered on an inpatient basis. The plan also contains a coinsurance mechanism of 20 percent for charges for all kinds of health care in excess of the deductible chosen and 50 percent for specific kinds of health services listed in the act that creates the program. However, the sum of the deductible and co-payments required in any calendar year under any option may not exceed a maximum limit of $1,000 per covered individual, or $2,000 per covered family. Both the deductible thresholds and the $1,000 and $2,000 annual limits may be adjusted on an annual basis by the State Insurance Commissioner to correspond

with the change in the medical component of the Consumer Price Index. The law that creates the state health insurance program also authorizes the State Commission on Hospitals and Health Care, within one year of April 1, 1976, to adopt regulations designed to require state Professional Standards Review Organizations established under P.L. 92-403 to extend their review of certain inpatient services to services received by all patients. The State Insurance Commissioner also shall adopt regulations to establish minimum standards for benefits under each of the following categories of coverage in individual policies: basic hospital expense coverage, basic medical-surgical expense coverage, hospital confinement indemnity coverage, major medical expense coverage, disability income protection coverage, accident only coverage and specified accident coverage. Specified disease policies, riders and benefits shall be prohibited whether they are issued on a group or individual basis. The state program also creates a Health Reinsurance Association for high risk insured. Any plan that is not insured by or through the Health Reinsurance Association or any other medical market association may not exceed the premium which would be applicable through participation in such associations. Finally, each self-insurer whose plan covers three or more employees shall make an individual comprehensive health care plan available under a conversion privilege to every person covered by the plan who is a resident of the state, who is not eligible for Medicare and whose coverage under the self-insured plan ceases as a result of a layoff, death

or termination of employment. The individual has his choice of low, middle and high option deductibles under this situation as well.[23/]

THE FUTURE

The future of the state health insurance movement cannot be viewed with precise clarity for national health insurance is still a viable possibility for enactment in the 95th Session of the U. S. Congress. Although several states have enacted health insurance programs and several other jurisdictions are presently contemplating the introduction of health insurance bills in their 1977 legislative sessions, the experience that has been gained thus far from these plans is still too minimal to make any decisive statement as to whether or not they are achieving the goals for which they have been or are being enacted. But, the fact that state government has chosen to create such vehicles to assist its residents in paying for the costs of medical care only underlines how serious a problem the financing of such costs has become for many of our citizens. The enactment of state health insurance programs may now be considered an appropriate role and extension of state activity in the health care area but until recently the provision of health insurance protection has been the province of private industry--not the responsibility of state government. However, as already noted, the problem of individual state health insurance programs is that they are individual creations and not uniformly designed among the states in terms of benefit coverage and other areas of legislative intent.

Even though model health insurance bills have been adopted by the Congress of Insurance Legislators (COIL) and the National Association of Insurance Commissioners (NAIC), it is still the decision of state government as to whether or not it wishes to adopt a model bill for its own jurisdiction or enact a bill of its own formulation. The following is one problem that can result from these activities. Should states enact health insurance programs that are diverse in content as well as in intent, then it would be possible that without a national health insurance program this country could be faced with another type of Medicaid situation of having 50 diverse and separate state health insurance plans rather than a uniform 50-state plan with all the possible problems that have attended Medicaid's enactment and operation. If nothing else has been learned from the Medicaid experience after a decade of operation, it should be that the path and experiences incurred under Medicaid should be avoided under diverse state health insurance plans as well so that all involved in such programs--the purchasers, the providers and the payers--will be treated equitably at costs that are reasonable to all.

ELIGIBILITY AND BENEFITS UNDER MINNESOTA CATASTROPHIC HEALTH EXPENSE PROTECTION ACT OF 1976

By Larry R. Fredrickson

I. Historical Background:

The first significant Legislative interest in a state catastrophic health insurance plan was in 1973 when two state senators asked Legislative staff to start working on legislation for a state catastrophic health insurance program. They were prompted by complaints from constituents who had suffered maior economic reverses due to health care expenses.

In 1974 two bills were introduced in the State Senate. One bill emphasized catastrophic protection for middle-income people who exhausted their insurance coverage. The other bill emphasized protection for low-income working people who were not eligible for medical assistance (Minnesota's medicaid program). Several hearings were held in a Senate subcommittee, but no action was taken. There was serious concern as to who would benefit under a catastrophic health insurance program and how much it would cost. Little concrete information and data were available then (or later).

A special Senate subcommittee was appointed to study health care costs during the interim between the 1974 and 1975 Legislative sessions. Its membership included five senators and five public members including an insurance company executive, a registered nurse, a union official, a housewife and a Native American. The subcommittee recommended an alternative to a

state catastrophic health insurance program which would include establishing minimum benefits (including catastrophic protection) for health insurance policies and a mechanism to enable uninsured people to obtain health insurance. They recommended that the state:

> Encourage further work and study in mandating minimum benefits provided under health insurance policies sold in the State, including minimum benefits for catastrophic coverage, and development of a plan of health insurance providing catastrophic coverage to the handicapped, uninsurable and others not having health insurance available. Both of these acts should provide coverage for ambulatory services. Minimum benefits in group health insurance plans should cover services including but not limited to periodic screening, immunization and non-communicable disease control . . . .

At the start of the 1975 session, the Governor recommended a $17 million state catastrophic health insurance program patterned after the then newly-enacted Rhode Island program. A group of Minnesota Senators, Representatives and staff made a site visit to Rhode Island to study their program. During the same site visit, meetings were held in New York with representatives of the Health Insurance Association of America. The officials and insurers working on the Rhode Island program were very enthusiastic about their law. The national insurance industry representatives supported the alternative recommendation of the Senate subcommittee - an approach which was later enacted in Connecticut. During the 1975 session, the Senate supported the recommendation of their subcommittee, while the House supported the Governor's recommendation. There was some committee action, but because of the conflict between the House and the Senate, no final action was taken.

At the start of the 1976 session, a new bill was introduced in the House which combined the basic features of the House and the Senate bills from the year before into one omnibus bill. The new bill became the basis for the law which was enacted in 1976.

II. Basic Content of Law:

The 1976 law contained three articles and is codified in Chapter 62E of the Minnesota Statutes. The first article dealt with health insurance standards and availability. Minimum standards were established for qualified health insurance policies. Insurers could continue to sell unqualified insurance but were required to offer qualified policies to all applicants for health insurance. Employers were generally required to make health insurance available to their employees. A state-mandated risk pool was established, using a private insurer as the writing carrier, to allow uninsurable or under-insurable people to purchase health insurance.

Because of a fear of inflation in health costs due to increased third party coverage, a second article was included. It increased the powers of the state insurance commissioner to regulate health insurance rates and established a hospital rate review system.

The final article established a state-funded catastrophic health expense protection program (hereafter "state program") to pay health care expenses of people who exceeded the specified threshold level of out-of-pocket expenses. There was not a great deal of legislative discussion of eligibility and benefits

under the article. In order to enable the health insurance availability programs of Article I to begin to function first and potentially save the state money, the third article was given a delayed effective date of July 1, 1977. The state program was originally to be administered by the State Insurance Department to avoid the appearance of it being a welfare program. At the last minute it was changed to have the Department of Public Welfare do the administration primarily because of their prior experience with the medical assistance program.

III. Eligibility Standards:

A. Legislative Considerations:

Initially there were attempts to devise a statutory formula which utilized three factors in determining eligibility: income level, expense level, and insurance protection level. This was the approach used in Rhode Island and seemed to be working there. It was decided to focus on people who were not eligible for existing categorical programs. (In fact, there was some sentiment for excluding people who were already eligible for categorical programs since they already had some protection.)

There was little objection to including the income and expense level factors in the formula. It was generally agreed that expenses in excess of a specified percentage of income should be the major factor. The state Tax Study Commission prepared a computer analysis of a sampling of itemized state tax returns. With this information, it was possible to obtain a rough approximation of the number of people at various income levels who had medical expense deductions in excess of specified dollar amounts.

The computer data did not differentiate between tax deductions for expenses which would be covered under the state program and tax deductions for expenses which would not be covered. This required the use of "guess" factors to estimate the actual numbers of people who would qualify under various threshold factors and the cost to the state of paying the qualified expenses of those people. This was especially true, for example, with senior citizens where it was assumed that many of them with high expenses had been paying for nursing home care which was not expected to be fully covered under the state program. With the Tax Study Commission data, the Legislature was able to select income and expense level thresholds which matched their policy and fiscal concerns.

The question of utilizing levels of insurance coverage as a qualification factor quickly became the major focus of the debate over eligibility standards.

Some legislators strongly felt that insurance coverage should be a major factor. (It is a significant part of the Rhode Island formula.) They were concerned that a failure to do so would, in effect, penalize those people who took the initiative in obtaining their own health insurance and reward those people who neglected or refused to obtain their own insurance protection. They argued that people would simply "gamble" on remaining healthy and not buy insurance if they knew that the state back-up protection would save them from total economic devastation if they guessed wrong.

On the other hand, other legislators felt that using existing insurance

coverage as an eligibility factor would penalize those people who could not obtain health insurance because of economic or health problems. They also argued that:

(1) The state protection program would require a significant enough out-of-pocket expense level to deter any "gambling";

(2) The day-to-day expenses of health care (as opposed to catastrophic expenses) are high enough to create a stronger incentive to buy insurance than any incentives not to buy insurance;

(3) The person who makes the decision not to buy the insurance may not be the one to need the health services - it could be a spouse or dependent child who became sick;

(4) It would be harder to draft a tripartite formula; and

(5) It would be harder to administer a tripartite formula.

The opponents of an insurance-related eligibility formula ultimately prevailed.

Four other factors did receive some scrutiny during the Legislative deliberations:

First, there was a concern that nonresident people with serious health problems would move into Minnesota to avail themselves of the state program. Various residency tests were considered and eventually rejected. The main arguments against them were court decisions which have rejected most types of residency tests imposed on beneficiaries of public assistance programs and a

contention that the proposed benefits were not lucrative enough to entice any significant number of people into the state.

Second, there was discussion over whether the primary purpose of the program should be (i) protection from non-recurring high cost episodes of illness or injury, (ii) protection from high-cost chronic diseases, or (iii) both. It was decided that the emphasis should be on non-recurring expenses. This enabled the legislature to set an income and expense level threshold which was not particularly generous. The required out-of-pocket expenditures were set high enough so that most households could not afford to make them year after year and continue to qualify for the state program. Instead, they would eventually qualify for another assistance program such as medical assistance. In light of the decision on the thrust of the program, it was decided to not emulate the Rhode Island approach which established a lower threshold for the second year's eligibility. To provide more assistance to the victims of a single high-cost episode, it was decided to provide for a flexible year of eligibility. The potential recipient can, in effect, pick the twelve month period in which to receive the benefits in a way to maximize benefits. This differs from the usual approach of using a calendar year as the basis for benefits.

Third, it was decided to go with a very broad definition of household income. All income of all members of the household was to be included. There was some discussion of providing limited exceptions in some cases such as where a dependent child was working to earn money for college. None of the suggested exceptions were adopted. On the other hand, proposals to factor

in assets such as real property, savings, or investments were also rejected primarily to avoid complicating the administration of the state program.

Finally, there was consideration of making special provisions for unemployed people and low income people without health insurance. Amendments were drafted to establish a mechanism for purchasing health insurance for these groups in the state risk pool for uninsurables. It was eventually decided to delay a decision on these provisions until the state program had been in operation for two or three years.

B. Standards in the Law:

The law has a graduated schedule for determining eligibility. As originally passed, it read:

> 62E.53. [APPLICATION FOR ASSISTANCE.] Subdivision 1. Any person who believes that they are or will become an eligible person may submit an application for state assistance to the commissioner. The application shall include a listing of expenses incurred prior to the date of the application and shall designate the date on which the 12 month period for computing expenses began.
>
> Subd. 2. If the commissioner determines that an applicant is an eligible person, he shall pay 90 percent of all qualified expenses of the eligible person and his dependents in excess of:
>
> (a) 40 percent of his household income under $15,000, plus 50 percent of his household income between $15,000 and $25,000, plus 60 percent of his household income in excess of $25,000; or
>
> (b) $2,500;
>
> whichever is greater for the 12 month period in which the applicant becomes an eligible person. If the commissioner determines that the charge for a health service is excessive, he may limit his

payment to the usual and customary charge for that service. If the commissioner determines that a health service provided to an eligible person was not medically necessary, he may refuse to pay for the service. To the extent feasible, the commissioner shall contract with a review organization as defined in section 145.61, in making any determinations as to whether or not a charge is excessive. To the extent feasible, the commissioner shall contract with a review organization as defined in section 145.61, in making any determination as to whether or not a service was medically necessary. If the commissioner in accordance with this section refuses to pay all or a part of the charge for a health service, the unpaid portion of the charge shall be deemed to be an unconscionable fee, against the public policy of this state, and unenforceable in any action brought for the recovery of moneys owed.

The bill which originally passed the House did not contain a graduated formula or the copayment requirement. The Senate, whose bill did not contain the state program, suggested in conference committee that some changes be made to control costs and make eligibility standards high at higher income levels. The conferees then developed the graduated income formula and the copayment feature primarily as cost and utilization control features.

Under the income and expense formula as adopted, the following out-of-pocket expenses would have to be incurred by a household to qualify:

Household Income	Out-of-pocket Expenses Incurred	Incurred Expenses as a Percentage of Income
$ 5,000	$ 2,500	50%
10,000	4,000	40
15,000	6,000	40
20,000	8,500	42.5
25,000	11,000	44
40,000	20,000	50
75,000	41,000	54.7
100,000	56,000	56

By and large, higher income households must pay a higher percentage of household income as out-of-pocket expenses before qualifying. The exception comes for households with very low incomes. It was assumed that these households would easily qualify for other assistance programs - hopefully ones where the Federal Government would participate in the costs of the program. Once it qualifies a household must still pay 10 percent of the costs of services provided. A second cost control mechanism was the provision in the law allowing the Commissioner of Public Welfare to establish mechanisms to review provider charges and prohibiting providers from attempting to collect excess charges from consumers.

IV. Benefits Schedule:

A. Legislative Considerations:

The question of benefits under the state program was not a major part of the deliberations in the Legislature once the bills were introduced. This was surprising - especially since the benefits were identical to those required to be covered by qualified health insurance policies sold by insurers and made available to employees by employers. This triple purpose for the schedule of benefits resulted in most of the little discussion that occurred focusing on the health insurance standards aspect rather than on the state program aspect. (In fact, the part of the law which created the state-funded catastrophic program does not list the benefits. It merely cross-references the benefits in the Insurance Standards Act.)

The triple purpose of the benefits schedule provided some consistency in achieving the three purposes of the schedule. However, it also meant that some of the standards were different from those that would have been established if each had been done separately.

The initial schedule of benefits was drafted by an insurance company's head actuary. It was then revised by the authors and Legislative staff after comparing it with similar laws and bills in other states, the National Association of Insurance Commissioner's Model Act, and the Conference of Insurance Legislators' Model Act.

Since the same benefits were being used for the state program, the minimum standards for qualified health insurance and the required offering by employers, the proposed benefits schedule was then reexamined in light of its effects on the health insurance industry and on employer-sponsored benefit plans.

Legislative staff obtained access to an insurance industry sponsored study of employee benefit plans. This study found that about 70 percent of the existing employer plans did not provide the required medical coverage, 40 percent did not provide the required hospital coverage, 25 percent did not provide the diagnostic x-ray and laboratory coverage, 85 percent did not provide the required major medical coverage, and 85 percent did not provide the required maternity coverage. Generally, larger employers were more likely to be in compliance. The relatively low level of coverages was something of a

surprise to legislators and a cause of some concern. However, it was felt that a dramatic rise in health insurance coverage would impose a serious burden on some employers and could cause serious inflation in health care costs. At this point there was consideration of having separate benefit standards for health insurance and for the state program. In the end, the decision was made to keep the benefits consistent and lower them somewhat to lessen the disruption in existing programs. The benefits schedule was therefore re-written again. Also, insurers and employers were allowed to substitute actuarially equivalent benefits for those set forth in the act. The state program would not make substitutions.

Once it was revised the second time and the bills were introduced, there were few changes.

There were five areas where conflicts did arise:

1. Coverage of Blood and Blood Derivatives:

The bill originally covered blood and blood derivatives. There was objection from some insurers and blood donor groups that this coverage under insurance policies would diminish the public incentives for voluntary blood donations. Because of this, the provision was deleted. This was done despite the counter-argument that the deletion would, in effect, disqualify most hemophiliacs from the state program.

2. Coverage of Preventive Services:

There was little input into the benefits schedule by consumer groups. Efforts were made to get comments from various consumer groups, but they

generally lacked the time and the expertise to participate. A consumer task force which was working with the Foundation for Health Care Evaluation (a joint insurer-physician peer review organization) did do some lobbying for the inclusion of more preventive services. As a result of efforts, and despite some mild opposition from insurers, the law was amended so that benefits will be expanded to cover well baby care, check-ups, annual physicals and diagnostic testing beginning in 1980.

3. Nursing Home Coverage:

The authors of the bills wanted to limit nursing home coverage in the benefits provisions of these bills. There was a concern about mandating it as a health insurance benefit and about the estimated cost of including it under the state program. It was predicted that coverage of nursing home expenses would lead to a state takeover of most of the nursing home expenses not already paid by the state under the medical assistance program - an additional $56 to $64 million per year. (Minnesota's medical assistance program already pays about two-thirds of the costs of nursing home care in the state.) As a result, the bills limited nursing home coverage in the same way that it is limited under Medicare - a maximum of 120 days per year with the stay commencing within 14 days after a hospital stay of at least three days. There was also an exclusion of domiciliary and custodial care. Objections raised by representatives of senior citizens organizations led to the removal of the exclusion. However, they were unsuccessful in their efforts to increase the coverage for nursing home care.

4. Coordination of Benefits:

There was a major disagreement between insurers and the Minnesota Department of Public Welfare as to coordination of benefits between insurance coverage and various governmental programs. It was not really resolved. Medicare was made primary to insurance. Medical assistance was left as an open question subject to some unclear existing statutory language. There was also some concern that the state might end up paying 100 percent of the cost of treatment for people who would have eventually received medical assistance (56 percent Federal share in Minnesota). Vice-President (then Senator) Mondale was able to obtain an indication from HEW that a Federal contribution to the cost could still be received for people who benefitted under the state program if they would also have eventually been eligible for medical assistance.

5. Specialized Coverages:

Minnesota, like most other states, had already mandated various other coverages under existing group health insurance plans. In fact, Minnesota already mandated nine specified coverages - far more than any other state. These coverages included:

* alcoholism treatment
* conversion privileges
* chiropractic treatment
* optometric services
* maternity benefits
* outpatient surgical treatment
* newborn child coverage
* handicapped and retarded coverage
* mental illness coverage

It was felt that not all of these services were appropriate benefits for the state program. However, they were all passed earlier due to well-organized lobbying efforts. Exclusion of any or all of them might have resulted in major disputes as to their appropriateness. It was decided that another front in the fight over passage of the bill should not be opened. Numerous other conflicts had already arisen. The existing mandated services were consequently included by cross-reference.

B. Benefits Provided:

The new law passed in 1976 provided the following benefits:

> 62E.06 [MINIMUM BENEFITS OF QUALIFIED PLAN.] Subdivision 1. Number three plan. A plan of health coverage shall be certified. . . if it otherwise meets the requirements established by chapters 62A and 62C*. . . and meets or exceeds the following minimum standards:
>
> (a) The minimum benefits. . . shall be the usual and customary charges for the following services and articles when prescribed by a physician:
>
> (1) Hospital services;
>
> (2) Professional services for the diagnosis or treatment of injuries, illnesses, or conditions, other than outpatient mental or dental, which are rendered by a physician or at his direction;
>
> (3) Drugs requiring a physician's prescription;
>
> (4) Services of a nursing home for not more than 120 days in a year if the services commence within 14 days following confinement of at least three days in a hospital for the same condition;
>
> (5) Service of a home health agency up to a maximum of 180 visits per year;

*This language has the effect of incorporating existing mandated benefits by reference.

(6) Use of radium or other radioactive materials;

(7) Oxygen;

(8) Anesthetics;

(9) Prostheses;

(10) Rental or purchase, as appropriate, of durable medical equipment;

(11) Diagnostic X-rays and laboratory tests;

(12) Oral surgery for partially or completely unerupted impacted teeth, a tooth root without the extraction of the entire tooth, or the gums and tissues of the mouth when not performed in connection with the extraction or repair of teeth; and

(13) Services of a physical therapist.

(b) Covered expenses for the services and articles specified in this subdivision do not include the following:

(1) Any charge for any care for any injury or disease either (i) arising out of an injury in the course of employment and subject to a worker's compensation or similar law, (ii) for which benefits are payable without regard to fault under coverage statutorily required to be contained in any motor vehicle, or other liability insurance policy or equivalent self-insurance, or (iii) for which benefits are payable under another policy of accident and health insurance or medicare;

(2) Any charge for treatment for cosmetic purposes other than surgery for the repair of an injury or birth defect;

(3) Any charge for travel other than travel by ambulance to the nearest health care institution qualified to treat the illness or injury;

(4) Any charge for confinement in a private room to the extent it is in excess of the institution's charge for its most common semi-private room, unless a private room is prescribed as medically necessary by a physician;

(5) That part of any charge for services or articles rendered or prescribed by a physician, dentist, or other health care personnel which exceeds the prevailing charge in the locality where the service is provided; and

(6) Any charge for services or articles the provision of which is not within the scope of authorized practice of the institution or individual rendering the services or articles.

(c) Effective January 1, 1980, the minimum benefits. . . shall include, in addition to those benefits specified in clause (a), benefits for the following services. . .:

(1) Well baby care;

(2) Physicians' services for routine check-ups and annual physicals when prescribed by a physician; and

(3) Multiphasic screening and other diagnostic testing. . .

* * *

V. Estimated Program Costs and Beneficiaries:

Using the data obtained from the Tax Study Commission's computer study of tax returns, actuarial studies provided by an insurer, and from Rhode Island's actual experience with their program which was already in operation, several estimates of costs and the number of beneficiaries by income level were made.

Based on the Tax Study Commission figures, the following estimates were made:

Program Cost

	Calendar Years			
	1976	1977	1978	1979
Cost of Care*	$11.3	$12.1	$12.9	$13.8
Less 10% Copayment	1.1	1.2	1 3	1.4
Gross State Cost	10.2	10.9	11.6	12.4
Less Savings in Other Programs**	1.7	1.8	1.9	2.1
Net State Cost***	$ 8.5	$ 9.1	$ 9.7	$10.3

All figures in millions of dollars

*1975 figures inflated 15% for inflation in health care costs and deflated 8% for inflation in income each year.

**It was assumed that there would be offsetting cost savings in other state health care payment programs.

***It was assumed that the Tax Study Commission figures were too high because of the inclusion of non-covered benefits which are tax deductible.

Beneficiaries by Income Level

Household Income Level	Senior Citizens (1,250 Households)	Others (500 Households)	Total (1,750 Households)
0-$5,000	40%	33%	38%
$5,000-$10,000	40%	50%	43%
$10,000-$15,000	20%	17%	19%
Over $15,000	0%	0%	0%

Based on Rhode Island's actual experience, the following estimates were made:

Time Period	Rhode Island (Actual)		Minnesota (Estimated)	
	Cost	Recipients	Cost	Recipients
First Six Months	$200,000	58	$ 800,000	230
Second Six Months	300,000	104	1,200,000	415
Third Six Months	400,000	261	1,600,000	1,045
Fourth Six Months	540,000	N.A.	2,160,000	N.A.

It was concluded that the Rhode Island figures indicated that there would be a lower level of participation in the early phases of the state program, probably because people would not be fully aware of the program, and that the Rhode Island figures would probably be more indicative of what Minnesota's actual experience might be.

The Legislature eventually approved a biennial budget of $17 million for the program. It is expected to be more money than needed, but health expense payment programs have historically cost more than anticipated.

VI. 1977 Amendments:

Even before the law took effect, pressures to make changes in the eligibility and benefit standards started to build. Insurers, consumer groups and the state Department of Public Welfare all requested changes in the law. Bills and amendments were introduced which would:

1. Provide specific coverage for blood and blood derivatives under the state program. (This was designed to bring hemophiliacs back under the provisions of the law.)

2. Provide specific coverage for renal dialysis and related costs under the state program.

3. Provide specific coverage for nursing home care under the state program.

4. Require coverage for a second opinion on surgery under both the health insurance mandatory coverage provisions and the state program.

5. Provide an earlier effective date for the coverage of the preventive services.

6. Make minor adjustments in the overall benefit schedule.

7. Exclude the income of certain dependents from the determination of household income.

8. Delay the effective date of the state program for another year.

Bills which actually passed did the following:

1. Provided state payment of 90 percent of the household expenses for nursing home care in excess of 20 percent of household income. The coverage would only apply to the expenses of people under age 65 and only after three years of treatment in a nursing home. (1977 Session Laws, Chapter 448)

2. Excluded the income of dependents under age 23 in determining household income. (1977 Session Laws, Chapter 448)

3. Excluded custodial and domiciliary care. (1977 Session Laws, Chapter 409)

4. Included coverage of a second opinion on surgery effective in 1979. (1977 Session Laws, Chapter 409)

5. Made health insurance and tort recovery primary to any state payments. (1977 Session Laws, Chapter 409)

6. Provided that health care providers be reimbursed on the same schedule as providers under medical assistance. (1977 Session Laws, Chapter 409)

VII. Summary:

The Minnesota state program is primarily designed to provide protection to households which face major health care expenses of a non-recurring nature. Since the program has only been operative since July 1, 1977, the efficacy of its benefits and eligibility standards are not yet known.

BENEFIT COVERAGE AND ELIGIBILITY STANDARDS OF STATE HEALTH INSURANCE PLANS RHODE ISLAND CATASTROPHIC HEALTH INSURANCE PLAN (CHIP)

Prepared by
Brian E. Keeler
Chief, Division of Health Insurance
Rhode Island Department of Health

One issue of great importance in the design of a health insurance program--be it a publicly sponsored or privately sponsored plan--is the determination of its benefit structure and eligibility standards. Questions relating to eligibility qualifications, the kind, extent and priority of benefit coverage, projected utilization rates, for example, are all issues of great importance. In this section of the seminar program, we present two papers that discuss both sides of the same issue. Larry Fredrickson of Minnesota analyzes how a state determines the benefit and eligibility standards that it wishes to incorporate into its plan design while this paper discusses the actual experiences of such determinations once the plan has become operational and has incurred several years of utilization experience.

I. ELIGIBILITY

Eligibility standards are delineated primarily through the guidelines of the Catastrophic Health Insurance Plan (CHIP) itself. Program eligibility is contingent upon essentially two elements: residency and a deductible. An applicant would normally be the head of a household and must be a permanent resident of the state for at least three months and must not have moved here

primarily to become eligible for CHIP. In addition, an applicant's out-of-pocket family medical expenses must exceed a CHIP deductible specified in the law, after all payments are made by his or her private health insurance plan. This deductible will either be a flat dollar amount or a percentage of the family's income, whichever is greater. Income is defined by Regulation as "the adjusted gross income of the taxable family unit, minus dependents allowances, as set forth by the Internal Revenue Service." Those persons who are Medicare subscribers only have to meet a dollar deductible since they are generally living as a group on fixed incomes. When found eligible, all members of a household are covered for CHIP benefits.

There are six levels of CHIP deductibles. They are applied to a particular applicant based upon the type and quality of the person's private health insurance plan. As the quality of a person's coverage goes up, the CHIP deductible goes down. The lowest deductible category is utilized when a person has what the law defines as a "qualified plan." This would be a combination of plans, provided by either Blue Cross or a commercial insurer, which includes the following:

- Semi-private hospital coverage for at least 120 days
- A medical/surgical plan providing coverage for usual and customary physician charges
- A major medical program providing at least $10,000 in supplemental coverage

CHIP DEDUCTIBLES

Health Insurance Status	Amount	% of Income
Qualified plan	$ 500	10
Semi-qualified plan (no major medical coverage)	1,250	25
Non-qualified plan		*
No health insurance plan	5,000	50
Qualified Medicare plan	500	N/A
Non-qualified Medicare plan	1,000	N/A

*The difference between a qualified and a non-qualified plan plus the deductible of a qualified plan.

Since CHIP has been designed as a "last payor" program, all other resources available to the applicant must be utilized first before CHIP would consider payment. For example, if a person was injured in an automobile accident and also has private health insurance, CHIP would not only be secondary to the health insurance plan but also to any automobile medical payments available as a result of the accident. CHIP would also be secondary to other programs such as Workmen's Compensation, Vocational Rehabilitation, Medicare and Medicaid.

The Division of Health Insurance of the Rhode Island Department of Health is responsible for the overall administraiton of the CHIP program. These duties also include eligibility services. Most applications are handled by mail but occasionally personal interviews are requested by either party. The Division also

directly refers CHIP applicants to other available programs. Outreach services of CHIP are considered to be an integral part of the program.

The major gaps in CHIP, as can be readily seen by reviewing the deductible structure, concerns those persons who do not have any health insurance coverage and in particular those who are earning just above the Medicaid upper income limits. Since CHIP was developed to assist the average working person, and only incidentally other income groups, no research has been initiated to ascertain the nature and extent of the financial implications resulting from any expansion of coverage to those groups falling through the gaps in the program as it is presently designed.

II. BENEFITS

The benefits provided to those persons found eligible for CHIP are essentially the same as described in the law under a "qualified plan," previously outlined. Additionally, the Department of Health has promulgated rules and regulations for the CHIP program which also carefully describe benefits and exclusions. The benefit structure of a qualified plan was extracted mainly from the best existing Blue Cross plans in the state. Blue Cross of Rhode Island covers approximately 85 percent of the state's population. If the Division of Health Insurance cannot readily determine if an applicant's plan is qualified, the policy will be referred to the Health Insurance Section of the Department of Business Regulation for review and comment according to an existing

cooperative agreement. The Department of Business Regulation may have the policy reviewed by its actuary, especially if the applicant has multiple health insurance plans, which taken singularly are not qualified, but as a composite may be an actuarial equivalent to a qualified plan.

Coverage in several specialty areas were added by regulation to those benefits provided directly by the law. For example, a qualified plan would pay for the deductibles and co-insurance for those persons on Medicare. However, neither Medicare nor a qualified plan provides coverage for prescription drugs. Since this was one of the most costly items to the consumer and largely unreimbursed by third parties, the CHIP regulations allowed for coverage of this type of expense. On the other hand, mental health benefits are currently under review since a full 20 percent of CHIP benefits in 1975 went for these services. Currently, CHIP allows for full coverage and 50 percent reimbursement for outpatient psychiatric care.

CHIP pays for 100 percent of the usual and customary costs of those eligible health expenses not otherwise payable by an insurer, state or federal agency. CHIP was designed to "top off" any existing health insurance plan a resident may have. Therefore, with only one exception (outpatient psychiatric), payment is at the rate of 100 percent. As mentioned previously, CHIP covers most of the benefits provided under a qualified health insurance plan. The only notable exception, in addition to the drug benefits

for Medicare persons, as compared with other plans offered or provided by insurers or agencies, is in the area of mental health. The Medicaid program does not provide any psychiatric benefits. Therefore, although a family may otherwise qualify for Medicaid, psychiatric benefits when required would be covered by CHIP.

Claim cost control is exercised over virtually all areas of benefit coverages, including prescription drugs and medical/ surgical supplies and equipment through the use of usual and customary fee profiles. Historically, psychiatric benefits have proven to be the most difficult to control. Selected cases, especially for out-of-state private facilities, have been referred to the Psychiatric Peer Review Committee for examination. Committee results have been a disappointment as a method for substantially reducing utilization and related costs.

The expansion of CHIP coverage to those persons who may fall through the gaps in the program would have to be extended first to those who have semi-qualified plans prior to making the coverage available to others who have no coverage. Here again, this concept would be in keeping with the intent of the law which is structured to help the average working person. However, the average working person is becoming increasingly difficult to define. There are many average working persons who for various reasons are unable to afford qualified health insurance plans. These persons rather than the uninsured should perhaps be the target group of any eligibility restructuring. With the proliferation of state

catastrophic health insurance plans, several key issues must be addressed. First, with more and more states considering the adoption of health insurance plans, is this a clear signal to Washington that the states do not want national health insurance with the inherent loss of local control over the health care/financing system? We believe this to be the case in Rhode Island and suspect the same to be true in other states. Secondly, has there been any noticeable migration of individuals to states which have the CHIP coverage? There is always the potential for this problem with any public program, most noticeably involving Unemployment Compensation and Medicaid. The Rhode Island CHIP program has only a three month residency requirement. However, CHIP is patterned in such a way as to "reward" persons with better coverage by affording them a lower deductible as a threshold to eligibility. Also, the program is meant to function as a "super" major medical plan with a good base of private health insurance as a prerequisite for total catastrophic health insurance protection. With this goal in mind and considering the structure of the plan, it would not seem to be worthwhile for a family to move to Rhode Island from another state just to be able to attain coverage under CHIP. If this does occur, and we are able to confirm that this is why a family moved to the state, we would be able to deny coverage on the basis of a relevant section in the law. Specifically, it excludes persons from CHIP who were found to have moved to Rhode Island for the primary purpose of receiving CHIP benefits. The Department has found that this is not a viable issue at this time.

Finally, it is probably appropriate here to end the discussion of benefits with a few comments concerning future changes to the program. Obviously, the program is still in its developmental stage and vast coverage changes cannot be recommended at this time. However, the Department believes that the General Assembly should be the proper vehicle for amending the list of covered services provided by the CHIP program. The Department of Health has tried unsuccessfully in the past to change benefits through regulation. Since the benefits are essentially similar to the benefits which are defined by the law as constituting a qualified plan, perhaps the safer course for the Department to take would be to seek amendment to the law. It should be noted that the General Assembly has been hesitant in the past to approve any new spending programs or amend existing ones in such a way as to substantially increase the cost burden to the state. It appears that any proposed amendments liberalizing the CHIP benefit structure would encounter great opposition in the immediate future.

III. UTILIZATION

In calendar year 1976, 189 persons actually received CHIP benefits as compared to 114 in 1975. Other statistics include:

	1975	1976
Total applications	234	258
Total family units	162	150

Original projections estimated that about 200-300 persons would become eligible for the CHIP program on an annual basis. Therefore,

the program's results appears to be somewhat lower than anticipated. However, original projections by the Task Force which helped shape the legislation were only rough estimates.

Of the 150 eligible family units in 1976, 57 had Blue Cross, 65 Medicare, 14 commercial insurance and 14 were without health insurance. Those persons eligible for Medicare appear to be benefiting substantially from the CHIP program since 43 percent of the eligible family units involved this group. Another breakdown of utilization was to group the persons actually receiving benefits by age group--32 were dependent children, 97 adults under age 65 and 60 were over age 65. The Department believes that the program must mature longer before definitive conclusions are delivered.

IV. CATASTROPHIC ILLNESSES

Although "catastrophic" is defined in terms of the financial loss to the family rather than by diagnosis, a diagnosis very often signals an impending catastrophic loss. The Task Force which developed the CHIP legislation originally suggested a dread disease type of plan which eventually was replaced by the present program which focuses on the finances of a family as it is affected by the patient's illness.

Catastrophe, in a medical sense, is both an absolute and a relative concept. Any serious health problem is a catastrophe to the individual and family experiencing the affliction. Physically and psychologically, any substantive illness is, almost by definition, an extremely stressful occurrence.

The financial implications of any period of illness beyond the most minor are equally distressing and only serve to increase the seriousness of other problems. The degree of financial catastrophe is determined by such factors as the total cost of diagnosis and treatment (which relate to the duration of the illness and the sophistication of available medical modes, etc.); the adequacy of basic health insurance coverage in force; the availability of various supplemental program (both public and private); independent financial resources available to cover medical expenses (taking into account other critical needs, such as maintenance of the family unit); and the encumbrance of basic earning capacity. Clearly, the interrelationship of these factors becomes most serious when a spell of illness becomes "catastrophic." Although little formal research work has been done to define "catastrophic," it is clear that the threshold can be reached very rapidly as nonreimbursable costs are incurred. The accelerating spiral of medical costs and the related expansion of technological alternatives merely intensify the problem, both for the present and the future. The combination of medical and financial "catastrophes" must have an extraordinarily heavy social impact, particularly on the dynamics of a family structure, and the resulting effects of both the fiscal and psychological stress represent a real and significant cost to society.

Major disability statistics for 1976 experience indicates again, as in 1975, that emotional disorders lead the list of reported conditions. Although there were 189 persons receiving benefits, in

many cases more than one person in a family received payment and such persons on an average did not have catastrophic type conditions. Therefore, these relatively minor diagnoses have not been reported here.

MAJOR DISABILITIES BY FAMILY UNIT:

Emotional	25	Birth Defects	2
CVA	19	Epilepsy	1
Cancer	16	Paget's Syndrome	1
Cardiac	13	Cerebral Palsy	1
Kidney	12	Myasthenia Gravis	1
Orthopedic	7	G.I.	1
GYN	6	Brain Damage	1
Leukemia/blood	5	Pancreatitis	1
Respiratory	5	Scleraderma	1
Arthritis	4	Syringamyelia	1
Quadraplegia	4	Appendix	1
Neurological	4	Circulatory	1
Multiple Sclerosis	4	Muscular Dystrophy	1
Amputation	3	Myeloma	1
Colitis	3	Brain Stem injury	1
Aneurysm	3	Anorexia Nervosa	1

TOTAL 150

V. SUMMARY AND EVALUATION

The CHIP program provides for mandatory yearly evaluation and health system reporting through the Annual Report on the Health

Condition of the State and Health Expenditures by the Director of the Department of Health by each January 30th to the Governor and General Assembly. In addition, the Department of Health, Division of Health Insurance implements the following monitoring programs:

1. Annual audit of fiscal intermediaries and those state agencies with whom the Department of Health has cooperative agreements
2. Preparation of a CHIP benefits annual report with statistics and demographics.
3. Contracting with private health research corporations, when required, to acquire data necessary to evaluate the program

The success of CHIP depends upon many factors: chiefly, the absolute necessity for cooperation between state government, insurers, and providers. The Law was initially conceived as a "working person's program," stressing the purchase of good private insurance as a step toward total catastrophic illness prevention. It was designed to provide an incentive for persons to purchase good basic health insurance coverage as an initial step and as an integral part of total catastrophic health insurance protection for all of the residents of Rhode Island. The State was the first nationally to implement this new approach to health insurance coverage and thereby ensure that no citizen would be forced to "spend down" or "abandon" his family to receive the kind of help which would reasonably be given to any neighbor or friend who has been struck by tragedy. The jury is still out as to a final verdict in regard to our endeavor.

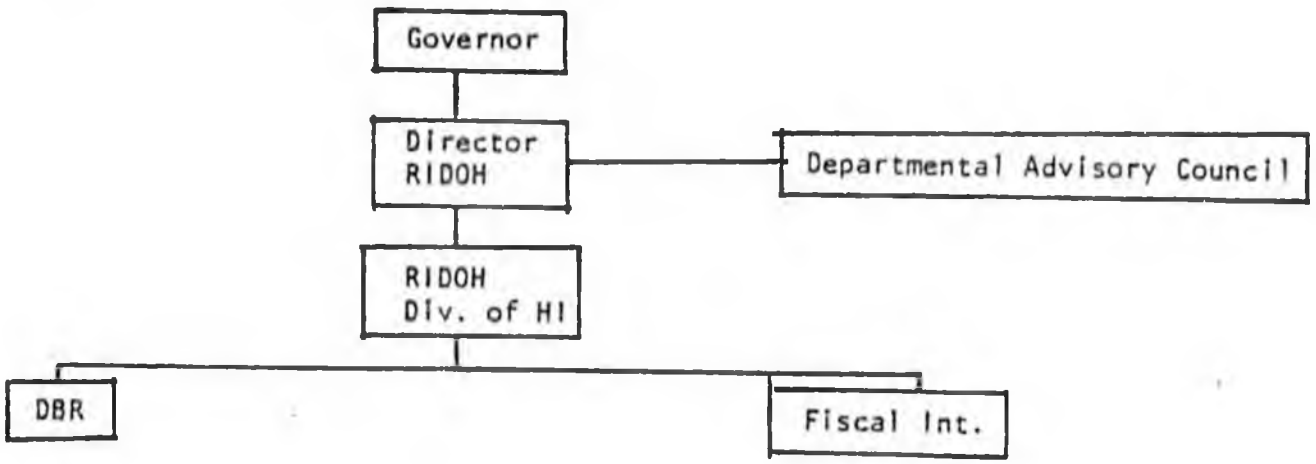
ADMINISTRATIVE ORGANIZATION OF A STATE HEALTH INSURANCE PLAN
RHODE ISLAND CATASTROPHIC HEALTH INSURANCE PLAN (CHIP)

Prepared by
Brian E. Keeler
Chief, Division of Health Insurance
Rhode Island Department of Health

As of July, 1977, only five jurisdictions had enacted into law state health insurance plans whose purpose is to provide protection against the incidence of ill health above and beyond whatever other health insurance coverage may be provided to their residents either from public or private sources. Very few states have established their own health insurance department within their governmental structure to administer such a program with all the implications that ramify from such an organization. One state which has, however, is Rhode Island. This state offers a clear profile of the character of a state administered health insurance plan and the following is a discussion of this jurisdiction's program.

I. ADMINISTRATIVE ORGANIZATION AND RELATIONSHIP

Organizational Structure



The Director of the Rhode Island Department of Health is assigned the overall responsibility for the CHIP Program according to the enabling CHIP legislation and reports directly to the Governor. The Director has delegated all administrative duties to the Chief of the Division of Health Insurance. The Division of Health Insurance (DHI) has access to various Departmental advisory groups in matters relating to appeals, claims and other specific program areas, such as certification of Health Maintenance Organizations.

The DHI administers all aspects of the CHIP Program from one central location. There are no local Health Departments in Rhode Island. Duties include the following: monitors those program components assigned to other agencies (Department of Business Regulation); provides assistance and information to all applicants and general public; determines eligibility; develops and implements program policy, rules and regulations; develops, monitors and audits programs for CHIP claim administration with insurers; provides for appeal procedures and hearings; organizes program promotion and publicity; certifies and monitors Health Maintenance Organizations.

The Department of Business Regulation (DBR) is responsible to the Director of the Department of Health (DOH) for expenditures and program performance relating to the various duties assigned to it within the CHIP legislation. These include the development and

enforcement of minimum standards for health insurers, certification of qualified health insurance plans, review and approval of rates and management of a Facility Reinsurance Pool. The Director of DBR is ultimately responsible to the Governor directly on all matters relating to actual program performance. Joint decisions are made between directors on program areas which require the concurrence of both by law. The DOH reimburses the DBR for all salaries and expenses related to the performance of CHIP duties. A special Health Insurance Section has been established within the DBR to perform the tasks created by the passage of CHIP.

Prior to CHIP, health insurance regulation in the state was minimal. The primary source for contact between Departments is for requests to DBR for review of potentially qualified plans. When an applicant applies for CHIP benefits to the DOH, a review of the person's private health insurance is mandatory since eligibility is contingent upon the type of insurance plan a person may have. The law outlines what is described as a "qualified plan." The closer a person's policy comes to this qualified plan, the lower the deductible will be for them and subsequently eligible for CHIP. Therefore, the DOH utilizes the DBR to review selected policies of the applicants to determine if they are "qualified." The DOH is able to make such determinations in many cases involving only one or two basic policies held by an applicant. However, many applicants have multiple insurance poliies or complicated policies which are not readily identifiable as qualified. In several cases,

the DBR has had to utilize the services of their consulting actuary since the law allows them to qualify some of the more involved policies on the basis of actuarial equivalencies. The law indicates that "any plan or combination of plans which provide qualified plan benefits, or their actuarial equivalent, may be deemed to be a qualified program."

Fiscal intermediaries are utilized for claim administration purposes. They are appointed by the Director of the DOH and are responsible to the DHI on matters relating to claims paid, administrative costs and expenses. They are also subject to audit by the Division. Blue Cross of Rhode Island pays CHIP claims for those applicants who are Blue Cross subscribers, have no health insurance, are members of an HMO or who are on Medidare (Title XVIII). Metropolitan Life is the intermediary for those persons who have commercial health insurance. Both intermediaries have assigned one person to work on CHIP claims exclusively. In the case of Blue Cross, the person works on CHIP full time; with Metropolitan, it is a part-time function. The intermediaries both bill the DOH monthly for the costs of claims plus administrative costs, which is a percentage of the month's total paid claims. The rate is subject to review and adjustment on an annual basis. An Administrative Servcies Agreement with the DOH governs the performance of the intermediaries' duties under CHIP. The original appointment of the fiscal intermediaries was developed and concluded with the cooperative assistance of Blue Cross and the Health Insurance Association of America.

II. RELATIONSHIP TO OTHER PROGRAMS

The CHIP law was designed to be the last payer and secondary to any other health benefits available to an individual. For example, if a person has a private health insurance plan, this plan would always assume the primary position even after a person qualifies for CHIP. As long as the plan remains in force, CHIP would assume the balance of covered expenses not payable by the insurance program. In addition, if a person is or may be potentially eligible for Workman's Compensation, Medicaid (Title XIX), Maternal and Child Health Programs, medical payments on an automobile policy and so on, CHIP would be secondary to any payments made by these sources or may be totally out of the picture, particularly in the case of a person's eligibility for Medicaid.

The DHI will assist any applicant who may be unaware of the availability of such other programs. Contacts have been established with these agencies and placement is normally made by telephone with a written communication following to the agency and/or applicant.

Blue Cross and the commercial insurers have been asked to "case find" for CHIP, particularly when an insured person may be approaching their major medical maximum. Blue Cross has even gone so far as to print a computer produced note in such cases on the explanation of benefits worksheet which is sent to the subscriber detailing a particular major medical payment.

The DHI has a special relationship with Health Maintenance Organizations (HMOs) in the state. According to CHIP, they are

considered both a provider and an insurer. In the case of the latter, the DHI would consider a qualified HMO in a similar manner to an insurer if a person requests assistance from CHIP and is enrolled in an HMO. Very few CHIP applicants are in this category since HMOs normally provide a comprehensive range of prepaid services.

CHIP also requires all employers of one or more employees in the state to provide a "dual choice" to their employees if they currently participate in a group insurance program. The law now requires them to offer the choice of the insured plan or the HMO membership if a qualified HMO exists which includes the employees' place of resident in their service areas. The DHI is responsible for determining whether or not an applicant HMO is qualified. Criteria have been established within the CHIP Rules and Regulations. There are presently three HMOs in the state--all are qualified. Re-application must be made each year to the DHI. Review of applications is made by the DOH HMO Advisory Council. Qualification as a provider is different from qualification as an insurer. The DHI regulations speak to the quality of care and related administrative functions of operating an HMO and only incidentally address the issue of the specifics in the scope of benefits.

The DBR is responsible for enforcement of the dual choice option itself with employees in the state and all complaints and infractions are referred to them. Regulations have also been issued by them to cover their duties under this section of the law.

The HMO dual choice provisions of CHIP are looked upon as meeting one of the law's primary goals--that each person in the state have access to available diagnostic, curative and rehabilitative health services. Prior to CHIP, employers outwardly rejected approaches from HMOs to solicit their employees and as a result, the entire HMO movement in the state was faced with dissolution. The law has produced significant and immediate results and another HMO is being planned for organization shortly.

III. COST AND QUALITY CONTROL

Due to the projected limited scope of the CHIP program, a rate setting formula or separate reasonable fee system was not developed. It was thought that this would add another unnecessary layer of control over the existing overburdened system (e.g., Medicare, Medicaid, Blue Cross, Workmen's Compensation). Instead, the fiscal intermediaries utilize, according to the CHIP regulations, their respective reasonable fee profile systems for reimbursement of provider charges. However, they must follow the regulations completely to ascertain whether or not a particular service is covered by the program. Moreover, the intermediaries must employ their medical advisors in reaching any decisions in judgment areas such as overutilization, custodial care and medical necessity.

Applicants may appeal to the Director of the DOH any adverse decision made by an intermediary regarding all aspects of claim administration. They may also appeal any adverse decision made by the DHI concerning eligibility. A formal appeal system is

provided for by the state's Administrative Procedure Act. When an appeal is received by the Director, it is referred to the DHI. The DHI then schedules a meeting of the CHIP Appeals Review Committee, composed of a registered nurse, social worker, physician, medical advisor and CHIP coordinator of the intermediary involved and the Chief of the DHI as Chairman. Medical records and case records are carefully reviewed and the Committee has the power to overturn the decision of the DHI eligibility section and/or intermediary. If the decision sustains that of the DHI or intermediary, then the applicant may request an adjudicative hearing within the DOH before an impartial hearing officer. The officer also has the power to overturn any previously adverse decision. If the appeal is denied at this level, the applicant may file an action in the Superior Court System of Rhode Island and no further appeal is available within the DOH.

Intermediaries are required to accumulate specific demographic data from claims processed which are provided to the DHI as requested in order to monitor program performance, recommend changes to the law and regulations and to provide a base for preparation of annual reports. Application data are also used by the DHI for these purposes. Additionally, Rhode Island Health Services Research, a private non-profit locally based health research firm, is employed by the DHI to analyze such data, conduct household surveys and to provide input for the required annual CHIP report.

Medical Society Review Committees are used by the intermediary on selected cases involving custodial care, overutilization and reasonable fees. The DHI has contracted with Equifax, Inc., a private investigative firm, to conduct checks into possible duplicate coverage not reported by an applicant, residency and financial data, when none is available from the Rhode Island Division of Taxation. Since there is a percent of income requirement on certain cases in order to determine the CHIP deductible, the DHI has established a program for requesting such information from the Division of Taxation. When a return has not been filed recently, an Equifax referral may be necessary.

IV. PROGRAM COSTS

The following financial statistics reflect program experience during 1976:

Total claim expenditures	$858,865
Average monthly	$ 71,572
Average per applicant	$ 4,544
Difference over 1975	+$351,206
Percent change over 1975	+ 69%
Total Claims (Metropolitan)	$ 68,001
Total Claims (Blue Cross)	$790,864
Total administration (Metropolitan)	$ 13,874
Total administration (Blue Cross)	$ 55,951

Program costs are projected annually during the budget preparation time period for the following two fiscal years. Projections have

not matched costs for 1976 but are expected to do so for 1977. Program promotion efforts are now beginning to demonstrate some positive results. Slow progress was made during the first full year of operation. A contact program has been established throughout the state with various providers, special interest groups and other involved state agencies. Also, the DHI has made over two hundred appearances during the last one and one half years before different groups and organizations in the state promoting the CHIP program.

Although the total administrative costs appear to be high, many of the CHIP related duties do not pertain to claims, as was previously discussed. The actual administrative costs relating to claims, including a percentage of time from the DOH and DBR, is approximately 10%.

Officials of the State Medicaid program do not believe that the existence of CHIP has, to any measurable extent, impacted upon the administrative costs of their program. In fact, due to the nature of CHIP as a "bottomline" program, the DHI has been case finding for Medicaid. It is very difficult for the reverse to occur. As previously mentioned, Blue Cross and commercial insurers case-find for CHIP where practical when a person approaches the major medical maximum. Here again, we believe that the costs associated with these efforts are barely measurable.

Many of the CHIP cost control devices could be utilized by other states contemplating health insurance programs. For example,

most states have a variety of medical society peer review committees. Accumulation of only the specific data needed to perform an objective analysis of the program is extremely important in order to implement an effective cost control plan. If the administrative agency does not have the expertise to initiate such a program, outside professional resources should be employed. A uniform reporting system should be developed as soon as possible during the implementation phase of a new program in order to capture the required data from the outset.

V. NATIONAL HEALTH INSURANCE

CHIP has been designed to coordinate with any future National Health Insurance Program (NHI). In fact, such wording is part of the Exclusions listed in the CHIP Act--"...medical services which may be financed in the future on behalf of all citizens by the United States." This would not necessarily close down the CHIP Program but it would be altered according to the nature and extent of the NHI plan. Of course, a complete evaluation of the CHIP goals and priorities should occur immediately if and when NHI is enacted.

INFORMATION ABOUT MINNESOTA'S CATASTROPHIC HEALTH EXPENSE PROTECTION PROGRAM

(PP
Minnesota Department
of Public Welfare
Box 30176
St. Paul, Minn. 5517[illegible]

What Is the Catastrophic Health Expense Protection Program?

The Catastrophic Health Expense Protection Program ("CHEPP") is a state program to help people who have had very high expenses for health care which no insurance company or other plan of health coverage will pay.

The program will pay 90 percent of the reasonable cost of covered services over and above an annual deductible that each eligible family must be responsible for itself.

When Am I Eligible?

You and your family are eligible for help from CHEPP when the sum of what you owe and what you have paid for health services received after June 30, 1977 equals your deductible. This is called satisfying the deductible. The charges used to satisfy the deductible must be for services covered by CHEPP, and they must be charges for which no one else is or has been liable. This means that anything paid or owed by an insurance company, Medicare, Worker's Compensation, or some other third party doesn't count.

How Much Would My Deductible Be?

Your "out-of-pocket" deductible is figured for your family--you and your tax dependents. It is always at least $ 2,500 per year. Often it is more.

To figure your deductible, take 40 percent of your gross family income up to $ 15,000 for the calendar year before the year in which you apply for CHEPP. To that figure, add 50 percent of your gross family income between $ 15,000 and $ 25,000 for that year. Then add in 60 percent of your gross family income in excess of $ 25,000 for that year. The sum is your deductible unless it is less than $ 2,500. In that case, your deductible is $ 2,500.

Some Examples:

A family applying for CHEPP in 1977 had gross family income in 1976 of $ 6,000. 40 percent of $ 6,000 is $ 2,400. This is less than $ 2,500, so the minimum deductible of $ 2,500 applies.

A family applying for CHEPP in 1978 had gross family income in 1977 of $ 26,000. 40 percent of $ 15,000 is $ 6,000. 50 percent of $ 10,000 (that is, $ 25,000 minus $ 15,000) is $ 5,000. 60 percent of $ 1,000 is $ 600. So the deductible is $ 6,000 plus $ 5,000 plus $ 600, which adds up to $ 11,600.

What Is Gross Household Income?

Gross household income is the sum of all the money income of all the members of a family except the children during a calendar year. It includes salaries, Social Security, pensions, welfare cash assistance, and tax-exempt interest income. It includes disability income payments, but food stamps, payments by Medicare, and payments by health insurance companies are not included. Gross household income is roughly what a family would report on its application for the Minnesota Homeowner and Renter Income-adjusted Homestead Credit or for the Senior Citizen's Special Property Tax Freeze Credit. (These applications are the goldenrod color forms that come with the Minnesota Individual Income Tax forms and instruction booklets.)

How Long Could I Be Eligible for Chepp?

CHEPP eligibility runs for 12 calendar months, beginning on the date of the first service offered in satisfaction of the CHEPP deductible. After the 12 months, you must requalify for CHEPP by incurring a new deductible. The new deductible is based on your gross family income in the calendar year before your new application.

What Health Services Are Covered?

The following health services are covered by CHEPP (if they were prescribed by a physician) but only to the extent that nobody other than yourself and your family is or has been liable for paying for the charges. These are also the services whose costs can count towards the CHEPP deductible, to the extent that nobody else is or has been liable for them.

1. Hospital services, both inpatient and outpatient;
2. Services of a medical doctor or osteopath (but not outpatient care for mental illness);
3. Drugs which require a physician's prescription;
4. Up to 120 days of care in a skilled nursing facility which meets Medicare standards, but only if the care is for serious illness or for rehabilitation, and only if the care begins within 14 days of a hospital stay of at least 3 days and is for a condition which was treated during the hospital stay; custodial care is not covered;
5. Home health agency services from an agency which meets Medicare standards, if the services are reimbursable under the Medicare program.
6. Use of radium, deep X-rays, and other radioisotopes;
7. Oxygen;
8. Anesthetics;
9. Prostheses such as artificial legs (but not false teeth or dental bridges);
10. Rental or purchase (whichever is most appropriate) of durable medical equipment (but not eyeglasses and hearing aids);
11. Laboratory tests and diagnostic X-rays;
12. Oral surgery for partly or completely unerupted impacted teeth, tooth roots, or for the gums or mouth tissues if the surgery is not related to the simple repair or extraction of teeth;
13. Services of a qualified physical therapist;
14. Medically necessary transportation in a licensed ambulance to the nearest facility qualified to treat the patient's condition; and
15. Nursing home care for patients under age 65 who have been in a nursing home continuously for at least 36 months. [*Note: payments for this group of nursing home residents are made on the basis of a special formula, and then only at the end of each state fiscal year (June 30).*]

When Can I Apply for CHEPP?

You can apply for CHEPP when you think you owe (or have paid) enough money for covered health services to satisfy the deductible that applies to you and your family. The money you owe or that you have paid must be for services received after June 30, 1977.

Where Do I Apply for CHEPP Help?

Apply for CHEPP benefits at your county welfare or social service office.

What Should I Bring if I Apply?

1. Bills for health services you want to apply to the CHEPP deductible. Also bring bills in excess of your deductible which you would like CHEPP to pay. If you have paid some of these bills, bring proof that you paid them.
2. All of your family's health insurance and automobile insurance identification cards (or copies of the policies or certificates).
3. Tax returns from the previous year to show what your gross family income was. If you filed for the Renter's Credit, Income-adjusted Homestead Tax Credit, or Senior Citizen's Special Property Tax Freeze Credit, bring a copy of your application.
4. Medicare, Veterans' Administration, and CHAMPUS identification cards.
5. Other information about people who may be liable for health care or for buying insurance for members of your family (such as a divorced husband).

Must I List All My Property and Assets?

Owning property and having savings will not make you ineligible for CHEPP. But your county welfare department will ask you about your assets to see if you might qualify for Medical Assistance ("Medicaid") or for General Assistance Medical Care. If you are eligible for one of those programs, you are probably not eligible for CHEPP. Those programs cover more kinds of care than CHEPP. They pay 100 percent of the cost of care. Often they have a lower deductible than CHEPP. But they have restrictions on property and other assets.

What Happens if I Am Eligible for CHEPP?

When you become eligible for CHEPP, your county welfare department will give you instructions and a handbook.

You will get a family CHEPP identification card. This card must be shown to all providers of health services which you want billed to CHEPP. It tells the provider what your CHEPP claim number is and alerts him to the fact that he will have to bill CHEPP instead of you. (In most cases CHEPP will not accept bills from you personally once you have become eligible.)

If you have already paid for services in excess of your deductible at the time you apply for CHEPP, copies of those bills and evidence of what part of them you paid will be collected. Then the state will pay you 90 percent of the reasonable cost of those services, minus any third party payments made to you or on your behalf.

Once a month you will get a listing from the state's computer of all the bills the state has paid for members of your family. This is called an Explanation of Medical Benefits ("EOMB"). It tells you how much copayment (the 10 percent which the state doesn't pay) you owe to the provider of each service. If the state has decided that part of a charge was too high, that part is forgiven by state law. You owe only the listed copayment amount.

Can I Substitute CHEPP for Health Insurance?

The Catastrophic Health Expense Protection Program is not intended to take the place of your own health insurance. This is why the minimum deductible is so high. (Your family's deductible may be considerably higher than the $ 2,500 minimum.) CHEPP is intended to help people whose medical bills have run way beyond what their insurance will pay or who haven't been able to buy health insurance. You don't have to have health insurance in order to qualify for CHEPP, but having some form of health insurance or prepaid health coverage is to your advantage.

How Does CHEPP Relate to the MCHA "Bad-risk" Insurance Program?

The law which set up CHEPP also set up a program of health insurance for people whose health problems have made them practically uninsurable. This other program, sometimes called "catastrophic health insurance," is run by the Minnesota Comprehensive Health Association (the "MCHA") under the supervision of the Insurance Division of the Minnesota Commerce Department. Information in this pamphlet does not apply to the programs of insurance offered by the Minnesota Comprehensive Health Association. *Information about these programs is available from:*

The Minnesota Comprehensive Health Association
Box 9309
Minneapolis, Minnesota 55440

Where Can I Get More Information about CHEPP?

To get more information about CHEPP, write to the address on the cover of this pamphlet or, after July 1, 1977, call your county welfare or social service office.

File No. 3

State of Rhode Island and Providence Plantations

JANUARY SESSION, 1974

CHAPTER 50.

AN ACT to Protect the Public Health of the People of the State of Rhode Island and Providence Plantations.

74-S 2239 A
Approved
Apr. 26, 1974.

PREAMBLE

Whereas, The state of Rhode Island has the right and the obligation to promote the public health, safety, morals and general welfare; and

Whereas, The high cost of health services can serve as a barrier to persons in need of health care, all to the detriment of the public health; and

Whereas, promotion of the public health, safety and welfare requires that all citizens have equal access to health services and a means to protect themselves against the extraordinary costs of serious illness or injury; and

Whereas, promotion of the public health, safety and welfare further requires that employers be encouraged to provide the best quality of health cov-

erage to their employees and their dependents, and that all other persons be encouraged to obtain the best quality of health coverage for themselves and their dependents; and

Whereas, Promotion of the public health, safety, and welfare further requires that persons or other entities which provide health services or which provide for the prepayment and insurance of health services, or which assist in the payment of health services; do so in furtherance of the public interest, now therefore,

It is enacted by the General Assembly as follows:

Section 1. Title 42 of the general laws entitled "State affairs and government" as amended is hereby further amended by adding thereto the following chapter:

CHAPTER 62

Catastrophic Health Insurance

42-62-1. SHORT TITLE.—This act shall be known and designated as the Rhode Island catastrophic health insurance plan ("CHIP") act.

42-62-2. PURPOSES.—The purposes of this chapter are to assure that each person residing in the state of Rhode Island shall have access to needed diagnostic, curative, and rehabilitative health services at reasonable costs and that each person shall have a reasonable means of protecting himself against the unusually high costs of receiving such health services. For these purposes the general assembly finds that promotion of the public health, safety and general welfare re-

quires that the conditions and responsibilities for the payment and provision of such health services be established.

42-62-3. EXERCISE OF POLICE POWER.—This chapter shall be deemed an exercise of the police power for the protection of the health, safety and general welfare of the people of the state.

42-62-4. DEFINITIONS.—

(a) The term "employer" means any person, partnership, association, trust, estate, corporation, whether foreign or domestic, or the legal representative, trustee in bankruptcy, receiver or trustee, thereof, or the legal representative of a deceased person, including the state of Rhode Island and each city and town therein, which has in its employ one or more individuals during any calendar year after the effective date of this chapter. For purposes of this section, the term "employer" shall refer only to an employer with persons employed within the state of Rhode Island.

(b) The term "employee" means any person who has entered into the employment of or works under contract of service or apprenticeship with any employer. It shall not include a person who has been employed for less than thirty days by his employer, nor shall it include a person who works less than an average of thirty hours per week. For purposes of this chapter, the term "employee" shall mean a person employed by an employer as defined in section 42-62-4 (a). Except as otherwise provided herein the terms "employee" and "employer" are to be defined according to the rules and regulations of the department of employment security.

(c) The term "insurer" shall include all persons, firms or corporations offering and/or insuring health services on a prepaid basis, including, but not limited to policies of accident and sickness insurance, as defined by chapter 18 of title 27, general laws of Rhode Island, 1956 as amended, nonprofit hospital or medical service plans, as defined by chapters 19 and 20 of title 27, general laws of Rhode Island, 1956 as amended, or any other entity whose primary function is to provide diagnostic, therapeutic or preventive services to a defined population on the basis of a periodic premium. It shall include all persons, firms, or corporations providing health benefits coverage for employees on a self-insurance basis without the intervention of other entities.

(d) The term "health maintenance organization" means an organized system of health care which accepts the responsibility to provide or otherwise assure the delivery of, an agreed upon set of comprehensive health maintenance and treatment services, for a voluntarily enrolled group of persons in a geographic area and is reimbursed through a pre-negotiated and fixed periodic payment made by or on behalf of each person or family unit enrolled in the plan.

(e) The term "health services" means those medical, professional, and paraprofessional services provided to a person to prevent disease, to maintain health, to detect disease and disability in early stages, to diagnose and treat illness, and to rehabilitate a person to his fullest capacities.

(f) The term "benefit" or "health benefit" means a health service financed for a person by a third party such as an insurer or the state.

(g) The term "allowable income" means the adjusted gross income as defined pursuant to section 44-30-12 of the Rhode Island general laws, 1956 as amended, minus any personal exemptions allowed pursuant to such chapter.

(h) The term "state" means the State of Rhode Island and Providence Plantations.

(i) The term "United States" means the government of the United States of America or any of its instrumentalities.

(j) The term, "departmental health advisory councils" means those councils which have been appointed to serve in an advisory capacity for various specific health matters which are a responsibility of the director of department of health or the director of the department of mental health, retardation, and hospitals.

(k) The term "maternity benefits" shall mean benefits rendered for normal obstetrical care. It shall include benefits for completion of obstetrics, prenatal care, care of the newborn infant, labor, delivery, and puerperium care. The term shall include benefits for normal deliveries or for any complications of pregnancy which do not result in delivery of a viable fetus.

(l) The term "medicare" means part A and part B of the United States social security act, title XVIII, as amended, 42 U.S.C. sections 1394, et seq.

(m) The term "physician" means any person duly licensed to practice surgery or medicine pursuant to the provisions of chapters 29, 31 of title 5 and chapters 36, and 37 of title 6 of the general laws of Rhode

Island, 1956 as amended (except dental hygienists), and comparable laws of other countries.

(n) The term "eligible person" means a person who has established permanent residency in the state for three months and who has the legal responsibility for the payment of eligible health costs incurred on his or her behalf or the behalf of persons for whom he or she is legally responsible. A person who has moved to the state for the primary purpose of receiving benefits provided pursuant to this chapter shall not be considered to be a permanent resident unless such residency has been established pursuant to a judicial order to be a permanent residency.

(o) The term "eligible health service" means a health service which would be covered within the type of qualified program an eligible person would be expected to have by the director of health in order to incur the smallest personal resource payment applicable under this chapter.

(p) The term "personal resource payment" means the money an eligible person is obligated to pay from his or her own wages, salary, income or assets for eligible health services which are not otherwise reimbursable under a health benefits plan unless such person is covered under provisions of section 42-62-9.

(q) The term "qualified program" means those health benefits plans which provide for the payment of health services by insurers through plans which have been certified as qualified by the director of the department of business regulation pursuant to this chapter.

(r) The term "health benefits plan" means any plan by which health benefits are paid by an insurer, the state, or the United States.

(s) The term "costs of eligible health service" means those usual and customary costs, or charges or rates of vendors at levels which have been approved in a qualified program by the director of business regulation, and which shall serve as the basis for the costs, rates or charges for which the state would be liable to pay pursuant to the provisions of this chapter.

ARTICLE I

Entitlement to Health Benefits Protection

42-62-5. ENTITLEMENT.—Each person residing in the state regardless of age, sex, race, religion, occupational status, or previously existing physical condition shall be entitled

(a) To receive financial protection from costs of health services under conditions and limitations established by this chapter.

(b) To have access to available diagnostic, curative and rehabilitative health services which are medically necessary; and

(c) To obtain through insurers financial protection against the costs of such health services provided by qualified programs.

42-62-6. DUTY OF THE STATE.—

(a) The state shall pay for the costs of eligible health services of an eligible person when such costs are determined to be catastrophic.

(b) The costs of eligible health services shall be determined to be catastrophic when an eligible person has incurred an obligation for payment in an amount of money determined pursuant to section 42-62-7.

(c) Any person who becomes eligible for payment for the costs of eligible health services determined to be catastrophic shall remain eligible for such coverage during the calendar year in which he becomes so entitled and during the following calendar year if such person incurs an obligation during such following calendar year for the payment of eligible health costs which are at least equal to twenty-five percent (25%) of the amount of what such person's personal resource payment would have otherwise been during the preceding year of catastrophic coverage. Said amount shall then be an eligible cost for catastrophic coverage during such following calendar year.

(d) Beginning at October 1, 1974, costs of eligible health services incurred on and after October 1 of any preceding year shall be construed as costs incurred in such following year.

(e) In the case of a dispute as to the eligibility of a type of health service for coverage as a catastrophic cost, the director of the department of health may determine, on the basis of an appeal by an eligible person and written comment by the appropriate insurer, whether or not such health service is an eligible health service.

(f) In the case of a dispute as to the eligibility of a person for coverage of catastrophic costs by the state, the director of the department of health shall determine said eligibility after an appeal by a person from a decision by an insurer.

42-62-7. PERSONAL RESOURCE PAYMENTS.—(a) To be eligible for payment by the state pursuant to section 42-62-6 of his or her health services

of a catastrophic nature, an eligible person must have incurred an obligation to make the applicable personal resource payment computed pursuant to this section. Such payment shall not be a cost payable by the state pursuant to subsections 42-62-6 (a) and (b).

(b) The applicable personal resource payment shall be determined on a calendar year basis and shall not include the payments made to meet the deductible of a major medical plan or the premium costs of a health benefits plan. It shall include the co-insurance payments made under a major medical plan.

(c) The applicable personal resource payment applies to the obligation for payment of health services that are not covered under any health benefit plan, except for health maintenance organization plans.

(d) The applicable personal resource payments shall be determined in relation to the extent of coverage for health benefits, if any, to which an eligible person is otherwise entitled according to the following categories:

(i) An eligible person

(A) Who has a qualified program must have incurred an obligation to pay an amount equal to five hundred dollars ($500.00) or to ten percent (10%) of his or her allowable income, whichever amount is greater;

(B) Who has a program that would have otherwise been qualified, except for a qualified major medical health benefits plan, must have incurred an obligation to pay an amount equal to twelve hundred fifty dollars ($1250.00) or to twenty-five percent (25%) of his or her allowable income, whichever amount is greater;

(C) Who has a plan or plans of health benefits which is not a qualified program must have incurred an obligation to pay an amount equal to (1) the difference between costs covered by his plan or plans of coverage and a qualified program, or (2) an amount which does not exceed five thousand dollars ($5,000.00) or fifty percent (50%) of his or her allowable income, whichever is greater;

(ii) An eligible person who has medicare coverage and

(A) Who has a qualified supplemental program must have incurred an obligation to pay an amount equal to five hundred dollars ($500.00);

(B) Who does not have a qualified supplemental program must have incurred an obligation to pay an amount equal to one thousand dollars ($1000.00);

(iii) An eligible person who is not otherwise entitled to coverage under any other health benefits plan must have incurred an obligation to pay an amount equal to either five thousand dollars ($5,000.00) or to fifty percent (50%) of his or her allowable income, whichever amount is greater.

42-62-8. EXCLUSIONS.—All services and charges within any of the following classifications are excluded from the financial protection provided pursuant to section 42-62-6 and shall not be included as applicable personal resource payments pursuant to section 42-62-7.

(a) Benefits provided pursuant to the laws of the United States including, but not limited to military service-connected disabilities, medical services pro-

vided for employees of the armed forces of the United States, medical services financed for the benefit of persons over the age of 65 years of age and for persons with insufficient income and assets to purchase benefits pursuant to the laws of the United States, and medical services which may be financed in the future on behalf of all citizens by the United States;

(b) Care which is primarily for custodial or domiciliary purpose and is not medically necessary;

(c) Cosmetic surgery unless provided as the result of an injury or medically necessary surgical procedure;

(d) Dentistry and optometry unless prescribed as medically necessary as the result of an injury or serious illness or disability;

(e) Chiropractic and psychological therapy and social counseling unless prescribed as medically necessary;

(f) Corrective appliances and artificial aids, such as hearing aids, corrective lenses and eyeglasses, unless such appliances and aids are medically necessary for the purpose of rehabilitation;

(g) Drugs and medication legally requiring prescriptions unless such items are medically necessary;

(h) Drugs and medication not legally requiring prescription;

(i) Outpatient psychiatric care in excess of fifty percent (50%) of the cost incurred of such eligible health services as may be incurred in a calendar year;
