TESTIMONY BEFORE JOINT HOUSE AND SENATE RESOURCES COMMITTEE 1977/78

SENATOR POLAND, REPRESENTATIVE OSTERBACK AND MEMBERS OF THE JOINT HOUSE AND SENATE RESOURCE COMMITTEES OF THE ALASKA STATE LEGISLATURE.

I WANT TO THANK YOU FOR THIS OPPORTUNITY TO SPEAK TO YOU TODAY ON WHAT I CONSIDER A TOP PRIORITY THIS YEAR - A COMPREHENSIVE REVISION OF THE STATE'S OIL AND GAS TAXING SYSTEM.

FOR SEVERAL MONTHS MEMBERS OF MY STAFF MADE A COMPREHENSIVE REVIEW OF ALASKA'S CURRENT OIL AND GAS TAX STRUCTURE. THAT REVIEW CULMINATED IN A REPORT ENTITLED "ALASKA'S OIL AND GAS TAX STRUCTURE: A STUDY WITH RECOMMENDATIONS FOR IMPROVEMENT." WITH THE PERMISSION OF THE CHAIRMAN, I WOULD LIKE THE DEPARTMENT'S STUDY TO BE MADE A PART OF THESE COMMITTEE'S RECORDS AND PROCEEDINGS.

BEFORE I GET TO THE SPECIFIC RECOMMENDATIONS AND BILLS INTRODUCED TO IMPLEMENT THOSE RECOMMENDATIONS, LET ME BRIEFLY SUMMARIZE THE DEPARTMENT'S REPORT. THE DEPARTMENT FIRST BY WAY OF BACKGROUND AND INFORMATION, SKETCHED OUT AN OVERVIEW

OF OIL AND GAS OPERATIONS IN ALASKA AS WELL AS DESCRIBED THE PRESENT ALASKA TAX SYSTEM. SECONDLY THE DEPARTMENT DISCUSSED PAST REVENUE EXPENDITURE PATTERNS AND MADE EXPENDITURE AND REVENUE PROJECTIONS OVER THE NEXT FEW YEARS. OUR PROJECTIONS OF OIL AND GAS REVENUES WERE BASED UPON THE ASSUMPTION THAT NORTH SLOPE OIL WOULD BE PRICED AS FREE MARKET OIL WITHOUT ENTITLEMENT PENALTIES. WE ALSO POINTED OUT, HOWEVER, THAT OUR REVENUES WOULD BE SUBSTANTIALLY SMALLER IF NORTH SLOPE OIL RECEIVED A DEPRESSED PRICING TREATMENT. AS YOU KNOW THE FEDERAL ENERGY ADMINISTRATION HELD HEARINGS IN WASHINGTON D.C., SAN FRANCISCO AND ANCHORAGE THIS WEEK ON THIS VERY QUESTION. AT THOSE HEARINGS WE HAVE TAKEN THE POSITION THAT NORTH SLOPE OIL SHOULD BE PRICED AS FREE MARKET OIL WITHOUT ENTITLEMENT PENALTY.

IN A THIRD PHASE OF THE REPORT, THE DEPARTMENT DISCUSSED SEVERAL PROBLEMS OR DEFICIENCIES WHICH WERE FOUND IN EACH OF THE STATE'S MAJOR OIL AND GAS TAXES. IN THE FOURTH SECTION OF THE REPORT, THE DEPARTMENT MADE ITS RECOMMENDATIONS TO

CURE THE DEFECTS, AND THEN ESTIMATED THE REVENUE EFFECTS OF THE VARIOUS RECOMMENDATIONS.

WITH THAT SUMMARY OF THE DEPARTMENT'S REPORT LET ME DISCUSS IN TURN EACH OF OUR RECOMMENDATIONS AS EMBODIED IN BILL FORM AND CONTRAST OUR PROPOSALS WITH OTHER BILLS WHICH ARE NOW PENDING BEFORE YOUR RESPECTIVE COMMITTEES.

LET ME START WITH WHAT I CONSIDER AS THE FIRST PRIORITY - A REVISION OF THE STATE'S SEVERANCE TAX. THESE REVISIONS ARE CONTAINED IN HB 321 AND SB 238. ALTHOUGH OUR SEVERANCE TAX PROPOSAL HAS SEVERAL PARTS, IT ESSENTIALLY ACCOMPLISHED TWO MAJOR GOALS. FIRST, IT PROTECTS THE STATE'S SEVERANCE TAX REVENUES IN THE EVENT OF ARTIFICIALLY DEPRESSED FEDERAL PRICING. SECONDLY IT PROVIDES TAX RELIEF TO PRODUCTION AT OR NEAR A PROPERTY'S LIMIT. EACH OF THESE GOALS ARE EXTREMELY IMPORTANT. AS YOU KNOW, THE FEDERAL GOVERNMENT WILL

SOON BE ESTABLISHING THE PRICING TREATMENT TO BE AFFORDED NORTH SLOPE OIL. BOTH THE STATE'S ROYALTY SHARE AND SEVERANCE TAX ARE DEPENDENT UPON THE "WELL HEAD" PRICE OF OIL PRODUCED. IF NORTH SLOPE OIL IS ALLOWED TO FIND ITS PLACE IN THE FREE MARKET OUR ROYALTY AND SEVERANCE TAX REVENUES ARE PROTECTED. IF, HOWEVER, THE PRICE IS SET ARTIFICIALLY BELOW THE FREE MARKET PRICE A PORTION OF THE STATE'S REVENUES WILL BE LOST UNLESS CORRECTIVE ACTION IS TAKEN. THE CORRECTIVE ACTION WHICH WE PROPOSE TO GUARD AGAINST THIS DEPRESSED PRICING IS TO RAISE THE CENTS-PER-BARREL FLOOR IN THE SEVERANCE TAX TO WHAT WE PROJECT TO BE A MID POINT FREE MARKET PRICE OF OIL ON THE NORTH SLOPE ($7.50 PER BARREL) AND TO ESCALATE THAT FLOOR THROUGH TIME WITH A PRICE ESCALATOR. THUS IF AN ARTIFICIAL PRICE IS SET AT $7.00, $6.50 , $6.00 OR EVEN LESS, THE STATE WOULD STILL COLLECT SEVERANCE TAX ON THE BASIS OF THE FREE MARKET VALUE OF THE OIL. ACCORDINGLY WE MUST PROTECT OURSELVES FROM THE POTENTIAL DANGER OF DEPRESSED PRICING BY RAISING THE CENTS-PER-BARREL FLOOR THIS YEAR. IF WE WAIT AND THE PRICING DECISION GOES AGAINST US, WE MAY LOSE SUBSTANTIAL AMOUNTS OF

REVENUES DURING AN INTERIM PERIOD UNTIL CORRECTIVE ACTION CAN BE TAKEN. TO DELAY IN THE FACE OF THIS DANGER MIGHT RESULT IN A LARGE BUDGET DEFICIT FOR THIS NEXT FISCAL YEAR.

THE SAME DANGER TO THE STATE CAN ARISE THROUGH THE ACTIONS OF THE OIL CORPORATIONS THEMSELVES EVEN WITH A FAVORABLE PRICING DECISION BY THE FEDERAL GOVERNMENT. FOR EXAMPLE INTEGRATED OIL CORPORATIONS - OIL CORPORATIONS WHICH NOT ONLY PRODUCE BUT TRANSPORT, REFINE AND MARKET THEIR OWN OIL CAN ESSENTIALLY EFFECT THE WELL HEAD VALUE BY THE TARIFFS WHICH ARE SET FOR TRANSPORTATION OF ITS OIL AND BY THE CHOICE OF THE PLACE WHERE THE OIL IS REFINED. SINCE THE ALASKA WELL HEAD PRICE IS DETERMINED BY TAKING THE REFINERY PRICE AND NETTING BACK ALL THE TRANSPORTATION CHARGES TO THE FIELD, THE WELL HEAD VALUE WILL BE REDUCED AS TRANSPORTATION CHARGES ARE INCREASED. IF THE PIPELINE TARIFF OR TANKER TARIFF ARE INFLATED IT MAY SUBSTANTIALLY REDUCE THE WELL HEAD VALUE. BY INFLATING THE TRANSPORTATION CHARGES, THE INTEGRATED COMPANY CAN SHIFT THE

PROFITS FROM ITS PRODUCTION OPERATION TO OTHER PHASES OF ITS BUSINESS AND REDUCE ITS ROYALTY AND SEVERANCE TAX LIABILITIES. THESE POTENTIAL ACTIONS MUCH AS FEDERAL PRICING WOULD EFFECTIVELY REDUCE THE WELL HEAD PRICE BELOW WHAT WOULD OTHERWISE BE THE MARKET VALUE OF THE OIL. BY RAISING THE CENTS-PER-BARREL TAX FLOOR YOU PROTECT THE STATE AGAINST THESE POSSIBILITIES.

THE SECOND MAJOR GOAL OF OUR SEVERANCE TAX BILL AFTER ASSURING THAT OUR SEVERANCE TAX REVENUES ARE PROTECTED FROM THE VAGARIES OF FEDERAL PRICING ACTIONS AND CORPORATE MANIPULATION, IS TO PROVIDE TAX RELIEF FOR PRODUCTION WHICH IS APPROACHING, OR IS AT, ITS ECONOMIC LIMIT. AS MENTIONED IN OUR REPORT THE SEVERANCE TAX CAN ACT AS A DISINCENTIVE TO CONTINUED PRODUCTION AS PRODUCTION FROM A PROPERTY REACHES ITS ECONOMIC LIMIT. A PARTICULAR PROPERTY'S ECONOMIC LIMIT IS NOT SOLELY A FUNCTION OF THE VOLUME OF PRODUCTION BECAUSE THE COSTS OF PRODUCING OIL MAY VARY SUBSTANTIALLY IN DIFFERENT REGIONS OF THE STATE. FOR EXAMPLE A WELL PRODUCING 1,000 BARRELS A DAY IN COOK INLET

MAY BE NOWHERE NEAR ITS ECONOMIC LIMIT BUT A WELL PRODUCING AT THE SAME RATE ON THE NORTH SLOPE OR IN INTERIOR ALASKA MAY ACTUALLY HAVE REACHED ITS ECONOMIC LIMIT BECAUSE OF THE HIGHER COSTS OF PRODUCTION AND TRANSPORTATION IN THOSE AREAS. ACCORDINGLY A STAIR STEP APPROACH BASED UPON PRODUCTION LEVELS MAY WORK WELL FOR ONE PART OF THE STATE BUT NOT ANOTHER. THEREFORE HB 32L AND SB 238 PROVIDE A MECHANISM WHEREBY THE TAX RATE IS SCALED DOWN OR REDUCED AS A PARTICULAR PROPERTY REACHES ITS TRUE ECONOMIC LIMIT. THIS FEATURE ESSENTIALLY TAILORS THE TAX RATE SCHEDULE TO THE ECONOMICS OF EACH PRODUCING PROPERTY. INSTEAD OF STAIR-STEPS IT PROVIDES A CONTINUOUS SERIES TAX RATES FROM 10 PERCENT TO ZERO AND WHICH DECLINE AS PRODUCTION APPROACHES THE PRODUCTION LEVEL AT THE PROPERTY'S ECONOMIC LIMIT.

THERE WAS SOME SUGGESTION EARLIER IN THE WEEK BY MR. KILGORE, THAT THE ECONOMIC LIMIT FACTOR WAS DEFICIENT IN PRACTIVE SINCE IT SEEMED TO RESULT IN HIGHER EFFECTIVE TAX RATES FOR SOME

PRODUCTION IN COOK INLET. THIS PRESUMED DEFICIENCY IS SIMPLY NOT TRUE. I BELIEVE THAT THE EFFECTS WHICH MR. KILGORE SPOKE TO WERE NOT BECAUSE OF ANY DEFICIENCY IN THE ECONOMIC LIMIT FACTOR BUT RESULTED FROM THE EFFECTIVENESS OF THE CENTS-PER-BARREL FLOOR IN PROTECTING THE STATE AGAINST THE ARTIFICIAL PRICING ACTIONS OF THE FEDERAL GOVERNMENT. IN THIS REGARD IT SHOULD BE NOTED THAT AS PRODUCTION BECOMES INECONOMIC IN COOK INLET THE PRODUCERS MAY APPLY AND RECEIVE PRICING RELIEF FROM THE FEDERAL GOVERNMENT. NO SUCH LUXURY IS GIVEN TO THE ROYALTY OWNER, - THE STATE - AS PRICING RELIEF WILL BE GIVEN ONLY TO THE WORKING INTEREST AND NOT ROYALTY INTEREST. THE FEDERAL RATIONALE FOR THIS POLICY IS THAT THERE WILL BE NO ADDITIONAL PRODUCTION AS A RESULT OF PRICING RELIEF TO THE ROYALTY OWNER. THUS PRICING RELIEF IS GIVEN TO THE WORKING INTEREST. CERTAINLY IF YOU COMPARE THE TAX RATES TO THE ARTIFICIALLY ADMINISTERED PRICE IN COOK INLET YOU WILL GET HIGHER EFFECTIVE TAX RATES. BUT AS STATED BEFORE, THE STATE SHOULD NOT BE CONTENT TO SIMPLY ACCEPT TAXES BASED ON THE

ARTIFICIAL PRICE SET BY THE FEDERAL GOVERNMENT BUT SHOULD INSIST ON A PERCENTAGE OF THE TRUE MARKET VALUE OF THE RESOURCES PRODUCED. IF THE TAX RATES ARE COMPARED TO THE TRUE MARKET VALUE OF OIL IN COOK INLET THESE HIGHER EFFECTIVE TAX RATES DISAPPEAR. THE ECONOMIC LIMIT FACTOR DOES WORK AS PLANNED TO SCALE DOWN THE TAX RATE AS THE PROPERTY REACHES ITS "TRUE ECONOMIC LIMIT". BY THIS I MEAN THE ECONOMIC LIMIT AS GAUGED BY THE MARKET VALUE OF THE OIL NOT THE ARTIFICIALLY SET PRICE. THUS USING THE TRUE MARKET VALUE OF OIL AS THE STANDARD IF THE ECONOMIC LIMIT FOR THE PROPERTY IS 100 BARRELS A DAY AND THE CURRENT PRODUCTION HAS DECLINED TO 200 BARRELS A DAY THE TAX RATE WILL BE SCALED DOWN BY 50 PERCENT. WHEN PRODUCTION REACHES 100 BARRELS A DAY OR WHEN IT IS AT ITS ACTUAL ECONOMIC LIMIT, THE TAX RATE IS ZERO.

LET ME ALSO POINT OUT SOME OF THE OTHER FEATURES OF HB 321 AND SB 238.

THE BILL WOULD PLACE THE TAX ON GAS PRODUCTION ON AN EQUIVALENT BASIS AS OIL AND IT WOULD ESTABLISH A CENTS-PER-MCF FLOOR AT 6.4 CENTS PER MCF. THIS IS BASED UPON THE HIGHEST PRICE PAID FOR GAS IN COOK INLET. THIS FLOOR, AS THE CENTS-PER-BARREL FLOOR, WOULD PROTECT GAS SEVERANCE TAX REVENUES FROM DEPRESSED PRICING BELOW MARKET VALUE.

BOTH THE CENTS-PER-BARREL AND CENTS-PER-MCF FLOORS WOULD BE ADJUSTED BY AN INFLATION FACTOR SET OUT IN THE BILL.

IN ADDITION THE BILL WOULD PROVIDE FOR TAX ON FLARED GAS WHICH IS PRESENTLY UNTAXED. THE TAX RATE FOR THIS FLARED GAS WOULD BE TWICE THE CENTS-PER-MCF RATE. THIS WILL PROVIDE ADDITIONAL INCENTIVE TO THE PRODUCER TO CONSERVE OUR NATURAL RESOURCES.

WITH THAT DISCUSSION OF THE SEVERANCE TAX PROPOSAL, I WOULD LIKE TO CONTRAST OUR SEVERANCE TAX PROPOSAL WITH OTHER SEVERANCE TAX PROPOSALS WHICH HAVE BEEN INTRODUCED. THE OTHER SEVERANCE TAX PROPOSALS ARE SB 103 AND HB 144.

FIRST, SB 105 AND HB 144 IN CONTRAST TO OUR BILLS DO NOT FULLY PROTECT THE STATE AGAINST UNFAVORABLE FEDERAL PRICING DECISIONS. THIS IS BECAUSE THE OTHER BILLS LEAVE THE CENTS-PER-BARREL FLOOR AT ITS PRESENT LEVEL OF $6.10 PER BARREL. THUS THE CENTS-PER-BARREL FLOOR WOULD NOT KICK IN TO PROTECT THE STATE UNTIL THE WELL HEAD PRICE OF OIL WAS REDUCED BELOW $6.10. THIS IS $1.40 BELOW THE PROJECTED FREE MARKET PRICE OF NORTH SLOPE OIL. JUST THIS DIFFERENCE OF $1.40 A BARREL IN THE SEVERANCE TAX FLOOR COULD COST THE STATE FROM $100 TO $200 MILLION DOLLARS A YEAR. TO PROTECT THE STATE AGAINST UNFAVORABLE FEDERAL PRICING AND CORPORATE MANIPULATIONS, IT IS NOT ENOUGH SIMPLY TO RAISE THE PERCENTAGE RATES SINCE ANY PERCENT OF AN ARTIFICIAL PRICE ONLY RETURNS THAT PERCENTAGE AMOUNT OF THAT ARTIFICIAL PRICE. TO PROTECT THE STATE, THE CENTS-PER-BARREL FLOOR HAS TO BE RAISED TO THE FREE MARKET LEVEL.

SECONDLY SB 103 AND HB 144 DO NOT ADEQUATELY PROVIDE TAX RELIEF TO PRODUCTION APPROACHING ITS ECONOMIC LIMIT. THESE BILLS ATTEMPT TO PROVIDE RELIEF FOR MARGINAL WELLS BY EXPANDING THE NUMBER OF STAIR-STEP TAX RATES AND BY APPLYING A ZERO TAX RATE IF PRODUCTION DECLINES TO 100 BARRELS A DAY. AS STATED EARLIER, THE STAIR-STEP APPROACH WILL WORK AT BEST ONLY FOR A PARTICULAR PART OF THE STATE. THUS THE STAIR-STEP SCHEDULE SET OUT IN THESE BILLS WILL PROVIDE RELIEF FOR COOK INLET PRODUCTION BUT WILL NOT PROVIDE RELIEF FOR OTHER AREAS IN THE STATE IN WHICH THE ECONOMIC LIMIT IS WELL ABOVE 100 BARRELS A DAY. FOR PRODUCTION ON THE NORTH SLOPE AND IN INTERIOR ALASKA WHICH HAVE HIGHER COSTS OF PRODUCTION AND TRANSPORTATION, THERE WILL NOT BE TAX RELIEF SINCE THE ECONOMIC LIMIT FOR THIS PRODUCTION MAY IN FACT REACH AS HIGH AS 1,000 BARRELS A DAY. THUS IN CONTRAST TO OUR SEVERANCE TAX PROPOSAL, SB 103 AND HB 144 DO NOT PROVIDE TAX RELIEF FOR MARGINAL PRODUCTION EXCEPT FOR COOK INLET PRODUCTION.

IN ADDITION SB 103 AND HB 144 DO NOT ADDRESS THE SEVERANCE TAX ON GAS PRODUCTION. THESE BILLS SIMPLY LEAVE THE TAX AT THE CURRENT 4 PERCENT OF VALUE WITHOUT PROVIDING A SEVERANCE TAX FLOOR TO PROTECT AGAINST DEPRESSED GAS PRICING. ALSO THE GAS FLARING TAX IN THESE BILLS MAY BE TOTALLY DEFICIENT SINCE IT IS NOT BASED ON A CENTS-PER-MCF BASIS BUT ON A PERCENTAGE OF VALUE BASIS. FOR EXAMPLE IT MIGHT BE ARGUED THAT GAS WHICH IS FLARED HAS ZERO VALUE OR PRICE SO ANY PERCENTAGE OF ZERO WOULD GIVE YOU ZERO REVENUE. ACCORDINGLY THE GAS FLARING TAX SHOULD BE BASED ON A CENTS-PER-MCF BASIS AS IN OUR BILLS TO CLOSE THIS POTENTIAL LOOPHOLE.

THUS WE BELIEVE THAT OUR SEVERANCE TAX PROPOSAL IS SUPERIOR IN THAT IT PROTECTS THE STATE AGAINST DEPRESSED FEDERAL PRICING; PROVIDES TAX RELIEF TO MARGINAL PRODUCTION IN ALL PARTS OF THE STATE; AND ASSURES A FAIR SEVERANCE TAX RETURN ON GAS PRODUCTION.

I WOULD LIKE TO NOW TURN TO OUR INCOME TAX PROPOSAL.

AS EXPLAINED EARLIER IN THE WEEK BY PROFESSORS ZEIFMAN AND AINSWORTH, THERE ARE TWO MAJOR PROBLEM AREAS WITH THE CURRENT CORPORATE INCOME TAX. THE FIRST PROBLEM IS THE ERODED FEDERAL CORPORATE INCOME TAX BASE WHICH ALASKA HAS INCORPORATED AS ITS OWN. OVER THE YEARS, CONGRESS HAS CONTINUALLY ERODED THE FEDERAL TAX BASE BY SPECIAL EXEMPTIONS, DEDUCTIONS, AND CREDITS WHICH DO NOT REFLECT NORMAL FINANCIAL ACCOUNTING. THE EROSION HAS BECOME SO GREAT THAT FEDERAL TAXABLE INCOME IS SUBSTANTIALLY BELOW THE NET INCOME WHICH IS CERTIFIED AND REPORTED TO SHAREHOLDERS. FOR EXAMPLE AS INDICATED ON PAGE 7 OF CHAPTER 5 OF OUR REPORT, A CONGRESSIONAL REPORT SHOWS THAT 5 MULTINATIONAL OIL COMPANIES PAID $107 MILLION DOLLARS IN CORPORATE INCOME TAXES TO THE FEDERAL GOVERNMENT ON PRE TAX PROFITS OF MORE THAN 2.2 BILLION FOR AN EFFECTIVE AVERAGE TAX RATE OF 4.8 PERCENT. THE REPORT ALSO SHOWS THE FINDINGS OF THE CONGRESSIONAL STUDY, IN WHICH THE EFFECTIVE FEDERAL TAX RATE ON THEIR WORLDWIDE INCOME IS

SHOWN FOR SEVERAL OF THE MAJOR OIL CORPORATIONS. NEEDLESS TO SAY THESE EFFECTIVE TAX RATES ARE SUBSTANTIALLY BELOW THE FEDERAL STATUTORY TAX RATE OF 48 PERCENT.

THE SECOND MAJOR PROBLEM FOUND WAS THE MANNER IN WHICH THE CORPORATION'S TOTAL NET INCOME IS APPORTIONED TO ALASKA. CURRENTLY THE TOTAL FEDERAL TAXABLE INCOME OF AN ALASKAN CORPORATION PLUS THE TAXABLE INCOME OF ALL OF ITS UNITARY AFFILIATES AND SUBSIDIARIES ARE COMBINED INTO A TOTAL WORLD-WIDE TAXABLE INCOME FIGURE AND THEN THAT AMOUNT IS MULTIPLIED BY A 3 FACTOR FORMULA OF PROPERTY, PAYROLL AND SALES. THE PRODUCT OF THAT CALCULATION BECOMES ALASKA TAXABLE INCOME FOR THE ALASKAN CORPORATION AND IT IS TAXED AT THE 9.4 PERCENT NOMINAL RAX RATE.

THE PRESENT APPORTIONMENT FORMULA OF PROPERTY, PAYROLL AND SALES IS DESIGNED TO MEASURE THE ACTIVITY OF GENERAL MERCHANTILE BUSINESSES. IT DOES NOT ACCURATELY MEASURE THE ACTIVITIES OF NATURAL RESOURCE COMPANIES AND IT DOES NOT TAKE INTO

ACCOUNT THE UNIUQE CONTRIBUTION MADE BY NATURAL RESOURCES THEMSELVES. THE PRESENT DESTINATION-ORIENTED FORMULA DOES NOT GIVE ANY WEIGHT TO THE SCARCITY VALUE OF THE NON-RENEWABLE RESOURCE WHICH IS REALLY WHAT DETERMINES THE INCOME OR PROFIT FOR A NATURAL RESOURCE COMPANY.

THE TAX WOULD BE LEVIED ON AND WOULD BE MEASURED BY THE TOTAL WORLD-WIDE NET INCOME OF THE CORPORATION AND ALL OF ITS UNITARY AFFILIATES AND SUBSIDIARIES AS REPORTED AND CERTIFIED TO ITS SHAREHOLDERS AND THEN APPORTIONED TO ALASKA BY A 3 FACTOR FORMULA. IN ONE CLEAN SWEEP IT WOULD ELIMINATE ALL OF THE SPECIAL SUBSIDIES AND ACCOUNTING DEVICES WHICH ARE EMBODIED IN THE PROVISIONS OF THE INTERNAL REVENUE CODE. THUS THE INCOME WOULD BE BASED ON NORMAL FINANCIAL NET INCOME UNERODED BY ALL THE SPECIAL FEDERAL EXEMPTIONS, CREDITS AND DEDUCTIONS.

ADMITTEDLY THERE IS SOME FLEXIBILITY UNDER NORMAL ACCOUNTING PRINCIPLES FOR THE DETERMINATION OF NET INCOME THAT IS REPORTED

TO STOCKHOLDERS. WE BELIEVE, HOWEVER, THAT THERE ARE REAL DETERRENTS AGAINST MANIPULATING "BOOK INCOME" FOR STATE TAX PURPOSES. FIRST OF ALL, BOOK INCOME IS SUBJECT TO CERTIFICATION UNDER RULES PROMULGATED BY THE AMERICAN INSTITUTE OF CERTIFIED PUBLIC ACCOUNTANTS AND IS SUBJECT TO REVIEW BY THE SECURITIES AND EXCHANGE COMMISSION. IN ORDER TO MANIPULATE "BOOK INCOME" TO LOWER ALASKA TAX LIABILITY, IT WOULD HAVE TO BE DONE AT THE EXPENSE OF THE CORPORATION'S STOCKHOLDERS.

THE EFFECTIVENESS OF ELIMINATING THE FEDERAL EROSIONS THROUGH THE ADOPTION OF BOOK INCOME WAS DEMONSTRATED BY PROFESSORS ZEIFMAN AND AINSWORTH. THEY FOUND IN THE SAMPLE OF LARGE OIL CORPORATIONS DOING BUSINESS IN ALASKA THAT BOOK INCOMES EXCEEDED FEDERAL TAXABLE INCOME BY 1.6 TO 3 BILLION DOLLARS A YEAR OVER THE LAST THREE YEARS.

THE SECOND MAJOR REVISION IS A MODIFICATION OF THE UNIFORM APPORTIONMENT FORMULA OF PROPERTY, PAYROLL AND SALES. THE

BILL SUBSTITUTES AN ORIGIN ORIENTED EXTRACTION FACTOR FOR THE DESTINATION ORIENTED SALES FACTOR. THUS A NEW FACTOR WOULD BE ADDED TO THE APPORTIONMENT FORMULA AND WOULD BE MEASURED BY THE NET PRODUCTION OF OIL AND GAS IN ALASKA VERSUS THE NET PRODUCTION OF OIL AND GAS EVERYWHERE. THIS WILL MEAN THAT FOR THE FIRST TIME, THE AMOUNT OF INCOME ATTRIBUTED TO ALASKA WILL BE BASED UPON, IN PART, THE AMOUNT OF OIL AND GAS PRODUCED IN ALASKA.

ACCORDINGLY THE BILL PROVIDES A METHOD IN WHICH WORLD-WIDE "BOOK INCOME" OF THE TOTAL UNITARY BUSINESS OPERATIONS WILL BE MULTIPLIED BY A FORMULA OF PROPERTY, PAYROLL AND EXTRACTION. IN ADDITION, TO SPECIFICALLY MEASURING PRODUCTION ACTIVITY IN THE STATE, THE SUBSTITUTION OF THE EXTRACTION FACTOR FOR THE SALES FACTOR WILL RETURN A LARGER PORTION OF A CORPORATION'S INCOME TO THE STATE. AND WELL THAT IT SHOULD SINCE THE TAX SHOULD BE MEASURED BY THE SCARCITY VALUE OF OUR NATURAL RESOURCES.

THERE WAS SOME SUGGESTION EARLIER IN THE WEEK THAT THERE MIGHT BE A PROBLEM WITH THE DETERMINATION OF NET EXTRACTION FROM FOREIGN JURISDICTIONS IN WHICH THE CORPORATIONS WOULD BE ACTING AS ESSENTIALLY A CONTRACTOR AND HAVE NO INTEREST IN THE OIL ITSELF. THE REASON FOR THE CONCERN SEEMED TO STEM FROM THE FACT THAT A BREAK DOWN OF PRODUCTION MIGHT NOT BE REPORTED IN PUBLISHED FINANCIAL STATEMENTS. IN OUR EARLY CONSIDERATION OF THE EXTRACTION FACTOR, WE ANTICIPATED THIS POTENTIAL DIFFICULTY BECAUSE OF THE ABSENCE OF CONSISTENT FIGURES ON PUBLISHED FINANCIAL STATEMENTS. FOR THAT REASON WE HAVE HAD OUR MULTI-STATE TAX COMMISSION AUDITORS DETERMINE IF ADEQUATE RECORDS ARE AVAILABLE TO AUDIT WORLD WIDE NET PRODUCTION. IN CONNECTION WITH CURRENT AUDITS WHICH THEY ARE DOING IN OUR BEHALF OF SOME MULTINATIONAL OIL CORPORATIONS, THEY FOUND THAT ADEQUATE RECORDS AND DOCUMENTATION EXIST TO AUDIT THE PRODUCTION FIGURES WHICH WOULD BE REPORTED BY THE CORPORATIONS SUBJECT TO THE TAX. IN ADDITION WE NOW UNDERSTAND THAT INDEPENDENT PRODUCTION STATISTICS ARE REPORTED BY THE UNITED NATIONS AND THE OPEC COUNTRIES THEMSELVES.

ANOTHER EXTREMELY IMPORTANT FEATURE OF THE FRANCHISE TAX IS ITS ABILITY TO INCLUDE IN THE MEASURE OF THE TAX THE ACTIVITIES LOCATED ON THE OUTER CONTINENTAL SHELF. BY THIS FEATURE WE ARE TAKING THE POSITION THAT IF ELEMENTS OF PROPERTY, PAYROLL AND SALES ARE NOT ASSIGNED TO ANY OTHER JURISDICTION, THEN THEY SHOULD BE ASSIGNED TO THE STATE WHICH HAS RECEIVED THE MOST DIRECT IMPACT. IN ADDITION TO COMPENSATING THE STATE FOR THE ECONOMIC IMPACT FELT BY THIS ACTIVITY IT PREVENTS THE CORPORATION FROM ASSIGNING INCOME TO THE STATE OF NO WHERE. ALSO THE PROPERTY AND PAYROLL FACTOR OF MARINE TRANSPORTATION SUBSIDIARIES WOULD BE ASSIGNED ON THE BASIS OF THE NUMBER OF DAYS IN PORT.

LET ME NOW COMPARE BRIEFLY SB 236 AND HB 322 WITH THE OTHER INCOME TAX BILLS WHICH HAVE BEEN INTRODUCED. SB 105 AND HB 145 ADOPT AN APPROACH ENTIRELY DIFFERENT THAN THE APPROACH WHICH WE HAVE TAKEN AND IS CALLED SEPARATE ACCOUNTING.

INSTEAD OF COMBINING THE ENTIRE NET INCOME OF THE UNITARY GROUP OF BUSINESSES AND APPORTIONING THAT TOTAL INCOME TO THE STATE BY AN APPORTIONMENT FORMULA, THE SEPARATE ACCOUNTING

BILL LOOKS ONLY AT THE SEPARATE INCOME AND EXPENSE OF A CORPORATE ENTITY DOING BUSINESS IN THE STATE. SEPARATE ACCOUNTING ESSENTIALLY SEPARATES THE NET INCOME OF THE BUSINESS INTO GEOGRAPHICAL UNITS. IN EFFECT, THE BUSINESS ACTIVITIES IN ONE STATE ARE TREATED AS IF THEY WERE CARRIED ON BY A TOTALLY SEPARATE BUSINESS.

THEORETICALLY, SEPARATE ACCOUNTING MEASURES THE NET INCOME OF THE BUSINESS EARNED WITHIN THE STATE. IN PRACTICE IT DOES NOT. THE REASON IT DOES NOT STEMS FROM THE WAY THAT LARGE MODERN BUSINESSES, ESPECIALLY LARGE INTEGRATED MULTINATIONAL CORPORATIONS, OPERATE.

THE ENTIRE ENTERPRISE IS OPERATED AS A UNIT WITH THE PROFIT BEING EARNED ONLY BY THE ENTIRE OPERATION AS A WHOLE. THUS THE WHOLE ENTERPRISE IS ACTUALLY MORE THAN THE SUM OF THE PARTS SINCE EACH PART IS ESTABLISHED ONLY TO CONTRIBUTE TO THE ENTIRE UNITARY BUSINESS. THE NET PROFIT IS ACTUALLY THE FINAL RESULT OF THE CONTINUOUS SERIES OF INCOME AND EXPENSE TRANSACTIONS AMONG THE VARIOUS COMPONENT PARTS OF THE BUSINESS.

WITH REGARD TO AN INTEGRATED MULTINATIONAL OIL CORPORATION, THE NET INCOME IS NOT EARNED BY ANY PARTICULAR PHASE OF THE OPERATION SUCH AS PRODUCTION, TRANSPORTATION, REFINING OR MARKETING. EACH SEGMENT CONTRIBUTES TO THE WHOLE, AND THE NET INCOME IS ONLY REFLECTED AFTER THE FINAL SALE AND THE CONTRIBUTION OF EACH PART OF THE BUSINESS.

BECAUSE OF THE REALITIES OF MODERN BUSINESS OPERATIONS, A SEPARATE ACCOUNTING METHOD OPENS THE DOORS TO WIDESPREAD TAX AVOIDANCE. WITH A MULTIFACETED BUSINESS ACTING THROUGH DIFFERENT DIVISIONS, AFFILIATES AND SUBSIDIARIES, IT DOESN'T MATTER TO THE OVERALL ENTERPRISE WHETHER A PARTICULAR DIVISION IS SHOWN TO MAKE A PROFIT OR LOSS AS LONG AS IN THE END A PROFIT IS MADE FOR THE COMPANY AS A WHOLE. IN A REAL SENSE THE PROFIT OR LOSS OF A PARTICULAR DIVISION CAN BE MADE TO APPEAR ANY WAY THAT THE ENTERPRISE WANTS IT TO APPEAR.

FOR EXAMPLE, WHEN GOODS ARE TRANSFERRED FROM ONE DIVISION TO ANOTHER, THE AMOUNT CHARGED TO EACH SEGMENT OF THE BUSINESS

CAN BE ANYTHING THAT THE ENTERPRISE FINDS IN ITS BEST INTEREST TO CHARGE. LIKEWISE AS THE PARENT CORPORATION OR ANOTHER DIVISION PROVIDES MANAGEMENT, ACCOUNTING, LEGAL OR OTHER RELATED SERVICES FOR ANOTHER DIVISION OR AFFILIATE, THE SAME FLEXIBILITY EXISTS FOR DETERMINING THE AMOUNT OF FEES TO BE CHARGED. INCOME AND EXPENSE CAN BE EFFECTIVELY SHIFTED FROM ONE PART OF THE BUSINESS TO ANOTHER. THIS SHIFTING OF INCOME AND EXPENSE DOES NOT TAKE PLACE THROUGH A HANDFUL OF EASILY RECOGNIZABLE TRANSACTIONS, BUT THROUGH A SERIES OF THOUSANDS OF TRANSACTIONS A DAY WHICH AMOUNT TO MILLIONS FOR AN ENTIRE YEAR. ALSO, THESE TRANSACTIONS ARE MADE NOT JUST BETWEEN A HANDFUL OF CORPORATE ENTITIES, BUT THROUGH LITERALLY HUNDREDS OF DIVISIONS, AFFILIATES, AND SUBSIDIARIES. WITH SUCH A MYRIAD OF CORPORATE ENTITIES AND TRANSACTIONS, IT IS EXTREMELY DIFFICULT, TO SAY THE LEAST, TO DETERMINE WHAT IS THE "TRUE" NET PROFIT EARNED BY ONE ENTITY OR GEOGRAPHIC PART OF AN ENTITY.

AS APPLIED TO THESE SEPARATE ACCOUNTING BILLS, THE SAME PROBLEM OCCURS. THAT IS, THESE BILLS COULD OPEN THE DOOR TO WIDESPREAD TAX AVOIDANCE BECAUSE OF THE MANIPULATIONS OF INCOME AND EXPENSE WHICH ARE POSSIBLE.

AS WITH THE OTHER SEVERANCE TAX PROPOSALS THE SEPARATE ACCOUNTING BILL WOULD LEAVE OPEN THE POTENTIAL OF EROSION BY FEDERAL PRICING DECISIONS. FOR EXAMPLE UNDER THESE BILLS GROSS REVENUE FOR PRODUCTION OPERATIONS IS DEFINED TO MEAN THE WELL HEAD VALUE. IF FEDERAL PRICING DECISIONS SET A DEPRESSED WELL HEAD PRICE THEN THE GROSS REVENUES UNDER THE BILL WILL BE SUBSTANTIALLY REDUCED. LIKEWISE MANIPULATIONS BY TAXPAYERS OF WELL HEAD OR GROSS REVENUES ARE ALSO POSSIBLE BY THE TRANSPORTATION CHARGES WHICH ARE MADE FROM ONE AFFILIATE TO ANOTHER.

JUST AS THE GROSS REVENUE OR WELL HEAD VALUE CAN BE MANIPULATED UNDER THE SEPARATE ACCOUNTING METHOD, SO CAN THE EXPENSES AND DEDUCTIONS. THAT IS, THE CHARGES FOR SERVICES AND PROPERTY

FROM ONE AFFILIATE TO ANOTHER CAN BE MADE SO AS TO SHIFT PROFIT FROM ONE CORPORATE ENTITY TO ANOTHER. THROUGH SUCH SHIFTING OF INCOME AND EXPENSE BETWEEN THE ALASKA CORPORATION AND OTHER AFFILIATED CORPORATIONS, THE INCOME AND EXPENSE CAN IN A REAL SENSE BE MADE TO BE WHAT THE OVERALL CORPORATE ENTERPRISE WANTS IT TO BE.

THIS DEFICIENCY CANNOT BE CURED SIMPLY BY HIRING AN ARMY OF STATE AUDITORS. TO THE EXTENT OF REDUCED GROSS INCOME BY REASON OF DEPRESSED FEDERAL PRICING, THE STATE IS SIMPLY STUCK UNDER A SEPARATE ACCOUNTING APPROACH. IN ADDITION, TO FERRET OUT THE MULTITUDE OF INTERCOMPANY CHARGES AND OVERTURN THEM AS EITHER FRAUDULENT OR UNREASONABLE IS SIMPLY IMPOSSIBLE. WITH LARGE MULTINATIONAL CORPORATIONS THERE ARE VIRTUALLY HUNDREDS OF TRANSACTIONS A DAY BETWEEN DOZENS OF CORPORATE AFFILIATES. YOU SIMPLY CANNOT UNSCRAMBLE THESE TRANSACTIONS TO DETERMINE THE "TRUE" PROFIT EARNED IN ALASKA.

IN CONTRAST THE FRANCHISE TAX AVOIDS THESE EROSIONS AND MANIPULATIONS BETWEEN DIFFERENT SEGMENTS OF THE OIL INDUSTRY

AND BETWEEN AFFILIATED COMPANIES. IT AVOIDS THESE PROBLEMS BY COMBINING THE INCOME OF THE TOTAL GROUP OF RELATED CORPORATIONS. THUS THE GAME OF SHIFTING PROFIT FROM ONE CORPORATION TO ANOTHER IS AVOIDED SINCE THE ENTIRE NET IS COMPUTATED AND NOT JUST FOR ONE CORPORATION IN ISOLATION. IT ALSO AVOIDS THE UNCERTAINTIES OF PRICE REGULATION OF THE PRODUCTION SEGMENT OF THE INDUSTRY, SINCE ALL SEGMENTS OF AN INTEGRATED COMPANY WOULD BE COMBINED AND THE OVERALL PROFIT OF UNITARY BUSINESS TAXED. THESE OTHER SEGMENTS OF THE INDUSTRY SUCH AS TRANSPORATION, REFINING AND MARKETING MAY NOT HAVE PRICE REGULATIONS AND SO THE PROFIT MAY BE TRANSFERRED TO THESE UNREGULATED SEGMENTS. THE SEPARATE ACCOUNTING APPROACH WOULD NOT MEASURE THIS SHIFTED PROFIT. THE FRANCHISE TAX BILL WOULD.

THE SEPARATE ACCOUNTING BILLS ALSO WOULD NOT INCLUDE IN THE MEASURE OF THE TAX, THE OIL AND GAS ACTIVITIES OCCURRING ON THE OUTER CONTINENTAL SHELF. IT WOULD SIMPLY ATTEMPT TO SEGREGATE THE INCOME GENERATED IN THE STATE. IN CONTRAST THE FRANCHISE TAX WOULD INCLUDE IN THE MEASURE OF THE TAX

PROPERTY, PAYROLL AND EXTRACTION LOCATED ON THE OUTER CONTINENTAL SHELF. I BELIEVE THAT IT IS IMPORTANT THAT THE STATE SEEK COMPENSATION FOR THE IMPACT FROM THIS ACTIVITY. THE FRANCHISE TAX WOULD COMPENSATE THE STATE AS A RESULT OF THESE ACTIVITIES TAKING PLACE OFF OUR SHORES. THE SEPARATE ACCOUNTING BILL WOULD ALSO NOT INCLUDE THE INCOME OF MARINE TRANSPORTATION SUBSIDIARIES TRANSPORTING OIL FROM OUR STATE.

CONTINUING ON, I WOULD NOW LIKE TO MAKE SOME COMMENTS ABOUT OUR PROPERTY TAX PROPOSAL. THIS IS CONTAINED IN SB 237 AND HB 323. OUR PROPERTY TAX PROPOSAL CORRECTS SEVERAL DEFICIENCIES IN OUR 20 MIL AD-VALOREM TAX.

ONE PORTION OF THE BILL WOULD STRENGTHEN THE VALUATION METHOD PRESCRIBED FOR PIPELINES AND ASSURE THAT THE TRANS-ALASKA PIPELINE WILL BE VALUED UNDER A FULL AND TRUE VALUE. UNDER THE PRESENT WORDING OF THE STATUTE, IT IS POSSIBLE THAT THE TRANS-ALASKA PIPELINE WILL BE VALUED ONLY AT ITS ACTUAL COST AND DEPRECIATED ON A STRAIGHT LINE BASIS OVER THE ECONOMIC

LIFE OF THE FIELD. WE FEEL THIS POTENTIAL OUTCOME WOULD BE DISASTROUS SINCE THIS ACTUAL COST-DEPRECIATED METHOD WOULD YIELD A VALUE SUBSTANTIALLY BELOW THE PIPELINE'S FULL AND TRUE MARKET VALUE. THE ARGUMENT FOR THIS DEPRESSED VALUATION HAS ALREADY BEEN MADE BY OTHER PIPELINE COMPANIES IN THE STATE AND THE DETERMINATION OF THE PROPER PIPELINE VALUATION METHOD IS NOW UNDER REVIEW BY THE SUPERIOR COURT.

OUR BILL WOULD ELIMINATE THIS POTENTIAL HAZARD BY AMENDING THE STATUTE TO INSURE A FULL AND TRUE VALUE OF PIPELINES WITH DUE REGARD TO THEIR ECONOMIC VALUE. THUS INSTEAD OF A VALUATION BASED SOLELY ON ACTUAL COST, THE VALUATION WOULD BE BASED UPON MORE REALISTIC VALUATION METHODS SUCH AS REPLACEMENT COST APPROACH AND THE CAPITALIZED NET INCOME APPROACH. IT SHOULD BE NOTED THAT THE COMPANIES WILL BE ALLOWED A RATE OF RETURN ON THE BASIS OF REPLACEMENT COST. IT IS ONLY FAIR THAT OUR TAX SHOULD BE BASED ON THE SAME BASIS.

SECONDLY THE BILL WOULD INCLUDE IN THE COVERAGE OF THE TAX SEVERAL IMPORTANT CATEGORIES OF OIL AND GAS PROPERTIES WHICH

ARE PRESENTLY EXEMPT FROM THE STATE TAX. THESE INCLUDE TANKERS, GAS PROCESSING PLANTS AND REFINERIES. GAS PROCESSING PLANTS AND REFINERIES WOULD BE VALUED AND TAXED AT THEIR REPLACEMENT COST. TANKERS WOULD ALSO BE VALUED AT THEIR REPLACEMENT COST EXCEPT THAT VALUATION WOULD BE APPORTIONED TO THE STATE UNDER A FORMULA OF DAYS IN PORT IN ALASKA VERSUS DAYS IN PORT EVERYWHERE. WE BELIEVE THAT A PORTION OF THE REVENUES FROM THESE IMPORTANT PROPERTIES SHOULD BE SHARED BY ALL ALASKANS. TANKERS, GAS PROCESSING PLANTS AND REFINERIES ARE SIMPLY EXTENSIONS OF THE PRODUCTION AND PIPELINE TRANSPORTATION PROPERTIES.

THE BILL ALSO AMENDS THE PROPERTY TAX STATUTE TO MAKE ABSOLUTELY CLEAR THAT TAXES PAID TO MUNICIPALITIES WHICH EXCEED THE MUNICIPAL LIMITATIONS ARE NOT CREDITABLE AGAINST THE STATE PROPERTY TAX.

I WOULD LIKE TO ADD A FEW COMMENTS ON OUR RESERVES TAX PROPOSAL. BECAUSE OF RECENT TAX CHANGES AND UNFORESEEN EVENTS, WE HAVE

DEVELOPED A SURPLUS IN FISCAL YEAR 1977. THIS SURPLUS IS SOMEWHAT ILLUSORY, HOWEVER, SINCE MOST OF IT REPRESENTS RESERVE TAX PAYMENTS WHICH WILL BE RECOUPED IN SUBSEQUENT YEARS BY OIL AND GAS COMPANIES THROUGH CREDITS AGAINST THEIR SEVERANCE TAXES. THE DEPARTMENT BELIEVES THAT IT MAKES SENSE TO REDUCE THIS YEAR'S TEMPORARY SURPLUS AND FREE UP ADDITIONAL REVENUES IN FUTURE YEARS. THE BILL WOULD DO THIS BY REDUCING THIS YEAR'S RESERVES TAX MILLAGE RATE FROM 20 MILLS TO 12 MILLS. AT THE SAME TIME, HOWEVER, I AM PROPOSING THAT IF THERE IS A DELAY IN THE START-UP OF THE TRANS-ALASKA PIPELINE, THEN AN ADDITIONAL RESERVES TAX PAYMENT WILL BE DUE.

THUS IF ON OCTOBER 1, 1977 THE TRANS-ALASKA PIPELINE IS NOT TRANSPORTING AT LEAST 600,000 BARRELS A DAY THEN AN ADDITIONAL 8 MILLS WOULD BE IMPOSED. ALSO IF ON DECEMBER 25, 2977 THE TRANS-ALASKA PIPELINE IS NOT TRANSPORTING AT LEAST 1.2 MILLIONS BARRELS A DAY THEN A RESERVES TAX WOULD BE IMPOSED FOR 1978 AT A RATE TO BE SET BY THE NEXT LEGISLATURE. WE

THINK THIS BILL IS IMPORTANT TO PRESERVING THE STATE'S FINANCIAL FLEXIBILITY DURING THE NEXT FISCAL YEAR.

IN ADDITION TO TAX CHANGES WHICH I AM PROPOSING FOR THE OIL AND GAS INDUSTRY, I AM ALSO PROPOSING A TAX MEASURE WHICH WILL PROVIDE SOME RELIEF TO INDIVIDUAL TAXPAYERS WHO ARE IMPACTED BY THE INCREASING COST OF ENERGY. AS A PART OF OUR TAX PACKAGE WE ARE PROPOSING A FUEL CREDIT FOR INDIVIDUALS TO TAKE ON THEIR INCOME TAX RETURNS TO ACCOUNT FOR THE HIGH COST OF ENERGY. THE CREDIT WILL BE EQUAL TO TWO PERCENT OF A PERSON'S HOME FUEL EXPENSES OR A MINIMUM CREDIT OF $10.

ALL OF THESE BILLS TOGETHER REPRESENT A COMPREHENSIVE REVISION OF OUR OIL AND GAS TAX STRUCTURE. THEY CLOSE CURRENT LOOP-HOLES AND PROTECT THE STATE FROM THE FUTURE UNCERTAINTIES OF FEDERAL OIL PRICING AND CORPORATE MANIPULATIONS. I URGE THAT YOUR COMMITTEES REPORT FAVORABLY ON THESE BILLS.

IN JUDGING THE TAX MEASURES BEFORE YOU I BELIEVE THAT WE MUST NOT ONLY PROTECT OUR REVENUES IN THE SHORT TERM BUT ALSO INSURE SUFFICIENT RETURN FROM THESE NON-RENEWABLE NATURAL RESOURCES FOR FUTURE ALASKANS AS WELL. WE SHOULD NOT BE SWAYED BY THE ARGUMENTS OF THOSE WHO WOULD HAVE US RECOVER FROM OUR NON-RENEWABLE NATURAL RESOURCES ONLY AMOUNTS SUFFICIENT TO COVER TODAY'S OPERATING EXPENDITURES. WE SHOULD NOT BE THAT SHORTSIGHTED THAT WE FORGET THAT THE REVENUES FROM THESE RESOURCES BELONG TO SUCCESSIVE GENERATIONS OF ALASKANS. ACCORDINGLY, IN DECIDING THE CORRECT LEVEL OF TAXATION LET US NOT FORGET FUTURE ALASKANS WHO WILL INHERIT THE STATE WHEN THE OIL AND GAS RESOURCES ARE DEPLETED. WE SHOULD WORK TO ELIMINATE THE LOOPHOLES AND POTENTIAL EROSIONS FROM OUR TAX SYSTEM AND SET A LEVEL OF TAXATION WHICH WILL RETURN REVENUES TO THE STATE FROM THOSE NATURAL RESOURCES FOR OURSELVES AND FUTURE GENERATIONS.

TESTIMONY BEFORE THE JOINT HEARING
OF THE
SENATE RESOURCES COMMITTEE
AND THE
HOUSE RESOURCES COMMITTEE
OF THE

ALASKA STATE LEGISLATURE

BY

RICHARD M. DONALDSON

VICE PRESIDENT FOR GOVERNMENT AND PUBLIC AFFAIRS

THE STANDARD OIL COMPANY (OHIO)

AT JUNEAU, ALASKA

ON MARCH 24, 1977

CONCERNING PENDING OIL TAX PROPOSALS

Testimony Before The Joint Hearing
Of The
Senate Resources Committee
And The
House Resources Committee
Of The
Alaska State Legislature
By
Richard M. Donaldson
Vice President For Government And Public Affairs
The Standard Oil Company (Ohio)
At Juneau, Alaska
On March 24, 1977
Concerning Pending Oil Tax Proposals

Senator Poland, Representative Osterback and Members of the Resources Committees:

I am Dick Donaldson, Vice President for Government and Public Affairs of Sohio, The Standard Oil Company of Ohio. Most of us are acquainted and I expect that all of you know of Sohio's and BP's interests in Prudhoe Bay and the Trans Alaska Pipeline, so I won't waste any words of introduction summarizing them. I would underscore, however, our continuing and long term interests in the future of Alaska as companies engaged here and as people working for them, many of whom now live here.

With respect to the subject of this hearing and all of the tax proposals you may consider, I hardly know where to begin. I guess that my first response is one of "disappointment". Let me explain, because my disappointment is probably not what you might be assuming.

About a year ago I appeared before a joint hearing of your Committees here in Juneau. Other tax legislation was being considered then. At the end of our discussion that day, I urged

the State to take whatever time was necessary to assess and balance three things: the future revenues of the State, the future expenditures of the State, and the State as a place to do business since a substantial majority of the people of Alaska are engaged in or work for businesses of all kinds. I not only urged the State to consider these three things but also to determine a longer term taxing and leasing policy for the State that would serve all three needs. I stated that my company would be responsive to such policy studies and would participate in them if invited. I felt that such a policy assessment was long needed by all of us, and that since the State no longer had its back to the wall financially, it could and should take some time to do the job right.

I can tell you that I was pretty excited when I read the Governor's statement on March 31, 1976, to your Committees. He said that the State's taxing policy must accomplish the following objectives:

1. It must generate sufficient revenues not only to compensate the State for additional service costs attending such development but also to provide a reasonable additional "dividend" to Alaskans.

2. It must leave profits to investors sufficient to encourage their continued interest in Alaskan resource development, especially where high risks, such as those in the area of oil and gas development, are involved.

3. It must be reasonably responsive to national and world economic trends of the time.

4. It should not discriminate on the basis of ownership.

5. It must reduce uncertainty and encourage stable expectations about future resource tax and management policies.

I felt further encouraged when I read Senate Concurrent Resolution No. 101 which spoke of the "revenue needs of the state", "revenue from oil and gas leases and production from oil and gas", and the "effect of increased taxation *** on future oil and gas development in the state".

The thought that both the Administration and the Legislature were going to take a thoroughgoing look at State revenues, State expenditures and their impact on the private sector in Alaska was good news. On July 1, 1976 I wrote Gregg Erickson, Director of Research Services, Legislative Affairs Agency, identifying some of the subject areas these studies might examine, and sent information copies to Commissioner Gallagher and Commissioner Martin who were heading up the Administration's studies. A copy of that letter is attached to my testimony today as Attachment A, if you are interested in it.

During the summer and fall which followed not much appeared to be happening with these studies, or at least not very much was visable to us. Various consultants were hired and the word

that filtered out seemed to indicate that some of them were looking at additional revenue possibilities, but not much else. In October, I tried to stir up some interest again on the need for a longer term taxing and leasing policy for the State, its people and our industry. I spoke to the Fairbanks Industrial Development Corporation, the Anchorage Chamber of Commerce, the Anchorage Rotary, the Kenai Chamber of Commerce, and to the Bar Association here in Juneau. Again, the responses seemed affirmative.

Since the first of the year there has been a lot of new tax bills introduced for consideration by the Legislature, and I suppose that's to be expected in the first session of every new Legislature. My disappointment, however, was that there still had been no in depth study of the policy implications, of how such revenue measures might impact the longer term economy of the State that will depend a lot on continued, reasonable resource development.

Today, I'd like to summarize and give you copies of some of the work Sohio undertook in anticipation of responding to the State's policy studies. I will tell you about some other work we undertook which is still in progress and which I hope will be finished before too long. All of this bears on both the policy questions to be considered and the bills before your Committees.

First, let's take up the subject of new revenues to the State. Many times over the last few years we have been asked to project what our company and the State might receive from Prudhoe Bay and the Trans Alaska Pipeline. We knew that if we furnished the State projections of our own future earnings expectancies, the rules of the Securities and Exchange Commission would then require us to disclose such projections to the general public and to publicly and perpetually update those projections any time our internal estimates of the future changed. The burden of disclosing such projections on a perpetual basis and the potential liabilities to investors if such projections turned out to be wrong have led substantially all U.S. companies to decline publication of any earnings projections. Our counsel has advised against this too. Instead, and in order to be of some help to the State, we developed a hypothetical projection of tax payments to Alaska which would result from an assumed one-third ownership of Prudhoe Bay and the Trans Alaska Pipeline by each of three typical companies. None of these companies is intended to represent a company actually involved in the development of the field or the pipeline. Rather, the projections are intended to demonstrate the level of tax obligations which would result from the project being owned by companies varying in size and scope of overall operations.

This particular work was included in a paper entitled Sohio Submission One which was submitted informally to the Alaskan Administration and Legislature on October 28, 1976, and which I offer now formally as Attachment B to my testimony today. To summarize, this paper examined the Alaska state income tax under the allocation method of the Multistate Tax Compact and made illustrative projections of the substantial revenue that Alaska would receive as a result of the first ten years of operation of Prudhoe Bay and the Trans Alaska Pipeline. No oil or gas production from any other fields in Alaska, either existing or likely, were included in these projections. The projections of revenue included estimates of the State's royalty income and the tax receipts resulting from Alaska's present severance tax, reserves tax, ad valorem tax and state income tax. The projections showed that under present Alaska laws, and assuming a $13.00 per barrel selling price in California, Alaska would receive from Prudhoe Bay and the Trans Alaska Pipeline average annual revenues on the order of $1 billion without consideration of any factor for future inflation. If the selling price in California were $10.00 per barrel, or $16.00 per barrel, Alaska would receive annual revenues on the order of $800 million or $1.6 billion, respectively.

While that's a lot of money, even without the numbers being escalated for any inflation, we also wanted to know from a "fair

share" standpoint what part of the total revenues attributable to this Alaskan oil the State could expect to receive as compared to all other states in the U.S. which will buy, refine, transport and use it. Let me give you a few interesting statistics based on the Sohio Submission One example. Since the Prudhoe Bay field is located on state lands, Alaska would receive 100 percent of the royalty payments. Similarly, Alaska would receive 100 percent of the severance tax payments and 100 percent of the ad valorem tax payments. The reserves tax payments and the severance tax credits resulting from those payments are also strictly an Alaskan transaction. Since the field and pipeline are located in Alaska, though most of the sales of the oil will probably not be, the State will also receive state income tax payments amounting to 22 percent of the total income tax paid to all states in the U.S. Finally and at all three of the oil price levels assumed in Sohio Submission One which were intended to range over the probably market price, Alaska, as one state, would receive 75 percent of all revenues to be received by all fifty states from oil production at Prudhoe Bay.

Though Sohio Submission One looked at only one field and one pipeline, it does provide a lot of assurance that Alaska's revenue needs will be well covered in the years ahead.

This was confirmed directionally by the Report of the Department of Revenue to the Governor on Alaska's Oil and Gas Tax

Structure, dated February 11, 1977. Chapter IV of this Report states that the Department of Revenue has calculated a combined general fund and permanent fund balance at the end of fiscal year 1985 ranging from $8.5 billion to $8.7 billion, depending on which gas pipeline project is ultimately built to take gas from Prudhoe Bay. In any event, the State is looking forward to very substantial revenue surpluses. That has another implication for the legislation you are considering now. Any additional tax legislation will only add to the surplus.

The second piece of work Sohio undertook in anticipation of State studies on longer term tax and leasing policies was a comparison of the total tax burdens under the present laws in Alaska and other leading oil producing states. This work proved further the testimony I presented to you a year ago and was developed on the same factual base as we used in Sohio Submission One. We called it Sohio Submission Two and submitted it informally to the Administration and Legislature on January 21, 1977. May I offer it formally now as Attachment C to my testimony today.

Sohio Submission Two compares the projected total taxes that Alaska will receive as a result of the first ten years of operation of Prudhoe Bay and the Trans Alaska Pipeline with the total taxes which the State would receive if it had the tax structure of the other three leading oil producing states of Texas, Louisiana or

California. Since this was a comparison of the taxes of these states, Alaska's royalty payments were not considered in Sohio Submission Two. For comparison purposes, only the $13.00 per barrel California selling price was used. This comparison, again under present law, confirmed that Alaska's tax burden on a project like Prudhoe Bay and the Trans Alaska Pipeline already equals or exceeds that of other oil producing states. Specifically, Alaska's present tax burden is 176 percent of the Texas tax burden, 99 percent of the Louisiana tax burden, and 111 percent of the California tax burden. Since state tax burdens represent a cost to companies engaged in oil exploration and production, the overall tax burden in one state compared to another is one of the factors considered by companies in deciding where additional oil exploration should be done.

Other comparisons in depth with the same import have been done by the Alaska Legal Committee of the Alaska Oil and Gas Association, and I think you will find them to be of interest.

There are, of course, other factors which influence decisions on where resource development will be carried on. Among these factors are the basic costs of finding, producing and transporting oil in various states or regions of the U.S. The third subject Sohio has been examining with respect to the State's long term taxing and leasing policy considerations is how the costs of

carrying on oil and gas development in Alaska and other areas of the country compare. We know from our general experience that there is a premium to be paid for working in the arctic and offshore, but we hoped to be able to document this and do so on a comparative basis. Good current data is difficult to come by. We are making progress, but not as fast as I had hoped, so I do not have finished work on that to offer you today.

The work so far confirms the premium cost factor of oil and gas development in the arctic and offshore. Let me give you a few examples. It costs two or three times as much to drill a well in Alaska as it would to drill the same well most places in the Lower 48. It sometimes costs more to ship a piece of casing to northern Alaska than the casing itself costs. Hourly rates for construction labor are substantially higher in the arctic, and the productivity is in many instances less than one-third or one-half of what you expect in other areas of the country due to the extreme weather conditions.

Last August, the Federal Energy Administration published a study that had been made of potential future developments of NPR 4.[1/] While this report was written in terms that were somewhat difficult for us to understand, at least two points seemed clear. The first one was that the costs are so high and risks are so great in the

---

1/ "The Exploration, Development and Production of Naval Petroleum Reserve No. 4." published by the Federal Energy Administration August, 1976.

arctic that with present prices of oil in California, it would be uneconomic to develop oil in Naval Petroleum Reserve 4 unless a field or a cluster of closely located fields were found with a total reserve of one-half billion barrels of oil. The significance of this is startling when you consider that a one-half billion barrel field in the Lower 48 would be a real bonanza. The second point in that report that struck us was the indication that at present oil prices, a 3-billion barrel field would earn a private investor an 8 percent rate of return. If the figures of this study are right, it is doubtful that anyone would undertake a venture like that for that level of economic return.

The three areas of our studies which I have summarized tells you about where we were when this session of the Legislature began. Since then, a number of proposals for additional Alaska taxes on future oil and gas operations have been introduced for consideration. We have tried to study all of these proposals, and have made a start on two aspects: their economic impact on our industry here and their legality. Because there are so many bills, I would like to comment on those that have been submitted by members of the Legislature as a group and on those that have been submitted by the Administration as a group. Specifically, the bills that I will be referring to as Legislative bills are those pertaining to severance tax, income tax, and the net proceeds tax. In connection

with those submitted by the Administration, I will be including the franchise tax, the property tax, and the severance tax.

The economic impact analysis produced some startling numbers. You will recall that in our Sohio Submission One and Sohio Submission Two we calculated what the tax income to the State will be from Prudhoe Bay and the Trans Alaska Pipeline under present severance tax, ad valorem tax and income tax during calendar years 1977 through 1986. We then made the same calculations assuming the taxes proposed by the Legislature were enacted, and also made them assuming the taxes proposed by the Administration were enacted. In each case we compared the results with the same leading oil producing states, Texas, Louisiana and California. The results of all this are set forth in Sohio Submission Three which is Attachment D to my testimony today and which I formally offer now as a part of your Committees' record.

You may want to examine Sohio Submission Three in detail, but let me highlight a few things for our discussion today. The hypothetical companies assumed to own all of Prudhoe Bay and the Trans Alaska Pipeline in Sohio Submissions One and Two were projected to pay the State $5.5 billion from 1976 to 1986 under present Alaskan laws. You will recall that the $5.5 billion figure represented revenues from the field and pipeline only, and did not include likely revenues from any other present or

future oil and gas development in Alaska. You will also recall that these figures have no factor in them for any inflation which will probably occur. The results are summarized in the following table, and show that Alaska would collect from the three companies about the same total amount it would if it had the tax structure of Louisiana on Alaska's books, 176% of the amount it would if it had the tax structure of Texas' laws, and 111% of the amount it would if it had the tax structure of California.

		If Alaska had the taxes of:		
	Alaska	Texas	Louisiana	California
Severance Tax	$2,688	$1,649	$4,466	$ 0
Ad Valorem Tax	2,038	1,459	684	4,202
Income Tax	753	0	382	728
Total	$5,479	$3,108	$5,532	$4,930
Alaska as a percent of the other states		176%	99%	111%

In Sohio Submission Three, we first calculated the results if the Administration's tax proposals are enacted and found that the State's tax income just from Prudhoe Bay and the Trans Alaska Pipeline is non-inflated dollars would increase by about $2 billion through 1986 over what it would be under Alaska's present tax laws. This would bring the total payments by the three companies in our analysis to $7.5 billion. Comparing these results with the results under the tax structures of Texas, Louisiana and California

showed that Alaska's tax income would be 240% of the revenues produced by the Texas laws, 135% of the revenues produced by the Louisiana laws, and 151% of the revenues produced by the California laws. As Sohio Submission Three shows, that even the passage of one of the Administration's proposals significantly lengthens Alaska's lead over the other oil producing states.

		If Alaska had the taxes of:		
	Alaska	Texas	Louisiana	California
Severance Tax	$3,283	$1,649	$4,466	$ 0
Ad Valorem Tax	2,582	1,459	684	4,202
Income Tax	1,591	0	382	728
Total	$7,456	$3,108	$5,532	$4,930
Alaska as a percent of the other states		240%	135%	151%

The next thing we did in Sohio Submission Three was to calculate the results if the Legislature's tax proposals are enacted and found that the State's tax income just from Prudhoe Bay and the Trans Alaska Pipeline in non-inflated dollars would increase by $3.6 billion through 1986 over what it would be under Alaska's present tax laws. This would bring the total payments by the three companies in our analysis to $9 billion. Again, comparing these results with the results under the tax structures of Texas, Louisiana and California showed that Alaska's tax income would be 291% of the revenues produced by the Texas laws, 163% of the

revenues produced by the Louisiana laws, and 183% of the revenues produced by the California laws. And again, Sohio Submission Three shows that the passage of just one of the Legislature's proposals will significantly lengthen Alaska's lead over the other oil producing states.

		If Alaska had the taxes of:		
	Alaska	Texas	Louisiana	California
Severance Tax	$4,219	$1,649	$4,466	$ 0
Ad Valorem Tax	2,038	1,459	684	4,202
Income Tax	2,774	0	382	728
Total	$9,031	$3,108	$5,532	$4,930
Alaska as a percent of the other states		291%	163%	183%

In making the calculations in Sohio Submission Three we assumed a price of $13.00 for oil in California, and included no factor for inflation. I realize that our treatment of price and inflation is conservative and that it is different from the way the Department of Revenue has done its work. The surpluses in 1985 for the General Fund and for the Permanent Fund which have been projected by the Department of Revenue and which I referred to above reflect some assumed increases in the price of oil and a factor for inflation. In any event, it seems likely that any increases in tax income which the State will realize if it enacts part or all of

the Legislative package or the Administration package will simply increase the surpluses. I don't know what the total surplus would then be, but it could be several times $8.5 billion now projected by the Department of Revenue under the present laws of Alaska.

Most of you know that I have always been reluctant to argue legalities of proposed legislation. It sometimes produces more misunderstanding than help. It is, however, a subject of concern from time to time on the part of the Legislature itself, the Administration and our industry. As you know, we routinely review significant legislative proposals for legality. With the number of bills before this Legislature and the diversity of their concepts, we have only had time to make a preliminary review. For what it's worth and not to be argumentative, let me give you some first observations. They suggest that further legal analysis may be appropriate for both the State and ourselves.

In addition to the numerical facts of the matter, there are some circumstances in the overall setting which bear on the legality of further tax proposals. For about seven years or perhaps a little longer, the State has made persistent efforts to increase its tax revenues from oil and gas activities in Alaska, and particularly its expected revenues from Prudhoe Bay and the Trans Alaska Pipeline. The focus has been rather narrow and the principal burden has been

directed to a few larger companies who have come to the State to engage in oil and gas exploration, development and transportation. Most all of such taxes impact upon interstate commerce by reason of the fact that over 99 percent of the markets for this Alaskan industry are located outside the State. The results are the tax laws presently on the books here. It is generally recognized that these laws as now constituted will produce revenues far in excess of the State's revenue needs over the next decade and beyond. No revenue need justification has even been attempted for the new tax proposals now before this Legislature. The cumulative effect of all this raises questions whether further substantial taxes become a confiscation of an equity interest or a modification of royalty contracts after the leases have been sold. The cumulative effect raises the question of a demonstrable bias against interstate commerce that would lead a court to conclude that this package of taxes discriminates against and unduly burdens interstate commerce. Again, let me say that I am outlining these questions to point up some legal areas I believe we all should examine, and not to be argumentative.

You may also be interested in some specific comments on the new income tax proposals before your Committees. My comments in this regard relate essentially to two legal concepts: fairness

and uniformity. Fairness to the taxpayer is of course something that should characterize all taxes that a government imposes. It takes on an added dimension, however, in the context of a federal system where, in addition to the exactions of the national government, a company can be obliged to contribute to the fiscal needs of as many as fifty state governments. If such businesses are not to bear a disproportionate share of the total tax burden, it is essential that the taxes imposed by each jurisdiction reflect a high sense of equity, of fairness, in determining the portion of the company's activities to be included in that state's tax base.

This concern for fairness is embodied in the federal constitution in the Commerce Clause and the Due Process Clause, and is at the core of the approach which the Supreme Court has charted in construing those provisions as they relate to state taxing statutes. A similar sentiment emanates from the Equal Protection Clause. Thus, for example, the U.S. Supreme Court has said that a multi-state enterprise should not be made to "bear more than its fair share" of the costs of state government, "that taxes imposed on income from interstate commerce (should) be fairly apportioned" between the States in order to avoid the risk of multiple taxation, and that the tax should be "a constitutionally fair demand by the State for that aspect of the interstate commerce to which the State bears a special relation." It is interesting

and somewhat refreshing that a matter so fundamental to our federal system should be governed in the final analysis by a simple, penetrating, common-sense inquiry: Is it fair?

Although, as one might expect, the precise dimensions of this "fairness" standard have not been fully spelled out, there are a number of decisions which shed some light along the way. For example, we know that it is not fair in terms of the Commerce Clause for a state taxing statute directly or indirectly to prefer local activity at the expense of interstate activity. The cases also tell us that it is unfair for a State to apply an imprecise apportionment formula which inflates the portion of the multi-state enterprise included in its tax base. We know that it is unfair for a State to adopt an apportionment formula so plainly inconsistent with that prevailing in other States that the logical and inevitable consequence will be that interstate income is subjected to multiple taxation.

In the light of these indications, it would seem appropriate for your Committees to give consideration to the provisions of each new proposal to ascertain how fairly each one treats the multi-state companies which are actively engaged in Alaska. With reference first to the proposed Oil and Gas Corporate Franchise Tax, there are several general lines of inquiry which I would recommend and which in turn will likely lead to further, more specific questions.

The proposed substitution of an "extraction factor" for the widely used "sales factor," would apportion the entire enterprise of a multi-state taxpayer according to a factor which measures only the taxpayer's oil and gas extraction activity. The essential problem with the extraction factor is that, unlike the standard three factors which measure activity common to virtually all profit-making endeavors and thus will generally result in a fair estimate of the portion of the taxpayer's entire enterprise related to the taxing state, the extraction factor is very narrowly based and thus seems wholly inappropriate to the task of apportioning the fruits of a multi-faceted interstate enterprise. As a result, this factor, in the case of Sohio, would apportion to Alaska income derived from a wide variety of our activities wholly unrelated either to Alaska or to oil and gas extraction, such as chemical sales, patent licensing, coal and uranium extraction, sales of plastic products and toothbrushes, and fertilizer sales, even though none of these activities will be reflected in either the numerator or the denominator of the fraction. I submit that this overreaches all bounds of fairness.

Moreover, as a result of the patent inconsistency of the extraction factor with the sales factor applied in the overwhelming majority of other states, the extraction factor will inevitably lead to multiple taxation of income derived from the sale or exchange of Alaskan oil out-of-state. Between Alaska and the

state of sale, for example, as much as 133% of this income could be taxed. This would well be the impact on Sohio and I ask you to consider whether this represents fair treatment of interstate commerce.

You may also want to refer to Tables A, B and C of Sohio Submission Three and particularly the line on each of those tables entitled, "Effective Composite State Income Tax Rate on Total Taxable Earnings". The jump in the percentages from those shown on Table A to those shown on Tables B and C are a pretty clear demonstration of the duplicative tax impact that raises the Constitutional questions.

A final point in reference to the franchise tax proposal which I think the Committees ought to consider is whether the effect of the $250 million floor is to exempt local producers while concentrating the impact of the tax on the multi-state producers. I understand the interests which this provision is designed to protect and am sympathetic to them. But the legal question is can the actual effect of this be reconciled with the notion of fairness underlying the Commerce Clause.

In the same vein, both the net proceeds tax proposal and the separate accounting proposal should be subjected to the same careful analysis. In general, I hope the Committees will consider whether it is appropriate and fair to single out the oil industry from all other corporations in Alaska for such extraordinary tax

treatment. In particular, the deductions allowed under these proposals should be analyzed to see whether they discriminate between in-state and out-state expenditures, which I submit may constitute unfair treatment of interstate commerce.

Finally, I would like to refer briefly to the legal concept of uniformity which Alaska has endorsed by its adoption of the Uniform Division of Income for Tax Purposes Act and of the Multi-state Tax Compact. I submit that the proposals I have just been discussing amount to a major retreat from the principle of uniformity, especially in light of the unavoidable duplicative taxation which the extraction factor would generate. Moreover, the separate accounting and net proceeds proposals are difficult to reconcile with the Multi-state Tax Commission's view that the three-factor formula should, in the interests of uniformity, enjoy clear predominance over any alternative approaches. As the Commission has said in its proposed regulations under the Compact, separate accounting "may be invoked only in specific cases where unusual fact situations (which ordinarily will be unique and nonrecurring) produce incongruous results under the apportionment and allocation provisions contained in Article IV." Even under the Compact, departure from the three-factor formula is to happen, if at all, only on a case-by-case basis within the reasonable discretion of the Tax Commissioner. In this light, the Committees should ask

to what extent, if any, Alaska's statutory departure from the Compact in the case of the State's largest industry would be consistent with Alaska's continued membership in the Multi-state Tax Compact.

Well, where are we? I realize that I've given you a lot to think about. I don't mean to overwhelm you, but the subjects you are considering are pretty substantial in and of themselves. Let me try to tie it all together with five principal perspectives.

First, the State's needs for revenues are more than covered for the forseeable future, and the past concerns about running out of money to meet current needs are no longer with you.

Second, the State's present tax laws concerning oil and gas exploration, production and transportation equal or exceed those in the other leading oil producing states. Any further oil and gas taxes will simply add to the State's projected revenue surpluses.

Third, the other costs businesses must pay for carrying on exploration, production and transportation in Alaska reflect the premium that must be paid in pursuing the potential of energy resources in the arctic. It is a penalty that Alaska itself must recognize in considering major new tax legislation, notwithstanding the high potential it has in energy resources. This is particularly true now when construction of the Trans Alaska Pipeline is winding down. Alaska is moving into what Robert R. Richards of the Alaska

Pacific Bank has recently called the "post pipeline plateau".[2/] He forecasts a "modest downturn" but not a "bust". He points out that the construction industry will experience somewhat of a setback in 1977, that retail and wholesale trade will level off in Anchorage and will drop significantly in Fairbanks, and that the State's economy in general will decelerate this year. A bright spot in the State's economy will be the Kenai region which will grow as a petroleum service and supply base for both Cook Inlet production and Gulf of Alaska exploration. He notes that Alaska's future remains bright because of its resource and other potentials.

Underlying this future, however, is the assumption of continued, reasonable resource development, and the positive incentives needed to assure its continuation. This subject was addressed in depth in Washington, D.C. last Monday, in San Francisco on Tuesday, and in Anchorage yesterday in hearings before the Federal Energy Administration on the appropriate pricing of Prudhoe Bay oil. I attended the hearings in Washington and Anchorage and would like to give you a report on the testimony of three witnesses. Their remarks recognized the high costs and risks of oil and gas development in the arctic, the need for positive economic incentives to encourage this work, and the important role Alaska will play in meeting the United States' needs for energy in the future.

2/ "Economic Outlook for the Year 1977", Alaska Business Trends, Alaska Pacific Bank.

Commissioner Sterling Gallagher represented the State in the Washington hearing and made a fine presentation. In at least four places in his testimony he urged the FEA to provide "positive price incentives" at the wellhead in Alaska that would encourage future development. He recognized that this applied to developments now underway like Prudhoe Bay and to all future resource development in Alaska. He expressed real concern that other possible courses of decision by the FEA would "virtually guarantee that no other North Slope resevoir is developed and (would) create a pronounced disincentive for the State of Alaska and the Alaska Native corporations to make any more lands available for oil and gas leasing." He stated that "The North Slope is a frontier area, still largely unexplored and untested despite past and present exploratory work. Likely discoveries and development will be much closer to the threshold of economic visability than is the main pool of Prudhoe Bay." With respect to Prudhoe Bay he noted that at the low wellhead prices possible under one FEA alternative, "the economic justification for developing even the main Prudhoe Bay oil pool would, if discovered today, be an 'iffy' proposition. And I can assure you that the likelihood would be nil for any further North Slope development other than that to which the companies are already deeply committed." I sat there and quietly cheered when the Commissioner concluded his testimony

saying, "Oil production decisions generally entail middle to long-term investments, and stability is more important in the decision than making ephemeral benefits that may be offered by FEA." I'm sure that you recognize that the interests of the State and those of our industry are identical in this, both before the FEA and generally speaking.

Senator Ted Stevens also spoke eloquently for Alaska in the FEA hearing urging the maximum incentives possible under present federal law.

The third witness before the FEA hearings in Washington that I want to report on was David P. Goodman, Managing Director of Morgan Stanley & Co. Incorporated, investment bankers in New York City. Mr. Goodman is also a member of the Energy Financial Advisory Committee to the FEA. His firm arranged over $5.5 billion of the financing for Prudhoe Bay and the Trans Alaska Pipeline, and he personally had the responsibility for over $5 billion of that amount. In the course of his work he has had in depth discussions with more than seventy major institutional investors regarding the financing of these and other large energy projects. His testimony before the FEA last Monday is Attachment E to my testimony here today, and I urge you to read the full account. There are several parts of his testimony to the FEA which bear directly on the business climate here in Alaska and which I would like to highlight for you.

With respect to the central issue on the pricing of Alaskan oil, Mr. Goodman made the following statement which he characterized as a strong one. He said that as a result of all the financing work he had been engaged in and all the discussions with institutional investors he had had,

> "I have concluded that if the Administration establishes price control or entitlements treatment for (Alaska North Slope) crude which does other than allow it to compete in price with world oil in the United States market, this action will have a serious detrimental impact on investor's willingness to provide financing for the development of future energy projects, both for petroleum and other energy sources."

He noted that there were four areas of risk that lenders sought assurance on: that the oil was there, that the pipeline and terminal would work, that there would be a ready market for the oil, and that the overall project evidenced continued financial viability. He said that his firm had been able to answer most of the questions most investors had, but

> "there was one risk which we were unable to eliminate in the minds of certain major, sophisticated investors, and they declined to participate in the financing partly because of it. That risk was that government would not permit (Alaska North Slope) crude oil to compete with world oil in the market place, but would place restriction on its price such as are currently under consideration."

A few moments later he said:

> "That is why my firm feels strongly that unfavorable treatment for (Alaska North Slope) crude will adversely affect the ability of industry to finance future energy projects."

Mr. Goodman then turned to the risk elements of Alaskan North Slope development and the appropriate rate of return for projects like Prudhoe Bay and the Trans Alaska Pipeline. He said:

"These hearings are also investigating the risk elements of North Slope development and the appropriate rate of return for this project. Both of these subjects were obviously matters of great interest to investors. This project is one of the riskiest ever undertaken by industry. The important risks aren't those cited in the Mortada study. The cost of exploration before the Prudhoe Bay discovery well is insignificant compared with the risk undertaken by the industry in going ahead with the project under the Pipeline Right of Way Act. The participants were committed to complete the project no matter what the cost in the face of absolute federal and state controls over construction. Remember that this project had been delayed over four years by court intervention and government redesign. Compliance with these actions had already more than doubled costs. Yet the industry was forced to accept a set of stipulations far more exacting than any ever applied to such construction before, stipulations that many in the industry were concerned about being physically able to comply with, and to proceed with absolute authority vested in one man to halt construction or require design changes that could cause costs to skyrocket with no accountability for cost effectiveness. The industry undertook these absolute obligations, and costs did rise to the point where, if ANS crude is allowed to compete against world oil, the Mortada study and industry figures indicate that the project will earn a discounted return in the area of 14% to 16%.

"Mortada states that a return of 12% should be equitable. There may be some analogy to the returns allowed to regulated industries in Mortada's thinking, although even higher returns are allowed in risky start-up ventures there. But regulated returns involve an exclusive franchise wherein subsequent rate regulation assures such a return. No one is assuring the price of Alaskan or world oil.

"If we had projected a 12% return from the outset, I'm not sure that the project could have been financed. It's our experience that oil companies will not undertake a project involving any significant risk for a projected return of under 15%. The industry will earn returns of approximately 22% in the British North Sea, where they have experienced retroactive majority participation by the British government. The financial institutions who invest in the equity of the leased tankers for the Valdez trade will earn a discounted after tax return in excess of 15% with the benefit of a hell or high water, all events charter from the oil companies. Based on these facts, I cannot accept that a 12% return is equitable for a project of the magnitude and riskiness of the North Slope project.

"The aggregate earnings from the North Slope will be very large. It is one of if not the largest oil field ever found outside of the Middle East. But the costs are high and the rate of return will be modest, particularly bearing in mind the risk. If you want industry to be able to finance the development of major energy discoveries this country so sorely needs, particularly the smaller companies you want to favor in your OCS leasing policies, do not make the wrong decision in pricing ANS crude oil. It is critical with regard to establishing an overall energy policy, of which the issue of pricing Alaskan North Slope crude oil can be looked on as an important first step to retain the willingness of the private sector to provide financing of future energy projects."

From all of the foregoing, you can see that the health of Alaska's economy has some sensitivities which the present pricing determination of the FEA materially impact. Similar impacts can also come from substantial new state taxes on oil and gas exploration, development and transportation. The point is I hope you will

take as much care on your consideration of the various tax proposals as we all want the FEA to take on the pricing of Alaskan oil. This is also important to all the Alaskans whose trade and business depends directly or indirectly on continued, reasonable resource development right here in Alaska.

The fourth of the five perspectives I mentioned concerns the FEA hearings specifically. It is most appropriate for the State to appear in these hearings and urge the maximum price permitted under federal law for Alaskan North Slope crude oil. That position is based on the need for positive economic incentives for present and future resource development here. On the other hand, it seems utterly inconsistent to me for the State to be urging the need for major economic incentives in Washington and at the same time be seriously considering substantial new taxes on oil and gas in Juneau which would wipe out a big part of whatever incentives there are. May I suggest that these tax measures be given a good deal of study, that whatever tax measures may be appropriate for serious consideration be taken up in the next session, and that the State, our industry and other Alaskan businesses concentrate on critical decisions that are now before the FEA. I understand, but don't know, that the FEA is trying to come to judgment by June 1st. There is a good deal of work to be done there and I hope we can all concentrate on that.

The fifth, and the last perspective, comes back to the point of beginning. The State and the industry still need to resolve a longer term policy for oil and gas taxation and leasing. If nothing else, the events of the last year and the present problems confirm this. It's not too late. Can't we begin again and take a look at the whole picture? At least for Sohio, we're still ready to be responsive.

Thank you.

RICHARD M. DONALDSON
VICE PRESIDENT
GOVERNMENT AND PUBLIC AFFAIRS

July 1, 1976

Mr. Gregg Erickson
Director, Research Services
Legislative Affairs Agency
State of Alaska
Pouch "Y", State Capitol
Juneau, Alaska 99811

Dear Gregg:

I have your letters of June 16 and 22, 1976, regarding the study you are preparing to undertake with respect to Alaska's longer term natural resource leasing and taxing policies.

These letters deal specifically with Alaska's income tax. While I recognize that the figures in these letters are hypothetical, the fact that "answers" have been calculated at the beginning of the study is somewhat disturbing. My experience has been that figuring out specific "answers" before the overall problem has been defined can preclude a study, unduly limit it or affect its objectivity. I certainly hope that none of these things happen as the proposed intersession studies hold out some promise of stability for both the State and our industry.

I am writing to give you some thoughts on three segments these studies could logically consider:

- Future revenues of the State
- Future expenditures of the State.
- Alaska as a place to do business from industry's perspective.

Set out below are some ideas that have occurred to me as starting points for things that could be considered in each of these subject areas.

Future Revenues

1. What are the ranges of revenues that the State government can expect to receive from all of its existing taxes--including those that impact on natural resources and their related facilities; and from other sources such as bonuses, royalties, and the Federal government?

2. To what extent will these revenues cover a reasonable estimate of the State government's future money needs?

3. What are the leasing alternatives available to the State with respect to its natural resources, and what would be the ranges of revenues from such alternatives?

4. What are the taxing alternatives available to the State with respect to its natural resources and other sources, and what would be the range of revenues for each such alternative?

5. How do other states compare with Alaska in tax revenues, in tax rates and in the leasing of their natural resources?

Future Expenditures

6. What is a reasonable estimate of the State government's future money needs for various purposes and in total under a range of prospects with respect to its future business and commercial development?

7. What will be the financial impact of the recommendations in the Governor's recent management and efficiency review?

8. Are management and efficiency reviews in other areas of the State government needed and what financial impacts are they likely to have?

Business Perspective

9. What factors does business use in determining what it considers a worthwhile investment? How does it choose the location for its investments where choices are available?

10. How do business conditions in Alaska compare with those in other states, in terms of availability of resources to be developed, financing, employment, construction and operating costs, regulation, taxes, government attitudes and so forth?

11. What can be learned of business' reaction to significant or continuing changes in the factors listed in the preceding question?

I don't mean to imply that these are the only questions that should be considered, but offer them as some indication of the scope that ought to be examined in a meaningful study of Alaska's longer term tax and leasing policies.

In my testimony on March 30, 1976 before the Joint Hearing of the Senate and House Resources Committees, I suggested such a study and indicated that we would be responsive to such a study. In addition to studying the attachments to your letters, we are thinking about ways in which all the questions noted can be studied and discussed in a manner which would be meaningful and understandable.

These questions are not only of interest to the State government and our industry, but concern everyone in Alaska I can think of--the native regional corporations, other business and commercial interests in the State, labor, the financial community, and people generally. I hope that this study will seek advice on that broader base.

I understand that a study similar to the one the Legislative Council will consider is being initiated by the Administration under the direction of Commissioner Gallagher and Commissioner Martin. Presumably these studies will be coordinated to some extent. It seems appropriate to send the Commissioners copies of this letter and I hope you won't mind my doing so.

Sincerely,

Richard M. Donaldson

SOHIO SUBMISSION ONE

This paper is submitted for consideration by the Alaskan Administration and Legislature in the intersession studies each is now conducting concerning the long term oil taxation and leasing policy for the State.

The first subject of inquiry by the staffs working for the Legislature and the Administration on these studies concerns the nature, revenue potential and appropriateness of Alaska's present tax laws as they will apply to the Prudhoe Bay field and the Trans Alaska Pipeline (TAPS). One point of interest to the staffs in this area of inquiry is Alaska's state income tax and how it will apply.

This submission examines the state income tax of Alaska and makes projections as to what the income tax payments will be utilizing certain assumptions for the future operations of Prudhoe Bay and TAPS. However, since state income tax is only one part of the substantial total revenue Alaska will receive as the result of Prudhoe Bay and TAPS, the non-income tax revenues have also been calculated. These revenues include projections of the State's royalty income and tax receipts resulting from Alaska's severance tax, rese es tax, and ad valorem tax. In addition, this submission points out certain relationships which exist within the present Alaskan tax structure.

Most of the larger companies in the United States are engaged in business activities in a number of states. Each of the states in which these companies do business expect to receive some state income tax

payments from them. Yet, if a company were to pay taxes to each state in which it operates calculated by applying that state's income tax rate to the total earnings of the company wherever earned, multiple taxation, or as the law states it, "duplicative taxation" would result leaving the firm with little, if any, after tax income. As companies became larger and did business in many states, there was a need for some method of equitably determining what each state's fair share of such income taxation should be.

The Multistate Tax Compact was set up by the states to ensure that effective and fair taxation of multistate businesses could be established among the various states. Today, most of the fifty states are members of the Multistate Compact, and Alaska has been a member since 1970 as a result of the Legislature's action.

States which are members of this Compact follow the Uniform Division of Income for Tax Purposes Act. Under this Act, the total taxable income of a company, wherever earned, is allocated to the various states in proportion to the amount of that company's business activity conducted in each state. This allocation is calculated by averaging three basic factors that take into account the extent of a company's business in a particular state: its physical property there, its actual sales there, and the number of its employees located in the state. The first factor is the percentage of the company's total physical property which is located in the state in question compared to all of its property wherever located. The second factor is the company's annual sales which occur within the specific state as a percent of the company's total annual sales. The third factor is the company's payroll costs incurred in the specific state divided by that company's total payroll for all of its operations.

The arithmetic average of these three factors for the state in question is multiplied times the company's total taxable earnings to arrive at the share of taxable earnings to be allocated to the state. This share is then taxed at that state's full tax rate. While any allocation of earnings among the states is probably not perfect, this particular system for doing so has been considered the fairest compromise approach that anyone has devised.

The Legislative Affairs Agency has asked us to provide it with a projection of what Sohio's state income tax payments to Alaska would be under the Multistate Tax Compact allocation method. Unfortunately, we are unable to provide this specific information because doing so would be equivalent to providing projections of Sohio's future earnings and create a number of other problems for us. The rules of the Securities and Exchange Commission would then require us to disclose such projections to the general public and to publicly and perpetually update those projections any time our internal estimates of the future changed. The burden of disclosing such projections on a perpetual basis and the potential liabilities to investors if such projections turned out to be wrong have led substantially all large U.S. companies to decline publication of any earnings projections. Our counsel has advised against this, and in view of the overall problems, we feel we cannot respond to the specific request and so advised the Legislative Affairs Agency.

However, in order to be of some help to the Legislative Affairs Agency and still follow our counsel's advice, we have developed hypothetical projections of tax payments to Alaska which would result from an assumed one-third ownership of Prudhoe Bay and TAPS by three typical companies.

None of these companies is intended to represent a company actually involved in the development of the Prudhoe Bay field or construction of TAPS. Rather, the projections are intended to demonstrate the level of tax obligations which would result from the project being owned by companies varying in size and scope of overall operations. Specifically, the three typical companies in our hypothetical example have the following assumed characteristics:

Company A - A California based marketing and refining company with no crude oil production.

Company B - A large integrated domestic company with significant petroleum production and transportation operations.

Company C - A major international company with substantial foreign operations.

The significant basic assumptions for each of these companies are summarized in the following table:

	Company A	Company B	Company C
Annual Sales (Millions)	$3,700	$8,200	$24,500
Gross Property (Millions)	$1,800	$8,200	$13,800
Total Employees	27,000	32,500	75,000
Taxable Income (Millions)	$ 210	$ 850	$ 1,700

For the purpose of these tax calculations, it was assumed that a ratio of employees in Alaska to total employees would be equivalent to the payroll ratio since detailed data on payroll costs is unavailable. It was also assumed that the only business activities any of these three companies had in Alaska was its one-third ownership of the field and the pipeline.

Since a great deal of uncertainty surrounds both the future price of North Slope oil and future rates of inflation, the tax payments of the three companies were calculated in terms of constant 1976 dollars assuming three different California market prices: $10.00/barrel, $13.00/barrel, and $16.00/barrel. (To put this range of prices in perspective, the price of foreign crude oil similar in quality to Prudhoe Bay oil is approximately $12.30/barrel delivered to California.)

The characteristics of the Prudhoe Bay field and TAPS project determine the nature of the allocation factors used in this analysis. First of all, crude oil production is a very capital intensive operation. This has been accentuated in the case of Prudhoe Bay due to the high cost of Arctic development.

Secondly, Alaska's industrial development has not as yet reached, and may never reach, the stage where significant volumes of Prudhoe Bay crude oil can be consumed within the State. That being the case, the $7.7 billion Trans Alaska Pipeline and Valdez terminal had to be constructed so that the crude oil could be shipped to other states where there is a demand for that oil. Without the demand in other states and the TAPS line, Prudhoe Bay oil would be of little value. These transportation facilities have contributed to the high capital costs of the project.

Finally, in most oil production and pipeline activities, the number of employees required for routine operations after the original construction has been completed is relatively small. This holds true for Prudhoe Bay and TAPS.

When these characteristics are translated into allocation factors, similar trends develop for each company. The Alaskan property factors of

all three companies are large relative to the overall scope of the basic companies' operations. The property factor for Company A, for example, is in the range of 65 to 70 percent and even for Company C, the major international, it is between 20 and 25 percent. On the other hand, the Alaskan payroll factor in all cases was assumed to be less than 2 percent of the companies' total employment. Finally, since Prudhoe Bay oil must be transported to other states for sale, an Alaskan sales factor of zero percent results.

The results of our analysis are summarized on the attached six tables. There are two tables, labeled A and B, for each of the assumed West Coast market prices, $10.00/barrel, $13.00/barrel, and $16.00/barrel.

Referring to Table 2-A which summarizes the results of the $13.00 per barrel market price caluclation as an example, the annual state income tax payable to Alaska by each of the hypothetical companies for each year from 1977 through 1986 is listed along the top of the Table. These tax payments in total range from $27.4 million in 1977 to almost $90 million in 1985.

It is very important to bear in mind that all these figures are expressed in 1976 dollars and that no adjustment has been made for any inflation in any year which would increase the dollar figures received by the State. These charts can be adapted, however, to whatever inflation factors one thinks appropriate to get a more accurate projection of actual revenue expectancies.

The other revenues that Alaska would receive in addition to income tax have also been calculated for each year for these companies and displayed in the second segment of the A Tables in order to provide an overall picture

of the revenues produced by the present Alaskan tax structure. The figures in this segment are totals for the three companies rather than individual amounts for each company, since each company's share would simply be one-third of the total figures shown. Included in this segment are royalty payments, severance tax payments, reserves tax payments, and ad valorem tax payments. Also shown are credits against severance tax for the reserves tax payable in 1976 and 1977 to the extent of 50 percent of the severance tax as provided by Alaskan law.

The sum of the Alaskan income tax payments by the three owner companies and the other revenues represents a projection of the total revenues Alaska would receive as a result of the field and pipeline project in our hypothetical case. These annual totals are also listed on the A Tables. Using Table 2-A as an example again, Alaska's total revenue as a consequence of the field and pipeline would range from over $600 million in 1977 to more than $1.1 billion annually from 1981 through 1985 if the market price of crude oil were to remain constant at $13.00/barrel. The comparable annual total revenues for a $10.00 market price and a $16.00 market price are displayed on Table 1-A and Table 3-A, respectively. The hypothetical case does not include any similar types of revenues from Cook Inlet development or future development in other parts of the State.

For comparison purposes, the total state income tax payments that the three companies would make to all the states in which they do business have also been calculated and displayed on the A Tables. These figures are based upon the total taxable earnings of the three companies, and they include the state income tax paid to Alaska listed along the top of the A Tables. As indicated on these Tables, the effective composite state

income tax rate on the total taxable earnings of the three companies, that is, all income taxes paid to all states, is around 6 percent. This is what one would expect, since income not allocated to Alaska is taxed by other states and the average state income tax rate of all the states in the United States is significantly below Alaska's 9.4 percent rate.

It is interesting to note that since the field and pipeline project is located in Alaska, Alaska's state income tax payments from the three companies will exceed 20 percent of the total income tax payments made to all states even though extensive activities are carried on by the three companies in other states. It is also interesting to note that this high percentage received by Alaska holds true for all three market prices of $10.00/barrel, $13.00/barrel, and $16.00/barrel. This percentage is shown at the bottom of each of the A Tables.

Tables 1-B, 2-B and 3-B show the total revenue that Alaska will receive from each of the companies over the 1977-1986 ten year period.

These B Tables also point out what percent of the total revenue paid to all states resulting either wholly or in part from the field and pipeline will go to Alaska. Since the Prudhoe Bay field is located on state lands, Alaska would receive 100 percent of the royalty payments. Similarly, Alaska would receive 100 percent of the severance tax payments and 100 percent of the ad valorem tax payments. The reserves tax payments and the severance tax credits resulting from those payments are also strictly an Alaskan transaction.

In addition, since the field and pipeline are located in Alaska, the State will also receive state income tax payments as indicated above. Alaska's state income tax payments are a result of that portion of the total

taxable income from all operations of the companies which would be allocated to the state under the Multistate Tax Compact. As such, it reflects the income distribution to Alaska based upon property, sales and payroll factors, regardless of how or where the taxable income originated.

Using Table 2-B as an example, at a $13.00/barrel California market price, Alaska will receive a total of $756 million in income tax revenues. This would be almost 22 percent of the total state income tax paid on all the operations of the three companies.

When those income tax receipts are added to the other revenues listed on Table 2-B, it can be seen that Alaska will receive almost $10.2 billion in revenues from 1977 through 1986. Those revenues will represent almost 75 percent of all the revenues going to all states, either wholly or partially as a result of the field and pipeline project. Again, as indicated by Tables 1-B, 2-B, and 3-B, this high 75 percent share holds true over the entire range of market prices from $10.00 to $16.00 per barrel.

In summary, the significant points that this three company hypothetical case confirms seem to be the following:

1. Under the existing Alaskan tax structure and royalty obligations, the State would receive substantial annual revenues from the three companies which in total are directionally representative of the actual ownership of the Prudhoe Bay field and the Trans Alaska Pipeline. In constant 1976 dollars, such revenues would average almost $800 million per year as a consequence of this project alone if the California market price for oil were $10.00 per barrel, and would exceed $1.3 billion if that price were $16.00 per barrel.

2. Such tax and royalty revenues to Alaska will represent approximately 75 percent of the total revenue paid to all states, including Alaska, resulting either wholly or in part from the Prudhoe Bay field and the Trans Alaska Pipeline.

3. Of the total revenues to be paid to Alaska attributable to this field and pipeline, the principal part of such revenues are due to State ad valorem taxes, State severance taxes, and State royalties which are 100 percent allocable to Alaska and to State income taxes, over 20 percent of which is allocable to Alaska under the Multistate Tax Compact.

4. With respect to the Alaskan State income tax, the State would receive payments at the full 9.4 percent rate of Alaskan income taxation on that portion of the three companies' total taxable income which is allocated to the State under the Multistate Tax Compact. This allocation would be based upon the extent of the business activity in Alaska measured by physical property in the State, actual sales within the State, and the number of employees located in the State.

The composite state tax rate on the total taxable earnings of the three companies will be approximately 6 percent. This is the portion of total taxable earnings the companies would pay as income tax to all the states in which they do business. This composite rate is lower than Alaska's income tax rate because the average state income tax in the United States is substantially below Alaska's 9.4 percent.

Alaska, however, would receive over 20 percent of the income tax payments which the three companies in our example would make to all states. That is a high percentage in light of the extensive business activities carried on by these companies in states other than Alaska.

January 21, 1977

SOHIO SUBMISSION TWO

This is the second paper submitted by Sohio for consideration by the Alaskan Administration and the Alaskan Legislature in the studies each has been conducting concerning the long term oil taxation and leasing policy for the State. The first paper, entitled Sohio Submission One, was provided to the Alaskan Administration and Legislature on October 28, 1976.

By way of background, that paper examined the state income tax of Alaska under the allocation method of the Multistate Tax Compact and made illustrative projections of the substantial revenue that Alaska would receive as a result of the first ten years of operation of the Prudhoe Bay Field and the Trans Alaska Pipeline System (TAPS). Those projections of revenue included estimates of the State's royalty income and tax receipts resulting from Alaska's severance tax, reserves tax, ad valorem tax and state income tax.

In order to develop those hypothetical projections for the future operations of Prudhoe Bay and TAPS, it was assumed that equal one-third shares of that field and pipeline would be owned by three typical companies, none of which were intended to represent any company actually involved in that project. The assumed characteristics of the three typical companies which were used in Sohio Submission One were as follows:

Company A - A California based marketing and refining company with no crude oil production.

Company B - A large, integrated domestic company with significant petroleum production and transportation operations.

Company C - A major international company with substantial foreign operations.

Due to the degree of uncertainty surrounding both the future price of North Slope oil and future rates of inflation, the projections of Alaskan revenue contained in Sohio Submission One were calculated in terms of constant 1976 dollars, assuming three different California market prices: $10.00/barrel, $13.00/barrel, and $16.00/barrel.

Among the significant findings of Sohio Submission One was that at the $10.00 per barrel price, Alaska would receive average revenues of almost $800 million per year from Prudhoe Bay and TAPS during the next ten years. At the $13.00 per barrel and $16.00 per barrel prices, Alaska's average annual revenues from this project would exceed $1.0 billion and $1.3 billion, respectively. These tax and royalty revenues to Alaska would represent approximately 75 percent of such revenue paid to all states, including Alaska, resulting either wholly or in part from the Prudhoe Bay Field and the Trans Alaska Pipeline. If some factor for inflation were applied to these projections rather than using constant 1976 dollars, the average annual revenues would increase accordingly, but Alaska's 75 percent share of such revenue to all states resulting from this project would not change.

The purpose of Sohio Submission Two is not to further examine either the "fair share" aspects of Alaska's taxation policy or the revenues the

State might expect as a result of Prudhoe Bay and TAPS. Sohio Submission Two takes the next step and compares the tax burden of such Alaskan tax laws currently on the books with the tax burden of the comparable tax laws of the other three largest oil producing states--Texas, Louisiana, and California. In the development of this comparison of tax burdens, exactly the same basic economic assumptions regarding the Prudhoe Bay Field and TAPS are used that were the basis for Sohio Submission One. Additionally, it is assumed again for this hypothetical case that one-third of this field and pipeline is owned by each of the three typical companies previously mentioned. In other words, the tax payments for each other producing state have been calculated by simply assuming that Alaska adopted the tax laws of that other state in lieu of the existing Alaskan tax laws. For comparison purposes, only the constant $13.00 per barrel selling price in California is used. This is the midpoint of the assumed price levels which were used in Sohio Submission One. As in the previous paper, no attempt has been made to forecast future rates of inflation, and again, all the calculations and results are expressed in constant 1976 dollars.

Since this paper analyzes only the taxes of these oil producing states, the $4.9 billion in royalty payments that Alaska would receive if oil sells for $13.00 per barrel in California has been eliminated from the comparison. To simplify the comparison, Alaska's 1976-1977 reserves tax and future credit against severance tax payments have been deleted from this analysis. Since the reserves tax was enacted to alleviate Alaska's short term financial difficulties prior to initial production from Prudhoe Bay and since the reserves tax payments will be completely offset by future credits against severance tax obligations, it is not a

part of Alaska's permanent ongoing taxes, and it is the comparison of these states' ongoing tax laws that is the most informative.

The results of this analysis are displayed on the attached Tables 1, 2, and 3. Each of these Tables lists the principal Alaskan taxes which currently apply to petroleum activities in the state. These include the state income tax, the severance tax, and the petroleum property ad valorem tax. The payments which would be made to the State of Alaska over the 1977 through 1986 ten year period have been calculated and listed on each Table, along with the basis of calculation for each tax. The tax payments resulting from the comparable taxes of Texas, Louisiana, and California and their bases are listed on Tables 1, 2, and 3, respectively. Finally, each Table compares the total payment to Alaska for each tax as a percent of the total payment which would result under the comparable tax of the other leading oil production state.

Table 1, for example, is a comparison of the tax burden under the Alaskan tax laws with the tax burden under such tax laws of Texas, currently the largest oil production state in the U.S. As indicated on Table 1, the Alaskan state income tax payments of the three hypothetical companies owning Prudhoe Bay and TAPS would total more than $750 million over the 1977-1985 ten year period. Texas, on the other hand, does not have a state income tax so, if the three companies were subject to Texas tax laws instead of the Alaska tax laws, the state income tax payments by the three companies would be zero.

The second section of Table 1 compares the payments which would be made from 1977 through 1986 by the three companies under the Alaskan

severance tax and ad valorem tax to those payments which they would have to make if they were subject to similar taxes in Texas. Since it is assumed that one-third of Prudhoe Bay and TAPS would be owned by each of the three typical companies, each company's tax payments would simply be one-third of the figures shown in this section. Alaska's severance tax would average 7.8 percent of the net wellhead value of the oil, i.e., the wellhead value after royalty payments are deducted. This results in total Alaska severance tax payments of almost $2.7 billion over the ten year period. Since the Texas severance tax rate is only 4.6 percent of the net wellhead value, the total severance tax payments would be slightly more than $1.6 billion over the same period. Therefore, the severance tax payments resulting under Alaska's current severance tax would be 163 percent of those resulting under Texas's current severance tax.

The present ad valorem tax rate of Alaska is equal to 20 mills and is applied to the valuation of all petroleum hardware. This would result in Alaskan ad valorem tax payments by the three companies of more than $2.0 billion from 1977 through 1986. The ad valorem tax on production properties in Texas is equivalent to 2.5 percent of the net wellhead value of the oil produced. For pipeline facilities, the Texas ad valorem tax averages slightly less than 8 mills times the hardware valuation. Therefore, the total ad valorem tax payments which the three companies would have to pay if they were subject to these Texas tax laws would total $1.46 billion from 1977 through 1986. As indicated on Table I, the Alaskan

ad valorem tax payments over this ten year period would be 140 percent of those in Texas.

The sum of all these Alaskan tax payments made by the three companies from 1977 through 1986 would be almost $5.5 billion. The comparable figures under the Texas tax laws would be only slightly more than $3.1 billion. In summary, the Alaska tax burden would be 176 percent of that for Texas.

Table 2 compares in the same way Alaska's taxes with those of Louisiana, currently the second largest oil production state. Several significant factors concerning Louisiana's taxes are demonstrated by this Table. First of all, while the Louisiana state income tax rate is 4.0 percent, Louisiana has an oil depletion allowance equal to the lesser of 38 percent of the net wellhead value, or 50 percent of oil production taxable income. Furthermore, the state allows the deduction of Federal income tax payments prior to the determination of the state income tax liability. Therefore, income tax payments to Louisiana by the three companies would amount to $382 million over the 1977 to 1986 period. The income tax payments under Alaska's state income tax over this same period would be 197 percent of this amount.

Another significant item highlighted by Table 2 is the total payments by the three companies of almost $4.5 billion resulting from Louisiana's 12.5 percent severance tax rate, which is the highest oil severance tax in the U.S. As indicated on Table 2, the corresponding payments under Alaska's severance tax are 60 percent of those under Louisiana's severance tax. However, this difference in tax receipts

is almost completely offset by the fact that Alaska's ad valorem taxes are substantially higher than those in Louisiana, that is, 298 percent of such Louisiana taxes. When the total of these tax payments by the three companies is considered, the payments to Alaska of almost $5.5 billion over the ten year period are 99 percent of the tax payments which would be made to Louisiana.

Table 3 compares the tax laws of Alaska to those of California, the third largest oil producing state. California's income tax rate of 9.0 percent is almost as high as that of Alaska, and the total tax payments by the three companies under either state's income tax law would be within $25 million of each other for the ten year period.

As indicated on Table 3, the ad valorem tax payments under California's tax law would be about twice those paid to the State of Alaska. On the other hand, California levies no severance tax on oil production. When the total payments by the three companies resulting from these two taxes are compared for each state, the payments to Alaska would be 112 percent of those under California's method of taxation. Including the projected state income tax payments in these totals, the $5.5 billion total ten year tax burden in Alaska would be 111 percent of the $4.9 billion total which would result under California's tax laws.

Sohio Submission Two confirms the testimony by Sohio before the joint hearing of the Alaskan Senate and House Resources Committees that the burden of these tax laws already on the books in Alaska equals or exceeds the corresponding tax burdens of the other leading

oil production states. Using the hypothetical three company ownership of the Prudhoe Bay Field and the Trans Alaska Pipeline to illustrate the point, Sohio Submission Two affirms in a more precise manner that Alaska's current tax laws are 176 percent of those of Texas; 99 percent of Louisiana's; and 111 percent of California's.

It is respectfully suggested that Alaska's comparative tax position is one factor deserving careful attention if the State considers further changes in its tax laws, since such changes will affect the revenues flowing to the State government and the health of the State's economy, both of which will principally depend on reasonable resource development.

SOHIO SUBMISSION THREE

In recent months Sohio has provided the Alaskan Administration and Legislature with two writings entitled "Sohio Submission One" and "Sohio Submission Two". Sohio Submission One sets out the revenues the State of Alaska might receive under its existing tax laws during the next decade. These figures were based on taxes that might be paid by three hypothetical companies, which were described in Submission One, under the assumption that in addition to its present operations each company would own a one-third interest in the Prudhoe Bay field and a one-third interest in the Trans-Alaskan Pipeline.

Sohio Submission Two compared the revenues Alaska might receive under its existing laws, as set out in the first writing, with the revenues Alaska would receive if it had the tax structure of either of three other leading oil producing states, namely, Texas, Louisiana, and California.

The purpose of Sohio Submission Three is to set out the taxes these three hypothetical companies would pay under two sets of assumptions; first, that the Administration's tax proposals became law, and second, that the Legislature's tax proposals became law.

This Sohio Submission Three consists of two parts. The first part describes our understanding of the existing laws and of the provisions of the proposed laws as we have used them in our work. The second part, commencing on page 8, provides comments on the results of our calculations as

Attachment D

March 22, 1977

SOHIO SUBMISSION THREE

In recent months Sohio has provided the Alaskan Administration and Legislature with two writings entitled "Sohio Submission One" and "Sohio Submission Two". Sohio Submission One sets out the revenues the State of Alaska might receive under its existing tax laws during the next decade. These figures were based on taxes that might be paid by three hypothetical companies, which were described in Submission One, under the assumption that in addition to its present operations each company would own a one-third interest in the Prudhoe Bay field and a one-third interest in the Trans-Alaskan Pipeline.

Sohio Submission Two compared the revenues Alaska might receive under its existing laws, as set out in the first writing, with the revenues Alaska would receive if it had the tax structure of either of three other leading oil producing states, namely, Texas, Louisiana, and California.

The purpose of Sohio Submission Three is to set out the taxes these three hypothetical companies would pay under two sets of assumptions; first, that the Administration's tax proposals became law, and second, that the Legislature's tax proposals became law.

This Sohio Submission Three consists of two parts. The first part describes our understanding of the existing laws and of the provisions of the proposed laws as we have used them in our work. The second part, commencing on page 8, provides comments on the results of our calculations as

they appear in the attached tables.

Part 1 - Comments on Existing Laws and Proposed Bills

The bills we considered in the case of the Administration proposals pertain to the franchise tax and property taxes and production taxes. In the case of the Legislature's proposals, we considered the bills relating to severance tax and income tax and a bill pertaining to net proceeds tax.

The salient provisions of the bills compared to the existing laws are as follows:

SEVERANCE TAX

Existing Law

The present law provides for payment of the higher of a percent of value or a cents per barrel in the case of oil. In the case of gas the tax is a straight 4 percent of value. The tax on oil is on a graduated scale as follows: For the first 300 barrels per day produced by a well during a month, the rate of 5 percent of value or 16.875¢ per barrel; for the next 700 barrels, the tax is 6 percent of value or 20.25¢ per barrel; and for all production over 1,000 barrels the tax is 8 percent of value or 27¢ per barrel. If a well produces 10,000 barrels per day the tax would be 7.77 percent of value or 26.22¢ per barrel, at the rate provided in the law. The cents per barrel figures escalate based on the wholesale price index for crude oil.

Administration's Proposal

The tax would be the greater of 10 percent of value or 75¢ per barrel, with the cents per barrel figure adjusted for changes in the Gross National Product deflator from and after the first quarter of 1977. The greater tax

rate is further adjusted by multiplying it by an "economic limit factor" for the purpose of reducing taxes on wells on properties which are approaching their economic limit. This economic limit factor is defined as one less the monthly rate of production at the economic limit of the property, divided by the current production from the property. The factor will be presumed to be one minus 100 barrels per day divided by total production per day, unless the owner can prove that this factor is not representative of the true economic limit. The economic limit factor will be changed if the operator can prove that his operating cost divided by the wellhead price would result in a lesser factor. A wellhead price for this purpose is determined by taking the landed price of imported oil on the West Coast and subtracting reasonable transportation costs from the field to the West Coast. The operating costs to be considered are set out in the proposed law.

With respect to gas, the tax would be the higher of 10 percent of value or 6.4¢ per MCF, providing that the cents per MCF will be adjusted by the GNP deflator from and after the first quarter 1977. These rates are subject to an economic limit factor, calculated in a manner similar to that described above for oil.

Legislature's Proposal

The legislative proposal provides for payment of the higher of a percent of value or cents per barrel of oil. In the case of gas the tax is a straight 4 percent of value. The tax on oil is on a graduated scale as follows: For the first 300 barrels per day produced by a well in a month, no tax; for the next 200 barrels, 4 percent of value or 13.5¢ per barrel;

the next 700, 6 percent or 20.25¢; the next 500, 9 percent or 30.38¢; the next 2,000, 11 percent or 37.13¢; over 3,500, 14 percent or 47.25¢. The cents per barrel figures escalate based on changes in the wholesale price index for crude oil from and after December 1973. If a well produces 10,000 barrels per day in a month, the composite rate would be 12.25 percent and the cents per barrel would be 41.346¢.

PROPERTY TAX

Existing Law

The present law provides for a 20-mill tax based on an assessed value equal to full and true value of the property. With respect to production facilities, the fair and true value is defined as actual cost during construction and thereafter as replacement cost less depreciation based on the economic life of proven reserves.

Full and true value of the pipeline is defined as cost during construction and then shall be determined with due regard to the economic value based on the estimated life of the proven reserves deliverable to the pipeline. However, if such reserves indicate an economic life materially shorter than the physical life of the pipeline, the full and true value is the actual cost reduced by straight-line depreciation over the life of the reserves. Under the law, the terms "actual cost" and "replacement cost" do not include capitalized interest or intangible drilling costs.

Administration's Proposal

The Administration proposes no basic change in the law with respect to production facilities. With respect to pipelines, the provision cited in the second to the last sentence above has been deleted. The law would

simply now say that the assessed value shall be "determined with due regard to the economic life of the property based on the estimated life of the reserves deliverable to the pipeline."

The property tax would apply to refineries and gas plants not now subject to tax. The basis would be replacement cost less depreciation based on the useful life of the property. It would also apply the tax to the tankers coming in to pick up oil at Valdez. This would be based on replacement cost less depreciation based on the useful life of the property. And based on the number of days the tankers spent in Alaskan ports compared to the total number of days the tankers spent in ports everywhere.

Legislature's Proposal

To our knowledge the Legislature has made no proposal with respect to property tax.

INCOME TAX

Existing Law

Practically speaking, under the existing law of Alaska, the income tax rate is applied to a portion of federal taxable income allocated to the State of Alaska under a three-part formula involving sales, payroll, and property.

Administration's Proposal

The Administration's proposal would apply to any company whose gross receipts exceed $250 million, 50 percent or more of which comes from one or more aspects of the oil and gas business. The taxable income of a company, part of which would be allocated to Alaska, would be the greater of taxable income as now computed or financial income before deduction of

any taxes based on income. The portion attributable to Alaska would be again determined by a three-part formula involving factors for property, payroll and extraction with extraction replacing the sales factor which is now used. The extraction factor would be the ratio, in terms of BTU's, of the oil and gas production of a company within the State of Alaska to such production everywhere.

Legislature's Proposal

The Legislature proposes separate accounting with respect to income tax. With respect to most oil companies operating in Alaska, their total taxable income in Alaska would consist of a combination of taxable income from oil and gas production, from oil and gas pipelining operations, and from other operations. The taxable income from oil and gas production would consist of the wellhead value of such production reduced by royalty, severance tax, property tax, operating costs, depreciation, interest, and exploration expenses.

Under this formula, depreciation would include a write-off of capitalized interest, less acquisition payments and property taxes which were incurred prior to the commencement of production. The interest would be interest not capitalized, allocated to the property based on the following formula: total interest times a fraction, the numerator of which is the book value of the field's fixed assets, defined by the book value of the fixed assets in the entire company.

The taxable income from oil pipeline operations would be calculated at 8 percent of the ICC valuation. In the case of gas pipelines the taxable income would be determined in accordance with FPC procedures as far as

interstate pipelines are concerned, and in accordance with the Alaska Public Utility Commission as far as intrastate lines are concerned.

The taxable income from all other activities would be the corporation's consolidated taxable income, minus the taxable income for oil and gas production and for oil and gas pipelines as outlined above, allocated to Alaska on the three-part formula.

NET PROCEEDS TAX

Existing Law

No such tax.

Administration's Proposal

None proposed.

Legislature's Proposal

There has been proposed an ad valorem tax based on income at income tax rates. The basis for the tax would be gross value minus certain deductions specified in the law. The gross value would be computed either at the wellhead or at some other point chosen by the Department of Revenue. There would be deducted from gross value royalties, transportation costs (if the valuation point is beyond the wellhead), operating costs incurred in the State, operating costs incurred outside the State or in lieu thereof 5 percent of expenses incurred in the State, taxes, depreciation, and geological and geophysical costs in areas outside the area of production. This latter item could be carried forward for ten years and may be included as an expense at no more than 20 percent per year. Income from operations other than production would continue to be taxed under the existing income tax law.

Part 2 - Results of Calculations

The results of our calculations are shown on attached Tables A through E. Tables A, B, and C show the amounts of each type of tax that will be paid each year from 1977 through 1986, under existing laws, the Administration's proposals and the Legislature's proposals, respectively. All of the figures are based on an oil price of $13 00/barrel in California and are in constant dollars. We have not shown the reserves tax to be collected in 1977 nor the impact of the future credits against severance taxes, because our purpose here was to show the impact of on-going taxes. As a consequence of this, it will be noted that the figures for the existing laws shown in Table A are slightly different from those on Table 2-A of Sohio Submission One, which covered basically the same tax situation.

Tables D, E, and F compare the total of taxes estimated to be received by Alaska during 1977 through 1986 with those that would be received if Alaska had the tax structure of Texas, Louisiana, or California, respectively. They are, therefore, somewhat similar to the tables appended to Sohio Submission Three but in addition include comparisons of the total taxes under existing laws, the Administration's proposals and the Legislature's proposals.

Of particular note on Tables A, B, and C is the second line of numbers from the bottom entitled "Effective Composite State Income Tax Rate on Total Taxable Earnings." This is the composite income tax rate paid to all states by the three companies. It ranges from 6 percent under existing laws to 12 percent under the Administration's proposal and 15 percent under the Legislature's proposals. We found that calculating this composite rate was a difficult and imprecise task. But in any event, the 6 percent,

12 percent, and 15 percent were all calculated using similar procedures with respect to all states with the exception of Alaska. Therefore, the increase in these rates highlights the impact of the Administration's and the Legislature's proposals. If Alaska should move away from the three-factor formula now provided for in its law and in the laws of most states the duplication of taxes becomes obvious.

Tables D, E, and F indicate that, as a consequence of the Prudhoe Bay field and TAPS, Alaska will collect $5.5 billion from 1977 - 1986 under its present tax laws from the three hypothetical companies. This is 176 percent of what it would collect under the tax structure of Texas; about the same as it would collect under the structure of Louisiana; and a little more (111 percent) of what it would receive under the tax structure of California. Figures in millions of dollars are:

		If Alaska had the taxes of: (Millions)		
	Alaska	Texas	Louisiana	California
Severance Tax	$2,688	$1,649	$4,466	$ 0
Ad Valorem Tax	2,038	1,459	684	4,202
Income Tax	753	0	382	728
Total	$5,479	$3,108	$5,532	$4,930
Alaska as a percent of the other states		176%	99%	111%

If we assume the Administration's tax proposals are enacted, we note from the following table that the tax income of Alaska will increase about $2 billion over what it would be under the existing tax structure for a

total of $7.5 billion. We note further Alaska's tax income would be from 1-1/3 to almost 2-1/2 of what it would be under the laws of the other three states.

		If Alaska had the taxes of: (Millions)		
	Alaska	Texas	Louisiana	California
Severance Tax	$3,283	$1,649	$4,466	$ 0
Ad Valorem Tax	2,582	1,459	684	4,202
Income Tax	1,591	0	382	728
Total	$7,456	$3,108	$5,532	$4,930
Alaska as a percent of the other states		240%	135%	151%

If the Legislature's proposed tax bills are enacted, we note that the tax income will go to $9 billion for 1977 to 1986. This would be three times as much as Alaska would collect under Texas law, over 1-1/2 times as much as under Louisiana law, or almost twice as much as under California law. Furthermore, we note that if the Net Proceeds bill were passed, the State would collect another $90 million during this time.

		If Alaska had the taxes of: (Millions)		
	Alaska	Texas	Louisiana	California
Severance Tax	$4,219	$1,649	$4,466	$ 0
Ad Valorem Tax	2,038	1,459	684	4,202
Income Tax	2,774	0	382	728
Total	$9,031	$3,108	$5,532	$4,930
Alaska as a percent of the other states		291%	163%	183%

It should be noted again that all of these figures assume a constant price of $13.00 for oil. We believe that in making some of its estimates of income, outgo, and fund balances the State of Alaska assumed some increase in the price of oil over the years. Comparisons of numbers should be made with this point in mind.

HEARINGS ON ALASKAN NORTH SLOPE PRICING AND ENTITLEMENT ISSUES

BEFORE THE FEDERAL ENERGY ADMINISTRATION

Monday, March 21, 1977

Statement of David P. Goodman, Managing Director of
Morgan Stanley & Co. Incorporated

My name is David P. Goodman. I am a Managing Director of Morgan Stanley & Co. Incorporated, investment bankers in New York City. I am a member of the Energy Financial Advisory Committee to the Federal Energy Administration.

In Morgan Stanley's capacity as investment bankers to the Standard Oil Company (Ohio), Exxon Corporation, Mobil Oil Corporation and the British Petroleum Company, Limited, our Firm has arranged during the last two and one-half years over $5.5 billion of financing for the development of the Prudhoe Bay Field and the Trans Alaska Pipeline System. I have had personal responsibility for over $5 billion of this financing in a series of ten public offerings and two private placements of $1,750 million and $500 million. In the course of these financings, particularly the two private placements which were to finance a portion of Sohio and BP's interests in TAPS (the Trans Alaska Pipeline), I have had in-depth discussions with many major institutional investors regarding the financing of major energy projects.

As a result of these discussions, I have concluded that if the Administration establishes price control or entitlements treatment for Alaskan North Slope crude which does other than allow it to compete in

price with world oil in the United States market, this action will have a serious detrimental impact on investors' willingness to provide financing for the development of future major energy projects, both for petroleum and other energy sources.

I realize that this is a strong statement, but I would like to review with you some of the problems we faced and overcame in financing the North Slope project.

The companies which own the Prudhoe Bay reserves will likely spend $14 to $15 billion to develop the 9.6 billion barrels of oil reserves and transportation facilities needed to bring the oil to market. Expenditures of similar magnitude will be required to bring Prudhoe Bay gas reserves to market. Probably in excess of $9 billion of financing for the oil project has been arranged since the Pipeline Right of Way Act was passed in January 1974, almost $7 billion through the sale of securities, principally debt, and the balance through bank loans. Although all of the major Prudhoe reserve holders have done extensive financing, I will focus my remarks on Sohio and BP.

Sohio has about 53% of the Prudhoe oil reserves, and Sohio and BP will spend almost $7.5 billion on the project, of which Sohio's share is $6 billion. Since Sohio's non-North Slope assets are only about one-third of this amount, the bulk of these funds have been raised externally.

The most important financing steps for Sohio and BP were two

private placements for their TAPS affiliates, one of $1,750 million arranged in the spring and summer of 1975 and one of $500 million arranged in the summer of 1976. Seventy-seven institutional investors, including almost all of the major life insurance companies and public pension funds, savings banks and many private pension funds administered by trust banks, participated in these transactions. The loans represent the largest single investment for many of these investors.

In selling a private placement of this type, Morgan Stanley, as agent, prepares an extensive offering memorandum and sits down with the institutional investors to explain the project in great detail and answers any questions they have. It was through these discussions that we became aware of the concerns of investors which led to my previous conclusion. There were a number of risks that lenders sought assurance on: that the oil was there, that the pipeline and terminal would work, that there would be a ready market for the oil. The lenders obviously required a detailed economic analysis of the project, particularly since costs continued to escalate at an alarming rate during the construction period. We were able to demonstrate the continued financial viability of the project because during the same period world oil prices also increased dramatically. But Prudhoe oil is expensive oil, with development costs on the order of magnitude of $12,500 per barrel per day.

Obviously, we were able to answer most questions these investors had since the Sohio/BP financings were by far the largest ever accomplished.

But there was one risk which we were unable to eliminate in the minds of certain major, sophisticated investors, and they declined to participate in the financing partly because of it. That risk was that the government would not permit Alaskan North Slope crude oil to compete with world oil in the market place, but would place restrictions on its price such as are currently under consideration. We cited the language of, and the legislative history behind, Section 8(g) of the EPAA which clearly contemplated that the President should consider special treatment for Alaskan North Slope crude to assure that its well-head price was high enough to provide incentive for future North Slope development. We pointed out the words of the law directing the President to exclude Alaskan North Slope crude from the composite price if the inclusion of high-priced Alaskan North Slope crude would lower the price for other upper-tier crude in the United States. Clearly the entitlements program was, in the words of the FEA, "designed to approximately equalize the cost of crude oil purchases" among refiners, and was never conceived of as a price control mechanism for crude oil. Yet the uncertainty of the prospect of these very proceedings here today was enough to cause important lenders not to participate in the most important energy project this country has ever seen. That is why my Firm feels strongly that unfavorable treatment for Alaskan North Slope crude will adversely affect the ability of industry to finance future energy projects. The prospect of a political decision in these hearings caused major investors to

eschew TAPS. Alaskan North Slope crude is new oil -- treat it as no worse than upper-tier oil at the well-head. Alaskan North Slope crude is very high-cost oil. Allow it to compete with world oil in the market place on the same basis as stripper oil, without detriment from the entitlements program.

These hearings are also investigating the risk elements of North Slope development and the appropriate rate of return for this project. Both of these subjects were obviously matters of great interest to investors. This project is one of the riskiest ever undertaken by industry. The important risks aren't those cited in the Mortada study. The cost of exploration before the Prudhoe Bay discovery well is insignificant compared with the risk undertaken by the industry in going ahead with the project under the Pipeline Right of Way Act. The participants were committed to complete the project no matter what the cost in the face of absolute federal and state controls over construction. Remember that this project had been delayed over four years by court intervention and government redesign. Compliance with these actions had already more than doubled costs. Yet the industry was forced to accept a set of stipulations far more exacting than any ever applied to such construction before, stipulations that many in the industry were concerned about being physically able to comply with, and to proceed with absolute authority vested in one man to halt construction or require design changes that could cause costs to sky-rocket with no accountability for cost effectiveness. The industry undertook these absolute obligations, and cost did

rise to the point where, if Alaskan North Slope crude is allowed to compete against world oil, the Mortada study and industry figures indicate that the project will earn a discounted return in the area of 14% to 16%.

Mortada states that a return of 12% should be equitable. There may be some analogy to the returns allowed to regulated industries in Mortada's thinking, although even higher returns are allowed in risky start-up ventures there. But regulated returns involve an exclusive franchise wherein subsequent rate regulation assures such a return. No one is assuring the price of Alaskan or world oil.

If we had projected a 12% return from the outset, I'm not sure that the project could have been financed. It is our experience that oil companies will not undertake a project involving any significant risk for a projected return of under 15%. The industry will earn returns of approximately 22% in the British North Sea, where they have experienced retroactive majority participation by British government. Financial institutions which invest in the equity of the leased tankers for the Valdez trade will earn a discounted after-tax return in excess of 15%, even though these financings are backed by "hell-or-high water," all-events charters from the oil companies. Based on these facts, I cannot accept that a 12% return is equitable for a project of the magnitude and riskiness of the North Slope project.

Gentlemen. The aggregate earnings from the North Slope will be

very large. It is one of, if not the largest oil field ever found outside of the Middle East. But the costs are high and the rate of return will be modest, particularly bearing in mind the risk. If you want industry to be able to finance the development of major energy discoveries this country so sorely needs, particularly the smaller companies you want to favor in your OCS leasing policies, do not make the wrong decision in pricing Alaskan North Slope crude oil. It is critical with regard to establishing an over-all energy policy, of which the issue of pricing Alaskan North Slope crude oil can be looked on as an important first step, to retaining the willingness of the private sector to provide financing of future energy project.

Thank you.

QUESTIONS AND ANSWERS
RICHARD DONALDSON - SOHIO
March 24, 1977

SENATOR COLLETTA - Dick, referring to Page 30, your statement on utterly inconsistent factor of the State urging major economic incentives before FEA in these taxing proposals before us gets subjective opinion to how damaging those would be in decision by FEA?

RICHARD DONALDSON - There are several parts, I guess, in answer to that Senator Colletta. We have been working the FEA question in Washington for about two months, calling on various members of the staff, talking with Mr. O'Leary himself, _____we've talked with James Schlessinger on several occasions. We have called on members of Congress, chairmen of committees and their staff, generally trying to lay the foundation on kinds of things you think they ought to be talking about, focusing on this maximum incentive. The first part of the answer, I guess, is you begin to get a feel of where the balance is, and what additional help can mean in striking a balance so that the answer hopefully comes out of the maximum price possible under law for Alaskan crude. In the course of this work, we have encouraged others, not just in our industry, but who rely on energy in various ways to study it, reach their own conclusions and express their opinions to the government on this. They are doing so. I was just delighted to see Alaska as a State government

beginning to participate in this. You don't know how important it is to have not just another oil company coming in in a soverign state, representing people. It puts a different element into the balance for which there is no substitute, and quality of advocacy that Alaska has been bringing to this, I felt it very good. My testimony reflected that. We have not yet gotten into the conference where the political questions of consumerism, a something for nothing kind of price will be raised. A pretty good record has been made so far in hearings in Washington, San Francisco, and in Anchorage, and I'm very concerned that we lose the essence of Alaskan advocacy that is an important thing in this bounds. It could be lost if, for example, the State appeared disinterested. It could be substantially reduced if somebody in Washington said "hay, you guys are down here arguing for the best price, but you're taking away at home". If you want to put it bluntly, why should the rest of the consumers in the lower '48 simply raise prices so you can raise taxes. The inconsistency of the position undermines the position as an advocate _____ State brings to this right now. I'm probably remiss in not reporting to you the fact that, and I don't mean this in a critical way, that there is a feeling in Washington that Alaska always wants some special treatment, and anything that doesn't stimulate that reaction that can temper judgement the wrong way ought to be avoided. So when you boil it all down, Senator Colletta, I think we need as an industry, and the State needs

in its own interests, as many positive advocates down there right now as we can. The FEA is going to make its decision, the President may make his recommendations toward the end of May or the early part of June that seems to be where they're pointing, so the next couple of months are pretty critical. I can't guarantee that I'm right. We're in the trenches on this and following it very very closely, and we need all the help we can. In this one, our interests simply are not enough. My suggestions in this testimony is intended as a friendly one. The State of Alaska gives up nothing in its soverignty by deferring judgement on major tax questions now. I think some of them deserve more study, but I don't think you lose anything by saying, we will come back to it next year and we will be cross-examining you, and we expect you to be responsive SOHIO, but I think it's a bad choice of tactics to ignore what is the big issues now for all of us, FEA pricing, and run down this, what is an important trail, but a side trail a long way from the main issue. That's a long response and I guess I'm only communicating feeling. For whatever it's worth I believe that's where we are.

SENATOR COLLETTA - During the gas hearings, Judge Litts decision came to the floor by a gentleman who gave extensive comprehensive testimony on interpretation of what that man was saying, and the _____ of what he was saying in this one

interpretation was that the credibility of Alaska is so laced with greed that whatever we do is just suspect, and what I want you to tell me is that I can gather from what you're saying on Page 30 here, if you perceive this attitude as far as oil is concerned why these people are going to make a decision is Alaska projecting an image of total greed?

RICHARD DONALDSON - I don't think dealing with issues like this at the National level, the State should feel apologetic. Obviously, someone who is a synic can give it a translation of greed, but you could present the same position in a much more acceptable way which I think is much more honest in the responsibility of State government, and I'm not trying to pretend I'm the State Governor, but let me express it this way. The State of Alaska is made up of people who live here, who are doing many things. Some of them work for the Governor. Most of them, maybe 75% of them work in the private sector so called of businesses or maybe they're just employed there. Almost all of those in the private sector one way or another directly or indirectly have the success of their business in part, maybe a large part, and the success of their remaining employed dependent on the resource development here, because it is your biggest industry and we're proud to be a part of it. Now what you're saying in Washington to me doesn't come across as greed. What you're saying is "look, in terms of the interests of the people in our State, we want to keep

our businesses relatively profitable. We want to do it over many years, and we recognize that a key thing in that is having a continued resource development, not tearing up the State, but in a planned way that goes forward on a continuing basis that keeps things humming, so men here of the FEA, we've come to Washington to tell you that we're concerned about people in Alaska who need to be employed, and we know that to do that, you have to have some incentive on oil and gas prices in the _____that will permit this activity to move forward. The second thing you can say without any apologies, if you look at the resource potential in Alaska, and what it contribates potentially is the whole country's needs in terms of energy, but we have a very responsible part to play, and that can't be done unless you have a fairly high incentive in the terms of the price decision which you have to make. So yes, there's an element of self interest, but it's all of our self-interests for people in the lower '48, people in the private sector who incidentally over the long haul bringing revenues into a state government provide the services that people need. I don't think you have to make any apologies for that. That is kind of how I would do it if I were representing the State, and that's the essence of what the Governor, the Commissioner of Revenue, Senator Stevens has been saying. I think that they would be a little more persuasive even though they have been good, if they talked a little more

about the private sector, and the concern for that here in Alaska. Most of you have lived or worked in the private sector before you put on your legislative hats. This is so, and I think arguing that and urging that, and saying it's important leaves you nothing to apologize for.

REPRESENTATIVE ELIASON - Dick, somewhere earlier in your presentation, you were tying in the surplusses and the needs of revenue relationship to extraction taxes. Now, I can relate the need for on-going programs to cover the services of the people in a relationship to income taxes and property taxes, but would you elaborate how surplusses or the need of income relates to a one time non-renewable resource and extraction tax?

RICHARD DONALDSON - Right now, I'm working on a committee that is a part of the National Petroleum Council in Washington. It's an interesting committee to work on because it's made up of members of our industry, members of organized labor, environmentalists, consumers, professors from academia, people in government. To try to get all those people around one table and agree on something like a national energy policy is what the committee is supposed to be doing, and we've made some interesting progress, and one of the things that we had been wrestling with at first, and it's responsive to your question,

is how do you treat something that seems finite. In other words shouldn't you take more because it is finite. That's really your question _____, and to pull two things out of all those weeks of discussion might be of interest to you and will help. The first is our ability to underestimate our energy reserves of all kinds has always been infinate, and what has happened is we have looked harder, brought better technology, new horizens on-shore, off-shore. We have kept pushing out the finite of what we know exists in energy supplies. I have a 1916 article from a magazine in my files, kind of a collectors piece that absolutely predicted that in 1925 we were going to run out of oil and gas, and no question about it, it had the figures, it had dates, it had a projection. You know, you can read that same article today, and all you've got to do is change the dates, and numbers and a couple names. Now, in a sense, fossil fuels have a finite quality, but I have to tell you that what we know may be very limited, our horizens are in close. The history of our industry is keeping and pushing those horizens out, so part of the answer to your question is let's don't assume today to know everything that's there because the history of our whole industry _____. The second thing that's important to it, there is a duel responsibility of government, if you don't mind putting it that way. On the one hand, you have to raise sufficient revenues from businesses and citizens where you are responsible to pay for the services they need, and you can bank some ahead,

and you are fortunate today if you can do it, but you have another responsibility and it's not to be so over-reaching, if you will, in the running of a government that you put a total chill, or a substantial chill, on the private sector because most people out there are in it for a living, and paying the taxes too, and so what you have is a very tough problem in government, and I don't envy you for a minute, of trying to hit some kind of a balance between government, taxes, and stimulation of the private sector so that it runs on its own, and that's exactly what we've got here. What I was trying to reach here, and probably didn't do it too well was saying you've done a good job in covering your future revenue needs. You're bills are paid for a couple of decades, there's no question about it, and I think there's time here needed to say what about the other side? What about the private sector? Where is the bounds? And, it's suggesting that you think about this policy and how it effects the private sector. I'm saying it kind of meshes in with the two problems that we have here in Alaska today that are the big ones. The FEA pricing decision is one, and this policy balance is the other. My whole testimony, when you boil it down simply says one thing, let s all work on the pricing problem with FEA this year, if you will until that's solved, and meanwhile so we don't prejudice that, let's take this policy question head on and try to answer that. Then you see how the two blend and you can go forward on both simultaneously

without prejudicing either one.

REPRESENTATIVE ELIASON - I guess what you're really saying then is that we're morally right in charging an increased tax upon a non-renewable resource, and extraction tax compared to an ordinary property tax or income tax approach?

RICHARD DONALDSON - All I'm suggesting is, and I don't know what the right numbers are, the laws help somewhat, the economics help sort it out somewhat, but the real point of focus, if you're going to do a good job, is to remember you've got a public sector and a private sector in the State, and overhanging the whole thing right now is this Federal Energy Administration question.

I have come today to be as frank as I can because we're trying to work on both, and I can't do anything less than tell you where we are and what we're worried about.

REPRESENTATIVE ELIASON - Of course, we really don't know what our future incomes are going to be either, and you're saying we have our bills paid for a number of years down the road, but we really don't know that particular point until the FEA makes that determination.

RICHARD DONALDSON - I don't either, and yet every study that I have seen shows very substantial surplusses in your treasury in the mid '80's, and the only question is how big they are, not whether they will be there. So directionally what you're saying is we've got a great piece of life insurance out there ahead of us. Maybe we should take a few months, or most of the year and sort out these other questions so we don't lose anything by taking the time.

SENATOR RADER - Madam Chairman, following along the same line as Representative Eliason, and in fact, I think it's exactly the same point, the Gove in his State of the State message to the legislature, and I think also in his budget message, spoke of a general policy which would involve the argument that the State has in trust these non-renewable resources such as oil, and that all of the revenue, at least 25% which is our permanent fund referendum, but he urges that 100% of the revenue which comes from royalty be saved and set aside and not used for the ongoing purposes of government, and that we impose taxes to handle which you consider to be our normal ongoing needs. You're a lawyer, I'm a lawyer, so lawyers would say we have the trust and he's arguing that the corpus of the trust, the body of the trust to be preserved, and that for the State to carry on its day to day activities, it must have the tax proposals that he has suggested in order to balance his budget. Now, if you adopt the Governor's argument

I suspect that the tax proposals that he's suggested may be correct that you'd have to have those to balance the budget. I don't know that that's the case, but at least he's said that that's the case. Do you, and I think this is exactly the same question as Mr. Eliason is addressing himself to, to what extent do we have an obligation to not invade the the corpus, so to speak? To what extent do you think we should raise taxes if we are going to completely keep the corpus in trust? How do you meet that argument?

RICHARD DONALDSON - Let me give you an example. Let me take myself and the way the finances of my family run. Some of the income on our family comes from my salary, some of it comes from investments, not too many that I have made, dividends, maybe a little appreciation on it, some comes from interest on my savings account, but it comes in at an overall flow, so to speak, in the family treasury. Now, I haven't made any decisions that I can stand with very long for the whole future of the rest of my life, I'm only going to bank my interest in dividends and not spend it if there's some other need. Sometimes, I have to dip into that where there's situations in the family. Sometimes I can put a little of the salary away too, and I stay flexible on that. Now, let's translate that into the State if it is translatable. The State has income strains from several sources. Many sources actually, but we will say basically to the tax and royalty. In a sense it's nice to put some by for problems that you can't foresee

now that the State will have. The idea of having a kind of permanent fund, particularly if it's used as a development type fund for sources and capital that wouldn't otherwise be available. It's a very good thing. Let me digress just a moment as an example. Suppose there had been a big copper strike somewhere up in the center part of the State, and it's a commercial load, and there's no transportation there and there's no town, but industry said, we'd like to come in and develop that, but put stipulations and requirements on. It would be a nice thing to have a fund that would say, well, industry normally puts in the mines, the processing facilities, and if they can get at the tide water they'd have to come up with the ships and take it from there, but maybe a fund that could establish a town and transportation systems and maybe even port facilities, the kind of thing that this permanent fund, just like you have some reserved in your own savings account can take up. On the other hand, if I draw too much out of my business and destroy the business or make it less profitable, I'm hurting my family too, aren't I? So the State has a balancing job at the other side. If it tries to draw too much into the savings account and destroys the general flow of income from oil and gas, maybe it hasn't made the best decision in managing those funds. So in a sense, the state's no different from my family. You've got to check the flow coming in and the flow going out, and be able to

adjust somewhat from time to time if you're going to run it intelligently. In answer to your question specifically, the idea of some kind of a permanent fund is a development resource for the State, not to help us necessarily, but other Alaskan's participating in that. I have no idea personally what the right size is, except that I would want to stay flexible if I were running it for my own family. On the other side, I don't want to prejudice the income. You see, that's the other question. If you set it all aside to the permanent fund, you may be very comfortable about those fat balances, but if there's no future out there, in ten years or fifteen because it's been discouraged, has it been the right decision? This is why I think, John, that we need to take a look at it.

SENATOR RADER - Alright, then that brings us to the next question. Should we, I note that Mr. Tanzer for example, compares our situation with tax loads that have been imposed by other governments, places where the oil industry has been nationalized in some places and so on and so forth. Your comparisons are primarily to other states. You did mention the North Sea situation, I think, a little bit, but in thinking of our own terms in terms of the future of an oil industry in Alaska, to what extent should we consider the international method of taxation or exappropriation or whatever might be the situation?

RICHARD DONALDSON - Well, I guess there are three questions that you have rolled into one. First we have considered Alaska versus other states because all states are subject to the same federal body of tax law that simply simplifies the presentation. There's no intention to mis-lead. Secondly, when you compare other country's situations what you are really doing is comparing the total tax burden in other countries, and sometimes they have only one government, not several levels, and you add up whatever they have, and if you compare that, and compare it with what we have which is the sum of federal, State and local, in doing that kind of comparison, we've done some work on that and Ken Schowlater can get it for the committee if you'd like to have it, what you find is that the total tax burden in the United States of Federal tax law, Alaskan tax law, and local tax law is very comparable to the burdens that you find in these other countries that Dr. Tanzer likes to refer to. The third thing, you can look at any kind of tax mechanism to raise revenue, and the ingenuity on that, you know it's really only limited by the time that somebody has thought of that you can research, but the key question is less the mechanics than the total burden, and if the burden becomes such that you tone down the economic activity that you also want, obviously, it's the burden that's the key to watch, not the mechanics. There's an interesting article as an editorial in the Anchorage paper last night talking about Indonesia. They over-reached, the industry shutdown. They tried to come back, and I guess those negotiations have fallen

off again. There isn't anything magic in saying well this is what they're doing someplace else in the world. What you really have to look at is the economics of the situation, and does it stimulate the activity you want? I don't know what's right or wrong, but I know the economics is worth it where it's all sorted out. You might say we'd have one tax in Alaska, not fifteen or three or four, and one tax generates the revenue and provides the economic activity, fine. What is the problem though in most state activity is that there is the need in other states, a terrible need for revenue. They don't have enough to run schools and things. You're fortunate here, so they keep looking for different kinds of taxes, and playing the game because it's a different tax, maybe nobody will mind, but here when you're doing planning of an economic nature for the state's longrun, I think it's encumbent upon you to look at the whole scene, all the taxes and the burden, and do the kind of comparative stuff that we try to do for you. If you do your own, you won't come out with any different numbers, though maybe you'll accept it.

SENATOR RADER - Just one more question if I might, Madam Chairman. One of the goals of the Governor's package was to capture some of the impact and activity from the Outer-continental Shelf development, the franchise tax is, I think, what he called it. Address yourself to that problem. I suppose you wouldn't care if you had a franchise tax that didn't change the total burden, and also include the Outer-continental Shelf.

As again, you're saying it's not the mechanics, it's the burden that you're worried about.

RICHARD DONALDSON - It's kind of a hard question to answer. You get into kind of a speculative area that you're just not sure where you are. Let me try this Senator. When you go into an area for resource development, as a company what you're looking at is the potential there for development, the costs and investments you have to throw at it, and you look at tax burdens and whatever it's called charges, franchise tax, or whatever, you do look at that. You also look at how many winners and losers you might expect in drilling holes here and there. You make some judgment, probably imperfect because there's much you still don't know whether it's worth the risk against other places. In this area of OCS development of what burdens should be assumed for impact for example on the coastal lands you tend to support this. You get some very tough questions, at least three that come to mind that you ought to sort out. Whatever it is, I suspect any industry that goes in there, they expect to pay a share of that impact cost. Maybe a little more than a fair share, that also seems to be the pattern, but they also have the option of not to go, and how that gets traded out many times is a matter of negotiation. I think there is a problem however of asking somebody to come in. You say, we want you to pay on day 1 what we will guess the total impact cost to be over the whole

life of your project. In the first place, that's not discounted for the time in the future when the impact will occur. There's no _____ economically in that advance payment. The second point is, suppose you're calculation of the advance is wrong. You don't find anything. You don't have any large development. You have a large string of dry holes. You've put a premium or a penalty if you will going in that would discourage a lot of people, and I think the answer, and this is only personal, not our company view, what you need is a system to say you've got a fair business cost, just like you pay your fuel bill or hire a guy to run a cat for this type of impact. I'd say it would be difficult for a company to say well, that's not right, that's fair, that is a business cost. But then you come to the second phase that says what's fair, and you say well, we had so many people coming in, we need so much land, we will pay these taxes, and then you have other service industries come in to support that. They too have a share of that impact cost, so you need a system that kind of allocates that over the whole thing. We've got a lot to learn in this area, and I suspect all of us will spend a good deal of time, but again you run the risk of making a mistake of trying to do something well and guessing wrong, and deterring other things that you really want to happen. I hope that's helpful.

SENATOR COLLETTA - On page 2, you were excited about the Governor's policy objectives on any new tax, Dick, and you enumerated the

five points that he made. Would it be fair to ask in the proposals that are before us, how many of these points do they fall short of?

RICHARD DONALDSON - You don't have any easier questions, you'd rather I'd answer do you? Alright lets take a flier at it. I think it's a fair question. Item one, sufficient revenues to compensate the State for additional service costs pending such development. Let me pause right here, I'll come to the dividend part in just a moment. If any of the forecasts of future revenues from lets say Prudhoe Bay or the pipeline are valid, over the next three years we will be paying from 75% to 120% of the State's total budget. It seems to me that that first standard is well covered just by one project. I'm not saying that you don't want more, but at least in terms of covering your costs, we're probably more on payment, and I'm not saying that to be argumentative. In terms of dividends, I don't know what the.Governor had in mind, what he's saying is we'd like to bank a little bit for the future. What you do say is if you have that surplus, maybe it's eight and a half million dollars in the mid 80's I don't know. There's at least a suggestion that the dividend is being paid. Maybe it's not enough, but this is one of the areas that you would have to discuss. I can't say it's short, but there's at least a good down payment on it and maybe some area for discussion. That's really the hardest part of the answer. Point two - I'm not sure that any consideration has been given to the

profits to investors to keep them _____, and back later on in the paper where I was quoting the stuff from Morgan Stanley and the cost of business here, there is at least a first offering on the subject, not enough consideration has been given to that. Perhaps we ought to have some discussion and we are all interested in having that go forward. Point three - We must be resonably responsive to the National and world economic trends of the time. Things that come to mind when you read that is the cost of energy on a BTU basis that is going up all over the world, and the need to generate supplies of energy of all kinds, particularly domestically here in the United States to try to meet more of those here at home so that we're not at the mercy of the foreign cartel. I think Alaska at least at the moment is responsive to this because it is just about to contribute to the United States energy supply, the oil flow from Prudhoe Bay, and nobody can say that that's small. On the other hand, as far as future participation, there hasn't really been much movement in the State in the last three years to significantly encourage future contributions, and you know the lead time is long. We hope for a Beaufort Sea lease, we hope for a Gulf of Alaska, and I think that needs to be dusted off and you would probably comply with that, if compliance is the question, by moving ahead on those things. The FEA question, you see, your participation in that, I think is being responsive to National need because if you get a higher price and stimulate this development, you see, you've got a part of that and

that's another place that I've tried to encourage you to do it. Nondiscrimination on the basis of ownership - well here I guess our industry feels like that wonderful line from Fiddler on the Roof. Remember when Tevia the father was standing out on the road, he looked up at the heavens and said "Lord, it's nice to be the chosen people, but do you have to do this every time"? I'm sorry about that, sometimes a joke is better than _____ _____. I must reduce uncertainty and encourage stable expectations about future resource tax and management policies. One of the problems, here and many places in the country, not just here has been the instability of governments relations with industry in energy, and as this testimony started and finished, it was really almost begging you again, say let's sit down and look at this policy to find some stability. We've done pretty well on some of these, Senator Colletta. Others I think, needs more work.

GEORGE SILIDES - Mr. Donaldson, I've been invited to ask you a couple of questions as counsel to the committee, and I notice, and I almost hesitate to ask you this question, but I do think that there is a table missing which would have made a rather fine report, or perhaps even better, but I notice that in the report in your comparison between taxes paid among the states, that is the percentages, your comparisons, of course, are in

actual dollars paid, and I don't see a table which includes the factor of doing business. Now, you indicated, of course, you made a very excellent point about how much more it costs your company to do business in Alaska. The corollary, of course is that it costs the State of Alaska to do business here also including the municipalities and everyone else. Have you a table which takes that into consideration? If I might give an example of what I'm speaking of, we'll use the State of Louisiana because it makes the numbers come out even, if for example, it costs 50% more to do business in the State of Alaska than it did in a third of Louisiana, then it could be argued that our taxes are not 99% of Louisiana's but only 66% of Louisiana's. Have you made that type of table in comparison?

RICHARD DONALDSON - This is the area that I have said that we hadn't completed, and what we're trying to do is to get comparative data, which is very hard to get, that would compare cost of findings and producing and transporting oil to different regions of the country. You remember about a year ago, we gave you a couple of maps and showed you some things. We've been trying to develop this comparative cost data in public figures. You can get pieces of it, but we haven't been able to get something that you could put all together. The pieces that we have, and this is sort of a preliminary report, if you will accept it that way, tend to show that there is a premium, a higher cost for doing business in the Arctic and off-shore

than in other states, and when you are looking at a company making your business decisions, what you do is tend to add two basic factors. You say, okay, there is a potential here that we would like to explore that we would guess going in would have two billion barrels of oil, just to take a number off the ceiling, and we know that the cost of that if we carry it through would be X and X is probably twice what it is in some other place. We also know what the tax burden would be. Let's say that's Y, now we add up X and Y versus the return. We say now that's a good risk investment, or no, we just don't want to touch it, even if the oil is there. The cost is not there, so we approach it from this standpoint, why this comparative data, we think would be helpful if we could get together. I'm not sure we can yet, we've worked on it for about six months, so we have some of the pieces but not all. You could say alright, let's consider how Alaska stands up with an oil well in west Texas or some off-shore work in California or something off the East Coast. Let's just see how we compare as a risk potential, risk reward type from other places in the country, and what I think this will show is that Alaska has a high development potential, but that it has to have better potential in resources than other places in the country because the costs are higher, and what that comes down to is this, you begin to see the margin of profitability shrink as you go farther off-shore or further into the arctic today. What that means to me for purposes

of bills that you have here, is that everytime you push that thing closer together by additional taxes.

We were told a few weeks ago that, how does it feel to work for an industry that has no risk, and I said how did you derive that? The man said, well, if you loo[illegible]nings they are very stable. I couldn't wait to get back to Cleveland and talk to Charlie Plumb who is our Vice-President for Accounting who has worked very hard to spread out these peaks and valleys of income and whatever so that you have some of these finance reportings that are consistent. Charlie, I said, you did a swell job on accounting, but you've made me real proud _____, and this is one of the little _____ that I just couldn't get over. On the pipeline itself, you find the oil and you know the market is there, and you think you have the technology to connect to, so in a sense you say a lot of the risk is taken away, and in a sense that's so because that's what project financing is all about, but when you get into the building and the design, the financing, the calculations of how to engineer something like this, it's sort of like going past the first grade and thinking you know how to add and subtract and suddenly you realize that out there is something called analytical geometry and calculas, and there's a whole string more of things you don't know. What we've had to do is to work through all of that the first time out in a project like this in the Arctic where there's no precedence for it in the whole world. Now, we've had a lot of experience building pipelines, and we've brought that to the table, but there's

a lot that we didn't know, and what is really happening, if you will recall is that through delay, the inflation involved in it, stipulations laid on by government for things that will be done in this line, increasing labor costs which you can anticipate _____ the actual cost of this pipeline, the things that are almost beyond our control has gone up 400% during the time of this project. Fortunately the cost of the oil in the world market has gone up 400% approximately too. What has happened in this is that probably more of my grace than anything else, the increase in price for oil has covered the increase in cost of the project. This is proved out, and I think we reported this to you in testimony a year ago that are going in anticipated return on a DCF basis in 1970 was about a 14 to 16% range. In 1974, we ran it again. A whole lot of things have changed and all these prices have gone up, but they are still all in about a 14 to 16% range. When we calculated for you a year ago, it was still in that range, not by anything more than chance frankly, so while we've had to invest four more dollars for each one we anticipated, the return in the market will be about four, but the profitability dollar per dollar hasn't changed, and you know who's been the real recipient for this windfall in products? Happily, it's the State of Alaska because you don't have any investment money in it. Your tax rates are still there on the books and you get a same percentage from a larger income plus. I think it's great that you do. I don't begrudge it, it's just a factor.

GEORGE SILIDES - Madam Chairman, if I might just one more time. Dick, that's a very complex subject, and I know that everytime we talk about it, we can go on for hours and I'll let it go for now, but there's something coming up that we're going to have to face in taxation, here, now, we've all heard a lot about the surplus of Alaskan crude on the west coast, and what to do with it whether it should go to Japan, or go to the gulf coast, and so on. Now, we anticipate of course when the pipeline was first built that we probably _____ to Cherry Point, or Long Beach and let it go at that. Now you're anticipating building a pipeline to the east coast from California. Are we going to have to share in that pipeline construction cost?

RICHARD DONALDSON - To some extent yes, but probably not as much as you're worried about. The reason is this. There will be a lot of new exploration and development in oil in Alaska and on the west coast. As we get some stability, I hope in national energy possibly. People with refineries begin to build new refineries to replace old ones or perhaps expand existing ones that will handle _____ in sour crude of the Alaskan type, so you may see more oil finding a home on the west coast than you could now guess today, but they will also find more offshore on the west coast, and maybe on shore, and the crying need for all of this is on the eastern part of the country. Now the reason I say worry a little bit less is that the country needs west and east

transportation. Pipeline transportation has historically been the best one to move oil in bulk at the lowest cost, and the project we have, we think tends to follow that precedent, but it doesn't mean that the only oil going through that pipeline will be Alaskan oil. There may be some. There may be some offshore California oil. There may be _____ oil, a lot of different oil, but you should recognize that the existence of that pipeline is a real plus to the State of Alaska and to us because it provides an escape valve to a market. Oil can move on to the next most economic spot, and this means it's worth more, maybe not quite as much as it would on the west coast, but a lot more than if it didn't have those facilities, and one thing that sometimes I think we tend to forget is the driving economics on us is to sell the oil at the best price that we can, and if you chose to take royalty on some of it, that's fine, but if you say that's a lot of risk, we have to do it for you under the leases, and our driving force is to get the same best price and you've got kind of a double piece of insurance here.

REPRESENTATIVE ELIASON - Even with the unknown costs, double costs, what was the return anticipated originally then on the investment?

RICHARD DONALDSON - I'm pulling these numbers out of my memory. In the files of your committee from last year, you will find testimony that I gave, and I think it was on March 29,

1976. In that testimony are the actual numbers. I'm just suggesting that's in your file. The rate of return really held almost constant through that six year period even though all this change was going on. That just happened, it wasn't planned. The original cost in the field and pipeline was much much less than it is now, and what you had going in was on those costs and on the value of oil in the world at that time. Now, you're talking about three and four dollar oil not thirteen dollar oil. A rate of return for each dollar invested was on a 14-16 base. What happened was that both sides of the equasion kept going up, and the three times we studied it '70, or '72, '74, and '76 there was a little change in the numbers, but it was still within that range. Now that was a range of 14-16%. You have to understand we have a driving force to go ahead with that project because we can forsee a shortage of oil in the United States in the near term, and SOHIO was an oil deficient _____, so what we were looking at was the return at the low end of what would be a normally acceptable range, but we were willing to do it because it was the source of supply and you can't run this business without supply. Less than that, you're getting down into the utility area, and what you have is a guaranteed market and a guaranteed source, it's sort of like you've got the coal pile there burned, and you don't have all this uncertainty that you have in oil exploration. When we look ahead to the kind of thing that David Goodman

addresses, what kind of return do you really look at as a company? If you're going ahead, and you look at the risk elements, some are more or less in different places. You may see a range that bottoms out at about 15% and you may have something as high as 25% or maybe even a little more to be an acceptable risk in this area of our business. Now, when you put up a gasoline station, you know marketing and all the things that Ken has in his experience, the risk factor is there, but not nearly as much, so you might say you'd accept something in the 15% range, but going into the new frontier area or offshore, you at least like to have the expectency of going in or something toward the upper end of that range, so _____ is just what Mr. Goodman's testimony is characterized to be, it's a utility rate of return, and he does distinguish it there.

REPRESENTATIVE ELIASON - I guess what bothers me is that when you analyze the project, your stay is relatively the same, but when he testified, if they had known there's was going to be so low, they might not have been able to finance to start with.

RICHARD DONALDSON - What he's saying is that _____ was right. _____ was wrong. If we had said it was 10 or 12% going in, you probably wouldn't have done it. Our number said it was 14 - 16% and that's enough of a difference to say okay, we'll take the risk and go. Does that answer it?

REPRESENTATIVE ELIASON - Not really?

RICHARD DONALDSON - I guess I don't understand. At the back of our testimony, Attachment E on Page 5, at the bottom of the page, you have the paragraph that begins Mortata states. This is from Mr. Goodman's testimony, and what he is saying is Mortata states that 12% is equitable. Mr. Goodman goes on to say, no it isn't, they couldn't have financed it on that basis, and what I've added to that which then caused the confusion was our estimate going in was higher than Mortata and we decided to go ahead. So I think if you look at this section here, it probably would answer the question.

SENATOR RADER - What kind of objective evidence, what would be the thing that would show up where the state is at or above a reasonable taxation rate considering the cost, the risk and also the expectations of perhaps a bonanza occasionally. I can see how if we get too high the activity just doesn't occur. There is no oil industry here. If we're too low, there's going to be a lot of oil industry here. How would you objectively measure, for instance, you know if you were running a department store, why, you could say our sales have dropped off, but if you were at General Motors or somewhere else there would be some objectives tests that we could use here as to whether or not we're approaching a reasonable tax level when you consider profitability, risk, the possibility

of a bonanza, the stability even of the government with which you're dealing which is the State government, which I'm sure has to be cranked into part of your concern here. What kind of evidence would you have - no more exploration, no more interest in drilling, no more lease bidding, or what?

RICHARD DONALDSON - It's easy to see, if everything stopped. You could say, well, that's too much. It's a little harder to sort it out when it's something other than that.

SENATOR RADER - Or even if everything stops, I guess it might mean there wasn't enough oil here to make it worthwhile for anybody to.....

RICHARD DONALDSON - Okay, I think the first thing you have to recognize is that most all of the studies have indicated that a high probability of the new resources are in Alaska. Some of the numbers that I have looked at have said that maybe in the $13 or $14 price for world oil, if Alaskan oil was allowed to compete with that, you would expect over the next thirty years that perhaps as much as 33% of all the oil found in the United States could be found in the north of Alaska or south of Alaska offshore. It's a tremendous potential, so I think you first have to start with the assumption that most people believe that it's here. It's other places too, but there's a lot here, so that's not quite

the equasion. The second thing is that you don't have either a go or no go. We've had to adopt the Tanzer proposal last year. Some people testified before your committee that we shut the State down. You might have had that case. What is more likely is how do you sense the business activity. There are a couple ready barometers. One is called Caparik, and the other is called Lisbern and that's marginal economics today. Obviously if you raise tax, it keeps it off the _____ list in some people's judgment. On the other hand, if world oil prices moved up a dollar or so, and Alaskan oil is allowed to be in the market place in that level, and delivered, then these two fields or strata may well come in and develop a pipeline. There's another thing that you can measure it, drilling activity is one, on the other hand if you're not leasing any lands, that tempers it, but let's assume there's reasonable lease land available. I think dealing with various _____ corporations, and the willingness of companies to enter into exploration arrangements there is another barometer, and what you look at is many things. You get a sort of feel from the pulse, but the key thing is, given the cost of doing business and giving the cost of the tax burden, the economics in total is so diminished as to reduce the attractiveness of it, and the only way I know you can solve it is to have some discussions with people about some cases, and there is some propriatary data, but you can begin to get a feel. I have a feeling you're close to or possibly over the line, but that's my own personal feeling.

SENATOR RADER - Let's take the Caparik and the Lisbern formations. As I understand some of them are underlying the _____ formation. So in other words, you actually have leases right now on those sands. Do you have any production wells on them at all? How much exploration have you done on them?

RICHARD DONALDSON - Some.

SENATOR RADER - I would assume that the reason you don't have any production is because at the present posture of pricing and tarrif and market, that it's not worthwhile.

RICHARD DONALDSON - and text and quality of oil, it's not economic or marginally economical.

SENATOR RADER - You can sight then, I suppose to this committee then as a concrete fact that at least a sand of that marginal quality is not readily producable under the present circumstances.

RICHARD DONALDSON - Probably so, it's something we keep looking at because there's a lot of oil there.

SENATOR RADER - Because again, we don't know what the federal government is going to do here in three months or six months, nor do you know what the State government's going to do.

RICHARD DONALDSON - But we have told them that they take some of these actions out of their pricing decisions that take all essentially lower the value of Alaskan oil delivered may have wiped out Caparik an Lisbern. In the same sense, I have tried to point out to you that tax passed here in the State have exactly the same economic effect directly.

SENATOR RADER - Are you continuing to explore these other sands or not?

RICHARD DONALDSON - The exploration thing is not my area, Senator. I suspect we can give you some information on that, but I'm really not qualified to speak on that particular point. Yes, we are doing some exploration up there, but the details, I'm just not familiar with.

SENATOR RADER - You sighted the willingness of the corporations to go into joint venutres with the native corporations or to explore for a percentage. As I understand it, some of those contracts provide for a 50% return to the native corporation of the net profitability as well as an over-ride of a normal _____. Am I in error on that or not?

RICHARD DONALDSON - I'm not familiar with all of the terms of the leases. Some of the companies that are engaged in that could respond to you. All of those however are the product of negotiation. What we have in these other cases

are leases that were entered into some years ago, and all this stuff has come on and now going in on new negotiations. Maybe one corporation can negotiate a better contract than another. You'd have to look at the individual transaction, the prospects in the area, and really ask someone whose involved in that to give you comment if they would.

SENATOR RADER - Can you think of any other objective evidence of when we were hitting the top or near the top or below it?

RICHARD DONALDSON - I can't at this point. I'm just getting loggy, but it's a fair question, and maybe one we ought to give some attention to and see if we can do it. The kind of thing that you get into in your own studies if you're trying to devise a longer term policy that you say okay that's the rule of the game, I understand and I will either go or not on these judgments that you have to make.

SENATOR RADER - I appreciate the fact that no matter what we did on a tax policy probably Prudhoe Bay would be produced mainly because even if you're losing money, you would have to minimize your losses. If you've got ten billion dollars up there, and you were only going to end up with the final return of 9 billion, you'd still have to do it because you only lose 1 billion that way instead of by damning the whole works of ten. So it isn't a question then really of the producability of Prudhoe Bay, that's going to happen no matter

what we do.

RICHARD DONALDSON - But, how that's treated is a big signal to the rest of us of what else do you want to do? I don't mean that in a threatening way, you just listen very carefully.

SENATOR RADER - I make that statement only because people say well you know they're not going to pull out, and I can say of course they're not going to pull out, but neither are they going to pull in.

RICHARD DONALDSON - Tom Williams, in his testimony addressed this to some extent, and if he's scheduled to testify here, you may want to ask him that question. I'm not trying to load it on Tom, but he's given some attention to this, and I think it would be of help to you.

SENATOR HUBER - Dick, considering Alaska taxes, you say we may already have gone over the motor line, and the fact that the State is going to have a surplus revenue according to your figures which I may not agree with, when do you plan on applying for an Alaska State subsidy to help you out?

RICHARD DONALDSON - No comment.

SENATOR HUBER - There are a few other points that I would like to touch on, although Senator Rader touched on most of

the points. If fact most of them that I had intended to, Madam Chairman. Speaking of the taxes that are now proposed, if we can get back to that for a minute, considering that your good presentation that you've made on the stands that Alaska takes in every way with FEA. Picture the proposals before us, would in your opinion try to take more than 9.4% net income tax that's been on the books since before you started doing business here. Would you care to single them out for us? I didn't know that there was any that had intended to do that?

RICHARD DONALDSON - Well, it's always 9.4% applied as to what?

SENATOR HUBER - To net profitability.

RICHARD DONALDSON - All of the income tax proposals by their structure have the duplicate tax effect with the result that all the taxes that our company would pay in income tax to all states in which we do business, would probably mean that we were paying tax on 133% of our income of course in another way about a third of our income becomes the extraction factor on the other approaches are taxed twice. What we had in these numbers here is proof in numbers though it's a hypothetical case. We get into our own company numbers if necessary and prove numerically that there's a double tax. Now, interestingly enough in the law, the Supreme Court said is that the principal is that there shouldn't be any duplicate tax or not a lot, so

if you can prove it, then you've got a pretty good case, and all I was trying to suggest to you rather than argue these was that the principal is against duplicative tax and the numbers that we have drawn on our hypothetical case on the statutes that you have proposed tend to confirm that it is clearly different. That is all that I want to call to your attention. I suggest that if there is some repair work to be done in the income tax statutes, that you may not want to increase the burden, but prepare the tax within the burden and avoid the duplicative effect. This type of tax reform it seems to me might be appropriate for the State at this point in its history so that it does go forward on kind of a stable basis that people can understand and make your judgments on as businesses.

SENATOR HUBER - I'd like to continue Madam Chairman. Does SOHIO, Dick, object to paying 9.4% on a true net income the same as they would have to if they were strictly an Alaska corporation?

RICHARD DONALDSON - Yes, you asked where these are. I fortunately had this open to where the subject is. In Attachment C, if you will look at Tables IA, IB, and IC. I'm sorry, I have the wrong table. Senator, I can't lay my hands on it right this minute.

SENATOR HUBER - Rather than hold it up, I'd consider if you'd let us know that later. As I understand your testimony, probably at least 9.4% or more can probably be taken by most of these tax proposals that we're talking about.

RICHARD DONALDSON - The numbers that I was trying to find for you went like this. As a single taxpayer, as a company, paying taxes to all the states in which we do business, we were paying an effective income tax rate on all of our income, in all states at about 6%. Now that would include in this example the Alaskan tax of 9.4%, the California tax at 9%. Texas has none, but the average tax burden and income tax under present law now and under the _____ tax compact is about 6%. The only thing we change when we ran our second case and our third case on the Administration franchise tax proposal and the legislative proposals for income tax, all the legislative proposal income tax came out about the same. Was it the 6% in the case of the Administration's proposal jumped to someplace between 11 and 12%, and in the case of the legislative proposal jumped to someplace in the nature of 14 to 15%.

SENATOR HUBER - That doesn't apply of course to the net proceeds tax. That's engineered not to do that, is that correct?

RICHARD DONALDSON - I think it didn't make too much difference in the total burden. Now ken has found it here. This is in

Table A, B, and C which are attached to Attachment B, and table A, in effect gives you this three company comparison under present law. At the bottom of the page you will see two lines of percentage figures, and the second line up from the bottom which reads effective composite State income tax rate on total taxable earnings shows you that 5 - 6% burden under present law. On the next page under Table B, the same line which is the Administration's tax proposal, shows the change of having their income tax replaced. You see it jumps to about 11.8%. On the next page where you look at the legislative factors, it jumps to 15 or 15.3%. On the next page where you look at the legislative package, it jumps to 15 or 15.3%. Those are the figures which tend to confirm in numbers the duplicative tax effect, but what we're really looking at here is the total burden, Senator.

SENATOR HUBER - Madam Chairman, Mr. Donaldson, when you started your Prudhoe Bay operation and you went into the pipeline operation, hasn't it in all your financing and everything been figured that you had a 9.4% net income tax liability in Alaska on your profits?

RICHARD DONALDSON - On some cases we ran, we did do that, yes.

SENATOR HUBER - Didn't this allow you for the last two years to borrow over 1 million dollars a month, SOHIO alone based

upon that as part of the package?

RICHARD DONALDSON - Yes, but you have to realize other things have changed in the equasion. Your severance taxes have changed, ad-valorum taxes have changed, income taxes have changed, and the reserve tax, and what you have to do on the continuing basis is look at all of the pieces not just one tax and say that your whole case was based on that assumption, _____. what was based on all of it.

SENATOR HUBER - Now, you're not planning on us continuing our reserves tax are you?

RICHARD DONALDSON - No. In fact there is a bill before your committee that I think came down in the Administration's package or was proposed by it. I did not comment on it although I should. Let me take just a moment and I will do that. This is the proposal that would reduce the millage on the reserve tax this fiscal year from 20 mills to 12, and what that does is reflects the Administration's judgment as I understand it, that 12 mills is needed to cover any deficit this year, not 20, and the philosophy of it is that you should borrow no more of your future than you need. I would support that bill partly because it means we'd pay less in reserves tax, but also because I think it follows the philosophy of the reserves tax covering your needs in this interim period

until the pipeline starts, and I would hope that of all the bills that you've got on your table, you might push that one out of your committee and through the legislature, and it does make good sense. If there are no further questions, I thank you for your patience.

SENATOR HUBER - I've got one last one, Madam Chairman. Dick, considering both the physical and the political conditions, where in the world is it more profitable to explore for oil now than in Alaska?

RICHARD DONALDSON - The North Sea.

SENATOR HUBER - I'm sure the Britishers would like to hear that.

RICHARD DONALDSON - They're doing it. There's a lot of play there. In fact, about a year ago, I was priviledged to fly over to one of those developments and tour some of them, they're exciting. I flew over a place called Cruzen Bay where the British are building _____field and the pipeline comes to shore. The pilot banked around and said that's where the pipeline comes ashore. I said I can't see it, he said that was the point.

SENATOR HUBER - Madam Chairman, it's interesting to note that last year's total tax package as it was adjusted, this was the terrible one that had the excess value tax added to it.

When it was finally adjusted, and it provided as much money as we're talking about on the Administration proposal this year, it's noted that it was adjusted down to do no more than the British government does in the North Sea area.

RICHARD DONALDSON - The return on investment there is about 22%. Ken Schowalter reminds me that about 40% of the North Sea areas prospects have been leased and are being developed, and the question is why? Obviously the incentives are there. That's another major _____ that's kind of an interesting thing.

SENATOR HUBER - I wonder if it has anything to do, Madam Chairman, with the British Petroleum Oil Company being partly British crown financed and the terrible crunch that they have on the petroleum industry.

RICHARD DONALDSON - I can't answer that question. There are many companies developing the North Sea, some separately, and some in conjunction with each other. BP is active in it, but it is only one of several. As far as its relationships with the government here, it's an arm's length, and I have talked to some of the men who have been in those negotiations, and it's been very difficult and has taken a lot of patience, and they have worked out something that probably has led to this development. We haven't been able to quite accomplish that here, and that's what I'm hoping to work on in the next year. Thank you.

QUESTIONS AND ANSWERS IN TESTIMONY OF COMMISSIONER GALLAGHER, DEPARTMENT OF REVENUE FOR THE JOINT SENATE-HOUSE RESOURCES COMMITTEE MEETING ON OIL AND GAS TAXATION (24 MARCH 1977)

Senator Radar - Madame Chairman, Commissioner, your testimony on the pricing problems, state's position, governor's position, that we do need a maximum well-head or a maximum price to encourage further exploration and development. Aren't your bills which are calculated to persist for barrel and so and so forth as you say to protect the state against federal pricing manipulation or corporate manipulation, let's say take the federal pricing manipulation. Aren't you saying then that under one set of circumstances if the pricing goes bad which means that the companies have no incentive to develop further that we are going to add further burden to that disincentive by a cents per barrel floor so to speak so as to protect the state's revenues?

Commissioner Gallagher - If the federal government is so foolish as to lower the well-head value down to $4.30, I don't think the state should be any part, have any part of that policy.

Senator Radar - Well but then our policy makes it even more burdersome from the point of view of the further exploration or development of petroleum in the state because we revert to a cents per barrel floor so that the, the very policy that you are adopting here to protect our budget, and I understand why you are doing it, it is because you want to protect our budget, but it, if the course is completely inconsistent with

any state policy which would be to encourage for the petroleum development. If that happened.

Commissioner Gallagher - I don't agree with that Senator. One of the things that we've done to encourage petroleum development and one of the things we talked about in our testimony was about the marginal fields. Prudhoe Bay will be produced at $4.30.

Senator Radar - Well it would be produced at $2.00 maybe because it would minimize their losses, but if your talking about the excuse me, go ahead.

Commissioner Gallagher - But Kuparik and Lisburne will not be produced unless they receive substantial return because its an incremental decision. One of the things that we tried to address in our tax policy where these marginal fields they are one and two billion barrel marginal fields. The tax rate under our tax proposals, we would actually lower the taxes on those fields, in fact encourage further production in the state.

Senator Radar - Do you disagree with the a analysis that was presented by a, Mr. Ronaldson SOHIO here as to where are our tax, our total tax burden relates as against Louisiania, California, and Texas?

Commissioner Gallagher - Yes I do, in looking at some of those numbers, I and we haven't run all the numbers ourselves but it seems to me that they've mixed a few apples and oranges and got fruit salad and I can see alot of the numbers they say they are in constant dollars but the only way I can get to some of those

numbers is using current dollar basis.

Senator Radar - Well you agree though that such an analysis is rather important to us don't you?

Commissioner Gallagher - I would, I would, I agree that that analysis is important. We attempted to do that in this tax study but due to only getting two man years into the study, we didn't have time and it takes substantial amount of time to do that sort of study.

Senator Radar - But if that is an important decision, then the fact that we haven't completed that study, if you do take the issue with the a SOHIO approach and perhaps you are correct, I am not saying that you are not but, but you agree that that is important information in this decision making process. A and we disagree with it but we don't have one of our own. Wouldn't that argue that fact alone would argue in waiting until we have that information before we made that decision, wouldn't it?

Commissioner Gallagher - We could provide you with that information so next year, I think it is a real danger to sit around and wait while, let the federal government do things to us.

Senator Radar - Alright then, let me ask you this then. For purposes of balancing our budget this year, we could do that with your ad valorem tax, could we not?

Commissioner Gallagher - I believe, well lets put it this way.

Senator Radar - Go ahead, I was going to say we balanced it the last several years that way, and we could do it this year too, couldn't we?

Commissioner Gallagher - You mean the reserves tax?

Senator Radar - Reserves tax yes.

Commissioner Gallagher - I assume we could, I don't favor extending the reserves tax off into the future though. To me it's a bad policy, its a poor tax and I would like to see it die a natural death.

Senator Radar - But from the point of view of balancing your budget this year you could do it that way, as we have in the last couple of years.

Commissioner Gallagher - Well you could also by raising the cents per barrel to a free market value and also do the same thing.

Senator Radar - Yes, but here's our problem. Neither the state nor the industry knows what incentives or disincentives may occur because of the federal pricing, and yet you are suggesting that we make tax decisions in which we all agree that that federal pricing is very very important if we are at all concerned about the future attractiveness of Alaska as a investment for petroleum industry.

Commissioner Gallagher - Well, one of the things that we have tried to address in our, is our testimony has been directed in all these

hearings toward getting the maximum production out of Alaska. Our tax policy is also directed in that and it addresses these marginal fields.

Senator Radar - Well but, but if the federal government were so foolish as to pursue this policy that you said that we should not have participated in then your floors make it even more difficult as far as the petroleum industry is concerned or as far as the producing marginal wells in Alaska is concerned, isn't it?

Commissioner Gallagher - Well, if they were that foolish, I don't see why we should be a part of that foolish action.

Senator Radar - It seems to me like we are adding on to it and not detracting from their fool hardiness, if they are foolish.

Commissioner Gallagher - If you know, if they did do this there wouldn't be an incentive to developing another Prudhoe Bay, so you know.

Senator Radar - Well but we are adding to whatever, we are adding to the difficulties in the production of whatever fuel might be found by adopting the floors that you are talking about here. Are we not?

Commissioner Gallagher - Not necessarily you may find one down in the Cook Inlet with the free market value should be substantially

above that.

Senator Radar - No.

Commissioner Gallagher - Also the economic limit factor comes into play on these large fields.

Senator Radar - Let me ask you if we're talking about an industry who doesn't know the value that they are going to get from their product and isn't going to know until next year, then how do we develop a stable tax policy at this time, that is dependent upon that? It seems to me as though, and I don't have any answer except that you can balance your budget with the other method. And I also recognize the difficulties of the credits in the future, on that. But at least when we come back here a year from now, when we start talking about the profitability or the non-profitability or the incentives or disincentives, won't we be talking about something that we can relate to the real world at that time, that we can't relate to the real world now?

Commissioner Gallagher - I think our policies to the real world, that's what we are trying to address in fact, if the real world says you should price the energy supply at the alternative market, the alternative market may be $20.00 a barrel, the alternate energy supplies. The OPEC countries are actually being very nice to teh United States and not taken up the alternate energy supply cost. If you want to go to the real world we should maybe put our policies up at $20.00 a barrel.

Senator Radar - But we can't do that as a state.

Commissioner Gallagher - You could set a cents per barrel that was based on $20.00 which is the alternate energy cost. That's the real world.

Senator Radar - Well but that option isn't available to us, to tax at that rate, is it?

Commissioner Gallagher - Under a cents per barrel floor, of course it is. Also, Senator, the FEA may open the pricing decision every ninety days after 1/1/78 or there after. I really doubt that they are going to make a decision on April 15th. I think you will not see a decision until somewhere around June 1. I really expect them to wait and see what the tariffs are, the initial tariffs are before they make some sort of decision.

Senator Radar - That's all. Thank you Madame Chairman.

Senator Colletta - Commissioner do you have one of these in front of you?

Commissioner Gallagher - Yes, I do.

Senator Colletta - O.K., On page 2 and you know just for the purposes of conversation and let's assume that you develop your tax package with the governors' standards, as to what they should include, now I think my question could be simply answered in two steps. First if you do agree that the industry says that they have between fourteen

and 16% worth of return on this project.

Commissioner Gallagher - I don't agree with that, but other than that.

Senator Colletta - O.K. with the assumption then the new tax proposals increase the tax by what percent?

Commissioner Gallagher - About 18% over all five bills.

Senator Colletta - What will their profitability be now that's different between that 14 and 16 percent?

Commissioner Gallagher - I reject number one the 14 to 16 percent that has the risk, under the Mortaida Study they multiplied all the assets by 4 to get the risk factor that may be appropriate to do an exploration work but it may not be important in doing other sort of work, you know the development work. If you want to use the Tanziers 33% or 35%, I don't think that is going to make 1 or 2 percent difference.

Senator Colletta - Commissioner I think I am going to try it another way. But anyway, the governor said it must generate sufficient revenues not only to compensate the state for additional service costs, attending such development but also to provide a reasonable additional dividend to Alaska. Now I would suspect you have computed that dividend in there. Can you tell me what the dividend is?

Commissioner Gallagher - The dividend to Alaskans? Well let me take you through the Prudhoe Bay numbers and maybe, you know I can work it right off the top of my head. We can talk about the dividends to various people. If you had a million two barrels a day there is four hundred and thirty eight million barrels of oil produced each year, three hundred and sixty five times one two, have you got your slide rule with me, times four hundred and thirty eight million times seven dollars and fifty cents per barrel is right on about three billion two. Is that correct, somewhere in there, less one eighth which is our royalty share. So that brings it down to four hundred million, three point two gets down to two billion eight, and let's subtract off the operating costs for the field, about three hundred and fifty million, four hundred million, let's say four hundred million we'll up it fifty million over the estimates, and that makes it down to two four. And let's say the State of Alaska through it's severence taxes takes another four hundred million, that brings it down to two billion and lets say our income taxes in effect takes us down a hundred and eighty, another hundred and eighty million, that leaves a billion eight left to share between the federal government and the oil industry. And so you have, before tax, you have a billion eight on a three billion dollar investment. Lets say they have three billion dollars investment. That's a nice return for oil industry too. One point eight billion dollars pre-tax on three billion dollars is a nice rate of return. Now they might claim that they pay forty eight percent taxes, I, you can look at SOHIO'S last report that was shown in their annual report and they showed they had effective tax rate of under ten percent. One of the things that they

happen to have is about three billion dollars of carry forwards of investment credits that will cancel off, pretty well wipe out at least fifty percent of their tax liability for the next five years. And they all have substantial investment credits so they should have developed substantial investment credits to be carried forward for the next several years, so whatever the effective federal tax rate is, you know, let's say they do pay three hundred million dollars income tax they still get in a billion and a half return on a three billion dollar investment, that's a fifty percent return per year. That's, I would take that, any day.

Senator Colletta - O.K. now, you know, we lost the Chinese and now your gettin to me, I'm understanding the last part of what you said and that's the part that a you know, I still want to come back to, a all of these companies collectively it seems and most of these reports we read, range within a two to teen percent, at least all I've seen, with the exception of one that happened last year, that say that this thing will return to those investers somewhere between this fourteen and sixteen and are you working under the assumption that they have thirty-five to fifty?

Commissioner Gallagher - Well I just, I don't want to go in and talk Chinese because there's a large difference between a, between income you report to your shareholders and discounted in cash flow, because one of the cash flows is, you know discounted

at some high rate of return to lower the number and it isn't fair. But I just demonstrated for accounting purposes it would show a fifty percent at least a fifty percent return. Now a discount in cash flow would be substantially below that because those values are, are reduced through time, for the investment. The major difference between Mortiada's investment and the investment Tanzier, like I pointed out was that one uses a risk multiplier factor that multiplies the assests by four times instead of three billion dollars investemnt they had, they used a regular return on twelve billion dollars investment and that's how you got a sixteen percent rate on a twelve billion dollar investment and you know, my numbers there kind of match out.

Senator Colletta - O.K. Commissioner I've got one other area that I need clarified and that's item five the governor's policy statement that it must reduce uncertainity and encourage stable expectations about future resource tax and management policies. If infact these taxes did pass, would these be the last ones, would we be creating a stable future resource?

(GAP)

Commissioner Gallagher - a premarket price. Let's say Cook Inlet was priced at a premarket price. This tax would hit McCarthur River a a higher rate then it would Prudhoe Bay because it's actually more profitable. Now the East Trading Bay Unit which is decidely less profitable, it would tend to treat that fairly. What's comin into a play here is the cents per barrel floor. Yes, our written tax rate on East Trading Bay Unit is probably one third of what the cents per barrel floor should be. Now, that oil if we wanted to go after Cook Inlet it should be maybe priced at fifteen dollars

which is the price for Swede a 348 gravity on the west coast, we are only going to 7 1/2 because of Prudhoe Bay, so we are not being inconsistent, we are giving them a break.

Senator Colletta - Thank you Madame Chairman.

Senator Huber - Well, Senator Radar brought it up, I think that it's only fair to ask a ask of Sterling because we do need to get down to the nitty gritty of it. Sterling do you think that the Walter Leavy Associates have the best possible advice for the State of Alaska's interests, or do you think other economic consultants may have something to offer too?

Commissioner Gallagher - I've always appreciated the, I, of Dr. Mead, but you know there are consultants and there are consultants. They give you a good point of view Mead gives you a good point of view. I think there could be a whole series of people in that could give you worth while information.

Senator Huber - In other words you don't think we should base it all on one consultant.

Commissioner Gallagher - That's correct. I think you, you know, we have economists in the Department of Revenue, we should listen to those economists too.

Senator Huber - Obvious on the Walter Leavy Companys advice which we have been receiving quite heavily lately about removing the cents per barrel, do you disagree strongly on that?

Commissioner Gallagher - Absolutely.

Senator Huber - And do you, do the other consultants that you have hired agree with you on this?

Commissioner Gallagher - Of course they are hired by me.

Senator Huber - No some of them weren't hired by you. How about the other ones? How about the other ones on the cents per barrel?

Commissioner Gallagher - I don't know what Mead says. You know, he isn't here before you. I wish Tom Fink was here today, Madame Chairman.

George Silides - Commissioner a, I have a couple of easy ones and then a couple of little more difficult ones, I'll give you the hard ones first if I may. You've touched on them, but I will have to ask them again because I wasn't entirely sure on them and it's a matter of mechanics on the bills. It's been pointed out that the foreign income taxes constitute a large part of the pre-tax book income for international oil companies, and that these taxes are likely to decline sharply in the future as providing the producing governments take over and the companies become contractors and purchasers of crude from governments rather than from concessionares, and income tax payers. Now, the questions on that is, as you recall this was mentioned a couple of days ago, you touched on it again tonight. Now wouldn't this work to erode Alaska's tax base under the proposed legislation

that is your franchise tax? And wouldn't it work to erode the tax base more if companies would measure foreign operations, let me say that again, and wouldn't it work to erode to tax base more for companies with major foreign operations than for those with only small scale foreign operations?

Commissioner Gallagher - Well Let me say, talk a minute about where the shifting centers are in the world. It's true that I think, I believe, Saudia Arabia gives the companies nine cents for every barrel they raise after they pay for expenses. I think that's what Saudia Arabia gives. And those wells are fifteen thousand or twenty thousand barrel well days with nine cents goes up in a hurry. But alot of profit centers are shifted to other areas of the business. If you will look at the transportation business for integrated companies you might find the profit center is shifted there. Federal government has, may have a oil head put on price ceilings on the well head. They also have it on some refined products but not the whole barrel. Infact the lower end of the barrel is pretty well decontrolled and they receive whatever price they want. You know, all sorts of ends of the business you can transfer your profits to.

George Silides - I'll just take it for what you said Commissioner. Well let me ask you someting - -

Commissioner Gallagher - Infact you know, it's quite obvious to me that the federal government is trying to encourage the shifting of profit centers away from production into refining and sales.

George Silides - But don't think that the fact that the companies are taking their payment as in-kind as it were, does it make any difference in the, to your bill?

Mr. Messenger - I believe I remember the comment that Mr. Kilgore made earlier this week and to the extent that the difference between some of the differece between book income and federal tax would book income before taxes and federal taxable income to the extent that some of that difference represents a foreign taxes. If those foreign taxes reproduce that would reduce that difference between book incomeand federal taxable income I believe that there would still be a substantial difference between, still, between federal taxable income and it would be still, in our interest to adopt book income because there is still alot of other erosions from book income in the Internal Revenue Code Book.

George Silides - Well, I understand what you are saying Mr. Messenger but your answer is basically yes, that it does erode some if that happens.

Mr. Messenger - Yes, but it is still better in the federal tax reform.

George Silides - I see, Madame Chairman if I may ask the second question then, another question. Do you have any idea how much income your proposed legislation would apportion to Alaska as against what might be measured by separate accounting as proposed in the Senate Bill 105 for example, once Prudhoe Bay is in operation

that is if we, if incometax law really and truly represented the 9.4 percent tape.

Commissioner Gallagher - I think it should be essentially the same. We pick up some additional features though like the days in port like 50% of the income from the transportation subsiduaries assigned to Alaska and things like that. So I'm it's hard to compare it. Also ours would pick up the OCS.

George Silides - I see. Well in that regard Madame Chairman that brings up another question then. I notice that you mentioned the days in port and of course you were talking about, and you were mentioning also that brings to mind your ad valorem tax or your hardware tax. If you put a tax on the tankers aren't you increasing the cost of transportation, and if you are increasing the cost of transportation doesn't that lower the well-head price?

Commissioner Gallagher - Yea but, you only give up twenty cents on a dollar.

George Silides - What you are telling me is that the differential is what counts? Since we are on the hardware tax, there are some refineries a couple of refineries in at North Kenai and there is one going on up now, being built now in the North Pole, hardly can be termed world scale refineries, especially the one at the North Pole. If you tax these refineries who will be paying that tax in the long run? If we are trying to encourage a refinery say in the North Pole area to, so that the people in the interior can get the same price for oil, fuel oil as they do in Anchorage, aren't you giving with one hand and taking away with another?

Commissioner Gallagher - That's possible. Also they may be export refineries too.

George Silides - The North Pole an export refinery?

Commissioner Gallagher - Not the North Pole ones, obviously not.

George Silides - But the SOCAL one?

Commissioner Gallagher - I know some piloteers for it.

George Silides - The SOCAL one?

Commissioner Gallagher - Yea.

George Silides - Are they export?

George Silides - I'm just curious. And another question on hardware then, I'm presuming that the same answer you gave on the tankers (inaudible) tankers goes for the increase tax on the pipeline.

Commissioner Gallagher - The increase tax, there is no increase tax on the pipeline.

George Silides - Well, under your system there would be a greater take because - -

Commissioner Gallagher - No we're just trying to cure our court case.

George Silides - I see.

Commissioner Gallagher - We already think we have it.

George Silides - One final technical thing again Madame Chairman. Are you aware Commissioner that in addition to the Walter J. Leavy Associates finding a flaw in only part of your severence tax bill, did you know that the Research Division of Legislative Affairs Agency has also found essentially the same flaw?

Commissioner Gallagher - I don't, that is not a flaw. That is the cents per barrel for coming in and playing a part there. It works exactly like it is intended. Those fields that are, where the formula works out to be 50 percent of what the phenomenal rate should be, is in fact 50 percent.

George Silides - Well Commissioner, I'm just calling it to your attention so that you maybe can talk to Mr. Erickson because he feels like the Walter J. Leavy Associates does that the bill is not fulfilling the function that you designed it for and I'm only bringing it to your attention. I'm not in the position, I don't know enough about it to argue about it.

TESTIMONY OF MR. RICHARD KILGORE
OF WALTER J. LEVY CONSULTANTS CORP.
FOR THE JOINT SENATE AND HOUSE
RESOURCES COMMITTEE MEETING ON
OIL AND GAS TAXATION - MARCH 21, 1977

CHAIRMAN POLAND - We will bring the meeting of the Senate and House Resources Committee meetings to order. We have with us as our first witness this morning, our consultant from the firm of Walter J. Levy, Mr. Richard Kilgore. We have asked Mr. Kilgore to address us this morning on the net income tax bills and those closely associated thereto. We will break at 10:00 AM, and will resume again this afternoon at 1:30 PM.

For those who are sitting behind me, if you'll raise your hand so that Mr. Farleigh can notify me if you have a question, you will be recognized, and with that I'd like to welcome Mr. Kilgore back to Alaska and let him take over.

RICHARD KILGORE - Thank you Senator Poland. I think it is appropriate since I am the leadoff witness, that I present here this morning what I call an overview of tax legislation.

CHAIRMAN POLAND - Mr. Kilgore, for the record, would you identify yourself.

RICHARD KILGORE - Yes. I'm Richard Kilgore. I'm Director of Research for W. J. Levy, Consultants. I've been with the firm for about fourteen years.

What I'm going to attempt to do here this morning is to provide what we would call an overview. I'm not really going to go into very much detail about the individual pieces of legislation, at least the specific provisions of them, and concentrate more on the approaches, the alternatives, and so on. Most of my remarks will have to do with income taxation, but I also have some remarks on severance taxation if we have enough time; and I'd like to say a little bit in the end about a total tax package - total tax regime in Alaska because the whole thing is obviously more than a sum of these parts if it has to do with the impact of the total program.

I'd like to look at the major areas of taxation and really consider the alternatives presented to you because they are quite diverse, and give you our appreciation, really, of the major pros and cons this time of the major pieces of legislation, of the major approaches and the kinds of pros and cons, advantages and disadvantages which we think you legislators should be looking at and asking questions of witnesses as you go along. We will be available as I say, for specifics later.

As many of you may recall, our firm has been urging upon the legislature, for many years, that it review its corporate income tax, and especially to do this before Prudhoe Bay Production really comes on and you have major questions of taxation there. We have pointed out in the past, and I think it's fairly well known now the problems of apportionment under the present regulation, and I don't really think we have to get into that in detail. We ourselves did our own analysis of how the present system might work for Prudhoe Bay. Taking data submitted by SOHIO, in submission 1 at the request of the legislature, and very roughly what it turned up was that if one applies the present system, that is the three factor apportionment system with sales and property, and payroll, what you turn up in the way of income apportion to Alaska is roughly one quarter of what the producing income and the pipeline income would be. Saying that another way - if the present system were applied to Prudhoe, using as I say, data supplied by SOHIO, what you would get is an effective rate of taxation instead of something like 9.4% an effective rate of taxation, roughly a quarter of that, two to two and a half percent, so there are obviously problems with the present system, and as I say, I won't burden you with too much of that as I think by this time it's fairly well known by everyone.

Now, you at the present time have before you three different bills, basically two different approaches, but three different bills designed basically to deal with this problem of the inappropriateness of the present formula. The first is the bill submitted by the Governor, and this comes out of the work of Professors Zeifman and Ainsworth, and a report done by the Department of Revenue. This is SB 236, and HB 322. We basically feel that this is quite an imaginative and new approach, and involves basically two features: A change in the tax base, and a modification of the apportionment formula. I'll come back to that. Second, we have a bill on separate accounting introduced by the subcommittee on leasing and taxation, and third we have the net proceeds bill introduced again this year which reads to similar, and I guess even identical, to the net proceeds tax of last year. So we have three bills basically, I'm going to say, on two approaches, and lets look at some of the pros and cons of these. I should say at the outset that like many things in the field of taxation, no one approaches his ideal here, there's no magic answer to this that's going to come out, and one approach is not just going to stand out that is uniquely better than any other one. It's just not the case. So there's clearly room for debate, and for your careful look at these approaches. So first lets look at this Governor's bill coming out of the Zeifman and Ainsworth work.

Basically, as you see, there are two features to this legislation. One is a change in the tax base, and the second is a change, as I say, in the apportionment factors themselves. The present system as you probably know, uses federal taxable income. That's its base, and takes a portion of that federal taxable income. This new proposal involves a switch to book net income before income taxes as reported by oil companies to their stockholders. Now, there are certain clearcut advantages or pros for the State in this switch in tax base from taxable income to book net profits. First of all, figures are readily available from annual reports. This concept of income is reported by most companies or at least most of the major companies that will be operating as oil producers in Alaska. Second, as you will hear, I'm sure, from Professor Zeifman and from the Revenue Department, there are fewer so called erosions than in federal taxable income, that is under federal taxable income rules there are various kinds of generous accounting rules allowed to companies which works to reduce the amount of income on which they pay taxes, and you're fairly familiar with this too, I'm sure. Such things as intangible drilling expenses are under federal tax law, can be treated as expense items, not as capital items, and this involves large write-offs. The federal government allows accelerated depreciation and so on, and companies in their book accounting

rarely, if ever, expense intangibles or use accelerated. They use normal kinds of depreciation under normal accounting rules. So very clearly switching in this direction results in a higher tax base than federal taxable income, and this obviously throws up more income to the State of Alaska. But switching from taxable income to debt book income does have problems.. It is not without problems. I'll just enumerate a few of these. Later we can talk about these in more detail. Even within acceptable accounting principals there's a certain flexability, obviously, to companies in respect to how they report income, the kind of deduction and so on. Inventory gains and losses are often treated differently by companies, and they have some choice in this. Currency changes, how they are affected by currency changes, gains and losses, they are often treated differently by companies. Incidentally, some of these factors which resulted in different kinds of accounting don't always even show up in company annual reports. If they're not material, they may not even be stated within a company annual report. One would probably have to go beyond that, if one wanted to see the effect of these factors. There is also a certain amount of flexibility in accounting for write-offs. When does one realize a loss, if one has some sort of venture that is going bad, at what point do you write the thing off as a total loss? There is a certain amount of flexibility in this. Companies at times will use what is sometimes

called the "blood bath" approach to accounting. When things really go wrong, and you have a lot of losses, there is a tendency to just write it all off in one year, and take all the bad at one time. Of course, the company doing this, it would effect the tax base that Alaska would be looking to in this approach. But, I don't think any of these while they present problems in switching to book income are probably disabling. Revisions could also be a problem. Companies at times change accounting procedures, and will then revise their book income and various parts of this back through time, and this would cause problems also if one does this, if there's a later revision, do you then change your tax base, and so on. So this presents problems. I think perhaps, a more serious problem in going to pre-tax book income has to do with how one arrives at that. Now, normally pre-tax income, if you went to a company annual report, what you would do was take net income after taxes and add back all income tax payments, and that's apparently what is proposed here in this piece of legislation. That would include all income taxes including income taxes paid to foreign governments. This looks to us like it could really present problems, and it raises questions about what sort of a tax base you are really reaching when you look at pre-tax book net income. If you'll take the annual report of a company like EXXON which is going to be an operator in Prudhoe Bay, is going to be a producer there, also a company that has very large foreign operations and pays very large

foreign income taxes, it is very interesting to see what has happened in the past to those foreign income taxes, and then I would like to talk about what may happen in the future to foreign income taxes and how this might effect the tax base that you'd be using if you should go to net book income under your appropriate income tax.

If you look at the annual report of EXXON or any other oil company operating in the foreign field, what you will find is that over the past few years, and particularly the years '73 and '74, there was a very sharp buildup in foreign income tax payments. That is tax payments to foreign producing governments such as the Saudi-Aribs in Iran, and so on, and the result of this huge increase in foreign income tax payments this bid build up, as you all know, had to do with the increase in OPEC prices. OPEC dictated very substantially higher prices. These higher prices were obviously not intended to benefit the companies, but to benefit the producing governments themselves, and so what the producing governments did was take a large part of this income generated by the very much higher prices and tax it away from the oil companies in the term of income taxes. Some of it they called royalty, some of it they called income tax, but there was a very large income tax component to this, and this resulted in very large increases in foreign income tax payments

by oil companies. And, if Alaska had been on this system which involves using book income, what would have happened over these years is that Alaska would have benefited from a huge increase in pre-tax income from a company such as EXXON, and this would have resulted in large part. not after tax profits EXXON earned, but because of its income tax payments to foreign government. So Alaska, over this period, would have benefited from a very short run up in pre-tax income because of income tax payments by oil companies to foreign governments. It would have worked to the benefit of Alaska, had Alaska been on this system. But now, if we look ahead, we find the concession terms are changing in the middle east and elsewhere, and almost all foreign areas. Foreign governments have increasingly taken control of producing operations themselves. When the companies remain, they remain as producers and operators, but they serve in increasingly different roles. They serve as contractors, not as concessionaires, and under this new type of system, payments to the producing governments tend not to be in the form of income tax, they tend to be in terms of purchase of oil, purchase at market prices with the companies being compensated in terms of service fees for their continuing operations in these countries. So what is beginning to happen is these huge payments to foreign producing governments are increasingly not called income tax payments, they are called purchases,

purchases of oil from the Saudi Arabian State Oil Company for example, and already if you look at the annual report of a company like EXXON, you will see that we have a decline already in 1975, and I guess when the 1976 annual report of EXXON is out, you will find another decline in foreign income tax payments, so what had happened in foreign oil markets would have worked to the benefit of Alaska over the past few years, but now would be working in the ocher direction. That is EXXON may have a relatively constant after tax profit on its foreign producing operations in countries such as Saudi Arabia, but its pre-tax will be going down. Why? Because it won't be making income tax payments to the Saudi's or other foreign governments. It will be purchasing oil and this would effect the pre-tax profit. So you could have a declining base from this kind of thing.

Now, I dwelled at some length on this because it's interesting. What it demonstrates is that when you use this approach, you do have some problems, and you have things happening outside Alaska which effects the tax base that you are going to reach an apportion part of, but it's very much affected by the things that have nothing to do with profitability in Alaska. And this, I think, the foreign income tax things, are a good illustration, and they are an important one,

and that's why I spent some time with this. So under this kind of system you would have things effecting net book income that really have very little to do with Alaska, and this is something of a problem, and one doesn't know for the future how these various kinds of changes would effect it, and what I'm talking in foreign income taxes probably will work to the disadvantage of Alaska. Other things that we may know nothing about could work the other way. So moving to book income as a concept had truly some advantages. You'll have obviously a higher income that you are trying to take a part of, but it's not without problems. We can discuss those more at some later point. The second part of this approach has to do with a change in the apportionment formula. What has been suggested here in the legislation is changing from sales to extraction, and there are some very clear advantages to Alaska in this obviously. The extraction isn't oriented measured and is production measured in Alaska, and is obviously more appropriate than a measure such as sales where a large part of sales of crude oil in Alaska are not made within Alaska, but they are made without Alaska. So this kind of a move will clearly apportion more income to Alaska, and is certainly a step in the direction of higher appropriate income tax receipts for the State of Alaska. Now here again, although this step obviously works in the direction of favoring Alaska and higher income tax payments to the State,

there are technical problems as well that you should be aware of, and especially in foreign areas. Net production of companies is not always so easy to define, and net production as set out in the annual reports of the oil companies may not quite match Alaska's definition. The legislation before you does define net income in certain specified ways. The production figures that you get from the companies may not always match, and there may be problems of meeting your definitions, especially in foreign areas such as Indonesia, for example, where companies work under contracts. The concept of net production is not the same as the simple system where one has the simple royalty that one takes off, and it may be difficult to define what really is net production. What is production of a company? What is purchased oil? So that moving in this direction has some benefits for the State, but it obviously is not without problems.

In general, we feel that this approach, this one and rather novel new approach for the State has certain advantages. I sum these up by saying it will clearly increase Alaskan tax revenues. It works better in a sense, and why it does is quite obvious. Book income is higher than taxable income. Extraction is a better measure than sales, so you throw up more income to Alaska. If you throw up more income it

obviously means you are moving closer, hopefully, to getting something like 9.4% of what will be the producing income in Alaska. And although the administration end of it is not quite so simple as it looks, initially, and for some of the reasons that I've set out here, it obviously has some administrative advantages over other approaches. It is somewhat simpler, and this is certainly an advantage in this approach. Now the real basic disadvantage that we feel to this whole approach is that while it would get higher income apportioned in Alaska, one doesn't really know out of this system, how close one would get to true profitability. That is, how much income in Alaska and how close that is to what seems to be extensively profitability in Alaska. This is very difficult to know, very difficult to know how close it is. In total and company by company, it's difficult to know how the thing will actually work.

We ourselves tried a very simple approach to try to see how close it would come, and what we did, and anyone can do this, if one takes the annual reports to say, the three major companies that will be producing on Prudhoe Bay, ARCO, EXXON, and SOHIO, takes the latest data available for them, and that's the 1975 annual reports of these companies, (the 1976 one is not out), and then simply adds to that data for Prudhoe Bay, profitability, production, and so forth for Prudhoe Bay, and rather than make our own estimates

for that, again we turn to the data submitted by SOHIO, in SOHIO submission 1, so what we attempted to do was simply combine the data for Prudhoe Bay/Alyeska as contained in SOHIO submission 1, with the company's latest annual report data, and then attempted to see how this new approach would work that is using as our tax base pre-tax book income and then using a property factor, payroll factor and an extraction factor, and this is a very rough approximation obviously, but what happens when one does that, you find out that this apportionment formula does not apportion all the income that is assumed for Prudhoe Bay and Alyeska. It does not apportion it all, and more interesting than that, what you get is if you look at the three companies, just to see how three companies of this type would fare under this system, you get quite different results for the different companies. That is, some companies, at least one of the companies, you would get a fairly high porportion of the income earned in Alaska by this approach. From another company, you would get quite low percentage of it, so that one could, at least this little illustration suggests, that one could have companies with exactly similar operations in Alaska such as for example ARCO and EXXON, and get very different tax liabilities for the two companies, and we think this looks to be a potential disadvantage. You say this is only an illustration and one doesn't know what would be thrown out of this approach, but it does suggest

that what you may be getting in the way of apportion income and income tax payments may be off the mark of what profitability really is. So, we receive that as kind of the key draw back to this. You go in the right direction, but you don't know where you really are. Some people could be underpaying income taxes, other people could be overpaying, and how it would balance out to the State as a whole, it's difficult to say.

We would make this suggestion. If the legislature decides that this new approach in the bill submitted by the Governor is the approach it wants, and it might well because of ease of administration or whatever reasons that one chose this, we would suggest that perhaps the legislature might want to consider at the same time that it did this, that it ask or require of the Department of Revenue that it provide every year, estimates of profitability on oil and gas production within Alaska, perhaps with input from company, I don't know, but estimates by Revenue, the best estimates they can make and how much is made on oil production, pipelining or whatever in Alaska, so that the legislature can take this information, set it against the income tax receipts it's actually getting, and try to get some measure of how this thing is really working, that is how well is it achieving its goal of identifying income in Alaska.

Perhaps such reports could even have data by company not identified or something of this sort so that one could also, so that the legislature could evaluate over time how well it was working company by company. So that if you take this approach, we suggest that you might want to consider also getting some sort of information estimates out of the Department so that you would be in a position to evaluate in subsequent years how well it seems to be working.

Moving from this approach to a second and quite different approach to income taxation, take a look at direct accounting. Now, in principal of course, direct accounting is getting around some of these problems of apportionment. It's going directly at a measure of how much income there is from oil and gas operations in Alaska, so that in principal at least, if it can be done in a reasonable way, it does not suffer from the defects of this other approach. It is trying to measure directly what you really want to tax, in total in company by company, and we've always felt if it was legally possible to do this, and it were administratively possible to do this, this would seem to be the logical approach to taxation. Now, the problem as will be pointed out by many other people who will be testifying in here is that there are

problems of administration. There clearly are, and they are real. There are various problems of how one allocates expenses to Alaska, how does one look at and evaluate inter-affiliate sales, and things of this sort, corporate overhead and how much is allocated to Alaska, and so on. So that there are very real administrative problems to this approach, even though it is a more straight forward approach. It requires, on the part of tax administrator's rules, regulations, rather extensive ones, and obviously involves audit capabilities. One has to audit. There is a lot more auditing under this approach, and so on. And a lot, I think, has been said in the reports by the Department of Revenue and by Professors Zeifman and Ainsworth about these administrative problems. What we would urge the legislature to do though is really to try to weigh these very carefully. This is the major drawback, the administrative problems in this more direct more logical approach, weigh very carefully just what are the magnitude of these problems? How difficult are they to handle? How many people will be involved? How much money would have to be spent and so forth. How difficult is it really? And what seems to me the attempt you have to get some judgement as is to weigh whether the difficulties in administrating this thing are really worth the effort. It is a difficult thing, really, to assess, and I think that in assessing these kinds of things, one can't necessarily

look for parallels elsewhere or general problems of separate accounting or direct accounting in other states. I don't think you can put too much weight simply on the fact that companies sometimes favor separate accounting. I think when you're looking at the difficulties here, you've really got to look at the circumstances of the oil producing operations in Alaska and try to get some handle on this by looking at that, not by looking at parallels elsewhere. Try to assess _____ ask questions on how to assess, how difficult it would be for the oil producing industry in Alaska. That's what we're talking about.

I won't really spend much time on the net proceeds. It was an attempt last year, really, an indirect attempt at direct accounting by a separate oil and gas production tax. It based, although differing in some respects from separate accounting and from the separate accounting bill, it's basically the same approach as direct accounting. So I think if one is going the route of attempting directly to estimate or tax income in Alaska, one would worry about the differences between the net proceeds and the separate accounting tax, but more important, I think, are the two basic approaches to income taxation in Alaska, and what you're going to have to do is weigh very carefully the pros, cons, advantages and disadvantages of these two basic approaches to a problem inherent in the present corporate income tax

regime in Alaska as it applies to oil and gas production.

Chairman Poland, I had planned at this time to go on with some comments on severance tax. I don't know whether you would want to break for questions on corporate income taxation or go on.

CHAIRMAN POLAND - Do any members of the committee have any questions that they would like to ask Mr. Kilgore at this time?

SENATOR HUBER - Madam Chairman, I thought that Dick might want to make some comments on the data base which you gather by a net proceeds tax approach that you may not find available in the other ones. That's been a major consideration by Levy Company and Associates, helping to develop that particular item.

RICHARD KILGORE - Okay, this is one of the obvious. Looking at this and direct accounting, this is one of the aspects to it. And the net proceeds things, you are doing it on kind of a property by property basis. You are not aggregating everything as you might under certain separate accounting approaches, and having access to that kind of information

would be of use to the State, because it does give the State some feel for profitability of individual properties, ranges of profitabilities, what are cost value relationships in various fields, and so on. And that is of value obviously in designing or further modifying the tax regime in Alaska.

CHAIRMAN POLAND - Any questions? Very well, Mr. Kilgore. We will go on to the severance tax at this time then.

RICHARD KILGORE - I believe our firm is on record as saying that this really is an appropriate time to review your severance tax. We have major new production coming on in Prudhoe Bay, and this production which is obvious y quite different in character from that you have now in Cook Inlet. The second reason is that our office has been concerned for some time about the way the present tax works for Cook Inlet production receiving old oil prices. We've been concerned about this, and we think that the legislature should appropriately review this at this time. And I'll come back to that.

Now you have two bills - two severance taxation bills before you, but before I turn to the bills themselves, I would like to review with you certain principals we feel you should keep in mind in revieving severance

tax legislation. First of all, we've said this before, but I will say it again, severance tax is something that one, a tax which the State cannot really expect to continue to raise endlessly without running into serious problems because of the nature of the tax itself. The tax is a tax on gross value or it's affixed per barrel tax of some sort for unit tax. It does not directly take into account the cost of production, nor net profitability of production. Cost relationships between prices or values and cost can vary considerably amongst producing fields and areas, and where costs are very high, severance taxes, being gross taxes can seriously impinge on profitability and at the extreme they can even result in shutting down production. So, there really are limits on how far the State should think in terms of pushing up severance taxes because of the nature of the tax. We have always felt that as a rule of thought that Alaska severance tax should probably not go above the highest rate in other major producing states, and the highest rate in other producing states per comperable kinds of production, and I think this is probably still a reasonable rule, to keep a severance tax within bounds. Second, given the potential problems with a gross tax such as a severance tax, we have always urged some protection for lower productivity on higher cost wells. This kind of advice goes back to our first written report for the legislature back in January of 1970

where we urged a step schedule which the State later adopted, and your current law does have a step schedule, and does provide some protection for lower productivity wells. So that the two principals basically are not pushing severance tax, try to provide some protection for lower productivity, higher cost wells. Now, you have two bills before you at this time that in principal seems to follow these guidelines. One submitted by the Governor, and the other by the subcommittee on leasing and taxes. While each raises overall severance taxes, neither bill goes above an effective rate higher than Louisiana's 12 1/2 percent on oil. Basically, they are in line with our first guideline, and both of the bills attempt to deal with the problem of higher cost wells, but we feel with different degrees of effectiveness.

The tax subcommittee's bill is basically an extension of the current law. It adds higher well productivity brackets than you presently have, and for the higher well productivity brackets, puts in higher rates of taxation, and at the same time, that bill lowers the rate at the lower end of the brackets. That is lower productivity wells would pay lower taxes under this subcommittee's bill, and this is in line with our second principal.

Now the Governor's bill developed out of the recommendations of the Department of Revenue, introduces a new and rather novel approach. An economic limit factor which attempts to deal with the economic impact of severance tax on high cost wells, and what it does instead of having a step schedule, in a sense it has a continuous schedule, so that the nearer a well is to very low levels or to its economic limit, the less tax it pays. The further it is from that limit the higher it pays. And in principal, this is a very sound thing. But we have reservations about how this particular bill would work in practice. And it appears to us, that despite the intent of the bill, it could work in the direction, and probably would work in the direction of considerably higher taxes, for example, on various Cook Inlet wells in the low well productivity ranges. So despite its adherence to what we feel is a good principal, the way the bill was drafted, and the way it appears to work on our own calculation, it does not seem to achieve its aim. And I think this is something we can take up in more detail when we come to that, and we certainly would illustrate how this appears to work to us. So despite a good principal, it would appear to not meet that principal, and I would feel that is a problem with that particular bill. Despite a good attempt, it doesn't seem to work.

Now, the other thing of concern to us is that both of these severance tax bills which we have before us retain an escalating sense - _____ feature in them. That is, t of wellhead value is lower than a certain cents per barrel, it's the cents per barrel tax which has effect, whichever is higher a percentage of value or a cents per barrel. Now, this tends to work in a direction of putting a very high effective severance tax rate on Cook Inlet wells that are getting the old oil price. That is that price which is being held at low levels by the federal government. They pay a cents per barrel tax because that is higher than the percentage of value, and that cents per barrel tax works out to a very high percentage of the value of production, so this present tax and both of the taxes being proposed as alternatives have this feature. High effective rates of taxation on Cook Inlet wells have old oil prices. Not only that, but since they have escalation features in them, the present legislation and the two bills being proposed have escalating features, this gets worse over time. That is the cents per barrel tax goes up, and this feature of high effective rates of taxation for these wells continues. Incidentally, if you make your calculations, you will find out that the Cook Inlet wells producing and getting old oil prices and low productivity wells will pay a higher effective rate of taxation than will Prudhoe Bay wells, than very productive Prudhoe Bay wells under cents per barrel. And this feature would

get worse with escalation. We think the legislature should seriously consider, if not eliminating this feature, that is if not eliminating the cents per barrel, and you may not because this would result in some loss of tax revenues for the State. If you don't feel you can do that, you might want to consider at least putting a hault to further escalation in the cents per barrel tax, that this feature of the taxation, I don't think is really what was intended in the beginning just doesn't continue to get worse over time.

Now, I would like to conclude by saying a little bit about the total tax package in Alaska because I think you will be hearing a lot about this from many people, and while you obviously are going to be evaluating the merits of different approaches to corporate income taxes, the different approaches to severance taxes, you will also have to be concerned with the impact of the total package of oil and gas taxation in Alaska. Severance tax, corporate income tax, property taxes, and so on, the whole range.

Industry witnesses, I'm sure, are going to talk at some length about this, and it is obviously of special importance: The total tax package and how it effects the oil and gas industry is important along with sensible approaches to each part. You obviously do not want to

destroy the oil and gas industry in your state. Here it seems to us, there ought to be two basic considerations when you're looking at the sum of all taxes in the state. Obviously you don't want the sum of all taxes in the State on oil and gas to be really an extreme burden on profitability or the prospects for profitability on successful ventures here. You don't want to do violence to the economics of ongoing oil and gas producing operations. But this is a difficult thing to measure. What may be a larger tax burden in Alaska, while in one state versus another, really can't be considered simply in the absolute. That is how much cents per barrel in total is being paid, and what really matters, obviously, is how the total sum of all the taxes paid by the industry relate to their profitability. What may be greater total taxes in one state, in a more profitable environment may be less of a burden than lower seller taxes in other states. So it has to be considered against the background of what appears to be profitability, and the second principal, another obvious one, I guess, is that you obviously don't want a total tax system which put together really discourages ongoing exploration in your State and the development of your resources.

Now those are two very, very broad principals, and there really are no easy answers as to exactly how the sum total of the package of taxes in the State can be set against

these two, which we think are very important criteria. It is a difficult assessment really to make, and reasonable men can obviously differ in their assessments as to the effect of a total tax package.

In our role as consultants to the legislature, we will do our best to assist and advise you in what is, we think, a difficult task of assessing oil and gas tax legislation.

CHAIRMAN POLAND - Thank you Mr. Kilgore. I don't really think that we have time for questions right now. We will be going into session right away. The Senate has a very light calendar this morning, and what I had hoped to do was for us to come back at 11:00 AM and continue with any questions that we might have or discussions with Mr. Kilgore. This afternoon we will hear from Professor Zeifman and Professor Ainsworth at 1:30 PM. Senator Huber.

SENATOR HUBER - Yes. I'd like to ask that Mr. Kilgore look into a couple items before he comes back. I think most of us here have heard Dick or Milton at least 10 or 15 times criticize the cents per barrel floor that we have in our severance tax, and of course, what I'm looking for is something to replace it, so that we can listen to this, we know that _____ cause in certain cases some unfairness,

but we need something to replace it in case the percentage of wellhead value is eroded by either federal action or other economic factors to where we have the old "bugaboo" negative wellhead value or something that is approaching that, so we would need something to replace that as a floor if we're going to work on that particular area. I wanted, maybe, Dick to look into that and give us some recommendations in that area because it must appear to him like we completely ignore him when he talks on that subject.

RICHARD KILGORE - We have given some thought to this. What we are talking about is a floor which protects you in case the general price level goes down, but also one which does not impose this particular problem on old oil production in Cook Inlet. We have given some thought to this.

(Chairman Poland adjourned the meeting at 9:55 AM)

******

TESTIMONY OF MR. RICHARD KILGORE
OF WALTER J. LEVY CONSULTANTS CORP.
FOR THE JOINT SENATE AND HOUSE
RESOURCES COMMITTEE MEETING ON
OIL AND GAS TAXATION - MARCH 22, 1977 (AM)

RICHARD KILGORE - I appreciate the opportunity of coming back so fast, and what I'd like to do is fire my remarks, really, to the corporate income tax issue and amplify on the very brief remarks I made yesterday morning, and also comment on what appeared to be some differences with other testimony yesterday. What I propose to do is review again in more detail, really, the pros and cons of the two basic approaches to income tax which are before you. I want to make it clear at the outset, though, that it is not our role here to advocate one approach or another. Basically, we see our role as giving you an appreciation of how we see the pros and cons, and advantages and disadvantages of these two approaches, what they seek to accomplish, how well they seem to accomplish the goals that they are intended for, and leaving it to you to make the final judgement. So I don't want my remarks to be construed as advocacy of either separate accounting or apportionment to modified apportionment approaches, and so on. I think, and I'd also really like to get down to basics on some of this, and I think maybe we lost some of the basics in some of the testimonies yesterday. I think it is important to appreciate at the outset that our concern here, my concern, your concern, is not really with how apportionment or separate accounting work in general in other

states for other industries and so on, what we are concerned with here is not with these approaches as general approaches to income taxation, but what we're talking about is their applicability to the oil and gas industry in Alaska. This is what we're talking about, and I think we have to keep this in mind. Not how well it works for other states, but why other people use it, and so on. If you will remember our original concern with the approach that you now have, the three factor approach that you now have with your income tax system didn't have anything to do with general worth, its general ability, and its general applicability. It had to do with how this thing specifically worked toward the oil and gas industry in Alaska, and this is how this whole question of reviewing your income tax came up, and it appeared to us, and we have testified many times, that the approach didn't seem to work very well for oil and gas operations in Alaska, that is in a portion, a very much smaller amount of income to Alaska than would appear to be earned by the oil and gas industry on producing operations and pipeline operations in Alaska. Now, if the oil and gas industry in Alaska were small scale, and I guess this really wouldn't matter, you probably wouldn't be very much concerned with it, and you probably also could view it as if it doesn't work for the oil industry, it probably works well for other industries, maybe for other industries it apportions more than you might expect, and so on if they wash out. But, as

you all know, the oil and gas industry will be by far the biggest income producing industry in Alaska as far as we all can see, so it obviously is of very considerable importance to you. It is important to you, I think, that you have a tax structure which gets you something like your 9.4% of what appears to be the profits generated by oil and gas operations in the State of Alaska, so we have to keep in mind, we're really talking about these two approaches very specifically in the context of oil and gas in Alaska, not as general approaches. Now, I noted the other day that Professor Zeifman argued against separate accounting at one point, and one of his arguments, I think repeated a number of times, was that a good reason for not adopting separate accounting was that no state has adopted it as a general approach to income taxation. This was an argument against separate accounting. Now, basically, I don't find that a very persuasive argument. First of all, we're not talking about other states, we're talking about Alaska, and we're not talking about general applicability to all industries, we're talking here about oil and gas, and I don't think anybody has suggested that the State of Alaska should adopt separate accounting as a general approach to income taxation in the State, and certainly the two bills before you, Senate Bill 105 on separate accounting, and Senate Bill 202 on net proceeds, both of these are clearly

intended to apply only to the oil and gas industry in Alaska, so I don't find this a very persuasive argument against separate accounting, and I think we have to keep this in mind. Conversely, just because a number of states use this three factor apportionment formula, I don't think it's a particularly persuasive reason for applying it in Alaska if it isn't appropriate to your oil and gas producing industry.

Now, I'd really like to get down to basics here. Starting off by considering what do we really mean by income in oil and gas operations in Alaska. Is it really so scrambled up by other activities of multi-national, multi-state enterprises that it just can't be unscrambled? Are we really talking about some kind of affliction which can never be put together and that we really just shouldn't bother with it? What is this income in Alaska that we're attempting to identify? Well, let's look first at what the industry does in Alaska. It comes to Alaska, it explores Alaska, hopefully finds oil or gas. It developes those resources, transports them to a point of export in the State, be it Valdez, Cook Inlet, or whatever - at least a bulk of the oil or gas does that, and then it moves into consumption in other states. Now it is true that a lot of this kind of activity and what goes on in this whole process does take place within the integrated scheme of operations of major oil companies. In fact, in many cases the final sale of the oil produced in your state

may not be a sale between third parties until it actually gets to the gasoline pump in California, for example, that may be the first point at which the sale is made, and the rest is within integrated operations. But what does this imply about income earned in Alaska? Is there a concept of income earned in Alaska, if this is the process by which a lot of your oil really moves. Well, I would put it to you that your oil when it leaves the State of Alaska does have a value. It will have a value, and it will have a value that's highly visable. We don't know what the FEA is going to do on the pricing of Prudhoe Bay oil, for example. But it may very well be that they will establish a value at Valdez for example. It may be that they will set a wellhead value. If they set a wellhead value, we can add on a pipeline charge, and we can have a value of oil as it leaves Alaska. So, basically, it's this value of oil leaving Alaska that is identifiable which is really the final revenues from producing oil and gas in this State. These are the revenues which you can identify as being earned by oil and gas producing operations in Alaska. Obviously when you are talking about a net income, you're talking about deducting various kinds of costs. Exploration development costs, pipeline costs, operating costs, amortization of capital costs and the like. The large number of these costs are incurred in the State and can be identified as incurred in the State.

Some of them are obviously some of the costs incurred to produce your oil. To get out of the State are the costs which are incurred elsewhere. Corporate overheads, obviously, a certain amount of corporate overhead time has to do with planning for the oil producing operations in Alaska. Some of the services which are provided to the operations in Alaska come from outside the State, and these are just some of the areas where accounting problems arise, but still these are within reason, identifiable also. So the income we're really talking about identifying in taxing is the value of the oil leaving the State of Alaska and an appropriate allowance for the various costs involved. Now the question for you, with your consideration of income tax, is which of these approaches really identifies income as we seem to see it and say that it is earned by the oil and gas industry by virtue of their operations up here. Which one is going to identify a portion of income which you apply your 9.4% tax. You'll get an appropriate tax on that income. Now, as I discussed yesterday, there are basically two approaches, and those are the approaches which are before you. One is apportionment, and this is where the approach is to look at the total income available, total income earned by a company, and try to work some fraction which gets applied to that total income, gets you income in Alaska. The other

approach is basically separate accounting which goes back to those revenues and cost categories that I discussed just a little while ago, and attempts directly to identify them and come up with income in Alaska, and the question is which of these seems to identify and work best that has come closest to identifying what would appear to be the true income on operations in Alaska, but not only that, taking into account also cost difficulties of tax administration, and that cannot be ignored. An approach which gives you the perfect answer and which is extremely costly or impossible to do in practice, obviously is not the kind of tax that you want.

Now, I'll start with apportionment. You have an apportionment formula in place in your tax laws today. You have Senate Bill 236, which is a modified version of an apportionment formula, but still an apportionment formula nonetheless, and the approach is to start, as I said, with total income of the company before taxes, under your present law, taxable income. This proposal suggests shifting it to book income, but nonetheless starting with the total income earned by an enterprise. The next step in apportionment, whether it be the one you have now or a new one, is to develop a fraction to apply to this total income in a corporation which hopefully when applied, brings back to Alaska an

appropriate amount of income. Now, you do that by taking factors that appear to be indicative of income generating activities, such things as properties, payrolls, sales and the like. These are things which indicate income producing activities are taking place, and what you do is you take ratios of these in the State to the total. Now, the question is does this really work? Does it correctly assign income to Alaska, or maybe _____ when does it work? When would this give you the kind of answer that you would hope to throw up? Well, it would work if roughly the same income is generated per unit of these income identifying factors in Alaska, as in Alaska and outside Alaska. These are the circumstances under which it appears to work. That is, just let's take one factor for a moment. Let's take property, if income is proportional to property in Alaska as it is elsewhere. That says in effect, if rates are returned the same in Alaska as they are elsewhere. If that's the case, and then you take the ratio of property in Alaska to the total, then you will allocate, and apply that to the total income of corporation, you will correctly bring into Alaska the amount of income that's earned there. That's if the ratio of income, in this case the property is the same inside Alaska as it is outside Alaska. And the same would go for the other factors. If you're looking at payrolls, if income to payrolls are the same in Alaska and outside, then this would be the correct factor for

allocating income in Alaska. Now, it's obvious, I guess, to anybody looking at any of these factors, it's unlikely that they will be identical in Alaska and outside Alaska. Rates of return aren't the same. You need fewer people and payrolls under some circumstances to generate income in Alaska and elsewhere, and so on. So that the apportion approach basically says factors are not perfectly going to be the same in Alaska and outside, and therefore work perfectly, so what do we do? We take a number of these factors. Three in this case and we average them, and hope that that will give us an overall fraction which will appropriately apportion income into Alaska when applied against the total income of a corporation operating here. It averages somewhat obviously better than any single one of these factors taken by itself. Now, the question is how well it really works even when you average these factors, and how much better will it work if you move from the factors that you have now, to an extraction factor. Professor Zeifman was asked in testimony yesterday, how well his approach would work in Prudhoe Bay and Alyeska. Now, his answer was that his approach would be more effective because it takes into account the whole picture. All the profitability of the corporation was the answer. In a more general vein he also said that in reviewing the disadvantages of separate accounting, in my review of the

disadvantages of separate accounting, I didn't mention the most important disadvantage of separate accounting, that is again that it didn't look at the whole pie, it didn't look at the total income of the corporation. So he was saying first of all that his approach would seem to work better for Prudhoe Bay and Alyeska because it looks at the total income of the corporation. And he also said this is one of the disadvantages to separate accounting. Now, it seems to us that looking at the whole pie, that is the whole income of the corporation, all of the income it generates everywhere, it in itself has no value, unless the apportionment you come up with that you apply to this whole pie, the fraction that you apply to it, really works to get the appropriate amount of income in Alaska. What we're saying is that simply looking at the whole pie, looking at the total _____ of the corporation in and of itself is no virtue. Its only virtue only works if the apportionment formula of the fraction you apply to it is appropriate and brings it in, and I think that's very important to appreciate, simply looking to the whole income of the corporation doesn't say that this is an appropriate appraoch of getting a lot of income as it were.

Now, you remember our analysis all along, with the present system you have looked at these factors and tried to come up with how appropriate they really were. We pointed out

that if you looked at the payroll factor, it was relatively _____. You have relatively few people on payrolls in the kind of functions that you will have in Alaska in the oil and gas industry. Very few payrolls for production for pipeline and so forth relative to the income generating, so we were critical of this particular fact. In sales, it's been pointed out are often zero in Alaska. Sales are made outside Alaska. Property, that to us appeared to be a better factor. That is, you have very heavy investment here in Alaska to generate the kind of income that you are going to generate, but our analysis said that property being a better factor couldn't make up for these other ones. Now, Senate Bill 236, this new approach, substitutes extraction for sale, and this is clearly an improvement. Oil production is a good measure of generation of income, and therefore it is a better factor. But the question remains, does even this modified apportionment formula do the job? Not just get more revenues, which it clearly will, and the other part of the approach is moving to book net income also will get more revenue, and it's not simply a question of does it get more revenue, does it really get the income apportioned to Alaska that is appropriate? This still remains the question. And this is what I said yesterday, the biggest drawback to the whole apportionment approach and even a modified apportionment approach as proposed

here, is that it is unclear how close you will come to true profitability through this approach. It's a very elusive and very uncertain thing, and it appears to us there's by no means a guarantee that this will happen, and this we see as the most serious drawback to this approach, and there are really two aspects to the question of whether appropriate income is apportioned to Alaska under this approach. One has to do with how much in total is apportioned to the State of Alaska. If you take each of the individual companies, apply this approach, apportion income to Alaska, sum it up, how close does that come to the overall profitability of the industry operating in Alaska, the profitability as I laid it out before. And the second question is, how does it work for individual companies. That is, we apportion use this approach for each individual company operating here. How close does the apportionment formula come to apportioning appropriate income to Alaska for individual companies. Does it work well for some companies, not well for other companies, and so on? If this is the case, that works unevenly amongst the companies, then you have a question of equity of taxation. So these are the two aspects that are important, and this is an uncertain thing and difficult to really try to come to grips with. How well would this thing do the job? Now, I stated yesterday that our office had done some illustrative analysis to try to get some handle on this question. We had been somewhat reluctant to put this

formally on the recrod and discuss with you a little bit about the results, what I saw as the major results that came out of this thing yesterday, but we were somewhat reluctant to lay out because there are a lot of caveats involved in what we did, and when you put this thing into the public record, it's often used without regard to the caveats which are very important, and we hate to see those get lost. I have been asked if we would put this formally into the record, and I'm going to do so now, and I would then like to discuss it with you including all the caveats and get those on the records. I would like to distribute this to you at this time and discuss it. I would like to spend some time on this. I hate to burden you too much, as I say, I want to make it clear in your own minds exactly what we have here and what we don't have. Now what we have done, we have labeled very carefully a hypothetical illustration. Because it is a hypothetical illustration, I would underscore that. It is a hypothetical illustration of this modified apportionment formula applied to book income which is the feature of this new legislation, and we've done it for three major Prudhoe Bay producers. Now, I would call your attention to the note first of all because this is important. The note says the calculations shown on the table above are not intended to represent projections of income that actually would be of portion to Alaska in 1978 for the three companies

if this new approach were taken. It is not that. Rather their calculations are meant to provide a rough illustration of how this approach might work for three Prudhoe Bay producers that vary in size and scope of overall operations, and even though these are identified as SOHIO, ARCO, and EXXON, and we use some of their data, it really is not meant so much that it is these companies, it is companies of these characteristics, and these are quite diverse companies as you know. EXXON is a huge international company. SOHIO has been basically limited to domestic activities with very little production so far, and ARCO being somewhere in between, so they are not meant to be really the companies. We have used their data just to illustrate what will happen with companies of different size. Now, what we've done in this illustration is on the first line to take from the 1975 annual reports of these companies, these are the latest available to us, the pre-tax net book income of these companies outside Alaska. We've just taken a pre-tax net book income, and since basically in these companies virtually everything is outside Alaska in those years anyway, we take this as the income outside Alaska, and this is data for 1975, and all we've then attempted to do is to graph on to this sort of a Prudhoe Bay operation. Now, we cast around for data to use for Prudhoe Bay, we considered making our own estimates, but we finally settled for some data that had been submitted by SOHIO to the legislature at the request of the legislature, and we reluctantly

used this. It was readily available, reluctant because when SOHIO put this information into the record, they did it with a lot of reservations, and we have the same reservations about it, and anybody looking at these numbers, I think, certainly should take it in the context of all the reservations that SOHIO had about their own data, and we apologize to SOHIO in a way for using it without a complete list of all their reservations.

SENATOR CROFT - Could I ask just one question in that regard? That was the information that was furnished by SOHIO, at the request of the committee was furnished to you?

RICHARD KILGORE - This is SOHIO submission 1.

SENATOR CROFT - To Greg Erickson, analyzing the corporate tax? So it was for that purpose.

RICHARD KILGORE - Yes. It was for that purpose, and they labeled it as hypothetical and so on, which it is, and I want you to understand that that's all that it is, and we appreciate their reservations about it, but we had to have something to give us an idea, something that we could graph upon to present data, and we simply and arbitrarily gave 50% of that to SOHIO and 25% each to the other two companies,

simply because that seems to be roughly their equities in this thing, and if we add that, we end up with a figure for total pre-tax income. This is obviously hypothetical, it has '75 data, it has what someone hypothetically says might go on in Prudhoe Bay in '75 _____purposes. Then, we attempted to apply the approach of Professor Zeifman to this. Looking at property factors where the numerator were the property factors used in the SOHIO thing. The denominator was property as we found it in the annual reports of the companies. Payroll, we just took an arbitrary 2%. It's arbitrary that makes relatively little difference to the analysis. The extraction factor, we took net production as assumed i SOHIO hypothetical illustration. We took as a denomina et production as it appeared in the annual reports o. the companies without worrying about whether net production was quite what was meant in this bill, and we averaged the factors for the companies. We then applied it to pre-tax book income which included other activities of companies and this hypothetical illustration for Prudhoe Bay. Divide the average of the three, which is the way this approach would work, and that gave us the income that would be apportioned to Alaska under these circumstances, and that's the second to the last line down there, and then what we did on the final line was

to take this income apportion to Alaska out of the theoretical model, but applying this new approach to this hypothetical model, and looked at what percent that was of the income assumed to have been earned on Prudhoe Bay and Alyeska operations above.

I think that the most striking thing that came out of this was the difference in the way the approach worked for the three companies. Again, three companies of these different characters. In the case of the EXXON type company, the approach came very close to apportioning what is assumed in the beginning was the income there. 650 up on the top. 625 apportion. So it worked very effectively for the EXXON type company in this particular situation. It worked much less effectively in the case of an ARCO type company with these sort of data. It added up to less than half, the income apportion to Alaska, than it was assumed to be earned there in the first place. And of course, in this simple model, EXXON and ARCO are earning the same money in Alaska, but the amount of income apportioned to Alaska under this mechanism are quite strikingly different. In fact in the ARCO type case it's about half. The SOHIO type company comes somewhere in between, and in total the approach allocates about two thirds of the total income from three companies in Alaska. I certainly wouldn't put too much stock in the two thirds, but I think the more striking thing is the differences that

get thrown up amongst the three companies here. Now, these are very _____ calculations, and things could very well change. I might point one thing out to you. What is striking in the case of the EXXON type corporation is that, as I say, it appears to be very effective in this case. And the question is, why? If you go to an addendum on the third page, it basically explains why this works in this particular instance for this type of a company. If you will recall, I said a while ago that if ratios of income to the various kinds of factors you use are the same within and without Alaska, then the approach works in general quite well. To take that a step further, the ratios of income to the various factors such as property or extraction are higher outside Alaska than they are inside Alaska, then the apportionment formula tends to favor Alaska. That is, it brings in more income than it should. If the ratio is higher in Alaska than outside, then these kinds of ratios work to the disadvantage of Alaska. Let me put it this way, if we look at a property factor for example, and within the State of Alaska, one earns whatever 20% on property (on assets) that's the rate of return. If it's 10% on operations outside Alaska, a lower rate of return, and you simply take the total income of the corporation then use the ratios of property to allocate to Alaska, you will not get the income to the State of Alaska that you should.

If the rates of return are higher in Alaska than they are elsewhere, then if you simply had a one factor apportionment formula, simply property, and that says that, say, 15% of the property is in Alaska, and you apply that to the total income, but the problem is that that 15%, what is it going to bring in? It's going to bring in average profitability to Alaska. An average of everything, and if Alaska is higher you're not going to bring in as much income as you should in effect. That is because what you're bringing in is average profitability if you do that. If you simply go with the ratios of property bringing in average profitability into Alaska, when in fact it's higher. And the other way around. If profitability is higher outside Alaska, higher say relative to property, and again you only have a one factor formula, and then you use the proportion of property, you bring in average profitability into Alaska, and in fact it's higher outside, so that you apportion more than you properly should. Now what this is getting to is why does this particular formula for these set of circumstances seem to work for an EXXON type corporation? Well, the answer is basically shown on the addendum. These, what we've done, if you'll look at the top panel, we've got the ratio of income pre-tax net book income to property in this model outside Alaska inside Alaska. Now, if you'll look at EXXON, it has a very much higher ratio of income to property outside Alaska than inside Alaska, Pre-tax income.

And, therefore, application of this formula for the EXXON type corporation is beneficial in the State of Alaska. It pulls in more income than it otherwise would. This very high ratio of 42.4 here, has the effect of favoring Alaska, and that's basically why you get the results that you have here. That's why it works better for the EXXON type than it does for other models that we have. Now, I want to tie back to something that I said the other day. If you look at the question of why does pre-tax net book income to property look so high for EXXON. Is it because it has really such profitable operations outside the United States? This would suggest then that on a pre-tax basis they make 42% return on their property. The answer is that this number, this ratio, is inflated by all those foreign income tax payments that I talked about the other day. EXXON works big international operations. In the year 1975 it payed tremendous amounts of income tax to foreign governments, and that inflated its pre-tax net book income. After tax it would look quite different, but we're talking pre-tax here. This is the way this thing works. So, that has inflated this figure, you get a very high figure. It happens to work to the advantage of the State of Alaska under this model. Now, as I said the other day, this is a particular aspect of this thing, pre-tax net book income including foreign income taxes that may not be the case in the future. These may very well dwindle. Income tax payments

probably will be replaced by purchases of oil, so that this high factor that's built in here with our particular model that happens to throw up a reasonable amount of income for income corporations, may not in the future, may not be this way in the future, but the fact that this EXXON type corporation, international corporation in this particular illustration ends up with an apportionment formula working correctly may not hold in the future. It's uncertain for a lot of reasons, including this particular income tax feature. If we went through this illustration five years from now, the results might be quite different here. In total, and I think amongst companies, I think really there is no way of knowing. Now, again, this is merely illustrative, nothing more. We've taken these three companies because they're quite different companies, they're quite different companies of the type that will be operating in Alaska. Their own income will be quite different obviously, but if you just grafted on the Prudhoe Bay Alyeska thing to this on some rough assumptions as profitability and investments and so on, this is the way it would appear to work, and all I submit is that it does raise questions about this approach and about its ability really to identify income. Clearly, the apportionment by picking another factor that takes up a higher amount of income, but that in the process of merely increasing the income, it creates some inequity, and if what you want to do is simply

increase the take, you ought to increase the rate, instead of tinkering with one of the factors to simply produce additional income.

RICHARD KILGORE - Of course, if you increase the rate, you have to increase the rate for other corporations.

SENATOR CROFT - Sure, then what you're saying is that Alaska operations themselves are not paying enough once you've isolated it. Then your solution to that problem is to increase the rate if you think you have to have more, rather than trying to increase one of the factors that go into determining what portion of the income is allocated to the State.

RICHARD KILGORE - Well, this might be one approach. If you're not willing to change the factors, you would be left with changing the tax base which has also been suggested, or you would be left with changing the rate.

SENATOR HUBER - I wish that Dick would discuss the pre-tax net book income on extraction because I want to ask him a question about the sales factor that it replaces. It looks to me like the sales factor that it replaces would be on the same side of the book as how he explained the income

from property up above to where Alaska would get more than its share, because we have less than a reasonable share of the world-wide sales.

RICHARD KILGORE - Well, accept that to the extent that sales are really zero. This may drop out of your thing all together.

SENATOR HUBER - You mean that doesn't work out because we have a multiplying factor, or a dividing factor of zero? I don't like these mathematics that don't work both ways.

REPRESENTATIVE MEEKINS - I'm just trying to figure out how this works. Is it, I might have it backwards, is it the ratio of whatever the factor is to income to the factor if it's higher than outside then.....

RICHARD KILGORE - Then it's to your disadvantage because you're bringing it in at the average.

SENATOR CROFT - In that regard, our best guess as far as Prudhoe Bay is concerned is that with regard to about 75% of the operations at Prudhoe Bay is going to work to our disadvantage. We're talking about 50% SOHIO, and 25% ARCO.

RICHARD KILGORE - Or in total, but as I said, I would not put any precision on these at all. In this particular model, what happens in total, you throw up about two thirds when

the companies combine.

If you'll just look at the illustration itself, you will see that total income apportioned to Alaska, the sum of the three companies is seventeen sixty. When in fact by definition they are earning 2.6, it's about two thirds, but I would not take that as indicative of how much this approach will really do. I think that the more important thing here is how it seems to work for the different companies, and also in a sense says, at least suggests, that for this particular model it also doesn't throw up all of the income as well in total.

REPRESENTATIVE MEEKINS - But you could get a rough estimation of how that's going to work by seeking out different companies and going with their finding what their ratios are in terms of the profitability of their Alaskan activity versus their average, and you could see whether or not you are losing or gaining the respect of that individual company, couldn't you in that respect if you knew clearly that the profits rates in Alaska were much greater than for those factors than their average world-wide, then you wouldn't know exactly how much, but you would know that we're not getting what's appropriate, and we're taking the average instead of the higher rate.

RICHARD KILGORE - It is possible to gather enough information to look around and see how it would work with various companies, but that's not really what I suggest that you do. This is, as I said, intended purely as an illustrative to demonstrate how it works under these particular set of circumstances assumed here, and again I would look very carefully at the notes to this and also to the note which sets out some caveats about this.

Now, this illustrates, I think, some of the potential problems and I think, at least I hope, focuses on the workings of this thing, so you can think about the workings of this approach. This was described, I think, in testimony yesterday, as fictional and I guess it is illustrative based on some real data, but it certainly is not intended to be a projection of what will happen or anything of that sort. It was described as fictional as opposed to some actual data that were used, tax return data that were used to develop this approach, and I would like to make at least a couple comments on some of the inferences that were drawn from those tax return data. For one thing, they were used to illustrate net book income if you'll remember exceeded taxable income for the companies and it certainly demonstrated that, and no one was surprised at that result. Now, the second thing though, is that what turned up in those tax return data is that for

companies for which you had both apportioned income and separate accounting if you'll remember, the former, that is the apportionment is always higher, it was positive, described as always positive, and the latter, separate accounting always zero or negative, and this was taken as evidence that separate accounting doesn't work. Now, I'd like to address myself to that problem. The question is why did you get this result. Why did apportionment give you positive, and in this case which is oil companies operating in the State, 14 of them I believe back in '73, '74, and '75 that you got this kind of result. It was said that Mr. Lipton was wrong when he guessed that perhaps the reason was that you had zero sales and therefore when you went to separate accounting you had zero sales and you started subtracting and so on, but it wasn't indicated what it is that really gives you this kind of result, and I think that it would be of considerable interest to you to find out why you got this kind of result. The explanation really was not given, and when I say it was said that zero sales were not the reason, zero sales in the sense that producers that were producing and selling would declare their sales at zero. That was a hypothesis that we had, apparently that's not it. I can only speculate, I would guess that in the years covered what happened was that there were companies operating in Alaska and spending

money on payrolls, they have some office space, property, exploration, money, geophysical work maybe, bonuses, I think that bonuses were paid and the like, and there must have been such companies that had little or no revenue that were not gaining revenue out of production in Prudhoe Bay, and for these companies they would in fact be running losses. That is they would have no income. Not a question of your producing, but selling outside the State, simply that they don't have any income. Now, if they don't have any income, no revenues incurring these various expenses, they would run losses and separate accounting would certainly show them with losses, but I don't think if this is the explanation, and if it's not I think we'd like to know. If this is the explanation, I think one doesn't go from that to assume that separate accounting always ends up with no income or negative income, clearly if you apply accounting to the producers on Prudhoe Bay, they will not throw up no income. I would also point out the results which said separate accounting negative apportionment positive, why does that happen? Well that happens probably because these companies had payrolls in Alaska. People were here, and they were getting interested in the search here, and so forth, so you threw up some positive income by apportionment. You had some payroll, you had some property and so on. And you throw up positive income, but I think you have to ask the question of whether

this is really what you intend to do if we have companies operating in Alaska at losses because they haven't found any oil, haven't generated any income, do you really want to apportion income to them in Alaska and tax them on it? Should they pay income taxes when in fact they have no income in Alaska?

CHAIRMAN POLAND - Mr. Kilgore, I'm afraid we're going to have to break now. Our schedule this afternoon is 1:30 PM at the Supreme Court Room again, and we only have one individual scheduled to speak this afternoon, and that's the gentleman from British Petroleum, so possibly when he's through, we can resume the rest of this discussion with you. Thank you very much.

******

TESTIMONY OF RICHARD KILGORE
DIRECTOR OF RESEARCH FOR
W.J. LEVY CONSULTANTS

RICHARD KILGORE - I am trying hard not to take it as a reflection of my testimony that every time I testify fewer people seem to show up, but this is a Saturday morning and its not quite like the middle of the week. My opening remarks, if you recall, were, try to present some overview of the various types of taxation on the issues and principals of oil and gas taxation. My second testimony before Senate Resources, and in the afternoon before the two committees, tried to elaborate and sharpen the pros and cons in approaches to income taxation, that is the apportionment verses seperate and direct accounting. Now today, I would like to provide you with our comments on the specifics on the bills before you, and also take the opportunity to address some of the issues raised by other testimony you have heard. And I would like to start again with the income tax. Before I get to the specifics there, I would like to discuss very briefly, some of the broad questions raised by industry spokesmen, in which they say that any deviation from the present three factor proportionate formula raises the potential for double or multiple taxation. I think this point was reaised by every one of the oil campany spokesmen. I want to make it clear that if all states used the three factor proportionate formula only, then the total income of the companies is apportioned to all the states and the sum of the tax basis in the individual states will add up to the corporations total income, and the deviations,

either by different factors such as the (Eathen, Ainsworth approach?) as substituding abstraction or going to book income or going to some sort cf seperate accounting approach does tend to work in the direction of raising the tax basis of states that do that and has the tendency of each of the states in their own approach to taxation identifying a tax base which when added up on total would be somewhat more than the total income of the corporation. I think there can be no denying this, taking either of these two approaches, does raise the potential for double taxation. This is clear, but against this Alaska has to be concerned with how the apportionment works for the State itself, and how, not simply how the system works in broad for the companies and equidy for the companies, but how it works for the State of Alaska and what sort of income is thrown up for the State of Alaska, it can't ignore this either. The State, looking at its own situation, I think in many respects does have a unique situation to look at, in many respects Alaska is unique and the taxation of oil and gas in Alaska in itself is unique. As I don't really have to tell you, oil and gas is far in the way, the largest industry and will be the largest income producing industry in Alaska. Alaska also does not have other industry, much in the way of other industry other than oil and gas it does not have major, it does not have agriculture on any kind of major scale as do other states, so many other states with a broader economic base can afford to have apportionment formulas

which they work well for some industries, not so well though for others and so forth, they tend to more average out than certainly they would for the State of Alaska. Another unique feature of Alaska's situation is its oil and gas industry is largely extractive and transportation ends of the business, Alaska does not have major refineries as do other states such as California, Louisiana, and Texas. It does not have major mardeting because it has limited markets on it because of its limited population, so it does not have major investments in mardeting and alike as other states do. So without refining, without marketing, head offices are not located here and so on, it does not have many of these factors which in other states have helped the apportionment formula work for the states. That is where you have all of these other activities, one tends to have larger payrolls, there are larger numbers employed in these other functions tends to apportion income to those states. It does not have major sales within the state and so on. So this also makes Alaska's situation unique and as we have said many times, it tends ti make the three factor a-portionment formula not particulary effective for Alaska. So on the one hand, the industry's argument is certainly a legitimate one and they have every right to be concerned about totential for double taxation and I think, beyond that, the potential that if you adopt this sort of a system that other states may somehow follow you and if this happens to them they more and more run the risk that the sum of the tax basis in all the states exceed their own income and this is a very legitimate concern of theirs. On the other hand, you do have these unique features of the oil and gas industry in Alaska that I have just memtioned. This means that Alaska really has to weigh its own unique

circumstances against the violence done to the principal of uniformity and the potential for double taxation, if you alter your income tax, you must appreciate what you are doing and what you are doing to the companies, you have got to attempt to assess, at least broadly what it really does mean to the company it violates the principal clearly, but what does it mean in terms or dolars and cents of the potential for double taxation in those terms and I think in that respect, some of the questioning of Senator Croft yesterday was along those lines and I think you probably also should pursue this somewhat more. You have to admit what you are doing, it would work in this direction but you have to get some appreciation of exactly what that does to oil companies. And I think in that respect if you are looking at that, I think, it is relevent that the oil industry is not taxed in all states, there are some states that do not have a corporate income tax and I think it is also relevent that the tax rate in other states is often lower than it is in Alaska. So if you are looking at the double taxation issue, I think this is relevent because it bears on how much are they really hurt by this kind of double taxation fort of thing which other approaches imply. And I think you have also been concerned, to some extent, that what you do would set a precedent for other states and, this is a legitimate concern of the industry, I don't know any other situation, at least I can't think of any other situations which what you are doing would immediately trigger something by some other state, but still the potential for that happening is there. So I think its very important for you to appreciate that what is being said is correct, you have your own interest, and if you are going to go this approach, that you appreciate what you are doing and try to get some feel for what it really means to the

companies. Now I would like to move on to some specifics on the bills before you, the income tax bills, and I would like to start with Senate Bill 236, and House Bill 322. This is the so-called corporate franchise tax and it is a modified apportionment formula. Now, here we really don't have comments on the bill itself and the way its drafted, it is, as far as we can see, a well drafted bill, does what it is intended to do, and I think in the respect of this bill the questions we have on the bill really have to do with the effectiveness of the approach and not really the specifics in the bill. It seems to do what it intends to do and the question in mind is, how effective is the approach this bill is attempting to use, so I really won't have any line-by-line comments on that, but I will on H.B. 105, excuse me, S.B. 105, H.B. 145, somehow I seem to have misplaced that one. Yes, Senate Bill 105. I would first like to call attention to, on page 1, line 18, to the intent of this bill, the intent of the bill seems to be, have to do with the determination for tax liability on production and pipeline activities, it addresses itself to these activities and in fact, uses the work "activities", it is not a tax on an entity, its tax on activities, now this approach would presumably differ from a net proceeds approach which taxes income form well or field or this kind of thing. This is presumably looking at these particular activities, that is oil and gas production activities and oil and gas transportation activities. And this is what the intent states, but when I am going to come to later sections and discuss those, I think it looks to us as when you go into the sections of the bill, which involve the calculation of the tax it doesn't really seem to be consistent with the intent to tax activities which is stated in the beginning, and I will ella-

borate on that when I come to it. I would also point out on page 1, line 28, that when it comes to taxing oil and gas transportation, like pipeline, this bill refers only to crude oil or natural gas by pipeline, the wording of the bill very specifically excludes products pipelines in the state and you have a products pipeline coming on soon I believe, I don't know whether this was the intent of the bill, I just want to point it out to you but this particular piece of legislation specifically excludes products pipelines and I question whether this was deliberate or not, I think you ought to consider that. Moving on to page 2, line 24, these are the costs that could be deducted under this bill. It has costs, including the cost of gathering, gathering is used there. Now, the point I want to make on the use of the words "cost of Gathering" is that these costs of gathering may very well be beyond the well head. This is a bill which takes well head value as the income and starts deducting cost, gathering cost may be beyond the well head in which they don't, in this case if they are beyond the well head they do not go to build up the well head value, but in fact, rather serve to reduce the well head value, so in effect if you take this treatment of using gathering costs as a deduction and these gathering costs are beyond the well head, in fact what you are doing seems to be allowing a double deduction, double deduction.

QUESTION- Thinking that the tax is placed at well head, and these are beyond the well head so its a bouble deduction.

KILGORE - It is a double deduction, right, it could be a double deduction, in fact I don't know how it is going to work on Prudhoe Bay, but the gathering could in many areas trump lines that also are the gatherers, it could be in this case that Alyeska pipeline would be the gatherer and you would be taxing them under this bill then you would also be allowing against oil and gas production a gathering

charge or a gathering cost so I think you ought to, this is something that needs to be cleared up, if it is gathering, maybe it should very specifically say, "gathering before the well head" or something of this sort. Your wording should establish some kind of consillience between the value in the producing function and the value of the activities in the transportation function beyond that. My next comments are on page 3, line 1, again we are talking about expences that can be deducted when it talks about lease acquisitions payments on the well head, lease acquisition payments, property taxes paid before the production on the lease holds, so what we are talking about are lease acpuisition payment on the lease holds, now we are going to underscore on the lease hold. Now its not clear to us with this kind of wording whether this is ment to be restrictive so that the deduction for these kinds of costs are restricted to producing lease holds, or is this generally an applicable feature of the law, that is when we use a word on the lease hold does that mean we are confining deduction ofthose costs specifically to income from that lease hold or is it more generally deductable. This sort of problem I think runs all the way through here and this particular section looks to us as if it might be intended to be restricted, that is restrict the income against which these acquisition costs could be written. Especially if you look at this in the content of section 7, a little further below it appears to us that this may be the intent. And that same problem comes up on the same page 3, on line 9, where we have associated with a lease hold, another case we have "field" in this particular wording here and, I t ink in another section there's the use of the word "property". Now, if these different words are used in here, I think that it ought to be made clear that there

is a intended destinction amongst these various things, I am going to come later, to a more general approach to this, where one really wouldn't really need these kinds of words and this seems to imply to us that there is some destinction between these and therefore, there is some restriction against, restriction on what income various kins of catagories acrossed here can be written off. In general, the wording of this whole section here on deductions really seems to be closer to us to a net proceeds tax than it is what we would call a seperate accounting apprcach. The wording here would seem to imply that to us if it doesn't mean that I thank the wording ought to be changed, it ought to be very clear against which income you can deduct, your various expences. For example, it is not clear to us in the wording of this bill how a producer who has income, say in Prudhoe Bay, has made another oil discovery and he is in the process of developing that discovery, putting in producing wells and the like, it is not clear under this bill, to us, how he could handle those development costs, would be able to, if he had to capitalize it, could he start writing them off immediately against his Prudhoe Bay income or his other income, or would he have to capitalize those and wait to deduct some sort of, that capitalized cost until he had production from this other new field that he has, so its not clear to us what is really intended in this bill, is it really a seperate accounting approach or is it something closer to a net proceeds. This raises the question of what should be your basic approach. Now if what is intended here is really seperate accounting, under an income tax and not a seperate kind of tax as a net proceeds was, we would think a more appropriate way would be really, to consolidate all the exploration, development and production

revenues and costs anywhere in the State. That is one would take revenues where ever they were from oil production or production of oil and gas in the State, and then be allowed to deduct all expences having to do with the activity of exploring, development, producing oil and gas, and this ould mean allowing the expencing of dry wholes here agains income there or development costs, amortization of development costs as against your income elsewhere, and we think if this is really an income tax approach, this makes more since really than an attempt to narrowly link expenditures with producing income from specific fields, even if you then allow some sort of write-off for losses and so on. We think it makes more since to go a more consolidated approach and it does not appear to us that the working nearly does that. Moving on to page 3, down on line 24, this is where we get into the determination of pipeling transportation income, the first section of this has to do with pipelines that, operating solely in interstate commerce and in this case subject to ICC regulations. Now what the bill sets as taxible income under those situations is 8% comes from, ICC said that one can set tariffs no higher than that level which would result in a 8% return on valuation of the pipeline, thats where this comes from, and seems to be an attempt to get that income. Well, first of all there would appear to be a technical flaw if this is the intention of the bill, to tax from the basis of ICC income. If you may recall, the ICC 8% allowable return on pipeline valuation is 8% after tax, <u>that is after income taxes</u>, after the deduction of all income taxes,. including federal income tax, therefore, if this tax were operative and you were taxing at 8% of the valuation of the pipeline, you would be taxing 8% of <u>after tax</u> income, not before tax, and I don't

think that was the intent of this bill. All your other sorts of taxes are always on before tax income, your present tax law starts with taxable income, federal taxable income, well, this is before the deduction of federal income taxes and this is after the deduction of federal income taxes, a very much smaller tax base, and I don't think your intent ever was to tax after the federal income tax was already deducted. So I think this was probably just a technical problem here I don't believe it was really an intent to tax after tax income rather than before tax, and if the intent is to really do this, that is tax assentually on a ICC basis this is what you would obviously have to do I think.is to take 8% after tax, add back the federal income tax, gross it up to a pretax concept. Again I think this is just a technical matter, I don't think this was the intent.

SEN. HUBER - I think, I wish Chancy were here, I think it was their intent to tax it after, if that was their intent, would you have any comments that would apply to it?

KILGORE - Well, I don't really know what the prupose of it would be, your general principal of taxation in most cases for corporations taxes in states is to tax on a taxable income basis before deduction of federal income taxes. And it seems to me, you are kind of restricting yourself to roughly half what kind of tax base you normally would try to reach.

SEN. HUBER - If the intent was to tax after, would this have the effact of not allowing it to be put into the base in such a manner that it would decrease the value of the oil? In other words, the value of Alaska's oil would decreace by the transportation charges and the profits on the transportation. They may have been aiming at that particular item.

KILGORE - Sentor Huber, I don't see how it would work that way because no matter, what ever state taxes you impose on the pipeline I don't care whether they are on a before tax, after tax, or property or whatever basis, they are going to be a liable deducation under ICC rule making. Going to a lower base and taxing less will not, it will still be a deduction obviously, it will be a lower deduction, but if thats purely your aim, you can not tax them at all if you want to get the well haired by that, if thats what you really have in mind. I think this is, you can talk to the people who wrote this but I think this is an oversite. This is a technical matter, I want to point it out because I suspect it was not the intent, but we also feel that this method of taxation has problems anyway it is clearly tax on deemed income, it does not look at the actual revenue of the pipeline, it does not look at the individual costs incured by the pipeline, its deed, and it may very well not accord with the income actually earned by the pipeline. That is even if the pipeline, a Alyeska pipeline is setting tariffs in line with ICC rule making trying to get the maximum 8% there is no assurance in any one year that they will in fact earn 8% on valuation obviously, you don't know exactly what your costs are you don't know what the values are going to be and so forth, so what you do is set a tariff which would appear on a projected basis we will try to get your 8% valuation, there is no assurance from year to year that you may in fact earn income greater than 8% of valuation or less than 8% on valuation, there is just no knowg exactly what sort of results you will get, and so certainly the ICC itself does not intend that exactly 8% is earned every quarter every year and so on, its just an impossible thing, it just can't happen, infact if youlook at the ICC records,

you will see thats clearly the case, not every pipeline is earning exactly 8% from year to year. So we think the real problem with taxing on a deed basis an aproach which looks at the actual revenue and expenditures of the pipeline, one of the other whitnesses yeasterday asked if this was in fact legal to do it on a deen basis,we don't know the answer to that but it may very well be legal questions with this, there are also questions with equity, taxing in a dean basis rather than an actual basis.

Sen. Huber- it it possible then that they just intended to use the lower base so it would be effectivly about 4% insteat of 8%, is that possible

Kilgore- thats possible, that would be . .

Sen. Huber - cause I can see what they are trying to get to, if you have to tax these oil pipelines in accordance with persentage of interest, mobile oil pipelines all over the country areall worked into the company and you get that scrambled egg that you can't un-scrambly, and I bhink they were problaly willing to take a smaller persentage right off of the interstate Alaska line at a point where tthey would get it ratherthan unscrambling that egg., I think thats the attempt.

KILGOR_- Senator Huber, it is my understanding that out of some underlegislatalon you passed in past session that the companies will be providing you withan accounting of Aleyeska pipeline, unscrambled from the rest of their pipeline oppcations. That is my recolection, and the pipeline regulatory bill, this is one of the provision and one that was not taken out laterthat the companies will infact provide you withrevenues, costs for Aseyeska pipeline

HUBER- again, this wasn't something that I helped draft, but I believe you to know information is to be provided the mechanisms

in our income tax law for unscrambling it and getting to the income of the pipeline just from Alaska are considered to be unyielding or don't exist. I think that's where the egg scramble is. I think that's what we've got here. It just may help in you telling us how to do it. I wish Chancy was here again, as I say. Is he coming back Madam Chairman?

CHAIRMAN POLAND - No.

SENATOR HUBER - He won't be back this morning. I had counted on him being here, he said he was going to..

CHAIRMAN POLAND - He's at a finance meeting.

SENATOR HUBER - The reason is because the bills that he's talking about now by the subcommittee, Chancy and Greg are the people that can really help us on them, and they should be here.

CHAIRMAN POLAND - Well, don't tell me Senator Huber, tell him.

SENATOR HUBER - Well, I can't tell another Senator what to do, but I'd really counted on him being here. It's too late now. We could have Greg and we'd be getting more information.

CHAIRMAN POLAND - I don't know why Greg isn't here. Let's go on anyway.

RICHARD KILGORE - Well, some of the intent of this section, I think, becomes clearer when you get to later sections about the Alaska Pipeline. I would like to point out though, that this taxing on this basis of inter-state pipeline at the 8% also really doesn't give them much of any incentive, no incentive really to lower their tarrifs if they're really interested in doing it. What is being taxed at that full 8% and you go to a lower tarrif, you don't even get any income tax benefit for doing that, so I'd like to point that out.

SENATOR HUBER - And even if you taxed it at half of that, it would be the same kind of incentive situation.

RICHARD KILGORE - Yeah, there just is no incentive to do that. You're going to pay on that regardless of what you do, unless you go to the other section of the bill that follows a little further on, which appears to be an attempt to strengthen the Alaska Pipeline Commission. That's a section just a little bit further on. Now, we basically wonder whether this is really necessary that one would try to force people through your income tax legislation to accept rules and regulations, and so on, of the Alaska Pipeline Commission through an income tax approach. I think we should also point out that under this

bill if a company, pipeline company, wishes to set tarrifs, say, lower than what would give him 8% on valuation, in fact, he may very well want to set tarrifs along the line established by the Alaska Pipeline Commission, but he may not want to go as far as the section here that says that he has to abide by all the rules and regulations of the Alaska Pipeline Commission. He may not want to go that far, but he may be willing to set tarrifs along the lines that the Alaska Pipeline Commission feels are appropriate, and he'll still be taxed at the 8%. He has to go all the way in order to have his income calculated in another way along the lines of the Alaska Pipeline Commission, and we really question whether this is the proper vehicle for trying to strengthen the Commission. We think there's a question also on the bottom of Page 3, where there's no ICC valuation where companies engage at least partially in intra-state commerce, and then it talks about he can have his taxes assessed on the basis of the Alaska Pipeline Commission assessment of income, and it's not clear to us from the wording here whether, what this means. Does this mean the rules of the Alaska Pipeline Commission as applied to the total operations of this pipeline which is both an inter-state and intra-state commerce, or does it only mean that part of the business of the pipeline which is purely intra-state. I suspect the intent means all. The Alaska Pipeline Commission rules and assessments of income as applied to the total business of the pipeline, but it's not entirely clear to us that this section says that.

As I said before, when you come to Page 4, Line 14 where the election, there is an election, it may very well be that companies are willing to set tarrifs more in line with what Alaskan's deem are appropriate, but still be reluctant to subject themselves to all regulations and so forth, provisions of the Commission. A minor technical problem on Page 4, Line 21, where we're talking about taxation of gas pipelines, this has to do with income along procedures established by the Federal Power Commission. I think it would work out very well to say Federal Power Commission or Assessor because as you may know there are, President Carter has proposed a reorganization of our energy, various energy agencies in the United States, including a Department of Energy which would include in it the Federal Power Commission, so it may very well be subsumed under something else, so I think it should say that. Now, our feeling is that if you're going to go the separate accounting route, I think you ought to consider carefully, rather than these sort of provisions that appear here, a more straightforward kind of separate accounting approach for oil pipelines. As I said before, it is our understanding that all the revenues and costs of the Alyeska Pipeline will be made available to the State, that is they will not be hidden in all the other pipeline operations of the companies in the lower '48, which would have been the case without your own provisions for them, but you will, it is our understanding, get the information, and it would seem to us a more straight-

forward approach to take these data and assess what the income is of the pipeline. One may want to take the information given and change depreciation rates or something of this sort. You may not want to use the same ones that the ICC does, as would be given to you by the companies, but you would have information to make a straight-forward accounting of the pipeline, if you desire to go the separate accounting route, and if you do, we would urge that you look carefully at that rather than these sorts of provisions here.

On Page 5 we have a section for the determination of income from other activities, that is from activities other than the oil and gas production and transportation, which you dealt with on the separate accounting basis, and what it amounts to is an apportionment formula for the rest of the income. Now, we think that the language here is really not clear either. There is talk about adjustment of factors to take out of the factors, say the payroll, etc., that are involved in the production and transportation section before which are separately accounted. One would take those out it says, but it doesn't really tell you whether they should be taken out of the numerator, or whether they would also be taken out of the denominator of the fractions used in the apportion system. We don't think it's clear. I think you could also raise a question as to what's intended here also, what you're going to do is exclude income that you tax otherwise in this bill before this on production and transportation,

but when you come to apportioning for other activities in Alaska, you appear to leave in the total income that gets apportioned, the total income of the company, you appear to leave in all their other production and transportation activities, so in attempting to get at, say, what refining income is here in the State, you're going to go through an apportionment formula which is also going to produce not only their refining activities elsewhere, but their production and transportation, and so on, and it's not entirely clear to us what exactly you really want to do under these circumstances. Presumably, if a company had no other activities in Alaska, that all their payrolls, properties, etc., were associated purely with the transportation and production functions, these fractions would be zero, and there would be no problem, but as long as there are other people involved in Alaska you would be apportioning, and I think you ought to conisder carefully what it is that you want to, how you want to try to do that.

We have down in Section 15, some provisions that have to do with the Department of Revenue providing estimates of tax costs of various kinds of deductions, and I think our only question there is the way the wording is, it's a very raw statement about the tax costs of various deductions. It would seem to mean you would have to come up with a tax cost of all kinds of categories of costs. I think what is meant is the tax costs of various special kinds of tax accounting. I don't think it really means that they want the tax cost

of such things as just plain operating costs, wages and so forth. I don't think that's the intent of this that one would want the tax cost of deducting payrolls, I mean because noone questions the deduction of payrolls.

CHAIRMAN POLAND - I'm sorry, but we've had a slight emergency, and we're going to take a ten minute break.

(MEETING RESUMED)

RICHARD KILGORE - I've been asked if I wouldn't state again what our problems were with the wording on the bottom of Page 5. This section calls for the Department of Revenue to rpovide a report, and in that report it asks for a report on itemized deductions by category, and the tax cost of these deductions. Now, I suspect what is not meant is all itemized deductions, that is, one would have the tax cost of allowing royalties as an expense, the tax cost of allowing payrolls as an expense. I don't think this is what they have in mind. Normally when you're talking about the tax costs of something, you're talking about what is the cost of treating various items in one way versus another way. That is in the case of intangible drilling costs, allowing them as a straight expense, or do you capitalize and advertise them over time, or if it's percentage depletion, what's the cost of this particular way of accounting, and normally one calculates tax cost for those things, not for

normal kinds of operating costs and so on that one has. I think that this should be defined a little bit more here, and the purpose of doing it too, also, I think should be defined, but I think what is meant is some special accounting procedures and so forth on tax cost of these, not all itemized deductions as is stated here.

Now, turning to Page 6, Line 3, talks about in this report for the Department of Revenue, a summary of each corporate tax return filed which shows income from the production of oil or natural gas, showing the total amount of oil and gas produced by or for each tax payer, the taxable income of the corporation from production as reported in accordance with and so on, and also the pipeline transportation. Now, we feel that this kind of a public report of income tax information could be especially threatening for the companies. We think it raises a lot of questions about laying out in the public record various kinds of information that would normally be considered confidential, and laying this out on the record, we think could have some impact on competitive situation of the industry. What it would do, it probably disclose the specifics of Prudhoe profitability. Everybody has an idea of what Prudhoe Bay profitability is, but this would probably lay it out on the line.

SENATOR HUBER - Is that bad, to have the profitability laid out on the line for instance, so that we all know what we're

talking about?

RICHARD KILGORE - Well, I think from the standpoint of the companies, it is bad, and I think they have a ligitimate complaint about this because once this information is out, it's not only available for you people to assess, but it also would effect competitive relationships. That is it would throw up information which say companies in the position of negotiating for the purchase of Prudhoe Bay Oil would know alot about what their competitors' costs and so forth were, and this is the kind of information which is normally not available in those kinds of buying and selling relationships, and I think for those who are in the selling position, this is.....

SENATOR HUBER - Did you say for oil or for lease _____ so that I can relate it.

RICHARD KILGORE - This calls for the whole corporation as such. This would presumably show for any individual company its total profitability on oil and gas production in Alaska, but it's basically EXXON's and Prudhoe Bay's position obviously.

SENATOR HUBER - Richard, I'm trying to be constructive, but I'm having trouble, I can see where more data base being out, if the companies we're talking about between themselves

selling their leases for their property, maybe somebody wants to sell somebody a pig in a poke or something, so the data being out would be detrimental, but I think you said that in selling oil, rather than oil properties, and I wonder about that being it's a completely controlled market, how there would be any legitimate interest there.

RICHARD KILGORE - Well, it may not very well be a completely controlled market, we don't know how FEA, what they're going to do on Prudhoe Bay pricing and so on, but what the FEA does is always set ceiling prices, and there's a question of whether one can realize the ceiling prices. There may very well be a situation where major refineries in California who are not Prudhoe Bay producers will be bargaining for North Slope Crude, and trying to strike a bargain with a North Slope producer, and this price is not fixed, there will be a bargain on some of these prices, and you do something when you introduce information in the public record that the buyer has access to. He knows then more about the economics of the seller.

SENATOR HUBER - The future danger it might cause than, rather than the present because they're so tightly sewed up now.

RICHARD KILGORE - In fact there's a general proposition putting this kind of thing on the record does put out confidential information which is normally not made available in public,

which is internal to companies, and I think it changes the bargaining kind of situation to some extent, it just has to.

SENATOR HUBER - I'm happy to hear, Madam Chairman, that somebody thinks that something may go more than the free market place, because from listening to the radio this morning, I was afraid that everything about energy was going to get further from the free market place until the President comes right into my house and tells me what I can do inside of my home.

RICHARD KILGORE - Anyway, we see problems with making this kind of information available by company. I think, if you want information it might very well be possible for the Department of Revenue to combine information in such a way that wouldn't disclose individual company positions. I don't know, aggregating data by producing areas or something of this sort. I don't know, but giving you information that would be helpful without raising these kinds of disclosure problems. That really concludes my specific comments on this piece of legislation. In sum, I guess, what we're really saying is if you feel you want to go the separate accounting route, that you might very well consider some alternative to this, or some alternative provisions, and in the oil and gas producing area really thinking seriously about consolidation, the consolidated kind of thing where you would consolidate all the revenues

and deduct all costs in the State of Alaska rather than the provisions here, which seem to be closer to a net proceeds, and on the pipeline that you consider again a more simple straight forward direct taxation on the basis of the information that will be coming to the State on the Alyeska Pipeline.

SENATOR HUBER - Madam Chairman, while Dick is still in this 015, this is the area where I questioned industry yesterday, if you remember. Dick on the secrecy of these reports, do you think that Line 28, Page 5, under the 015, one of the things I read into this is I thought that was all inclusive, and maybe it isn't.

RICHARD KILGORE - Would you repeat that again, Senator.

SENATOR HUBER - Page 5, Line 28, under 015. We're talking about public reporting, which you were just talking about a moment ago. I took it to mean itemized deduction by category, and that these returns by category must run all the way through this, so that you aren't disclosing actual returns, but only by category.

RICHARD KILGORE - Well, I did not read it that way Senator Huber. I read this particular part of the report has to do with itemized deductions by category and tax cost, and then

I read on the next page, Line 2 of the next page, also included in the report shall be the summary of each corporate tax return. I didn't read by categories as part of that. These seem to be two separate parts of this report to me.

SENATOR HUBER - Greg was that meant to be in there so that that is by category rather than divolging the summary of an actual individual tax report?

GREG ERICKSON - Mr. Haggert drafted that particular portion of it, and it is my understanding that, subject to correction by him, is that each individual tax report and the summary by category.

SENATOR HUBER - In other words, the way I'm reading category is what you determine it to be? But the category goes over to the next pate too.

UNIDENTIFIED SPEAKER - No. There are two requirements. The intent when it was drafted, was that there be a general summary for all taxpayers under this piece of legislation by category. Then, in part B there would be for each taxpayer a summary of that taxpayer's tax due and paid, and so on, so that it would not be by category it would be by taxpayer in two parts of it.

RICHARD KILGORE - Okay, I would then like to turn to the severance tax. As I said in my general remarks, if you're interested in raising the severance tax, both of these bills that we're going to consider seem to in general follow our guidelines, and has to do with more the specifics of how each one of them works. We'll start with HB 144, SB 103. This bill does several things. One is it moves to lease averaging rather than wells in the calculation, and we think that makes an awful lot of sense from the administrative standpoint, and probably should be done even if you don't raise the severance tax, probably even amending your present severance tax would do that, and would make sense. Page 1, Line 11 of the bill moves the point of tax from the wellhead to a new point of production which is later defined.

SENATOR HUBER - How is this defined?

RICHARD KILGORE - It's defined back on Page 4, line 9, gross value at the point of production means for oil, the value of the oil at the point where it is metered or measured in a condition of pipeline quality on the premises of the lease or property from which it is recovered. So in come cases it would change the point of taxation from the wellhead to somewhere beyond up to a point where it was meter measured and made put in pipeline conditions, so it clearly, and this is pointed out by someone else, moves the point of taxation

and in a sense in certain situations it would tend to tax the transportation and upgrading of the crude oil. That's clearly the case.

SENATOR HUBER - I think it had another reason for being in there. I think it was on account of that Kenai deal to where if they transferred our royalty share portion that went into resale that they were subject to the APUC, and doing it this way, while they pushed their royalty share through our line, they were not subject to our APUC. There was quite a problem on that in Kenai, it happens to be in gas, but we're talking jointly here and I think this was done for the company's benefit.

RICHARD KILGORE - Well, I think also in Cook Inlet, as I understand it, there have been continuing disputes about questions of wellhead and where one taxes, and I think this is all intended to straighten this matter out by legislation. This is where it is, and we don't have to argue about backing out transportation or whatever, this is what they're talking about. This makes administration of it easier, clearly, I think that some of the testimony yesterday it was complained that there would be a cost to the companies in a sense that they wouldn't be taxed on transporting and upgrading. I think that if it's administratively easier and there is a cost, perhaps what you should do here is get a better idea of what you're really talking about in terms of cost and dollars and

cents. What is really the extra costs that companies would bear by doing this, or some idea. I think that's how you would have to assess that. Now lets look at the tax rates in this bill. I think you are all familiar with the fact that it adds higher well brackets and puts in these higher brackets at higher tax rates than exist in the present legislation, and it also lowers the tax rates, both the cents per barrel tax and the percentage tax for lower productivity wells. Now, just to give you a rough idea of what this does, and I'd like to just give you some numbers on how it would seem to us to effect, say, Prudhoe Bay, and then look at the Cook Inlet situation under this bill. All the numbers I'm going to use are ease of comperability for 27 gravity crude oil. Now, in Prudhoe Bay, and I'm assuming for purposes of this calculation that the wellhead value on Prudhoe Bay is say $7.50 per barrel just as illustriative. Under the present tax for a 5,000 barrel a day well in Prudhoe Bay, and these figures are cents per barrel of gross production not of taxable production, but you still get an idea of the relative increase in the tax. The present tax for 5,000 barrel a day well at $7.50 is 49 and 1/2 cents per barrel of gross production. This tax for the same well, a 5,000 barrel a day well would raise the tax to 68.9 cents. That's about a 37% increase in taxation of a 5,000 barrel a day well in Prudhoe Bay. If you went to a 10,000 barrel a day well, the percentage increase and the tax is greater. As against

about 51 cents at the present time, this tax would raise it to about 80 cents, so on a very productive 10,000 barrel a day well at Prudhoe Bay, the increase there would be about 58%, increased through this tax over what you have today. The effective rate on gross barrels produced would go from about 7.8% on a 10,000 barrel a day well to about 12.2% under the new tax, so this is what it does to Prudhoe Bay, very significant increases. And the percentage as I gave you were really the effective rate on taxable barrels going from 7.8 to 12.2. So you are ending up on the very productive well, you end up with an average effective rate on taxable barrels of just under 12 and 1/2 percent in Louisiana. I think that's what was intended. So that's the impact it has on Cook Inlet, I mean on Prudhoe Bay. Now, lets look a Cook Inlet, and particularly the old oil because we've always been worried about effective taxation of old oil. Now, this bill does retain the cents per barrel feature that exists in the present bill, and it retains the cents per barrel feature with basically the same floor price as you have today. It works out for 27 gravity crude to about $6.10 today. So it retains that, but what it does at the same time is that it does lower the rates of taxation both percentage and the cents per barrel taxes in the lower well brackets, so despite the cents per barrel feature still being in there, it does lower taxes on low productivity wells below what they are today. I'll again give you some examples, and they'll

again be on the same basis as before. 27 gravity crude, and these are figures on a gross barrel basis. At the present time a 100 barrel a day well in Cook Inlet would be on the cents per barrel tax and it would pay 26.6 cents per barrel. This bill on a 100 barrel a day well would eliminate the tax. It would go to zero, and a very substantial gain for a 100 barrel per day well. For a 300 barrel a day well, would also pay under the present tax, 26.6 cents. Under this bill, under our calculations, it would drop that 26.6 to 14.2 cents per barrel. So you have about a 12 and 1/2 cent reduction for a 300 barrel a day well, and if you move up to a 500 barrel a day well, you still get a reduction. Under the present tax it would be 28.7 cents. Under SB 103 it would be 21.2. ' So even for a 500 barrel per day well, you're going down by about 7 and 1/2 cents per barrel, and in fact this new tax as compared with the present lowers the tax up to somewhere wells in the range of 1,000 to 2,000 barrels a day. Somewhere in that range, the new tax gets higher than the old tax, so it does provide very significant relief for low productivity wells.

SENATOR HUBER - Madam Chairman - the figures which we have in the committee they are open to him now, I think, I just wonder when he finishes there. If you have any dispute with those, I think that they confirmed his testimony.

RICHARD KILGORE - Yes Senator, we did do our own homework on this obviously, and we have had a chance to look at what legislative affairs has, and they coincide with what I'm testifying here.

SENATOR HUBER - I was wondering. It would help us a lot to know that they do or don't or if there are differences.

RICHARD KILGORE - No they don't they calculate the same way we do.

Now, so this bill does, I think, meet our objections really to the present taxation of old oil at Cook Inlet which has the high effective rates because of the cents per barrel feature. At least its present operation would reduce the tax substantially for low productivity wells, and we think that's a good feature of this bill. I should point out though, this bill does retain cents per barrel and it does retain escalation of that cents per barrel, so it is possible that under this bill we would again be back in the same problem that we have today. If the escalation manages to raise the cents per barrel tax high enough, we could be back in this problem again of taxing old oil in Cook Inlet at high prices, it's possible. The potential is still in this bill.

SENATOR HUBER - This evades it from present time, and we might have to look at it again in future years if we don't do something with cents per barrel.

RICHARD KILGORE - Yes, it may be back again.

SENATOR HUBER - Well, I'd sure look at it again, Madam Chairman, than I would to have Tom Fink for Governor.

RICHARD KILGORE - I think I was on record the first time I testified as saying that if you do retain a cents per barrel that perhaps what you do is at least consider no further escalation in cents per barrel, and perhaps that could be in this bill too. I don't know. I want to only point out that it could happen again. So that's basically what this tax does. It raises fairly significantly, the tax in Prudhoe Bay, but it does lower the tax considerably on low productivity old oil priced wells in Cook Inlet. It also has a severance tax for gas that is flaired, and a very substantial one, five times the rate. I think before you do this kind of thing and add such a tax, you ought to look very carefully at where gas is being flaired and why. There has been testimony yesterday about safety flairs and so on. I think you ought to look very carefully at what it is that you would be taxing and why the flairing is going on at the present time. Now, if what you're really trying to do is tell companies to find a use for this flaired

gas and find markets for it, I think that at the very least if there is gas being flaired now which you think you could find markets for, therefore you're going to try to compel people through this tax, somebody used the word incentive the other day, but you're compelling them through this tax that at least you ought to provide somebody with a grace period before they would pay this tax. That is, you wouldn't start right away. You would make it clear to them that they had certain time within which to find markets for this. You wouldn't penalize them in the meantime, but if you don't find gas for which it's logical to find markets, that you would say at some point in the future you're going to start paying a tax on this, so you had better get busy and look for markets. I don't think I.....

SENATOR HUBER - I think, Madam Chairman, that we should make sure in there. I think we should find out the required safety flair of no more than a certain amount except during an emergency blowout or something like that. The idea was, as long as it's economically unfeasible to take small amounts of gas and reinject them, the State loses its royalty share on it, and the nation loses the energy strictly because at a given space in time, using if you will excuse me, a cash discounting flow and everything else, that we determine its value and we say it's nothing, and what's nothing is moving down the pike another twenty or thirty years may be all we have, and Prudhoe Bay, in spite of an absolute no

flair restriction has been allowed to flair and everybody knows it. Somehow or other, it does have to be stopped, and if you make it so it isn't economically feasible to flair, then it becomes economically feasible to build a small compressor system for saving.

GEORGE SILIDES - Madam Chairman, I know that the flairing _____ as Huber pointed out, _____ that the flairing of course, and the word allowed is important, they get permission from the State, and we have to do something about the bill, that we don't have competition between the taxing department and the Department of Oil and Gas Conservation. They are the ones that give the permission, and you have to apply and you have to point out that it's being done with safety and so on. I don't think that the bill intended to penalize somebody for entering into a safety feature, and so am I correct Mr. Kilgore?

RICHARD KILGORE - I would assume that that's the intent. You'r not really interested in taxing gas.....

SENATOR HUBER - But that board still has the power and makes the exemptions and has been constantly making the exemptions, and it's a matter of record, both at Prudhoe Bay and elsewhere, they make the exemptions, they're legally made, but the product is gone, the resource is gone, it is flaired, and so at least putting in a fairly stiff recovery there, does at

least give us something off of our severance tax that went up in flair too.

GEORGE SILIDES - Madam Chairman, I might make another comment. I think that in view of the comments being made, we're going to have to look into the legality of being able to tax a safety feature.

SENATOR HUBER - No, we don't tax the safety feature. Let's not get crossways on that. We should put an exemption in here for the safety flair only, and somewhere we need to come up with a figure of what is the amount that may be flaired to date per well or per safety flair. We definitely shouldn't tax them on what is a safety requirement. But there isn't a provision. The gas that's being burned in significant, is not being burned in so called legal actual safety flairs. It's being flaired otherwise by legal permits by the board.

CHAIRMAN POLAND - I think we have to check with the Board as to why they are giving the tax.

SENATOR HUBER - That's why the Governor's bills has it in it. That's why committee's bills has had this for two years, and we should certainly, like Dick says, make sure that we don't tax the necessary safety flairs. I asked yesterday what

was, and they said a million cubic feet. That's a thousand MCF's a day. I'm not sure that that isn't considerably over what's needed to burn there in case, I need a good definition of a safety flair.

RICHARD KILGORE - I think also you might consider if you really feel the gas is being flaired that you don't want to be flaired other than as safety purposes or whatever, that's something you might consider as an alternative just tightening up your regulatory bill and your regulations rather than do it through a taxing approach.

SENATOR HUBER - We've done everything but tar and feather the board.

REPRESENTATIVE OSTERBACK - Madam Chairman, could anybody tell us how much gas they will be flairing at Prudhoe Bay? Anything that burns is energy. We're talking about we're running short of energy. Somebody talked about the railroad. If they took it in there, they could take out about a hundred tanks of gas a day, and they didn't think it would be enough to pack that out with flairing, and that would be an awful lot of energy, but most of us don't really know what this gas is with the flairing, but I know anything that burns is energy, and we're talking we're running out of energy. So I think there should be something done about it. Anything

that you can save as energy, you can sell. There's no problem in that.

RICHARD KILGORE - Well, I agree with you, if what we're really talking about is waste, then I think we should eliminate that. It is energy, and you're absolutely right, and I think you should look very carefully at what's going to happen at Prudhoe Bay, and how your regulatory people will handle it.

SENATOR HUBER - Might we, Madam Chairman, Al brought it up and it's very important. I think that it's understood that they have stopped flairing or are to stop flairing. It was only for that refinery that they flaired at Prudhoe Bay, and they didn't pump it back down the gas well even though they were drawing gas out to run the refinery because it would have cost more money than the gas was worth, so naturally the gas was worth nothing, so it wouldn't cost money to pump it back down into the ground. If it had a value of 20 cents an MCF, it would have been a lot cheaper to pump it back down into the ground, but just so that the record is straight, we aren't really looking for flairing at Prudhoe Bay, but if you will take a look at the Valdez terminal, you will find that we don't flair no more, but we've got three huge oxidizers there, and there's going to be a tremendous amount of energy unless the LPG's that are in that gas and the vapors that are in the gas at Valdez,

unless there's a plant built to recover those and use them which is not in the plan, it is going to effectively flair trillions of BTU's before Valdez is over with. That's because the plant and the tanks will not stand the pressure in the storage.

GEORGE SILIDES - Madam Chairman, I think the point is well made that something's got to be done about defining what is meant by safety gas, what is being wasted, and I think also that the bill had intended to address the bottom of the possible wasting of carbon dioxide. There was a considerable amount in this particular natural gas, and I suppose what we're getting to is that we have to do something about those things, either by definition or by amending the bill. I think this is a point that we're going to have to look into. I don't think we're going to get it solved right here.

SENATOR HUBER - I think they're willing, George, not to flair the carbon dioxide, but I'm not sure if they will get rid of it.

GEORGE SILIDES - It doesn't burn anyway, Senator.

CHAIRMAN POLAND - We'll be checking on this flairing part.

SENATOR HUBER - Well, it's important on both ends. I think that the bill needs to not penalize them, but by all means

should be retained in the bill, and we may of course have to put it in in some other places. I don't think this is going to effect it when it comes to the flairs in Valdez.

RICHARD KILGORE - I'd like to move on the the second severance tax bill, and that's HB 321, SB 238. Now, basically this tax changes the tax rate to 10%, but it also has a cents per barrel feature of 75 cents per barrel, so it has an effective floor price of $7.50, and it also has what _____ for an economic limit factor built into it, and I think Mr. Wilson yesterday did quite a good job explaining how the mechanics of this worked, and he also provided an example for you that I think was probably quite useful. Basically what the bill does is give you the first hundred barrels a day as an allowance for operating costs is what it amounts to, and wells producing more than 100 barrels a day, they pay then an increasing fraction of the 10% for the 75 cent tax is the way it works, and it's a continually increasing thing as well productivity moves above average well productivity moves above loo barrels a day. Very roughly, a 100 barrel a day well would pay no tax under this bill. A 200 barrel a day well would pay about 43% of the tax. It isn't 50% because as you might think by taking 100 to 200 because it's taxable barrels only that count. That is the 200 barrel a day doesn't produce 200 barrels that are entirely income to the company. Twelve and a half percent of those go to the State.

GEORGE SILIDES - Mr. Kilgore, it's 43%.

RICHARD KILGORE - It's 43%, 200 is 43% of either 10% of value or 75 cents a barrel depending on which it is.

GEORGE SILIDES - That's what I wanted you to say.

RICHARD KILGORE - For a 300 barrel a day well it would be 62% of these basic rates and on a 4,000 barrel a day well, it would be up to 89% of this. This is the way it works, and it amounts to a continuous function as against the step schedule that you have in your present legislation. As I said, it amounts to a continuous function and in principal we find it as kind of an appealing concept as against the step schedule. Now the other feature of it is that one can't apply for an economic limit factor greater than 100 barrels per day well average if you can prove it, and what you basically have to prove is that your operating costs that you require, out of pocket operating costs are greater than what you would get with 100 barrels of production per well. You would need more than this to recover your operating costs. Now, there appear to us to be a couple problems with how this actually works. First of all on Page 3 Line.....

SENATOR HUBER - Madam Chairman, I would note that we've got John Messenger here, too. This is the same problem that came

up yesterday in talking with the industries. We might want John to answer some of these.

RICHARD KILGORE - It has to do first of all with how costs are defined, and that starts on Page 3, Line 16, subsection C here, and as was pointed out in testimony yesterday, it is not clear that the cost category specifically allowed here really provide for all the kind of out of pocket expenses that a producer might have, and basically that's the concept that you're trying to get at, whatever is out of pocket expenses, and it's not clear to us that that is the case and some questions were raised yesterday and I think you ought to consider those too, but what I think is more important is that after calculating the costs here, you then have to determine how many barrels are necessary to recover, that is if more than the hundred that you are allowed anyway. Now the problem with it is that the way that the bill was written, you don't take your costs and divide through by the price of oil that you as a producer receive. That is your actual price, if you're an old oil producer and getting $5.00 per barrel, you don't divide through by $5.00 to see how many barrels you need to recover your costs, but you use another deemed price to do this, and the deemed price is acquisition, this is Page 3, Line 29, its acquisition costs CIF at westcoast refineries for imported oil of like quality and then you net this back to Alaska, so you're not doing it on the price you actually

receive, you're doing it on a deemed price that you may not be receiving, and it seems to us this causes problems.

SENATOR HUBER - Could we at this point if it's convenient, I wonder, Sterling isn't here, but John is and this was the question yesterday, I understood from the testimony by the State that as of starting in December or sometime like that that these wells that were in economic trouble shall we say, that these figures that you have put in here talking about _____ price are actually what's happened. They are now being allowed, these higher prices on the producer's share, but not upon the State's royalty share. The argument yesterday, and I think we're right into it again today, is whether we're just talking about a possible deemed price working it back from San Francisco or whether we're truly talking about what they're going to get, and the industry said no this was unfair that wasn't what they were going to get, so we're right at the nitty gritty, and. I think you can help us John.

RICHARD KILGORE - Perhaps, Senator, I'm going to give an example, maybe I ought to do this and then we can talk about it.

SENATOR HUBER - Okay, just so that John, he wasn't here yesterday, so he's alerted. My stand was or what I saw was that you fellows put this in here because that's actually

what the oil companies are getting, and so you were getting right to the nitty gritty, and they said no this is what they might give them, but I understood Sterling to say that this had actually started in December, and I don't think this was in testimony, I believe this was talking in the afterwards that it actually had started in December and the State had been denied that increase, but the producer's share had been allowed, so if that predicates it and as he goes on if you can straighten this out, it will help me a lot.

RICHARD KILGORE - I'd like to just give a little example of what we're talking about here. If we had an operating cost for a well or wells whatever the unit or something, and say $2,800 a day, and these were direct operating expenses defined properly however, and if you didn't get these revenue enough to do this, you would shut down. Now, if one looked at the foreign price and then netted back to Alaska, let's say you came up with $14 just to make the arithmetic easy, you came up with $14. Now in calculating your economic limit factor here, you would divide through by that, and that would give you $2,800 divided by $14 is 200 barrels a day. You're economic limit you could then justify is 200, rather than the 100 which you had presumed. That means you're getting more, but let's say that the producer only gets $5 a barrel for oil because he's receiving the old oil price in Cook Inlet. He doesn't bet $14, he gets $5. Well for him to actually recover the

$2,800 his total expenses at $5 he's actually receiving for his oil, his real economic limit factor is $2,800 divided by $5 or 560 barrels, so that in fact, his limit factor, that is the number of barrels he needs before he's got to shut down, because he doesn't make it out of pocket cost of 560 under this bill it appears to me, he would only get 200. I don't think it really gives you the results that you intend. The result that you intend is to provide relief for marginal wells. It doesn't appear to really serve the intended purpose.

SENATOR HUBER - That's at $5.61?

RICHARD KILGORE - That's at $5.00 even.

SENATOR HUBER - But doesn't this other deal work to raise that?

RICHARD KILGORE - Well, the other thing we're talking about is price relief under FEA regulations. I think that's really something different here. I'm addressing.....

SENATOR HUBER - That's not five dollar oil. You know, if we're talking about his economical limit on the well then we assume it to be $5.00 oil, but he is actually receiving $10.95 for it because it's below a certain economic limit

already established, then we're dealing with something that doesn't exist, and that's what I'm trying to get into this, and I thought that that was why the State had drafted it.

RICHARD KILGORE - Because it assumes that the Federal government will always bail out people, is what you're saying, other than royalty owners.

SENATOR HUBER - My information was, it didn't only assume, it was based on what was happening. Can you clarify that John?

JOHN MESSENGER - Let me just make a couple comments. I guess it's true that one position that we've taken on this bill that our taxes should not be based on the artificial price set by the Federal government, and the Federal government set a price of $5.00. Our position is that we shouldn't be content with the tax based on that artificial price, and that's why, one, we've set the cents per barrel floor, likewise when you're figuring the economic limit factor, again, we say the true economic limit is not how many barrel are produced at the artificial price, but the amount of barrels they would produce using the true value of that oil, pre-market oil. We should insure ourselves that so many cents to so many percent of that pre-market oil because that is our resource and we should get at least that percent out of it. Secondly, is that producers are

reaching their break even point which they will stop producing. There is a procedure by which they can make application to the FEA and get price relief and with that higher price they can produce longer, but the FEA has said that they will give price relief only to the producers, and not to royalty owners, so if a company is reaching its economic limit in Cook Inlet, and they go in for price relief, they are given that price relief. They will raise their price, but they will not raise that price in the terms of the amount of royalties which _____. So, it's two things, one is the tax rate and the economic limit factor should be based upon the true value of the oil, and secondly that producers are protected through FEA regulations, but the State is not.

SENATOR HUBER - Then I guess what he's saying is that if someone's going to shut down the production there, by it being below economic limit on $5.00 oil, the State is advocating that we put the monkey on the fed's back and say you did it, you set an artificial price, we're going to set our tax based on free market price, and if you want to save that resource, save that company, you can turn around and do likewise what's reasonable. I'd say it's what I call putting the monkey on the Fed's back. They caused the problem. I happen to be strongly in agreement with the State's stand on that, and compliment them for it because why should we throw away our royalty share and our

taxing ability because somebody forced an artificial price down our throut, and is forcing that same artificial price down the throat of the oil companies.

RICHARD KILGORE - Look, I'm going to address myself to the question of the artificial price, that's part of what I'm doing here, and I think the Commissioner took issue with earlier testimony I made when I said I thought this was a flaw in the thing, and it certainly was, I thought, a flaw in terms of its purpose of providing relief, and now I do understand why they do this which is another objective, than what appeared to be the intent of the bill, and I'm going to come back to the whole question of the artificial price. It's very clear they did this by design. I'd like to again, as you asked, talk about just very roughly what it does to Prudhoe Bay and then to Cook Inlet, and then discuss the consequences of that. Again, for Prudhoe Bay, looking at 5,000 and 10,000 barrel a day wells at Prudhoe Bay, this bill also raises taxes significantly on those wells as does the other bill, as does HB 321 that we looked at before, excuse me HB 144, that we looked at before, but it does not raise them as sharply as the other tax. If we take a 5,000 barrel a day well, I said that, and I'm not going to run through all the numbers here, I think, but that the other tax for a 5,000 barrel a day well raised the tax about 39% on a 5,000 barrel a day well. This tax would raise it about 29% it appears to us using the presumed hundred

barrel figure. The discrepancy between the two gets larger at very productive wells because of the steep rates near the end of the schedule in the other bill, and for a 10,000 barrel a day well, HB [illegible] 58% this would raise it about 27% on the very [illegible]s, so if it both increased taxes on Prudhoe Bay, clearly the one, HB 144 would increase them significantly.

SENATOR HUBER - That would be effective of what of 5 and 10.

RICHARD KILGORE - Okay, the effective rate would be very close to, on taxable barrels it would be very close to 10%. On 5,000, it would be 9.8% and 9.9% on the 10,000. It approaches 10%.

SENATOR HUBER - Just slightly under ten percent for a total maximum. Or fully 2 and 1/2 percent, a little over 2 and 1/2 percent below Louisiana. Using the Administration's bill.

RICHARD KILGORE - That's correct.

SENATOR HUBER - And it would be right at Louisiana with the other bill.

RICHARD KILGORE - Close to it. That's correct.

Now, let's look at what happens to the Cook Inlet old oil price here. This bill as the other one for a 100 barrel a day well eliminates the tax altogether. It does exactly the same thing, but what we find troublesome is that is you go to 300 barrel a day wells, these are the wells that we're concerned with because of their productivity and the old oil price they have to bare, they get the tax there doesn't go down, but it increases. It goes up from 26.6 cents on gross barrels to 40.6 cents. It goes up by 14 cents a barrel. This tax raises it that much. On a 500 barrel a day well, it raises it by about 13 and 1/2 cents, and on a 1,000 barrel a day well. I'm sorry 14 cents increase on a 300 barrel a day well, 22 cents on a five hundred barrel a day well, and 28 cents on a 1,000 barrel a day well. What I think are particularly disturbing are the increases on the lower productivity wells. A well as low as 300 barrels a day which we already have some concern for because of the effective rate on the old oil thing has actua ly a fairly substantial increase in its tax burden. As Commissioner Gallagher stated correctly, you get this result because of raising the floor price essentially. You are raising the floor price from $6.10 to $7.50 and you have higher tax rates at the same time, and it's deliberately designed to do this. Now, we really feel that this kind of goes against what we feel are good principals of severance taxation. What you're saying is the producer in Cook Inlet he received a relatively low old oil price established by

the Federal government. This in turn restricts his own profitability, but then the State adds to his burden by taxing him as if he received $7.50, and it seems to us that rather than help his producing situation, this only makes the situation worse. One of the reasons given for doing this is that the Federal government is following an unwise, or I think it was described as a foolish price policy. Now, this may or may not be the case. I'm not willing to pass a judgement on that, but they're, you should know that the Federal government does have reasons for doing this. It's not capricious, they do have reasons. They have concern over the effect. What they're concerned with is this, we've had a fantastic increase in the oil prices outside the United States by the OPEC nations and if one frees the oil, the old oil price, it will go up very, very sharply. It will, perhaps in some cases, close to triple in price, and the people are concerned about the consequences of this. Rightly or wrongly, they are concerned about the inflationary impact on consumers. They're concerned about when _____ producers, because these are on old oil wells, wells production which is established at old costs and so on and therefore you have to question whether you want to give them huge increases in the price and windfalls. There is concern over that. So there are reasons, and you can argue one way or another, but there are reasons for this.

SENATOR HUBER - Would it be fair to say that those reasons are exactly on a par with the same reasons for having controlled gas prices as would be in inter-state commerce as well as setting a free-market price. It's the same principal in both cases.

RICHARD KILGORE - As deregulation of natural gas prices. Yes.

SENATOR HUBER - Deregulation of natural gas. Deregulation of petroleum would do the same thing, it would increase the price at the burner or the price at the gas tank as it comes in out of the nozel, but all of the other factors of pro and con are the same.

RICHARD KILGORE - Yes, that's right, and the concern is that if you let it go up to, and I really object to the word free-market price because we're not talking about free-market price, what we're talking about is it goes to a price administered by OPEC. That's what we're talking about going from price administered by the Federal government to a price administered by OPEC. This is by no means a free-market price. It's a market price, but one set by OPEC, and set by political reasons as much as for economic reasons.

SENATOR HUBER - Some of us are referring to free-market price though as to this free-market price that exists that we talk

about what the price would be if OPEC were not controling it. Some of us are talking about a true free-market price

---

RICHARD KILGORE - Senator, I don't know what the price would be if OPEC were not controling it.

SENATOR HUBER - We don't know. We have projections just like we do on what Prudhoe Bay is going to cost.

RICHARD KILGORE - One the one hand, if OPEC did not exist one would certainly expect over time that the price would rise at some point in time to the level of alternative energy sources which are quite high in the $20 - $25 range. On the other hand, in the short run, you do have an overhang of surplus productive capacity in the world, and if there were no OPEC, and it were perfectly free market, there's no reason why the price couldn't drop to less than $1.00 per barrel, because that's what costs are in their surplus capacity. If there were truly competitive free market, one would have $1.00 a barrel oil or less because that's what the costs are in the middle east, less than that so but as time went on, and this surplus which overhangs the market now, and which would push it down, gets eaten up and it will, one would then have prices moving off in the other direction. I don't know what the price would be. But anyway, we're talking about not letting the price, the U.S.

government as a matter of policy, not letting it go to a price set outside its own borders by an orgnaization of petroleum exporting companies, and that's what we're talking about. It's the intent apparently of the Congress not to do this because basically the idea is concerned with price impacts, concerned with windfalls, and alsc that there's no way of assuring that the price that would be set by OPEC is an appropriate price for our internal markets for our own costs and so forth. There's no way of knowing whether they will set a price appropriate to our cost circumstances in the United States or a price that may be very much higher than people think it is now or maybe even a price lower. Not good enough for development of our domestic resources. So this is a matter of national policy and people can quarrel.

SENATOR HUBER - Feable minded or otherwise.....

RICHARD KILGORE - Well, I don't want to characterize it. I'm trying to give you a few of the reasons for doing this, and this is a matter of federal policy. Now, but even if it is a foolish policy, or at least if Alaska views it as one, o the people who did this legislation think it is, I think that you have to ask, if that is the case, still, why do you want to then punish producers for this price policy basically. They already suffer enough from it in terms of the revenues they receive, why do you want to go an

added step and raise their taxes because of this. I don't think it's reasonable to assume that if you do this you will force national policy to change by what you do in the way of taxation here in Alaska. That seems to be reasonable.

GEORGE SILIDES - Madam Chairman, may I ask a question?

In addition to your comment of being unable to force national policy, would you think that this kind of tax is counter-productive?

RICHARD KILGORE - I suppose it's possible, I don't really know the answer to that, but I suppose there are reasons that might want to lead one to that result, and if the FEA has procedures for relief of these kinds of situations , then it sees the State of Alaska in fact imposing higher and higher taxes on such low productivity wells. I don't know. It's not inconceivable that it would enter into their thinking in this matter. Rather than providing relief, it seems that the State of Alaska goes in the other direction in this situation.

SENATOR HUBER - George brought something up here. Isn't this the fact that it effects these 300 barrel wells just because of the total tax maximum that we pay and then how we apply the mechanics of the formula. They could for instance, modify, and the mathematics of it I would have

to find out from somebody else how, so that that point would hit, maybe, more on a five or six hundred barrel a day well and maybe give as much as 10.3% or 10.4% out of Prudhoe Bay instead of an even 10%, and the formula diddled with enough to change that point to where it would be correct. Couldn't that be done?

RICHARD KILGORE - Yes it could be. If you like the basic approach of the continuous formula .....

SENATOR HUBER - Apparently you do, and I do too, and we might consider, and George's question pointed up that we might consider something from being John Messender is here, that they might give us an alternative is that reasonable Madam Chairman?

CHAIRMAN POLAND - Well yes, except today we have Mr. Kilgore with us. He's leaving on a plane and we want to take advantage of this. We can bring this up.

SENATOR HUBER - I have considered this, Madam Chairman, to be a work session with him, and it's more valuable to me, the way we've been conducting it here today, than anything that we've had.

CHAIRMAN POLAND - Well fine. Let's give him a chance to get with it.

RICHARD KILGORE - Okay, we really are concerned with how this aspect works. There are two parts where Alaska is attempting to impose its own view of what the proper price policy should be, that is if they want the OPEC price. It comes on the floor, and it also comes as I said before in this calculation of the economic limit factor again. It enters in two places, and we have serious questions about this and what you really want to do. If the basic intent of the legislation is to provide relief that you don't go off in the other direction simply because you're unhappy with the prices because this throws all the burden on the producer, and then you're going exactly against what you really want to do, and you could have economic consequences to this.

I understand your concern with the prices that you get for your oil, and you'd rather get higher prices than lower prices, and that's fine, but the question is if the price is not set at a level that you think is appropriate then what do you do about it, and I guess, it's just bothersome to us that what you do about it is throw a burden back on a producer here. That's what you're doing about it, and that then goes against what we feel is an appropriate kind of severance tax because then you run into all the kind of economic problems with this gross tax and that's our concern, and we appreciate why you think in terms of floors and why you want to get an adequate value for your oil, and so forth,

and we understand why you do it, it's the consequences.

This tax also raises the tax on natural gas. If you'll recall our testimony before, we were always pointing out to you that if you did this you would have an impact on Alaskan consumers, that would flow through to Alaskan consumers. I noticed that there is another bill which is HB 329, SB 239 which is a residential fuel credit, and I presume that the intent of this is to mitigate to some extent the impact that raising the gas tax would have on Alaska. Consumers - we're not really in a position to know how adequately it does this because this has to do with what fuel bills really are in Anchorage and so on. We really don't have the information to calculate how adequately that does that, but obviously, you are concerned with that aspect to it, and the balance of the increase of course would be assessed against exports. I think that the other thing I should point out is that here you have in this not only an increase in the tax rate from 4% to 10%, but also introduce a floor price here, that is a minimum 6.4% per MCF, which is an effective floor price of 64 cents per MCF, and I think we have the same reservations here about this as you do on the oil side. If you have oil flowing, producers getting less than 64 cents, someone mentioned 42 cents the other day, but less than 64 cents, then you start to raise the effective rate of it, and I think we have the same problems with it here as we would anywhere else, and this

also has a gas flaired feature taxation, but it's only double, not five times, and all my comments on that go for this too.

SENATOR HUBER - That is in the equalization deal?

RICHARD KILGORE - No, it's in the severance tax, itself. There's a provision.

In the end, I'd like to talk a little bit about this whole question of the overall tax burden and how you assess it, the kind of questions that Senator Rader has been talking about, but I would first just like to make a few comments on the property tax bill, unless there are some other questions here on the severance tax.

CHAIRMAN POLAND - No. I was going to suggest that when you are finished on the bill, and before you kind of wrap up, that we take a five minute break.

RICHARD KILGORE - Okay, shall I just say a few things about the property tax. I have relatively limited comments here. HB 323, SB 237, now, this extends the property tax to some other areas as you know to refineries, gas plants, and also to marine transportation, and L & G liquifaction facilities, and so forth. So it extends the kinds of things that you would tax with your property tax. Now, the only real comments

that we have here are that for each of these areas that you're thinking of proposing a property tax on, you think carefully about where that tax will actually be borne. You're talking about taxing properties for crude oil production that largely obviously is borne by producers. They realize prices in the lower '48 that are set for them, and the tax you impose is a tax which they have to bare in terms of their own profitability, but that's not necessarily the case with each of these other areas that you are extending, and what I think you ought to think about what you are doing, because if you're looking at property taxes on refining in Alaska, we would expect that most of the refining capacity in Alaska for some time to come would be basically capacity oriented to supplying low markets so that the tax that you impose on those refineries presumably would over the long run be borne by Alaskan consumers. You're assessing a tax which goes to the treasury, but eventually that tax would have to be borne by consumers if the refineries are to operate properly. So you have to worry about the incidence of the tax. If you're looking at L & G facilities you have to worry again about the consequences of this and what will happen, and who will actually bare this. Will it be a cost that will simply be passed along because the facilities under an FPC jurisdiction will be passed along as probably may be the case. It's not clear that if it's L & G or export to foreign countries whether this would be the case. Who would bare it, it's not entirely clear.

GEORGE GILIDES - Would it not also have an effect on a decision as to whether to locate in Alaska.

RICHARD KILGORE - Yes, it could under certain circumstances. If it's a cost which basically the person thinking of putting in the facility has to bare himself because he hasn't got an automatic pass along or he can't pass along to Alaskan consumers, or he can't through his regulatory process, pass it along, then surely, it would be one of those tax entering into his decision as to whether to locate in Alaska. Noone can say whether this is the thing that would swing it in the balance, but obviously, it's part of the package of doing business, if it's a higher cost, it could have some effect, yes.

The last one is marine transportation, and there, well there's a question of legality, I guess, but we can't address ourselves to those, but it seems to me you might have some concern about this one too, because you already face a problem where you are concerned with the fact that your oil may have to move to quite distant markets, for example the U. S. gulf and the eastcoast, and you're very much rightly concerned about that long haul and those high transportation costs and what it may do to your wellhead value, and if you go this route of taxing marine transportation, you obviously add to the cost of transportation, I don't know how much would be thrown up by this tax, but you are in principal anyway

adding to the cost of transporting your oil which certainly works in the direction of lowering the value of your oil, so I think that you ought to consider this as well, as I say, in each case consider the consequences, but here you're putting an added cost on transportation and it may be small, but it certainly works in the direction of lowering your wellhead value. Basically that concludes my remarks on the specifics of the bill.

I would like to conclude with a few remarks about this old question of the total tax burden in Alaska. What fair share is, and at what point do you destroy incentives, undermine profitability and the like, and of course Senator Rader has been pressing a number of people for answers to this, but as he himself in asking the question admits, there obviously is no easy answer to this question. If there were, somebody would have given it, and I can't give you an easy answer. A number of things have been suggested, all of which make a certain amount of sense. What kind of activity is there in the State has been suggested. A number of people have suggested looking at the total tax burden in Alaska, relative to other states. I have a few comments on that aspect too. It clearly is important what the total tax burden is on the oil and gas industry, there's just no doubt about that and how it compares with other states. It certainly is not just the absolute amount of dollars being paid or dollars per

barrel of production being paid to the State. What really matters for the economics of the industry for their incentives to go in and so forth really are these aggrigate dollars or dollars per barrel things put into context of the profitability of the operation in the various states. This is what really counts in the end, not just the amount that one pays. If one is paying a high tax, but in a situation where profitability is very large it's one thing, if they're paying perhaps even a lower level of taxation in a situation where profitability is low can be another thing. So, you really have to put it in the context of profitability. This doesn't make it any easier to answer obviously because profitability is elusive and difficult to measure, but certainly one has to put it in this context, not just in the dollars themselves. And the second thought about it is, I think that although some people have said this, that the mix in which you get your taxes out of this total burden to your state and other states is really not irrelevant. Someone suggested that a dollar is a dollar, but this isn't really quite so it seems to me if you're looking at the burden of those dollars on people. If you have taxes that are realtively based or geared closely to income, that is income taxes in kind of a true income tax in a sense that it is directly trying to measure income, it's one thing if you collect it that way as against certain just gross taxes or property taxes and the like, because if you have taxes based on income, they have a different economic impact than gross taxes.

If you have a severance tax, it's not a matter of indifference how it comes. If you're collecting high severance taxes in Alaska because you have wells that are extremely productive and that's the way your tax is structured that's one thing, if you're just doing it flat out on everything that's another. So, that it's not just the total dollars, these dollars have different effects, and that high taxes in one circumstance where they're thrown up out of a total tax package that's more closely geared to income and costs and so forth may be less of a burden than in another case where you have somewhat lower taxes, but their generated by things that have nothing to do with profitability, and you have a low profitability situation, so that I think it isn't strictly the total, it is the mix and the types of taxes that you have also, that also matters, and to the extent that the closer these are geared to income, the better you really are. The second thought I have on this whole question is the State, I'm thinking in terms of the burden of its taxation also has to remember that it has a role not only as a taxing authortiy, but you also in this State, and this is different from other states, most other states anyway, you have also a role as a land owner, you have lots of land and you will have leased that land and you will be leasing more, and you have to realize that the higher and higher you put your own taxes, this will have some effect on the kinds of terms that you're going to be able to get for your land. No matter how you lease it.

If you lease it on a bonus basis, the higher your taxes, the lower your bonus. If you go on a royalty bidding basis, the higher your taxes, you'll get lower royalty bids out of all that, or if you have a net carried interest or a net profit interest kind of leasing arrangement which you may turn to. Your profit people are willing to give you also _____ part of the taxes.

GEORGE SILIDES - This matter came up before in a different form, and the comment was made by the speaker was that not to be so terribly concerned because the competition in leasing would take care of that matter.

RICHARD KILDGOR - Well what I'm saying is that I think the competition in the leasing is going to reflect your taxation. That is, if you have higher taxes, I would expect in general you will get out of the competitive process when people are bidding for leases on whatever variable they're bidding, whether it be royalty or bonus or whatever, the amount of the tax that they will perceive you will take in the future will effect their bids, and they'll bid competitively and it will be reflected on how much money they're willing to offer you initially, or how much percentage of the thing they're willing to give you and so forth, so that your tax will effect the terms you're able to get on your own land.

REPRESENTATIVE OSTERBACK - I would like to ask a question. We listened to all this testimony, but we never came down yet with how much are we getting for our oil. And another question on leasing, it doesn't seem to make any difference, the bids I say that came out from the State or from outside the three mile limit seem to be about the same value they are bidding into the millions for off-shore leasing. What kind of a deal could you answer that on off-shore leasing? And the taxes, what kind of taxes are they paying? Are we going to get a benefit out of the off-shore leasing taxes?

RICHARD KILGORE - Well, on off-shore leases, where they're on Federal waters, you basically will not get the state severance tax from those barrels or MCF's of gas being produced out _____ there, and basically the tax that that oil in Federal waters will be subjected to is basically just the Federal income taxation, and you will not get severance or other kinds of tax revenues unless one's able to go through some franchise tax kind of thing. I just don't know whether that's legally possible for you to do that, but unless you can think of something ingenious of that sort, basically it will be just federal taxation on that, and the bids that would be received if you had comperable prospects on shore Alaska, lets say off shore but in Alaska waters similar prospects to something over the line in Federal waters, and you put these up for bonus bidding,

presumably what you would get since you have no severance tax on the offshore, you would presumably get higher bonus bids to the federal government, than you in Alaska would get for your exactly comperable prospects. I don't know if that answers the question or not.

REPRESENTATIVE OSTERBACK - One other thing, somebody brought up the other day that since we get 10%, or we pay 10% of the federal tax, I don't know, I know you know more about, would we be getting a share of the federal tax in the amount of 10%?

RICHARD KILGORE - Yes, to the extent you share in federal revenues and so on, yes you do get some share that way. That is correct, but the other thing is that as you know, there is some move afoot in the Congress to provide some sort of sharing of royalties and other income from offshore productions with the coastal states, and I would think that the State of Alaska should push very hard for this kind of thing, and I would also think that in the past this was probably not the kind of thing that the Congress would pass because there were relatively few states which would benefit from that basically Texas, Louisiana and California that would benefit from that kind of thing, that is sharing the revenues, some portion of the royalties and bonuses in the federal waters off their shores, but the situation seems

to be quite different today because we now are talking about exploration along basically the whole eastcoast of the United States, so there are an awful lot more states which potentially could benefit from this and presumably would support such a measure in Congress. There seems to be a lot more support for that kind of thing than before, and perhaps you will get something like this. I think there's a lot of merit in doing this from a national standpoint too, because as you know on the eastcoast there are all kinds of environmental opposition to this drilling and everything and bringing this oil ashore and everybody is up in arms about the environmental problems, well, I would think that if the states including my own where I live, New Jersey, really thought they had the prospect of getting some direct share of the income from oil and gas in federal waters offshore New Jersey, I think they would view the environmental matters somewhat differently, or at least be willing to look much more realistically at them and have greater support for this activity, so I think that this is something that Alaska should be looking for, and maybe it's another way you would be able to benefit, and if you were able to get some benefit, in that way some share of royalties, bonus income and so on from federal waters offshore Alaska, I think the amounts of money, I don't know what the share would be, I think the amounts of money that you would be getting would be very very much larger than any kind of fooling with apportionment factors

in that franchise bill to try to pick up something. We're talking about much larger potential amounts of money I would think.

REPRESENTATIVE OSTERBACK - Talking about the environmental con ion and everything, you're going to get a lot of static from fishermen, _____ coming out that the oil won't take Kachemak Bay for example. Now, Kachemak Bay, only produces about 6 million pounds of shrimp, but you come up towards the chain around Kodiak, what we do, that's just a drop in the bucket, and we're buying that back, so there's going to be a lot of static, say in the Bering Sea, is one of the richest crab, herring, shrimp, and out along the chain, so if there is no revenue for the then we're going to kill off our fisheries and there ng to be a lot of static coming from that on the offshore drilling, because you can see what happened in Kachemak Bay, which is just a small little thing, and we're going to pay I don't know how many million dollars to buy that back to save that fishery. And what I'm trying to get across, if we're not going to get no sharing off the offshore, there's going to be a big fight to try to stop it.

RICHARD KILGORE - Absolutely, because then you say what do you need it for, to get nothing whatsoever out of it. I don't want anything I say to be construed that I'm against environmental concerns, they obviously are very real, but

I think what you're saying is correct and this goes for other parts of the country too, if what you're talking about is development of Federal waters, and off your shore with the potential environmental problems from which you will suffer, and you get absolutely no benefit, then what do you need it for. In those circumstances one would take a very extreme, I think, position on viewing the environmental damages. That is, one would say, I don't care if the chances are one in a million, I don't want it because I don't get anything out of it anyway. If there's any chance whatsoever, let's just don't do it, because I don't gain anything anyway, but if you have something to gain from it, I think perhaps people may very well take a more realistic view of what the potential hazards are, what might happen, and with the odds have been happening and so forth, but if people are in the position where they have absolutely nothing to gain, and any possibility of something happening to their environment, that's really going to be against them.

REPRESENTATIVE OSTERBACK - One more, if I may. Take say a barrel of oil is worth what $12.00, $11.00, what? A barrel of fish is worth about $200.00. So what do we want?

RICHARD KILGORE - Sure, if you're going to destroy a valuable industry.....

GEORGE SILIDES - One of the things the administration has put forth through the federal government in my recollection is that, it is just that, and this is why they were hoping to hold off some of the offshore production was to submit a proposition to the Federal government on revenue sharing. I think you are familiar with that, and I think you touched on it. My recollection, and I ask this only for informational purposes as you know, it seems to me that we also suggested a two tier affair. I know you hate everything with two tiers in it, but in that all of the states were able to get a portion of the offshore revenues, so that you gain a broader base of support.

RICHARD KILGORE - Yes, and I think that's a sensible approach to this whole thing too. One can gain broader support where you have some approach as you're saying. Where you have everybody benefits to some extent, but those who are directly effected or so on, get some larger share.

I am saying that you do have this interrelation when you think about how high you put your taxes. There is this interrelation between what your taxing policy will be and how much you are raising taxes, and what you're going to get in terms of economic benefits when you lease lands, and that's very very clear, so to some extent you're taking one area through higher taxes and you give up in another through lower, whatever it is, bonuses and so on. So to some

extent they are offsetting, but of course at the same time you have to appreciate that while this is true on new leases for people under existing lease terms, obviously they can't change their contracts with you if you raise taxes, so if you raise taxes they are hurt. You also through your tax policy, obviously effect the value of lands or the value that one can get out of other landowners in the State, and of course the native corporations are obviously the ones who will be effected to the extent that you raise taxes and they make new arrangements on their lands, they will be effected, and they will get less in the way of.....

SENATOR HUBER - I wanted to just for a moment on that same subject to lead Dick back across the cannon ball range and the mud flats, and back to dry land for a minute on these leasing policies, and you were talking about bonus leasing when we got into this, and isn't it true that the price paid for a bonus lease whether it's offshore or onshore, mud flats or whatever, it is based upon what they're willing to pay for the price to gamble on what may be down there in a huge gamble and if we wanted to minimize what our tax would do on that, the minimum would be no tax, and other than that to have a tax that would have a minimum effect, would be a tax that was a percentage of a net profit, and if you had a percentage of net profit tax, that would be the kind of tax that would provide the minimum for losing money in your bonus, because they would all figure when they were bidding

that there would be no tax on anything that we don't get anything on and it will only be a maximum of this amount of exposure on the net when we do make, and if we don't make, we don't pay.

RICHARD KILGORE - That's correct, but that's assuming of course that the income tax that you have really is taxing what is real kind of income in Alaska. If you are on, as the gentleman from EXXON testified the other day, if you're on an apportionment formula, you may pay income tax anyway.

SENATOR HUBER - I didn't mean to lead you back into the net proceeds tax which you happened to design, but I'm thinking about any fair income tax that would.....

RICHARD KILGORE - The income tax works differently, that's right, in the sense when he factors it in and if it's true income tax, he only pays if he wins, so it does effect what he's willing to pay.

SENATOR HUBER - I just wanted to get it to where we actually, what kind of tax we've heard so much, so many times about how you discourage your front end money in bonus bidding, and in some cases, it's absolute milarkey, you don't do it at all, and there you hardly do any discouragement when you do it on a net profit basis. If you get a portion of that in there in a gross manner, you've got a problem.

RICHARD KILGORE - My only point here was to leave you with the idea that we do have an interrelation between the taxes and what you will get on your lands when you lease them, but you also will effect, of course, the value that other people get from their lands and _____ the native corporations.

Well in the end, this whole question of the relative tax burdens and the effects, and when do you have to_____ incentives, when do you discourage, obviously there are no easy answers as I said at the outset. There are many things you would obviously have to look at, and many of these have been suggested. One would obviously be an economic study of the industry, some of which have been done. Levels of activity would be another indicator of your total tax package, lease bids and so on, comparisons with other states and all these things are things that one would look to and try to assess how far you have gone in your taxation policy.

I think one of the really best safe courses, so one would really know where one is in this whole thing, even after you look at all these sort of measures, one of the best safeguards is probably to try to design taxes in your state that relate reasonably well to profitability. I think you run less of a risk if you do this. If you are able reasonably, or in some fashion to relate them to profitability, then you're not going to impose a very big tax burden if the industry isn't

very profitable, and if it is very profitable, you tend to throw up higher taxes and you run less of a risk really that you end up imposing on reasonable taxes on people, and this probably in the end is one of your best safeguards to kind of keep those principals in mind which means taxes related either directly related to income or taxes sort of semi-related to income as the step schedule that you have or the continuous schedule as is proposed where you really impose high taxes only in circumstances that weem to indicate high profitability, that is high well productivity which tends to be associated with high profitability, so I think the more that you keep to these kind of principals, the less of a problem you're likely to have in terms of really going too far in your tax burden on the industry.

GEORGE SILIDES - I have questions on two matters which concern most of us. One of them I know particularly concerns Senator Huber also, and if I may I would like to ask them now. One is do you have any comment on wipping out all the industrial incentive taxes in the State.

RICHARD KILGORE - We really don't have a comment on that.

GEORGE SILIDES - And the other one then is something which was discussed back in 1973 when we had a bill before us to own part of the TAAPS line. Now we have some bills in front of us which concern the possibility of again acquiring

an equity interest in gas lines or other lines, and I wonder if you could comment on that, whether your position has changed or what it might be now.

SENATOR HUBER - George, would you _____ bills particularly is for an industrial incentive, or for a state sponsor corporation which would operate on its own under the so called industrial incentive type bonding 100% if you could expand your question .....

GEORGE SILIDES - Senator, yes, I was going to make it into two parts, one is just to get a general statement on the State being an equity owner, and secondly of course we have SB 251 which is Senator Huber's bill actually.

RICHARD KILGORE - I haven't seen the bill itself.

SENATOR HUBER - It establishes an authority Dick, and with all of the powers, 100% of the authority to build the gas line.

RICHARD KILGORE - Well, frankly I would prefer, if you don't mind kind of deferring an answer to this question, and give it a little more thought. I know we have in the past, I guess, generally kind of questioned states being involved in things of this sort, and I don't want to give a general answer.

SENATOR HUBER - I don't want to force it either, but the reason that you might give it some consideration when you go back home is that the bill is not this one that is just an idea of whether we do it next year. This particular bill is an either now or never type of thing because it is designed, the whole purpose of it is to supply the North Slope gas to the lower '48 at an economically feasible price to make the project feasible, so it don't have to be subsidized either by users or the government, and if with the FEA setup and everything is set up with the President's approval and everything, it's an either pass it, so it's a method or else it will not be a factor. It's kind of a forced thing but it's now or never. It's timely.

RICHARD KILGORE - Senator, there are a lot of ramifications and a lot of things to think through on this particular kind of thing. I would prefer rather than just giving it off the top of my head, if we did especially take a look at the bill in itself, think it through carefully, and either come back to you with a written response or on the occasion of our next visit be prepared to respond.

MEETING ADJOURNED.

******

ADDRESS TO HOUSE (SENATE) RESOURCES COMMITTEE

ON

PROPOSED NEW OIL AND GAS TAXATION
(HB 638, 803 - SB 620, 621)

Mr. Chairman, members of the committee. My name is Oliver Leavitt. I am a resident of Barrow, Alaska and am appearing before you today as Treasurer and Director of the Arctic Slope Regional Corporation. I also serve as an officer and director of AFN, Inc.

As you are aware the native regional corporations and AFN, Inc. have gone on record unanamously in opposition to a package of proposed bills in both the house and senate. These bills, if enacted, will greatly increase taxes on oil produced in the state.

Uniquely, out of a commonality of purpose rather than by design or intent we find ourselves aligned with all present and potential future producers of oil. This includes any individual or corporate entity who holds or may ever hold an interest in oil produced in this state.

The cliche that "Politics makes strange bedfellows" is appropriate to emphasize that we are not here in collaboration with the oil industry. No conspiracy or plot by design or inference exists, but by coincidence we find ourselves on the same side of the playing field. Simply stated it is a case of the well worn expression "whose ox is getting gored."

While our self-interests or, better stated our economic survival is at stake we would also like to bring out in a few brief remarks why we believe the consequences of enactment of the proposed legislation at this time could have damaging effects on organized labor, the general business sector, and the individual consumer/taxpayer in Alaska.

Some of you may think that it is out of context for the native people of Alaska to argue for or against anything but preservation of our culture or historic life style including a subsistence living pattern. The Alaska Native Claims Settlement Act in recognition of the value of extinguishment of aboriginal rights and title, provided for compensation

in the form of land and its attendant resources as well as cash dollars. The primary vehicle for management of the assets that were granted are the regional corporations. Congress expressly mandated that the corporations be structured as profit making organizations who have an obligation and responsibility to improve the economic well being of their shareholders. So, like it or not, our task is similar to any other non-public corporation. Maybe because we are relatively new in this game we enthusiastically embraced the free enterprise concept. An individual through hard, honest work is entitled to make a buck and to be allowed to keep some of it.

That is what we have been led to believe. The intent of the Settlement Act was to provide a means to economically develop in a free society without the shackles of subservience or bondage of governmental domination. But, in truth, we are not there yet and we have a long way to go before our economic stability is assured.

Now, let us examine the whole spectrum of what is involved with this proposed legislation.

I. THE CONCEPT OF TAXATION:

Everyone in this nation let alone the State of Alaska understands why governmental authority from the largest to the smallest imposes taxes. Also we know what the taxes are supposed to do - provide services for the public. Taxes run the machinery of government which in turn provides the taxpayers with necessary services that they otherwise cannot effectively and efficiently do for themselves. Education, health, protection, transportation, economic stimulation, aid for those who need it, management of renewable and non-renewable resource belonging to the public - all these and more are the charge of government. Our system is to provide funds through taxes to support the level of need. The idea of taxing beyond the immediate and discernible need is not our system - it best fits those societies who think confiscation or exappropriation are the way of life.

Some of you may believe that industry is such a greedy creature that no matter what tax is levied they will hang on. I won't belabor this point other than to cite a recent example that has been accurately statistically documented.

The action by the Western Canadian Provinces, especially British Columbia, in the past few years saw a sharp percentage drop until many people wised up and changed the make up of the government.

II. THE POSSIBLE EFFECT OF USUROUS TAXATION

Both our U.S. Senators have recently commented publicly that Alaska may be on the verge of being considered a "bad little rich boy." We obtain more in federal support per capital annually than any other state - exceeded only by Washington D.C. But more than this Alaska receives 90 percent of the revenues from Federal Oil and Gas leases in the state and receives 25 percent of the stumpage from Federal Timber Sales. The latter is common to other forest product producing states but should be mentioned because the revenues flow directly to the local communities.

If the present proposed tax laws are enacted and the federal treasury loses from 25 to 38 percent over what it otherwise would receive from income of Alaska producers from sale of Alaska resources, why in the name of heaven would the preferential treatment continue? Lost distribution of federal receipts affect everyone - consumer, housewife, and individual taxpayer.

III. THE IMPACT ON ASRC AND OTHER REGIONAL CORPORATION

I have attached to copies of this written testimony our interpretation of how the proposed taxes would effect our income from oil produced on ASRC lands, under both the House and Senate versions of the bills.

cents/barrel taxation upon the company, that is, you had anticipated that a $6.50 wellhead value will obtain for most of the production on the North Slope, in which case the cents per barrel really is not onerous, because the companies were paying on a percent of wellhead value. So if your cents/barrel is geared to hurt a company only if the wellhead value falls below $6.50, and you don't anticipate it falling below $6.50. Oh, this was a kind of compromise, protection against what might go wrong. Well, a lot of things went wrong. Among the things that went wrong were things that were partly beyond control of the company. Namely the adverse economics of disposing of the Prudhoe Bay production beyond California. One of the other things that went wrong, not necessarily wrong but went counter to the expectations of the Legislature, was that the pipeline tariff posted by the companies and now applicable pending adjudication by the Department of Energy, the successor to the ICC, is a very high pipeline tariff. This tends to reduce the wellhead value. So partly the companies have in effect shifted wellhead value down, because of the profit of the pipeline, but partly it has to do with economic circumstances, the ability to market at a good market, the prices in California are not that different than in Gulf Coast, for competitive reasons, but that's a different story. Basically, the price that they have to compete against is not much different in California than in the Gulf of Mexico. The big difference is the difference in transportation costs and there is a difference of $2.50 in transportation costs gross, and probably somewhere between 70 - 80¢ net after taxes out of pocket to the companies to go all the way to the US Gulf Coast.

Q: Sumner: I believe that I heard you say this morning that if we keep foremost in

mind the subject of future investment incentives in Alaska that we're going to have to weigh very carefully, even though we may want to restructure the tax structure here in Alaska, but as it relates to the aggregate of the total taxes that are being paid, I got an impression that you thought maybe we ought to think cautiously of how much we might increase in aggregate the taxes that are paid as it concerns the future investment incentives.

Lipton: I think that's right. I think that no industry can be indifferent and because the industry is important to Alaska, no legislature can be indifferent to the aggregate tax burden. I think that's quite a different thing from simply being overwhelmed by a statistic which says this industry is already paying, given our assumptions, somewhat, 5% more, five percentage points more than we would be paying in California. There's a shadow area between where tax burdens or expected tax burdens suddenly are going to affect industry investment incentives, particularly in the area of exploration. One thing you know, that the exploration dollar does not go automatically where the tax burden is least. The exploration dollar tends to go where the exploration prospects are best. You can surely shift it somewhere in this gray, shadowy area, where the tax burden get so overwhelming, or if there is somewhere the perception, and I think this is one of the things the Legislature surely will want to consider, that if the perception is that changes in the tax structure, as it is applied to the oil and gas industry, are regularly taken, largely with the view to budgetary needs or revenue deficiency, and hardly ever with the long view as to what is a reasonable tax regime for the state, then I think it creates impressions which may be even more important in discouraging investment than the fact of the tax burden per se. And this is why I think in all of our discussions with the legislature, we've

tried to emphasize that a balanced tax structure, in which each of the three elements, which are the income tax, the severence tax, and the ad valorem tax, have to be weighed somehow by a different criteria because they have different effects on the industry, but if it's balanced and if there's a concept of continuity over time, that under those circumstances we have not yet seen this legislature placing such extravagant burdens on the industry that if they had sufficient confidence in, you know, the trend over the future, that this would not discourage investment.

Q: Sumner: What is your guess to the liklihood of depressed oil prices in Alaska to resolve the oil activity throughout the rest of the world. Right now in terms of the efforts to increase or step-up production in many areas of the world and the West Coast surplus to some degree, do you see that as building on itself?

LIPTON: No. I don't think that there's anything in the nature of oil exploration world-wide. One has to have an incentive, and two, has to have a purpose. The incentive is the hoped-for profitability of the relatively high foreign oil prices. The purpose is to try to create the reserves, the expanded reserves that will meet world oil requirements in the future. If I may digress for just a moment, we're living in a strange circumstance. The productive capacity in the world today is considerably larger than world oil requirements. The reserves of the world today are really not very great compared to what future demand is going to be. We're facing a temporary surplus of collective capacity but a long run deficiency in the reserve base for oil, so the exploration is going to go on. I don't think there's any adverse effect on Alaska. I think the long run opportunities for marketing Alaskan oil in North America at prices that are attractive from the standpoint of the profitability

of exploration ventures, from the standpoint of the state's share of the economic value, the prospects down the line are terrific, and if the geologists of the company see the opportunities here, the exploration money will come.

Q: Sumner: I'm trying to determine what period of years might be involved in your projection there and weigh that against what is scheduled to be the peak production years, Prudhoe Bay for instances, which is right now of course one of the largest reserves in the state. You know, if it's ten years down the road, we won't be competitive, or we will have marketed the major part of this oil from that reserve. So does the long term picture look like three years, four years before improved or upturned pricing structure.

LIPTON: I don't think your prospects are all that adverse even at the present time. You're suffering a temporary disadvantage by virtue of several things, one, price control and two, the fact that your production is surplus to the ability or the willingness of California refiners to take that amount of your oil, and this will become aggravated next year when the production goes up substantially and the demand for all crude oil in California refineries is not going to be large, so that a larger portion of your oil is going to move beyond, but there will be in the interim, there'll be improvement in both world and US oil prices, world oil prices because of the level detemined by OPEC and US oil prices under whatever compromise on energy policy evolves.

Q: SUMNER: On the near and the long term?

Q: HUBER: Milton, would you go further into the relationship between cents/barrel in relation to vertically intergrated companies allocation to expenses and profits, sales, processing, production, transportation, such as possibly what would be the difference in situations with BP?SOHIO for instance if they have decided to take not the maximum in the transportation but to take

a minimum from the pipeline transportation and maximize their production profits.

LIPTON: Well, Senator Huber, you pick a difficult example. British Petroleum has a direct participation in the pipeline, so whatever the after-tax profitability of the pipeline operations are, for its undivided share of tax it accrues 100% of the profitability. Now, whatever the effect will be upon the wellhead value at Prudhoe Bay, therefore on the tax liabilities of Prudhoe Bay producers, therefore on the after-tax profits of Prudhoe Bay producers, affect British Petroleum only through it's partial ownership of SOHIO. What the net effect would be, I would assume without doing a great deal of number work, British Petroleum looks at 100% interest on the one hand and less than 100% interest through SOHIO's participation in Prudhoe Bay, would in a sense place greater weight on it's 100% equity which is the pipeline participation than on it's indirect participation in Prudhoe Bay. But you see, neither this company nor any other company has complete flexibility in how they operate. The tariff that British Petroleum set TAPS can set on the same basis as all the other operating companies; that is to say they chose to calculate a tariff based upon the old ICC 8% rate-making modified by the 7% consent decree with Department of Justice, and so they all use the same principles, they've got approximately the same tariffs depending upon their debt proportions and so on. British Petroleum behaved exactly the same way, and obviously, if it did behave the same way as the other companies, it was thinking in terms of what seemed, from their assumptions, to be an appropriate policy. I really don't know that there's so much difference among the companies. The other part of your question is a meaningful one. If you have integrated operations, and if in fact the

tax exposure of profits earned in one place or one function is different, in other words, if you earn the profits here you pay more taxes, therefore you like to have the profit somewhere else. If you earn the profits in production, you pay higher taxes, therefore you like to have the profits in transportation. This is true of any company that has the possibility of shifting through transferring pricing the profitability from production to (IA). But the companies don't have freedom here in terms of the pipeline. . . The issue of the pipeline tariff really I think should be divorced from the taxing policy of the legislature, at least at this moment in time because it's now at issue. First of all in the courts and certain legal respect, and more importantly, it's at issue before the Economic Regulatory Administration, Department of Energy, which is looking into both things, both what the capital base is for the determination of tariffs, and two, what the proper rate of return ought to be. And this is now in adjudiction. And your own Alaska Pipeline Commission is seized with the issue of the tariff between Prudhoe Bay and Fairbanks. It's going through it's own administrative process, and if it turns out that in fact, the administrative decision upheld in the courts is that the pipeline tariff is too high you will get higher wellhead values and (IA) the companies whatever their predilection will be low side of profitibility and tax exposure, are going to have to follow suit.

Q: HUBER: I can recall the arguments when we put in the cents per barrel, and it was to protect the state, if I remember right, through revenues even if the oil would fall to zero wellhead value, and even if the allowed transportation should be extremely high. Coupled with that was the figures given to us many times that most oil pipelines were allowed to 8% maximum but the history of the ICC shows that they weren't, the prices were such that they weren't taking only 5%, 6%, 4.5%

of these figures and many others several times showed that most of ICC-controlled pipelines were not charging that maximum amount. Here we have the situtation that you brought up, SOHIO is paying 12.25% effectively because of the floor

LIPTON: (INTERRUPTS) (16.5)

Q: (continues) you said 16.5% effective, and yet every one of them is change and it seems like they have decided that the Alaska pipeline that the old proportion will be used, they will go for the maximum they can and I'd hate to see what it would be if we didn't have the lid of 8%. It looks like you've got a whole new ball game here.

LIPTON: Senator Huber, I think I do recall your reference to the past.

We have been rather vocal on this subject of ICC tariff regulations and pointed out the history of two things, one, that the 8% rate making rule was a monstrous rate-making rule because it had been adopted in an economic environment which no longer existed and the ICC for unfathomable reasons has never gone back and reviewed the 8% and the rate-making rule, and because of that, we raised the whole question of the effect upon netback values, wellhead values, and we strongly supported the establishment of the Alaska Pipeline Commission, which gives you your own avenue of administrative regulation. But you know, an interesting thing happened. All of a sudden the ICC came alive, and the ICC said that that old 8% rate-making rule is no good. We're going to go to a 10% rule. But you know the 10% rule yields much lower tariffs than the old 8% rule. The 8% rule was 8% after tax and after recovery of interest on total valuation. The 10% rule, and there's nothing magic about it, and I suspect that in the course of time the review of the whole issue will mmodify that too, but the whole point of the 10% rate-making rule is not to give a higher rate of return. What is said in effect was the 10% shall be the total return to capital; that is to say your interest charges,

which are such a fantastically large thing have to be covered by that 10% return of your capital, and this led to ICC-proposed tariffs which were $1.50 or so on the average below what the companies have posted. Now I suspect that the change in attitude of the ICC did not arise of a vaccum. It was a reflection of a long discussion on the implications of the rates that had taken place before your legislature over many years and argumentation over what the appropriate rates of return should be, what the appropriate rate base should be, and what the resulting tariff would be, and I think that at this stage of the game, from the standpoint of Alaska, not from the standpoint of the companies, there is reason to anticipate at least that there will be very very serious review of these pipeline rates. Now if it turns out that after all administrative review and after all judicial review, that the company tariffs stand, where are we left then? What's the judgement then? That everybody's wrong? The companies are wrong? The Department of Energy io wrong? The courts which uphold them are wrong? The Alaska Pipeline Commission hasn't been able to do anything. I doubt that that's the case. But if all of that does transpire, what then is the implication? Maybe the tariffs are not of out line. If it's done through all process, I don't think that's going to be the result. I think the strength of the Alaskan position is in everything which has transpired over the last few years, including the arguments about the rate base, the arguments about the rate of return, and everything else, I think this, I strongly believe that this is a judgment, a personal judgment, that you will have substantially lower tariffs on TAPS than were promulgated by the companies themselves.

Q: HUBER: Just one final follow-up. It is within our responsibility, purvue as legislators for the State of Alaska's people to determine at what point do you say this is what we would do in fairness, or do you say if it isn't economically feasible to produce this oil at this time because of transportation problems, federal rules that are in many cases arbitrary assumptions, maybe we shouldn't get rid of this depletable well at this time. The cents per barrel tends to do that, what I'm talking about, rather than removing it entirely, or move the cents/barrel down to where we could bring more fairness to the companies as you say, what do we do with ...

LIPTON: Senator Huber, if you're talking about revenue per se, it's a persuasive argument. If the function is to provide an underpinning to state revenues, the cents/barrel does it. Now, the other question is what are the implications when you choose to buttress or underpin state revenues by doing this? First of all, what you see is a kind of ad hoc taxing policy, increasingly year after year dedicated to our budgetary needs, revenue deficiencies, or whatever the case may be. There are circumstances which may militate in that direction, if it's necessary, if the state faces a crisis. But you must always ask yourself, is this to be the principle of taxation that you'll follow in every legislative session, or are you willing to say that the state has an economic interest which is represented by, first of all, it's royalty claim in the lease, secondly by principles of taxation which have been evolved over sessions, and only under extreme situations do you start intruding unique revenue problems as the basis for change in the tax liability in one year or the next year or the third year. I have no argument against the necessity of doing so from time to time, when abnormal circumstances intrude. I do think that it

causes, the question is asked of me so many times, including just this session, where do you start adversely affecting corporate investment decisions, and I said thenand I still feel that you could with the burden of taxation do it, but more likely, the kind of changes in the burden of taxation really won't have that much effect, but if there is a perception that tax policy always is detemined with a kind of a unique view toward the budgetary exigencies and the revenue deficiencies of the moment, and there seems to eb no continually over time, that would have a very adverse effect.

Q: HUBER: By possibly reducing the floor, and I do hope that in some cases this might be a viable suggestion. I just can't get it with our responsibility that floor of 62.5 ¢ a barrel, for Alaskan oil now at least that's the floor on severence tax, and I can't see how that could be effective now when this same oil it's competing with throughout the world, other countries like Arabia, are taking $10.00 a barrel, we're taking too much at 62.5¢. I just wonder if we're making our discussions in the right range. We shouldn't be making off somewhere halfway in between somewhere instead of down below the bottom one.

LIPTON: I'll give you a very quick answer to that. Saudi Arabia in effect takes more than $10 a barrel for their oil. But let's assume that you'll be satisfied with a modest $10/barrel taxation on your oil. You take $10/barrel for your oil and the oil has to be sold in L.A in competition with Saudi Arabian oil, or $13/barrel. Now you have left $3/barrel to pay your transportation costs from L.A. to Valdez, never mind the profit on the pipeline, your pipeline costs from Valdez up to PrudhoeBay, the costs of producing the oil. $3 won't do that. That's why you can't get $10 for your oil and Saudi Arabia can

get $10 for it's oil. Furthermore, you are not a Saudi Arabia in Alaska. Let me be presumptious for a moment in addressing the Alaska Legislature. You are not a United States in Alaska either. You're living as part of a nation which also has a tax regime. The United States has all forms of taxation upon oil and gas operations, including your oil and gas operations here in Alaska. The United States has a policy with respect to development of energy resources, the pricing of energy resources, they may be unattractive in Alaska. They are largely tax regimes attractive to the oil companies, the price and policies are attractive to the, but never the less, it is our national policy and it seems to me that the State of Alaska in its perception of how it treats the oil industry, must do so as part of the United States talking about an oil industry which is also part of the United States.

Q: HUBER: It just seems like we've got about a 20 to 1 difference there, and I hate to get working below the one figure in figuring where we should come out when I have a feeling it's somewhere between the 1 and the 20 instead of below the zero line, below the 1 line. And I just can't relate it.

LIPTON: A, Senator here, let me put it this way. There are companies operating here in Alaska who are operating in the Middle East, and earning in the range from .15¢ to .21¢ a barrel for their producing operations. And it's a bonanza to them. A fantastic bonanza, ever so much profitable than any operation in Alaska. If they earn as a margin of after tax profit in Alaska $2 a barrel we couldn't come close to the profit ability of middle east operations. Look at the fantastic difference in investment that's involved. What's of interest is not just how many cents per barrel we take away after cost and taxes, but how much of an investment of that is necessary to do it. There's a tremendous difference. I'm not addressing myself again to the fact the industry could not

stand any increase in taxation here or it's too high now. This is a very difficult thing to arrive at and this is a thing the legislature always has to balance. But I don't think, this is my only point, I don't think that the criterian the legislature should use in deciding whether the taxes are too high, or whether in fact they should raise taxes on the oil industry here. That they should look at the government take or the taxation in foreign producing countries. It's completely irrelevent.

Q: HUBER: Could you tell us better and more direct how should Alaska get it's honest, true, fair share both as a property owner and as a taxing entity if we don't use comparative means. That I think is the level we set up.

LIPTON: You're comparing yourselves with other tax jurisdictions which are also state states in the United States. I mean this is one of the reasonable comparisons. And you look at one form of taxation which is a corporate income tax and try to get what is a, well, you've got a corporate income tax rate. The problem is that that rate is going to apply to too low an estimate income. You can correct that if you choose. You have a severence tax which has evolved over time, I think in a very healthy direction. You have increased the ceiling percent of well head value over time not to any onerous letters compared to other states. You reduced it at the other end. You tried to provide not only for the state's revenue under optimum circumstances, but for protection of larger industry operations under adverse circumstances. You loaded on ad valorem taxes at a very considerable extent, and you did that under the exigencies I think it's quite understandable that, in your judgement revenue needs which anticipated the flow of revenues. You chose an avenue which was to tax before profits were being generated. It happens alot of times. But I think this is the basis upon which you judge. You look first at the total tax burden, then you look at the individual parts, and how are

they in terms of the revenue for the state and what are the economic implications for the companies that have to operate under those taxes. Certainly you've never subscribed here to the opinion that you're aggregate taxation, or that individual aspects of taxation were so onerous that in a sense they are discouraging operations here is Alaska. There's no evidence that operations here in Alaska are discouraged. If there's been a lag in exploratory drilling there certainly hasn't been because of the tax regime. It's because of the problems of leasing, land selection.

Q: REP. MILLER: Just real quick, and I'm curious, name a few states that use separate accounting.

LIPTON: Louisiana and Oklahoma

Q: REP. OSTERBACK: Talking about the oil. Have you done any figuring on the gas? That's the next thing that's going to face us in our Committee, the well-head price on gas. Have you done anything on that.

LIPTON: No. This is a wide open subject, and I have nothing but pity for those individuals who must now wrestle with the problem of not only what, what the well-head price of Prudhoe Bay gas can be. Second, Question, what the well-head price of gas ought to be. Can be, ought to be, and third, is how to get at those things. This is an awesome problem. Just let me say that I think this is one thing which is again to the thinking of the legislature. We always said that your oil is a price taker. That is to say, the price at which your oil can be disposed of in the refining centers of the lower 48 states can never be determined by Alaska, the state of Alaska or Alaskan producers. You're price takers you've got to move into the refineries in competition with other forms of oil. Which is why any increase in real costs that are incurred, for example, the ultimate cost of the pipeline, they come out of the ultimate profitability of Alaskan operations and they come out of the state revenue. There's no way of getting away from that. This

is not quite true in the case of gas. In the case of gas things which happen here in Alaska have influenced what the price of that gas will be when it's delivered to lower 48 markets. For example, severence taxes can be passed on. Increases in cost can be passed on. The reason is that the barrel of oil that reaches the California refinery has to be refined in competition with a barrel of oil from somewhere else. And MCF gas which reaches the Great Lakes area from Alaska doesn't have the market and competition with the MCF of gas which comes up from Texas, or off shore Louisiana, because you've got rolled in pricing which is involved at different stages of the game. Both in the transmission pricing and the distribution gas companies. Now how that's going to be resolved over future years, it has to be resolved before the new gas pipeline is finally going to be brought before us. But it is quite possible that the well-head price of gas on the North Slope will turn out to be higher on the BTU basis than the well-head value of the oil. It's quite possible. In which case the utilization of that gas in Alaska may not be so effective. If that's the way it works out. Although the utilization of the liquids may be very attractive, but that's a different story. I'm sorry but this is kind of a long winded answer, but the answer is basically I don't know what the price is going to be, but there's a difference between the way the price of gas can be determined and the way the price of oil can be determined.

Q: BUTROVICH: At what point in time and has the Prudhoe Bay oil been felt by the National Energy picture?

LIPTON: On sure. I mean there's no two ways about it. You've got 800,000 barrels a day of American oil being produced here which would increase our imports by 800,000 barrels a day if we didn't have.

If you ask how important is that 800,000 barrels a day or 1.2 million barrels a day which hopefully you'll reach next year, or 2 million barrels a day that you may reach by 1980. It's very difficult to judge how important that is from the standpoint of national balances. You would just hate like hell not to have it.

Q: BUTROVICH: I was going to ask you if that is good. The overall effect.

LIPTON: I don't think there's any argument on the part of the producing companies that have to pay your taxes and the part of the State of Alaska that have revenues, and the part of the United States as a whole, which has the benefit of that oil, no question about it.

Q: BUTROVICH: Suppose it hadn't gone on stream until July 1, 1979.

LIPTON: We're importing more oil now. The interim volumes of oil would be available in 1979 and thereafter. I don't think it would be the decisive factor in the national interest. I don't think it would have a very major impact upon the companies, and probably the state of Alaska. The companies' cash flow in the state of Alaska is revenue, you know.

Q: BUTROVICH: Would you elaborate a little about the companies cash flow, I'm not that concerned about the state's revenues.

LIPTON: There's no question that from the standpoint of operating companies the invested proceeds over time there is in the best of circumstances a very considerable lag between the time the investment starts and the time the investment is completed the first production, the first pipeline really begins and then build up your revenues thereafter. The companies have to pay out the money for a long period of years and incur interest costs over the whole interim. The duration between outlay and income, let us say the cash flow, is a very vital consideration, no question about it. Which is one of the reasons

that in almost all instances the companies would look for the most expeditious possible development of a resource the earliest possible production. The cash flow is, you said something interesting about the workers of other companies than the government because the government

Q: BUTROVICH: Pardon me. I didn't mean to say I was more concerned with the companies. I was more concerned with what effect it would have on the companies that's what I wanted to elaborate on. I'm more concerned about the state.

LIPTON: Yes. But your point, I was going to suggest that your comment really is a very meaningful comment in another context. For a profit making company the timing of it's outlays and it's income and it's cash flow, is extremely important to the continuity of it's operations because the dollar that's spent out can't be reemployed until it's returned in so for a company that would like to expand and continue to grandise it's profits. Cash flow is what provides the dynamics of it's operation. But for most governments the cost of waiting for income is really not as terrible as it is for companies. The cost of waiting if you have to put a discount factor or interest factor is bound to be lower for government, because for governments the governments are looking to a continous lead for revenues over the future. Now nobody wants to defer revenue too long, but the dollar of revenue deferred which becomes a dollar of revenue earned is going to play it's role in the budgetary balance wherever it takes place. The viability of government is not dependent upon the timing of cash flow really so much as it is for a profit making organization. That's one of the reasons, again we're talking about taxes. If you built a foreign producing operations, one of the forms that has

recently evolved is a production sharing contract. And you have a company that operates as a producer for a government oil entity and the nature of the production sharing contract is that the company will recover out of early production all of it's operating costs and what barrels of oil recover it's operating costs and relatively will quickly get enough barrels of oil to recover it's whole capital investment. Now after that shares go in increasing proportions say to government. For the company the amount that it's willing in negotiations to give to a foreign government will be the greater. The earlier the foreign government allows that company to get enough barrels of oil to recover it's costs. In other words, they will split more number of the government the earlier they can get back to themselves, because the cash flow is so important to them and the governments which recognize that are willing to do it, because they feel that the cash flow to the government is always going to be valuable in terms of their budgetary balances.

Q: RADAR: Mr. Lipton, the failure of Arthur Andersen to take into consideration the Cook Inlet production, is that considering amount of production. Does that significantly alter their conclusions here.

LIPTON: First of all I was not critical of Arthur Andersen for not doing this. They did what they were asked to do.

Q: RADAR: Yes, we are talking about a statewide policy here and ranking. What I'm saying is the failure of their application only to Prudhoe . . . What effect do you think it would have had, had they included Cook Inlet?

LIPTON: Senator, if all you did was to expand Cook Arthur Andersen model to include Cook Inlet as it is today, an extrapolation of the remaining reserves into a production profile for for Cook Inlet and apply the whole thing you'd have very little effect on the sum total. Because we're talking about close to 10 billion barrels of oil in Prudhoe Bay we're talking very

limited reserves, you know production now out of Cook Inlet is around 120,000 barrels a day which is projected with a (IA) overtime. Now I don't, the specific answer to your question is if the model had been designed to include all oil producing operations, all oil reserve discovered and available for development and production as they now exist in Alaska the effect upon the ranking would be very very small.

Q: RADAR: Would it be as much as 1%, maybe bringing 1 from 92 - 93 or something in that range?

LIPTON: I don't know. The answer is two-fold. The effect depends on two things. First of all upon the relative volumes. Now we know what that is. The relative volumes are overwhelmingly in the Prudhoe Bay direction. Plus the pipeline which is so much profitability and taxation involved in the pipeline. However, some of the greatest advantages the state gives under it's tax regime are given to Cook Inlet. I would not think it would make as much as 1 percentage point difference in the ranking producers.

Q: RADAR: In the future when we're in full production instead of limited production because of problems with the pipeline, full production Alaskan wells will move into higher bracket and Alaskan rating or ranking actually as compared to the next closest state would be further apart as the fields grow older and the fields produce less and less. Alaska's ranking would be closer to Louisianias' for example.

LIPTON: I'm not sure that I get the thrust of your question, and that is to say as you increase your production for example, if next year you average 7,000 barrels a day for a Prudhoe Bay well your cents per barrel goes up to 64.8¢. So your cents per barrel tax goes up. The chances are that your

average well-head value if the tariff remains the same will go down. The average well-head will go down, because a larger volume of the Prudhoe Bay production next year is going to have to move to the Gulf Coast and net back even lower. So if you're looking one year ahead then the incidence of taxation in Alaska will look worse than today. If the study were made just for one year, remember Arthur Andersen study is based upon a projection of 25 years. So if you are just doing it for next year as compared to this it will look less favorable. They've already done this for 25 years. That shouldn't have any effect upon their (IA) but let me just say something else. That if your tax regime remains as it is, abstract what may change, you have only to project reasonable increases in the well-head value because of what is happening to world oil prices and what's happening to government prices. Reasonable increases in well-head value and suddenly the tax burden becomes proportionately lower here in Alaska. Because increase in the value of the oil will go to a very considerable extent to the companies themselves. That is to say what's going to be the increase in the tax burden as the value of the oil goes up. Your ad valorem taxation really isn't going to increase very much. Your severence taxation will increase a little bit as you go through cents per barrel into percent of well-head value and by god, your state income tax revenue will hardly increase at all. Because you are under a formula an allocation formula. So as production increases in the future and as the value of Prudhoe oil goes up in the future the burden, the relative burden of Alaska taxation as things now stand becomes less.

Q: RADAR: I'm interested in your observation as to the statement we the federal government is going to expect Alaska to participate in the financing of an Alcan pipeline and the federal government in no circumstance is going to participate. I don't know that, and I understand that some federal people

will be up here in a couple of weeks to talk about that very thing. I'm a little bit uneasy as to what our posture is and what our maneuvering room is against what their maneuvering room is.

LIPTON: I recently returned form Alberta, Edmundton, where we are also consultants. The question of financing the gas line of course has been raised in Alberta as well as in the State of Alaska. I find it of double interest because while the pipelines were competing for authorization the promotors were very hush hush about requiring outside financing and everything. Once the competition was over and the realities begin to emerge and one begins to worry about who's going to do the financing and whether the province of Alberta should take an equity interest or whether the State of Alaska should lend money or whether the State of Alaska should in a sense guarantee the bonds so the rate of interest will be lower. I don't know how many different roles the state of Alaska can be cast. It's already been, with respect to the oil and gas industry, cast in the role of a soverign power. It's already cast in a role of a land owner, and now it's going to be cast in the role of a money lender. I just don't know the answer. This comes down in the end to very pragmatic consideration. What are the realities of financing as they are presented to you? What is the state's interest in pursuing this? How far should the state go?

Q: RADAR: What do you think promoted the Federal government to take the position that it was reasonable for the state to finance or participate in the financing but unreasonable for the federal government to participate.

LIPTON: That's what they said to the city of New York.

Q: RADAR: New York was asking for something, we're not asking for anything.

LIPTON: No. They're saying that these are problems internal to Alaska and we should not take the responsibility for it. That is a bad analogy. But this a subject

one can address themselves to a lot better after one knows what the real circumstances are. I don't know that the Federal government in the end will not play in some kind of a role in the financing of the gas line. An awful lot depends on the extent in which the federal government wants (1) the gasline built by a certain date, (2) is convinced that private financing either is not available, which is unlikely, but is available at onerous interest rates. Therefore what role should the government, any government whether it federal, state or provincial. I think it is a little too early because so far I suspect that what we are hearing are the protestations of the party of the first part. That is to say the people who are involved in the financing.

Q: RADAR: When do you expect when the federal government will reach an agreement on the price, set a price, April - May?

LIPTON: This Spring or early this Summer I would suspect it has to be done. Even if the least optimistic time schedule or authorization, financing, construction, design and construction of the gas line has been met, the pricing policy is basic to almost any other decision that can be made.

Q: RADAR: Well if they expect the state to participate, again I'm thinking about our session and our opportunity to address this problem. Do you think we are likely to have before us the facts that it takes to intelligently address this problem if we were to adjourn in June, what's your best estimate on that?

LIPTON: I would doubt very much if you'll have all the facts, but I think you may have, the first thing I think you have to listen to more than anything else is just what the facts along this line are going to be, what are now the alternatives to the companies involved in the construction line. How do they see their own alternatives. What is the Federal Government realistically thinking about. I don't think the Federal Government is

actually asking the state of Alaska to undertake any of the responsiblity, I'm sure of that at all. The Federal Government may be simply saying to the people building this pipeline, "Look, you go ahead. These are the authorizations - these are the rules of the game. Now you go where can in terms of equity in terms of debt capital and in terms of the government entities that are involved. Really, which is basically the state of Alaska, the Province of Alberta, the Federal government of Canada to a certain extent, even the problems of British Columbia. I doubt if you'll have all the facts, but you'll probably have alot more."

(Answer to question asked by George Silides in Commissioner Gallagher's testimony)

Tom Williams Madame Chairman with your permission I would like to try to address that question and also try to speak a little bit to what Senator Radar was talking about earlier. For the record my name is Tom Williams I'm the Director of Petroleum and Revenue. We have two changes in the severence tax that we are suggesting. One is the economic limit factor and the other is the increase in cents per barrel floor. Right now we have a federal pricing decision to give oil , to Prudhoe Bay oil new oil treatment for both pricing purposes and for entitlements purposes. Entitlement is a transfer of money back and forth among the refiners to equalize their apposition costs to the national average, that is the objective of the entitlement, and new oil in the lower forty eight comes in the refinery less than imported oil consequently there is a fraction of an entitlement that didn't flaw, for the right to run as new oil. Our oil when it gets there, will not be below the cost for import oil it will be right at the cost for import oil. In fact the national policy has been for new oil like high risk North Slope production we got right from our Prudhoe Bay field. National policy is to give that, right now a $10.95 average price, cause of the realities of market, we tried, if we insisted

or if the producers who own that insisted on getting a market price at the refinery that corresponded to a $10.95 well-head price, someone is going to have to pay the transportation cost, and if you have say a total $5.00 transportation cost you would be getting into the market place at $15.95 the Saudi oil which is competitive with ours is selling for $13.50 to $13.75 so somebody would have to, I mean where's the incentive to buy, you'd have to compell people to buy our oil to get $10.95 price or there would have to be a subsidy. This has not been a thing that we have been requesting the federal government to do. We recognize the fact that this is how the market is, we are far away from it in terms of cost. Consequently the well-head value is not that it's realized by a refinery price that's competitive with the Saudi Arabian oil. Our well-head value is going to be lower than the ceiling. The problem is that they are going to, if they treated this new oil, they are going to try to equalize something that is already equalized and it is going to result in a penalty over $3.00 a barrel, this equalization. They will equalize all the rest of new oil for the lower forty eight, it won't hurt them too much, it will cause some problems though, because it will over equalize new oil producers in the lower forty eight. But for us it doesn't, it's completely inappropriate because our oil is already coming in at the level corresponding to imports. There is no need to equalize. Consequently if you make them buy at a fractional entitlement at a cost of $3.00 or $3.35 that means the refiner is going to pay that much less instead of paying $13.50 he will pay $10.50, and that means a Prudhoe Bay producer or the State of Alaska if it takes its royalty in kind and goes out and tries to sell it, when he gets it to the west coast is gonna see only $10.50 coming to him. $3.00 goes into the entitlement,

we never see that. So you start from $10.50 down there in California and then you have that when you get to a $4.00 welling price. Our contention is that if that happens the game is over. There will be no more exploration. There are no more Prudhoe Bays. It is highly unlikely, there is only one Prudhoe Bay in the United States and there may be a second one down in Mexico, in the Tabascoarea in the farmers fields, but a, there pretty darn few and far between to find a field that large and at $4.00 well-head value. If that's the prospect, four dollar well-head with

today's cost, even if you found it out of Prudhoe Bay the chances are nill that it would be developed. And so the game is over because we are not likely to find fields twice and three times the size of Prudhoe Bay. So given that the game would be over, we are not doing any more damage by saying that well, instead of $6.00, $7.10 is the floor and the post which is our present floor with the cents per barrel, we are simply saying, Why should the people of Alaska follow the resource? At the game, it then becomes a question of priorities and where our allegiance lies, with the people of Alaska or the share holders in the larger corporations? Now there is a balance, but given that &7.50 is not a reasonable well head price for North Slope oil in the beginning of a cut, and as production continues and through what builds up, if it, the federal began, assuming the federal government doesn't screw things up and destroy the insantitudes, the increase thuroughfare will lower the pipeline tariff. This will allow the well head value to rise. OPEC countries can be expected to raise their price, that includes Arabia. So if the refinery price for our oil, our refineries will raise the charge for getting our oil from Prudhoe Bay to the refineries will be less. These two things will conbine to raise our well head value and by the early 1980's we won't get by talking about the well head value of $7.50, we will be taldingabout well head values greater than $10.00. In fact extrapulating out by the end of this century, we will be seeing well head values of well, your world market values it sounds obsurd today, but $20.00 well values are certainly not inconceivable at that time, and thats $20.00 in terms of today's dolars, you know, not inflation dolars of the year 2000, that twenty of today's dolars,

thats simply because we have increasing demand, our Latin American neighbors for instance, their energy consumption is growing at a rate ten times ours, their population keeps growing, and world energy demands are far outstripping our own nation's demand and as vast as the OPEC resources are, this is a world wide shortage developing in the next 10-15 years. This shortage is going to cause, ask developers, its going to cause the price to rise in real terms that is to say in addition to the effects of inflation, we will have an additional increase in the real rather than the illusion. Consequently when we turn back, to the point, if the federal government gives us new oil in Tilener's treatment, the question then becomes whether we are willing to sit by and say OK we will take 8% or 10% off for dolars and there it is, its not good, but thats all there is to it. Even though we are paying right now, importing almost 10 mission barrels a day to each, though I don't know what the latest figures are and we are paying our good, loyal allies, Arabs, Iranians, Abu Dhabians, and all those nice people and Indonesians, Nigerians and Algerians, 14-15 somewhere in that range, 14-15 dolars is the average per import acquisition cost.

QUESTION- Tom, I understand what you are saying, I really do, but how, I must have missed somthing, how does that help Cook Inlet today?

- OK, with Cook Inlet, we, Sterling and I have gone to the Federal Energy Administration last summer and in fact, the hearings that they had earlier, in April or May, it was in Anchorage regarding the price of new oil and how to compound the upper and lower tears should move through time, and also about this problem

of oil production that reaches its break-even point with the control oil price. Right now, I mean the federal government is not reluctant to price our oil severly below what its actually worth, in the inlet that oil is beginning from $5.00 to $5.15, and for oil of similar quality we are paying, almost, we are probably paying over $15.00 a barrel to get it from Indonesia to the west coast or Pudget Sound. So we don't see a very friendly attitude on the behalf of the federal government toward Alaska production to begin with. We went there and pointed out that there are some properties in the oil that were at that time dangerously close to reaching this break-even point at $5.00 a barrel, we said we know you have shis procedure to allow pricing on this basis, to allow the price to go up, so that they continue to have more revenue than expenditures. Then they, thats indeed true, then they said that of course we are not going to give it to the State of Alaska because thats fixed cost, you are going to be stuck there at $5.00. Well that presents an interesting question about how they rewrite our lease, but they said that they would allow that much pressing relief and return the property to the level of profitability enjoyed in May of 1973 when price controls, that's the reference period they all relate back to, May of '73. But he said, we'll allow to have that same measure of profitability, which to my thinking would include among as profit, you have what's over for tax. So if you raised the severence tax, that's an increase cost, but an oil company can go into the FEA and present the case saying, here are my thoughts, now give me my May 1973 rate of return,

and in fact that should accelerate the movement to a more realistic price to the upper tear which is not still the market price, but at least its, $10.95 is a good site better than $5.00. And consequently, if the Federal Energy Administration is doing what they say they are going to do and if they can do it in a timely fashion, there should be no problem for the oil companies because this is simply an expence, severence taxes are recognised as such.

- that had not been explained before, thank you.

SENATE RESOURCES COMMITTEE

HOUSE RESOURCES COMMITTEE

Testimony of Lawrence L. Wilson

March 25, 1977

My name is Lawrence L. Wilson, Associate Tax Counsel, Union Oil Company of California. I shall be speaking today on a number of bills which cover income taxation, severance taxation and property taxation. Specifically, these will be SB 105 and its companion bill, HB 145 and HB 322, all of which deal with income taxation along with SB 202 which is the "net proceeds" tax. I will also cover SB 103 and HB 321 and its companion bill HB 144, which deal with severance taxation. Finally, there will be remarks covering HB 323 dealing with property taxation and HB 328 dealing with the Reserves Tax. Where appropriate, my remarks will also comment on testimony that has already preceded my testimony. The first bill I wish to comment on is SB 105. No reference is made to HB 145 since it is an identical bill.

SB 105

SB 105 is a bill which purports to determine income to Alaska through the "separate accounting" method. The preficatory language in Section 1 states that the present method of apportioning income under the three-factor formula embodied in the Multistate Tax Compact does not fairly represent the extent of

the business activities in Alaska for corporations engaged in the production and pipeline transportation of crude oil and natural gas. Section 1 goes on to state that the legislature, therefore, intends that section 18 of Article IV of the Compact, which allows separate accounting, shall be adopted for determining income derived from the production and pipeline transportation of oil and gas.

Richard Kilgore of Walter J. Levy and Associates and Professors Jerome Zeifman and Kenneth Ainsworth have commented on "separate accounting" as a method of determining income with Mr. Kilgore defending it and Messrs. Zeifman and Ainsworth attacking it. Even Mr. Kilgore acknowledged that the administrative problems of determining "value" for a product transferred out of the state and of allocating expenses to Alaska were troublesome. Messrs. Zeifman and Ainsworth painted a picture of corporate maneuvering by astute managers to deliberately operate Alaska affiliates at a low profit through such means as selling property to the affiliate at high prices to get high depreciation and by allocating excessive overhead.

However, none of these witnesses have provided this Joint Committee with the really significant reasons why separate accounting is an unsatisfactory method of determining income within a state. First, even if one could overcome the administrative problems of valuing production and allocating overhead, separate accounting simply cannot adequately and properly determine how much profit of a business is derived from within a

state where the overall business has parts which are dependent upon one another and which are located in more than one state. It was for this very reason that the "unitary business" concept was developed along with apportionment formulas to determine how much of the total income of the total multistate business should be apportioned to a state. This is precisely the procedure which Alaska uses today, as well as most taxing jurisdictions, i.e., the total income of the total business of a multistate company is determined and then apportioned.

The other reason why separate accounting should not be adopted is that it exposes the taxpayer to multiple taxation. Income which would be fully taxed in Alaska would also be apportioned to other states using the apportionment method, which looks to the total income of the taxpayer as a taxable apportionment base. Conversely, Alaska's or any other state's adoption of separate accounting could cause it to lose tax from an overall profitable multistate company -- specifically, where the in-state separate accounting calculations produce an in-state loss for such overall profitable company. As Mr. Bonney of EXXON will demonstrate LATER, this would have been his company's case had Alaska been on separate accounting during the development years of the North Slope. Instead, Alaska received income tax by using the current apportionment method, apportioning a part of that company's overall profit into Alaska.

Turning to the provisions of SB 105, it is clear that the bill is not even the form of separate accounting which any of the witnesses were debating. Rather, it is a hybrid form of

separate accounting. It seeks to determine income by simple reference to the wellhead value of oil and gas used for severance tax purposes and then allows only seven deductions while totally ignoring any other legitimate deductions which represent business expenses allowable under established principles of income taxation. Five of the seven allowed deductions relate to costs closely associated with production. Another category is for unsuccessful exploration costs incurred in Alaska. The only out-of-state cost allowed is for interest expense "not capitalized and capitalizable", but this expense would be severely limited for most companies through the use of a ratio of the book value of the fixed assets associated with the field to the total book assets held by the corporation and of its affiliates. All interest expense related to a company's operations within the state should be recognized as a current operating expense, without the limitation described in this bill.

It is clear that SB 105 would introduce new concepts of taxing an oil and gas producer which radically depart from concepts found under the existing Alaska corporate income tax structure. The traditional concepts established over decades of experience and which are contained in that corporate income tax structure would in large part not apply, yet the producer would be taxed at the same 9.4% corporate rate of tax.

One of the seven deductions is for "severance taxes actually paid." This provision may appear to be without problems until one analyzes it in connection with the reserves tax.

Unless the statute is amended, the reserves tax will likely result in nearly $240-250 million dollars paid to the state next June 30th. With the $220 million paid on June 30, 1976, the aggregate of nearly $500 million represents, in essence, prepaid severance taxes because the reserves tax may be used as a credit against future severance taxes payable. Hence, the word "actually" in the clause "severance taxes actually paid" takes on significance, and it appears that the authors' intent is to allow as a deduction only that amount of severance tax "actually" paid over after the credit with the result that some $500 million would be denied as a deduction.

Depreciation is allowable but only on facilities closely associated with production, but the amount of depreciation is simply left to the Department of Revenue to handle by regulation. Depreciation is a vastly complex subject under income tax laws and can be handled in many ways to provide fair and equitable results to a taxpayer. The bill provides little or no guidance on a subject of such importance to a taxpayer.

As noted earlier, SB 105 does not fit within the category of the "separate accounting" method of determining income. What it really seeks to do is draw a ring around successful oil and gas operations and allow as expenses only those that are literally tied to the lease, plus expenses for unsuccessful exploration efforts and a severely limited amount of interest expense. The resulting amount is supposed to be net income, but in fact, would represent a level of income much higher than would occur under regular principles of income taxation.

In addition to the tax received by Alaska based on an inordinately high level of income, the authors of SB 105 would, under Section 43.20.014, still seek to reach, through apportionment, the taxpayer's out-of-state income, including its oil and gas and pipeline income as well as all other income. In short, SB 105 would allow Alaska to fully, or, rather, more than fully, tax directly all of the Alaska income from oil and gas and pipeline transportation and would also require the taxpayer to apportion to Alaska all of its other income except the income already taxed by SB 105. And, of course, the final effect to the taxpayer would be that other states where it does business would also apportion income to themselves under their tax laws and included in that apportionment to them would be the Alaska income already fully taxed by Alaska.

A state may constitutionally tax only that income of a taxpayer which is derived from within its borders. That fundamental rule applies irrespective of the method used to determine income. SB 105 seeks to reach all income from oil and gas and pipeline transportation in Alaska and at the same time, through apportionment, seeks to reach the taxpayer's other income including its non-Alaskan oil and gas and pipeline income, thereby raising the constitutional question of the taxation of extraterritorial value in violation of the Fourteenth Amendment of the U. S. Constitution.

With respect to income from pipeline transportation of oil, Sec. 43.20.013 simply provides that where such a pipeline is regulated by the Interstate Commerce Commission (ICC), the

annual taxable income "shall be eight percent of the valuation." There are no guidelines to determining income under any set of rules, and items of income and expense are not even considered. Obviously, this provision is aimed at the Trans Alaska Pipeline and, in effect, says that the tax shall be valuation times 8% to get around $600 million of "annual income" which, when taxed at 9.4%, produces a tax of about $60 million.

Attempting to tax a business in this manner would be similar to a law which says that an individual shall be deemed to have annual income equal to a certain percentage of the assets he owns. For example, suppose such a law say that a person's annual income is deemed to be 50% of his assets and the person owns an apartment house worth $200,000 but has a $150,000 mortgage against it. His annual income would be $100,000 to be taxed irrespective of his costs. It would not matter that the person may, in fact, show very little profit.

A taxing scheme which deems "income" to be a percent of value of assets without regard to actual income and expenses is, in effect, nothing more than a property tax under the guise of an income tax and raises serious legal and constitutional problems.

The authors, however, have attempted to provide a form of "escape hatch" to the foregoing method of taxation by providing in Section 43.20.013(c) that the corporation operating such an ICC-regulated oil pipeline may elect to have taxable income from the pipeline determined under rules and regulations of the

Alaska Pipeline Commission. Thus, the idea seems to be that if the corporation does not like the percent-of-value method of determining annual income (which would deem annual income to be at a very high and ficticious level), then it can be economically forced to submit to the rules and regulations of the Alaska Pipeline Commission whose rules may or may not be parallel with the ICC rules. In fact, section 6 of the bill contains an amendment to Section 42.06.041 by adding new provisions which require the Alaska Pipeline Commission to give the Department of Revenue a certificate that the pipeline corporation so electing has complied with the Commission's rules and regulations. Subsection (c) of Section 041 provides that the Commission shall by regulations establish an accounting procedure to define net income to "coincide as nearly as possible with the net income definition used by the Commission in establishing rates and measuring rate of return."

What is happening under these provisions seems clear enough. The idea seems to be to put such an onerous tax burden on the ICC-regulated pipeline that it would be forced to elect to comply with all applicable regulations and orders of the Alaska Pipeline Commission concerning accounting methods and reports. In short, the Commission would set the rules for income determination notwithstanding that the pipeline company remains subject to the primary jurisdiction of the ICC. Thus, there would be four parties involved in determining income: the taxpayer, the ICC, the Alaska Pipeline Commission, and the Commissioner of Revenue who is interpreting the Alaska Commission's rules.

Use of the tax laws to achieve the apparent goal of regulation by the Alaska Pipeline Commission is an abuse of the taxing power. Further, the scheme raises obvious legal and constitutional questions and with so many parties that would be involved in the income determination process, the stage would be set for endless controversies.

The foregoing discussion relates to ICC-regulated oil pipelines. Where an oil pipeline does not yet have a value established by the ICC or where the oil pipeline is strictly an intrastate oil pipeline, the bill provides that such a corporation having one of these pipelines shall have its income determined under the rules and regulations of the Alaska Pipeline Commission. Here again, as would be the case of an ICC-regulated pipeline corporation which was forced to elect to have income determined by the Commission (discussed above), the income determination is left to another agency under rules and regulations as it chooses. In essence, the whole matter of determining income to tax under an income tax law is left to the vague guidelines of another governmental agency. This, in itself, raises questions whether there has been an unconstitutional delegation of legislative authority. But even if one gets over that hurdle, the fact remains that whatever rules would finally apply, those rules would not accord with general principles of income taxation which ought to apply to pipeline operations just as they apply to any other type of operation.

As to gas pipelines regulated by the Federal Power Commission (FPC), SB 105 provides in Section 43.20.013(d) that

taxable income shall be determined in accordance with reporting procedures established by the FPC. Here again, there is a departure from normal application of income tax principles because a gas pipeline, though regulated, is really no different from any other taxpayer insofar as having income tax principles applied to its operations. The regulation and rate-making process of the FPC fully takes into account a gas pipeline's handling of its operations where that pipeline utilizes the provisions of the Internal Revenue Code to achieve tax savings for the benefit of not only its customers but also its shareholders.

Finally, I would like to say a word about Section 43.20.015 which deals with "Public Reporting." Under that provision the Commissioner of Revenue is to compile and transmit to the legislature each year an annual report which shows the tax paid under SB 105 together with the itemized deductions that have been allowed and how much tax revenue was not collected because of the deductions. Further, the report is to provide a summary of the total amount of oil and gas produced by each taxpayer, the taxable income as calculated under Section 12 and 13 relating to oil and gas income and pipeline transportation in Alaska, and the out-of-state income of the taxpayer apportioned to Alaska.

In short, SB 105 would open up for general scrutiny without safeguards of confidentiality the whole operation of the oil and gas producers and pipeline operators in Alaska. I would hope that we haven't progressed to the point in this country where a

taxpayer's returns have become a matter of public record. I doubt if anyone would consent to having their tax return information bundled up by the tax collector to be laid bare for anyone to review. There are strict rules in all states and at the federal level covering disclosure of tax return information, and there are ways whereby certain limited groups of people having a legitimate interest can obtain that information on a strictly confidential basis with criminal sanctions imposed for violations. But under SB 105, the information could be made available to a large number of people where there are no guidelines whatsoever over disclosure. Such a provision is one that simply should not be tolerated no matter who the taxpayer may be.

HB 322

The next bill I wish to discuss is HB 322. This is the Department of Revenue's bill which adopts the recommendations of Professors Zeifman and Ainsworth. Essentially, this bill has the following features:

1. Impose a franchise tax on oil and gas producers operating in Alaska who have gross receipts of $250 million or more.

2. The income base to be taxed would be the higher of (1) pre-tax book income as reported to stockholders before any reduction by reason of taxes on income, or (2) taxable income under the Internal Revenue Code.

3. Apportion the pre-tax book income under item 2 by means of a three-factor formula where the property and payroll factors are the same as now contained in the Multistate Compact but the sales factor in the Compact would be replaced by an extraction factor. Such extraction factor would be the ratio of oil and gas produced in Alaska (expressed in BTU's) to total production of the taxpayer everywhere.

Thus, there are two main themes to HB 322: tax base changes and apportionment factor changes. Such changes are the same changes discussed and recommended by Professors Zeifman and Ainsworth in their testimony earlier this week.

Professors Zeifman and Ainsworth would reject federal taxable income as a tax base because the Federal Internal Revenue Code contains many deductions, credits and exclusions which they allege have diluted revenue-raising potential through subsidization of of some activities while discouraging others.

In their report, though not mentioned except briefly in their testimony, the professors attempted to demonstrate how the revenue raising potential has been eroded and referred to the concept of "tax expenditures" which, in essence, is simply a listing of those items or categories constituting deductions, credits, or exemptions found in the Internal Revenue Code, together with the estimated effect they have on revenue collected. This listing is required to be published each year under the

Congressional Budget Act of 1974. However, instead of discussing and commenting on the more than 75 general categories of items in the published list as they apply to both individual and corporate taxpayers, the professors chose only to extract in their report but six categories, and only one of the six (expensing of exploration and development costs) applies specially to the petroleum and mining industry.

I have here the complete listing of "tax expenditures" for the Fiscal Year 1978 which also shows those "tax expenditures" for years 1976 and 1977. A copy of this listing is attached. There are two columns for each year, one for corporations and one for individuals. A review of both the number of categories listed as well as dollar amounts will reveal that individual taxpayers indeed have fared very well compared with corporate taxpayers. It will also be noted that there are only two items relating specially to the petroleum industry. One deals with the expensing of exploration and development costs, which, from the testimony of the professors as well as Mr. Kilgore, one would think was the major provision in the Internal Revenue Code but which in reality represents a rather small item compared to other items in the listing. In fact, that item has a revenue loss effect about equal to the loss from the credit allowed for buying new homes. The other category deals with the excess of percentage depletion over cost depletion. But this latter item applies to over 100 different minerals which involve percentage depletion--oil and gas being but one category. In any event, percentage depletion has

negligible application to major oil companies because of the severe restriction of percentage depletion for oil and gas resulting from the 1975 Tax Reform Act. The professors' attempt in their paper to show the petroleum industry as a highly favored industry that receives a major share of tax benefits is simply incorrect.

After leveling a finger at corporate taxpayers generally, the professors then recommended that one special group--namely oil companies--be singled out for tax "reform". However, the professors failed to discuss either in their paper or their testimony the inequity or possible legal problems of proposing a "book income" base for major oil companies which would be far different than would apply to any other class of taxpayers. They did not even mention in their report that no state in the country has a law utilizing "pre-tax book income" as a tax base though questioning by the Committee did bring out this information.

Even if one were to agree with the novel approach suggested by Professors Zeifman and Ainsworth and embodied in HB 322, a true advocate of their theory could not logically propose its use with one set of taxpayers and then ignore its applicability to the vast majority of other taxpayers. If such a radical change in tax approach is to be made, then it should apply to all taxpayers under all income tax laws at the same time, with corresponding adjustments of tax rates for all.

An approach which uses the higher of book income before taxes or taxable income can lead to distorted results. Mr. Bonney of EXXON will demonstrate through a simple example how the use of one versus the other could prevent a full recovery of a capital investment and yet tax phantom or non-existent income. Further distortion may result from the inclusion of earnings of non-controlled companies in pre-tax income, as required by generally accepted accounting principles. While the oil companies may be required to report the earnings of their investments in non-controlled companies, they do not determine if or when the earnings of these entities are distributed. Yet HB No. 322 provides for immediate taxation of this income because it would be included within the pre-tax book income reported to stockholders.

Professor Zeifman emphasized the fact that book income is invariably larger than taxable income, thereby showing that big corporations have tax benefits. However, of what real significance is it that a corporation's management chooses to adopt a conservative book accounting method as long as it is consistent in doing so year after year to avoid distortions? Differences between book and tax income due to different treatment has existed for decades under generally accepted accounting principles. For tax purposes the Internal Revenue Service, as well as a company's own auditors, will require a full reconciliation of the taxable income back to the book income and there are extensive schedules in tax returns which do this every year.

The only point Professor Zeifman is making is that under the Internal Revenue Code corporations are permitted certain deductions, or credits, or exclusions which, if taken advantage of, show a lesser "taxable" income than shown on the books if the management chooses to use a consistent method which treats the item differently. But the same thing can be said for all taxpayers, i.e., all taxpayers receive some form of tax treatment which causes their taxes to be less than if the tax law simply taxed the gross dollars received at a specified rate. This can be seen from the "tax expenditures" listing referred to earlier. Pointing the finger at one group of taxpayers as ones who should first go on the chopping block of reform while ignoring others who are not so treated is asking a lot of any legislative body whose duty it is to play fair with its citizens, whether they be corporate citizens or individuals.

Substitution of an "extraction" factor for the "sales" factor

The second main point of HB 322 deals with deleting the sales factor and substituting an extraction factor.

Before plunging into this subject, I believe it would be helpful to give the Committee some background about the traditional three-factor formula utilizing property, payroll and sales, where it came from and why it is used today by most states which tax corporate income. Another reason why this will be helpful is that Professors Zeifman and Ainsworth gave their testimony recommending a change strictly on the basis

that its use will apportion more income and, therefore provide more tax. However, the matter is not quite as simple as the professors have indicated.

When states began taxing corporate income over 50 years ago, there were various formulas used to divide the income. Because there were different formulas, it was not long before disputes arose between states and taxpayers, usually involving the question whether the state was reaching for too much of the taxpayer's income. It is very important to bear in mind all the way through the discussion of this subject that a state can constitutionally tax only that income of the taxpayer which is derived from within the state's borders. Thus, the search has always been to find a formula which gives both the taxpayer and the state fair treatment. But as to the taxpayer who operates in more than one state, the problem has also been to utilize a method of dividing income which does not subject the taxpayer to multiple taxation.

It is not difficult to see how multiple taxation can occur. Suppose X corporation operates in states A, B, and C, each of which has the same standard three-factor formula of property, payroll, and sales and each of which has an 8% income tax rate. In would be rare if X corporation had exactly the same mixture of property, payroll, and sales in each state. However, when each of the three states apply their tax laws and divide the income under their uniform formulas, X's total tax to all three states will be no more than 8% of its total income.

But let's vary the example just slightly and assume that in state A, X corporation has a heavy concentration of property and payroll but not many sales and that state A decides to delete its sales factor and have only a two-factor formula. In such a case state A will apportion to itself a greater amount of X's income but apportionment to States B and C will remain the same. The result will be that an amount greater than X's total income will be apportioned in the aggregate to all three states and X will have been subjected to multiple taxation because State A broke the uniformity.

The foregoing is a simplified example but nevertheless demonstrates how multiple taxation can result. As noted earlier, disputes over income taxation existed for decades and it was not until 1957 when the Commissioners on Uniform Laws in conjunction with the tax section of the American Bar Association and many other interested parties finally wrote a model law known as the "Uniform Division of Income for Tax Purposes Act" (UDITPA) in the hope that states would adopt it and thus put an end to the chaotic condition that existed. The apportionment formula settled upon utilized property, payroll and destination sales. Underlying this three-factor theory of apportionment is the concept that the employment of capital in the form of property, labor as reflected in payrolls and ultimate sales to generate the sustaining revenues for the business are all vital factors to be given equal weight in determining income. Thus, the theory recognizes that in a true economic sense some part of taxable income is earned at every stage of the business process.

To date, about one-half of the states (including Alaska) have adopted UDITPA and all but two states which impose an income tax use the three-factor formula of property payroll and sales.

The UDITPA model law only deals with apportionment of income and does not contain provisions setting forth rules or procedures whereby a state cooperates with other states to administer income taxation on a joint basis. In an effort to promote uniformity of tax rules and cooperation, a number of states formed what is now called the Multistate Tax Compact. However, a state which adopts the Compact also adopts the three-factor division of income formula based on the UDITPA model law. Alaska adopted the Compact in 1970 but followed the UDITPA formula before 1970. Hence, states which have adopted the Compact and states which simply follow the UDITPA rules have compatible laws.

With this brief background let me turn to the proposal to delete the sales factor and impose an extraction factor. The nub of the professors' argument is that the sales factor is low due to destination sales which causes lesser apportionment of income to Alaska and this can be cured by substituting an extraction factor. Thus, the sales factor is dismissed by the professors and the reader of their paper and the audience to their testimony is simply left with a conclusion void of any reasoning except maximizing revenue.

There was a sound reason for the UDITPA and Compact treatment of sales on a destination basis for purposes of the "sales" factor. A destination sale is one which occurs in a state if goods are

delivered in that state or services are performed in that state. Suppose a manufacturer has its plant in Illinois and has a large payroll at that plant. From this plant the manufacturer ships most all of his products to purchasers in other states. If this is the only plant, the property and the payroll factor to Illinois

will be high and if the sales are attributed to the Illinois plant as the origination point of the sale, then Illinois would apportion nearly all the income for taxation in Illinois. As can be seen from this simplified example, the major manufacturing states would receive an unreasonably high proportion of apportioned income to the detriment of non-manufacturing states. Hence, the "destination" sales concept is one which not only affords protection to less populated, non-manufacturing states, such as Alaska, but also gives legitimate recognition to sales activity in consumer states by deeming the sale to "occur" where the purchase takes delivery.

What the professors have proposed as a factor change is no different from what they might propose in any state based upon simple reasoning to get more revenue, the only difference being that in such other states it might be a different factor which provides the key. For example, they might shift their proposal to Illinois or Pennsylvania to point out that its sales factor also is destination-oriented and because most products are shipped out-of-state, the ratio of sales in either of those states will be lower. The professors could then recommend that the "destination" sales factor be changed to an "origin" sales factor or that the sales factor be deleted in favor of one based on manufactured units (e.g., television sets) in the state to total units manufactured everywhere. By such changes, those states could then command most of the apportioned revenue since, being manufacturing states, they already have the bulk of property and payroll and, through the sales factor change, they could prevent

dilution of the total factor to be used by the taxpayer.

But suppose it was some state which did not have heavy manufacturing (i.e., low property and payroll in the state)? Under the professors' reasoning this might call for use of only a sales factor -- i.e., destination sales and not origin sales because only the former would help the state (in contract to what was said above as being in the "best interests" of Illinois or Pennsylvania). By so limiting the formula to a single factor, the non-manufacturing state maximizes apportionment of income to the state.*

The foregoing are only two examples out of many one could establish to tailor apportionment formulas for various states if the only objective is simply maximizing revenue without concern for inequitable or unconstitutional consequences. However, the problems with the examples are parallel to the same problems that are contained in the professors' proposal for an extraction factor. In each instance there is a break in the uniformity of treatment by a state which inevitably results in the taxpayer being subjected to multiple taxation. The state breaking uniformity will tax a larger part of the income by use of its advan-

---

* Recently the Iowa courts struck down as unconstitutional that state's use of a single factor of sales because it was not an adequate measure of the taxpayer's income derived from within Iowa. (Moorman Mfg. Co., Polk Cty. Dist. Ct. No. CE 3-1595 (12-17-76)). Similarly, in General Motors Corporation vs. Dist. of Columbia, 380 U.S. 512 (1965), the United States Supreme Court struck down use of a single sales factor by the District of Columbia.

tageous apportionment factors. Unfortunately, part of that same income will also be apportioned to and taxed by the other states having the uniform apportionment formula.

As noted, the professors have given no reason for use of the extraction factor except that it will raise revenue. Missing is the reasoning why the present factors are not a proper measure of a taxpayer's income within Alaska or, conversely, why use of the extraction factor will give a more accurate measure of that income. Merely saying that oil goes out of the state and does not count as a "sale" in Alaska to its detriment is not good enough because, as shown earlier, any state could analyze its economic position and make the same argument when it observes a resource material or manufactured item being shipped out of the state. If that happened, then clearly the states and taxpayers would be back to the same chaotic situation that existed before the uniform rules of UDITPA and the Multistate Tax Compact were formulated and adopted.

To satisfy constitutional requirements, an apportionment formula must fairly and reasonably measure a taxpayer's net income in the particular state since a state has jurisdiction to tax only that income derived within its borders. The professors and some Alaskan critics of the present three-factor formula have simply looked at the oil production aspects of the business of a multistate oil company operating in Alaska but apparently wish to ignore the other part of the business where that oil has to be transported, refined into products, distributed and sold.

In fact, the bulk of such a company's employees and a large portion of its investment lie in these phases of the business. Moreover, the revenue which pays for the expenses of company operations is generated mainly out of the sales of refined products.

The concept of income taxation is the taxation of the overall profits of an enterprise which may have many parts in many states but all of which contribute to the ultimate profit or loss. In devising a formula to measure income for apportionment, the drafters of the UDITPA model law were not being arbitrary when they settled upon use of property, payroll and "destination-oriented" sales. They were looking for a formula which not only contained elements reflecting as many aspects or segments of the business as possible but also for a formula which could be easily and uniformly administered and which provided equitable treatment to states as well as taxpayers. Using these guidelines, the drafters found that property, payroll and sales provided a balance of factors reaching and reflecting the essential elements of any manufacturing or mercantile business.

There can be no doubt that the author's solution fails to protect the taxpayer from multiple taxation but, rather, actually creates it. While this is reason enough to reject use of the extraction factor, it also is clear that use of this form of factor in place of a sales factor reduces the segments or sectors contained within a business whose operations are reflected in the formula. Sales from all phases of the integrated business are the sustaining element of the business without which the business fails, and such sales reflected in the sales factor

are drawn from the total business. Units of petroleum extracted are important to the business too but represent operations pertaining to only one segment or phase of an integrated petroleum company's total business.

While crude oil extracted may have a value at the point of production, that value exists only because of consumer demand for products produced within other equally important phases of the business consisting of refining, product transportation and marketing distribution. In this regard, oil production in the case of the oil industry is not unique and the same reasoning can be applied for iron ore in connection with steel making, for raw timber in connection with finished wood products, or even for grapes grown for winemaking since in each of these cases the raw product can be viewed as having been "extracted". In all these cases, as well as with the oil industry, the "extracted" material undergoes a complex transformation into products resulting in sales revenues only after having been acted upon by other necessary phases of the business containing most of the taxpayer's employees and containing facilities representing a substantial part of the taxpayer's invested capital, both of which are distinct from the "extraction" phase yet still a part of the overall operation of the enterprise.

By using an extraction factor in place of a sales factor the whole element of sales which sustain the business for its survival are disregarded. Units of oil and gas produced is simply not a proper measuring factor and, as will be pointed

out in an example by Mr. Bonney of EXXON, the substitution of an extraction factor can result in a distorted attribution of "downstream" income from transportation, refining, marketing, etc. to Alaska which can result in the taxpayer having income taxed twice.

From the foregoing it can be seen that substituting an "extraction" factor for the "sales" factor actually distorts rather than improves the measurement of net income of the total enterprise attributable to or derived from within a particular state. What it does is provide a change to "maximize" revenue which is not a goal of formula apportionment when done at the expense of sacrificing the other principles which lie behind the concept of apportionment

I would like to say a word about the provision in HB 322 which the professors recommend as being a basis for Alaska including OCS property, payroll and extracted oil and gas as its own factors when the OCS property is dependent upon on-shore Alaska operations. The professors were certainly correct in saying that there may be problems. However, they failed to point out that section 1333 of Title 43, which deals in part with state laws applicable to the OCS area, contains rather troublesome language for a state attempting to extend its tax laws to the OCS area. Section 1333(a)(2) contains the following sentence:

> "State taxation laws shall not apply to the Outer Continental Shelf."

At least one state, California, has looked deeply into this matter of whether California, could consider the OCS developed area as providing property, payroll and sales factors for use by California, i.e., the same consideration being recommended by Professor Ainsworth. The California Franchise Tax Board in Legal Ruling No. 366 has held that California cannot claim property, payroll and sales in the OCS area for California's benefit, i.e., California cannot put these factors in the numerator for California. There is attached to my testimony copies of the pertinent federal statute referred to above, along with a copy of Legal Ruling No. 366 of the California Franchise Tax Board.

SB 202

SB 202 is basically the same bill which was considered in the 1976 session as SSSB 620. The main difference between the bills is that under SSSB 620 the net proceeds tax was a credit against regular corporation income tax insofar as that corporation income tax would represent tax on income from oil production taxed under SSSB 620; under SB 202, the taxpayer also remains subject to the Alaska corporation income tax but is deemed to be exempt only to the extent of income earned from production of oil in the state. In short, under SSSB 620 there was an actual credit against the Alaska corporation income tax but the net proceeds tax credit was only applicable against that part of the corporation income tax which was applicable to income from Alaska oil operations. Under SB 202 there is no credit as such but the taxpayer who apportions income to Alaska is simply not

taxed on income deemed to come from Alaska oil production.

As some of the members of this Committee know, I testified on SSSB 620 last year and pointed out what I believed to be the deficiencies in that bill. That testimony is no doubt still available in the Committee files and I do not propose to go into all the details of the bill again. Rather, I shall have some general comments on the bill and point out how this bill impacts on the taxpayer, as well as point out some of the legal problems with its operation.

The "net proceeds tax" contemplated by its proponents has features of an income tax in that it attempts to reach a level of "income" or "profitability" from successful oil and gas production operations with a tax rate applied which is equal to (or higher than) the regular Alaska corporation income tax rate (i.e., 9.4%). Essentially, the tax would be determined by subtracting from the wellhead value of oil and gas production certain limited costs and expenses directly associated with production and multiplying the difference by the corporation income tax rate of 9.4%.

Proponents of the "net proceeds" tax have chosen to label it as an "ad valorem" tax rather than an "income" tax. However, in substance and operation the tax is unquestionably a form of income tax and merely calling it by another name cannot change that fact.

Because the "net proceeds" tax approach is itself a form of separate accounting, taxpayers will be exposed to multiple

taxation under that approach for the same reasons as discussed in connection with SB 105. In fact, the economic effect to a taxpayer would be even more adverse since the goal of the "net proceeds" tax is simply to isolate successful Alaskan oil and gas producing operations, allow a very limited amount of deductions closely and directly associated with production, and tax the resulting "net proceeds" at the corporation income tax rate (9.4%) as though those "net proceeds" constituted net income of the taxpayers.

Proponents of the "net proceeds" tax in the past have admitted that the "net proceeds" to be taxed would represent a tax base which is higher than would occur under regular principles of income taxation applicable to other taxpayers. Hence, the economic effect is that Alaska would place a tax (at the 9.4% corporate income tax rate) on a level of income (but called "net proceeds" instead of "income") which is much higher than would result under regular income tax principles, and that same income (or at least a certain level of that income) would be included in the base subject to apportionment to other states and taxed by them because they use the standard three-factor apportionment formula.

But the adverse effect of the "net proceeds" tax approach would not stop there because under that approach the same taxpayer would still be subject to the regular Alaska corporation income tax. SB 202 would still require the taxpayer to apportion to Alaska under the three-factor formula all of the tax-

payer's income from outside Alaska, including its non-Alaska oil and gas income. Thus, SB 202 would provide Alaska with the best of all worlds: it would receive a tax at the 9.4% corporate income tax rate on Alaska "net proceeds" which would constitute a tax base much higher than under regular income tax principles and, through apportionment, it would also seek to reach all of the taxpayer's income from outside Alaska as well as any non-oil and gas income from within Alaska.

The concept of the "net proceeds" tax which would operate in substance like an income tax raises a legal question whether the method would permit the state to tax a greater amount of net income than reasonably could be attributed to Alaska.

Proponents of the "net proceeds" tax have claimed that a "precedent" exists for such form of tax and have cited the states of Nevada, Utah, Colorado, Idaho, Montana, and New Mexico as examples. However, a review of the statutes in those states reveals that the "net proceeds" tax has nothing whatsoever to do with a scheme to tax income such as that being advanced by the proponents of the "net proceeds" tax. Rather, the "net proceeds" involved in the states referred to are simply convenient and simplified means of arriving at a value on mining or oil properties for purposes of applying property tax rates by local county assessors in order to provide property tax revenue in the local counties. Such a method is essentially a substitution for the rather sophisticated and complex valuation procedure that would otherwise occur each year, such as the complex

valuation of the Prudhoe Bay field for purposes of applying the reserves tax in Alaska.

It is safe to say that no state in the country imposes a "net proceeds" tax of the type the proponents in Alaska have in mind.

I would now like to direct my comments to the Legislative Council's proposed production tax changes incorporated in the identical bills, SB 103 and HB 144.

DESCRIPTION OF THE BILL

As discussed yesterday, the proposal would:

a. Change the point where the taxable value of oil is determined from the "well" to the point where "oil is first metered or measured in a condition of pipeline quality".

b. Realign the stepped tax rates, lowering the tax on the first 1,000 bbls per well per day and substantially raise the tax on all production over the first 1,000 bbls with a high rate of 14% on all production exceeding 3,500 bbls per day.

c. Use lease or property averaging in determining each well's daily production.

d. Tax flared gas at 5 times the normal rate.

e. Advance the monthly tax due date to the 20th day of the month following production.

COMMENTS

1. Adoption of lease or property averaging of daily bbl. per well production is a step in the right direction in properly ascertaining the stepped tax rates applicable to a field. The change, of course, will aid both the taxpayer and the state administratively.

2. The resultant increase in the overall industry tax burden (estimated by the Legislative Affairs Agency to be about $180 million per year by 1980) is completely unwarranted, considering the question of need which others have already addressed and considering the fact that Alaska oil is already being taxed at virtually the highest level in the nation. The limited benefit given to the lower producing fields in Cook Inlet in no way should be considered as justification (or a basis of consistency) for placing such a harsh extra tax burden on high producing wells in the North Slope or any other location. This approach portrays the concept of taxing the taxpayer at a high level, not on the basis of state governmentel need, which we believe to be grossly unfair.

3. Retention of the alternate cents-per-barrel rate floor with its wholesale price index adjustments more than counteracts any true benefit out of reduced rates given low Cook Inlet producing wells through percentage rate reduction. As Levy Associates has maintained, this minimum price-setting device has created an artificially high value on the old Cook Inlet oil for tax purposes, resulting in an effective tax rate well in excess of what we believe was intended by the legislature on such oil. The last time I reviewed the situation--which was about a year ago--the cents-per-barrel feature of the severance tax had caused Union and other companies for which it reports severance tax to pay about

$5 million more than would have been paid under the percent-of-value method. We view this amount as simply an unintended windfall benefit to the State since January 1, 1974, the date the current cents-per-barrel tax took effect.

4. We do not see any justification for imposing a penalty rate (5 times normal rate) for flared gas, considering the fact that such flaring controls are best placed with regulatory agencies, not taxing agencies. If proper regulatory authority exists to flare gas, such as for safety pruposes, there is no justification for adding tax at a confiscatory rate to a product that the producer loses through flaring where that flaring is done for reasons of safety.

5. Moving the point of measurement of production value downstream to the point of metering in a condition of pipeline quality could unjustly place a substantial tax on transportation costs on some fields which for a variety of reasons require movement of oil significant distances before measurement. Since the Alaska Production Tax is an occupation tax on the privilege of severing oil and gas, it would be more appropriate to continue measuring it by its value at the point of severance, i.e., the wellhead, instead of adding on to it incremental values of gathering, transportation and field treatment.

6. Advancing the delinquent date for payment from the first of the month following the month of production to the 20th day of the month following the month of production would place

an undue administrative strain on the reporting groups within the various producing companies. In most cases, the production data to calculate tax liability and prepare returns must be transmitted to offices outside Alaska. Advancing the delinquent date by 10 days will simply make worse an already short time open to comply with the law. By advancing the reporting time 10 days, the State, overall, only gains a total of 10 days for revenue collection which seems inconsequential compared with the added administrative burden on producers.

My next comments pertain to HB 321 and SB 238, identical bills, which contain the Administration's recommended changes to the oil and gas production tax.

Briefly, the bills would replace the present stair-stepped tax rates on oil production per well with a single rate of 10% on value or one alternative minimum cents-per-barrel rate of 75 cents (adjusted for gravity and for changes in the "Gross National Product Deflator").

Also, the 4% rate on gas would increase to 10% with a new alternative minimum tax of 6.4 cents per MCF. The new percentage rate and cents-per-unit rates would be adjusted by an "economic limit factor (ELF) discussed later.

The proposal also makes other changes, including changing the point of measurement from the wellhead to the point of measurement of pipeline quality. The proposal also imposes a double rate of tax on flared gas.

We strongly oppose perpetuation of cents-per-barrel floor prices and expansion of it to gas production, as well as increasing the minimum price to which it relates, that is, $7.50 per barrel. As Milton Lipton has advised, the current floor as escalated by the National Wholesale Crude Price Index has worked in unintended ways on Cook Inlet Crude, creating an artificial taxing value well in excess of the value permitted by the FEA on old oil. Now the Administration not only recommends continuance of the minimum price concept but also proposes to increase the minimum price to $7.50 per barrel.

The Administration supports this course with the argument that the FEA price is artificially low. But the oil companies producing such "old" oil nevertheless suffer the economic realities of federal pricing. Accordingly, we believe it is unfair that in addition to bearing such economic loss in price, the Cook Inlet producer must also bear an increase in production tax because of an arbitrary floor of $7.50 per barrel used as the measure of tax. This, of course, would be equally true on the North Slope if the FEA placed a value below $7.50 on that production. We fail to see any justification for the State to arbitrarily burden the production with such a heavy production tax through an artificially set value because of the possibility that FEA pricing decisions may not be favorable.

As mentioned above, HB 321 introduces the concept of an Economic Limit Factor (ELF) as an adjustment to the percentage rate of tax applied to both oil and gas. According to the Department of Revenue's February 1977 study, the Department believes that the present "stair step" rate schedule does not adequately take into account differences in the economic conditions existing from field to field, e.g., a well producing 1,000 bbl/day at one location may be marginal while such a producing rate at another location may be profitable. In short, the stair-step approach is deemed defective because it does not adequately protect against excessive taxation as a well approaches its economic limit.

To correct this, the Department proposes an ELF, the calculation of which begins by determining a fraction the numerator of

which is the "monthly production rate at the economic limit" and the denominator of which is the production during the month for which the tax is to be paid. Under HB 321, the numerator is by statute deemed to be 100 barrels times the number of well-days. Well-days are by definition the number of days a well is operating. Thus, if there were 10 wells on a lease operating for 28 days each, the numerator would be 100 X 10 X 28 = 28,000 bbls. If the total monthly production on the lease was 280,000 bbls, the ratio would be 10%, or expressed as a decimal, .10. The next step in determining the ELF is to reduce "unity", i.e., 1.00, by the ratio expressed as a decimal. Thus, 1.00 less .10 = .90 = ELF.

The best way to explain how the HB 321 mechanism works is through a simplified example, a copy of which is attached. The example uses Cook Inlet production of 35° oil at a $4.85 per barrel controlled price. Under the bill, one of the adjustments is a half-cent for each degree above 27°, so 4 cents is added to the 75 cents. The GNP Deflator adjustment is ignored. The statutory presumption of 100 barrels is the numerator and 1,600 barrels is the denominator which gives a decimal of .0625, and when subtracted from 1.00 gives an ELF of .9375. Both the cents per barrel of 79 cents and the 10% rate are multiplied by .9375 to find the adjusted cents-per-barrel and percent-of-value rates. Next, the royalty of 200 barrels is subtracted to find 1,400 non-royalty barrels. Finally, the 1,400 barrels are multiplied by the value of $4.85 and then by 9.375% to find the tax under the percent-of-value method, and are multiplied by $.7406 to find the tax under

the cents-per-barrel method. Since the tax of $1,036.84 is the higher (i.e., under the cents-per-barrel), that tax is the one that would be payable.

At the bottom of the example the tax under HB 321 is compared with the tax produced on the same production if it occurred this month (March 1977) under current law. As shown, the increase is about 60%. Also at the bottom of the example it is shown that the effective rate of the production tax under current law would be 9.5% but 15.3% under HB 321. While not shown if the production rate had been 800 bbls/day instead of 1,600, the increase in tax over the current tax would have been around 75% instead of 60%.

As mentioned earlier and used in the example, the monthly production rate at the economic limit is, by statute, presumed to be 100 barrels times well-days unless the producer in a formal hearing proves by "clear and convincing evidence" that it is otherwise. However, in proving this, HB 321 contains some rather curious and questionable ground rules which do not track with reality. These provisions are found in subsections (b), (c), and (d) of Section 43.55.013. In essence, the "average monthly direct operating cost" (based on at least 4 consecutive months) is divided by the value at the point of production of oil which is produced from the lease, but this "value" is not the value the producer actually gets but, rather, that value which is deemed to be the value of comparable crude at West Coast refineries for imported oil which is then "backed out" to the wellhead.

Translated, the "value" used to divide into the monthly operating costs is, for Cook Inlet, Indonesian Crude laid into Los Angeles at about $14.50 per barrel. When the $14.50 is "backed out" to the wellhead, the value at the wellhead is about $13.50. Thus, it is not the $4.85 real price used to calculate "monthly production rate at the economic limit" but, rather, $13.50.

While that is bad enough, with regard to the "direct operating expenses allowed", the bill only allows four: drilling supplies, fuel, routine maintenance and wages and benefits of employees working on production operations. Specifically excluded are capital expenditures, tangible or intangible drilling expenses, costs of well workovers, costs for repairs or replacements (other than routine maintenance), depreciation or amortization, taxes, insurance, overhead, or monies paid or set aside to cover the cost of terminating operations, i.e., abandonment costs.

Allowing only four listed costs is not realistic because there are cash operating costs not allowed but which are tied to operations versus no operations. Any cash cost which would be affected by a decision to operate or not operate is the realistic approach and more in line with the way it would actually be approached by a producer in a true situation. HB 321 would even deny severance taxes on the production itself and property taxes on the equipment. In short, "economic limit" is that point at which actual revenue and actual costs are equal.

I requested Union Oil's oil and gas division engineers to run some calculations using real data as a test. Doing it in the

normal way, our people used the realistic value of about $4.85/bbl for value and the real operating costs to get an ELF of about .67. But by using $13.50 per barrel as a value and limiting the costs to the four categories the ELF was around .92. We also made a rough comparison of the taxes under HB 321 compared with taxes paid in 1976 and found that the tax on oil production would have been increased by about 50% if HB 321 had been in effect in 1976.

HB 321 also contains an ELF for gas production though it is not totally clear under the bill language how this is computed. In any event, the principle is the same and the same four direct operating costs are used but the value used for gas is the highest price in the field or within 100 miles.

With respect to gas production, the minimum of 6.4 cents per MCF is especially onerous, since gas is customarily sold under long term contracts and those contracts may not permit the seller to receive a value which happens to be the highest price on the lease on "within 100 miles". The 6.4 cents minimum tax is equal to 64 cents gas at a 10% rate, but there are contracts of sale for gas where the price is much less than 64 cents. Hence, the effective rate of tax on gas is much higher. For example, if gas were sold at 42 cents, the tax would nevertheless be the minimum of 6.4 cents (assuming no ELF applied) which would equate to an effective rate of tax of 15.2%.

With respect to the proposed gas rate increase--while admittedly the gas tax rate might warrant some degree of increase, the severity of this proposal is overreaching. We would suggest that any value tax on gas be based on actual sales price at the

sales meter. We would discourage taxation governed by an artificial floor price or by what some other producer may be receiving for his gas in some other field.

For flared gas, the rate is doubled, i.e., 12.8 cents. Even gas used for safety flaring necessary to safe operations would be taxed, which cannot be justified by any standard. We oppose this double tax for the same reasons as stated in the discussion under SB 103.

In summary, while there is merit to the concept of an economic limit factor, the manner in which it is determined under this bill is unrealistic and virtually meaningless. It seems to me a lot more thought has got to go into it before it can be a worthwile mechanism. The way it is set up now--with questionable use of phantom values and restricted costs--an ELF so determined could have other consequences beyond just severance tax because the concept of economic life of a field is one used in valuation for property tax too. If economic lives of oil or gas properties as used for property valuations are to be determined using the methods for the ELF for severance tax purposes, then the stage is further set for endless arguments and disputes over property values as well as in connection with the ELF itself.

I would next like to comment on the Administration Sponsored Bill, HB 323.

This bill proposes several amendments to the so-called "20-Mill Hardware Tax", and certain provisions of Title 29, governing municipal taxing limitations.

Section 1 would add to the statute a highly controversial amendment to regulation 15 AAC 05.840 which was issued by the Department of Revenue in June 1976. This provides that any municipal tax levy, say for bonded debt, which is in excess of the $1,500 per capita limitation is not creditable against the 20-mill tax.

We take direct exception to this provision in that AS 43.010(a) quite clearly provides for a maximum tax of 20 mills on our state-assessed properties. This issue is presently being litigated in a case involving the 1976 tax levy of the North Slope Borough. It would seem appropriate to let the court rule on this important issue rather than to amend the statute at this time.

Heretofore, the state 20-mill tax has applied to exploration, production, and pipeline transportation properties. HB 323 would extend this tax to refineries, liquefaction or processing plants, plants manufacturing oil or gas products and also to tankers and other marine equipment used in the transportation of oil and gas.

We believe it inadvisable to enact any further extension of this special state property tax imposed upon oil and gas producers.

The taxable basis on the marine equipment is specified as replacement cost less depreciation based on useful life multiplied by a fraction of days in Alaska ports over days in port both within and without the state. This proposal raises serious questions in

that it is believed that only the home port, under long standing case law and practice, has taxing jurisdiction over ocean-going vessels.

Aside from the "home port" doctrine, and assuming that Alaska could legally assess these properties, we would suggest a more equitable formula. One possibility would be use of days in Alaska ports versus days in the year.

Due to the controversial nature of this issue, however, we would respectfully urge that this section of the bill be stricken, irrespective of what action is taken on the remainder.

HB 323 additionally would delete the existing provision for using straight line depreciation of historical cost on pipeline assessable values in those instances where the physical life of the pipeline materially exceeds the economic life of reserves committed thereto. As a consequence, pipelines would be assessed with regard to "economic" value based on the economic life of committed reserves.

This issue is being litigated in the Cook Inlet Pipeline Co. case and it would seem appropriate to let the court rule on the issue rather than amending the statute. It is further believed that the existing law and Regulation 15 AAC 05.890 pertaining thereto are sufficiently workable to develop assessments for operating pipelines which will be fair and reasonable, both for the state and the taxpayer.

Section 8 of the bill provides that the municipal taxing limitation of $1,500 per capita shall be adjusted each year in accordance with changes in the Consumer Price Index for Anchorage.

Assuming that the $1,500 per capita levy is reasonable, it would likewise be reasonable to key it to an inflation index.

Section 12 makes the provisions of HB 323 retroactive to January 1, 1977, except for tanker assessments which begin January 1, 1978. This retroactive provision seems peculiarly unreasonable in view of the fact that the 1977 tax returns have been filed and assessment notices have been issued by the Department.

I will now turn to House Bill Number 328, the Administration's proposal on the Oil and Gas Reserves Tax.

The Reserves Tax was enacted for a two year period, 1976 and 1977, for the purpose of meeting anticipated revenue shortfalls for Fiscal Years 1976 and 1977. The statutory tax rate for 1976 was 20 mills (2%) and the 1977 tax rate was set by the 1976 legislature at the same rate -- 20 mills. Reserves Taxes paid in 1976 were $223 Million and in 1977 are expected to total approximately $270 Million.

In Fiscal Year 1976, because of the Reserves Tax revenues and increases in other revenue sources, unrestricted general fund revenues exceeded expenditures by approximately $125 Million, leaving a surplus of $505 Million, of which $338 Million was available for appropriation at 6/30/76. Revenues in FY 1977 are also expected to exceed expenditures, thereby increasing the surplus.

HB No. 328 proposes to reduce the 1977 tax rate from 20 mills to 12 mills, reducing the revenue from this tax from $270 Million to about $170 Million, but subject to the following:

(1) If on October 1, 1977, TAPS thru-put is less than 600,000 bbls/day, an additional 8 mills would be levied, payable November 30. 1977.

(2) If on December 15, 1977, TAPS thru-put is less than 1.2 Million bbls/day, the Reserves Tax would be extended another year.

While the prospect of a reduced tax rate is always welcomed, we question the propriety of the limitations mentioned, which limitations are so specific and restrictive.

Present indications are that the Prudhoe Bay Field will start delivering oil to TAPS reasonably close to schedule at mid-1977. It seems unreasonable that some minor variance from the restrictive provisions of this bill could cause the tax rate to be increased and possibly for the Reserves Tax to be extended another year.

Accordingly, we believe that the Reserves Tax should expire, as scheduled in the existing statute, at the end of 1977. However, we certainly agree that the 1977 tax rate can be reduced to 12 mills, since the 1978 budget can be met with no difficulty and the 1979 budget as well unless there were some serious, prolonged delay in TAPS startup. This reduction would certainly be consistent with the original intent of the reserves tax which was to help the state over a potential period of deficit in the General Fund.

LAWRENCE L. WILSON

SPECIAL ANALYSES BUDGET OF THE UNITED STATES GOVERNMENT

FISCAL YEAR

1978

repeal of all itemized deductions resulting in tax expenditures. This hypothetical revenue gain would be $21.2 billion in 1978, whereas the simple sum of the tax expenditures for each separate item is $31.3 billion. The estimate for the combined effect of all such deductions was derived from a model of the tax system that accounts for the interaction between tax expenditure provisions and the provisions of the normal structure. In particular the model provides that individuals would take the standard deduction if itemized deductions were repealed. No comparable estimate can reasonably be made for the combined effect of a hypothetical repeal of all exclusion provisions.

A few aggregations of related tax expenditure items are presented and discussed in the next section. These aggregates have been specially estimated so as to account for the interactions referred to above but do not consider the effect of changes in behavior. Where tax expenditures for both individuals and corporations result from the same tax code provision, such as the investment tax credit, the two estimates may appropriately be added together.

Tax Expenditures by Function

Estimates of tax expenditures are grouped together by functional category and presented in table F–1. The estimates are shown separately for individuals and corporations. Wherever possible, particular tax expenditures have been classified according to the functional categories used for budget outlays. Many tax expenditures do not, however, fit into these categories and for this reason three special functional categories have been added: business investment; personal investment; and other tax expenditures.

A brief description of each of the special tax provisions for which a tax expenditure estimate is shown in table F–1 follows.

National defense.—The supplements to salaries of military personnel, including provision of quarters and meals on military bases and quarters allowances for military families, and virtually all salary payments and reenlistment bonuses to military personnel serving in combat zones, are excluded from tax. Disability-related military pensions received by current retirees are largely excluded from taxable income. The Tax Reform Act of 1976 terminated the exclusion of noncombat related disability pensions for those who entered the armed services after September 24, 1975.

International affairs.—Prior to 1976, a U.S. citizen was generally able to exclude up to $20,000 a year of foreign earnings if the taxpayer were a bona fide resident of a foreign country. After 3 years of foreign residence a taxpayer could exclude up to $25,000 a tax year of foreign earnings. The Tax Reform Act of 1976 modified these provisions, limiting the exclusion to $20,000 only for employees of U.S. charitable organizations and reducing it to $15,000 for all others, denying tax credits for foreign taxes paid on excluded income, and taxing income beyond the amount eligible for exclusion at the higher bracket rates which would apply if the excluded income were also subject to tax. The estimates also reflect the tax-exempt status of certain allowances received by Federal employees working abroad.

[1] All estimates are based on the tax code as of Dec. 31, 1976.

The 1976 Act repealed a special provision for U.S. firms operating in a less developed country (LDC). When a foreign subsidiary of a U.S. corporation operating in a LDC repatriated dividends to its parent corporation, that income could, under prior law, be reported net of foreign income taxes paid. U.S. tax liability was then calculated on that net amount and the foreign tax taken as a credit. For non-LDC corporations, foreign source income must now be "grossed up" by adding back in an amount equal to foreign taxes paid. Under prior law the failure to "gross up" dividends by the amount of the foreign taxes paid to LDCs resulted in a tax expenditure.

The profits of a domestic international sales corporation (DISC) are not taxed to the DISC but instead are taxed to the shareholders when distributed to them. This deferral was available for 50% of the export income of a DISC prior to 1976. The Tax Reform Act of 1976 permits DISC benefits to the extent that current export gross receipts exceed 67% of the DISC's average for a 4-year moving base period (initially 1972-75) which will move forward year-by-year after 1979. DISCs with less than $150,000 of taxable income are exempt from the incremental rule. The Tax Reduction Act of 1975 denied DISC benefits to exporters of energy products and the 1976 Act terminated DISC benefits for 50% of military sales.

The 1976 Act phases out the 14-percentage-point tax rate reduction provided under prior law for domestic corporations qualifying as Western Hemisphere trade corporations.

TITLE 43 U.S.C. § 1333

§ 1333. Laws and regulations governing lands—Constitution and United States laws; laws of adjacent States; publication of projected States lines; restriction on State taxation and jurisdiction

(a) (1) The Constitution and laws and civil and political jurisdiction of the United States are extended to the subsoil and seabed of the outer Continental Shelf and to all artificial islands and fixed structures which may be erected thereon for the purpose of exploring for, developing, removing, and transporting resources therefrom, to the same extent as if the outer Continental Shelf were an area of exclusive Federal jurisdiction located within a State: *Provided, however,* That mineral leases on the outer Continental Shelf shall be maintained or issued only under the provisions of this subchapter.

(2) To the extent that they are applicable and not inconsistent with this subchapter or with other Federal laws and regulations of the Secretary now in effect or hereafter adopted, the civil and criminal laws of each adjacent State as of August 7, 1953 are declared to be the law of the United States for that portion of the subsoil and seabed of the outer Continental Shelf, and artificial islands and fixed structures erected thereon, which would be within the area of the State if its boundaries were extended seaward to the outer margin of the outer Continental Shelf, and the President shall determine and publish in the Federal Register such projected lines extending seaward and defining each such area. All of such applicable laws shall be administered and enforced by the appropriate officers and courts of the United States. State taxation laws shall not apply to the outer Continental Shelf.

(3) The provisions of this section for adoption of State law as the law of the United States shall never be interpreted as a basis for claiming any interest in or jurisdiction on behalf of any State for any purpose over the seabed and subsoil of the outer Continental Shelf, or the property and natural resources thereof or the revenues therefrom.

federal regulation invalid or the regulation itself is changed. Accordingly, until such time, retirement benefits payable to disabled San Francisco policemen and firemen, after such personnel has applied for service retirement under the new Charter provisions, are not excludable from gross income under the exclusion formula contained in Revenue and Taxation Code Section 17131(d).

[¶ 205-026] Legal Ruling No. 366.

Franchise Tax Board, December 11, 1973.

Franchise—Corporation Income—Allocation and Apportionment—Taxation of Income Generated by Offshore Oil Operations.—The activities of a unitary enterprise conducting offshore oil operations under federal jurisdiction by reason of the Outer Continental Shelf Lands Act can only be reflected in the denominators of the three-factor apportionment formula. Under the Act, California lacks jurisdiction to tax the revenues derived from the Outer Continental Shelf since it is under exclusive federal jurisdiction. By including the Continental Shelf factors only in the denominators of the formula, no income is apportioned to California.

However, the operation of a drilling barge within California's jurisdiction must be reflected in the California numerators of the apportionment formula denominator.

See ¶ 12-414.

Facts:

Advice has been requested as to the treatment to be accorded to the income earned by unitary businesses, taxable in California, from oil operations beyond the three mile continental limit. The operations considered are:

1. The actual operations of an offshore oil well, beyond the three mile continental limit, conducted from a fixed drilling platform; and

2. The exploring and drilling operations beyond the three mile continental limit conducted from floating drilling barges.

Questions:

For California franchise tax purposes, what is to be included in the numerator and denominator of the apportionment formula with respect to:

1. Activities conducted from fixed drilling platforms which are under federal jurisdiction by reason of the the Outer Continental Shelf Lands Act?

2. Activities conducted from fixed drilling platforms which are within the jurisdiction of a foreign country?

3. Activities conducted from floating drilling barges?

Decision:

See discussion.

Discussion:

1. In 1953 the United States Congress passed the Outer Continental Shelf Lands Act (67 Stat. 462, 43 U.S.C. §§ 1,331 et seq.) which extended the Constitution and laws of the United States to the Outer Continental Shelf, i.e., that property located beyond the three mile limit of state jurisdiction which was established by the Submerged Lands Act (43 U.S.C. §§ 1,301 et seq.). The outer limit of the continental shelf is not established with precision, but rather is marked only by a steep drop of the continental mass toward the ocean deeps. (1953 U.S. Code Congressional and Administrative News, p. 2,178). In some cases this may occur several hundred miles from shore.

Section 1333(a)(1) of the Outer Continental Shelf Lands Act extends federal jurisdiction to all artificial islands and fixed structures erected on the Outer Continental Shelf:

> ... to the same extent as if the Outer Continental Shelf were an area of exclusive Federal jurisdiction located within a State. ...

It is a matter of settled law that no state has jurisdiction to tax in an area of exclusive federal jurisdiction located within a state. *Surplus Trading Co. v. Cook*, 281 U.S. 647, *Standard Oil Co. v. California*, 291 U.S. 242, *James v. Dravo*, 302 U.S. 134. Since Congress extended federal jurisdiction to the Outer Continental Shelf "to the same extent" as if it were an area of exclusive federal jurisdiction within a state, this body of settled law applies with equal force to the Outer Continental Shelf and effectively prohibits the imposition of any state tax on revenues derived therefrom.

The lack of jurisdiction in a state to tax in areas of exclusive federal jurisdiction applies not only to direct taxes but to indirect taxes as well. In *James v. Dravo*, *supra*, the United States Supreme Court was faced with the question of whether "annual privilege taxes" measured by profits from "business and other activities" could be imposed by West Virginia on a contractor working on government-owned land. The Supreme Court stated that this depended upon, "... whether the United States has acquired exclusive jurisdiction over the respective sites. Wherever the United States has such jurisdiction [the Court added] the state would have no authority to lay the tax."

In the Buck Act, 4 U.S.C.A., §§ 101-110, Congress did provide the states with jurisdiction to levy certain specified taxes within federal enclaves. The

Buck Act cannot be construed, however, to apply to the Outer Continental Shelf. Section 1333 provides:

> . . . State taxation laws shall not apply to the Outer Continental Shelf. . . .
>
> The provisions of this section for adoption of State law as the law of the United States shall never be interpreted as a basis for claiming any interest in or jurisdiction on behalf of any State for any purpose over the seabed and subsoil of the Outer Continental Shelf, or the property and natural resources thereof or the *revenues* therefrom . . . (Emphasis added.)

In view of the well settled law establishing the absence of state jurisdiction to tax in federal enclaves, the provisions of Section 1333(a)(1) extending federal jurisdiction to the Outer Continental Shelf by reference to such enclaves, the provisions of Section 1333 negating any possible application of the Buck Act to the area in question, it is clear that California tax laws cannot reach revenues derived from the Outer Continental Shelf.

Before considering the formula it should be mentioned that the income to be apportioned is the total business income including that derived from the Outer Continental Shelf. When a corporation doing business solely within California commences operations on the Outer Continental Shelf, outside California, it becomes subject to Section 25101 and its business income will be apportioned in a like manner with other unitary businesses as follows.

Property Factor: All real and tangible personal property owned by the taxpayer everywhere must be included in the denominator. But the numerator can include only those properties with sufficient California connections. In this situation, any such contacts appear to be minimal.

Although some suggestions have been made to exclude the property from both the numerator and the denominator, if such is done, there will be an indirect apportionment of additional income to California contrary to federal law.

However, it may be noted that, under the rule set forth in *Montgomery Ward & Co., Inc.* v *Franchise Tax Board*, 6 Cal. App. 3d 149 (1970), that oil in transit to a California location would be considered California property includible in the numerator of the property factor.

Payroll Factor: Regulation 25132 provides that the payroll factor shall include the total amount paid by the taxpayer in the regular course of its trade or business for compensation during the tax period. Subdivision (b) further provides that the denominator of the payroll factor is the total compensation paid everywhere during the taxable year. Accordingly, compensation paid to employees whose services are performed entirely in a state where the taxpayer is exempt from taxation, for example by Public Law 86-272, is included in the denominator of the payroll factor. In other words, there is no throwback of the payroll to the California numerator even though the taxpayer is exempt from taxation in the state in which the services are performed. Where the services are performed partially within California and without California, the tests set forth under Regulations 25132(c) and 25133 apply. Payroll shall be included in the California numerator in accordance with the provisions of Section 25133 and the regulations thereunder.

Sales Factor: In view of the express federal ban against any state taxation of revenues derived from the Outer Continental Shelf, none of the sales, if any, which take place in the Outer Continental Shelf area will be includible in the sales factor numerator. Furthermore, in order that there be no indirect taxation of income from such sales, the sales factor denominator must include these sales. And, of course, if the natural resource is placed on the driller's own ships, no sale has occurred. On the other hand, if the natural resource is piped or brought into California, then the sale can be included in the numerator thereafter (assuming that it is subsequently sold in California).

It should be recognized that there are two fundamental considerations involved in this question. There is first the mandate that; under California law, the income of a unitary business must be apportioned by formula. *Edison California Stores* v. *McColgan*, 30 Cal. 2d 472 (1947). *John Deere Plow Co.* v. *Franchise Tax Board*, 38 Cal. 2d 214 (1951). Secondly, there is the federal prohibition against state taxation of revenue derived from the Outer Continental Shelf.

It is established that while formula apportionment is inherently incapable of attaining exactitude, so long as the formula employed produces a reasonable result its use will be sustained. *El Dorado Oil Works* v. *McColgan*, 34 Cal. 2d 731 (1950). It is submitted that the formula factors set forth above take into account both fundamental considerations. They provide formula apportionment to California of the income reasonably attributable to California sources, and by including the Continental Shelf factors only in the denominator, they do not apportion income to California, thereby giving effect to the federal law.

2 Section 25120(f) of the California Revenue and Taxation Code provides that the definition of "state" includes a foreign country. A basic purpose of the Uniform Division of Income for Tax Purposes Act (UDITPA), which is codified in Sections 25120-25139, is to insure that 100 percent of income, no more or no less, would be subject to tax. See Pierce, The Uniform Division of Income for Tax Purposes Act, 35 Taxes 747.

It therefore seems clear that where another state has jurisdiction to tax and the taxable activity has no connection whatever to California, the factors associated with the activity may not be reflected in

©1974, Commerce Clearing House, Inc.

the California numerator. These factors, however, are income producing and must be included in the denominator. *McDonnell Douglas Corporation v. Franchise Tax Board*, 69 Cal. 2d 531 (1968).

3. The Outer Continental Shelf Lands Act extends federal jurisdiction (and prohibits state taxation) "To the subsoil and seabed of the Outer Continental Shelf and to all artificial islands and fixed structures which may be erected thereon. . . ." 443 U.S.C. §§ 1333(1).

It has been established by a number of decisions that a drilling barge or rig is neither an artificial island nor a fixed structure within the contemplation of the Act, but rather is properly classified as a vessel.

Offshore Company v. Robison, 266 Fed. 2d 769 (1959); *Producers Drilling Co. v. Gray*, 301 Fed. 2d 432 (1966); *Marine Drilling Company v. Autin*, 363 Fed. 2d 579 (1966). Although the cited cases arose in the context of wrongful death or injury under the Jones Act (46 U.S.C. § 688), rather than a tax contest, they hold squarely that drilling barges or rigs are vessels and not within the ambit of the Outer Continental Shelf Lands Act. It therefore follows that the Act likewise does not exempt the activities of such barges or rigs from state taxation and California can apply its usual rules to tax the income earned from the operations of the barges.

Under the Submerged Lands Act (43 U.S.C. §§ 1301 *et seq.*) California's jurisdiction to tax extends offshore for three miles. There can therefore be no question that, to the extent that the drilling barges are within the three mile limit their presence and activities must be reflected in the California numerators of the apportionment formula. Similarly, the activities of drilling barges not present within California's jurisdiction will only be reflected in the denominator of the factors of the apportionment formula.

When, during a taxable year, the drilling barge is both within and without California waters, its operations and presence shall be reflected in the California numerator in accordance with the rules set forth in Cal. Adm. Code, tit. 18, Regs. 25128 to 25136, inclusive.

[¶ 205-027] Legal Ruling No. 367.

Franchise Tax Board, December 14, 1973.

Franchise—Corporation Income—Sales Factor of the Apportionment Formula—Advertising Receipts.—Receipts from sales of advertising space in magazines and periodicals are included in the numerator of the sales factor of the apportionment formula in the same ratio as the sales of magazines and periodicals in California bears to total sales.

See ¶ 12-442.

Advice has been requested regarding the inclusion of advertising revenue in the sales factor of the apportionment formula under the Uniform Division of Income for Tax Purposes Act (UDITPA) for publishers of magazines and periodicals.

Receipts from the sales of magazines and periodicals and advertising space in such magazines and periodicals by publishers, gives [give] rise to income from transactions and activity in the regular course of the taxpayer's trade or business constituting "business income" under Section 25120(a), Bank and Corporation Tax Law. Gross receipts from those transactions constitute "sales" as defined in Section 25120(e) which are required to be included in the sales factor (Section 25134) of the apportionment formula under UDITPA.

Tangible property is that which is visible and corporeal, having substance and body. *Roth Drug, Inc. v. Johnson*, 13 Cal. App. 2d 720, 734 (1936). It is evident that a magazine or periodical has substance and body. Consequently, the sale of magazines and periodicals by the publisher to subscribers and newsstands are sales of tangible personal property. (cf. *Time, Inc. v. Hulcher*, 201 N.Y. 2d 374, 377, 31 Ill. 2d 344.) Receipts from such sales are to be included in the sales factor in accordance with Section 25135 governing sales of tangible personal property.

The sale of advertising space in such magazines and periodicals is closely connected with the sale of the publication. The primary purpose of the advertiser is to reach the market provided by the publisher. The publisher in turn guarantees a particular circulation volume, or in other words, a market. Since advertising included in magazines and periodicals is inextricably connected with the sale of those publications, it is concluded that advertising receipts are to be included in the numerator of the sales factor based upon the ratio which sales of magazines and periodicals in this state bears to the total sales of magazines and periodicals everywhere.

[¶ 205-028] Legal Ruling No. 368.

Franchise Tax Board, December 14, 1973.

35° Gravity - $4.85/bbl Controlled Price

Tax Calculation

Under Current Law

(a) % Of Value Method:

300 bbl X $4.85 X 5% =	$72.75
700 bbl X 4.85 X 6% =	203.70
600 bbl X 4.85 X 8% =	232.80
	509.25
Less 1/8 Royalty Portion	63.66
Tax =	$445.59

(b) Cents Per Bbl Method:

300 bbl X $.3519 =	$105.57
700 bbl X .4224 =	295.68
600 bbl X .5632 =	337.92
	739.17
Less 1/8 Royalty Portion	92.40
Tax =	$646.77

Tax Payable (higher of (a) or (b) = $646.77

Tax Calculation Under HB 321

Tax rate = 10% of value or $.75 per bbl plus adjustments for gravity (up 1/2 cent for each degree above 27°) and for Gross National Product Deflator-- (1st Qtr. 1977 = base period).

Cents per bbl = $.75 X .04 = $.79

Percent of value rate and cents per bbl rate multiplied by Economic Limit Factor (ELF):

$$ELF = \frac{100 \text{ bbl}}{1600 \text{ bbl}} = .0625$$

1.000 - .0625 = .9375 = ELF

Cents per bbl adjustment:

$.79 X .9375 = $.7406

% of value adjustment:

10% X .9375 = 9.375%

Tax Calculation

1600 less royalty (200) = 1400 bbls

% of value method:

1400 X $4.85 = $6,790

$6,790 X 9.375% = $636.56 (Tax)

Cents per bbl method:

1400 X $.7406 = $1,036.84

Tax Payable: $1,036.84

Difference in tax between HB 321 and Current Law:

HB 321 =	$1,036.84
Current Law	646.77
	$390.07 = 60.3% increase in tax

Production tax burden as a % of producer's net share of $6,790 (1400 bbls X $4.85):

Under current law = 9.5%
Under HB 321 = 15.3%

Joint Resources Committees

QUESTIONS AND ANSWERS
PROFESSORS ZEIFMAN AND AINSWORTH
March 21, 1977

SENATOR HUBER - I'd like to get into that change in apportionment formula. I believe you said substituting a production factor for sales.

PROFESSOR ZEIFMAN - We called it an extraction factor.

SENATOR HUBER - Alright an extraction factor. Was that in addition to sales or was that separate from sales?

PROFESSOR ZEIFMAN - In our proposal, we recommended the use of an extraction factor instead of the sales factor. So that there would only be property, payroll, and extraction.

SENATOR HUBER - Okay, now you can by defending yourself, why instead of an extraction factor, in answering this question, you'll get what I want, instead of an extraction factor why didn't you, so that Alaska would get the best possible deal, why didn't you put in a factor that said the average number of degree days below zero degrees celceus? Now, I'm serious about that. If you can answer why you did something like that instead of that....

PROFESSOR ZEIFMAN - If I were a resident of Alaska, I think I'd prefer rainy days in Juneau.

SENATOR HUBER - _____ but why is it we can't use something like that instead of adding an extraction factor. What stops us?

PROFESSOR ZEIFMAN - Well, I think the nature of the Supreme Court decisions in this area if you'll look at the Northwestern Portland Cement Company case, is that an apportionment factor has to or should in some ways reflect the business activities of the company in the State and be reasonably related to the economic impact that those activities have on the State. If we were using rainy days in Juneau to total rainy days, that would make no sense unless the companies themselves were producing the rain.

SENATOR HUBER - Excuse me Madam Chairman. Do we have to have the concurrence of any of the other members of the multi-state compact in order for the change in factor or can we change it unilaterally for Alaska?

PROFESSOR ZEIFMAN - I think that you can change it unilaterally for Alaska both persuent to Section 18 of the compact, but also this is a soverign state and you can enact this whatever laws you wish. There is no penalty provided for in the compact for states that depart in this line. I think that you can change it unilaterally.

SENATOR HUBER - If we went ahead with the extraction factor which would take care of things in oil, wouldn't we then have lost the sales factor that takes care of such things as us getting a fair return from the J. C. Penny Company, and from other outfits that sell in Alaska? In other words, you've got enough of it, I think.

PROFESSOR ZEIFMAN - Yeah. Well, I don't think in fact that that follows. I think you could continue to use the sales factor for other types of industries. As a matter of fact I would draw a distinction between the petroleum industry and other types of industry because of the fact that the petroleum industry is removing from the State a non-renewable resource, and I think that's a perfectly legitimate basis for drawing distinction between the use of an extraction factor and sales factor. I think that the sales factor is far more appropriate to a merchantile type of operation that is not engaged in production and certainly not engaged in the removel or the extraction of non-renewable resources.

SENATOR HUBER - Well, I can see Professor, and I won't pursue this much longer, Madam Chairman. I can see that our extraction factor could very well be New Jersey's sales factor, and they could for instance have an extraction factor maybe on wood products or something else. That would then become a sales

factor here. It's like a doubled ended thing, it could work from both ends.

PROFESSOR ZEIFMAN - Well, My immediate reaction is that I don't think you have to worry about that too much. West Virginia for example has a two factor formula based only on property and payroll, and Florida has a different type of a sales tax there than Alaska does. The fact that other states have departed from the Uniform Act in one form or another or had not adopted the Uniform Act, I don't think is a matter that ought to pursuade you one way or another.

SENATOR HUBER - It is obvious, Madam Chairman, that some of us don't understand about the multi-state compact and how some of the factors are brought into it. They might appreciate an answer of just if you wanted to change to the two factor system or substitute extraction factors for sales on petroleum, or sales on other things, who in this State has to act in what manner. What has to be done to bring this about?

PROFESSOR ZEIFMAN - I think it simply requires an act of the State Legislature.

SENATOR HUBER - I can't find any multi-state compact act in our books now. It looks like the thing is done somewhere else, except we're members is all I know. I can't find it in the statutes.

PROFESSOR ZEIFMAN - There is a statute, I don't have the statutes in front of me, but the citation is referred to.

SENATOR HUBER - It makes us a member of the multi-state compact but it doesn't spell these out.

PROFESSOR ZEIFMAN - You have also adopted the formula and also the formula has a provision in it that the Uniform Division of Income for Tax Purposes Act has a section 18 which permits modification.

SENATOR CROFT - I had two particular sets of questions. One, in the Bill itself on the bottom of Page 3, the definition of net income, Section 41.1030 defines net income as the net income determined and certified by an independent certified public accountant for the purpose of a report to shareholders covering its earnings, and the like, and I noticed in today's Wall Street Journal on Page 6 there's a summary of a considerable amount of recent activities with regard to the drawing suspicion that independent auditor's opinions are simply unreliable. In the first place, the commission on auditor's responsibilities of the American Institute of Certified Public Accountants as long as two and one half years ago put out a report critical of auditors opinions, and now there's a Senate subcommittee headed by Lee Metcalf of Montana holding hearings on the role of auditors and financial reporting,

and this article says a highly critical report by the subcommittee staff accused auditors of being too close to their corporate clients and recommended a major expansion of the government's role in setting accounting and auditors standards, and I'm curious why with the increasing suspicions that corporate management can manipulate the auditors reports. You're suggesting that the study should base its tax on something of that nature.

PROFESSOR ZEIFMAN - Well, Senator, I think that any changes in the procedure in this area as our society becomes more and more consumer oriented, if that's the right way to describe it, any changes will reflect a tightening up of the procedures rather than a liberalization of them in terms of tax avoidance, so that the concern of Senator Metcalf, which I would agree is a legitimate one, about the use of the independent _____ I think is relevant, but I think that the significant thing is that given all of the flexability that does exist in the law, the company has an incentive under the present system to face it fully and realistically, to put it in a colloquial way, I think our proposal catches the company between the bark and the tree, or the auditor between the bark and the tree. The accountants have an interest in maximizing earnings and profits in terms of the report to the share holders, and they have an interest in minimizing taxable income for tax accounting purposes. So we're suggesting that the State would do better by adopting a tax base which is measured by an amount where the

company itself has an incentive to maximize the amount rather than minimize it. I cannot see company accountants for purposes of reporting earnings and profits collectively, espousing as your suggesting, espousing an accounting method that's going to decrease their earnings and profits. So, to whatever extent there is flexability, by and large, the companies own accountants will want to maximize the book income, now if we were talking about this as a 60% tax, we might have a different kind of a situation, but in view of the fact, once again, that the accountants have a desire to maximize earnings and profits, I would think that it would be a desirable thing for the state to simply say, listen what you report to your shareholders, we regard as more a reflection of your real profitability, and then as a way of protection, I don't think this is needed, but as the Administration bill does, if you simply say look, we'll take federal taxable income or book income whichever is the higher, you have plugged the loopholes if that's what you want to call them more effectively than has the federal government, and I would suggest you have plugged the loopholes more effectively than has any other state in the United States.

SENATOR CROFT - Madam Chairman, I don't care to belabor the point, I do understand what you're saying if you're basic assumption is correct that the companies for reporting purposes will maximize their income in terms of book value which may or may not be correct, then what you say may be appropriate,

but the notion that the independent autitor is not subject to manipulation by the corporation, it seems to me that all of the information the past couple years indicates they are, but if you are correct about book value, it seems to me that what you're saying is that our Department of Revenue, if you're correct with regard to your figures about oil corporations in Alaska today, our Department of Revenue has simply not been doing an adequate job of enforcing the existing law, be it you're saying that they can take book value now and have increased the income taxes to be paid to the State of Alaska because they have the authority to do that even under the multi-state compact do they not?

PROFESSOR ZEIFMAN - No. Respectfully, I think you misunderstand the law. The law talks about giving the administrator the power to modify the apportionment formula, but not the unapportioned tax base.

SENATOR CROFT - Let me ask you then, what is the interpretation of 43.19.010, Section 18, which says that the allocation and apportionment provisions of this article do not fairly represent the extent of the taxpayers business activity in this state. The taxpayer may petition for or the tax administrator may require in respect to any or all of the taxpayers business activity if reasonable A. separate accounting. And then they go ahead and list three other factors.

PROFESSOR ZEIFMAN - Senator, I believe that's not relavent to this discussion. That is the means of dividing a pie. The pie is the tax base prior to apportionment. The size of the allocation and apportionment method is a method of determining what percentage of the pie is going to be taxed by Alaska, but the subject of how large is the pie which is going to be subject to the apportionment and allocation is the subject of the undivided tax base. For defining the undivided tax base prior to apportionment, the State has adopted the federal definition of taxable income so that our findings in no way indicate any remission on the part of the Department of Revenue, though the Department of Revenue does not have the power to eliminate the deductions for intangible drilling expenses in defining the tax base, so I think that the talk about the tax base prior to apportionment is a separate subject than the subject of modifying the apportionment formula. I hope that's clear.

SENATOR CROFT - Then I'm curious why you propose, Madam Chairman, that we change the formula if the present formula adequately addresses Alaska's interests. Why is one of your major provisions a change in the formula as well as increasing the size of the pie?

PROFESSOR ZEIFMAN - Well, if I were hungry so to speak, and I was concerned about getting more to eat, I would try to

persuade my mother to both make larger pies and to give me a larger percentage.

SENATOR CROFT - And would you argue the percentage of the existing pie if you had the authority to do it?

PROFESSOR ZEIFMAN - Yes.

SENATOR CROFT - And we have that authority?

PROFESSOR ZEIFMAN - No. Only under extraordinary circumstances is the case I would argue that in terms of both the case law and the statutes that only under those circumstances in which the company is involved in something called a nonunitary type of business and that would not be relevant with respect to the vertically integrated petroleum companies.

SENATOR CROFT - I thought you had said a minute ago that the section of the statute that I read gave the State only the authority to change the allocation as it related to other states and not to increase the size of the pie itself.

PROFESSOR ZEIFMAN - Right.

SENATOR CROFT - Then my question is, how has the State attempted to increase the amount of the multi-state income that's allocated

to the State under its existing statute? You said that that was one of the two things that you would do.

PROFESSOR ZEIFMAN - Well, when you say the State do you mean the Department of Revenue or the legislature?

SENATOR CROFT - No. the Department of Revenue.

PROFESSOR ZEIFMAN - Well, the Department of Revenue, as I understand it, has been trying to administer the present formula in its present statutory form. The legislature in its wisdom has enacted a statutory method including the use of a sales factor and said, so to speak, to the Department of Revenue, this is the general method of doing it, and this is the method that you should use. In very extraordinary cases, we are giving you authority to exercise some discretion. Generally, that kind of administrative discretion that is provided for in the statute has not been construed as far as I understand it by the tax administrator of this State or by the tax administrators of other states as a kind of license to exercise an _____ discretion and say look, we don't like the size of the pie that the statutory formula gives us, so therefore I'm going to come up with my own method of doing this. I would be opposed frankly as an interested citizen if you will, to that type of approach to the whole text deals anyway with where the Administrator would take the position of "We didn't get enough money from

your company this year, therefore, we're going to change the rules some. I think that's the worst kind of tax administration.

SENATOR CROFT - One final question. Doesn't your bill allow that though? Doesn't it say that in the event the Commissioner of Revenue decides that the method of reporting that the company uses on book value isn't adequate, that the Commissioner can change the rules of the game and require a different reporting method?

PROFESSOR ZEIFMAN - Now, that's a different kind of a situation, Senator Croft, that's prescribing a normal amount of administrative discretion with respect to prescribing rules which most tax administrators have that would be consistent with the statutory scheme. I would not construe every grant of discretion to be a total departure, I think as you are suggesting, from the prescribed statutory methods.

SENATOR RADER - Is there an easier way or a more clearer way to get the tax that the State should have from the petroleum activities and what we _____do you have any other suggestions? Are there any other avenues that would be easier or more fair?

PROFESSOR ZEIFMAN - Well, easier, yes. I think that, first of all my philosophical point of view, if you wish, the nature of a corporate income tax, a tax measured by profitability

is such that it invariably runs into the kinds of problems we're discussing, allocation and apportionment. I personally feel that the most effective and the easiest way to tax petroleum production is at the wellhead in terms of the severance tax. I think that an effective severance tax is perhaps the most, certainly the easiest if it's valued properly. I want to add, however, though there's a subject that I'm particularly interested in. The income tax does offer you the advantage perhaps, and I don't hold out any guarantee of this, but at least it gives you a crack at outer-continental shelf development through the apportionment device. Under the present law, you are just not going to get, I would say you have no chance of winning a supreme litigation, trying to impose a severance tax with respect to outer-continental shelf activity, so in that regard, that would be the exception. I think an apportioned income tax has a better chance of withstanding constitutional attack with respect to the outer-continental shelf production, but generally in the arsonal of state tax weapons, if that's an appropriate way to put it, I would regard the severance tax as the main battery, and income tax as kind of a secondary battery.

SENATOR RADER - Are there other states using the method that you are suggesting here that we adopt.

PROFESSOR ZEIFMAN - There are no other states as far as I know that have adopted the method of using book income. It's rather interesting. Some years ago, the State of Tennessee had that kind of a provision that taxable income is the income determined by a normal _____two standard accounting procedures. When we were investigating the tax structures of all the states, I was particularly fascinated by that and talked to the tax administrator, and to my surprise, he said "oh well, we don't bother with that, we'll accept whatever income they report for federal tax purposes. That part of it is novel of our proposal in that respect. The idea of an apportionment formula based on production as one of the factors is not novel, it's used in one form or another by different types of states. A few states, I don't have our report with me, but some states have used apportionment factors, special apportionment factors based on cost of production. As I mentioned West Virginia eliminates the sales factor entirely, so that the use of a specially fashioned apportionment factor designed to reflect the peculiar economic situation of the State I think is very conventional.

PROFESSOR AINSWORTH - Senator, if I might add just a comment to Professor Zeifman here that the book value is not used as such by any state that we know of. On the other hand, a number of states do start with taxable income and then tend to restore

toward book value to some degree. I think with the Supreme Court case in mind that Professor Zeifman just mentioned in his earlier testimony and with the general desirability as many states see it of restoring taxable to a degree that this would be a forward looking step and you might find yourself cut off from the restoration thing and you would have to go all the way to its value if you wished to use it.

SENATOR RADER - Of course you have a great volume of law and experience and regulation as to what is _____ taxable income. Do we have any such law, body and experience as to what should be book value income, so that when you have this acute, I know that you mentioned that the bad apple is the bad apple, the bad apple accessor or the bad apple tax payer in this direct accounting approach left too much to discretion. Do we have a body of law that can resolve disputes? Part of our problem with our corporate citizens or other citizens is to resolve as easy as possible, put grease on those places where we have pressure and have a difference of interests so that it will work without too much scraping and burning and chewing. What kind of discription do we have of book income that when we get into a dispute with someone as to.....

PROFESSOR ZEIFMAN - Well, I think that we have the experience of the Securities Exchange Commission and the experience of

stockholders in general. I appreciate the observation, and I think Senator, that it's a very profound one. I think that the great body of law however, is a two edge sword. The great body of law has also created an army of lawyers, accountants and tax planners that have given an enormous incentive to diminish the taxable base through various types of devices. I think that the beauty of the book income proposal is that the company as I mentioned to Senator Croft, if the company wants to diminish its income for Alaska tax purposes, it's got to persuade its shareholders that it is not being operated very profitably.

SENATOR RADER - Well, let me ask you this. Let's take EXXON because they're so large and let's assume that only 5% of their operation is in this state. From their point of view to their stockholders, they're going to be interested in a consolidated sheet that shows their whole operations. Do you say it's their incentive to keep them honest and to sell their stock and to keep the FCC, and if they meet all of the FCC requirements, but still won't they have the same incentive and the same opportunity to shift the responsibility of their costs in the book method as they would have in any other method? And if we are only 5%, let the Alaska portion show as being unprofitable and pick it up someplace where they don't go on book method.

PROFESSOR ZEIFMAN - Again, Senator, I think that your observation gets right to the heart of the question, and I agree with your

observation, however, that would occur only if you have a separate accounting system. I think your question illustrates the disadvantages and the dangers of separate accounting.

SENATOR RADER - Can you create a system to do that? I mean you've only had one system and the federal government doesn't care, they're not going to care as to how we do it at least between the states, excuse me, go ahead.

PROFESSOR ZEIFMAN - You see the advantages, rather than talk about individual companies like EXXON, we have not identified the individual companies. In no case, let's assume that the book income, I think you can reasonably assume that the book income is going to be at least twice, at least double the amount of federal taxable income.

SENATOR RADER - This is as defined by them.

PROFESSOR ZEIFMAN - Yes, worldwide.

SENATOR RADER - Without any body of law to define how they define that.

PROFESSOR ZEIFMAN - Other than the regulatory procedures of the FCC.

SENATOR RADER - Which are only calculated to prevent them from overstating their _____, not understating them, I assume.

PROFESSOR ZEIFMAN - Well, it cuts both ways, and although we are talking about book income as though it were different from federal taxable income. Let me also point out this, Senator, I think this is a key feature that frankly I think that Mr. Kilgore glossed over. Many of the basic book accounting mechanisms are in fact policed by the Internal Revenue Service. For example, Mr. Kilgore mentioned inventory accounting and talked about the fluctuation of inventory. Well, the Internal Revenue code requires that the company use the same tax accounting technique in terms of evaluation of its inventory, the exact same for federal tax purposes as it does for reporting its book income, and so in a sense the advantages of book income as I see it is you have the feds. in a sense policing a big hunk of the accounting aspects of the company. The company cannot play hanky panky with its inventory accounting, with its gross receipts, with the major blocks of its item. The IRS is policing that, and the internal revenue code requires that it police that, so that in using book income, you're not departing from.....(end of tape) ..... provision that would go like this would say no depreciation deductions would be allowed in excess of the depreciation actually taken of the companies books. In that way small companies would

continue to have the advantages of excellerated depreciation here and there, but the large companies would not be able to use quick write-offs to a very large extent to substantially reduce their taxable income. So, I think that although we have been talking about the difference between book income and federal taxable income as though they were two different things, the major sediments that comprise blocks of income and expenses that comprise book income are in fact audited by the Federal government.

SENATOR RADER - Well, then you're saying we're not making a significant change. It is a significant change, but you're saying that the major portions are already audited so _____ right now.

PROFESSOR ZEIFMAN - Right.

SENATOR RADER - And so we're talking about this insignificant change which is going to be tempered by their own statement to their own stockholders in which they have a goal of maximizing profits instead of minimizing, but then I get down to this, and we don't have a body of law. That's really largely management discretion, I assume. The security exchange regulation which I don't know now, that's what I'm asking you, isn't it largely a management discretion then to, you're not breaking the federal tax laws when you report your income differently to your stockholders on different accounting

basis, and as Senator Croft observed independent auditors will I think, generally submit to management discretion if there is no breech to the law, and the most that they would do would be to footnote it with an asterik and say this is within management discretion, and can be done three different ways. This is an acceptable way. How do we eliminate without a body of knowledge and law, and with the same opportunity to shift income for book purposes between one state and another or between one opportunity and another, so long as the bottom line is the same.

PROFESSOR ZEIFMAN - Well, the last part of your sentence, Senator, is the part that I have the most trouble with, and somehow Senator Croft's question indicated for example a misunderstanding. We are combining the notion of use of book income with the idea of the combined report. We are saying to EXXON if you will, look, we don't care. If you want to play games for any purposes. If you want to keep your Alaska subsidiary at a low level of profitability for your books, you go ahead and do it. We are aware of that fact that you might want to do that. The advantages of the apportionment formula and the combination approach, and as a result the _____disadvantages of separate accounting is we are saying look, we are going to look at the whole pie, and we want the book income of the whole pie, and so long as we're dealing with the book income of the whole pie, it makes no difference whether the company in its internal bookkeeping among its affiliates divides it up.

SENATOR RADER - I see what you're saying. I understand that, but now let me ask you one other thing. You say no other states have adopted this. Now, to be the devil's advocate, why not? Is this something of your own creation that hasn't been tried yet?

PROFESSOR ZEIFMAN - Let me make this observation of why not, and I say this I hope that based on 20 years of experience working for the United States Congress, I would say lack of political muscle, in the sense especially with respect to the petroleum industry and because of the United States Congress. The Congress does not have political muscle in part to remove the tax subsidies from the internal revenue code, on the one hand that are related to the petroleum industry. Another part of it is perhaps a question of policy. When Congress decided that it was going to, if ever there was a radical departure from the use of normal accounting procedures, it was percentage deflation. Congress decided it was going to subsidize the petroleum industry, and so it provided for a percentage depletion. In a sense, the use of book income as we conceive it, and in terms of a general policy, we are saying look what we are interested in the earnings and profits with no subsidies. If we are going to subsidize the petroleum industry, we might do it in other ways, but we're talking about a tax base that is based on purely accounting procedures, as distinct from a tax base that's eroded through policies that reflect a desire to reduce the tax.

SENATOR RADER - Let me ask you again, and I think you've answered it, and it's only my own inability to receive your intelligence as fast as you can state it. I'm unaccustomed and haven't got quite the receiver you have transmitter either, but when you get back to it, is there a body of law through the FCC or otherwise to which we could go to if we were in a dispute with any one of our corporate citizens, and say, we think that when we say book value that the questions have been answered to the extent that there's a reasonable body of law that people with the opposite interests of the taxpayer and the tax collector can look at that and their attornies can look at that and handle that problem without rubbing each other wrong and fighting their way through courts interminably.

PROFESSOR ZEIFMAN - I think Senator, that there's probably as much of a body of law on that subject as there is..... I think it's a less complicated body of law in terms of the federal taxable income, and its lack of complexity, I think, is an advantage. As a lawyer, let me make this observation. This is an everyday kind of dispute. If I'm a minority stockholder for a closely held corporation, and we get involved in litigation as to its profitability, or if there's going to be a dispute among partners for the evaluation of the states. The extent to which the accountants have overstated or understated various items I think is a subject that the courts and most lawyers have had a great deal of experience with. I suppose I'm doing my own profession a disservice, but I'm suggesting that the use of book

income takes the body of law, the normal body of law, and applies that as distinct from the highly specialized priesthood of the internal revenue code.

SENATOR RADER - One more question, if I might. Now, Mr. Kilgore, I think, suggested this morning that he made some actual projections using this extraction factor and it did not appear to him to protect the State as well as he had thought it might. I might have misunderstood him in that, but have you done any such estimates as to how it will actually work.

PROFESSOR ZEIFMAN - Yes, we have on the basis, and I'm glad you mentioned that Senator, because I had a meeting with Mr. Kilgore and Mr. Lipton in New York, and at the outset before I agreed to accept the contract as a consultant to Alaska, I made it clear that I did not want to be a consultant or make any recommendations unless I was able to make the recommendations as I put it on the basis of actual data and not addressing myself to paper solutions to paper problems. I think that the data that Mr. Kilgore has relied on has been data which has been admittedly been fictitious, a sample that was provided to a large extent by Standard Oil of Ohio. Our predictions and our data are based on a study of the actual tax returns.

SENATOR RADER - If my previous question about is there an easier or better way, and you said well, the easiest and the simplist way is at the wellhead. Count the barrels and put a tax on it, and a gross income tax instead of a net income tax so you don't have to worry about all the rest or the other half of that problem. What is the customary way of doing that? Do I understand you to say that the main reason that you're proposing the book income tax is the ability or the possibility to capture the outer-continental shelf production which can not be done with a severance tax.

PROFESSOR ZEIFMAN - No. The use of the book income, you could adopt our proposal in part using the extraction factor and the outer-continental shelf feature without adopting the book income part. Do you follow? That's an apportionment part. The book income is the means of defining the pie.

SENATOR RADER - Now wait a minute, say that to me again, I don't understand it.

PROFESSOR ZEIFMAN - You could continue to use federal taxable income and still have a formula that has an extraction factor in it, and also include in the numerator of the extraction factor as is done in the administration's bill, the amounts related to the outer-continental shelf production. It's not the book income feature of our proposal which relates to the

outer-continental shelf, it's the extraction factor.

SENATOR RADER - I see. Thank you, Madam Chairman.

SENATOR HUBER - I wonder if I could get just a line, a short quicky on the bottom of Senator Rader's before the thought is lost? I was following along very well when you answered Senator Rader about going it alone. This is the reason for going with the compact instead of going it alone. If a corporation or any corporation taking in a profit, is doing so from a state such as Delaware or Washington, that does not have an income tax, and then they have an Alaska subsidiary here, and they don't give a darn about the Alaska subsidiary taking a blood bath every year in the annual report book because their stockholders are in the main corporation and they think the more Alaska takes a blood bath in the Alaska corporations the higher the value of the coupons that I clip. Now, aren't we still leaving that loophole? I think it's a yes or a no.

PROFESSOR ZEIFMAN - Under our proposal, No.

SENATOR HUBER - That loophole is plugged?

PROFESSOR ZEIFMAN - Yes, because of the fact that we're saying to the company, that's the advantage, and you see this is the disadvantage to saparate accounting. We're saying to the

company, look, we're saying to the whole group, the whole multi-corporate enterprise. We're saying look, we want to see the whole pie, and then we will apportion a piece of the whole pie to us, and so if the company, for example, and I appreciate your question, Senator because it really illustrates what we're getting at. Suppose you had under the present system to make it simple. Lets say New Hampshire does not have a corporate income tax, and I were going to drill in Alaska, here's what I would do. I would create a New Hampshire parent. I'd get a Delaware corporation, has its principal place of business, its so called domicil with Deleware, have its office in New Hampshire, and have it own an Alaska subsidiary. I would operate the Alaska subsidiary at a low level of profitability and the New Hampshire parent at a high level of profitability. Since New Hampshire has no corporate income tax, I'd be off the hook entirely, and if Alaska insists on separate accounting, Alaska has no remedy. Under our proposal, we're saying look, we are going to take the Deleware corporation. We don't care about all these arrangements, we want to know the size of the pie, the total income, the total profitability of the whole family, then we will make an apportion to Alaska. That is the modern progressive method of corporate income taxation that has been adopted by those other states that have progressive modern forms of taxing corporate income including California, Minnesota, and many other states.

SENATOR HUBER - They can't get out of that by only operating in the states that isn't a member of the inter-state compact?

PROFESSOR ZEIFMAN - That's right. They cannot get out of it. That's the advantage of the combined report approach, and you see, this is exactly what has been going on in Alaska for years. Alaska affiliates of large petroleum companies have been reporting to Alaska that they have a low level of profitability. They have said separate accounting. The tax administrator recently, consistent with the practices of a multi-state tax compact have been saying in so many words, listen, we are not going to buy that. We want to know whether or not, we want to know about the relationship between you and the parent. In a sense this is what I'm getting at with the treaty. The treaty which Great Britian has persuaded the Treasury Department to adopt, and which the Senators from Alaska were opposed as well as I understand the Governor and the tax administrator would say to Alaska, you must only look at the Alaska subsidiary, and if the Alaska subsidiary is operated a low level of profitability, there is no way, according to this treaty, that you can look at the parent if the parent is located in Great Britain, and that's exactly the disadvantage of separate accounting. It's been _____, I suppose I'm making a speech, but it's been _____by the proponents of separate accounting some wierd notion, they say we ought to draw a ring around Alaska as though it's kind of a bath tub, and only look at the local subsidiary. Well, I am suggesting to

you that if you really want to know about the profitability of the petroleum companies operations in Alaska, that I would urge you not to simply look at the books of Alaska's subsidiary, but to go for the whole pie.

SENATOR HUBER - Thank you Madam Chairman. It did straighten me out, but I'm going to have to do some more background yet on why, I guess that's the word. There's a piece missing there.

REPRESENTATIVE GRUENING - Professor Zeifman, you mentioned the treaty. Does that treaty in any way prevent us from getting the advantage of the franchise tax?

PROFESSOR ZEIFMAN - It sure would. Of course, the treaty has not yet been approved. Fortunately, it has to be ratified by the United States Senate, and due to the opposition of some Senators it came close to being ratified by the way. I would like to urge this body to adopt a resolution urging the President to withdraw the treaty, and the present Secretary of the Treasury to get the United States out of that treaty. But at any rate the treaty would, as I indicated, prevent you from looking at the whole pie. It also would prevent you from. I'm sorry, the treaty would. The separate accounting proposal would accomplish the same thing as the treaty, and that's what I find is rather extraordinary, the proposal that Alaska would inflict upon itself. The same limitations on its

own taxing power by compelling its own tax administrator to look only at the Alaska subsidiary in its books, destroy the most powerful weapon that it's had, when the petroleum industry is urging especially those parts of it that are related to the United Kingdom is urging the Congress to impress this limitation on Alaska as well.

REPRESENTATIVE GRUENING - Aren't we doing about the same thing though on the franchise tax in terms of apportionment in theory as done under the multi-state compact by saying, okay, we're going to take a different look at what the basis is, but we're still going to use an apportionment theory to attribute the sum of that income back to Alaska.

PROFESSOR ZEIFMAN - Right, exactly.

REPRESENTATIVE GRUENING - But is there a constitutional problem then with through treaty with the federal government telling us that we can't use this as a describing basis. I mean isn't this an interference under the constitution with State rights?

PROFESSOR ZEIFMAN - One of the unfortunate conditions under which you labor is the supremecy clause of the constitution which makes the federal statutes and treaties and treaties are given equal status under the supreme law of the land, so that if for example the United States were to enter into a treaty with France protecting french citizens against

inheritance taxes in Alaska, I think you would be stuck.

REPRESENTATIVE GRUENING - I have one other question. Mr. Kilgore, this morning outlined some disadvantages of the franchise tax, and I think maybe Senator Rader's questions about the body of law might have answered them, but as I recall, you were here this morning listening to his presentation. Three things allows a different treatment on accounting methods, greater write-off flexability and companies can revise their accounting procedures. Now, maybe Mr. Kilgore ought to elaborate on that, but as I understand the criticism there, it's not so definite, you're relying on the incentive factor to keep them from changing, as I understand his criticism, I may be unfairly stating it.

PROFESSOR ZEIFMAN - I very much appreciate the fact that Senator Rader brought this up in questioning because it frankly compelled me to address myself to it. That is, you know, I want to make it clear that the use of book income is not an either, or, we're not saying we're not going to use the federal tax system because anyone who has filed a corporate income tax report can tell you. You just don't go changing your inventory method in terms of the book income and your accounting method for the purposes of the companies books without the IRS policing them, and so any system, for example, and I was rather amazed by Mr. Kilgore's observation about inventory. There is a very strict requirement, and as a matter

of fact there is probably no subject which is more carefully audited by the Internal Revenue Service. You just can't go playing around for federal tax purposes by using a different inventory method of accounting on your books that you are using for federal tax purposes. The inventory accounting that you use for federal tax purposes is required by law to be the same as you are using for your book income. So that fluctuation, I think, is very unrealistic.

REPRESENTATIVE GRUENING - What is meant by greater write-off flexability under the franchise. Maybe I should ask _____ I mean that was listed as a disadvantage, greater write-off flexability.

PROFESSOR ZEIFMAN - I would agree that there would be greater write-off flexability with the use of book income, and some write-offs would be permisable.

REPRESENTATIVE GRUENING - That are not permisable under .....

PROFESSOR ZEIFMAN - Yes, but again the observation is the company, if it does that, it's going to diminish its earnings and profits for shareowners. I'll give you the example, I think, the most dramatic example of that. The petroleum industry as you know, is able right now to expense intangible drilling costs. Take a current deduction, and use intangible drilling costs to minimize their federal taxable income as a result. Well, many

of the large petroleum companies do not expense their intangible drilling costs because if they did they would diminish their earnings and profits for purpose of distribution to the shareholders, so they capitalize their earnings and profits, in a sense it is true, I would agree with Mr. Kilgore's observation that there may be some ways in which the companies could have a lower book income this year, that they would have some flexability, but at the same time that flexability as I put it sort of gets them between the bark and the tree because in order to reduce the Alaska tax base, they would have to tell their stockholders they were earning less money, and that's a different kind of position than they are now in.

REPRESENTATIVE MEEKINS - Is there a provision in the bill that, I think I heard you say, that you take the federal taxable income or the book value, whichever is greater, so in relation to what Senator Rader was asking, you're saying that there's a motivation that's strong enough to keep them from playing around with these possibilities, flexabilities they have, with the motivation being that they have to report to their stockholders the profitabilities because that's what we're looking at. They can't erode our Alaska tax base without going against that other need that they have.

PROFESSOR ZEIFMAN - Yes, they could not go below which is the advantage of the alternative base here. No matter how much flexability there is.....

REPRESENTATIVE MEEKINS - They'll never go below the taxes, so in that respect we're not any worse off even if they did.

PROFESSOR ZEIFMAN - It is inconceivable to me that the use of book income will cause, the way it's written in this bill, it's inconceivable to me that the use of book income would result in a lower tax base for Alaska with the alternative written into it.

REPRESENTATIVE MEEKINS - You see, that brings up the question, I mean the point of going to book income is that there's not really that much faith in the federal taxable income because of the subsidy as you call it written into it. So I'm wondering wouldn't it also make sense to, couldn't we have the alternative be federal taxable income plus putting back into that some of these allowances that are taken out? Couldn't we do that also and then.....

PROFESSOR ZEIFMAN - Yes, we mentioned that in our report as an alternative. You could take federal taxable income _____ add back all capital losses. California has done that. Federal taxable income plus, we will prohibit carryovers. Federal taxable except that intangible drilling expenses are to be deducted.

REPRESENTATIVE MEEKINS - Well the, what I'm getting at is then you would really have them because you could also then say that either, or whichever is higher, book value or that value, but that valu

is even higher, so the difference, if there was any possibility of arranging that as some people are fearing, you'd have even still a higher base for the federal taxable income in which to make or take your percentage.

PROFESSOR ZEIFMAN - I agree that that's an alternative. The advantage of book income is that you're doing it all in one fell swoop and the easiest way that we know how. The item by item thing, frankly again if I can be political, would compel you to have to fight it out on each front. You're going to add back, you're going to have a vote and add back, disallow the carryover, the capital gains item by item. The book income does have the advantage of simplicity, I think.

REPRESENTATIVE MEEKINS - I have one more question on separate accounting. I'm not quite sure. When you do separate accounting, does that mean you just look at the Alaska subsidiaries, the numbers that they have on their books, but you don't consider anything else at all. There's no apportionment whatsoever, there's just totally separate accounting?

PROFESSOR ZEIFMAN - Essentially, yes.

REPRESENTATIVE MEEKINS - Essentially you are using the numbers that the companies give you, in that case, wouldn't that be correct?

PROFESSOR ZEIFMAN - Essentially, yes.

REPRESENTATIVE MEEKINS - Can you put back into that your own extraction factors and things like that?

PROFESSOR ZEIFMAN - No, the extraction only works when you are talking about a pie to a portion.

REPRESENTATIVE MEEKINS - Yes, so if you put in an extraction factor, you're not.....

PROFESSOR ZEIFMAN - Let me give you a simple example of separate accounting that the Supreme Court reputiated. There is a case, Wallgreen Drugs. Now you know everybody's got a drug store, that ought to be simple, it's just like a candy store. Wallgreen Drugs tried to argue that it ought to be able to use separate accounting because it could show through separate accounting that its Minnesota drug stores were being operated at a lower level of profitability than its non-Minnesota drug stores. The Minnesota tax administrator said, "hey listen, we can't unscramble that egg. All we know is that Wallgreen is in the drug retailing business. In effect it's a kind of a view that goes like this, it doesn't have any geographic source. It has an economic source. They said in effect, "look the ice cream manufacturing plant that you've got outside of Minnesota, that contributes to the profitability of the Minnesota store, so we're going to require you now to make an apportionment, add the

whole thing together. How much income did all of your drug stores earn all over the United States, and then we will make an apportionment based on the ratio of Minnesota to total property payroll and sales. The taxpayer argued separate accounting. We ought to be able to use separate accounting, I can keep my own books, I can show you the Minnesota sales of the Minnesota drug store", but the court reputiated that, so on its surface separate accounting is deceptively simple, but with any degree of sophistication at all, especially when you're dealing with multi-national companies, it is no difficult problem at all for a non-United States company for example, or a New York based company to operate its Alaska subsidiary at a low level of profitability, and especially in getting it back, Senator, to your observations about the federal government, here's the rock now. The federal government doesn't care. In other words if you have a New Hampshire company operating at a high level of profitability, and the Alaska subsidiary at a loss, the federal government doesn't care because it's getting the tax from the New Hampshire company, and it's not concerned about the policing of it. The federal audit in the apportionment area is not really going to be helpful. So, I hope that my observations are, I hope that I have been helpful to you, and again, I want to reiterate that no state of the United States, currently and as far as I know in the last 30 or 40 years has adopted separate accounting method of taxation under these

kinds of circumstances as a general method of imposing a tax. The controversy has always been as to whether or not any form of separate accounting was going to be permitted, even in extraordinary circumstances, and generally the court has been said to look with disfavor on the separate accounting notion. I might add, for example, in California, you don't have much Alaska case law. I mean, you have no Alaska case law on this subject, but in California, let me give you an example. This perhaps will confuse you because it goes the other way. The Wildcat Oil Company, drilling a dry hole in one state and operating, if you want, not striking oil. It then goes to drill another hole in another state and still doesn't strike oil, and it goes on through six or seven states that way, and still doesn't strike oil, but most of California, and in California it strikes oil, and all of the oil is sold at the wellhead, right then and there. This is an unusual type of operation. The California tax administrator said in so many words, "this is one of those extraordinary cases in which we might try separate accounting, because after all if we only talk about the California operation, it's a desirable state of affairs. The taxpayers said, "listen I'm a unitary business, I've been operating all around, you've got to treat me as a single entity. The California courts invalidated the use of separate accounting under those circumstances. So, again, I would urge you to examine the notion of separate accounting very carefully because, not because of the disadvantages that Mr. Kilgore points out, about the hypothetical pricing and

the administrative overhead. That's not the disadvantage of separate accounting, the disadvantage of separate accounting is that you don't get to look at the whole pie, and he didn't mention that.

SENATOR RADER - Then, it's like you say, if the piece of the pie was very perfitable and the rest of their operation non-profitable, we might want to separate out and have accounting only as California attempted to do. You're saying that our court, if they followed the California court would not permit separate accounting if the Alaska operation was a bonanza and the Texas operation was no longer profitable.

PROFESSOR ZEIFMAN - That's right if they followed the California Supreme Court. And perhaps Professor Ainsworth ought to address himself to this because in the longrun the advantages of the combination approach, as I see it, is in the longrun you're dependent upon the fact that on the overall profitability of the whole multi-corporate family, and I would argue that that provides you with a much more stable type of a tax base. It's almost like a diversified investment. We could, for example, in the Wallgreen Drug case, you could have this kind of a situation which would make good business sense. Wallgreen goes into Minnesota, intentionally operates its drug stores at a low level of profitability, sells its products low and at a cheap price in order to compete in the local market, but it really is as a result the profitability of the whole. The whole company is

enhanced because of the additional sales and the large quantity, so for the State to deny itself, and to take away from the tax administrator, if I could leave you with this thought, whether you buy that proposal or adopt a proposal of that book income, or the extraction factor, perhaps there's a separate question, and maybe these are not alternatives. Whether you adopt the proposal of book income or the extraction factor is perhaps a separate question, but I would urge you to not voluntarily, by your own act, deprive your Department of Revenue and your State of the most effective tax weapon that you have in the corporate income tax area, and that's the ability to look at the whole picture and the whole pie.

SENATOR RADER - Well, I have a little different line of inquiry, if I could? We're in Juneau with the Prudhoe Bay situation where we're in pricing hearings right now, or we start Wednesday. Are you at all familiar with what our problem is there? They have not set a price for Prudhoe Bay as one tier or another tier, new oil or old oil. They haven't said, they might leave it uncontrolled like they suggested for Pet 4, which is not producing doesn't make any difference then. There's some suggestion that's come to our attention that the Federal government in their Prudhoe Bay pricing will take into consideration the tax structure that the corporations operating there and elsewhere in Alaska are facing in so far as it affects their incentive to explore and develop further. It seems to me

like sort of a delima problem. If we were going to increase the tax burden on a petroleum industry, our state administration is going in and asking for the highest possible price, I believe that's there position, the highest possible allowable federal price, it would be new oil or uncontrolled oil, and so it would be with the foreign oil, and their argument is that we need this as an incentive because of the extraordinary cost in Alaska. True we've had a bonanza in Prudhoe Bay, but then that's statistically and otherwise not expected to be counted upon and that we really need a very, very high price here to insure that lesser sands, sands that we know to be less profitable in existance, that you will preclude us from pumping or developing those, or even exploring further unless you give us a high price, and the State if urging the same thing because we are a royalty owner on one side. We've got one hat as an _____ and on the other side, we have the hat of the tax collector, and on the side of the _____, we want the highest price we can get, and we also want it for our oil company citizens. We're all citizens and we are all _____ 7/8 and 1/8 all have the same interests, but when you get to the point of doing the taxes, should the State if we're going to pull taxes, impose it now before they set a price on that oil, or should we wait until after they set a price on that oil. The argument being that if we try to set it before we set a price on the oil, that it destroys our credability that we need a high price for purposes of encouraging development, and the other argument being that if

we don't assess it now, that it will not be taken in as a cost, and therefore that if we cry to assess it later on, we would genuinely create a disincentive that would be so severe to the companies that they couldn't produce under the pricing, and I'm not sure I understand the problem, so I'm certainly sure I can't explain it. Does any of this ring a bell to you?

PROFESSOR AINSWORTH - I think that in a situation like that, I don't know how the State tax or the enactment of a state tax right now would effect the price that the federal authorities might permit you or might not permit you. I would suggest, of course, that any business entity including oil companies would welcome a higher price, and part of the justification in that in the case of oil is always the exploration and coming up with new and better resources, and I think so far as the oil supply situation in general was concerned, that I would leave that pretty much to national policy. Now, as to your own tax, I would say yes, a state tax will indeed reduce in some measure, if you look narrowly at it, the profitability of the oil company. I don't think there's any question about that. On the other hand, what I think taxpayers as well as tax collectors and the State generally would also see is that this tax comes at a time and in a situation where you have no history of taxing oil companies really. I think that this is a whole new thing as far as the State of Alaska goes with substantial oil being produced and generating income and therefore being subject to tax. So that you're coming in more or less at ground zero

as far as major production is concerned and what you ought to be concerned about is not whether you go from say the experiences of '73, '74 where so many separately accounted zero income to your state and so on and so forth, but you ought to look at that and say well now, how will our tax compare with other taxes around about in other states because ultimately it's the differential between your state's tax and other oil producing states tax. If that differential is not substantial after you take account of the very high quality deposit you have here, why then I'd see no great disadvantage to the State going with a 9.4% tax that was effectively applied to oil profit. Every State taxes it in some measure.

SENATOR RADER - Now let's follow that up a little bit. I saw an analysis put together by one of our operators here which had indicated that our total combined tax load if you consider our Ad Valorum taxes, the taxes on the pipeline, the taxes on the whole works, of their properties and their operation that we were 114% above California, or Texas, or something like that. We were 99% of Louisiana. In other words there might be one state in the Union that has imposed a heavier tax load on its petroleum extraction industry than Alaska. Is that, how do you respond to that kind of a statement? And if that is the case should we be talking about imposing any more tax?

PROFESSOR AINSWORTH - Well, I'm not familiar with that particular oil company's own report on its tax problems, but I would suggest

that this is one company, and it apparently comes up after it analyzes its own tax situation for its own information presumably. With this finding, that difference might possibly apply to one company, but not apply to all companies. Certainly a differential of tax as between and among states would however, have to look at what I understand to be the relatively good deposit that you have here, differentially good deposits relative to some other area, and if I were looking at this, I think, strictly from a state point of view, I would certainly take account of that quality differential before I assessed any ninety nine hundred and fourteen study that a particular oil company made.

SENATOR RADER - Let's assume that we determined that our present tax level was all taxes combined, was at the very top, very close to the top in the nation. Do you think as a policy matter, can we go much beyond that or not? What kind of constraints do we have there?

PROFESSOR AINSWORTH - All taxes combined, I think I've seen some of these general statements also, and yet I don't have a detailed picture of them before me, but frequently the general statements I've seen, when they say all taxes combined, the oil companies had sometimes included what they paid the farmer for the oil in North Dakota as a part of the payment to the State.

SENATOR RADER - They broke out the royalty payments as being different than the tax payments.

PROFESSOR AINSWORTH - So you certainly ought to wipe that out first.

SENATOR RADER - I think that's broken out clearly. What they did was they took the operation, they took the wells in operation, and they took the pipeline, the gathering lines of the rest of it and they applied it, and said you can pick this whole thing up and move it to Louisiana and use Louisiana's rates, in some places they're higher than ours, in some places they're lower than ours, and in some places there's no Ad Valorum taxes, _____ that we were at 99% Louisiana, and Louisiana was the highest in the nation, and we were 114 - 125% of other states to which they made the comparison. Now let's assume, I don't know if it's right or not either, but let's assume for purposes of discussion that that presentation was fairly made.

PROFESSOR AINSWORTH - If that were fairly made, then I would only caution that the only thing that they can't pick up from the State of Alaska and put it in Louisiana, even hypothetically, is the oil itself in the ground, and that's differentially good in Alaska, so you may have a margin there to work on.

SENATOR RADER - And how would you determine that the historical experience of the petroleum industry in all fields of Alaska as compared with historical experience of the industry in all fields in Texas, or something? How would you determine that?

PROFESSOR AINSWORTH - Well, I think I would make a current comparison of productivity, potential productivities as we look from here ahead.

SENATOR RADER - Well, if you do that, because of our extraordinary Prudhoe Bay situation, then I would assume that you might say we could afford a tax at a much higher rate than 125% of the next highest state in the nation, and still not provide disincentive to the petroleum industry. If you look at only where we are so far rather than statistically trying to estimate the liklihood of a repeat. I don't know how to judge it, I'm completely at sea on it myself, so I'm not asking you a question on which I have any opinion. I just know that the oil companies make the argument that I'm making to you, and that is "look, we're at the very highest right now, we admit that Prudhoe Bay is a heck of a find, but can we afford to continue hoping to hit that one long shot if your taxes are out of line with what is customary in other producing states". How do we analyze that?

PROFESSOR AINSWORTH - I would say the first thing to analyze would be to do your own study of differential taxation. Included in that study, I would certainly look at all of the work that

the companies have done and take full account of what they've done, say for their Texas, their Louisiana, whatever other place, how they came out of it there as getting all the information you can about statements regards taxability, levels of taxation in various states, and come to your own conclusions, then as to how far you could go on a differentially high side would depend largely, I think, on the relative of quality which is perhaps not quite the right word here of your own deposits visa vis others, actual and potential, and I would be concerned that the State of Alaska should, especially with this a non-renewable type resource, take its own long distance welfare into account in deciding whether or not the tax differentially high, and how far you might reasonably go in that direction.

SENATOR RADER - Well, I think in taking a look at our own welfare, we'd like to say that, we certainly would not want this to be the last exploration done by the petroleum industry in this state because of the fact that we have established an unreasonable taxing method based upon a bonanza, instead of based upon what could be expected to be an average productivity profitability for an industry, and I have no idea how to judge that, nor do I think again, I think you're right, you have to look at and compare our own state with other states, and I don't say you rely on any one elses analysis for that, but I'm just saying let's assume that we've made that analysis, and we've found that our taxes were among the highest and we have transportation

costs. If you did get too high, how would you know it?

PROFESSOR AINSWORTH - You would know it by whether or not the companies continued to operate at profitable levels and whether they continue to explore, how far they went. I would think you could consider that as kind of a current evaluation of what they do in the circumstances that they present.

SENATOR RADER - If we were to take something that's current here on how to explore, what would we have to do, ask them ask EXXON, I keep picking on EXXON just because we started in. It's nothing personal or impersonal about it, but they are a corporate citizen. Would we ask them how much of their exploration budget is coming to us as against other states and other areas of the United States to determine whether or not we think that we have already based a tax level which has created disincentive considering the costs of production and the transportation problems when we get through with the rest of it. How would we go about putting our finger on what is a reasonable level? Everybody talks about fair share. You want to tax your fair share? Sure. I want to pay my fair share. Sure. They're miles apart. Nobody knows what that is.

PROFESSOR AINSWORTH - I think you have very little problem there because as is so vividly reported at the federal level and regards the shortages of fuel just this past winter.

Nobody seems to have data that they agree about regards reserves and what was and what wasn't done with that. We seem to get different stories on that. I would think that the best thing and it probably doesn't apply explicitly or exclusively to Alaska, but would be that if one could come up with your own independent testiments of what your resources are, and the potential yields and profitabilities of them.

SENATOR RADER - Well, we could do that to some extent, but finally the proof is what is their ability to spend the money to poke the hole, and there's been some suggestion that the state should start going out and wildcatting. That way they would know alright, but I imagine they would blow a lot of money too.

PROFESSOR AINSWORTH - That might be a kind of a check that the State would want to make.

SENATOR RADER - Can you think of any way we could get a handle on that problem as to whether or not we've become unreasonable in our tax policy, and in effect driving our petroleum industry out of the state, or diminishing to an unreasonable point their incentive to explore further for new finds and new development.

PROFESSOR AINSWORTH - I think the only way to work at that is to do what seems to be a reasonable job of getting your tax in order for the first time on this kind of industry and activity

really. By that I mean bringing it up surely to the level of other states which with the sales destination and so on, I would judge under the separate accounting would not be the case. Get it up to that level then assess the differential quality as best you can. The information is imperfect. The companies and the energy people in the federal government seem to agree on that at least, and you just have to continue to evaluate.

SENATOR RADER - Well is there any argument in anybody's mind that we are taxing among the highest rate on our severance taxes and on our other taxes than any other states? You see that I thought we were nudging the very top for a long, long time and exceeded almost everybody.

PROFESSOR AINSWORTH - Of course, we're buying an awful lot of oil just now from foreign sources which I think would have a total tax and price situation that would make Alaska's quite minutive perhaps.

SENATOR HUBER - In the studies that you've been doing, do you have any doubt but what singling out Prudhoe Bay. It seems to be what we're basically talking about there anyway. Is there any doubt but what it could stand exceptionally high taxation rates in comparison with other places in the country? Have you discovered that it couldn't, that it would have to be held down to an average of what other states are, or could Prudhoe Bay as being a bonanza, something that you don't find

everyday, could it bear a high rate of taxation in relation to other places?

PROFESSOR AINSWORTH - Of course we're out of the area of the income tax.

SENATOR HUBER - No, we're really not out of the area of the income tax. We're talking about a total rate. Madam Chairman, if you'll give me a little latitude here, Senator Rader was tying us down to the approximate maximum of what other states were doing, and we've had other studies and testimonies since the Tanzer report indicating that Prudhoe Bay is capable of supporting from 50-85% total taxation rate, and many other studies that show maybe as much as 50%. We know that countries in the middle east, some of them with about the same production that we have here are sustaining from 10-11 dollars a barrel tax out of a total price of $14, so that's what I want to get some comments about. I thought it was all going on one side that maybe the oil companies were going to leave before we left this room.

PROFESSOR AINSWORTH - I would not expect that, but more specifically to that point, I think first of all, your suggestion, Senator, that one looks to the other states, but also of course to other places in the world, the petroleum market and its exploration and so on is indeed a worldwide kind of thing, so before concluding as to what could be done by way of taxation

of petroleum companies in Alaska, I would certainly take a very broad look at it. Secondly, it seems to me that we're really not quite at the point of being differentially high in Alaska. We're really sort of starting from the beginning as far as oil operations are concerned, and the ineffectiveness historically, ineffectiveness of the sales destination package historically has set a low base here as a starting point and unless something is done, I think that it would continue perhaps unfortunately low to the disadvantage of the State. Then a final observation I would make is this that in terms of the kind of taxes that are most inconveniently kind, as it were, for all taxpayers, but certainly including corporate taxpayers, it seems to me the net income tax applies only when there is in fact net income, and what we're proposing primarily is a system for determining what that net income is and assigning its fair share to Alaska, and then taxing it. If it comes out zero as it conceivable could, though I think unlikely in the forseeable future, why then it would go away, unlike a tax, say well the tax that Professor Zeifman mentions as the first string on the bow, if you wish, the severance tax, that does not vary with the profitability of the oil companies, so in a sense an income tax is a more conveniently kind tax which gets less if profitability diminishes. So its differential effect between and among the states would be somewhat moderated as compared with say the severance tax and those other taxes which are not geared to net profitability, so I think you have a way

to go before you come up to for all practical purposes this line if you look nationwide and indeed OPECwide, and also the income tax would be of less concern, I should think, than almost any other tax because it is a net thing. It's only after their profitable that in fact taxes are applied.

SENATOR HUBER - Madam Chairman, would you care to comment upon the different make up of the type of oil companies that we have on the slope in Alaska, mainly comment maybe on there being more of the vertically integrated multi-national in regards to the small independents there in many states like Texas and other places. I know it's an entirely different problem of handling them and dealing with the two different kinds of companies. In fact it's entirely different to be fair with them even. Would you care to comment on that?

PROFESSOR AINSWORTH - I would comment to this extent on that, and then perhaps Professor Zeifman can add something. It seems to me that if you look at the House proposal before you 322, the destination versus the Senate proposal 105, the separate accounting one, that for the company which is entirely and exclusively in Alaska, any one of these three is likely to come to about the same end result, because you are indeed all there. Now, if you look at it however, from the other perspective. If you keep the destination factor or if you use the separate accounting device as a way to determine Alaska taxable income, then you will be providing an opportunity

for the large integrated company to reduce its tax liability differentially low, relative to the small highly local company because the effective rate of 9.4% will indeed be applied to that local company which is 100% Alaska no matter how you look at it. The whole pie is here obviously and simply. The destination factor and the separate accounting factor provides an opportunity for some shipping of income out of Alaska which might buy the House 322 be apportioned to Alaska, and in that sense, the small local company will be treated equally. They will pay their 9.4% on income just as the large company will pay 9.4% on its income more reasonably now apportioned to Alaska, so the small company gains not in the sense that its taxes go down all that much, but in the sense the other competitors, larger competitors will be paying at the same effective rate or more nearly so, now there is also a size provision that applies in some measure here and perhaps Professor Zeifman.....

PROFESSOR ZEIFMAN - Our proposal of course applies really for all practical purposes only to multi-national corporations, and I think we've already discussed the tax avoidance possibilities of them with respect to the use of separate accounting. I would sort of like to address myself to both of your observations, and that is that I wouldn't necessarily be persuaded by one way or the other by the fact that whether Alaska has the highest effective rate of taxation of the petroleum industry of any state in the United States of course has some relevance, but

I don't think that that ought to be necessarily the measure. At the same time, you could say that one of the chief industries of Alaska, perhaps more than other states, that the heaviest industry in Alaska is the petroleum industry, and therefore it follows that it would come out that way. I interestingly enough, and this is purely coincidental, most of my experience or ten years of my experience with the Congress, especially with the subcommittee on the outer-continental shelf was working with a chairman from Louisiana who used to be in his earlier days, was the majority leader of the Louisiana assembly, and he used to talk to me in great lengths about the problem of taxation in Louisiana where the State had a similar kind of situation before the oil companies came, and that was the timber industry. It came into Louisiana, stripped the timber bare, and left, and left the state with practically no tax base, and then when the petroleum industry came, I suppose Huey Long who often became criticized for other things began a program to try to develop an effective tax program with respect to the petroleum industry, but as the petroleum industry becomes more and more multi-national, again I want to reiterate that for the State to look at a multi-national petroleum company, only in terms of the profitability as determined by the company, in terms of its own books, in terms of the Alaska subsidiary, I think prevents you from getting the kind of data and the kind of perspective that you would need in order to make this kind of a decision. As I mentioned to you before, if I were working for a multi-national petroleum

company, what I would do would be to try to demonstrate again, and again, and again the low level of profitability of Alaska petroleum developemnt, and the way I would do it would be to establish affiliates, have them operate in Alaska, and control them from parent corporations that exist elsewhere and argue that their profitability was low. So again, I think in order to get the kind of perspective that you're talking about, that both of you are talking about, you have to look at the whole picture of the petroleum companies operations. Also, again I think that we run into this problem all over, in the sense that the New York stock exchange threatened to move out of New York. There are some industries that can't move. The California wine industry is not going to move from California. I don't think the citrus industry is going to move from California, and the petroleum industry is not going to move from Alaska, but you have, I think, an especially important problem here, and that is the non-renewable nature of the resource, and so I think that in addition to asking yourself the question about what happens if, are we going to discourage the petroleum companies to move out. You ought to also ask the question of the extent to which you are extracting revenues from them that are commensurate with the burden and with the long-range economic environmental burden that they are imposing on the State. The more the petroleum industry comes into Alaska, the more it imposes burdens, so I would suggest to you that an important measure of the tax begins where I first started, the preficatory

language of the bill that the measure of the tax to a large extent ought to be related to the economic burden and demand for services that the petroleum industry creates for the State. Admittedly, to translate that into a tax rate is I guess fortunately for us lawyers, that's the kind of thing that economists are dealing with.

SENATOR HUBER - Madam Chairman, it's interesting to note about this language at the beginning of the bill. I think maybe Professor Zeifman mentions that it seems to be important. If I remember right, I don't have to remember back very far. Four years ago our drafting attornies used to tell me that we couldn't put it in. Three years ago they started putting it in if I jumped up and down hard enough, and now every bill I get has it drafted in, and they all tell me it don't mean anything, it has nothing to do with the legality, so I'm not sure that it does, but there's one observation that you made about the 9.4% tax that Alaska corporation would have to pay doing the same thing, and where the multi-national or vertically individual company gets away from it, and this is where we got started, where we are now is trying to plug up that loophole, that Alaska corporation would have to pay, and the other ones wouldn't have to pay. We look back at history like you mentioned in Louisiana, and we found that our fur traders were here and all they did was left us with a bunch of mad indians, and then they came along and dug the gold up and left us with tailing piles, then the salmon were gone and

all we're left is fighting with the Japanese over whats left of the little piddlin bit of salmon that's left, so now it's oil. It seems like Alaska has had one after another.

PROFESSOR ZEIFMAN - It sort of ends the history of successful people in mankind doesn't it?

SENATOR HUBER - Something on that order, but we end up with in each case Alaska's ending up with the impact, but look at salmon, and those pilings that we pick up all over aren't worth a damned, as Senator Poland will tell you. It's another thing that makes it a paying thing, and somehow or another I suppose we're trying to do the same thing with the petroleum industry which we know is depletable.

CHAIRMAN Poland - Senator Huber, did you have another question? I think that our consultant for the Committee, Mr. Silides might have some.

GEORGE SILIDES - Madam Chairman, both Mr. Erickson and I have several, but I think we'll have to defer, except for one which I think is going to need answering on Rader's plan of _____ If we might be able to mail them or telephone them in.

PROFESSOR AINSWORTH - Or if you wish we could remain with you, whichever.

GEORGE SILIDES - I'm concerned about how effectively your approach would be in apportioning income to Alaska from Prudhoe Bay and the Alyeska operations. You know, Alyeska in particularly is wholly an inter-state corporation. That was the question. How effective are you or would your scheme be in apportioning income to Alaska from the Prudhoe Bay and the Alyeska operation?

PROFESSOR AINSWORTH - Well, I would argue that it is the more effective way by far in the sense that first of all, I think there's a little bit of a mystery as to how the pipeline company is going to operate totally, but I would argue that, let me put it this way in order to be very specific. Again, I'm not talking about the book income part of it, and I'm talking in part about the extraction factor, but the part again that I want to emphasize, because frankly, respectfully, I feel that Mr. Erickson has totally misunderstood the nature of this problem, but anyway I want to make that clear that the idea of looking at the whole picture of the out of state owners and their profitability of the whole picture of their profitability is important, extremely important because the truth of the matter is that in a true economic sense, the pipeline companies are not operating solely in Alaska. They are part of a worldwide conglomerate type of operation, and although they have set up subsidiaries that operate in Alaska, in a true economic sense, those pipeline companies are truly and part of a unitary kind of business, and it has been suggested

to me for example by Mr. Erickson, that the state ought to draw a ring around Alaska, and therefore make sure that it is effectively taxing all those companies. That ring that Mr. Erickson would draw around Alaska is a ring that would prevent the State from having any effective remedy if the control of the pipeline companies, let's face it, the pipeline companies are not controlled by Alaska. They are not controlled by the legislature. They are controlled by corporations who have their corporate headquarters, and the major portion of their resources outside of Alaska. If they operate those in a manner to minimize their profitability which they easily can do, and the Department of Revenue is stradled with what I call this bow and arrow, obsolete, outmoded, mioptic form of taxation based on separate accounting. I think you are opening the flood base for widespread tax avoidance on the part of pipeline operators.

GEORGE SILIDES - Madam Chairman, Professor, that was not Mr. Erickson's question, but at any rate, one last thing. What is to prevent, now let me ask you this, you have said that no other state has adopted this particular procedure.

PROFESSOR AINSWORTH - Now, let me be very specific about this, and I'm very appreciative to Senator Rader for having brought this up. When I said that no other state has adopted this procedure, I am talking about the use of book income as a taxpayer, not the subject of the so called worldwide combination

or combined report which most of the progressive states have adopted.

GEORGE SILIDES - I understand all that, but now supposing that all the other 49 states have adopted this book income, wouldn't Alaska or Prudhoe Bay with it's high profitability, wouldn't Alaska income be voted by other states as jumping on to a possible venture?

PROFESSOR AINSWORTH - If all of the states adopted the book income approach, all the states would agree on the total size of the worldwide pie that's all. That is not related. If I could rephrase your question, I think what you're getting at is if all states are adopting the kind of apportionment formula that we are talking about.

GEORGE SILIDES - No.

PROFESSOR AINSWORTH - Well, I understand it to be addressed to book income, and I would say that the effect of all states adopting book income as the state taxable income would be to enlarge the corporate tax revenue for every state, a little bit as we suggested it be enlarged in Alaska. It would not shift income from one state to another, but every state would be more effective in raising revenue by that device.

GEORGE SILIDES - From the company?

PROFESSOR AINSWORTH - Yes, but not at the expense of Alaska.

GEORGE SILIDES - That answers my question.

PROFESSOR AINSWORTH - If I may Madam Chairman, in further comment so far as the pipeline property is concerned, in ing my estimates of revenue, I have assumed that property would indeed be incorporated into the numerator and the denominators of the appropriate oil company, so in that sense it would also be incorporated into this proposal that we have. We did not exclude that as part of the property factor.

GEORGE SILIDES - Professor we understand that we have a unique situation here, the pipeline companies are actually small.

PROFESSOR AINSWORTH.- Also, let me make an additional observation about the pipeline company which is a form of justification for departing from the uniform act. The uniform act itself and the draftsman of the uniform act expressly, intentionally they were cognizant of the fact that transportation companies present special problems, and so they did not include, they excluded transportation companies from the coverage of the uniform act, which is a further justification for the use of an extraction factor with respect to the apportionment of income in Alaska.

CHAIRMAN POLAND - Are there no further questions? Thank you very much Professor Ainsworth and Professor Zeifman, and ladies and gentlemen for your patience. We will resume our joint resources meeting here tomorrow at 1:30 in the afternoon.

STATEMENT

OF

BRISTOL BAY NATIVE CORPORATION

February 9, 1978

Madam Chairman, my name is Donald F. Nielsen, a shareholder and Vice President of Bristol Bay Native Corporation.

We are opposed to S.B. 236 or any other proposal to establish an oil and gas corporate franchise tax. Under the terms of our agreement with a major oil company, if oil or gas is produced on our lands, we will share in the production and would become a producing oil company. The market for our production would be outside of Alaska. The figure in excess of $250,000,000 gross receipts may be of some protection in the immediate future; however, there is no assurance that if such a proposed bill becomes law that this figure could not be adjusted downward to fit any given corporation, nor does it take into account any future price increases.

As an Alaskan corporation, we do not feel we should be required to keep separate accounts and pay any different tax than any other normal Alaska corporation. Also, we feel the proposed franchise tax, if passed, could later be applied to other industires such as mining, all of which tends to discourage major investments and financing of any type of investments in Alaska. The same reasoning applies to any burdensome tax policies that that effect Alaska's investment climate. Thank you.

CITIES SERVICE MINERALS CORPORATION

March 17, 1977

Mr. Bill Bishop
Bristol Bay Native Corp.
445 East 5th Avenue
Anchorage, AK 99501

Dear Bill:

Mr. Ranspot and I want to thank you and the Bristol Bay Native Corporation staff for the courtesies extended during our meeting last week. We found our review of the Bear Creek Mining Data to be most interesting and, in fact, these data exceeded our expectations. Bear Creek Mining has done an excellent job in its investigation of porphyry type targets.

As I mentioned on the phone, we have had to decline entering into an exploration agreement with Bristol Bay Native Corporation for a number of reasons in spite of the excellent mineral potential indicated by the data reviewed.

Certainly one important reason for being very hesitant to engage in new minerals exploration programs has been the Hammond administration's attitude toward mining taxes. Not only are attempts being made to adversely change the present mining license tax but several comments by the administration have indicated that an additional severance tax bill is going to be introduced in the next session of the legislature. One needs only to look at what has happened to taxes on oil and gas production in the last ten years to believe that the same thing will happen to the mining industry. With the high capital costs and the high infrastructure costs in mine development in Alaska a high tax burden will simply eliminate any chance for development of a mining industry.

The attractiveness of possible mining operations on native corporation land is being outweighed by the ever more burdensome tax policies generated in Juneau.

Sincerely,

Donald L. Stevens

DLS:bh

OIL AND GAS TAXATION

SENATE RESOURCES COMMITTEE

HOUSE RESOURCES COMMITTEE

Testimony of Lawrence L. Wilson

March 25, 1977

My name is Lawrence L. Wilson, Associate Tax Counsel, Union Oil Company of California. I shall be speaking today on a number of bills which cover income taxation, severance taxation and property taxation. Specifically, these will be SB 105 and its companion bill, HB 145 and HB 322, all of which deal with income taxation along with SB 202 which is the "net proceeds" tax. I will also cover SB 103 and HB 321 and its companion bill HB 144, which deal with severance taxation. Finally, there will be remarks covering HB 323 dealing with property taxation and HB 328 dealing with the Reserves Tax. Where appropriate, my remarks will also comment on testimony that has already preceded my testimony. The first bill I wish to comment on is SB 105. No reference is made to HB 145 since it is an identical bill.

SB 105

SB 105 is a bill which purports to determine income to Alaska through the "separate accounting" method. The preficatory language in Section 1 states that the present method of apportioning income under the three-factor formula embodied in the Multistate Tax Compact does not fairly represent the extent of

the business activities in Alaska for corporations engaged in the production and pipeline transportation of crude oil and natural gas. Section 1 goes on to state that the legislature, therefore, intends that section 18 of Article IV of the Compact, which allows separate accounting, shall be adopted for determining income derived from the production and pipeline transportation of oil and gas.

Richard Kilgore of Walter J. Levy and Associates and Professors Jerome Zeifman and Kenneth Ainsworth have commented on "separate accounting" as a method of determining income with Mr. Kilgore defending it and Messrs. Zeifman and Ainsworth attacking it. Even Mr. Kilgore acknowledged that the administrative problems of determining "value" for a product transferred out of the state and of allocating expenses to Alaska were troublesome. Messrs. Zeifman and Ainsworth painted a picture of corporate maneuvering by astute managers to deliberately operate Alaska affiliates at a low profit through such means as selling property to the affiliate at high prices to get high depreciation and by allocating excessive overhead.

However, none of these witnesses have provided this Joint Committee with the really significant reasons why separate accounting is an unsatisfactory method of determining income within a state. First, even if one could overcome the administrative problems of valuing production and allocating overhead, separate accounting simply cannot adequately and properly determine how much profit of a business is derived from within a

state where the overall business has parts which are dependent upon one another and which are located in more than one state. It was for this very reason that the "unitary business" concept was developed along with apportionment formulas to determine how much of the total income of the total multistate business should be apportioned to a state. This is precisely the procedure which Alaska uses today, as well as most taxing jurisdictions, i.e., the total income of the total business of a multistate company is determined and then apportioned.

The other reason why separate accounting should not be adopted is that it exposes the taxpayer to multiple taxation. Income which would be fully taxed in Alaska would also be apportioned to other states using the apportionment method, which looks to the total income of the taxpayer as a taxable apportionment base. Conversely, Alaska's or any other state's adoption of separate accounting could cause it to lose tax from an overall profitable multistate company -- specifically, where the in-state separate accounting calculations produce an in-state loss for such overall profitable company. As Mr. Bonney of EXXON will demonstrate, LATER, this would have been his company's case had Alaska been on separate accounting during the development years of the North Slope. Instead, Alaska received income tax by using the current apportionment method, apportioning a part of that company's overall profit into Alaska.

Turning to the provisions of SB 105, it is clear that the bill is not even the form of separate accounting which any of the witnesses were debating. Rather, it is a hybrid form of

separate accounting. It seeks to determine income by simple reference to the wellhead value of oil and gas used for severance tax purposes and then allows only seven deductions while totally ignoring any other legitimate deductions which represent business expenses allowable under established principles of income taxation. Five of the seven allowed deductions relate to costs closely associated with production. Another category is for unsuccessful exploration costs incurred in Alaska. The only out-of-state cost allowed is for interest expense "not capitalized and capitalizable", but this expense would be severely limited for most companies through the use of a ratio of the book value of the fixed assets associated with the field to the total book assets held by the corporation and of its affiliates. All interest expense related to a company's operations within the state should be recognized as a current operating expense, without the limitation described in this bill.

It is clear that SB 105 would introduce new concepts of taxing an oil and gas producer which radically depart from concepts found under the existing Alaska corporate income tax structure. The traditional concepts established over decades of experience and which are contained in that corporate income tax structure would in large part not apply, yet the producer would be taxed at the same 9.4% corporate rate of tax.

One of the seven deductions is for "severance taxes actually paid." This provision may appear to be without problems until one analyzes it in connection with the reserves tax.

Unless the statute is amended, the reserves tax will likely result in nearly $240-250 million dollars paid to the state next June 30th. With the $220 million paid on June 30, 1976, the aggregate of nearly $500 million represents, in essence, prepaid severance taxes because the reserves tax may be used as a credit against future severance taxes payable. Hence, the word "actually" in the clause "severance taxes actually paid" takes on significance, and it appears that the authors' intent is to allow as a deduction only that amount of severance tax "actually" paid over after the credit with the result that some $500 million would be denied as a deduction.

Depreciation is allowable but only on facilities closely associated with production, but the amount of depreciation is simply left to the Department of Revenue to handle by regulation. Depreciation is a vastly complex subject under income tax laws and can be handled in many ways to provide fair and equitable results to a taxpayer. The bill provides little or no guidance on a subject of such importance to a taxpayer.

As noted earlier, SB 105 does not fit within the category of the "separate accounting" method of determining income. What it really seeks to do is draw a ring around successful oil and gas operations and allow as expenses only those that are literally tied to the lease, plus expenses for unsuccessful exploration efforts and a severely limited amount of interest expense. The resulting amount is supposed to be net income, but in fact, would represent a level of income much higher than would occur under regular principles of income taxation.

In addition to the tax received by Alaska based on an inordinately high level of income, the authors of SB 105 would, under Section 43.20.014, still seek to reach, through apportionment, the taxpayer's out-of-state income, including its oil and gas and pipeline income as well as all other income. In short, SB 105 would allow Alaska to fully, or, rather, more than fully, tax directly all of the Alaska income from oil and gas and pipeline transportation and would also require the taxpayer to apportion to Alaska all of its other income except the income already taxed by SB 105. And, of course, the final effect to the taxpayer would be that other states where it does business would also apportion income to themselves under their tax laws and included in that apportionment to them would be the Alaska income already fully taxed by Alaska.

A state may constitutionally tax only that income of a taxpayer which is derived from within its borders. That fundamental rule applies irrespective of the method used to determine income. SB 105 seeks to reach all income from oil and gas and pipeline transportation in Alaska and at the same time, through apportionment, seeks to reach the taxpayer's other income including its non-Alaskan oil and gas and pipeline income, thereby raising the constitutional question of the taxation of extraterritorial value in violation of the Fourteenth Amendment of the U. S. Constitution.

With respect to income from pipeline transportation of oil, Sec. 43.20.013 simply provides that where such a pipeline is regulated by the Interstate Commerce Commission (ICC), the

annual taxable income "shall be eight percent of the valuation." There are no guidelines to determining income under any set of rules, and items of income and expense are not even considered. Obviously, this provision is aimed at the Trans Alaska Pipeline and, in effect, says that the tax shall be valuation times 8% to get around $600 million of "annual income" which, when taxed at 9.4%, produces a tax of about $60 million.

Attempting to tax a business in this manner would be similar to a law which says that an individual shall be deemed to have annual income equal to a certain percentage of the assets he owns. For example, suppose such a law says that a person's annual income is deemed to be 50% of his assets and the person owns an apartment house worth $200,000 but has a $150,000 mortgage against it. His annual income would be $100,000 to be taxed irrespective of his costs. It would not matter that the person may, in fact, show very little profit.

A taxing scheme which deems "income" to be a percent of value of assets without regard to actual income and expenses is, in effect, nothing more than a property tax under the guise of an income tax and raises serious legal and constitutional problems.

The authors, however, have attempted to provide a form of "escape hatch" to the foregoing method of taxation by providing in Section 43.20.013(c) that the corperation operating such an ICC-regulated oil pipeline may elect to have taxable income from the pipeline determined under rules and regulations of the

ACO 547512

Alaska Pipeline Commission. Thus, the idea seems to be that if the corporation does not like the percent-of-value method of determining annual income (which would deem annual income to be at a very high and ficticious level), then it can be economically forced to submit to the rules and regulations of the Alaska Pipeline Commission whose rules may or may not be parallel with the ICC rules. In fact, section 6 of the bill contains an amendment to Section 42.06.041 by adding new provisions which require the Alaska Pipeline Commission to give the Department of Revenue a certificate that the pipeline corporation so electing has complied with the Commission's rules and regulations. Subsection (c) of Section 041 provides that the Commission shall by regulations establish an accounting procedure to define net income to "coincide as nearly as possible with the net income definition used by the Commission in establishing rates and measuring rate of return."

What is happening under these provisions seems clear enough. The idea seems to be to put such an onerous tax burden on the ICC-regulated pipeline that it would be forced to elect to comply with all applicable regulations and orders of the Alaska Pipeline Commission concerning accounting methods and reports. In short, the Commission would set the rules for income determination notwithstanding that the pipeline company remains subject to the primary jurisdiction of the ICC. Thus, there would be four parties involved in determining income: the taxpayer, the ICC, the Alaska Pipeline Commission, and the Commissioner of Revenue who is interpreting the Alaska Commission's rules.

Use of the tax laws to achieve the apparent goal of regulation by the Alaska Pipeline Commission is an abuse of the taxing power. Further, the scheme raises obvious legal and constitutional questions and with so many parties that would be involved in the income determination process, the stage would be set for endless controversies.

The foregoing discussion relates to ICC-regulated oil pipelines. Where an oil pipeline does not yet have a value established by the ICC or where the oil pipeline is strictly an intrastate oil pipeline, the bill provides that such a corporation having one of these pipelines shall have its income determined under the rules and regulations of the Alaska Pipeline Commission. Here again, as would be the case of an ICC-regulated pipeline corperation which was forced to elect to have income determined by the Commission (discussed above), the income determination is left to another agency under rules and regulations as it chooses. In essence, the whole matter of determining income to tax under an income tax law is left to the vague guidelines of another governmental agency. This, in itself, raises questions whether there has been an unconstitutional delegation of legislative authority. But even if one gets over that hurdle, the fact remains that whatever rules would finally apply, those rules would not accord with general principles of income taxation which ought to apply to pipeline operations just as they apply to any other type of operation.

As to gas pipelines regulated by the Federal Power Commission (FPC), SB 105 provides in Section 43.20.013(d) that

taxable income shall be determined in accordance with reporting procedures established by the FPC. Here again, there is a departure from normal application of income tax principles because a gas pipeline, though regulated, is really no different from any other taxpayer insofar as having income tax principles applied to its operations. The regulation and rate-making process of the FPC fully takes into account a gas pipeline's handling of its operations where that pipeline utilizes the provisions of the Internal Revenue Code to achieve tax savings for the benefit of not only its customers but also its shareholders.

Finally, I would like to say a word about Section 43.20.015 which deals with "Public Reporting." Under that provision the Commissioner of Revenue is to compile and transmit to the legislature each year an annual report which shows the tax paid under SB 105 together with the itemized deductions that have been allowed and how much tax revenue was not collected because of the deductions. Further, the report is to provide a summary of the total amount of oil and gas produced by each taxpayer, the taxable income as calculated under Section 12 and 13 relating to oil and gas income and pipeline transportation in Alaska, and the out-of-state income of the taxpayer apportioned to Alaska.

In short, SB 105 would open up for general scrutiny without safeguards of confidentiality the whole operation of the oil and gas producers and pipeline operators in Alaska. I would hope that we haven't progressed to the point in this country where a

AGO 547515

taxpayer's returns have become a matter of public record. I doubt if anyone would consent to having their tax return information bundled up by the tax collector to be laid bare for anyone to review. There are strict rules in all states and at the federal level covering disclosure of tax return information, and there are ways whereby certain limited groups of people having a legitimate interest can obtain that information on a strictly confidential basis with criminal sanctions imposed for violations. But under SB 105, the information could be made available to a large number of people where there are no guidelines whatsoever over disclosure. Such a provision is one that simply should not be tolerated no matter who the taxpayer may be.

HB 322

The next bill I wish to discuss is HB 322. This is the Department of Revenue's bill which adopts the recommendations of Professors Zeifman and Ainsworth. Essentially, this bill has the following features:

1. Impose a franchise tax on oil and gas producers operating in Alaska who have gross receipts of $250 million or more.

2. The income base to be taxed would be the higher of (1) pre-tax book income as reported to stockholders before any reduction by reason of taxes on income, or (2) taxable income under the Internal Revenue Code.

AGO 547516

3. Apportion the pre-tax book income under item 2 by means of a three-factor formula where the property and payroll factors are the same as now contained in the Multistate Compact but the sales factor in the Compact would be replaced by an extraction factor. Such extraction factor would be the ratio of oil and gas produced in Alaska (expressed in BTU's) to total production of the taxpayer everywhere.

Thus, there are two main themes to HB 322: tax base changes and apportionment factor changes. Such changes are the same changes discussed and recommended by Professors Zeifman and Ainsworth in their testimony earlier this week.

Professors Zeifman and Ainsworth would reject federal taxable income as a tax base because the Federal Internal Revenue Code contains many deductions, credits and exclusions which they allege have diluted revenue-raising potential through subsidization of of some activities while discouraging others.

In their report, though not mentioned except briefly in their testimony, the professors attempted to demonstrate how the revenue raising potential has been eroded and referred to the concept of "tax expenditures" which, in essence, is simply a listing of those items or categories constituting deductions, credits, or exemptions found in the Internal Revenue Code, together with the estimated effect they have on revenue collected. This listing is required to be published each year under the

Congressional Budget Act of 1974. However, instead of discussing and commenting on the more than 75 general categories of items in the published list as they apply to both individual and corporate taxpayers, the professors chose only to extract in their report but six categories, and only one of the six (expensing of exploration and development costs) applies specially to the petroleum and mining industry.

I have here the complete listing of "tax expenditures" for the Fiscal Year 1978 which also shows those "tax expenditures" for years 1976 and 1977. A copy of this listing is attached. There are two columns for each year, one for corporations and one for individuals. A review of both the number of categories listed as well as dollar amounts will reveal that individual taxpayers indeed have fared very well compared with corporate taxpayers. It will also be noted that there are only two items relating specially to the petroleum industry. One deals with the expensing of exploration and development costs, which, from the testimony of the professors as well as Mr. Kilgore, one would think was the major provision in the Internal Revenue Code but which in reality represents a rather small item compared to other items in the listing. In fact, that item has a revenue loss effect about equal to the loss from the credit allowed for buying new homes. The other category deals with the excess of percentage depletion over cost depletion. But this latter item applies to over 100 different minerals which involve percentage depletion--oil and gas being but one category. In any event, percentage depletion has

negligible application to major oil companies because of the severe restriction of percentage depletion for oil and gas resulting from the 1975 Tax Reform Act. The professors' attempt in their paper to show the petroleum industry as a highly favored industry that receives a major share of tax benefits is simply incorrect.

After leveling a finger at corporate taxpayers generally, the professors then recommended that one special group--namely oil companies--be singled out for tax "reform". However, the professors failed to discuss either in their paper or their testimony the inequity or possible legal problems of proposing a "book income" base for major oil companies which would be far different than would apply to any other class of taxpayers. They did not even mention in their report that no state in the country has a law utilizing "pre-tax book income" as a tax base though questioning by the Committee did bring out this information.

Even if one were to agree with the novel approach suggested by Professors Zeifman and Ainsworth and embodied in HB 322, a true advocate of their theory could not logically propose its use with one set of taxpayers and then ignore its applicability to the vast majority of other taxpayers. If such a radical change in tax approach is to be made, then it should apply to all taxpayers under all income tax laws at the same time, with corresponding adjustments of tax rates for all.

AGO 547519

An approach which uses the higher of book income before taxes or taxable income can lead to distorted results. Mr. Bonney of EXXON will demonstrate through a simple example how the use of one versus the other could prevent a full recovery of a capital investment and yet tax phantom or non-existent income. Further distortion may result from the inclusion of earnings of non-controlled companies in pre-tax income, as required by generally accepted accounting principles. While the oil companies may be required to report the earnings of their investments in non-controlled companies, they do not determine if or when the earnings of these entities are distributed. Yet HB No. 322 provides for immediate taxation of this income because it would be included within the pre-tax book income reported to stockholders.

Professor Zeifman emphasized the fact that book income is invariably larger than taxable income, thereby showing that big corporations have tax benefits. However, of what real significance is it that a corporation's management chooses to adopt a conservative book accounting method as long as it is consistent in doing so year after year to avoid distortions? Differences between book and tax income due to different treatment has existed for decades under generally accepted accounting principles. For tax purposes the Internal Revenue Service, as well as a company's own auditors, will require a full reconciliation of the taxable income back to the book income and there are extensive schedules in tax returns which do this every year.

The only point Professor Zeifman is making is that under the Internal Revenue Code corporations are permitted certain deductions, or credits, or exclusions which, if taken advantage of, show a lesser "taxable" income than shown on the books if the management chooses to use a consistent method which treats the item differently. But the same thing can be said for all taxpayers, i.e., all taxpayers receive some form of tax treatment which causes their taxes to be less than if the tax law simply taxed the gross dollars received at a specified rate This can be seen from the "tax expenditures" listing referred to earlier. Pointing the finger at one group of taxpayers as ones who should first go on the chopping block of reform while ignoring others who are not so treated is asking a lot of any legislative body whose duty it is to play fair with its citizens, whether they be corporate citizens or individuals.

Substitution of an "extraction" factor for the "sales" factor

The second main point of HB 322 deals with deleting the sales factor and substituting an extraction factor.

Before plunging into this subject, I believe it would be helpful to give the Committee some background about the traditional three-factor formula utilizing property, payroll and sales, where it came from and why it is used today by most states which tax corporate income. Another reason why this will be helpful is that Professors Zeifman and Ainsworth gave their testimony recommending a change strictly on the basis

that its use will apportion more income and, therefore provide more tax. However, the matter is not quite as simple as the professors have indicated.

When states began taxing corporate income over 50 years ago, there were various formulas used to divide the income. Because there were different formulas, it was not long before disputes arose between states and taxpayers, usually involving the question whether the state was reaching for too much of the taxpayer's income. It is very important to bear in mind all the way through the discussion of this subject that a state can constitutionally tax only that income of the taxpayer which is derived from within the state's borders. Thus, the search has always been to find a formula which gives both the taxpayer and the state fair treatment. But as to the taxpayer who operates in more than one state, the problem has also been to utilize a method of dividing income which does not subject the taxpayer to multiple taxation.

It is not difficult to see how multiple taxation can occur. Suppose X corporation operates in states A, B, and C, each of which has the same standard three-factor formula of property, payroll, and sales and each of which has an 8% income tax rate. In would be rare if X corporation had exactly the same mixture of property, payroll, and sales in each state. However, when each of the three states apply their tax laws and divide the income under their uniform formulas, X's total tax to all three states will be no more than 8% of its total income.

But let's vary the example just slightly and assume that in state A, X corporation has a heavy concentration of property and payroll but not many sales and that state A decides to delete its sales factor and have only a two-factor formula. In such a case state A will apportion to itself a greater amount of X's income but apportionment to States B and C will remain the same. The result will be that an amount greater than X's total income will be apportioned in the aggregate to all three states and X will have been subjected to multiple taxation because State A broke the uniformity.

The foregoing is a simplified example but nevertheless demonstrates how multiple taxation can result. As noted earlier, disputes over income taxation existed for decades and it was not until 1957 when the Commissioners on Uniform Laws in conjunction with the tax section of the American Bar Association and many other interested parties finally wrote a model law known as the "Uniform Division of Income for Tax Purposes Act" (UDITPA) in the hope that states would adopt it and thus put an end to the chaotic condition that existed. The apportionment formula settled upon utilized property, payroll and destination sales. Underlying this three-factor theory of apportionment is the concept that the employment of capital in the form of property, labor as reflected in payrolls and ultimate sales to generate the sustaining revenues for the business are all vital factors to be given equal weight in determining income. Thus, the theory recognizes that in a true economic sense some part of taxable income is earned at every stage of the business process.

To date, about one-half of the states (including Alaska) have adopted UDITPA and all but two states which impose an income tax use the three-factor formula of property payroll and sales.

The UDITPA model law only deals with apportionment of income and does not contain provisions setting forth rules or procedures whereby a state cooperates with other states to administer income taxation on a joint basis. In an effort to promote uniformity of tax rules and cooperation, a number of states formed what is now called the Multistate Tax Compact. However, a state which adopts the Compact also adopts the three-factor division of income formula based on the UDITPA model law. Alaska adopted the Compact in 1970 but followed the UDITPA formula before 1970. Hence, states which have adopted the Compact and states which simply follow the UDITPA rules have compatible laws.

With this brief background let me turn to the proposal to delete the sales factor and impose an extraction factor. The nub of the professors' argument is that the sales factor is low due to destination sales which causes lesser apportionment of income to Alaska and this can be cured by substituting an extraction factor. Thus, the sales factor is dismissed by the professors and the reader of their paper and the audience to their testimony is simply left with a conclusion void of any reasoning except maximizing revenue.

There was a sound reason for the UDITPA and Compact treatment of sales on a destination basis for purposes of the "sales" factor. A destination sale is one which occurs in a state if goods are

AGO 547524

delivered in that state or services are performed in that state. Suppose a manufacturer has its plant in Illinois and has a large payroll at that plant. From this plant the manufacturer ships most all of his products to purchasers in other states. If this is the only plant, the property and the payroll factor to Illinois

will be high and if the sales are attributed to the Illinois plant as the origination point of the sale, then Illinois would apportion nearly all the income for taxation in Illinois. As can be seen from this simplified example, the major manufacturing states would receive an unreasonably high proportion of apportioned income to the detriment of non-manufacturing states. Hence, the "destination" sales concept is one which not only affords protection to less populated, non-manufacturing states, such as Alaska, but also gives legitimate recognition to sales activity in consumer states by deeming the sale to "occur" where the purchase takes delivery.

What the professors have proposed as a factor change is no different from what they might propose in any state based upon simple reasoning to get more revenue, the only difference being that in such other states it might be a different factor which provides the key. For example, they might shift their proposal to Illinois or Pennsylvania to point out that its sales factor also is destination-oriented and because most products are shipped out-of-state, the ratio of sales in either of those states will be lower. The professors could then recommend that the "destination" sales factor be changed to an "origin" sales factor or that the sales factor be deleted in favor of one based on manufactured units (e.g., television sets) in the state to total units manufactured everywhere. By such changes, those states could then command most of the apportioned revenue since, being manufacturing states, they already have the bulk of property and payroll and, through the sales factor change, they could prevent

dilution of the total factor to be used by the taxpayer.

But suppose it was some state which did not have heavy manufacturing (i.e., low property and payroll in the state)? Under the professors' reasoning this might call for use of only a sales factor -- i.e., destination sales and not origin sales because only the former would help the state (in contrast to what was said above as being in the "best interests" of Illinois or Pennsylvania). By so limiting the formula to a single factor, the non-manufacturing state maximizes apportionment of income to the state.*

The foregoing are only two examples out of many one could establish to tailor apportionment formulas for various states if the only objective is simply maximizing revenue without concern for inequitable or unconstitutional consequences. However, the problems with the examples are parallel to the same problems that are contained in the professors' proposal for an extraction factor. In each instance there is a break in the uniformity of treatment by a state which inevitably results in the taxpayer being subjected to multiple taxation. The state breaking uniformity will tax a larger part of the income by use of its advan-

---

* Recently the Iowa courts struck down as unconstitutional that state's use of a single factor of sales because it was not an adequate measure of the taxpayer's income derived from within Iowa. (Moorman Mfg. Co., Polk Cty. Dist. Ct. No. CE 3-1595 (12-17-76)). Similarly, in General Motors Corporation vs. Dist. of Columbia, 380 U.S. 512 (1965), the United States Supreme Court struck down use of a single sales factor by the District of Columbia.

tageous apportionment factors. Unfortunately, part of that same income will also be apportioned to and taxed by the other states having the uniform apportionment formula.

As noted, the professors have given no reason for use of the extraction factor except that it will raise revenue. Missing is the reasoning why the present factors are not a proper measure of a taxpayer's income within Alaska or, conversely, why use of the extraction factor will give a more accurate measure of that income. Merely saying that oil goes out of the state and does not count as a "sale" in Alaska to its detriment is not good enough because, as shown earlier, any state could analyze its economic position and make the same argument when it observes a resource material or manufactured item being shipped out of the state. If that happened, then clearly the states and taxpayers would be back to the same chaotic situation that existed before the uniform rules of UDITPA and the Multistate Tax Compact were formulated and adopted.

To satisfy constitutional requirements, an apportionment formula must fairly and reasonably measure a taxpayer's net income in the particular state since a state has jurisdiction to tax only that income derived within its borders. The professors and some Alaskan critics of the present three-factor formula have simply looked at the oil production aspects of the business of a multistate oil company operating in Alaska but apparently wish to ignore the other part of the business where that oil has to be transported, refined into products, distributed and sold.

In fact, the bulk of such a company's employees and a large portion of its investment lie in these phases of the business. Moreover, the revenue which pays for the expenses of company operations is generated mainly out of the sales of refined products.

The concept of income taxation is the taxation of the overall profits of an enterprise which may have many parts in many states but all of which contribute to the ultimate profit or loss. In devising a formula to measure income for apportionment, the drafters of the UDITPA model law were not being arbitrary when they settled upon use of property, payroll and "destination-oriented" sales. They were looking for a formula which not only contained elements reflecting as many aspects or segments of the business as possible but also for a formula which could be easily and uniformly administered and which provided equitable treatment to states as well as taxpayers. Using these guidelines, the drafters found that property, payroll and sales provided a balance of factors reaching and reflecting the essential elements of any manufacturing or mercantile business.

There can be no doubt that the author's solution fails to protect the taxpayer from multiple taxation but, rather, actually creates it. While this is reason enough to reject use of the extraction factor, it also is clear that use of this form of factor in place of a sales factor reduces the segments or sectors contained within a business whose operations are reflected in the formula. Sales from all phases of the integrated business are the sustaining element of the business without which the business fails, and such sales reflected in the sales factor

are drawn from the total business. Units of petroleum extracted are important to the business too but represent operations pertaining to only one segment or phase of an integrated petroleum company's total business.

While crude oil extracted may have a value at the point of production, that value exists only because of consumer demand for products produced within other equally important phases of the business consisting of refining, product transportation and marketing distribution. In this regard, oil production in the case of the oil industry is not unique and the same reasoning can be applied for iron ore in connection with steel making, for raw timber in connection with finished wood products, or even for grapes grown for winemaking since in each of these cases the raw product can be viewed as having been "extracted". In all these cases, as well as with the oil industry, the "extracted" material undergoes a complex transformation into products resulting in sales revenues only after having been acted upon by other necessary phases of the business containing most of the taxpayer's employees and containing facilities representing a substantial part of the taxpayer's invested capital, both of which are distinct from the "extraction" phase yet still a part of the overall operation of the enterprise.

By using an extraction factor in place of a sales factor the whole element of sales which sustain the business for its survival are disregarded. Units of oil and gas produced is simply not a proper measuring factor and, as will be pointed

out in an example by Mr. Bonney of EXXON, the substitution of an extraction factor can result in a distorted attribution of "downstream" income from transportation, refining, marketing, etc. to Alaska which can result in the taxpayer having income taxed twice.

From the foregoing it can be seen that substituting an "extraction" factor for the "sales" factor actually distorts rather than improves the measurement of net income of the total enterprise attributable to or derived from within a particular state. What it does is provide a change to "maximize" revenue which is not a goal of formula apportionment when done at the expense of sacrificing the other principles which lie behind the concept of apportionment.

I would like to say a word about the provision in HB 322 which the professors recommend as being a basis for Alaska including OCS property, payroll and extracted oil and gas as its own factors when the OCS property is dependent upon on-shore Alaska operations. The professors were certainly correct in saying that there may be problems. However, they failed to point out that section 1333 of Title 43, which deals in part with state laws applicable to the OCS area, contains rather troublesome language for a state attempting to extend its tax laws to the OCS area. Section 1333(a)(2) contains the following sentence:

> "State taxation laws shall not apply to the Outer Continental Shelf."

AGO 547531

At least one state, California, has looked deeply into this matter of whether California, could consider the OCS developed area as providing property, payroll and sales factors for use by California, i.e., the same consideration being recommended by Professor Ainsworth. The California Franchise Tax Board in Legal Ruling No. 366 has held that California cannot claim property, payroll and sales in the OCS area for California's benefit, i.e., California cannot put these factors in the numerator for California. There is attached to my testimony copies of the pertinent federal statute referred to above, along with a copy of Legal Ruling No. 366 of the California Franchise Tax Board.

SB 202

SB 202 is basically the same bill which was considered in the 1976 session as SSSB 620. The main difference between the bills is that under SSSB 620 the net proceeds tax was a credit against regular corporation income tax insofar as that corporation income tax would represent tax on income from oil production taxed under SSSB 620; under SB 202, the taxpayer also remains subject to the Alaska corporation income tax but is deemed to be exempt only to the extent of income earned from production of oil in the state. In short, under SSSB 620 there was an actual credit against the Alaska corporation income tax but the net proceeds tax credit was only applicable against that part of the corporation income tax which was applicable to income from Alaska oil operations. Under SB 202 there is no credit as such but the taxpayer who apportions income to Alaska is simply not

AGO 547532

taxed on income deemed to come from Alaska oil production.

As some of the members of this Committee know, I testified on SSSB 620 last year and pointed out what I believed to be the deficiencies in that bill. That testimony is no doubt still available in the Committee files and I do not propose to go into all the details of the bill again. Rather, I shall have some general comments on the bill and point out how this bill impacts on the taxpayer, as well as point out some of the legal problems with its operation.

The "net proceeds tax" contemplated by its proponents has features of an income tax in that it attempts to reach a level of "income" or "profitability" from successful oil and gas production operations with a tax rate applied which is equal to (or higher than) the regular Alaska corporation income tax rate (i.e., 9.4%). Essentially, the tax would be determined by subtracting from the wellhead value of oil and gas production certain limited costs and expenses directly associated with production and multiplying the difference by the corporation income tax rate of 9.4%.

Proponents of the "net proceeds" tax have chosen to label it as an "ad valorem" tax rather than an "income" tax. However, in substance and operation the tax is unquestionably a form of income tax and merely calling it by another name cannot change that fact.

Because the "net proceeds" tax approach is itself a form of separate accounting, taxpayers will be exposed to multiple

taxation under that approach for the same reasons as discussed in connection with SB 105. In fact, the economic effect to a taxpayer would be even more adverse since the goal of the "net proceeds" tax is simply to isolate successful Alaskan oil and gas producing operations, allow a very limited amount of deductions closely and directly associated with production, and tax the resulting "net proceeds" at the corporation income tax rate (9.4%) as though those "net proceeds" constituted net income of the taxpayers.

Proponents of the "net proceeds" tax in the past have admitted that the "net proceeds" to be taxed would represent a tax base which is higher than would occur under regular principles of income taxation applicable to other taxpayers. Hence, the economic effect is that Alaska would place a tax (at the 9.4% corporate income tax rate) on a level of income (but called "net proceeds" instead of "income") which is much higher than would result under regular income tax principles, and that same income (or at least a certain level of that income) would be included in the base subject to apportionment to other states and taxed by them because they use the standard three-factor apportionment formula.

But the adverse effect of the "net proceeds" tax approach would not stop there because under that approach the same taxpayer would still be subject to the regular Alaska corporation income tax. SB 202 would still require the taxpayer to apportion to Alaska under the three-factor formula all of the tax-

payer's income from outside Alaska, including its non-Alaska oil and gas income. Thus, SB 202 would provide Alaska with the best of all worlds: it would receive a tax at the 9.4% corporate income tax rate on Alaska "net proceeds" which would constitute a tax base much higher than under regular income tax principles and, through apportionment, it would also seek to reach all of the taxpayer's income from outside Alaska as well as any non-oil and gas income from within Alaska.

The concept of the "net proceeds" tax which would operate in substance like an income tax raises a legal question whether the method would permit the state to tax a greater amount of net income than reasonably could be attributed to Alaska.

Proponents of the "net proceeds" tax have claimed that a "precedent" exists for such form of tax and have cited the states of Nevada, Utah, Colorado, Idaho, Montana, and New Mexico as examples. However, a review of the statutes in those states reveals that the "net proceeds" tax has nothing whatsoever to do with a scheme to tax income such as that being advanced by the proponents of the "net proceeds" tax. Rather, the "net proceeds" involved in the states referred to are simply convenient and simplified means of arriving at a value on mining or oil properties for purposes of applying property tax rates by local county assessors in order to provide property tax revenue in the local counties. Such a method is essentially a substitution for the rather sophisticated and complex valuation procedure that would otherwise occur each year, such as the complex

valuation of the Prudhoe Bay field for purposes of applying the reserves tax in Alaska.

It is safe to say that no state in the country imposes a "net proceeds" tax of the type the proponents in Alaska have in mind.

I would now like to direct my comments to the Legislative Council's proposed production tax changes incorporated in the identical bills, SB 103 and HB 144.

DESCRIPTION OF THE BILL

As discussed yesterday, the proposal would:

a. Change the point where the taxable value of oil is determined from the "well" to the point where "oil is first metered or measured in a condition of pipeline quality".

b. Realign the stepped tax rates, lowering the tax on the first 1,000 bbls per well per day and substantially raise the tax on all production over the first 1,000 bbls with a high rate of 14% on all production exceeding 3,500 bbls per day.

c. Use lease or property averaging in determining each well's daily production.

d. Tax flared gas at 5 times the normal rate.

e. Advance the monthly tax due date to the 20th day of the month following production.

COMMENTS

1. Adoption of lease or property averaging of daily bbl. per well production is a step in the right direction in properly ascertaining the stepped tax rates applicable to a field. The change, of course, will aid both the taxpayer and the state administratively.

AGO 547537

2. The resultant increase in the overall industry tax burden (estimated by the Legislative Affairs Agency to be about $180 million per year by 1980) is completely unwarranted, considering the question of need which others have already addressed and considering the fact that Alaska oil is already being taxed at virtually the highest level in the nation. The limited benefit given to the lower producing fields in Cook Inlet in no way should be considered as justification (or a basis of consistency) for placing such a harsh extra tax burden on high producing wells in the North Slope or any other location. This approach portrays the concept of taxing the taxpayer at a high level, not on the basis of state governmentel need, which we believe to be grossly unfair.

3. Retention of the alternate cents-per-barrel rate floor with its wholesale price index adjustments more than counteracts any true benefit out of reduced rates given low Cook Inlet producing wells through percentage rate reduction. As Levy Associates has maintained, this minimum price-setting device has created an artificially high value on the old Cook Inlet oil for tax purposes, resulting in an effective tax rate well in excess of what we believe was intended by the legislature on such oil. The last time I reviewed the situation--which was about a year ago--the cents-per-barrel feature of the severance tax had caused Union and other companies for which it reports severance tax to pay about

AGO 547538

$5 million more than would have been paid under the percent-of-value method. We view this amount as simply an unintended windfall benefit to the State since January 1, 1974, the date the current cents-per-barrel tax took effect.

4. We do not see any justification for imposing a penalty rate (5 times normal rate) for flared gas, considering the fact that such flaring controls are best placed with regulatory agencies, not taxing agencies. If proper regulatory authority exists to flare gas, such as for safety pruposes, there is no justification for adding tax at a confiscatory rate to a product that the producer loses through flaring where that flaring is done for reasons of safety.

5. Moving the point of measurement of production value downstream to the point of metering in a condition of pipeline quality could unjustly place a substantial tax on transportation costs on some fields which for a variety of reasons require movement of oil significant distances before measurement. Since the Alaska Production Tax is an occupation tax on the privilege of severing oil and gas, it would be more appropriate to continue measuring it by its value at the point of severance, i.e., the wellhead, instead of adding on to it incremental values of gathering, transportation and field treatment.

6. Advancing the delinquent date for payment from the first of the month following the month of production to the 20th day of the month following the month of production would place

an undue administrative strain on the reporting groups within the various producing companies. In most cases, the production data to calculate tax liability and prepare returns must be transmitted to offices outside Alaska. Advancing the delinquent date by 10 days will simply make worse an already short time open to comply with the law. By advancing the reporting time 10 days, the State, overall, only gains a total of 10 days for revenue collection which seems inconsequential compared with the added administrative burden on producers.

My next comments pertain to HB 321 and SB 238, identical bills, which contain the Administration's recommended changes to the oil and gas production tax.

Briefly, the bills would replace the present stair-stepped tax rates on oil production per well with a single rate of 10% on value or one alternative minimum cents-per-barrel rate of 75 cents (adjusted for gravity and for changes in the "Gross National Product Deflator").

Also, the 4% rate on gas would increase to 10% with a new alternative minimum tax of 6.4 cents per MCF. The new percentage rate and cents-per-unit rates would be adjusted by an "economic limit factor (ELF) discussed later.

The proposal also makes other changes, including changing the point of measurement from the wellhead to the point of measurement of pipeline quality. The proposal also imposes a double rate of tax on flared gas.

We strongly oppose perpetuation of cents-per-barrel floor prices and expansion of it to gas production, as well as increasing the minimum price to which it relates, that is, $7.50 per barrel. As Milton Lipton has advised, the current floor as escalated by the National Wholesale Crude Price Index has worked in unintended ways on Cook Inlet Crude, creating an artificial taxing value well in excess of the value permitted by the FEA on old oil. Now the Administration not only recommends continuance of the minimum price concept but also proposes to increase the minimum price to $7.50 per barrel.

The Administration supports this course with the argument that the FEA price is artificially low. But the oil companies producing such "old" oil nevertheless suffer the economic realities of federal pricing. Accordingly, we believe it is unfair that in addition to bearing such economic loss in price, the Cook Inlet producer must also bear an increase in production tax because of an arbitrary floor of $7.50 per barrel used as the measure of tax. This, of course, would be equally true on the North Slope if the FEA placed a value below $7.50 on that production. We fail to see any justification for the State to arbitrarily burden the production with such a heavy production tax through an artificially set value because of the possibility that FEA pricing decisions may not be favorable.

As mentioned above, HB 321 introduces the concept of an Economic Limit Factor (ELF) as an adjustment to the percentage rate of tax applied to both oil and gas. According to the Department of Revenue's February 1977 study, the Department believes that the present "stair step" rate schedule does not adequately take into account differences in the economic conditions existing from field to field, e.g., a well producing 1,000 bbl/day at one location may be marginal while such a producing rate at another location may be profitable. In short, the stair-step approach is deemed defective because it does not adequately protect against excessive taxation as a well approaches its economic limit.

To correct this, the Department proposes an ELF, the calculation of which begins by determining a fraction the numerator of

which is the "monthly production rate at the economic limit" and the denominator of which is the production during the month for which the tax is to be paid. Under HB 321, the numerator is by statute deemed to be 100 barrels times the number of well-days. Well-days are by definition the number of days a well is operating. Thus, if there were 10 wells on a lease operating for 28 days each, the numerator would be 100 X 10 X 28 = 28,000 bbls. If the total monthly production on the lease was 280,000 bbls, the ratio would be 10%, or expressed as a decimal, .10. The next step in determining the ELF is to reduce "unity", i.e., 1.00, by the ratio expressed as a decimal. Thus, 1.00 less .10 = .90 = ELF.

The best way to explain how the HB 321 mechanism works is through a simplified example, a copy of which is attached. The example uses Cook Inlet production of 35° oil at a $4.85 per barrel controlled price. Under the bill, one of the adjustments is a half-cent for each degree above 27°, so 4 cents is added to the 75 cents. The GNP Deflator adjustment is ignored. The statutory presumption of 100 barrels is the numerator and 1,600 barrels is the denominator which gives a decimal of .0625, and when subtracted from 1.00 gives an ELF of .9375. Both the cents per barrel of 79 cents and the 10% rate are multiplied by .9375 to find the adjusted cents-per-barrel and percent-of-value rates. Next, the royalty of 200 barrels is subtracted to find 1,400 non-royalty barrels. Finally, the 1,400 barrels are multiplied by the value of $4.85 and then by 9.375% to find the tax under the percent-of-value method, and are multiplied by $.7406 to find the tax under

the cents-per-barrel method. Since the tax of $1,036.84 is the higher (i.e., under the cents-per-barrel), that tax is the one that would be payable.

At the bottom of the example the tax under HB 321 is compared with the tax produced on the same production if it occurred this month (March 1977) under current law. As shown, the increase is about 60%. Also at the bottom of the example it is shown that the effective rate of the production tax under current law would be 9.5% but 15.3% under HB 321. While not shown, if the production rate had been 800 bbls/day instead of 1,600, the increase in tax over the current tax would have been around 75% instead of 60%.

As mentioned earlier and used in the example, the monthly production rate at the economic limit is, by statute, presumed to be 100 barrels times well-days unless the producer in a formal hearing proves by "clear and convincing evidence" that it is otherwise. However, in proving this, HB 321 contains some rather curious and questionable ground rules which do not track with reality. These provisions are found in subsections (b), (c), and (d) of Section 43.55.013. In essence, the "average monthly direct operating cost" (based on at least 4 consecutive months) is divided by the value at the point of production of oil which is produced from the lease, but this "value" is not the value the producer actually gets but, rather, that value which is deemed to be the value of comparable crude at West Coast refineries for imported oil which is then "backed out" to the wellhead.

Translated, the "value" used to divide into the monthly operating costs is, for Cook Inlet, Indonesian Crude laid into Los Angeles at about $14.50 per barrel. When the $14.50 is "backed out" to the wellhead, the value at the wellhead is about $13.50. Thus, it is not the $4.85 real price used to calculate "monthly production rate at the economic limit" but, rather, $13.50.

While that is bad enough, with regard to the "direct operating expenses allowed", the bill only allows four: drilling supplies, fuel, routine maintenance and wages and benefits of employees working on production operations. Specifically excluded are capital expenditures, tangible or intangible drilling expenses, costs of well workovers, costs for repairs or replacements (other than routine maintenance), depreciation or amortization, taxes, insurance, overhead, or monies paid or set aside to cover the cost of terminating operations, i.e., abandonment costs.

Allowing only four listed costs is not realistic because there are cash operating costs not allowed but which are tied to operations versus no operations. Any cash cost which would be affected by a decision to operate or not operate is the realistic approach and more in line with the way it would actually be approached by a producer in a true situation. HB 321 would even deny severance taxes on the production itself and property taxes on the equipment. In short, "economic limit" is that point at which actual revenue and actual costs are equal.

I requested Union Oil's oil and gas division engineers to run some calculations using real data as a test. Doing it in the

normal way, our people used the realistic value of about $4.85/bbl for value and the real operating costs to get an ELF of about .67. But by using $13.50 per barrel as a value and limiting the costs to the four categories the ELF was around .92. We also made a rough comparison of the taxes under HB 321 compared with taxes paid in 1976 and found that the tax on oil production would have been increased by about 50% if HB 321 had been in effect in 1976.

HB 321 also contains an ELF for gas production though it is not totally clear under the bill language how this is computed. In any event, the principle is the same and the same four direct operating costs are used but the value used for gas is the highest price in the field or within 100 miles.

With respect to gas production, the minimum of 6.4 cents per MCF is especially onerous, since gas is customarily sold under long term contracts and those contracts may not permit the seller to receive a value which happens to be the highest price on the lease on "within 100 miles". The 6.4 cents minimum tax is equal to 64 cents gas at a 10% rate, but there are contracts of sale for gas where the price is much less than 64 cents. Hence, the effective rate of tax on gas is much higher. For example, if gas were sold at 42 cents, the tax would nevertheless be the minimum of 6.4 cents (assuming no ELF applied) which would equate to an effective rate of tax of 15.2%.

With respect to the proposed gas rate increase--while admittedly the gas tax rate might warrant some degree of increase, the severity of this proposal is overreaching. We would suggest that any value tax on gas be based on actual sales price at the

AGO 547546

sales meter. We would discourage taxation governed by an artificial floor price or by what some other producer may be receiving for his gas in some other field.

For flared gas, the rate is doubled, i.e., 12.8 cents. Even gas used for safety flaring necessary to safe operations would be taxed, which cannot be justified by any standard. We oppose this double tax for the same reasons as stated in the discussion under SB 103.

In summary, while there is merit to the concept of an economic limit factor, the manner in which it is determined under this bill is unrealistic and virtually meaningless. It seems to me a lot more thought has got to go into it before it can be a worthwile mechanism. The way it is set up now--with questionable use of phantom values and restricted costs--an ELF so determined could have other consequences beyond just severance tax because the concept of economic life of a field is one used in valuation for property tax too. If economic lives of oil or gas properties as used for property valuations are to be determined using the methods for the ELF for severance tax purposes, then the stage is further set for endless arguments and disputes over property values as well as in connection with the ELF itself.

AGO 547547

I would next like to comment on the Administration Sponsored Bill, HB 323.

This bill proposes several amendments to the so-called "20-Mill Hardware Tax", and certain provisions of Title 29, governing municipal taxing limitations.

Section 1 would add to the statute a highly controversial amendment to regulation 15 AAC 05.840 which was issued by the Department of Revenue in June 1976. This provides that any municipal tax levy, say for bonded debt, which is in excess of the $1,500 per capita limitation is not creditable against the 20-mill tax.

We take direct exception to this provision in that AS 43.010(a) quite clearly provides for a maximum tax of 20 mills on our state-assessed properties. This issue is presently being litigated in a case involving the 1976 tax levy of the North Slope Borough. It would seem appropriate to let the court rule on this important issue rather than to amend the statute at this time.

Heretofore, the state 20-mill tax has applied to exploration, production, and pipeline transportation properties. HB 323 would extend this tax to refineries, liquefaction or processing plants, plants manufacturing oil or gas products and also to tankers and other marine equipment used in the transportation of oil and gas.

We believe it inadvisable to enact any further extension of this special state property tax imposed upon oil and gas producers.

The taxable basis on the marine equipment is specified as replacement cost less depreciation based on useful life multiplied by a fraction of days in Alaska ports over days in port both within and without the state. This proposal raises serious questions in

that it is believed that only the home port, under long standing case law and practice, has taxing jurisdiction over ocean-going vessels.

Aside from the "home port" doctrine, and assuming that Alaska could legally assess these properties, we would suggest a more equitable formula. One possibility would be use of days in Alaska ports versus days in the year.

Due to the controversial nature of this issue, however, we would respectfully urge that this section of the bill be stricken, irrespective of what action is taken on the remainder.

HB 323 additionally would delete the existing provision for using straight line depreciation of historical cost on pipeline assessable values in those instances where the physical life of the pipeline materially exceeds the economic life of reserves committed thereto. As a consequence, pipelines would be assessed with regard to "economic" value based on the economic life of committed reserves.

This issue is being litigated in the Cook Inlet Pipeline Co. case and it would seem appropriate to let the court rule on the issue rather than amending the statute. It is further believed that the existing law and Regulation 15 AAC 05.890 pertaining thereto are sufficiently workable to develop assessments for operating pipelines which will be fair and reasonable, both for the state and the taxpayer.

Section 8 of the bill provides that the municipal taxing limitation of $1,500 per capita shall be adjusted each year in accordance with changes in the Consumer Price Index for Anchorage.

Assuming that the $1,500 per capita levy is reasonable, it would likewise be reasonable to key it to an inflation index.

Section 12 makes the provisions of HB 323 retroactive to January 1, 1977, except for tanker assessments which begin January 1, 1978. This retroactive provision seems peculiarly unreasonable in view of the fact that the 1977 tax returns have been filed and assessment notices have been issued by the Department.

AGO 547550

I will now turn to House Bill Number 328, the Administration's proposal on the Oil and Gas Reserves Tax.

The Reserves Tax was enacted for a two year period, 1976 and 1977, for the purpose of meeting anticipated revenue shortfalls for Fiscal Years 1976 and 1977. The statutory tax rate for 1976 was 20 mills (2%) and the 1977 tax rate was set by the 1976 legislature at the same rate -- 20 mills. Reserves Taxes paid in 1976 were $223 Million and in 1977 are expected to total approximately $270 Million.

In Fiscal Year 1976, because of the Reserves Tax revenues and increases in other revenue sources, unrestricted general fund revenues exceeded expenditures by approximately $125 Million, leaving a surplus of $505 Million, of which $338 Million was available for appropriation at 6/30/76. Revenues in FY 1977 are also expected to exceed expenditures, thereby increasing the surplus.

HB No. 328 proposes to reduce the 1977 tax rate from 20 mills to 12 mills, reducing the revenue from this tax from $270 Million to about $170 Million, but subject to the following:

(1) If on October 1, 1977, TAPS thru-put is less than 600,000 bbls/day, an additional 8 mills would be levied, payable November 30. 1977.

(2) If on December 15, 1977, TAPS thru-put is less than 1.2 Million bbls/day, the Reserves Tax would be extended another year.

AGO 547551

While the prospect of a reduced tax rate is always welcomed, we question the propriety of the limitations mentioned, which limitations are so specific and restrictive.

Present indications are that the Prudhoe Bay Field will start delivering oil to TAPS reasonably close to schedule at mid-1977. It seems unreasonable that some minor variance from the restrictive provisions of this bill could cause the tax rate to be increased and possibly for the Reserves Tax to be extended another year.

Accordingly, we believe that the Reserves Tax should expire, as scheduled in the existing statute, at the end of 1977. However, we certainly agree that the 1977 tax rate can be reduced to 12 mills, since the 1978 budget can be met with no difficulty and the 1979 budget as well unless there were some serious, prolonged delay in TAPS startup. This reduction would certainly be consistent with the original intent of the reserves tax which was to help the state over a potential period of deficit in the General Fund.

repeal of all itemized deductions resulting in tax expenditures. This hypothetical revenue gain would be $21.2 billion in 1978, whereas the simple sum of the tax expenditures for each separate item is $31.3 billion. The estimate for the combined effect of all such deductions was derived from a model of the tax system that accounts for the interaction between tax expenditure provisions and the provisions of the normal structure. In particular the model provides that individuals would take the standard deduction if itemized deductions were repealed. No comparable estimate can reasonably be made for the combined effect of a hypothetical repeal of all exclusion provisions.

A few aggregations of related tax expenditure items are presented and discussed in the next section. These aggregates have been specially estimated so as to account for the interactions referred to above but do not consider the effect of changes in behavior. Where tax expenditures for both individuals and corporations result from the same tax code provision, such as the investment tax credit, the two estimates may appropriately be added together.

Tax Expenditures by Function

Estimates of tax expenditures are grouped together by functional category and presented in table F–1. The estimates are shown separately for individuals and corporations. Wherever possible, particular tax expenditures have been classified according to the functional categories used for budget outlays. Many tax expenditures do not, however, fit into these categories and for this reason three special functional categories have been added: business investment; personal investment; and other tax expenditures.

A brief description of each of the special tax provisions for which a tax expenditure estimate is shown in table F–1 follows.

National defense.—The supplements to salaries of military personnel, including provision of quarters and meals on military bases and quarters allowances for military families, and virtually all salary payments and reenlistment bonuses to military personnel serving in combat zones, are excluded from tax. Disability-related military pensions received by current retirees are largely excluded from taxable income. The Tax Reform Act of 1976 terminated the exclusion of noncombat related disability pensions for those who entered the armed services after September 24, 1975.

International affairs.—Prior to 1976, a U.S. citizen was generally able to exclude up to $20,000 a year of foreign earnings if the taxpayer were a bona fide resident of a foreign country. After 3 years of foreign residence a taxpayer could exclude up to $25,000 a tax year of foreign earnings. The Tax Reform Act of 1976 modified these provisions, limiting the exclusion to $20,000 only for employees of U.S. charitable organizations and reducing it to $15,000 for all others, denying tax credits for foreign taxes paid on excluded income, and taxing income beyond the amount eligible for exclusion at the higher bracket rates which would apply if the excluded income were also subject to tax. The estimates also reflect the tax-exempt status of certain allowances received by Federal employees working abroad.

[1] All estimates are based on the tax code as of Dec. 31, 1976.

The 1976 Act repealed a special provision for U.S. firms operating in a less developed country (LDC). When a foreign subsidiary of a U.S. corporation operating in a LDC repatriated dividends to its parent corporation, that income could, under prior law, be reported net of foreign income taxes paid. U.S. tax liability was then calculated on that net amount and the foreign tax taken as a credit. For non-LDC corporations, foreign source income must now be "grossed up" by adding back in an amount equal to foreign taxes paid. Under prior law the failure to "gross up" dividends by the amount of the foreign taxes paid to LDCs resulted in a tax expenditure.

The profits of a domestic international sales corporation (DISC) are not taxed to the DISC but instead are taxed to the shareholders when distributed to them. This deferral was available for 50% of the export income of a DISC prior to 1976. The Tax Reform Act of 1976 permits DISC benefits to the extent that current export gross receipts exceed 67% of the DISC's average for a 4-year moving base period (initially 1972–75) which will move forward year-by-year after 1979. DISCs with less than $150,000 of taxable income are exempt from the incremental rule. The Tax Reduction Act of 1975 denied DISC benefits to exporters of energy products and the 1976 Act terminated DISC benefits for 50% of military sales.

The 1976 Act phases out the 14-percentage-point tax rate reduction provided under prior law for domestic corporations qualifying as Western Hemisphere trade corporations.

AGO 547558

TITLE 43 U.S.C. § 1333

§ 1333. Laws and regulations governing lands—Constitution and United States laws; laws of adjacent States; publication of projected States lines; restriction on State taxation and jurisdiction

(a) (1) The Constitution and laws and civil and political jurisdiction of the United States are extended to the subsoil and seabed of the outer Continental Shelf and to all artificial islands and fixed structures which may be erected thereon for the purpose of exploring for, developing, removing, and transporting resources therefrom, to the same extent as if the outer Continental Shelf were an area of exclusive Federal jurisdiction located within a State: *Provided, however,* That mineral leases on the outer Continental Shelf shall be maintained or issued only under the provisions of this subchapter.

(2) To the extent that they are applicable and not inconsistent with this subchapter or with other Federal laws and regulations of the Secretary now in effect or hereafter adopted, the civil and criminal laws of each adjacent State as of August 7, 1953 are declared to be the law of the United States for that portion of the subsoil and seabed of the outer Continental Shelf, and artificial islands and fixed structures erected thereon, which would be within the area of the State if its boundaries were extended seaward to the outer margin of the outer Continental Shelf, and the President shall determine and publish in the Federal Register such projected lines extending seaward and defining each such area. All of such applicable laws shall be administered and enforced by the appropriate officers and courts of the United States. State taxation laws shall not apply to the outer Continental Shelf.

(3) The provisions of this section for adoption of State law as the law of the United States shall never be interpreted as a basis for claiming any interest in or jurisdiction on behalf of any State for any purpose over the seabed and subsoil of the outer Continental Shelf, or the property and natural resources thereof or the revenues therefrom.

AGO 547559

federal regulation invalid or the regulation itself is changed. Accordingly, until such time, retirement benefits payable to disabled San Francisco policemen and firemen, after such personnel has qualified for service retirement under the new Charter provisions, are not excludible from gross income under the sickpay formula contained in Revenue and Taxation Code Section 17139(d).

[¶ 205-026] Legal Ruling No. 366.

Franchise Tax Board, December 14, 1973.

Franchise—Corporation Income—Allocation and Apportionment—Taxation of Income Generated by Offshore Oil Operations.—The activities of a unitary enterprise conducting offshore oil operations under federal jurisdiction by reason of the Outer Continental Shelf Lands Act can only be reflected in the denominators of the three-factor apportionment formula. Under the Act, California lacks jurisdiction to tax the revenues derived from the Outer Continental Shelf since it is under exclusive federal jurisdiction. By including the Continental Shelf factors only in the denominators of the formula, no income is apportioned to California.

However, the operation of a drilling barge within California's jurisdiction must be reflected in the California numerators of the apportionment formula denominator.

See ¶ 12-414.

Facts:

Advice has been requested as to the treatment to be accorded to the income earned by unitary businesses, taxable in California, from oil operations beyond the three mile continental limit. The operations considered are:

1. The actual operations of an offshore oil well, beyond the three mile continental limit, conducted from a fixed drilling platform; and

2. The exploring and drilling operations beyond the three mile continental limit conducted from floating drilling barges.

Questions:

For California franchise tax purposes, what is to be included in the numerator and denominator of the apportionment formula with respect to:

1. Activities conducted from fixed drilling platforms which are under federal jurisdiction by reason of the the Outer Continental Shelf Lands Act?

2. Activities conducted from fixed drilling platforms which are within the jurisdiction of a foreign country?

3. Activities conducted from floating drilling barges?

Decision:

See discussion.

Discussion:

1. In 1953 the United States Congress passed the Outer Continental Shelf Lands Act (67 Stat. 462, 43 U.S.C. §§ 1,331 et seq.) which extended the Constitution and laws of the United States to the Outer Continental Shelf; i.e., that property located beyond the three mile limit of state jurisdiction which was established by the Submerged Lands Act (43 U.S.C. §§ 1,301 et seq.). The outer limit of the continental shelf is not established with precision, but rather is marked only by a steep drop of the continental mass toward the ocean deeps. (1953 U.S. Code Congressional and Administrative News, p. 2,178). In some cases this may occur several hundred miles from shore.

Section 1333(a)(1) of the Outer Continental Shelf Lands Act extends federal jurisdiction to all artificial islands and fixed structures erected on the Outer Continental Shelf:

> . . . to the same extent as if the Outer Continental Shelf were an area of exclusive Federal jurisdiction located within a State. . . .

It is a matter of settled law that no state has jurisdiction to tax in an area of exclusive federal jurisdiction located within a state. *Surplus Trading Co. v. Cook*, 281 U.S. 647; *Standard Oil Co. v. California*, 291 U.S. 242, *James v. Dravo*, 302 U.S. 134. Since Congress extended federal jurisdiction to the Outer Continental Shelf "to the same extent" as if it were an area of exclusive federal jurisdiction within a state, this body of settled law applies with equal force to the Outer Continental Shelf and effectively prohibits the imposition of any state tax on revenues derived therefrom.

The lack of jurisdiction in a state to tax in areas of exclusive federal jurisdiction applies not only to direct taxes but to indirect taxes as well. In *James v. Dravo, supra*, the United States Supreme Court was faced with the question of whether "annual privilege taxes" measured by profits from "business and other activities" could be imposed by West Virginia on a contractor working on government-owned land. The Supreme Court stated that this depended upon, ". . . whether the United States has acquired exclusive jurisdiction over the respective sites. Wherever the United States has such jurisdiction [the Court added] the state would have no authority to lay the tax."

In the Buck Act, 4 U.S.C.A., §§ 101-110, Congress did provide the states with jurisdiction to levy certain specified taxes within federal enclaves. The

AGO 547560

Buck Act cannot be construed, however, to apply to the Outer Continental Shelf. Section 1333 provides:

> . . . State taxation laws shall not apply to the Outer Continental Shelf. . . .
>
> The provisions of this section for adoption of State law as the law of the United States shall never be interpreted as a basis for claiming any interest in or jurisdiction on behalf of any State for any purpose over the seabed and subsoil of the Outer Continental Shelf, or the property and natural resources thereof or the *revenues* therefrom. . . . (Emphasis added.)

In view of the well settled law establishing the absence of state jurisdiction to tax in federal enclaves, the provisions of Section 1333(a)(1) extending federal jurisdiction to the Outer Continental Shelf by reference to such enclaves, the provisions of Section 1333 negating any possible application of the Buck Act to the area in question, it is clear that California tax laws cannot reach revenues derived from the Outer Continental Shelf.

Before considering the formula it should be mentioned that the income to be apportioned is the total business income including that derived from the Outer Continental Shelf. When a corporation doing business solely within California commences operations on the Outer Continental Shelf, outside California, it becomes subject to Section 25101 and its business income will be apportioned in a like manner with other unitary businesses as follows.

Property Factor: All real and tangible personal property owned by the taxpayer everywhere must be included in the denominator. But the numerator can include only those properties with sufficient California connections. In this situation, any such contacts appear to be minimal.

Although some suggestions have been made to exclude the property from both the numerator and the denominator, if such is done, there will be an indirect apportionment of additional income to California contrary to federal law.

However, it may be noted that, under the rule set forth in *Montgomery Ward & Co., Inc.* v. *Franchise Tax Board*, 6 Cal. App. 3d 149 (1970), that oil in transit to a California location would be considered California property includible in the numerator of the property factor.

Payroll Factor: Regulation 25132 provides that the payroll factor shall include the total amount paid by the taxpayer in the regular course of its trade or business for compensation during the tax period. Subdivision (b) further provides that the denominator of the payroll factor is the total compensation paid everywhere during the income year. Accordingly, compensation paid to employees whose services are performed entirely in a state where the taxpayer is exempt from taxation, for example by Public Law 86-272, is included in the denominator of the payroll factor. In other words, there is no throwback of the payroll to the California numerator even though the taxpayer is exempt from taxation in the state in which the services are performed. Where the services are performed partially within California and without California, the tests set forth under Regulations 25132(c) and 25133 apply. Payroll shall be included in the California numerator in accordance with the provisions of Section 25133 and the regulations thereunder.

Sales Factor: In view of the express federal ban against any state taxation of revenues derived from the Outer Continental Shelf, none of the sales, if any, which take place in the Outer Continental Shelf area will be includible in the sales factor numerator. Furthermore, in order that there be no indirect taxation of income from such sales, the sales factor denominator must include these sales. And, of course, if the natural resource is placed on the driller's own ships, no sale has occurred. On the other hand, if the natural resource is piped or brought into California, then the sale can be included in the numerator thereafter (assuming that it is subsequently sold in California).

It should be recognized that there are two fundamental considerations involved in this question. There is first the mandate that, under California law, the income of a unitary business must be apportioned by formula. *Edison California Stores* v. *McColgan*, 30 Cal. 2d 472 (1947); *John Deere Plow Co.* v. *Franchise Tax Board*, 38 Cal. 2d 214 (1951). Secondly, there is the federal prohibition against state taxation of revenue derived from the Outer Continental Shelf.

It is established that while formula apportionment is inherently incapable of attaining exactitude, so long as the formula employed produces a reasonable result its use will be sustained. *El Dorado Oil Works* v. *McColgan*, 34 Cal. 2d 731 (1950). It is submitted that the formula factors set forth above take into account both fundamental considerations. They provide formula apportionment to California of the income reasonably attributable to California sources, and by including the Continental Shelf factors only in the denominator, they do not apportion income to California, thereby giving effect to the federal law.

2. Section 25120(f) of the California Revenue and Taxation Code provides that the definition of "state" includes a foreign country. A basic purpose of the Uniform Division of Income for Tax Purposes Act (UDITPA), which is codified in Sections 25120-25139, is to insure that 100 percent of income, no more or no less, would be subject to tax. See Pierce, The Uniform Division of Income for Tax Purposes Act, 35 Taxes 747.

It therefore seems clear that where another state has jurisdiction to tax and the taxable activity has no connection whatever to California, the factors associated with the activity may not be reflected in

©1974, Commerce Clearing House, Inc.

the California numerator. These factors, however, are income producing and must be included in the denominator. *McDonnell Douglas Corporation v. Franchise Tax Board*, 69 Cal. 2d 506 (1968).

3. The Outer Continental Shelf Lands Act extends federal jurisdiction (and prohibits state taxation) "To the subsoil and seabed of the Outer Continental Shelf and to all artificial islands and fixed structures which may be erected thereon. . . ." (43 U.S.C. §§ 1333).

It has been established by a number of decisions that a drilling barge or rig is neither an artificial island nor a fixed structure within the contemplation of the Act, but rather is properly classified as a vessel.

Offshore Company v. Robison, 266 Fed. 2d 769 (1959); *Producers Drilling Co. v. Gray*, 361 Fed. 2d 432 (1966); *Marine Drilling Company v. Autin*, 363 Fed. 2d 579 (1966). Although the cited cases arose in the context of wrongful death or injury under the Jones Act (46 U.S.C. § 688), rather than a tax contest, they hold squarely that drilling barges or rigs are vessels and not within the ambit of the Outer Continental Shelf Lands Act. It therefore follows that the Act likewise does not exempt the activities of such barges or rigs from state taxation and California can apply its usual rules to tax the income earned from the operations of the barges.

Under the Submerged Lands Act (43 U.S.C. §§ 1301 et seq.) California's jurisdiction to tax extends offshore for three miles. There can therefore be no question that, to the extent that the drilling barges are within the three mile limit their presence and activities must be reflected in the California numerators of the apportionment formula. Similarly, the activities of drilling barges not present within California's jurisdiction will only be reflected in the denominator of the factors of the apportionment formula.

When, during a taxable year, the drilling barge is both within and without California waters, its operations and presence shall be reflected in the California numerator in accordance with the rules set forth in Cal. Adm. Code, tit. 18, Regs. 25128 to 25136, inclusive.

[¶ 205-027] Legal Ruling No. 367.

Franchise Tax Board, December 14, 1973.

Franchise—Corporation Income—Sales Factor of the Apportionment Formula—Advertising Receipts.—Receipts from sales of advertising space in magazines and periodicals are included in the numerator of the sales factor of the apportionment formula in the same ratio as the sales of magazines and periodicals in California bears to total sales.

See ¶ 12-442

Advice has been requested regarding the inclusion of advertising revenue in the sales factor of the apportionment formula under the Uniform Division of Income for Tax Purposes Act (UDITPA) for publishers of magazines and periodicals.

Receipts from the sales of magazines and periodicals and advertising space in such magazines and periodicals by publishers gives [give] rise to income from transactions and activity in the regular course of the taxpayer's trade or business constituting "business income" under Section 25120(a), Bank and Corporation Tax Law. Gross receipts from those transactions constitute "sales" as defined in Section 25120(e) which are required to be included in the sales factor (Section 25134) of the apportionment formula under UDITPA.

Tangible property is that which is visible and corporeal, having substance and body. *Roth Drug, Inc. v. Johnson*, 13 Cal. App. 2d 720, 734 (1936). It is evident that a magazine or periodical has substance and body. Consequently, the sale of magazines and periodicals by the publisher to subscribers and newsstands are sales of tangible personal property. (cf. *Time, Inc. v. Hulman*, 201 N.E. 2d 374, 377, 31 Ill. 2d 344.) Receipts from such sales are to be included in the sales factor in accordance with Section 25135 governing sales of tangible personal property.

The sale of advertising space in such magazines and periodicals is closely connected with the sale of the publication. The primary purpose of the advertiser is to reach the market provided by the publisher. The publisher in turn guarantees a particular circulation volume, or in other words, a market. Since advertising included in magazines and periodicals is inextricably connected with the sale of those publications, it is concluded that advertising receipts are to be included in the numerator of the sales factor based upon the ratio which sales of magazines and periodicals in this state bears to the total sales of magazines and periodicals everywhere.

300 bbl X $4.85 X 5% =	$72.75
700 bbl X 4.85 X 6% =	203.70
600 bbl X 4.85 X 8% =	232.80
	509.25
Less 1/8 Royalty Portion	63.66
Tax =	$445.59

(b) Cents Per Bbl Method:

300 bbl X $.3519 =	$105.57
700 bbl X .4224 =	295.68
600 bbl X .5632 =	337.92
	739.17
Less 1/8 Royalty Portion	92.40
Tax =	$646.77

Tax Payable (higher of (a) or (b) = $646.77

Tax Calculation Under HB 321

Tax rate = 10% of value or $.75 per bbl plus adjustments for gravity (up 1/2 cent for each degree above 27°) and for Gross National Product Deflator--(1st Qtr. 1977 = base period).

Cents per bbl = $.75 X .04 = $.79

Percent of value rate and cents per bbl rate multiplied by Economic Limit Factor (ELF):

$$ELF = \frac{100 \text{ bbl}}{1600 \text{ bbl}} = .0625$$

1.000 - .0625 = .9375 = ELF

Cents per bbl adjustment:

$.79 X .9375 = $.7406

% of value adjustment:

10% X .9375 = 9.375%

Tax Calculation

1600 less royalty (200) = 1400 bbls

% of value method:

1400 X $4.85 = $6,790

$6,790 X 9.375% = $636.56 (Tax)

Cents per bbl method:

1400 X $.7406 = $1,036.84

Tax Payable: $1,036.84

Difference in tax between HB 321 and Current Law:

HB 321 =	$1,036.84
Current law	646.77
	$390.07 = 60.3% increase in tax

Production tax burden as a % of producer's net share of $6,790 (1400 bbls X $4.85):

Under current law = 9.5%
Under HB 321 = 15.3%

TO: CHAIRMAN, HOUSE RESOURCES COMMITTEE
AND ALL COMMITTEE MEMBERS

FROM: SUB-COMMITTEE ON OIL & GAS

During the week of march 21 - 26 the Joint Senate and House Resources Committees met to hear testimony relating to the various oil and gas taxation bills currently before us. Some of the bills under discussion, have not been refered to this committee.

Of the ones that have been, the Sub-committee on Oil and Gas recommends that H.B. 321, H.B. 322, C.S.H.B. 323, H.B. 328, and S.B. 274 be brought to the full committee's attention for consideration and that they be acted upon and passed out of committee no later than April 7.

Each of these bills have a further referal to House Finance and the Finance Committee has scheduled hearings and work sessions on these bills beginning early next week. Representatives from the oil companies and several nationally recognized economists will be present. We urge all members, who are able, to attend.

RECOMMENDED BILLS

H.B. 321 - SEVERENCE TAX

This tax, in our opinion, rates highest in priorities. It's timeliness is dependant upon the actions undertaken by the Federal Energy Administration in setting a recommended "well head" price by April 15, 1977, and further by actions later taken by the I.C.C. in recommending the transportation cost of North Slope crude. For other features of the bill, we refer the committee's attention to the Governor's transmittal letter for H.B. 321, included with this report.

H.B. 322 - ALASKA NET INCOME TAX OR FRANCHISE TAX

This tax bill, in our opinion, has several advantages over our present income tax collection system. It is easy to administer, is based upon the amount earned within the state, including OCS development, and would provide the State and the industry with a stable taxation policy for years to come. For other features, we refer you to the Governor's transmittal letter for H.B. 322, included in this report.

AGO 547565 +

H.B. 323 - PROPERTIES AD VALOREM TAX

This tax bill, in our opinion, is premature. It would increase the scope of taxable property to include refining, liquefaction, and marine transportation. We believe that it would act as a "disincentive", at this time, for future development within our state, and of all the tax bills before us, meet with the most resistence. Accordingly, we have asked the Department of Revenue to place before this committee, a committee substitute for H.B. 323 which would reduce the bill to a "house-keeping" measure. This has been done and is before the committee for consideration.

H.B. 328 - RESERVE TAX

This tax bill amends the reserves tax bill to allow a credit reduction of tax levied 12 [20] if the oil flow through the Trans-Alaska Pipeline by October 1, 1977 has reached at least 600,000 barrels of oil on a daily average. Otherwise, the bill extends the reserve tax beyond the December 31, 1977 effective date of the original act. We urge its passage.

S.B. 274 - THE TAKING OF OIL AND GAS ROYALITY IN KIND

This bill requires that royality oil and gas be taken "in kind" rather than in money unless deemed otherwise by the commissioner, the Alaska Royality Oil and Gas Development Advisory Board, and the the Legislature. As an encouragement for future development within our state, we urge the passage of this bill.

RLD ?
Are you taking up that bill tomorrow that I suppose Stuart part of?

AGO 547566

CONCLUSION:

The Sub-committee bleieves that the passage of these tax proposals, taken in conjunction with the desire to have the Alaskan Permanent Fund replace the eventual and inevitable passage of our nonrenewable resources, will produce a desired benefit for the State of Alaska. We further believe that they <u>will not</u> act as a disincentive for the oil industry and that their passage will ensure Alaska's "fair share" in the wealth of our state. Regarding this aspect, we urge committee members to read the Tanzer Report, "IMPACT OF INCREASED TAXATION ON OIL EXPLORATION AND DEVELOPMENT IN ALASKA", submitted to all members of the Alaskan State Legislature on March 25, 1977.

We have asked that Mr. John Messenger from the Department of Revenue be present to assist committee members in answering their questions and would, as this time, like to highly commend the staff of Senate and House Resources for providing the back-up material needed for the committee's deliberations.

Rep. Merle G. Snider
Rep. Hugh Malone
Rep. William Akers.

HOUSE BILL NO. 321 by the Rules Committee by request of the Governor, entitled: HB 321

"An Act relating to the oil and gas properties production tax; and providing for an effective date."

was introduced, read the first time and referred to the Committees on Resources and Finance.

The Governor's transmittal letters appear following the bill to which it pertains: fiscal notes appear in House Supplemant No. 31 to today's journal.

"March 8, 1977

HB 321

The Honorable Hugh Malone
Speaker of the House
Alaska State Legislature
Juneau, Alaska 99811

Dear Mr. Speaker:

Under the authority of art. III, sec. 18 of the Alaska Constitution, and in accordance with AS 24.30.060(b) and the Uniform Rules of the Alaska State Legislature, I am transmitting a bill relating to the oil and gas properties production tax.

As a result of a recent study of Alaska's oil and gas tax structure, the Department of Revenue has recommended several changes in the state's production or "severance" tax. This bill incorporates those specific recommendations.

Currently the state's oil production tax is calculated according to "stair stepped" rates depending upon the level of production for the lease or property. As currently structured the tax may have an adverse impact upon a particular property as it reaches its economic limit. The "stair step" approach may not alleviate this adverse effect since the economic limit may vary substantially from one part of the state to another. This is because it may be more costly to produce and transport the oil in the more remote areas of the state. Accordingly, the bill contains an economic limit mechanism which automatically scales the tax rate down as the production nears its economic limit. This will insure that the tax will not unduly inhibit oil production as it reaches its economic limit.

One of the immediate dangers which face the state's revenue picture is the potential for artificially depressed pricing of the state's North Slope oil. This could result from federal pricing decisions or excessive tariff costs from the wellhead to the refinery. To insulate the state's petroleum revenues from these forces, the bill provides for a mechanism which would raise the cents-per-barrel floor to correspond to a mid-range market value for North Slope oil and tie that floor to an index which will let the floor keep pace with inflation.

One of the Department of Revenue's recommendations -- the oil and gas surtax -- which was designed to offset revenue losses due to depressed pricing of North Slope oil and which was to be imposed only on holders of state-owned leaseholds was deleted on the advice of this department because of the substantial legal problems involved.

The bill places the tax on gas at a parity with the tax on oil. Currently gas is taxed at only 4 percent while oil is taxed from 5 to 8 percent. The bill would tax both oil and gas at 10 percent. In addition, the bill sets a cents-per-Mcf floor for the gas tax similar to the cents-per-barrel floor for oil. This new floor for gas corresponds to the highest market price in the state, and it too is tied to an index to keep pace with inflation.

Sincerely,

[signature]

Jay S. Hammond
Governor"

AGO 547568

HOUSE BILL NO. 322 by the Rules Committee by request of the Governor, entitled: HB 322

"An Act establishing an oil and gas corporate franchise tax; and providing for an effective date."

was introduced, read the first time and referred to the Committees on Resources and Finance.

"March 8, 1977

The Honorable Hugh Malone
Speaker of the House
Alaska State Legislature
Juneau, Alaska 99811

Dear Mr. Speaker:

Under the authority of art. III, sec. 18 of the Alaska Constitution, and in accordance with AS 24.50.060(b) and the Uniform Rules of the Alaska State Legislature, I am transmitting a bill establishing an oil and gas corporate franchise tax.

The Department of Revenue, in its oil and gas tax study, found two basic deficiencies with the corporate income tax as it relates to oil and gas corporations. This bill would correct those deficiencies.

HB 322

The first problem is the eroded federal tax base. The department found that the federal corporate tax base which Alaska has adopted has been substantially eroded by special exemptions, deductions, credits and other accounting devices. The result has been that oil and gas corporations pay an effective tax rate much smaller than the statutory 48 percent. Accordingly, the bill would enact a separate franchise tax on a corporation's "book income." "Book income" is the net income which the corporation reports to its stockholders. This would eliminate all the special Congressional tax provisions.

In addition, the department found that the present apportionment formula does not fully represent the oil and gas corporate activity in the state. The present formula of property, payroll, and sales generally measures corporate business activity in the state. For natural resource companies, however, it does not. No reflection in the present formula is made for the scarcity value of the oil and gas produced. Accordingly, the bill will substitute for the present sales factor an extraction factor which will give weight specifically to oil and gas production activity.

One of the advantages of this franchise tax is that it will take into account elements of property, payroll, and extraction located on the Outer Continental Shelf which causes a resulting impact on the adjoining state. Thus property, payroll, and extraction not located in any state but which are located off the shores of an adjoining state which is impacted by the oil and gas production activity will be allocated to that state suffering the impact. Although this latter provision may raise some constitutional law questions, we believe that the proposal comes within the limits of the state's taxing powers given the impact on the coastal communities of our state of these OCS activities.

Sincerely,

Jay S. Hammond
Governor"

AGO 547569

HOUSE BILL NO. 328 by the Rules Committee by request of the Governor, entitled:

HB 328

"An Act amending the oil and gas reserves ad valorem tax; and providing for an effective date."

was introduced, read the first time and referred to the Committees on Resources and Finance.

" March 9, 1977

The Honorable Hugh Malone
Speaker of the House
Alaska State Legislature
Juneau, Alaska 99811

Dear Mr. Speaker:

Under the authority of art. III, sec. 18 of the Alaska Constitution, and in accordance with AS 24.50.060(b) and the Uniform Rules of the Alaska State Legislature, I am transmitting a bill amending the oil and gas reserves ad valorem tax.

Section 1 of this bill proposes that the reserve tax levy be reduced from 20 mills to 12 mills this year with the condition that an additional levy will be made if there is a delay in the start-up of the Trans-Alaska Pipeline.

This amendment is proposed because the state has a budget surplus for FY 1977. This surplus is somewhat illusory, however, since the reserve tax payments may be recouped by oil and gas producers by credits against future severance tax. Accordingly, the adoption of this measure would reduce the surplus for 1977 and also reduce the amount "borrowed" from future revenues.

Section 2 provides for a contingent 1978 assessment at a rate to be determined by that year's legislature.

Sincerely,

Jay S. Hammond
Governor"

AGO 547570

HOUSE BILL NO. 323 by the ...
the Governor, entitled:

"An Act relating to the oil and gas exploration, production, and pipeline and marine transportation property tax; and providing for an effective date."

(introduced, read the first time and referred to the ...ittees on Resources and Finance.

"March 8, 1977

The Honorable Hugh Malone
Speaker of the House
Alaska State Legislature
Juneau, Alaska 99811

Dear Mr. Speaker:

Under the authority of art. III, sec. 18 of the Alaska Constitution, and in accordance with AS 24.30.050(b) and the Uniform Rules of the Alaska State Legislature, I am transmitting a bill relating to the oil and gas exploration, production, and pipeline and marine transportation property tax.

The Department of Revenue has recently completed its study of Alaska's oil and gas tax structure and has made several recommendations. One set of recommendations dealt with the state's 20-mill property tax imposed by AS 43.56. This bill would implement that set of recommendations.

The bill corrects four problem areas in the current property tax: the omission of certain important kinds of oil-and-gas-related properties from the definition of taxable property; present uncertainty about how pipelines should be valued; the static nature of the $1500 per-capita limitation on municipal taxation, and the extent to which municipal property tax payments should be allowed as credits against the state tax. The bill's features are described below:

Section 1 of the bill makes clear that taxes paid to municipalities which exceed the statutory limitations in AS 29.53.045 and 29.53.050 are not creditable against the state tax.

Section 3 of the bill removes the current uncertainty on pipeline valuation by ensuring that pipelines will be valued on the basis of their full and true value with due regard to their economic value. This will eliminate the possibility of pipelines being valued under the depressed valuation method of actual cost depreciated.

Section 4 of the bill defines full and true value of property used in refining or liquefying of gas or oil as replacement cost less depreciation. It also defines the value of taxable marine transportation property.

Section 7 adds new categories of taxable property including oil refineries, gas processing plants and liquefied natural gas facilities. This will mean greater revenues to the state from these important oil and gas properties.

Section 8 and 9 of the bill tie the $1500 per capita municipal limitation to the Anchorage cost-of-living index in order that the limitation would increase over time as inflation raises the cost to municipalities of providing services to its residents.

HB 323 In addition, Sections 2, 4, 5, 6, and 7 are aimed at amending the relevant provisions of AS 43.56 to provide for the taxation of marine transportation property (i.e. tankers) on an apportioned basis determined by the number of days spent on ports loading and unloading gas and unrefined oil divided by the total number of days-spent-in-ports everywhere. Although these provisions raise close and difficult questions of constitutional law regarding the ability of the state and municipalities to impose an ad valorem property tax on such vessels in light of the traditional application of the "home port" doctrine, it is the view of the Department of Law that these vessels have sufficent nexus with the state to bring them within the constitutional parameters of the state's taxing power.

Sincerely,

Jay S. Hammond
Governor"

AGO 547571

TESTIMONY OF MR. RICHARD KILGORE
OF WALTER J. LEVY CONSULTANTS CORP.
FOR THE JOINT SENATE AND HOUSE
RESOURCES COMMITTEE MEETING ON
OIL AND GAS TAXATION - MARCH 21, 1977

CHAIRMAN POLAND - We will bring the meeting of the Senate and House Resources Committee meetings to order. We have with us as our first witness this morning, our consultant from the firm of Walter J. Levy, Mr. Richard Kilgore. We have asked Mr. Kilgore to address us this morning on the net income tax bills and those closely associated thereto. We will break at 10:00 AM, and will resume again this afternoon at 1:30 PM.

For those who are sitting behind me, if you'll raise your hand so that Mr. Farleigh can notify me if you have a question, you will be recognized, and with that I'd like to welcome Mr. Kilgore back to Alaska and let him take over.

RICHARD KILGORE - Thank you Senator Poland. I think it is appropriate since I am the leadoff witness, that I present here this morning what I call an overview of tax legislation.

CHAIRMAN POLAND - Mr. Kilgore, for the record, would you identify yourself.

RICHARD KILGORE - Yes. I'm Richard Kilgore. I'm Director of Research for W. J. Levy, Consultants. I've been with the firm for about fourteen years.

What I'm going to attempt to do here this morning is to provide what we would call an overview. I'm not really going to go into very much detail about the individual pieces of legislation, at least the specific provisions of them, and concentrate more on the approaches, the alternatives, and so on. Most of my remarks will have to do with income taxation, but I also have some remarks on severance taxation if we have enough time; and I'd like to say a little bit in the end about a total tax package - total tax regime in Alaska because the whole thing is obviously more than a sum of these parts if it has to do with the impact of the total program.

I'd like to look at the major areas of taxation and really consider the alternatives presented to you because they are quite diverse, and give you our appreciation, really, of the major pros and cons this time of the major pieces of legislation, of the major approaches and the kinds of pros and cons, advantages and disadvantages which we think you legislators should be looking at and asking questions of witnesses as you go along. We will be available as I say, for specifics later.

As many of you may recall, our firm has been urging upon the legislature, for many years, that it review its corporate income tax, and especially to do this before Prudhoe Bay Production really comes on and you have major questions of taxation there. We have pointed out in the past, and I think it's fairly well known now the problems of apportionment under the present regulation, and I don't really think we have to get into that in detail. We ourselves did our own analysis of how the present system might work for Prudhoe Bay. Taking data submitted by SOHIO, in submission 1 at the request of the legislature, and very roughly what it turned up was that if one applies the present system, that is the three factor apportionment system with sales and property, and payroll, what you turn up in the way of income apportion to Alaska is roughly one quarter of what the producing income and the pipeline income would be. Saying that another way - if the present system were applied to Prudhoe, using as I say, data supplied by SOHIO, what you would get is an effective rate of taxation instead of something like 9.4% an effective rate of taxation, roughly a quarter of that, two to two and a half percent, so there are obviously problems with the present system, and as I say, I won't burden you with too much of that as I think by this time it's fairly well known by everyone.

Now, you at the present time have before you three different bills, basically two different approaches, but three different bills designed basically to deal with this problem of the inappropriateness of the present formula. The first is the bill submitted by the Governor, and this comes out of the work of Professors Zeifman and Ainsworth, and a report done by the Department of Revenue. This is SB 236, and HB 322. We basically feel that this is quite an imaginative and new approach, and involves basically two features: A change in the tax base, and a modification of the apportionment formula. I'll come back to that. Second, we have a bill on separate accounting introduced by the subcommittee on leasing and taxation, and third we have the net proceeds bill introduced again this year which reads to similar, and I guess even identical, to the net proceeds tax of last year. So we have three bills basically, I'm going to say, on two approaches, and lets look at some of the pros and cons of these. I should say at the outset that like many things in the field of taxation, no one approaches his ideal here, there's no magic answer to this that's going to come out, and one approach is not just going to stand out that is uniquely better than any other one. It's just not the case. So there's clearly room for debate, and for your careful look at these approaches. So first lets look at this Governor's bill coming out of the Zeifman and Ainsworth work.

Basically, as you see, there are two features to this legislation. One is a change in the tax base, and the second is a change, as I say, in the apportionment factors themselves. The present system as you probably know, uses federal taxable income. That's its base, and takes a portion of that federal taxable income. This new proposal involves a switch to book net income before income taxes as reported by oil companies to their stockholders. Now, there are certain clearcut advantages or pros for the State in this switch in tax base from taxable income to book net profits. First of all, figures are readily available from annual reports. This concept of income is reported by most companies or at least most of the major companies that will be operating as oil producers in Alaska. Second, as you will hear, I'm sure, from Professor Zeifman and from the Revenue Department, there are fewer so called erosions than in federal taxable income, that is under federal taxable income rules there are various kinds of generous accounting rules allowed to companies which works to reduce the amount of income on which they pay taxes, and you're fairly familiar with this too, I'm sure. Such things as intangible drilling expenses are under federal tax law, can be treated as expense items, not as capital items, and this involves large write-offs. The federal government allows accelerated depreciation and so on, and companies in their book accounting

rarely, if ever, expense intangibles or use accelerated. They use normal kinds of depreciation under normal accounting rules. So very clearly switching in this direction results in a higher tax base than federal taxable income, and this obviously throws up more income to the State of Alaska. But switching from taxable income to debt book income does have problems. It is not without problems. I'll just enumerate a few of these. Later we can talk about these in more detail. Even within acceptable accounting principals there's a certain flexability, obviously, to companies in respect to how they report income, the kind of deduction and so on. Inventory gains and losses are often treated differently by companies, and they have some choice in this. Currency changes, how they are affected by currency changes, gains and losses, they are often treated differently by companies. Incidentally, some of these factors which resulted in different kinds of accounting don't always even show up in company annual reports. If they're not material, they may not even be stated within a company annual report. One would probably have to go beyond that, if one wanted to see the effect of these factors. There is also a certain amount of flexibility in accounting for write-offs. When does one realize a loss, if one has some sort of venture that is going bad, at what point do you write the thing off as a total loss? There is a certain amount of flexibility in this. Companies at times will use what is sometimes

called the "blood bath" approach to accounting. When things really go wrong, and you have a lot of losses, there is a tendency to just write it all off in one year, and take all the bad at one time. Of course, the company doing this, it would effect the tax base that Alaska would be looking to in this approach. But, I don't think any of these while they present problems in switching to book income are probably disabling. Revisions could also be a problem. Companies at times change accounting procedures, and will then revise their book income and various parts of this back through time, and this would cause problems also if one does this, if there's a later revision, do you then change your tax base, and so on. So this presents problems. I think perhaps, a more serious problem in going to pre-tax book income has to do with how one arrives at that. Now, normally pre-tax income, if you went to a company annual report, what you would do was take net income after taxes and add back all income tax payments, and that's apparently what is proposed here in this piece of legislation. That would include all income taxes including income taxes paid to foreign governments. This looks to us like it could really present problems, and it raises questions about what sort of a tax base you are really reaching when you look at pre-tax book net income. If you'll take the annual report of a company like EXXON which is going to be an operator in Prudhoe Bay, is going to be a producer there, also a company that has very large foreign operations and pays very large

foreign income taxes, it is very interesting to see what has happened in the past to those foreign income taxes, and then I would like to talk about what may happen in the future to foreign income taxes and how this might effect the tax base that you'd be using if you should go to net book income under your appropriate income tax.

If you look at the annual report of EXXON or any other oil company operating in the foreign field, what you will find is that over the past few years, and particularly the years '73 and '74, there was a very sharp buildup in foreign income tax payments. That is tax payments to foreign producing governments such as the Saudi-Aribs in Iran, and so on, and the result of this huge increase in foreign income tax payments this bid build up, as you all know, had to do with the increase in OPEC prices. OPEC dictated very substantially higher prices. These higher prices were obviously not intended to benefit the companies, but to benefit the producing governments themselves, and so what the producing governments did was take a large part of this income generated by the very much higher prices and tax it away from the oil companies in the term of income taxes. Some of it they called royalty, some of it they called income tax, but there was a very large income tax component to this, and this resulted in very large increases in foreign income tax payments

by oil companies. And, if Alaska had been on this system which involves using book income, what would have happened over these years is that Alaska would have benefited from a huge increase in pre-tax income from a company such as EXXON, and this would have resulted in large part not after tax profits EXXON earned, but because of its income tax payments to foreign government. So Alaska, over this period, would have benefited from a very short run up in pre-tax income because of income tax payments by oil companies to foreign governments. It would have worked to the benefit of Alaska, had Alaska been on this system. But now, if we look ahead, we find the concession terms are changing in the middle east and elsewhere, and almost all foreign areas. Foreign governments have increasingly taken control of producing operations themselves. When the companies remain, they remain as producers and operators, but they serve in increasingly different roles. They serve as contractors, not as concessionaires, and under this new type of system, payments to the producing governments tend not to be in the form of income tax, they tend to be in terms of purchase of oil, purchase at market prices with the companies being compensated in terms of service fees for their continuing operations in these countries. So what is beginning to happen is these huge payments to foreign producing governments are increasingly not called income tax payments, they are called purchases,

purchases of oil from the Saudi Arabian State Oil Company for example, and already if you look at the annual report of a company like EXXON, you will see that we have a decline already in 1975, and I guess when the 1976 annual report of EXXON is out, you will find another decline in foreign income tax payments, so what had happened in foreign oil markets would have worked to the benefit of Alaska over the past few years, but now would be working in the other direction. That is EXXON may have a relatively constant after tax profit on its foreign producing operations in countries such as Saudi Arabia, but its pre-tax will be going down. Why? Because it won't be making income tax payments to the Saudi's or other foreign governments. It will be purchasing oil and this would effect the pre-tax profit. So you could have a declining base from this kind of thing.

Now, I dwelled at some length on this because it's interesting. What it demonstrates is that when you use this approach, you do have some problems, and you have things happening outside Alaska which effects the tax base that you are going to reach an apportion part of, but it's very much affected by the things that have nothing to do with profitability in Alaska. And this, I think, the foreign income tax things, are a good illustration, and they are an important one,

and that's why I spent some time with this. So under this kind of system you would have things effecting net book income that really have very little to do with Alaska, and this is something of a problem, and one doesn't know for the future how these various kinds of changes would effect it, and what I'm talking in foreign income taxes probably will work to the disadvantage of Alaska. Other things that we may know nothing about could work the other way. So moving to book income as a concept had truly some advantages. You'll have obviously a higher income that you are trying to take a part of, but it's not without problems. We can discuss those more at some later point. The second part of this approach has to do with a change in the apportionment formula. What has been suggested here in the legislation is changing from sales to extraction, and there are some very clear advantages to Alaska in this obviously. The extraction isn't oriented measured and is production measured in Alaska, and is obviously more appropriate than a measure such as sales where a large part of sales of crude oil in Alaska are not made within Alaska, but they are made without Alaska. So this kind of a move will clearly apportion more income to Alaska, and is certainly a step in the direction of higher appropriate income tax receipts for the State of Alaska. Now here again, although this step obviously works in the direction of favoring Alaska and higher income tax payments to the State,

there are technical problems as well that you should be aware of, and especially in foreign areas. Net production of companies is not always so easy to define, and net production as set out in the annual reports of the oil companies may not quite match Alaska's definition. The legislation before you does define net income in certain specified ways. The production figures that you get from the companies may not always match, and there may be problems of meeting your definitions, especially in foreign areas such as Indonesia, for example, where companies work under contracts. The concept of net production is not the same as the simple system where one has the simple royalty that one takes off, and it may be difficult to define what really is net production. What is production of a company? What is purchased oil? So that moving in this direction has some benefits for the State, but it obviously is not without problems.

In general, we feel that this approach, this one and rather novel new approach for the State has certain advantages. I sum these up by saying it will clearly increase Alaskan tax revenues. It works better in a sense, and why it does is quite obvious. Book income is higher than taxable income. Extraction is a better measure than sales, so you throw up more income to Alaska. If you throw up more income it

obviously means you are moving closer, hopefully, to getting something like 9.4% of what will be the producing income in Alaska. And although the administration end of it is not quite so simple as it looks, initially, and for some of the reasons that I've set out here, it obviously has some administrative advantages over other approaches. It is somewhat simpler, and this is certainly an advantage in this approach. Now the real basic disadvantage that we feel to this whole approach is that while it would get higher income apportioned in Alaska, one doesn't really know out of this system, how close one would get to true profitability. That is, how much income in Alaska and how close that is to what seems to be extensively profitability in Alaska. This is very difficult to know, very difficult to know how close it is. In total and company by company, it's difficult to know how the thing will actually work.

We ourselves tried a very simple approach to try to see how close it would come, and what we did, and anyone can do this, if one takes the annual reports to say, the three major companies that will be producing on Prudhoe Bay, ARCO, EXXON, and SOHIO, takes the latest data available for them, and that's the 1975 annual reports of these companies, (the 1976 one is not out), and then simply adds to that data for Prudhoe Bay, profitability, production, and so forth for Prudhoe Bay, and rather than make our own estimates

for that, again we turn to the data submitted by SOHIO, in SOHIO submission 1, so what we attempted to do was simply combine the data for Prudhoe Bay/Alyeska as contained in SOHIO submission 1, with the company's latest annual report data, and then attempted to see how this new approach would work that is using as our tax base pre-tax book inco and then using a property factor, payroll factor and an extraction factor, and this is a very rough approximation obviously, but what happens when one does that, you find out that this apportionment formula does not apportion all the income that is assumed for Prudhoe Bay and Alyeska. It does not apportion it all, and more interesting than that, what you get is if you look at the three companies, just to see how three companies of this type would fare under this system, you get quite different results for the different companies. That is, some companies, at least one of the companies, you would get a fairly high porportion of the income earned in Alaska by this approach. From another company, you would get quite low percentage of it, so that one could, at least this little illustration suggests, that one could have companies with exactly similar operations in Alaska such as for example ARCO and EXXON, and get very different tax liabilities for the two companies, and we think this looks to be a potential disadvantage. You say this is only an illustration and one doesn't know what would be thrown out of this approach, but it does suggest

that what you may be getting in the way of apportion income and income tax payments may be off the mark of what profitability really is. So, we receive that as kind of the key draw back to this. You go in the right direction, but you don't know where you really are. Some people could be underpaying income taxes, other people could be overpaying, and how it would balance out to the State as a whole, it's difficult to say.

We would make this suggestion. If the legislature decides that this new approach in the bill submitted by the Governor is the approach it wants, and it might well because of ease of administration or whatever reasons that one chose this, we would suggest that perhaps the legislature might want to consider at the same time that it did this, that it ask or require of the Department of Revenue that it provide every year, estimates of profitability on oil and gas production within Alaska, perhaps with input from company, I don't know, but estimates by Revenue, the best estimates they can make and how much is made on oil production, pipelining or whatever in Alaska, so that the legislature can take this information, set it against the income tax receipts it's actually getting, and try to get some measure of how this thing is really working, that is how well is it achieving its goal of identifying income in Alaska.

Perhaps such reports could even have data by company not identified or something of this sort so that one could also, so that the legislature could evaluate over time how well it was working company by company. So that if you take this approach, we suggest that you might want to consider also getting some sort of information estimates out of the Department so that you would be in a position to evaluate in subsequent years how well it seems to be working.

Moving from this approach to a second and quite different approach to income taxation, take a look at direct accounting. Now, in principal of course, direct accounting is getting around some of these problems of apportionment. It's going directly at a measure of how much income there is from oil and gas operations in Alaska, so that in principal at least, if it can be done in a reasonable way, it does not suffer from the defects of this other approach. It is trying to measure directly what you really want to tax, in total in company by company, and we've always felt if it was legally possible to do this, and it were administratively possible to do this, this would seem to be the logical approach to taxation. Now, the problem as will be pointed out by many other people who will be testifying in here is that there are

problems of administration. There clearly are, and they are real. There are various problems of how one allocates expenses to Alaska, how does one look at and evaluate inter-affiliate sales, and things of this sort, corporate overhead and how much is allocated to Alaska, and so on. So that there are very real administrative problems to this approach, even though it is a more straight forward approach. It requires, on the part of tax administrator's rules, regulations, rather extensive ones, and obviously involves audit capabilities. One has to audit. There is a lot more auditing under this approach, and so on. And a lot, I think, has been said in the reports by the Department of Revenue and by Professors Zeifman and Ainsworth about these administrative problems. What we would urge the legislature to do though is really to try to weigh these very carefully. This is the major drawback, the administrative problems in this more direct more logical approach, weigh very carefully just what are the magnitude of these problems? How difficult are they to handle? How many people will be involved? How much money would have to be spent and so forth. How difficult is it really? And what seems to me the attempt you have to get some judgement as is to weigh whether the difficulties in administrating this thing are really worth the effort. It is a difficult thing, really, to assess, and I think that in assessing these kinds of things, one can't necessarily

look for parallels elsewhere or general problems of separate accounting or direct accounting in other states. I don't think you can put too much weight simply on the fact that companies sometimes favor separate accounting. I think when you're looking at the difficulties here, you've really got to look at the circumstances of the oil producing operations in Alaska and try to get some handle on this by looking at that, not by looking at parallels elsewhere. Try to assess _____ ask questions on how to assess, how difficult it would be for the oil producing industry in Alaska. That's what we're talking about.

I won't really spend much time on the net proceeds. It was an attempt last year, really, an indirect attempt at direct accounting by a separate oil and gas production tax. It based, although differing in some respects from separate accounting and from the separate accounting bill, it's basically the same approach as direct accounting. So I think if one is going the route of attempting directly to estimate or tax income in Alaska, one would worry about the differences between the net proceeds and the separate accounting tax, but more important, I think, are the two basic approaches to income taxation in Alaska, and what you're going to have to do is weigh very carefully the pros, cons, advantages and disadvantages of these two basic approaches to a problem inherent in the present corporate income tax

regime in Alaska as it applies to oil and gas production.

Chairman Poland, I had planned at this time to go on with some comments on severance tax. I don't know whether you would want to break for questions on corporate income taxation or go on.

CHAIRMAN POLAND - Do any members of the committee have any questions that they would like to ask Mr. Kilgore at this time?

SENATOR HUBER - Madam Chairman, I thought that Dick might want to make some comments on the data base which you gather by a net proceeds tax approach that you may not find available in the other ones. That's been a major consideration by Levy Company and Associates, helping to develop that particular item.

RICHARD KILGORE - Okay, this is one of the obvious. Looking at this and direct accounting, this is one of the aspects to it. And the net proceeds things, you are doing it on kind of a property by property basis. You are not aggregating everything as you might under certain separate accounting approaches, and having access to that kind of information

would be of use to the State, because it does give the State some feel for profitability of individual properties, ranges of profitabilities, what are cost value relationships in various fields, and so on. And that is of value obviously in designing or further modifying the tax regime in Alaska.

CHAIRMAN POLAND - Any questions? Very well, Mr. Kilgore. We will go on to the severance tax at this time then.

RICHARD KILGORE - I believe our firm is on record as saying that this really is an appropriate time to review your severance tax. We have major new production coming on in Prudhoe Bay, and this production which is obviously quite different in character from that you have now in Cook Inlet. The second reason is that our office has been concerned for some time about the way the present tax works for Cook Inlet production receiving old oil prices. We've been concerned about this, and we think that the legislature should appropriately review this at this time. And I'll come back to that.

Now you have two bills - two severance taxation bills before you, but before I turn to the bills themselves, I would like to review with you certain principals we feel you should keep in mind in reviewing severance

tax legislation. First of all, we've said this before, but I will say it again, severance tax is something that one, a tax which the State cannot really expect to continue to raise endlessly without running into serious problems because of the nature of the tax itself. The tax is a tax on gross value or it's affixed per barrel tax of some sort for unit tax. It does not directly take into account the cost of production, nor net profitability of production. Cost relationships between prices or values and cost can vary considerably amongst producing fields and areas, and where costs are very high, severance taxes, being gross taxes can seriously impinge on profitability and at the extreme they can even result in shutting down production. So, there really are limits on how far the State should think in terms of pushing up severance taxes because of the nature of the tax. We have always felt that as a rule of thought that Alaska severance tax should probably not go above the highest rate in other major producing states, and the highest rate in other producing states per comperable kinds of production, and I think this is probably still a reasonable rule, to keep a severance tax within bounds. Second, given the potential problems with a gross tax such as a severance tax, we have always urged some protection for lower productivity on higher cost wells. This kind of advice goes back to our first written report for the legislature back in January of 1970

where we urged a step schedule which the State later adopted, and your current law does have a step schedule, and does provide some protection for lower productivity wells. So that the two principals basically are not pushing severance tax, try to provide some protection for lower productivity, higher cost wells. Now, you have two bills before you at this time that in principal seems to follow these guidelines. One submitted by the Governor, and the other by the subcommittee on leasing and taxes. While each raises overall severance taxes, neither bill goes above an effective rate higher than Louisiana's 12 1/2 percent on oil. Basically, they are in line with our first guideline, and both of the bills attempt to deal with the problem of higher cost wells, but we feel with different degrees of effectiveness.

The tax subcommittee's bill is basically an extension of the current law. It adds higher well productivity brackets than you presently have, and for the higher well productivity brackets, puts in higher rates of taxation, and at the same time, that bill lowers the rate at the lower end of the brackets. That is lower productivity wells would pay lower taxes under this subcommittee's bill, and this is in line with our second principal.

Now the Governor's bill developed out of the recommendations of the Department of Revenue, introduces a new and rather novel approach. An economic limit factor which attempts to deal with the economic impact of severance tax on high cost wells, and what it does instead of having a step schedule, in a sense it has a continuous schedule, so that the nearer a well is to very low levels or to its economic limit, the less tax it pays. The further it is from that limit the higher it pays. And in principal, this is a very sound thing. But we have reservations about how this particular bill would work in practice. And it appears to us, that despite the intent of the bill, it could work in the direction, and probably would work in the direction of considerably higher taxes, for example, on various Cook Inlet wells in the low well productivity ranges. So despite its adherence to what we feel is a good principal, the way the bill was drafted, and the way it appears to work on our own calculation, it does not seem to achieve its aim. And I think this is something we can take up in more detail when we come to that, and we certainly would illustrate how this appears to work to us. So despite a good principal, it would appear to not meet that principal, and I would feel that is a problem with that particular bill. Despite a good attempt, it doesn't seem to work.

Now, the other thing of concern to us is that both of these severance tax bills which we have before us retain an escalating sense _____ feature in them. That is, as the percent of wellhead value is lower than a certain cents per barrel, it's the cents per barrel tax which has effect, whichever is higher a percentage of value or a cents per barrel. Now, this tends to work in a direction of putting a very high effective severance tax rate on Cook Inlet wells that are getting the old oil price. That is that price which is being held at low levels by the federal government. They pay a cents per barrel tax because that is higher than the percentage of value, and that cents per barrel tax works out to a very high percentage of the value of production, so this present tax and both of the taxes being proposed as alternatives have this feature. High effective rates of taxation on Cook Inlet wells have old oil prices. Not only that, but since they have escalation features in them, the present legislation and the two bills being proposed have escalating features, this gets worse over time. That is the cents per barrel tax goes up, and this feature of high effective rates of taxation for these wells continues. Incidentally, if you make your calculations, you will find out that the Cook Inlet wells producing and getting old oil prices and low productivity wells will pay a higher effective rate of taxation than will Prudhoe Bay wells, than very productive Prudhoe Bay wells under cents per barrel. And this feature would

get worse with escalation. We think the legislature should seriously consider, if not eliminating this feature, that is if not eliminating the cents per barrel, and you may not because this would result in some loss of tax revenues for the State. If you don't feel you can do that, you might want to consider at least putting a hault to further escalation in the cents per barrel tax, that this feature of the taxation, I don't think is really what was intended in the beginning just doesn't continue to get worse over time.

Now, I would like to conclude by saying a little bit about the total tax package in Alaska because I think you will be hearing a lot about this from many people, and while you obviously are going to be evaluating the merits of different approaches to corporate income taxes, the different approaches to severance taxes, you will also have to be concerned with the impact of the total package of oil and gas taxation in Alaska. Severance tax, corporate income tax, property taxes, and so on, the whole range.

Industry witnesses, I'm sure, are going to talk at some length about this, and it is obviously of special importance. The total tax package and how it effects the oil and gas industry is important along with sensible approaches to each part. You obviously do not want to

destroy the oil and gas industry in your state. Here it seems to us, there ought to be two basic considerations when you're looking at the sum of all taxes in the state. Obviously you don't want the sum of all taxes in the State on oil and gas to be really an extreme burden on profitability or the prospects for profitability on successful ventures here. You don't want to do violence to the economics of ongoing oil and gas producing operations. But this is a difficult thing to measure. What may be a larger tax burden in Alaska, while in one state versus another, really can't be considered simply in the absolute. That is how much cents per barrel in total is being paid, and what really matters, obviously, is how the total sum of all the taxes paid by the industry relate to their profitability. What may be greater total taxes in one state, in a more profitable environment may be less of a burden than lower seller taxes in other states. So it has to be considered against the background of what appears to be profitability, and the second principal, another obvious one, I guess, is that you obviously don't want a total tax system which put together really discourages ongoing exploration in your State and the development of your resources.

Now those are two very, very broad principals, and there really are no easy answers as to exactly how the sum total of the package of taxes in the State can be set against

these two, which we think are very important criteria. It is a difficult assessment really to make, and reasonable men can obviously differ in their assessments as to the effect of a total tax package.

In our role as consultants to the legislature, we will do our best to assist and advise you in what is, we think, a difficult task of assessing oil and gas tax legislation.

CHAIRMAN POLAND - Thank you Mr. Kilgore. I don't really think that we have time for questions right now. We will be going into session right away. The Senate has a very light calendar this morning, and what I had hoped to do was for us to come back at 11:00 AM and continue with any questions that we might have or discussions with Mr. Kilgore. This afternoon we will hear from Professor Zeifman and Professor Ainsworth at 1:30 PM. Senator Huber.

SENATOR HUBER - Yes. I'd like to ask that Mr. Kilgore look into a couple items before he comes back. I think most of us here have heard Dick or Milton at least 10 or 15 times criticize the cents per barrel floor that we have in our severance tax, and of course, what I'm looking for is something to replace it, so that we can listen to this, we know that _____ cause in certain cases some unfairness,

but we need something to replace it in case the percentage of wellhead value is eroded by either federal action or other economic factors to where we have the old "bugaboo" negative wellhead value or something that is approaching that, so we would need something to replace that as a floor if we're going to work on that particular area. I wanted, maybe, Dick to look into that and give us some recommendations in that area because it must appear to him like we completely ignore him when he talks on that subject.

RICHARD KILGORE - We have given some thought to this. What we are talking about is a floor which protects you in case the general price level goes down, but also one which does not impose this particular problem on old oil production in Cook Inlet. We have given some thought to this.

(Chairman Poland Adjourned the meeting at 9:55 AM)

******

TESTIMONY OF MR. RICHARD KILGORE
OF WALTER J. LEVY CONSULTANTS CORP.
FOR THE JOINT SENATE AND HOUSE
RESOURCES COMMITTEE MEETING ON
OIL AND GAS TAXATION - MARCH 22, 1977 (AM)

RICHARD KILGORE - I appreciate the opportunity of coming back so fast, and what I'd like to do is fire my remarks, really, to the corporate income tax issue and amplify on the very brief remarks I made yesterday morning, and also comment on what appeared to be some differences with other testimony yesterday. What I propose to do is review again in more detail, really, the pros and cons of the two basic approaches to income tax which are before you. I want to make it clear at the outset, though, that it is not our role here to advocate one approach or another. Basically, we see our role as giving you an appreciation of how we see the pros and cons, and advantages and disadvantages of these two approaches, what they seek to accomplish, how well they seem to accomplish the goals that they are intended for, and leaving it to you to make the final judgement. So I don't want my remarks to be construed as advocacy of either separate accounting or apportionment to modified apportionment approaches, and so on. I think, and I'd also really like to get down to basics on some of this, and I think maybe we lost some of the basics in some of the testimonies yesterday. I think it is important to appreciate at the outset that our concern here, my concern, your concern, is not really with how apportionment or separate accounting work in general in other

states for other industries and so on, what we are concerned with here is not with these approaches as general approaches to income taxation, but what we're talking about is their applicability to the oil and gas industry in Alaska. This is what we're talking about, and I think we have to keep this in mind. Not how well it works for other states, but why other people use it, and so on. If you will remember our original concern with the approach that you now have, the three factor approach that you now have with your income tax system didn't have anything to do with general worth, its general ability, and its general applicability. It had to do with how this thing specifically worked toward the oil and gas industry in Alaska, and this is how this whole question of reviewing your income tax came up, and it appeared to us, and we have testified many times, that the approach didn't seem to work very well for oil and gas operations in Alaska, that is in a portion, a very much smaller amount of income to Alaska than would appear to be earned by the oil and gas industry on producing operations and pipeline operations in Alaska. Now, if the oil and gas industry in Alaska were small scale, and I guess this really wouldn't matter, you probably wouldn't be very much concerned with it, and you probably also could view it as if it doesn't work for the oil industry, it probably works well for other industries, maybe for other industries it apportions more than you might expect, and so on if they wash out. But, as

you all know, the oil and gas industry will be by far the biggest income producing industry in Alaska as far as we all can see, so it obviously is of very considerable importance to you. It is important to you, I think, that you have a tax structure which gets you something like your 9.4% of what appears to be the profits generated by oil and gas operations in the State of Alaska, so we have to keep in mind, we're really talking about these two approaches very specifically in the context of oil and gas in Alaska, not as general approaches. Now, I noted the other day that Professor Zeifman argued against separate accounting at one point, and one of his arguments, I think repeated a number of times, was that a good reason for not adopting separate accounting was that no state has adopted it as a general approach to income taxation. This was an argument against separate accounting. Now, basically, I don't find that a very persuasive argument. First of all, we're not talking about other states, we're talking about Alaska, and we're not talking about general applicability to all industries, we're talking here about oil and gas, and I don't think anybody has suggested that the State of Alaska should adopt separate accounting as a general approach to income taxation in the State, and certainly the two bills before you, Senate Bill 105 on separate accounting, and Senate Bill 202 on net proceeds, both of these are clearly

AGO 547602

intended to apply only to the oil and gas industry in Alaska, so I don't find this a very persuasive argument against separate accounting, and I think we have to keep this in mind. Conversely, just because a number of states use this three factor apportionment formula, I don't think it's a particularly persuasive reason for applying it in Alaska if it isn't appropriate to your oil and gas producing industry.

Now, I'd really like to get down to basics here. Starting off by considering what do we really mean by income in oil and gas operations in Alaska. Is it really so scrambled up by other activities of multi-national, multi-state enterprises that it just can't be unscrambled? Are we really talking about some kind of affliction which can never be put together and that we really just shouldn't bother with it? What is this income in Alaska that we're attempting to identify? Well, let's look first at what the industry does in Alaska. It comes to Alaska, it explores Alaska, hopefully finds oil or gas. It developes those resources, transports them to a point of export in the State, be it Valdez, Cook Inlet, or whatever - at least a bulk of the oil or gas does that, and then it moves into consumption in other states. Now it is true that a lot of this kind of activity and what goes on in this whole process does take place within the integrated scheme of operations of major oil companies. In fact, in many cases the final sale of the oil produced in your state

may not be a sale between third parties until it actually gets to the gasoline pump in California, for example, that may be the first point at which the sale is made, and the rest is within integrated operations. But what does this imply about income earned in Alaska? Is there a concept of income earned in Alaska, if this is the process by which a lot of your oil really moves. Well, I would put it to you that your oil when it leaves the State of Alaska does have a value. It will have a value, and it will have a value that's highly visable. We don't know what the FEA is going to do on the pricing of Prudhoe Bay oil, for example. But it may very well be that they will establish a value at Valdez for example. It may be that they will set a wellhead value. If they set a wellhead value, we can add on a pipeline charge, and we can have a value of oil as it leaves Alaska. So, basically, it's this value of oil leaving Alaska that is identifiable which is really the final revenues from producing oil and gas in this State. These are the revenues which you can identify as being earned by oil and gas producing operations in Alaska. Obviously when you are talking about a net income, you're talking about deducting various kinds of costs. Exploration development costs, pipeline costs, operating costs, amortization of capital costs and the like. The large number of these costs are incurred in the State and can be identified as incurred in the State.

Some of them are obviously some of the costs incurred to produce your oil. To get out of the State are the costs which are incurred elsewhere. Corporate overheads, obviously, a certain amount of corporate overhead time has to do with planning for the oil producing operations in Alaska. Some of the services which are provided to the operations in Alaska come from outside the State, and these are just some of the areas where accounting problems arise, but still these are within reason, identifiable also. So the income we're really talking about identifying in taxing is the value of the oil leaving the State of Alaska and an appropriate allowance for the various costs involved. Now the question for you, with your consideration of income tax, is which of these approaches really identifies income as we seem to see it and say that it is earned by the oil and gas industry by virtue of their operations up here. Which one is going to identify a portion of income which you apply your 9.4% tax. You'll get an appropriate tax on that income. Now, as I discussed yesterday, there are basically two approaches, and those are the approaches which are before you. One is apportionment, and this is where the approach is to look at the total income available, total income earned by a company, and try to work some fraction which gets applied to that total income, gets you income in Alaska. The other

approach is basically separate accounting which goes back to those revenues and cost categories that I discussed just a little while ago, and attempts directly to identify them and come up with income in Alaska, and the question is which of these seems to identify and work best that has come closest to identifying what would appear to be the true income on operations in Alaska, but not only that, taking into account also cost difficulties of tax administration, and that cannot be ignored. An approach which gives you the perfect answer and which is extremely costly or impossible to do in practice, obviously is not the kind of tax that you want.

Now, I'll start with apportionment. You have an apportionment formula in place in your tax laws today. You have Senate Bill 236, which is a modified version of an apportionment formula, but still an apportionment formula nonetheless, and the approach is to start, as I said, with total income of the company before taxes, under your present law, taxable income. This proposal suggests shifting it to book income, but nonetheless starting with the total income earned by an enterprise. The next step in apportionment, whether it be the one you have now or a new one, is to develop a fraction to apply to this total income in a corporation which hopefully when applied, brings back to Alaska an

appropriate amount of income. Now, you do that by taking factors that appear to be indicative of income generating activities, such things as properties, payrolls, sales and the like. These are things which indicate income producing activities are taking place, and what you do is you take ratios of these in the State to the total. Now, the question is does this really work? Does it correctly assign income to Alaska, or maybe _____ when does it work? When would this give you the kind of answer that you would hope to throw up? Well, it would work if roughly the same income is generated per unit of these income identifying factors in Alaska, as in Alaska and outside Alaska. These are the circumstances under which it appears to work. That is, just let's take one factor for a moment. Let's take property, if income is proportional to property in Alaska as it is elsewhere. That says in effect, if rates are returned the same in Alaska as they are elsewhere. If that's the case, and then you take the ratio of property in Alaska to the total, th you will allocate, and apply that to the total income o corporation, you will correctly bring into Alaska the amount of income that's earned there. That's if the ratio of income, in this case the property is the same inside Alaska as it is outside Alaska. And the same would go for the other factors. If you're looking at payrolls, if income to payrolls are the same in Alaska and outside, then this would be the correct factor for

allocating income in Alaska. Now, it's obvious, I guess, to anybody looking at any of these factors, it's unlikely that they will be identical in Alaska and outside Alaska. Rates of return aren't the same. You need fewer people and payrolls under some circumstances to generate income in Alaska and elsewhere, and so on. So that the apportion approach basically says factors are not perfectly going to be the same in Alaska and outside, and therefore work perfectly, so what do we do? We take a number of these factors. Three in this case and we average them, and hope that that will give us an overall fraction which will appropriately apportion income into Alaska when applied against the total income of a corporation operating here. It averages somewhat obviously better than any single one of these factors taken by itself. Now, the question is how well it really works even when you average these factors, and how much better will it work if you move from the factors that you have now, to an extraction factor. Professor Zeifman was asked in testimony yesterday, how well his approach would work in Prudhoe Bay and Alyeska. Now, his answer was that his approach would be more effective because it takes into account the whole picture. All the profitability of the corporation was the answer. In a more general vein he also said that in reviewing the disadvantages of separate accounting, in my review of the

disadvantages of separate accounting, I didn't mention the most important disadvantage of separate accounting, that is again that it didn't look at the whole pie, it didn't look at the total income of the corporation. So he was saying first of all that his approach woul. seem to work better for Prudhoe Bay and Alyeska because it looks at the total income of the corporation. And he also said this is one of the disadvantages to separate accounting. Now, it seems to us that looking at the whole pie, that is the whole income of the corporation, all of the income it generates everywhere, it in itself has no value, unless the apportionment you come up with that you apply to this whole pie, the fraction that you apply to it, really works to get the appropriate amount of income in Alaska. What we're saying is that simply looking at the whole pie, looking at the total _____ of the corporation in and of itself is no virtue. Its only virtue only works if the apportionment formula of the fraction you apply to it is appropriate and brings it in, and I think that's very important to appreciate, simply looking to the whole income of the corporation doesn't say that this is an appropriate appraoch of getting a lot of income as it were.

Now, you remember our analysis all along, with the present system you have looked at these factors and tried to come up with how appropriate they really were. We pointed out

that if you looked at the payroll factor, it was relatively _____. You have relatively few people on payrolls in the kind of functions that you will have in Alaska in the oil and gas industry. Very few payrolls for production for pipeline and so forth relative to the income generating, so we were critical of this particular fact. In sales, it's been pointed out are often zero in Alaska. Sales are made outside Alaska. Property, that to us appeared to be a better factor. That is, you have very heavy investment here in Alaska to generate the kind of income that you are going to generate, but our analysis said that property being a better factor couldn't make up for these other ones. Now, Senate Bill 236, this new approach, substitutes extraction for sale, and this is clearly an improvement. Oil production is a good measure of generation of income, and therefore it is a better factor. But the question remains, does even this modified apportionment formula do the job? Not just get more revenues, which it clearly will, and the other part of the approach is moving to book net income also will get more revenue, and it's not simply a question of does it get more revenue, does it really get the income apportioned to Alaska that is appropriate? This still remains the question. And this is what I said yesterday, the biggest drawback to the whole apportionment approach and even a modified apportionment approach as proposed

here, is that it is unclear how close you will come to true profitability through this approach. It's a very elusive and very uncertain thing, and it appears to us there's by no means a guarantee that this will happen, and this we see as the most serious drawback to this approach, and there are really two aspects to the question of whether appropriate income is apportioned to Alaska under this approach. One has to do with how much in total is apportioned to the State of Alaska. If you take each of the individual companies, apply this approach, apportion income to Alaska, sum it up, how close does that come to the overall profitability of the industry operating in Alaska, the profitability as I laid it out before. And the second question is, how does it work for individual companies. That is, we apportion use this approach for each individual company operating here. How close does the apportionment formula come to apportioning appropriate income to Alaska for individual companies. Does it work well for some companies, not well for other companies, and so on? If this is the case, that works unevenly amongst the companies, then you have a question of equity of taxation. So these are the two aspects that are important, and this is an uncertain thing and difficult to really try to come to grips with. How well would this thing do the job? Now, I stated yesterday that our office had done some illustrative analysis to try to get some handle on this question. We had been somewhat reluctant to put this

formally on the recrod and discuss with you a little bit about the results, what I saw as the major results that came out of this thing yesterday, but we were somewhat reluctant to lay out because there are a lot of caveats involved in what we did, and when you put this thing into the public record, it's often used without regard to the caveats which are very important, and we hate to see those get lost. I have been asked if we would put this formally into the record, and I'm going to do so now, and I would then like to discuss it with you including all the caveats and get those on the records. I would like to distribute this to you at this time and discuss it. I would like to spend some time on this. I hate to burden you too much, as I say, I want to make it clear in your own minds exactly what we have here and what we don't have. Now what we have done, we have labeled very carefully a hypothetical illustration. Because it is a hypothetical illustration, I would underscore that. It is a hypothetical illustration of this modified apportionment formula applied to book income which is the feature of this new legislation, and we've done it for three major Prudhoe Bay producers. Now, I would call your attention to the note first of all because this is important. The note says the calculations shown on the table above are not intended to represent projections of income that actually would be of portion to Alaska in 1978 for the three companies

if this new approach were taken. It is not that. Rather their calculations are meant to provide a rough illustration of how this approach might work for three Prudhoe Bay producers that vary in size and scope of overall operations, and even though these are identified as SOHIO, ARCO, and EXXON, and we use some of their data, it really is not meant so much that it is these companies, it is companies of these characteristics, and these are quite diverse companies as you know. EXXON is a huge international company. SOHIO has been basically limited to domestic activities with very little production so far, and ARCO being somewhere in between, so they are not meant to be really the companies. We have used their data just to illustrate what will happen with companies of different size. Now, what we've done in this illustration is on the first line to take from the 1975 annual reports of these companies, these are the latest available to us, the pre-tax net book income of these companies outside Alaska. We've just taken a pre-tax net book income, and since basically in these companies virtually everything is outside Alaska in those years anyway, we take this as the income outside Alaska, and this is data for 1975, and all we've then attempted to do is to graph on to this sort of a Prudhoe Bay operation. Now, we cast around for data to use for Prudhoe Bay, we considered making our own estimates, but we finally settled for some data that had been submitted by SOHIO to the legislature at the request of the legislature, and we reluctantly

used this. It was readily available, reluctant because when SOHIO put this information into the record, they did it with a lot of reservations, and we have the same reservations about it, and anybody looking at these numbers, I think, certainly should take it in the context of all the reservations that SOHIO had about their own data, and we apologize to SOHIO in a way for using it without a complete list of all their reservations.

SENATOR CROFT - Could I ask just one question in that regard? That was the information that was furnished by SOHIO, at the request of the committee was furnished to you?

RICHARD KILGORE - This is SOHIO submission 1.

SENATOR CROFT - To Greg Erickson, analyzing the corporate tax? So it was for that purpose.

RICHARD KILGORE - Yes. It was for that purpose, and they labeled it as hypothetical and so on, which it is, and I want you to understand that that's all that it is, and we appreciate their reservations about it, but we had to have something to give us an idea, something that we could graph upon to present data, and we simply and arbitrarily gave 50% of that to SOHIO and 25% each to the other two companies,

simply because that seems to be roughly their equities in this thing, and if we add that, we end up with a figure for total pre-tax income. This is obviously hypothetical, it has '75 data, it has what someone hypothetically says might go on in Prudhoe Bay in '75 _____purposes. Then, we attempted to apply the approach of Professor Zeifman to this. Looking at property factors where the numerator were the property factors used in the SOHIO thing. The denominator was property as we found it in the annual reports of the companies. Payroll, we just took an arbitrary 2%. It's arbitrary that makes relatively little difference to the analysis. The extraction factor, we took net production as assumed in the SOHIO hypothetical illustration. We took as a denominator, net production as it appeared in the annual reports of the companies without worrying about whether net production was quite what was meant in this bill, and we averaged the factors for the companies. We then applied it to pre-tax book income which included other activities of companies and this hypothetical illustration for Prudhoe Bay. Divide the average of the three, which is the way this approach would work, and that gave us the income that would be apportioned to Alaska under these circumstances, and that's the second to the last line down there, and then what we did on the final line was

to take this income apportion to Alaska out of the theoretical model, but applying this new approach to this hypothetical model, and looked at what percent that was of the income assumed to have been earned on Prudhoe Bay and Alyeska operations above.

I think that the mos striking thing that came out of this was the difference in the way the approach worked for the three, companies. Again, three companies of these different characters. In the case of the EXXON type company, the approach came very close to apportioning what is assumed in the beginning was the income there. 650 up on the top. 625 apportion. So it worked very effectively for the EXXON type company in this particular situation. It worked much less effectively in the case of an ARCO type company with these sort of data. It added up to less than half, the income apportion to Alaska, than it was assumed to be earned there in the first place. And of course, in this simple model, EXXON and ARCO are earning the same money in Alaska, but the amount of income apportioned to Alaska under this mechanism are quite strikingly different. In fact in the ARCO type case it's about half. The SOHIO type company comes somewhere in between, and in total the approach allocates about two thirds of the total income from three companies in Alaska. I certainly wouldn't put too much stock in the two thirds, but I think the more striking thing is the differences that

get thrown up amongst the three companies here. Now, these are very _____ calculations, and things could very well change. I might point one thing out to you. What is striking in the case of the EXXON type corporation is that, as I say, it appears to be very effective in this case. And the question is, why? If you go to an addendum on the third page, it basically explains why this works in this particular instance for this type of a company. If you will recall, I said a while ago that if ratios of income to the various kinds of factors you use are the same within and without Alaska, then the approach works in general quite well. To take that a step further, the ratios of income to the various factors such as property or extraction are higher outside Alaska than they are inside Alaska, then the apportionment formula tends to favor Alaska. That is, it brings in more income than it should. If the ratio is higher in Alaska than outside, then these kinds of ratios work to the disadvantage of Alaska. Let me put it this way, if we look at a property factor for example, and within the State of Alaska, one earns whatever 20% on property (on assets) that's the rate of return. If it's 10% on operations outside Alaska, a lower rate of return, and you simply take the total income of the corporation then use the ratios of property to allocate to Alaska, you will not get the income to the State of Alaska that you should.

If the rates of return are higher in Alaska than they are elsewhere, then if you simply had a one factor apportionment formula, simply property, and that says that, say, 15% of the property is in Alaska, and you apply that to the total income, but the problem is that that 15%, what is it going to bring in? It's going to bring in average profitability to Alaska. An average of everything, and if Alaska is higher you're not going to bring in as much income as you should in effect. That is because what you're bringing in is average profitability if you do that. If you simply go with the ratios of property bringing in average profitability into Alaska, when in fact it's higher. And the other way around. If profitability is higher outside Alaska, higher say relative to property, and again you only have a one factor formula, and then you use the proportion of property, you bring in average profitability into Alaska, and in fact it's higher outside, so that you apportion more than you properly should. Now what this is getting to is why does this particular formula for these set of circumstances seem to work for an EXXON type corporation? Well, the answer is basically shown on the addendum. These, what we've done, if you'll look at the top panel, we've got the ratio of income pre-tax net book income to property in this model outside Alaska inside Alaska. Now, if you'll look at EXXON, it has a very much higher ratio of income to property outside Alaska than inside Alaska, Pre-tax income.

And, therefore, application of this formula for the EXXON type corporation is beneficial in the State of Alaska. It pulls in more income than it otherwise would. This very high ratio of 42.4 here, has the effect of favoring Alaska, and that's basically why you get the results that you have here. That's why it works better for the EXXON type than it does for other models that we have. Now, I want to tie back to something that I said the other day. If you look at the question of why does pre-tax net book income to property look so high for EXXON. Is it because it has really such profitable operations outside the United States? This would suggest then that on a pre-tax basis they make 42% return on their property. The answer is that this number, this ratio, is inflated by all those foreign income tax payments that I talked about the other day. EXXON works big international operations. In the year 1975 it payed tremendous amounts of income tax to foreign governments, and that inflated its pre-tax net book income. After tax it would look quite different, but we're talking pre-tax here. This is the way this thing works. So, that has inflated this figure, you get a very high figure. It happens to work to the advantage of the State of Alaska under this model. Now, as I said the other day, this is a particular aspect of this thing, pre-tax net book income including foreign income taxes that may not be the case in the future. These may very well dwindle. Income tax payments

probably will be replaced by purchases of oil, so that this high factor that's built in here with our particular model that happens to throw up a reasonable amount of income for income corporations, may not in the future, may not be this way in the future, but the fact that this EXXON type corporation, international corporation in this particular illustration ends up with an apportionment formula working correctly may not hold in the future. It's uncertain for a lot of reasons, including this particular income tax feature. If we went through this illustration five years from now, the results might be quite different here. In total, and I think amongst companies, I think really there is no way of knowing. Now, again, this is merely illustrative, nothing more. We've taken these three companies because they're quite different companies, they're quite different companies of the type that will be operating in Alaska. Their own income will be quite different obviously, but if you just grafted on the Prudhoe Bay Alyeska thing to this on some rough assumptions as profitability and investments and so on, this is the way it would appear to work, and all I submit is that it does raise questions about this approach and about its ability really to identify income. Clearly, the apportionment by picking another factor that takes up a higher amount of income, but that in the process of merely increasing the income, it creates some inequity, and if what you want to do is simply

increase the take, you ought to increase the rate instead of tinkering with one of the factors to simply produce additional income.

RICHARD KILGORE - Of course, if you increase the rate, you have to increase the rate for other corporations.

SENATOR CROFT - Sure, then what you're saying is that Alaska operations themselves are not paying enough once you've isolated it. Then your solution to that problem is to increase the rate if you think you have to have more, rather than trying to increase one of the factors that go into determining what portion of the income is allocated to the State.

RICHARD KILGORE - Well, this might be one approach. If you're not willing to change the factors, you would be left with changing the tax base which has also been suggested, or you would be left with changing the rate.

SENATOR HUBER - I wish that Dick would discuss the pre-tax net book income on extraction because I want to ask him a question about the sales factor that it replaces. It looks to me like the sales factor that it replaces would be on the same side of the book as how he explained the income

from property up above to where Alaska would get more than its share, because we have less than a reasonable share of the world-wide sales.

RICHARD KILGORE - Well, accept that to the extent that sales are really zero. This may drop out of your thing all together.

SENATOR HUBER - You mean that doesn't work out because we have a multiplying factor, or a dividing factor of zero? I don't like these mathematics that don't work both ways.

REPRESENTATIVE MEEKINS - I'm just trying to figure out how this works. Is it, I might have it backwards, is it the ratio of whatever the factor is to income to the factor if it's higher than outside then.....

RICHARD KILGORE - Then it's to your disadvantage because you're bringing it in at the average.

SENATOR CROFT - In that regard, our best guess as far as Prudhoe Bay is concerned is that with regard to about 75% of the operations at Prudhoe Bay is going to work to our disadvantage. We're talking about 50% SOHIO, and 25% ARCO.

RICHARD KILGORE - Or in total, but as I said, I would not put any precision on these at all. In this particular model, what happens in total, you throw up about two thirds when

the companies combine.

If you'll just look at the illustration itself, you will see that total income apportioned to Alaska, the sum of the three companies is seventeen sixty. When in fact by definition they are earning 2.6, it's about two thirds, but I would not take that as indicative of how much this approach will really do. I think that the more important thing here is how it seems to work for the different companies, and also in a sense says, at least suggests, that for this particular model it also doesn't throw up all of the income as well in total.

REPRESENTATIVE MEEKINS - But you could get a rough estimation of how that's going to work by seeking out different companies and going with their finding what their ratios are in terms of the profitability of their Alaskan activity versus their average, and you could see whether or not you are losing or gaining the respect of that individual company, couldn't you in that respect if you knew clearly that the profits rates in Alaska were much greater than for those factors than their average world-wide, then you wouldn't know exactly how much, but you would know that we're not getting what's appropriate, and we're taking the average instead of the higher rate.

RICHARD KILGORE - It is possible to gather enough information to look around and see how it would work with various companies, but that's not really what I suggest that you do. This is, as I said, intended purely as an illustrative to demonstrate how it works under these particular set of circumstances assumed here, and again I would look very carefully at the notes to this and also to the note which sets out some caveats about this.

Now, this illustrates, I think, some of the potential problems and I think, at least I hope, focuses on the workings of this thing, so you can think about the workings of this approach. This was described, I think, in testimony yesterday, as fictional and I guess it is illustrative based on some real data, but it certainly is not intended to be a projection of what will happen or anything of that sort. It was described as fictional as opposed to some actual data that were used, tax return data that were used to develop this approach, and I would like to make at least a couple comments on some of the inferences that were drawn from those tax return data. For one thing, they were used to illustrate net book income if you'll remember exceeded taxable income for the companies and it certainly demonstrated that, and no one was surprised at that result. Now, the second thing though, is that what turned up in those tax return data is that for

companies for which you had both apportioned income and separate accounting if you'll remember, the former, that is the apportionment is always higher, it was positive, described as always positive, and the latter, separate accounting always zero or negative, and this was taken as evidence that separate accounting doesn't work. Now, I'd like to address myself to that problem. The question is why did you get this result. Why did apportionment give you positive, and in this case which is oil companies operating in the State, 14 of them I believe back in '73, '74, and '75 that you got this kind of result. It was said that Mr. Lipton was wrong when he guessed that perhaps the reason was that you had zero sales and therefore when you went to separate accounting you had zero sales and you started subtracting and so on, but it wasn't indicated what it is that really gives you this kind of result, and I think that it would be of considerable interest to you to find out why you got this kind of result. The explanation really was not given, and when I say it was said that zero sales were not the reason, zero sales in the sense that producers that were producing and selling would declare their sales at zero. That was a hypothesis that we had, apparently that's not it. I can only speculate, I would guess that in the years covered what happened was that there were companies operating in Alaska and spending

money on payrolls, they have some office space, property, exploration, money, geophysical work maybe, bonuses, I think that bonuses were paid and the like, and there must have been such companies that had little or no revenue that were not gaining revenue out of production in Prudhoe Bay, and for these companies they would in fact be running losses. That is they would have no income. Not a question of your producing, but selling outside the State, simply that they don't have any income. Now, if they don't have any income, no revenues incurring these various expenses, they would run losses and separate accounting would certainly show them with losses, but I don't think if this is the explanation, and if it's not I think we'd like to know. If this is the explanation, I think one doesn't go from that to assume that separate accounting always ends up with no income or negative income, clearly if you apply accounting to the producers on Prudhoe Bay, they will not throw up no income. I would also point out the results which said separate accounting negative apportionment positive, why does that happen? Well that happens probably because these companies had payrolls in Alaska. People were here, and they were getting interested in the search here, and so forth, so you threw up some positive income by apportionment. You had some payroll, you had some property and so on. And you throw up positive income, but I think you have to ask the question of whether

this is really what you intend to do if we have companies operating in Alaska at losses because they haven't found any oil, haven't generated any income, do you really want to apportion income to them in Alaska and tax them on it? Should they pay income taxes when in fact they have no income in Alaska?

CHAIRMAN POLAND - Mr. Kilgore, I'm afraid we're going to have to break now. Our schedule this afternoon is 1:30 PM at the Supreme Court Room again, and we only have one individual scheduled to speak this afternoon, and that's the gentleman from British Petroleum, so possibly when he's through, we can resume the rest of this discussion with you. Thank you very much.

QUESTIONS AND ANSWERS IN TESTIMONY OF TOM WILLIAMS
DIRECTOR OF PETROLEUM AND REVENUE FOR THE JOINT SENATE-HOUSE
RESOURCES COMMITTEE MEETING ON OIL AND GAS TAXATION (24 MARCH 1977)

(Answer to question asked by George Silides in Commissioner Gallagher's testimony)

Tom Williams Madame Chairman with your permission I would like to try to address that question and also try to speak a little bit to what Senator Radar was talking about earlier. For the record my name is Tom Williams I'm the Director of Petroleum and Revenue. We have two changes in the severence tax that we are suggesting. One is the economic limit factor and the other is the increase in cents per barrel floor. Right now we have a federal pricing decision to give oil , to Prudhoe Bay oil new oil treatment for both pricing purposes and for entitlements purposes. Entitlement is a transfer of money back and forth among the refiners to equalize their apposition costs to the national average, that is the objective of the entitlement, and new oil in the lower forty eight comes in the refinery less than imported oil consequently there is a fraction of an entitlement that didn't flaw, for the right to run as new oil. Our oil when it gets there, will not be below the cost for import oil it will be right at the cost for import oil. In fact the national policy has been for new oil like high risk North Slope production we got right from our Prudhoe Bay field. National policy is to give that, right now a $10.95 average price, cause of the realities of market, we tried, if we insisted

or if the producers who own that insisted on getting a market price at the refinery that corresponded to a $10.95 well-head price, someone is going to have to pay the transportation cost, and if you have say a total $5.00 transportation cost you would be getting into the market place at $15.95 the Saudi oil which is competitive with ours is selling for $13.50 to $13.75 so somebody would have to, I mean where's the incentive to buy, you'd have to compell people to buy our oil to get $10.95 price or there would have to be a subsidy. This has not been a thing that we have been requesting the federal government to do. We recognize the fact that this is how the market is, we are far away from it in terms of cost. Consequently the well-head value is not that it's realized by a refinery price that's competitive with the Saudi Arabian oil. Our well-head value is going to be lower than the ceiling. The problem is that they are going to, if they treated this new oil, they are going to try to equalize something that is already equalized and it is going to result in a penalty over $3.00 a barrel, this equalization. They will equalize all the rest of new oil for the lower forty eight, it won't hurt them too much, it will cause some problems though, because it will over equalize new oil producers in the lower forty eight. But for us it doesn't, it's completely inappropriate because our oil is already coming in at the level corresponding to imports. There is no need to equalize. Consequently if you make them buy at a fractional entitlement at a cost of $3.00 or $3.35 that means the refiner is going to pay that much less instead of paying $13.50 he will pay $10.50, and that means a Prudhoe Bay producer or the State of Alaska if it takes its royalty in kind and goes out and tries to sell it, when he gets it to the west coast is gonna see only $10.50 coming to him. $3.00 goes into the entitlement,

we never see that. So you start from $10.50 down there in California and then you have that when you get to a $4.00 welling price. Our contention is that if that happens the game is over. There will be no more exploration. There are no more Prudhoe Bays. It is highly unlikely, there is only one Prudhoe Bay in the United States and there may be a second one down in Mexico, in the Tabascoarea in the farmers fields, but a, there pretty darn few and far between to find a field that large and at $4.00 well-head value. If that's the prospect, four dollar well-head with

today's cost, even if you found it out of Prudhoe Bay the chances are nill that it would be developed. And so the game is over because we are not likely to find fields twice and three times the size of Prudhoe Bay. So given that the game would be over, we are not doing any more damage by saying that well, instead of $6.00, $7.10 is the flcor and the post which is our present floor with the cents per barrel, we are simply saying, Why should the people of Alaska follow the resource? At the game, it then becomes a question of priorities and where our allegiance lies, with the people of Alaska or the share holders in the larger corporations? Now there is a balance, but given that &7.50 is not a reasonable well head price for North Slope oil in the beginning of a cut, and as production continues and through what builds up, if it, the federal began, assuming the federal government doesn't screw things up and destroy the insantitudes, the increase thuroughfare will lower the pipeline tariff. This will allow the well head value to rise. OPEC countries can be expected to raise their price, that includes Arabia. So if the refinery price for our oil, our refineries will raise the charge for getting our oil from Prudhoe Bay to the refineries will be less. These two things will conbine to raise our well head value and by the early 1980's we won't get by talking about the well head value of $7.50, we will be taldingabout well head values greater than $10.00. In fact extrapulating out by the end of this century, we will be seeing well head values of well, your world market values it sounds obsurd today, but $20.00 well values are certainly not inconceivable at that time, and thats $20.00 in terms of today's dolars, you know, not inflation dolars of the year 2000, that twenty of today's dolars,

thats simply because we have increasing demand, our Latin American neighbors for instance, their energy consumption is growing at a rate ten times ours, their population keeps growing, and world energy demands are far outstripping our own nation's demand and as vast as the OPEC resources are, this is a world wide shortage developing in the next 10-15 years. This shortage is going to cause, ask developers, its going to cause the price to rise in real terms that is to say in addition to the effects of inflation, we will have an additional increase in the real rather than the illusion. Consequently when we turn back, to the point, if the federal government gives us new oil in Tilener's treatment, the question then becomes whether we are willing to sit by and say OK we will take 8% or 10% off for dolars and there it is, its not good, but thats all there is to it. Even though we are paying right now, importing almost 10 mission barrels a day to each, though I don't know what the latest figures are and we are paying our good, loyal allies, Arabs, Iranians, Abu Dhabians, and all those nice people and Indonesians, Nigerians and Algerians, 14-15 somewhere in that range, 14-15 dolars is the average per import acquisition cost.

QUESTION- Tom, I understand what you are saying, I really do, but how, I must have missed somthing, how does that help Cook Inlet today?

- OK, with Cook Inlet, we, Sterling and I have gone to the Federal Energy Administration last summer and in fact, the hearings that they had earlier, in April or May, it was in Anchorage regarding the price of new oil and how to compound the upper and lower tears should move through time, and also about this problem

of oil production that reaches its break-even point with the control oil price. Right now, I mean the federal government is not reluctant to price our oil severly below what its actually worth, in the inlet that oil is beginning from $5.00 to $5.15, and for oil of similar quality we are paying, almost, we are probably paying over $15.00 a barrel to get it from Indonesia to the west coast or Pudget Sound. So we don't see a very friendly attitude on the behalf of the federal government toward Alaska production to begin with. We went there and pointed out that there are some properties in the oil that were at that time dangerously close to reaching this break-even point at $5.00 a barrel, we said we know you have shis procedure to allow pricing on this basis, to allow the price to go up, so that they continue to have more revenue than expenditures. Then they, thats indeed true, then they said that of course we are not going to give it to the State of Alaska because thats fixed cost, you are going to be stuck there at $5.00. Well that presents an interesting question about how they rewrite our lease, but they said that they would allow that much pressing relief and return the property to the level of profitability enjoyed in May of 1973 when price controls, that's the reference period they all relate back to, May of '73. But he said, we'll allow to have that same measure of profitability, which to my thinking would include among as profit, you have what's over for tax. So if you raised the severence tax, that's an increase cost, but an oil company can go into the FEA and present the case saying, here are my thoughts, now give me my May 1973 rate of return,

and in fact that should accelerate the movement to a more realistic price to the upper tear which is not still the market price, but at least its, $10.95 is a good site better than $5.00. And consequently, if the Federal Energy Administration is doing what they say they are going to do and if they can do it in a timely fashion, there should be no problem for the oil companies because this is simply an expence, severence taxes are recognised as such.

- that had not been explained before, thank you.

QUESTIONS AND ANSWERS IN TESTIMONY
OF COMMISSIONER GALLAGHER, DEPARTMENT
OF REVENUE FOR THE JOINT SENATE-HOUSE
RESOURCES COMMITTEE MEETING ON OIL AND
GAS TAXATION (24 MARCH 1977)

Senator Radar - Madame Chairman, Commissioner, your testimony on the pricing problems, state's position, governor's position, that we do need a maximum well-head or a maximum price to encourage further exploration and development. Aren't your bills which are calculated to persist for barrel and so and so forth as you say to protect the state against federal pricing manipulation or corporate manipulation, let's say take the federal pricing manipulation. Aren't you saying then that under one set of circumstances if the pricing goes bad which means that the companies have no incentive to develop further that we are going to add further burden to that disincentive by a cents per barrel floor so to speak so as to protect the state's revenues?

COmmissioner Gallagher - If the federal government is so foolish as to lower the well-head value down to $4.30, I don't think the state should be any part, have any part of that policy.

Senator Radar - Well but then our policy makes it even more burdensome from the point of view of the further exploration or development of petroleum in the state because we revert to a cents per barrel floor so that the, the very policy that you are adopting here to protect our budget, and I understand why you are doing it, it is because you want to protect our budget, but it, if the course is completely inconsistent with

any state policy which would be to encourage for the petroleum development. If that happened.

Commissioner Gallagher - I don't agree with that Senator. One of the things that we've done to encourage petroleum development and one of the things we talked about in our testimony was about the marginal fields. Prudhoe Bay will be produced at $4.30.

Senator Radar - Well it would be produced at $2.00 maybe because it would minimize their losses, but if your talking about the excuse me, go ahead.

Commissioner Gallagher - But Kuparik and Lisburne will not be produced unless they receive substantial return because its an incremental decision. One of the things that we tried to address in our tax policy where these marginal fields they are one and two billion barrel marginal fields. The tax rate under our tax proposals, we would actually lower the taxes on those fields, in fact encourage further production in the state.

Senator Radar - Do you disagree with the a analysis that was presented by a, Mr. Ronaldson SOHIO here as to where are our tax, our total tax burden relates as against Louisiania, California, and Texas?

Commissioner Gallagher - Yes I do, in looking at some of those numbers, I and we haven't run all the numbers ourselves but it seems to me that they've mixed a few apples and oranges and got fruit salad and I can see alot of the numbers they say they are in constant dollars but the only way I can get to some of those

numbers is using current dollar basis.

Senator Radar - Well you agree though that such an analysis is rather important to us don't you?

Commissioner Gallagher - I would, I would, I agree that that analysis is important. We attempted to do that in this tax study but due to only getting two man years into the study, we didn't have time and it takes substantial amount of time to do that sort of study.

Senator Radar - But if that is an important decision, then the fact that we haven't completed that study, if you do take the issue with the a SOHIO approach and perhaps you are correct, I am not saying that you are not but, but you agree that that is important information in this decision making process. A and we disagree with it but we don't have one of our own. Wouldn't that argue that fact alone would argue in waiting until we have that information before we made that decision, wouldn't it?

Commissioner Gallagher - We could provide you with that information so next year, I think it is a real danger to sit around and wait while, let the federal government do things to us.

Senator Radar - Alright then, let me ask you this then. For purposes of balancing our budget this year, we could do that with your ad valorem tax, could we not?

Commissioner Gallagher - I believe, well lets put it this way.

Senator Radar - Go ahead, I was going to say we balanced it the last several years that way, and we could do it this year too, couldn't we?

Commissioner Gallagher - You mean the reserves tax?

Senator Radar - Reserves tax yes.

Commissioner Gallagher - I assume we could, I don't favor extending the reserves tax off into the future though. To me it's a bad policy, its a poor tax and I would like to see it die a natural death.

Senator Radar - But from the point of view of balancing your budget this year you could do it that way, as we have in the last couple of years.

Commissioner Gallagher - Well you could also by raising the cents per barrel to a free market value and also do the same thing.

Senator Radar - Yes, but here's our problem. Neither the state nor the industry knows what incentives or disincentives may occur because of the federal pricing, and yet you are suggesting that we make tax decisions in which we all agree that that federal pricing is very very important if we are at all concerned about the future attractiveness of Alaska as a investment for petroleum industry.

Commissioner Gallagher - Well, one of the things that we have tried to address in our, is our testimony has been directed in all these

hearings toward getting the maximum production out of Alaska. Our tax policy is also directed in that and it addresses these marginal fields.

Senator Radar - Well but, but if the federal government were so foolish as to pursue this policy that you said that we should not have participated in then your floors make it even more difficult as far as the petroleum industry is concerned or as far as the producing marginal wells in Alaska is concerned, isn't it?

Commissioner Gallagher - Well, if they were that foolish, I don't see why we should be a part of that foolish action.

Senator Radar - It seems to me like we are adding on to it and not detracting from their fool hardiness, if they are foolish.

Commissioner Gallagher - If you know, if they did do this there wouldn't be an incentive to developing another Prudhoe Bay, so you know.

Senator Radar - Well but we are adding to whatever, we are adding to the difficulties in the production of whatever fuel might be found by adopting the floors that you are talking about here. Are we not?

Commissioner Gallagher - Not necessarily you may find one down in the Cook Inlet with the free market value should be substantially

above that.

Senator Radar - No.

Commissioner Gallagher - Also the economic limit factor comes into play on these large fields.

Senator Radar - Let me ask you if we're talking about an industry who doesn't know the value that they are going to get from their product and isn't going to know until next year, then how do we develop a stable tax policy at this time, that is dependent upon that? It seems to me as though, and I don't have any answer except that you can balance your budget with the other method. And I also recognize the difficulties of the audits in the future, on that. But at least when we come back here a year from now, when we start talking about the profitability or the non-profitability or the incentives or disincentives, won't we be talking about something that we can relate to the real world at that time, that we can't relate to the real world now?

Commissioner Gallagher - I think our policies to the real world, that's what we are trying to address in fact, if the real world says you should price the energy supply at the alternative market, the alternative market may be $20.00 a barrel, the alternate energy supplies. The OPEC countries are actually being very nice to teh United States and not taken up the alternate energy supply cost. If you want to go to the real world we should maybe put our policies up at $20.00 a barrel.

Senator Radar - But we can't do that as a state.

Commissioner Gallagher - You could set a cents per barrel that was based on $20.00 which is the alternate energy cost. That's the real world.

Senator Radar - Well but that option isn't available to us, to tax at that rate, is it?

Commissioner Gallagher - Under a cents per barrel floor, of course it is. Also, Senator, the FEA may open the pricing decision every ninety days after 1/1/78 or there after. I really doubt that they are going to make a decision on April 15th. I think you will not see a decision until somewhere around June 1. I really expect them to wait and see what the tariffs are, the initial tariffs are before they make some sort of decision.

Senator Radar - That's all. Thank you Madame Chairman.

Senator Colletta - Commissioner do you have one of these in front of you?

Commissioner Gallagher - Yes, I do.

Senator Colletta - O.K., On page 2 and you know just for the purposes of conversation and let's assume that you develop your tax package with the governors' standards, as to what they should include, now I think my question could be simply answered in two steps. First if you do agree that the industry says that they have between fourteen

and 16% worth of return on this project.

Commissioner Gallagher - I don't agree with that, but other than that.

Senator Colletta - O.K. with the assumption then the new tax proposals increase the tax by what percent?

Commissioner Gallagher - About 18% over all five bills.

Senator Colletta - What will their profitability be now that's different between that 14 and 16 percent?

Commissioner Gallagher - I reject number one the 14 to 16 percent that has the risk, under the Mortaida Study they multiplied all the assets by 4 to get the risk factor that may be appropriate to do an exploration work but it may not be important in doing other sort of work, you know the development work. If you want to use the Tanziers 33% or 35%, I don't think that is going to make 1 or 2 percent difference.

Senator Colletta - Commissioner I think I am going to try it another way. But anyway, the governor said it must generate sufficient revenues not only to compensate the state for additional service costs, attending such development but also to provide a reasonable additional dividend to Alaska. Now I would suspect you have computed that dividend in there. Can you tell me what the dividend is?

Commissioner Gallagher - The dividend to Alaskans? Well let me take you through the Prudhoe Bay numbers and maybe, you know I can work it right off the top of my head. We can talk about the dividends to various people. If you had a million two barrels a day there is four hundred and thirty eight million barrels of oil produced each year, three hundred and sixty five times one two, have you got your slide rule with me, times four hundred and thirty eight million times seven dollars and fifty cents per barrel is right on about three billion two. Is that correct, somewhere in there, less one eighth which is our royalty share. So that brings it down to four hundred million, three point two gets down to two billion eight, and let's subtract off the operating costs for the field, about three hundred and fifty million, four hundred million, let's say four hundred million we'll up it fifty million over the estimates, and that makes it down to two four. And let's say the State of Alaska through it's severence taxes takes another four hundred million, that brings it down to two billion and lets say our income taxes in effect takes us down a hundred and eighty, another hundred and eighty million, that leaves a billion eight left to share between the federal government and the oil industry. And so you have, before tax, you have a billion eight on a three billion dollar investment. Lets say they have three billion dollars investment. That's a nice return for oil industry too. One point eight billion dollars pre-tax on three billion dollars is a nice rate of return. Now they might claim that they pay forty eight percent taxes, I, you can look at SOHIO'S last report that was shown in their annual report and they showed they had effective tax rate of under ten percent. One of the things that they

happen to have is about three billion dollars of carry forwards of investment credits that will cancel off, pretty well wipe out at least fifty percent of their tax liability for the next five years. And they all have substantial investment credits so they should have developed substantial investment credits to be carried forward for the next several years, so whatever the effective federal tax rate is, you know, let's say they do pay three hundred million dollars income tax they still get in a billion and a half return on a three billion dollar investment, that's a fifty percent return per year. That's, I would take that, any day.

Senator Colletta - O.K. now, you know, we lost the Chinese and now your gettin to me, I'm understanding the last part of what you said and that's the part that a you know, I still want to come back to, a all of these companies collectively it seems and most of these reports we read, range within a two to teen percent, at least all I've seen, with the exception of one that happened last year, that say that this thing will return to those investers somewhere between this fourteen and sixteen and are you working under the assumption that they have thirty-five to fifty?

Commissioner Gallagher - Well I just, I don't want to go in and talk Chinese because there's a large difference between a, between income you report to your shareholders and discounted in cash flow, because one of the cash flows is, you know discounted

at some high rate of return to lower the number and it isn't fair. But I just demonstrated for accounting purposes it would show a fifty percent at least a fifty percent return. Now a discount in cash flow would be substantially below that because those values are, are reduced through time, for the investment. The major difference between Mortiada's investment and the investment Tanzier, like I pointed out was that one uses a risk multiplier factor that multiplies the assests by four times instead of three billion dollars investemmt they had, they used a regular return on twelve billion dollars investment and that's how you got a sixteen percent rate on a twelve billion dollar investment and you know, my numbers there kind of match out.

Senator Colletta - O.K. Commissioner I've got one other area that a I need clarified and that's item five the governor's policy statement that it must reduce uncertainity and encourage stable expectations about future resource tax and management policies. If infact these taxes did pass, would these be the last ones, would we be creating a stable future resource?

(GAP)

Commissioner Gallagher - a premarket price. Let's say Cook Inlet was priced at a premarket price. This tax would hit McCarthur River a a higher rate then it would Prudhoe Bay because it's actually more profitable. Now the East Trading Bay Unit which is decidely less profitable, it would tend to treat that fairly. What's comin into a play here is the cents per barrel floor. Yes, our written tax rate on East Trading Bay Unit is probably one third of what the cents per barrel floor should be. Now, that oil if we wanted to go after Cook Inlet it should be maybe priced at fifteen dollars

which is the price for Swede a 34% gravity on the west coast, we are only going to 7 1/2 because of Prudhoe Bay, so we are not being inconsistent, we are giving them a break.

Senator Colletta - Thank you Madame Chairman.

Senator Huber - Well, Senator Radar brought it up, I think that it's only fair to ask a ask of Sterling because we do need to get down to the nitty gritty of it. Sterling do you think that the Walter Leavy Associates have the best possible advice for the State of Alaska's interests, or do you think other economic consultants may have something to offer too?

Commissioner Gallagher - I've always appreciated the, I, of Dr. Mead, but you know there are consultants and there are consultants. They give you a good point of view Mead gives you a good point of view. I think there could be a whole series of people in that could give you worth while information.

Senator Huber - In other words you don't think we should base it all on one consultant.

Commissioner Gallagher - That's correct. I think you, you know, we have economists in the Department of Revenue, we should listen to those economists too.

Senator Huber - Obvious on the Walter Leavy Companys advice which we have been receiving quite heavily lately about removing the cents per barrel, do you disagree strongly on that?

Commissioner Gallagher - Absolutely.

Senator Huber - And do you, do the other consultants that you have hired agree with you on this?

Commissioner Gallagher - Of course they are hired by me.

Senator Huber - No some of them weren't hired by you. How about the other ones? How about the other ones on the cents per barrel?

Commissioner Gallagher - I don't know what Mead says. You know, he isn't here before you. I wish Tom Fink was here today, Madame Chairman.

George Silides - Commissioner a, I have a couple of easy ones and then a couple of little more difficult ones, I'll give you the hard ones first if I may. You've touched on them, but I will have to ask them again because I wasn't entirely sure on them and it's a matter of mechanics on the bills. It's been pointed out that the foreign income taxes constitute a large part of the pre-tax book income for international oil companies, and that these taxes are likely to decline sharply in the future as providing the producing governments take over and the companies become contractors and purchasers of crude from governments rather than from concessionares, and income tax payers. Now, the questions on that is, as you recall this was mentioned a couple of days ago, you touched on it again tonight. Now wouldn't this work to erode Alaska's tax base under the proposed legislation

that is your franchise tax? And wouldn't it work to erode the tax base more if companies would measure foreign operations, let me say that again, and wouldn't it work to erode to tax base more for companies with major foreign operations than for those with only small scale foreign operations?

Commissioner Gallagher - Well Let me say, talk a minute about where the shifting centers are in the world. It's true that I think, I believe, Saudia Arabia gives the companies nine cents for every barrel they raise after they pay for expenses. I think that's what Saudia Arabia gives. And those wells are fifteen thousand or twenty thousand barrel well days with nine cents goes up in a hurry. But alot of profit centers are shifted to other areas of the business. If you will look at the transportation business for integrated companies you might find the profit center is shifted there. Federal government has, may have a oil head put on price ceilings on the well head. They also have it on some refined products but not the whole barrel. Infact the lower end of the barrel is pretty well decontrolled and they receive whatever price they want. You know, all sorts of ends of the business you can transfer your profits to.

George Silides - I'll just take it for what you said Commissioner. Well let me ask you someting - -

Commissioner Gallagher - Infact you know, it's quite obvious to me that the federal government is trying to encourage the shifting of profit centers away from production into refining and sales.

George Silides - But don't think that the fact that the companies are taking their payment as in-kind as it were, does it make any difference in the, to your bill?

Mr. Messenger - I believe I remember the comment that Mr. Kilgore made earlier this week and to the extent that the difference between some of the differece between book income and federal tax would book income before taxes and federal taxable income to the extent that some of that difference represents a foreign taxes. If those foreign taxes reproduce that would reduce that difference between book incomeand federal taxable income I believe that there would still be a substantial difference between, still, between federal taxable income and it would be still, in our interest to adopt book income because there is still alot of other erosions from book income in the Internal Revenue Code Book.

George Silides - Well, I understand what you are saying Mr. Messenger but your answer is basically yes, that it does erode some if that happens.

Mr. Messenger - Yes, but it is still better than the federal tax reform.

George Silides - I see, Madame Chairman if I may ask the second question then, another question. Do you have any idea how much income your proposed legislation would apportion to Alaska as against what might be measured by separate accounting as proposed in the Senate Bill 105 for example, once Prudhoe Bay is in operation

that is if we, if income tax law really and truly represented the 9.4 percent tape.

Commissioner Gallagher - I think it should be essentially the same. We pick up some additional features though like the days in port like 50% of the income from the transportation subsiduaries assigned to Alaska and things like that. So I'm it's hard to compare it. Also ours would pick up the OCS.

George Silides - I see. Well in that regard Madame Chairman that brings up another question then. I notice that you mentioned the days in port and of course you were talking about, and you were mentioning also that brings to mind your ad valorem tax or your hardware tax. If you put a tax on the tankers aren't you increasing the cost of transportation, and if you are increasing the cost of transportation doesn't that lower the well-head price?

Commissioner Gallagher - Yea but, you only give up twenty cents on a dollar.

George Silides - What you are telling me is that the differential is what counts? Since we are on the hardware tax, there are some refineries a couple of refineries in at North Kenai and there is one going on up now, being built now in the North Pole, hardly can be termed world scale refineries, especially the one at the North Pole. If you tax those refineries who will be paying that tax in the long run? If we are trying to encourage a refinery say in the North Pole area to, so that the people in the interior can get the same price for oil, fuel oil as they do in Anchorage, aren't you giving with one hand and taking away with another?

Commissioner Gallagher - That's possible. Also they may be export refineries too.

George Silides - The North Pole an export refinery?

Commissioner Gallagher - Not the North Pole ones, obviously not.

George Silides - But the SOCAL one?

Commissioner Gallagher - I know some piloteers for it.

George Silides - The SOCAL one?

Commissioner Gallagher - Yea.

George Silides - Are they export?

George Silides - I'm just curious. And another question on hardware then, I'm presuming that the same answer you gave on the tankers (inaudible) tankers goes for the increase tax on the pipeline.

Commissioner Gallagher - The increase tax, there is no increase tax on the pipeline.

George Silides - Well, under your system there would be a greater take because - -

Commissioner Gallagher - No we're just trying to cure our court case.

George Silides - I see.

Commissioner Gallagher - We already think we have it.

George Silides - One final technical thing again Madame Chairman. Are you aware Commissioner that in addition to the Walter J. Leavy Associates finding a flaw in only part of your severence tax bill, did you know that the Research Division of Legislative Affairs Agency has also found essentially the same flaw?

Commissioner Gallagher - I don't, that is not a flaw. That is the cents per barrel for coming in and playing a part there. It works exactly like it is intended. Those fields that are, where the formula works out to be 50 percent of what the phenomenal rate should be, is in fact 50 percent.

George Silides - Well Commissioner, I'm just calling it to your attention so that you maybe can talk to Mr. Erickson because he feels like the Walter J. Leavy Associates does that the bill is not fulfilling the function that you designed it for and I'm only bringing it to your attention. I'm not in the position, I don't know enough about it to argue about it.

MEMORANDUM

February 21, 1977

SUBJECT: House Bill 2, Authorizing Land to be Made Available as Homesites (W.O. #3407)

TO: The Honorable Sally Smith

FROM: George Utermohle
Research Analyst

House Bill 2 seeks to encourage settlement and development of state lands by authorizing the grant of 2.5 acres for residential purposes to each qualified state resident. This bill emphasizes that the distribution and settlement of state land serves a greater public good than does the disposal of land to the highest bidder.

SUMMARY OF HB 2

After the Director of Lands has classified and surveyed available state land for homesite entry, he shall make it available to qualified state residents. To qualify for a homesite under this program, the applicant must be 18 years of age, be a three year resident of Alaska, not be a member of a household which has already applied for a homesite permit, and agree to fulfill the conditions of the homesite permit. If there is more than one applicant for a specific homesite, the permit shall be granted on the basis of length of residence. The bill does not state how length of residence will determine which applicant receives the permit. It can be assumed that the intent is that a greater length of residence confers a greater priority, but it is not clear.

Once the qualified applicant has received his permit to occupy the homesite which he has selected, he must build and occupy a suitable dwelling. The Director of Lands will issue regulations describing what is a habitable dewlling for the vicinity in which the homesite is located. The Director will also issue regulations to establish the time limits in which the dwelling must be built. Once the dwelling has been built, the homesite applicant must occupy the dwelling for at least seven months each year for three years in order to acquire patent to the homesite.

Only one permit shall be issued to each qualified person during his lifetime.

The only costs to the homesite applicant shall be a one time permit application fee, not to exceed $10, and the cost of the land survey. The applicant does not pay rent for the homesite.

If the homesite applicant does not comply with the terms of his permit, the permit will be revoked. Any improvements which the applicant has made to the land prior to the revocation of the permit must be removed in accordance with AS 38.05.090. If the improvements are not removed in the time allowed and are valued at more than $10,000, they may be sold at public auction. The purchaser will then be required to remove the improvements. The money received at auction, less costs to the Division of Lands, shall go to the former homesite applicant. If the improvements are not removed and are valued at less than $10,000, they revert to the state. If the improvements are fixed to the land, they may be sold to the subsequent homesite applicant or to the state.

The Director of Lands must make homesite land available in each of the four judicial districts on a rotating basis. The availability of land must be advertised widely throughout the state by the Director. State land within an organized borough or city cannot be classified for homesites without consultation with the local planning authority. Land classified for homesite entry is not available for selection by boroughs or cities under their municipal land selection rights (AS 29.18.190).

By making land available for homesite entry the state does not obligate itself to supply services to the land, such as water, sewer, or electricity. These services are normally supplied by the landowners themselves operating through service districts or local governments or by private enterprise.

Members of a household which already holds a homesite permit or patent cannot obtain a permit. The terms "members of the same household" as used in the bill is not defined. If the term is not defined in the bill, the Director of Lands will define it when he established regulations for the homesite entry program. There are numerous ways to define the term, but the simplest way may be to include anyone who is declared a dependent for personal income tax purposes as a member of a household.

AVAILABILITY OF LAND FOR HOMESITE ENTRY

To date the state has received patent to 19,200,000 acres of its 104,556,000 acre entitlement. Of this 19.2 million acres, 14.4 million acres has been classied by the Director of Lands. Thus the existing vacant, unappropriated, and unreserved lands of the state is about 4.8 million acres which is available for classification as available for homesite entry.

If the Director of Lands deems that it is in the best interest of the state, he may reclassify all existing classified lands, except those reserved by the legislature, as available to homesite entry. 2.5 million acres of the land included within existing classifications are classified as open to entry. The open to entry program has been suspended since 1973, so it is conceivable that this land could be made available for homesite entry.

Feb. 7, 1977

Dear Sally Smith,

I would like to make some recommendations for changes in HB 2 and 6.

There seem to be at least two easily identifiable groups of people supporting these bills: those who urge the transfer of land from public to private hands for philosophical reasons and those who want land completely isolated from urban areas for "subsistence" living.

I have very strong objections to designating land completely isolated from urban areas for homesite entry.

The argument of those proponents of homesteading who seem primarily interested in the conveyance of public land into private hands seems to be: Young people should have a chance to carve their homes out of the wilderness as I was able to do in the past. The major fallacy in this reasoning is that while we're making new young people daily, no new wilderness is being made. Some generation of young people must face the fact that one can no longer carve his home out of the wilderness; let it be now while there is still some wilderness

The subsistence living groups appear to stress the values of a simple life far from the stresses of urban life, of being able to observe and relate intimately with nature, and of being dependent only on oneself. While the first two statements are valid motives for many people, the last one clearly reveals self-deception. However simple ones life may be, such things as Aladdin lamps, flour and wood stoves do not spring forth fully made from the Alaskan wilderness; all these people need some sort of cash income which they most likely get from periodic trips to the city.

A subtle and more profound difficulty with subsistence living(at least for urban whites without a cultural background of subsistence)lies in the inability of almost anyone to know who they will be in 10, 20, 30 years. A young couple goes into the wilderness; their babies become toddlers, become school age children and so forth. I think there almost always comes a time in the growth of a family when either the parents or the children desire educational and social opportunities not available in an isolated wilderness setting. As the family might find it difficult financially(especially after years of wilderness living)to move to an urban area, pressure develops for a road, electricity etc., a piece of wilderness is no more, and these people have ultimately destroyed what they first came to enjoy.

Finally there is a problem of implementation in that a family with possibly a dog team to feed needs a lot more land than 2-1/2 or 5 acres to keep themselves and their dogs in moose or caribou and their stoves in wood. The same holds true for a trapper. Each 2-1/2 or 5 acre homesite would have to be miles from any other.

If it is necessary for the State to supply subsistence living sites, a possible method for guaranteeing an opportunity for a subsistence lifestyle experience for future generations would be for the State to lease such wilderness sites. A precedent for this has existed for some years in those cases where a person or family rents an existing cabin in the wilderness for a winter or so. Thus "subsistence" living becomes a period of ones life one studies and saves for like a year taken off to travel around the world or go back to school, and the development pressure inherent in the growth of a family is eliminated. I would recommend that private enterprise continue to supply subsistence homesites in the manner it has done in the past.

House Bills 2 and 6 in Section 2, (d) point out it is inherently more difficult to classify home site entry land in urban areas than it is in isolated areas. Perhaps these Bills could be rewritten to reverse this. An obvious way is to limit homesite entry land to organized boroughs and cities.

Regions which feel the loss brought on by disappearing wilderness more keenly than we have been inclined to in Alaska, plan their residential areas in compact form rather than in isolated units a mile or so apart. House Bills 2 and 6 deal with the form homesites will take only by naming the acreage. I feel it would be environtmentally more desirable to group the homesites in subdivisions like the Spinach Creek Subdivision in the Fairbanks area. Lot size should not be arbitrarily set a 5 acres, but should be determined by the ability of the land to accept waste water and of the water table to recharge.

I suspect that the majority of Alaskans favor homesites close to jobs and an urban area, not isolated wilderness sites. Likewise the closer the homesites are to work, the more Alaskans will be able to live on their homesite and commute to work which should provide a considerable impetus for the conveyance of public lands into private hands.

Thank you for considering my opinion in this matter.

Sincerely,

Joanne E. Groves

MINUTES - HOUSE RESOURCE COMMITTEE - JANUARY 14, 1976

Present were: Huntington, Osterback, Swanson, Smith, Rhode, Brown, Hershberger, Chmn. Anderson and Staff Assistant Van Doren. Absent was Eliason.

Subject: HB 132

Sponsor Representative Keith Specking commented that a new approach is needed in solving the problem of opening up state lands to entry. Present policy does not work. The lease approach is necessary, rather than the fee-simple. "We should not bury our heads in the sand and allow any and all lands open to entry. Included in a lease can be requirements and restrictions not permissable in an outright sale. Also, if we rely on the newly created Planning Unit within the Div. of Lands, an endless series of sessions on land planning can end in no action.

Discussion ensued regarding getting more land into private hands, with comment being made that this was a paramount issue last year. Mention was made that under the former lease program leases could be open to entry. Also under question was the problem of who inherits under the proposed bill.

Commissioner Martin acknowledged the pressures for private ownership of land, and agreed that the first open to entry plan had inequities built into it. The Administration agrees that a private land program must become functional. However, some items to consider are:

- What does the legislature want to be allowed on the land i.e. agriculture, second home, main home, wilderness, recreation
- How can a fair market value be obtained
- What use does private ownership wish to make of the land
- Do we want to put people into new areas, with the attendant problems of roads, schools, stores, etc.
- Every program that moves land puts a great burden on the small group that must administer the program
- The Division of Lands is concerned with the end use of the land, and the eventual combining of possibly incompatible uses.

Commissioner Martin agreed to present to the committee a more formal list of administrative concerns for land ownership.

Additional discussion included problem of guaranteeing Alaskans land; pulling back into use lands identified now as wilderness areas;how to get local persons involved in planning the use of their land;the fact that Alaska is a land-tight state. Swanson stressed that we must have multiple use of the land, not prime use.

Representative Smith moved that the committee adopt the draft copy of CS HB 132, with Line 17 to read ----cognizant platting authority. Motion passed.

January 26 was scheduled as the date for the next hearing of HB 132. January 15 was scheduled as the date for hearing HB 278, and possibly HB 313 (now tabled).

Meeting was adjourned.

Tape 2 Side 2 0240--1828

HOUSE RESOURCE COMMITTEE - Minutes - January 26, 1976

Subject: HB 132 Homesite

Present were Osterback, Brown, Swanson, Eliason, Hershberger, Rhode, Staff Assistant Van Doren and Chmn. Anderson.
Excused was Huntington.

Guests included Sharon Lobaugh, Commissioner Guy Martin, Jamie Love, Joel Bennett, Waco Shelly, Sharon Mitchell and Rep. Keith Specking.

Meeting opened at 8:10 a.m, with a statement by Commissioner Guy Martin. Mr. Martin stated that the purpose of the bill seemed to be a single-purpose one--to make available single, non-contiguous areas of land to private parties. Along with urging that the Dept. of Fish and Game take a close look at the bill from the standpoint of appraising the effect on habitat areas, he stated that the bill needs to address who it intends to help. As it now stands, there is no real differentiation between Alaskans and others. (Commissioner Martin later added that it is now very difficult to spell out "Alaskan resident" requirements in any legislation.)

The biggest question posed by the bill lies in the uncertainty of land status in the state. It is a difficult time to make any additional commitments on land. Already, the demand far exceeds the land. "We don't want to cause pressures that will exceed our abilities to control". An "Open-to-Entry" program must be in addition to and supplemented by other plans and regulations.

Mr. Martin continued by urging that the committee consider the best eventual use of the land (i.e. mineral exploration, recreation, natural habitat, etc.) before opening it up. Also, there is a need to look at local government participation -- educational, transportation, communication -- and delineate responsibilities--not get the state tied up in unforeseen commitments.

Title control needs to be spelled out in the bill. If the state really wants to control the use of the land, then leases are needed, not outright sale.

Rights of individuals must be faced--if new people are encouraged by availability of land to enter an area, how do their rights compare to the rights of the people already in the area?? (Rep. Specking stressed that this could be controlled by allowing people in a given area to veto land availability)

Chmn. Anderson stated that the administration should deal with how they will implement the bill--how they will deal with the problems.

Mr. Martin commented that the administration would be faced with the same problems as the committee, and that as much should be spelled

out in the bill itself as possible.

Rep. Eliason emphasized putting more "shalls" in the bill. Rep. Swanson added that the "creeping bureaucracy" can be toned down by putting more strength in the bill. However, Swanson also mentioned that the reason many people want these isolated parcels of land is to "do their own thing" with their own property. This can be accomplished by minimal, but explicit, building and environmental standards, spelled out in the bill.

Rep. Brown stated that there should be criminal penalties for misusing land.

Questions of how to determine the fair market value of land in an area where no land has been previously sold were raised. In answer, Rep. Specking suggested the option of continuing the leases rather than eventual sale. He also suggested working closely with the Forest Service on the bill, since they have had a "successful" land program for many years.

A question by Rep. Eliason as to why only one member of a household could apply for the land, and the constitutionality of such a statement, was answered by Rep. Specking, stating that although it would limit only a husband or wife, not both, from participation in the program, it would not hinder any child from participating on setting up his own household. Specking stated that it became in part a self-limiting program.

Rep. Eliason stated that the public should be able to initiate hearings as to the desireability of opening a given section before it is opened.

Chmn. Anderson reviewed the past history of the bill, asking Commissioner Martin if the committee was addressing adequately the problems created by the previous program. Rep. Specking commented that the problems with leasing could have been solved administratively by the previous administrator. Commissioner Martin would be the one to best know whether he could comfortably work with the leasing program as it is now on the books.

Rep. Swanson insisted that the committee see copies of any regulations the administration would use to implement current or proposed legislation on open-to-entry lands, before passing any new legislation. Rep. Brown added that any regulations must be tight enough to refer problems back to the legislature.

Sharon Lobaugh, representing the Alaska Conservation Society, asked about any hearings in any other part of the state on this bill. Chmn. Anderson answered that we needed to get action before this session was over, and consequently could not travel any more. Her only other comment; that the Society was in favor of any leases reverting back to the state if they became available.

With the comment that the committee would wait for Rep. Speckings next draft of the bill, before setting up another date, meeting adjourned.

HOUSE RESOURCE COMMITTEE - Minutes - April 5, 1976

Present were Hershberger, Swanson, Rhode, Huntington, Osterback, Eliason, Staff Assistant Van Doren and Chairman Anderson.

Subject: HB 808
CS SS HB 626 (report only) Homesites

Rep. Rhode was asked to review his substitute for SSHB626. Background included the fact that a sanctuary isn't needed because the area already is a Habitat area. The draft Committee Substitute is the same as the Senate bill. It was moved to adopt the Rhode substitute. Motion carried. Staff was instructed to send copies to the people coming to Juneau for the hearing Friday, April 9, at 8:00 a.m.

Re: HB 808--Rep. Oral Freeman testified on his bill. Interest has been expressed from around the state for a new classification of land and a method of disposing of said lands. Previously, disposal has been on a sale basis, to raise revenue. Lands used to be bought for speculation. Southeast Alaska is boxed in by forests--there won't be much land available under this bill in this area. There should be much more in the Interior. Mr. Freeman stressed that there is nothing in this bill that would benefit him personally.

Rep. Swanson added testimony. He has received many replies to this proposed legislation. It is good legislation, and would be helpful to the whole state.

Freeman: As long as the intent of the bill is retained, changing language would be no problem to him. The biggest complaint is that people already owning property can't qualify under this bill. Possibly those persons with property who apply for one of these sites could be put at the bottom of the list in preference.

Chairman Anderson asked about the state plan for disposal of lands. Does this bill respond to that plan?

Freeman: Some say that the bill is too vague. However, that's a deliberate fact. Freeman feels that the Division of Lands should handle the details of regulation. This bill was worked out with the local representative of the Division of Lands.

Anderson: Most criticisms received have been constructive criticisms. There is concern that regulations must be set up before the lands become available--not after.

Rhode stated that the residency requirement as stated in the proposed legislation has been questioned.

Commissioner Martin testified. (Copy available) The whole problem of land disposal has been discussed often, including many times before this committee. Many of the answers to problems are not yet available. For instance, the bill doesn't say whether it is addressing rural or urban lands. As it stands now, Martin would oppose the bill. Re: a fiscal note, as the bill now stands, up to $13,000,000 per year would be needed to administer the bill. And--the bill presently favors non-residents.

Bob Pavitt, a professional planner, and a lobbyist, spoke. The Planning Association of Alaska wishes to bring to the attention of the committee the foresight that is lacking in the bill. There is no quarrel as to the proposed land use, but the highest and best use of a given parcel of land has not yet been established. There is no overall plan for Alaska as yet. Re: Section 2 of the bill--planners suggest that it takes lots of study to establish whether land is suitable for habitation. Pertinent questions: How do you determine whether a home has been lived in for 5 months per year? After title has been conveyed, how do you prohibit subdivision? Pavitt feels that the end result will be a bureaucracy serving the program instead of planning. Another point--it allows an applicant to file on several sites at the same time. Also, how about land owned in other states? This is not mentioned in the legislation. Pavitt urged that the committee keep in mind the reasons that Open to Entry was shut down. He urged that surveys be done before anything else happens.

Pavitt mentioned the fact that trailers could be moved in to the sites. Also, how can a bank loan money when the person building the house doesn't yet own the land? And additional service would be demanded by the public living on these sites.

Planners aren't negative to the concept, just this particular bill, and HB 132. A program must be developed which will accomplish the planning background before this bill becomes law.

In response to questions, Pavitt stated that the plan under study by the planners would be completed within the year.

Rep. Eliason: If these sites fall within the boundaries of a borough, the planning and zoning controls would be undertaken by the borough.

Pavitt responded by mentioning overlapping land selections. Some boroughs have selected for public use. Others have not. Planners are willing to work with anyone who will put together the concept with good planning.

Sharon Lobaugh, representing the Alaska Conservation Society, spoke. They endorse the concept of the bill, with the following suggestions. On page 2, subsections 4, 5 and 6, restraints imposed would be creating problems. She mentioned that the initial land disposition policy in Alaska was to equalize the rights of the residents. Most of that original land is still vacant. Speculation created high prices on the parcels. A mosaic of private ownership now exists throughout the state. The Conservation Society's major concern is that the bill doesn't solve the land management problem.

Anderson: Do you agree that no other land disposition should take place until the land management plan is complete?

Lobaugh urged that the committee members refer to the administrations presentation for answers to some of the questions.

Phil Holdsworth, of the LUPC, presented a statement. At the meeting in Anchorage on April 21 and 22, the LUPC will study for adoption a report on the use of the state lands. There are suggestions within this report on the Open to Entry issue.

Swanson asked whether action on this proposed legislation would help the deliberations of the LUPC. Answer: Yes.

Anderson asked for discussion of amendments proposed by Swanson.

Huntington asked that the committee return later for the discussion.

Swanson: Page 1, Line 23, change the "may" to "shall". This must be a positive program.

Eliason objected, stating that guidelines were missing in the program. Swanson replied stating that 19 pages of legislation would simply mean that nothing could happen under the bill.

Freeman reminded the committee that the Division of Lands now disposes of land for residences by selling the land. The bill does not require payment for the land.

Eliason stated that the "shall" wording removes the option of selling or giving.

Swanson: Page 1, Line 28, "not less than 5 months" should be changed to "not less than 9 months". Page 2, Line 16, strike the "of the same household" language and add "must be of the age of majority". Renumber the sections.

Swanson asked for a change as to allowing the Director of Lands to open more lands for entry--creating another "shall" situation. And on Page 2, Line 26, strike all of "a". Insert "At time of application applicant must have had 3 years of continuous residency immediately prior to application."

Eliason expressed concern as to creating a class of people.

Swanson: Page 4, Line 5, change "specific" to "reasonable".

Huntington: Expressed objection to "shall" wording in regards to the Director opening additional lands.

Freeman said that there isn't ever going to be enough land available for everyone. This bill addresses the people who need it most.

Swanson stated that you can't create a privileged class.

Huntington said that possibly 1-acre sites would be better than 2-acre ones, to accommodate more people. Swanson replied that we should have enough land in Alaska for everyone. Huntington reminded him that the bill speaks to state lands only.

Swanson stated that there is land available along the Alcan Highway from Fairbanks to the Canadian border, within travel distance of cities--. Regulations could be written so as to avoid the problems encountered in the Open to Entry program.

Osterback suggested that the nine month requirement created a problem in that a fisherman couldn't live on the land long enough each year. Swanson answered that if that's your permanent residence, it should be o.k. to be away at a job.

It was moved to adopt the proposed "shall" wording on Page 1, Line 23.

Eliason reminded the committee that it was necessary to modify the bill to meet administration requirements.

Swanson wondered whether the Director of Lands would work under the proposed program on a trial basis to try the legislation on for size.

Rhode felt that the "shall" wording, as applied to duties of the Director of Lands, was modified enough by the language in the rest of the bill.

Freeman felt that the fiscal note suggested by Martin would be increased by the "shall" wording. However, political pressure would cause the bill to go into effect anyway.

Motion to adopt the first amendment failed.

Re: Line 28, page 1, changing the 5 months to 9 months, motion was made to adopt the new wording. Rhode suggested that the 5 month wording should be 7, not 9, to coincide with other regulations.

Swanson reminded the group that these were to be homesites, not homesteads.

No action was taken on the second motion.

Meeting recessed, and resumed at 11:15 a.m. Motion was made to incorporate the 7 month wording. Motion carried.

Motion was made to adopt the amendment striking the "members of the same household" wording. Discussion ensued and Freeman stated that the intent was to avoid a husband and wife each filing. Swanson stated that the language of the bill (living in the house for 7 months) would take care of the problem.

Anderson appointed Swanson chairman of a committee to draft a Committee Substitute, or draft amendments, to HB808. Huntington was appointed to the committee.

Hearing will resume Tuesday, April 6, at 8:00 a.m.

HB 2

GOVERNOR HAMMOND INTRODUCES RESIDENTIAL HOMESITE BILL
February 22, 1977
#34

Governor Jay Hammond today introduced his residential homesite bill which is to make land available at a reasonable cost to landless Alaskans who are willing to live on the land and build a home.

Governor Hammond's bill was intended as an improved version of the "Hippie Homestead" bills which were first introduced in the Legislature last year. At that time, Governor Hammond announced that he favored the concept of such legislation, but that there were so many problems inherent in the bills being considered that the Governor indicated his strong opposition.

According to the Governor, "I believe my opposition to the legislation last year made it imperative for me to come forward with a responsible alternative, and the bill introduced today is intended to present that alternative. My bill would make land available to some Alaskans within two years, and if the program is successful, grow in following years to make planned residential homesites available to many Alaskans each year on a lottery basis. What is most important to understand is that this single bill cannot solve the problems

of Alaska land scarcity or cost. Residential homesite legislation can be only a start, and it is my intention ultimately to have a comprehensive program involving State, Federal and local governments as well as private owners in an effort to make land available at reasonable cost in all areas of the State."

The Governor's bill introduced today will make homesites up to 2.5 acres available in areas planned with the cooperation and approval of local governments to Alaskan residents who live on the land for an aggregate of 21 months during a three-year period and erect a suitable dwelling within that time. The Governor's bill will make the first land available in areas where high costs and land scarcity problems are the most serious.

The Governor also said, "This bill is designed to avoid the abuses of past land disposal programs. In the strongest of terms I wish to emphasize the efforts undertaken by the Administration have been to frame this legislation so as to meet the objectives of a good concept without creating other problems which led to my opposition to similar legislation last year. Notwithstanding my continued support of the concept, I will not hesitate to oppose again legislation which adds elements which caused the abuses of the past or which make the cost of administration so burdensome that it is not in the best interests of the State to continue."

STATE OF ALASKA
THE LEGISLATURE

LEGISLATIVE AFFAIRS AGENCY

POUCH Y - STATE CAPITOL
JUNEAU, ALASKA 99811

MEMORANDUM

February 21, 1977

SUBJECT: House Bill 2, Authorizing Land to be Made Available as Homesites (W.O. #3407)

TO: The Honorable Sally Smith

FROM: George Utermohle
Research Analyst

House Bill 2 seeks to encourage settlement and development of state lands by authorizing the grant of 2.5 acres for residential purposes to each qualified state resident. This bill emphasizes that the distribution and settlement of state land serves a greater public good than does the disposal of land to the highest bidder.

SUMMARY OF HB 2

After the Director of Lands has classified and surveyed available state land for homesite entry, he shall make it available to qualified state residents. To qualify for a homesite under this program, the applicant must be 18 years of age, be a three year resident of Alaska, not be a member of a household which has already applied for a homesite permit, and agree to fulfill the conditions of the homesite permit. If there is more than one applicant for a specific homesite, the permit shall be granted on the basis of length of residence. The bill does not state how length of residence will determine which applicant receives the permit. It can be assumed that the intent is that a greater length of residence confers a greater priority, but it is not clear.

Once the qualified applicant has received his permit to occupy the homesite which he has selected, he must build and occupy a suitable dwelling. The Director of Lands will issue regulations describing what is a habitable dewlling for the vicinity in which the homesite is located. The Director will also issue regulations to establish the time limits in which the dwelling must be built. Once the dwelling has been built, the homesite applicant must occupy the dwelling for at least seven months each year for three years in order to acquire patent to the homesite.

Only one permit shall be issued to each qualified person during his lifetime.

The only costs to the homesite applicant shall be a one time permit application fee, not to exceed $10, and the cost of the land survey. The applicant does not pay rent for the homesite.

If the homesite applicant does not comply with the terms of his permit, the permit will be revoked. Any improvements which the applicant has made to the land prior to the revocation of the permit must be removed in accordance with AS 38.05.090. If the improvements are not removed in the time allowed and are valued at more than $10,000, they may be sold at public auction. The purchaser will then be required to remove the improvements. The money received at auction, less costs to the Division of Lands, shall go to the former homesite applicant. If the improvements are not removed and are valued at less than $10,000, they revert to the state. If the improvements are fixed to the land, they may be sold to the subsequent homesite applicant or to the state.

The Director of Lands must make homesite land available in each of the four judicial districts on a rotating basis. The availability of land must be advertised widely throughout the state by the Director. State land within an organized borough or city cannot be classified for homesites without consultation with the local planning authority. Land classified for homesite entry is not available for selection by boroughs or cities under their municipal land selection rights (AS 29.18.190).

By making land available for homesite entry the state does not obligate itself to supply services to the land, such as water, sewer, or electricity. These services are normally supplied by the landowners themselves operating through service districts or local governments or by private enterprise.

Members of a household which already holds a homesite permit or patent cannot obtain a permit. The terms "members of the same household" as used in the bill is not defined. If the term is not defined in the bill, the Director of Lands will define it when he established regulations for the homesite entry program. There are numerous ways to define the term, but the simplest way may be to include anyone who is declared a dependent for personal income tax purposes as a member of a household.

AVAILABILITY OF LAND FOR HOMESITE ENTRY

To date the state has received patent to 19,200,000 acres of its 104,556,000 acre entitlement. Of this 19.2 million acres, 14.4 million acres has been classied by the Director of Lands. Thus the existing vacant, unappropriated, and unreserved lands of the state is about 4.8 million acres which is available for classification as available for homesite entry.

If the Director of Lands deems that it is in the best interest of the state, he may reclassify all existing classified lands, except those reserved by the legislature, as available to homesite entry. 2.5 million acres of the land included within existing classifications are classified as open to entry. The open to entry program has been suspended since 1973, so it is conceivable that this land could be made available for homesite entry.

GU:mo

MINUTES - HOUSE RESOURCE COMMITTEE - JANUARY 14, 1976

Present were: Huntington, Osterback, Swanson, Smith, Rhode, Brown, Hershberger, Chmn. Anderson and Staff Assistant Van Doren.
Absent was Eliason.

Subject: HB 132

Sponsor Representative Keith Specking commented that a new approach is needed in solving the problem of opening up state lands to entry. Present policy does not work. The lease approach is necessary, rather than the fee-simple. "We should not bury our heads in the sand and allow any and all lands open to entry. Included in a lease can be requirements and restrictions not permissable in an outright sale. Also, if we rely on the newly created Planning Unit within the Div. of Lands, an endless series of sessions on land planning can end in no action.

Discussion ensued regarding getting more land into private hands, with comment being made that this was a paramount issue last year. Mention was made that under the former lease program leases could be open to entry. Also under question was the problem of who inherits under the proposed bill.

Commissioner Martin acknowledged the pressures for private ownership of land, and agreed that the first open to entry plan had inequities built into it. The Administration agrees that a private land program must become functional. However, some items to consider are:

- What does the legislature want to be allowed on the land i.e. agriculture, second home, main home, wilderness, recreation
- How can a fair market value be obtained
- What use does private ownership wish to make of the land
- Do we want to put people into new areas, with the attendant problems of roads, schools, stores, etc.
- Every program that moves land puts a great burden on the small group that must administer the program
- The Division of Lands is concerned with the end use of the land, and the eventual combining of possibly incompatible uses.

Commissioner Martin agreed to present to the committee a more formal list of administrative concerns for land ownership.

Additional discussion included problem of guaranteeing Alaskans land; pulling back into use lands identified now as wilderness areas;how to get local persons involved in planning the use of their land;the fact that Alaska is a land-tight state. Swanson stressed that we must have multiple use of the land, not prime use.

Representative Smith moved that the committee adopt the draft copy of CS HB 132, with Line 17 to read ----cogni ant platting authority. Motion passed.

January 26 was scheduled as the date for the next hearing of HB 132. January 15 was scheduled as the date for hearing HB 278, and possibly HB 313 (now tabled).

Meeting was adjourned.

Tape 2 Side 2 0240--1828

HOUSE RESOURCE COMMITTEE - Minutes - January 26, 1976

Subject: HB 132 Homesite

Present were Osterback, Brown, Swanson, Eliason, Hershberger, Rhode, Staff Assistant Van Doren and Chmn. Anderson.
Excused was Huntington.

Guests included Sharon Lobaugh, Commissioner Guy Martin, Jamie Love, Joel Bennett, Waco Shelly, Sharon Mitchell and Rep. Keith Specking.

Meeting opened at 8:10 a.m, with a statement by Commissioner Guy Martin. Mr. Martin stated that the purpose of the bill seemed to be a single-purpose one--to make available single, non-contiguous areas of land to private parties. Along with urging that the Dept. of Fish and Game take a close look at the bill from the standpoint of appraising the effect on habitat areas, he stated that the bill needs to address who it intends to help. As it now stands, there is no real differentiation between Alaskans and others. (Commissioner Martin later added that it is now very difficult to spell out "Alaskan resident" requirements in any legislation.)

The biggest question posed by the bill lies in the uncertainty of land status in the state. It is a difficult time to make any additional commitments on land. Already, the demand far exceeds the land. "We don't want to cause pressures that will exceed our abilities to control". An "Open-to-Entry" program must be in addition to and supplemented by other plans and regulations.

Mr. Martin continued by urging that the committee consider the best eventual use of the land (i.e. mineral exploration, recreation, natural habitat, etc.) before opening it up. Also, there is a need to look at local government participation -- educational, transportation, communication -- and delineate responsibilities--not get the state tied up in unforeseen commitments.

Title control needs to be spelled out in the bill. If the state really wants to control the use of the land, then leases are needed, not outright sale.

Rights of individuals must be faced--if new people are encouraged by availability of land to enter an area, how do their rights compare to the rights of the people already in the area?? (Rep. Specking stressed that this could be controlled by allowing people in a given area to veto land availability)

Chmn. Anderson stated that the administration should deal with how they will implement the bill--how they will deal with the problems.

Mr. Martin commented that the administration would be faced with the same problems as the committee, and that as much should be spelled

out in the bill itself as possible.

Rep. Eliason emphasized putting more "shalls" in the bill. Rep. Swanson added that the "creeping bureaucracy" can be toned down by putting more strength in the bill. However, Swanson also mentioned that the reason many people want these isolated parcels of land is to "do their own thing" with their own property. This can be accomplished by minimal, but explicit, building and environmental standards, spelled out in the bill.

Rep. Brown stated that there should be criminal penalties for misusing land.

Questions of how to determine the fair market value of land in an area where no land has been previously sold were raised. In answer, Rep. Specking suggested the option of continuing the leases rather than eventual sale. He also suggested working closely with the Forest Service on the bill, since they have had a "successful" land program for many years.

A question by Rep. Eliason as to why only one member of a household could apply for the land, and the constitutionality of such a statement, was answered by Rep. Specking, stating that although it would limit only a husband or wife, not both, from participation in the program, it would not hinder any child from participating on setting up his own household. Specking stated that it became in part a self-limiting program.

Rep. Eliason stated that the public should be able to initiate hearings as to the desireability of opening a given section before it is opened.

Chmn. Anderson reviewed the past history of the bill, asking Commissioner Martin if the committee was addressing adequately the problems created by the previous program. Rep. Specking commented that the problems with leasing could have been solved administratively by the previous administrator. Commissioner Martin would be the one to best know whether he could comfortably work with the leasing program as it is now on the books.

Rep. Swanson insisted that the committee see copies of any regulations the administration would use to implement current or proposed legislation on open-to-entry lands, before passing any new legislation. Rep. Brown added that any regulations must be tight enough to refer problems back to the legislature.

Sharon Lobaugh, representing the Alaska Conservation Society, asked about any hearings in any other part of the state on this bill. Chmn. Anderson answered that we needed to get action before this session was over, and consequently could not travel any more. Her only other comment, that the Society was in favor of any leases reverting back to the state if they became available.

With the comment that the committee would wait for Rep. Speckings next draft of the bill, before setting up another date, meeting adjourned.

HOUSE RESOURCE COMMITTEE - Minutes - April 5, 1976

Present were Hershberger, Swanson, Rhode, Huntington, Osterback, Eliason, Staff Assistant Van Doren and Chairman Anderson.

Subject: HB 808
CS SS HB 626 (report only) Homesites

Rep. Rhode was asked to review his substitute for SSHB626. Background included the fact that a sanctuary isn't needed because the area already is a Habitat area. The draft Committee Substitute is the same as the Senate bill. It was moved to adopt the Rhode substitute. Motion carried. Staff was instructed to send copies to the people coming to Juneau for the hearing Friday, April 9, at 8:00 a.m.

Re: HB 808--Rep. Oral Freeman testified on his bill. Interest has been expressed from around the state for a new classification of land and a method of disposing of said lands. Previously, disposal has been on a sale basis, to raise revenue. Lands used to be bought for speculation. Southeast Alaska is boxed in by forests--there won't be much land available under this bill in this area. There should be much more in the Interior. Mr. Freeman stressed that there is nothing in this bill that would benefit him personally.

Rep. Swanson added testimony. He has received many replies to this proposed legislation. It is good legislation, and would be helpful to the whole state.

Freeman: As long as the intent of the bill is retained, changing language would be no problem to him. The biggest complaint is that people already owning property can't qualify under this bill. Possibly those persons with property who apply for one of these sites could be put at the bottom of the list in preference.

Chairman Anderson asked about the state plan for disposal of lands. Does this bill respond to that plan?

Freeman: Some say that the bill is too vague. However, that's a deliberate fact. Freeman feels that the Division of Lands should handle the details of regulation. This bill was worked out with the local representative of the Division of Lands.

Anderson: Most criticisms received have been constructive criticisms. There is concern that regulations must be set up before the lands become available--not after.

Rhode stated that the residency requirement as stated in the proposed legislation has been questioned.

Commissioner Martin testified. (Copy available) The whole problem of land disposal has been discussed often, including many times before this committee. Many of the answers to problems are not yet available. For instance, the bill doesn't say whether it is addressing rural or urban lands. As it stands now, Martin would oppose the bill. Re: a fiscal note, as the bill now stands, up to $13,000,000 per year would be needed to administer the bill. And--the bill presently favors non-residents.

Bob Pavitt, a professional planner, and a lobbyist, spoke. The Planning Association of Alaska wishes to bring to the attention of the committee the foresight that is lacking in the bill. There is no quarrel as to the proposed land use, but the highest and best use of a given parcel of land has not yet been established. There is no overall plan for Alaska as yet. Re: Section 2 of the bill--planners suggest that it takes lots of study to establish whether land is suitable for habitation. Pertinent questions: How do you determine whether a home has been lived in for 5 months per year? After title has been conveyed, how do you prohibit subdivision? Pavitt feels that the end result will be a bureaucracy serving the program instead of planning. Another point--it allows an applicant to file on several sites at the same time. Also, how about land owned in other states? This is not mentioned in the legislation. Pavitt urged that the committee keep in mind the reasons that Open to Entry was shut down. He urged that surveys be done before anything else happens.

Pavitt mentioned the fact that trailers could be moved in to the sites. Also, how can a bank loan money when the person building the house doesn't yet own the land? And additional service would be demanded by the public living on these sites.

Planners aren't negative to the concept, just this particular bill, and HB 132. A program must be developed which will accomplish the planning background before this bill becomes law.

In response to questions, Pavitt stated that the plan under study by the planners would be completed within the year.

Rep. Elinson: If these sites fall within the boundaries of a borough, the planning and zoning controls would be undertaken by the borough.

Pavitt responded by mentioning overlapping land selections. Some boroughs have selected for public use. Others have not. Planners are willing to work with anyone who will put together the concept with good planning.

Sharon Lobaugh, representing the Alaska Conservation Society, spoke. They endorse the concept of the bill, with the following suggestions. On page 2, subsections 4, 5 and 6, restraints imposed would be creating problems. She mentioned that the initial land disposition policy in Alaska was to equalize the rights of the residents. Most of that original land is still vacant. Speculation created high prices on the parcels. A mosaic of private ownership now exists throughout the state. The Conservation Society's major concern is that the bill doesn't solve the land management problem.

Anderson: Do you agree that no other land disposition should take place until the land management plan is complete?

Lobaugh urged that the committee members refer to the administrations presentation for answers to some of the questions.

Phil Holdsworth, of the LUPC, presented a statement. At the meeting in Anchorage on April 21 and 22, the LUPC will study for adoption a report on the use of the state lands. There are suggestions within this report on the Open to Entry issue.

Swanson asked whether action on this proposed legislation would help the deliberations of the LUPC. Answer: Yes.

Anderson asked for discussion of amendments proposed by Swanson.

Huntington asked that the committee return later for the discussion.

Swanson: Page 1, Line 23, change the "may" to "shall". This must be a positive program.

Eliason objected, stating that guidelines were missing in the program. Swanson replied stating that 19 pages of legislation would simply mean that nothing could happen under the bill.

Freeman reminded the committee that the Division of Lands now disposes of land for residences by selling the land. The bill does not require payment for the land.

Eliason stated that the "shall" wording removes the option of selling or giving.

Swanson: Page 1, Line 28, "not less than 5 months" should be changed to "not less than 9 months". Page 2, Line 16, strike the "of the same household" language and add "must be of the age of majority". Renumber the sections.

Swanson asked for a change as to allowing the Director of Lands to open more lands for entry--creating another "shall" situation. And on Page 2, Line 23, strike all of "a". Insert "At time of application applicant must have had 3 years of continuous residency immediately prior to application."

Eliason expressed concern as to creating a class of people.

Swanson: Page 4, Line 5, change "specific" to "reasonable".

Huntington: Expressed objection to "shall" wording in regards to the Director opening additional lands.

Freeman said that there isn't ever going to be enough land available for everyone. This bill addresses the people who need it most.

Swanson stated that you can't create a privileged class.

Huntington said that possibly 1-acre sites would be better than 2-acre ones, to accommodate more people. Swanson replied that we should have enough land in Alaska for everyone. Huntington reminded him that the bill speaks to state lands only.

Swanson stated that there is land available along the Alcan Highway from Fairbanks to the Canadian border, within travel distance of cities---. Regulations could be written so as to avoid the problems encountered in the Open to Entry program.

Osterback suggested that the nine month requirement created a problem in that a fisherman couldn't live on the land long enough each year. Swanson answered that if that's your permanent residence, it should be o.k. to be away at a job.

It was moved to adopt the proposed "shall" wording on Page 1, Line 23.

Eliason reminded the committee that it was necessary to modify the bill to meet administration requirements.

Swanson wondered whether the Director of Lands would work under the proposed program on a trial basis to try the legislation on for size.

Rhode felt that the "shall" wording, as applied to duties of the Director of Lands, was modified enough by the language in the rest of the bill.

Freeman felt that the fiscal note suggested by Martin would be increased by the "shall" wording. However, political pressure would cause the bill to go into effect anyway.

Motion to adopt the first amendment failed.

Re: Line 28, page 1, changing the 5 months to 9 months, motion was made to adopt the new wording. Rhode suggested that the 5 month wording should be 7, not 9, to coincide with other regulations.

Swanson reminded the group that these were to be homesites, not homesteads.

No action was taken on the second motion.

Meeting recessed, and resumed at 11:15 a.m. Motion was made to incorporate the 7 month wording. Motion carried.

Motion was made to adopt the amendment striking the "members of the same household" wording. Discussion ensued and Freeman stated that the intent was to avoid a husband and wife each filing. Swanson stated that the language of the bill (living in the house for 7 months) would take care of the problem.

Anderson appointed Swanson chairman of a committee to draft a Committee Substitute, or draft amendments, to HB808. Huntington was appointed to the committee.

Hearing will resume Tuesday, April 6, at 8:00 a.m.

STATE of ALASKA

MEMORANDUM

TO: Guy Martin
Commissioner

DATE : January 28, 1977

FROM: Dave Hanson, Chief
Planning & Research

SUBJECT: Differences in Homesite Bills

The most important substantive differences between the administration bill and the Freeman Bill are set forth in the following summary. Two additional bills, the Huber Bill and the Phillips Bill, are substantially the same as the Freeman Bill except for the following differences:

Freeman - Maximum of 2.5 acres, Minimum of 3 years residency in Alaska

Phillips - Maximum of 5 acres, Minimum of 5 years residency in Alaska

Huber - Maximum of 5 acres, Minimum of 3 years residency in Alaska

A more detailed analysis of all substantive changes is attached.

2.5 acres — MAJOR DIFFERENCES — 2.5 acres

Administration Bill	Freeman Bill
Type of Title - only residential development rights	Total unencumbered title - fee
Ownership of the property - cannot own other land	No ~~provision~~ limitation
Borough Relationship - requires ~~borough~~ local gov't approval	Requires only joint study and review by ~~Borough~~ and state local gov't
Bond - $500 bond or deposit (for reclamation of abandoned homesite, if rec.)	Bond not required
Method of Disposal - Lottery	Length of Residency test
Residency requirement for qualifying - 1 year	3 years
Mobile Homes as habitable dwellings - not adequate for building requirement.	Mobile homes not mentioned
Land Availability - All of State but consideration of local or regional needs	Rotating among Judicial Divisions

Administration Bill	Freeman Bill
Obligation for State Services - Land must be developed to conform with state or borough regulations, unless waived by local govt.	No obligation to provide state services
Time limit for the Bill - repealed July 1982 Sunset provision -	No limit

Attachments

Differences between the Administration and Legislative Bill introduced by Freeman et al concerning "An Act authorizing state land to be made available as homesites"

Page/line of House Bill 2 (Freeman Bill)	Freeman Bill	Administration Bill
Purpose of the Act 1-20	Provide land for Alaskans to settle at a cost reasonably within their means, ~~where they can have a home and live as a family.~~	Provide a means for landless residents to obtain land without the ordinary cost of purchasing undeveloped land, and to relieve real or artificial related land availability problems during periods of scarcity.
Classification 1-24	Director shall classify	Commissioner may classify and develop. Commissioner shall consider regional and local land price scarcity and funds budgeted.
Type of land 1-25	Vacant, unappropriated and unreserved land	Appropriate land for the program purposes
1-28	permit	Conditional ~~Conditional~~ Contract for partial patent
1-29	Occupy seven months each year for three consecutive years	Occupy the homesite an aggregate of 21 months within three years
2-1	pay cost of survey at end of three years	Pay a pro-rated share of ~~of~~ the cost of survey before conditional contract is issued
2-2	Patent to the land conveying an unencumbered title ~~fee~~	Partial patent to the land conveying residential development rights only
2-5	Parcels not exceeding 2 1/2 acres in reasonably compact form	Parcels of appropriate size conforming with local or state zoning but not exceeding 2 1/2 acres
2-7	Offered on a rotating regional basis from the judicial districts	Consider regional or local land scarcity and price factors
~~2-10~~ 2	Following classification publish notice	No requirement to publish notice immediately
2-20	Priority in award based on length of residency	Lottery

Page/line of House Bill 2 (Freeman Bill)	Freeman Bill	Administration Bill
2-26	18 years old	At least 19 years of age
2-27	Three years continuous residence in the State	1 year resident as further defined
3-1	Erect a habitable dwelling within a reasonable time determined by the director	Erect a dwelling within three years which meets state and local regulations
3-22	Studied and reviewed jointly by the director and the local planning agency	Notice and review under Sec. 305
	Classify land available for borough or city selection	Appropriate land
3-29	If classified, it is not available for city or borough selection	Silent - (land must be classified reserved use before the Borough can select it)
4-2	No obligation to provide services to lands	The land must be developed to conform with state or borough regulations, unless waived.
4-4	Permanent dwelling with required or customary sanitary facilities - reasonable requirements to satisfy the standard of a habitable dwelling established by the Commissioner.	Erect a habitable dwelling which meets all state and local regulations. Also provision that trailers do not qualify as habitable dwellings.

At Lands is conflict with municipal selections is worded in 3-28 State bill

Residential Homesite Legislation
Bill Comparisons

	# Administration	# HB 2, HB 6 Freeman, Huber, Phillips
Purpose -	Provide low-cost land to landless Alaskan residents who are willing to live on the land, build a dwelling, and share whatever public costs are involved.	Similar, but no exclusion if other land is owned.
Eligibility -	Resident one year (19 years old)	Freeman - 3 year resident Huber - 3 year resident Phillips - 5 year resident (18 years old)
Method of Disposal -	Lottery from among applications	Length of residence among applicants (DNR to adjudge disputes)
Landsize -	Up to 2 1/2 acres	Freeman - up to 2 1/2 acres Huber - up to 5 acres Phillips - up to 5 acres
Land Available -	Commissioner shall classify - appropriate land for purposes of program	Director, Division of Lands shall classify (from vacant, unappropriated, unreserved land)
Choice of Homesite Program Areas	Based on local or regional land needs, scarcity and cost	Rotate among Judicial Districts
Planning and Preparation of Areas -	Selection of area, planning and subdivision by State prior to opening of area	Same
Local government Role	Must approve of plan after consultation	Consultation study by local government - no approval required
State and Local Requirements (sewer, roads)	Must be met unless waived by local government or State	No obligation to meet these requirements (theory is that they cannot or should not be binding on State Homesite program)

	Administration	Freeman, Huber, Phillips
Live-on Requirement	21 months aggregate during 3 year period	7 months each year for 3 years
Building Requirement	Erect dwelling within 3 years. Standards set by DNR for habitable dwelling	Erect dwelling within reasonable time. Same standards.
Title Ultimately Given	Patent conveying only residential development rights - (prevent speculation and high tax value)	Fee patent
Costs to Homesite Owner	- Survey Costs - Other costs of development (roads, sewer) unless waived by local government	Survey costs No others - theory is that local or State requirements can be overridden
Sunset Provision	July, 1982	No limit
Bond-for Reclamation of site, if abandoned	$500	No provision

FISCAL NOTE ASSUMPTIONS FOR AN ACT AUTHORZING STATE LAND TO BE MADE AVAILABLE AS HOMESITES (ADMINISTRATION BILL)

The following information is intended to outline the principal fiscal assumptions which were made in order to estimate the costs involved with a possible homesite program. The information will list positions by year, the number of lots and areas covered, and approximate value of the land transferred by the State.

SIZE OF PROGRAM

	Settled Areas		Remote Areas	
Year	# Lots	# Areas	# Remote Lots	# of Remote Areas
1978	64	1 or 2	10	1 or 2
1979	128	2 - 4	20	2 - 4
1980	192	5 - 8	30	5 - 8

PERSONAL SERVICES

Year	Positions Required	Salary
1978	1 Associate Planner	$ 21,048.00
	1 Land Management Officer I	16,884.00
Total	2	37,932.00
1979	1 Associate Planner	21,048.00
	1 Land Management Officer II	19,560.00
Total	2	40,608.00
1980	1 Associate Planner	21,048.00
	1 Land Management Officer II	19,560.00
	1 Land Management Officer I	16,884.00
Total	3	57,492.00

ESTIMATED SURVEY COSTS FOR A STATE HOMESITE PROGRAM

(Settled Area Lots)

Year	# Lots	Cost per lot	Total	Actual Total
1978	64	436.00	27904	27904
1979	128	436.00	55808	27904
1980	192	436.00	83712	27904

ESTIMATED SURVEY COSTS FOR A STATE HOMESITE PROGRAM

(Remote Area Lots)

Year	# Lots	Cost per lot	Total	Actual Total
1978	10	1825	18250	18250
1979	20	1825	36500	18250
1980	30	1825	54750	18250

Total estimated survey costs per year for a Homesite Program - 46,154

NOTE: The survey costs remain the same because it is assumed that the survey costs for the previous year will be repaid to the State. When the program ends it is assumed that there will be no survey cost to the State.

APPROXIMATE UNDEVELOPED LAND VALUE OF STATE RURAL HOMESITE LAND
(LAND VALUES NOT FIGURED IN FISCAL NOTE)

Year	Cost per acre	# Acres needed	Total Land Value
1978	2000 - 2500	80	160,000 - 200,000
1979	2000 - 2500	160	320,000 - 400,000
1980	2000 - 2500	320	640,000 - 800,000

APPROXIMATE UNDEVELOPED LAND VALUE OF STATE REMOTE HOMESITE LAND

Year	Cost per acre	# Acres needed	Total Land Value
1978	500 - 2000	25	12,500 - 50,000
1979	500 - 2000	50	25,000 - 100,000
1980	500 - 2000	75	37,500 - 150,000

Feb. 7, 1977

Dear Sally Smith,

I would like to make some recommendations for changes in HB 2 and 6.

There seem to be at least two easily identifiable groups of people supporting these bills: those who urge the transfer of land from public to private hands for philosophical reasons and those who want land completely isolated from urban areas for "subsistence" living.

I have very strong objections to designating land completely isolated from urban areas for homesite entry.

The argument of those proponents of homesteading who seem primarily interested in the conveyance of public land into private hands seems to be: Young people should have a chance to carve their homes out of the wilderness as I was able to do in the past. The major fallacy in this reasoning is that while we're making new young people daily, no new wilderness is being made. Some generation of young people must face the fact that one can no longer carve his home out of the wilderness; let it be now while there is still some wilderness

The subsistence living groups appear to stress the values of a simple life far from the stresses of urban life, of being able to observe and relate intimately with nature, and of being dependent only on oneself. While the first two statements are valid motives for many people, the last one clearly reveals self-deception. However simple ones life may be, such things as Aladdin lamps, flour and wood stoves do not spring forth fully made from the Alaskan wilderness; all these people need some sort of cash income which they most likely get from periodic trips to the city.

A subtle and more profound difficulty with subsistence living(at least for urban whites without a cultural background of subsistence)lies in the inability of almost anyone to know who they will be in 10, 20, 30 years. A young couple goes into the wilderness; their babies become toddlers, become school age children and so forth. I think there almost always comes a time in the growth of a family when either the parents or the children desire educational and social opportunities not available in an isolated wilderness setting. As the family might find it difficult financially(especially after years of wilderness living)to move to an urban area, pressure develops for a road, electricity etc., a piece of wilderness is no more, and these people have ultimately destroyed what they first came to enjoy.

Finally there is a problem of implementation in that a family with possibly a dog team to feed needs a lot more land than 2-1/2 or 5 acres to keep themselves and their dogs in moose or caribou and their stoves in wood. The same holds true for a trapper. Each 2-1/2 or 5 acre homesite would have to be miles from any other.

If it is necessary for the State to supply subsistence living sites, a possible method for guaranteeing an opportunity for a subsistence lifestyle experience for future generations would be for the State to lease such wilderness sites. A precedent for this has existed for some years in those cases where a person or family rents an existing cabin in the wilderness for a winter or so. Thus "subsistence" living becomes a period of ones life one studies and saves for like a year taken off to travel around the world or go back to school, and the development pressure inherent in the growth of a family is eliminated. I would recommend that private enterprise continue to supply subsistence homesites in the manner it has done in the past.

House Bills 2 and 6 in Section 2, (d) point out it is inherently more difficult to classify home site entry land in urban areas than it is in isolated areas. Perhaps these Bills could be rewritten to reverse this. An obvious way is to limit homesite entry land to organized boroughs and cities.

Regions which feel the loss brought on by disappearing wilderness more keenly than we have been inclined to in Alaska, plan their residential areas in compact form rather than in isolated units a mile or so apart. House Bills 2 and 6 deal with the form homesites will take only by naming the acreage. I feel it would be environtmentally more desirable to group the homesites in subdivisions like the Spinach Creek Subdivision in the Fairbanks area. Lot size should not be arbitrarily set a 5 acres, but should be determined by the ability of the land to accept waste water and of the water table to recharge.

I suspect that the majority of Alaskans favor homesites close to jobs and an urban area, not isolated wilderness sites. Likewise the closer the homesites are to work, the more Alaskans will be able to live on their homesite and commute to work which should provide a considerable impetus for the conveyance of public lands into private hands.

Thank you for considering my opinion in this matter.

Sincerely,

Joanne E. Groves

Memo to: Alvin Osterback

From: Resources Subcommittee on
Parks, Timber and Lands
Sally Smith, Chairman

Re: HB 2 and HB 247, Relating to Homesites

The Resources Subcommittee on Parks, Timber and Lands recommends that the Resources Committee take up HB 2 and make any revisions deemed necessary on that specific bill. The Committee recommends No Action on HB 247.

Respectfully Submitted,

Sally Smith

SUBJECT: HB 2 Homesites, sponsored by Rep. Freeman

TO: Rep. Terry Gardiner, Chairman
House Judiciary Committee

FROM: Al Osterback, Chairman
House Resources Committee

al Osterback

Attached is the transcript from our March 4, 1977 meeting on HB 2. It begins with Rep. Freeman's testimony. Guy R. Martin's testimony begins on page 5.

Note: VETO comment on page 13.

HOUSE RESOURCES COMMITTEE
FRIDAY @ 4 MARCH 1977

House Bill 2

Mr. Chairman and members of the committee, I will try not to get to long winded with this. You and I are well acquainted with this but I don't know about the three other members. I don't know how much time was spent looking at this but I will try to be brief about it and if there are any questions why maybe that would be the best way to handle the thing.

To begin with the purpose of the bill, I think it is stated just about as well as they can state it, and the purpose of the act as a matter of fact I'm kinda proud of that, I wrote that one myself word for word; the reason for the bill in the first place is because there is quite a number of young people in my district came to me and complained about the problem they are having obtaining a place to build a home. The price of land, land is scarce and the price is so outrageously high that by the time they figure out a way to come by the land there was nothing left or any way they could build house on it. I went back and checked the map that the state had been using since the disposing of their land for residential purposes and that is by auction. They surveyed the land into lots and auctioned it off at public auctions and then the high bidder could buy it with 10% down, 10 years to pay, 7% interest and this seemed like this was the proper way to do it. The problem is that the people who were buying the land were buying it not merely for a place to build a home on, they were buying it for speculation and I have no quarrel with the speculators, there is nothing illegal or immoral about it, but what they were doing because they had enough money they could afford to do that, because the land was scarce and the opportunity available and spare money available, the people that were buying the land were not the people who really needed it. As I said from

Statehood the state has disposed of the land mainly for the purpose of providing revenue. The first year of the Statehood, I didn't object to that because the state did need the money but since the advent of the North slope oil I don't think the few dollars the state get from selling it's land and ending up in the hands of speculators is the best and highest use for that land. So to try to solve this problem I drew on my own experience, when I came to Alaska 31 years ago, the Federal Government had a home sight program available. Under the terms of that act a person could get up to five (5) acres of land by occupying it and building a habitable dwelling. You can find these words, as best as I could remember them, in the language of this bill. Then for the price of the survey you were given patent of the land free and clear. As I said the first home I ever had in this state was one of those home site. I'm not saying that I couldn't have made it without it but in those days it was a great help to me. But at the time the help did mean something to me and I appreciate it very much and I have a great belief in the idea of this program. So what I was trying to do here at State level was to duplicate that so if you go through this bill, you will find a lot of language, as I said to the best that I could remember from that act. To the provisions of this bill you are required to live in the State three years and then when the state has land available you apply for a permit. The permit costs you $10.00 and then if you are fortunate enough to get one of the lots you live on it and build a habitable dwelling of course and you live in the house atleast seven (7) months out of the year for three (3) consecutive years and at that time the State will give you the patent to the land for the price of the survey. I suppose everybody has a different idea in his own mind about how this thing should work but I envision that it would work no differently

than it does now and that the State would go out to the proper location, we will give them their choice, and will survey the lot and then make them available to the public. There is one thing in this provision here that you will notice, I'll touch on it lightly because I'm sure that Commissioner Martin here I would assume that he is probably going to testify on the Governor's home ~~type~~ site bill and there is a great difference but there is one thing that I would like to call to your attention that is in the provision of this bill that I think is most important and what I consider the guts of this thing and that is the provisions that says, "at any time when there are more applicants than there are lots available (page 2) or if several applicants apply and qualify for the same home site, priority in award of an entry shall ~~shall be on the basis of length of residence in the State.~~ The puppose be on the basis of length of residence in the State. The puppose of that Mr. Chairman is to go back to what I was saying in the beginning and that was to make land available to young Alaskan citizens who were not fortunate enough to have the money to do otherwise. I envision that when this happens that there will always be the case that there will be more people applying for lots then there are lots available and so it seems to me that it would be only fair to give a preferance to those people who live in Alaska the longest. To give you an example so as to be more specific about it, the people who I was trying to reach in the first place, lets say a young Alaskan born and raised in this country that is 25 or 26 years old and is not fortunate enough to have the financial status enough to buy a lot and build a home. If you give them preference based on length of residence obviously a youngster that has lived here 25 years compared to a somebody twice his age who has only lived here ten (10) years, the young guy is going to have the advantage and I think that this

is only fair. For myself I wouldn't have one of them if you gave it to me,I had one and I know how much sweat, blood and tears it takes to make a home out of one of those things the hard way, the way I did it. So I wouldn't want one but I would think to me that this is the most important part of the whole bill and is one that I feel real strongly about. I couln't think of any other way that I could reach the people that I was trying to reach other than with an example. Again drawing from my own experience if you get a peice of land even if you don't have much money, you can get a peice of land to start with and you can build enough of a house to move into and stop paying rent and start buying boards and nails with the money you paid for rent eventually you can build a nice home. I know because I did it and there is nothing in this that I consider a give away it is simply giving a chance to some type person that might not be able to do it other wise. I think with that Mr. Chairman, I think you can well imagine I can go on for hours on this, I have had lots of practice on it and I will be glad to answer any questions on this. Are there any questions on this from the Committee? Mr. Snider questions.

Mr. Freeman on the resident requirement (I can't understand the rest of this question on the tape, all mumbled).

Mr. Freeman: When I started this bill I never spent more time or effort on anything or peice for the Legislature in my life. I've worked on this for a long time by myself, when I went as far as I could I called in man from the Division of Lands and explained to him and explained to him what I was trying to do. I asked him to go over it with me and work with me and make any suggestions that he might have, which he did. Then when I finished that I went to the Director of Legislative Affairs and told him I would like to have somebody back a bill for me and I did not want just any bill

drafter, I wanted somebody that could read what I proposed to do and believe in it and would work with me. That after some time was granted they came up with the right man and we went over angle we could think of and this is one of the things that we touched on. The attorney that worked on it said he could see no reason and he named (I can't remember all of them) numerous cases in our State law, longevity bonus for old timers is one of them where they use the length of residence. I don't have any fears for it.

Hearing on ???

Commissioner Martin: Mr. Chairman, thank you very much. I do have some objections on this bill. I think I might say three things about this bill to begin with. I'm really speaking about all the bills (can't understand the rest of this sentance). HB 2, HB 6, HB 247

Mr. Martin was then reminded that they were only taking testimony on House Bill 2 today.

Mr. Martin: I'm afraid my testimony is really cast in terms of comparing it with our own, I hope that will be acceptable to the Committee.

First of all, I think we should say the work that the administration owes a great deal to Mr. Freeman's idea and we really share that idea. We think that it is important to make land available to people who need land and we think there is a very serious problem in this State in availability and pricing of land, particularly in certain areas. We also think that there is something that is just inherent in living in Alaska that gives people reason and cause to expect land to be available and available on a reasonable basis. I think we start in exactly the same place that Mr. Freeman does and being frustrated with the situation as it is and trying to find ways to get around that. As you know, administration opposed this legi-

slation last year and will oppose it again this year as presently structured but it doesn't come from any difference of what it is basically after regards to this overall land program. I think there are some things that the committee might well know about our approach in this legislation which is very important. One is, I think and Mr. Freeman has done this extrodinarily well o.. this bill, to recognize that one bill or program can't meet all needs of the State for land availability. I think that in his own bill as well as in the bill that has been proposed by the administration we have attempted to carve out a singular purpose. One of the reasons that the Administration ultimately opposed the bill last year as it moved through Legislative process is that the single purpose ~~of Mr. Freeman~~ proposed and the single purpose that we think might be entered by this bill got distorted and miltiplied and expanded and we tried to do to much with a single peice of legislation. What we are going to need ultimately is actually a whole range of programs that answere different kinds of needs. We are going to need programs that enable this State to retain certain lands and state ownership for such things as mineral development, timber development, recreation and other ~~things~~ purposes. We are going to need programs by which we lease land for such things as agricultural development, grazing for special uses and the way the programs will actually dispose of land for residential purposes, recreational purposes, or for other reasons in industrial development. We went into a range of programs (I think I said th before to this Committee) and I think I am going to have to ask not just the State but the other land owners that own land in this State to participate in that program. We are going to have to ask the Federal Government local government, and we are going to have to ask private land owners, and native corporations to make their lands available just as we asked the State to do it. We are going to be submitting an analysis

to this committee we hope within the next month or so which describes the land availability situation in this State. I think one of the things that we are going to see from that is that the State is not itself in possession of lands in certain areas which is capable of meeting certain needs due to the way that the fire land selection has been made, due to the way rules and inheritant Alaskan Native Land Settlement Act. A good deal of land left available in this State or is owned in this State for certain purposes is in the hands of either the Federal government, native corporation or if it is in the hands of the State, it University mental health and school trust wing rather than simple State Public domain so that we are going to have to look at who owns the land before we decide on uses. Again I just want to reiterate that I think Mr. Freeman has done something that we very much approve of and that is that he focused his bill on a certain prupose and has identified a specific reason and drafted a bill to get there . We basically have drafted the administration bill that we think is a better version of the same idea to go to the needs that he articulates and that is the need to make land available to people who need land to build on. It's not a recreational cabin bill, its not a homestead bill, it's not a bill that intentions to do a wide range of things. It;s a bill to make land available ~~to make land available~~ to people to build on. Now our view points, ~~our~~ are somewhat different from Mr. Freeman's, has a number of differences in it and I would like to point to those differences now to indicate to you how we think we would reach the same result Mr. Freeman would but would do so in a way which would be totally more satisfactory for the future.

First of all we would convey in our bill only residential development rights. Mr. Freeman apparently desires to convey full fee titles and we would object to that protion of the bill. First of

all what the bill does, is it intends to convey land to people to build homes, in other words, by passing the bill to Legislature would be identifing a need and then disigning a program to meet that need. But in less time then was limited we believe the two things are going to happen fairly rapidily under this bill that are undesirable if that is what the Legilsature is surely trying to do. One is, once title is conveyed there may not be any reason to believe that the land will stay in residential use, yet the program would have been created and the land would have been conveyed sc as to allow residential use to occur. Second thing we think will happen, the land will be the subject of speculation and in virtually every situation in this State where there is land scarcity that scarcity is due less to the simple availibility of the land then it is to the cost of the land. Two exception to that bill and I think Mr. Freeman knows it, are Ketchikan and Sitka where there is a true scarcity of land. In most cases the scarcity is only a function of price rather than a function of simple land not being on the market. In fact the place where there is the most land on the market is a place where the price speculation and price inflation has been worse, namely the (can't understand rest of sentance).

The second major difference from (incidentally I should just add to this, the Legislature has already looked very seriously at this idea of limiting titles when it is conveyed as a vehicle for limited inseculation only. Last year they passed a bill for agricultural title that I think is one of the most progressive and inovated things we have done for years in this State. I think we should look at that same concept when we convey title under this bill. It will hold taxes down so people will take it, it will mean that the use won't be changed and I think ultimately it will ~~mena~~ mean

that there won't be speculation.

Second major difference in our approach from Mr. Freeman's is that we would limit the people who are eligible to get land under our bill to people who don't otherwise own land. Now Mr. Freeman makes, what I think is a fairly good case for individuals owning land in the State of Alaska, but I must say that I think that if we're after the sort of individual that Mr. Freeman is talking about the Alaskan who is here and wants a peice of land to live on and build on then it seems to me that we should address people who don't otherwise own land. I see nothing in Mr. Freemen bill that would prevent a 55 year resident of Alaska who is a bank president from holding to simply contracting to have somebody to build a house on a peice that he ~~whimed~~ had won. We believed that what we are doing is trying to reach atleast 50% of Alaskan who don't own land rather than to provide a second peice of land for someone who may already own it. Again, it distorts the purpose for bill and it allows people to essentially get second homes and what you are really creating here is a recreational hom site bill rather than a bill that is suppose to make land available to people to build a house on so we think we run a great risk in this bill in creating basically land welfare, just giving Alaska land away. I think that their justification for that but the greatest justification for it is to do so in a system that makes that land available to people who just don't own land. I understand that that was controversial last year but I think that I would object to the program very strongly that simply gives State land away to people who already own land or are building somewhere else and simply picking up another peice of land and are doing so simply because they live here in the state longer than someone else. I might say that I also disagree with Mr. Freeman, I understand very much his desire to help as he has described to me personally as well as to

this committee, an individual who has lived here 27 years in this State and is a young man and wants land. I will leave it to the common judgement of this committee whether or not if there are two or three or four hundred homesites available each year in this state whether or not a person who has lived here 27 years is going to get any of that land or whether its going to be someone who is 55 or 60 years old who owns another piece of land. It seems to me that we ought to target the program and limit it to what we actually want to do. Still another difference is and it is in the same regard is that we would replace Mr. Freeman's system with a lottery system where there is to much demand for available homesites. The legislature will have the capability under this bill to decide how big this program is going to be because basically it is creating an administrative costs and giving away land so the size of the program can be directly determined by the bugetary commitment that the legislature wants to make. We propose our program to be small and to grow over the years if it works. I think that basically Mr. Freeman will accept that kind of growth pattern but we believe that no matter how large the program is within a reasonable bounds there will be more people asking for homesites than there are homesites available. We would prefer a lottery system to resolve those differences rather than (interference on tape, can't understand up to this sentance) or seek one from the administration through the department of law on this matter. I am not prepared to offer one today but my indications are that constitutional problems are inherent in this consept and if you want the bill to succeed I don't think we should put a time bomb in it that might make it legally assailable because of a durational residency requirement. Now again I leave it to your judgement as to whether or not you think that the program will reward the individual that has been suggested or whether it will infact reward

other people by trying to determine who gets land based on who has lived here the longest. I don't want to dwell on it but I could tell you that our figures, we'll be submitting these to you, show that the idea of attempting to ask the division of Land or another State agency to judicate how long Alaskans have been here is an administrative nightmare. It would ask for some extremely difficult choices to be made and would cost substantially more as we see it depending on the size of the program to decide which people have been here the longest. Quite frankly i think we would see in too many cases litigation over who it is that has lived here the longest. I can think of both arguements that are easy to resolve and ones that hard to resolve but in any case I think we face some real problems both in terms of litigation and terms of constitutionality of requirements and in terms of the cost by inposing a test which is basically one which requires an awfully tough judgement called by the division of Land. On the other hand we believe a lottery system has a certain aspect of equity, it is easy to establish and administer, there is very little question about who wins and it doesn't require the additional administrative costs. Another very significant difference between the approach Mr. Freeman has taken and the one that Govenor Hammond has authorized is that we require local government participation approval before any of these homesite subdivisions are put on the block. Mr. Freeman required the consultation occur and he apparently indicates in his bill where local, it's really not addressed from the bill but basically it seems to operate on the theory that the local government will not impose control on such subdivisions. The fact of the matter is that local governments are highly likely to impose control in the area of water, sewer and roads that are simply local requirements that can't be overcome. What we require in our bill is that the

local government must approve of these subdivisions and that in order for any local government requirements of subdivisions not to apply rather than simply overruling them or attempting to overrule them with State law we require they be waived by local government. We think that is a concept that shouldn't be lost. I think that this committee will probably get very much the same sort of testimony from local government. Those are rea differences that we think are important and there are a couple other differences that I want to mention briefly to the committee. One is we think that one of the great ??? of the open entry program and it's not a difference but a similarity between the two programs, was that the open entry program basically simply opened the land in that any directions for administration or any guidelines. We think both Mr. Freeman's bill and the State's bill are well founded in the sense that they require prior decision making by the State and prior subdivision prior to putting this land on the market. But we think that in spite of this there could very well be problems with a program like this that we should monitor closely. The way we have proposed our program is to have it start small, grow to a size which within three (3) or four (4) years would put 200 or 300 sites on the block every year and then to put a sunset provision in the bill itself so that future legislators do not have to face unpleasant political tasks of having to appeal the program that didn't work if in fact that is the case. If it works and is as popular as we hope it might be then the legislature will simply have to re-enact the program as it is. We think that putting a sunset provision on it is important. There is one error in our bill that I would point out and that is that the eligibility age in Mr. Freeman's bill is 18 and our is 19. Ours should be 18. We believe that we have some additional flexibility in our bill in that the occupancy requirements for each

year Mr. Freeman requires seven (7) months for each of three (3) years and we require a period of 21 months during a period of three (3) years. We simply think that some people may want to rather than living out there every summer during the good weather may want to go for extended periods of time where they build and not live at all on the land during the first year while they are maybe working or putting together finances and I think that the flexibility is a good idea. There are some other differences that are important. Now turning very briefly to the fisical note I think we have supplied a very thorough fisical note on this bill and will be supplying a fisical note agenda that deals with Mr. Freeman's bill at aearly time. Basically speaking we believe that the bills are, is you assume that the size of the program would be comparable, that is building up from an initial first year effort of 64 settled area lots and 10 remote lots up to a level in three (3) years of 192 settled area lcts and 30 remote area lots. We think the costs are reasonably similar start with about $104,000 the first year. Mr. Freeman's bill would add because of the length of residency test and the judication desires substantially to that costs. As we see it it would be from 40,000 to 60,000 a year and I will be supplying those figures to the committee. I guess in closing Mr. Chairman, before taking any questions I would like to say this. We think that the idea of this bill is a ggod one and we think that even in it's best form it has problems and is some what marginally acceptable but it does respond to a very important public need. If the same thing happens to this bill as happened to the one last year, if it gets destorted in purpose and gets ornaments attached to it, I can tell you that my own recommendations will that the bill is vetoed. I think it has potential to be one of the very fine part of an over-all program if the bill is reasonably limited and is put together in

in a form which is workable and administrable but I hope the committee will take a close look at some of the ideas that we have attempted to put forward in our version of this bill which are acceptable before acting on other bills. I am dissapointed to hear that you are not considering our bill today Mr. Chairman, we think that it is well worth considering and that we have put a considerable amount of time in on it to try to develop an acceptable way to make this concept work. Thank you.

Unable tc understand this part of the tape, volumn to low on your tape.

(I don't know who is talking)

Commissioner we are going down two different paths trying to stay up with you. In reference to the title in your testimony, you said that Mr. Freeman's bill is pretitled and the Governor's bill gave something else.

Commissioner: Yes. A limited title, a residential title which would permit exactly the purpose of the bill, that is to own the land, it is a ????, it would for instance own the land, have title to the land but only for residential purposes. It would mean that the land then couldn't be subdivided later or turned to other purposes including industrial purposes, or comercial purposes but would remain within the purpose for which it was conveyed.

Question: Let me point out something, in my parochial way of thinking when you are giving somebody some land to be their land yet you're tieing a string on it and saying that seven (7) or eight (8) years from now if the road is rerouted or if circumstances change that in fact the people they own slightly over 80,000 square feet (can't understand the rest of this line up to here) but they can't use this for their own purpose. Here again I am going down two roads, I think

the thing is to give land to people yet we are tieing a string on it as if the people are prudent enough to use the land as they see fit. Answer: Mr. Mayor, I agree but I think what we are doing is talking about two different programs. I agree, I think that there are many occasions where you want to convey land to people with full feet title to exactly the kind of freedom that you say but I'm not certain that you want to do that as a part of the program which is created for the specific purpose that Mr. Freeman sets out here. For instance, this State already has a very solid program for doing just that. A cituation in which land can be put on the market and be sold at at a fair market value and have people pay a fair market value for it but as I understand the purpose of this legislation is to put land in the hands of the people who then need to build a place to live. Let me take the middle case if I may to tellwhat I mean, kind of a half way case between your road and what may happen. Let's assume the land goes up and again as Mr. Freeman admits,we are largely looking at settled areas and to make land available to people so they can build. Let's say that just one or two people out of this subdivision, not because there is a road but because they simply see that they can get more for their land back. Say I'm going to convert my land to commercial use or I'm going to convert it to some other use, but the rest of the people there got their land under this program in the faith and the belief that they were going to be part of the residential area where they could build and do that. It seems to me that the Legislature by passing this bill is saying, " we want people to have land in a low cost to build residency homes. If the program you really want is to give land to people to do anything they want with then I think we are talking about a different program, although I agree completely with your objective.

Question: Let me ask you then, if we went along with the other bill aren't we in fact legislating zoning which my constituents in Fairbanks area are up in arms about between the second and third class borough.
Answer: I don't think you are actually zoning it becausealtimately for one of these subdivisions to be put in it would have to be approved by the local government according to our bill but not Mr. Freeman's anyway. It seems to me that you are legislating a more serious problem for the local areas by simply saying the Division of Land will go out and locate this land where ever they want after consulting with the Borough but not requiring their approval Mr. Bennett. You are doing something far worse than zoning for them you are simply inflicting a State government action on them without any ability on their part to approve it.
Question: I shook a lot of hands and talked to alot of people last summer and last fall, I would hate to say how many thousands, in the Fairbanks area there were at least 20,000 to 30,000 over a period of weeks and when the subject of land came up and it most always did, one of the things that they were really upset about was ~~one of the~~ in Mr. Freeman's bill earlier and was tagged on the homestead bill was primarily that a young couple who had in fact entered mortgage though they were great young people trying to do their thing entered into the mortgage buying a piece of ground not realizing that this was coming up and by virtue of bought a piece of ground and were in the process of paying off this piece of ground, they are totally disqualified for the (call it theivery if you want but thats kind of bizarre because they spend more money on gas, oil and maintenance commuting back and forth (tape faded out, can't understand).
This was one of the biggest hangups that in fact people who spent their money, what they had felt was prudently and wisely and not

down in the bars on 2nd Street, were in fact being penalized by this very program and only the shiftless people who in fact had not tempted to put down their taxes in our States are the one that are eligible. Please explain this as I don't understand it.

Answer: I understand and I don't say that the case that you make out of this is an unsympathetic one but it seems to me that other side of that case is the one that I raised. That is it seems to me that there would be no reason under the bill as presently structures HP2 that a real estate developer who has been here in this State all his life and is 47 years old couldn't get a piece of land ~~because it had~~ a house built on it and then sell it.

Question: In the real world doesn't that always happen no matter what we are doing there is a percentage (tape fades out, can't understand).

Answer: I guess I goofed that but I don't think that it minimizes the point. It seems to me what you really have to decide is the purpose in the program. If the purpose of the program is to allow people who have lived here a long time to get land for free from the State, that is one thing but if your purpose is to help people who can't other wise get land then I think the best group to define that is people who don't own it. I would not agree I guess with your characterization of people who don't own land in this State are as you say people who and I think implying that ther're not particularly valuable people because they haven't "put down tap roots". I think there are a good many people in this State who don't own land who are extraordinarily fine people who simply have not been able to meet the incredibly high costs of land in this State. What we have proposed here and these are excellant people, just as good as the young couple who made the mortgage down payment, my feelings is that by defining that group you have really your best opportunity to answer a need without unduly opening the program up to what I think both you and I

would both agree is abuse.

Mr. Bennett: On the converse side of your agreement, I fully agree with you but I think what you are doing is the fact that you are making first rate citizens out of those who are not and while those in fact and I am not putting values on which group is actually better, but what you have done is took one group and put them in second choice and the other group in first choice and I don't think that that is constitutionally correct.

Mr. Martin: I guess our difference is this,I'm sympathetic and you are sympathetic to your proposals, I'm just not sure that this is the program to do it. For instance, we have looked at this question speculation and said that the worst speculation, the worst inflation of land prices are the places where the greatest amount of land is avialable. Other words where (can't understand rest of sentance). What we are looking for is a program which will make land available and we think it is fine to make it available not at a free cost but at a low cost, we think it is fine to make it available , let's say, at a market value cost but to do so under terms and this is the basics for our limited title idea, by which speculation won't occur. I guess I'm with you on the idea that you should be able to do anything you want to with your land but allowing people, for instance, who have agricultural land in the valley to do anything they want with it has resulted basically in a lost of virtually all of the agricultural land potential land in that area. I don't look at limiting titles so much as the problem of ruining the basic human rights of an individual as helping to protect them from the speculation of the high taxes that have driven so many people out of that area. They are balancing values but I think we really have to begin look in this State at a way to reduce speculation and reduce the chang f land out of the use which you and I might agree is the principal use of the land. In this

case, it's residential land. I understand the balance but I think we are now at a point where speculation of high taxes are forcing many people out of uses that we might agree are valuable to the land. (Volumn to low on your tape, can't understand)

I do have information on the bill, I have introduced the bill which is identical to Mr. Freeman bill, the only exception is the residency requirement and the acreage. My bill is House Bill 6. to which it says that a person has to be a minimum of five (5) years in the State in order to be qualified for five (5) acres and I do some information for some changes on this bill. I will more than happy to Xerox some copies for the committee.

HOUSE BILL NO. 18 am

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the management of wolves; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 16.05 is amended by adding a new section to read:

Sec. 16.05.784. MANAGEMENT OF WOLVES. (a) Notwithstanding the authority of the Board of Game in sec. 255 of this chapter,

(1) nothing prohibits a person from taking a wolf [~~at any time~~] in any game management unit or subunit by any means except the use of poison, if the person holds a valid [resident] hunting license;

(2) upon taking a wolf, any person, whether resident or nonresident, shall notify, within 30 days, the appropriate person in the division of fish and wildlife protection of the Department of Public Safety as designated by the Legislative Council Commissioner; the notification shall specify, but not be limited to, the date of taking, the location of taking, and the sex of the animal; the division of fish and wildlife protection shall compile a record of all notifications under this paragraph and submit it to the Legislative Council and the Department of Fish and Game at least once every six months.

(b) The Legislative Council shall review the record submitted under (a) of this section and advise the legislature within 10 days of the beginning of each regular session on whether to repeal or retain this section.

* Sec. 2. This Act takes effect immediately in accordance with AS 01.10.-070(c).

(3) PROGRAM EFFECTS OF BILL

This bill would eliminate effective management of wolves by removing all authority regulating their take from the Board of Game and the department. Effective management would also be hampered by the transfer of management authority, compiling harvest reports, to the Department of Public Safety.

(4) FISCAL IMPACT: ☒ NONE ☐ FISCAL ANALYSIS ATTACHED

(5) AMENDMENTS PROPOSED:

none

(6) COMMENTS: The enactment of this bill would make it impossible to assure perpetuation of the wolf in Alaska and would seem to be in violation of Article VIII, Section 4 of the State Constitution which requires that "...resources belonging to the State shall be utilized, developed and maintained on the sustained yield principle, subject to preferences among beneficial uses." While it is true that the state has embarked on wolf control programs in selected portions of the state, it is equally true that there are a number of places in the state where the wolf population level dictates closed seasons during portions of the year and a careful limitation of methods and means employed in taking them.

One provision of this bill violates Federal Public Law 92-159 in that it would waive the prohibition on taking of wolves with the aid of aircraft except under a permit issued by the state. Proposed Section 16.05.784(a)(2), which sets up a system for reporting wolves taken, should more appropriately direct persons taking wolves to report to the Department of Fish and Game. This bill, if enacted, would seriously detract from any cohesive systems management program. The authority for managing wolves is now vested with the Board of Game,

features of management superior to existing programs.

JUNEAU ALASKA

HOUSE RESOURCES COMMITTEE

Alvin Osterback, Chairman

MEMORANDUM 21 February 1977

When HB 18 was taken up in this Committee on 1 February 1977 the following suggestions were made for amendments.

1. Line 12 thru line 14 delete and add, " (1) nothing prohibits a person who holds a valid hunting license from taking a wolf in any game management unit or subunit by any means except

(A) the use of poison; or

(B) the taking of a wolf from an aircraft, unless the taking is authorized under permit issued by the commissioner;

2. Line 18, delete "Legislative Council" and replace with "Commissioner"

A motion is necessary to adopt a Committee Substitute to incorporate these amendments.

HB 18

MEMORANDUM February 3, 1977

SUBJECT: Comments on HB 18 and HB 20

TO: Representative Alvin Osterback

FROM: Joel F. [illegible]nett J.F.B.
Legislat[illegible] Counsel

You have asked me to comment on the bill analysis done by the Department of Fish and Game on HB 18 and HB 20, both by Representative Swanson.

HB 18 seeks to institute wolf control by allowing private persons full license to hunt, at any time, by any means. The Department of Fish and Game objected to this on two grounds: (1) that it violated article VIII, secion 4; and (2) that it violated federal law (P.L. 92-159). The "General Authority" provision of Alaska Constitution, article VIII, section 2, empowers that legislature to provide for the "utilization, development and conservation of all natural resources..." In section 4 it further specifies that this shall be done on the sustained yield principle, subject to preferences among beneficial uses." I find no clear violation of article VIII, section 4. HB 18 is merely a legislative scheme for the management of wolves, presumably having biological as well as public policy justification. As evidence of concern for the potential overharvest of wolves, a notification procedure was established. At the beginning of each year the legislature will evaluate the number of animals taken and where, and determine whether a proper balance of wolves has been attained.

Furthermore, in reviewing the minutes of the Constitional Convention (Part 4) on article VIII, section 4, I find no clear-cut interpretation or helpful elaboration of the sustained yield concept. It was intentionally loosely defined. The Secretary of the committee on Resources discusses it briefly on P.2451 as follows:

> "...in our reference to sustained yield, we have in mind no narrow definition of "sustained yield, "as is used, for example, in forestry, but the broad premise that insofar as possible a principle

> of sustained yield shall be used with respect to administration of those resources which are susceptible of sustained yield, and where it is desirable. For example, predators would not be maintained on a sustained yield basis...." and on P.2457: "For fish, for wild life, and for some other replenishable resources, such as huckleberries, as an example, it is difficult or even impossible to measure accurately the factors by which a calculated sustained yield will be determined. Yet, the term "sustained yield principle" is used in connection with the management of such resources. When so used in this article, it denotes conscious application insofar as practicable, of principles of management intended to sustain the yield of the resource being managed."

(2) The second objection to HB 18 is well founded and will require an amendment that prohibits taking of wolves by means of aircraft. Although resisted by the U.S. Attorney General on legal grounds, an amendment to the Fish and Wildlife Act of 1956 (P.L. 92-159) imposed a federal criminal penalty of $5,000 or 1 year imprisonment for the offense. This, of course, subjects those taking wolves from aircraft under HB 18 to federal prosecution, regardless of state law.

HB 20 clearly removes a management function from the Department of Fish and Game. Without judging the merits of such a policy, it must be concluded that it is within the authority of the legislature to do so. Under article III, section 22:

> "...exective and administrative departments and agencies of the state government and their respective functions, powers and duties shall be allocated by law among and within not more than twenty principal departments..."

What authority the legislature grants under law it can take away. By the passage of an Act such as HB 20, it is presumed that management guidelines and data were fully considered and that the legislature has acted in the best interest of the state, with attention to the dictates of article VIII, sections 1-7 of the Alaska Constitution. There is no apparent violation of the sustained yield principle in HB 20. Presumably, the intent of the bill is to restore moose to their former levels, at numbers compatible with other species. It could be argued that the bill further's sustained yield by producing more moose for the "utilization, development, and conservation of all natural resources...for the maximum benefit of the people." (article VIII, section 2).

In addition, the "sustained yield" and "wildlife...reserved to the people for common use, phrases in the Alaska Consti-

tution are not necessarily synonomous with "harvest" - "use" may reasonably be interpreted as availability for recreational viewing, photography or scientific study. "Sustained yield" in the sense of "harvest" may give way to preferences for certain non-consumptive uses under a reasonable interpretation of article VIII, section 4. I might add that the legislature recognizes other legitimate "uses" of wildlife when it creates state parks, and game sanctuaries, not oriented to hunting. Chapter 219 SLA 1975 further illustrates this expanded use concept, in the preamble to creation of the Department's wildlife photography concept:

> "...encourage other necessary public uses of wildlife in addition to their legitimate harvest."

The fact that HB 20 goes against the current local option, antlerless scheme, and effectively takes a portion of the management authority from the board of game may or may not be poor policy but it violates no constitutional law.

I hope this will be of some assistance to the committee.

FISH AND WILDLIFE—SHOOTING FROM AIRCRAFT

For Legislative History of Act, see p. 1735

PUBLIC LAW 92-159; 85 STAT. 480

[H. R. 5060]

An Act to amend the Fish and Wildlife Act of 1956 to provide a criminal penalty for shooting at certain birds, fish, and other animals from an aircraft.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That:

The Fish and Wildlife Act of 1956 is amended by adding at the end thereof the following new section:

"Sec. 13. (a) Any person who—

"(1) while airborne in an aircraft shoots or attempts to shoot for the purpose of capturing or killing any bird, fish, or other animal; or

"(2) uses an aircraft to harass any bird, fish, or other animal; or

"(3) knowingly participates in using an aircraft for any purpose referred to in paragraph (1) or (2);

shall be fined not more than $5,000 or imprisoned not more than one year, or both.

"(b)(1) This section shall not apply to any person if such person is employed by, or is an authorized agent of or is operating under a license or permit of, any State or the United States to administer or protect or aid in the administration or protection of land, water, wildlife, livestock, domesticated animals, human life, or crops, and each such person so operating under a license or permit shall report to the applicable issuing authority each calendar quarter the number and type of animals so taken.

"(2) In any case in which a State, or any agency thereof, issues a permit referred to in paragraph (1) of this subsection, it shall file with the Secretary of the Interior an annual report containing such information as the Secretary shall prescribe, including but not limited to—

"(A) the name and address of each person to whom a permit was issued;

"(B) a description of the animals authorized to be taken thereunder, the number of animals authorized to be taken, and a description of the area from which the animals are authorized to be taken;

83. 42 U.S.C.A. § 296b(b).
84. 42 U.S.C.A. § 298(a).

"(C) the number and type of animals taken by such person to whom a permit was issued; and

"(D) the reason for issuing the permit.

"(c) As used in this section, the term 'aircraft' means any contrivance used for flight in the air.".

Sec. 2. (a) Section 609 of the Federal Aviation Act of 1958 (49 U.S.C. 1429)[85] is amended by inserting "(a)" immediately after "Sec. 609." and by adding at the end thereof the following new subsection:

"VIOLATION OF CERTAIN LAWS

"(b) The Administrator, in his discretion, may issue an order amending, modifying, suspending, or revoking any airman certificate upon conviction of the holder of such certificate of any violation of subsection (a) of section 13 of the Fish and Wildlife Act of 1956, regarding the use or operation of an aircraft.".

(b)(1) Immediately after the section heading of such section 609, insert the following:

"PROCEDURE"

(2) That portion of the table of contents contained in the first section of the Federal Aviation Act of 1958 which appears under the side heading

"Sec. 609. Amendment, suspension, and revocation of certification."

is amended by adding the following:

"(a) Procedure.

"(b) Violation of certain laws.".

Sec. 3. The amendments made by the first section of this Act shall take effect as of the thirtieth day after the date of enactment of such section; except that, in any case in which a State is not authorized to issue any permit referred to in the amendments made by such first section, such amendments shall take effect in any such State as of the thirtieth day after the expiration of the next regular session of the legislature of such State which begins on or after the date of enactment of this Act.

Approved November 18, 1971.

MILITARY CONSTRUCTION APPROPRIATION ACT, 1972

PUBLIC LAW 92-160; 85 STAT. 482

[H. R. 11418]

An Act making appropriations for military construction for the Department of Defense for the fiscal year ending June 30, 1972, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That:

The following sums are appropriated, out of any money in the Treasury not otherwise appropriated, for the fiscal year ending June 30, 1972, for military

85. 49 U.S.C.A. § 1429(a), (b).

IN THE HOUSE BY SWANSON

HOUSE BILL NO. 18

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the management of wolves; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 16.05 is amended by adding a new section to read:

Sec. 16.05.784. MANAGEMENT OF WOLVES. (a) Notwithstanding the authority of the Board of Game in sec. 255 of this chapter,

(1) nothing prohibits a person from taking a wolf [~~at any time~~] in any game management unit or subunit by any means except the use of poison, if the person holds a valid [~~resident~~] hunting license;

(2) upon taking a wolf, any person, whether resident or nonresident, shall notify, within 30 days, the appropriate person in the division of fish and wildlife protection of the Department of Public Safety as designated by the ~~Legislative Council~~ Commissioner; the notification shall specify, but not be limited to, the date of taking, the location of taking, and the sex of the animal; the division of fish and wildlife protection shall compile a record of all notifications under this paragraph and submit it to the Legislative Council and the Department of Fish and Game at least once every six months.

(b) The Legislative Council shall review the record submitted under (a) of this section and advise the legislature within 10 days of the beginning of each regular session on whether to repeal or retain this section.

* Sec. 2. This Act takes effect immediately in accordance with AS 01.10.-070(c).

(3) PROGRAM EFFECTS OF BILL

This bill would eliminate effective management of wolves by removing all authority regulating their take from the Board of Game and the department. Effective management would also be hampered by the transfer of management authority, compiling harvest reports, to the Department of Public Safety.

(4) FISCAL IMPACT: ☒ NONE ☐ FISCAL ANALYSIS ATTACHED

(5) AMENDMENTS PROPOSED:

none

(6) COMMENTS: The enactment of this bill would make it impossible to assure perpetuation of the wolf in Alaska and would seem to be in violation of Article VIII, Section 4 of the State Constitution which requires that "...resources belonging to the State shall be utilized, developed and maintained on the sustained yield principle, subject to preferences among beneficial uses." While it is true that the state has embarked on wolf control programs in selected portions of the state, it is equally true that there are a number of places in the state where the wolf population level dictates closed seasons during portions of the year and a careful limitation of methods and means employed in taking them.

One provision of this bill violates Federal Public Law 92-159 in that it would waive the prohibition on taking of wolves with the aid of aircraft except under a permit issued by the state. Proposed Section 16.05.784(a)(2), which sets up a system for reporting wolves taken, should more appropriately direct persons taking wolves to report to the Department of Fish and Game. This bill, if enacted, would seriously detract from any cohesive systems

features of management superior to existing programs.

STATE OF ALASKA
DEPARTMENT OF FISH AND GAME
OFFICE OF THE COMMISSIONER

JAY S. HAMMOND, GOVERNOR

SUBPORT BUILDING — JUNEAU 99801

FEB 02 1977

January 28, 1977

The Honorable Hugh Malone
Speaker of the House
Alaska State Legislature
Pouch V, State Capitol
Juneau, Alaska 99811

Dear Mr. Malone:

Transmitted herewith is a report on the status of the predator control program in District 2, submitted in compliance with the direction of the Legislature (FY 77 Operating and Capital Budget, Natural Resources, p. 132).

Sincerely,

James W. Brooks
Commissioner

cc: Chairman, Senate Finance Committee
Chairman, House Finance Committee
Mike Whitehead, Office of the Governor

STATUS OF WOLF PROGRAM IN GMU 3

The 1976 session of the Alaska Legislature appropriated $50,000 to the Alaska Department of Fish and Game for the reduction of wolf populations in the vicinity of Petersburg and Wrangell (Election District 2). The need for this program was documented in the attached presentation by the Region I game staff to the Board of Game on March 22, 1976.

Deer populations declined steadily in the Petersburg-Wrangell area from 1965 through 1972, primarily as a result of severe winters. Since 1972, winter conditions have not been a major factor, but deer numbers continued to decline through 1975 in areas where wolves are present, leading managers to believe that wolves were the primary limiting factor during this period.

Deer populations throughout Units 1B and 3 are presently below acceptable hunting levels. The southern portion of Mitkof, Wrangell and Etolin Islands presently show a slight improvement since 1975 but on Kupreanof and Kuiu Islands it is difficult to locate evidence of deer.

Wolf populations have also declined since 1975. Surveys in March 1976 indicated approximately 38 wolves on Kupreanof, Mitkof, Wrangell and Etolin Islands; current estimate for the same area is 20. No wolves have been taken in GMU 3 since March 1976.

Although wolf populations have declined, even the few present have a significant impact on the low deer populations. We are attempting to further reduce the wolf population and maintain them at low level until deer populations increase.

The present program consists of hiring three local trappers to concentrate trapping efforts on Mitkof, Kupreanof, Wrangell and Etolin Islands. We also have authority for aerial hunting from helicopters but to date here has not been sufficient snow cover for tracking.

Trapping efforts, begun in early January, have been delayed somewhat by unusually warm weather, but efforts are currently being made on these islands. To date, only 2 wolves have been taken by department trappers in Election District 2, but we anticipate success to rise in February and March.

With wolf numbers fairly low to begin with, removal efforts will cost more per wolf caught than would be the case when populations are high. However, it must also be realized that removal of a few wolves now may do more good in restoring deer herds than removal of a much larger number when both wolves and deer were more abundant.

The program has been discussed with Advisory Committees and residents of Petersburg, Wrangell and Kake. In spite of poor success, local citizens feel the program is justified and consider the techniques and efforts acceptable. The low status of deer is presently the most important game management concern of the residents of GMU 3.

Expenditures through January will be approximately $13,000. Of this, over $5,300 is for temporary hires; $4,900 for traps, fuel and groceries, $2,600 for vessel rental and aircraft support and $200 for miscellaneous items. Anticipated expenditures through April will be about $8,000 per month for trapping, leaving a balance of $10,000 for aerial hunting and reconnaissance if weather conditions permit.

A DEER AND WOLF MANAGEMENT PROGRAM IN UNITS 1(B) and 3

Board of Game Meeting - Anchorage, March 22, 1976

Introduction

The current deer population in Unit 3 is at the lowest level that it has been since at least the early 1940's. The present wolf population is apparently able to impede the normal recovery of the depressed deer population. The Department of Fish and Game is proposing a program to reduce wolf predation on deer until they have recovered sufficiently to allow their use by both humans and predators. Concurrently we would obtain additional information on predator-prey relationships that would be useful in managing wildlife resources.

Deer have historically been the major big game species used by hunting residents of this unit (primarily from Petersburg, Kake and Wrangell). In recent years deer populations have declined drastically within Unit 3 so that in 1975 the hunting season was closed entirely and local residents have repeatedly requested that the wolf population be reduced to remove some of the predation pressure on the deer population. Winter weather conditions is considered the primary limiting factor causing the initial declines but when deer populations have reached a low level, predation by wolves becomes significant - prolonging or preventing deer recovery or even further reducing the population. We recognize

that given sufficient time the deer population would recover but the time that apparently will be required is not acceptable to the residents who want to enjoy good hunting returns nor to those of us involved in the management of the wildlife resources.

Historical Information

Deer populations have fluctuated many times during the past throughout Region I, but to our knowledge, populations in Unit 3 are now lower than at any time since the early 1940's. There have been periods when Unit 3 had the highest deer population within the region. Deer were abundant in Unit 3 from 1956 through 1964. From 1965 through 1968 the area experienced a series of colder-than-average winters resulting in a steady decline in deer numbers. This decline was climaxed by the most severe winter in recent history in 1968-69 and another severe winter in 1971-72. Since 1972, winters have been relatively mild but deer populations have not responded. Weather has apparently not been a major limiting factor since 1972.

Harvest data provide good indications of deer abundance. From 1960 throughout 1966 Petersburg and Wrangell hunters usually took over 2000 deer, primarily from Unit 3, and the average number of deer taken per hunter was usually over two deer with a high of 3.5 deer for Petersburg hunters in 1961 (Table 1). From 1967 through 1971 there was a reduction in numbers of deer taken, the average dropped below two deer per hunter and in 1972,73, and 74 less than five

1975	NO OPEN SEASON						

a 2 antlered deer on Mitkof Island
b 2 antlered deer on Mitkof, Wrangell, Etolin and Woronkofski Island

percent of deer killed by Petersburg and Wrangell residents were taken within Unit 3. From 1960 through 1968 the bag limit was four deer of either sex with the season generally from August 1 through December 31. From 1969 through 1972 the bag limit was reduced to two antlered deer in parts of Unit 3 and in 1973 and 1974 was further reduced to only one antlered deer. In 1975 Unit 3 was closed to deer hunting. In spite of all the hunting restrictions and subsequent reduced harvest, deer populations continued to decline. This decline continued during years when winters were mild and deer survival should have been good.

The northern portion of Kupreanof Island has historically been one of the major deer wintering areas in Unit 3. When deer were abundant there were so many tracks that it was impossible to determine numbers. On March 2, 1976, not a single deer track was observed on a foot transect in this area.

Wolves

Wolves have always been present within Units 1(B) and 3 in varying abundance. Wolf populations normally follow deer trends, but there is usually a lag of several years before wolf populations begin to decrease after a deer low. Wolf bounty and sealing records provide some idea of wolf abundance. As bounties are still paid in Units 1, 2, and 3, there is more incentive to submit wolves for sealing and records may be more accurate than for non-bounty units. From 1963 through 1971, an average of 44 wolves were taken

annually from Unit 3 with highs of 82 in 1967-68, and 72 in 1969-70. In 1974-75, only 11 wolves were taken and in 1975-76, 11 have been taken to date. There is no question that wolf populations are now lower in Unit 3 than during the 1960's. The deer population is so low however, that the ratio of wolves to deer is unacceptably high.

When deer were plentiful almost every wolf stomach or scat examined contained deer. In a study within Unit 3 in 1958, 125 of 131 scats examined contained deer remains. During the first five years after wolves were introduced to Coronation Island, of 499 scats collected, 450 contained deer. When deer become scarce, wolves utilize other food sources which has happened in Unit 3. In 1975-76, of nine wolf stomachs and scats examined, only two contained deer remains.

Adjacent Areas in Unit 4

The northern portion of Unit 3 and the southern portion of Admiralty Island (Unit 4) are separated by a water body only 15 miles in width. In a recent survey of a six-mile segment of beach on Admiralty Island, 69 deer were observed. In over 11 hours of aerial survey time covering hundreds of miles of Kupreanof and Mitkof Islands in Unit 3, no deer were observed. Winter conditions are normally more severe on Admiralty Island than in Unit 3. More deer were lost per unit area on Admiralty Island in the late 1960's than in Unit 3. Range conditions are presently much better in Unit 3 than in Unit 4 and Unit 3 has a greater potential for

producing deer than Unit 4. Hunting pressure is higher on Admiralty than in most of Unit 3. In the past, there have been times when deer were more abundant in Unit 3 than in Unit 4. Deer populations on Admiralty have recovered from the severe winters of 1968-1969 and 1970-1971, however, in Unit 3 they have not shown any signs of recovery. A major difference between the two areas is wolves which are present in Unit 3 but absent in Unit 4. Similarily during a foot survey in July 1975 the deer populations on six small islands in Unit 3 without wolves were higher than adjacent areas which did support wolves.

Many game biologists consider predation a natural factor which can contribute to healthy prey populations. In recent years, however, almost every investigator of predator-prey relationships has determined that given certain conditions, predators can reduce prey species below acceptable levels. This has happened in Unit 3 as it has gone from one of the best deer areas in Region I to a level so low that no hunting is allowed.

Recent Surveys

During February and early March, 1976, aerial surveys were flown in Unit 3 to evaluate the deer and wolf population status. Most of these surveys were flown shortly after snow storms so that tracking conditions were good to excellent. Surveys were concentrated on Wrangell, Etolin, Mitkof and Kupreanof Islands as these were the areas most intensively

hunted by Petersburg, Kake and Wrangell residents. Both fixed-wing aircraft and helicopters (11.0 hrs. fixed-wing and 7.5 hrs. helicopter) were used. Generally a fixed-wing aircraft was used initially and location of tracks were marked on a map. A helicopter was then used to land near any tracks that could not be identified with certainty from the fixed-wing. The following number of different sets of wolf and deer tracks were observed on each island.

	Deer Tracks	Wolf Tracks	Hr's. Flying
Mitkof Island	6	6	4.3
Kupreanof Island	2	10	6.9
Wrangell Island	0	10	3.4
Etolin Island	0	12	3.9
TOTALS	8	38	18.5

It is significant that there were more observations of wolf tracks than deer tracks.

In addition to the aerial surveys, nine transects were walked on locations of Mitkof and Kupreanof Islands which have supported some of the highest deer populations in the past. These transects extended from the beach inland approximately on-half mile. With existing snow conditions, they transversed the majority of usable winter range. On these nine transects, only two deer tracks were observed. Wolf tracks were present (4 separate tracks) on three transects. On similar transects in Unit 4, hundreds of deer tracks can be observed. During beach counts utilizing boats within the survey areas, no deer have been observed. On a boat survey around Wrangell Island, stopping at several locations, the

only deer tracks observed were on Blake Island (6 tracks). Blake Island normally does not support a wolf population.

Present Program

We have contracted most trappers in Unit 3 and are collecting specimen material from wolves that are being taken by local trappers and hunters, however, trapping pressure is light and spotty because of the low wolf population. To obtain additional specimen material from areas not presently being hunted or trapped we have recently employed two trappers, one from Wrangell and one from Petersburg. Materials obtained from any wolves taken will be valuable in further documenting the deer-wolf situation in Unit 3 and will add to our knowledge of predator-prey relationships. Trapping is not a very effective method of taking wolves when the population is low, however.

Proposed Program

The basic objective is to expedite the recovery of the deer population to a level that will allow their use by both humans and wolves. To accomplish this, the Department of Fish and Game considers it necessary to reduce the current wolf population as much as possible on certain islands and maintain it at a lower level until the deer population recovers. Wolves commonly move from island to island in Unit 3 and from the mainland in Unit 1B to the islands. Efforts to maintain lowered wolf populations would be concentrated on those islands that were traditionally the most popular

islands for deer hunting. Based on our surveys, our estimate of the wolf population on these islands is:

	Estimated Population
Mitkof Island	6
Kupreanof Island	10
Wrangell Island	10
Etolin Island	12

In addition, recent surveys have shown that approximately 11 wolves are present within the Stikine River drainage (below the Canadian Boundary). These wolves can cross both to Wrangell and Mitkof Islands. Efforts to maintain a desired wolf population on Mitkof and Wrangell Islands would be ineffective unless comparable measures were initiated on the Stikine River.

Presently hunting and trapping are the only available options for taking wolves and these seem to be ineffective in reducing the wolf population to a level to allow a normal recovery of the deer in Unit 3. We request the Board of Game to authorize Department personnel to use helicopters to take those wolves that hunters or trappers do not take to maintain the wolf population at the desired level until the deer population recovers. We recognize that the expense involved in a large systematic aerial hunting program in Southeastern Alaska would be unjustified. However during regular activities in the past, Department personnel could have taken wolves from helicopters and this is the authority we are now requesting. It would be a useful tool in our overall program to re-establish deer and wolf population levels.

similar to those that were present in the 1960's. The general public from Unit 3 and the Petersburg and Wrangell advisory Committees support this concept.

Summary

Deer populations in Unit 3 are presently extremely low. We believe there is adequate evidence to demonstrate that predation by wolves is presently the major limiting factor. We recommend that most wolves be removed from Mitkof, Kupreanof, Wrangell and Etolin Islands in Unit 3 and on the Stikine River in Unit 1(B) this year and that the wolf populations be maintained at that level until deer populations recover. We request authority to use helicopters to take wolves on an opportunity basis. The extremely low deer population in Unit 3 has caused a loss of public confidence in the Department's game management programs. We wish to not only correct this situation, but to be allowed to manage game in the best interest of the resource and the user. We recognize the State and National implications but hold that such game management measures to be consistent with the best public interests and professional game management standards.

HOUSE BILL NO. 18

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the management of wolves; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 16.05 is amended by adding a new section to read:

Sec. 16.05.784. MANAGEMENT OF WOLVES. (a) Notwithstanding the authority of the Board of Game in sec. 255 of this chapter,

(1) nothing prohibits a person from taking a wolf [at any time] out in any game management unit or subunit by any means except the use of poison, if the person holds a valid [resident] hunting license;

(2) upon taking a wolf, any person, whether resident or nonresident, shall notify, within 30 days, the appropriate person in the division of fish and wildlife protection of the Department of Public Safety as designated by the [Legislative Council] Commissioner out, the notification shall specify, but not be limited to, the date of taking, the location of taking, and the sex of the animal; the division of fish and wildlife protection shall compile a record of all notifications under this paragraph and submit it to the Legislative Council and the Department of Fish and Game at least once every six months.

(b) The Legislative Council shall review the record submitted under (a) of this section and advise the legislature within 10 days of the beginning of each regular session on whether to repeal or retain this section.

* Sec. 2. This Act takes effect immediately in accordance with AS 01.10.-070(c).

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPARTMENT OF FISH AND GAME

OFFICE OF THE COMMISSIONER / SUBPORT BUILDING
JUNEAU 99801

February 9, 1977

The Honorable Alvin Osterback, Chairman
House Resource Committee
Pouch V
Juneau, Alaska 99811

Dear Representative Osterback:

Re: Request for information on wolf harvest and cost to state of wolf control, Unit 20A

HB 18

I have attached statewide wolf harvest information for the year 1976.

The cost figure for the wolf control effort in game management Unit 20A follows:

Helicopter Charter	$16,759.00
Estimated line item 100, 200, 300 & 400 costs	$ 8,000.00
	$24,759.00

Total wolves taken - 66

Sale of 50 wolf skins @$275+ per skin	(13,789)
Remaining skins held by Div. of Admin.	(4,000) Est.
Net cost to state of central operations	6,970

The average net cost per wolf killed equals approximately $106.00.

HB 20

During questions on House Bill 20 Representative Urion requested information on the 1976 harvest of moose in Unit 16. The projected harvest follows:

16B 215 Bulls and 135 females - 350
16A 80 Bulls and 40 females - 120

Total 470

If you should require additional information, please contact me.

Sincerely,

Robert A. Rausch, Director
Division of Game

NANA-77-A054

Leslie E. (Red) Swanson
State Representative
Alaska State Legislature
Juneau, Alaska 99811

Dear Representative Swanson:

I am responding to your letter requesting comments on House Bill No. 18 and House Bill No. 20 introduced by yourself. The former relates to funding and the latter to the taking of anterless moose.

Unfortunately we do not feel that NANA can support these bills at this time. It seems to us that you are attempting to legislate game management. One of the reasons that we have a Fish & Game Department is to manage our wildlife resources. To attempt to manage it by the legislation is to take away the very flexability that is needed in order to assure good management of wildlife resources.

We understand the intent of what you are trying to do and do not disagree necessarily with the programs you have outlined. However we have very strong feelings that these programs should be initiated by the Department of Fish & Game and not by the Legislature.

Thank you for giving us the opportunity to comment. We'd be glad to discuss the bills with you at anytime.

Sincerely yours,

NANA REGIONAL CORPORATION, INC.

Committee on Resources.

I urge you to recommend House Bills no. 18 - & no 20. — for passage - with the strongest emphasis.

I have lived in Alaska 35 years - and have hunted widely - until the last 4 years - when I considered the game too scarce to jeopardize it by my taking any game.

I have skilled a lot more moose than I can ever share - but they I want to feed a lot of kids - (not my own) - and I never wasted any meat -

The ignoramuses in game management would go broke as cattle farmers - or ranchers - in two years — any farm boy of 12 years of age - knows that you protect all cows & big calves - killing or selling only mature bulls — and that you prevent all predation!

America gained 9 million population from 1970 - to 1975 - & they forecast another 21 million in the next 20 years. And we need predators?

Somebody is mixed up - & it is the game management outfits.

Let them go as they are - and the only game we will have - will be in

Goas!

Why don't you take a page from the Scandinavians - They harvest more by the 10's of thousands every year. Predators are eliminated —

Thank you

Joe Vogler

SUBJECT: Comments on HB 18 and HB 20

TO: Representative Alvin Osterback

FROM: Joel F. Bennett J.F.B.
Legislative Counsel

You have asked me to comment on the bill analysis done by the Department of Fish and Game on HB 18 and HB 20, both by Representative Swanson.

HB 18 seeks to institute wolf control by allowing private persons full license to hunt, at any time, by any means. The Department of Fish and Game objected to this on two grounds: (1) that it violated article VIII, secion 4; and (2) that it violated federal law (P.L. 92-159). The "General Authority" provision of Alaska Constitution, article VIII, section 2, empowers that legislature to provide for the "utilization, development and conservation of all natural resources..." In section 4 it further specifies that this shall be done on the sustained yield principle, subject to preferences among beneficial uses." I find no clear violation of article VIII, section 4. HB 18 is merely a legislative scheme for the management of wolves, presumably having biological as well as public policy justification. As evidence of concern for the potential overharvest of wolves, a notification procedure was established. At the beginning of each year the legislature will evaluate the number of animals taken and where, and determine whether a proper balance of wolves has been attained.

Furthermore, in reviewing the minutes of the Constitional Convention (Part 4) on article VIII, section 4, I find no clear-cut interpretation or helpful elaboration of the sustained yield concept. It was intentionally loosely defined. The Secretary of the committee on Resources discusses it briefly on P.2451 as follows:

> "...in our reference to sustained yield, we have in mind no narrow definition of "sustained yield, "as is used, for example, in forestry, but the broad premise that insofar as possible a principle

> of sustained yield shall be used with respect to administration of those resources which are susceptible of sustained yield, and where it is desirable. For example, predators would not be maintained on a sustained yield basis...." and on P.2457: "For fish, for wild life, and for some other replenishable resources, such as huckleberries, as an example, it is difficult or even impossible to measure accurately the factors by which a calculated sustained yield will be determined. Yet, the term "sustained yield principle" is used in connection with the management of such resources. When so used in this article, it denotes conscious application insofar as practicable, of principles of management intended to sustain the yield of the resource being managed."

(2) The second objection to HB 18 is well founded and will require an amendment that prohibits taking of wolves by means of aircraft. Although resisted by the U.S. Attorney General on legal grounds, an amendment to the Fish and Wildlife Act of 1956 (P.L. 92-159) imposed a federal criminal penalty of $5,000 or 1 year imprisonment for the offense. This, of course, subjects those taking wolves from aircraft under HB 18 to federal prosecution, regardless of state law.

HB 20 clearly removes a management function from the Department of Fish and Game. Without judging the merits of such a policy, it must be concluded that it is within the authority of the legislature to do so. Under article III, section 22:

> "...exective and administrative departments and agencies of the state government and their respective functions, powers and duties shall be allocated by law among and within not more than twenty principal departments..."

What authority the legislature grants under law it can take away. By the passage of an Act such as HB 20, it is presumed that management guidelines and data were fully considered and that the legislature has acted in the best interest of the state, with attention to the dictates of article VIII, sections 1-7 of the Alaska Constitution. There is no apparent violation of the sustained yield principle in HB 20. Presumably, the intent of the bill is to restore moose to their former levels, at numbers compatible with other species. It could be argued that the bill further's sustained yield by producing more moose for the "utilization, development, and conservation of all natural resources...for the maximum benefit of the people.". (article VIII, section 2).

In addition, the "sustained yield" and "wildlife...reserv to the people for common use, phrases in the Alaska Const.

tution are not necessarily synonomous with "harvest" - "use" may reasonably be interpreted as availability for recreational viewing, photography or scientific study. "Sustained yield" in the sense of "harvest" may give way to preferences for certain non-consumptive uses under a reasonable interpretation of article VIII, section 4. I might add that the legislature recognizes other legitimate "uses" of wildlife when it creates state parks, and game sanctuaries, not oriented to hunting. Chapter 219 SLA 1975 further illustrates this expanded use concept, in the preamble to creation of the Department's wildlife photography concept:

> "...encourage other necessary public uses of wildlife in addition to their legitimate harvest."

The fact that HB 20 goes against the current local option, antlerless scheme, and effectively takes a portion of the management authority from the board of game may or may not be poor policy but it violates no constitutional law.

I hope this will be of some assistance to the committee.

FISH AND WILDLIFE—SHOOTING FROM AIRCRAFT

For Legislative History of Act, see p. 1735

PUBLIC LAW 92-159; 85 STAT. 480

[H. R. 5060]

An Act to amend the Fish and Wildlife Act of 1956 to provide a criminal penalty for shooting at certain birds, fish, and other animals from an aircraft.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That:

The Fish and Wildlife Act of 1956 is amended by adding at the end thereof the following new section:

"Sec. 13. (a) Any person who—

"(1) while airborne in an aircraft shoots or attempts to shoot for the purpose of capturing or killing any bird, fish, or other animal; or

"(2) uses an aircraft to harass any bird, fish, or other animal; or

"(3) knowingly participates in using an aircraft for any purpose referred to in paragraph (1) or (2);

shall be fined not more than $5,000 or imprisoned not more than one year, or both.

"(b)(1) This section shall not apply to any person if such person is employed by, or is an authorized agent of or is operating under a license or permit of, any State or the United States to administer or protect or aid in the administration or protection of land, water, wildlife, livestock, domesticated animals, human life, or crops, and each such person so operating under a license or permit shall report to the applicable issuing authority each calendar quarter the number and type of animals so taken.

"(2) In any case in which a State, or any agency thereof, issues a permit referred to in paragraph (1) of this subsection, it shall file with the Secretary of the Interior an annual report containing such information as the Secretary shall prescribe, including but not limited to—

"(A) the name and address of each person to whom a permit was issued;

"(B) a description of the animals authorized to be taken thereunder, the number of animals authorized to be taken, and a description of the area from which the animals are authorized to be taken;

83. 42 U.S.C.A. § 296b(b).
84. 42 U.S.C.A. § 298(a).

"(C) the number and type of animals taken by such person to whom a permit was issued; and

"(D) the reason for issuing the permit.

"(c) As used in this section, the term 'aircraft' means any contrivance used for flight in the air.".

Sec. 2. (a) Section 609 of the Federal Aviation Act of 1958 (49 U.S.C. 1429)[85] is amended by inserting "(a)" immediately after "Sec. 609." and by adding at the end thereof the following new subsection:

"VIOLATION OF CERTAIN LAWS

"(b) The Administrator, in his discretion, may issue an order amending, modifying, suspending, or revoking any airman certificate upon conviction of the holder of such certificate of any violation of subsection (a) of section 13 of the Fish and Wildlife Act of 1956, regarding the use or operation of an aircraft.".

(b)(1) Immediately after the section heading of such section 609, insert the following:

"PROCEDURE"

(2) That portion of the table of contents contained in the first section of the Federal Aviation Act of 1958 which appears under the side heading

"Sec. 609. Amendment, suspension, and revocation of certification."

is amended by adding the following:

"(a) Procedure.

"(b) Violation of certain laws.".

Sec. 3. The amendments made by the first section of this Act shall take effect as of the thirtieth day after the date of enactment of such section; except that, in any case in which a State is not authorized to issue any permit referred to in the amendments made by such first section, such amendments shall take effect in any such State as of the thirtieth day after the expiration of the next regular session of the legislature of such State which begins on or after the date of enactment of this Act.

Approved November 18, 1971.

MILITARY CONSTRUCTION APPROPRIATION ACT, 1972

PUBLIC LAW 92-160; 85 STAT. 482

[H. R. 11418]

An Act making appropriations for military construction for the Department of Defense for the fiscal year ending June 30, 1972, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That:

The following sums are appropriated, out of any money in the Treasury not otherwise appropriated, for the fiscal year ending June 30, 1972, for military

85. 49 U.S.C.A. § 1429(a), (b).

For an Act entitled: "An Act prohibiting the taking of antlerless moose."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 16.05.780 is repealed and re-enacted to read:

Sec. 16.05.780. TAKING OF ANTLERLESS MOOSE PROHIBITED. The taking of antlerless moose at any time in any game management unit or subunit is prohibited.

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPARTMENT OF FISH AND GAME

OFFICE OF THE COMMISSIONER

SUBPORT BUILDING
JUNEAU 99801

February 9, 1977

The Honorable Alvin Osterback, Chairman
House Resource Committee
Pouch V
Juneau, Alaska 99811

Dear Representative Osterback:

Re: Request for information on wolf harvest and cost to state of wolf control, Unit 20A

HB 18

I have attached statewide wolf harvest information for the year 1976.

The cost figure for the wolf control effort in game management Unit 20A follows:

Helicopter Charter	$16,759.00
Estimated line item 100, 200, 300 & 400 costs	$ 8,000.00
	$24,759.00

Total wolves taken - 66

Sale of 50 wolf skins @$275+ per skin	(13,789)
Remaining skins held by Div. of Admin.	(4,000) Est.
Net cost to state of central operations	6,970

The average net cost per wolf killed equals approximately $106.00.

HB 20

During questions on House Bill 20 Representative Urion requested information on the 1976 harvest of moose in Unit 16. The projected harvest follows:

16B	215 Bulls and 135 females	350
16A	80 Bulls and 40 females	120
	Total	470

If you should require additional information, please contact me.

Sincerely,

Robert A. Rausch, Director
Division of Game

SUMMARY

(1) RELATED BILLS (SIMILAR OR CONFLICTING)

none

(2) a. ORGANIZATIONAL SUPPORT FOR BILL

unknown

(2) b. ORGANIZATIONAL OPPOSITION TO BILL

unknown

(3) PROGRAM EFFECTS OF BILL

The bill would place an additional drain on alternate food species in rural areas, e.g., caribou, sheep and goats. Further, it would prohibit presently legal, local option antlerless moose hunts and it would prohibit moose manageme programs designed to maintain moose populations in optimum balance with available nge.

(4) FISCAL IMPACT: ☒ NONE ☐ FISCAL ANALYSIS ATTACHED

(5) AMENDMENTS PROPOSED:

none

(6) COMMENTS: The enactment of this bill, prohibiting the taking of antlerless moose at any time in any game management unit, would appear to violate Article VIII, Section 4 of the State Constitution which requires that "...resources belonging to the State shall be utilized, developed and maintained on the sustained yield principle, subject to preferences among beneficial uses." A continuous closure on a species such as moose could hardly qualify as sustained yield of beneficial uses. At present the authority for establishing antlerless moose seasons is vested with the Board of Game and they are limited by a complex system which requires that the department recommend such a season and that the advisory committee(s) for a game management unit or a subunit favorably recommend on the department's proposal. The present system provides an indepth review of such proposals by the public and the board. There are relatively few antlerless moose seasons in the State of Alaska at this time and all of them have the support of the appropriate advisory committees if such exist. The proposals that will be before the Board of Game at the next meeting, March 1977, will all have been favorably considered by the appropriate advisory committees. Imposition of this bill would seriously detract from a progressive systems management

File HB 40 / in Out of Comittee

1510

January 25, 1977

The Honorable Alvin Osterback
Chairman House Resources
Alaska State House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Representative Osterback:

This responds to your request for a statement on forestry activities at the State level. The Forest Service strongly supports measures which will strengthen the professional forestry staff and organization of State governments so that professional forestry expertise can better serve the needs of people in the management of forests and related resources. With the imminent acquisition of the full 103.4 million acres of land provided by the Statehood Act and approximately 44 million acres transferring to Native ownership, such measures are timely.

The State forestry staff is already charged with responsibility for protecting State and private lands from fire, insect, and disease attack. A statewide organization able to meet these demands needs the equipment, experienced managers, and training to provide this support. It needs the cooperation of local communities to provide the manpower during periods of extreme fire hazard, and it must be able to react rapidly to minimize delays in meeting these demands. A trained statewide organization can effectively handle such situations.

Our present State forestry organization is beginning the major task of fielding fire protection forces to protect Alaskan life and property with the gradual phase out of the Bureau of Land Management protection contract. Experience in firefighting and organization of a cadre of district personnel capable of leading temporary firefighters is of paramount importance for making the operation function.

In the area of management, the renewable resources of forest and rangelands include timber production, fish and wildlife habitat, recreational opportunities, wilderness experiences, and watersheds. Minerals management is also related to these resources. The State Forestry organization, working through cooperative Federal-State programs, can provide technical, and in some cases financial, assistance to establish, protect, manage, and use forest and related resources.

The Forest Service works closely with the State Forestry organization of the States and Territories. The National Association of State Foresters is an organization with substantial leadership in promoting sound forest practices on all non-Federal lands. We would encourage the State to examine the opportunities to strengthen its organization to meet the rapidly expanding challenge of its forests. The National Association of State Foresters and individual State organizations have demonstrated the merits of sound forest management practices. A number of States have established forest practice laws and regulation. Their experience could be very helpful in your efforts.

In summary, we believe Alaska now needs a strong State forestry organization operating at a level of government that reflects the emerging importance of this resource activity. Additionally, a comprehensive State forestry program is needed that focuses not only on State lands but is also designed to provide forestry assistance of all kinds to Alaska's new landowners. Numerous federal grant programs exist requiring some state matching funds that are specifically directed to this purpose. The State Forester needs authority and a mandate to participate in these programs.

Many bush communities, wanting to develop sound managment programs for their lands, are now requesting forestry and land managment assistance. With a strong forestry organization and program the state can be responsive to their citizens needs. We believe it very important that any forestry legislation considered this session address these concerns.

Sincerely,

John A. Sandor

Mr. Alvin Osterback
Chairman, House Resources Committee
Alaska State Legislature
Pouch A
Juneau, Alaska 99811

Dear Mr. Osterback:

The enclosed Resolution regarding establishment of a State Division of Forestry was adopted today in Anchorage, during a regular quarterly meeting of this Council.

The Resolution specifically relates to House Bill No. 40 which proposes to create a Division of Forestry within the Department of Natural Resources. We believe the valuable forest land resources on the State and private lands of Alaska need increased professional attention under a stronger State Forester's organization than now exists.

Establishment of a Division of Forestry would help to accomplish this by elevating the existing resource management of forested lands from a Section of Forestry within the Division of Land and Water Management in the Department of Natural Resources, to a higher level of management and authority.

Forest land management is a type of agricultural use, and it affects State-wide development of rural areas in which our Council is specifically concerned. We join with other organizations and groups in the State in support of establishing a State Division of Forestry.

Sincerely,

Ted Freeman

Ted Freeman
Chairman
Alaska Rural Development Council

January 20, 1977
Anchorage, Alaska

ALASKA RURAL DEVELOPMENT COUNCIL

RESOLUTION

To support legislation for establishing a State Division of Forestry within the Department of Natural Resources

WHEREAS, the State of Alaska is in the process of selecting 103.4 million acres of land under the Statehood Act, and Native Corporations are in the process of selecting 43 million acres of land under the Alaska Native Claims Settlement Act, and

WHEREAS, State selection lands now comprise a significant portion, approximately 6 million acres, or 25% of the commercial forest lands of Alaska, with significant additional acreage of similar value to be selected in the near future, and

WHEREAS, Native Corporation lands now comprise approximately 15 million acres of forest land containing high value renewable resources, and

WHEREAS, the forest resource industry has a high expansion potential on both State and private lands which will contribute significantly to State and local economy in rural areas of Alaska, and

WHEREAS, strong State leadership is essential to provide professional forest land management and protection against wildland fire, insect, and disease losses for all State and private lands, and at the same time enhance and sustain high resource values consistent with other high environmental values, and

WHEREAS, House Bill No. 40 has been introduced in the First Session of the Tenth Legislature of the State of Alaska, to create a Division of Forestry within the Department of Natural Resources, and

WHEREAS, a State Division of Forestry should develop increased professional capability to not only more effectively manage State forested lands under its jurisdiction, but also to more effectively deliver technical assistance to new Native Corporation and other private landowners at a critical time in development and management of their lands, and

WHEREAS, a State Division of Forestry should also stimulate increased federal financial assistance, and related federal assistance through regular U.S.D.A. agency programs, such as extension forestry education, and through cooperative state and federal programs of forest fire control, forest management, and forest insect and disease management,

NOW THEREFORE BE IT RESOLVED, the Alaska Rural Development Council supports legislative action such as House Bill No. 40 to create a

State Division of Forestry and strengthening of professional forestry leadership and authority within the State Forester's organization, and

BE IT FURTHER RESOLVED, that copies of this Resolution be sent to Jay S. Hammond, Governor of Alaska; Guy R. Martin, Commissioner, Alaska Department of Natural Resources; and the House Resources Committee and Senate Resources Committees of the Alaska State Legislature.

HB 40

March 1, 1977

The Honorable Alvin Osterback
Chairman, House Resources Committee
Alaska State House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Representative Osterback:

This is in regard to H.B. No. 40 "An Act Creating a Division of Forestry within the Department of Natural Resources...".

The Alaska Section of the Society of American Foresters views H.B. No. as a companion bill to S.B. No. 59 which is an Act relating to forest practices. We favor the establishment of a Division of Forestry. However, we are concerned that the bill does not speak to the establishment of the position of a professionally qualified State Forester. We believe this is essential to provide the professionalism and leadership needed to the conduct and promotion of a sound forestry program within the State of Alaska.

For your additional information and use, we have enclosed a copy of the Society's evaluation of S.B. No. 59 and our letter to Senator Kay ~~Ploand~~ POLAND which essentially reiterates our position.

We would be pleased to assist you in any way in the development of H.B. No. 40.

Sincerely,

Joseph Zylinski

SOCIETY OF AMERICAN FORESTERS

Alaska Section

February 11, 1977

The Honorable Kay Poland
Chairman, Senate Resources Committee
Alaska State Senate
Capitol Building
Juneau, Alaska 99811

Dear Senator Poland:

The Alaska Section of the Society of American Foresters has had a continuing interest in proposed Forest Practices legislation for the State of Alaska. The Alaska Section represents over 200 professional foresters and is a part of a National organization consisting of over 20,000 professional foresters.

The Society of American Foresters does not advocate that States should enact laws which regulate forest practices. This is for each State to decide, based on its needs in terms of environmental protection and forest land productivity which are likely to vary from State to State. Nevertheless, we are concerned that if a Forest Practices Act is enacted in a given State, it be a competent law. To this end, the Society has established "criteria for a competent State Practices Act", a copy of which is enclosed.

In 1976, we tested S.B. No. 563 against the Society criteria, but unfortunately, only one of our recommendations was incorporated into S.B. No. 59. We have again tested S. B. No. 59 against this same criteria. We sincerely hope that our enclosed analysis and recommendations will be helpful and useful to you and your Committee in developing a competent forest practices act for the State of Alaska.

We recognize the importance of the proposed legislation, especially in view of the fact that more than one-third of the entire State of Alaska of 141,000,000 acres are classified as forest land. Of this amount, 18,650,000 acres are in the coastal western hemlock timber type, with 1,187,000 acres in State ownership and 1,340,000 acres in Native land ownership. The remaining 122,350,000 acres are spruce-hardwood timber types in the Interior, with 27,089,000 acres in State ownership and 16,190,000 acres in Native land ownership.

This means 32.5% or nearly one-third of Alaska's forested lands are now in State and private land ownership. Subsequent State and Native selections will substantially add to this acreage.

Please advise if we can be of additional service. We would be happy to work with you on developing specific language, definitions or other aspects as you consider appropriate.

Sincerely,

Joseph Zylinski

TESTING SENATE BILL 59

AGAINST SOCIETY OF AMERICAN FORESTERS

CRITERIA FOR A COMPETENT STATE

FOREST PRACTICE ACT

PREPARED BY JUNEAU CHAPTER

SOCIETY OF AMERICAN FORESTERS

FEBRUARY 10, 1977

1. "A Forest Practices Act should encourage the application of scientific knowledge and forest management principles in order that society can obtain the largest net sum of benefits from forest lands. Such an Act should reflect full consideration of both its social and private costs and benefits."

Since the Act designates the Commissioner of the Department of Natural Resources as the person responsible to administer the Act, there is no assurance that scientific and forest management principles will be applied. It is recommended that the State Forester play a more prominent role in administering the Act to assure a sound professional approach He should be specifically named in the Act and his responsibilities clearly defined.

To be really effective a Division of Forestry should be established with the State Forester as Director. The Act then would be administered by this Division.

2. "A Forest Practices Act should insure the productivity of forest lands and protect the environment, including air and water quality."

Review of this Act indicates that this criteria is adequately covered. Although air pollution is not specifically mentioned, it is assumed that air pollution is included in the review by other agencies, i.e. Department of Environmental Conservation.

3. "State-initiated regulation of forest practices is perferable to regulation initiated by federal and local governments. A Forest Practices Act should recognize regional forest variations within a state's boundaries."

Section 41.17.060 (b) provides "the Commissioner may establish regions, districts, or other subdivisions of forest land within the state in which different regulations apply to reflect varying conditions throughout the state."

It appears that this criteria is fully met by S.B. 59.

4. "A Forest Practices Act should be coordinated and in compliance with related regulatory programs in order to minimize jurisdictional conflicts and administrative costs. Such an Act should be consistent with public forestry research, education, technical assistance and financial incentive programs."

This Act does not specifically provide for acknowledgment that compliance with the Act constitutes compliance with State Federal water quality standards, including non-point pollution. This feature should be integrated into the notification system. Review without objection by other state agencies affected should constitute compliance.

Section 41.17.020 (b) provides for the designation and operation of experimental forests; (c) establishing cooperative forestry programs and extension service programs; (d) establishing and maintaining forest tree nurseries.

There is no provision for forestry education or financial incentive programs. These features should be made a part of the cooperative forestry and extension service programs. Funds would have to be made available for the incentive program.

5. "A Forest Practices Act should clearly define the forest land to be covered under the Act as well as any standards and terms applied with respect to forest practices, air and water quality and soil erosion. A Forest Practices Act should use terminology which is generally accepted by the professions concerned."

Section 41.17.030 establishes exemptions to the provisions of the Act. Subsection (b)(1) indicates that a tract less than 160 acres does not fall under the provisions of the Act. While we believe certain operations are so small as to cause little concern to the citizens of the State, we recognize that a timber harvest of 160 acres at the mouth of certain streams or adjacent to certain estuarine areas could have substantial effects on offsite users if timber harvesting is conducted improperly. As with most resource management policies we find it difficult to establish an acreage limit where impacts are a matter of general public concern. However. we believe this is an administrative detail best left to professionals to prescribe on a case to case basis. We would prefer that the Board, along with the State Forester, establish guidelines that are based on a combination of resource factors including, but not limited to, acreage.

The definitions in Section 41.17.950 are a credit to this bill. Definitions specified are close to meeting SAF criteria No. 5. Improvement of some definitions is needed. We would be more than willing to coordinate this section with the various professions involved and recommend appropriate language.

6. "A Forest Practices Act should establish procedures and guidelines for the development and adoption of regulations, but make no attempt to specify the regulations themselves."

We believe the proposed bill generally meets this criteria and have only one suggestion. The suggestions is that Section 41.17.060 provide for procedures (probably) a subsection (14) should be added) aimed at establishing regulations for maintaining State water quality standards and protecting the environment of aquatic and offsite fisheries resources commensurate with economic values represented.

7. "A Forest Practices Act should allow a forest landowner latitude in applying professional forestry expertise and forest management principles. Administrative requirements for forest landowners and operators should not be unduly burdensome."

We find the bill reaches far beyond our criteria in this respect and from a number of different aspects. In essence we believe the provisions of the Bill are unduly burdensome and deprive forest landowners of land resource value and operational latitude without any form of compensation for this taking of basic rights. For instance:

1. Subsection 41.17.040 (b) provides equal regulations for State, municipal, and private land. Item (1) under this subsection (p.4) places the burden of proof on the landowner. While this may be appropriate for State or municipal forest lands, it is not appropriate as a basis for depriving a private landowner of economic values that exist on his own land. The burden of proof should be on the administering agency.

2. Item (3) under this subsection (p.4) requires administration of forest land with respect to production levels of timber products to allow reasonable consideration for marketing conditions. We submit that there is little likelihood that State officials will have access to sufficient data on an individual land owners marketing conditions to warrant any regulation on this account. Even if sufficient trend data for forest products operations at large within a district are available to the State, there can be little justification in regulating any individual landowner's harvest plan since that individual's market opportunities simply are not the concern of the State. This is another illustration of the need to consider regulation of private forest land separately from State or municipal lands.

3. Item (5) under this subsection (p.4) requires the maintenance of scenery in or adjacent to areas important to the tourism and recreation industry. Again, such an imposition on a private landowner is questionable while it can be mandated for State or municipal lands.

4. Section 41.17.050 requires that this Act shall be administered so as to protect forest land from "depletion", "overharvesting", "unsatisfactory forest management", etc. In our view such objectives, while perhaps appropriate for public lands, are not entirely applicable to all private lands in Alaska.

This Section also requires that the State conduct periodic inventories of timber on lands subject to the Act. While we agree that the State needs such authority, there is little reason to require it as a State function. The nationwide Forest Survey of the Forest Service has traditionally provided such service to states and to private and other forest landowners as well as to the various federal agencies.

Section 41.17.060 (d) is an improvement over old S.B. No. 563. This approaches a one-stop-shopping service that will benefit the operator and reduce the amount of work and frustration needed to wade through an unfamiliar bureaucratic requirements. This Section needs to be worded in such a manner to imply that approval of the plan also carries with it a certification that it meets with State air and water quality standards and grants all necessary permits, such as: tideland or other land and water use or occupancy.

Section 41.17.070, subsection (b) provides a "notification" procedure as contrasted to a permit process. We endorse this concept as being more efficient and less burdensome on the private landowner. We believe this notification should reflect an operator's "planned" operation rather than a proposal.

It is noted that up to a total of at least 85 days is provided for the State to make up its mind on each timber harvest plan. While this may be appropriate for public land activities, it is unduly burdensome and debilitating with respect to planned activities on private lands.

Under subsection (d) (3) (p.8) any other agency of the State may trigger a 20 day delay in a crucial operation. Again, we emphasize the importance of eliminating unduly burdensome requirements.

Under subsections (c) and (g) the State must ask for comment on each harvesting plan from both State agencies and by the citizenry through newspaper invitation. This is an open invitation to delays in legitimate plans of a private economic entity. We believe the needed agency coordination should be developed with a Forest Practices Board during the promulgation of regulations and any private landowner's plan or actual operation conducted in compliance with these State regulations should not be postponed or denied.

We endorse subsection (i) of this section.

Subsection (j) limits State approval of deviations from approved plans. Approval is contingent upon consultation with other affected State agencies. We believe a strong professional head of the Forestry Agency can provide an appropriate and expeditious decision on such matters without violating valid concerns of other agencies and without delaying a crucial decision to an operator.

Section 41.17.080 adopts the attitude that chemicals are not a bonafide attribute of productive forest management. The burden of proof is put on the landowner to prove no adverse consequences. We believe the State's policy should be the other way around, i.e. any application of chemicals for forestry purposes which is lawful is acceptable unless evidence in the hands of the State Forestry Agency shows otherwise. To do otherwise is to deprive a landowner of the opportunity to profit by modern day forest practices.

8. "Where boards, commissions or advisory bodies are used, their composition should represent the broad public interest with at least a majority of the membership being knowledgeable and experienced in the scientific management of forest resources."

A major weakness of the bill is that it creates weakness in the administering agency. First, there is no recognition that a strong Forestry Agency is needed to achieve competent and beneficial regulation of forest practices. A demonstratably effective arrangement for achieving such a goal is to provide for a professional State Forester to administer the Act and a Forest Practices Board to promulgate those necessary procedures or

regulations which can't be efficiently established through the legislative process. Forest practices in the State of Oregon have been, over the years, notably more advanced than other west coast states and without the forest practice legislative upheavals experienced in sister states. Oregon has long operated under the State Forester-Forest Practices Board approach.

Next is the problem of gaining support for a forest practices act from forest landowners or forestry experienced residents of the State when the Act will be administered by an appointee subject to change with each new State administration. Forestry programs and regulations must have more continuity and stability to be successful.

Our suggestions for solving this dilemma is to establish a board and a State Forester or Director, perhaps along the lines outlined in the EPA model Forest Practices Act. An additional suggestion varying from the EPA model is that a majority of the board members be knowledgeable and experienced in the scientific management of forest resources. Such a board should include at least one member from the Forest Products Industry and one from an Alaskan Native Corporation.

Recognizing that the question of establishing a strong and professional forestry agency is a major philosophical difference between the Administration and the Society, we wish to point out that the Alaska Section of the Society has been a leader, possibly the first, in advocating that it is timely for Alaska to adopt forest practices legislation. We will not support legislation that is not competent in the forest practices field.

9. "The development of forest practice regulations should be accomplished with due consideration of the knowledge and opinions of forest landowners, timber operators, forestry and related professionals and the public, and should take into account regional forest variations and disparities in land ownership patterns. Public hearings are necessary to achieve these purposes.

It appears that SB No. 59 meets this criteria. However, we recommend emphasis on technical assistance and incentive programs rather than on regulation of activities.

10. "Using appropriate State administrative procedures, forest practice regulations should be adopted by a State forestry agency or board with responsibility for interagency coordination. Forest practice regulations should rest upon scientific knowledge and professionally recognized forest management principles. The regulations should be administered and enforced by a single state agency with adequate staffing and forestry expertise."

The bill fails to provide for a state forestry agency or a board with responsibility for interagency coordination. All powers are vested in the Commissioner who may delegate authority to his subordinate employees or units within the Department of Natural Resources to the extent he considers advisable. This does not guarantee that regulations would be

administered and enforced by an entity within the Department with either adequate staffing, forestry expertise, and funding.

The conversion of nearly 150 million acres of federal land to state and private ownership will occur in the near future. This will involve many millions of acres of forest land. It is reasonable to assume that the Commissioner could satisfactorily perform all of the administrative and regulatory functions as described in SB No. 59 without delegation. The very scope of other activities and responsibilities vested within his Department would necessitate delegation.

The Governor, in transmitting essentially this same bill to the previous Legislature, indicated a desire to administer and regulate forest practices on state and private lands within existing structures and personnel resources of the Department to avoid the creation of a new bureaucracy and to keep government regulation at a minimum. We subscribe to that philosophy. However, we contend that the existing structure, personnel, and professional resources of the Department are insufficient to perform satisfactorily the state and private forestry workload presently existent within the State without even considering the 150 million acres moving from federal to State and private status.

While the Governor's motives are admirable, we believe that the imposition of an additional sizable workload upon an existing skeletal capability would be a disservice to the State, its forest and related resources and a derogation of the stated findings and purposes of SB No. 59.

In this regard, we urge the identification of a State Forester established within and heading a Division of Forestry. In addition, funding and professional forestry manpower needed by the State Forester to administer and enforce a Forest Practice Act need to be recognized and provided for in SB No. 59.

11. "A Forest Practices Act should provide for effective administration and enforcement, with adequate provisions for due process, to achieve the objectives and purposes of the Act. Administrative and enforcement procedures should be efficient and expeditious. Provisions should also be included for the use of continuing education, information and training programs to implement regulations adopted under the Act. Forest management operations conducted in accordance with adopted forest practice regulations should be considered to have met the requirements of laws pertaining to soil sedimentation and air and water quality."

Senate Bill No. 59 contains a considerable amount of administrative and regulatory detail. We believe the Bill should provide for these features in broad terms. The development of details should be left to the State Forester who would work with the various publics in a series of scheduled and well-advertised public meetings. Resultant administrative and regulatory details developed within that medium would be substantially more palatable, relevant, and acceptable.

The Bill should provide for the use of continuing education, information,

and training programs designed to implement regulations adopted under the Act. The State Forester should play a key role in this activity.

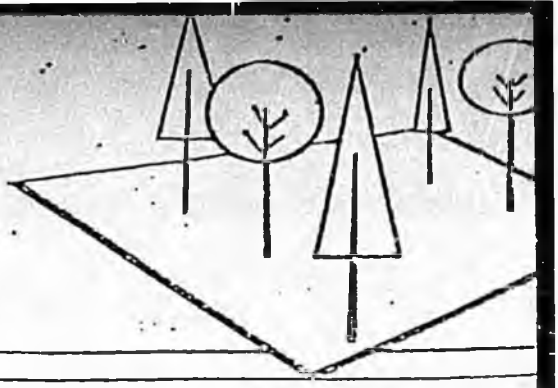
These features would go a long way toward developing public acceptance of a Forest Practices Act.

12. "A Forest Practices Act should not preclude the legitimate conversion of forest land to other uses."

Senate Bill No. 59 appears to meet this criteria.

General Comment

Section 41.17.040 (c) (3) states that "...all resources and values are of equal priority;...." This is inconsistant with the definition for multiple use contained in Section 41.17.950. We concur with the definition of multiple use and that consideration in any activity must be given to the relative value of the various resources.



SOCIETY OF AMERICAN FORESTERS

CRITERIA FOR A COMPETENT STATE FOREST PRACTICES ACT*

The Society of American Foresters (SAF) has prepared its "Criteria for a Competent State Forest Practices Act" to aid legislators and other groups considering the development or adoption of legislation to regulate forest practices. The paragraphs below are provided as an introduction and should be read carefully so that the "Criteria" can be considered in its proper perspective.

Controversy over the regulation of forest practices in the United States has reached national proportions in three periods prior to the current debate, namely 1910-1911, 1923-1924 and 1938-1952. The sources of these earlier controversies were widespread public concern over future timber supplies, poor timber harvesting practices and wildfire, and the consequent damage in terms of soil erosion and sedimentation of watercourses.

The present focus on state forest practice legislation is a result of the recent sharp increase in public concern over the quality of life in the United States. This change has caused Federal enactment of several far-reaching environmental laws, many of which apply to water quality, to include the Federal Water Pollution Control Act Amendments of 1972. This law is the basis for the Environmental Protection Agency development of a "Suggested State Forest Practices Act" in late 1974.

There has been and remains a concomitant concern for the potential and actual productivity of the forest lands in the United States. When some activities related to forest land management are improperly performed, accelerated soil erosion can result in a significant reduction in water quality and the capacity of the land to produce vegetation. In addition to man-caused siltation of watercourses, other forms of water pollution can result. Certainly, occurrences of this kind ought to be discouraged or at least kept within acceptable limits. This can be done through various education, training and financial incentive programs. Activities which diminish a forest's capacity to grow trees can also be discouraged or prevented through regulation by states or other authority. For this purpose regulation might be useful, and in some cases, necessary.

If the forest management activities involving soil disturbance are properly performed, water quality and the potential productivity of forest soil can be maintained. In fact, certain forest management practices can increase tree growth and provide for wildlife habitat and recreational opportunities substantially beyond the natural limitations of many forest lands. These practices ought to be encouraged, and can be through various education and incentive programs. However, the efficacy of legal coercion in the form of regulation of forest practices is questionable so far as encouraging intensive forest management. The bulk of experience indicates that regulation is better employed to enforce minimum performance standards. Expectations to achieve anything more appear unwarranted.

*A statement approved by the Society of American Foresters [illegible] 1975

The Society of American Foresters does not advocate that states should enact laws which regulate forest practices. This is for each state to decide based on its needs in terms of environmental protection and forest land productivity which are likely to vary from state to state. Nevertheless, SAF is concerned that if a Forest Practices Act is enacted in a given state, it be a competent law. To this end SAF undertook the task of developing its "Criteria for a Competent State Forest Practices Act" set forth below.

There are twelve criteria. In some cases it was found necessary to either expand on a given criterion or to address a current issue. These are the purposes of the short paragraphs which follow some of the criteria.

SAF is prepared to elaborate, where necessary, upon any of the following "Criteria" and to assist in discussions or deliberations regarding the regulation of forest practices.

Criteria for a Competent State Forest Practices Act

1. A Forest Practices Act should encourage the application of scientific knowledge and forest management principles in order that society can obtain the largest net sum of benefits from forest lands. Such an Act should reflect full consideration of both its social and private costs and benefits.

2. A Forest Practices Act should insure the productivity of forest lands and protect the environment, including air and water quality.

3. State-initiated regulation of forest practices is preferable to regulation initiated by federal and local governments. A Forest Practices Act should recognize regional forest variations within a state's boundaries.

One of the principal arguments for state regulation of forest practices is the immense variability of forest types within the boundaries of most states. A regular practice of states which have forest practices acts is to divide the state in two or more forest districts. Subsequently, separate forest practice regulations are developed for each forest district. This procedure is quite defensible.

4. A Forest Practices Act should be coordinated and in compliance with related regulatory programs in order to minimize jurisdictional conflicts and administrative costs. Such an Act should be consistent with public forestry research, education, technical assistance and financial incentive programs.

If a Forest Practices Act becomes law in a state, it would be but one part of a body of laws, regulations and programs relating to forest resources. Efforts to integrate elements of a Forest Practices Act with other existing laws, regulations and programs should be encouraged. Duplications in agency jurisdictions should be minimized.

5. A Forest Practices Act should clearly define the forest land to be covered under the Act as well as any standards and terms applied with respect to forest practices, air and water quality and soil erosion. A Forest Practices Act should use terminology which is generally accepted by the professions concerned.

Because a Forest Practices Act deals directly with scientific phenomena, to clarify the Act's purposes and scope technical terminology should be employed where appropriate, and standards and terms should be operationally defined.

6. A Forest Practices Act should establish procedures and guidelines for the development and adoption of regulations, but make no attempt to specify the regulations themselves.

Forests are inherently heterogeneous. Furthermore, scientific knowledge of forests and forest management techniques is rapidly evolving. Therefore, a Forest Practices Act would be best designed if it prescribed the procedures by which forest practice regulations are developed and implemented rather than speci the regulations themselves.

Where a Forest Practices Act provides for reforestation, specific stocking standards should evolve from the same process used to develop forest practice regulations.

7. A Forest Practices Act should allow a forest landowner latitude in applyin professional forestry expertise and forest management principles. Administrative requirements for forest landowners and operators should not be unduly burdensome.

A Forest Practices Act could so encumber a forest landowner with its requirements that he would forego opportunities to sell his timber, and hence, would have little inducement to manage his land for timber production. In such cases, timber supplies will be adversely affected. There will also be a misallocation of resources if, as a result, intensive timber management techniques are applied to lands which are relatively less suited for timber production.

8. Where boards, commissions or advisory bodies are used, their composition should represent the broad public interest with at least a majority of the membership being knowledgeable and experienced in the scientific management of forest resources.

A widely accepted arrangement for developing forest practice regulations is through an appointed board or commission. If this arrangement is employed, at least a majority of the board's members should be selected on the basis of their education, knowledge and experience in the scientific management of forest resources. Together the board members should be broadly representative of the public interest in forest resources, to include the interests of private forest landowners and timber operators.

9. The development of forest practice regulations should be accomplished with due consideration of the knowledge and opinions of forest landowners, timber operators, forestry and related professionals and the public, and should take into account regional forest variations and disparities in land ownership patterns. Public hearings are necessary to achieve these purposes.

10. Using appropriate state administrative procedures, forest practice regulations should be adopted by a state forestry agency or board with responsibility for interagency coordination. Forest practice regulations should rest upon scientific knowledge and professionally recognized forest management principles. The regulations should be administered and enforced by a single state agency with adequate staffing and forestry expertise.

11. A Forest Practices Act should provide for effective administration and enforcement, with adequate provisions for due process, to achieve the objectives and purposes of the Act. Administrative and enforcement procedures should be efficient and expeditious. Provisions should also be included for the use of continuin education, information and training programs to implement regulations adopted under the Act. Forest management operations conducted in accordance with adopted forest practice regulations should be considered to have met the requirements of laws pertaining to soil sedimentation and air and water quality.

Two methods by which an administrative agency may be advised of an intended timber harvesting operation are by a so-called "notification scheme" and by a system requiring state approval prior to the commencement of timber harvesting. Under a notification scheme, the forest landowner, timber owner, or timber operator notifies the administering agency of his intent to harvest and the location of the harvesting site, together with other pertinent information. Under the "prior approval" system, the forest landowner, timber owner or timber operator submits an explicit statement, application or plan stating his intentions and must await approval by the administering state agency. To date there is no evidence which of these schemes ultimately results in a greater degree of environmental protection or more productive forest land. However, the costs of a prior approval system appear to be inherently greater than those of a notification scheme, all other things being equal. Therefore, a notification scheme should be given preferential consideration.

Instruments which have been effective in enforcing forest practice regulations include: (1) informal conferences, (2) notices to comply, (3) "stop work orders," and ultimately, (4) agency authority to take corrective action at the violator's expense where environmental damage has occurred or is imminent. It should be recognized that the effectiveness of these instruments does not preclude the existence or the possible development of other effective means for enforcement.

12. *A Forest Practices Act should not preclude the legitimate conversion of forest land to other uses.*

A Forest Practices Act which would prevent a forest landowner from converting his land to uses other than timber production would severely infringe upon his property rights. Nevertheless, the landowner's legal right to such conversion should not become a means for evading the provisions of a Forest Practices Act.

ABOUT THE SOCIETY

The Society of American Foresters, with over 19,000 members, is the national organization representing all segments of the forestry profession of the United States including public and private practitioners, researchers, administrators, educators, and forestry students.

Objectives of the Society are: To advance the science, technology, education, and practice of professional forestry in America, and to use the knowledge and skills of the profession to benefit society.

Gifford Pinchot and six other pioneer foresters established the Society in 1900.

Members subscribe to a strict code of professional ethics. The Society is the accreditation authority for professional forestry education in the U.S. It publishes the *Journal of Forestry* and *Forest Science*.

STATEMENT MADE TO ALASKA HOUSE OF REPRESENTATIVES
RESOURCES COMMITTEE

MARCH 2, 1977
HOUSE BILL 40

"AN ACT CREATING A DIVISION OF FORESTRY WITHIN THE DEPARTMENT OF NATURAL RESOURCES; AND PROVIDING FOR AN EFFECTIVE DATE."

MISTER CHAIRMAN, MY NAME IS PETER HUBERTH, I AM GENERAL MANAGER OF THE FOREST PRODUCTS DIVISION OF THE SEALASKA CORPORATION, THE NATIVE REGIONAL CORPORATION FOR SOUTHEAST ALASKA.

UPON CONVEYANCE OF OUR LANDS, WHICH WILL BE SELECTED FROM WITHIN THE TONGASS NATIONAL FOREST, SEALASKA CORPORATION WILL UNDOUBTEDLY HAVE THE LARGEST COMMERCIAL PRIVATELY OWNED FOREST INVENTORY IN THE STATE OF ALASKA. WITH RECEIPT OF SUCH A SIGNIFICANT RESOURCE COMES THE RESPONSIBILITY FOR WISE USE AND MANAGEMENT WHICH OUR CORPORATION FULLY ACCEPTS AND INTENDS TO IMPLEMENT. THE ALASKA NATIVES HAVE ALWAYS BEEN WISE USERS OF NATURAL RESOURCES AND WE IN SEALASKA FULLY INTEND TO CONTINUE THAT TRADITION.

ADDITIONALLY, IT IS MY OBSERVATION FROM DISCUSSIONS WITH NATIVES FROM OTHER REGIONAL AND FROM MANY VILLAGE CORPORATIONS

THAT CONCERN FOR PROPER USE OF NATURAL RESOURCES IS A TRADITION WHICH HAS NOT BEEN LOST.

WITH THIS AS BACKGROUND, WE HAVE REVIEWED HOUSE BILL 40 AND WISH TO OFFER COMMENTS TO YOU AND THE MEMBERS OF YOUR COMMITTEE IN ORDER TO ASSIST YOU IN ASSURING THAT RESPONSIBLE AND EQUITABLE FOREST REGULATIONS ARE IMPLEMENTED IN A TIMELY FASHION SO AS TO REASSURE THE STATE THAT PRIVATE FOREST LANDS WILL BE WISELY MANAGED.

WITH THIS GENERAL INFORMATION AS BACKGROUND, I WISH TO COMMENT ON HOUSE BILL 40 ON BEHALF OF MY CORPORATION. WE HAVE REVIEWED THE PROPOSED LEGISLATION AND AGREE WITH THE CONCEPTS WHICH HAVE BEEN INCLUDED THEREIN. BASED ON ANALYSES OF FOREST PRACTICE LAWS IN THE THREE STATES WHICH BORDER ON THE PACIFIC IN THE LOWER '48, WE FEEL THAT THE SPONSORS OF THIS LEGISLATION HAVE DONE A VERY COMMENDABLE JOB OF INSURING THAT THERE ARE BROAD ARTICLES CONTAINED IN THE ACT WHICH WILL PROVIDE FOR THE RESPONSIBLE DEVELOPMENT OF THE COMMERCIAL FORESTS ON STATE, MUNICIPAL GOVERNMENT, AND PRIVATE LANDS.

OF PRIME IMPORTANCE TO THE FOREST LANDOWNER AND USER IS THAT THERE BE A STRONG DIVISION OF FORESTRY WITHIN THE DEPARTMENT OF NATURAL RESOURCES. SUCH A DIVISION MUST BE AT A SUFFICIENTLY

HIGH LEVEL TO ALLOW THE STATE FORESTER TO BE ABLE TO SET POLICY AND MAKE DECISIONS INVOLVING THE ADMINISTRATION OF REGULATIONS AND THE MANAGEMENT OF FOREST LANDS. THEREFORE, THE STATE FORESTER WILL BE AN INDIVIDUAL WHO REPORTS DIRECTLY TO THE COMMISSIONER OF THE DEPARTMENT OF NATURAL RESOURCES AND WILL HAVE A BACKGROUND WHICH INCLUDES A FORMAL EDUCATION AND SIGNIFICANT EXPERIENCE IN FOREST MANAGEMENT. TO DILUTE THE ADMINISTRATION OF FOREST RESOURCES AND PRACTICES IN ANY WAY OTHER THAN JUST DESCRIBED PLACES A SIGNIFICANT BURDEN ON THE FOREST LANDOWNER AND DENIES TO THE CITIZENS OF THE STATE THE TYPE OF RESPONSIBLE IMPLEMENTATION OF FOREST REGULATIONS WHICH EVERYBODY DESERVES.

IN REFERENCE TO SEC. 38.05.041. DIVISION OF FORESTRY. SEALASKA CORPORATION ENDORSES THE 12 DUTIES AND FUNCTIONS RELATING TO THE MANAGEMENT OF FORESTS WITHIN THE STATE. IT IS FELT THAT A STATE FORESTER WHO HAS THE APPROPRIATE EDUCATION AND EXPERIENCE IN THE FIELD OF FOREST MANAGEMENT WILL BE ABLE TO TAKE RESPONSIBILITY FOR THE FUNCTIONS LISTED AND PROMULGATE REGULATIONS WHICH WILL PROVIDE APPROPRIATE INCENTIVES FOR THE PRIVATE LANDOWNER TO IMPLEMENT RESPONSIBLE FOREST PRACTICES.

WE WOULD HOPE THAT SUCH FOREST PRACTICES AND TIMBER MANAGEMENT REGULATIONS WHICH MIGHT BE PROMULGATED AT A LATER DATE WOULD TAKE INTO CONSIDERATION THE ECONOMIC NEEDS OF THE PRIVATE

LANDOWNER. THIS IS LARGELY DUE TO THE VERY HIGH COSTS OF UNDERTAKING FOREST PRACTICE OPERATIONS IN OUR STATE COMPARED TO THE LOWER '48.

ASSUMING THAT THERE WILL BE AT A LATER DATE SOME REGULATIONS INVOLVING A DEFINITION OF COMMERCIAL FORESTS AND FOREST LANDS, WE WOULD HOPE THAT SUCH REGULATIONS WOULD STILL ALLOW THE INDIVIDUAL COMMERCIAL FOREST LANDOWNER TO HAVE THE OPPORTUNITY TO SPEED UP HIS HARVEST SCHEDULE IF MARKETS AND PERSONAL ECONOMIC NEEDS ARE CRITICAL TO HIM. EVEN IN SOUTHEAST ALASKA, WHERE A NATIVE VILLAGE CORPORATION MAY OWN MORE THAN 20,000 ACRES OF COMMERCIAL FOREST RESOURCE, THERE WOULD PROBABLY BE ONLY SIX SEPERATE TIMES DURING A FOREST ROTATION IN WHICH A COMMERCIAL LOGGER WOULD BE BROUGHT IN TO OPERATE ON HIS LANDS. THIS IS DUE TO THE LARGE AMOUNT OF VOLUME WHICH MUST BE MOVED FAIRLY RAPIDLY IN ORDER TO UNDERWRITE THE VERY HIGH COSTS OF MOVING TO A NEW OPERATION AND SETTING UP THE NECESSARY SOCIAL AND INDUSTRIAL INFRASTRUCTURE FOR ITS SUPPORT.

WHILE THERE ARE FOREST PRACTICES ACTS EXISTING WHICH PROTECT AGAINST "OVER-HARVESTING" AND UNSATISFACTORY FOREST MANAGEMENT, ETC., THESE ARE VERY DIFFICULT TERMS TO DEFINE. IT MIGHT BE BETTER FOR SUBSEQUENT REGULATIONS TO LEAVE THESE TERMS ALONE, BUT THEN ASSURE THAT COMMERCIAL FOREST LANDS ARE PROPERLY REFORESTED AND STOCKED AFTER HARVESTING.

THERE IS A CONSIDERABLE RANGE OF COMMERCIAL FOREST TYPES IN THE STATE OF ALASKA INCLUDING OLD-GROWTH, VERY LARGE TREES IN THE PANHANDLE AND CHUGACH, TO RELATIVELY SMALL ASPEN AND SPRUCE IN THE INTERIOR. THEREFORE WE WOULD ENCOURAGE THE DIVISION OF FORESTRY TO UNDERTAKE A REGIONALIZATION PROGRAM WHICH WOULD ALLOW FOR REGIONS OF SIMILAR FOREST TYPES AND COVER WITH THE ATTENDENT PROBLEMS OF MANAGEMENT IN EACH REGION.

ADDITIONALLY, A NOTIFICATION PROCESS INSTEAD OF AN APPLICATION IN ORDER TO UNDERTAKE VARIOUS FOREST PRACTICES IS OF REAL BENEFIT TO ALL OF THE CITIZENS IN THE STATE BECAUSE IT REDUCES TIMBER HARVEST AND SILVICULTURAL COSTS TO THE INDIVIDUAL PRIVATE LANDOWNER THEREBY PROVIDING MORE FUNDS WHICH CAN BE OF ECONOMIC BENEFIT TO THE STATE. IT WOULD BE MORE EFFICIENT FOR ALL PARTIES IF THE NOTIFICATION PROCESS OPERATED SIMILARLY TO A "ONE STOP" PERMIT SYSTEM. THE STATE FORESTER WOULD CIRCULATE THE NOTIFICATION TO ALL INTERESTED STATE AGENCIES SO THAT THOSE CONCERNED COULD MONITOR LAND MANAGEMENT ACTIVITIES UNDERTAKEN BY AN OPERATOR.

ASSUMING THERE IS A REASONABLE BODY OF REGULATIONS PROMULGATED AT A LATER DATE, THE PRIVATE LANDOWNER SHOULD BE ABLE TO VARY HIS FOREST PRACTICES ASSUMING THAT HE STAYS WITHIN THE REGULATIONS AND GUIDELINES FOR HIS REGION.

FINALLY WHERE ALLEGED VIOLATIONS ARE DISCOVERED BY EMPLOYEES OF THE STATE FORESTRY DIVISION, THERE SHOULD BE A PROVISION FOR THE OPERATOR TO IMMEDIATELY CORRECT THE SITUATION IF HE AGREES WITH THE REPRESENTATIVE OF THE STATE FORESTER. IF THE OPERATOR DOES NOT AGREE, THEN THERE SHOULD BE AN EQUITABLE HEARING PROCESS IN THE REGULATIONS WHICH INCLUDES THE FACT THAT (1) THE HEARING OFFICER WILL HAVE A FORESTRY BACKGROUND IN ORDER TO BE ABLE TO PROPERLY ASSESS THE ALLEGED VIOLATION, (2) THE PROCEDURES OF ANY SUCH HEARING WILL INCLUDE THE FACT THAT THE OPERATOR DOES NOT HAVE TO HAVE A LAWYER PRESENT IN ORDER TO FULLY PRESENT HIS CASE, AND (3) THE HEARING WILL TAKE PLACE AS CLOSE TO THE AREA OF OPERATION AS POSSIBLE AND IN MANY CASES AT THE ACTUAL SITE IN ORDER FOR THE HEARING OFFICER TO MAKE HIS OWN INDEPENDENT ASSESSMENT OF THE ALLEGED VIOLATION. ADDITIONALLY, THE HEARING SHOULD TAKE PLACE IN A TIMEFRAME WHICH IS VERY CLOSE TO THE DISCOVERY OF THE ALLEGED VIOLATION.

ALTHOUGH NOT DIRECTLY GERMAIN TO THE SECTIONS IN THE ACT, I WOULD LIKE TO COMMENT ON SOME PROVISIONS IN SENATE BILL 59. THESE PROVISIONS ARE ESPECIALLY ONEROUS TO THE PRIVATE FOREST LANDOWNER AND YOU MAY HAVE THEM CALLED TO YOUR ATTENTION, AT A LATER DATE.

SENATE BILL 59 (IN SEC. 41.17.040(B)(5)) PROVIDES THAT THE PRIVATE LANDOWNER MUST MANAGE HIS FOREST RESOURCE IN A MANNER WHICH WILL NOT DETRACT FROM SCENIC AND AESTHETIC QUALITY IN OR ADJACENT TO AREAS WHERE THERE IS OR COULD BE SIGNIFICANT IMPORTANCE TO TOURISM. WE VIEW SUCH A PROVISION WITH A HIGH DEGREE OF CONSTERNATION. THE STANDARD DENIES TO THE RESPONSIBLE FOREST MANAGER THE RIGHT TO IMPLEMENT PROPER SILVICULTURAL PRACTICES TO ENHANCE THE FOREST RESOURCE. ADDITIONALLY, ITS' LAMENTABLE LACK OF SPECIFICITY PLACES THE DEPARTMENT OF NATURAL RESOURCES AND THE PRIVATE LANDOWNER IN AN UNTENABLE AREA OF INTERPRETATION.

OF SIGNIFICANT IMPORTANCE TO THE CITIZENS OF THE STATE AND THE FOREST LANDOWNER IS THAT AN EQUITABLE HEARING PROCESS BE IMPLEMENTED WHICH ALLOWS THE REVIEW OF ALLEGED VIOLATIONS BY INDEPENDENT HEARING EXAMINERS WHO ARE QUALIFIED WITHIN THE FORESTRY FIELD. SENATE BILL 59 PROVIDES FOR THE COMMISSIONER TO APPOINT A STATE EMPLOYEE AS HEARING OFFICER AND THE COMMISSIONER DETERMINES THE HEARING PROCEDURES. IF MISUSED, SUCH A SITUATION COULD LEAD TO HAVING THE ALLEGED VIOLATOR BEING PLACED IN A VERY UNEQUAL SITUATION. WITH APPROPRIATE INPUT FROM INTERESTED PARTIES, A STATE FORESTER CAN SET EQUITABLE PROCEDURES FOR THE HEARING OF ALLEGED VIOLATIONS AND CAN ASSURE THE ALLEGED VIOLATOR THAT THE STATE IS SYMPATHETIC TO HIS SITUATION AND YET IS PROPERLY

DISCHARGING ITS RESPONSIBILITIES TO ALL OF THE CITIZENS IN THE STATE. NATURALLY, SHOULD THE ALLEGED VIOLATOR FEEL THAT THE HEARING PROCESS WAS NOT SUFFICIENTLY FAIR TO HIM, THEN HE WOULD HAVE RECOURSE TO APPEALS AND JUDICIAL REVIEW.

SEALASKA CORPORATION HAS OTHER CONCERNS ABOUT SOME LINE ITEMS CONTAINED IN SENATE BILL 59, AND WE WILL BE HAPPY TO MAKE THEM AVAILABLE TO YOU SHOULD YOUR COMMITTEE CONSIDER A BILL SIMILAR TO IT AT A LATER DATE.

I CONSIDER HOUSE BILL 40 TO BE A LOGICAL PIECE OF LEGISLATION WHICH WILL PROVIDE FOR THE ORGANIZATION OF A STATE FORESTRY DIVISION WITH THE SUBSEQUENT PROMULGATION OF RESPONSIBLE FOREST REGULATIONS WHICH PROVIDE FOR THE COMMERCIAL FOREST LANDS THROUGHOUT THE STATE AND YET MINIMIZE THE COMPLEXITY OF SUCH REGULATIONS IN ORDER TO MEET THE NEEDS OF INDIVIDUAL REGIONS AND COMMERCIAL FOREST LANDOWNERS.

IT WILL BE VERY IMPORTANT THAT THE HOUSE ACT IN A FORCEFUL MANNER TO INSURE THAT THIS PIECE OF LEGISLATION PREVAILS AND IS OFFERED TO THE GOVERNOR FOR HIS APPROVAL.

THANK YOU FOR ALLOWING ME TO APPEAR BEFORE YOU AND I WILL BE GLAD TO ANSWER ANY QUESTIONS WHICH YOU OR THE MEMBERS OF YOUR COMMITTEE MAY HAVE.

I THANK YOU MISTER CHAIRMAN.

IN THE HOUSE

HOUSE BILL NO. 40

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act creating a division of forestry within the Department of Natural Resources; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 44.37 is amended by adding a new section to read:

ARTICLE 4. DIVISION OF FORESTRY.

Sec. 44.37.200. DIVISION OF FORESTRY. There is created in the Department of Natural Resources the division of forestry.

* Sec. 2. AS 38.05 is amended by adding new sections to read:

Sec. 38.05.041. DIVISION OF FORESTRY. The division of forestry shall perform all duties and functions relating to management of the state forests which were performed by the division of lands before the effective date of this Act, including but not limited to

(1) the disposal of timber and materials under secs. 110 -120 of this chapter;

(2) the state program for the protection of forested land under AS 41.15;

(3) the dissemination of public information regarding forest practices and timber management;

(4) the adoption of regulations in accordance with the Administrative Procedure Act (AS 44.62) necessary to implement secs. 41 - 43 of this chapter;

(5) a system of regular inspection of timber sales by state foresters;

(6) the establishment of sound forest practices necessary to ensure the continuous growing and harvesting of commercial forest tree species and the protection of the soil, air, fish and wildlife, and water resources;

(7) administering AS 45.50.210 - 45.50.325 relating to log brands;

(8) the maintenance of necessary records and files regarding timber management;

(9) the selection and employment of personnel which the director considers necessary for the proper operations of the division;

(10) coordination and cooperation with federal agencies in the development of national forest management plans;

(11) cooperation with the Joint Federal-State Land Use Planning Commission;

(12) performance of administrative duties and functions, delegation of duties, and execution of the administrative powers similar to other divisions within state departments.

Sec. 38.05.043. TIMBER OPERATION OR FOREST PRACTICES REGULATIONS. Regulations that provide guidelines for the conduct of timber operations shall be used as standards by persons harvesting timber resources and shall include, but not be limited to, measures for fire prevention and control, soil erosion control, water quality and watershed control, flood control, stocking, protection against timber operations which unnecessarily destroy young timber growth or timber productivity of the soil, prevention and control of damage by forest insects, pests and disease. In developing these regulations, the division shall solicit and consider recommendations from

(1) the Department of Fish and Game, relating to the protection of fish and wildlife;

(2) the Department of Environmental Conservation, relating to air and water quality and waste disposal;

(3) the division of policy development and planning, relating to land use planning; and

(4) other public and private interested sources, including representatives of the forest products industry and timber owners and operators.

* Sec. 3. Regulations, rules, orders or other Acts in effect with respect to forest management and practices covered under this Act shall continue in full force and effect until amended, repealed, modified or rescinded as the director of the division of forestry determines in accordance with law. Existing contracts made by a department, division or agency transferred to and under the jurisdiction of the division of forestry under this Act shall continue in full force and effect until amended, repealed, modified or rescinded as the director of the division of forestry determines in accordance with law.

* Sec. 4. This Act takes effect July 1, 1977.

Area

Sec. 41.17.070 – State employee.

TO: The Honorable Jay S. Hammond
Governor

FROM: Avrum M. Gross
Attorney General

RE: Attached bill on forest resources and practices
Our File No. J-77-001-77

Attached is a bill (a slightly revised version of last legislature's SB 563) which has been requested and reviewed by numerous agencies, although the lead agency is the Department of Natural Resources. A few relatively minor modifications of last year's bill have been worked out with Alaska Lumber and Pulp Company and the Alaska Loggers Association.

We have spent considerable time soliciting the comments of interested organizations on this subject, and made numerous changes to reflect their recommendations before introduction of the bill last year. We will continue to work with these organizations up to and during the upcoming session to obtain consensus on this legislation if possible.

A draft transmittal letter to the legislature, explaining the bill, is attached.

AMG:md:JH

D R A F T

Under the authority of art. III, sec. 18 of the Alaska Constitution, and in accordance with AS 24.30.060(b) and the Uniform Rules of the Alaska State Legislature, I am transmitting a bill which relates to state forest resources and practices. This bill has been extensively reviewed by various state agencies and interested organizations, including representatives of the forest products industry; it contains provisions responding to concerns expressed by them.

In addition to Alaska's incomparable mineral wealth, the forest land and water resources of Alaska are among the most valuable natural resources of the state. This land not only holds timber resources which are vital to the economic well-being of the state and the numerous businesses and activities dependent on timber, but the land is also important as the habitat for fish and wildlife, as collection areas for our water resources, and as places for people to fish, hunt, or simply find peace with themselves.

The purpose of this bill is to provide, with a minimum of new bureaucracy, the essentials necessary to foster the longevity of Alaska's forest products industries while concurrently benefiting from all other forest values along the way. This can be done only through adopting some controls over forest practices, but the controls in the bill have intentionally been kept to a minimum.

The focus of the bill throughout is to create new authority only where gaps exist in present authority, and specifically to avoid the creation of a new bureaucracy to deal with forest practices. Furthermore, the authority to be exercised over private forest land, which is treated distinctly from state forest land, emphasizes only a few basic objectives. Our intention is, above all, to keep government regulation at the basic minimum necessary to do the job.

Instead of creating a new entity to deal with forest practices, responsibility is housed in the Department of Natural Resources which, with its experience in land administration, is the most logical choice. The commissioner would administer the Act, with full powers of delegation to existing structures and personnel resources within the department. This will provide for implementation of the Act with a minimum of disruption and expense and without significant inconvenience to the affected public.

Not all timber harvest activities in the state are subject to regulation. Certain activities are exempted. For example, with regard to private and municipal forest land, only commercial forest land, as defined by the Act, is covered. In addition, unconnected small tracts of 160 acres or less under single ownership are excluded from the provisions of the bill to avoid regulation of activities which have minimal impact. The commissioner

also may exempt certain types of operations of forest land from regulation regardless of where they occur, if unnecessary to achieve the objectives of the legislation.

Fostering a continuous supply of timber is another objective, and, here, no complex or restrictive system of allowable cuts or production limits is imposed. Rather, the commissioner is simply charged with reporting to the legislature at two-year intervals on his administration of the Act; his report must demonstrate his plan for insuring a long-term sustained yield of timber.

As to utilization of timber in a manner compatible with other resource values, this bill does not copy the approach used in several other states of incorporating highly detailed forest practice restrictions and codes. Instead, the commissioner is authorized to adopt regulations governing forest practices with respect to subject matter areas that are common in forest practices legislation. He is guided by certain regulatory and administrative standards which are flexible enough to encourage practicality without sacrificing the objectives of the legislation. Most important, these guiding standards distinguish private forest land (which may not be available for general public use) from state and municipal forest land (which will normally be open to the public), and designate the objectives that are appropriate for each. For example, forest administration on public forest

land must be based on the principle of multiple use of all of the resources and values, and encourages recognition of all resources and values. On the other hand, since private forest land owners may elect to concentrate on particular uses and exclude others, their land is not subject to the multiple use directive.

Timber harvesting will be taking place across the state. Some of this harvesting will be covered by the policies of the bill and the regulations issued under it. Consequently, there must be some means of assuring that those regulations are complied with and that the objectives of the bill are reached. Two different systems have been used in other states. The notification system merely requires a timber harvester to notify the state that he intends to operate on forest land; no advance approval is necessary. The advantage of the notification system is that it is simple and administratively inexpensive (at least the process itself is). The disadvantages are that the government may be largely unaware of what is happening in particular projects and violations may escape notice. In addition, the timber harvester has little or no contact with the administrative authority, leading to the likelihood of misunderstandings and a large number of inadvertent violations. Other states use varying degrees of a prior-approval system. In some cases, highly detailed plans approaching impact-statement detail are required; in addition, they may have to be prepared by a licensed forester. The benefits of this system

include a much greater familiarity with operations taking place around the state, the opportunity to identify undesirable aspects of operations before any damage occurs, and the chance to work out differences with the operator before the project is initiated. On the negative side, the prior-approval system can be highly expensive, onerous to the operator, and may lead to extensive delays.

This bill uses neither system exclusively; rather, it incorporates the positive and eliminates the negative aspects of each. Before operating, the timber harvester must submit a brief description of the proposed project. It is to be reviewed during a relatively brief time by the commissioner (with input from affected agencies) for consistency with the applicable policies and regulations, and approved or conditioned to insure that consistency. Only if substantial problems appear would more detailed plans be required, and these would apply only to the particular problem area rather than to the entire project. To protect against bureaucratic footdragging, there is a statutory maximum time which the commissioner may use for review and approval, and there are no exceptions. There is also a statutory directive that paperwork be kept to a minimum to prevent inconvenience to the operator. This approach will require only that amount of information and participation from the operator necessary to provide the commissioner with familiarity as to the nature of forest development operations and to identify in advance serious problems.

Finally, in the event of a violation, the bill uses an administrative fine system (with full due process guarantees) rather than criminal penalties. Criteria are set out for establishing the amount of the fine. Judicial review of the administrative fine is provided.

I am convinced that this bill is well suited to Alaska and will greatly benefit the natural resources and general well-being of the state. I urge your favorable consideration.

Sincerely,

Jay S. Hammond
Governor

Memo to: Rep. Alvin Osterback, Chairman
House Resources Committee

Date: February 7, 1977

From: Rep. Sally Smith, Chairman
Subcommittee on Parks, Lands, Timber

The Subcommittee on Parks, Timber and Lands met at noon with Ted Smith and Jack Roderick of the Dept. of Natural Resources to discuss:

HB 54-------Administration of State Lands
HB 114------Fire Suppression Fund
HB 115------Appropriation for Fire Suppression Fund

Attached are copies of information received on these subjects--Note some are quite old. The subcommittee recommends that the bills be given the attention of the complete Resource Committee to receive testimony from Mr. Smith.

Sincerely,

Sally Smith, Chairman

STATE of ALASKA

MEMORANDUM

M-TIMBER SALES

DEPARTMENT OF NATURAL RESOURCES
DIVISION OF LANDS

TO: ROGER LEWIS
Legislative Liaison

THRU: DALE P. TUBBS DPT
Deputy Director

DATE : February 9, 1975

FROM: L. A. DUTTON
Management Forester
State Forester's Office

SUBJECT: House Bill No. ~~SB~~ 54

Forestry and Water Resources had proposed amendments to As 38.05.115 to be included in this bill. One of these, and the most important to Forestry, was an amendment to sub-sec. (b) of this statute. The proposed amendment which would facilitate the processing of contracts for minor amounts of timber or materials has been entirely omitted from HB ~~SB~~ 54.

Section 115(b) presently provides:

> "Negotiated sales for timber or materials not exceeding a value of $250 are exempt from the provisions of AS.34.15.150."

Sec. 115(b) as proposed for amendment would read:

> "Negotiated sales [FOR TIMBER OR MATERIALS] not exceeding 50M.b.m. [A VALUE OF $250] or the equivalent other measure of timber or more than $500 of materials are exempt from the provisions of AS 34.15.150.

The problem with AS 38.05.115(b) as presently written is that $250 does not buy anywhere near the amount of timber or materials today that it did seven years ago. Consequently, we do not have many sales for $250 and Sec. 115(b) is not accomplishing what it was intended to do; i.e.; reduce the burdensome, inconvenient, and impractical necessity of having simple contracts for the sale of minor amounts of timber or materials acknowledged as required by AS.34.15.150.

A volume rather than a value limitation applicable to timber is used in the proposed amendment, as this conforms to the volume limitation for negotiated sales in Sec. 115(a). Also, this will make the statute less dated with regard to timber, so that future amendments of this nature should not be necessary.

Please forward a copy of this memorandum through the appropriate channels with a request that the amendment be incorporated in HB 54. Otherwise, please let us know why AS 38.05.115(b) should not be thus amended.

Statute as it will read following amendment:

HB 4

Sec. 38.05.115. Limitations and conditions of sale. (a) The commissioner, upon recommendation of the director, shall determine the timber and other materials to be sold, and the limitations, conditions, and terms of sale. The limitations, conditions, and terms shall include the utilization, development, and maintenance of the sustained yield principle, subject to preference among other beneficial uses. The director may negotiate sales of timber or materials without advertisement and on the limitations, conditions, and terms which he considers are in the best interests of the state, subject to the approval of the commissioner. However, not more than 500,000 board feet [M.B.M.] or the equivalent of timber or more than 25,000 ~~50,000~~ cubic yards [$2,500] of materials may be sold by nonadvertised, negotiated sale to the same purchaser within a one year period.

(b) Negotiated sales [FOR TIMBER OR MATERIALS] not exceeding 50,000 board feet [A VALUE OF $250] or the equivalent of timber or 1000 cubic yards of materials are exempt from the provisions of AS 34.15.150.

Justification for amendment:

The amendment is proposed, because due to inflation the volume of material that can be purchased for $2,500 today is far less than could have been purchased in 1969. For the same reason, the $250 limit on the exemption from AS 34.15.150 (notorizing contracts) is now impractical. It is felt that a volume rather than a dollar limitation will be more practical, make the statute less dated, and make future amendments of this nature unnecessary.

[illegible] OF AS [illegible].115

[illegible]:

HOUSE BILL NO. 54 by the Rules Committee by Request of the Governor, entitled: HB 54

"An Act relating to the administration of state land; and providing for an effective date."

was introduced, read the first time and referred to the Committees on Resources and Judiciary.

"January 14, 1977

The Honorable Hugh Malone
Speaker of the House
Alaska State Legislature
Juneau, Alaska 99811

Dear Mr. Speaker:

Under the authority of art. III, sec. 18 of the Alaska Constitution, and in accordance with AS 24.30.060(b) and the Uniform Rules of the Alaska State Legislature, I am transmitting a bill relating to the administration of state land. This bill makes three changes in the Alaska Land Act (AS 38.05):

1. It eliminates the requirement in AS 38.05.050 that land sales be held in the recording district where the property sold is located because recording district boundaries have been modified with the result that some districts do not include a site appropriate or convenient for the holding of a sale of land located in the district. In other cases, it is possible that a sale site in an adjacent recording district may be closer to the property for sale than any possible site in the same district.

2. The bill also adjusts the maximum amount of materials which may be sold by non-advertised, negotiated sale under AS 38.05.115(a). The measure of the maximum amount of materials which may be sold in this manner is changed from dollar value ($5,000) to volume (25,000 cubic yards) to be consistent with the volume measure of timber in the same section, to adopt the standard industry measurement, and to provide for a more flexible measurement in the face of rising prices and inflation.

3. In AS 38.05.115(b), the bill also adjusts in the same manner and for the same reasons, measures of the maximum amounts of timber and material which may be sold by negotiated sale without notarization as required by AS 34.15.150. This maximum is changed from dollar value ($500) to board feet (50 M.B.M.) for timber and cubic yards (2,500 cubic yards) for gravel.

Sincerely,

Jay S. Hammond
Governor"

SUBJECT: Fire Suppression Fund

One of the items that will have to be resolved before we start in the fire suppression business on the Kenai Peninsula next summer is where does the out-of-pocket money come from to pay our bills. As long as we use State crews and equipment, there is no problem as they are funded in our budget. The problem will be in paying the individuals we hire and the equipment owner that may be needed at times to supplement our crews. No money has been included in our budget for this unknown. All our previous bills have been to BLM and have been paid up to a year or so after they expended the funds. When we hire an individual, he is going to want his pay within a short period of time after the fire.

The amount of money needed for out-of-pocket fire suppression costs is really an unknown. If we were to look at the last five years' costs on the Kenai, we find the following:

Year	Acres Burned	Cost	# Fires
1970	2875	$354,424.39	33
1971	1	1,454.84	5
1972	205	11,145.65	11
1973	47	14,687.20	20
1974	40	24,036.16	13
Total	3168	$405,747.24	102

This then gives us an average cost of $81,149.45, which you can see does not come close to any of the years. These figures are not a true picture of what the out-of-pocket cost will be as a good bit of these costs will be covered by State crews and equipment.

The same thing shows up when we look at the fire suppression costs for all State and private lands.

Year	Costs
1970	$1,451,445.63
1971	1,384,955.70
1972	99,646.79
1973	235,907.31
1974	389,537.49

I am not sure what is the best way to handle the situation, but do feel that there should be some way to have money available on a non-expiring basis. This way everyone who has to be involved with the money from payor to payee knows there is money available.

I would like to suggest that the idea of having a "Fire Suppression Fund" be established by the Legislature be looked into. I can see where it could be worked out somewhat similar to the Disaster Relief Fund (copy attached). Since the fire law A.S. 41.15 refers to the Commissioner, it would then be natural to tie the operation of the suppression fund there also.

Since we are really dealing with an unknown figure at this time, I would suggest we ask for an initial funding of $50,000.00. This would give us some protection for our job on the Kenai Peninsula. It would mean we would have to come in each year as we take over different areas of the State for subsequent financing. This may be easier than asking for a large amount at first. I would be most happy to work with someone on the wording of such a fund and also the amount, if you feel it is worthwhile.

If we do not go the fund route, it will then be necessary to ask for a supplemental to the FY 76 budget to be assured there are funds available to make payments. Since the fire season starts in May, it would be best to have about $20,000.00 in case we do have any trouble. I am not sure what code something like this would go under since they appear to have removed the 800 code. If there is something like the old 800 code, I would say that is where it belongs as we pay both salaries and equipment rental from the funds.

Let me know if there is any more information I can put together or any way I can help.

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)
The requested legislation establishes a Fire Suppression Fund and appropriates from the General Fund monies sufficient to initiate the Fund and maintain it in future years at a level adequate to meet anticipated costs of annual fire fighting activities. The Fire Suppression Fund is a reserve from which fire fighting expenses will be paid; it is not a planned expenditure. Future annual inputs from the General Fund to the Fire Suppression Fund are difficult to predict, however, from 1970 through 1975 State outlays for fire suppression have ranged from $1.2 million to $99,646, averaging approximately $539,055. Creation of a Fire Suppression Fund will enable prompt payment of fire fighting costs. With increasing State ownership of land, and responsibility for fire protection, the base cost can be expected to rise, even aside from inflation. Previously these payments have been met through supplemental or annual appropriations and have been subject to the delays implicit in that process.

BRIEFING

Bureau of Land Management - State of Alaska Fire Control Contract

February 4, 1977

BACKGROUND

With realization of Alaska statehood in 1959, BLM entered a contract with the State to protect State lands from wildfire. This was an interim measure to protect State resources until the State established its own fire control capability.

In 1971, after considerable dialogue, serious contract disengagement proposals were discussed with Mr. Charles Herbert, Commissioner, Department of Natural Resources. These proposals called for BLM disengagement in the Cook Inlet - Kenai Peninsula areas by 1975.

In 1972, BLM disengaged from the lands in Southeast Alaska. The Cook Inlet disengagement plan was reiterated this same year by letter to Governor William Egan.

In 1973, Governor William Egan informed BLM, by letter, that he had directed the Department of Natural Resources to review the problem and prepare a detailed program for building a State organization.

In a 1975 letter, Governor Jay Hammond was briefed on BLM's disengagement plans.

By contract amendment dated June 17, 1976, the State removed 21,206,381 acres of land from BLM contract protection. The State established a fire control organization to fight fire on the Kenai Peninsula and the Chugach State Park. This amendment also eliminated all protection on approximately 10,500,000 acres of burnable resources on State lands in western Alaska. During the 1976 fire season, problems were identified with the "let burn" decision on this 10.5 million acres. Since time did not allow a formal contract adjustment, BLM agreed by memorandum to protect these acres on a fire by fire basis despite contract deletion and lack of associated presuppression monies.

Also in 1976, a formal plan of BLM disengagement from lands bounded by the Alaska Range, Talkeetna Mountains, Chugach Mountains, and Kenai Mountains was presented to the State. More specifically, this area includes the Kenai Peninsula, Anchorage Bowl, and the Mat-Su Valley.

This brief chronology brings us to the present. Three situations require attention:

1. 10.5 million acres of unprotected State land in western Alaska.

2. BLM's planned disengagement from the Mat-Su area.

3. Contract rewrite to optimize the contract dollar and optimize protection on BLM and State lands.

One last comment is made. BLM can contractually protect State lands only as long as mutual agency benefit is realized. In other words, BLM cannot sell its fire control services unless it realized reciprocal benefits such as the State protecting portions of BLM land. The opportunity exists for a contract incorporating this concept.

BLM has responsibility lands in locations where the State is major land holder. The features of these locations include people/property density, road accessibility, and compact area. Fire attack can be accomplished with vehicular pumper trucks and some helicopter support.

The State has responsibility lands in locations where BLM is the major responsible land administrator. The features of these locations include limited people/property density, no road access, and vast area. Fire attack can only be accomplished utilizing major aircraft involvement. Annually, BLM must obligate 3.0 million dollars to acquire contract aircraft. This cost is exclusive of flying time.

The point is made that no technical organizational duplication will exist if the State elects to focus fire protection in the population/property density areas and BLM focus its protection in the vast roadless areas. Mutual benefit is realized and the resulting fire control organizations are complementary.

The briefing will describe the current contractual situation and offer a new contract approach to better solve our mutual fire control problem.

SIGNIFICANT FIRE CONTROL CONTRACT PROVISIONS

(STATE OF ALASKA-BUREAU OF LAND MANAGEMENT)

1. On lands contracted to either party by the other, there is a $0.0474 per acre presuppression charge.

2. On contracted lands all suppression costs incurred are directly reimbursable.

3. An administrative charge on a sliding scale is added to reimbursable suppression costs. This charge is applied on the total annual bill.

Amount of Bill	Rate	Maximum Amount
First $ 250,000	25%	$ 62,500
Next $ 250,000	20%	$ 50,000
Next $ 500,000	15%	$ 75,000
Next $1,000,000	10%	$100,000
Over $2,000,000	5%	N/A

4. Bills by each party offset each other annually.

5. The presuppression bill is due and payable each September 1 for the following fiscal year (October 1 through September 30).

6. The advanced suppression bill is due and payable September 1 for the current calendar year (75 percent of the last 5 year average reimbursable suppression bills).

7. The suppression bill is due and payable each September 1 for the year previous to the two most current calendar years (the advanced suppression payment applies to this bill).

8. Presently the State protects 372,194 acres of BLM responsibility lands at a presuppression cost of $17,642.

9. Presently BLM protects 14,115,468 acres of State responsibility lands at a presuppression cost of $669,073.

10. The State advanced suppression bill for CY 1977 is $295,447.

11. During the 5 year period 1971 - 1975, the lowest actual State suppression bill was $99,647 and the highest actual bill was $1,240,740.

- - - - - For the remainder of this presentation we will only consider contract change opportunities in the southwestern quarter of Alaska - - - - -

CHANGES FROM PRESENT TO RECOMMENDED CONTRACT

1. Kenai Peninsula. No change. As a note of interest, BLM has suppression base at Soldotna for protection of the Kenai Moose Range.

2. Chugach. Presently the State protects 8,432 acres of BLM responsibility land in the Eagle River area. Recommended contract would add the 6,000 acre Eklutna Power Withdrawal Area to this State protection. The State has in-place capability.

3. Bristol Bay. No change. No protection needed since no fire history.

4. Kodiak Island. No change. Each agency protects its own land.

5. Taylor Mountain. Realign contract protection to the area with fire history (north one-third). Due to negligible fire incidence in the south two-thirds, BLM would react to assistance requests without contract presuppression monies.

6. Iditarod. Total State area would change from no protection to protection by BLM.

7. Poorman. Total State area would change from no protection to protection by BLM.

8. Farewell. No change. No protection needed since no fire history. Fires near the west boundary on State land would be normally attacked by BLM as they threaten BLM responsibility lands. No presuppression monies necessary.

9. Kokrine Hills. Total State area would change from no protection to protection by BLM.

10. Haines Skagway. No change.

11. Mat-Su. State would assume protection of its own lands (4,920,396 acres). Additionally, the State would contract protect 697,473 acres of BLM land located adjacent to the Alaska Range.

Note that irrespective of this particular proposal, BLM will discontinue contract protection on the SE quarter of Mat-Su in CY 1977. This quarter experiences 85 percent of the ignitions in Mat-Su. This particular disengagement is in consonance with planning, discussions, and correspondence between BLM State Director, Curt McVee, and Governors Jay Hammond and William Egan.

PRESENT CONTRACT TERMS

Area	BLM Land Protected By State		State Land Protected by BLM		Burnable Area Not Being Protected		
	Acres	5 Year Average No. of Fires	Acres	5 Year Average No. of Fires	Acres	5 Year Average No. of Fires	Land Owner
1. Kenai Peninsula	258,762	1.0	0	N/A	0	N/A	N/A
2. Chugach	8,432	2.0	0	N/A	0	N/A	N/A
3. Bristol Bay	0	N/A	0	N/A	1,612,800	0	State
4. Kodiak Island	0	N/A	0	N/A	0	N/A	N/A
5. Taylor Mountain	0	N/A	4,772,711	0.8	4,608,306	1.2	State
6. Iditarod	0	N/A	0	N/A	1,385,605	3.6	State
7. Poorman	0	N/A	0	N/A	3,658,621	8.0	State
8. Farewell	0	N/A	0	N/A	1,961,644	1.2	State
9. Kokrine Hills	0	N/A	0	N/A	875,520	1.2	State
10. Haines-Skagway	105,000	0	0	N/A	0	N/A	N/A
11. Mat-Su	0	N/A	4,920,396	47.6	0	N/A	N/A
Total	372,194	3.0	9,693,107	48.4	14,102,496	15.2	----

Net presuppression cost: (9,693,107 - 372,194) 0.0474 = $ 441,811.

RECOMMENDED CONTRACT TERMS

Area	BLM Land Protected By State		State Land Protected By BLM		Burnable Area Not Being Protected		
	Acres	5 Year Average No. of Fires	Acres	5 Year Average No. of Fires	Acres	5 Year Average No. of Fires	Land Owner
1. Kenai Peninsula	258,762	1.0	0	N/A	0	N/A	N/A
2. Chugach	14,432	2.0	0	N/A	0	N/A	N/A
3. Bristol Bay	0	N/A	0	N/A	1,612,800	0	State
4. Kodiak Island	0	N/A	0	N/A	0	N/A	N/A
5. Taylor Mountain	0	N/A	3,068,883	1.4	6,312,134	0.6	State
6. Iditarod	0	N/A	1,385,605	3.6	0	N/A	N/A
7. Poorman	0	N/A	3,658,621	8.0	0	N/A	N/A
8. Farewell	0	N/A	0	N/A	1,961,644	1.2	State
9. Kokrine Hills	0	N/A	875,520	1.2	0	N/A	N/A
10. Haines-Skagway	105,000	0	0	N/A	0	N/A	N/A
11. Mat-Su	697,473	0.4	0	N/A	0	N/A	N/A
Total	1,075,667	3.4	8,988,629	14.2	9,886,578	0.6	---

Net presuppression cost: (8,988,629 - 1,075,667) 0.0474 = $ 375,074.

Conclusions

If the discussed or similar contract change is acceptable, the following products will be realized:

1. All BLM and State lands will receive protection from wildfire either contractually or cooperatively.

2. State lands which presently receive no contract protection will be reduced from 14.1 million acres to 9.9 million acres.

3. The 9.9 million acres will be relocated on the basis of low fire occurrence (15.2 fires annually to 0.6 fires annually). On these lands BLM will react to assistance requests from the State without contract presuppression monies.

4. The State will provide protection to the whole Mat-Su valley (4.9 million acres State land and 0.7 million acres BLM land). This impact is minimal, since in 1977, BLM will disengage from the State contract area containing 85 percent of the Mat-Su fire load.

5. State contract dollar will be placed in areas having highest occurrence.

6. In this southwestern quarter of Alaska, State presuppression monies to BLM will be reduced from $442,000 to $375,000.

7. The State would develop a tanker truck fire control organization while BLM would continue operation of an aerial fire control organization. Organizations are complementary. This type State development is commensurate with its projected fire control engagement in the Fairbanks, Delta, and Glenallen areas.

We are jointly engaged in rewriting our mutual protection contract to update provisions. Likewise we must jointly address our operating policies, procedures, and field organizations for the 1977 fire season. An early decision on State protection position would allow smooth transition into this fire season.

HB
56

SB 141
2 PM - Friday
Feb 25th

APPENDIX A

Proposed Amendments to HB 56

PROPOSAL #1 An amendment of lines 7-10 of page 2:

(d) if mining business operations not subject to sec. .010 of this chapter are conducted in two or more places within the state by one person, those operations may, at the person's option, be considered as one mining business, and the tax shall be computed upon the net proceeds of all those mining business of operations.

PROPOSAL #2 An amendment of the last sentence on page 1:

The tax exemption granted to new mining business operations does not apply to the business of mining sand and gravel.

An amendment of the first sentence on page 2:

The Department of Natural Resources shall certify to the department the date upon which production began from the mining business operation, and the department shall issue a certificate of exemption to the applicant after this certification.

PROPOSAL #3 An amendment of line 2 of page 3:

167 of the Internal Revenue Code (26 U.S.C. 167);

PROPOSAL #4: An amendment of lines 3 and 4 of page 3:

(7) amortization of exploration and mining development costs not included in (6) of this section;

PROPOSAL #5 An amendment to insert a new line after line 9 of page 3:

(9) net operating losses as set out in sec. 172 of the Internal Revenue Code (26 U.S.C. 172).

PROPOSAL #6 An amendment of the sentence beginning on line 27 of page 3:

Gross receipts include the actual amount received during the year for the sale of minerals or materials whether or not the minerals or materials were actually extracted during that year.

An amendment of the subsection beginning on line 2 of page 4:

(b) If the minerals or materials are sold or transferred at a price other than the true market price, as when a wholly owned subsidiary transfers or sells the mineral or material to its parent at a price less

than market value, gross receipts are the true market price or average market price per ton or other measurable unit of the mineral or material multiplied by the total units of the mineral or material sold or transferred during the year.

An amendment of lines 24-28 on page 8:

(9) "minerals means asbestos, coal, sulphur, iron ore, lead, zinc, mercury, tin, chromite, bauxite, copper, gold, silver, platinum, potash and other valuable metals or ores except oil, gas and materials;

(10) "materials" means sand, gravel, building material and top soil

PROPOSAL #7 An amendment of line 29 of page 4:

make returns for the person engaged in the mining business [, OR THE

PROPOSAL #8 An amendment of lines 9-22 of page 8:

(7) "business of mining"

(A) means a business operation for the extraction of minerals from the earth or water of the state operated by a person

(i) who owns and operates, works, or develops a mineral property, whether or not that property is currently producing a marketable product;

(ii) who leases a mineral property and operates the mineral property, whether or not the mineral property is producing a marketable product;

(iii) who leases a mineral property and pays royalties, rents or other payments to the owner of the property;

(iv) who has an interest in a lease, concession, joint venture, or other agreement for the exploration or development, or extraction of a mineral property if royalties, rents, or other payments are to be paid for that interest;

(B) does not include a natural person who undertakes only discovery work required to be done in prospecting for or locating any mining claims, or annual assessment work, or work required in the obtaining of title to mining property from the United States, or required by the laws of the United States or of this state in order to hold possessory title to any mining claim;

Bear Creek Mining Company

Spokane Office

TESTIMONY BEFORE HOUSE NATURAL RESOURCES COMMITTEE

Juneau, Alaska - March 4, 1977

Mr. Chairman, members of the Committee, my name is Russell C. Babcock, Jr., and I am Exploration District Manager, Bear Creek Mining Company, Spokane, Washington. I am in charge of my company's exploration efforts in Alaska, as well as the northwest states, and have been involved in Alaskan work since 1962. Bear Creek Mining Company is, of course, the exploration subsidiary of Kennecott Copper Corporation, an active producer and explorer in Alaska for many years.

I appeared before this Committee on April 8, 1976 and testified in favor of revision of the Mining License Tax as it now exists. I would now like to re-submit that testimony for Bear Creek Mining Company. You will find that, among other things, it requests inclusion of net operating loss carry forward and elimination of the restriction of deductions to the taxable year.* Bear Creek Mining Company is strongly in favor of a stable, reasonable tax policy for the state of Alaska. We believe there is a mineral industry in Alaska's future, and that with responsible treatment from both business and Government it can be a beneficial corporate citizen of the state.

Thank you.

* We would like to add to those 1976 comments our ~~des~~ recognition of the need to add "smelting" to Subsection 15-A-3 of the simplification and benefit of a flat-rate royalty of 5% of the net proceeds.

BOX 9, DISHMAN BRANCH • 7821 EAST SPRAGUE AVENUE • SPOKANE, WASHINGTON 99213 • PHONE: 509-924-2600 • TWX: 510-773-1821

Bear Creek Mining Company

Spokane Office

TESTIMONY BEFORE HOUSE NATURAL RESOURCES COMMITTEE

Juneau, Alaska - April 8, 1976

Mr. Chairman, Members of the Committee, my name is Russell Babcock, and I am Exploration District Manager, Bear Creek Mining Company, Spokane, Washington. I have the jurisdictional responsibility for my company's exploration efforts in Alaska and the northwest states, and have personally been involved in programs within the state intermittently since 1962. The exploration efforts of Bear Creek cover the period beginning in 1956, and prior to this our parent company, Kennecott Copper Corporation, was an active producer and explorer.

At present, Bear Creek is seriously considering the development of copper and copper-zinc-silver deposits in the Ambler District near Kobuk on the south flank of the Brooks Range. We are also exploring other parts of Alaska, and are encouraged by the unexplored nature of what we see and the favorable geologic setting. We feel that additional mineral deposits can be discovered in Alaska.

It is clear that the costs of development and production in Alaska will be significantly higher than in the mining states of the west, and it is clear that real dollar incentives will be required to start a viable, long-lived Alaskan mining industry. On the other hand, mining is one of the very few industries which might be developed in rural Alaska, and which might lift the burden of supporting rural populations from the shoulders of the state and federal governments. Incentives such as infrastructure support, for roads, railroads, ports and communication, funded by both state and federal agencies, or federal tax credits for Alaskan development or production income, would have a more far-reaching and significant impact on the economics of a new mine in Alaska than minor variations in the current special tax structure. These types of incentives have been responsible for the dramatic progress in rural Canada over the last decade or so.

In principle, Bear Creek would like to see its operations taxed on the same basis as other industries or businesses, without special loadings or special taxes. At the present time, Alaska has a special tax on mining, the 7% Mining License Tax on net income. The proposed revisions of this tax, as presented here today in House Bill 878, will result in a clearer, more agreeably interpreted tax law, and, because the 7% rate is retained, will promote a feeling of stability concerning mineral taxation in Alaska which will have a positive effect on decisions to explore for minerals and develop mines in Alaska.

Additional taxes would be a strong disencentive, not only for development of new mines but for the exploration necessary to make new discoveries. Reduction of special taxes would be accepted as recognition that a mining industry would be a welcome and contributory state citizen, that the State of Alaska was willing to work with industry to derive some benefit from its presently untapped, unproductive mineral resources.

BOX 9. DISHMAN BRANCH • 7821 EAST SPRAGUE AVENUE • SPOKANE, WASHINGTON 99213 • PHONE: 509-924-2600 • TWX: 509-328-8570

The revised Mining License Tax, HB 878, with its implied stability, is a step in the right direction. To further clarify its language, to provide conformity with federal tax law, and to yield legislation acceptable and workable in our view, Bear Creek respectfully submits some changes as shown on the attached copies of pages 2 and 3 of HR 878 (points were explained).

We feel the addition of these elements will enhance the legislation in clarifying its intent and smoothing out the tax burden it would otherwise impose in the startup years of a new operation or during periods of fluctuating market conditions which are inevitable in the industry. A stable, viable, long-lived mining industry will provide the maximum benefit to both the state and the industry.

I thank you for this opportunity to work with you and your committee to this end.

sand and gravel. The Department of Natural Resources shall certify to the department the date upon which production began from the mining business operation, and the department shall issue a certificate of exemption to the applicant after this certification. A person must apply for an exemption certificate in the first year of production from the mining business operation in order to qualify for the exemption under this section.

(d) If mining business operations are conducted in two or more places within the state by one person, those operations may be at the person's option considered as one mining business, and the tax shall be computed upon the net proceeds of all those mining business operations.

* Sec. 2. AS 43.65 is amended by adding new sections to read:

Sec. 43.65.015. NET PROCEEDS. (a) In this chapter, "net proceeds" means the total gross receipts from the mining business less the following deductions:

(1) all expenses incurred directly in the extraction of minerals in the state;

(2) all expenses incurred in transporting the minerals from the point of extraction to any further processing plant where only necessary treatment processes are applied to obtain a commercially marketable product;

(3) all expenses directly related to the production, refining, crushing, screening or other necessary process incurred to make a commercially marketable product;

(4) the actual selling expenses incurred in marketing the product;

(5) all expenses incurred in transporting the marketable product to a buyer;

(6) depreciation of the mining business equipment, works,

plant and facilities used directly in the extraction, transportation and processing phases of the mining business, in accordance with sec. 167 of the Internal Revenue Code (26 U.S.C. sec. 167);

(7) amortization of exploration and mining development costs not included in (6) of this subsection;

(8) an allowance for depletion on a cost or percentage basis at the rates set out in secs. 611--614 of the Internal Revenue Code as amended (26 U.S.C. secs. 611--614) except that the allowance for depletion may not exceed 50 per cent of the taxpayer's net proceeds calculated before the allowance for depletion.

(9) net operating losses as set out in the Internal Revenue Code

(b) If the taxpayer has expenses within the state other than those specified in (a) of this section, such as general overhead expenses, relating to the business of mining or to the business of mining and other business activities, the deductions shall be apportioned in the ratio which the direct expenses of the mining business within the state under (a) of this section bear to the total direct expenses of all business activities of that taxpayer in the state.

(c) Except for wages paid during temporary travel out of the state by an employee who is domiciled in the state, the deductions allowed in (a) and (b) of this section do not include wages or other payments for services not performed in the state.

(d) If a person is engaged in the business of mining and the only receipts from the business are royalties, the net proceeds of the mining business are the royalties received less the depletion allowance under sec. 15(a)(8) of this chapter.

Sec. 43.65.017. GROSS RECEIPTS. (a) In this chapter, "gross receipts" means all revenue received, including royalties, rental payments, and all other compensation from the business of mining. Gross receipts include the actual amount received during the year for the

IN THE HOUSE

BY THE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

HOUSE BILL NO. 56

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the Alaska Mining License Tax; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 43.65.010 is repealed and re-enacted to read:

Sec. 43.65.010. MINING LICENSE AND TAX. (a) For the privilege of engaging in the business of mining in the state, a person shall first apply for and obtain a license from the department. The license fee is $25, which must accompany the application for a license.

(b) There is also levied an annual license tax on each person engaging in the business of mining in the state computed on the net proceeds of the taxpayer from the mining business. The license tax shall be computed according to the following table:

If the net proceeds are:	Then the tax is:
Over $40,000 but not over $100,000	3 per cent of the excess over $50,000
Over $100,000 but not over [illegible]	$1,500 plus 5 per cent of the excess over $100,000
Over $[illegible]	~~$2,800 plus 7 per cent of the excess over $100,000~~

(c) Upon application and receipt of an exemption certificate, a new mining business operation is exempt from the license tax levied by this chapter for three and one-half years after production from the mining business operation begins. The tax exemption granted to new mining business operations does not apply to the business of mining

the department the date upon which production began from the mining business operation, and the department shall issue a certificate of exemption to the applicant after this certification. A person must apply for an exemption certificate in the first year of production from the mining business operation in order to qualify for the exemption under this section.

(d) If mining business operations are conducted in two or more places within the state by one person, those operations are considered as one mining business, and the tax shall be computed upon the net proceeds of all those mining business operations.

* Sec. 2. AS 43.65 is amended by adding new sections to read:

Sec. 43.65.015. NET PROCEEDS. (a) In this chapter, "net proceeds" means the total gross receipts from the mining business less the following deductions incurred during the taxable year:

(1) all expenses incurred directly in the extraction of minerals in the state;

(2) all expenses incurred in transporting the minerals from the point of extraction to any further processing plant where only necessary treatment processes are applied to obtain a commercially marketable product;

(3) all expenses directly related to the production, refining, crushing, screening or other necessary process incurred to make a commercially marketable product;

(4) the actual selling expenses incurred in marketing the product;

(5) all expenses incurred in transporting the marketable product to a buyer;

(6) depreciation of the mining business equipment, works, plant and facilities used directly in the extraction, transportation

and processing phases of the mining business, in accordance with sec. 167 of the Internal Revenue Code (26 U.S.C. sec. 1976);

(7) amortization of mining development costs not included in (6) of this subsection;

(8) an allowance for depletion on a cost or percentage basis at the rates set out in secs. 611 - 614 of the Internal Revenue Code as amended (26 U.S.C. secs. 611 - 614) except that the allowance for depletion may not exceed 50 per cent of the taxpayer's net proceeds calculated before the allowance for depletion.

(b) If the taxpayer has expenses within the state other than those specified in (a) of this section, such as general overhead expenses, relating to the business of mining or to the business of mining and other business activities, the deductions shall be apportioned in the ratio which the direct expenses of the mining business within the state under (a) of this section bear to the total direct expenses of all business activities of that taxpayer in the state.

(c) Except for wages paid during temporary travel out of the state by an employee who is domiciled in the state, the deductions allowed in (a) and (b) of this section do not include wages or other payments for services not performed in the state.

(d) If a person is engaged in the business of mining and the only receipts from the business are royalties, the net proceeds of the mining business are the royalties received less the depletion allowance under sec. 15(a)(8) of this chapter.

Sec. 43.65.017. GROSS RECEIPTS. (a) In this chapter, "gross receipts" means all revenue received, including royalties, rental payments, and all other compensation from the business of mining. Gross receipts include the actual amount received during the cyar for the sale of minerals whether or not the minerals were actually extracted

during that year.

(b) If minerals are sold or transferred at a price other than the true market price, such as when a wholly owned subsidiary transfers or sells the mineral to its parent at a price less than market value, gross receipts are the true market price or average market price per ton or other measurable unit of the mineral multiplied by the total units of the mineral sold or transferred during the year.

(c) Gross receipts from the business of mining sand and gravel include:

(1) receipts from the sale to customers directly from the pit or mine;

(2) receipts from the sale to customers at their place of business or their business site, including receipts relating to the delivery of the sand and gravel; and

(3) the average market value of sand and gravel from intercompany transfers of the minerals calculated immediately before the transfer, including intercompany transfers of sand and gravel to a ready-mix or concrete plant.

* Sec. 3. AS 43.65.020 is amended to read:

Sec. 43.65.020. TAXPAYER'S DUTIES. (a) A person subject to tax under this chapter shall make a return stating specifically the items of gross receipts [INCOME] from the business [PROPERTY], including royalty received and the deductions [AND CREDITS] allowed by this chapter, and other information for carrying out this chapter which the department [DEPARTMENT OF REVENUE] prescribes. The return shall show the mining license number and shall be signed by the taxpayer or his authorized agent, under penalty of perjury. If receivers, trustees, or assigns are operating the mining [PROPERTY OR] business, they shall make returns for the person engaged in the mining business [, OR THE

RECIPIENT OF ROYALTY IN CONNECTION WITH MINING PROPERTY]. The tax due on the basis of the returns shall be collected in the same manner as if collected from the person of whose business they have custody and control.

(b) A return made on the basis of the calendar year shall be filed [MADE] before March 15 [MAY 1] of the next year. A return made on the basis of a fiscal year shall be filed [MADE] before the fifteenth [FIRST] day of the third [FIFTH] month of the next fiscal year.

(c) The department [DEPARTMENT OF REVENUE] may grant a reasonable extension of time for filing returns, under regulations adopted [PRESCRIBED] by it. Except in the case of a taxpayer going abroad, no extension may be granted [MADE] for more than six months.

(d) A [TAXPAYER'S] return shall be filed with [MADE TO] the department [DEPARTMENT OF REVENUE AT JUNEAU] using the same tax year as the person uses in filing his federal income tax return. [A TAXPAYER SHALL MAKE HIS RETURN EITHER ON A CALENDAR YEAR OR FISCAL YEAR BASIS, IN CONFORMANCE WITH THE BASIS USED IN MAKING HIS RETURN FOR FEDERAL INCOME TAX PURPOSES.]

(e) The total amount of tax imposed by this chapter shall be paid on or before the due date of the tax return required under this section [THE 30TH DAY OF APRIL OF THE NEXT CALENDAR YEAR, OR, IF THE RETURN IS MADE ON THE BASIS OF THE FISCAL YEAR, THEN ON THE LAST DAY OF THE FOURTH MONTH OF THE NEXT FISCAL YEAR].

(f) [EVERY PERSON PROSECUTING OR ATTEMPTING TO PROSECUTE OR ENGAGING IN THE BUSINESS OF MINING IN THE STATE SHALL COMPLY WITH THE DEPARTMENT'S REGULATIONS AND SHALL KEEP SUCH RECORDS, GIVE SUCH STATEMENTS UNDER OATH, AND MAKE SUCH RETURNS AS THE DEPARTMENT OF REVENUE PRESCRIBES.]

(g) When the department considers it necessary, it may require a

person, by notice served upon him, to make a return, give statements under oath, or keep records as it considers sufficient to show whether or not the person is liable <u>for the</u> [TO] tax under this chapter. If a person fails to file a return at the time prescribed by law or regulation, or makes, wilfully or otherwise, a false or fraudulent return, the department shall make the return from its own knowledge and from such information as it can obtain [THROUGH TESTIMONY OR OTHERWISE]. A return so made and subscribed by the department is prima facie good and sufficient for all legal purposes.

* Sec. 4. AS 43.65.030 is amended to read:

Sec. 43.65.030. APPLICATION FOR RENEWALS. <u>A person engaged in the business of mining shall apply</u> [APPLICATION] for a renewal of a mining license <u>each year</u> [SHALL BE MADE] before <u>the 30th day of the first month of the person's tax year</u> [MAY 1 OF EACH YEAR].

* Sec. 5. AS 43.65 is amended by adding a new section to read:

Sec. 43.65.051. PENALTIES AND INTEREST. (a) If part of a deficiency in the tax is due to fraud with intent to evade the tax, then 50 per cent of the total amount of the deficiency, in addition to the deficiency, shall be assessed and collected. If this penalty is assessed, then the penalty in AS 43.05.220 does not apply.

(b) A person who is required under this chapter to pay the tax, make a return, keep records, or supply information who wilfully fails to pay the tax, make the return, keep the records, or supply the information, at the time required by law or regulations, is, in addition to other penalties provided by this chapter, guilty of a misdemeanor, and upon conviction is punishable by a fine of not more than $1,000, or by imprisonment for not more than one year, or by both.

(c) In this section, "person" includes an officer or employee of

a corporation or a member or employee of a partnership who is under duty to perform the act in respect to which the violation occurs.

(d) A person who wilfully attempts to evade the tax imposed by this chapter is, in addition to other penalties provided by this chapter, guilty of a felony and, upon conviction, shall be fined not more than $5,000, or imprisoned for not more than five years, or both.

(e) A person who wilfully makes and subscribes a return, statement, or other document required under this chapter which contains or is verified by a written declaration that it is made under the penalties of perjury which he does not believe to be true and correct as to every material matter is, in addition to other penalties provided by this chapter, guilty of a felony and, upon conviction, shall be fined not more than $5,000, or imprisoned for not more than three years, or both.

(f) A person who wilfully or knowingly aids, procures, or counsels the preparation or presentation in connection with any matter arising under this chapter of a return, affidavit, claim or other document, which is fraudulent or is false as to any material matter is guilty of a felony whether or not the falsity or fraud is with the knowledge or consent of the person required to present the return, affidavit, claim, or document, and, upon conviction, shall be fined not more than $5,000, or imprisoned for not more than three years, or both.

(g) A person who wilfully delivers or discloses to the department under this chapter any list, return, account, statement, or other document, known by him to be fraudulent or to be false as to any material matter shall be fined not more than $1,000, or imprisoned for not more than one year, or both.

* Sec. 6. AS 43.65.060(4) is amended to read:

(4) "new mining business operation [OPERATIONS]" means a mining operation [OPERATIONS] which began production after January 1, 1953, and which has not acquired the ownership or property of another mining business which has previously received an exemption certificate under sec. 10 of this chapter [OR WHICH HAVE NOT BEEN LIABLE TO PAY A MINING LICENSE TAX UNDER THIS CHAPTER ON NET INCOME SINCE JANUARY 1, 1948];

* Sec. 7. AS 43.65.060 is amended by adding new paragraphs to read:

(7) "business of mining" means a business operation for the extraction of minerals from the earth or water of the state , operated by a person

(A) who (i) owns and operates, (ii) works, or (iii) develops a mineral property, whether or not that property is currently producing a marketable product;

(B) who leases a mineral property and operates that property, whether or not it is producing a marketable product;

(C) who leases a mineral property and pays royalties, rents or other payments to the owner of the property; or

(D) who has an interest in a lease, concession, joint venture, or other agreement for the exploration or development, or extraction of a mineral property if royalties, rents, or other payments are to be paid for that interest;

(8) "department" means the Department of Revenue;

(9) "minerals" means asbestos, coal, sulphur, iron ore, lead, zinc. mercury, tin, chromite, bauxite, copper, gold, siver, platinum, potash, clay, stone, sand, gravel, and other valuable metals, ores and marketable earth or stone but not including oil and gas.

* Sec. 8. AS 43.65.050 and 43.65.060(1) - (3) are repealed.

* Sec. 9. This Act is retroactive to January 1, 1977.

* Sec. 10. This Act takes effect immediately in accordance with AS 01.-10.070(c).

STATE
of ALASKA

MEMORANDUM

TO: Debbie Behr
Legislative Affairs Agency
5th Floor, Capitol Building

DATE : February 7, 1977

FROM: Gary L. Jenkins
Director
Audit Division

SUBJECT: House Bill No. 56

House Bill No. 56, which is a major revision of the Mining License Tax Bill, was introduced late in the last Legislative session as House Bill 878. This Bill is identical to the original HB 878, except for some changes which reflect legislation that was enacted by the 1976 Legislature.

Early in the 1975 Legislative session, Governor Hammond introduced a Mineral Severance Tax Bill which generated violent opposition from the mining industry. The Governor agreed to withdraw that Bill if the representatives of the mining industry would meet with the Department of Revenue personnel in an effort to rewrite the current law so that it would be in more understandable and enforceable terms. The Department held hearings in the fall of 1975, receiving a very substantial amount of input from the mining industry. The result of those hearings, along with written input we received from interested parties, was HB 878, which was introduced in the Legislature. The basic thrust of that Bill was to clarify the many sections of the original Act which were extremely vague and in some cases impossible to understand. With this law, the mining industry would be able to clearly understand the methods of calculating net proceeds from their operations in the State of Alaska and computing the tax thereon. By having a well defined law which would not need to be amended in the future, it was hoped that this would create a stable taxation environment in the State and would encourage additional mining development.

It is anticipated that there will be no additional revenue generated or lost through the passage of this legislation.

February 10, 1977

Ms. Sally Smith
Alaska State Representative
Pouch V
Juneau, AK 99811

Dear Ms. Smith:

We appreciate your concern for our interest in mining in Alaska and your transmittal of a copy of H.B. No. 56 entitled "An Act Relating to the Alaska Mining License Tax; and providing for an effective date," which was introduced 1/14/77.

In Sec. 1, (b), I recommend a flat rate of 5% (no more) on the net proceeds derived from mining in the State of Alaska.

In Sec. 1, (d), I think it would be best to tax each operation separately and not to consider mining business operations conducted in two or more places as one mining business.

A further provision should be included for a mining business to carry forward net operating losses.

A further provision should be included for deduction of wages and payments for services performed out-of-state, where these are directly related to in-state operations.

We appreciate your consideration of this matter.

Sincerely yours,

John G. Kuhn

February 18, 1977

The Honorable Sally Smith
Alaska State Representative
Pouch V
Juneau, Alaska 99811

Dear Ms. Smith:

Thank you for your letter of February 15, 1977 advising me of the schedule of the House Resources Committee for the next three weeks. Your thoughtfulness is greatly appreciated.

I am sorry that I have not had a chance to respond to your letter of January 24, 1977 regarding HB-56 (Mining License Tax). U.S.BORAX's application for a permit to construct a road to our Quartz Hill molybdenum prospect near Ketchikan is in the draft E.I.S. review process and this has required a good part of my time. In this regard, I have enclosed for your information a copy of my letter to the Ketchikan Chamber of Commerce of February 15, 1977 requesting their support, as well as copy of a statement I made at their annual awards banquet meeting February 8.

In regard to the proposed amendments to the Mining License Tax, we do have some comments and we will get a letter off to you next week.

Sincerely yours,

Eugene D. Smith
Assistant Manager
Environmental Affairs

Mr. Reinhart Klein, President
Ketchikan Chamber of Commerce
Mary Frances Towers
Ketchikan, Alaska 99901

Dear Mr. Klein:

In follow up of our appearance at the Ketchikan Chamber of Commerce Meeting on February 8, we are writing to ask for your support for our application to the Forest Service for a special use permit to construct a primitive type access road to our Quartz Hill mineral property. As you know, we have agreed to the Boca de Quadra-Keta River route selected by the Forest Service. The road is required to conduct development drilling and bulk sampling to obtain data for use in completion of necessary engineering and feasibility studies. These studies will include an evaluation of all possible environmental impacts of a future mine development in this area and the action necessary to avoid or minimize adverse impacts.

We believe the question of surface access can be put into perspective by considering the answers to the following questions:

1. Is U.S.BORAX entitled to access?

   Yes, the Forest Service acknowledged the property interest we have acquired and acknowledges that we have a right to access.

2. Should U.S.BORAX be given road access or should it be limited to helicopter access?

   We believe we are entitled to road access because helicopter access alone is not a reasonable means of access. Total dependence on helicopters would subject the project to cost and operating risks (safety and financial) that would probably prohibit the capital investment necessary to see this project through feasibility (the evaluation upon which the decision to develop will be made).

UNITED STATES BORAX & CHEMICAL CORPORATION • 3075 WILSHIRE BOULEVARD • LOS ANGELES, CALIFORNIA 90010 • (213) 381-5311
MAIL ADDRESS: P. O. BOX 75128, SANFORD STATION, LOS ANGELES, CALIFORNIA 90075

3. Would road access cause prohibitive environmental damage?

   We believe it would not and we believe the Draft Environmental Impact demonstrates that it would not. The impact statement concludes that the adverse environmental impact of the Keta Road on fish habitat is inconsequential insofar as sediment, flow, or rearing and spawning area changes are concerned (see Page 15 of D.E.I.S.).

4. Will the bulk sampling cause a significant environmental impact?

   Again, we believe the D.E.I.S. demonstrates that it would not. The bulk sampling is a comparatively minor type operation involving about 5 to 10 acres and the removal of 25,000 to 60,000 tons of rock by underground workings from which samples will be taken and removed for metallurgical tests. Such a quantity of rock would constitute a 10-foot high pile covering only two and a half acres with very little, if any, visual impact.

   We would like to point out that the decision as to the type of access allowed (helicopter or road) does not alter the bulk sampling program other than to introduce additional costs and risks if helicopter is selected. Environmental impacts of the bulk sampling program will be the same by either means of access.

5. Will the construction of the road prohibit that area of the mainland lying south of the Granite Fjords Wilderness Study Area from being designated wilderness?

   We believe that it would, but we also believe that the mineral discovered to date at Quartz Hill should have already eliminated such an area from wilderness consideration.

6. Will the activity at Quartz Hill have any effect on the wilderness study or classification of Granite Fjords?

   No, the work area cannot be seen from the North and there will be no visual or noise impacts in the area designated as Granite Fjords Wilderness Study Area.

We believe the question is: Will mineral resource development or wilderness be the best use for this area considering the potential extent and value of

mineralization against wilderness values such as scenic enjoyment and potential use or wilderness? Road access to Quartz Hill is critical to its development but such a road and such development will be in conflict with the proposed Misty Fjords Wilderness Area. Will it be in the best public interest to exclude mining from this area or to reduce the size of demands for wilderness?

We believe the right of road access is a matter of major importance to any development on National Forest land and denial of road access to Quartz Hill could adversely affect any future mineral exploration in the Tongass.

We hope you share our opinions and will submit your views on this matter in writing to the Forest Service on or before March 6, 1977.

Please write to: J. S. Watson, Forest Supervisor
Ketchikan Area Tongass National Forest
P. O. Box 2278
Ketchikan, Alaska 99901

Your participation could be very important to the final decision on this land use.

Very truly yours,

E. D. Smith

STATEMENT TO BE MADE TO CHAMBER OF COMMERCE

KETCHIKAN, ALASKA - FEBRUARY 8, 1977

MANY OF YOU KNOW THAT IN MARCH OF LAST YEAR, U.S.BORAX ANNOUNCED ITS DISCOVERY AT QUARTZ HILL. THIS ANNOUNCEMENT WAS PROMPTED BY OUR APPLICATION TO THE U.S. FOREST SERVICE FOR AN ACCESS ROAD TO OUR CLAIMS WHICH ARE LOCATED IN THE TONGASS NATIONAL FOREST. OUR QUARTZ HILL PROJECT, AS BOB KISTLER HAS EXPLAINED, IS STILL IN THE EXPLORATION STAGE AND WILL BE FOR PROBABLY TWO MORE YEARS. THE RESULTS OF OUR EXPLORATION TO DATE ARE VERY ENCOURAGING BUT CONSIDERABLE WORK IS REQUIRED TO DETERMINE WHETHER WE HAVE A MINE.

I WOULD LIKE TO EMPHASIZE THAT THE EXPLORATION AND DEVELOPMENT OF A MINERAL DEPOSIT OF THE TYPE AT QUARTZ HILL, REMOTELY LOCATED AND SUBJECT TO THE WEATHER CONDITIONS OF THE AREA, IS A LONG TERM, HIGH COST AND HIGH RISK VENTURE THAT WILL REQUIRE THE EFFORTS OF MANY PEOPLE, SOPHISTICATED TECHNOLOGY, TIME, A GREAT DEAL OF MONEY AND THE COURAGE TO TAKE THE RISK. IT WILL ALSO REQUIRE THE COOPERATION AND ASSISTANCE OF MANY PEOPLE AND GOVERNMENTAL AGENCIES.

AS WE HAVE STATED, WE ARE STILL IN THE EXPLORATION PHASE OF THIS VENTURE. WE HAVE TALKED ABOUT THE POTENTIAL VALUE OF THE PROPERTY AND GENERALLY THE ASPECTS OF ITS POSSIBLE FUTURE DEVELOPMENT BECAUSE EVERYONE HAS ASKED THESE QUESTIONS. UNFORTUNATELY, SOME PEOPLE HAVE HAD THE OPINION THAT WE ARE FARTHER ALONG WITH THE PROJECT THAN WE ARE, AND SOME PEOPLE MAY HAVE EVEN THOUGHT WE WERE READY TO COMMENCE OPERATIONS OF A SIZE AND SCOPE THAT WOULD CREATE A MAJOR IMPACT ON THE AREA, BOTH ECONOMICALLY AND ENVIRONMENTALLY. WE ARE NOT THAT FAR ALONG AND WE HOPE THE DRAFT ENVIRONMENTAL IMPACT STATEMENT AND OUR MEETINGS HERE IN KETCHIKAN WILL PUT OUR PROJECT IN PROPER PERSPECTIVE; THAT IS, AN EXPLORATION PROJECT WITH PROMISING POTENTIAL TO WHICH WE PROPOSE TO CONSTRUCT A PRIMITIVE TYPE ACCESS ROAD.

THE DRAFT ENVIRONMENTAL IMPACT STATEMENT (DEIS) EXPLAINS THAT THE STATEMENT WAS PREPARED ON THE ROAD ACCESS AND ALTERNATIVES ONLY AND NOT THE MINE NOR ANY OF THE SUPPORT FACILITIES OTHER THAN BULK SAMPLING (p.2). IT EXPLAINS THAT THE IMPACTS OF THE MINE ARE NOT INCLUDED IN THE STATEMENT BECAUSE THE SIZE, METHODS OF MINING AND MILLING, EXACT LOCATION, AND EXTENT OF THE OREBODY HAVE NOT AS YET BEEN DETERMINED (p.2). IT IS ACKNOWLEDGED BY THE FOREST SERVICE THAT FUTURE DEVELOPMENT WILL CREATE

IMPACTS NOT ASSESSED IN THE STATEMENT BUT THEY CANNOT BE EVALUATED BASED ON PRESENTLY KNOWN DATA (p.2). I WOULD LIKE TO ADD THAT THE ACTION BEING REQUESTED IS TO ALLOW US TO REASONABLY PURSUE THE EXPLORATION OF THE PROJECT AND TO GATHER ALL THE ENGINEERING AND ENVIRONMENTAL DATA REQUIRED TO EVALUATE ALL ASPECTS OF THE PROJECT. WE BELIEVE THIS IS A RESPONSIBLE REQUEST THAT SHOULD BE GIVEN RESPONSIBLE CONSIDERATION.

THE DEIS EXPLAINS THAT U.S.BORAX HAS PROPOSED TO CONSTRUCT A 14-FOOT WIDE PRIMITIVE (p.27) AND TEMPORARY (p.33) MINING EXPLORATION ROAD FROM TIDEWATER TO THE MINING CLAIMS WHICH IT HAS LOCATED ON A DISCOVERY OF MOLYBDENUM DISULFIDE WE CALL "QUARTZ HILL". U.S.BORAX'S PURPOSE FOR CONSTRUCTING SUCH A ROAD IS TWOFOLD. WE WANT SURFACE ACCESS FROM AN OCEAN DOCK FOR EQUIPMENT, MACHINERY, ETC. NECESSARY TO CONDUCT DEVELOPMENT DRILLING,AND THE COLLECTION AND REMOVAL OF A BULK SAMPLE. SUCH SURFACE ACCESS ALSO IS CRITICAL TO THE COMMITMENT OF CORPORATE FUNDS TO THIS PROJECT. WE EXPECT TO SPEND $5 TO $6 MILLION OVER THE NEXT THREE YEARS (THIS DOES NOT INCLUDE THE ROAD) AND WITHOUT SURFACE ACCESS IT WILL BE DIFFICULT, IF NOT IMPOSSIBLE, TO JUSTIFY SUCH EXPENDITURES.

DEFERMENT OF AN ACCESS ROAD ALSO WOULD PLACE AN UNREASONABLE DELAY AND COST BURDEN ON THE PROJECT. NEITHER THE ROAD NOR ANY CONSTRUCTION COULD COMMENCE UNTIL THE COMPLETE

PROJECT HAD GONE THROUGH PRELIMINARY ENGINEERING, AN ENVIRONMENTAL IMPACT STATEMENT (EIS) AND APPROVAL OF ALL PERMITS. SUCH A PROCESS COULD REQUIRE ONE TO TWO YEARS AND WOULD SUBJECT THE PROJECT TO AN UNREASONABLE COST BURDEN.

THE DEIS, IN CONSIDERING THE PROPOSED ACCESS ROAD, ESTIMATES THE ENVIRONMENTAL IMPACT OF SUCH AN ACCESS ROAD AND EXPLORES THE ALTERNATE METHODS BY WHICH THE PROPOSED ACTION MIGHT BE ACCOMPLISHED. THE DEIS ALSO ESTIMATES THE SOCIO-ECONOMIC IMPACT OF THE ACTION OR DENIAL OF THE ACTION. AS MANY OF YOU KNOW, THE ALTERNATES WHICH HAVE BEEN CONSIDERED ARE:

(A) SEVERAL ACCESS ROAD ROUTES, THE PRINCIPAL ONES BEING THE KETA AND THE BEAVER ROUTES

(B) HELICOPTER ACCESS

(C) AERIAL CABLEWAY ACCESS

(D) WILDERNESS

(E) NO ACTION

THE DECISION AS TO THE ACTION ALLOWED RESTS WITH THE FOREST SERVICE. IN MAKING ITS DECISION, IT MUST CONSIDER:

(A) THE PROPERTY RIGHTS U.S.BORAX HAS ACQUIRED BY ITS DISCOVERY AND LOCATION OF THE SUBJECT MINING CLAIMS IN ACCORDANCE WITH THE MINING LAW OF 1872 (p.1,38).

(B) THE ORGANIC ACT OF 1897 FROM WHICH THE AUTHORITY AND REGULATIONS OF THE FOREST SERVICE ARE DERIVED (p.1).

(C) THE MINING AND MINERALS POLICY ACT OF 1970 WHICH DECLARES IN PART THAT IT IS THE CONTINUING POLICY OF THE FEDERAL GOVERNMENT IN THE NATIONAL INTEREST TO FOSTER AND ENCOURAGE PRIVATE ENTERPRISE IN THE ORDERLY AND ECONOMIC DEVELOPMENT OF DOMESTIC MINERAL RESOURCES, RESERVES, AND RECLAMATION OF METALS AND MINERALS TO HELP ASSURE SATISFACTION OF INDUSTRIAL SECURITY AND ENVIRONMENTAL NEEDS (p.1).

(D) THE OPINION AND WISHES OF THE PEOPLE.

IN REGARD TO THE PROPERTY RIGHTS WE HAVE ACQUIRED AT QUARTZ HILL BY THE LOCATION OF MINING CLAIMS, WE WOULD LIKE TO EXPLAIN THAT THE RIGHT OF A QUALIFIED PARTY TO ACQUIRE A POSSESSORY INTEREST IN MINERALS OF VALUE FOUND AND LOCATED IN ACCORDANCE WITH FEDERAL AND STATE STATUTES IS WELL RECOGNIZED LAW. THE FOREST SERVICE ACKNOWLEDGES THE STATUTORY RIGHTS GRANTED BY THE MINING LAW OF 1872, INCLUDING THE RIGHT OF THE PROSPECTOR AND MINER TO ENTER UPON THE NATIONAL FORESTS FOR THE EXPRESS PURPOSE OF PROSPECTING AND MINING (p.1,38). THE FOREST SERVICE CLAIMS THE RIGHT TO REGULATE ACCESS BUT THEY ACKNOWLEDGE THAT SUCH REGULATION CANNOT BE UNREASONABLY RESTRICTIVE OR EXCESSIVELY BURDEN-

SOME (p.1,38). IT IS OUR OPINION THAT THEY MAY HAVE THE RIGHT TO REGULATE ACCESS BUT THEY CANNOT DENY ACCESS OR LIMIT IT TO SUCH A MEANS OR SUCH A ROUTE AS TO PROHIBIT DEVELOPMENT AND OPERATION OF A MINING PROPERTY.

THE MINING AND MINERALS POLICY ACT WAS PASSED IN 1970 IN RECOGNITION OF THE IMPORTANCE OF A SOUND AND RELIABLE DOMESTIC MINERALS INDUSTRY. THE WISDOM AND FORESIGHT OF THIS ACT WAS SUBSTANTIATED IN THE SECRETARY OF INTERIOR'S FIRST ANNUAL REPORT ON THE STATE OF THE DOMESTIC MINING, MINERALS AND MINERAL RECLAMATION INDUSTRIES IN 1972. WE BELIEVE U.S.BORAX'S PROPOSED ACTION IS IN KEEPING WITH THIS POLICY AS IT WILL PROVIDE ACCESS TO A LARGE SUPPLY OF POTENTIAL MOLYBDENUM ORE THAT COULD ENHANCE THE ECONOMIC WELL-BEING AND SECURITY OF ALASKA AND THIS NATION.

IN REGARD TO THE OPINION AND WISHES OF THE PEOPLE, WE SUGGEST THAT YOU CONSIDER THE PROPOSED ACTIONS (ALTERNATES) SET FORTH IN THE DEIS AND THE RECOMMENDATIONS OF THE FOREST SERVICE,AND WE URGE YOU TO SUBMIT YOUR COMMENTS TO THE FOREST SERVICE IN WRITING ON OR BEFORE MARCH 6, 1977. PUBLIC INPUT IS ONE OF THE PURPOSES OF THE DEIS AND WE BELIEVE YOUR COMMENTS COULD HAVE AN IMPORTANT INFLUENCE ON THE OUTCOME. WE ALSO

WANT TO REMIND YOU THAT ONLY THE WRITTEN COMMENTS RECEIVED BY THE FOREST SERVICE DURING THE 60-DAY COMMENT PERIOD CAN BE CONSIDERED AS PART OF THE FINAL EIS.

THOSE OF YOU WHO HAVE REVIEWED THE DEIS KNOW THAT THE FOREST SERVICE SELECTED THE KETA ROUTE BASED ON THE DETERMINATION THAT THIS ROUTE WOULD HAVE THE LEAST ADVERSE EFFECT ON THE ENVIRONMENT (p.5). THIS IS THE ROAD ROUTE THAT STARTS AT THE HEAD OF BOCA DE QUADRA AND PROCEEDS TO THE CLAIM AREA BY WAY OF THE KETA RIVER AND WHAT WE CALL HILL CREEK. U.S.BORAX ACCEPTS THE RECOMMENDATIONS OF THE FOREST SERVICE BASED ON THE PRESENTLY KNOWN DATA CONSIDERED BY THE DEIS. WE HAVE SOME CONCERN WITH THIS ROUTE AND IN PARTICULAR THE SNOW AVALANCHE PROBLEM (p.75). WE PLAN TO COMMENT ON THIS PROBLEM AND OTHER ASPECTS OF THE DEIS BUT WE WILL NOT DISAGREE WITH SAID SELECTION OF THE KETA ROUTE.

WE WISH TO EMPHASIZE THAT THE DEIS COVERS A PRIMITIVE AND TEMPORARY ROAD FOR THE PURPOSE OF CONDUCTING DEVELOPMENT DRILLING AND BULK SAMPLING. IT WILL BE CONSTRUCTED SO THAT IT CAN BE OBLITERATED AND RECLAIMED TO CAUSE THE LEAST ENVIRONMENTAL IMPACT SHOULD IT HAVE TO BE ABANDONED.

WE BELIEVE THE ROAD, THE DEVELOPMENT DRILLING AND THE BULK SAMPLING WILL HAVE MINOR IF NOT INSIGNIFICANT IMPACT ON THE PROJECT AREA. WE KNOW THAT FISH AND FISH HABITAT ARE OF PRIME CONCERN AND THIS CONSIDERATION INFLUENCED THE SELECTION OF THE KETA ROUTE. THE DEIS EXPRESSES THE VIEW THAT IN LIGHT OF THE NATURAL IMPACT WHICH OCCURS IN THE KETA, IT IS BELIEVED THAT THE IMPACT OF THE KETA ROAD ON FISH HABITAT IS INCONSEQUENTIAL INSOFAR AS SEDIMENT, FLOW OR REARING AND SPAWNING AREA CHANGES ARE CONCERNED.(p.15).

IN REGARD TO CHEMICAL TOXICITY FROM MINERAL EXPLORATION AND SAMPLING, THE BULK SAMPLING WILL EXPOSE AN ESTIMATED 25,000 TO 60,000 TONS OF CRUSHED ROCK TO SURFACE WATERS. SUCH WATERS WILL BE COLLECTED, MONITORED AND TREATED AS NECESSARY BEFORE DISCHARGE TO THE SURFACE WATER SYSTEM OF THE AREA. WE EXPECT LITTLE IF ANY TREATMENT WILL BE NECESSARY OTHER THAN THE COLLECTION OF THAT SEDIMENT THAT MIGHT ENTER COLLECTION PONDS. MOLYBDENITE AND THOSE MOLYBDENUM MINERALS THAT MAY OCCUR IN THE PROJECT AREA ARE RELATIVELY INSOLUBLE IN THE CHEMICAL ENVIRONMENT OF THE PROJECT AREA. THE CHEMICAL ENVIRONMENT OF THE AREA WOULD CAUSE THOSE SOLUBLE MOLYBDENUM COMPOUNDS THAT MIGHT OCCUR AS A RESULT OF OXIDATION, TO FORM INSOLUBLE COMPOUNDS WITHIN A SHORT DISTANCE OF THEIR POINT OF ORIGIN.

WE BELIEVE, AND WE BELIEVE THE DEIS CONCLUDES, THAT THE POTENTIAL RESOURCE BENEFITS OF OUR PROPOSED ACTION, AN ACCESS ROAD TO QUARTZ HILL, FAR OUTWEIGHS THE TEMPORARY IMPACT ON THE ENVIRONMENT OF OUR PROPOSED ACTION. THE REAL VALUE OF OUR DEPOSIT IS NOT KNOWN TO US AT THIS TIME NOR CAN WE JUDGE OR ESTIMATE THE IMPACT OF THE ULTIMATE DEVELOPMENT AND OPERATION OF THE PROPERTY SHOULD THIS OCCUR. THEREFORE, WE BELIEVE WE ARE TAKING A RESPONSIBLE POSITION WHEN WE REQUEST ACCESS TO MAKE THE TESTS AND GATHER THE INFORMATION NECESSARY TO DETERMINE FEASIBILITY AND THE IMPACTS OF DEVELOPMENT BEFORE PROCEEDING WITH ANYTHING MORE THAN A PRIMITIVE ROAD.

I WANT TO EMPHASIZE IN CLOSING THAT IF U.S.BORAX DEVELOPS AND OPERATES THE QUARTZ HILL PROPERTY, IT WILL DO SO IN A MANNER THAT MEETS ALL ITS RESPONSIBILITIES. WE DESIRE TO DO A GOOD JOB AND MEET OUR CORPORATE OBLIGATIONS AS WELL AS OUR RESPONSIBILITIES TO THE ENVIRONMENTAL AND PUBLIC AFFAIRS OF THE ENTIRE COMMUNITY.

EDS

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPARTMENT OF COMMERCE &
ECONOMIC DEVELOPMENT

OFFICE OF THE COMMISSIONER / POUCH D — JUNEAU 99811

February 23, 1977

File in HB 156 & HB 56

Honorable Alvin Osterback
Chairman
House Resources Committee
Alaska State Legislature
Juneau, Alaska 99811

Dear Mr. Osterback:

Thank you for your letter of February 14, informing us of your upcoming meetings on HB 156 and HB 56.

This department has no testimony to present to the committee on either bill. Rather, we would support the positions of the departments of Natural Resources and Revenue since they are more directly involved with these matters.

Yours truly,

H. Phillip Hubbard
Commissioner

Alaska State Legislature

House

JUNEAU ALASKA

Memo to: Rep. Alvin Osterback, Chairman
House Resources Committee

Date: February 14, 1977

From: Rep. Sally Smith, Chairman
Subcommittee on Parks, Timber and Lands

The Subcommittee on Parks, Timber and Lands met this afternoon to discuss:

HB 73--------Keystone Canyon State Park.
This bill was referred to the Committee as a whole for their discussion.

HB 56--------Mining Taxation
This bill was referred to the committee as a whole for full hearings.

HJR 15-------Geological and Geographical data in offshore areas
This Resolution was given a Do Pass recommendation from the Subcommittee to the Committee.

Sincerely,

Sally

Dear Mr. Hawley.

We have scheduled HB 56 relating to Alaska Mining License Tax on Friday, 4 March 1977. I hope that you can get some input to us by that time.

I realize that this is prior to mid-March time you asked for and I hope that it does not inconvenience you.

As we are trying to get all legislation through in a 100 day session, we are trying to get bills through the Committee as fast as possible.

We would be pleased to have someone here representing your organization on that date, for testimony.

Thank you for your cooperation.

Sincerely,

Alvin Osterback Jr

Juneau, AK 99811

Dear Mr. Osterback:

The Alaska Miners Association would like to respond on HB-56 introduced at the request of the Governor. However, because of two or three pressing matters, we would like to delay formal response until mid-March. Could this be worked into your hearings schedule?

The association will consider HB-56 and other possibilities at a special meeting in Anchorage February 23-24, and will have a definite position at that time.

Sincerely,

C. C. Hawley

February 9, 1977.

Ms. Sally Smith,
Alaska State Legislature,
House of Representatives,
Pouch V,
Juneau, Alaska, 99811.

Dear Sally:

Thank you for your February 3 letter and the copy of House Bill No. 56, which is "An Act relating to the Alaska Mining License Tax".

At this late date, I doubt that my comments will serve any purpose, but will pass on a little input anyway.

Last year we had a battle with HB 878, which I believe was finally held in committee.

As far as the small miner is concerned, HB 56 will not hurt them too much as most small miners do not have net proceeds in excess of $40,000. For the big mining company though, HB 56 adds another 7% tax.

At the present time no significant mining exists in Alaska. The principal reason why no new mines are being developed is the high taxes. Mining companies must pay:

a. 48% U.S. Corporate Tax
b. 9.4% Alaska Corporate Tax
c. 7% Mining License Tax
64.4% Taxes - Total

This is the highest rate of taxation for any state in the Union. It is almost an impossibility for any company to bring in a major mine, considering this terrific tax handicap.

In order to bring in major mines, incentives should be considered. I notice HB 56 does allow for a 3-1/2 year mining License Tax exemption. This is a start in the right direction. I think the 3-1/2 year Tax exemption period should be increased to 5 years and the computation of the tax as shown on page 1 should be reduced considerably, so that Alaska does not have the highest rate of taxation for any state in the United States. Our operating costs in Alaska are more than twice as high as in the contiguous 48 States. We apparently can do very little in order to reduce our operating costs but we can certainly reduce our tax rates which may provide the encouragement for large companies to attempt to bring in major mines.

Sincerely,

Doug

Douglas B. Colp.

MEMORANDUM

February 7, 1977

SUBJECT: Analysis of HB 56 Relating to the Alaska Mining License Tax (W.O.# 3267)

TO: The Honorable Sarah Smith

FROM: George Utermohle
Research Analyst

In response to your request for an analysis of HB 56 as introduced by the Governor, we have compiled the attached report. Attached to the report are the fiscal notes for HB 878 and CSHB 878.

We were not able to complete a comparison of the different tax rates imposed by other states, which are discussed in Part C, because we could not develop a system which would fairly evaluate the different taxing strategies. We will send this information to you when we have developed an unbiased method of comparison.

A CURSORY ANALYSIS OF HB 56 RELATING TO THE ALASKA MINING LICENSE TAX

Taxation of Mineral Production in Alaska

A. General Description of Existing Tax

B. General Description of HB 56

C. Occupation Taxes or Net Proceeds Taxes Levied on the Mining Industry in Other States

D. Incidence of the Alaska Mining License Tax

E. Reconciling HB 56 with CSHB 878

Appendices:

Appendix A Proposed Amendments to HB 56

Appendix B Comparison of "Alaska Mining License Tax" with Similar Law in Other Western States

Taxation of Mineral Production in Alaska

Alaska has imposed a tax upon mining activities in the state under the provisions of the Mining License Tax (AS 43.65) since 1949. The provisions of the mining license tax have changed only slightly since that time.

A. General Description of Existing Tax

The Alaska Mining License Tax is an occupations tax levied upon the net proceeds from mineral production. The net proceeds from mineral production are the gross income less deductions for depreciation, taxes, general expenses, and overhead attributable to the expense of operating the mine and the ordinary treatment processes. The depletion allowance, federal income taxes, and the Alaska Mining License Tax itself are not deductible from the gross income. The depletion allowance is, however, deducted from the net proceeds to determine the taxable income provided that the depletion allowance shall not exceed 50% of the net income. The depletion allowance is calculated as a percentage of the gross income minus the rents and royalties paid.

The percentage depletion rates established for the Alaska Mining License Tax are:

Coal	10%
Metal mines, fluorspar, flake graphite vermiculite, beryl, feldspar, mica talc, lepidolite, spodumene, varite, ball and sagger clay, or rock asphalt, and potash mines or deposits	15%
Sulphur mines or deposits	23%

All new mining operations, except the mining of sand and gravel, are exempt from taxation for the first three and one-half years of production. The income from all mining operations owned by one person must be aggregated for the purposes of determing the tax.

Oil and gas extraction and production are not subject to the Mining License Tax.

Persons who hold royalty-only interests in mining activities taxed by the Mining License Tax are considered to be engaged in mining for the purposes of this act. If a person receives only royalty income, those royalties are considered to be net proceeds. The only deductions allowed from royalty-only income is the mineral depletion allowance.

The Mining License Tax does not exempt the mining industry from any local or state ad valorem or other taxes, except for the Alaska Business License Tax (AS 43.70.110(1)).

The Mining License Tax is computed on taxable income according to the following schedule:

TAXABLE INCOME	TAX RATE SCHEDULE	TAX PAYABLE
$0 - $40,000	0	0
$40,000 - $50,000	3%	$1,200 - $1,500
$50,000 - $100,000	$1,500 plus 5% of amount over $50,000	$1,500 - $4,000
over $100,000	$4,000 plus 7% of amount over $100,000	$4,000 -

Any person who engages in the business of mining in Alaska is required, prior to May 1 of each year, to apply for and obtain a license. No fee is required for the license. An annual Mining License Tax return is required of all persons engaged in mining. The return is due together with any required tax payment on or before the last day of the fourth month following the close of the fiscal year.

Failure to pay all the tax which is due will result in the assessment of a penalty. If the failure to pay the full tax is due to negligence, the penalty is five percent of the deficiency. If the failure to pay the full tax is the result of an attempt to defraud, the penalty is 50% of the deficiency, as well as, any applicable criminal penalties.

B. General Description of HB 56, Relating to the Alaska Mining License and Tax

*Section 1.

All persons engaging in the mining business will be required to obtain a mining license for which the fee is $25. This requirement subjects those involved in the mining business to a license fee equivalent to that paid by businesses subject to the Alaska Business License Act.

The annual license tax levied on those engaged in the mining business is amended by changing the tax rate. The tax would be computed on net proceeds according to the following schedule:

TAXABLE INCOME	TAX RATE SCHEDULE	TAX PAYABLE
$0 - 40,000	0	0
$40,000 - $50,000	3% of amount over $40,000	$0 - 300
$50,000 - $100,000	$300 plus 5% of amount over $50,000	$300 - $2,800
over $100,000	$2,800 plus 7% of amount over $100,000	$2,800 -

These changes would mean a significant tax savings for small scale mining businesses while giving only a slight decrease to mining businesses with high taxable incomes. For example, under existing law a mining business with $50,000 of taxable income would pay a tax of $1,500 while under HB 56 this same business would pay only $300. This is a savings of $1,200. All mining businesses in the state with a taxable income of over $40,000 will receive this same savings of $1,200. This savings is due to the exemption of the first $40,000 of taxable income from liability to the mining license tax.

The exemption of a new mining business, except the mining of sand and gravel, from the mining license tax for the first three and one-half years of operation is continued. The only change is that a certificate of exemption must be requested during the first year of operation.

Mining operations in more than one location by one person must be considered as one operation for the determination of taxable income.

*Section 2

"Net proceeds" which is the basis for the assessment of the license tax is defined as the total gross receipts from mining less deductions for extraction expenses, transportation expenses, processing expenses,

marketing expenses, depreciation of equipment, plants, and facilities, amortization of development costs and the depletion allowance. The total deduction for the depletion allowance shall not exceed 50% of the taxpayers net proceeds. The depletion allowance will no longer be set forth in state law. In the future, the depletion allowance will conform with the rates set by the federal government (26 U.S.C. secs. 611-614). The depletion rates which would apply under the adoption of the Internal Revenue Code are:

sulphur and uranium, fluorspar, graphite, talc, ores of antimony, cobalt, lead, manganese, molybdenum, nickel, platinum, tin, titanium, tungsten and zinc	22%
gold, silver, copper and iron ore	15%
rock asphalt, vermiculite, barite, feldspar, potash, ball and sagger clay	14%
coal, lignite	10%

These new depletion allowances would result in a lower depletion rate for only sulphur which under existing law has a depletion rate of 23%. The remaining mineral resources would either have an increased depletion allowance or would remain the same. Those minerals which would have notably higher depletion rates under HB 56 are fluorspar, graphite, antimony, colbalt, lead, manganese, molybdenum, nickel, platinum, tin, titanium, tungsten, and zinc.

A deduction from the gross proceeds of the business is also allowed for the overhead costs associated with the mining business but which are not specifically stated in HB 56. Out of state travel by employees on mining business is also an allowable deduction.

Royalty-only interests in mining activities are subject to the mining license tax. The taxable income from royalties is the royalty income less the depletion allowance. This provision is unchanged from existing law.

"Gross receipts" are defined as all forms of income or compensation derived from the mining business. The value of minerals sold at less than market value by a wholly-owned subsidary to its parent company are assessed at their full market value for tne purposes of determining the gross receipts for tax purposes. The gross receipts from the mining of sand and gravel are defined as the receipts from the sale of sand and gravel at the mine or delivered to the customer or the average market value of sand and gravel from intercompany transfers at concrete or ready-mix plants.

*Section 3

This section of HB 56 generally makes changes in style by inserting "receipts" for "income", "business" for "property", "department" for "Department of Revenue" in portions of the existing law. The substantive changes made in existing law are:

1. the filing date for tax returns is the 15th day of the third month following the calendar year or fiscal year depending upon the tax year which the mining business used in filing its federal income tax return.

2. the total amount of the tax must be paid on or before the due date for the tax return.

*Section 4

Application for renewal of a mining license must be made during the first 30 days of the person's tax year. This changes the requirement that the renewal application be received by May 1 of each year.

*Section 5

A number of additional illegal acts by those responsible for preparation and submission of true and accurate tax returns to the Department of Revenue are included in HB 56. The illegal actions which are covered in existing law are:

1. willful failure to pay a tax, make a return, keep records or supply information as prescribed by law or regulation is a misdemeanor. HB 56 amends this provision by deleting the requirement that a person found to be in violation of this law is liable for the costs of prosecution.

2. willful making and subscription of a return or other document required by the mining license tax law which known to be false shall make a person guilty of a felony upon conviction.

The new provision of HB 56 makes it illegal to:

1. willfully attempt to evade the mining license tax;

2. willfully aids or counsels the preparation of a fraudulent return, affidavit, or other document;

3. willfully deliver to the department any return, statement, or other document which is known to be false.

The failure to fully pay the tax as levied by this law results in an assessed penalty equal to 50% of the deficient amount in addition to the deficient amount.

*Sections 6, 7, and 8

The business of mining is defined in such a manner that anyone who owns, operates, or develops a mineral property, anyone who leases and operates a mining property, or anyone who has an interest in a lease or other agreement for exploration development or extraction of a mineral property is required to obtain a mining license. Many persons who previously had not been required to obtain a license will now have to have one, such as exploration companies and mineral leaseholders who are not producing a product. All those subject to the mining license tax will be exempt from the business license tax.

The definition of "new mining business operation" has been rewritten so that only new mining operations at a undeveloped mining site will be eligible for the three and one-half year tax exemption. The exemption will not be available for mining companies which acquire mining properties which have previously received a tax exemption. The "ordinary treatment processes" which are allowed as deductions from the gross income of a mining business are not changed by HB 56. The exemption of oil and gas production from the mining license tax remains unchanged.

C. Occupation Taxes or Net Proceeds Taxes Levied on the Mining Industry in Other States

Idaho, Montana, and Utah, as well as Alaska, have placed a separate occupation tax (license tax) upon the mining industry. The State of Washington subjects extractive industries, as mining and logging, to its general business and occupation tax. Nevada has placed a "net proceeds" tax, similar to Alaska's Mining License Tax, upon the mining industry but it is usually referred to as a property tax rather than as an occupation tax.

The Alaska Mining License Tax is compared with the taxes in the other states in Appendix B.

It is evident from Appendix B that states may pursue one of two strategies for occupation taxes. A state may adopt either the gross income without any deductions as the tax base and set the tax rate very low, or the net income (gross income less deductions) as the tax base and set the tax rate much higher. The differences between the tax strategies of the states make any comparison of the revenue production potential very subjective.

Of those states listed in Appendix B which used the net income as the tax base, Alaska has the highest tax rate. However, without a complete understanding of the deductions by each state, further comparisons are very speculative.

D. Incidence of the Alaska Mining License Tax

The incidence of the Alaska Mining License Tax[1] was discussed by Peat, Marwick, Mitchell and Co. in its report to the Department of Revenue, "Review of the Alaska Tax Structure". The discussion of the incidence of the license tax from that report is quoted below:

> It is difficult to assess who carries the burden of the tax. It is imposed upon net income of the person's mining operations in Alaska after allowance for percentage depletion. In this respect the tax is based upon the ability to pay concept. Where the output is sold in a market where prices are established beyond the control of the Alaskan producer, it can be said that the investor bears the tax in the form of reduced profits, i.e., return on investment. Where the output is produced solely for local market (coal for example) the tax may largely be passed along to the consumer. If the consumer is the Federal Government, the tax then is mostly exported and borne by non-residents of the state. A satisfactory means of determining the shift of taxes has not yet been developed, but we believe that it is reasonable to conclude that the minor amount of mining severance taxes collected by the state to date has been substantially borne out of profits, therefore by the investor.

[1] *The incidence of a tax describes who ultimately pays the tax in question.*

E. Reconciling HB 56 with CSHB 878

HB 56, relating to the Alaska Mining License Tax, is in essence the same bill that the Governor introduced last session (HB 878). In drafting HB 56 the Governor chose to disregard the amendments made to his previous bill by the House Resources Committee and which were contained in CSHB 878. The differences between HB 56 and CSHB 878 are outlined below:

*Section 1

I. HB 56 does not contain an amendment which permits a mining business operation to chose whether or not operations conducted at two or more places shall be considered as one mining business provided that none of the mining operations are covered by a valid exemption certificate.

--If the committee wishes to amend HB 56 to include this amendment, proposed language is included as proposal #1 of Appendix A.

II. HB 56 contains a clerical error at the bottom of page one. The last sentence on the page is not completed on the top of page two. The sentence should read as shown in proposal #2.

*Section 2

I. HB 56 contains a typographical error on line 2 of page 3. The line should read as shown in proposal #3.

II. HB 56 does not contain an amendment made to the previous bill which permits the deduction of amortized exploration costs as a deduction from the gross receipts of the mining business.

--If the committee wishes to adopt this amendment, the proposed language is shown in proposal #4.

III. HB 56 does not contain an amendment made to the previous bill which permits the taxpayer to deduct "net operating losses" from the gross receipts in a manner which conforms with the federal Internal Revenue Code. This amendement permits a taxpayer to apply a net operating loss as a deduction against the gross receipts for the three years prior and the five years following the year in which the loss is incurred.

--If the committee wishes to adopt this amendment, the proposed language is included in proposal #5.

IV. HB 56 does not contain an amendment made in the previous bill which added the phrase "or materials" after "minerals" each time it occurred in line 29 on page 3 or line 6 on page 4. This amendment would seem unnecessary as long as the definition for minerals included sand, gravel, stone, and soil.

--If the committee wishes to include the phrase "or materials" following "minerals", the proposed language for the necessary amendments is included in proposal #6.

*Section 3

I. HB 56 contains a technical drafting error on line 29 of page 4. The word "business" should be underlined as it is an insertion of new language into existing law. The correct form is shown in proposal #7.

*Section 7

I. HB 56 does not include an amendment made to CSHB 878 which exempted prospectors from the law. This provision was intended to exempt the casual prospector from the mining license and the mining license tax.

--If the committee wishes to exempt the casual prospector from this law, proposed language is given in proposal #8.

APPENDIX A

Proposed Amendments to HB 56

PROPOSAL #1 An amendment of lines 7-10 of page 2:

(d) if mining business operations not subject to sec. .010 of this chapter are conducted in two or more places within the state by one person, those operations may, at the person's option, be considered as one mining business, and the tax shall be computed upon the net proceeds of all those mining business of operations.

PROPOSAL #2 An amendment of the last sentence on page 1:

The tax exemption granted to new mining business operations does not apply to the business of mining sand and gravel.

An amendment of the first sentence on page 2:

The Department of Natural Resources shall certify to the department the date upon which production began from the mining business operation, and the department shall issue a certificate of exemption to the applicant after this certification.

PROPOSAL #3 An amendment of line 2 of page 3:

167 of the Internal Revenue Code (26 U.S.C. 167);

PROPOSAL #4: An amendment of lines 3 and 4 of page 3:

(7) amortization of exploration and mining development costs not included in (6) of this section;

PROPOSAL #5 An amendment to insert a new line after line 9 of page 3:

(9) net operating losses as set out in sec. 172 of the Internal Revenue Code (26 U.S.C. 172).

PROPOSAL #6 An amendment of the sentence beginning on line 27 of page 3:

Gross receipts include the actual amount received during the year for the sale of minerals or materials whether or not the minerals or materials were actually extracted during that year.

An amendment of the subsection beginning on line 2 of page 4:

(b) If the minerals or materials are sold or transferred at a price other than the true market price, as when a wholly owned subsidiary transfers or sells the mineral or material to its parent at a price less

than market value, gross receipts are the true market price or average market price per ton or other measurable unit of the mineral or material multiplied by the total units of the mineral or material sold or transferred during the year.

An amendment of lines 24-28 on page 8:

(9) "minerals means asbestos, coal, sulphur, iron ore, lead, zinc, mercury, tin, chromite, bauxite, copper, gold, silver, platinum, potash and other valuable metals or ores except oil, gas and materials;

(10) "materials" means sand, gravel, building material and top soil

PROPOSAL #7 An amendment of line 29 of page 4:

make returns for the person engaged in <u>the</u> mining <u>business</u> [, OR THE

PROPOSAL #8 An amendment of lines 9-22 of page 8:

(7) "business of mining"

(A) means a business operation for the extraction of minerals from the earth or water of the state operated by a person

(i) who owns and operates, works, or develops a mineral property, whether or not that property is currently producing a marketable product;

(ii) who leases a mineral property and operates the mineral property, whether or not the mineral property is producing a marketable product;

(iii) who leases a mineral property and pays royalties, rents or other payments to the owner of the property;

(iv) who has an interest in a lease, concession, joint venture, or other agreement for the exploration or development, or extraction of a mineral property if royalties, rents, or other payments are to be paid for that interest;

(B) does not include a natural person who undertakes only discovery work required to be done in prospecting for or locating any mining claims, or annual assessment work, or work required in the obtaining of title to mining property from the United States, or required by the laws of the United States or of this state in order to hold possessory title to any mining claim;

Subject: HB 878 - An Act Relating to the Alaska Mining Tax

The original bill was worked out jointly between the Dept. of Revenue and representatives of the mining industry. The bill makes several modifications to the current Mining License Act, mainly in the area of clarifying who is taxable, what activities are taxable, and how taxable proceeds for purposes of computing the tax are arrived at.

The legislation will not cost the State of Alaska additional dollars for administration nor will it immediately generate additional dollars for the state since there is an extremely small number of mines operating in the State of Alaska.

The Committee Substitute reflects the concerns of the industry in testimony before the Committee, and clarifies the definition of minerals by taking out specific minerals and making the definition cover all minerals not specifically excluded. The Committee also added a definition of "materials" in order that there would be no confusion. The reason the word topsoil was used was because of "rare earth", which is highly valuable. Building materials were included under materials because of the use of rock, slate, sandstone, etc. for construction.

Changes other than those mentioned above are found on Page 2 Sec (d) which allows more than one mining operation by a single company, to be considered one mining business.

Page 3, Line 9. This adds "net operating costs set out in the Internal Revenue Code, as amended" Industry had requested this as an added deduction from gross receipts.

Page 4. Where the word "minerals" appeared in the original bill, the word "materials" was added due to the addition of the material definition section. Presently, the largest amount of tax is derived from the removal of sand and gravel.

Page 10 Sec. B, was added to exclude the casual propsector, as opposed to an actual mining operation or business.

In summary, the bill will make significant strides in clarifying how this tax is applied but does not change the basic mode of taxation and is a good example of cooperation between the Legislature, Administration and the industry.

THE LEGISLATURE OF THE STATE OF ALASKA
FISCAL NOTE
Second Session - Ninth Legislature

I. REQUEST
Bill No. Committee Substitute for House Bill No. 878
Title: an Act relating to the Alaska Mining License Tax
Requested by: House Finance Committee Date: April 13, 1976

MEMORANDUM State of Alaska

TO: R. D. Stevenson
Special Assistant

DATE: April 21, 1976

FILE NO:

TELEPHONE NO:

FROM: Gary L. Jen
Director
Audit Division

SUBJECT: CS for House Bill 878

The Committee Substitute for House Bill 878 made two basic changes to the original bill. First of all, it provided that taxpayers may elect to report all mining operations in the State as one mining business or may treat each separate mine as an individual mining business. The effect of this provision would be to multiply the amount of net proceeds which would be exempt from tax for an individual company. For example, if a company had three mines in the State, they would be able to have up to $120,000 per year not subject to taxation. That would mean a revenue loss of $4,200 each year to the State of Alaska for that company. The total revenue loss would depend on how many companies have multiple mining operations in the State.

The reasoning behind allowing $40,000 in net proceeds to be tax exempt was that there are many small mines in the State who we agreed should be encouraged to pursue marginal mining operations generating a limited amount of income. This amendment is in direct opposition of the principal by allowing multiple exemptions to larger companies.

Second, the Committee Substitute would allow the deduction of a net operating loss as provided for in the Internal Revenue Code. Apparently this provision was added to provide an additional incentive for mining operations to come into the State. It should be remembered that we have already provided an incentive for the mining industry in the form of a 3 1/2 year period beginning at the time of production, during which a company would be tax exempt on a new mine. To provide yet additional incentives such as the net operating loss carryforward is showing very obvious favoritism where none is needed or justified. None of the other licensing laws in the State of Alaska have any tax exempt or other incentive provisions.

I feel the State of Alaska is being more than generous in allowing the 3 1/2 year exemption from taxation and that no additional incentives are needed. The lack of major mining operations in the State is totally unrelated to the lack of incentives in our mining license law.

JUNEAU ALASKA

Memo to: All Committee Members, House Resource Committee

From: Office of Sally Smith

Date: Feb. 11, 1977

Re: Various Communications on HB 56

The Dept. of Revenue (John Messenger) and Dept. of Natural Resources, as well as Mike Whitehead of the Governors Office have been contacted several times for input on HB 56. We finally received the memo of January 19 from Art Peterson.

So far, this is the only official communique from the Administration, except for explicit comments from John Messenger that, with the exception of obvious typos and omissions, HB 56 is to stand as presented.

STATE of ALASKA

MEMORANDUM

FROM: AL OSTERBACK (JN)

TO: The Honorable Al Osterback
Alaska State Representative
Chairman
House Resources Committee
Alaska State Legislature

DATE: January 19, 1977

FROM: Avrum M. Gross
Attorney General

SUBJECT: HB 56 (mining license tax)
Our File No. J-77-014-77

By: Arthur H. Peterson
Assistant Attorney General
Department of Law

Two errors in this bill have come to our attention:

1. The mag card machine dropped the following line at the top of page 2: "sand and gravel. The Department of Natural Resources shall certify to". Thus, the last sentence on page one and the first sentence on page 2 should read: "The tax exemption granted to new mining business operations does not apply to the business of mining sand and gravel. The Department of Natural Resources shall certify to the department the date upon which production began from the mining business operation, and the department shall issue a certificate of exemption to the applicant after this certification."

2. On page 2, line 28, "eyar" should read "year". This, too, is a strange error in that on the last draft of the bill, before it was put in final form, that word is correctly typed.

We would appreciate your making these corrections as you work with the bill. Thank you.

IN THE HOUSE BY THE RESOURCES COMMITTEE

CS FOR HOUSE BILL NO. 878

IN THE LEGISLATURE OF THE STATE OF ALASKA

NINTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to the Alaska mining li e tax; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 43.65.010 is repealed and re-enacted to read:

Sec. 43.65.010 MINING LICENSE AND TAX. (a) For the privilege of engaging in the business of mining in the state, a person shall first apply and obtain a license from the department. The license fee is $25, which must accompany the application for a license.

(b) There is also levied an annual license tax on each person engaging in the business of mining in the state computed on the net proceeds of the taxpayer from the mining business. The license tax shall be computed according to the following table:

If the net proceeds are:	Then the tax is:
over $40,000 but not over $50,000	3 per cent of the excess over $40,000
over $50,000 but not over $100,000	$300 plus 5 per cent of the excess over $50,000
over $100,000	$2,800 plus 7 per cent of the excess over $100,000

(c) Upon application and receipt of an exemption certificate, a new mining business operation is exempt from the license tax levied by this chapter for three and one-half years after production from the mining business operation begins. The tax exemption granted to new mining business operations does not apply to the business of mining sand

and gravel. The Department of Natural Resources shall certify to the department the date upon which production began from the mining business operation, and the department shall issue a certificate of exemption to the applicant after this certification. A person must apply for an exemption certificate in the first year of production from the mining business operation in order to qualify for the exemption under this section.

(d) If mining business operations not subject to sec. 10(c) of this chapter are conducted in two or more places in the state by one person, those operations may, at the person's option, be considered as one mining business, and the tax shall be computed upon the net proceeds of all those mining business operations.

* Sec. 2. AS 43.65 is amended by adding new sections to read:

Sec. 43.65.015. NET PROCEEDS. (a) In this chapter, "net proceeds" means the total gross receipts from the mining business less the following deductions incurred during the taxable year:

(1) all expenses incurred directly in the extraction of minerals in the state;

(2) all expenses incurred in transporting the minerals from the point of extraction to any further processing plant where only necessary treatment processes are applied to obtain a commercially marketable product;

(3) all expenses directly related to the production, refining, crushing, screening or other necessary process incurred to make a commercially marketable product;

(4) the actual selling expenses incurred in marketing the product;

(5) all expenses incurred in transporting the marketable product to a buyer;

(6) depreciation of the mining business equipment, works, plant and facilities used directly in the extraction, transportation and processing phases of the mining business, in accordance with sec. 167 of the Internal Revenue Code as amended (26 U.S.C. sec. 167);

(7) amortization of [put in 54 exploration and] mining development costs not included in (6) of this subsection;

(8) an allowance for depletion on a cost or percentage basis at the rates set out in secs. 611 - 614 of the Internal Revenue Code as amended (26 U.S.C. secs. 611 - 614) except that the allowance for depletion may not exceed 50 per cent of the taxpayer's net proceeds calculated before the allowance for depletion;

[(9) net operating losses as set out in the Internal Revenue Code as amended.]

(b) If the taxpayer has expenses in the state other than those specified in (a) of this section, such as general overhead expenses, relating to the business of mining or to the business of mining and other business activities, the deductions shall be apportioned in the ratio which the direct expenses of the mining business in the state under (a) of this section bear to the total direct expenses of all business activities of that taxpayer in the state.

(c) Except for wages paid during temporary travel out of the state by an employee who is domiciled in the state, the deductions allowed in (a) and (b) of this section do not include wages or other payments for services not performed in the state.

(d) If a person is engaged in the business of mining and the only receipts from the business are royalties, the net proceeds of the mining business are the royalties received less the depletion allowance under sec. 15(a)(8) of this chapter.

Sec. 43.65.017. GROSS RECEIPTS. (a) In this chapter, "gross

receipts" means all revenue received, including royalties, rental payments, and all other compensation from the business of mining. Gross receipts include the actual amount received during the year for the sale of minerals [or materials] whether or not the minerals or materials were actually extracted during that year.

(b) If minerals or materials are sold or transferred at a price other than the true market price, such as when a wholly owned subsidiary transfers or sells the mineral [or material] to its parent at a price less than market value, gross receipts are the true market price or average market price per ton or other measurable unit of the mineral [or material] multiplied by the total units of the mineral [or material] sold or transferred during the year.

(c) Gross receipts from the business of mining sand and gravel include

(1) receipts from the sale to customers directly from the pit or mine;

(2) receipts from the sale to customers at their place of business or their business site, including receipts relating to the delivery of the sand and gravel; and

(3) the average market value of sand and gravel from intercompany transfers of the minerals calculated immediately before the transfer, including intercompany transfers of sand and gravel to a ready-mix or concrete plant.

* Sec. 3. AS 43.65.020 is amended to read:

Sec. 43.65.020. TAXPAYER'S DUTIES. (a). A person subject to tax under this chapter shall make a return stating specifically the items of gross <u>receipts</u> [INCOME] from the <u>business</u> [PROPERTY], including royalty received and the deductions [AND CREDITS] allowed by this chapter, and other information for carrying out this chapter which the <u>department</u>

[DEPARTMENT OF REVENUE] prescribes. The return shall show the mining license number and shall be signed by the taxpayer or his authorized agent, under penalty of perjury. If receivers, trustees, or assigns are operating the mining [PROPERTY OR] business, they shall make returns for the person engaged in the mining business [, OR THE RECIPIENT OF ROYALTY IN CONNECTION WITH MINING PROPERTY]. The tax due on the basis of the returns shall be collected in the same manner as if collected from the person of whose business they have custody and control.

(b) A return made on the basis of the calender year shall be filed [MADE] before March 15 [MAY 1] of the next year. A return made on the basis of a fiscal year shall be filed [MADE] before the 15th [FIRST] day of the third [FIFTH] month of the next fiscal year.

(c) The department [DEPARTMENT OF REVENUE] may grant a reasonable extension of time for filing returns, under regulations adopted [PRESCRIBED] by it. Except in the case of a taxpayer going abroad, no extension may be granted [MADE] for more than six months.

(d) A [TAXPAYER'S] return shall be filed with [MADE TO] the department using the same tax year as the person uses in filing his federal income tax return [DEPARTMENT OF REVENUE AT JUNEAU. A TAXPAYER SHALL MAKE HIS RETURN EITHER ON A CALENDER YEAR OR FISCAL YEAR BASIS, IN CONFORMANCE WITH THE BASIS USED IN MAKING HIS RETURN FOR FEDERAL INCOME TAX PURPOSES].

(e) The total amount of tax imposed by this chapter shall be paid on or before the due date of the tax return required under this section [THE 30TH DAY OF APRIL OF THE NEXT CALENDER YEAR, OR IF THE RETURN IS MADE ON THE BASIS OF THE FISCAL YEAR, THEN ON THE LAST DAY OF THE FOURTH MONTH OF THE NEXT FISCAL YEAR.

(f) EVERY PERSON PROSECUTING OR ATTEMPTING TO PROSECUTE OR ENGAGING IN THE BUSINESS OF MINING IN THE STATE SHALL COMPLY WITH THE

DEPARTMENT'S REGULATIONS AND SHALL KEEP SUCH RECORDS, GIVE SUCH STATEMENTS UNDER OATH, AND MAKE SUCH RETURNS AS THE DEPARTMENT OF REVENUE PRESCRIBES].

(g) When the department considers it necessary, it may require a person, by notice served upon him, to make a return, give statements under oath, or keep records as it considers sufficient to show whether or not the person is liable for the [TO] tax under this chapter. If a person fails to file a return at the time prescribed by law or regulation, or makes, wilfully or otherwise, a false or fraudulent return, the department shall make the return from its own knowledge and from such information as it can obtain [THROUGH TESTIMONY OR OTHERWISE]. A return so made and subscribed by the department is prima facie good and sufficient for all legal purposes.

* Sec. 4. AS 43.65.030 is amended to read:

Sec. 43.65.030. APPLICATION FOR RENEWALS. A person engaged in the business of mining shall apply [APPLICATION] for a renewal of a mining license each year [SHALL BE MADE] before the 30th day of the first month of the person's tax year [MAY 1 OF EACH YEAR].

* Sec. 5. AS 43.65.040 is [repealed and re-enacted] to read:

[Sec. 43.65.040. LIMITATION. The department shall review returns and assess any additional tax due under this chapter within three years of the due date of the return or the date that the return was filed, whichever is later. If a return has not been filed the tax may be assessed at any time.]

* Sec. 6. AS 43.65.050 is amended to read:

Sec. 43.65.050. [VIOLATIONS AND] PENALTIES AND INTEREST. (a) In case of failure to obtain a license or file a return [REQUIRED BY THIS CHAPTER] within the time prescribed by this chapter, or to pay the full amount of the tax due on the return or a deficiency of the tax as

determined by the department [LAW OR PRESCRIBED BY THE DEPARTMENT ACCORDING TO LAW], unless it is shown that the failure is due to reasonable cause and not due to wilful neglect, five per cent is added for each 30 days or fraction of 30 days during which the failure continues, but not exceeding 25 per cent in the aggregate. The amount [SO] added to the tax shall be collected at the same time, in the same manner, and as a part of the tax. If the tax is paid before discovery of the neglect, the amount added shall be collected in the same manner as the tax.

[(b) IF PART OF A DEFICIENCY IN THE TAX IS DUE TO NEGLIGENCE OR INTENTIONAL DISREGARD OF REGULATIONS, BUT WITHOUT INTENT TO DEFRAUD, FIVE PER CENT OF THE TOTAL AMOUNT OF THE DEFICIENCY, IN ADDITION TO THE DEFICIENCY, SHALL BE ASSESSED, COLLECTED, AND PAID IN THE SAME MANNER AS IF IT WERE A DEFICIENCY, EXCEPT THAT (d) OF THIS SECTION IS NOT APPLICABLE.]

(c) If part of a deficiency in the tax is due to fraud with intent to evade the tax, then 50 per cent of the total amount of the deficiency, in addition to the deficiency, shall be assessed and collected. If this penalty is assessed, then the penalty in (a) of this section does not apply.

(d) When the tax levied by this chapter becomes delinquent, it bears interest at the rate of eight per cent a year. The tax is delinquent if it is not paid on its due date. [INTEREST UPON THE AMOUNT DETERMINED AS A DEFICIENCY IN THE TAX SHALL BE ASSESSED AT THE SAME TIME AS THE DEFICIENCY, AND PAID UPON NOTICE AND DEMAND BY THE DEPARTMENT. THE INTEREST SHALL BE COLLECTED AS A PART OF THE TAX, AT THE RATE OF SIX PER CENT A YEAR FROM THE TIME PRESCRIBED FOR PAYMENT OF THE TAX TO THE DATE THE DEFICIENCY IS PAID.]

(e) The tax levied or accruing under this chapter and the penalties

and interest on the tax are a lien prior, paramount, and superior to all other liens, mortgages, hypothecations, conveyances, and assignments, upon all the real and personal property of the person liable for them, and upon the real and personal property used with the permission of the owner in carrying on the business of mining. This lien is [SHALL] not [BE CONSIDERED] exclusive of other civil or criminal remedies provided by law for the recovery of license taxes.

(f) A person who is required under this chapter to pay the [A] tax, make a return, keep records, or supply information [FOR THE COMPUTATION, ASSESSMENT, OR COLLECTION OF THE TAX IMPOSED BY THIS CHAPTER], who wilfully fails to pay the tax, make the return, keep the records, or supply the information, at the time required by law or regulations, is, in addition to other penalties provided by this chapter [LAW], guilty of a misdemeanor, and upon conviction is punishable by a fine of not more than $1,000, or by imprisonment for not more than one year, or by both [, TOGETHER WITH THE COST OF PROSECUTION].

[(g) A PERSON WHO WILFULLY MAKES AND SIGNS A RETURN WHICH HE DOES NOT BELIEVE TO BE TRUE AND CORRECT AS TO EVERY MATERIAL MATTER IS GUILTY OF A FELONY, AND UPON CONVICTION IS SUBJECT TO THE PENALTIES PRESCRIBED FOR PERJURY UNDER THE LAWS OF THE STATE.]

(h) In this section "person" includes an officer or employee of a corporation or a member or employee of a partnership who is under duty to perform the act in respect to which the violation occurs.

(i) A person who wilfully attempts to evade the tax imposed by this chapter is, in addition to other penalties provided by this chapter, guilty of a felony and, upon conviction, is punishable by a fine of not more than $5,000, or by imprisonment for not more than five years, or by both.

(j) A person who wilfully makes and subscribes a return, statement,

or other document required under this chapter which contains or is verified by a written declaration that it is made under the penalties of perjury which he does not believe to be true and correct as to every material matter is, in addition to other penalties provided by this chapter, guilty of a felony and, upon conviction, is punishable by a fine of not more than $5,000, or by imprisonment for not more than three years, or by both.

(k) A person who wilfully or knowingly aids, procures, or counsels the preparation or presentation in connection with any matter arising under this chapter of a return, affidavit, claim, or other document, which is fraudulent or is false as to any material matter is guilty of a felony whether or not the falsity or fraud is with the knowledge or consent of the person required to present the return, affidavit, claim, or document, and, upon conviction, is punishable by a fine of not more than $5,000, or by imprisonment for not more than three years, or by both.

(l) A person who wilfully delivers or discloses to the department under this chapter any list, return, account, statement, or other document, known by him to be fraudulent or to be false as to any material matter is, upon conviction, punishable by a fine of not more than $1,000, or by imprisonment for not more than one year, or by both.

* Sec. 7. AS 43.65.060(4) is amended to read:

(4) "new mining business operation [OPERATIONS]" means a mining operation [OPERATIONS] which began production after January 1, 1953, and which has not acquired the ownership or property of another mining business which has previously received an exemption certificate under sec. 10 of this chapter [OR WHICH HAVE NOT BEEN LIABLE TO PAY A MINING LICENSE TAX UNDER THIS CHAPTER ON NET INCOME SINCE JANUARY 1, 1948];

* Sec. 8. AS 43.65.060 is amended by adding new paragraphs to read:

(7) "minerals" means all locatable and leasable minerals except sand, gravel, oil, gas, building materials and topsoil;

(8) "materials" includes sand, gravel, building material and topsoil;

(9) "business of mining"

(A) means a business operation for the extraction of minerals from the earth or water of the state, operated by a person

(i) who owns and operates, works, or develops a mineral property, whether or not that property is currently producing a marketable product;

(ii) who leases a mineral property and operates the mineral property, whether or not the mineral property is producing a marketable product;

(iii) who leases a mineral property and pays royalties, rents or other payments to the owner of the property;

(iv) who has an interest in a lease, concession, joint venture, or other agreement for the exploration or development, or extraction of a mineral property if royalties, rents, or other payments are to be paid for that interest;

(B) does not include a prospector who explores for new mineral deposits, stakes a claim, performs the required assessment work to keep it in good standing, and holds it for possible development by others;

(10) "department" means the Department of Revenue.

* Sec. 9. AS 43.65.060(1) - (3) are repealed.

* Sec. 10. This Act is retroactive to January 1, 1976.

* Sec. 11. This Act takes effect immediately in accordance with AS 01.10.070(c).

RESOURCE ASSOCIATES OF ALASKA, INC.

January 12, 1976

Honorable Sterling Gallagher
Commissioner of Revenue
State of Alaska
Pouch S
Juneau, AK 99801

Dear Commissioner Gallagher:

Thank you for sending me the transcript of the November tax hearings, and the copy of the proposed revisions to the Alaska mining license tax.

At the conclusion of the tax hearings last November, you stated that as Commissioner you would recommend revisions in the existing mining license tax that would correct some of its technical deficiencies, but would not make substantive changes.

However, contrary to that statement, the proposed revisions have one very major substantive change that is a discouragement to mining investment in Alaska: you allow depreciation at a maximum rate of only 10%, which means for many types of mining equipment the period of depreciation exceeds the useful life of the equipment. The mine operator would thus be forced to carry on his books equipment that had been worn out and discarded while simultaneously capitalizing new replacement equipment.

This is not fair to the taxpayer, and is particularly unsensible for a State that should be trying to encourage investment in order to develop a tax base. At the least, the State tax treatment of depreciation should be no more severe than the Federal tax code.

As many knowledgeable people tried to explain in the hearings of November, 1975, if this State wants a mining industry to help provide a tax base, then it should offer incentives, such as accelerated depreciation, fast write-offs of investments, and investment tax credits. You have done the reverse with your proposed depreciation limit of 10%, and since the proposed revisions differ substantially from what you told industry representatives they would, you have again called into question the credibility of the State administration.

This poor old world never needed mutual trust more than it does now, and the only way mutual trust can be established is for people to do what they say they are going to do.

I have enclosed a copy of an article from the September 1975 issue of Mining Engineering to provide information on the severe problems facing those who would finance new mines. Notice, as I testified in November, that stockholder's equity in constant dollars has declined 7.4% since 1965. The mining industry faces an unprecedented liquidity crisis. In the face of these obstacles, compounded by the terrible costs in Alaska, if you folks want a mining tax base up here, you should offer incentives, rather than putting new tax obstacles in the road.

Right now, with fishing and timber in a state of disaster, the people of Southeast Alaska could expect some relief from unemployment if we had decent tax laws that encouraged exploration and development of the tremendous mineral potential of Southeast Alaska.

Respectfully submitted,

Jeff Knaebel

Mine Financing: A Worsening Problem

It took the Roman Emperors almost 150 years—from Nero to Marcus Aurelius—to double the money supply, which they achieved by reducing the silver content of the denarius by almost 50%. It took the American government only 10 years, from 1965 to 1974, to double the money supply (M2), while "... it took the world at large only three to four years to double the international liquidity," notes G. Carl Wiegand, professor of economics at Southern Illinois University.

Today's paradox is that, though there's more money in circulation than ever before, everybody is short of cash (or "illiquid")—particularly industries like mining, which are extremely capital intensive. Why is it so difficult, for instance, to finance a new mining project?

Academically speaking, *other things being equal*, a doubling in the money supply will merely double everybody's income as well as the price of everything and, in effect, nothing will have changed. In the real world, however, things don't behave in that neat a fashion—as proved by the record of the past 10 years.

Since 1965, the US dollar has lost more than 50% of its purchasing power. So, to stay even—never mind expansion or growth—the mining industry's net income (i.e., after-tax earnings before dividends) should have *at least* doubled. Has it?

Well, let's look, for example, at the US primary metal industries which include most of the biggest mining companies in the nation. Their net income, which the companies report in *current* dollars, shows a 123% increase—from $2.35 billion in 1965 to $5.24 billion in 1974. However, since a "current" dollar of 1974 vintage will not buy the same amount of goods and services that it bought in 1965, the industry's net income translated in *constant* 1965 dollars (meaning: after discounting for inflation) has increased by 43.8% since 1965 (see Table 1). So far, so good. But it's not the whole story.

Table 1—Primary Metal Industries' Net Income (billion $)

Year	In Current $	In Constant 1965 $
1965	2.35	2.35
1966	2.75	2.65
1967	2.25	2.11
1968	2.35	2.11
1969	2.62	2.24
1970	2.00	1.62
1971	1.45	1.12
1972	1.72	1.20
1973	3.07	2.10
1974	5.24	3.38
1965-74 % Change	+123%	+43.8%

Sources: US Federal Trade Commission; US Dept. of Commerce; Ramesh Malhotra; MINING ENGINEERING.

Since dividends have to be paid to stockholders, let's now have a look at the industry's cumulative retained earnings, which is the true measure of what's left to corporations to replace obsolescent facilities, expand existing ones, and build new ones. In current dollars, cumulative retained earnings have increased by 56.7% since 1965; but after discounting for inflation, the real increase has been 1.33% *in ten years* (see Table 2).

Well, what about stockholders? Table 3 shows the picture: in current dollars, stockholders' equity has increased by 43.5%; in constant dollars, however, it has actually *decreased* by 7.4%. Not surprisingly, investors have stayed away from the stock market, i.e., away from equity.

Table 2—Primary Metal Industries' Cumulative Retained Earnings (billion $)

Year	In Current $	In Constant 1965 $
1965	15.0	15.0
1966	15.5	15.0
1967	16.0	15.0
1968	17.5	15.7
1969	18.0	15.4
1970	18.5	15.0
1971	18.0	14.0
1972	19.3	14.5
1973	21.0	15.0
1974	23.5	15.2
1965-74 % Change	+56.7%	+1.33%

Sources: US Federal Trade Commission; US Dept. of Commerce; Ramesh Malhotra; MINING ENGINEERING.

Unable to raise capital via the equity route, and unable to finance growth and expansion from internally generated funds (an impossible task when cumulative retained earnings are growing at an annual rate of less than 0.13%), the industry has gone into debt financing.

As reported by my good friend Ramesh Malhotra (of the Mineral Economics Group, Illinois State Geological Survey), "... the total long-term debt of the primary metal industries rose from $5901 million in 1965 to $12,986 million in 1974," while "... total liabilities rose from $13,337 million in 1965 to $30,984 million in 1974, thus pushing the ratio of total liabilities to stockholders' equity from 0.58 to 0.91 in the 10-year period."

Table 3—Primary Metal Industries' Stockholders' Equity (billion $)

Year	In Current $	In Constant 1965 $
1965	23.0	23.0
1966	24.0	23.2
1967	25.8	24.2
1968	27.0	24.3
1969	28.0	24.0
1970	28.2	22.9
1971	27.8	21.6
1972	29.8	22.2

Sources: US Federal Trade Commission; US Dept. of Commerce; Ramesh Malhotra; MINING ENGINEERING.

Today, 10 years older and deeper in debt, the industry faces an unprecedented liquidity crisis. Where will the capital for new mines come from? Every feature article in this issue deals with the various aspects of this problem and offers many valuable suggestions. Investment capital, however, can ultimately come from only one source: the savings of individuals and corporations. But with Big Government taking an increasingly larger share of people's earnings—government's take as a percentage of the national income has risen from 27.7% in 1950 to 44% in 1974—saving money is correspondingly more difficult. Besides, who wants to save during double-digit inflation?

Continued on page 22

What might help the mining industry, as several spokesmen are now advocating, would be: 1) A higher minerals depletion allowance and faster tax-depreciation deductions that would enable the recovery of the *real* replacement cost of plants and equipment rather than the historical cost; 2) An immediate write-off for pollution control equipment in the year the costs are incurred. Since the rationale for depreciation is to recover expenditures out *of* earnings, it is grotesque to depreciate equipment that generates *no* earnings. The cost of that hardware should be written off immediately; 3) A higher and *permanent* investment tax credit; and 4) The elimination of double taxation on corporate profits because the taxing of income when earned by the corporation and again when received by shareholders in the form of dividends has the twofold effect of scaring investors away from equity and pushing companies into debt financing.

Actually, even if all these tax revisions were made, the next Congress would probably unmake them because, as President Ford once said: "A government that can give you everything is a government that can take everything from you." Besides, a sound monetary system and a non-confiscatory tax system, while being *necessary* conditions for a healthy economy, are not *sufficient* by themselves. Unless Americans are free to create, produce, and trade values, the best currency and the most equitable tax system in the universe won't do much good. Freedom comes first: what's urgently needed is a massive program of deregulating and decontrolling industry. One can't produce with one's hands tied. We may survive double-digit inflation and even greater taxation; but unless we regain our freedom to produce, the American economy will reach the terminal stage.

Sterling Gallagher, Commissioner
Department of Revenue
11th Floor, State Office Building
Pouch S
Juneau, Alaska 99811

Dear Commissioner Gallagher:

We have reviewed the draft Mining License Tax recently received from your department. We appreciate the efforts you have taken to incorporate the suggestions made by industry at the November hearings, and the fact that the revisions very accurately reflect the decisions made at those meetings.

Two major points still remain to be ironed out to reflect a total agreement, however. In the matter of depreciation, 10% per year is unacceptable in that most equipment has a life much shorter than ten years. Recapitalization of equipment is a continuous operation with replacements being made in three years in some cases. It would appear that conformity with Federal law would be reasonable, and we suggest that Sec. 43.65.015(6) concludes: "...operation, at rates provided in the Internal Revenue Code." A second major point is the treatment of net operating losses, and we suggest again that conformity with federal law is reasonable. We recommend a subsection (8) be added to Sec. 43.65.015, as follows: "Net operating losses with a five-year carry forward as provided in the Internal Revenue Code."

A minor change is recommended for Sec. 43.65.010 (b-2) to effect clarity, as follows: "...The exemption certificate must be applied for in the year the mine first reaches commercial production to qualify for the three and one-half year exemption. A mine will be considered to be in commercial production when it has a net operating income. Another change in Sec. 43.65.010 (c) is recommended to insure that aggregation does not eliminate possible incentives produced by the three and one-half year tax holiday. We recommend the first line of Sec. 43.65.010 (c) read "Where mining operations subject to the tax levied by this chapter are conducted in two or more places by one...". Sec. 43.65.015 (a-7) should read "Amortization of the exploration and mining costs not included in (6)." to insure that it is clear that exploration costs can be amortized, as discussed.

We hope these comments will be incorporated in any bills drafted for this session of the Alaska legislature. The ensuing legislation, if enacted, would provide a real incentive for the mining industry by demonstrating an interest on the part of the state in maintaining a healthy economic climate. We hope this interest is reflected in other tax legislation being proposed by the State of Alaska at this time -- special taxes on any industry or group of individuals should be minimized if a truly democratic way of life is to be preserved.

Thank you.

Sincerely,

R. C. Babcock, Jr.
Chairman
Alaska Taxation Committee

RCB/bb

cc: H. T. Eyrich, President
Northwest Mining Association

The Department of Revenue held hearings on the Administration's proposed Mineral Severance Tax (SB 294) in Anchorage on November 6 and 7. The meeting was opened by Commissioner Sterling Gallagher who acknowledged that SB 294 was not a good piece of legislation. He asked those attending to indicate what form of taxation would be acceptable to the mining industry.

Twenty-five formal presentations were made by the mining industry, Native corporations, and service industry spokesmen. Some of the major points presented by the mining industry were:

1. A U.S. Bureau of Mines study has shown that the cost of producing a pound of copper from a large, lowgrade deposit in Alaska would be twice that of a similar mining operation in Arizona.

2. Present taxes on metal mining are already higher than in most other states - and higher than those imposed on other industries in Alaska.

3. The metal mining industry in Alaska is practically non-existent, with only two operations presently paying a tax under the Mining License Tax - one a coal mine.

4. The mineral exploration effort by the industry is the major contributor to the tax base, presently spending $15 million annually of which 87% remains in the state. The present nature and location of the work done and expenditures made is such that this industry has no significant impact upon those services normally provided at Alaska taxpayers' expense.

5. The history of the industry has shown that most new modern mines are found in isolated areas. The industry, itself, has traditionally built their own communities, schools, and even churches at these isolated sites - and provided employment in those areas where the unemployment rate is highest.

6. It is estimated that in terms of 1975 dollars at least $132 million have been expended in Alaska for metallic minerals exploration from the time the Kennecott Mine closed in 1938 to the present. This effort and expenditure has resulted in not one substantial orebody being brought into production. This gives an indication of the magnitude of exploration risk, and the tough economic conditions facing the prospective mining industry in Alaska.

7. Several nation-wide and international company representatives predicted exploration budget reductions or cancellations for Alaska, should the economic climate be worsened by increased taxation such as that proposed in SB 294.

8. It was suggested that what this almost non-existent Alaskan industry needed was tax incentives, rater than disincentives. These incentives might take the form of - (a) a more flexible cost recovery allowance, (b) accelerated depreciation, (c) an investment credit for exploration expenditures, and (d) repeal of the present Mining License Tax. This latter tax is, in effect, a tax on a tax as individuals and corporations engaged in this industry pay their income tax as well. Certainly the threat of new taxes would drive away explcration - hence a reduction in state tax revenue, increased unemployment, and a worsening of the state's deficit. This would be irresponsible on the part of government.

The State presented its position that - (a) the present Mining License Tax is ambiguous, (b) the state spends about $3,200 for services per year for each person on a payroll, and (c) the state is interested in broadening its tax base.

Following a lengthy panel discussion an apparent industry-state concensus was developed on the following points:

1. SB 294 should be formally withdrawn by the state administration.

2. New incentives should be discussed, whether or not they may be obtainable thru the legislature at this time.

3. The present Mining License Tax should be improved to more clearly define who should be taxed, and what is allowable for deductions.

4. The 3½-year tax holiday for new operations, and allowance for depletion should remain a part of the tax provisions.

5. Revision of the Mining License Tax should be pursued in the legislature, but only to tidy up language.

6. Legislative intent should be expressed in the form of a policy statement on long-term economic (tax) stability for the industry.

The Department of Revenue is presently redrafting the Mining License Tax and will circulate it early in December for further comments. They intend to have a revised bill ready for introduction in January.

Memo to: Resource Committee Members

From: Office of Sally Smith

Re: Office conversation with Vance Thornsberry of Inspiration Mining relating to HB 56

Vance stated that his company and he himself would like a mining tax bill, but changes are necessary in HB 56 as it stands now.

1. The tax rate should be a straight 5%, not the sliding scale with all of the qualifications

2. Mining companies should be able to carry forward net operating losses because it helps to smooth out the peak years. For instance, 1972 was a peak year for copper, but it followed a series of very bad years.

Mr. Thornsberry will try to be present to present testimony to the Committee when HB 56 is heard.

HB 56

The Honorable Hugh Malone
Speaker of the House
Alaska State Legislature
Juneau, Alaska 99811

Dear Mr. Speaker:

Under the authority of art. III, sec. 18 of the Alaska Constitution, and in accordance with AS 24.30.060(b) and the Uniform Rules of the Alaska State Legislature, I am transmitting a bill relating to the Alaska mining license tax.

This bill amends the mining license tax law in several respects to achieve a more effective taxing system than we presently have in Alaska.

The bill would impose the tax on the net proceeds of a mining business. It would be calculated using the total gross receipts from the business less certain specified direct expenses of mining. The bill also insures that all mining businesses would be subject to the tax regardless of the form of business or the nature of the operation. The bill also clarifies several ambiguous areas of the present law which serve as loopholes for some mining businesses. In addition, the bill expands and strengthens tax penalties.

Sincerely,

Jay S. Hammond
Governor "

Mr. Sterling Gallagher, Commissioner
Department of Revenue
Pouch SA
Juneau, AK 99811

Dear Sterling:

Phil Holdsworth has advised me that the Department of Revenue will likely oppose carryover of net operating loss in HB878, if it does show up at more committee hearings. I would like you to consider this carefully, and take it up at the cabinet level to see if your stand can be modified.

I realize that effectively we were given a choice between a three-and-a-half year Mining License Tax free period, or carryover, but we also did not have much real choice in the matter. Our argument is that the two things are not at all equivalent. The three-and-a-half year period allows you to recover some capital costs prior to the special tax. The net operating loss provision helps you ride over periods of low metal prices. At present about only five of fifteen major low-grade copper mines in the United States are operating profitably. This condition has held for about two years and, although there is an upswing in copper profitability, this thing happens time and time again. There is a vast difference in the profitability of the mining industry now, as against the time when the original Mining License Tax was passed. This additional concession would be an incentive, but would not cut into revenues paid the state during long stable periods of profit.

I am also requesting you consider this carefully because of the split within the mining ranks. The Alaska Miners Association (a majority anyway) is still with you on 878, but, as you are aware, we have a broad split, and the Northwest Mining Association has come out against 878 in majority, even though some companies--especially Kennecott--are strongly behind 878. It will be much easier for us to stay in this middle ground, if the state can make some concessions.

I don't think you will argue with us that Alaska is just an expensive place to operate, including taxes. But small concessions made now on rates or schedules will mean mining revenues will start to appear sooner than if maximum tax rates go in effect.

Sincerely,

C. C. Hawley

Ms. Sally Smith
Alaska State Representative
Pouch V
Juneau, AK 99811

Dear Ms. Smith:

We appreciate your concern for our interest in mining in Alaska and your transmittal of a copy of H.B. No. 56 entitled "An Act Relating to the Alaska Mining License Tax; and providing for an effective date," which was introduced 1/14/77.

In Sec. 1, (b), I recommend a flat rate of 5% (no more) on the net proceeds derived from mining in the State of Alaska.

In Sec. 1, (d), I think it would be best to tax each operation separately and not to consider mining business operations conducted in two or more places as one mining business.

A further provision should be included for a mining business to carry forward net operating losses.

A further provision should be included for deduction of wages and payments for services performed out-of-state, where these are directly related to in-state operations.

We appreciate your consideration of this matter.

Sincerely yours,

John G. Kuhn

UNIVERSITY OF ALASKA

Position Paper on HB 68
March 11, 1977

HOUSE BILL 68
"An Act Creating the Bald Eagle Council Grounds State Park"

The University of Alaska would like to draw your attention to a conflict of State interest in the land involved with the proposed bill.

On January 24, 1956 as recorded in the Clear List #7, and on May 14, 1957 contained in Clear List #8, 846.30 acres of this proposed park were designated Trust Lands to be held for income production to support higher education in the then Territory, now State of Alaska. We believe that the courts have been clear that any use of trust land must be accompanied by appropriate payment into the Permanent Fund for such use. At the time the same area was declared critical habitat, we drew the same information to the attention of the committee. Further check will reveal a similar situation is in existence in the same area with Mental Health lands. Both of these land situations predate statehood.

The University of Alaska hereby requests that this bill be held in committee until such time that the defects in handling of the Trust Status of the lands can be properly spoken to. Further, the closing of this area to miners/entry is noted and we would draw the committee's attention to the long-term State lease for iron ore held by U.S. Steel within one mile and three-quarters of the proposed boundary of the area. The University requests consideration on this matter to resolve anticipated administrative or legal problems prior to action, hoping to avoid creating, through premature action, a situation requiring extensive after-the-fact negotiation, litigation, added legislative action, etc. We recommend that further consideration of the details of the bill be made.

(2) b. ORGANIZATIONAL OPPOSITION TO BILL:

PROGRAM EFFECTS OF BILL

More than one hundred thousand shellfish pots are in use in Alaska's shellfish and bottomfish fisheries. In the Bering Sea king crab fishery alone, an estimated 35,000 pots were used during the 1976 season. Pots vary in design and durability between fisheries. Not all pots degrade at the same rate. To require that all pots have a biodegradable seam or panel would put an unreasonable burden on the fishermen of the state.

We applaud the objectives of this bill but believe its enactment would be detrimental.

(4) FISCAL IMPACT: ☒ NONE ☐ FISCAL ANALYSIS ATTACHED

(5) AMENDMENTS PROPOSED:

(6) COMMENTS:

Biodegradable pots are currently required by Board of Fisheries regulation in the Southeastern Alaska bottomfish fishery. This requirement was adopted by the Board in December 1975 on an experimental basis to be expanded to other fisheries if it proved successful. In April 1976, the Board adopted regulations requiring that after July 1, 1978, all king crab and tanner crab pots have a mechanism which will destroy their fish catching and holding ability within a six-month period if they are lost or abandoned. The intent of these regulations was to encourage the department and fishermen to experiment with methods which will insure that lost pots do not continue to fish without unnecessarily restricting fishermen to use of a biodegradable panel. Since regulations are currently in existence which provide the means of dealing with the problem addressed by this bill, there is no need for this legislation to be enacted.

RESOLUTION NO.

ALASKA BOARD OF FISHERIES

WHEREAS the Alaska Board of Fisheries recognizes the socio-economic advantages of pot limits in certain areas and urges the Fish and Wildlife Protection Division of the Department of Public Safety to enforce it to the best of its abilities.

FURTHERMORE, Mr. Ole Harder's proposal to individually mark crab pot buoys may be applicable in some king crab fisheries of the state while in other major production areas new refinements may be necessary to implement it on a reasonable cost-benefit basis.

THEREFORE BE IT RESOLVED, that the Alaska Board of Fisheries urges the legislature to explore the possibilities of funding a comprehensive program that would incorporate a realistic and enforceable approach to this pot limit problem.

ANALYSIS: CS for SB 196, Regulation of Shellfish pots

Passage of for SB 196 will require positive identification of shellfish pots and buoys used in taking King Crab by means of individually numbered registration tags designating year of issuance which are to be issued with each license and permanently affixed to each pot.

A reliable manufacturer estimates that a tag suitable for this use can be produced for approximately $.20 each. Approximately 280 vessels will be affected by the requirement to identify shell fish pots (Sec 16.05.632). The pot limit is 75 pots that can be fished per vessel in regulated areas. Lost gear and replacement pots average approximately 25% of the total shellfish pots. Therefore, approximately 26,250 tags will be needed at a cost of approximately $5,250.00. Shipping, postage, and other handling charges would amount to approximately $2,000.00.

Personal services to administer tag issuance and maintain records will be necessary for six months per year at Homer, Kodiak, Juneau, and Petersburg. This requirement will be satisfied by four temporary Clerk III's, totaling 12 man-months per year at a total cost of $12,721.00.

Registration tags could be issued for a fee of $.75 per tag to offset General Funds.

Valdez

AGO 122801

TESTIMONY OF RUSSELL W. CAHILL
DIRECTOR - ALASKA STATE PARKS
ON
H.B. 73
FEBRUARY 15, 1977
ALASKA HOUSE OF RESPRESENTATIVES RESOURCES COMMITTEE

Mr. Chairman, committee members, thank you for the opportunity to comment on the Keystone Canyon State Park proposal.

In 1969, the Legislature instructed the State Department of Natural Resources to study the Thompson Pass - Keystone Canyon area, which was known at the time as one of the great scenic wonders of Alaska. A study was done and a proposal, which had great support, was developed. The proposal had so much support that the City of Valdez once had imprinted on its municipal stationary, "City of Valdez, Home of Keystone Canyon State Park."

Since that time, a lot of water has gone under the proverbial bridge. The trans-Alaska Pipeline has been drivern through this State, over Thompson Pass and down to the sea at Valdez Harbor. This park proposal has been placed on the back burner. The El Paso Gas line versus the Arctic Gas proposal seems the big issue in resources now. El Paso's "all Alaska" line would diverge from the trans-Alaska Pipeline Corridor here and run through the wilderness to Port Gravina down here (indicate on map). A potential road route connecting Cordova with the rest of Alaska by road would come up here (indicate on map). Development is booming in the area.

I drafted this legislation and Commissioner Martin and I asked the Governor to send it over as an administration bill. We did so because we believe strongly that this area should be set aside as a scenic park. Set aside to encourage recreation and tourism as a part of the array of resource uses in the Copper Basin - Valdez area: to balance. if you will, some of the heavily

development oriented resource use which this area is experiencing in it's period of rapid growth.

My staff has provided you with briefing papers which give the nuts and bolts of this proposal. In addition, we have held two meetings in Valdez, and have discussed this proposal in Anchorage, Fairbanks, and Juneau at public meetings. The general consensus of feelings at the meetings in Fairbanks, Anchorage, and Juneau was favorable toward the bill. In Valdez, as you can see by the questionnaire, the community was in basic opposition.

To meet some of the needs expressed by the people of Valdez and their government, I have for your perusal, a proposed substitute for H.B. 73 , which would remove from the park proposal approximately 4,000 acres of potential development land in the Lowe River Valley. The proposed substitute also contains the following stronger language regarding utility and road corridors:

> The commissioner must, upon review of an approved environmental impact statement, issue a permit authorizing a right-of-way or corridor for a utility or transportation project within the boundaries of the Keystone Canyon State Park when there is no other feasible alternative.

I am hopeful that these changes will make this proposed legislation more acceptable to the people of Valdez and to this committee.

There is another argument against this bill which I will try to deal with at this time. That is a general argument which shows up frequently in the Alaskan media. Because this is my first appearance before you this session I beg your indulgence for a short time to allow me to deal with the overall picture of State Parks in Alaska.

Why set aside State Parks when the federal government is proposing more than 100 million acres for the National Parks, Forests and Wildlife Refuge systems? First, where are these federal parks? 75 per cent of them are more than 100 miles from Alaskan communities of 1,000 or more people. The State Parks, existing and proposed, are all within those 100 miles of such communities.

Second, how much do Alaskans have to say about management on the systems? On the Federal Systems, almost nothing. The laws and regulations are very nearly holy-writ. Promulgated in and enforced from Washington, D.C. One cannot hunt or trap on those lands, and many recreational pursuits are limited. Conversely on State Park lands, the laws and regulations are made in Alaska by Alaskans responsive to an Alaskan public. In 80 per cent of the State Park System, hunting and trapping is permitted. Snow-machines are permitted in many areas, and visitation is encouraged. More than twice as many people visit the State Parks as visit the National Parks in Alaska. We operate five times the number of campsites and serve a more local recreation clientele.

The last reason, and I think the best, is that if we, in Alaska, are going to talk about balanced resource use, then we can't talk out of both sides of our mouths. Our 102½ million acres should have a rational and reasonable distribution among resource uses. One of those is scenic and recreation protection and use. All of the existing State Parks make up 1.6 per cent of the State's land entitlement. Adding all proposed State Parks to the system would still leave the percentage under 4 per cent. That's 4 per cent of the land to be set aside for <u>our</u> people to use for active recreation pursuits. Certainly if we can drive

two highways and two pipelines through Thompson Pass and the Keystone Canyon, we can afford to pay our dues to the re-creation of the human spirit by setting aside this magnificient area as a State Park.

Ladies and gentlemen, if we are to go to Washington, D.C. and talk to Congress about a rational plan for Federal lands in Alaska, let us do the right thing with our lands so that we can hold our heads high and talk from a position of the strength of our convictions. Thank you.

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act creating the Keystone Canyon State Park."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 41.20 is amended by adding new sections to read:

ARTICLE 14. KEYSTONE CANYON STATE PARK.

Sec. 41.20.460. DECLARATION OF PURPOSE. The purpose of secs. 460 - 475 of this chapter is to establish the state-owned and state-acquired land and water described in sec. 465 of this chapter as Keystone Canyon State Park. The primary purpose in creating the park is to protect and develop the area's recreational and scenic resources. The land and water described in sec. 465 of this chapter are closed to multiple purpose use in conformity with AS 38.05.300 and are dedicated as a special purpose site in accordance with art. VIII, sec. 7, of the Constitution of the State of Alaska.

Sec. 41.20.465. DESIGNATED LAND AND WATER RESTRICTED TO USE AS A STATE PARK. The state-owned and state-acquired land and water lying within the following parcel comprising 330,000 acres more or less, are

designated as the Keystone Canyon State Park: beginning at the NW corner, Section 6, T9S, R4W, C.R.M.; thence easterly to the SW corner of Section 32, T8S, R4W, C.R.M.; thence northerly to the NW corner of Section 8, T7S, R4W, C.R.M.; thence easterly to the NE corner of Section 9, T7S, R2W, C.R.M.; thence southerly to the SE corner of Section 21, T7S, R2W, C.R.M.; thence easterly to the NE corner of Section 26, T7S, R1W, C.R.M.; thence southerly to the SE corner of Section 35, T8S, R1W, C.R.M.; thence westerly to the SW corner of Section 32, T8S, R1W, C.R.M.; thence southerly to the SE corner of Section 7, T9S, R1W, C.R.M.; thence westerly to the SW corner of Section 12, T9S, R2W, C.R.M.; thence southerly to the SE corner of Section 14, T9S, R2W, C.R.M.; thence westerly to the SW corner of Section 14, T9S, R2W, C.R.M.; thence southerly to the SE corner of Section 27, T10S, R2W, C.R.M.; thence westerly to the SW corner of Section 27, T10S, R2W, C.R.M.; thence southerly to the SE corner of Section 33, T10S, R2W, C.R.M.; thence westerly to the SW corner of Section 33, T10S, R2W, C.R.M.; thence southerly to the SE corner of Section 8, T11S, R2W, C.R.M.; thence westerly to the SW corner of Section 8, T11S, R2W, C.R.M.; thence southerly to the SE corner of Section 19, T11S, R2W, C.R.M.; thence westerly to the intersection of the south line of Section 21, T11S, R4W, C.R.M. with the north boundary of the Chugach National Forest; thence northwesterly along that boundary line to the intersection with the west line of Section 30, T10S, R5W, C.R.M.; thence northerly to the NW corner of Section

30, T9S, R5W, C.R.M.; thence easterly to the NE corner of said section 30; then southerly to the E 1/4 corner of said section 30; thence easterly along the east-west 1/4 line of section 29, T9S, R5W C.R.M. to the E 1/4 corner of said section 29; thence southerly to the SE corner of said section 29; thence easterly to the NE corner of section 33, T9S, R5W, CRM; thence southerly to the N 1/16 corner of said section 33; thence easterly along the N 1/16 line of section 34, T9S, R5W, CRM, to the N 1/16 corner of the E section line of said section 34; thence southerly to the SW corner of section 35, T9S, R5W, CRM; thence easterly to the SE corner of said section 35; thence northerly to the N 1/16 corner of section 25, T9S, R5W, CRM; thence easterly along N 1/16 lines of said section 25 and sections 29 and 30, T9S, R4W, CRM, to the N 1/16 corner on the eastern section line of section 29, T9S, R4W, CRM; thence northerly to the NE corner of said section 29; thence westerly to the intersection with the northern right-of-way limit of the Richardson Highway; thence westerly along said right-of-way limit to the intersection with the west section line of section 23, T9S, R5W, CRM; thence northerly to the NW corner of said section 23; thence easterly to the NE corner of section 24, T9S, R5W, CRM; thence northerly NW corner of section 6, T9S, R4W, CRM; this corner being the true point of beginning. All bearing courses for this description follow section lines, either surveyed or protracted, except where otherwise stated.

Sec. 41.20.470. DESIGNATION OF MANAGEMENT RESPONSIBILITY. The land and water described in sec. 465 of this chapter are assigned to the Department of Natural Resources for control, development, and maintenance as a state park. The Department of Fish and Game is responsible for the management of fish and wildlife resources in the Keystone Canyon State

Park and shall consult with the Department of Natural Resources before the adoption of regulations concerning fish and wildlife management. The maintenance of public roads and highways within the area is the responsibility of the Department of Highways, and the cost of the maintenance are to be borne by Department of Highways funds. Park regulations apply to a highway right-of-way.

Sec. 41.20.475. INCOMPATIBLE USE PROHIBITED. (a) The land and water described in sec. 465 of this chapter are closed to mineral entry.

(b) The commissioner shall designate by regulation incompatible uses within the boundaries of the Keystone Canyon State Park in accordance with sec. 460 of this chapter and those incompatible uses designated are prohibited or restricted, as provided by regulation.

(c) The commissioner must, upon review of an approved environmental impact statement, issue a permit authorizing a right-of-way or corridor for a utility or transportation project within the boundaries of the Keystone Canyon State Park when there is no other feasible alternative.

Analysis of Public Information

Sessions Conducted by the Alaska

Division of Parks on the Proposed

KEYSTONE CANYON STATE PARK

(House Bill 73)

Meetings Conducted In:

- Fairbanks: 6 January 1977
- Anchorage: 13 January 1977
- Juneau: 17 January 1977
- Valdez: 27 January 1977

Prepared By:

Planning Section
Division of Parks
619 Warehouse Drive, Suite 210
Anchorage, Alaska 99501

1. COMMENT/QUESTION: Exclude private lands at Mile 12 of Richardson Highway. (Anchorage, Valdez.)

   DISCUSSION: Future land needs of Valdez warrant exclusion of some lands from proposed park in the vicinity of private parcels near Mile 12, Richardson Highway.

   RESPONSE: Proposed redescription of boundary in Lowe River to exclude 4,000 acres of developable land.

2. COMMENT/QUESTION: Would a right-of-way for power transmission lines in the park be a compatible use? (Anchorage.)

   DISCUSSION: Yes, if the commissioner of Natural Resources determines that such a project is in the best interests of the state.

   RESPONSE: The proposed legislation contains the following: "The commissioner may, upon review of an approved environmental impact statement, issue a permit authorizing the construction of a utility or transportation project within the boundaries of Keystone Canyon State Park when he determines that construction to be in the best interest of the state.

3. COMMENT/QUESTION: Shouldn't such a large land tract have a mineral survey before making it a park? (Anchorage.)

   DISCUSSION: The proposal covers what's generally known as "Valdez Group Rock", which is associated with low mineral potential except for some gold associated with quartz veins.

   RESPONSE: General mapping has occurred. Area has been prospected by company teams and individuals. Less than 10 mining claims are known to exist in the area, which are allowed to operate under existing mining law.

4. COMMENT/QUESTION: What's your policy on possible concession developments in this area? (Fairbanks.)

   DISCUSSION: Concessions are allowed in state park areas if their development is compatible with park values and user demands. Concession contracts are negotiated under competitive bid procedures.

   RESPONSE: Proposals for concession development invited for review at any time, but must be awarded on a competitive basis.

5. COMMENT/QUESTION: Are there trails in area? (Fairbanks.)

   RESPONSE: A few unmaintained trails exist.

6. COMMENT/QUESTION: Developments - specifically trails - will encourage more use of area and thereby hurt hunting opportunities. (Fairbanks.)

   DISCUSSION: Better access to unroaded or trailed areas can increase hunting pressure. Trails offer increased recreational opportunities while helping to disperse people over a larger area.

   RESPONSE: Some recreational development will take place. It is the responsibility of the Department of Fish and Game to prevent over-harvest of game animals.

7. COMMENT/QUESTION: Isn't the area too rugged for building trails? (Fairbanks.)

   DISCUSSION: Keystone Canyon State Park is a very rugged, glaciated mountain area with several river and creek valleys of moderate gradient.

   RESPONSE: Trails could be constructed in much of the area, including Brown Creek Valley, Sheep Creek Valley, Heiden Canyon, Ptarmigan Creek, and the Tsina River Valley.

8. COMMENT/QUESTION: What's the Division of Parks policy towards commercial uses originating outside of the park, crossing through, or using the park - such as kayak trips? (Fairbanks.)

   DISCUSSION: Such uses are allowed if impacts on both the park and other users is minimal.

   RESPONSE: Most uses are allowed if not damaging to the park environment or irritating to other visitors.

9. COMMENT/QUESTION: How much will it cost to operate this park? (Fairbanks.)

   DISCUSSION: Operations staff, equipment, space rental, and construction of recreation facilities broken down. This, of course, depends on legislative authorization.

   RESPONSE:

	Operation	Construction
1978	88.9	12.5
1979	75.8	300.0
1980	83.6	300.0

10. COMMENT/QUESTION: Why make this area a state park? (Fairbanks.)

DISCUSSION: Scenic beauty, accessibility, minimum resource conflicts involving timber, minerals, oil and gas, and agriculture and developable lands.

RESPONSE: The State Constitution and Alaska Statutes Title 38 and 41 mandate the establishment of an Alaska State Park System and the Keystone Canyon area is immensely qualified for such status.

11. COMMENT/QUESTION: Didn't the bill fail last year? (Juneau.)

DISCUSSION: The Keystone Canyon State Park - introduced last year by a legislator - never reached a floor vote in the House and the Senate.

RESPONSE: Bill did not become law in the 9th State Legislature and has been submitted this year by Governor Hammond.

12. COMMENT/QUESTION: Would the Division of Parks zone private lar , within the park boundary? (Valdez.)

DISCUSSION: Efforts will be made to preserve the scenic quality of the park. There is very little private land within the park. It is our policy to work with local government for zoning ordinances prior to taking any state zoning action.

RESPONSE: The possibility of the Division of Parks zoning private lands within the park exists at a later day.

13. COMMENT/QUESTION: Which way is information flowing between the public and the Division of Parks? (Valdez.)

RESPONSE: Both directions, but the public meetings are for the primary purpose of receiving public comment.

14. COMMENT/QUESTION: The proposed Keystone Canyon State Park is too large. (Valdez.)

DISCUSSION: The proposed park covers 330,000 acres, mostly very steep mountainous country and glaciers.

RESPONSE: Size of park may be reduced by excluding developable lands on lower portion of Lowe River.

15. COMMENT/QUESTION: Why such a large park? Suggest a series of small roadside waysides and wilderness trails. (Valdez.)

DISCUSSION: The boundary of the proposed park has been drawn to include an optimum amount of highly scenic mountain country, primarily following hydrographic boundaries.

RESPONSE: The possibility of small roadside waysides and wilderness trails will not provide long-term assurance that lands around the waysides and trails will be protected from uses incompatible to public recreation and scenic protection.

16. COMMENT/QUESTION: Exclude 6,000 acres along Lowe River to the east of Keystone Canyon, in the vicinity of Sheep and Wortmans Creek, for development. (Valdez.)

DISCUSSION: The proposed park contains minimal development sites for campgrounds, picnic areas, visitor centers, etc. The forested area along the Lowe River in the vicinity of Sheep and Wortmans Creek provides interesting contrast to the rocky high country which constitutes 80 percent of the park.

RESPONSE: Park boundary will retain this area.

17. COMMENT/QUESTION: Disagree with giving the Commissioner of Natural Resources the discretionary power over approving utility or transportation project within the proposed Keystone Canyon State Park (41.20.475 (c)). (Valdez.)

DISCUSSION: The Commissioner of Natural Resources presently has this power - the legislation only re-states it.

RESPONSE: Wording in legislation regarding discretionary power of commissioner to be retained.

Juneau, Alaska

Dear Rep. Smith:

I would likt to make a comment on the proposed Keystone Canyon State Park. As a land owner and resident of some of the private property located within the proposed boundaries, I object to the eminent domain provisions of the park bill.

My home and land is located at milepost 18½ on the Richardson Highway, which is just about in the middle of the proposed park. I would like to be assured that my home and land is safe from public seizure (regardless of compensation) if the park bill ever becomes a reality.

Any advise or comments you could give me would be appreciated.

Sincerely,

James J. Shephard

Representative Al Osterback
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Subject: Senate Bill No. 73 - Keystone Canyon State Park

Dear Representative Osterback:

The citizens and city council of the city of Valdez, Alaska are violently opposed to the creation of the subject state park. This opposition has been expressed each time this specific park has been proposed since 1970.

Each time this proposal has been submitted, the City has taken exception to the superimposing of the park upon the city boundaries and encompassing privately owned lands. Each time the boundaries have been redrawn to conform to the City's demands. The proposal has been subsequently rejected and then reintroduced with the same old boundaries.

How many times do we have to oppose this same proposal? When is the State going to stop trying to force this park upon the City?

The Division of Parks allegedly scheduled a hearing in Valdez on January 11, 1977. No public notice was given; no contact made with City Hall and no one showed up at the hearing, not from lack of interest, but from lack of notice. Subsequently a hearing was held in Valdez on January 27, 1977, but only because a couple of Valdez citizens happened to attend the meeting scheduled in Anchorage and demanded a hearing in Valdez.

The proposal is completely unacceptable and the continued effort to sneak this legislation through is very repugnant. The State representatives, at the meeting on January 27, 1977, even failed to advise us that the bill had been introduced on January 19, 1977. The City's objections to the park are on file; however, the following is a brief summation.

1. The proposed park includes many private homes and private property.

2. Public utility corridors must be provided for, but presently are not.

3. Most of the park is inaccessible except to the most hardy and public penetration of the area is restricted to a very narrow margin along the existing road system.

4. Valdez would become the only city in the country with sole land access through a state park.

5. Economic development in Valdez is dependent upon local planning and zoning powers without restrictions imposed by the State.

The Valdez hearing response from the public and from the official statement by the Chamber of Commerce and the city of Valdez has one hundred percent against park formation.

I encourage you to consider the desires of the citizens of Valdez and withdraw this bill from consideration.

Respectfully yours,

Herbert W. Lehfeldt
City Manager

VALDEZ, ALASKA 99686

January 18, 1977

Mr. Russell W. Cahill, Director
Division of Parks
Department of Natural Resources
323 East 4th Avenue
Anchorage, Alaska 99501

Subject: Keystone Canyon State Park

Dear Mr. Cahill:

At its regular meeting of January 17, 1977, the Valdez City Council voted unanimously to oppose the creation of the Keystone Canyon State Park as set forth by the proposed legislation to be introduced by Governor Hammond.

When the first proposal for the Keystone Canyon State Park was presented in 1970, the city council, by Resolution No. 7002, opposed the proposed boundaries and requested that provision be made to provide for a perpetual general utilities corridor through the park.

Again in 1975 the City took precisely the same position and now again in 1977 the City is forced to assume the same negative position because the state Division of Parks refuses to recognize the legal rights of the citizens of Valdez.

As a result of the City's protests in 1975, a committee substitute for House Bill No. 163 was introduced. This bill attempted to resolve the conflicts between the state proposal and the city of Valdez. While still opposed to the proposal, the City felt that this bill reflected the least of two evils.

The citizens of Valdez are not opposed to state parks per se; but we are opposed to being strangled by the imposition of rigid regulations relating to access to our city and the utilization of properties within the city. Land use patterns are a local home rule responsibility. This is and has always been recognized and honored. What other city in the whole United States has other than a local city park superimposed upon its boundaries?

If the State wishes to develop hiking trails, visitor centers, ski trails or ski runs, additional camping areas, picnic or campgrounds, the City welcomes such improvements and encourages immediate construction; however, if this is the carrot to gain acceptance of the rigid restrictions on the use of the land, then - no thank you!

CITY OF VALDEZ
All American City 1965
P. O. BOX 307
VALDEZ, ALASKA 99686

Surely these improvements can be made and enjoyed without infringing upon the local community.

Copies of this letter are being sent directly to the Governor, the Commissioner of Natural Resources, Senator Kertulla, Representative Specking and all other senators and representatives in order that there will be no misunderstanding as to Valdez's posture on this subject.

Very truly yours,

Herbert W. Lehfeldt
City Manager

SUMMARY

(1) Related bills (similar or conflicting)

Unknown.

(2) a. Organizations sponsoring and supporting bill	(2) b. Organizations opposing bill
Unknown.	Unknown.

(3) Program effects of bill The primary effect is that it would require a substantial increase in personnel staff to perform and accomplish an identical level of service in protection of the commercial fisheries. Present program of "stake-out crews" utilizes concealment to create a deterrant to closed water fishery violations and has successfully achieved this goal. To remain visible is announcing where stream protection is being afforded and would be the most effective aid to the potential and habitual violator in unlawful fishing activity.

To adequately provide protection of anadromous spawning areas with placement of "stream guard" personnel utilizing the concept of remaining visible would require an increase of both permanent and seasonal staff to a similar level in which this concept was practiced during the early 1960's A departure from this concept became necessary due to funding restrictions and return would have an outstanding fiscal impact as well as substantial program planning changes.

(4) Fiscal impact: none Fiscal analysis attached X

(5) Amendments proposed: None.

(6) Comments: Implementation of the bill would have severe detrimental results to the fishery resources unless an approximate 400% increase in temporary man months were funded to provide stream guards for protection of salmon spawning streams. In addition to the temporary man months support funds would be necessary to provide field gear such as: tents, skiffs, outboard motors, cots, mattresses, cooking equipment, food, mooring tackle, charter funds for field servicing, outboard fuel and maintenance plus a major item, warehouse space throughout the coastal areas to accommodate winter storage of gear.

Implementation of the bill is legislating enforcement methods and provides a license to steal. It would offer the maximum advantage to theft of fish stocks by commercial fishermen that can be envisioned. Perpetuation of fish stocks would be limited to those areas where a stream guard was stationed during the spawning activity and would be directly proportional to the funding provided for temporary personnel. Southeastern Alaska alone has in excess of 2,500

1. CHANGES IN PERSONNEL.

To provide a minimal level of surveillance to spawning activity on a stream guard concept, temporary man months must be increased to the following level:

SOUTHEASTERN ALASKA:
Ketchikan, Craig, Wrangell, Petersburg, Sitka, and Juneau.

	60 temp. employees at 3 mo. each.
Yakutat	5 temp. employees at 3 mo. each.
Cordova	12 temp. employees at 4 mo. each.
Valdez	6 temp. employees at 3 mo. each.
Seward	10 temp. employees at 3 mo. each.
Homer	8 temp. employees at 3 mo. each.
Kodiak	32 temp. employees at 3 mo. each.
Sand Point and westward	16 man months at 3 mo each.

TOTAL TEMP. EMPLOYEES - 149 TOTAL TEMP. MAN MONTHS - 459

The following is an estimate of the costs of hiring, equipping and maintaining one stream guard for a 10 week period:

EQUIPMENT

Tent, 10 x 12 white wall		100.00
Boat, Avon S-400 Sportboat, 12' 4" (40 h.p. rated)		1,200.00
Motor, 25 h.p. Johnson, Short Shaft, Manual Start		520.00
Coleman Lantern		30.00
Coleman Stove		30.00
Foam Mattress		35.00
Tent Frame		200.00
Cooking Utensils		20.00
Gas cans, funnels, misc. gear		100.00
	Sub Total	$2,135.00
Air Charter - Minimum 6 trips including setting up camp		600.00
Food - 10 weeks at $50.00 per week		500.00
Fuel - White gas, outboard fuel		100.00
		1,200.00
Wages - 12 weeks - 37.5 straight time (hourly rate $_____)		_____
15 hours overtime/week		_____
	TOTAL	$1,301,000

This figure does not include the cost of training or the cost of maintaining the man in the field. Depending on the number of stream guards in the field, it will take one to two men to handle engine repairs, buy groceries, run errands and chauffeur.

6) Comments, Cont.

spawning streams and each should receive protection from fishery theft. It would be physically and financially impossible to thoroughly protect the areas unless the fisherman is faced with the prospect of apprehension during the violation through a means he cannot predetermine. Under the terms of the bill, absence of a visible stream guard would assure the fisherman the stream is unprotected and vulnerable.

SUBJECT: Stream Surveillance Control

TO: Representative Alvin Osterback

FROM: Joel Bennett JEB
Legislative Counsel

You asked me to investigate the commercial fisheries "stake-out crew" situation within the Department of Public Safety. You said current procedure allowed violations to occur first, before arrest and apprehension, thereby allowing the waste of fisheries resources.

I have talked with Capt. Frank Sharp, Division of Fish and Wildlife Protection (under whose jurisdiction this is) and he informs me that what happened in Sand Point last summer was the exception - what usually happens is that the violators are apprehended while in the act of setting the net and they are ordered to release the fish before they are landed. Apparently in most cases, the fish are released in good shape.

He went on to say that stake-out crews, (concealed at the sites) have been the most effective enforcement tool for violations of this type since 1960. Although some stream guard crews still operate in certain situations, the state has found that there are just too many producing stream sites to cover (2500 in Southeast Alaska alone); the boats just switch to a stream around the corner in another arm of the same cove, for instance, and take their illegal catch there.

The real problem, in his opinion, is lack of funds in the budget for Fish and Game to hire adequate "temporary personnel" for stream surveillance. He said they don't even have a quarter of the personnel they used to have. Last season, about 40 people operated during the fishing season statewide in this capacity. Eleven in Southeast, six in the Aleutians and Alaska Peninsula area, and the rest elsewhere.

After hearing this, you may wish to alter your bill request. If statistics have shown concealed "stake-outs" to have been more effective than visible "stream guards", with few cases of resource loss, and if the Sand Point case was really an exception, I would suggest leaving things as they are. To be more effective, it might be better to push for a fish and game budget increase for that category of employees. You could perhaps ask that the category be made more specific, i.e. temporary stake-out guard instead of just "temporary employee".

Please consider this - if you want to get further details on the stream guard situation, call Capt. Frank Sharp, Division of Fish and Game Wildlife Protection, Department of Public Safety, in Anchorage at 272-1561.

If you still feel that legislation requiring all stream surveillance to be conducted openly and visibly is appropriate, please contact me. I will wait on further word from you.

DATE : February 16, 1977

FROM: Col. Fred M. Woldstad
Director
Fish & Wildlife Protection
Anchorage

SUBJECT: E-76-0811/Controversial Incident - House Resources Committee.

I have taken the liberty of summarizing a rather lengthy investigation report that includes a number of statements attesting to identical information. Two seine vessels were involved and six defendants:

F/V "Andronica"

William Dushkin - Captain, Sand Point.
Carl R. Furguson - Crewmember, Sand Point.
Jack Foster, Jr. - Crewmember, Sand Point.

F/V "Norse Maid"

Carl G. Carlson, Jr. - Captain, Sand Point.
Charles G. Gundersen - Crewmember, Sand Point.
Henry P. Nielsen - Crewmember, Sand Point.

On July 23, 1976 at 10:30 a.m., a stakeout team composed of Officer Steve Case and Officer Mike Webber was placed at Bay Point by a Department of Public Safety Goose flown by Ed Fleek. They set up camp about a mile from the creek at Bay Point.

At approximately 9:30 p.m., Officer Case observed two boats heading toward Bay Point. Both boats were white in color and towing skiffs. The boats were later identified as the "Andronica" and the "Norse Maid". The two subject vessels anchored up, side by side, about 30 yards from the entrance to the lagoon at Bay Point (Nigger Head). At approximately 10:15 p.m., two skiffs left the anchored boats and entered into the lagoon. Each skiff contained two men.

Shots were fired from one skiff into the brush around the edge of the lagoon, apparently by a semi-automatic rifle. The two skiffs then returned to the "Andronica" and "Norse Maid".

At 11:00 p.m., four skiffs left the subject boats and proceeded into the waters of the lagoon at Bay Point. Officer Case moved around to where he could observe what they were doing. He observed the skiffs engaging in making two sets with their commercial type salmon seines, taking salmon from the closed waters at Bay Point. At 11:25 p.m., one skiff headed back to the anchored vessels. At midnight the other three seine skiffs followed. Officer Webber observed that two of the boats were low in the water and had what appeared to be a seine with a bulge in it alongside. At 12:45 a.m.,

Officer Case, who has commercial fished in the past, heard the hydraulics start up, as if the brailer was in operation on the subject vessels. At 3:00 a.m., the two vessels pulled anchor and left Bay Point.

On 7/24/76, the Captain of the P/V "Enforcer" was patrolling in a skiff at Settlement Point with Fish and Wildlife Aide Shaul when he observed the "Norse Maid" pull their anchors and head off toward the North.

Gunnar Hamren, the Captain of the tender "Logger", reports in his statement that the F/V "Norse Maid", Captained by Carl Carlson, Jr., got into the line behind his tender at 11:00 p.m. on 7/24/76. About midnight the "Norse Maid" pulled up alongside the Logger with approximatley 7,000 salmon on board. Carlson asked Hamren to split his load with the "Andronica", stating they had been fishing together. The crew from the "Andronica" came over and helped take the salmon off the "Norse Maid". The "Logger" was anchored in Canoe Bay.

Mrs. Bertha Jean Hamren, who made out the ADF&G Fish Tickets #393789 and #393319, in her statement relates a conversation with Carlson in which he told her that the "Andronica" and "Norse Maid" had been fishing together and he wanted to split his load with the "Andronica". The fish tickets were made out at approximately 12:30 a.m. on 7/25/76. Later that day the skipper of the "Andronica" came over and signed his fish ticket, #393789. The poundage on the fish tickets totaled 32,255; 16,127 lbs. to William Dushkin on the "Andronica" and 16,128 lbs. to the "Norse Maid", skippered by Carl Carlson, Jr. James Harrington, a crew member on the "Logger", was present when the Captain of the "Andronica" signed his fish ticket the morning of 7/25/76.

William Fishell was a Fish and Game employee sampling the catches on board the "Logger" when the subject fish were delivered. He states he remembers one boat bringing in a large number of salmon and states that without the delivery made by the "Norse Maid" figured into the daily catches, the boat average was 1,149.5 salmon per boat. The catches reflected for the "Norse Maid" and the "Andronica" were over three times the average for boats delivering to the "Logger" on the day in question.

On 7/26/76 at 12:20 p.m., the F/V "Norse Maid" was boarded soon after it moored at the fuel dock in Sand Point. Corporal Winn advised the Captain and crew of their legal rights and that they would be charged for seining in closed waters. Also on 7/26/76, Captain Sharp flew to Canoe Bay and boarded the F/V "Andronica",, advised the Captain and crew of their rights and that they would be charged for seining in closed waters. While aboard the "Andronica" Captain Sharp observed a 30 caliber carbine semi-automatic weapon with a 30 shot clip and during the conversation the owner of the weapon was identified as Jack Foster, Jr.

The six defendants were cited to the Sand Point District Court and each entered a not guilty plea requesting a jury trial. Subsequent trial in Sand Point before a jury found all six defendants not guilty. Stated cause for the not guilty verdict was that the state did not prove fish were taken by the skiffs in the stream mouth, and the jury was not advised that "take" is also defined as "attempting to take".

Two additional statements are found in the report which are pertinent to the character and honesty of the defendants involved. Both are statements of Fish and Wildlife Aide Steve Case.

"On the 4th of July, 1976, at the New England Reservoir in Sand Point, I was testing outboards and rafts when we were approached by Charles G. Gundersen on the subject of bribery and asked what our salary was and if we were getting paid enough for watching the streams. I said, "yes, we were getting paid enough". Then he approached me with an offer for $2,000.00 or $3,000.00 for turning my back while they made a couple sets in the creek. He kept saying he would make it good to me for twice the amount I'm getting paid. He said that if I would get hold of him later we would talk real business and a part of $2,000.00 or $3,000.00. Then we departed the area."

On August 29, 1976, Charles G. Gundersen approached Officer Steve Case and Officer Jim Johnston stating that if the State lost their case, he would sue for false arrest. He also advised that they better be careful or they would leave Sand Point in a pine box. Gundersen stated he was passed out drunk when the skiff from the "Norse Maid" went up into the creek. Gundersen was drunk while making the statements.

SUBJECT: Fire Suppression Fund

One of the items that will have to be resolved before we start in the fire suppression business on the Kenai Peninsula next summer is where does the out-of-pocket money come from to pay our bills. As long as we use State crews and equipment, there is no problem as they are funded in our budget. The problem will be in paying the individuals we hire and the equipment owner that may be needed at times to supplement our crews. No money has been included in our budget for this unknown. All our previous bills have been to BLM and have been paid up to a year or so after they expended the funds. When we hire an individual, he is going to want his pay within a short period of time after the fire.

The amount of money needed for out-of-pocket fire suppression costs is really an unknown. If we were to look at the last five years' costs on the Kenai, we find the following:

Year	Acres Burned	Cost	# Fires
1970	2875	$354,424.39	33
1971	1	1,454.84	5
1972	205	11,145.65	11
1973	47	14,687.20	20
1974	40	24,036.16	13
Total	3168	$405,747.24	102

This then gives us an average cost of $81,149.45, which you can see does not come close to any of the years. These figures are not a true picture of what the out-of-pocket cost will be as a good bit of these costs will be covered by State crews and equipment.

The same thing shows up when we look at the fire suppression costs for all State and private lands.

Year	Costs
1970	$1,451,445.63
1971	1,384,955.70
1972	99,646.79
1973	235,907.31
1974	389,527.49

I am not sure what is the best way to handle the situation, but do feel that there should be some way to have money available on a non-expiring basis. This way everyone who has to be involved with the money from payor to payee knows there is money available.

I would like to suggest that the idea of having a "Fire Suppression Fund" be established by the Legislature be looked into. I can see where it could be worked out somewhat similar to the Disaster Relief Fund (copy attached). Since the fire law A.S. 41.15 refers to the Commissioner, it would then be natural to tie the operation of the suppression fund there also.

Since we are really dealing with an unknown figure at this time, I would suggest we ask for an initial funding of $50,000.00. This would give us some protection for our job on the Kenai Peninsula. It would mean we would have to come in each year as we take over different areas of the State for subsequent financing. This may be easier than asking for a large amount at first. I would be most happy to work with someone on the wording of such a fund and also the amount, if you feel it is worthwhile.

If we do not go the fund route, it will then be necessary to ask for a supplemental to the FY 76 budget to be assured there are funds available to make payments. Since the fire season starts in May, it would be best to have about $20,000.00 in case we do have any trouble. I am not sure what code something like this would go under since they appear to have removed the 800 code. If there is something like the old 800 code, I would say that is where it belongs as we pay both salaries and equipment rental from the funds.

Let me know if there is any more information I can put together or any way I can help.

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)
The requested legislation establishes a Fire Suppression Fund and appropriates from the General Fund monies sufficient to initiate the Fund and maintain it in future years at a level adequate to meet anticipated costs of annual fire fighting activities. The Fire Suppression Fund is a reserve from which fire fighting expenses will be paid; it is not a planned expenditure. Future annual inputs from the General Fund to the Fire Suppression Fund are difficult to predict, however, from 1970 through 1975 State outlays for fire suppression have ranged from $1.2 million to $99,646, averaging approximately $539,855. Creation of a Fire Suppression Fund will enable prompt payment of fire fighting costs. With increasing State ownership of land, and responsibility for fire protection, the base cost can be expected to rise, even aside from inflation. Previously these payments have been met through supplemental or annual appropriations and have been subject to the delays implicit in that process.

BRIEFING

Bureau of Land Management - State of Alaska Fire Control Contract

February 4, 1977

BACKGROUND

With realization of Alaska statehood in 1959, BLM entered a contract with the State to protect State lands from wildfire. This was an interim measure to protect State resources until the State established its own fire control capability.

In 1971, after considerable dialogue, serious contract disengagement proposals were discussed with Mr. Charles Herbert, Commissioner, Department of Natural Resources. These proposals called for BLM disengagement in the Cook Inlet - Kenai Peninsula areas by 1975.

In 1972, BLM disengaged from the lands in Southeast Alaska. The Cook Inlet disengagement plan was reiterated this same year by letter Governor William Egan.

In 1973, Governor William Egan informed BLM, by letter, that he had directed the Department of Natural Resources to review the problem and prepare a detailed program for building a State organization.

In a 1975 letter, Governor Jay Hammond was briefed on BLM's disengagement plans.

By contract amendment dated June 17, 1976, the State removed 21,206,381 acres of land from BLM contract protection. The State established a fire control organization to fight fire on the Kenai Peninsula and the Chugach State Park. This amendment also eliminated all protection on approximately 10,500,000 acres of burnable resources on State lands in western Alaska. During the 1976 fire season, problems were identified with the "let burn" decision on this 10.5 million acres. Since time did not allow a formal contract adjustment, BLM agreed by memorandum to protect these acres on a fire by fire basis despite contract deletion and lack of associated presuppression monies.

Also in 1976, a formal plan of BLM disengagement from lands bounded by the Alaska Range, Talkeetna Mountains, Chugach Mountains, and Kenai Mountains was presented to the State. More specifically, this area includes the Kenai Peninsula, Anchorage Bowl, and the Mat-Su Valley.

This brief chronology brings us to the present. Three situations require attention:

1. 10.5 million acres of unprotected State land in western Alaska.
2. BLM's planned disengagement from the Mat-Su area.
3. Contract rewrite to optimize the contract dollar and optimize protection on BLM and State lands.

One last comment is made. BLM can contractually protect State lands only as long as mutual agency benefit is realized. In other words, BLM cannot sell its fire control services unless it realized reciprocal benefits such as the State protecting portions of BLM land. The opportunity exists for a contract incorporating this concept.

BLM has responsibility lands in locations where the State is major land holder. The features of these locations include people/property density, road accessibility, and compact area. Fire attack can be accomplished with vehicular pumper trucks and some helicopter support.

The State has responsibility lands in locations where BLM is the major responsible land administrator. The features of these locations include limited people/property density, no road access, and vast area. Fire attack can only be accomplished utilizing major aircraft involvement. Annually, BLM must obligate 3.0 million dollars to acquire contract aircraft. This cost is exclusive of flying time.

The point is made that no technical organizational duplication will exist if the State elects to focus fire protection in the population/property density areas and BLM focus its protection in the vast roadless areas. Mutual benefit is realized and the resulting fire control organizations are complementary.

The briefing will describe the current contractual situation and offer a new contract approach to better solve our mutual fire control problem.

SIGNIFICANT FIRE CONTROL CONTRACT PROVISIONS

(STATE OF ALASKA-BUREAU OF LAND MANAGEMENT)

1. On lands contracted to either party by the other, there is a $0.0474 per acre presuppression charge.

2. On contracted lands all suppression costs incurred are directly reimbursable.

3. An administrative charge on a sliding scale is added to reimbursable suppression costs. This charge is applied on the total annual bill.

Amount of Bill	Rate	Maximum Amount
First $ 250,000	25%	$ 62,500
Next $ 250,000	20%	$ 50,000
Next $ 500,000	15%	$ 75,000
Next $1,000,000	10%	$100,000
Over $2,000,000	5%	N/A

4. Bills by each party offset each other annually.

5. The presuppression bill is due and payable each September 1 for the following fiscal year (October 1 through September 30).

6. The advanced suppression bill is due and payable September 1 for the current calendar year (75 percent of the last 5 year average reimbursable suppression bills).

7. The suppression bill is due and payable each September 1 for the year previous to the two most current calendar years (the advanced suppression payment applies to this bill).

8. Presently the State protects 372,194 acres of BLM responsibility lands at a presuppression cost of $17,642.

9. Presently BLM protects 14,115,468 acres of State responsibility lands at a presuppression cost of $669,073.

10. The State advanced suppression bill for CY 1977 is $295,447.

11. During the 5 year period 1971 - 1975, the lowest actual State suppression bill was $99,647 and the highest actual bill was $1,240,740.

- - - - - For the remainder of this presentation we will only consider contract change opportunities in the southwestern quarter of Alaska - - - - -

CHANGES FROM PRESENT TO RECOMMENDED CONTRACT

1. Kenai Peninsula. No change. As a note of interest, BLM has suppression base at Soldotna for protection of the Kenai Moose Range.

2. Chugach. Presently the State protects 8,432 acres of BLM responsibility land in the Eagle River area. Recommended contract would add the 6,000 acre Eklutna Power Withdrawal Area to this State protection. The State has in-place capability.

3. Bristol Bay. No change. No protection needed since no fire history.

4. Kodiak Island. No change. Each agency protects its own land.

5. Taylor Mountain. Realign contract protection to the area with fire history (north one-third). Due to negligible fire incidence in the south two-thirds, BLM would react to assistance requests without contract presuppression monies.

6. Iditarod. Total State area would change from no protection to protection by BLM.

7. Poorman. Total State area would change from no protection to protection by BLM.

8. Farewell. No change. No protection needed since no fire history. Fires near the west boundary on State land would be normally attacked by BLM as they threaten BLM responsibility lands. No presuppression monies necessary.

9. Kokrine Hills. Total State area would change from no protection to protection by BLM.

10. Haines Skagway. No change.

11. Mat-Su. State would assume protection of its own lands (4,920,396 acres). Additionally, the State would contract protect 697,473 acres of BLM land located adjacent to the Alaska Range.

Note that irrespective of this particular proposal, BLM will discontinue contract protection on the SE quarter of Mat-Su in CY 1977. This quarter experiences 85 percent of the ignitions in Mat-Su. This particular disengagement is in consonance with planning, discussions, and correspondence between BLM State Director, Curt McVee, and Governors Jay Hammond and William Egan.

PRESENT CONTRACT TERMS

Area	BLM Land Protected By State		State Land Protected by BLM		Burnable Area Not Being Protected		
	Acres	5 Year Average No. of Fires	Acres	5 Year Average No. of Fires	Acres	5 Year Average No. of Fires	Land Owner
1. Kenai Peninsula	258,762	1.0	0	N/A	0	N/A	N/A
2. Chugach	8,432	2.0	0	N/A	0	N/A	N/A
3. Bristol Bay	0	N/A	0	N/A	1,612,800	0	State
4. Kodiak Island	0	N/A	0	N/A	0	N/A	N/A

6. Iditarod	0	N/A	0	N/A	1,385,605	3.6	State
7. Poorman	0	N/A	0	N/A	3,658,621	8.0	State
8. Farewell	0	N/A	0	N/A	1,961,644	1.2	State
9. Kokrine Hills	0	N/A	0	N/A	875,520	1.2	State
10. Haines-Skagway	105,000	0	0	N/A	0	N/A	N/A
11. Mat-Su	0	N/A	4,920,396	47.6	0	N/A	N/A
Total	372,194	3.0	9,693,107	48.4	14,102,496	15.2	----

Net presuppression cost: (9,693,107 - 372,194) 0.0474 = $ 441,811.

RECOMMENDED CONTRACT TERMS

Area	BLM Land Protected By State		State Land Protected By BLM		Burnable Area Not Being Protected		
	Acres	5 Year Average No. of Fires	Acres	5 Year Average No. of Fires	Acres	5 Year Average No. of Fires	Land Owner
1. Kenai Peninsula	258,762	1.0	0	N/A	0	N/A	N/A
2. Chugach	14,432	2.0	0	N/A	0	N/A	N/A
3. Bristol Bay	0	N/A	0	N/A	1,612,800	0	State
4. Kodiak Island	0	N/A	0	N/A	0	N/A	N/A
5. Taylor Mountain	0	N/A	3,068,883	1.4	6,312,134	0.6	State
6. Iditarod	0	N/A	1,385,605	3.6	0	N/A	N/A
7. Poorman	0	N/A	3,658,621	8.0	0	N/A	N/A
8. Farewell	0	N/A	0	N/A	1,961,644	1.2	State
9. Kokrine Hills	0	N/A	875,520	1.2	0	N/A	N/A
10. Haines-Skagway	105,000	0	0	N/A	0	N/A	N/A
11. Mat-Su	697,473	0.4	0	N/A	0	N/A	N/A
Total	1,075,667	3.4	8,988,629	14.2	9,886,578	0.6	----

Net presuppression cost: (8,988,629 - 1,075,667) 0.0474 = $ 375,074.

Conclusions

If the discussed or similar contract change is acceptable, the following products will be realized:

1. All BLM and State lands will receive protection from wildfire either contractually or cooperatively.

2. State lands which presently receive no contract protection will be reduced from 14.1 million acres to 9.9 million acres.

3. The 9.9 million acres will be relocated on the basis of low fire occurrence (15.2 fires annually to 0.6 fires annually). On these lands BLM will react to assistance requests from the State without contract presuppression monies.

4. The State will provide protection to the whole Mat-Su valley (4.9 million acres State land and 0.7 million acres BLM land). This impact is minimal, since in 1977, BLM will disengage from the State contract area containing 85 percent of the Mat-Su fire load.

5. State contract dollar will be placed in areas having highest occurrence.

6. In this southwestern quarter of Alaska, State presuppression monies to BLM will be reduced from $442,000 to $375,000.

7. The State would develop a tanker truck fire control organization while BLM would continue operation of an aerial fire control organization. Organizations are complementary. This type State development is commensurate with its projected fire control engagement in the Fairbanks, Delta, and Glenallen areas.

We are jointly engaged in rewriting our mutual protection contract to update provisions. Likewise we must jointly address our operating policies, procedures, and field organizations for the 1977 fire season. An early decision on State protection position would allow smooth transition into this fire season.

SUBJECT: CS for HB 118

TO: House Resources Committee

FROM: Joel F. Bennett, Legislative Counsel JFB

Unfortunately, time constraints do not allow me to fully research this question, but at first glance I should point out to the committee that the enclosed bill may suffer constitutionally as special legislation (Art. II, Sec. 19, Alaska Constitution) or as a denial of equal protection of the laws (Art. I, Sec. 1, Alaska Constitution) unless there is a proper basis for the division of seine fishing into two geographical areas for purposes of limited boat lengths.

In analyzing this bill you must be able to conclude that there is a sufficient and justifiable difference in circumstances and situation, other than economics, to justifying the creation of two separate classes in this instance, and then treating them differently, to the apparent economic disadvantage of one against the other.

The general rule is that all classifications must be based upon substantial distinctions, which make one class really different than another. Is there a sound biological, safety, or other basis for this sort of distinction?

JFB:hjd

STATE OF ALASKA
JAY S. HAMMOND, GOVERNOR
DEPARTMENT OF FISH AND GAME
OFFICE OF THE COMMISSIONER
SUBPORT BUILDING – JUNEAU 99801

January 31, 1978

The Honorable Alvin Osterback
Chairman, House Resources Committee
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Mr. Osterback:

The Board of Fisheries wishes to reaffirm its position with regard to House Bill No. 118, relating to the maximum length of salmon seine vessels, and House Bill No. 119, relating to drum seining.

The enactment of both of these bills into law is recommended by the Board of Fisheries. This should not be construed, however, as being an endorsement by the Board that the current restriction regarding the maximum size of salmon seine vessels and the prohibition against the use of drum seines should be eliminated. Rather, it is the position of the Board that the size of salmon seine vessels and the use of drum seines are regulatory problems which should be resolved by the Board of Fisheries by means of appropriate action under the Administrative Procedure Act rather than by the Legislature by means of inflexible laws.

Should the Legislature follow the recommendation of the Board with regard to these bills, it is the intent of the Board to initially take action to maintain status quo with regard to these problems. A public hearing (or public hearings, as appropriate) will be scheduled by the Board for full consideration by the public after which the Board will adopt regulations consistent with the general welfare of the fishermen and the resource.

Sincerely,

Nick Szabo by RSA

Nick Szabo, Chairman
Alaska Board of Fisheries

Editor's note. — The repealed section derived from § 27, art. I, ch. 94, SLA 1959.

Sec. 16.05.831. Waste of salmon. (a) It is unlawful for a person to waste salmon intentionally, knowingly, or with reckless disregard for the consequences. In this section, "waste" means the failure to utilize the majority of the carcass, excluding viscera and sex parts, of salmon which are to be

(1) sold to a commercial buyer or processor;

(2) utilized for consumption by humans or domesticated animals; or

(3) utilized for scientific, educational, or display purposes.

(b) The commissioner may authorize other uses of salmon upon request if he finds that to do so would be consistent with maximum and wise use of the resource.

(c) A person who violates this section or a regulation adopted under it is punishable by a fine of not more than $10,000, or by imprisonment for not more than six months, or by both. In addition, a person who violates this section is subject to a civil action by the state for the cost of replacing the salmon wasted. (§ 3 ch 89 SLA 1975; § 3 ch 99 SLA 1975)

Editor's note. — This section is set out as it appears in ch. 99, SLA 1975. Chapters 89 and 99, SLA 1975, are virtually identical except that ch. 99 contains a § 5, providing for an effective date of the act.

Section 1, chs. 89 and 99, SLA 1975, provides, in subsection (b): "It is the intent of sec. 3 of this Act to control the waste of salmon resources."

Sec. 16.05.835. Maximum length of salmon seine vessels. No salmon seine vessel may be longer than 50 feet, official Coast Guard register length, and 58 feet overall length except vessels that have fished for salmon with seines in waters of the state before January 1, 1962, as 50-foot, official Coast Guard register length vessels. (§ 1 ch 252 SLA 1970)

Sec. 16.05.840. Fishway required. If the commissioner considers it necessary, every dam or other obstruction built by any person across a stream frequented by salmon or other fish shall be provided by that person with a durable and efficient fishway and a device for efficient passage for downstream migrants. The fishway or device or both shall be maintained in a practical and effective manner in the place, form and capacity the commissioner approves, for which plans and specifications shall be approved by the department upon application to it. The fishway or device shall be kept open, unobstructed, and supplied with a sufficient quantity of water to admit freely the passage of fish through it. (§ 30 art I ch 94 SLA 1959)

Sec. 16.05.850. Hatchery required. If a fishway over a dam or obstruction is considered impracticable by the commissioner because of cost, the owner of the dam or obstruction, in order to compensate for the loss resulting from the dam or obstruction shall, at his option: (1)

Representative Alvin Osterback
Alaska State Legislature
Pouch V
Juneau, Alaska 99801

Dear Alvin,

Regarding House Bill ~~#118~~ "An Act relating to the maximum length of salmon seine vessels" and House Bill #119,"An act relating to purse seining". It appears that the majority of members we were able to poll in the Prince William Sound area favor retention of both the 50 ft. keel limit for Alaskan salmon seiners and the non-legal status of drum seining for Alaska.

While some might say that with the advent of limited entry there is no need to maintain a status quo regarding the efficiency of the Alaskan salmon seine fleet, we disagree. At present, with the legal types of gear and equipment, Alaskan salmon seiners are able to generate more than enough effort and efficiency to harvest far more salmon than nature has been able to produce.

Limited entry has not restricted the amount of participation in any of the salmon seining fisheries to the degree that more efficient methods of harvest are necessary.

The majority of Alaskan owned and operated salmon seining vessels are probably too small to efficiently handle drum seining equipment, thus enactment of these bills would create hardship situations regarding increased competitiveness and the necessity to procure larger boats by many Alaskan fishermen.

We cannot see at this time, any direct benefit from enactment of these bills to the majority of the Alaskan salmon seiners or the salmon fisheries of the State.

Your careful consideration and evaluation of this matter is respectfully requested. Thank you.

Sincerely,

Bob Blake

SUMMARY

(1) RELATED BILLS (SIMILAR OR CONFLICTING)

(2) a. ORGANIZATIONAL SUPPORT FOR BILL	(2) b. ORGANIZATIONAL OPPOSITION TO BILL

(3) PROGRAM EFFECTS OF BILL The use of drums or reels in the operation of purse seines will increase the fishing power and efficiency of vessels so equipped. The extent of the increased fishing power is not accurately known, estimates range from slight up to 100%. Efficiency may also result from smaller crews required to operate the gear. Two potentially serious adverse effects would be (1) management problems in controlling the fish catching ability of a fleet equipped with drums unless the vessel numbers were reduced through the limited entry program; and (2) competitive unfairness between drum seine vessels and those with conventional power blocks. If some vessels changed to drums, all would have to in an effort to remain competitive. Such change would be expensive. Presently, we have enough fishing power to harvest all salmon that can reasonable be expected to be available.

(4) FISCAL IMPACT: ☐ NONE ☐ FISCAL ANALYSIS ATTACHED

(5) AMENDMENTS PROPOSED:

(6) COMMENTS:

On balance, we presently feel that the problems and risks of legalizing drums and reels for purse seine vessels outweigh the benefits. Nevertheless, this is a decision that the fishermen themselves should have a part in making, which will undoubtedly happen through the legislative process.

Cost Estimates for Application Assistance To Individuals Made Eligible to Apply for Entry Permits Under the Alaska Supreme Court Decision in ISAKSON vs RICKEY

Prepared at the request of the House Resources Committee for its use in considering HB 121

Submitted by the Commercial Fisheries Entry Commission

February 17, 1977

STATE OF ALASKA
COMMERCIAL FISHERIES ENTRY COMMISSION

JAY S. HAMMOND, GOVERNOR

POUCH KB – JUNEAU 99801

February 17, 1977

The Honorable Alvin Osterback
Chairman
House Resources Committee
Room 118 Capital Bldg.
Juneau, Alaska 99811

Dear Representative Osterback:

Following your Committee's request on February 11, 1977, the Commercial Fisheries Entry Commission has prepared a total cost estimate for providing statewide application assistance to individuals made eligible to apply for entry permits under the Alaska Supreme Court decision in Isakson vs Rickey. Please note that much of the accompanying material is based on verbal cost estimates prepared over a short period of time by organizations willing to participate in this program.

The following points should also be considered:

1) Contract negotiation expenses of $630 are based on prompt action to get the assistance program moving as soon as possible. It is probable that all contracts could be negotiated by telephone and mail but this would require significantly more time.

2) The $4,000 cost estimate for advertising includes newspaper publication of a list of eligible applicants who have not applied, radio announcements if public service time is not available or inadequate, and other "outreach" that may be necessary. Newspaper ads printing the names of potential applicants for the AYK salmon fisheries in 1976 cost over $800 per publication. The actual cost for advertising will be contingent to a high degree on the applicant response as the application deadline approaches.

3) The actual cost for the Commission's employment of a temporary worker to process applications and monitor contract performance will fluctuate as a function of the number of applications received.

4) Commission cost estimates for training representatives and providing direct assistance to the people of Cook Inlet and Prince William Sound have attempted to allow for the contingencies of bad weather, travel delays and unusually extended assistance sessions.

The Commission is ready to develop and present any other information which the Committee may require.

Sincerely,

Allan Adasiak
Commissioner

ISAKSON APPLICATION ASSISTANCE

$ 630 - Commission expenses to negotiate contracts

$26,698 - Contractual agreement for application assistance:

Southeastern	- $2,740
Yakutat	- $ 208
Kodiak	- $2,000
Peninsula	- $6,000
Bristol Bay	- $9,750
Yukon-Kuskokwim	- $6,000

$ 900 - Commission expenses to conduct training sessions.

$ 2,000 - Commission expenses to provide application assistance:

Prince William Sound	- $ 500
Cook Inlet	- $1,500

$ 4,000 - Commission expenses to advertise application period.

$ 500 - Commission expenses for long distance telephone calls.

$ 300 - Commission expenses for computer time to monitor assistance programs.

$ 3,000 - Commission expense for hiring one temporary employee to process applications and clerical monitoring of assistance program.

$38,028 - TOTAL

BRISTOL BAY NATIVE ASSOCIATION
P. O. BOX 179
DILLINGHAM, ALASKA 99576
PHONE (907) 842-5322

January 14, 1977

Nels Anderson Jr.
Pouch V
Juneau, Alaska 99811

Dear Representative Anderson:

Last year the Limited Entry Commission signed a consent order to place persons in each village to assist applicants with Limited Entry Permit Applications. They subcontracted with BBNA to use six (6) CETA Liaison workers already enrolled and drawing salaries to perform this task. The commission contracted to provide $10,000 for travel costs and per diem and BBNA assigned limited entry assistance to their regular tasks as Field Representatives.

Legal action resulted in a new group of potential applicants, smaller in number but equally dispersed geographically as the initial group. Therefore, a need for similar assistance is required during the short period, January 15 to March 15, that will be allowed by the Commission for this new group to submit their applications.

BBNA is willing to assist again except that this year's CETA program does not have paid CETA Liaison as a part of the FY 77 program. Recruitment of new group of 6 Liaison workers, enrollment, certification, and addition to payroll would take too long, considering also time to negotiate a contract, conduct a training session, etc. Mounting a new program usually requires two months for our small staff with present workload of starting up a delayed CETA program already planned.

We propose to use 7 existing CETA village administrators in Manokotak, Togiak, Aleknagik, New Stuyahok, Pedro Bay and Chignik Lake to assist those applicants in their own villages and appeal to their village council to allow them time away from their village duties to contact other potential applicants in other neighboring villages.

Two more field representatives could be quickly recruited, enrolled, trained, paid salaries under our CETA Work Experience funds and assigned to cover villages missed because village councils could not afford the released time of their village administrators and because of the heavy scheduling of travel necessary due to the short application period.

A former CETA Liaison, Jeff Moxie, now paid under an CETA OJT contract to Legal Services has volunteered to supervise and coordinate the Limited Entry Application Assistance project, thus taking the workload of the CETA Administration.

Costs:

Estimated travel (29 villages) from last years budget reducing the number of trips to Dillingham to 12 round trips:	$4310.00
Estimated Per Diem $20.00 @ day x 30 working days x 9 workers	5400.00
TOTAL	$9710.00
In-kind wages & benefits, $927 x 1 1/2 mos. x 9	$12,515.00

Very Truly Yours,

Commissioners
Commercial Fisheries Entry Commission
Pouch KB
Juneau, Alaska 99811

Dear Commissioners:

I have reviewed the new application form and instruction booklet to be used for entry permit applications under the Isakson decision. While the new forms are somewhat less complicated and shorter, it is my opinion that the application forms are still too sophisticated and complex for the rural village people to complete without assistance.

As you know, it was the complex nature of the original applications which brought about the Cosuk et al v. Rickey action. While I am not suggesting a similar action at this time, I do believe that some outreach into the bush is absolutely necessary.

As a result of the Cosuk settlement agreement, the Bristol Bay Native Association (BBNA) contracted with the Commission to provide outreach to the 29 villages in the Bristol Bay area. Had no such contract agreement existed, a great many rural fishermen would have been precluded from receiving entry permits, especially in light of the Commission's strong adherence to closing dates for applications. The major reason would have been that the people simply did not know how to fill out the forms.

Even despite the BBNA bush assistance, this office still has approximately 25 to 30 cases where eligible applicants failed to apply during the original application period. These people are forever barred from receiving free entry permits unless they receive some type of legislative or judicial relief. I foresee a far greater number of eligible fishermen in this same situation under the present application period if no bush outreach operations are performed.

Accordingly, I request that contract monies again be made available. The Bristol Bay Native Association upon request

will submit an appropriate proposal.

Along the same lines, I would like to state my objections to the apparent policy of having all first time 1973 or 1974 gear license holders apply during the new application period, even those applicants who timely filed applications during the original application period but were rejected because of A.S. 16.43.260(a), subsequently declared unconstitutional by Isakson. The Commission already has complete files on these individuals and need only check their records or request proof of 1973 or 1974 gear license holding from these individuals. Why do these applicants need to assume the burden of completing the entire application again?

To summarize, I respectfully request a waiver of the submission of applications for those fishermen who applied during the original application period yet were denied because of A.S. 16.43.260(a). Further, I request an outreach program be initiated as soon as possible to assist the village people of the Bristol Bay Region with their applications.

Thank you and I await your considered reply.

Sincerely yours,

ALASKA LEGAL SERVICES CORP.

A REVIEW OF COMPARATIVE OIL TOXICITY AND COMPARATIVE ANIMAL SENSITIVITY

Stanley D. Rice, Jeffrey W. Short, and John F. Karinen

Northwest and Alaska Fisheries Center Auke Bay Laboratory
National Marine Fisheries Service, NOAA
P.O. Box 155, Auke Bay, AK 99821

INTRODUCTION

Laboratory bioassays have been used to describe or quantitate the ability of crude and refined oils to kill marine life. The principal objective of earlier studies was to estimate oil concentrations that were definitely lethal to marine animals, and in some cases there have been attempts to predict environmental effects on the basis of these studies. More recently, two objectives of laboratory toxicity testing have emerged. First, acute toxicity studies have been used to determine and compare the toxicities of different crude and refined oils to marine life, and the toxicities of individual components of oils. In these studies, the quantity of oil or oil component necessary to kill 50% of the standard test species exposed under a constant set of conditions (median lethal concentration, LC50) is equated to the toxicity of the oil or oil component. Secondly, acute toxicity data have been used to determine and compare the sensitivities of different species or the different life stages of a given species. The goal here has been to identify species or life stages that are especially sensitive or vulnerable to oil. Here the LC50 has been used as an index of species sensitivity.

There has been a wide variety of results from these studies, and some apparent contradictions, mainly because of the absence of standard exposure and analytical methods but also because of difficulties involving quantitation of the oil used and its instability in the test waters. The amount of oil used to prepare a test solution is invariably much more than the amount of oil that enters into the test water and the composition of oil in the test water is invariably different from the composition of the parent oil. The composition and amount of oil that enters the water column is a function of many factors, such as mixing energy and duration, temperature, and salinity. Once in the water, oil components are subject to evaporation and microbial oxidation, which can appreciably alter the composition and concentration of oil constituents with time, even at low temperatures. Analytical methods for measuring the amount of oil in the test water have only recently been widely available, and all of these methods are less than ideal.

The scope of this review is limited to studies dealing with the ability of crude and refined oils to kill marine animals. Emphasis is given to the more recent quantitative studies that were not available to earlier reviewers (Evans and Rice 1973; Moore and Dryer 1974; National Academy of Science 1975). This review covers (1) the behavior of oil in water; (2) the methodology problems associated with bioassays; (3) the comparative toxicity of oil-water mixtures, oils, and components of oils; and (4) the comparative sensitivity of different life stages and species.

BEHAVIOR OF OIL IN WATER

Bioassays involving crude or refined oils are fundamentally different from bioassays involving other substances (such as heavy metals) in one major respect. Oil bioassays attempt to evaluate the effects of a mixture of many different toxic compounds together rather than a single pure compound. There is a wide spectrum of physical and biological properties associated with these various compounds which affects the rate and amount of these compounds transported into water. Once in the water, the persistence of some of the toxic compounds in oil is influenced by a variety of processes such as biodegradation, evaporation, etc.

A basic knowledge of physical processes that affect both the transport of oil into an aqueous phase and the persistence of oil transported is essential to evaluate results of bioassay tests. In this section, we discuss some of the factors that transport oil into and out of the water column. All of these processes occur simultaneously, and the relative

importance of these processes varies from one compound or class of compound to another. Because of the complexities involved, simple bioassay methods do not work well for investigating toxic effects of oil.

Factors that Affect the Quantity of Oil Transported into Water

Oils can become associated with an aqueous phase in a variety of different ways, such as emulsion, dispersion, or accommodation (Peake and Hodgson 1966), or some of the constituent compounds of an oil may dissolve, forming a true solution. The solubility of oil compounds in water varies considerably with the class of compound and is an important factor that determines the toxicity of oil-water solutions. Some hetero compounds such as pyridine are completely miscible with water. Benzene is the most soluble aromatic hydrocarbon at about 1,800 ppm in water. The solubility of other aromatic hydrocarbons decreases with increasing degree of alkyl substitution and number of aromatic rings. Aliphatic hydrocarbons are among the least soluble hydrocarbons, with solubility decreasing sharply with increasing carbon number (McAuliffe 1966, 69).

The amount of the soluble fraction of oil that enters the water phase is mainly determined by mixing energy, mixing duration, and the viscosity of the oil. Turbulence (or mixing energy) was found to have a pronounced effect on the amount of both particulate and sub-particulate oil going into the water phase (Gordon et al 1973). In similar studies at our laboratory we have been unable to detect concentrations of 10 ppb in water 1 cm beneath a slick that is gently layered on the water surface (Taylor and Karinen, This symposium). Gentle mixing of oil in seawater for 20 hr will generate water-soluble fractions with oil concentrations in seawater from about 1 to 10 ppm (Anderson et al 1974, Rice et al 1976a). Violent mixing can produce oil concentrations in seawater in the hundreds of parts per million, with much of the oil present as dispersed droplets.

The amount of time that oil and water are mixed is as important as mixing energy in determining the quantity of oil that enters the water phase. Using gentle mixing, the amount of oil that enters the water phase steadily increases for over 30 hr (Gordon et al 1973, Anderson et al 1974, Percy and Mullin 1975, Rice et al 1976a).

The viscosity of the oil also affects the amount of oil that enters the water phase, because more mixing energy is required to mix thick, viscous crude oil. We have observed that the relatively viscous Prudhoe Bay crude oil yields WSF's that are about half the concentration of those from Cook Inlet crude oil when mixed under identical conditions (Rice et al 1976a).

There are several other less well-studied factors that affect the amount of oil entering the water phase. There is evidence that polar hydrocarbon derivatives are generated from oil by photo-oxidation (Lysyj and Russell 1974). These polar hydrocarbons tend to dissolve into solution from an oil slick, which raises the total concentration of oil-derived hydrocarbons with time. In addition, pH (Kauss et al 1973) and salinity (Rice et al 1975) affect the amount of oil entering the water phase.

Changes in temperature influence the transport of oil into water because changes in temperature change the viscosity of the oil, the solubility of oil components, and the stability of emulsified or suspended oil. The viscosity of oil increases as temperature decreases, thus at low temperatures more mixing energy or time is required to transport oil into the aqueous phase. As temperature decreases, the solubility of the non-volatile oil components decreases, but the solubility of the volatile components increases. Finally, emulsions and suspensions are more stable at lower temperatures. These conflicting effects make it difficult to predict the overall effect of temperature on the amount of oil transported into the aqueous phase.

Factors Affecting the Composition of Oil in Water

The composition of oil transported into the aqueous phase is also strongly dependent on compound solubilities, mixing energy, mixing duration, and oil viscosity. The composition of oil in water may or may not be similar to the composition of the parent oil, depending on how the oil is associated with the water. When oil is mixed violently with water, many dispersed droplets having a composition similar to that of the parent oil are formed. When oil is mixed slowly, the bulk of the hydrocarbons transported into water is composed of the more soluble hydrocarbons, unlike the composition of the parent oil. For example, Bean et al (1974) found water-soluble fractions to have compositions quite unlike the parent oil. They found increases in IR absorption at 3,000 to 3,100 cm^{-1} for WSF's, indicating significant increases in the relative concentration of aromatic hydrocarbons in the WSF.

The AEF is the ratio of the concentration of aromatic compounds to n-paraffins in the oil-water mixture, divided by the ratio of the concentration of aromatic compounds to the n-paraffins in the parent oil. A dispersion from a turbulent mix will result in an AEF of 1-3, indicating that the composition of oil in water is about the same as the parent oil. In contrast, the AEF will be higher in oil-water solutions prepared with less turbulence. Aromatic enrichment factors of 10-125 and similar magnitude have been reported for WSF's prepared with slow, gentle mixing of Kuwait, Prudhoe Bay, and Cook Inlet crude oils (Anderson et al 1974, Short et al 1975, Rice et al 1976a).

In addition to solubility, mixing energy, mixing duration, and oil viscosity, there are undoubtedly other factors that affect the compositon of oil in water. For example, the solubility of many compounds is influenced by pH (Kauss et al 1973), salinity, and temperature. Removal of selected hydrocarbons from solution by biodegradation, evaporation, photochemical oxidation, etc. will change the compositon of oil in water.

The fact that the amount and composition of oil that is transported into distilled water or seawater is strongly dependent on the method used to prepare the oil-water mixture, emphasizes the need for analytically determining the amount of oil actually transported into the aqueous phase. There have been many studies of static bioassays that report only the volume of oil used to prepare the oil-water test mixture. The concentrations of oil that the test species were actually exposed to in these studies are almost completely unrelated to the amount of oil used to prepare the test solutions, so that these studies are of limited value.

Factors Affecting the Persistence of Oil in Water

After the oil has been transported into the water, several factors cause hydrocarbons to be lost, resulting in changes in both concentration and composition of the oil solution or dispersion. Cheatham et al (In prep.) demonstrated that the losses of total aromatics from WSF's of crude oil were significant, and that the rate of loss was less at low temperatures (Fig. 1).

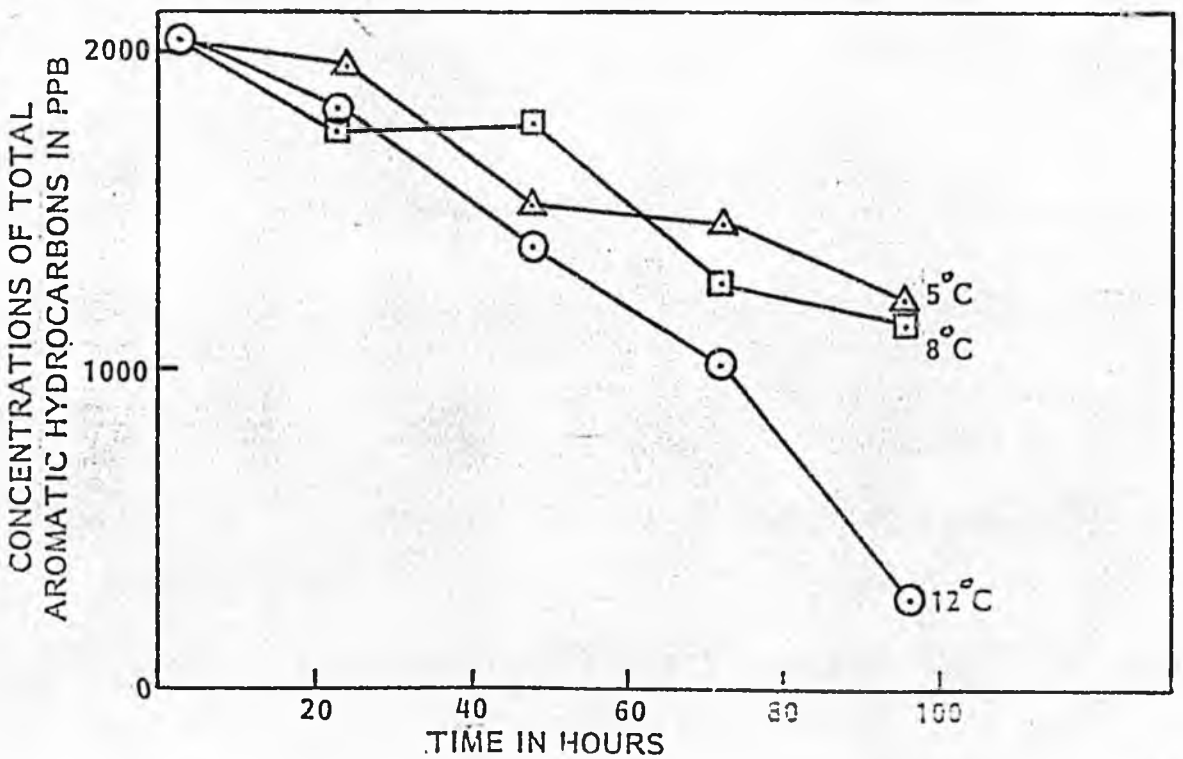

Fig. 1. Concentration of total aromatic hydrocarbons from water-soluble fractions of Cook Inlet crude oil measured by gas chromatography at 24-hr intervals. Solutions were non-aerated, and held at either 5°, 8°, or 12° C (from Cheatham et al In press).

Both paraffinic and aromatic hydrocarbons are susceptible to microbial oxidation, although several studies (Kator et al 1971) have indicated that paraffins are oxidized by microbes more easily than aromatic hydrocarbons. Further, dinuclear aromatic hydrocarbons are lost from solutions primarily by biodegradation, while mononuclear aromatics are lost primarily by evaporation; both processes occur at faster rates at higher temperatures (Cheatham et al In prep.).

Chemical and photo-oxidation can also change the concentration and composition of oil in water. Aromatic hydrocarbons in particular are susceptible to photo-oxidation. Finally, significant quantities of oil can be separated from the water when dispersed droplets coalesce into larger droplets and form a layer of oil at the surface.

METHODOLOGY PROBLEMS ASSOCIATED WITH BIOASSAYS

Since oil-water solutions are so complex and difficult to work with, researchers have had to develop various modifications of standard bioassay methods. The following discusses the general problems encountered in oil toxicity testing, and specific problems associated with comparisons of oil toxicity.

Preparation of Oil-water Mixtures

Different investigators have used a wide range of methods to prepare oil-water mixtures. For example, mixing methods range from virtually no mixing (layering oil on top of water) to very turbulent mixing for prolonged periods. As noted previously, the mixing turbulence and duration strongly affects the amount and composition of oil entering the water phase. Direct comparisons between results of different investigators cannot be made when different mixing methods have been used.

Individual investigators have tended to justify their choice of mixing methods on the basis of analogy to probable environmental situations. This strikes us as a fundamentally faulty approach. Several different mixing regimes may occur in the environment, so that it is impractical to try to simulate all of them. Acute bioassays cannot provide more than a hazy idea of what is likely to occur in the environment, nor were they intended to do so.

Methods of Exposing Animals to Oil

There are numerous practical problems in oil toxicity tests that have led to a variety of specific exposure techniques. For example, sometimes the test animals are passed directly through a surface film of oil into the oil-water mixture, and sometimes the animals are added to oil-water dispersions or WSF's. Some investigators have aerated the oil-water mixtures, which will affect results since aeration accelerates the evaporation of the toxic light aromatics. Many different designs of exposure containers have been used because the requirements of various animals differ. For example, most intertidal animals have to be trapped in the exposure container to prevent them from crawling out (controls included).

Death versus Moribundity

Since animals have a variety of structures and activity levels, dead and moribund animals may be difficult to distinguish from live animals. Usually, the lack of visible motion is used to define death, but with some slow-moving animals, death may not be distinguishable until some necrosis occurs, and this requires extending the time of the observation period. Some animals depress their metabolism and respiratory activities when stressed, and will appear dead, but can recover when placed in clean water. On the other hand, delayed mortality (deaths occurring after the exposure period has terminated), may occur in some species, such as molluscs (Swedmark 1973).

Delayed mortality leads to the problem of identifying moribund animals in contrast to dead animals. Moribund animals are severely affected and destined to die, usually within a few days. Moribund animals will die a physiological death and are not to be confused with affected animals that can live but would be "ecologically dead" because of increased vulnerability to predation or environmental stresses. If moribund animals are counted as alive at the end of the exposure (e.g. 96 hr), the calculated median lethal concentrations will be high, implying a level of tolerance that is erroneous. Crustacean larvae have been observed to be particularly slow in dying, and will exist in a moribund state for up to several days before the larvae become necrotic (Brodersen et al In press).

Each species that is tested must be observed carefully and with attention to its biology. Although there can be no universal guidelines for observing all animals in toxicity tests, post-exposure observations should be made to determine if affected animals are moribund or if they will recover.

Effects of Temperature on Oil Toxicity Tests

Temperature can affect the results of oil toxicity tests in a complex manner. Percy and Mullin (1975) found that the amphipod *Onisimus affinis* was consistently more sensitive to oil when exposed at 8°C than at 0°C, but that oil-water solutions prepared at 0°C were consistently more toxic than solutions prepared at 22°C. Korn et al (In prep.) attempted bioassays at different temperatures with pink salmon fry and shrimp exposed to crude oil WSF's, naphthalene, and toluene a d found opposing results. Survival of pink salmon fry was decreased when exposed at low temperatures, whereas shrimp survival was decreased when exposed at higher temperatures. Temperature can affect toxicity measurements in two basic ways: (1) by affecting oil toxicity, and (2) by affecting animal sensitivity. Oil toxicity is increased at lower temperatures, since toxic aromatics persist longer at lower temperatures (Percy and Mullin 1975, Cheatham et al In prep.). Animal sensitivities will be affected by changes in temperature since rates of hydrocarbon uptake, metabolism, and excretion will be altered. Because the effects of temperature on oil toxicity and animal sensitivity may oppose each other, it is conceivable that the order of potency of different oils could vary with temperature. Indeed, Ottway (1971) found that the relative toxicities of 10 different crude oils changed in a complicated way between 4°C and 26°C.

Chemical Analysis

Until the 1970's, comparison of results between experimenters has been especially difficult because most experimenters have not measured the concentrations of oil present in their test solutions. In these cases, results have usually been reported as the volume of oil used to prepare the test solution. Reporting oil concentrations as the "volume added" will underestimate the toxicity of oil, because most of the oil exists as a separate phase above the water phase. As previously discussed, the amount of oil that actually enters the water phase depends strongly on the method of mixing, and the volume of oil used to prepare the test solution is an inadequate measure of the amount of oil actually in the test solution.

Several chemical methods have recently been used to determine the concentration of oil in the water phase. Infrared spectrophotometry (Anderson et al 1974, Bean et al 1974, Rice et al 1975, 1976a, 1976b), ultraviolet spectrophotometry (Brenniman et al 1976, Rice et al 1976a, Caldwell et al This symposium), fluorescence spectroscopy (Gordon et al 1973, Percy and Mullin 1975, Wells and Sprague 1976), and gas chromatography (Bean et al 1974, Benville and Korn In press, Cheatham et al In prep., Korn et al In prep.) have been used as analytical methods. These analytical methods all have the advantage of providing a measure of the amount of oil actually in the test water, as opposed to the amount of oil used to prepare the test water. Each of these analytical methods also has different practical advantages.

The infrared (IR) method of Gruenfeld (1973) is relatively simple, but is much more sensitive to paraffinic hydrocarbons than to aromatics. In addition, standards for this method are necessarily arbitrary because the composition of oil in the water phase is not the same as the parent oil. Although the IR method quantitates paraffins that presumably are not toxic, their concentrations are usually proportional to concentrations of toxic compounds.

Ultraviolet (UV) spectrophotometry and fluorescence spectroscopy are especially sensitive methods for detecting aromatic hydrocarbons, which are presumed to be the most toxic fraction of crude and fuel oils. However, the UV and fluorescence methods are completely insensitive to paraffinic hydrocarbons, and measure different aromatics with different sensitivities, making standards somewhat arbitrary.

Analysis by gas chromatography (GC) or high pressure liquid chromatography (HPLC) is more complicated than the UV and fluorescence methods, but it also provides more detailed results. Both GC and HPLC separate individual compounds from mixtures, can measure paraffins and aromatics with nearly equal sensitivity, and have standards that are not arbitrary. However, because most individual compounds are separated by these methods, the amount of data produced by a single analysis can be formidable. Analyses by GC and HPLC are relatively expensive since fewer samples can be analyzed per day.

Gas liquid chromatography (GLC) and high pressure liquid chromatography (HPLC) are probably the most appropriate analytical methods for oil toxicity investigations. Both GLC and HPLC are able to separate and measure the concentrations of individual aromatic hydrocarbons present in oil-water mixtures. As discussed later, there is general agreement that

aromatic hydrocarbons are responsible for most (if not all) of the toxicity of oil-water mixtures. Thus, using GLC or HPLC, one can attempt to correlate changes in the toxicity of oil-water mixtures with changes in chemical (i.e. aromatic) composition in order to assess the relative toxicity of each of the aromatics present (Bean et al 1974).

All of the previously described methods involve extraction of oil components into a low polarity solvent, such as hexane or methylene chloride. Since a low polarity solvent may not efficiently extract polar components of oil in the WSF, polar compounds may not be measured effectively. These polar compounds may form a significant proportion of oil-derived material in the water phase, especially if the water has been in contact with oil in the presence of light for a prolonged period (Lysyj and Russell 1974). Detailed measurement of these polar compounds is a formidable analytical problem, and the contribution made by these polar derivatives to toxicity has not been evaluated.

Statistical Analysis

Statistical analysis of bioassay data is required for meaningful comparisons between tests. Unfortunately, only a few investigators have determined 95% fiducial intervals so that statistically significant differences could be determined.

Probit analysis (Finney 1976) is the most appropriate statistical method for analyzing bioassay data because (1) it provides an accurate determination of the concentration of oil necessary to kill 50% of the test animals (LC50, LD50, or TLm), (2) it provides a measure of how much the toxicity of oil increases with increasing oil concentration, and (3) 95% fiducial intervals for LC50's can be calculated.

Other methods for calculating LC50's have been used which do not require as much data as the probit method, but the certainty of the calculated LC50 is reduced. The most commonly used of these methods is that of Doudoroff et al (1951) where the percent mortality is plotted against the log of the oil concentration, and a line is fitted to the plot. The antilog of the oil concentration corresponding to 50% mortality is the estimate of the LC50. This method will work even when exposure to oil concentrations results in only zero and complete mortality. However, the accuracy of the method in such cases can be very poor, and there is no way to estimate confidence in the LC50. In addition, an underlying assumption of Duodoroff's method is that percent mortality is a linear function of the log of the oil concentration. A detailed plot of percent mortality versus the log of the oil concentration will usually yield a sigmoid curve, if enough observations are made at oil concentrations resulting in less than 100% mortality but more than zero mortality in the test animals.

A comparatively simple method that does not have the drawbacks of Doudoroff et al's (1951) method is that of Spearman and Kärber (Finney 1976). This method requires only that oil concentrations resulting in zero and 100% mortality in the test animals be known, although it also makes efficient use of data where some concentrations have some survivors. Confidence intervals can be calculated for LC50's determined by this method, and the applicability of the method is not affected by assumptions regarding the tolerance distribution of test animals.

Neither probit analysis nor the method of Spearman and Kärber determine variability in toxicity test results from any source other than the test organisms. Specifically, we have found that variation in the toxicity of water-soluble fractions or dispersions of a given crude or refined oil mixed under identical conditions significantly exceeds the variation expected from the test organisms. Therefore, in order to obtain statistically reliable data when other sources of variation are involved, such as different WSF preparations, a bioassay should be conducted on each WSF preparation and the LC50's analyzed using Student's t-test. This procedure would then include all sources of variation.

Specific Methodology Requirements Associated with Comparing Oil Toxicities or Animal Sensitivities

At least three specific methodology requirements must be met when comparing the toxicities of different oils or comparing the sensitivities of different species.

First, a reference toxicant is needed when comparing oil toxicities. Different investigators have compared oil toxicities, but the validity of comparing results without a reference toxicant is questionable when the tests are not conducted simultaneously with the same population of test animals under identical conditions. Use of a reference toxicant will permit valid comparisons by verifying that different sub-populations of animals are equivalent in sensitivity, or that minor modifications of procedures between different researchers are insignificant.

The toxicant DSS (dodecyl sodium sulfate), suggested as a standard reference toxicant by LaRoche et al (1970), has been used in some tests; however, it is evidently not a satisfactory standard for use over a wide range of temperatures. Rice et al (1976a) were unable to generate reliable data on DSS toxicity to some shrimp because a precipitate involving DSS forms readily above 30 ppm at 30 °/₀₀ salinity and temperatures less than 15°C. They concluded that DSS is a poor reference toxicant.

Although the bioassay method is appropriate for comparisons of toxicity, few investigators have used the same test species, exposure conditions, or appropriate reference toxicant. It is therefore impossible to directly compare results between investigators. However, conclusions made by each investigator are usually valid, and one can compare conclusions formed by different investigators.

The second requirement when comparing oil toxicities is a standard test species. Comparisons of toxicity differences between several oils require that the sub-populations of animals used in the tests be of equal sensitivity. This is presumably assured when the same test species is used, although "reference toxicant" tests will verify that the sensitivities of the sub-populations have not been affected by other factors, such as sex, health, etc. Several investigators have used more than one species, and found the relative toxicities of different oils (or different methods of mixing a given oil) are generally not significantly affected by the choice of test species. Anderson et al (1974) tested four different oils each mixed with water in two different ways (WSF's and dispersions), and determined the toxicity of each oil-water mixture to six different marine animal species. Within each mixing method, the order of toxicity was not significantly different for the six animals. Rice et al (1976a) conducted a similar study and found that the LC50's of the eight species studied were generally within the same order of magnitude regardless of the kind of oil or mixing method used. Percy and Mullin (1975) found that the order of potency of four different crude oils was different for each of the three marine invertebrates they tested. However, they did not determine the concentrations of oil in the doses they used to determine the toxicity of these oils, so that these results may be due to variation in potency between preparations of their test solutions. When different investigators use different species to compare oil toxicities, the relative toxicities of different oils can be compared, but absolute values from one study cannot be compared to values from another study unless the same species is used. For the purpose of comparing toxicities of different oils, the use of a standard test species is most desirable.

Third, accurate comparisons of sensitivities of different species require that oil concentrations remain stable during the exposure. However, in static tests the oil concentrations usually decline with time, since aeration, biodegradation, temperature, and other factors affect the persistence of petroleum hydrocarbons in seawater. Nevertheless, most toxicity studies to date have used static exposures rather than flowthrough exposures because static exposures are relatively easy and inexpensive, and the technology for flowthrough bioassays with oil has been complicated, costly, and slow to develop.

There are two reasons why declining oil concentrations during static exposure cause difficulties in comparing the sensitivities of different species. First, the effective exposure period is short, possibly only a few hours, depending on the rate the oil concentration declines. Consequently, estimates of toxic oil concentrations are likely to be high. Since the rate of decline is likely to vary between tests, the effective period of exposure is also likely to vary between static tests. Second, some species accumulate the toxicants at faster rates than others, and are likely to be the species that will die faster than others. Animals that slowly approach equilibrium with toxic solutions may not be as tolerant as they seem because lethal concentrations may decline to sublethal concentrations before the animals have achieved equilibrium. Sensitivities of fast- and slow-dying species can be compared if they are tested long enough in flowthrough exposures where the toxicant concentrations are held constant during exposure. The value of flowthrough tests depends on constant exposure to stable concentrations, which must be verified by chemical analyses.

COMPARATIVE TOXICITY OF OIL-WATER MIXTURES, OILS, AND COMPONENTS OF OILS

Historically, bioassays were developed to determine the biological potency of substances such as drugs and insecticides. For these purposes, the bioassay method requires that a standard set of exposure conditions be maintained and that standard test species be used whose sensitivity does not change between tests. If the standard species sensitivity does change between tests, then reference bioassays may be conducted with a standard reference toxicant to identify and correct for this change in sensitivity. If the above requirements are met, then the bioassay method will yield valid comparisons of toxicity. The bioassay method is thus appropriate for determining relative toxicity differences.

Toxicity Differences Between Water-soluble Fractions of Oil and Oil-water Dispersions

The toxicity of oil-water mixtures depends in part upon the way the oil is associated with the water. Experiments comparing the toxicity of water-soluble fractions and dispersions of oil suggest that the toxicity of an oil is due to the soluble compounds contained in that oil, and not due to compounds in dispersed droplets. The chemical composition of the droplets is probably very similar to that of the parent oil, except that the droplets probably contain slightly lower concentrations of soluble compounds because of losses of these compounds due to equilibration with the water. If oil dispersions are less than or equally as toxic as WSF's (which contain far fewer dispersed droplets of oil), the toxicity must be due to the soluble fractions of oil.

Oil dispersions are slightly less toxic than WSF's of a given oil when oil concentrations are analyzed by IR. Rice et al (1976a) tested five species with dispersions and WSF's of two crude oils and found that toxicities of dispersions were always less than, but within an order of magnitude of, the toxicities for corresponding WSF's. Anderson et al (1974) did not analytically determine oil concentrations in the doses they used to determine the toxicity of dispersions. However, they did provide data relating the amount of oil used to prepare a dispersion to the amount of oil found in a typical dispersion (as determined by IR). After calculating the amount of oil found in toxic dispersions, we estimate that the toxicity differences between the dispersions and WSF's studied by Anderson et al ranged from nil to about an order of magnitude, with the dispersions being consistently less toxic.

Dispersions and WSF's seem to be equally toxic when oil concentrations are measured by UV. Rice et al (1976a) compared toxicities of dispersions and WSF's of two crude oils to each of 6 test species. They found significant differences in only 4 of 12 cases when oil concentrations were determined by UV. In 3 of these 4 cases, the dispersions were slightly more toxic than the corresponding WSF. The lack of significant differences in toxicity suggests that the toxicity of oils is due to the water-soluble compounds.

In conclusion, all these results suggest that oil toxicity is due to chemical toxicity of soluble aromatics, rather than physical toxicity of dispersed droplets.

Toxicity Differences Between Different Oils

Toxicities vary between oils, which is to be expected because the concentration and composition of individual hydrocarbons within the oil vary. The refined oils are generally considered to be more toxic than crude oils, since smaller volumes of refined oils are needed to kill 50% of the test animals in a given length of time. The increased toxicity of refined oils, as measured on a volume added basis, is primarily caused by two factors. Refined oils often have higher concentrations of aromatic hydrocarbons, and refined oils are usually less viscous than crude oils thus requiring less mixing energy for toxic concentrations to be mixed into the water.

We believe that direct toxicity comparisons between different oils is a simplistic approach, because so many factors other than composition differences between oils can affect the observed results. We now know that the toxicity of a given oil is influenced by mixing method, temperature, salinity, etc.

We believe that any oil, whether crude or refined, is best considered as a source of toxic compounds. Based on a knowledge of the toxicity of all the compounds contained in an oil and the concentration of these compounds, one should be able to predict the toxicity of any oil-water mixture. (This may not be so formidable a task, since the solubility of most toxic compounds in oil is so low that they probably do not make significant contributions to toxicity.) With this approach, the toxicity of an oil would be evaluated in terms of (1) the concentrations of toxic compounds it contained, and (2) the physical characteristics of the oil (such as viscosity) that would promote the transfer of these toxic compounds into solution when a standard oil-water preparation method is used.

Comparative Toxicity of Different Oil Components

Although there is general agreement that aromatic hydrocarbons are responsible for the toxic effects of crude oils and refined products, the relative importance of various aromatic hydrocarbons to toxicity is not clearly defined. Therefore, there has been an increasing interest in determining the degree of contribution of individual aromatics to the toxicity of oil-water solutions.

There have been several studies on the toxicity of individual hydrocarbons (summarized in Table 1). Studies by Neff et al (1976), Benville and Korn (In press), and Caldwell et al

(This symposium) compare the toxicities of mono- and di-aromatic compounds to four marine species. Even though the species tested are quite different, and include tests with larvae, the following three results are quite consistent: mono-aromatics are the least toxic, acute toxicity increases with increasing molecular size until the 4- and 5-ring compounds are reached, and alkylation of the aromatic nucleus seems to increase the toxicity of the parent compound. Thus, in both the benzene and naphthalene series, toxicity increases with increasing degrees of alkylation. The toxicities reported for m-, o-, and p-xylene for shrimp, bass, and crab larvae suggest that the position of alkyl substitution on the aromatic ring may influence toxicity (Benville and Korn In press, Caldwell et al This symposium). The most toxic hydrocarbon evaluated by Neff et al (1976) was 1-methylphenanthrene. Considering the toxicity of the compounds they studied and the concentrations of these compounds in toxic WSF's, Neff et al (1976) concluded that much of the toxicity of most crude and refined oils was due to the mono- and dinuclear aromatics.

TABLE 1

Comparative toxicity of different aromatic hydrocarbons, expressed in 96-hr LC50's with concentrations in ppm. Asterisk (*) indicates that toxic concentrations were above solubility limits.

AROMATIC H.C.	96-hr LC50's in ppm

The solubility of individual aromatic hydrocarbons decreases with increasing methyl substitution and number of rings, and this is reflected in most WSF's (Caldwell et al This symposium). The concentrations of mono-aromatics, such as benzene, are usually greater in WSF's than naphthalene and other larger aromatics. Since the toxicity of aromatic hydrocarbons increases as the concentrations in the WSF decrease, it is difficult to identify which specific compounds are most responsible for the toxicity of WSF's. The toxicity of oil-water solutions is probably due to contributions from both the more soluble, less toxic mono-nuclear aromatics and the less soluble, more toxic dinuclear aromatics. The relative importance of the two classes will likely depend on several factors, such as their relative concentrations in the parent oil, temperature, mixing characteristics, etc.

Since the solubilities of the larger polynuclear aromatic hydrocarbons are so low, these compounds probably contribute little to the acute toxicity of oil-water solutions. Neff et al (1976) found several polynuclear aromatics that were not acutely toxic in four days at the maximum possible concentrations (solutions were 100% saturated). However, these

compounds may contribute to long-term damage if they accumulate to significant concentrations in the tissues after lengthy exposures.

Several investigators have given evidence suggesting that mono- and dinuclear aromatic hydrocarbons account for much of the toxicity of oil-water solutions, and there have been correlations of adverse effects with tissue concentrations of aromatic hydrocarbons. However, it is premature to conclude that the aromatic hydrocarbons are solely responsible for the acute toxicity of oil-water solutions. The presence and toxicity of polar hydrocarbon derivatives or polar oxidation products of oil hydrocarbons have generally been ignored, because they are more difficult to identify and measure.

COMPARATIVE SENSITIVITY OF DIFFERENT LIFE STAGES AND SPECIES

When assessing the potential impact of spilled oil, it is crucial to know if some species or life stages are more sensitive than others to oil toxicity. As previously discussed, comparisons of animal sensitivities to oil are most valid when tested with flowthrough exposures during which the oil concentrations remain constant. Unfortunately, most studies have used static exposures, in which the oil concentrations decline with time, and slow-dying animals may appear more tolerant than they actually are to four-day exposures. In spite of these limitations with static exposures, we attempt to compare sensitivities of different life stages and species to oil.

Comparing Sensitivities of Different Life Stages

Survival of a species is dependent on the survival of each developmental stage. In general, eggs are assumed to be more tolerant than other life stages to oil exposures because of the protection given by the surrounding chorion. In contrast, larvae have been assumed to be more sensitive to oil pollution, probably because of their high mortality in response to natural environmental stresses. In an earlier review, Moore and Dwyer (1974) concluded that larvae are approximately an order of magnitude more sensitive than adults to oil toxicity. Although their conclusions are consistent with general assumptions of larval sensitivity, support for their conclusions is based on literature where oil concentrations had to be "normalized" for comparative purposes.

Comparisons of results from early studies on the sensitivity of eggs to oil are severely limited since exposure concentrations are reported in quantities of oil added. The sensitivities of fish eggs and larvae of Black Sea turbot (Mironov 1967), herring eggs incubated under an oil film (Kühnhold 1970), and cod eggs incubated in the water-soluble fraction of crude oil (Kühnhold 1974) have been reported. In addition to mortality, effects on developmental rates and developmental abnormalities which would presumably cause death at a later stage have been observed. In more recent quantitative studies, Struhsaker et al (1974) found herring eggs to be more tolerant than larvae. Similarly, Rice et al (1975) found salmon eggs to be quite resistant to the crude oil WSF, and that sensitivity increased after hatching until yolk absorption was complete.

Some investigators have also attempted to document the sensitivity of larvae of various species to oil but the concentrations are given as "volume added" and comparisons are arbitrary. Crude oil concentrations as low as 1,000 ppm are reported to retard development of *Crassostrea* larvae (Renzoni 1975). Concentrations of 100 ppm of oil are fatal to larvae of lobster (Wells 1972), shrimp, and crab (Mironov 1968). In addition, 10 ppm or less produced a delayed mortality and resulted in marked changes in color and behavior in lobster larvae (Wells 1972). Chia (1973) exposed 14 species (5 phyla) of pelagic larvae to 0.5% diesel oil and found that larger larvae generally lived longer than smaller larvae. The large range in reported lethal concentrations (10 to 1,000 ppm) may reflect differences in the toxicities of crude oils or the sensitivities of species, but is more likely due to differences in preparation of the oil-water mixtures. As stated previously, the amount of oil in solution is particularly influenced by mixing energy and duration (Gordon et al 1973, Anderson et al 1974, Rice et al 1976a). All of the above studies on larvae were quantitated in terms of "volume of oil added" rather than by quantitative analytical measurements that allow comparisons.

Recent studies employing analytical measurement of oil concentrations in the test exposures have found the sensitivities of larvae and juveniles to vary considerably, with sensitivity depending on life stage and species (summarized in Table 2). Neff et al (1976) found larvae of grass shrimp to be more sensitive than adults, while post-larvae of brown shrimp were more resistant than early or late juveniles. They concluded that generalizations cannot be made about larvae versus adult sensitivity, and this is borne out by other studies. The early stages of a polychaete worm were found to be more resistant than later juvenile stages and adults to crude oil and No. 2 fuel oil (Rossi and Anderson 1976). Stage

I lobster larvae are more sensitive (4-day LC50 of 0.86 mg oil/liter) than stages III and IV (LC50 of 4.8 mg/liter) (Wells and Sprague 1976). Brodersen et al (In press) determined sensitivities of stage I larvae of four species of shrimp, two species of crab, and of six larval stages of coonstripe shrimp. Sensitivities differed considerably, but stage III and VI larvae of coonstripe shrimp were the most sensitive (4-day LC50's of 0.35 and 0.24 ppm). Brodersen et al concluded that the stage I larvae tested were all slightly more sensitive than adults (larvae were 1.2-4.9 times more sensitive). They concluded that larvae are slow to die, and that comparisons of sensitivities should be based on oil concentrations that cause moribundity rather than mortality during a four-day test.

The animals most sensitive to oil appear to be crustacean larvae but this may only be apparent because of test methodology differences, or because these larvae have been studied more than any other phylum. Brodersen et al (In press) report a 96-hr LC50 for moribundity of 0.24 ppm of crude oil for stage VI larvae of coonstripe shrimp; Wells and Sprague (1976) report an LC50 of 0.14 ppm of oil after exposing lobster larvae for 30 days; and Sanborn and Malins (1977) report an LC50 of less than 8-12 ppb of naphthalene after 36-hr exposures for larvae of spot shrimp and Dungeness crab. The test by Wells and Sprague was quite long (30 days) compared to most larval bioassays. The observations on shrimp larvae by Brodersen et al were of moribundity rather than death during the exposure. Although the observations of Wells and Sprague (1976) during the 30-day test with lobster were of death, they may be analogous to the previous observations on moribundity in shrimp larvae (Brodersen et al In press) since there was ample time during the 30-day tests for moribund lobster larvae to die. The tests by Sanborn and Malins (1976) were short in duration (36 hr) but were conducted with a pure and highly toxic compound under continuous-flow conditions.

TABLE 2

Comparison of larval sensitivities to crude oil and No. 2 fuel oil. The reported LC50's are from 96-hr static tests, except the 30-day test by Wells and Sprague, and the flowthrough, 36-hr tests by Sanborn and Malins.

		Range of LC50 (ppm)	
Study and Species	Stage	Crude oils	No. 2 fuel oil
Rossi and Anderson (1976)			
Polychaete	Juveniles	15-19.8	4-8.4
	Adults	12.5-17.6	2-4.2
Neff et al (1976)			
Grass shrimp	Larvae	--	1.2
3 sp. shrimp	Post larvae	--	1.4-6.6
3 sp. shrimp	Juveniles, adults	--	1.0-3.7
Wells and Sprague (1976)			
American lobster	Stage I-IV	0.8-4.9	--
	Stage I	0.14 (30-day LC50)	
Brodersen et al (In press)			
6 sp. shrimp and crab	Stage I	0.9-1.8	
Coonstripe shrimp	Stage I-VI	0.2-1.8	
Mecklenburg et al (This symposium)			
King crab	Stage I	2.0	
	Stage I molting	1.3	
Coonstripe shrimp	Stage I and II	4-7.9	
	Stage I molting	0.9	
Sanborn and Malins (1977)			
Spot shrimp	Stage I and V		Naphthalene < 12 ppb

Previous studies with crustacean larvae exposed to oil (Wells 1972, Katz 1973) have suggested that molting larvae were more sensitive, since mortalities often increased during molting. Mecklenburg et al (This symposium) confirmed that molting larvae of coonstripe shrimp and king crab were more sensitive than non-molting larvae. Molting larvae of coonstripe shrimp were about five times more sensitive to oil than non-molting larvae. Similarly, adult tanner crabs exposed to oil just prior to molting died during the molting process (Karinen and Rice 1974). Emery (1970) also found molting larvae of two crustaceans to be more sensitive to creosol than non-molting larvae. Emery suggested that tolerance is reduced during molting because of the toxicant-laden fluid that is taken up rapidly prior to molting to create enough hydrostatic pressure to split the exoskeleton. Since all molting crustaceans are probably more sensitive to oil exposure than non-molting crustaceans, comparison of sensitivities will be more valid if sensitivities are determined for crustaceans when they are all in the same period of the molt cycle, such as intermolt. However, isolating intermolt larvae for toxicity tests can be a problem, especially in warmer climates where larvae of some species molt more frequently and the intermolt periods are shorter.

Juveniles of non-crustaceans, such as polychaetes, are apparently more tolerant than adults to oil (Rossi and Anderson 1976). Polychaete juveniles grow by adding additional segments, and do not molt like crustaceans. Since there is no molting process, polychaete juveniles do not have a rapid uptake of fluid associated with growth. These differences in growth and sensitivity suggest that molting animals are more vulnerable to oil, probably because of increased permeability during the molting process.

At this time, generalizations about greater sensitivity to oil during early life stages cannot be made, since a general pattern has not emerged from the literature. More life stages from several groups need to be tested, with the bulk of the early literature being of little value. It seems likely that sensitive stages will be those that are already under a certain amount of natural stress. Larvae in general would seem to qualify, since they typically have a high natural mortality. If larvae are more sensitive, then species from a colder climate may be particularly vulnerable because of the relatively long period spent as developing larvae.

Although some questions remain about the relative sensitivity of larvae and adults exposed to oil, larvae are probably more vulnerable than adults. Larvae that are weakened by oil, though not killed outright, may become easy prey while adults so affected are afforded some protection by their greater size and their better-developed exoskeletons. Furthermore, some adults and juveniles will probably avoid contaminated water, since they can detect the oil and have the motor ability to avoid the area (Rice 1973). Larvae may lack both of these abilities. Lack of avoidance behavior has been observed in larvae of three species of marine fish (Kühnhold 1970) and in herring and crab larvae (Rice et al 1976a). The interactions in the environment are complex, and while sensitivities to oil can be extrapolated from the laboratory to the ecosystem, vulnerability and survival of larvae exposed to oil in the natural environment are another matter.

Comparing Sensitivities of Different Species

The sensitivities of several marine species have been tested in quantitative static or flowthrough tests (summarized in Table 3). There have been differences between the studies, such as the oil used, mixing techniques, analytical methods, temperatures, and exposure methods (static or flowthrough). In spite of these differences, the ranges of LC50's overlap considerably between most studies, suggesting that sensitivities of most animals are fairly similar.

The study by Rice et al (1976b) tested 27 species of marine fish and invertebrates, and permits the best comparisons of species sensitivities since methods, temperature, etc., were all similar. Fish and shrimp were usually among the more sensitive species tested, while intertidal animals were generally more tolerant. Intertidal animals are probably more tolerant to static exposures because they can temporarily insulate themselves from the exposures, at least until the concentrations in the static exposures have declined to sublethal levels. The intertidal limpets and chitons were more sensitive than the other intertidal animals, but this may have been due to damage occurring when they were collected (pried off the substrate).

The sensitivities of cold-water fish and shrimp (Rice et al 1976b, Korn et al In prep.) appear greater than sensitivities of similar species from warmer climates (Anderson et al 1974, Neff et al 1976). The differences in sensitivity are consistent, but are not large. Rice et al (1976b) speculate that the cold-water species may appear more sensitive because lower temperatures increase the persistence of toxic aromatic hydrocarbons, even though there are differences in oils and species between the studies. This speculation is compatible with other studies. Cheatham et al (In prep.) have shown that water-soluble fractions

at lower temperatures have increased persistence of aromatic hydrocarbons because of decreased losses from evaporation and biodegradation. Korn et al (In prep.) tested the effect of temperature on the toxicity of toluene, naphthalene, and the water-soluble fraction of crude oil to shrimp and fish. They found that with increasing temperature, toxicity increased for shrimp but decreased for fish. They concluded that temperature affects complex interactions in three ways: (1) the persistence of aromatic hydrocarbons is increased at lower temperatures, (2) temperature affects an animal's sensitivity by changing the rates of hydrocarbon uptake, metabolism, and excretion, and (3) temperature may act as a synergistic stress at cold or warm extremes.

TABLE 3

Comparison of adult sensitivities to crude oils and No. 2 fuel oil. All tests were static, except the flowthrough tests (FT) by Battelle. Most of the LC50's reported for the Battelle studies are estimates that have been calculated from Battelle's raw data.

Study and species tested	Temperature range (°C)	96-hr LC50's (ppm) Crude oils	96-hr LC50's (ppm) No. 2 fuel oil
Battelle/Sequim 1973-76			
2 fish sp. (FT)[1]	8	15-65	--
Coonstripe shrimp (FT)[2,3]	10-11	6.6-24.9	0.8
Coonstripe shrimp[1]	8	1.3-4.9	--
Texas A&M 1974-76			
4 crustacean sp.[4,5]	18-22	6->19.8	1.3-4.9
3 fish sp.[4]	18-22	5.5-19.8	3.9-6.3
3 polychaete sp.[6]	20	9.5-12.5	2.3-2.7
Auke Bay Lab 1976[7]

CONCLUSIONS

Methods

1. Toxicity tests with oil require some form of chemical analysis to determine what concentrations of oil are in the water. Gas chromatography or HPLC is preferable since these methods can measure concentrations of individual aromatic hydrocarbons.

2. Statistical analysis generating confidence intervals is more informative than graphic estimates of the LC50.

3. If oil toxicities are compared, reference toxicants and the same test species should be used.

4. If species sensitivities are compared, flowthrough tests with stable oil concentrations during exposure should be used.

Comparative Toxicity

1. Crude and refined oils are best considered as sources of toxic compounds, with toxicity depending on the concentration of toxic compounds in the oil and on physical factors, such as temperature and viscosity of the oil, which affect the transport of petroleum hydrocarbons into the water.

2. Refined oils are generally considered [illegible] than crude oils on a volume added basis because refined oils often have higher [illegible] of aromatic hydrocarbons and are usually less viscous than crude oils.

3. The toxicity of oils is apparently due to the soluble compounds in the water rather than dispersed droplets.

4. The toxicity of aromatic hydrocarbons increases with the number of rings and with the degree of alkyl substitution. The solubility of these compounds decreases with these factors, so that the relative importance of individual aromatic hydrocarbons to toxicity of water-soluble fractions is unknown. Mono- and dinuclear aromatics are probably the most important classes of compounds, accounting for most of the toxicity in water-soluble fractions.

Comparative Sensitivity

1. No conclusions can be made concerning egg sensitivities because not enough quantitative data exist.

2. Crustacean larvae appear more sensitive than most adults. Molting animals are more sensitive than non-molting animals.

3. Sensitivity data for larvae or juveniles from other groups are generally lacking, except for polychaete juveniles, which are more tolerant than adults.

4. Adult sensitivities are fairly similar when data from static tests are compared. Intertidal animals appear more tolerant in short-term, static exposures, probably because of their ability to temporarily insulate themselves from the environment.

5. Cold-water species probably have sensitivities that are equivalent to the sensitivities of species from warmer water, but cold-water species may be more vulnerable to oil toxicity because toxic aromatic hydrocarbons persist longer at colder temperatures.

6. The preceeding conclusions are based on static exposures. Because of the deficiencies of the static exposure method (declining dose), conclusions about sensitivity differences may be altered considerably when tests with flowthrough exposures have been conducted.

Recommendations for Future Research

1. A high standard of quantitative methodology (flowthrough tests, chemical analyses, and statistical analyses) should be used in future toxicity tests.

2. There is little need to test the toxicity differences between different oils. Future research should: (a) determine if aromatics account for most, if not all, of the toxicity of WSF, and (b) determine the relative importance of individual mono- and dinuclear aromatics to the acute toxicity under various conditions.

3. Additional sensitivity data are needed for eggs, larvae, and juveniles of several groups of animals such as molluscs, echinoderms, etc. since virtually no information on these animals is available.

4. Several species need to be retested with flowthrough exposures, so that (a) better estimates of sensitivity can be measured, and (b) sensitivities can be compared between species.

5. A few selected species should be tested for longer periods of time, so that the relationship between oil concentrations that are toxic for short and long exposures can be determined.

ABSTRACT

Larvae of coonstripe shrimp and king crab were exposed to solutions of the water-soluble fraction (WSF) of Cook Inlet crude oil in a series of bioassays on intermolt stages I and II and the molt period from stage I to stage II. Molting larvae were more sensitive than intermolt larvae to the WSF, and molting coonstripe shrimp larvae were more sensitive than molting king crab larvae. When molting larvae were exposed to high concentrations of the WSF (1.15-1.87 ppm total hydrocarbons) for as little as 6 hr, molting success was reduced by 10-30% and some deaths occurred. When larvae were exposed to these high concentrations for 24 hr or longer, molting declined 90-100% and the larvae usually died. The lowest concentrations tested (0.15-0.55 ppm total hydrocarbons) did not inhibit molting at any length of exposure, but many larvae died after molting. Median lethal concentrations (LC50's) based on 144 hr of observation for molting coonstripe shrimp and 120 hr for molting king crab were much lower than the 96-hr LC50's, showing that the standard 96-hr LC50 is not always sufficient for determining acute oil toxicity. Although our LC50's for intermolt larvae are higher than levels of petroleum hydrocarbons reported for chronic and spill situations, some of our LC50's for molting larvae exposed 24 hr and longer are similar to or below these environmental levels. Comparisons of sensitivity to oil between different crustacean species or life stages should be based on animals tested in the same stage of the molt cycle, such as intermolt.

Key Words: Molting, crustaceans, larvae, *Paralithodes camtschatica*, *Pandalus hypsinotus*, crude oil, Alaska.

INTRODUCTION

The breeding and larval stages of marine invertebrates are considered to be the most sensitive to natural environmental stresses (Thorson 1950). In crustacean larvae this sensitivity is compounded during molting. Factors contributing to a high natural mortality in molting crustaceans include increased permeability and altered ionic regulation, the mechanical process of casting off the old exoskeleton, and increased predation while the cuticle is still soft and locomotion is slowed down (Lockwood 1967, Hagerman 1973). Manmade stresses such as pollution from offshore oil production and transoceanic transport of crude and refined oils could impose an additional burden. Pollution by petroleum hydrocarbons in Alaskan surface waters would be particularly damaging to crustacean larvae in the early spring when the larvae are released from the females and undergo several rather closely spaced molts. Cold temperature is another factor to consider in arctic and subarctic waters because aromatic hydrocarbons persist longer (Atlas and Bartha 1972, Cheatham et al. 1976) and some animals retain accumulated hydrocarbons for longer periods of time (Short and Rice in prep.) than would be the case in warmer waters.

The sensitivity of molting crustacean larvae to oil pollution has been reported for only a few species. Oil was more toxic to molting larvae than intermolt larvae in tests with a lobster, *Homarus americanus* (Wells 1972, Wells and Sprague 1976), and the crabs *Neopanope sayana* (Katz 1973) and *Rhithropanopeus harrisii* (Neff et al. 1976). Sublethal effects on these crustaceans included both delayed and stimulated molting.

For this study we chose two crustaceans that are important Alaskan fishery resources, the king crab, *Paralithodes camtschatica*, and the coonstripe shrimp, *Pandalus hypsinotus*, and exposed their larvae to various concentrations of the water-soluble fraction of Cook Inlet crude oil. Separate bioassays were conducted on larvae during intermolt stages I and II and during the molting period from stage I to stage II. We wished to determine sensitivity differences between the intermolt and molt stages and the effects of various concentrations

and lengths of exposure to the WSF on molting success and survival.

METHODS

Mixing and Analysis of Oil Solutions

Solutions of the water-soluble fraction of Cook Inlet crude oil were prepared at ambient seawater temperatures (3°-5°C) and salinity (29 °/oo) by the methods of Anderson et al (1974) as modified by Rice et al (In press). Samples of the test solutions were taken at the beginning of each exposure and whenever a solution was replaced with a fresh solution. The samples were measured by infrared spectrophotometry (IR) at a wavelength of 2930 cm^{-1} (Gruenfeld 1973). At this wavelength IR measures paraffinic hydrocarbons, but not aromatics. Optical densities were converted to ppm total hydrocarbons by comparing the optical densities to prepared standards. Gas chromatographic characterization of a typical WSF of Cook Inlet crude oil has been given by Rice et al (1976).

Collection and Rearing of Larvae

Ovigerous coonstripe shrimp and king crab were caught in pots or collected by divers and held in flowing seawater tanks at the Kasitsna Bay and Auke Bay laboratories. Individual females were isolated in rearing containers just before hatching and release of the larvae. When the larvae were released the females were removed from the containers. The water in the rearing containers was aerated continuously and changed daily. Larvae were fed daily on detritus and laboratory-reared *Artemia*.

Bioassays

The bioassays were conducted in sealed 200-ml and 500-ml glass jars submerged in a waterbath chilled to ambient seawater temperature. There were replicate jars for each of 7 to 12 concentrations of the WSF. There were 10-20 larvae in each jar and the tissue weight/volume ratio in the test jars never exceeded 1 g/liter. Oxygen concentrations measured at the end of the exposure periods were above 70% saturation.

Observations of death and molting success were made without removing the larvae from the test jars. This eliminated handling of the larvae, which could be detrimental. We observed the larvae in each test jar by holding the jar horizontally above a 24-in convex magnifying mirror. Larvae were recorded as dead when there was no visible motion.

Intermolt stage I king crab and coonstripe shrimp larvae were bioassayed within 24 hr of release from the females. The first intermolt stage lasted about 10 days, so we could be sure that molting would not begin during these bioassays. Bioassays on molting larvae were begun 1 or 2 days before the larvae started to molt to stage II. Intermolt stage II coonstripe shrimp larvae were bi assayed 3 days after molting was completed. The second intermolt stage also lasted 10 days. No bioassays were conducted on intermolt stage II king crab larvae.

For intermolt larvae we conducted static 96-hr bioassays (single-dose with declining concentration). Three separate bioassays were conducted on coonstripe shrimp intermolt stage I larvae, and one bioassay each for coonstripe shrimp intermolt stage II and king crab intermolt stage I.

We conducted several bioassays on molting larvae, and each bioassay had a different exposure period: 6, 24, 48, and 96 hr for coonstripe shrimp, and 6, 12, 24, 48, and 72 hr for king crab. In exposures longer than 24 hr the old WSF solution was replaced with fresh solution every 24 hr. After the exposure periods the larvae were returned to uncontaminated seawater for further observations. The total length of time for each test, including the exposure period and the period in clean seawater, was 120 hr for king crab larvae and 144 hr for coonstripe shrimp larvae.

Statistical Analysis

The acute toxicity of the Cook Inlet crude oil WSF to intermolt and molting larvae was expressed as the median lethal concentration (LC50), which is the concentration of WSF causing death in 50% of exposed larvae in a given amount of time. For intermolt larvae we give the standard 96-hr LC50. For molting larvae we give 96-hr LC50's which, although they are each based on 96 hr of observation, involve different exposure times and periods in clean seawater. When comparing acute toxicity to molt and intermolt larvae, for molting

larvae we use the 96-hr LC50 based on 24 hr of exposure and 72 hr in clean seawater.

The LC50's and 95% fiducial limits were calculated by probit analysis (Finney 1971) where possible. Where the data were insufficient for probit analysis we determined LC50's by the methods of Spearman-Karber (Finney 1971) and Doudoroff et al (1951). Abbott's formula (Finney 1971) was used to compensate for control deaths.

RESULTS

Molting larvae of both coonstripe shrimp and king crab were significantly more sensitive to the Cook Inlet crude oil WSF than were intermolt larvae of either species (LC50's with nonoverlapping fiducial limits, Table 1). Molting coonstripe shrimp larvae were four to eight times more sensitive to the WSF than were intermolt stages I and II. The tolerance of king crab larvae during molting was not decreased to the extreme observed in coonstripe shrimp larvae.

TABLE 1

The 96-hr LC50's for molting and intermolt larvae of coonstripe shrimp, *Pandalus hypsinotus*, and king crab, *Paralithodes camtschatica*, exposed to the WSF of Cook Inlet crude oil. The 95% fiducial limits are given in parentheses.

Larval stage	96-hr LC50's in ppm of total hydrocarbons for--	
	Coonstripe shrimp	King crab
Intermolt larvae:		
Stage I	7.94* (6.05-9.50)	2.00 (1.60-2.60)
Stage II	4.06 (3.22-5.11)	-- --
Molting larvae:		
Stage I-Stage II	0.95 (0.87-1.03)	1.33 (1.23-1.45)

*Mean of three separate bioassays.

As the WSF concentrations and exposure periods increased, the number of coonstripe shrimp larvae that molted to stage II declined (Fig. 1). Control coonstripe shrimp larvae for each bioassay completed molting to stage II, with 95-100% molting success, by the sixth day or 144 hr after the beginning of each bioassay. At the lowest concentration tested, 0.25 ppm total hydrocarbons, there was little or no effect on molting success even when the larvae were exposed to replenished WSF solutions for as long as 96 hr. The next highest concentration, 0.63 ppm total hydrocarbons, did not affect molting success when the larvae were exposed only 6 hr, but was progressively more effective in inhibiting molting with each increased duration of exposure. The highest concentrations, 1.15 and 1.37 ppm, severely inhibited molting in exposures of 24 hr or longer. Molting success was only about 10% in these longer exposures to high concentrations and did not drop below 10% even when the WSF solutions were renewed daily.

Molting success in king crab larvae exposed to the WSF followed essentially the same pattern of decline (Fig. 2). Control groups for king crab larvae molting to stage II reached a maximum molting success of 37% by the end of 120 hr of observation. Exposure of king crab larvae to the two lowest concentrations, 0.15 and 0.55 ppm total hydrocarbons, for 6 and 12 hr resulted in some stimulation of molting compared to controls. Longer exposures to these low concentrations had little effect, even when the larvae were exposed for 72 hr to periodically-renewed solutions. The 1.20 ppm concentration had no effect on molting success at exposures less than 48 hr, but 48- and 72-hr exposures completely inhibited molting. The highest concentrations, 1.65 and 1.87 ppm, progressively inhibited molting with increased exposure time until the 48- and 72-hr exposures which again resulted in zero molt.

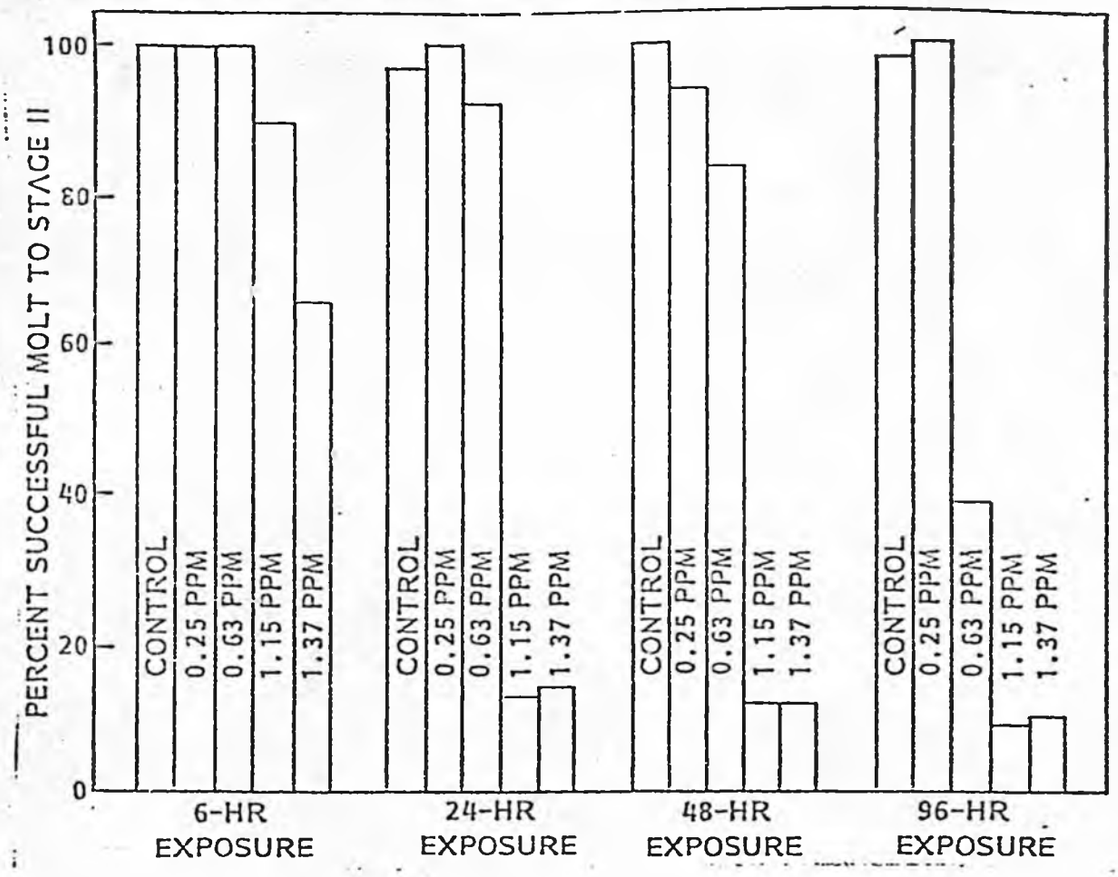

Fig. 1. Molting success of larvae of coonstripe shrimp, *Pandalus hypsinotus*, exposed for increased lengths of time to increased concentrations of the WSF of Cook Inlet crude oil. After the exposure time listed, the exposure water was replaced with clean seawater to make a total of 144 hr of observation for each test. Molting success at 144 hr = stage II larvae/initial total of stage I larvae.

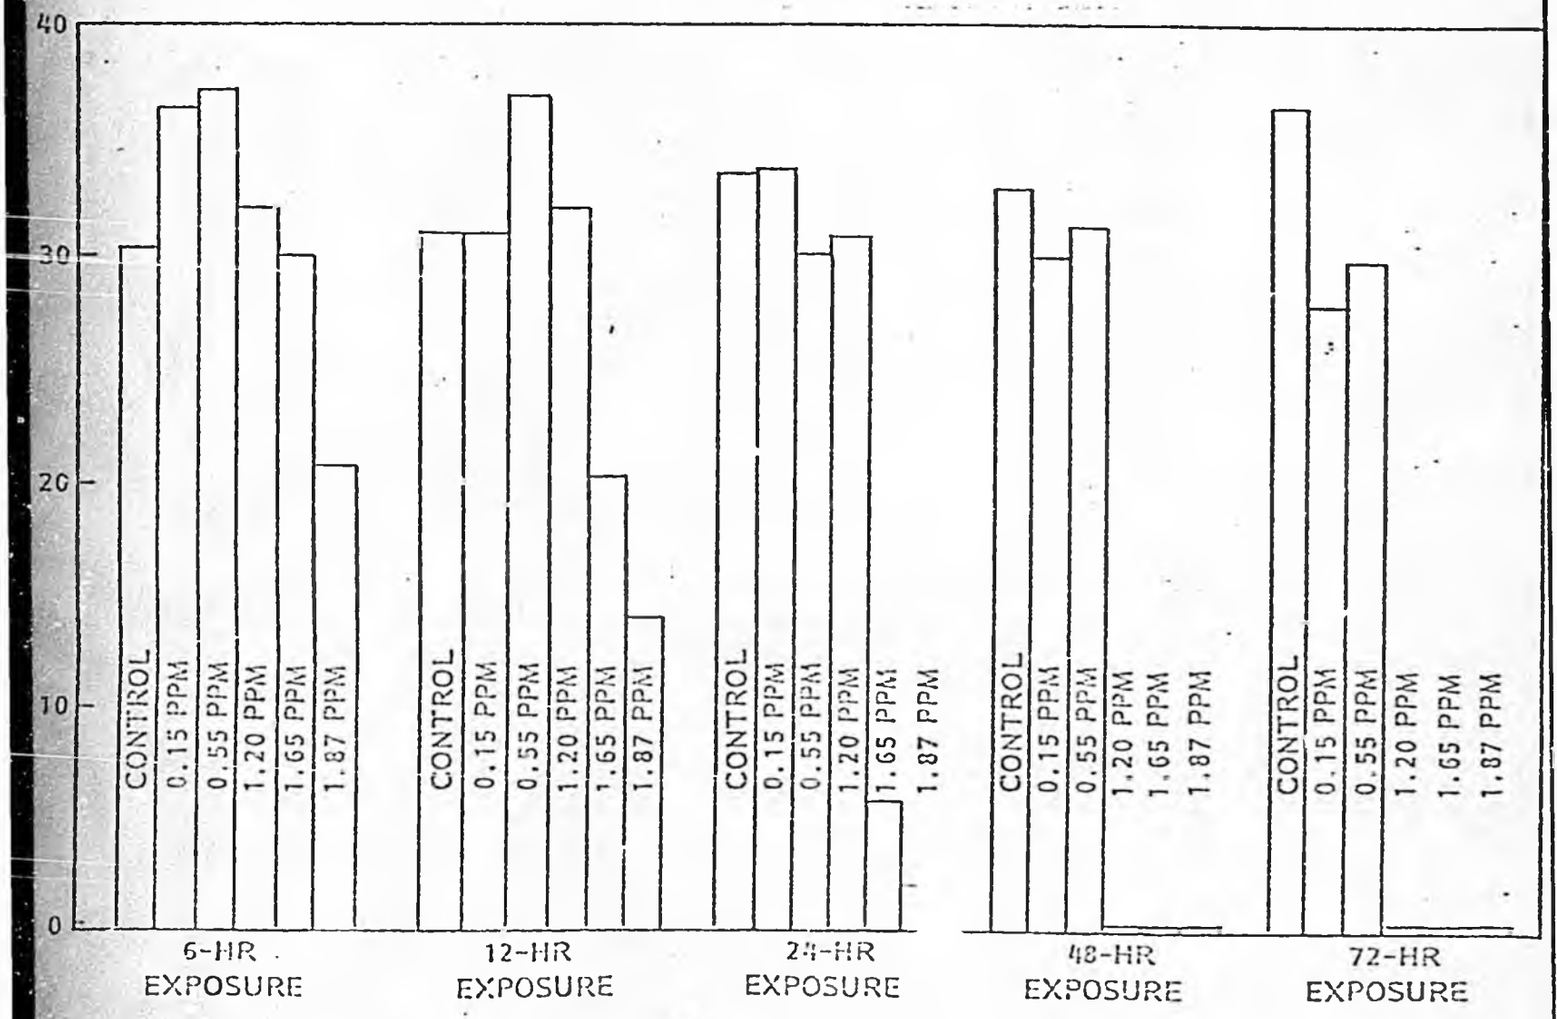

Fig. 2. Molting success of larvae of king crab, *Paralithodes camtschatica*, exposed for increased lengths of time to increased concentrations of the WSF of Cook Inlet crude oil. After the exposure time listed, the exposure water was replaced with clean seawater to make a total of 120 hr of observation for each test. Molting success at 120 hr = stage II larvae/initial total of stage I larvae.

late in the tests. This is shown by comparing the LC50's for deaths occurring by 96 hr with the LC50's for deaths occurring by the end of the observation period (Table 2). There were no significant numbers of deaths by 96 hr when the larvae were exposed for only 6 hr, but deaths occurring within the next 48 hr yielded an LC50 of 2.24 ppm total hydrocarbons for coonstripe shrimp. (Observations were not continued as long for king crab.) For coonstripe shrimp larvae exposed 24 hr and longer the 96-hr LC50's were all similar, averaging 0.96 ppm, and also very similar in king crab which averaged about 1.40 ppm total hydrocarbons. The progressively more toxic effects of these longer exposures to periodically-renewed WSF solutions did not show up until sometime after 96 hr, when the larvae were in clean seawater. For example, for coonstripe shrimp larvae exposed for 96 hr, the LC50 dropped from 0.96 ppm at 96 hr to 0.24 ppm at 144 hr.

TABLE 2

The LC50's for larvae of coonstripe shrimp and king crab exposed to the WSF of Cook Inlet crude oil during the molting period from stage I to stage II. After the duration of exposure listed, the exposure water was replaced with clean seawater to make a total of 144 hr for each test on coonstripe shrimp and 120 hr for king crab. The 95% fiducial limits are given in parentheses; NS indicates insignificant number of deaths.

Duration of oil exposure	LC50's in ppm of total hydrocarbons for--			
	Coonstripe shrimp		King crab	
	96-hr LC50	144-hr LC50	96-hr LC50	120-hr LC50
6 hr	NS	2.24	NS	NS
12 hr	No bioassay		4.75 --	1.75 (1.72-1.78)
24 hr	0.95 (0.87-1.03)	0.62 (0.35-0.75)	1.33 (1.23-1.45)	1.38 (1.08-1.61)
48 hr	0.98 (0.83-1.15)	0.50 (0.42-0.62)	1.45 (1.35-1.50)	0.76 (0.66-0.88)
72 hr	No bioassay		1.37 (1.20-1.55)	0.93 --
96 hr	0.96 (0.80-1.15)	0.24 (0.15-0.37)	No bioassay	

DISCUSSION

Larvae of coonstripe shrimp and king crab were more sensitive to the WSF of Cook Inlet crude oil during the molting period from stage I to stage II than during intermolt stages I and II (Table 1), which agrees with previous studies on molting crustacean larvae exposed to different oils. In two of the earlier studies (Wells 1972, Katz 1973) the oil concentrations were not chemically quantified so the reported lethal concentrations cannot be compared to ours. Lethal concentrations for molting stage I-II larvae reported in the other two studies (Neff et al. 1976, Wells and Sprague 1976) are based on different oils and different types of bioassays than ours, but are useful to mention for the purpose of a broad comparison. The 96-hr LC50 for the first larval molt of the crab *Rhithropanopeus harrisii* was between 0.63 and 0.94 ppm (WSF of No. 2 fuel oil; Neff et al 1976) and for the lobster *Homarus americanus* it was 0.86 mg/liter (oil-water dispersion of crude oil; Wells and Sprague 1976). These concentrations are similar to our 96-hr LC50's of 0.95 ppm for molting coonstripe shrimp larvae and 1.33 ppm for molting king crab larvae in that all of the concentrations are lower than the 96-hr LC50's reported for nonmolting larvae, juveniles, and adults exposed to various oils (reviewed by Wells and Sprague 1976).

Molting coonstripe shrimp larvae were about four times more sensitive to the WSF than molting king crab larvae (Table 1), suggesting that as much difference in sensitivity to oil exists between crustacean species during molting as has been reported for species in intermolt stages. These differences in sensitivity to oil also occur intraspecifically at

larvae differ in their sensitivities to oil when, for example, stage III being more sensitive than stages I and II (Brodersen et al In press); this suggests that coonstripe shrimp larvae molting at the later stages could also be more sensitive than we observed for the first molt. However, larvae of *Neopanope texana* were more sensitive during the first molt than the later molts (Katz 1973). In *Homarus americanus* (Wells and Sprague 1976) and *Rhithropanopeus harrisii* (Neff et al 1976) most of the deaths also occurred during the first molt, but the tests on these species were long-term (30 or more days) and did not include separate tests for the different molt periods, so the sensitivities of later molts were not determined. The available data are insufficient to determine if the most sensitive molt period differs with species or is usually the first larval molt, and if any one group of crustaceans (such as shrimp) is more sensitive than another (such as crab) during molting.

The effects on molting success (Figs. 1 and 2) and mortality (Table 2) that occurred when larvae of coonstripe shrimp and king crab were exposed for increasing periods of time to increasing concentrations of the WSF of Cook Inlet crude oil were basically the same for each species and are summarized as follows. The lowest concentrations of the WSF (0.15-0.55 ppm total hydrocarbons) did not cause molting success to decline at any length of exposure, but did cause some stimulation of molting in king crab larvae after short exposures. Although molting success did not decline, at long exposures to the low concentrations many of the larvae died after molting, as reflected in the low 144-hr and 120-hr LC50's. Exposure of larvae to the highest concentrations of the WSF (1.15-1.87 ppm) for only 6 and 12 hr reduced molting success by 10-30% and resulted in some deaths of both molted and nonmolted larvae. When exposed to these high concentrations for 24 hr or longer, 90-100% of the larvae were inhibited from molting and usually died, yielding LC50's that were equal to or well below the high concentrations tested. The stimulation of molting we observed in king crab larvae has also been reported for larvae of the crab *Rhithropanopeus harrisii* when exposed to low concentrations of No. 2 fuel oil (Neff et al 1976). On the other hand, we did not observe any delays in molting relative to controls; long-term studies like those reported on crabs and lobster (Katz 1973, Neff et al 1976, Wells and Sprague 1976) would be needed to determine if the nonmolted larvae which survived our tests would have eventually molted to stage II or later stages.

In our bioassays on molting larvae, many larvae died after 96 hr, so the progressively more toxic effects of increased exposure times and increased concentrations of the Cook Inlet crude oil WSF were not as clear from the 96-hr LC50's as they were from the 144-hr and 120-hr LC50's (Table 2). Delayed mortality (i.e., deaths occurring after exposure) has also been noted for some other crustacean larvae exposed to toxic pollutants (Buchanan et al 1970, Brodersen et al In press). These data indicate that a bioassay lasting only 96 hr is not always sufficient to yield an accurate determination of acute toxicity.

Greater sensitivity to environmental stresses during molt than intermolt periods is a general phenomenon among crustaceans (Lockwood 1967) which should also be reflected in tests on crustaceans molting at any life stage, and in tests with pollutants other than oil. Exposures of tanner crab, *Chionoecetes bairdi*, to crude oil near the time of molting resulted in reduction in molting success and autotomizing of limbs (Karinen and Rice 1974). The greater sensitivity of molting crustacean larvae during exposures to insecticides (Buchanan et al 1970, Epifanio 1971) and creosol (Emery 1970) has also been reported.

Increased sensitivity to oil during molting is probably related to the physiological changes associated with the molting process. Rises in blood osmotic pressure and changes in permeability to seawater (Lockwood 1967, Hagerman 1973) could result in heightened concentrations of toxic hydrocarbons in the tissues. Depressed metabolism has been observed in molting adult blue crab, *Callinectes sapidus* (Lewis and Haefner 1976), and in oil-exposed king crab, *Paralithodes camtschatica* (Mecklenburg and Rice In prep.), and may impair the ability of molting larvae to metabolize and excrete the oil-derived hydrocarbons accumulated in the tissues.

Because molting has a significant influence on the sensitivity of crustaceans to oil, comparisons of sensitivities between life stages and species will be most valid if based on animals tested in the same stage of the molt cycle, such as intermolt. Testing the sensitivity of intermolt larvae to oil may be difficult for many crustacean species because the intermolt periods are often as short as 2 or 3 days. Thus, larvae would begin to molt during the standard 96-hr bioassay.

Measurements of hydrocarbons from chronically polluted areas or oil spills in Alaskan waters are not yet available. Levels of petroleum hydrocarbons reported for other areas, harbors and tanker routes as well as the open ocean (reviewed by Brown et al 1973, Wells and Sprague 1976), are very low compared to our LC50's for intermolt and molting larvae of king crab and coonstripe shrimp. However, the concentration of 0.8 mg/liter reported for a small oil spill in Nova Scotia (Gordon et al 1973) is higher than some of the LC50's we found for molting larvae exposed 24 hr and longer.

CONCLUSIONS

(1) For both coonstripe shrimp and king crab, larvae molting from stage I to stage II were more sensitive to the WSF of Cook Inlet crude oil than were larvae in intermolt stages I or II. From this we further conclude that comparisons of the sensitivities of crustaceans to oils should be based on tests on animals in the same stage of the molt cycle, such as intermolt.

(2) In tests on molting coonstripe shrimp and king crab larvae, as the concentrations and lengths of exposure to the WSF of Cook Inlet crude oil increased, molting success decreased and deaths increased. This pattern was not as clear from the 96-hr LC50's as it was from the 120-hr and 144-hr LC50's. From this we also conclude that the standard 96-hr bioassay is not always long enough for accurate determinations of the sensitivities of crustacean larvae to oils.

EFFECTS OF OIL ON MARINE ECOSYSTEMS: A REVIEW FOR ADMINISTRATORS AND POLICY MAKERS

DALE R. EVANS[1] AND STANLEY D. RICE[2]

ABSTRACT

A broad selection of recent literature on the effects of oil on marine ecosystems is reviewed. The focus is on studies on crude oil, and the results are discussed with the purpose of providing a summary of findings that will be a useful reference for administrators and policy makers involved in decisions concerning petroleum developments and related activities. The characteristics of crude oil and factors modifying its impact on the marine environment are discussed. Most research on the toxicity of oil has dealt with acute effects and data on long-term impacts at the community level are inconclusive. It is concluded that chronic low-level pollution is potentially more damaging to ecosystems than isolated catastrophic spills. Decision makers are forced to rely on interpretative judgments rather than conclusive data.

Much of the material in this report was gathered as background material for use in preparing the marine section of the final environmental impact statement on the proposed trans-Alaska pipeline system (U.S. Department of the Interior, 1972). Some of the statements are essentially unchanged from the way they were presented in the appendix to volume IV of the impact statement. The impact statement made it clear that not enough data are available to analyze conclusively all of the potential environmental impacts of operation of the pipeline marine terminal facilities at Port Valdez, Alaska, and the transshipment of crude oil by tankers to west coast ports. A conclusion that can be drawn, however, and a message of the impact statement, is that oil poses a significant hazard to marine ecosystems, and a good deal of intensive research is necessary if these hazards are to be quantified and fully understood.

Research on oil pollution published since the impact statement on the pipeline was issued reveals that scant progress has been made, particularly with regard to the effects of chronic low-level oil pollution. Current and projected demands for energy in the United States are prompting accelerated development of offshore petroleum reserves, expanded oil tanker traffic, and proposals for construction of deepwater port facilities to handle the increasing number of supertankers. These developments will not wait for conclusive answers to questions on oil pollution. Recognizing this, we feel it is important that public administrators and policy makers be made aware of the inferences and trends evident in the research findings to date. These findings present a persuasive case that decisions regarding the handling of crude oil and petroleum products should be conservative and in favor of protecting the natural environment. While this report is by no means a complete review of the literature, it is sufficient to illustrate the potential danger of oil pollution to marine ecosystems and provide some guidance for policy decisions.

History is replete with examples of man's scientific and technological advances carrying him into situations he did not fully comprehend and with consequences he could not evaluate. Bella (1970) noted that "our ability to change this world is going to increase faster than our ability to predict what that change is going to be." He concludes that our management procedures must recognize the degree of ignorance we have about this world in which we live.

Pollution of the ocean by oil is a worldwide problem of growing concern to many nations. Spills like the *Torrey Canyon*, the *Arrow*, the Santa Barbara Channel blowout, and other spectacular incidents have helped stimulate international organizations of governments and industry to react to the problem. Viewed pragmatically, international response has been at least as adequate as domestic programs. Predicting the impact of an oil spill on the environment requires an understanding of the complex interactions involved. What

appears to be universally lacking is the difficult research leading to an understanding of chronic and sublethal effects of oil at the biological community level. The following discussion outlines these complexities and points out how they make most generalizations invalid and the extrapolation of most data dangerous.

DESCRIPTION OF OIL

Crude oil is a complex mixture of many different specific hydrocarbons and a variety of compounds containing sulfur, oxygen, nitrogen, and some trace metals. Hydrocarbons make up the bulk of crude oil and can roughly be placed into one of three classes: paraffinic, naphthenic, and aromatic. From one area to another, crude oils vary in their composition and in density, volatility, and solubility. Their relative toxicity will vary (Ottway, 1971) but is roughly proportional to their aromatic content.

Paraffinic (or aliphatic) hydrocarbons are straight or branched carbon chains and are saturated (thus no carbon-carbon double bonds) with hydrogen or other groups. These hydrocarbons are the least toxic, although they may have an anesthetic or narcotic effect if concentrations are great enough.

Naphthenic compounds (cycloparaffins) contain at least one ring structure that is saturated. With this base, more rings or chains may be attached to form a variety of complex molecules.

Aromatic hydrocarbons also contain a ringed structure, but the ring is unsaturated with hydrogen and contains carbon-carbon double bonds (benzene ring). The simplest aromatic is benzene, which is very toxic and relatively water soluble in comparison to most hydrocarbons found in crude oil. Benzene and other low-boiling aromatics are the most toxic petroleum fractions. High-boiling aromatics act as slower poisons than low-boiling aromatics, but they are equally severe in their effect. In addition, some are known to induce cancer; 3,4-benzpyrene, 1,2-benzanthracene, and some alkylbenzanthracenes have been isolated from crude oil, and their carcinogenic effects on animals and man have been demonstrated (Blumer, 1970).[3]

Olefinic hydrocarbons (paraffinlike but unsaturated and containing reactive carbon-carbon double bonds) are not generally found in crude oils but are plentiful in certain gasolines and other refined products. The fate of olefins in the marine environment is poorly understood, but this class of compounds may be quite reactive under certain conditions and may combine readily with hydrogen, oxygen, chlorine, sulfur, and other elements to produce toxic substances. Once incorporated into organisms, olefins may remain intact for surprisingly long times (Blumer, 1967). The full range of olefinic hydrocarbons probably interferes with the reception of chemical messengers, or odors, in the sea by certain marine organisms (Blumer, 1970, see footnote 3).

When crude oil is processed ("cracked"), olefins and other compounds for gasoline and fuel oils may be formed or separated. Fuel oils, commonly involved in spills, are rated from 1 to 6. Those rated 1 are the lightest, most volatile, and most toxic and have the greatest aromatic concentrations; those rated 6 are the least volatile, least soluble, and least toxic and are asphaltic (tarlike).

Hydrocarbons are not foreign to the marine environment; normal paraffins are synthesized by most, if not all, living organisms. Blumer, Guillard, and Chase (1971) characterized the natural hydrocarbon content of 22 species of phytoplankton and cited literature for zooplankton. There are certain characteristic differences, however, between hydrocarbons native to organisms and the hydrocarbons in petroleum, particularly in the relative distribution of the various hydrocarbons. Crude oils and certain petroleum products are complex mixtures that contain molecules of different sizes in ratios not found in any one species of organism. Certain specific paraffins, and some naphthenic and aromatic compounds, are rarely found in organisms not exposed to oil pollution. These characteristic differences have been the basis for several scientific papers (Blumer, Souza, and Sass, 1970; Ehrhardt, 1972; Clark and Finley, 1973; and others).

FACTORS INFLUENCING THE IMPACT OF OIL

The impact of oil on the marine environment is governed by several factors—physical, chemical, and biological—in addition to the inherent complexity of crude oil and refined products. The behavior, effects, and fate of an oil spill involve all of

[3]Blumer, M. 1970. Scientific aspects of the oil spill problem. Presented at NATO Conference, Brussels, 6 Nov. 1970, 21 p., Woods Hole Oceanogr. Inst., Woods Hole, Mass.

these factors; and because they are interdependent, the reliability of our predictions concerning the impact of a spill is limited by our knowledge of the least understood variable.

Straughan (1972) noted our general inability to predict the environmental impact of a spill because of the complexity of the matter, and identified several factors that govern biological damage caused by a spill: 1) type of oil spilled, 2) dose of oil, 3) physiography of the area of the spill, 4) weather conditions at the time of the spill, 5) biota of the area, 6) season of the spill, 7) previous exposure of the area to oil, 8) exposure to other pollutants, and 9) treatment of the spill. Several of these factors are touched upon below.

Natural Physical Processes Affecting Oil in the Water Column

Once oil is spilled, it is dissipated by evaporation, dissolution, and mixing or dilution in the water column. The natural processes are speeded by wind action and by waves and currents that increase spreading and vertical mixing. Various fractions respond differently to these processes, and the weathered residue behaves differently than the material originally spilled. A contaminated bay may be flushed by freshets, tidal action, or longshore currents. Some oil sinks directly to the bottom, especially in fresh water, where some oil fractions have densities approaching that of fresh water, and in water with high sediment loads. Certain fractions may undergo autoxidation.

Conover (1971) reported that sedimentation of fecal-bound oil that had been ingested by zooplankton may have accounted for up to 20% of the spilled oil entering the water column at Chedabucto Bay, Nova Scotia. Oil can also be removed from the water column by absorption within organisms and accumulation within the food chain. Suspended sediments carried by runoff from a major flood entered the Santa Barbara Channel area immediately before and after the well blowout (Kolpack, 1971). Kolpack noted that adsorption of oil on the flocculated suspended particles followed by decomposition was a major factor in carrying much of the oil to the sea floor. Kinney et al. (1970) reported, however, that in Cook Inlet, Alaska, glacial silt from the inlet had no apparent effect on the emulsion properties or the sinking of the type of crude oil found in that area.

Forrester (1971) noted the extensive distribution of oil particles stirred into the water by wave action after a bunker C oil spill in Chedabucto Bay. Oil particles were found to a depth of 80 m inside the bay and to depths of 45 m at a distance of 65 km outside the bay. Near-surface distribution of particles extended 250 km southwest along Nova Scotia in a band extending up to 25 km offshore. Berridge, Thew, and Loriston-Clark (1969) indicated that the stabilization of emulsions like those observed at Chedabucto Bay and elsewhere was caused by complex chemical components in the nonvolatile residues and not by bacterial activity, marine organisms, or suspended solid matter.

Environmental Differences

The fate and effects of oil spilled in the marine environment are difficult to generalize because several types of environments may be involved. Some extreme comparisons are tropics versus arctic, open ocean versus estuaries, and the differences between the intertidal and subtidal zones.

Within these environments are several diverse physical conditions such as temperature, salinity, oxygen, and nutrient concentrations, as well as biological differences such as species composition, diversity and density, and community metabolic rate. The prediction or assessment of pollution effects on the basis of observations extrapolated from one environment to another is seldom supported by adequate data. Unfortunately, however, few data on pollution effects exist for most areas and species, which has led to the use of information from areas that may be dissimilar in critical respects.

There are arguments as to which environment is the most stable and capable of withstanding attacks by additional pollution stresses. Copeland (1970), discussing the response of ecological systems to stress, suggested the principle that "...those systems already subjected to energy-requiring stresses are more likely to resist the changes than those (such as tropical systems) adapted to relatively constant environments." He concluded that estuarine ecosystems composed of organisms capable of wide adaptations and generalizations, such as north temperate systems, would be relatively unaffected by the same magnitude of disturbance that would drastically alter

a tropical system. Odum (1970) noted, however, that many estuarine species are living near the limit of their tolerance range and that any alteration in the environment, such as additional stresses caused by low levels of pollution, could exclude these animals permanently from the estuary.

All healthy balanced ecosystems are generally functioning at or near some critical tolerance limit. In an ecosystem with a variable environment, such as a north temperate estuary, responses to additional stress might not always be the same. For example, even though factors surrounding an oil pollution incident might be outwardly similar in most respects to another spill in a comparable area, the biological impacts may differ. The ability of the local community to absorb the additional stress will be influenced by the coincidence of seasonal variability of natural stresses, the differences in vulnerability of stages in an organism's life cycle, and many other dynamic features of the ecosystem.

Biological Differences

The effects of oil pollution on many different organisms in various habitats may vary from no effect to responses of avoidance and decreased activity, to nonadaptive responses of panic and physiological stress. What kills one species may have little or no effect on another. Affected organisms vary from single cells, to sedentary clams, to highly mobile predators, each of which has different behavioral and physiological interactions with the environment.

Just as different species are affected differently, so may individuals within a species be affected differently. In particular, different life stages such as eggs, hatched larvae, and newly molted individuals may have different sensitivity to the same level of pollution. Mironov (1968), for example, reported that prelarval stages of barnacle, *Balanus* sp., were 100 times more sensitive to oil pollution than the adult form. This contrasts with the relative lack of sensitivity to crude oil by pink salmon eggs and sac fry, which were 10 times more tolerant than older fry (Stanley D. Rice and Adam Moles, Auke Bay Fisheries Laboratory, National Marine Fisheries Service (NMFS), NOAA, Auke Bay, AK 99821, pers. commun.).

Renzoni (1973) conducted a series of experiments on the toxicity of several crude oils and petroleum products to the sperm, eggs, and larvae of the oysters *Crassostrea angulata* and *C. gigas* and the mussel *Mytilus galloprovincialis*. He found a relatively high degree of tolerance by eggs and larvae but reported that the fertilizing capacity of sperm was markedly affected by similar exposures.

Biodegradation

Quantitative data describing the biodegradation of various components of crude oil, especially in arctic and subarctic areas, are limited.

ZoBell (1973a) briefly reviewed the current understanding of microbial degradation of oil, including interactions, limiting factors, problems, and perspectives. Ahearn (1973) stated that research on microbial utilization of hydrocarbons for treatment of oily pollutants in the environment, though more intensive in recent times, is still in an early stage of development. It is known that microorganisms can degrade much of a crude oil, particularly the less toxic paraffinic compounds. No single species can degrade all the compounds, but many different species together can metabolize a large number of the compounds, if not all. The rate of microbial degradation, which is principally aerobic, decreases with a decrease in temperature. Large quantities of oxygen are needed. It has been estimated, for instance, that complete oxidation of 1 gallon of crude oil would require all of the dissolved oxygen in 320,000 gallons of water. This comparison may be unrealistic because most oil is at the surface of water in contact with air and only the outer surfaces of oil can be attacked at any one time. It is reasonable to assume, however, that an oxygen-deficient environment may well occur under some oil slicks and in oil-contaminated sediments.

Glaeser and Vance (1971) studied the behavior of Prudhoe Bay crude oil in controlled spills in the Chukchi Sea but were not able to isolate any microorganisms which could degrade hydrocarbons at the ambient temperatures of the Arctic, although some emulsification of the crude oil was observed. However, ZoBell and Agosti (1972) collected oil-oxidizing bacteria near natural oil seeps from the Alaska North Slope and observed oxidation rates of mineral oil at −1°C and above. They noted that the solid surfaces of the ice crystals appeared to facilitate bacterial growth, because the rate at −1°C was substantial and near the 4°C rate.

The apparent contradiction between the studies is probably best explained by ZoBell's (1973b) continued observations with North Slope bacteria. He

found that the nine different crude oils were not degraded as rapidly as purified mineral oil. Glaeser and Vance's studies were with microorganisms from the surface water of the Chukchi where small numbers of bacteria may have been present. Furthermore, the observations of Straughan (1971), who noted the apparent lack of biological damage by the Santa Barbara blowout, may apply here. She discussed the possibility that the fauna had an unusually high tolerance for oil, probably because of adaptation from chronic low-level oil exposures from local natural seepages. The observations of ZoBell and Agosti (1972) on the oxidation rates of oil at −1°C may be an example of similar adaptive response by the North Slope bacteria collected near natural seeps. These oxidation rates and other adaptive responses might not occur from organisms that have not been preacclimated to chronic low-level exposures of oil and may explain why Glaeser and Vance obtained reports of negligible oxidation rates at 0°C from microorganisms from surface water of the Chukchi Sea. Robertson et al. (1973) estimated hydrocarbon-oxidizing bacteria populations were in the order of 1/ml in Cook Inlet and Port Valdez, but less in the Arctic Ocean. Numbers decreased with salinity in Cook Inlet and with depth in Port Valdez.

ZoBell (1963) reported that oil is readily adsorbed by clay and silt and suggests that although adsorption of oil by solids renders the oil more susceptible to autobial and microbial oxidation, almost no bacterial decomposition occurs after burial in the bottom sediments, probably because the environment is anaerobic. Blumer and Sass (1972) found that some paraffinic hydrocarbons remained in bottom sediments 2 yr after the West Falmouth oil spill and aromatic hydrocarbons were prominent, which suggests that these more toxic compounds are utilized by bacteria to a minimum degree.

Oil in Sediments

The effect of oil in sediments is poorly understood, although several authors have quantitated oil concentrations and noted its persistence. Scarratt and Zitko (1972) observed little diminution of bunker C oil concentration from soft sediments 26 mo after the wreck of the tanker *Arrow*. The oil reached maximum concentrations in coarse sediments 1 yr after the spill, but the concentrations reduced thereafter. Chemical degradation can occur but is normally restricted to the surface layer of the bottom penetrated by ultraviolet light. Blumer and Sass (1972) noted that "The preservation of hydrocarbons in marine sediments for geologically long time spans is one of the accepted key facts in current thought on petroleum formation." However, in spite of the stability of hydrocarbons in marine sediments, there are characteristic differences between the hydrocarbons in polluted and unpolluted areas. Tissier and Oudin (1973) found that hydrocarbons in polluted sediments differed from those of unpolluted sediments by having lower percentages of heavy components, by not having an odd carbon dominance in the n-alkanes, and by having polycyclic aromatic hydrocarbons with alkyl chains.

Oil residues were observed on sandy beaches by ZoBell (1963) and in marshes and in sediments of the deepest area (15.3 m) near the West Falmouth spill by Blumer, Sass, Souza, Sanders, Grassle, and Hampson (1970).[4] About 2 wk after fuel oil was spilled at Resolute Bay, Northwest Territory, in August 1970, casual sampling revealed that oil penetrated into beach material to a depth of about 3 inches (7.6 cm) (Barber, 1971). Oil may be buried and stay intact for a considerable time, even at the higher temperature of the California coast (ZoBell, 1963). During laboratory experiments, Johnston (1970) determined oil decay rates in sand columns contaminated with various concentrations of oil. Ten percent of the oil was oxidized over a period of several months; the remaining 90% decayed much slower.

The West Falmouth spill provided a unique opportunity for a study of the immediate and long-term effects of an oil spill on an area where the previously existing environmental base was well known (Blumer, Sanders, Grassle, and Hampson, 1971). One effect of the oil was to reduce the cohesion of bottom sediments of tidal marshes and the estuary by killing the benthic plants and animals (Blumer, Sass, Souza, Sanders, Grassle, and Hampson, 1970, see footnote 4). The resulting erosion spread hydrocarbons to new areas, where the process was repeated. Because of the stability and persistence of the hydrocarbons in marine bottom sediments, Blumer, Souza, and Sass (1970) noted that hydrocarbons may be returned to the biosphere by organisms living and feeding in the sediments. This redistribution of hydrocarbons can be

[4]Blumer, M., J. Sass, G. Souza, H. Sanders, F. Grassle, and G. Hampson. 1970. The West Falmouth oil spill. Unpubl. manuscr. Woods Hole Oceanogr. Inst., Ref. No. 70-44, 32 p.

the source of a chronic pollution problem near that spill.

It is quite possible that normal functions of sediments will be disrupted when contaminated by oil. Changes in the sediments that are subtle and difficult to detect, such as decreased nutrient recycling and community metabolism, could result in the loss of significant contributions to the productivity and stability of an area. Although oil in sediments has been monitored and measured after several spills, other aspects of the oil–sediment relation have yet to be studied.

BIOLOGICAL EFFECTS OF OIL POLLUTION

Blumer (1970, see footnote 3) summarizes the potential damage to organisms from pollution by crude oil and oil fractions as follows:

1. Direct kill of organisms through coating and asphyxiation.
2. Direct kill through contact poisoning of organisms.
3. Direct kill through exposure to the water-soluble toxic components of oil at some distance in space and time from the accident.
4. Destruction of the generally more sensitive juvenile forms of organisms.
5. Destruction of the food sources of higher species.
6. Incorporation of sublethal amounts of oil and oil products into organisms (resulting in reduced resistance to infection and other stresses—the principal cause of death in birds surviving immediate exposure to oil).
7. Incorporation of carcinogenic and potentially mutagenic chemicals into marine organisms.
8. Low-level effects that may interrupt any of numerous events (such as prey location, predator avoidance, mate location or other sexual stimuli, and homing behavior) necessary for the propagation of marine species and for the survival of those species higher in the marine food web.

Some of the potential effects described by Blumer may be obvious, such as the direct deaths from acute exposures. Less obvious indirect deaths may occur from effects at either the individual or population level. Individual organisms subjected to sublethal exposures may undergo an "ecological death" if they are less capable of adjusting to and responding to natural changes (stresses) in their physical and biological environments. For example, postmolt Tanner (snow) crab, *Chionoecetes bairdi*, lost legs during short exposures to crude oil (Karinen and Rice, in press). Even though the crabs lived through the exposure, they probably could not have survived in the natural environment because some of them lost as many as seven legs, including both chelae. Moreover, crabs or other adversely but sublethally affected organisms would be more likely to be eliminated by natural selection.

Effects from chronic exposure may be adverse to a population over a period of time if exposed but normal-appearing adults have their ability to reproduce seriously impaired. This loss may be due to physiological changes such as reduced fecundity and delayed ovary development or to impaired behavioral mechanisms which could prevent mate location and identification or homing and timing of spawning. Although the effects at this level might not result in death of the adult, they could induce a trend of decreasing numbers that might eventually eliminate the population or race.

Hydrocarbons in the Marine Food Web

Blumer (1967, 1969) and Blumer, Guillard, and Chase (1971) studied the fate of organic compounds in the marine food web. They found that certain hydrocarbons, even highly unsaturated ones, are stable once they are incorporated into a particular marine organism and that they may pass through many members of the marine food web without alteration and may actually be concentrated in tissue. Most hydrocarbons are lipid soluble and thus may accumulate in food webs to the point where toxic levels are reached. This pathway is illustrated by the well-documented chlorinated hydrocarbon group of pesticides.

The entrance of oil-derived hydrocarbons into marine food webs has been observed several times at several trophic levels. Conover (1971) reported that 10% of the bunker C oil in the water column after the Chedabucto Bay spill was combined with zooplankton and that their feces contained up to 7% oil. Mironov (1968) also noted the ability of some zooplankters to accumulate hydrocarbons. The incorporation of hydrocarbons into the food web at these primary levels assures exposure at all higher trophic levels.

Blumer, Souza, and Sass (1970) and Ehrhardt (1972) reported pollution-derived hydrocarbons in shellfish. Uptake and retention of labeled hydrocarbons of several classes by a marine mussel,

Mytilus edulis, was noted by Lee, Sauerheber, and Benson (1972). Smith (1968) reported the presence of oil and benzene-ring compounds in the feces of limpets browsing on an oily deposit, and in top shells, *Monodonta*, and limpets, *Patella*, living on oiled rocks. He reported that analysis of the gut indicated "the proportion of oil in material ingested by these animals was estimated as about 20-30 percent in *Patella* and 5-50 percent in *Monodonta*."

Organisms at the highest trophic levels may be affected directly by the oil itself or indirectly by hydrocarbons that have reached them through the food web. Horn, Teal, and Backus (1970) found large amounts of tar in the stomachs of three saury, *Scomberesox saurus*, from a sample of ten in the Mediterranean Sea near Gibraltar. Although saury are generally considered to be carnivorous, the occurrence of tar and also of "vegetable debris" in one of the stomachs examined by Horn et al. (1970) suggests that the species is not a very discriminate feeder. Although all ingested oil was obviously not incorporated into the tissues (some oil was found in feces), such feeding behavior does describe a pathway for hydrocarbons to be directly taken up into the tissues of the organism. Thus, oil ingested, absorbed, and even adsorbed may enter the food chain when contaminated organisms are eaten.

Carcinogenicity

Some doubt may remain as to the direct carcinogenicity to man of crude oil and crude oil residues in marine organisms (Blumer, 1969), but evidence pointing toward this is accumulating (Blumer, 1970, see footnote 3; 1972). A literature search and evaluation conducted for the U.S. Coast Guard by Battelle Memorial Institute (1967) noted that shellfish, although alive, may have been unfit for consumption because of the carcinogenic hydrocarbon 3,4-benzpyrene in their bodies. Oysters that were heavily polluted and contaminated with ship fuel oil were reported to contain 3,4-benzpyrene. The Battelle review also reported that barnacles attached to creosoted poles contained the same carcinogenic hydrocarbon (3,4-benzpyrene). Sarcomas were elicited when extracts from the barnacles were injected into mice. The endemic occurrence of papillary tumors around the rectal opening of soft-shell clam, *Mya arenaria*, was reported, but the author (Battelle Memorial Institute, 1967) did not feel these were due to oil pollution, even though the clams were taken from waters adjacent to areas highly polluted by ship fuel oil. Hyperplasia in reproductive cells of a bryozoan in response to coal tar derivatives was observed by Powell, Sayce, and Tufts (1970). They noted that similar abnormalities may also have occurred in coastal faunas exposed to spills such as the *Torrey Canyon* and the Santa Barbara blowout. However, most observations on these spills were concerned with gross mortality and may not have detected the sublethal effects.

ZoBell (1971) reported the natural synthesis and metabolism of carcinogenic hydrocarbons by several marine organisms. Thus, oil pollution is certainly not the only source for carcinogenic hydrocarbon introduction into marine food webs. Suess (1972) recognized that carcinogens were in seafoods but concluded that they would probably not be dangerous unless the foods contained an excess amount of polynuclear aromatic hydrocarbon carcinogens. Carcinogenesis from oil-contaminated marine organisms has not been proved, but Ehrhardt (1972) expressed a need for carcinogenic testing of hydrocarbon fractions extracted from marine organisms contaminated by exposure to oil.

Observed Toxic Effects

A study of the available information on potential toxic effects of oil pollution reveals more unknowns than proven conclusions. Only a decade ago, ZoBell (1963) reviewed the literature on the effects of oil on bacteria and higher organisms and concluded that oil pollution had no great adverse impact on fishery resources in general. He did point out, however, a few reports of toxic effects, tainting of flesh, and damage to vessels and fishing gear.

The quantity of literature on effects of oil spills has increased since the *Torrey Canyon* incident of 1967. Most of the recent work has depended on onsite visual surveys after occurrence of an oil spill rather than on experiments and detailed study. The surveys have been limited mostly to the effects of oil and of cleaning or dispersing agents on primarily adult intertidal organisms and populations. These observations on a restricted segment of the affected ecosystem include only a few of the factors that influence the total impact of oil. Wilson, Cowell, and Beynon (1973) noted that the absence of results from studies at the commu-

nity level make the interpretation, extrapolation, and use of many observations very difficult. Further, the differences between various crude oils and between the hundreds of petroleum products in their physical and biological effects must always be kept in mind. Comparative data generally are far too few to permit attaching any relative significance to production area or product formulation in this review.

Field Investigations

The utility of many "after-the-fact" studies is limited because of the lack of knowledge of prespill conditions. Data are often collected without proper controls for comparison, and knowledge of natural local fluctuations and species composition of animal populations is usually quite limited. For these reasons conclusions about the impact of a particular spill may vary.

Ehrsam (1972) reported substantial immediate kills of marine life from a fuel oil spill at Anacortes, Wash., and concluded that if larval and juvenile forms of certain organisms were killed, the full impact of the spill may not be known for some time. Katz (1972) observed intertidal transects of the same affected area and concluded that the effects were minor and long-term effects would be unlikely. Webber (1972) pointed out, however, that these after-the-fact studies observed only a small wedge of the total biota. Knowledge of subtidal and benthic organisms as well as larvae and juveniles was lacking.

Other large spills have been studied in greater detail and have contributed significantly to our understanding of the gross effects of oil. Yet, they have been unable to answer many important questions on the effect of pollutant hydrocarbons in the marine environment, and generalizations learned from one spill may not apply to another because each is different.

Field observations of behavior and effects of oil in Arctic ice environments are few. The U.S. Coast Guard investigations in the Arctic have primarily been directed toward gaining knowledge to improve cleanup methods (Glaeser and Vance, 1971; McMinn and Golden, 1973). Campbell and Martin (1973) discussed possible large-scale movements and persistence of oil spilled in the Beaufort Sea. They suggested that the surface waters of the Arctic Ocean and the winter waters of Chedabucto Bay, Nova Scotia, might be comparable, particularly with regard to the physical behavior of oil. Chedabucto Bay is the site of the grounding of the tanker *Arrow* in February 1970 with 2.8 million gallons of bunker C oil aboard. Campbell and Martin (1973) found that highly stable oil-water emulsions formed to a depth of 50 m throughout Chedabucto Bay. They described conditions by which oil reaching the edge of the pack ice could be distributed under the ice.

Thomas (1973) also suggested that results of the studies at Chedabucto Bay might in some respects be applicable to spills in the Arctic. He observed remobilization of oil from beneath the weathered surface of deposits during the summers following the *Arrow* spill and the subsequent re-oiling of some intertidal areas, adding a chronic pollution aspect to the spill. Extensive mortalities of soft-shell clams and salt marsh cord grass, *Spartina alterniflora*, resulted where this occurred. In other areas, clams were visibly contaminated with oil and clam fishing was closed, at least through the summer of 1972 (Thomas, 1973).

When the *Torrey Canyon* broke up near the southwest coast of England in 1967, 15 million gallons of Kuwait crude oil with a high aromatic content were released. Efforts to cope with this first super disaster depended principally upon 2 million gallons of toxic dispersant, which probably caused more damage than the oil, most of which had weathered at sea for a week or more before reaching the shores. Many techniques for oil containment and control on the seas were attempted during the time oil leaked from the tanker; the fact that they all failed reveals the inadequacies of our technology and preparedness for such emergencies.

Extensive investigations of the West Falmouth spill by Blumer and his associates at Woods Hole provide one of the best documentaries of an oil spill. A total of 185,000 gallons of no. 2 fuel oil (41% aromatic content) were spilled in 1969 from a ruptured barge. Intertidal and subtidal benthic organisms of all phyla were killed during the first few days (Blumer and Sass, 1972). Blumer, Souza, and Sass (1970) showed that the uptake of fuel oil hydrocarbons by shellfish left them unfit for human consumption for later. Blumer and Sass (1972) reported the continued persistence of fuel oil hydrocarbons in the sediments after 2 yr. Although there had been some degradation, the boiling range and composition of the hydrocarbon mixture was basically unchanged.

The 1969 Santa Barbara blowout released an estimated 5,000 barrels of crude oil per day ini-

tially (Foster, Charters, and Neushul, 1971), yet biological damage was not reported widespread and the area has started to recover. Foster, Neushul, and Zingmark (1971) observed that much of the damage to intertidal areas corresponded to sand movement, probably from storm damage. Cimberg, Mann, and Straughan (1973) concluded that the blowout had less effect on intertidal marine organisms than did sand movement and substrate stability. Straughan (1971), reporting on investigations at Santa Barbara, noted factors unique to that accident: 1) the long history of natural oil seepage in the Santa Barbara Channel and 2) the unusually heavy winter runoff at the time of the spill, which reduced salinities, increased sedimentation, and possibly increased pesticides in the channel. R. L. Kolpack (pers. commun. cited by Foster, Straughan, and Jessee (1971)) noted that Santa Barbara crude oil is relatively insoluble in water and contains a very low percentage of toxic aromatic compounds. Thus, information gathered on the effect of the Santa Barbara spill or any other is of limited utility in predicting the ecological effects of crude oil spills or of other oils in other areas.

Several studies have provided encouraging reports of varying degrees of recovery after some of the recent larger spills. Investigations about 1½ yr after the *Torrey Canyon* spill revealed that at least the affected shoreline areas were recolonizing and recovering, although recovery was not yet complete at that time (Spooner, 1969). The areas affected by the 1969 Santa Barbara blowout were recently reported to be recovering (Cimberg et al., 1973), as was a reef affected by bunker C oil spilled from a tanker collision in San Francisco Bay in January 1971 (Chan, 1973).

Too few of the controlled field investigations have been designed to bridge the gap between field surveys after spills and simultive laboratory experiments. Perkins (1970) exposed periwinkles and other intertidal organisms to the oil dispersant BP1002 in the laboratory and then released marked individuals in the natural environment. After recapture of the individuals exposed, he found that survival from doses as low as one three-thousandth of the 24 h LC_{50}[5] was lower than among the recaptured controls. Crapp (1971a) conducted field experiments by applying crude oil and oil emulsifiers to the intertidal zone. Physical damage by the oil was observed, but toxicity damage was not great because the oil had previously been exposed to air; in contrast, the oil-emulsifier mixtures were toxic. Baker (1970) applied a crude oil to salt-marsh plots at different times of the year and monitored the effects on plants. Summer applications of oil severely affected annuals but not perennials.

[5]24 h LC_{50} equals that dose of toxicant that resulted in 50% survival after 24 h exposure.

Laboratory Studies

Experiments in the laboratory also do not provide all the answers about how an oil spill will affect a marine organism or its environment. Laboratory research has demonstrated the toxicity of various crude oils and petroleum products on several forms of marine life. Much of this research has focused on the planktonic life history stages of pelagic and benthic animals. Many of these planktonic larvae are phototactic at their earliest stages and concentrate in the surface layer of the sea. This community of the surface 5 cm, the neuston, is the first affected by most oil entering the water. Thus, many organisms are most sensitive to oil pollution at the time of their greatest likelihood of exposure.

Studies by Mironov (1968) on the development of fertilized eggs of the plaice, *Rhombus maeoticus*, showed extreme sensitivity of the eggs to the influence of the oil products in seawater. He noted that injury to the eggs occurred at concentrations of 10^{-4} to 10^{-5} ml/liter (0.1 to 0.01 ppm). In these concentrations of oil products, 40 to 100% of the hatched prelarvae showed some signs of degeneration during development and perished. Mironov (1969a) also demonstrated that 0.001 ml of crude oil per liter was toxic to the eggs of anchovy, scorpionfish, and sea parrots from the Black Sea.

Newly set spat of *Elinius modestus*, an Australian barnacle introduced to Europe, were tolerant of 100 ppm crude oil but showed reduced cirral activity and retarded shell growth (Corner, Southward, and Southward, 1968). Adults of this species also showed reduced activity at 100 ppm (Corner et al., 1968).

Mironov (1969b) tested crude oil on several copepods and a cladoceran, and found that 0.001 ml/liter accelerated death in all forms and that 0.1 ml/liter caused death in less than 1 day. *Acartia* and *Calanus* died at 0.01 ml/liter oil in seawater in 72 to 96 h (Mironov, 1968). Larvae of crab and shrimp died at 1 ppm (Mironov, 1969c).

Little is known of the mechanisms of various

toxic effects. Damage to cell membranes and the cellular contents of planktonic larvae may occur. Goldacre (1968) demonstrated such cytological damage and death to the freshwater protozoan, *Amoeba proteus*, exposed to crude oil fractions. Brocksen and Bailey (1973) measured increased respiratory response of striped bass and chinook salmon to sublethal concentrations of benzene. The fish recovered to normal activity when they returned to noncontaminated water for several days. Rice and Short were unable to demonstrate changes in the enzyme activity of cholinesterase or Na-K stimulated ATPase in juvenile pink salmon, *Oncorhynchus gorbuscha*, after in vivo and in vitro exposures to Prudhoe Bay crude oil (Stanley D. Rice and Jeffrey Short, Auke Bay Fisheries Laboratory, NMFS, NOAA, Auke Bay, AK 99821, pers. commun.). This is somewhat surprising because various hydrocarbon pesticides have been shown to affect both enzymes.

Cellular membranes of phytoplankton are also damaged by the penetration of hydrocarbon molecules: the cellular contents are extruded, and oil penetrates into the cell. Detergents administered in a concentrated solution also penetrate the plant cells and cause the dissolution of cellular membranes and the extrusion of cellular fluid (Ruivo, 1972). The effects of oils on plant respiration are variable, but an increase of respiration is frequently observed, probably because of an alteration of the mitochondria. This could result in an uncoupling of the oxidative phosphorylation enzymes from the electron transport enyzmes, and the energy release would be lost as heat.

All marine animals ultimately depend on the photosynthetic activity of phytoplankton and algae for the production of biomass. Baker (1971), reviewing the literature, noted that weathered *Torrey Canyon* oil had no apparent effect on the photosynthetic activity of green algae. He did find, however, that green algae treated with fresh crude oil died and that photosynthesis in kelp, *Macrocystis* sp., was reduced when the kelp was exposed to various petroleum products. Kauss et al. (1973) determined the effects of crude oil on several species of freshwater algae in both field and laboratory experiments. In their field studies, response of the algae to a spill varied from suppression of growth to its stimulation. In their laboratory studies, they noted depressed photosynthetic rates in one algal species after it had been exposed to aqueous crude oil and other selected aromatics.

Growth of phytoplankton from axenic cultures and mixed cultures of natural populations was inhibited by water-soluble extracts from no. 2 fuel oil in a laboratory study by Nuzzi (1973). Mironov and Lauskaya (1968) demonstrated that marine phytoplankton vary several orders of magnitude in sensitivity to crude oils and kerosene in oil concentrations ranging from 0.1 to 1,090 ppm. Of the 20 species tested, a diatom, *Ditylum brightwellii*, was the most sensitive. The wide variation in susceptibility may account for the statements in other reviews of low toxicity of crude oils to phytoplankton (Føyn, 1965; Nelson-Smith, 1970) and supports the premise that biological response will differ among species.

Sublethal and Chronic Effects of Oil Pollution

While data are scarce in some of the areas previously discussed, information on the ecological effects of chronic sublethal oil pollution is essentially nonexistent. Observing these effects is difficult because they are not dramatic and may pass unnoticed by the casual observer. A full description would require observations extending over a long period of time.

Lewis (1972), commenting on approaches to the study of chronic pollution, contends "... that without a massive expansion of ecological and reproductive data by simultaneous multidisciplinary studies not only will we be unable to detect the significant long-term changes, but we will even remain unaware of the most suitable or important species and methods to build into a monitoring program."

A few studies concerning sublethal effects on organisms have appeared in the literature. Wells (1972) reported deaths of lobster larvae to exposures of 0.1 ml of Venezuelan crude oil per liter, while larvae exposed to 0.01 ml/liter had poor survival rates and were unable to molt to the fourth stage. Decreased limb (cirral) activity of marine larvae exposed to oil has been reported (Smith, 1968). Kuhnhold (1972), while observing toxic effects of crude oils to eggs of cod and to larvae of cod, plaice, and herring noted that the larvae exposed to oil-contaminated water were unable to avoid well-defined milky clouds of toxic oil dispersions. Blanton and Robinson (1973) observed damage to the gills of specimens of seven species of fish that had apparently been exposed to an oil spill off the Louisiana coast.

Crapp (1971b) observed that fucoid algae replaced barnacle and limpet populations near an outfall where the effluent contained about 20-25 ppm oil from treated ballast water of tankers unloading at Milford Haven. Although the relative oil content was low, the cumulative volume discharged was large (20,000 gallons of oil per year), a situation similar to that which may occur at Port Valdez, Alaska, when the trans-Alaska pipeline is completed.

Blumer (1972) discussed how low-level chronic effects of oil may damage marine organisms because of their dependence on natural organic chemical clues for a variety of functions. Salmon and other fishes utilize organic chemical clues in migrations; predators are attracted to prey by organic compounds at the parts-per-billion level (Whittle and Blumer, 1970); and other organisms may use chemical clues for predator avoidance, selection of habitat, and sex attraction. Blumer (1972) discussed the fears that oil pollution may interfere with these fundamental biological processes by masking or blocking, or by mimicking natural stimuli (resulting in false responses). He cited literature discussing the attraction of lobsters to kerosene and to purified hydrocarbon fractions derived from kerosene and noted that many dead lobsters were washed ashore after the West Falmouth spill. Blumer's fears about interference with chemoreception are further substantiated by the observations of Takahashi and Kittredge (1973) on crab behavior. Crabs, *Pachygrapsus crassipes*, exposed to water-soluble extracts of crude oil failed to exhibit feeding behavior or mating behavior responses when given appropriate chemical stimuli. Inhibition of chemoreception of some motile marine bacteria by a crude oil and several other hydrocarbons has been demonstrated by Walsh and Mitchell (1973).

Rice (1973) performed laboratory tests of avoidance of pink salmon fry to Prudhoe Bay crude oil and observed avoidance of oil at concentrations as low as 1.6 mg/liter. He concluded that salmon fry had the capability of detecting sublethal concentrations of oil and that they might avoid areas contaminated with sublethal levels of oil, which would result in confused and nonadaptive migratory behavior. The effect of chronic low-level pollution in areas such as Port Valdez, the terminus of the trans-Alaska oil pipeline, could be as severe as the total loss of all salmon runs in the local area because of altered behavioral responses to sublethal oil pollution.

CONCLUSIONS

Although crude oil generally should be considered toxic to marine organisms and harmful to their environment, most ecosystems can tolerate some pollution because oil can be dissipated or removed by processes like evaporation, autoxidation, dilution, and biodegradation. However, each organism and environment has a limit to how much oil can be absorbed and metabolized. Catastrophic spills are obviously pollution at a level that ecosystems cannot tolerate without damage. However, if the spills are not continued, the oil will slowly be removed and recovery of the area, at least to some degree, will likely occur. There is some evidence for recovery of some affected individuals.

Assessments of the impact of oil pollution cannot depend solely on evaluation of immediate kills of organisms from acute exposures. Chronic low-level oil pollution can cause subtle changes in organisms and is potentially more dangerous to the ecosystem than dramatic catastrophic spills. For this reason, the effects of chronic pollution warrant intensive study so that they will not be underestimated. The cumulative impact of "ecological death" of individuals which have impaired functions may be quite significant, yet difficult to assess because the death is not tied directly to an acute oil exposure. Equally as dangerous is the potential impact on populations where reproductive processes, adversely affected through physiological or behavioral mechanisms, result in fewer progeny. Chronic pollution may eliminate a species from an area entirely, and once eliminated that species may remain suppressed and may not repopulate the area because of continuing pollution or because its niche has been filled by a more tolerant, possibly less desirable, species.

The adverse effects of oil on animal populations has been of wide concern when stocks of special interest, such as those providing the basis of a sport or commercial fishery, have been involved. It should be remembered that changes in populations of lesser apparent significance will also cause changes in the community because each species population interacts with and is dependent on the rest of the community.

The foregoing review of information does little to simplify or ease the problems of policy makers concerned with marine production and transportation of oil and petroleum products. The weight of

the evidence leaves little doubt that oil poses a serious hazard to living marine resources, that spills and chronic pollution have happened and will continue to occur, and that the interests of the marine environment are best preserved if marine transportation of oil and petroleum products is minimized. The continuing need for new sources and increased amounts of energy, however, limits many of the conservative and prudent alternatives to these hazards. Until research has provided conclusive data, policy makers must continue to rely on these interpretative judgments for much of their guidance in making decisions that can profoundly affect the well being of marine ecosystems.

ACKNOWLEDGMENTS

We received much counsel in the preparation of the report from Jack E. Bailey, Theodore R. Merrell, Jr., Richard T. Myren, and Bruce L. Wing, biologists of the Auke Bay Fisheries Laboratory, NMFS, NOAA; and Robert C. Clark, Jr., of the Northwest Fisheries Center, NMFS, NOAA, Seattle, Wash.

HB 712

March 30, 1978

ALASKA LEGISLATION - 1978
S.B. 557
OIL SPILL PENALTIES

This bill, which amends H.B. 137, Chapter 129 of the 1977 Session, should be further amended as follows:

1. Section 46.03.758(a)(2) is amended to read:

> "~~the exact nature and extent of oil pollution can be neither documented with certainty nor precisely quantified on a spill-by-spill basis; however,~~ in light of the magnitude of harm which may be caused by oil discharges, and the vital importance of commercial, sport and subsistence fishing, tourism, and Alaska's natural abundance and beauty to the economic future of the state, and its quality of life, it is the judgment of the legislature that substantial civil penalties should be imposed for the discharge of oil, in order to provide a meaningful incentive for the safe handling of oil and to insure that the public does not bear substantial losses from oil pollution for which, ~~because of its subtle, long-term or unquantifiable nature,~~ compensation would not otherwise be received; and however, it is not the intent of this section to impose a civil penalty for discharge of oil where there is no demonstrable damage to the environment; and"

This amendment is the most important of the four. It deletes the reference to unquantifiable damage, a thoroughly illogical concept which no one has ever been able to explain, and it adds language to require a demonstration that environmental damage has occurred before penalties under this law can be imposed.

The existing law, which does not require evidence of environmental damage before imposing penalties, must be considered punitive. Yet, subsection (a)(3) states this should not be the case.* Thus, this amendment would render the penalty remedial rather than punitive.

2. Section 46.03.758(b)(1) is amended to read:

> "Subject to subsection (a)(2) and to ~~(3)~~ (2) of this subsection, the penalties for the following categories of receiving environments may not exceed"

Making the penalties subject to subsection (a)(2) is a precaution to ensure that penalties will not be imposed unless it is demonstrated that environmental damage occurred.

*46.03.758 (a)(3) "in order to provide an incentive which is effective, but not punitive."

The change from (3) to (2) is a technical change. There is no (3) in subsection (b).

3. Section 46.03.758(d) is amended to read:

> "The schedule shall vary according to the toxicity, degradability and dispersal characteristics of the oil. The schedule shall also vary according to the sensitivity and productivity of the receiving environment. And, the schedule shall take into account seasonal changes. Variations under this subsection may be by subcategories of receiving environments, specific receiving environments, or both. The maximum penalties established in (b) of this section shall apply to discharges in the most sensitive and productive of receiving environments within each category of receiving environment, and the penalty shall decrease for less productive or less sensitive receiving environments."

This is consistent with past arguments that seasonality is an important factor in determining potential enviromental damage. Also, it reinforces our first amendment. "Less" is added before "sensitive" in the interest of good construction.

4. Section 46.03.758(g) is amended to read:

> "Except as provided in (f) and (j) of this section, the entire penalty specified in the regulations shall be imposed, except that a person who discharges oil into a receiving environment may demonstrate, by a preponderance of evidence, that mitigating circumstances relating to the effects of the discharge would make imposition of the full penalty inappropriate. ~~In determining whether mitigating circumstances exist, the court shall recognize that scientific knowledge pertaining to oil spills is very limited and if there is insufficient knowledge either to predict a base case or to show mitigating circumstances varying from that base case, the administratively established schedule of penalties shall apply.~~ Only when no such mitigating circumstances exist shall the schedule of full penalties apply."

The language deleted describes the body of scientific knowledge pertaining to oil spills as "very limited." This is simply not true. The scientific community, academicians, government, and industry have produced volumes of data on the fate and effects of oil spills (an abbreviated bibliography is attached), and their work is continuing. Therefore, the deleted sentence cannot be justified.

alvin

Sponsor Analysis of HB 137

1. Need for the legislation

Oil pollution can and does cause a wide range of harm to renewable resources, and the environment in general. Many types of harm, which can have devastating long-term effects on important marine resources, cannot be quantified. Included within this category are mortality to fish and shellfish larvae, food chain contamination, carcinogenic effects, and chronic toxicity. (See "Effects of Oil on Marine Ecosystems: A Review for Administrators and Policy Makers," Evans and Rice (1974), copy of which is attached to this analysis.)

Much of the damage caused by oil pollution can at least partially be seen -- oil-smothered beaches and intertidal areas, dead birds, marine mammals and the like. Yet even here, under existing state and federal law, the public, and the industries which depend upon the productivity of the sea, must bear these damages without compensation. As impressive as oil spill liability statutes may seem on their face, the fact of the matter is that traditional concepts of burden of proof will normally pose an insurmountable barrier to effective redress for the great bulk of harm caused by oil pollution.

In Alaska, the primary remedy for recoving damages for oil pollution is AS 46.03.822, which provides a strict liability remedy for those damaged by oil discharges. Yet it must be remembered that, to receive any compensation under the statute, the plaintiff must prove actual loss, the precise economic value of the loss, and causation. It is naive to believe that in any but the most basic cases can that burden be met. For example, let us suppose that, two years after a major oil spill, the salmon run in the area declines by 30%. Is that decline attributable to the oil spill? Natural fluctuation? Hard winters? Overfishing? A little of each? An even greater problem, of course, arises with regard to the subsistence user, who must prove not only causation, but must also meet his burden of establishing an exact dollar figure for lost subsistence opportunities. As the Court of Appeals for the Ninth Circuit warned in Union Oil Co. v. Oppen, 501 F. 2nd 559 (1974), after holding that commercial fishermen could sue for lost profits due to oil pollution:

> "To [recover any damages] it must be shown [by the fishermen] that the oil spill did in fact diminish aquatic life, and that this diminution reduced the profits the plaintiffs would have realized from their commercial fishing in the absence of the spill. The reduction of profits must be established with certainty and must not be remote, speculative or conjectural. . . . These are not small burdens, nor can they be eased by our abhorrence of massive oil spills. All that we do here is to permit plaintiffs to attempt to prove their case. . ." Id at 570.

The problem, of course, reaches unmanageable proportions when the state, on behalf of the public, seeks redress for harm caused to its natural resources. Here we deal not with lost profits, but with the diminution of the quality of the state -- lost recreational opportunities, decreased tourism, loss of heritage and the like.

The State of Maine considered it a major victory when a federal district court ruled in Maine v. M/V Tamano, 357 F. Supp. 1097 (D.Me. 1973) that the state could sue for these kinds of damages. The difficulty, of course, came afterwards -- in translating the harm from the spill into a dollar figure. Maine was fortunate in this instance. The primary visible harm was the direct coating of commercially valuable clams. The state actually conducted an on-site survey, and counted the dead clams. Yet even here, the inability of the state to put a dollar figure on the value of "in place" clams forced an out-of-court settlement of $750,000.

In most cases, however, the burden on the state will be far more formidable. While dead clams can be more or less effectively surveyed, most species cannot. And what of the indirect damages to commercial species -- such as food chain contamination? And the problem of valuation of non-commercial species? What is the "in place" value of a trumpeter swan, or a whale?

Alaska's answer to this problem has been the modest civil assessment provision of AS 46.03.760, which provides for an assessment of not less than $500, nor more than $100,000 for oil spills, based on the toxicity of the substance discharged, and the receiving environment. The statute is intended to provide "liquidated damages" for harm caused by oil pollution.

The most glaring problem with the statute is the $100,000 upper limit. In light of the fact that in many situations, the only recovery the state will make will be under sec. 760, the $100,000 figure seems ludicrous when applied to a Torrey Canyon or Santa Barbara.

The $100,000 figure is unreasonably low for another reason. Any civil penalty scheme should be regulatory as well as remedial. The penalties should be sufficiently high to constitute a meaningful stimulus to comply with the laws which they enforce. A potential maximum exposure of $100,000 no doubt fails to even register in the cost-benefit analysis of oil handling operations. An illustrative anecdote might be provided here. Last summer, Exxon Corporation willingly paid the U. S. Environmental Protection Agency $100,000 in civil penalties for a 200-400 gallon discharge of oil into the Beaufort Sea, to protect a "tight hole" from potential exposure in litigation. With regard to oil spills, sec. 760 fails its regulatory, as well as its compensatory role.

Sec. 760 is primarily addressed to continuing acts of pollution -- by depriving the discharger of the economic incentive of continuing to violate state law. It is not an appropriate enforcement mechanism for single-act oil spills. Even with the presence of the toxicity and receiving environment criteria, it is still exceptionally difficult to apply to any given oil spill. A person simply has no means of assessing his potential liability under the law. A trial to set the amount of the assessment remains largely potluck, and, as a result, there have been none. Cases under the law languish for years, while the private and public bar argue across the negotiating table as to whether the spill in question is a $500, or $50,000 discharge. There are more efficient, as well as more effective ways of protecting the public interest.

2. Major issues regarding HB 137

A. What is a civil penalty?

Although called a "penalty," the primary purpose of a civil penalty is to compensate for public harm, and to effectively encourage the regulated industry to comply with the laws which it enforces. See U.S. v. Mar.-Tee Contractors. _____F. Supp. _____, 8 ERC 1925 (D.N.J. 1976). In both intent and operation, HB 137 is remedial and regulatory, rather than punitive in nature.

B. Why dollars per gallon?

Civil penalty schemes are usually open-ended -- like current sec. 760 -- with a broad range between the lower and upper limits. This inevitably leads to the problems the state has faced with sec. 760.

The consequences of oil pollution should be definitively and unequivocally established from the outset. The dollars per gallon approach objectively grades the penalty according to the degree of public harm caused. The approach also furthers the regulatory purposes of the bill, by increasing the incentives for safe operation according to the amount of oil handled.

C. Why should an administrative agency establish the dollars per gallon schedule?

In the bill, the legislature establishes both the amount of the penalty, and the criteria for its application. What remains is a ranking of the relative sensitivity of receiving environments, and the relative toxicity of various types of oil. That is a technical effort which is properly vested in an administrative agency.

It might be argued that the establishment of a particular dollars per gallon figure should be established on a spill-by-spill basis by the courts. That, of course, would lead to precisely the same problem faced in utilizing current sec. 760. Moreover, courts are simply not equipped to make these kinds of relative judgments.

D. Why $5 to $50 per gallon?

We believe that $5-$50 per gallon is reasonably related to the gravity of the harm caused by oil pollution. In arriving at the figure, we of course recognize that it is impossible to quantify the environmental harm caused by oil pollution. But this bill is not an attempt to rigidly pre-establish damages. It is a penalty scheme in lieu of damages for which the public will never recover. It is also, of course, intended to serve as a meaningful incentive for safe operations.

On this point, it should be noted that a significantly lower range would result in unreasonably low assessments at the low end of the scale. For example, at a maximum range of $1 per gallon, the discharge of 100 gallons of oil to a salmon stream would result in a penalty of $100 -- a sum hardly commensurate with the gravity of that kind of incident.

E. Shouldn't there be an upper limit on liability?

Under HB 137, an upper limit does exist -- $50.00 per gallon. The total limit of liability thus depends upon the total amount of oil spilled.

To place a dollar limit on the total amount that may be assessed would represent a policy judgment that, at a given point, the harm caused by oil pollution should be

borne by the public, rather than the discharger. The administration is not prepared to make that judgment. In this regard, it should be noted that Alaska currently imposes unlimited strict liability for actual damages -- as do Maine and Florida. See AS 46.03.822.

Admittedly, the recoveries which might be had under HB 137 are conceptually very high. So, it should be added, is the level of impact which an oil spill catastrophe can cause, as well as the figures which enter into industry's calculations in determining what level of safety is economically justifiable.

F. Why is it necessary to establish vicarious liability?

HB 137 does extend liability for the penalty to certain persons who are in a position to control the integrity of operations from which the discharge occurred. For example, oil terminals are made vicariously liable for spills caused by vessels which load at their facilities. Similarly, the lessee of an offshore platform is made vicariously liable for discharges caused from his platform, even though the actual cause of the discharge may be due to the acts of an independent contractor.

Focusing on the question of vicarious liability for terminals, it should be stressed that the owners of the transported oil are the ones who choose the carriers which

handle their products. Because of the terminal's ability to insure that only the safest vessels, and most experienced crews enter Alaska waters, it simply makes sense, as a matter of equity, to hold the terminal responsible for the vessels' actions, while they are in state waters.

It is this philosophy which motivated §204 of the Trans-Alaska Pipeline Authorization Act (43 USC §1653(c)) which makes the owners of the TAPS oil, through the Trans-Alaska Pipeline Liability Fund, vicariously liable for damages (above $14 million) caused by oil spills from vessels which service the terminal. It is this same philosophy which led the State of Maine, in its Oil Discharge Prevention and Pollution Control Act of 1970, to make oil terminals vicariously liable for oil spills caused by "vessels destined for the licensee's facilities." 38 M.R.S.A. §552. This vicarious liability provision was upheld by the Maine Supreme Court in Portland Pipe Line Corporation vs. Environmental Improvement Commission, 307 A 2nd 1 (1973).

There are very real practical reasons for creating vicarious liability, aside from the amount of control which the terminal exercises over the quality of the vessel and its crew. First, the "independent contractor" defense -- which may be available if vicarious liability were not created -- has generally caused severe problems in oil spill

enforcement. For example, the dogged insistence of Alyeska Pipeline Service Company that it is not responsible for oil spills caused by independent contractors engaged in Trans-Alaska Pipeline work has frustrated state enforcement efforts in that regard.

Litigation against the owner of the vessel will often be fruitless. The vessel's owner or charterer will often be protected under the federal Limited Liability Act (46 USC §183, 186), which provides that the liability for damages of the vessel's owner or bareboat charterer as a result of a maritime incident will often be limited to the value of the vessel and freight on board after the incident. After a tanker grounding, of course, that value will be rather small. Of course, since HB 137 imposes liability for penalties, and not damages, it will be the state's position that the Limited Liability Act is inapplicable. It is, however, far from certain how the federal courts will treat this hybrid regulatory approach vis-a-vis that act.

The Torrey Canyon disaster provides a tragi-comic example of precisely this problem. On March 18, 1967, the Italian master of this Liberian registered flagship ran aground off the coast of England, spilling, over a period of days, most of her 119,000 tons of crude oil. On March 28, the vessel was sunk by RAF bombers.

The Torrey Canyon was owned by Barracuda Tanker Corp., a subsidiary of Union Oil Co. of California. Barracuda owned the boat pursuant to a sale-lease back arrangement with Union.

Barracuda immediately sued to limit its liability. The federal court obliged, limiting Barracuda's liability to $50 -- the value of one lifeboat which survived the bombing. See In Re Barracuda Tanker Corp., 281 F. Supp. 228, 232 (S.D.N.Y. 1968).

The frustrated British and French governments finally resorted to a remedy unavailable to Alaska -- they seized the Torrey Canyon's sister ships in Singapore and Rotterdam and, in a very real sense, held them for ransom. Barracuda's insurers then paid the governments 3 million pounds sterling -- about one-sixth of the clean-up costs incurred as a result of the spill.

Vicarious liability is nothing new to hazardous undertakings -- particularly the handling of oil. Both as a matter of equity, and practical necessity, we believe it is imperative that those who induce, and profit from oil handling activities, and who in fact have the ability to control the integrity of those activities if they so desire, be impressed with a non-delegable duty to see that those operations are conducted in as safe as possible a manner.

Finally, it should be stressed that those upon whom vicarious liability is imposed are not without recourse if the penalty is assessed against them. As the Maine Supreme Court stressed in Portland Pipe Line Corp., supra, we are dealing here with a "mutually beneficial relationship [i.e. between terminal and vessels, and owners and operators where] there is, in the relationship, adequate opportunity to locate, among the business associates, the primary liability."

G. Will federal admiralty law let us do this?

The short answer is yes. Following the United States Supreme Court decision in Askew v. American Waterways Operators, 411 US 325 (1973), which upheld Florida's strict liability oil spill statute, it was argued by some that certain implications in that opinion might limit the state's ability to impose strict liability for sanctions or damages beyond the limits established in the Federal Water Pollution Control Act -- i.e. $14 million dollars for vessels. In upholding Maine's unlimited strict liability oil spill law, the Maine Supreme Court, in Portland Pipe Line Cement, supra, specifically rejected that argument, and Congress has since made it clear that the Maine Supreme Court correctly interpreted its intent with regards to the state's power to enter the domain of admiralty, to seek redress for oil pollution. For example, in establishing the Trans-Alaska Pipeline Liability Fund, Congress stated with regard to vessels:

> "This subsection shall not be interpreted to preempt the field of strict liability or preclude any state from imposing additional requirements." 43 USC § 1653(c)(9).

To the same effect is the following provision in the federal law creating the Deep Water Port Liability fund:

> "This section shall not be interpreted to preempt the field of liability or to preclude any state for imposing additional requirements or liability for discharges of oil from a deep water port or a vessel within a safety zone." P.L. 93-697, § 18(k)(1).

Similar provisions are contained in comprehensive oil spill liability legislation now pending before Congress. It is clear that states have a "wide scope" in enacting laws pertaining to admiralty matters, as long as the law does not concern a matter requiring uniformity, or impair the harmony of the admiralty system. See Romero v. International Terminal Operating Co., 358 U. S. 354; Askew, supra. Both the courts and Congress have made it clear that the states' power to legislate in admiralty with regard to oil pollution is particularly broad.

H. Where does the money go?

The administration made a conscious decision, in submitting HB 137, not to specify how the penalties received should be allocated. If the bill is left untouched in this

regard, penalties collected would, pursuant to AS 30.25-.220(b), be deposited in the coastal protection fund. We believe it would serve no purpose to over-load the coastal protection fund with the substantial penalties which may be collected under this bill.

We would submit, for the legislature's consideration, that it would be more appropriate to return the penalties to the general fund, providing at the same time that the legislature may annually appropriate an amount equal to the penalties collected for the previous year for the purpose of financing renewable resource enhancement efforts in areas affected by oil pollution. These efforts, of course, could specifically include fish hatcheries. It is our belief that, in light of the extreme unlikelihood of effective recovery by fishermen for the full amount of damages actually caused to them as the result of oil pollution, that this mechanism would come as close as possible to, in fact, making the fishing industry whole after a catastrophe occurs. The department of law will be glad to assist the legislature in drafting a new subsection in this regard if that is the legislature's desire.

I. How does this bill affect private damages actions under AS 46.03.822?

This bill has no effect on the bringing of private damages actions under §822. It must be stressed that this section does not provide a damages remedy, but is rather a penalty law. It is true that the penalties are graded according to environmental and renewable resource impacts. However, again, the purpose of the bill is to provide a means of redress for harm caused by oil spills above those actual damages which might be proven in a given instance.

Respectfully submitted,

AVRUM M. GROSS
ATTORNEY GENERAL

Re: House Bill No. 144

Dear Mr. Osterback:

House Bill No. 144, an Act concerning the oil and gas properties production tax was introduced in the House on January 31, 1977 and was referred to the House Resources and Finance Committees.

For the consideration of the House Resources Committee, I am enclosing a Fiscal Note prepared by Mr. Thomas K. Williams, Director, Petroleum Revenue Division, Department of Revenue, Anchorage, concerning the proposed legislation.

Very truly yours,

R. D. Stevenson
Special Assistant

Enclosure

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

This Bill would facilitate the administration of the present production tax, making it fully auditable for the first time since "stair steps" were introduced into the statute in 1970. No additional staff or other costs are anticipated to administer this Bill. Assuming a full and fair market price for Prudhoe Bay oil, estimated receipts under the Bill for production from the main reservoir of that field would be $131.3 million in FY 78, $205.6 million in FY 79, $362.4 million in FY 80, $585.9 million in FY 81 and $636.3 million in FY 82. Further comments (which are hereby incorporated into and made part of this Analysis) on the Bill appear in the attached memorandum from Thomas Williams to R. D. Stevenson.

MEMORANDUM State of Alaska

TO: R. D. Stevenson
Special Assistant
Department of Revenue

DATE: February 18, 1977

FILE NO:

TELEPHONE NO:

FROM: Thomas K. Williams
Director
Petroleum Revenue Division
Department of Revenue

SUBJECT: SB 103 and HB 144
(identical Bills)

At the outset I would note that the Department of Revenue has recently released its review of Alaska's present taxation methods as they apply to the oil and gas industry. Within that review is the production tax, and recommendations regarding this tax have been made by the Department. This will shortly be followed up with specific bills.

SB 103 and HB 144 are identical. They incorporate a number of suggestions made last Session by the Administration to improve the production tax; however, these Bills do not reflect the latest recommendations in the Department's tax study. The most notable difference is that these Bills retain the basic "stair step" approach based on productivity, while the Department proposes a "curve" (instead of "steps") based on the actual economic condition of a property. The Department's recommendation recognizes and adapts itself to the fact that different areas of the State have different scales of economic production (i.e., in some places a far greater amount of production is needed to break even than is needed in others).

No simple set of "steps" can be structured for statewide application that will reduce the economic effect of the tax as the production of a property declines toward the minimum needed to break even. Either the tax will accommodate Cook Inlet operations and be too insensitive for non-coastal Native lands (whose break-even rates of production will more closely resemble the break-even rates for Prudhoe Bay than those for the Inlet), or else they will reflect the economic scale of operations for Native lands and Prudhoe Bay and give too much away to the Inlet operations.

If the "stair step" approach is to be retained despite its defects, the change to average well productivity as the basis for the "steps" is an improvement over the present tax. Both Bills make this change. However, they seem to give a bit too much away in their present definition of average daily per well production." A well operated only one day in the month would count the same as one operated every day of the month. To prevent the "one-day well" tax dodge, it is suggested that something along the lines of the following be used:

AGO 547430 +

R63072

(15) "average daily per well production" means the amount calculated by dividing the total number of barrels of oil produced from a lease or property during the calendar month by the well-days for that lease or property for the calendar month.

(16) "well-days" means the total obtained by determining the number of days each well of a lease or property was operated during the calendar month and then adding those numbers together for all the wells of that lease or property.

Again, this suggestion is made only if "stair steps" are to be retained: it would be unnecessary if the Department's proposed Economic Limit Factor (ELF) is adopted instead.

Despite the difference between "stair steps" and the ELF, these Bills do contain a number of the Administration's recommendations last Session that would still be beneficial.

Most important of these is the specification of the point at which the production is to be valued. There was litigation over this question for Cook Inlet production, and only the fact that the tax is being paid on the cents-per-barrel basis keeps the controversy from boiling up anew. A similar situation could develop at Prudhoe Bay. Specifying the valuation point corrects this and prevents a problem from arising.

Another good feature of the Bills is their proposal to extend the tax to flared gas and to tax that gas at a higher rate. Without a cents-per-Mcf tax, however, the percent-of-value tax could have little if any effect. A producer presumably would argue (before the courts?) that its flared gas has zero value or else why would it be flared.

Neither Bill would change the ordinary gas production tax rate to achieve rate parity with oil. This flaw in the existing tax structure was pointed out in the Department's tax study.

MEMORANDUM February 15, 1977

SUBJECT: HB 144, Proposed Change in Oil and Gas Production Tax (W.O. #3344)

TO : The Honorable Merle Snider
Alaska State Representative

FROM : Gregg K. Erickson
Director of Research

As you requested on February 8th, we are sending herewith a copy of the fiscal note for HB 144.

Also attached is a memorandum prepared by Al Latham for the Subcommittee on Oil and Gas Leasing and Taxing Policies, which sets out the expected revenues to accrue from this legislation. The memorandum evaluates a number of alternative proposals, but the one reflected in the bill is schedule B, with escalating floor price. In tables 1, 2 and 3, this is the second column from the left. For example, under the assumptions used, the proposed tax will yield $285.6 million in FY 1978. Also attached is a table showing the relative impacts on the oil companies doing business in Cook Inlet.

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

In addition to the changes in the tax rates, this bill provides for an administrative simplification of the oil and gas production tax. No additional costs for the proposed changes are anticipated and it is possible that some minor savings will result. Revenue increases due to passage of HB 144 are analyzed in the attached memorandum.

MEMORANDUM

January 15, 1977

SUBJECT: Severance Tax Schedules (Supplement to C.O. #2883)

TO: The Honorable Chancy Croft, Chairman
Subcommittee on Oil and Gas Leasing and Taxing Policies

FROM: A. R. Latham
Research Analyst

Following your consideration of our memorandum on Oil Severance Taxation on Janaury 8, 1977, we were requested to perform further analysis with the following objectives:

1) Prepare a tax schedule which will leave the effective severance tax rate for the Cook Inlet Basin at present levels, eliminate tax liabilities on the first 100 barrels of production per day, and produce an effective tax rate at Prudhoe Bay of approximately 12.5%.

2) Analyze the effects on this schedule and on projected revenues of eliminating the floor price altogether, freezing the cents/bbl. option at present levels (i.e. $6.10/bbl) using the controlled "old oil" price as the floor price, and freezing the floor price at present levels for one year.

3) Contrast these above options to the present situation.

For the purpose of reference in this memorandum, let us define the present tax schedule as Schedule A and the proposed schedule, Schedule B.

Schedule A (Present Law)

Production (b/d per well)	Percent of Value Tax
0 - 300	5.0
301 -1000	6.0
over 1000	8.0

Floor Price $6.10/bbl 27' API

AGO 547441 +

Schedule B (Proposed)

Production (b/d per well)	Percent of Value Tax
0 - 100	0.0
101 - 300	4.0
301 -1000	6.0
1001 -1500	9.0
1501 -3500	11.0
over 3500	14.0

Floor Price $6.10/bbl 27° API

You may recall from our previous memo that the average severance tax rates over the two Prudhoe Bay units under the current law is 7.7% and over the 20 Cock Inlet units is 7.8%.

In Cook Inlet, since the various units produce such different volumes of oil, a better definition of the effective tax rate is the weighted average over the basin rather than the arithmetic average over the units as we have considered up to this time. This difference is of no consequence whatsoever in Prudhoe Bay since the two percentages are identical. In Cook Inlet, however, this is not true. The calculated weighted average over Cook Inlet is 0.9 percentage points higher, 8.7%, indicating that those units which pay the higher effective rates also produce the greater volumes.

In contrast, the new proposal produces an effective tax rate over Prudhoe Bay of 12.3%; in Cook Inlet the average rate over the units drops precipitously to 5.0% yet the average rate over the basin is only slightly lowered to 8.3%. It is thus seen that we have decreased the effective tax rate on the lower producers without significantly affecting the rate on the higher producers (See Appendix A). This means, however, that we still have units in Cook Inlet paying very high rates but none paying higher than Prudhoe Bay.

Let us now turn to the other versions of Schedule B. The effects upon the severance tax rate at Cook Inlet and Prudhoe Bay may be most easily illustrated by referring to Tables 1, 2 and 3.

We immediately observe from the Tables that altering the floor price or eliminating it altogether has no effect under present conditions on Prudhoe Bay.

The story in Cook Inlet is different indeed. Removing the floor price or lowering it to the value of the "old oil" controlled price will reduce the effective tax rate to 5.9% resulting in a 29% decrease in the anticipated tax revenues in Fiscal 78. Holding the floor price fixed at $6.10/bbl for 27° API oil will reduce the effective tax rate to 7.96% decreasing revenues by 4.0%. Holding the floor price constant for one year and letting it increase 5% annually thereafter will produce a negligible effect. (Approximately an 0.8% decrease in revenues over 5 years.) We must, however, be careful in equating the removal of the floor price and establishing it as the "old oil" controlled price simply because the effective rates and fiscal impacts are identical. We must always remember that removing the floor price allows the possibility of a drastic reduction in severance tax revenue (and royalty revenues) if there is a precipitous drop in the well-head value of oil.

Re: House Bill No. 145

Dear Mr. Osterback:

House Bill No. 145, an Act relating to the Alaska net income tax was introduced in the House on January 31, 1977 and was referred to the House Resources and Finance Committees.

For the consideration of the House Resources Committee, I am enclosing a Fiscal Note prepared by Mr. Gary L. Jenkins, Director, Audit Division, Department of Revenue, Juneau concerning the proposed legislation.

Very truly yours,

R. D. Stevenson
Special Assistant

STATE of ALASKA

MEMORANDUM

TO: Mr. R. D. Stevenson
Special Assistant
Department of Revenue

DATE : February 3, 1977

FROM: Gary L. Jenkins
Director
Audit Division

SUBJECT: House Bill 145

House Bill 145 provides that all oil producing and pipeline companies would compute their income on a separate accounting basis. This concept, while appearing to be simplistic and easy to accomplish, actually is very complex. This has been pointed out by the recent report prepared by Messrs. Zeifman and Ainsworth for the Department of Revenue and the Legislature.

There are several specific areas of concern which we have regarding the Bill. First, it splits the responsibility for audit of the returns to two different agencies. For a company in the production of oil and gas, the returns would be audited by this Division, while for pipeline companies it is assigned to the APUC. I would strongly urge that the audit function for pipeline companies be assigned to this Division with the provision that the APUC will generate the reporting requirements which would be used as the basis for the audit. Sections 3, 6 and 8 of the Bill would need to be amended to accomplish this.

Second, it appears that the intent of the Bill is that the Department of Revenue would by regulation define what would be deductible as an expense and how such items as intangible drilling costs would be treated for reporting purposes. To accomplish this would necessitate the employment of two Auditors and the Clerk Typist III at least one year ahead of the effective date of the law to do the research needed for these determinations.

Third, on line 17 of page 5 of the Bill is a reference to the "allocation" formula required under Sec. 65 of the chapter. To be technically correct and to remove all doubts of what is meant, I would recommend that the proper term "apportionment" be inserted in place of allocation. To allocate is to specifically identify the nature of each item of income and assign it to the proper jurisdiction, while to apportion is to assign income on the basis of a formula.

Fourth, Sec. 4 of the Bill refers to AS 43.20.330 which was repealed in 1972 by Chapter 169 of the Session Laws. The proper reference is AS 43.20.335 with the two subsections identified as (j) and (k).

Fifth, the portion of Sec. 3 of the Bill which pertains to public reporting has provisions in it which may be unconstitutional. A primary tenant of our system of self-assessed tax is that the information reported shall remain confidential. The provision which would require

a summary of each return filed to be made public should be stricken from the Bill. That portion is included in lines 2 - 9 of page 6.

Lastly, there appears to be a conflict between Sections 9 and 10 of the Bill. Section 9 implies that the Bill would be effective on 1-1-77 while Section 10 states that it is effective on 1-1-78. Does Section 10 mean that returns would be due after 1-1-78 on income earned in 1977? I would recommend that this be clarified.

AGO 547464

The certification procedure envisioned by the proposed legislation is a significant extension of the Commission's responsibilities because of both the scope of the task and its interrelationship with current regulatory activities.

The Commission will be required to review the accounts and certify the net taxable income of natural gas pipeline companies or, alternatively, to identify the deficiencies and, if possible, provide a reporting of the true and correct income. This procedure is akin to issuing an independent audit opinion and will require comparable standards of review and expertise. Additionally, the Commission is constrained to issue a certificate of compliance or deficiency within 45 days from receipt of a request of a pipeline carrier.

Section AS 42.05.502(c) anticipates some coincidence between the definition of net income for tax purposes and that used by the Commission in establishing rates and measuring rate of return. There are a number of differences between accounting for rate-making purposes and tax purposes. The information on net income currently filed and reviewed by the Commission is tailored to regulatory requirements and only tangentially relevant to the certification process. Thus, existing analysis of pipeline financial data, while complimentary, is not directly applicable to this task.

Given the Commission's workload, satisfactory performance of the certification responsibility will necessitate hiring a staff person with specialized knowledge of tax accounting. The alternative of developing in-house expertise and diverting limited staff resources to certification would dilute effective performance of existing regulatory responsibilities.

REALTOR®

March 18, 1977

The Honorable Al Osterback
Chairman
House Resource Committee
Capitol Building
Juneau, Alaska 99811

Copy in all files

Dear Representative Osterback:

The Alaska Association of Realtors questions the effect of HB 156 as written on three basic counts: This Act erodes the inherent rights to private ownership of land (fee simple title) and it will have a potential drastic effect on the tax base of municipalities and boroughs. More particularly, this Act will not assure what it presumes to protect. The purchase of development rights to agriculturally-classified land would not assure the continuing or future agricultural use of the land.

The Alaska Association of Realtors is in favor of the preservation of the opportunity for agricultural use and development of lands suited to such occupation.

May we respectfully submit that tax relief on agricultural land that is in production is an incentive that should be explored.

Very truly yours,

Elden L. Haugen

Side 1 - 0 - 2025

HOUSE RESOURCE COMMITTEE - Minutes - April 7, 1976

Subject: HB 654 Sale of school lands & other lands

Present were Eliason, Huntington, Osterback, Smith, Brown, Staff Assistant VAn Dor_n and Chairman Anderson.

Dale Tubbs, Deputy Director of the Division of Lands, began testimony. He stated that this bill gives corrections and changes to operation of the land bill--it ties up the loopholes.

Sect. 1 38.05.430 (c)
The present language doesn't allow school grant lands to be sold except to municipalities. The change is to remove the limiting wording. It would still require the Board of Education to review any proposed sales.
Question: Does it include college lands? No.
Question: How much land is involved? A. About 100,000 acres. It doesn't involve any lands being surveyed now. Most of the lands involved are around the large cities, with some in Southeast Alaska on U.S.F.S. land.
Question: Is the Board of Education for it? A. Yes.
Q. How about the rent being charged? A. The grant says that you must create revenue from the land. Market value will be paid for all lands sold.

Tubbs mentioned that some school lands had previously been sold, before 1971, in residential areas. The money is then used for schools wherever it is needed.

Huntington asked about the source of information for leasing or selling preferences. Answer was that School Board minutes contain that information.

Eliason asked about putting land into recreational lands. A. That's o.k., but the lands involved are still residential.
Question: Could control of lands be put under Natural Resources?
A. They are the managing agent now.
Question: Would money be used for buying other sites? A. Probably not. Only the interest can be spent.

Osterback asked whether homesites as defined under HB808 could go on this land. A. Not as it stands now, because the land must make money one way or another to meet requirements.

Smith added that the lands aren't necessarily in the right places for either schools or parks.

Sect 2 (regarding agricultural preference right holders.) Agricultural land is now being lost to subdivision because prices are too high to farm it. Wording needed gives the Director the responsibility of determining whether agriculture is the best use. Also, an "existing farmer" is the only one who could qualify for the agricultural lands.

Re: taxes on land forcing persons to sell, Tubbs replied that it is up to the local government unit to determine the tax on land.
Smith reminded the group that agricultural exemptions are still available.

(See approx. 1682 on tape for testimony not in minutes)

There was discussion of "adjacent" lands, as applied to the grazing industry.

Also discussed was the fact that the soil survey analysis for the state is not yet completed. In the end, the Director of Lands makes the final land use determinations.

Eliason asked about public hearings being required for agricultural land classification. A. At present none are required, just public notification. Recommendations are usually received from Planning and Zoning departments. The present law says that the state "shall negotiate". The new law would state "auction".

Rod Pegues, of the Attorney General's office presented testimony. The purpose of the change is to set a fair market value through auction of the land.. As to the price of the land at an auction being too high for the farmers, it was explained that the land that is designated agricultural would not be able to be subdivided, so the auction would be only between farmers. They themselves would determine the price.

Sect. 3. Adds wording on agricultural lands when agriculture isn't the highest and best use, in order to allow the land to be re-offered for commercial use.

Pegues stated that all decisions made by the Director of the Division of Lands are appealable. The court can then decide.

Senator Tillion stated that the state can't arbitrarily take the land from a farmer. The farmer must request the classification change.

Regarding how the conveyance is done, Tubbs stated that in paragraph 4, page 3, we need to add "agrees and consents" to accept payment. Also added should be "constructed" improvements. (Clearing the ground doesn't count as a "constructed" improvement.

Senator Tillion expressed concern that the farmer should be paid for his farm--not just the land. A discussion of "fee title" ensued--who should get the money for the farm.

Chairman Anderson stated that at the top of Page 3, language is needed to protect improvements on the land.

Re: paragraph 6. This is needed to protect the state rights to sell timber, gravel, and minerals on the land. Example was given of agricultural land with timber on it. You can use the timber on the land to develop the land, but you can't sell "off" the land, at the present. (Tape 2145)

Senator Tillion stated that what you want is to allow the guy to sell the timber, but don't allow the state to go on the land to get the timber or the gravel.

Pegues mentioned the situations where agreements can't be reached with the state. A mechanism isn't provided now for solving the problem. It must be stated--the bill can't remain silent.

Tubbs stated that lease agreements cover the situation, but a sale contract doesn't. Smith stated that a mutual agreement was needed with the proceeds going to the state.

Pegues stated that the only real problem is the disposal of gravel. Again, the basic question to solve is how to allow the farmer to use his own "things". He added that the value of the timber shows up in the bid amount.

Re: Sect. 6. Pegues said that minerals must be isolated or a lawsuit is possible. A subsection 6 can be added stating that "Nothing affects.....(tape 2308).

Discussion of renewing leases brought out the fact that there used to be a standard value used ($600.00), renewable. This allowed people to get their "foot in the door" for a minimal amount of money, and acquire more land, with little if any additional money. The automatic renewal has created a problem.

Question: How about eliminating the negotiating authority? Answer: Negotiating doesn't require a survey. The timespan involved can be shorter. If an auction is used, it takes at least a year to cover all the necessary paper work, including the survey. "Spot" classification is also a problem. The year's delay is an inconvenience to the buyer or lessee.

Tubbs answered that wherever competitive interest is involved, public auction is used anyway.

Regarding eliminating the automatic renewal on negotiated leases, Pegues said that the bill doesn't eliminate it, but it could be done. Tubbs said that all current leases <u>can</u> be renewed. The new wording would only apply to new leases.

Re: Section 6 of the existing statute, the wording "equivalent other measure" is used to cover different measuring standard language. Also, the limit should be changed to $5,000 as applied to timber. Negotiation for materials becomes critical. Sometimes it becomes limited to one bidder because of location or circumstances. The higher limit allows the state to take care of these projects without bids.

Re: Sect. 7. When the land is within 6 miles of a municipality the municipality would be allowed to bid.

Re: Sect. 8--Public Utilities shouldn't have to auction for land, if there is no other place that will suit their needs. Brown stated that the language is too simple. It needs to be tightened. A higher standard than "reasonably requires" is needed.

Smith suggested that "licensed public utility" would qualify.

Pegues stressed that we don't give them a right--the need has to be demonstrated.

Sect. 11 takes out existing language. Publication rules would be changed to make at least 30 days involved. At present the wording is such that the process can take as little as 15 days.

Concern was expressed that the Director of the Division of lands has too much power without control.

(Morning meeting adjourned until after the Session)

1:30 meeting Tape 19 Side 1 0523

Present were Hershberger, Rhode, Huntington, Smith, Osterback, Eliason, Van Doren and Chairman Anderson.

Discussion began on the issue of including not only "municipalities" but also "villages" in the 6-mile requirement (or privilege). Pegues stated that the problem has been indefiniteness. Village incorporation is limited.

Tubbs stated that if villages were included care would be needed. Half are now incorporated. We assume others will be soon. That would give the certainty needed for the qualifications. Also, if villages were included it would help to include only those outside a Borough. What we're aiming for is an official Planning Authority for each contact.

Discussion continued as to the differences between the villages and the Regional Corporations. It was suggested that the Corporations could be designated the contact organization.

Chairman Anderson stated that the land use patterns are pretty well set up for Corporations.

Tubbs added that the problem (village) will be more acute as the state acquires more land. Disposal of minerals is a problem now, but land is being taken care of.

Re: Sect. 12--This would repeal the renewal of lease wording. In one place it says renew, in another it says must review first. This would apply only to future renewals--not current ones.

Discussion of "high bid" on leases, and preference right structure took place.

Clarification was given as to school sites not being the same as school grant lands.

Tubbs stated that a reappraisal is done every 5 years on all leases. As land values climb, there is pressure to change recreational leases to sales.

Tubbs explained that Section 13 makes legal what's already being done--it ratifies previous leases granted under preference rights. Possibly 40 preference right leases have been offered.

Chairman Anderson asked what would happen if the bill didn't pass. Tubbs answered that they would continue working with the Planning Authority in any affected areas. Especially needed is the school grant land part of the bill. Otherwise, the schools are losing money. It is better to have the government manage the money, as under the bill, than the land, as now is being done.

Not all of the 100,000 acres of school grant land has been appraised as yet. Most of it is in urban areas. At present, there are many uses of the Anchorage area sites, both commercial and residential.

Pegues explained that the Board of Education makes the decisions on land use. Commercial property is leased. Residential will be sold.

Huntington asked who would do the appraising of the lands. Answer was that the Division of Lands has appraisers. It must be remembered that no two appraisals match. Appraising is not an exact science. Mr. Smith mentioned that the State of Alaska has qualifications that their own employees acting as appraisers must meet.

Tubbs stated that on school grant lands, development plans are submitted, then accepted if there is no competition for the land.

Question was raised about the problem in Southeast (possible problem) of school grant sections conflicting with Claims Act selections. Answer was given that exchanges can be made if problems are encountered.

Eliason expressed concern as to public input before the Director can classify land.

Re: Section 4, Tubbs would recommend passage. Smith mentioned that he would prefer retaining control by keeping the $250 limit as pertains to this section.

Re: Section 7, this is considered critical. Guidelines are created. A new subsection (b) is needed to cover the Regional Corporation responsibility as a Planning Agent.

Re: Section 13, this is needed for Title companies. i.e. if you deal with the government, but the government acts illegally, you're out of luck.

Smith asked that in Section 1, leave in the now-deleted words, but add "or for residential purposes". Also, on Page 3, Paragraph 6, Add a new subsection.

Recommendation was made to delete Section 4 leaving the section as it is in existing law. This would retain the $250 per year limit and 5-year leases.

Pegues explained that it is basically an inflation amendment.

Committee agreed to delete section 4.

Smith asked that on Page 4, between Lines 6 and 7, add (b) changing exempt limits to $500. Committee adopted the amendment.

Committee approved the "right of renewal" appeal wording.

Chairman Anderson asked that the Committee Substitute be drafted and ready as soon as possible.

Meeting adjourned.

Rep Sally Smith

P. O. Box 223

February 3, 1977

The Honorable Alvin Osterback
Chmn., House Resources Committee
Alaska State Legislature
Juneau, Alaska

Dear Representative Osterback:

During the last few weeks, I have been developing an administrative manual for the State Board of Education. (I am a retired, former employee of the Department of Education for 25 years.) During the course of the project, I reviewed the various statutes applying to the Board and I noticed that legislation enacted a year ago expanded on the Board's responsibilities in connection with the leasing of school lands.

Prior to last year, the Board was required to approve the lease or other disposition of school lands. Their responsibilities and prerogatives have now been increased to the point where the Board is now the trustee for school lands and has the authority to employ special legal counsel and technical assistance to administer this program.

In my opinion, this is a misapplication of the Board of Education's function, and the Board's involvement in the management of school lands should be repealed.

School lands, like other categories of state lands, should be administered by the Division of Lands, Department of Natural Resources, the agency especially created for land management.

Actually, there is no connection between the Department of Education (Board of Education) and school lands. Up to statehood, certain surveyed sections of lands in each township were designated school lands (Sections 16-36, of each township). When such lands were leased or sold, the funds were placed in the "permanent school fund" and invested. The income (interest) from the permanent fund then goes to the State General Fund. Relatively speaking, the income from the permanent fund is small and is only indirectly involved in financing educational programs.

It is my understanding there has been some criticism of the Division of Land's handling of school leases in the past. If

there are problems concerning the leasing of school lands, they should be resolved by strengthening procedures in the Division of Lands, not by involving another agency in lands administration.

In ord[illegible]l its trusteeship responsibilities, the Board of Educ[illegible]quired to employ additional personnel to administer the [illegible].

I submit that the Board of Education should not be in the land leasing business, that it detracts from their primary educational function, and furthermore, could result in a needless expense.

With the above in mind, I respectfully request the Resources Committee to initiate legislation which would repeal the Board of Education's involvement in the leasing of school lands.

Yours truly,

Robert P. Isaac

State Department of Natural Resources

(14) School Lands - Title 38

Section 38.05.030(e). The sale, lease or other disposal of school lands under the jurisdiction of the department shall be made by the commissioner in accordance with the provisions of this chapter. However, disposal of school lands under this subsection, other than disposal by lease for a term of years, shall be made only for sites for school facilities or for public park and public recreation purposes. School lands may be exchanged for (1) state lands, (2) vacant, unappropriated and unreserved public lands and (3) lands owned by a city, borough or other public entity. In the case of unequal values, cash may be used to equalize land values. When the department determines that it is in the best interest of the state to dispose of the school lands located within Sections 16 and 36 in an organized borough or city of any class, the borough or city is authorized, and has preference for six months after notice, to acquire the land at the appraised value by purchase or exchange of land acceptable to the department. No sale, lease, exchange or other disposal of school lands may be made without the approval of the state Board of Education. The state Board of Edudation shall act as a trustee of school lands. The board may retain private counsel or other professional assistance when necessary to carry out its duties as a trustee.

MEMORANDUM

February 15, 1977

SUBJECT: HB 156, "An Act Relating to the Conservation of Privately Owned Agricultural Land" (W.O.# 3319, Partial)

TO: The Honorable Sally Smith

FROM: George Utermohlen
Research Analyst

SUMMARY

House Bill 156 is a companion bill to Senate Bill 66 introduced by Senator Tillion. These bills seeks to conserve agricultural land by severing the rights to develop agricultural land from the fee title. Once the landowner has sold his development rights to the state, he is relieved of the tax burden associated with the development rights as well as the pressure to develop. The decreased tax burden is important to those who own agricultural land near major population centers where there is the greatest pressure to convert agricultural land to more intense use.

The landowner who wishes to sever the development rights from his agricultural land may sell them to the state. The purchase price of the development rights shall be determined by an independent appraisal of the value of the development rights. The cost of the appraisal is deducted from the purchase price. The development rights remain with the state until the landowner requests that the development rights be sold or leased and the Director of the Division of Lands and the Commissioner of Natural Resources agree. When the development rights are sold at public auction, the landowner has thirty days to meet the high bid. In exericing his preference right, the landowner may credit the value of improvements on the land towards the purchase price.

The only lands affected by this act are those lands for which a soil survey has been completed by the U.S. Soil Conservation Service. Those areas which have been surveyed by the Soil Conservation Service are the Kenai Peninsula, Anchorage, Matanuska Valley, Fairbanks, and Delta Junction.

At least 60% of the agricultural land for which the development rights are acquired must be rated as Class V or better by the Soil Conservation Service. A copy of the soil classification scheme is attached.

COMMENT

That area of law dealing with the acquisition of development rights is relatively new. No state has had similar legislation in effect long enough for all the potential problems to be realized. The best that can be done with new kinds of legislation is to address all the foreseeable problems in the initial legislation and to hope for sucess.

Those parts of the bill which deserve scrutiny in committee are addressed below.

1. In the proposed subsection 38.60.010(b), the only criterion for selecting land to be protected is the soil capability classification assigned to the land by the Soil Conservation Service. Other criteria which might also be considered are minimum acreage and past agricultural use. The state gains little in protected agricultural potential if the plots which are protected are too small for agricultural purposes or if the land has an unknown agricultural potential.

2. In subsection 38.60.010(c) the purchase price of the development rights is established by an appraisal of the development rights by an independent appraiser. The cost of the appraisal is deducted from the purchase price. This provision is meant to assure the landowner the best price for his development rights. However, if the cost of the appraisal is deducted from the purchase price, it may be in the best interests of the property owner to accept an appraisal by the Division of Lands, which will not be subject to a deduction equal to the appraiser's fee. It is suggested that the provision for an independent appraisal be at the option of the landowner.

3. Under subsection 38.60.020(a) are listed a few of the provisions to be included in any development rights purchase agreement. One of these provisions allows the construction of only those structures consistent with agricultural purposes. It is not clear if this provision would prevent a landowner who has not already built a home on the land from building a one-family residential structure for his personal use. Examples of those structures which would be allowed to be built while the state holds the development rights could be included as a guide for Division of Lands.

Another provision of this subsection limits the kinds of interest which a landowner can sell in his land if the state owns the development rights. This provision should be written so that it is clear that the landowner may not sell any interest in his land which would substantially hinder agricultural operations and that scenic, access, and utility easements would be permitted by the development rights purchase agreement.

4. Subsection AS 38.60.020(b), as proposed, would permit the Director of Lands to offer the development rights for sale or lease if requested by the landowner. The sale of development rights is by public auction. The landowner has 30 days to meet the high bid and repurchase the development rights. The value of improvements owned by the landowner may be credited toward the purchase price. The value of improvements owned by the landowner who is engaged in certain forms of capital intensive agriculture, as dairy farming, could be worth much more than the development rights. If these improvements could be credited toward the repurchase of the development rights, the landowner would be able to receive cash for his development rights, tax relief while the state holds the development rights, and then repurchase his development rights at no cost at any time before the value of the development rights exceeds the value of the improvements. An alternative form of improvement credits would allow credit only for those improvements made during the period when the development rights purchase agreement is effective.

5. The phrase beginning on line 26 of page 2 "included with the development rights sold" may be deleted because it is unnecessary and complicates interpretation of the section.

6. By requesting the Director of Lands to make the development rights available for purchase, the landowner consents to the sale and acknowledges that the development rights may be sold to a third party if he cannot meet the bid received at public auction. The provision of 38.60.020(b)(3)(B) is not consistent with the other sections of the bill and should be deleted, because it requires the landowner to assent to the sale of improvements. No improvements made by the landowner are affected by the sale of development rights; all improvements remain the property of the landowner.

7. The phrase "together with improvements" should be deleted from line 7 of page 3 [sec. 38.60.020(b)(4)] because it is not applicable to the situation which is addressed by this bill for the same reasons as given in Six above.

8. A new definition of "agricultural operations" which would change only the form of the existing definition is suggested as follows:

"agricultural operations" means those activities related to the production of domesticated plants and animals useful to man, including forage and sod crops, grains and feed crops, fruits, vegetables, and livestock;

9. A proposed amendment of the definition of "agricultural use" which alters the form of the definition, but not the meaning, is suggested as follows:

"agricultural use" means the use of substantially undeveloped land for the production of domesticated plants and animals useful to man, including forage and sod crops, grains and feed crops, fruits, vegetables and livestock; and other related uses and activities.

Because this aspect of land use legislation is relatively new, this bill is, in many respects, very general. It will be the responsibility of the Division of Lands to promulgate regulations which will enumerate the procedures to be employed in purchasing development rights to privately owned agricultural land.

This legislation shall benefit both the agricultural landowner who wishes to remain in agriculture, but is subject to pressure to convert his land to more intense uses, and the state, which will be able to conserve productive agricultural land. The ability of the state to acquire development rights to farm land will promote the retention of open space in areas subject to intense development pressure, however, the ability of the state to utilize this land use planning tool will depend upon the monies appropriated.

SOIL CONSERVATION SERVICE

Soil Capability Classes

Class I soils have few limitations that restrict their use.

Class II soils have moderate limitations that reduce the choice of plants or that require moderate conservation practices.

Class III soils have severe limitations that reduce the choice of plants, require special conservation practices, or both

Class IV soils have very severe limitations that reduce the choice of plants, require very careful management, or both.

Class V soils are subject to little or no erosions but have other limitations, impractical to remove, that limit their use largely to pasture, range, woodland, or wildlife habitat.

Class VI soils have severe limitations that make them generally unsuited to cultivation and limit their use largely to pasture or range, woodland, or wildlife habitat.

Class VII soils have very severe limitations that make them unsuited to cultivation and that restrict their use largely to pasture or range, woodland, or wildlife habitat.

Class VIII soils and land forms have limitations that preclude their use for commercial plants and restrict their use to recreation, wildlife habitat, or water supply, or to esthetic purposes.

HB 157

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act making a special appropriation to the University of Alaska to determine the feasibility of using waste heat generated by the trans-Alaska pipeline for grain and forage drying; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA

* Section 1. The sum of $100,000 is appropriated from the general fund to the University of Alaska for a study to establish the feasibility to use waste heat recovered from pump station No. 9 of the trans-Alaska pipeline to dry grains and forages for livestock feed.

* Section 2. The unexpended and unobligated portion of this appropriation lapses into the general fund June 30, 1979.

* Section 3. This Act takes effect immediately in accordance with AS. 01.10-070(c).

Analysis of Fiscal Note

FY 77 Costs

100	Personal Services		$ 3,394.61
	Assistant Professor of Resource Systems	$ 3,394.61	

This position would be employed for one month prior to FY 78 to begin implementation of the research project. It is the responsibility of the position to act as project co-principal investigator and to conduct the cost analysis, assist in data analysis of grains, and interact with technological contractural services provided.

$2,482.13	Salary ($2,482.13 per month X 1 month)
394.66	Leave Allowance (15.9%)
$2,876.79	Subtotal
517.82	Staff Benefits (18%)
$3,394.61	Position Total

400	Commodities		$ 200.00
	a) Bag tags and grain bags	$ 200.00	
500	Equipment		$ 2,500.00
	a) Laboratory grain dryer and associated equipment	$ 1,000.00	
	b) Grain storage bins	$ 1,500.00	
	TOTAL FY 77 COSTS		$ 6,094.61

Senate Bill No. 87

FY 78 Costs

100 Personal Services $24,604.62

Assistant Professor of Resource Systems $11,392.14

This position would be employed for three months to develop and coordinate the project. It is the responsibility of the position. to act as project co-principal investigator and to conduct the cost analysis, assist in data analysis of grains, and interact with technological contractural services provided.

$ 8,191.02	Salary ($2,730.34 per month X 3 months)
1,302.36	Leave Allowance (15.9%)
$ 9,493.38	Subtotal
1,898.76	Staff Benefits (20%)
$11,392.14	Position Total

Senior Research Assistant (21A) $11,922.48

This position would be employed for four months to develop the project. The person employed would be an agronomic specialist, skilled in laboratory techniques and would aid in laboratory work, calculating data and other duties assigned by the project heads.

$ 8,572.40	Salary ($2,143.10 per month X 4 months)
1,363.00	Leave Allowance (15.9%)
$ 9,935.40	Subtotal
1,987.08	Staff Benefits (20%)
$11,922.48	Position Total

Agricultural Laborer (11A) $ 1,290.00
(Temporary Help)

This position would be responsible for field work associated with grain harvest and storage and would be employed for one month.

$ 1,075.00	Salary ($1,075.00 per month X 1 month)
215.00	Staff Benefits (20%)
$ 1,290.00	Position Total

200	Travel		$ 3,500.00
	Travel required to review waste heat agricultural projects in parts of United States, such as California, Washington, Oregon, etc. to analyze various drying techniques for application in Alaska.	$ 1,000,00	
	The Scandanavian countries and England currently employ waste heat in the processing of agricultural products, particularly high moisture grains. A review of the techniques would be done to determine applications in Alaska.	$ 2,000.00	
	Approximately 20 trips to and from Delta Junction (Pump Station #9 site and field plot site) would be necessary during equipment adaption and harvest.	$ 500.00	
300	Contractural Services		$10,200,00
	Contractural services will be used to determine types and amount of fungal organisms and amounts or presence of micro toxins in stored grains; analysis of carbohydrate content (sugars & starches); and amino acid analysis of proteins.	$ 1,700.00	
	Technological consultants will be used for aid in analysis of technology for utilizing waste heat for grain drying and for aid in equipment design and installation.	$ 8,000.00	
	Computer run time will be necessary for cost analysis and grain analysis.	$ 500.00	
400	Commodities		$ 200.00
	a) Bag tags and grain bags	$ 200.00	
500	Equipment		$ 9,500.00
	200 bushel per hour grain dryer, conversion and heat transfer equipment.	$ 9,500.00	
		TOTAL FY 78 COSTS	$48,004.62

Senate Bill No. 87

FY 79 Costs

100 Peraonal Services $37,858.16

Assistant Professor of Resource Systems $12,740.13

This position would be employed for three months to coordinate and complete the project. The position would also collaborate in preparation of documentation for publication of the project results.

$ 9,010.11	Salary ($3,003.37 per month X 3 months)
1,432.62	Leave Allowance (15.9%)
$10,442.73	Subtotal
2,297.40	Staff Benefits (22%)
$12,740.13	Position Total

Senior Research Assistant (21A) $16,666.65

This position would be employed for five months to maintain and complete the project. The position would also assist in preparation of documentation of project results as assigned by project heads.

$11,787.05	Salary ($2,357.41 per month X 5 months)
1,874.15	Leave Allowance (15.9%)
$13,661.20	Subtotal
3,005.45	Staff Benefits (22%)
$16,666.65	Position Total

Secretary (12A) $ 4,123.43

Secretarial services would be necessary for two months to type project results and be responsible for any duties necessary for publication of documentation.

$ 3,379.86	Salary ($1,689.93 per month X 2 months)
743.57	Staff Benefits (22%)
$ 4,123.43	Position Total

Agricultural Laborer (11A) $ 4,327.95
(Temporary Help)

This position would be responsible for field work associated with grain planting, harvest, drying and storage and would be employed for three months.

$ 3,547.50	Salary ($1,182.50 per month X 3 months)
780.45	Staff Benefits (22%)
$ 4,327.95	Position Total

200	Travel		$ 500.00
	Approximately 20 trips to and from Delta Junction (Pump Station #9 site and field plot site) would be necessary during planting, harvest and drying seasons.	$ 500.00	
300	Contractural Services		$ 7,200.00
	Contractural services will be used to determine types and amount of fungal organisms and amounts or presence of micro toxins in stored grains; analysis of carbohydrate content (sugars & starches); and amino acid analysis of proteins.	$ 1,700.00	
	Technological consultants will be used to aid in assessment of methods of utilizing waste heat for drying assessment of system performance and documentation of technological data.	$ 5,000.00	
	Computer run time will be necessary for cost analysis and grain analysis.	$ 500.00	
400	Commodities		$ 300.00
	Parts needed for equipment adjustment and/or field preparation.	$ 300.00	
	TOTAL FY 79 COSTS		$45,858.16

February), 1977

THE FEASIBILITY OF UTILIZING WASTE HEAT FROM THE TRANS-ALASKA PIPELINE FOR GRAIN AND FORAGE DRYING

BACKGROUND

Much emphasis has been placed in recent years on energy utilization and it's impact on economic growth. In the face of an increasing world population, heavy demands are being made on energy supply sources, particularly as related to food production. It has become exceedingly important to conserve and improve the efficiency of energy available from both fossil and non-fossil fuels. This is very evident in the agricultural industry, particularly in small grain and forage production. As an example, natural gas forms the energy base for over 80 percent of the energy used in irrigation pumps, grain drying and anhydrous ammonia fertilizer production in Kansas. Decreasing supplies of natural gas can be expected with continuously rising prices.(1) This will be true in all agricultural areas of the United States. It is important to utilize the maximum energy available from any fuel source.

Alaska, in particular, is placed in a unique position in the scenario of total energy use in food production. Over 17 million acres of tillable land and 10 million acres of rangeland have been identified.(2) One area, the Delta-Clearwater region, in the interior is considered most attractive for future agricultural development for the following three major reasons:

1. The area contains approximately 10,000 cleared acres and over 100,000 acres of uncleared land with high agricultural potential. Portions of this acreage are currently in use for the production of grain and forage crops.

2. Pump Station #9 of the trans-Alaska pipeline is located centrally within the area. During beginning phases of oil flow, an average of 800,000 BTU per minute of low pressure turbine exhaust will be released at temperatures of 475° F at an ambient temperature of 0° F. At maximum oil flow, this will increase to an average of 1,000,000 BTU per minute at temperatures of 535° F.(3) These temperatures are considered within the range necessary to operate grain and forage dryers, which have an energy requirement in the neighborhood of 1/10 that available from Pump Station #9, if the grain and forage is harvested at moisture levels as high as 40 to 60 percent.(4,5)

3. The beginnings of a production and marketing infrastructure are present in the Delta-Clearwater area. A major road system serves as a connector to Fairbanks and Anchorage. Farm equipment and supply outlets are located within a 100 mile radius. Small grains and hay produced within the area are marketed within the state through established channels. In addition, Delta Junction is the headquarters of the Alaska Farmers Cooperative, Inc..

The potential for growth in agricultural production, processing and marketing in the Delta-Clearwater area will not be realized until several specific questions are resolved. These are:

1. Can waste heat be used for grain and forage drying? Although the heat generated by pump station turbine exhausts is extremely high, it is not in a form immediately usable in any agricultural application. Investigations show that systems can be designed within specifications of the turbines to use the heat generated.(6) The various methods of transfering the heat to the drying area must be investigated to determine that which is the most efficient. Use of waste heat for grain and forage drying may make production of these crops within Alaska economically attractive.

2. Will use of turbine exhaust gases for drying damage grains and forages? Indications are that there will be no damage and that there may be an advantage to using waste gases. Grains and forages should be analyzed both before and after a storage period to determine the effect of the exhaust gases, if any.

3. Will grains and forages produced meet international quality standards? Data from the Agricultural Experiment Station at Fairbanks indicate approximately 80 percent of barley produced in the Delta-Clearwater area can meet international standards. Again, analysis of grain and forage quality before and after a storage period will substantiate this data.

The conversion and use of gas turbine exhausts as an energy source for drying grains and forages is a key to large scale production of an animal feed product within Alaska.

PROJECT OBJECTIVES

The objective of this project is to show the feasibility for utilizing waste heat for drying grains and forages. This will accomplish:

1. The provision of a waste heat recovery system design for Pump Station #9 of the trans-Alaska pipeline or for similarly designed exhausting systems.

2. The provision of a method for more efficient use of fossil fuel in a multi-purpose system (pump station operation and crop drying).

3. A means to use high moisture grains and forages as a year-round feed base in Alaska and as a marketable product to areas outside the state.

All of the above will combine to provide the opportunity for growth of an agricultural industry which will include as major components production, processing and marketing of grains and forages. The industry will serve the immediate area and the state and provide consumer benefits including dollar savings per unit of energy expended.

PROJECT AREA

The Delta-Clearwater area is largely agricultural. It is serviced by a major highway system providing access to Fairbanks (90 miles west-northwest), Anchorage (300 miles southwest) and the Canadian border (200 miles southeast). The nearest railhead is in Fairbanks; the nearest port, Anchorage. Only charter airlines service the area with Fairbanks the nearest international airport. The area cannot be considered a bedroom community of fairbanks, although Fairbanks is considered the primary trade center. It was, previous to the trans-Alaska pipeline influx, a trading center for area farmers, most of whom had begun as homesteaders. In fact, Fairbanks, ninety miles west of the Delta-Clearwater area, from the turn of the century to the 1930's, was considered the center of Alaska's agriculture. Cattle and hogs were rainsed. Market vegetable production, hay production and grain production were under way.

In 1968, legislative action made additional land available to persons actively engaged in farming. Several area farms have grown because of this action but have not expanded substantially. As examples, a 1,000 hog production facility was established in 1970, but did not remain in operation because of lack of a consistent feed supply and lack of an existing market infrastructure.(7) A dairy operation involving more than one hundred head with a complete processing, packing and distributing facility exists in the area. In addition, a beef cattle feeding operation involving one hundred head was recently established. There is an on-going egg production operation of over 10,000 laying hens, as well as a sheepherder with a one hundred head flock. Agriculture in the area is not limited by climactic or biological factors, but by factors of a developmental and economic nature.

The transportation access in the Delta-Clearwater area provides a means for import and export of products. The same system makes distribution to inter and intra-state destinations possible, and provides access to shipping ports making available possibilities for international trade. Japan, in particular, imports 90 percent of its vital grains. Alaska, with a high quality grain product, could be in a good position to compete in the international livestock feed market. As the market is expanded, the Delta-Clearwater area could conceivably provide up to 100,000 acres of high quality agricultural land for production of grains and forages.

An ad hoc committee on agriculture has prepared an assessment of large scale barley production in the Delta-Clearwater area. The assessment indicates that farms approximately 3,000 acres in size, using fallow management systems are viable and that sufficient quantities of grain can be produced on 50,000 acres to warrent a 1 million bushel out-through elevator-dryer system.(9) Investigation of the potential of drying grains and forages with waste heat is, therefore, of high interest in terms of contribution to a renewable resource economic base for the state. The conclusion which may be reached is that waste heat utilization may well be the impetus needed for the revival and future development of agriculture in Alaska.

RELATED STUDIES AND PROJECTS

The following is a listing of projects, with references, of on-going and future research by the University of Alaska, Agricultural Experiment Station.

Grain and forage production:
For the past four years, a cereal grain research program has been conducted in the Clearwater-Big Delta region. Emphasis has been placed on evaluation of barley, oat and wheat varieties as feed grain crops. Oat varieties have also been evaluated as a forage and straw crop. Other areas of research include fertilizer response, comparison of production systems (continuous grain vs. summer fallow-grain), tillage practices, seeding rates, and weed control.

On-going research concerns grain production in the Tanana Valley of interior Alaska. The objectives are to increase production of barley, oats, and wheat through a broad, intergrated, research program of variety testing and cultural practices. Triticale is to be evaluated as a potential new grain crop. Grains produced in a subarctic environment are to be evaluated for quality and suitability. In addition, grain adaptation tests are being conducted for remote areas of Alaska.

Wooding, F. J., "Grain Adaptation Tests for Remote Areas of Alaska", Special Appropriation of Hatch Funds, 1974.

Since May, 1970, research on peas, barley and oat mixtures has been conducted to determine in-combination and independent response to harvest date and crop mix. The parameters of interest are protein, digestibility and yield.

Brundage, A. L., R. L. Taylor and V. L. Burton, "Barley, Oats and Peas, Alone and in Combination, for Forage", presentation at the Annual Meeting of the American Dairy Science Association, June, 1976.

Markets:

Past work on markets for agricultural commodities produced in Alaska has been largely confined to only statewide markets. The topics covered have included pork, beef, vegetables, dairy, and feed production. Although only limited local markets were identified, production within the state is small enough to allow market expansion in most areas.

Stephens, C., W. Thomas and V. Burke, "Supplying Alaska's Red Meat and Poultry Products, Institute of Agricultural Sciences, University of Alaska, 1975.

Research just beginning at the University of Alaska will analyze the export market for feed barley, malt barley, and grain and/or feed pellets. Identification will be made of possible markets and problems and opportunities associated with these markets. Included will be an analysis of price conditions, trade arrangements, transportation system requirements and appropriate domestic and foreign government regulations.

Thomas, W., "International Markets and Marketing for Alaska Produced Farm Products", Research Project, Agricultural Experiment Station, University of Alaska, 1976. Sections of this marketing research will be carried on as in-kind contributions to the waste energy project proposed here.

Agricultural potential:
There are three agricultural potential studies which are on-going within the Agricultural Experiment Station. The major concern is economic and social impact on the state and on available markets for products from the state.

PROJECT PROCEDURES

Method of Approach

A three part study will be conducted over a two year period to provide answers to those questions raised in the background discussion. The parts of this study are:

Part 1. Provision of an efficient design for the conversion of low pressure turbine exhaust to usable form.

Part 2. Determination of the effect of turbine exhaust gases on quality of grains and forages.

Part 3. Determination of grain and forage quality after drying with exhaust gas and after a period of storage at varying moisture levels.

Discussion of Part 1.

The exhausted heat available is in the form of a low pressure, high BTU per minute flow at high temperatures. Requirements of low back pressure for efficient turbine operation limit the design specifications for recovery of the heat. Both a fin tube and a tube/ambient air system have been suggested. Alternate possibilities will be considered. The possibility of a water jacket surrounding the recovery tube will be investigated, assuming a future need for heated water. Cost of the system and operation and maintenance requirements will be a primary consideration.

In FY 78, a small dryer (200 bushel per hour) will be purchased and equipped with heat conversion and transport systems which will allow utilization of turbine exhausts. If it is not possible, due to conflict with pipeline start-up operations, to use the Pump Station #9 site, an alternative source will be used. Several are available in the Fairbanks area. The dryer system is scheduled to be operational in FY 79.

After completion of drying of the FY 79 crops, an analysis of operating efficiency, cost of operation and conversion and installation costs will be prepared. The waste heat system will be compared to conventional drying systems using this cost data.

Discussion of Part 2.

During FY 78, grain and forage samples harvested either in Fairbanks or in the Delta-Clearwater area will be dried to moisture levels varying from 30 to 12 percent. The drying will be done at the Agricultural Experiment Station at Fairbanks using conventional drying methods. The objective of the FY 78 sampling is to establish a data base for Alaskan grains and forages dried using conventional methods. This data base will be used as a comparison when turbine exhaust is used for drying.

Before storage, contractural services will be used to analyze grain and forage quality. Particular attention will be given to carbohydrate content (sugars and starches), protein content, and amino acid composition of proteins.

The grain and forage samples will be stored in outdoor bins. After a nine month storage period, an analysis will again be conducted of carbohydrate content and proteins. Additionally, a determination will be made of the type and amount of fungal organisms and amounts or presence of micro-toxins in the stored grains and forages.

Discussion of Part 3.

During FY 79, the grain and forage drying procedure of Part 2. will be repeated. However, the drying will be accomplished using a waste heat source and a drying system described in Part 1.. Contractural services will again be used to perform the analysis described in Part 2. on the dried samples and on samples taken from grains and forages which have been stored for nine months.

After sample analysis is completed, carbohydrate content, protein levels, amino acid composition of proteins, and fungal types and micro-toxins present will be compared to those in the grain and forage samples in the control group of Part 2..

Summary of Data to be Collected

After completion of the three part study (July 1, 1979), sufficient data will have been collected to complete a report addressing the questions:

1. Can waste heat be used to dry grains and forages?

2. Will use of gas turbine exhaust for drying effect grains and forages?

3. Will grains and forages produced in Alaska meet internation quality standards both before and after storage?

The following data catagories will be used in the report.

1. Technology of waste heat recovery systems for use in grain drying.

2. Efficiency of waste heat recovery systems considering all energy uses within a system. An example would be the use of fossil fuel for pump station operation and a use of the exhaust heat from the turbines for crop drying.

3. Investment cost of the waste heat recovery system.

4. Operating cost of the recovery system.

5. Efficiency, investment cost and operating cost of conventional drying systems.

6. Quality characteristics of grains and forages stored at varying moisture contents for one season after drying by either conventional or waste heat methods.

7. Quality characteristics of grains and forages immediately after drying either by conventional or waste heat methods.

FOLLOW-UP

This project has been proposed to aid those persons already producing grains and forages within Alaska and those who may be considering a beginning enterprise. At present, there is no data base which the farmer can use to determine to what moisture level grains and forages should be dried to maintain quality after storage under interior Alaska climactic conditions. Moreover, much interest has been generated concerning the use of waste heat for grain and forage drying. It is

reasonable to assume an operating cost savings would be effected by waste heat utilization. When the cost of wasted energy is compared to investment cost of recovery systems, the qualitative savings of valuable fuels is also large. Cost savings may be even larger if the use of turbine exhaust proves beneficial in storage of grains and forages at higher than normal moisture levels. However, if gas turbine exhausts damage the crop, there will be no need for further consideration of waste heat for grain and forage drying. The completion of the much needed data base for drying of grains and forages utilizing waste heat.

DREW'S SUGGESTION TO COMPLY W/SB 87 THIS BILL

Introduced: 2/2/77
Referred: Resources and Finance

IN THE HOUSE BY COWPER

HOUSE BILL NO. 158

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act making a special appropriation to the University of Alaska for a study to develop the technology for using waste heat generated by the transalaska pipeline for ~~agricultural purposes~~ grain + forage drying; and providing for an effective date."

DR. DREW'S suggestion change → the study of grain drying + forage drying from pump station 9

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. The sum of $100,000 is appropriated from the general fund to the University of Alaska for a study to develop the technology necessary for utilizing waste heat in Alaska for the production of intensively cultivated agricultural crops.

* Sec. 2. The unexpended and unobligated portion of this appropriation lapses into the general fund June 30, 1979.

* Sec. 3. This Act takes effect immediately in accordance with AS 01.10.-070(c).

sub. SB 87 (1067 ON TAPE 8:05 PM)

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPARTMENT OF FISH AND GAME

OFFICE OF THE COMMISSIONER

SUBPORT BUILDING – JUNEAU 99801

January 4, 1978

The Honorable Alvin Osterback, Chairman
House Resources Committee
Alaska State Legislature
Box 71
Sand Point, Alaska 99661

Dear Mr. Osterback:

The Board of Fisheries at its December 1977 meeting unanimously adopted the resolutions listed below. Copies of them are being transmitted to you at the direction of the Board.

> Resolution #77-29-FB relating to the inclusion of the contiguous marine and coastal waters of the State of Alaska into the definition of anadromous streams and waters; and
>
> Resolution #77-30-FB relating to the passage of House Bill 176 of the 1977 legislative session, relating to the reservation of water.

The Board voiced strong convictions supporting these resolutions, and I am sure any assistance you can give would be appreciated.

Sincerely,

Ron Skoog

Ronald O. Skoog
Commissioner

Enclosures

Board of Fisheries

ALASKA BOARD OF FISHERIES

Resolution #77-29-FB

RELATING TO THE INCLUSION OF THE CONTIGUOUS MARINE AND COASTAL WATERS OF THE STATE OF ALASKA INTO THE DEFINITION OF ANADROMOUS STREAMS AND WATERS

WHEREAS, the marine and anadromous fish resources of Alaska's coastal zone and marine waters are critical to the economic, cultural, and social well-being of the citizens of Alaska; and

WHEREAS, these resources constitute a major food source not only for other nations of the world, but also for other forms of marine and terrestrial life; and

WHEREAS, the contiguous marine and coastal waters of the State of Alaska are critical to the spawning and early life history of most of Alaska's commercial fisheries resources including crab, shrimp, herring, smelt, salmon, halibut, and many other pelagic and demersal species of commercial and ecological importance; and

WHEREAS, these fisheries resources are particularly vulnerable to damage or destruction during their spawning and early life stages; and

WHEREAS, the nearshore marine and coastal environment itself is particularly susceptible to damage from man's activities in the coastal zone;

BE IT THEREFORE RESOLVED, that Alaska's contiguous marine and coastal waters, out to three nautical miles, should be declared a fisheries conservation zone and that the provisions of Alaska Statute 16.05.870 pertaining to the protection of waters important to the production of anadromous fish be extended to include this area; and

BE IT FURTHER RESOLVED, that a copy of this resolution be sent to the Alaska Coastal Policy Council with a recommendation that it be incorporated into the Guidelines and Standards of the Alaska Coastal Management Plan and included when the plan is sent to the Legislature for approval; and that a copy of this resolution be sent to the Alaska Legislature with the recommendation that Alaska Statute 16.05.870 be amended in an appropriate manner during the 1978 Legislative Session.

Nicholas G. Szabo, Chairman
Alaska Board of Fisheries

ADOPTED: December 18, 1977

M E M O R A N D U M 25 March 1977

SUBJECT: HB 176, Reservation of Water

TO: House Resources Committee Members

FROM: Al Osterback, Chairman

Several people have contacted me concerning HB 176, which we originally considered on March 2, 1977 - see minutes in your files. These people want the bill to be considered by the Committee again.

There was a lot of controversy with the bill at that meeting. Today I met with Sandy Sagalkin, Department of Law and Mike Kaill, Department of Fish & Game. Together we went through the bill and cleaned it up, trying to address all of the controversial items brought up on March 2, 1977. A record of those items is in your minutes. What do you think?

Attached - mark up copy of HB 176.

Diann - this is in the files. Pat Conheady brought it by.

[redacted] ANALYSIS
CSHB 176 - RESERVATION OF WATER

Intent

CSHB 176 provides a mechanism and a process for reserving stream flows and water levels in some streams and bodies of water for purposes of fish and wildlife, recreation, and sanitary and water quality purposes. Without the legislation, State authority to make water reservations for instream uses is unclear and inconsistently administered. All streams and lakes would not be affected. The amount of water reserved would be a percentage of the stream flow and would be based on "instream" requirements.

The procedure established by CSHB 176 follows the intent and mechanisms established in the Alaska Constitution and in the Water Use Act, AS 46.15. Existing water rights are not affected in any way by the provisions of this proposed measure. CSHB 176 utilizes guidelines of the Water Use Act requiring the Commissioner of Natural Resources to follow established procedures in evaluating applications (public notice and comment period) and provides for public hearings. Criteria detailed in the existing Water Use Act are also employed to determine that the proposed reservation is in the public interest. The criteria utilized to review applications include:

--economic effect

--impact on fish and game resources

--public health aspects

--harm to persons

--effect upon access to navigable or public waters

Recommended Revisions to CSHB 176

1. Preference in granting permits

Section 2 of CSHB 176 established a somewhat rigid rule that "when there are competing applications for water from the same source, and the source is insufficient to supply all applicants," that first preference in the granting of permits is given to public water supply and second preference to reservations of water. This provision allows little flexibility and could circumvent thorough analysis of individual cases.

Administration recommendation: Delete section 2 of CSHB 176.

2. Public review

CSHB 176 is designed to be implemented under the administrative regulations of the parent law, the Water Use Act (AS 46.15). Generally that law provides that each water use application must be publicly advertised, reviewed comprehensively, and public hearings held where the Commissioner determines it appropriate. CSHB 176 also provides guidelines for use by the Commissioner during his review. These guidelines include: findings that the rights of prior water users are not affected, that a need exists, that there is unappropriated water available, and that the proposed reservation is in the public interest. The Water Use Act includes public interest criteria such as economic effects, effects on fish and game resources and public health, the effect of the loss of alternate uses of water, and harm to other persons.

Administration recommendation: The proposed amendment to AS 46.15.070(c) (Section 2 of the Sponsor Substitute) would direct the Commissioner to conduct public hearings and undertake a more detailed analysis if a municipality affected by the proposed reservation expresses concern regarding the application. The addition to line 11, page 2 of CSHB 176 in the Sponsor Substitute makes direct reference to public interest criteria in the Water Use Act.

3. Water Quality

Maintaining sufficient flows to reduce the impact of pollutants can be a significant factor in achieving water quality standards. Page 3, line 5 of CSHB 176 adds "and maintenance of water quality" to the definition of beneficial use. The reference to water quality needs clarification.

Administration recommendation: Page 3, line 5, delete the semi-colon after the word "quality" and add the words "standards as promulgated under AS 46.03.070."

Summary

1. Need for the bill:

Drought conditions in the western United States have resulted in serious damage to fish populations and other instream uses of water. Industries dependent on normal streamflows have been significantly damaged. Alaska is at a stage in its development where such problems can be avoided with positive actions at the present time.

The Water Use Act directs the Commissioner of Natural Resources to take into account many factors before issuing a water use permit. One of the public interest considerations in AS 46.15.080is "the effect on fish and game resources and on public recreational opportunities". This and other sections of the Alaska Constitution and Water Use Act indicate that water can be reserved through existing law, but clarification of this authority is desirable before undertaking such a program.

2. Provisions of the bill:

* Establishes a means of reserving water in a stream or lake for purposes such as maintaining sufficient water for fish populations.

* Clarifies the Department of Natural Resources' authority to reserve water from further appropriation.

* Establishes criteria for the issuance of a certificate.

* Is compatible with the Water Use Act (AS.46.15) which recognizes that public water supply is a preferred use of water that shall be granted preference over other appropriators and reservations of water.

* Specifies that the Commissioner of Natural Resources shall consider applications for the reservation of water in a manner similar to that used for other water rights applications.

3. Impact of the bill:

Passage of HB 176 would allow the State to reserve stream flows and maintain lake levels before competition for the available water resource creates conflict situations. Reservation of water will have a beneficial effect on the future of important renewable resource inductries such as commercial fishing and tourism. The bill does not affect existing uses of water. It does provide a mechanism for maintaining quantities of water whach are necessary for "instream" uses. As such, the process helps to clarify the availability of surface water by recording reservations of water along with other water appropriations. Development plans can then be formulated with full knowledge of instream water needs.

4. Implementation and coordination:

HB 176 is the product of interagency efforts to draft a bill which accomplishes the desired objectives and is administratively workable. Although the process of reserving water would be administered by DNR, significant coordination with the Departments of Fish and Game and Environmental Conservation will continue to occur during the submission and review of applications. In addition, DNR and ADF&G are working on procedures for determining instream flow requirements. This bill is an important part of interagency efforts at state water planning that have recently received new direction and emphasis.

Thursday - 1/15

ADMINISTRATION SUBSTITUTE FOR HOUSE BILL NO. 176

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the reservation of water; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*Section 1. AS 46.15.030 is amended to read:

Sec. 46.15.030. WATERS RESERVED TO THE PEOPLE. Wherever occuring in a natural state, the waters are reserved to the people for common use and are subject to appropriation and beneficial use and to reservation of instream flows and levels of water, as provided in this chapter.

*Section 2. AS 46.15.070(c) is amended to read:

Within 15 days of publication or service of notice of the proposed appropriation or reservation of instream flows or levels of water as provided in sec. 145 of this chapter, an interested person or any general law, home rule or unified municipality, as defined under AS 29, containing all or part of the stream or body of water may file an objection. The commissioner may hold hearings upon giving due notice, however, if requested to do so by an objecting municipality he shall hold a hearing within that municipality. (AND) The commissioner shall grant, deny, or condition the application in whole or in part within 30 days of receipt of the last objection or at the conclusion of the hearing. Notice of the order or decision shall be served personally or mailed to any person or municipality (WHO HAS FILED AN OBJECTION.) filing an objection.

*Section 3. AS 46.15 is amended by adding a new section to read:

Sec. 46.15.145. RESERVATION OF WATER. (a) The State or any political subdivision or agency of the state may apply to the commissioner to reserve sufficient water to maintain a specified instream flow or level of water at a specified point on a stream or body of water, or in a specified stretch of

stream, throughout the year or for specified times of the year, for protection of fish and wildlife habitat, migration and propagation, for recreation and park purposes, and for sanitary and water quality purposes.

(b) Upon receiving an application, the commissioner shall proceed in accordance with sec. 70 of this chapter.

(c) The commissioner shall issue a certificate reserving the water requested if he finds

(1) the the rights of prior appropriators will not be affected by the reservation;

(2) that a need exists for the reservation;

(3) that there is unappropriated water in the source sufficient for the reservation; and

(4) that the proposed reservation is in the public interest, consistent with criteria in sec. 80(b) of this chapter.

(d) After the issuance of a certificate of reservation, the specified water shall be withdrawn from appropriation and the commissioner shall reject an application for a permit to appropriate the reserved water, except for public water supply.

(e) A reservation under this section does not affect any rights in existence when the certificate reserving water is issued.

*Section 4. AS 46.15.260(1) is amended to read:

(1) "appropriate" means to divert, impound, or withdraw a quantity of water from a source of water, or, in the case of a public agency, to reserve water in accordance with sec. 145 of this chapter, for a beneficial use;

*Section 5. AS 46.15.260(2) is amended to read:

(2) "apropriation" means the diversion, impounding or withdrawal of a quantity of water from a source of water, or in the case of a public agency, the reservation of water in accordance with sec. 145 of this chapter, for a beneficial use;

*Section 6. AS 46.15.260(3) is amended to read:

(3) "beneficial use" means a use of water for the benefit of the appropriator, other persons or the public, that is reasonable and consistent with the public interest, including, but not limited to, domestic, agricultural, irrigation, industrial, manufacturing, fish and shellfish processing, mining, power, public, sanitary, fish and wildlife, (AND) recreational uses, and maintenance of water quality standards as promulgated under AS 46.03.070;

*Section 7. This Act takes effect immediately in accordance with AS 01.10.070(c).

HB 176 HOUSE BILL NO. 176 by the Rules Committee by request of the Governor, entitled:

"An Act relating to the reservation of water; and providing for an effective date."

was introduced, read the first time and referred to the Resources Committee.

"February 4, 1977

The Honorable Hugh Malone
Speaker of the House
Alaska State Legislature
Juneau, Alaska 99811

Dear Mr. Speaker:

Under the authority of art. III, sec. 18 of the Alaska Constitution, and in accordance with AS 24.30.060(b) and the Uniform Rules of the Alaska State Legislature, I am transmitting a bill to allow a reservation of instream flows and levels of water for the benefit of fish, wildlife, recreation, and for the maintenance of water quality.

This bill is an amendment to the state's Water Use Act, AS 46.15, and is designed to permit state agencies and political subdivisions to apply for an order reserving a certain quantity, level or flow of water, without actually diverting it from its source.

The bill does not represent a significant departure from existing law. The Alaska Constitution, for example, in art. VIII, sec. 13, states that water of the state may be appropriated subject to "the general reservation of fish and wildlife." Also, secs. 80 and 260 of the Water Use Act, dealing with permit issuance and definitions, respectively, explicitly recognize the value of water for fish and wildlife, recreation, and public health. It is our belief that existing law would allow such a reservation of water to be made. However because of uncertainty caused by case law in other states which hold that appropriated water must be diverted from its source, a clarification of the Alaska Water Use Act is necessary.

The bill would give reservations, after public water supply, for fish and wildlife, recreation, or water quality a preference over other applications, if there are competing applications for use of water from the same source. This seems to be implicitly recognized in the state constitutional provision mentioned above, with respect to fish and wildlife, and it is certainly reasonable to assume that recreation and maintenance of water quality are public uses which should likewise be given some priority.

Sincerely,

Jay S. Hammond
Governor"

MEMORANDUM

February 14, 1977

SUBJECT: An Analysis of HB 176, Relating to the Reservation of Water (W.O.# 3383)

TO: The Honorable Sally Smith

FROM: George Utermohle
Research Analyst G.U.

House Bill 176, relating to the reservation of water, was introduced by the governor and contains amendments to the Water Use Act (AS 46.15.010-.270). The effect of the amendments is to provide for the reservation of stream flows or water levels by the Commissioner of Natural Resources at the request of local governments or state agencies.

EXISTING LAW

Article VIII, section 13 of the Alaska Constitution subjects to appropriation all surface and subsurface waters controlled by the state. Any appropriation of water, except for a public water supply, is limited to the use for which the water is appropriated and is also subject to preferences among beneficial uses and a general reservation of water for fish and wildlife. The Water Use Act implements the constitutional provisions relating to water rights.

The right to appropriate (use) water is obtained only by an application to the Commissioner of Natural Resources. When the Commissioner receives an application for water, he must publish a public notice and notify the Departments of Fish and Game and Environmental Conservation to that effect. The Commissioner issues the permit to appropriate water if he determines that:

1. rights of a prior users will not be unduly affected;
2. the proposed means of diversion or construction are adequate;
3. the proposed use of water is beneficial; and
4. the proposed appropriation is in the public interest.

In determining the public interest, the Commissioner shall consider:

1. the benefit to the applicant resulting from the proposed appropriation;

2. the effect of the economic activity resulting from the proposed appropriation;

3. the effect on fish and game resources and on public recreational opportunities;

4. the effect on public health;

5. the effect of loss of alternate uses of water that might be made within a reasonable time if not precluded or hindered by the proposed appropriation;

6. harm to other persons resulting from the proposed appropriation;

7. the intent and ability of the applicant to complete the appropriation; and

8. the effect upon access to navigable or public waters.

When there are competing applications for water from the same source, and the source is insufficient to supply all applicants, the Commissioner shall give preference first to public water supply and then to the use which alone or in combination with other foreseeable uses will constitute the most beneficial use.

When the permitholder has completed construction of the facilities to appropriate water and appropriations have begun, the Commissioner issues a certificate of appropriation if the conditions of the permit are followed.

The use of water for a public water supply is preferred above all other uses, however, a user who exercises his preference right must agree to compensate permit and certificate holders who have established prior rights to the water.

Water rights are attached to the land where the water is used unless the Commissioner has approved the severance of appropriated water from the land where it is used. If the Commissioner does permit the severance, water rights may be sold, leased, or transferred.

The use of less than 1,000 gallons per day for domestic use and the use of water in a remote location which does not affect other uses are exempt from the requirement to apply for a water use permit under regulations

issued by the Commissioner. Those who take advantage of the exemption are generally encouraged to apply for a water use permit because rights to water on the basis of prior use are not recognized unless the prior use has been recorded with the Commissioner.

AMENDMENTS TO THE WATER USE ACT BY HB 176

House Bill 176 amends the Water Use Act as described below.

Section 1 amends AS 46.15.030 to provide for the reservation of stream flows and water levels, as a form of appropriation.

Section 2 amends AS 46.15.090 by giving preference to reservations of stream flows and water levels over other beneficial uses of water when there exists competing applications for water from one source which exceed the amount available. The preference granted to applications for water needed for public water supplies over all other applications is unchanged.

Section 3 amends the Water Use Act by adding a new section which establishes the reasons for which water can be reserved and the procedures by which reservations are granted. Any local government or state agency may apply to the Commissioner of Natural Resources for a reservation of sufficient water at a specified point in a stream or body of water for all or any part of the year, if it is necessary to protect fish and wildlife or it is for park, recreation, sanitary or water quality purposes. The request for a reservation of water is subject to the same procedures as other applications for appropriation. (The only exception is found in section 2 of HB 176.)

The Commissioner is authorized to grant the reservation of water, if he finds that the prior rights of others are not adversely affected, that there exists sufficient unappropriated water, that a need exists, and that it is in the public interest. All existing rights are protected from adverse impacts if a certificate of reservation should be granted.

Section 4 amends the definition of "appropriate" to include reservation of water at the request of a public agency.

Section 5 amends the definition of "appropriation" to include the reservation of water at the request of a public agency. The definition of "beneficial use" is amended to specifically include the maintenance of water quality. Standards for water quality are established by the Department of Environmental Conservation in compliance with the Federal Water Pollution Control Act. Alaska's water quality standards are found in AAC 18.70.

EFFECT OF HB 176 ON EXISTING LAW

House Bill 176 amends the existing law by specifically allowing public agencies to reserve stream flows and water levels for fish and wildlife, parks and recreation, and sanitation and water quality. The application by a public agency to reserve water is treated as all other requests for water. When the application is received, the Commissioner must publish notices in newspapers. If there is any objection, the Commissioner must hold a public hearing. Before the approval of a reservation, the Commissioner must determine that the reservation would not interfere with prior appropriations, that adequate water is available, and that the reservation is needed and is in the public good.

The only difference between the reservation of water and other non-public water supply uses is that when the number of applications for water use is greater than that available, the application for a reservation of water shall have second preference, after public water supplies, but before other applications. All water rights are determined on a first come, first served basis. If valid rights exist to all the water in a stream, no additional rights to use water from that stream is possible. The only exception is that applications for water for public water systems can take precedence over valid existing rights (including reservations of water) but the public water utility must compensate prior users.

It is possible that the reservation of certain stream flows or water levels will preclude other water uses in the future. This bill seeks to make it public policy that reservation of water for permissible uses is as important as appropriations for other purposes. HB 176 makes the existence of flowing water or certain water levels a valid use when such use of water is for wildlife and fish, parks and recreation or sanitation and maintenance of water quality. This bill would make it possible to reserve water for those reasons just listed in order to establish a legal right of priority.

The Alaska Constitution gives a preference for the use of water to fish and wildlife. This bill establishes a formal procedure by which water may be reserved for fish and wildlife. Federal pollution control laws could have the effect of requiring the state to reserve water for sanitary or water quality reasons because certain minimum stream flows may be necessary to insure that pollutants which may arise from industrial or domestic waste are sufficiently diluted. Parks and recreation as a justification for a reservation of water are the uses of water which do not already have a stated or implied existence in state or federal law.

JUNEAU ALASKA

Memo to: Rep. Sally Smith

From: Ruth

Date: Feb. 21, 1977

Re: Conversation in office with Phil Holdsworth

HB 156: The issue of agricultural preference for land is "hot" all over the nation. The preference should not exclude other uses that might be determined in the future--determinations made on information not now available, or contemplated. Also, the Committee should keep in mind that the waste heat bill is tied closely to the agricultural use situation.

HB 159: Holdsworth would hate to see resources separated from each other within the state. They are too interdependent. State Departments would end up fighting among themselves. All of the issues relate to land, and should remain together. Instead of consolidating the state, which is the expressed desire of the governor, this would expand state government. Each department would tend to be competing. But--as the bill stands, Holdsworth sees no major problem with it.

HB 176: According to Holdsworth, this bill is dangerous. The reservation for minimum flow could preclude future uses for public water supply. It is "cloudy" as to who would currently have a "claim" on the water --a reservation--at the time the bill would go into affect. What happens to future public water supplies--in situation where they do not now need the water? At that time, who gets the water?

HB 40: The Forestry area should be strengthened by this bill.

HB 2: The homesites could be a good thing, if adequately planned.

HB 211: It is unclear with present wording whether the three commissioners from the state could, or would be state employees. Also, would this commission take effect before the LUPC disbanded? Re. the $250 per day compensation, Holdsworth says that, from his experience on the LUPC, this is definitely not out of line.

JUNEAU ALASKA

Memo to: Rep. Sally Smith

From: Ruth

Re: Conversation in office with Rep. Smith, Sharon Lobaugh, Marlys Burnett, Sandy Sagalkin, and Michael Kaill.

Date: Feb. 21, 1977

Subject: HB 176--Reservation of Water

Kaill--Dept. of Fish and Game, Sportfish Division. Fish and Game need to make sure that enough water is available to ensure the survival of the wildlife they officially are mandated to represented. In many instances, the water can't be appropriated legally unless you take it out of the stream. Alaska is one of the states that currently has appropriation only if you take the water out of the stream.

Sagalkin: Most states had laws saying you had to divert water from its source to obtain a water right. This bill is an effort to clarify that "in place water right" is legal. In Alaska, uses for Fish and Wildlife are considered to be "beneficial" uses. But leaving the water in its original stream--in place--for habitat, is better than diverting for a hatchery (Lobaugh comment). Most western states have changed to "in place" beneficial uses, and most of these changes are recent.

Sagalkin: (In response to question from Rep. Smith) There is a problem with Section .90 of the bill. There are now 1800 pending aplications for water reservation. There is no intent on the part of the Departments to "bump" these aplications. Maybe this Section .90 should be separated into two parts. (Sagalkin will have suggested amendment wordings available by Monday)

Lobaugh: (to Sagalkin) What about allocations [illegible] being completely used, such as Auke Bay?

Sagalkin: The water would still have to be allocated on an available basis, considering the previously approved uses.

The earliest filed would be considered first. The Dept. of Natural Resources says that prior aplications should be considered, but there could be a situation where the Conservationists may not want that. The bill isn't clear.

Kaill-The Dept. of Fish and Game, Sportfish Division, is reviewing existing "flow" technology. However, it gets expensive. An indexing system is necessary. Existing flows must b e determined--i.e. low season, high season, width of stream, etc. A water system profile is roughed out on "instream flows", then Alaskan systems are figured in to the profile. Flows are documented within a system and by season. Estimated minimum flows are based on what's required. (Water flow bases include the amount necessary to carry sediment out.)

Kaill--A grant for studying non-point pollution is being contemplated. (Adequate flows minimize the contaminants)
It is necessary to:
Apply existing technology to Alaska
Relate to what we already know about Alaska
Apply for appropriations so as to minimize already existing areas of controversy and resolve those conflicts early.

Fish and Game will apply first so that the fish get priority. The Sportfish staff will probably begin work on this issue from the Anchorage area, then branch out.

Fish and Game acts as agent for the fish now. The bill clarifies that right. Under Title 16:
Protect the resource
Make sure people get benefit from the resource

Lobaugh: What will Fish and Game request? Will it be on a stream by stream basis?

Kaill--Many streams have small runs--as low as 30 fish--but miles and miles of coastline mean lots of fish are affected. The bill doesn't change much at all--it just clarifies.

Water is a limited resource.

MEMORANDUM

April 5, 1977

SUBJECT: Definition of "Public Water Supply" (W.O. #3936)

TO: The Honorable Sally Smith

FROM: George Utermohle
Research Analyst

The term "public water supply," for the purposes of determining "beneficial use" under the Water Use Act (A.S. 46.15), has not been defined by statute. In order to find a definition one must go to the administrative regulations adopted by the Department of Natural Resources under the authority of the Water Use Act (11 A.A.C. 72.010-.300). Those regulations promulgated by the Department of Natural Resources have adopted by reference the definition used by the Department of Health and Social Services (7 A.A.C. 14.020(1)). Thus, the definition of "public water supply" for the purpose of implementing the Water Use Act is as follows:

> A "public water supply" shall mean any water supply and all parts of the collection, treatment, transmission and distribution works of such supply which is officially designated as a "public water supply." Public water supplies shall include but not be necessarily limited to supplies made available to residents of a community such as a municipal corporation, public utility district, village, town, subdivision, or any other area within the jurisdiction of a duly constituted authority which is authorized to provide, operate or control a water supply system or any water distributed, sold, or made available to 25 or more consumers for drinking, culinary or ablutionary purposes.

The above definition of "public water supply" has been used by the Department of Health and Social Services since at least 1959 and by the Department of Natural Resources since 1967.

I have found no court cases which have challenged or refined this definition.

The definition of "public water supply" could be changed at any time in one of three ways: First, the Department of Health and Social Services could amend its regulation which defines the term "public water supply;" second, the Department of Natural Resources could rescind its regulation which adopts the Department of Health and Social Services definition and promulgate a new regulation containing a new definition of "public water supply;" and third, the legislature could amend the Water Use Act by adding a definition of "public water supply."

However, until one of those events occurs, the definition of "public water supply" for the purposes of the Water Use Act and HB 176 is that adopted by the Department of Health and Social Services.

STATE
of ALASKA

MEMORANDUM

TO:

Sally Smith
House Resources

DATE : April 5, 1977

FROM: Pat Conneady
Legislative Liason
Dept. of Natural Resources

SUBJECT: Definition of Public Water Supply

The Department has finally been able to agree on the most appropriate language for a definition of a "public water supply" if the Resources Committee deems it necessary for inclusion in the committee substitute for HB 176.

A "public water supply" shall mean any water supply and all parts of the collection, treatment, transmission and distribution works of such supply which is officially designated as a public water supply. Public water supplies shall include but not be limited to supplies made available to residents of a community such as a municipal corporation, public utility district, village, town, or any other area within the jurisdiction of a duly constituted authority which is authorized to provide, operate or control a water supply system where water is distributed, sold or made available for drinking, culinary or ablutionary purposes.

Designation of a public water supply is authorized pursuant to 7AAc 14.310.

by law. Leases and permits giving the exclusive right of exploration for these minerals for specific periods and areas, subject to reasonable concurrent exploration as to different classes of minerals, may be authorized by law. Like leases and permits giving the exclusive right of prospecting by geophysical, geochemical, and similar methods for all minerals may also be authorized by law.

Water Rights

SECTION 13. All surface and subsurface waters reserved to the people for common use, except mineral and medicinal waters, are subject to appropriation. Priority of appropriation shall give prior right. Except for public water supply, an appropriation of water shall be limited to stated purposes and subject to preferences among beneficial uses, concurrent or otherwise, as prescribed by law, and to the general reservation of fish and wildlife.

Access to Navigable Waters

SECTION 14. Free access to the navigable or public waters of the State, as defined by the legislature, shall not be denied any citizen of the United States or resident of the State, except that the legislature may by general law regulate and limit such access for other beneficial uses or public purposes.

No Exclusive Right of Fishery

SECTION 15. No exclusive right or special privilege of fishery shall be created or authorized in the natural waters of the State. This section does not restrict the power of the State to limit entry into any fishery for purposes of resource conservation, to prevent economic distress among fishermen and those dependent upon them for a livelihood and to promote the efficient development of aquaculture in the State.

(The amendment to this section was approved by the voters of the State, August 22, 1972. This amendment added the second sentence.)

Protection of Rights

SECTION 16. No person shall be involuntarily divested of his right to the use of waters, his

Sponsor Analysis

of HB No. 176

(Reservation of Water)

Purposes of Bill

This bill--pure and simple--is designed to help the state ensure that streams and other bodies of water contain enough water for fish. It lets the state act like any other person or business and apply for an appropriation for the water it needs. The needs of the private appropriator are strictly his own--personal consumption, water for industrial processes, etc. The needs of the state, on the other hand, are public--everyone benefits. The public purposes for which water can be appropriated are spelled out in the bill--the protection of fish and wildlife habitat, migration and propagation, recreational and park purposes and sanitary and water quality purposes.

Water, Water Everywhere?

Juneau distorts our view of the problem. Since it is difficult to stay dry in Juneau, how, people say, can we possibly have water problems? But here are the facts and they belie the aquarium-like atmosphere of Juneau: The Sag River on the North Slope flows at 10,000 to 20,000 cubic feet per second (cfs) in June; in the winter when most of the water freezes, at 1.6 cfs. Over-wintering fish must then search out under-ice pools to survive; must compete, at times with North Slope drilling and construction camps for a meagre resource. Even south-east Alaska has its distinct

problems. Recently glaciated, southeastern soil has extremely poor water holding abilities and requires steady precipitation to maintain minimum flows to support fish. Extended dry periods in southeastern have in the past prevented normal salmon spawning--fish could not ascend streams to reach the spawning beds.

Even streams having normal flows can run into trouble. In the Matanuska Valley several are so over-appropriated that if all holders of water rights turned on their taps and collected their water simultaneously, the streams would go dry.

How Much Water Is Enough Water For Fish and Wildlife?

We know how much water is needed to run a household--human consumption, sanitary, etc.--and we know how much water is needed for irrigation or industrial processes. We also have a good idea of how much water is needed to keep fish alive. The Alaska Departments of Fish and Game or Environmental Conservation would apply for enough water to keep fish alive during critical life stages such as spawning, egg development, and rearing. The following table, for example, shows general spawning needs of salmon:

Water Velocity: (fps)	1.0-3.0
Water Depth: (ft)	.6-.8
Riffle-pool Rates:	near 50:50
Riffle Area Covered by Water:	60% or more
Pool Velocities: (fps)	.3-.8

Knowing these amounts, state biologists and hydrologists can measure streams in stretches where spawning occurs and determine how much water must be reserved from upstream appropriation to guarantee these flows. Downstream of the spawning area fish might need less water--for migration, for example--and sufficient water for that function would then be reserved. The important point is that each section of the stream providing a vital function for fish or wildlife would be separately measured and only the amount of water necessary would be reserved.

Why Do We Need A Change In the Law?

The main reason is that under existing law there is no real recognition of the needs of fish and wildlife. Anyone can apply for and obtain an appropriation for almost any other conceivable non-wasteful use, but in-stream appropriation (i.e. leaving sufficient water in the stream) is not a use for which an appropriation can be made under Alaska water law. In granting water rights for these other uses, present law does allow the commissioner to consider the effects of the appropriation on fish and wildlife. But nothing in the law tells him how much weight those considerations should receive or whether to deny an appropriation which might damage fish and wildlife resources.

More basic yet is whether existing law provides a good institutional basis for protecting the water fish and wildlife need? If state agencies had to intervene to protect fish and wildlife and other in-stream values in each appropriation

proceeding brought by a private individual, each application would have to be analyzed, and a determination made on whether the stream would be over-appropriated. In each case the resource agency would be reacting to an appropriation and that reaction would soon appear negative and obstructionist. This has happened in California. Furthermore this strategy would be difficult to budget for and would probably drag out the proceedings much longer than necessary while the state completed its studies.

The bill on the other hand, allows the state to make the case for fish and wildlife and allows the state to prioritize time and money to streams where protection is most needed. Other streams and other appropriators can be left alone. Once the state obtains a water right, the public knows what its rights in the stream are and future private appropriators know what their rights are. Fairness, order, and certainty are the results. Public water supply, of course, always takes precedence over other uses, including reservations for fish and wildlife.

In sum, HB 176 is designed to help the state carry out its responsibilities to the public to protect fish, wildlife and public recreation in an orderly manner, assuring that the wisest use of water will prevail. The bill is needed because under existing law it is highly impractical for the state to try to reserve water from appropriation

case by case, as intervenor in private applications for water rights, and it is highly doubtful that the public interest can be fully protected in that way.

Resolution Number 2

WHEREAS Fish and Wildlife resources are of paramount importance to the State of Alaska, and to Alaskan individuals, from aesthetic, commercial, subsistence and recreational points of view, and

WHEREAS the current Alaska water code (Title 14) does not adequately address the issue of protection of in-stream water resources, as it defines appropriation of water in terms of diversionary (removed from the streambed) use, and as it does not adequately identify in-stream values of fish and wildlife and of recreational values as beneficial uses,

THEREFORE BE IT RESOLVED that the Alaska Chapter of the American Fisheries Society at its annual meeting in Cordova, Alaska, February 1977, hereby endorses the concept of legislation (e. g. HB 176) that recognizes in-stream flow demand as a beneficial use and that the in-stream water resources for fish and wildlife and recreational uses be accorded the highest possible priority, and that copies of this resolution be sent to the Alaska House of Representatives Resources Committee, Alaska Senate Resources Committee, the Governor of the State of Alaska, the Commissioners of Department of Natural Resources and Alaska Department of Fish and Game, and other appropriate agencies.

Dear Representative Urion:

I have recently learned that House Bill 176--Reservation of Water was discussed in the House Resources Committee, but that some members of this Commmittee apparently have not taken this issue seriously. As a fisheries biologist with the University of Alaska's Arctic Environmental Information and Data Center, I support the concept proposed in this bill: recognize that waters of the State must be reserved, after public water supply, for fish and wildlife needs.

I have already expressed my feelings to Representative Sally Smith in a previous letter, to which she responded that this bill will be held in committee until additional information is gathered. My questions to you at this time are: will this bill be seriously considered by you and your fellow Resource Committee members during this legislative session, and if not, specifically why not? Secondly, would you please indicate to me your personal feelings, or reservations, on this bill?

Thank you for taking your time to consider my letter, and I look forward to your response.

Sincerely,

William J. Wilson

Re: H.B. 176

Dear Representative Osterback:

Trustees for Alaska is an organization which encourages the use of our state's resources in a manner that assures the right of present and future Alaskan generations to enjoy a rich and varied quality of life. We are therefore highly interested in a bill currently before the House Resources Committee, H.B. 176, which would provide for reservation of in-stream water flows or levels by the state. I write this letter to inform you of our views on this subject.

In brief, the provisions of H.B. 176 are basic to the future health of Alaska's waters and the many important values associated with them -- particularly the fishery resources.

The need to protect stream flows from over-appropriation has already been recognized by a number of other states, including Idaho, Colorado, California, Montana, and Oregon. And the National Water Commission, in its study of water resources and problems, has specifically recommended that: "Public rights should be secured through State Legislation authorizing administrative withdrawal or public reservation of sufficient unappropriated water needed for minimum stream flow in order to maintain scenic values, water quality, fishery resources and the natural stream environment . . . . "

The concern expressed by the Commission and several Western states is very well-founded. Unless adequate water flows are protected in our rivers and streams, there is a real danger that fish which rely on those watercourses to spawn will be left, literally, high and dry. (This nearly happened in British Columbia's Goldstream River in 1970, where it took emergency actions by concerned citizens to ensure that sufficient water

was allowed to flow to permit salmon spawning. See Natural Resources Journal, Vol. 16, p. 137 (1976).)

In Alaska, fortunately, this danger has probably not yet materialized in a widespread fashion. But as more and more water is appropriated for out-of-stream use, it will become increasingly difficult to assure the necessary conditions for fish spawning without encroaching on vested property rights. Indeed, fish survival has already been seriously threatened at some North Slope locations due to dewatering of under-ice pools by oil development activities. And in the Matanuska Valley there are now some streams whose total flows have been fully appropriated.

All this simply goes to show that now is the time to provide for protection of Alaska's future fisheries by reservation of the necessary stream flows and water levels.

Thank you for your cooperation.

Sincerely yours,

Robert Mintz

A Minimum Stream Flow Rationale for Alaska

Mike Kaill

Mention of Alaska often brings to mind visions of huge river systems such as the Yukon and Kuskokwim Rivers. This probably contributes to the unfortunate myth that water is unlimited in Alaska. True, in most areas there *is* plenty of water, but in many situations low water flow becomes a limiting factor for fish and wildlife populations. For example, the Sagavanirktok River has an abundant flow 10,000 to 20,000 cubic feet per second in June, but it slows to a fraction of that (1.6 cfs) in the winter, when most of the water freezes. Over-wintering fish are then forced into under-ice-pools. In some instances, North Slope drilling and construction camps have completely dewatered these fish refuges (on occasion the water pump intakes are clogged with fish). Another example of low flow problems encountered in Alaska is the system of small coastal streams in Southeastern Alaska. Flows in these streams depend upon Southeast's frequent and abundant rains. Periodically, Southeast may have a week or more of sunny weather producing droughtlike conditions. In some years, this has prevented normal salmon spawning, as fish have inadequate water with which to ascend streams.

Even where streams normally have enough water there may be heavy demands that can produce low flows. Several streams in the Matanuska Valley are presently so over-appropriated that if all owners of water rights simultaneously claimed water due them, these streams would dry up.

All of these examples point to the need for legislation to protect and administer the most basic element of fish habitat — water. Not *just* water, but water "in place" or to use the current terminology, "minimum in-stream flows." Such terminology is necessary because most states, Alaska included, define appropriation as a diversion or "out-of-stream" use. In other words, the only people that can appropriate water are those that intend to use it outside the stream banks. Examples of such uses are irrigation, industrial needs, and domestic water supplies. A Fish and Game department or other party attempting appropriations on behalf of fish and wildlife has no legal water right. Clearly, in a state as fish-oriented as Alaska, this is an incongruous situation. A portion of a legal decision from Montana is illustrative of this point:

> "Testimony and evidence relating to recreational and wildlife uses of Carpenter Lake was not considered. Such *nondiversionary* recreational and wildlife uses are not recognized under Montana Water Law before July 1, 1973 and testimony to their existence is not relevant." (emphasis added).

Legislation providing for water rights for fish and wildlife is necessary to realign Alaska's existing water laws. Once legislation is accomplished, our attention can turn to the establishment of minimum flow administration. Natural flow patterns are affected by precipitation, nature and size of the drainage basin, soil structure, and vegetative cover to name a few influences. How much water will fish and wildlife of a particular stream really need? One thing for sure, we should not interpret the "minimum" in "minimum in-stream flow" too literally. As Don Tennant of the U.S. Fish and Wildlife Service recently wrote:

> "Recommending the meager, all-time historic minimum flow would be unthinkable. That would be like prescribing a person's all-time worst health condition as a recommended level for a portion of his future well-being."

Most aquatic animals can "hang on" for short periods of low flow, but in order to establish maintenance levels of stream flow, it is necessary to study the effect that various flow levels have on fish and wildlife. For example, as flows increase, the "wetted area" of the stream bed also increases, increasing habitat opportunities. Stream riffles produce insect populations that are important sources of food. Undercut banks and overhanging vegetation are important for cover, providing protection from predators, and as sources of eddies in which fish can rest. At low flow, these areas may be outside of the wetted area of the stream. An important (but poorly known) requirement is spawning and rearing habitat. In many streams, the spaces between the gravel particles of the stream bed fill with sand, silt and other "fines" (smothering eggs and reducing insect populations) — unless there is a periodic flushing from high flow rate during freshets. Impairment of periodic cleansing water flows deprives a stream of its inherent energy and therefore its ability to clean itself.

Intensive studies are required to establish minimum flows necessary to support satisfactory populations of fish. Yet, Alaska cannot afford to do intensive studies on all streams, especially since water appropriations are going on all the while.

Is there a "rule of thumb" that can be generated based on the more detailed studies?

Tennant thinks so, and recommends a regime based on percentages of average annual flow. His rule of thumb is that 10 percent of the average annual flow is sufficient only for short-term survival: 20-40 percent is satisfactory, 40-60 percent excellent, and 60-100 percent optimum. On the other hand, Pitney, from Oregon State Fish and Game states that, "Each stream must be physically studied. No pat 'slide rule formula' has been developed as an alternate."

A continuum of possibilities exists for the determination of

Granite Creek, Kenai Peninsula, Alaska CHARLIE OTT

stream flows for particular systems. With certain basic guidelines for spawning and rearing conditions (Table 1), four basic categories are feasible with increasing credibility as field measurements. They are: (a) the formula method, (b) field observation with application of professional judgement, (c) techniques involving a variety of conversion factors, and (d) evaluation of field measurements. Put in the vernacular, they become: (a) crystal ball, (b) eye ball, (c) slide rule, (d) Gurley (a widely used type of flow meter).

Perhaps the best approach to Alaska stream flow determination with the available resources is to "type" them as to basic nature of the drainage, and evaulate them in terms of index measurements. Feasibility of such an approach is an important area of study yet to be done. Another critical problem is that many generalities developed in other states may not be applicable in Alaska.

The people of Alaska must have the legal right to appropriate water *in the stream* for preservation of fish and wildlife. As in all allocation problems, trade-offs and compromises will have to be made. Economic analyses are necessary, so that the "most beneficial" use of resources can be made and then substantiated. Biologists and hydrologists must be consulted to assure that the biotic and abiotic systems are protected through use of proper biological criteria and procedure. Finally, workable monitoring systems, smooth administrative procedures, and effective enforcement of established minimum in-stream flows are needed.

Since water appropriations are being granted every year, timeliness is of the essence. As soon as possible, the people of Alaska must make fish and wildlife, as well as water recreationists, legal beneficial users of water, entitled to appropriation of water for use within the stream banks.

Table 1
Salmon Spawning Criteria

Water Velocity: (fps)	1.0 to 3.0
Water Depth: (ft)	0.6 to 0.8
Riffle-pool Ratio:	near 50:50
Riffle Area Covered by Water:	60 percent or more
Pool Velocities: (fps)	0.3 to 0.8

A MYTH — (Continued from page 3)

bodies ineffectively. Something, I maintained, was being consumed: respect for animals, my enjoyment, and the seal's sleep, at least.

Item: the newest issue of *Audubon* magazine briefly tells of a new problem birds face: birdwatchers armed with tape recorders. Want to add a rare bird to your life list? Get a recording of the bird's territorial call, march out into the springtime, and play the tape loudly. An answer comes, you check off another bird on your list. Oops! Better check: it might have been another tape recorder. One pair of rare black hawks was disturbed so often by such nonconsumptive shenanigans that they failed to nest successfully in three consecutive years.

Item: in 1975, scientists in Alaska "collected" birds of over 80 species, fish of over 20 kinds, and 20 kinds of mammals. (Nobody kills wildlife: hunters "harvest" it and scientists "collect" it.) Among the birds killed were 79 black-footed kittiwakes, 110 tufted puffins, 224 redpolls, 23 savannah sparrows, and 32 black-capped chickadees. Fish collections included 179,697 three-spined sticklebacks and 2,988 arctic char. Scientists reported taking and killing 1,046 tundra red-backed voles, 5 wolverines, 34 arctic ground squirrels, and 6 arctic fox, among numerous other mammals. All very well justified collections, I'm sure, and undoubtedly within sustained yield limits. But where is the distinction between scientist and hunter, in terms of consumption? The only difference is that scientists kill animals of more species, and more of them in breeding seasons, than hunters.

Item: Christopher Robin likes sand between his toes, and so do millions of other Englishmen. The international journal *Biological Conservation* reported in 1974 that human use of British beaches had eliminated the Kentish plover as a breeding species on the British Isles. The little tern is suffering the same stresses in Sweden. At Chatham on Cape Cod, Massachusetts, a colony of arctic terns plummeted from 40,000 birds to 24 survivors after intensive disturbances over a decade's time by wildlife photographers and beachgoers.

Item: Nonconsumptive users enjoying national parks and forests all over the world have trampled, eroded, and burned thousands of acres of green places and wildlife habitat.

Item: Elementary and high school classes have all but stripped many California beaches bare of the bigger, easily found, and colorful species of tidepool and beach animals.

No fingers are being pointed. My intent, in fact, is to make anyone who has a scornful or accusing finger pointed at anyone else, to realize that we are all consumers of wildlife.

We share the burden and responsibility of being consumers in much more fundamental ways than the leisure-time goofs I sampled just now. Consider, for instance, the consumption involved in hunting moose, versus the consumption involved in eating the same amount of beef. The hunter eats no more meat than the average non-hunter, but he gets it from a different source. Nature produces moose without plowing ground, spreading fertilizers, or spraying pesticides. The energy consumed in transporting a moose home is less than the energy cost of shipping a beef from Colorado to Chicago and up to Anchorage. Who is the consumptive user? When you think about it, the conservationists who ate prime rib at last year's Earthcare Conference undoubtedly consumed more quail and quail habitat than if they had each gone out and shot a brace of bobwhites for dinner. And the money spent in hunting would have lobbied for quail habitat preservation, whereas the money paid for prime rib paid "the enemy."

We are all consumers of wildlife. I consume energy in flying to distant meetings and in heating my home, and that energy comes from strip-mined lands or oilfields and pipelines. I wear clothes made from wool (which commits wildlife forage to domestic sheep), cotton (which replaces oak-pine woodlands of the South), or polyester (which comes from coal or oil). In short, every human, by existing, consumes or displaces wild things.

To continue to make false distinctions between consumptive and nonconsumptive users is to play into the hands of those who don't give a damn about wildlife.

There is no such thing as a nonconsumptive user of wildlife. There are only consumers who care, and consumers who don't care.

Robert Weeden

I. Introduction

You will forgive me, I trust, if I draw on some experience gained during an earlier part of my life for the introduction to my presentation today. I think this experience is useful to show why, at a rather tender age, I learned to appreciate the necessi' ' of diverting water from the stream to make crops grow, as well as the importance of preserving the watercourse for its environmental and social values.

I was born and raised on the desert of southwestern Utah, where water was scarce and where one naturally developed an appreciation of the vital role of water and the wonders it can perform, whether in or out of the watercourse. Years later, in England, I always enjoyed the rain, because I remembered how important it had been to the needs of the desert, and that there had never been enough, though my companions in England perceived no particular fascination in the daily downpour.

Not all memories associated with water use on the farm were entirely pleasant. I remember irrigating, particularly at night, when the water flooding between the dikes would force the wildlife to seek refuge on the dikes where you had to walk to change the

water settings. It never failed to release a little adrenalin into my system when a snake would wind itself around my boot, or when a pheasant or meadow lark would fly up in front of my face in the dead of night.

Instream uses were quite limited in that area. The primary excitement derived from swimming in the river was waiting to see whether you would get typhoid fever. But we did fish in the river in the summer, and we ice skated in winter when it was frozen over.

That river was the Sevier River, which has its headwaters near Bryce Canyon National Park, and which used to terminate in Sevier Lake, a lake that was about thirty miles long and ten miles wide--before diversions from the stream took their toll. The Sevier River system is probably subject to a more intensive use than any stream system in the United States, and Sevier Lake is now totally dry, as is the main stem of the river for about 20 miles upstream from the lakebed. There are simply so many diversions from the river, and so many impoundments on it, that it no longer has sufficient water to reach the old lakebed.

Sevier Lake and the lower reaches of the river were dry from my earliest recollection, and so I have no first-hand knowledge as to what the social values used to be. Indians used to hunt waterfowl there, and I have found arrowheads and pottery along the shores of the dry bed. And my father used to tell me that, when he was a boy, he and his friends would hook a team of horses to a wagon and go to Sevier Lake and spend a couple of days, and shoot enough ducks and geese to fill the wagon box. They would then return home and the waterfowl would be bottled, or "canned" if you prefer the euphemism, for winter use. Of course, that was before conservation laws placed limits on the number of ducks and geese you could shoot.

Perhaps even at that time it was improvident to take wildlife in those amounts, even discounting the story a bit to allow for the exaggerations that sometimes creep into our telling of stories about the good old days. Even so, while I don't think that I would have been too interested in eating bottled ducks all winter, I would have enjoyed the opportunity to hunt when waterfowl was present in such abundance. But waterfowl will never return to Sevier Lake.

I think that you have to live in an area where outdoor esthetic values are scarce before you can truly appreciate the importance of preserving and protecting them. In a humid area like Virginia, where I lived for several years, it seemed that the State was blanketed with trees and grass, and so it was not too disturbing to see trees being removed to clear a construction site. But on the desert, where there are virtually no trees, it was a very sad experience to see hugh cottonwoods, planted by the early settlers, later destroyed because they were

considered to be harmful phreatophytes whose roots drew too much water from the stream.

The annual outing that I looked forward to most, as a boy, was the fishing trip that the family would take in June after the hay was cut, hauled and stacked. We always went to Trout Creek, which is in the Deep Creek Mountains of western Utah near the Nevada border. The trip always seemed long across the desert, but it was a rewarding experience, because the stream, though small, was clear and pure, and was loaded with native trout. The banks were lined with willows and birch trees. I did not have a chance to go back to Trout Creek between 1948, when I went away to college, and 1974, when I decided to let my kids experience the same fun I had had in catching those native trout.

But Trout Creek was not the same in 1974. It had been lined with cement, in a rather crude manner, but still effective enough to kill streamside vegetation and fish. The birch trees and willows that had graced the dry bench were gone, no fish could be found, and all that remained was a very long cement trough which carried the water from its canyon source to marginal irrigation uses on the alkali flats below. I am aware of no better illustration of a poorly conceived program to "improve" the use of water resources. It also served as a reminder to me, if I needed one, that you can't go home again.

I have retained an interest in farming, and I still have farm lands and consumptive use water rights. But I realize that the day has not only come, but in fact has long since pa when the public interest demands that environmental and socia values of watercourses be considered, preserved and protected in a manner consistent with society's need for orderly econom development.

This brings us, then, to a consideration of the ways in which instream flows may be preserved or protected under state laws. I hope we can prevent this subject from becoming as dry as the bed of Sevier Lake.

II. Examples of Strategies that may be Employed under State Law to Enhance Instream Uses

A. Scope of the Analysis

There are various legal concepts that justify regulat of water use by the states and by the Federal Government. Som of these concepts are based on constitutional considerations, some on statutes, and some on judicial doctrines. In many instances there have been, and still are, conflicts between the United States and the states concerning their respective propr etary rights and regulatory powers. I shall refrain from identifying or summarizing these concepts, because I believe they will constitute the substance of Professor Frank Trelease's presentation tomorrow morning.

It should also be noted that the statutory and regulatory regimes for regulation of water resources vary from state to state. While the appropriation states have very much in common, they also have a significant number of difference. And riparian states differ markedly from appropriation states, although some of the Federal programs, such as those created by the 1972 Amendments to the Federal Water Pollution Control Act, are serving to create some degree of uniformity in some state programs. But time does not permit an exploration in this of the differences among the states.

The historic stumbling blocks to protecting instream uses in the western states have been the requirements that water must be (1) physically diverted from the stream and (2) applied to a beneficial use before an appropriation right could be acquired.[1] These trammels are no longer insurmountable, although in some states legislation is required before effective measures can be implemented to protect instream flows. More difficult questions arise, however, when state constitutional provisions provide, in substance, that appropriation for beneficial use shall never be denied. The Idaho Supreme Court has had no difficulty in finding that protection of instream flows is consistent with its constitutional provison;[2] but Colorado, which has a similar provision, has yet to answer this question.[3]

The purpose of this paper is to illustrate various kinds of techniques, approaches and strategies that have been used, or may be used, under state law to protect streamflows. The material that follows is sort of a laundry list of such strategies. The list is not inclusive, and I suspect that different people would compile the illustrations differently, both with respect to the strategies selected and the sequence of their presentation. Be that as it may, it should be remembered that these examples are intended merely to illustrate techniques, and we shall not pause to evaluate the legal ramifications of each technique. Since the audience is comprised of representatives of various professions and disciplines, the task at hand is to survey the practical utility of the strategies selected.

With the foregoing limitations and caveats, let us proceed to the specific strategies.

B. Specific Illustrations

1. Interstate Compacts

Interstate compacts cannot be created unilaterally by a single state, but they result from state action because they are negotiated by states. The United States need not be involved in the negotiation, but Congress must approve such compacts as a constitutional requirement.[4] These compacts should be distinguished from Federal-Interstate compacts, such as those on the Delaware and Susquehanna Rivers, where the United States actually becomes a party to the compact.

Interstate compacts necessarily have an impact on instream flows, because they provide certain allocations and apportionments to the states, and flows adequate to meet these obligations must be sustained. The Colorado River Compact provides, for example, that an average of 7,500,000 acre-feet of water must flow past Lee Ferry in Arizona each year to satisfy lower basin entitlements.[5] These flows also are regulated to some extent by hydrologic criteria which are designed to optimize generation of hydroelectric power in reservoir releases.

The pertinent point, I suppose, is that the conventional wisdom of earlier years failed to take into account the social and environmental values of instream flows when interestate compacts were negotiated; and, to the extent that minimum flows or stream yields are provided for in such compacts, such results were designed to serve purposes other than instream values. It would be appropriate, I think, for States to plan for the protection and enhancement of instream uses as direct purposes of such a compact, along with the allocation and apportionment of waters for economic and consumptive use purposes. This opportunity, and obligation, should be kept in mind when new compacts are negotiated or when existing compacts are amended.

2. Purchases and Contracts

All state wildlife agencies have the authority to enter into contracts to advance and support their statutory missions. With very little imagination, contracts can be negotiated to provide for instream flows. In Utah, for example, the Division of Wildlife Resources has participated financially in the construction of new reservoir facilities, most commonly purchasing conservation pools and public access rights, but in some instances purchasing sufficient water to provide for releases for streamflow augmentation during critical times of the year.

A number of contracts have also been negotiated in reservoirs that were constructed many years ago. In some instances, conservation pools have simply been acquired by buying part of the water rights held by an irrigation company; and in other instances similar rights have been acquired when an older facility has been enlarged or modified. Not all of these arrangements have provided for releases to augment downstream flows, but if such a need had been critical, and if the Division had had sufficient money, such arrangements would have been possible.

There are any number of arrangements that might be consummated through such negotiation. It would be possible in many instances, for example, for a wildlife agency to purchase water shares in a mutual irrigation company and hold such water in storage for release during critical low flow periods, and to sell the released water to users far enough downstream so that the purpose of stream augmentation would have been satisfied. Complications will arise,

of course, but in most cases they can be worked out to accommodate the particular concerns of the parties and the hydrologic features of the watercourse.

In short, this avenue of purchases and contracts derived through negotiation should not be overlooked, and it is important not only for new project construction, but also for existing facilities on watercourses where the entire water supply has been fully appropriated.

3. Legislation Protecting Scenic Rivers

Where watercourses have particular scenic and esthetic values, some states have enacted legislation to protect these values. One of the earlier efforts was that of Oklahoma in 1970, known as the Scenic Rivers Act,[6] which provides for protection of certain free-flowing streams which:

> possess . . . unique natural scenic beauty, water conservation, fish, wildlife and outdoor recreational values. . . .[7]

The statute also recites that its purpose is to:

> . . . preserve these areas for the benefit of the people of Oklahoma . . . as a part of Oklahoma's diminishing resource of free-flowing rivers and streams.[8]

The act identifies specific reaches of particular streams and provides for protective measures to perserve natural scenic values, and further provides for the elimination of pollution in these waters. In essence, the statute seeks to maximize public use and the protection of social values, while, at the same time, protecting private rights.

4. Legislative Definition of Navigability

States have regulatory authority over navigation on the navigable waters within their borders. If the waters are navigable waters of the United States, then the state authority is subject to the paramount regulatory authority of the United States; but if the waters are the navigable waters of the states, the state regulatory authority controls the use of the watercourse.[9] Since the public trust over navigable waters extends to all waters that are navigable, a more inclusive test of navigability will extend the public trust to more watercourses.

Many states follow the Federal test of navigability, which requires that the watercourse be capable of supporting commercial navigation.[10] But, for purposes of the public trust, the states are at liberty to declare their own test of navigability, and some have adopted tests much more inclusive than the Federal test. Idaho, for example, has enacted legislation that declares that certain streams are navigable for the purpose of fishing, and, after naming such streams, further provides that every other stream or part thereof will be deemed navigable if:

> . . . logs or timber can be floated to market or the place of use during the high water season of the year. For the purpose of this act, logs and timber are defined as any cut timber having a diameter in excess of six (6) inches; high-water is defined as the time of year when the stream normally carries its greatest volume.[11]

This is, indeed, a very inclusive test. As an aside, it might be worthy of note that a case is now pending before the Idaho Supreme Court which is based in part on this statute, and which involves competing claims for fishery resources. A small inlet on the Snake River was diked and commercial fish ponds were constructed. Since springs flowed into the inlet, a source of fresh water was available to flow through the fish ponds and make it possible to raise trout for sale. An action was filed by private persons, invoking the statute cited above, claiming that the inlet was a navigable water that could not be appropriated for private use to the exclusion of the public. The district court agreed, and ordered that the fish ponds be removed. Since the Idaho Supreme Court has not yet acted on the appeal, /12 it is too soon to say whether the lower court's decision will be upheld.

5. Judicial Definition of Navigability

In some States, even in the absence of a legislative definition of navigability, the courts have established inclusive tests of navigability, thereby extending the protection of the public trust to all waters falling within the judicial definition. Quite commonly, a "pleasure boat" test of navigability has been applied. Illustrative examples are found in cases decided by the courts of Minnesota, /13 Wisconsin /14 and Oklahoma. /15

6. State Regulation of Navigation

States have authority to regulate their navigable waters to aid navigation, and, since navigation is an instream use, flows to support navigation might also support wildlife. In the west, where past emphasis has been on diversions and consumptive uses of water, very few efforts have been made to require instream flows sufficient to support navigation. But there is no reason why the states should not now focus more attention on this prospect, particularly in the light of the fact that no compensation would have to be paid to those making diversion from the stream by virtue of the state navigation servitude. /16

To keep things in perspective, let me repeat once more that the Federal Government has superior regulatory power on the navigable waters of the United States and their tributaries, and state regulations cannot conflict with Federal regulations on those waters; but states have sole regulatory authority over navigation on the navigable waters of the states. /17

7. Instream Reservations by State Agency

Some states authorize an agency of the State to withdraw or reserve instream flows sufficient to satisfy instream needs. This is not to say that instream needs have a priority over consumptive use needs, but is to emphasize that administrative action to withdraw or reserve instream flows against other appropriations or diversions is an important technique. In 1969 the

State of Washington authorized the Department of Water Resources to reserve minimum flows for fish, game, and other wildlife resources when requested to do so by the wildlife agencies.[18]

8. Appropriations by State Agency

In 1969 Montana enacted a statute which authorized the Montana Fish and Game Commission to appropriate water from streams named in the statute, "in such amounts as may be necessary to maintain stream flows necessary for the preservation of fish and wildlife habitat."[19] This procedure is similar to appropriations made for consumptive uses, but the substantive difference, of course, is that the very purpose of such instream appropriations is to protect the streamflow from excessive diversions.

The 1969 statute went on to provide that such appropriations, when made, would have a priority of right over other uses until such time as the state district court should determine that the water was needed for a use "more beneficial" to the public. And so it was possible for the instream appropriations to be divested by changing circumstances and needs. The most curious provision, it seems, is that which placed upon the district judge the responsibility of determining public policies and priorities to assess which uses are more beneficial to the public.[20] Ordinarily policy questions such as these are determined by the state legislature, or by administrative agencies with delegated authority to establish such policies, and not by the courts.

It might also be noted that in 1973 Colorado enacted a statute,[21] popularly known as Senate Bill 97, which recited in its title that it was for the purpose of "providing for the appropriation of water by the State of Colorado to protect the Natural Environment." Section 1 of that statute eliminated the "diversion" requirement for appropriations and enlarged the statutory definition of "beneficial use," which already included fishery and wildlife,[22] to include "the appropriation by the State of Colorado . . . of such minimum flows between specific points or levels for and on natural streams and lakes as are required to preserve the natural environment to a reasonable degree."[23]

Another provision authorizes the Colorado Water Conservation Board to make appropriations, on behalf of the people of the State of Colorado, of waters in natural streams and lakes "as may be required to preserve the natural environment."[24] Before doing so, however, the Board must request the recommendations of the Division of Wildlife and the Division of Parks and Outdoor Rec[illegible]on.

9. Statutory Moratorium on Appropriations and New Diversions

State water records do not have the accuracy and reliability that real estate records do, and it is often difficult to determine with any degree of accuracy the extent to which the waters of a stream are appropriated.[25] Moreover, in some instances

the hydrologic data and flow records for the stream need further supplementation, refinement and evaluation to assess fully the available water supply.

Because of factors such as these, it becomes difficult to determine the amount of unappropriated water that might be available for withdrawal or reservation to protect instream flow needs. As a result, in some instances it might be advisable to declare a moratorium on further appropriations pending a study of present appropriations and prospective needs for diversions and instream flows.

Montana, for example, provided for such a moratorium on the Yellowstone River in 1974, when it enacted a statute which withdrew the waters of that river from further appropriation for a three-year period, during which time a thorough study was to be made of the available water supply and present and prospective water-use needs, including instream flow needs.[26] Applications to appropriate pending at the time of the enactment cannot be acted upon until the study is completed. One of the applications now pending was filed by the Montana Fish and Game Commission on March 4, 1974, and it requests a substantial reservation of flows to preserve instream values. The recommended minimum streamflow would yield an annual discharge at Billings in the amount of 3,800,000 acre-feet, 6,300,000 acre feet at Miles City, and 7,000,000 acre-feet at Sidney.

10. Administrative Moratorium on Appropriations and Diversions

Sometimes states have general legislation which authorizes an administrative withdrawal of unappropriated waters. Some of these statutes were enacted long ago when instream values were of no particular concern, and when diversions and economic uses were paramount concerns. However, the language in a Utah statute seems to be sufficiently broad to permit an administrative withdrawal of water to protect instream values.[27] That statute provides that when the State Engineer and Governor jointly agree that the "welfare of the state demands it," the Governor can preserve the surplus and unappropriated waters of any stream "for any use whatsoever" by suspending "the right of the public to appropriate such surplus or unappropriated waters." It seems plausible that this statute could be dusted off and used to protect instream values.

11. Conditions in Water Use Permits

Another technique is to impose conditions and restrictions when water use permits are issued or when applications to appropriate are approved. These conditions and restrictions could be designed to protect important instream flow needs, and this could be done whether the permit was for the construction of a reservoir or simply for direct diversion from the stream.

In the case of a reservoir, the permit might require that a minimum flow be sustained through reservoir releases as a condition to construction of the reservoir; and, in the case of

direct diversion permits, it could be stipulated that there would be no right to divert when the stream fell to a certain level or to a flow of a specified number of cubic feet per second. California has used this technique, and it seems to hold promise for states that have not yet considered it.[28]

12. Conditions on Transfers

One feature of an appropriation water right is that it may be sold and transferred, and sometimes the purchaser desires to change the point of diversion, place of use, or nature of use (such as from an irrigation use to a municipal or industrial use). And sometimes the owner of the water right will desire to make such changes without actually selling the water right to another party.

It would seem to be appropriate to consider the impact of any such proposed change or transfer on the natural stream environment, and to approve such changes and transfers only when such impact is not reasonable or unduly harmful.[29] Colorado,[30] Montana and Utah,[31] through differing devices, seem to be taking such an approach.

13. Conditions on Exchanges

Exchanges must be distinguished from transfers and changes. The latter relate to changes and transfers in water use on the same source of supply where the original appropriation was made, whereas exchanges contemplate moving the water right to a separate source of supply.[32] Most commonly, this arises when a proposal is made to move the water right from the main stem to a tributary, or from a tributary to the main stem, or from one tributary to another.

There seems to be no reason why the same environmental considerations that might be applied to changes and transfers could not also be applied to applications for exchanges.

14. Prohibitions on Transfers and Changes

Montana seems to have gone the furthest in restricting transfers and changes by enacting a statute in 1975 which prohibits transfers from agricultural to industrial use when the amount involved exceeds 15 cubic feet per second.[33] While I have refrained from commenting on the legal aspects of the mechanisms discussed, I must say that there are serious questions concerning the constitutionality of this statute. If it is valid, then I suppose that a similar prohibition could be imposed on exchanges.

15. Permits for Limited Periods of Time

Traditionally, appropriation water rights have been acquired in perpetuity, without regard to the period of time that the appropriator actually needs to use the water in order to satisfy the purpose of the appropriation. In many cases it is obvious that the appropriator does not need to use the water in perpetuity. A mining operator will not need the water after the ore body is mined out; a sand and gravel washing

operation might be commenced for the sole purpose of a single construction project, such as a major dam; and many similar illustrations could be cited.

The question, of course, is whether a water right acquired for such purposes should be in perpetuity or only for the period of time required to satisfy the intended use. If awarded in perpetuity, the owner most likely will sell and transfer the right when he no longer has a use for the water; but if awarded only for the period of time required to satisfy the original use, the water would return to the watercourse after expiration of the permit, and would be available to satisfy instream flow needs or other benericial purposes. And, as a general proposition, such fixed-period permits would give the state water rights administrator a good deal more flexibility in allocating and reallocating the water resource.

In some states such fixed term permits may be implemented without specific statutory authorization, so long as there is general authority to approve water applications and there is no direct conflict with any other statutory provision. I think, for example, that the Utah State Engineer would have had such authority, but the question is now moot because the Engineer sought and received express legislative authority [34] to approve applications for fixed periods of time--although the farm lobby succeeded in getting agricultural uses exempted from this provision.

Thus, the implication of the statute now is that water rights acquired for agricultural purposes must be in perpetuity, whereas, prior to the statute, there was no such implication, and it is likely that the State Engineer could have imposed fixed periods on all water appropriations, whether for agriculture or otherwise.

It is not entirely clear to me, however, that the exemption for agricultural uses will be an unmitigated boon to farmers. The State Engineer must still evaluate all applications to determine, among other things, whether the proposed use will interfere with the more beneficial use of water and whether it will prove detrimental to the public welfare. It seems quite possible that an application to appropriate water in perpetuity for irrigation purposes might conflict with more beneficial uses of water in the future, and might otherwise prove detrimental to the public welfare--whereas an application to appropriate water for an irrigation use for a fixed period of time, say 20 years, might not. In such an event, the application might be denied, whereas it might have been approved for a limited period of time if the statute had not provided the exemption.

16. Statutory Criteria to Protect Instream Values

Another technique for considering and protecting instream values is realized through statutory criteria which require the administrative officer to reject any application to appropriate when it appears that it would unreasonably interfere with instream flow needs. It is important to visualize

that, under this technique, it is the legislature that requires instream values to be considered, but it is the administrator who actually determines whether any specific proposal to divert water would result in an unacceptable impairment of instream values.

Utah enacted such a statute in 1971,[35] wherein an additional criterion was added to those previously in effect. The pertinent part of the 1971 amendment provided that any application to appropriate water must be rejected by the State Engineer if, after investigation, he determines that such proposal would "unreasonably affect public recreation or the natural stream environment."

17. Enlightened Administrative Interpretation of Broad Statutory Criteria

Even though, historically, state administrative officers have not been concerned with instream values when acting on applications to appropriate water, it is quite possible that they have had authority to take such values into consideration. The administrative officers almost always have had authority to take the "public interest" into consideration, but they often took a narrow view as to what the public interest was. Most administrative officers have authority to promulgate rules and regulations to implement the statutory authority vested in them, and it seems entirely appropriate for such officers to set forth in their regulations the criteria which will be used to ascertain the public interest. And there is no reason why these criteria cannot embrace instream values.

The Utah State Engineer has distributed for public comment a preliminary draft of rules that contain such provisions, but he has not yet taken any final action to approve and implement them. The pertinent observation is that the Utah State Engineer has been required for many years to determine whether a proposal to appropriate water would interefere with the "more beneficial use" of water or would be "detrimental to the public welfare," but he had never taken any steps to define these broad criteria or to develop any specific criteria by which they could be determined. The new regulations, as proposed in draft form, would require an evaluation of positive and negative impacts on economic, social, recreational and environmental values that would result from the proposed use,[36] in addition to other specific criteria set forth in the review draft of the regulations.

It might be observed that in 1971 the Utah legislature added an additional statutory criterion, mentioned earlier, which required the State Engineer to reject any application that would have an unreasonable affect on public recreation or the natural stream environment. But the new draft rules now under review, it seems to me, would have been authorized by the earlier legislation.

Some questions might arise under this mechanism when instream flows are preserved and applications to appropriate are denied when there is unappropriated water in the source, and these questions will depend on the particular state. Questions as to the "diversion" requirement and "beneficial use" concept might

still arise in some states, although the answer seems to be that the instream flow is not an "appropriation" under this strategy. The administrative officer has simply determined that the public interest would be better served by leaving the water in the stream. It must be conceded, however, that where instream values are not "beneficial uses," it would be difficult to sustain administrative action which denies a proposed appropriation that would qualify as a beneficial use, for the purpose of protecting a public value that does not qualify as a beneficial use.

18. Imposing More Stringent Burden of Proof on Large Applications to Appropriate

Montana has devised a mechanism, apparently designed to protect instream values, which imposes a more severe burden of proof on those appropriators who seek to appropriate flows in excess of 15 cubic feet per second.[37] The traditional requirement in most states has been that an applicant must make at least a prima facie showing that there is sufficient unappropriated water in the source to satisfy his proposed appropriation, but the Montana statute goes further by requiring a clear and convincing showing that the appropriation would not interfere with other water rights.[38] It must be borne in mind that the Montana Fish and Game Commission is authorized to acquire instream rights, and so any applicant who desires to divert 15 cubic feet per second, or more, must make a clear showing that any instream rights so held by the Commission will not be impaired. In many cases, this might be an insurmountable burden.

19. Demanding Increased Efficiency in Existing Uses before Allowing further Stream Depletions

Appropriation law has always required water users to employ a reasonable degree of efficiency in their use of water, so as to avoid waste. Indeed, the very concept of "beneficial" use contemplates that the method of diversion, means of conveyance, and application to use will be reasonable so that quantities of water in excess of those beneficially required will not be diverted from the stream. Courts have generally been quite liberal in construing this requirement, however, and in many cases rather substantial losses--particularly in conveyance systems--have been sustained as being reasonable.[40]

The time has now come, it seems to me, when we should take a more careful look at the efficiency of use. New technologies have provided new and improved ways of diverting, transporting and using water. Methods that were reasonable a half-century ago, or even ten years ago, might no longer be reasonable in light of potential improvements that are now feasible. It also seems sound, in fact necessary, to consider the increasing demands now being placed on the resource--including demands for instream uses.

I think the possibilities of imposing more stringent requirements on efficiency of use are well illustrated by the decision of an intermediate appellate court in California.[41] In that case a water district sought to withdraw additional water from the American River, but was met with opposition by an environmen

organization which claimed (1) that the district could satisfy its need for additional water by reclaiming and recycling its existing supply, and that (2) further stream depletions would have adverse environmental impacts. The court noted that the California constitution [42] requires that waste, unreasonable use, or unreasonable method of use of water be prevented, and held that to the fullest extent possible all waters within the state should be put to beneficial use. [43] So holding, the court remanded the case for trial on the merits.

20. Demanding Greater "Diligence" in Completing Appropriations

Under the laws of most western states, when the first step is taken to acquire a water right the appropriator acquires an inchoate right, and he may then complete or perfect his appropriation free from interference by subsequent appropriators, so long as he proceeds with "reasonable" or "due" diligence. In the first instance, the question as to whether there has been reasonable diligence is determined by the administrative officer, with subsequent judicial review.

But administrative officers ordinarily are given wide discretion in deciding what is reasonable, and some have allowed unperfected appropriations to pend for many years. The Utah statute, [44] for example, allows the State Engineer to keep pending appropriations alive for 50 years, and, even then, if the works are fully constructed additional time may be granted within which to apply the water to beneficial use.

The Utah State Engineer, in his draft rules distributed for review, has indicated a much more demanding position by requiring prompt completion of appropriations, and by indicating that he will consider such things as environmental values and instream flow needs in deciding whether an appropriator should be granted additional time within which to complete the appropriation. [45]

From the standpoint of instream flow values, it should be noted that waters cannot be reserved or withdrawn for instream use unless there is unappropriated water in the stream. When water is "obligated" by numerous unperfected appropriations, the water is still in the stream but it is not available for allocation to instream uses. In many instances, the old, unperfected appropriations could be lapsed and cancelled for lack of diligence, and there then might be unappropriated water that could be reserved for instream values.

21. Private Instream Appropriations

Another strategy is that of allowing private persons to make appropriations of instream flows. While a number of arguments could be mounted in favor of, and against, this approach, I personally do not favor it because there appear to be so many preferable mechanisms and strategies available. That approach seems similar to the private riparian rights of Eastern states. I confess that I feel that instream flows in natural channels yield public values that should be reserved and protected for and in the name of the public, rather than private parties.

Nevertheless, the State of Washington feels otherwise, and a private appropriation of an instream flow has been recognized as lawful.[46] Consequently, it appears that this avenue cannot be ignored.

22. Additional Strategies and Techniques

Time does not permit a discussion of further strategies and techniques, but I would like briefly to identify some remaining mechanisms and procedures that have important implications for instream flows.

a. Weather Modification

Many states have operational weather modification programs to augment water supply,[47] and instream flow needs should be considered along with other needs in deciding how the new supply of water should be allocated.[48]

b. Watershed Management

In the western states watershed management is primarily a function of the Forest Service and the Bureau of Land Management, but in some areas significant parts of watersheds are owned by the states, and state and county zoning regulations and other land use controls can play a meaningful role. While the tail cannot wag the dog, the relationship of watershed management practices to instream flow needs should be considered in establishing the criteria and programs for the watersheds.[49]

c. Intrastate Transbasin Diversions

It is not uncommon for water to be transported from one basin to another within a particular state. The exporting basin will experience a depletion in its water supply, and the importing basin will experience an augmentation of its supply. The impacts on instream flows in both basins should be evaluated before the diversion is made; and, if made, measures to satisfy instream flow needs in the importing basin should be considered as part of the project purposes.[50]

d. Protection of Streambeds

State statutes which protect streambeds from alteration and relocation are now rather common.[51] While these statutes do not augment, preserve or protect instream flows, they do protect habitat and spawning areas for fish, and are thus of considerable importance to the value of the instream flow. A minimum streamflow is not too significant, from the point of view of the fish, if the bed of the stream has been lined with cement.

e. Water Quality Control

While many state water quality control programs are prompted, and to some extent controlled, by PL 92-5[illegible] other state water quality programs are within the discretion and control of the states. And some states have adopted administrative procedures whereby fish and wildlife needs are considered a part of the water quality planning process.[52] As such, administrative action can be taken not only to control the quality of wate[illegible]

in the stream, but also to establish minimum flows for fish and wildlife needs.[53]

f. Planning Programs under Section 208 of PL 92-500

The planning programs under Section 208[54] of PL 92-500 are just getting under way. These programs are conducted by state and local representatives in the planning process, in accordance with the board mandate of Section 208 and regulations promulgated thereunder. In essence, these programs are state planning processes, and now is the time for advocates of instream flows to take appropriate steps to make sure their views are heard and considered in these planning programs.[55]

g. Pumping Groundwater to Augment Streamflow

Groundwater can be a valuable source of augmentation for the flow of surface streams, either as part of a water management plan (conjunctive use of surface water and groundwater), or as an isolated operation.[56] In some cases, particularly on the lower reaches of a stream, groundwater has been pumped to augment the flow of the stream, with benefits to instream needs as well as to downstream users who divert from the stream.

h. Requiring Consideration of State Water Plan

All of the states have developed, or are in the process of developing, state water plans, ordinarily with financial assistance provided by the Federal Government throug the Water Resources Council, under the provisions of the Water Resources Planning Act of 1965.[57] To the extent that these pla provide for protection of instream flows, it is important that appropriate legislation require the water rights administrator to consider the state plan when deciding whether appropriation should be approved or rejected.[58]

i. Evolving Water Use Plan to Regulatory Status

If it is deemed desirable to accord regulato status to the state water plan, then rather formal procedures must be followed to develop and adopt the plan.[59] I think that this technique has significant potential for placing all water uses, including instream flows, in a proper balance to protect the entire spectrum of the public interest. In the past, there has been far too much "daylight" between the planning process and regulatory procedures.[60]

j. Water Management Districts

Strange to say, several eastern states have advanced beyond the western states in creating water management districts as integrated entities to plan, administer and regula water use.[61] This technique might be the ultimate in water mana ment, and might be a very effective means of protecting instrea flows, as well as providing for diversions and economic uses. The primary reluctance of western states to adopt such manageme districts has stemmed from the resistance of those holding

appropriation rights, who fear that their rights might be jeopardized or diminished by the creation of such districts.

This fear is unfounded. Management districts might well plan and implement programs for augmentation of water supply to the benefit of all. This augmentation might result from weather modification programs,[62] integrated use of surface water and groundwater to maximize supply,[63] water savings practices and techniques,[64] basin imports,[65] and a variety of other possibilities.

k. Little NEPAs (SEPAs)

Some states have enacted statutes patterned after the National Environmental Policy Act.[66] These statutes commonly have the effect of requiring a consideration of the environmental values of instream flows before state action is taken to authorize the diminution of depletion of such flows.

l. State Fish and Wildlife Coordination Acts

Some state legislation is patterned, to a considerable extent, after the Federal Fish and Wildlife Coordination Act,[67] so that fish and wildlife values are to be given equal consideration with economic values when water projects are licensed or constructed by the state.

m. Appropriations held in Trust for other Uses

A statute in Utah authorizes a state agency to acquire water rights for no other purpose than to hold such rights in trust for subsequent assignment to users.[68] This might seem to be a rather awkward technique, but it has had the effect of preserving a water supply in some streams that otherwise would have become fully appropriated. And now, when such water rights are assigned to others, environmental and instream values are seriously considered and reasonable protective measures are provided,[69] even though I am sure the original legislation did not contemplate the protection of such values.[70]

n. Acquisition and Re-Allocation of Water Rights

If there seems to be no other way to augment a stream flow that already has been severely depleted, and the need for augmentation is substantial with a promise of sufficient benefits, then it would be possible to acquire existing water rights and re-allocate the water for flow augmentation through the critical stretch of the stream. The state could acquire such rights by purchase or condemnation.[71]

III. Conclusion

In the preceding discussion I have identified 35 separate strategies and techniques that, to varying degrees, might prove useful in preserving, protecting and enhancing instream flows for fish and wildlife purposes. But we have only scratched the surface. Many more techniques and strategies can be found, perhaps some more effective than any I have mentioned. The field is fertile for those researchers who are interested in state water law and who believe that a fair share of the water resource must be preserved to protect instream values.

NOTES

1. Dewsnup, Legal Protection of Instream Water Values (National Water Commission, 1971).

2. State Department of Parks v. Idaho Department of Water Administration, 96 Idaho 440, 530 P.2d 924 (1974). The provision construed was Article 15, Section 3, of the Idaho constitution.

3. The similar provision in the Colorado constitution is Article 16, Section 6. A Colorado statute provides for appropriation of water by the state to protect instream flows (Section 37-92-102(3), Colo. Rev. Stat. Ann.), but the Colorado Supreme Court has not had occasion to determine whether the statute violates the consitutional provision. Other states have milder constitutional provisions in support of appropriation (Wyoming constitution, Article 8, Section 3; Nebraska constitution, Article 15).

4. United States Constitution, Article 1, Section 10, para. 4.

5. Colorado River Compact of 1922, Article III(a).

6. Okla. Stat. Ann., Title 82, § 1451-59.

12. Ritter, et al. v. Standal, et al, Case No. 11971, pending in Idaho Supreme Court. See Southern Idaho Fish & Game Ass'n v. Picabo Livestock, Inc., 96 Idaho 360, 528 P.2d 1295 (1974).

13. Lamprey v. State, 52 Minn. 181, 53 N.W. 1139 (1893), as subsequently modified in State v. Adams, 251 Minn. 521, 89 N.W.2d 666 (1958). See also State v. Bollenbach, 241 Minn. 103, 63 N.W.2d 278 (1954).

14. Diana Shooting Club v. Husting, 156 Wis. 261, 145 N.W. 815 (1914).

15. Curry v. Hill, 460 P.2d 933 (Okla. 1969).

16. See, e.g., Colberg, Inc. v. State of California, 67 Cal.2d 408, 62 Cal. Rptr. 401, 432 P2d 3 (1967); Southern Idaho Fish & Game Ass'n v. Picabo Livestock, Inc., 96 Idaho 360, 528 P.2d 1295 (1974); Commonwealth v. Thomas, 427 S.W.2d 213 (1968).

17. PL 92-500, 33 U.S.C. 1251 et seq., extends federal regulatory authority over water quality to all navigable waters and their tributaries, whether navigable waters of the United States or navigable waters of the states. This jurisdiction apparently is based on general Commerce Clause power and not on the narrower power to regular navigation. See United States v. Ashland Oil and Transportation Company, 504 F.2d 1317 (C.A. 6, 1974). The United States Supreme Court has not yet ruled on the constitutionality of the broad jurisdictional reach of PL 92-500.

18. Rev. Code Wash. § 90.22.010.

19. Mont. Rev. Code § 89-801(2); repealed in 1973, now see § 89-890.

20. Ibid. The statute provided that instream appropriations for fish and game purposes "shall have a priority of right over other uses until the district court in which lies the major portions of such stream or streams shall determine that such waters are needed for a use determined by said court to be more beneficial to the public." For present provisions see § 89-890.

21. Colo. Rev. Stat. Ann. § 37-92-102(3).

22. Id., § 37-92-103(4).

23. Ibid.

24. Colo. Rev. Stat. Ann. § 37-92-102(3).

25. Dewsnup and Meyers, Improvement of State Water Records (National Water Commission, 1971).

26. Mont. Rev. Code § 89-8-103 (1974).

27. Utah Code Ann. § 73-6-1.

28. California State Water Resources Control Board Decision No. 1379 (1971); Bank of America Nat'l Trust & Savings Ass'n v. State Water Resources Control Board, 42 Cal. App. 3rd 198, 116 Cal. Rptr. 770 (1974); and see Cal. Water Code § 1243 (1975 Supp.).

29. Colo. Rev. Stat. Ann. § 37-92-102(3) authorizes the Colorado Water Conservation Board to appropriate instream flows for fish and wildlife purposes, but the streams of Colorado are fully appropriated. This would seem to mean that the Board will have to appropriate streamflows as they now are, so that there will be no interference with vested rights. But when the owner of a water right desires to transfer the point of diversion, it will be necessary to determine whether such a transfer would interfere with the "junior" instream

right held by the Board. If so, the transfer would be denied, or adjusted in such a manner as to avoid any interference.

30. Mont. Rev. Code §§ 89-890, 892.

31. The Utah State Engineer has promulgated draft rules for public review and comment, but has not yet finalized or adopted these rules. These draft rules would require consideration of the natural stream environment when any request for transfer is filed.

32. Utah Code Ann. § 73-3-20.

33. Mont. Rev. Code § 89-892(3).

34. Utah Code Ann. § 73-3-8.

35. Ibid.

36. Preliminary Draft of Rules to Supplement Rules of Utah State Engineer Adopted February 8, 1974.

37. Mont. Rev. Code § 89-885(6).

39. Dewsnup, Legal Aspects of Water Salvage (National Water Commission, 1971).

40. Ibid.

41. Environmental Defense Fund v. East Bay Municipal Utility District, 8 ERC 1535 (Cal. Ct. App. 1975).

42. California constitution, Article 14, Section 3.

43. Environmental Defense Fund v. East Bay Municipal Utility District, note 41 supra.

44. Utah Code Ann. § 73-3-12.

45. Proposed Rule No. 2; see note 36 supra.

46. A decision by the Washington Pollution Control Hearing Board has allowed such a private appropriation for research related to raising fish. See the discussion of such decision in Trelease, Water Law, pp. 37-38 (2d ed. 1974).

47. For a comprehensive discussion of weather modification programs and associated legal implications, see The Legal Implications of Atmospheric Water Resources Development and Management (Bureau of Reclamation, October 1968).

48. The most practical means of allocation would be through negotiated agreements with water users and funding agencies. See section II.B.2 of this paper, supra. Since most operational programs receive public funds, there would seem to be ample justification to provide for public uses such as instream flows.

49. See Land Use and Wildlife Resources, pp. 149-180 (Special Problems of Waters and Watersheds) (National Academy of Sciences, 1970).

50. This is particularly appropriate where public funds are used to aid in construction of the project, as is usually the case. Compare section II.B.22.1 of this paper, infra.

51. One of the first statutes of significance was passed by Montana in 1963, as Chapter 258, Mont. Sess. Laws 1963, amended in 1965 and codified in Rev. Code Mont. 26-1501 through 1507, and since amended. Now see 26-1501 through 1509, and the 1975 enactment of 26-1510 through 1523.

52. See section II.B.7 of this paper, supra.

53. Rev. Code Wash. § 90.22.010.

54. 33 U.S.C. 1288.

55. The Section 208 programs necessarily will develop both water use plans and land use plans in order to control water quality, and there inevitably will be conflicts between these plans and state water rights administration.

56. In some instances irrigation companies have simply filed for underground water permits upstream from the point of intended use, and have drilled wells and pumped water into the watercourse, thus augmenting the instream flow until such pumped water was diverted at the downstream point of use.

57. 42 U.S.C. 1962 et seq.

58. Too often water planners proceed to plan and water administrators proceed to administer, with little or no consultation. If water use planning develops useful data or meaningful alternatives for allocation of the water supply, the administrative officer should at least be required to consult the fruits of such planning, even though he is not bound by any recommendations or findings of the planning agency.

59. See Dewsnup and Jensen, Proposed Procedures for Planning, Allocating and Regulating Use of Water Resources in Utah, Vol. One, Chapter Two (Utah Division of Water Resources, 1975).

COMMITTEE REPORT

2-11-77

HOUSE

JUDICIARY

April 13, 1978 Date

Mr. Speaker:

The Committee on RESOURCES has had HB 211 under consideration. A majority of the members of the Committee

☐ recommends it do pass

☐ recommends it do not pass

☐ recommends it do pass with attached amendment(s)

☐ recommends it be replaced with CS for HB 211 and that CS for HB 211 do pass

☐ (and) recommends it be referred to the _____ committee

☐ reports it back without recommendation

☐ AND attaches a report of its intent

☒ (other) COMMITTEE LETTER ATTACHED

MEMBERS SIGNING THE MAJORITY REPORT:

16 February 1978

The House Resources Committee was called to order at approximately 2:25 p.m. by Chairman Alvin Osterback in Room 118 of the Capitol Building in Juneau, Alaska. All members were present

HB 211 Creating the Alaska Land Commission

TRANSCRIPT

MR. GRAVEL:

I really appreciate the opportunity to come forward. I received the invitation from the Speaker and President of the Senate to give my annual talk as other members of the delegation to the legislature. I'll be doing that. I think we have communicated back in March, about the 28th in the morning, if that would be the morning most desirable. From my point of view that is when we are having our Easter recess and I'll be in State for that whole period. What I wanted to do at this particular meeting in which you graciously afforded me the opportunity to do is to float, literally float, the draft of legislation on d-2 which I have promised to our collective constituencies that I would do at the beginning of the year, and I have it here and I met previously with the Steering Council and gave them copies of it since it is germane to their area of inquiry. And, also as I understand it, it is also germane to your area as a committee as the subject you are going through, so I would (indisc) submit for deliberation a copy of this Bill. Would appreciate your input and would hope to introduce this in the Senate sometime right around the 15th of March. The Bill does not have the magic numbers of acreage for the very simple reason, we could have easily done it, but since all of our attention is focused on acreage I thought it would detract from the substance of legal language in question to just worry about acreage and I thought it would be more advantageous to concentrate of substance, it would be easy to put some figures together that would hopefully cast us in a compromise mood with other pieces of legislation in that regard.

Before launching into this in some detail, because there is one element from my personal point of view in paramount. I would like to speak about two pieces of legislation. I think one is the reason you are having these hearings. Two pieces of legislation that involve land in Alaska and would have some unusual impact. One piece of legislation is HB 720 which apparently

is a substitute piece of legislation for HB 211. The Beirne bill is -- which is the Beirne bill?

UNIDENTIFIED VOICE: 720

MR. GRAVEL

720 - let me speak on that one first. If I were to suggest a piece of legislation that would destroy Alaska's position in Washington on d-2 I would think that this would be the piece of legislation. I want to make sure I've got the legislation properly. HB 720 as I understand it is a substitute. That is a new piece of legislation. If the initiative were to pass I think you would see the Congress react and this would foreclose the need of my -- initiatives. My testimony to you today is very (indisc). I would hope that this legislation would come into being and it would foreclose the need for (indisc). The reason is that, and I will use two cliches, we have federal laws right now that keeps us from doing what that initiative would do. As a result of those land scandals we have had in Florida and Arizona. If we were to parcel out chunks of land to the people wholesale, as I understand it, during the initial 15 year period there would be no responsibility at all for providing utilities or any planning process whatsoever, that essentially we would be selling unsubdivided land and this would be viewed by the Congress of (indisc) responsibility and would give real credence to the environmentalist community's charge, some elements of the environmentalist community, that Alaskan's are irresponsible and therefore we need a very strong d-2 bill because we don't know how to handle our own situation. Yet I can appreciate that the referendum, the initiative, would have a great deal of popular support. In fact one of the fears I would have and it's the reason why I'm talking about it now publicly -- I only found out about the initiative, I confess, not all that long ago and I couldn't believe it when somebody described to me what this initiative was going to do. And so realizing that it has a great deal of popularity and realizing that I may be treading on some individuals' toes -- I would respectfully apologize for treading on anybody's toes -- but the utilization of land and development of land is something that I feel a certain professional confidence in. I made my living in it. I've seen how people have butchered land from the state and how unconscionable this impact can be on the balance of society because once you've butchered it up, you spend the rest of your life paying to correct the deficiencies you've created structurally. And so what we'd be doing with this kind of initiative (indisc). And like I say, if you try to do this in the private sector, you'd be put in jail for trying to do it. And so trying to do it collectively as a society, you've got to realize what kind of an impact this would have in the United States and on the Congress. Therefore, the approach that's been taken with HB 70 in my mind is a very mature approach to try and sort of save the day because we've got so far down the road in the other approach. I can only commend to

your attention the capacity to effect legislation. (indisc) in general terms.

The next item I'd like to speak to is HB 211 which is a piece of legislation that was introduced last year, (indisc) Mike Miller, Mr. Speckling. I don't know if they have other co-sponsors. I was very impressed with it. Here again I find by noticing a lot of things that you're doing, that you're just doing a lot of good work and this essentially is the tactic that I'm here to recommend that the state employ in order to regain the initiative that we lost on the entire d-2 issue. We've got a chance now as the legislation comes into the Senate to take up the initiative. If we don't coalesce to some degree -- and I'll speak to how we can coalesce and still maintain our individual positions. But if we don't coalesce, we're just going to get run over as we have in the House. But one of the recourses that we will have at our disposal would be Senator Stevens and I would just wage a filibuster. I think we have the seniority and the capability and experience to wage a very effective one and I think we (indisc) legislation. I have never been one to be proud of negative acts because you're really not contributing anything, you're just stopping something from happening. But I think the task at hand is to bring something about not just stop something -- to bring something about that's worthwhile. So we have the opportunity to do this. In the legislation that I have here, there presupposes state legislation to accompany this. That's essentially what you have in HB 211, is state legislation. So if that could be flushed out and developed and passed in a reasonable period of time, that could be our position in the Congress. It wouldn't be Mike Gravel's position or Don Young's position or Steven's position, it would be the Alaska Legislature has so spoken. There's no question it's not going to be cast in concrete but it'll be a darn sight more powerful than anything else I can think about (indisc) that anybody else would have. And so if you can meet a time frame of early mid-March before the hearings reconvene, we could have a new product to present to the Congress -- the parties behind it, the State Legislature, the Governor would probably endorse it. I certainly endorse it and I think the balance of the delegation would endorse it. Let me now speak as to what would be the key elements of my endorsement and I've tried in the past to discuss the subject to varying degrees with success, with varying degrees of comprehension. Where I am right now I can say very simply, last year this document would not have been politically possible to introduce or to float under any elective official's name. We talked privately last year as to the efficacy of having cooperative management over the entire sub-continent of Alaska. And mind you, I'm specifically using the word sub-continent and not the state, the entire sub-continent. That would have been viewed quite oddly and very suspiciously, but we've all gone through a maturing process since last year and taking the position that they just can't do it to us is not a position, it's merely a reaction. That's all we've been

doing. They can't do it to us. That's why we have no initiative. That's why we have no collective posture. But what has happened is that we now see that every one of the state-wide leaders are talking the same rhetoric. They're talking the rhetoric of collective management. And so we're not far at all. When people in politics and society can begin to use the same words, then the only transition is to go from interpretative approaches to these words. So I would just like to share with you an analysis of what does collective cooperative management mean? And what would it mean from a tactical point of view as we would try to affect a compromise in the Congress. Let's take the first part of it. What does cooperative management mean? We could say in Alaska, in this area where they have federal lands, and part of those federal lands will be in four systems, one area, one level. Next we are going to have lands not in the four systems which would be under the BLM, which would be general lands under the Organic Act. That could quote be a fifth system, if you want to use that (indisc.) Then you've got state lands. That could be a sixth system. Then you've got Native lands, that could be a seventh system. And then somebody decides, well, there's a chunk of land here that maybe we ought to study or (indisc.) a little different, so let's make that a seventh (sic) system and we'll call that -- that's land that we think we're going to work and study together. And then you could have municipal lands, that's the eighth system and whatever lands that are held in patent today, you could develop and call it a system. You've just got a whole plethora of activity and definition on lands. And, in only one area where you have federal/state cooperation do you call that cooperative management. For my mind, if it's worthwhile to have cooperative management on one acre of ground -- if there's any merit to that concept at all, since there's really only two governmental entities on to themselves (indisc.) the federal government and the state government, then if it's worthy of having some cooperative management, then why just put it as part of it? Why pick up capriciously or arbitrarily ten million acres and say we're going to study that as cooperative management. If there's some merit to cooperative management, let's just do the whole thing in cooperative management. And then when you begin to think of it in that respect and the rhetoric is there for that, every one of the elected high officials quote, so to speak, are talking that rhetoric. We may have differences in the definition of cooperative management, but at least we're there.

Now let's look at what that would do. On the four systems lands, there's no way that you're going to have cooperative management. You usurp the powers of the Congress, literally. But (indisc.) you could very well do that. In a society of representative government, power is many times knowledge. Not always, but many times. And so if we set up a system, like the Land Use Planning Commission which is a vehicle for cooperative management, that Land Use Planning Commission has the ability to acquire knowledge

through research efforts, then that knowledge places them in a superior position than the individual members of Congress, or for that matter even yourselves, as individual legislators. And the reason why they have more knowledge is because they'd be more expert in the one particular area. The legislature and the Congress have a whole (indisc.) of issues that effect all facets of human life that we have to deal with continuously. So that simple fact that the Land Use Planning Commission in Alaska would be the major repository of land information and its use and adjudication would give it an edge that when it made a pronouncement or a study on something, that study would have great credibility in the Congress and I mean considerable credibility. Just as the present Land Use Planning Commission today, which is merely a voluntary organization, so to speak, when they'd come in and testify before the Interior Committee, it carried every bit as much weight as an individual member of the Congress. So you begin to see where the shift would take place. Ask youself why the House of Representatives under the leadership of Mr. Udahl and Seiberling don't want a Land Use Planning Commission that has any muscle. In fact the one that I introduced in 1971 had police powers and came out of the Senate that way. It was diluted in the conference on the House side. The reason why it was diluted was because they did not want to see a diminution in the power at the federal level. Well if those fellows back there think that there's a diminution of power at the federal level, where do you think that power goes. It's going to come back at this level, maybe in federal hands, but really what's happening just in that process alone and in the process that takes place on federal lands that are handled by the Bureau of Land Management, you've shifted the center of gravity from the federal government in Washington to the federal government in Alaska, meaning that there's a great principle of government that's closest to the people (indisc.). So if we now have the Land Use Planning Commission that will adjudicate all federal lands save the four systems, but will have an effect on the four systems because of their superior knowledge, we've made quite a gain. Now that's on the federal side. On the state side, if we take all the state lands that are presently there except lands that are in municipalities and boroughs and that they would come under (indisc.) of the Land Use Planning Commission and then offer entry into this to the Native community so that the Natives would voluntarily bring their lands in -- that could be very simply -- you could initiate a study of possible taxation would take place -- the Native community, properly so, has great fear over the possibility of future property taxes. They could be land poor. Their land could be under development and that they would have no ability to have a cash flow to handle that form of taxation. So they rightfully, from their point of view, would like to see them absolved of this. That could be the ingredient that would bring them in on a voluntary basis. I think not to do it more than on a voluntary basis might cause some real acrimony since they would feel that they received

their lands as part of a legacy, the land claims, and then if we pulled a win by fiat, I think they'd feel that they had been violated. And rightly so in the one sense. The balance of the land that's in boroughs is already subject to a planning process. We have that in state law and so there need not be a duplication. There need but be a liaison relationship established so that a community that develops a plan, or borough or municipality, it would have a five year projection of what that plan would be, they'd submit that plan to the Land Use Planning Commission, and the Land Use Planning Commission would give it it's seal, would sign off on it. But the function would be done by the municipality. This would solve the obvious problem of where individual governments come together, the frictions and the discoordinated activity is handled intelligently. So in this way, you look at the continent and I've just enumerated a process where all lands in Alaska is now under the aegis either directly, the Land Use Planning Commission or (indisc.) through the knowledge process of the four systems. Where that becomes a valuable tactic is that when we now talk to and negotiate in the Senate with the environmental community, national community and say we don't think that we need to put in a hundred million acres or ninety million acres into the four systems because we have a device that will continually adjudicate the use of land on an intelligent basis as a product of study. And so they're cast in a mode of saying well no we don't want to do something before we study it. Let's put it there before we study it. I don't think that's a very credible position for anybody to have. In fact when you look historically at why the environmental community has its extreme posture in some areas, it's because they could not get a resolution of the problem as they saw it in a legitimate fashion. And so what happens -- it's a simple process -- if you don't permit evolution, you have revolution. And so since we don't have a (indisc.) process in the United States of America, those people who are deeply concerned about the misuse of land and the atrocities that took place in the past and you need to travel this great country to see these atrocities then they are so fed up and their cup runith over with such reaction, that all they can think of is that we just don't trust anybody. We don't trust anybody so let's just lock it up. And in some cases you can look around and there's valid reasons for that posture. And I would say that if we passed that referendum, that on the national point of view there would be a valid reason to lock up major portions of Alaska. So they're at where they're at because there wasn't a process that permitted the intelligent organized adjudication of land. So what I'm proposing here is that we lay down a device that will have definitive powers which will be able to adjudicate the land on the sub-continent. Of course you get this attitude -- the brokers say well I'm not too keen on that commission because obviously they're going to put a bunch of environmentalists on that commission and they're going to stop growth. Then you talk to some environmentalist and they say

well boy I'm not to keen on that commission because they are going to put a bunch of chamber of commerce types on there and they'll rip up the country. Essentially what both parties are saying is that they have no confidence in our system of representative government because, you know, what's the point of having a legislature, you might get some dingalings elected to it and many times we do. We've had them in the Congress and we've had them here occasionally. So that doesn't mean that we don't develop a system of representative government because sometimes it fails to work. We don't have any options. Either anarchy or we develop a pattern of evolving things in an orderly fashion and this, of course, is what I think would be a most compelling argument in the Congress. Looking at individuals, Scoop Jackson has passed a land using planning bill twice in the Senate. It's failed both times in the House. I think (indisc.) I think many other members would view this from the environmental community, Senators in that area, would view this as an unusual opportunity to establish a prototype. I think that we could -- in the future I would recommend that we have a sunset feature in this. We don't know if this is going to work. We'll say this law is going into effect for ten years. At the end of ten years the Congress has to renew its charter of the law, of the situation, and so would the state legislature. So if it succeeds, it will build its constituency of success and it will be easy to renew and if it's not working very well, it will have an alternate constituency and it will be very easy to stop its renewal. And I think that that really could ward off a lot of serious criticism and would permit us to negotiate down the quantity of acres to something reasonable and something obvious because there are obvious easy decisions to be made in placing land in the four systems. But it's the quantities that we find disturbing and the fact that we don't have the vehicle to make changes. But if we've learned anything from the Statehood Act and from the Native Claims Act is that we've had a steady stream of people to Washington trying to resolve all of those problems that have been placed with the Congress. Well if that doesn't tell us something that we should have a body that should be deliberating on these problems daily. The other thing that I would recommend is that we take the Clean Air Act, the Solid Waste Act, the Coastal Zone Management Act and the Clean Water Act and place this under the aegis of the Land Use Planning Commission. Let me give you an example. Right now supposing we took the interior of Alaska -- somebody wanted to build an asbestos mine and a cement factory, let's say two of the real bad polluting elements, and it was a group of Natives that had a mountain and they made a joint venture with some Japanese interests and New York interests and they're going to come in and they're going to build a cement plant, maybe we'll build a dam and other devices, that we'll need some cement and the economic success would warrant it here in Alaska. How does that take place? Well presently what you do is you deal at the borough level, then you turn around -- if it's in the borough, if not you just go to the state level and you're bicycled

around to the various interests be it land, be it for water, be it for access. The access is very much undetermined. You don't know what the access is going to be. But under the plan I'm suggesting, you'd develop your plan and you'd go to the Land Use Planning Commission. The Land Use Planning Commission would do exactly what the legislature's done which I think has shown great maturity. You've got to hire some consultants to evaluate this for me, I'm not in the cement business, I don't know anything about cement. Come in and tell me what that means. Come in and tell me what the access requirements are going to be and how (indisc.) with this possible development up there. Analyze for me if (indisc.) what the air pollution will be. Do all those things as one coordinated body. And then when you know all the facts, these nine individuals will say yes or no. That's it. And when they state their approval, that's it. You don't have to go over there, or getting dragged here or having a catch-22 there. You're getting it all done at once. That to me is efficient from an economic point of view and from a knowledged decision judgmental point of view, it's just excellent. Because the people will be expert in this area. That's all they will do. They'll be handsomely paid and they will have research capabilities. And then a decision will be made. Yes or no (indisc.). Another question -- people want land. There's no reason why people cannot have land and I certainly in my opposition to the referendum, I hope that it won't ever be construed that Mike Gravel's against people having land in this state. I believe in private property. I think it's an excellent base to our free enterprise system. But there's got to be something reasonable to it, because when you give somebody a piece of property, it's got to be a legitimate piece of property. And legitimate means you've got to have access to it, he's got to have water, he's got to have air that he can breathe on his property. He's got to be sure that he's not invaded or polluted by his neighbors in that regard. So there's got to be an orderly process. There's no reason why if a person wants to go out and live in a wilderness, that he can't go to the Land Use Planning Commission and say hey, I want five acres. I want to go out and chop trees and haul water to a cabin in a bucket. And there's no reason why the Land Use Planning Commission can't look at this and say, hey, here's your five acres, go at it -- and bring an orderly process to that type of existence. There's no reason why that can't be done. So we can handle every facet of this. The only thing that I'm (indisc.) begging for is that by God we're intelligent human beings, let's do it in an orderly fashion and set up a vehicle to do it in an orderly fashion and essentially that's the case. I could go through and perhaps we could stop at this point for some question and answers and then in this draft proposal, this deals specifically with the Land Use Planning Commission which is really the guts of this proposal. This proposal is essentially the collective conventional wisdom of where we're at in the whole d-2 situation. Subsistence is no longer a gut, backbreaking issue. The fact that we're going to legislate state land, title land, Native land titles is something that's pretty well accepted, a whole host of things. What's new probably in here is an authorization for five hundred million dollars for a

transportation system to Mt. McKinley. That would be a new element in there. That's a simple thought that if it works this way, we're going to have the greatest park in the United States and probably the greatest park in the world, we'd darn well better make it accessible to the American people. It's tough to get there right now. I get there, I get there in a helicopter, but that's not the way it should be available to the American people. So I've got an authorization in there if Congress wants to make a great park, they've got to pay to let the American people see it.

The other key element (indisc. -- cough) this draft here of the language. On the second page of this draft I've detailed what I would recommend as suggestions and I really want to underline suggestions. It's all a product of how much thought you want to effect on an issue and so when you people start your deliberations and marking up the legislation, you're going to think of things that we haven't thought of and to that end, when you get to that point, where you decide to go that, I would have Pat Prusho (ph) on my staff spend some time in Juneau so we can monitor what's going on so that we understand your thinking processes so that we stay on the same wave length. These are just, these are suggestions of what I think the state legislation should encompass and I can't help but be struck by the parallel with HB 211 and so HB 211 in my mind is a vehicle that you should ---. You already have introduced. It's under hearing now. When your hearings are complete, you can begin markup on it. I would hope you'll just consider these suggestions to be incorporated into HB 211 and if you have HB 211 out as a product by mid-March -- and if CMAL -- and I have every reason to beleive that CMAL might be willing to endorse such a proposal. I can't speak for the other members of the delegation but I think that they would all be happy with a coalesce that might take place as a result of your actions. So let me just close with that point and you can proceed with questions and answers.

CHAIRMAN OSTERBACK:

Representative Malone.

MR. MALONE:

Thank you Mr. Chairman. Senator, first I'd like to thank you for making yourself available to the committee in this type of setting. As far as I know this is the first time a committee of the legislature during this legislature at least on the (indisc.) question has had an opportunity to meet in a hearing setting with a member of our congressional delegation. As legislator to legislator, I appreciate that. To begin with, some of the legislation that you

discussed at the beginning of your presentation, specifically HB 359 and the initiative which is now certified to the ballot in Alaska (indisc.) initiative, while I personally think that there's some problems with that legislation (indisc.) approaches that were set out in HB (indisc.) last year and HB 720, to be candid about it I would have to say with regards to this position of state lands, I'm usually relatively suspicious of recommendations coming from the federal arena. (Indisc.). On the two different approaches the homestead initiative versus the home site program, I think of the two that the more modern one is probably the better at least at this time. Coming down to HB 211 -- I don't think it's really any accident that that legislation parallels the possible compromise position that might be reached in the Senate. It did go out of consultation between members of the legislature and I think the congressional delegation and state administration last year and also through consultation with members of the Federal/State Land Use Planning Commission but my basic question on that approach, the management program approach as opposed to the classification and lockup of large amounts of federal land in Alaska is how realistic is the approach? How likely is the Congress, at least the Senate, to adopt on a consensus basis, or adopt that approach as a compromise position because that's the information we need to know in the legislature in order make a realistic determination as to what strategy we should pursue on the whole d-2 question. I gather from some of your remarks, that I think a compromise is possible. That Senator Jackson, yourself and others would be able to adopt an approach like this and perhaps sell it to the Senate and that work by the legislature on this question and putting an effort and interest in the concept would be valuable in reaching a compromise position on d-2 lands in the U. S. Congress. Is that correct then? Do you think that there's a real chance of a compromise being developed perhaps along these lines in the Congress?

MR. GRAVEL:

(Indisc.) I think the international environmental community has felt (indisc.) over their success and support both in the White House and the House of Representatives. In order for them to be placed into a compromise mode they have to fear that they will lose something. I've tried to convey as much as possible from my particular office that without this land use planning process, without a mechanism that I would be prepared to filibuster the bill. And the very simple reason is that I just feel that we'll never have an opportunity again to effect a planning process. It's such a complicated issue in the national arena. People are so afraid of it. And we're now pressured into a situation that we're prepared to now accept a planning process. And it's because we're about to be run over and so if that is what saves the day, I think it will turn around and be constructed to not only save the day but making

a significant contribution to human advancement in the process of how we deal with ourselves in society. We have to develop a planning process. I think that when they're faced with a situation that they're not going to get entirely what they want, and realize some of the things that we have (indisc.) compromise may prevail on their side. I have not been criticized in this approach and like I say I've covered it now for over a year or more privately, sometimes publicly, depending on the forum and I've never been criticized by anybody in the community for the idea. The only negative criticism has been well, that kind of people won't be appointed to the commission. To me that's not a valid criticism. That's the only criticism that's been heard. So I think it will be appreciated. And some environmentalists will realize that if this succeeds in Alaska, this is the (indisc.) of the nation. And if it doesn't succeed in Alaska, we'll go back to square 1. So both sides are going to have to give a little bit. Where the acreage will finally wind up, anybody can guess. That's really (indisc.) conference where you're shouting each other down and that process is not going to be all that logical. But the question is (indisc. -- pounding) to the conference. And so if we can do our work in the Senate in the conference, it's every man for himself. I think we'll clear ourselves very well on that. It's tough to argue against this. We're talking about -- it's tough to argue an orderly approach to things, regardless of how you feel, very tough to argue against that. That's the essence of what I'm proposing. The rest is already accepted by and large. So it's land use planning, how much it covers and the size -- how many acres. That's what we're down to in the whole process. How many acres, land use planning process and one sort of can balance out the others because if you have a process, you don't need so much acreage and you don't have to be afraid of locking up or putting away so much acreage into a system. You've got a process to deal with it. So in brief, to answer your question, I think we have a good chance to develop the elements of a compromise. Not to speak of the coalesce thing that will take place within the Alaska community which is lacking now for -- and probably for a very fundamental reason -- not so much I've got a personality and they have their personality -- we are all representatives of some degree of element in our contituency and I think the lack of coalesce is because we weren't at a mature level to coalesce. And I don't mean just the four of us in state-wide office, I mean just the whole (indisc. -- cough). This year has been a very sobering year. And I think we're getting there fast. The question is, we'd better get there real fast if we want to take the positive approach. If we don't get there fast enough then we can take the destructive negative approach.

CHAIRMAN OSTERBACK:

Thank you Senator. Are there any more questions from the committee.

MR. MILLER:

Yes, Senator Gravel, you were talking about the four systems -- (indisc.) but do I understand that what you're proposing still does

have a generous (indisc) of national park, wild scenic rivers, residues of the national forest and that sort of thing? More then 25 million acres.

MR. GRAVEL.

Considerably. The base would be twice that much, as I would say the negotiations would begin somewhere between 50 and 80. So we will tighten up between 50 and 80 and enlarge and be guided by your reaction in that area. I obviously would, with my staff, sit down with Pat and others and yourself when you get back there and go over maps. It truly is somewhat ...You know there is and I know there is, The summer season is nothing. You know areas and I certainly know areas that I would have no difficulty at all in making decisions as to what system we go to.

MR. CHAIRMAN.

Are there any other questions?

I would like to ask a question. Since we have native land claim settlement going on in our communities to determine land to build a home on, how long do you think it would be before title to your land, where they could build?

MR. GRAVEL.

The title problem in this proposal we are talking about here again I think we are (indisc.) at this point when we settle d-2 we are going to settle the land transfer question right then and there. We are tired of being dragged and delayed and working with an uncooperative bureaucracy, so it's (indisc) for this process here.

MR. MALONE.

Could I bring up one ...

MR. GRAVEL.

I have had, not from you, Hugh, but a couple of members of the legislature called me for my views on a trip back in Washington and characterized by some that they all want to get together and go back to Washington. I think that would be a terrible mistake for everybody to get on a plane and go back to Washington for several reasons. One: You would gobble up all the offices of Senator Stevens, myself and Don Young, and we would be doing nothing but handling your presence which would not permit us to be working effectively. Two: It would be viewed very much

by the Congress and by the national media as conspicuous consumption, and three, that many people visiting Washington the members of Congress would be a little oppressed. What I would suggest would be to appropriate monies for every member of the Alaska legislature to come to Washington and that they be staggered out, come in pairs, two and threes, not too much more than that and they would start right after your session has been terminated and I think it would be very beneficial as to what could be accomplished and I think you could do effective lobbying and come in and talk about areas of your expertise and interest to various members of the committee, the staff and Congress. Too, I think when you come back there you are going to get a feeling of what's going on in Washington, perceptions and I think that base of knowledge (indisc) regardless of the d-2 issue and as you pursue your political careers it will help you very much. There is one detriment to that and that is obviously some of you will come back and covet the offices of those of us that are already there. That is a gamble that we will have to take and if we treat you nice in the future we might not have to be harassed so extensively, in forms of a challenge I might say. I have never seen harassment in any other form. You have always been gracious. So in responding to those phone calls privately I have outlined this and I don't think I went into this much detail because I hadn't given that much thought to it but I would hope that you would look at it in those terms and that it would be a good investment for the public officials to come back, but to come back in very small numbers and to come back stretched out over a period of time and you will be surprised because this issue is not going to be solved either beneficially or negatively prior to the probably the first of October of next year. We have all summer.

CHAIRMAN OSTERBACK.

Representative Malone.

MR. MALONE.

Thank you, Mr. Chairman. First of all (indisc - cough) follow up statement on your last questions, in this question of transfer of title and the disposition of the different land settlements, it occurs to me that in addition to the resolution and legal entanglements there may be, and I haven't (indisc.) there may be a problem with the ability of bureaucracy to deal with the sheer volume that they are facing. Recently I think we have come to the conclusion in the State of Alaska that a similar situation exists with respect to the dispostion of some of the state lands they are owning and quite often the answer is money so I would think that in addition to the legal resolution that if the Congress is serious about expediting settlements that they would respond to your urgency to appropriate money to make the process take place within a reasonable period of time. A certain question with regard to trips by members of the legislature to go to Washington on the d-2 crisis, an additional suggestion was made by Senator Stevens during his visit with the legislature

that it might be his thought to appropriate funds for allowing members of the Congress to visit the State and meet with people and perhaps view some of the areas that are proposed for the classification. What is your reaction to that?

MR. GRAVEL.

Last year I felt very strongly about that and suggested that in our deliberations when the four of us were meeting. I felt strongly then because we had the whole month of August of last year and I had about ten members of the Senate that had agreed to come up here and that was just the beginning and it expanded that we had thirty or forty members of the Senate. We were unsucessful in getting federal money at the time and the subject did not have the (indisc.) of state legislature coming up with the money to do this. Now you have only got two opportunities. You have the 4th of July recess and you've got the Labor Day recess. There is no August recess because it's election year and they are going to try and get out early to campaign. The time frame is so short and it is a very difficult time to bring people up in that regard. The other is, you know it becomes a little sobering, it's not an easy task to do that and it cost a lot, a lot of money. I'm told (indisc. cough) that it was over a million dollars (indisc. cough) to bring us up here so you are talking about a considerable commitment of money and a million dollars would only be for four, five or six members to come up here and handle it properly. Whenever members come up, I am sure Senator Stevens devotes a lot of time, and I know that two years ago when I had five members of the Senate coming to Alaska, it took literally over forty days of the time of my Administrative Assistant and then a lot of time within staff and during the trip I spent all my time with each member making sure that each detail functioned during that whole ten day period, so these are all the things you would have to provide for and if they came here and didn't have a good trip you would have spent your money and done as much damage as you could have possibly have done. The other thing is that we have had -- Udal and Seiberling spent a lot of time in Alaska and didn't do us that much good on the particular views that we hold, but it cuts several different ways and I think that as we get closer to the frame here I would hope that we would not panic and you know throw things every different way and I remember that old cliche that when the going gets tough - the tough get going. That is where we are at. That is where we are going to take the measure of ourselves. We aren't going to run around like a little white mouse holding our hands (indisc) so just throwing money isn't going to be the answer. It could be very damaging. Alaska does have the perception in the eyes of the American people of being very wealthy. We confirm that perception every time we do something out of the ordinary. Sending the Alaska Legislature to Washington is (indisc.). I don't know if it ever has been done in American history. Inviting the entire United States Senate and the House of Representatives on us to Alaska and prepare to

pay their way is a little out of the ordinary. You know there would be a greater exodus then they had at the Battle of Bull Run if the time were right, so we have to be careful. I think there is some merit in it but I think it should be done (indisc.)

CHAIRMAN OSTERBACK.

Thank You. Mr. Parker.

MR. PARKER.

$31,500 is not a great deal of money. We spent over $800,000 on the Steering Committee to go back and convince certain people in Congress that we would like to have a little bit more of input on the d-2 lands, so if we are talking about $31,500 (indisc) I don't know for each member.

That's for each member.

MR. PARKER.

That's the total. (Indisc. simultaneous speech). We get per diem. We get per diem while we are here. $31,500. You could spend the rest of the year saying it didn't cost very much money but it looks like a hell of a lot. (indisc.)

I think this is the time Alaska should make full determinations and something like this might catch your imagination.

MR. GRAVEL.

You know the old days of rah-rah type of activities, you know like statehood, that's not what we are asking for. We are asking for the Congress to be generous in its adjudication of federal land - not state land - federal land. This land belongs to everybody so the guy, remember Seiberling's statement, remember the cliche that was used by an Alaska, boy this is a big federal land grab and the environmentalists are grabbing all this land in Alaska and Seiberling came along and said yah there is a land grab going on. The people of Alaska are trying to grab our land. Our means federal government. We live here, we get confused with the language as to whether its federal or state, but remind you the state it is 430,000 and with the federal it is 220 million. A big difference. If you were to send back the whole Alaska legislature all at once -- you know the only place I think we differ is that I think it is very important for you to go back. I would only differ in the way you go back. I would like to see you go back quietly without fanfare and do things in a nice

(indisc) fashion rather than swamp us back there and that is literally -- literally swamp us, and we couldn't be able to handle it, the appointments -- you might plan the trip and then all of a sudden we might have four or five key votes in the Senate on the Panama Canal Treaty in the House and you might have four or five key votes on some (indisc) legislation and you would all be sitting there with your bare faces hanging out. You can't plan, things change very quickly. So the worst that could happen if you string it out you might have a couple bad visits by two, three or four people, not by the whole (indisc.) I don't think -- there is a page out of the book of the Wealthy Philadelphian, it was during the depression, and it was one of the few places in the world that they did this, was that when the depression is (indisc) you don't drive Cadillacs. (indisc. cough). Just keep a low profile. And that is why Texas has had such difficulty it is because they have been too spectacularized, and what we in Alaska have to do is give a low profile and just go get the goods. That's what the natives have done, they handle the federal bureaucracy very well. Just come in slowly, two or three at a time, the only time we ever had the whole native (indisc) was on Alaska Day. But up until that it was a steady stream and we still have a steady stream. There is probably no crowd of people on this earth that better handled the federal government than these Alaska Indians and I think we should take a page out of their book and keep a fairly low profile, and they got in trouble when they had high profile, you know when you heard statements well we are going to do this and we are going to vote, and that always hurt their cause. When they kept a low profile and did their homework they did well. I didn't mean to (indisc.)

No, No, it's getting back to a initiative, you know, it might be far out, but nevertheless it's a serious initiative and 22,000 people (indisc.). People are frustrated with the fact that they are surrounded by land can't (indisc.) $20,000 for a lot to build on undeveloped land and we have nothing but land so I can understand (indisc).

MR. GRAVEL.

The worst thing we could do is pass a law telling people we are doing something for them when you are not. When you talk in terms of giving somebody land you have got to give them access, you have got to give them air, you have got to give them water, you have got to give them all those things, otherwise if it just a little piece of paper that they own land and they can't experience that ownership you thought they were frustrated before they'll go beserk, because you cheated them.

MR. PARKER.

I'm not speaking in favor of it, I am just speaking the way it is.

MR. GRAVEL.

Oh, no, I agree with you. That is exactly the way it is.

MR. PARKER.

Of course we have a problem here is that we have endorsed more or less a compromise, it might not be much, (indisc.) but what would happen if it was approved by the voters of Alaska how would that affect d-2 specifically. Would they lock everything else up?

MR. GRAVEL.

Like I said I don't (indisc.) the last month. I am supposed to be generally informed. I know that the Congress is not knowlegeable about this referendum and I'll bet you that when it does become known, and this public meeting here is going to carry it to the Congress. I mean, the environmentalists would absolutely be fools from their practical point of view if they didn't jamb this down our throat one little piece of paper at a time, and I would have no response. If I were testifying (indisc. cough) and somebody said well, Senator, you say that you people can handle the management process up there, the referendum has 22,000 Alaskans that want to carve up the land the way they used to do it in the land frauds of Arizona and Florida, do you really think that you can make the people in Alaska mature enough to handle the problem. Don't you think we should lock up a major part of Alaska. How do you think I would be able to answer that? How would you answer it?

MR. PARKER.

That's after the fact. (indisc). Wouldn't it be just as bad to give them, say through this piece of legislation, 20 million acres as a sort of a compromise, wouldn't that be (indisc).

MR. GRAVEL.

The process here would be to give them the land and the other process is to give them a piece of paper, which has evidence of land. The paper could be fraudulant. See, that's the difference between, you know I could buy land in Florida and go down there and plot it and see that it's got a road to it, see that there is electricity to it, see that there is a municipality, proper plan, and that it is zoned properly, or I could have sent in my $100 down payment, my $5.00 a month for the next twenty years and then I go down there later when I am ready to retire and I find out that it is under water. It's a valid piece of land, you know, but it floods four or five times a week. I have been cheated. There is no road to it. I have been cheated. That's why we pass federal laws so we can't - we can't sell these mail order properties, so

what we did, we designed a referendum capitalizing on the frustration and the lack of knowledge of the people, and we are going to give them a bunch of pieces of paper that's going to be useless, absolutely useless. (Indisc.) supposing I send in and say I want a piece of land right here. It is not in any native entitlement. I want that piece of land, I want 200 acres. So somebody sends, the Department of Natural Resources or whoever sends me a deed. I've got my deed. I wait around and then I finally take a plane up there and maybe hire somebody to drive me out to my property and it's nothing but a sheer cliff. You know, it's about a 45 degree angle (indisc.) What do I do, I've got my deed in my hand, I've spent a lot of money to get it. I would be so hopping mad at whoever was elected to office, whoever thought of this concocted scheme I would shoot them on sight.

MR. PARKER.

Let me finish this, I guess my question is, what do we do about it now? (indisc. simultaneous speech and laughter).

I think Hugh said it, I am here to legislate (indisc.) I don't pay (indisc.) answers. I think we have one heck of a problem.

MR. GRAVEL.

I thought of one, are all of these things valid that people just thought out (indisc. simultaneous speech - laughter). I am starting to do things in my life that I haven't thought out. It is a real tragedy, it really is. The fact that 20 some odd thousand signatures you know the only thing I can say is that that is not a majority of Alaska.

MR. CHAIRMAN.

Mr. Malone.

MR. MALONE.

Thank you, Mr. Chairman. On that subject, of course, I think that the referendum to a large extent does capitalize on people's frustrations and I think those frustrations are unlikely to be relieved if the referendum should be adopted. There will be problems of access, there will be problems of services, there will be problems of getting clear titles and there are only really two courses of action that the legislature can take at this time. One is to adopt an alternative program that would preclude the ballot measures, I don't know if there is a responsible program that would really preclude the ballot measures under the laws of the Constitution, of the State of Alaska and make an attempt

in that direction. The other thing is responsible measures at least to point out the shortcomings of the proposed initiative. I think the ideas behind it are probably valid at least at the root but I think it something that is not going to work once adopted and I expect it to be adopted because on the ballot at least it would be today. It might be time to change the (indisc.) between now and the election,not right now, I admit, but I think there are going to be some problems in even gaining the piece of paper that Senator Gravel is talking about there will be worse problems when it comes to access and should people manage to settle on the land they will need some kind of access and get their title. They are not going to get any form of governmental services whatsoever or most likely an economic basis to generate anything for a long, long time. In addition to the problems that might create in terms of perceptions in the Congress of the United States, I think the problems are of internal program that should be raised on the question on the ballot and I don't see any other course or anything other than those two courses of action (indisc.) I don't think that the question should be ignored. I don't think that is responsibility either even if the ballot measure should fail it is going to come back again.

MR. GRAVEL.

I was hoping to sit this year out, but if that's the situation that the legislature does not have the power to correct, change the setbacks we have, I am sure I will be out there campaigning against this and the only way that would be possible if a lot of others like you would join me and be out there campaigning (indisc.) I'll volunteer to lead the charge and reap whatever I reap figures in.

MR. PARKER.

Senator, getting back to HR39. I mentioned earlier that if all else fails you and Senator Stevens would engage in a filibuster wouldn't that also preclude any hope at all for next years (indisc.) of state land transference and land (indisc.).

MR. GRAVEL.

The question is that everything is delayed. We are held in suspension, it might even trigger a freeze by the executives in retaliation, but that could be in my mind a better situation then having a permanent bad situation forced upon us. So, you know, it's not much but again it's better (indisc.). I think the environmentalist and the leadership in the House certainly recognize that this is serious business. I've seen many times where you march up the hill and all of a sudden you pull the power and you don't have the ability to get back up the hill again and they are marching up the hill, they are doing quite well, you know maybe it is the time to compromise. It's only a fool in a moral contest that doesn't compromise.

MR. CHAIRMAN.

(Indisc.) any other questions? (Indisc.)

No thank you, Mr. Chairman, I am going to be testifying on this other committee.

CHAIRMAN OSTERBACK:

Any other questions. Representative

Just one point, Mike, you were talking about low profile. This is in view of the Capital move and even worse financing the gap of the pipeline.

MR. GRAVEL.

On the gas pipeline you have just been given a presentation. I'll have some real specific requirements in that area. I need some time myself to study that. I'll be going to New York I think on the second to speak to a group on Wall Street, a group of Bankers, which is what I did several times during the Alyeska deal (indisc.) to talk to them about Alaska's future and so I will have a little better feel on that situation. (indisc. simultaneous speech, laughter). It used to be back in Washington and travelling around the country, it used to be I would be asked about wolves, in fact I can recall once in my hotel on my pillow there was a little note stating save the wolves. Probably the (indisc.) historically has been about wolves. Our mail has not run heavily nationally but wherever I go it used to be how cold is it in Alaska, now it is oh, you are moving your Capital, huh? How is that going? For some reason it has captured the imagination of the American people. I think I stated earlier that I felt it had some (indisc.) because anybody who could afford to move the Capital has got to have a little wealth, and, now I must confess, I don't feel all those decrements (ph) taking place in the quarry but they could be there subconsciously and you just don't know. Of course you can't psychoanalyze every body that you meet, but you do know that every so often when you propose a piece of legislation where you are going for an appropriation all of a sudden everybody in the room votes against you, you smellyour breath to see if you have bad breath, you can't understand why out of no where everybody is against you. When that phenomena occurs and its occurred to me several times, I know it's occurred to Senator Stevens, I know it has occurred to Don Young. You ask yourself, is there something wrong with me or is there something going on that I can't perceive in the subconscience of the bodies I am dealing with. I went to a hearing once on a housing issue unbelievably meritorious and my colleagues in the Senate they were having to hear it (indisc) and they started making statements, well you Alaskans got it all, (indisc.) this (indisc.) is a very very serious thing. It is almost impossible to handle, so you know we can talk about the Capital move contributing to that, I don't know. I suspect that that is about the extent of it. So far it is just an oddity.

(indisc. simultaneous speech - laughter)

It occurred to me when you said it might not be too smart for us to be out of the ordinary does the figure 4.4 billion dollars (indisc.). Is that a little out of the ordinary? Is that the figure you are talking about?

MR. GRAVEL.

Let me respond by saying this. When the Congress focuses on whatever the cost is and they focus on the fact that maybe it is a conspicuous consumption you can bet your bottom dollar that somebody is going to say if you want to do it you do it on your money. You are not going to use my money. I think that will eventually happen. Roberto Compos (ph), I don't know if you know the name, is the Brazilian Ambassador to the Court of St. James. He is the architect of the economics of Brazil, (indisc.) Brazil. Brazil is one of the five super powers of the world. It is unbelievable what is going on and Roberto is one of the great renaissance of our society in his area, he is every bit as important of a person as Henry Kissinger. He resigned from his position over the Brazilian question, and when I saw him in London when I was coming out of the North Sea,boy he just assaulted me on (indisc)so if anyone wants to get a speaker up here that wants to take that side invite him and three good speakers on the other side. I didn't mean to dodge your question. (indisc. simultaneous speech - laughter).

(indisc.) you had a question?

CHAIRMAN OSTERBACK.

Just one before we let you go. (indisc.) I have been there twice and they have a different system than we have. If they have a big buzzer in a committee room. (indisc.) a couple times we went in to see a couple Senators, and the buzzer rang and they said we have to go, there is an issue on the floor and we have to go to vote, and then they leave, so if the buzzer rings you are left standing by yourself. And their committee rooms are real small. Sometimes two chairs and I don't know what 60 people would do. They don't have room to stand. Like you said get the money and travel two or three at a time.

MR. GRAVEL.

I think this may be the beginning of doing it every two or three years. Maybe during your two year tenure that one trip should be authorized for each member so they could get acquainted with their interrelationship with federal government.

Not only d-2 and looking into the future, but do you anticipate anything more important in Washington, D.C. then d-2 in Alaska?

MR. GRAVEL.

Not at this time.

Down the road?

MR. GRAVEL.

Yes. In economic terms, yes, but nothing of permanent nature. D-2 is on the order of native claims, on the order of statehood, on the order of purchase of Alaska. Once we are by that we are by the issue, the rest will warrant attention and will obviously be important as was the pipeline. But nothing of a permanent nature, d-2 is the biggest thing we have got going. No question about that. But I am persuaded that you do your jobs much better here when you interface more directly with your Congress rather than through our office. Thank you very much. It has been a pleasure being here.

CHAIRMAN OSTERBACK. Thank you very much, Senator.

MR. COWPER:

It is going to be a great help to the Congressional Delegation and instead of going into all the reasons why we should have this and why it is such a good thing, I think that has been pretty well covered, I would like to bring up one thing and I have a specific suggestion for an amendment on the Bill. The AFN has suggested that we place in any such legislation as this an authorization for the commission or whatever it is called, to enter into cooperative agreements with private land owners and the incentive for submitting our private to the jurisdiction of the commission would be that there would be no real estate taxes on any lands put in under the jurisdiction of the commission for a period of not less than five years. This is endorsed by AFN and I think it is a good idea and I think we should have a joint management agency or joint management system as to what land is being managed, particularly contiguous land (indisc.) I would like to suggest the following amendments and then I will yield to Mr. Parker. On Page 3, line 12, omit all the language after the word "land owner". Because we would like to, I think it might be well not to restrict those agreements just to contiguous land. Then add the following section in the appropriate place. SEction 41.45.085 seems like a good place to add it. If a private land owner, including any entity established under the Alaska Native Claims Settlement Act, enters into an agreement by which the commission manages undeveloped land, cross out undeveloped, I think, by which the commission manages land owned or selected under an Act of Congress by such private land owners, for a minimum of five years such land shall be exempt from any property tax on the land for the time it is managed by the commission. If the land is withdrawn from the commission's management before the minimum five year period then all property taxes on such land which would otherwise have been payable shall be due at the time the land is withdrawn. Now as you know we don't have a tax on unorganized borough right now but we might at some future time and I believe that this concept has been endorsed not only by the AFN but also at least by certain members of the congressional delegation. I think it is a good idea and it provides (indisc.) that consistent management plan spread not only the public land but the private land. Mr. Chairman that's all I have and I have this Amendment which I'll be glad to pass to the staff. Unfortunately it is not typed and it is sorta scratched out.

CHAIRMAN OSTERBACK.

Representative Malone.

MR. MALONE.

I just have one quick question, Mr. Chairman. Steve, you have been working on this stuff and all, what's your ideas in respect to the reality of adopting common management approach as an alternative, I won't say compromise, because it is not a compromise.

MR. COWPER.

Well, I think that the possibility is very real. I think what we have to do is take care of the fear that people have and I am speaking very frankly of the environmental community that the State will have effective control over the management of all federal lands in Alaska, or a substantial portion of it, without any (indisc.) I think if we come in and we establish a management system by which a joint commission manages not only federal but also state and native lands or private land, and we also provide a (indisc) by the land owners so that if the land owner doesn't like the decision being made it goes back to the drawing board and I think it should be acceptable, as Senator Gravel said, the main problem is not in the concept really but everybody says this isn't acceptable because they'll appoint somebody who is unacceptable to run it. They are afraid the system won't work just because they are not sure who is going to be administering the system. That's the problem everywhere. No system works if it isn't administered by good people. But I think there is a real chance of doing it. There is not any chance of doing it in the House. But I think it is a concept that has been advanced so many times at that level that when it comes back to them from the Senate they do not even look at it twice. That's my interpretation of what I have seen of it.

CHAIRMAN OSTERBACK.

Are there any other questions? (indisc.)

Why did you leave out the undeveloped (indisc.)

MR. COWPER.

Ah, Rick (ph) this is just to be consistent with AFN's position. I don't think that a real estate tax as such is all that way of getting into that sort of thing anyway. But, it it is consistent with AFN's position. I rather suspect that land which is developed in the sense of having a village on it or something like that isn't going to be turned over to the land (indisc) commission to manage. It is not precluded for instance personal property tax is the (indisc.) on pipeline property or production property on the slope. It would not preclude that and also it wouldn't preclude the severance taxes. I would think that the way you would get income being generated into land that is under the commission's jurisdiction would be through income taxes.

CHAIRMAN OSTERBACK.

Any other questions?

MR. COWPER.

Thank you, Mr. Chairman. I will have this proposed amendment

typed out and sent down to Committee (indisc.)

CHAIRMAN OSTERBACK.

Thank you. Mr.

Thank you, Mr. Chairman and Committee members. I would like to note that Commissioner Holdsworth(ph) is here also and he tells me he testified before you yesterday. This is the second time I have testified on House Bill 211. I testified last year. I didn't have much to offer except my personal opinions because the commission had not taken a (indisc.) position on the future land use planning commission. They finalized their position at a meeting in September of 1977 and that is contained in a Position paper which I will submit for the record for your concurrence as part of this testimony. I have some brief record testimony also which I would like to submit for the record and just highlight that, if that's alright. The need for a continuing commission as well said by Senator Gravel and Representative Cowper, I think that the main point that needs to be made what does a continuing commission offer for the state that the existing federal - state relationship does not offer. I think for me the important thing it offers is a thermo entry for the state through the commission into the federal planning process in the early stage. It also offers a form for mitigating and coordinating effects of single agency management. Whatever comes out of the d-2 legislation we are going to see a substantially stronger position for all federal land management and resource management agencies in Alaska. I think it's to the advantage of the people of Alaska that they have some form in which they don't have to be (indisc.) in which all the agencies are brought together and force to bounce from one position to another. It would be (indisc.) under its new organic act the thing that has extremely strong powers and if Alaskans are going to have any real say in future management of federal lands in the state I think that some form of commission structure is vitally important and therefore I strongly support the concepts expressed in HB 211. The points that Representative Cowper made on the native lands I strongly support also because as both the commission's inventory reveals and the state inventory, the native selected lands are prime lands for wildlife habitat and resource development (indisc.). They are also key strategic lands of transportation and are in effect the strategic lands of the state because of their relationship to the coast line and the rivers, primarily. So it is imperative that they be encouraged to cooperate to the maximum extent in the future system.(indisc.) has not taken a real position on state lands in this and the reason for that is that in dealing with the d-2 situation it did restrict itself to dealing with the federal lands and in dealing with the state land, of course was recently made a good many recommendations

to this committee and I think if you want a position from the commission on whether it feels all state lands should come under a future commission or a portion of the state lands we could certainly attempt to give you that but we have not had one as yet. In any case, to get to the specifics of HB 211 as our recommendations relate to it, the commission has recommended to continue the membership of 10 members with 2 co-chairmans rather than 7 members recommended in HB 211 and also recommends the continuation of the presidential appointment on the federal side and the governor's designation on the state side to continue to provide strong leadership with such a commission. The difference between the assembly chairman and the co-chairman is an important one. As a single chairman I think would be extremely powerful individual. He would probably be appointed by the President with the concurrence of the Governor and Legislature and the advice and consent of the U.S. Senate, and if he was able to get through all those steps then there is no doubt about it he would have a predominant role in the state. Whereas, if you have the two co-chairman, they tend between them to adjust a good many federal state conflicts before they get to the full commission or to the congress or to the legislature, so it depends between a single chairman and co-chairman how strong you would want the future commission to be in its relationship to both governments. The commission agrees with HB 211 in that the commission members do not be institutional or ex-officio. We found that having state commissioners sit on the commission is not in the best interest of the state commission or the commission because he has to represent the administrations point of view in his particular area and very strongly rather then reasonably independent point of view. And we also recommend the appointants not be representatives of special interests because the sub-committee that worked on this felt that special interest representation tended to institutionalize conflict rather than to contribute to problems solution. What the commission is supposed to do is to resolve problems before they become problems that require either legislative action or extreme action by the President or the Governor. They also felt that the commissioner should continue to be part time except for the co-chairman. The general feeling was that full time commissioners would tend to institutionalize its own perspective while part time commissioners were subject to other pressures and open to other viewpoints from the various sectors in which they operate when they are not being commission members. Also part time was felt to be more open to public input then full time. And, the present commission also felt that the commission should serve at the pleasure of the appointed official rather than (indisc.) this position differs from HB 211. The primary reason for this was that it was felt that the commission should relate strongly to whatever political views of either federal administration and state administration was. Of course, if you are appointed for a term then the commission once again has much more independence in itself so once again it depends on how strong you want that commission to be.

Regarding the duties of the commission our recommendations differ only in degress to those contained in HB 211. The major difference Commissioner Holdsworth(ph) went into with you yesterday. We see the commission's role on (indisc.) plans as classified. Whereas management would be continued by the land agencies for any of the federal and state side. That is an important distinction. You don't want to create another bureaucracy in this position to give the management powers well then you have to give him the man power to manage. The idea is to keep the commission very small in policy making and research groups, and certainly no larger then the federal commission. If it does expand why then it would inevitably tend to become another government agency and (indisc.) One of the things that we have felt to be a real power in the present commission in which future commissions should continue, the commission should be (indisc. cough) the Governor and the Legislature and to the President and the Congress, and being an advisory role only you certainly have (indisc.) committee programs (indisc.) if you have program responsibility. We think that needs to be continued and the only exception would be the classification of common management plans. Also in some spelled out roles in cooperative planning insuring both governments that Fish and Game managements would lean towards acceptable manner, the transportation planning would lean toward acceptable manner, research coordination and day assistance coordination are the four areas where we felt we really need a lot of mileage if you can coordinate them strongly and keep the agencies on either side from dealing in the territorial (indisc.) too heavily. The other area strongly stressed is the system of joint classification. As we have seen the future thus far the difference between the commission classifying common management land and the joint classification would be the commission would bring the two governments together to establish joint classification standards and (indisc. cough) the state and then BLM on one side or the other federal agency and the Division of Lands would use those classification standards and work them between the two of them with some commission over sight would arrive at joint classification for those particular areas. So in those areas rather then doing it yourself well the commission would encourage the cooperation existing to the maximum extent possible.In time we would approach what we would call total (indisc) HR 39. We would do it with cooperation between the two governments rather than proposed by HR 39 by standard refuge of park boundaries. (Indisc. cough) Because no matter how much those refuge or park boundaries they are going to protect those refuge and park boundaries you are not going to protect the entire critical areas that are entire watersheds. Eventually you have to get to this strong cooperating system anyway. One thing that is missing from HB 211 is the veto power on the state and federal side. We think it is important that you protect the sovereignty of both governments by incorporating that veto power. One thing that this present commission has that no other federal-state entity we studied has is the veto power of the state and that is very important to retain. It certainly made the present commission operate totally different from any other state organization that I have been associated with, and we did some research on some other organizations

and I will offer that for the record, Commission Memo dated March 15th, 1977, which has a rather comprehensive research on other federal-state entities. When we made our position we examined HB 211 of course, from last year, and we Secretary Andres (ph) amendments to HR39 (indisc. cough) operating management and we also had Senator Steven's Bill on cooperating management and so we considered all of those in reaching our decision. We then had the Seiberling which was contained in committee print 3 of HR39 before us but as I understand it that's changed little from committee print 2, so the comments which we enclosed in our letter to Congressman Seiberling on January 17th of this year would still be germane as to how we feel about that particular language and also that's for the record with this testimony. I am getting a big mound of paper here dealing with cooperative management and hopefully it will shed a little more light in particular areas. One other important area that we feel very strongly about is the executive coordination committees being established by both the state and federal government to review the commission's work. This is especially important at the federal level because you can coordinate all you want to in Alaska and get all the agencies meeting in unison and take it back to Washington you will have to go in and deal with each department separately. It wasn't always that way, the old Federal Appeal Committee for Development Planning Alaska we did have an executive review agency which was chaired by the Secretary of Commerce but which also reported to the White House but we were able to get good use out of that executive review committee during the earthquake relief and during the early stages of the land claim settlement. I think we just erred in not re-establishing that to relate to the present commission. We should have made sure Congress put it in the legislation report and it's not as critical at the state level to have that kind of executive review since the commission works on a continuing basis review level committees where the commission is concerned to review the commissioner's work on a state level also.

We do feel also that you need a more direct relationship between the commission and the land and resource management agencies on both sides. The way we do that is simply forming them together into a technical advisory committee to the commission which would have to come together composed of the land and resource managers on both state and federal sides that would have to come together and either relate to commission for the propositions that were put before them or they could develop propositions which they wish to put before the commission. Right now we don't have that kind of institutionalized dialogue between management agencies and the commissions and we try to institute it constantly but it's not spelled out in the legislation so the agencies can either come together or not if they feel whether they can get away with it or not, and usually they are pretty good about coming together on the issues we've developed but having it in the language would give the commission much stronger coordinating powers and that briefly are the major concepts that we would like to see incorporated in HB 211. We would certainly be willing to either

draft suggested amendments or work with you in any way we can.

CHAIRMAN OSTERBACK.

Representative Malone.

Mr. Malone.

Thank you, Chairman. Well, I would like to start out by asking my basic question on this thing. In your understanding and knowlege of activities that take place in the Congress and also the attitudes that may exist in the different federal bureaucracies, how realistic is this approach if it could work if it were adopted?

MR.

Of course it has been a while since I came on the commission and I can't -- don't know what the relationship was with the previous federal chairman or the previous state chairman of the federal agency, but the commission was able to make some steps forward when the federal administration changed and the d-2 perceptions in the interior and the conveyance of native lands in several other areas. I was the only chairman at that time in the interim between Mr. Sokof (ph) leaving and Mrs. Warnecke (ph) appointment but even though I wasn't the federal chairman, even though I was a state chairman why the door was open and we were able to get initiatives launched last spring that probably would have been delayed until late summer or fall, the spring of '77 I am talking about now, which if it had to have gone through the conventional route through the agencies and the difference, of course, that I was saying that I was going in and saying to the secretary was on native conveyances you've got a problem. The natives are not getting their land fast enough, BLM isn't working fast enough and obviously BLM isn't going to go say that to him, or the Assistant Secretary for Lands and Waters. On the d-2 issue HR 39 had just come out and of course that was Secretary Andres (ph) (indisc) and was able to immediately put before him critical areas on Fish and Game Management and Wilderness and the other points of disagreement with HR 39 so he could start relating to those. It's unfortunate that in the House of Representatives the sub-committee who handled that took its original draft from the Alaska Coalition and represented only that perspective and since the commission didn't agree with the original HR 39 they really hand's used it to the extent that they could. In April they practically threw us out of the hearing and by July they said well, this is good stuff and they started to use it but on the Senate side we have always had an excellent relationship directly and you know, we don't go through administration, we go directly to Congress.

CHAIRMAN OSTERBACK.

Representative Malone.

Mr. MALONE.

Yes I have a number of questions, but I have a follow-up question on that one. Considering that the commission is basically is a (indisc.) of Congress in the first place how come the House at least in the early stages decided to by-pass. (Indisc.)

MR.

The sequence of events is simply that the committee chairman and the sub-committee chairman knew that the commission's position wasn't the position they wanted so they (indisc. blank tape)

MR. MALONE.

How is it they work again at present, how is it they work?

On the Washington level there is no institutionalized coordination on Alaska matters. Right now they've got a group which was set up to coordinate gas lines for the gas pipe line. There is no d-2 coordinating group that brings all departments together to coordinate d-2 matters so the way d-2 is coordinated in the federal government is that in the last days of August and the last week of August and the first week of September the Interior sent out its information for comments and comments came back and they all put it together at a meeting and it was kind of a rushed process. If there had been a continuing executive review committee of the commission's actions why all these things that the commission had developed over the last five years would have been considered by these departments in Washington on a continuing basis, as it was every department just reacted to the Department of Interiors initiative. The only reason things went (indisc.) was that we took it upon ourselves in the spring of '76 to coordinate d-2 with all of the federal agencies concerned, transportation, energy, defense, and so forth, but it would be a lot easier to have them all in the same room rather than to have to go to each one individually but that's what we were up against.

MR. MALONE.

One final question. What would be possible in addition to us getting an advanced copies of proposed amendments of HB 211. Would it be possible for the commission to provide somebody to sit in on a mark up session of the bill?

CHAIRMAN OSTERBACK.

Yes, we could do that.

MR. MALONE.

Thank you.

CHAIRMAN OSTERBACK.

What we discussed, we had a meeting with Senator Mike Gravel and(indisc.) and he will send one of his staff members to work up a mark up session and we have a holiday coming up now. But the thing is you said you wanted to get something in from the legislators what we are all going to back and bring it in and he will take it up before the Senate or down there, correct me if I am wrong, and with the legislators behind he thinks it will carry a lot of weight instead of someone coming in with a different amendment all the time, come up with a package saying this is what the state is backing. Diann?

MS. NELSON.

One thing that we discussed is that we would assign Mr. George (indisc.) and Bill Berrier(ph) and Jack (indisc.) and would work with one member of the Steering Council staff and your office, Walt, and possibly come up with a committee substitute within a week or so. Something that we could bring before this committee as a mark-up copy and bring it back.

CHAIRMAN OSTERBACK.

Representative Malone.

MR. MALONE.

Mr. Chairman, I wonder if that schedule isn't a little optomistic. I don't object to the speed except (indisc. noisy tape)

MS. NELSON.

Can we schedule a meeting for next week in the evening?

(WHEREUPON due to bad noise on the tape I was only able to pick up selected portions of the discussions)

CHAIRMAN OSTERBACK.

What I was going to suggest is that we get everything together for a mark up (Indisc.)

DRAFT D-2 BILL--SENATOR MIKE GRAVEL

George

A BILL

To designate certain lands in the State of Alaska as units of the National Park, National Wildlife Refuge, National Wild and Scenic Rivers, and National Forest Systems, to create a Federal-State Land Use Planning Commission, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Alaska Lands Conservation and Management Act."

SEC. 2 (a) In order to preserve for the benefit, use, education, and inspiration of present and future generations certain natural lands and rivers in the State of Alaska that contain nationally significant natural scenic, historic, archeological, geological, scientific, wilderness, cultural, recreational, and wildlife values, the areas described in Title I are, subject to valid e sting rights, hereby declared to be units of the National Park System; the areas described in Title II are, subject to valid existing rights, hereby declared to be units of the National Wildlife Refuge System; the areas described in Title III are, subject to valid existing rights, hereby declared to be units of the National Wild and Scenic Rivers System; lands described in Title IV are, subject to valid existing rights, hereby declared to be added to units of the Nation al Forest System; and lands designated in Title V are, subject to valid existing rights, hereby declared to be units of the National Wilderness Preservation System.

(b) It is the intent of Congress in this Act to preserve unrivaled scenic and geological values associated with natural landscapes; to provide for the maintenance of sound populations of, and habitat for, residen and nonresident wildlife species; to preserve in their natural state unaltered ecosystems; to protect the resources related to subsistence needs; to protect and preserve the historic and archeological heritage of Alaska and the nation; to preserve wilderness resource values and related recreational opportunities; and to maintain opportunities for scientific research in undisturbed ecosystems.

(c) It is also the intent of Congress to provide a management system for the lands which are not located within the conservation system units designated in the Act which will be provide a mechanism for making sound land use decisions on lands owned by one or more governmental or private entities but which contain common resources requiring complementary management decisions and actions.

(d) It is also the intent of Congress to encourage the use and appreciation of the various conservation system units designated by this Act by the public. To the extent that it is compatible with the resources and values for which the unit was established, access and facilities to accommodate visitors and recreationists to and within the designated units would be developed in connection with the management plans for the areas.

and nonresident wildlife species of inestimable value to the citizens of Alaska and the Nation, including those species dependent on vast relatively undeveloped areas; to preserve in their natural state extensive unaltered arctic tundra, boreal forest, and coastal rainforest ecosystems; to protect the resources related to subsistence needs; to protect and preserve historic and archeological sites, rivers, and lands, and to preserve wilderness resource values and related recreational opportunities within large arctic and subarctic wildlands and on freeflowing rivers; and to maintain opportunities for scientific research and undisturbed ecosystems.

(e)(1) Areas established in titles I ~~and~~ II, +IV of this Act shall, subject to valid existing rights, comprise the lands, waters, and interests therein within the boundaries generally depicted on the maps bearing the following designations:

The boundaries of areas added to the National Park and Wildlife Refuge Systems shall, in coastal areas, not extend seaward beyond the mean high tide line to include lands owned by the State of Alaska unless the State shall have concurred in such boundary extension and such extension is accomplished under the notice and reporting requirements of this Act.

(2) The maps described in subsection (c) of this section shall be on file and available for public inspection in the office of the Secretary of the Interior (hereafter referred to as the "Secretary"), or the Secretary of Agriculture with regard to the National Forest System.

(3) As soon as practicable after enactment of this Act, a map and legal description of each change in land management status effected by this Act in the four national conservation systems, including the National Wilderness Preservation System, shall be published in the Federal Register and filed with the Speaker of the House of Representatives and the President of the Senate, and each such description shall have the same force and effect as if included in this Act: Provided, however, That correction of clerical and typographical errors in each such legal description and map may be made. Each such map and legal description shall be on file and available for public inspection in the office of the Secretary. Whenever possible, boundaries shall follow hydrographic divides or embrace other topographic features in all cases where straight line map boundaries approximate such features. Following reasonable notice in writing to the Congress of his intention to do so, the Secretary of Interior and the Secretary of Agriculture may make minor adjustments in the boundaries of the areas added to or established as units of the National Park, Wildlife Refuge, Wild and Scenic Rivers, and the National Forest Systems by this Act.

TITLE I-NATIONAL PARK SYSTEM

~~Purpose~~ Establishment of New Areas

SEC. 101. (a) The following areas are hereby established as units of the National Park System and shall be administered by the Secretary under the laws governing the administration of such lands and under the provisions of this Act:

DRAFT

(1) Wrangell-St. Elias Park and Preserve, containing approximately _____acres of Federal lands;

(2) Gates of the Arctic Park, containing approximately _____ acres of Federal lands;

(3) Lake Clark Park and Preserve, containing approximately _____acres of Federal lands;

(4) Kobuk Valley Monument, containing approximately _____ acres of Federal lands;

(5) Cape Krusenstern Monument and Preserve, containing approximately _____acres of Federal lands;

(6) Aniakchak Monument and Preserve, containing approximately _____acres of Federal lands;

(7) Yukon-Charley National Rivers, containing _____acres;

ADDITIONS TO EXISTING AREAS

SEC. 102. (a) The following units of the National Park System are hereby expanded:

(1) Mount McKinley National Park by the addition of _____ acres of Federal land;
(i) the park is hereby redesignated as "Denali National Park, and
(ii) the mountain known as Mount McKinley shall hereafter be known as "Denali". Any law, regulation, map, document, or record of the United States in which such mountain is designated or referred to under the name Mount McKinley shall be held to refer to such mountain under and by the name of "Denali."

(2) Katmai National Monument by the addition of _____ acres of Federal land, and the monument is hereby redesignated as "Katmai National Park" ;

ADMINISTRATIVE PROVISIONS

SEC. 103. (a) The Secretary shall administer the lands, waters and interests therein added to existing units, or established by the foregoing sections of this title as new units, of the National Park System in accordance with the provisions of law applicable to the National Park System, except that the taking of fish and wildlife may be permitted under the provisions of Title VII of this Act, and transportation and utility rights-of-way may be granted by the Secretary across units of the National Park System under the provisions of Title X of this Act.

(b) All valid Native selections or nominations of lands within the boundaries of the Gates of the Arctic National Park or

DRAFT

the Wrangell-St. Elias National Park,as established under this Act, are hereby recognized and shall be honored and conveyed by the Secretary in accordance with the Alaska Native Claims Settlement Act and Title VIII of this Act.

TITLE II--NATIONAL WILDLIFE REFUGE SYSTEM

Establishment of new areas

SEC. 201. The following areas are hereby established as units of the National Wildlife Refuge System, and shall subject to valid existing rights, be administered by the Secretary pursuant to the provisions of law governing the administration of such units and under the provisions of this Act:

(1) Selawik Refuge, containing approximately _____acres of Federal lands;

(2)Koyukuk Refuge, containing approximately _____acres of Federal lands;

(3) Innoko Refuge, containing approximately _____acres of Federal lands;

(4) Shishmaref Refuge, containing approximately _____ acres of Federal lands;

(5) Kanuti Refuge, containing approximately _____acres of Federal lands;

(6) Kaiyuh Refuge, containing approximately _____acres of Federal lands;

(7) Alaska Marine Resources Refuge, containing approximately _____acres of Federal lands;

ADDITIONS TO EXISTING REFUGES

SEC. 202. The following units of National Wildlife Refuge System are hereby expanded:

(1) Arctic National Wildlife Range by the addition of approximately _____acres of Federal lands.

(2) Clarence Rhode National Wildlife Range and Hazen Bay National Wildlife Refuge by the addition of approximately _____acres of Federal lands; furthermore, the Clarence Rhode National Wildlife Range and Hazen Bay National Wildlife Refuge are hereby redesignated as the Yukon Delta National Wildlife Refuge.

(3) Cape Newenham National Wildlife Refuge by the addition

DRAFT

of approximately _____acres of Federal lands;

(4) Kenai National Moose Range by the addition of approximately _____acres of Federal lands;

ARCTIC NATIONAL WILDLIFE RANGE EXCHANGE

SEC. 203. The subsurface estate of approximately 280,000 acres of land described on the map numbered _____within the existing Arctic National Wildlife Range are hereby removed from the Range. After concurrence by the Governor of the State and the Secretary _____acres of lands selected, tentatively aprroved for patent, or patented to the State which are located adjacent to one or more of the areas designated in Title I or II of this Act shall be conveyed to the Federal Government or retained in Federal ownership and shall be added to the respective unit designated in Title I or II. Upon concurrence of these State lands by the Governor and the Secretary, the subsurface estate of those lands described in this section within the Arctic National Wildlife Range shall be conveyed to the State of Alaska.

SEC. 204.(a) The Congress finds that despite the authority of the Secretary to grant leases for the exploration and development of oil and gas resources on units of the National Wildlife Refuge System, oil and gas leases have not been let for all intents and purposes on refuge system lands in Alaska. Furthermore, the Congress finds that with strict regulations governing surface uses within refuge system lands oil and gas exploration and possible development could occur with minimal and acceptable impact on the resources and values for which the unit was established.

(b) The Secretary shall initiate a leasing program for oil and gas resources of lands designed in this Title. In his determination of those lands for which leases would be let he shall seek the recommendations of representatives of the oil and gas industry, conservation groups, the State of Alaska, local governments, Native corporations, and other interested parties. The Secretary shall prescribe such regulations as may be reasonably necessary to insure that exploration and development occurs in a manner which does not result in significant adverse impacts on the resources or values for which the refuge unit was established.

DRAFT

TITLE III---NATIONAL WILD AND SCENIC RIVERS SYSTEM

Additions to the National Wild and Scenic Rivers System

SEC. 301(a) Section 3(a) of the Wild and Scenic Rivers Act (16 U.S.C. 1247(a)) is amended by adding the following new paragraphs at the end thereof:

(16) .....
(17) .....
etc.

(b) Detailed boundaries and development plans referred to in this section shall be established and prepared within one year of enactment of this Act. Such boundaries shall include an area up to one mile from either side of the mean high water level of the river segments designated in Section 301(a)

(c) The units designed in this section would be managed by the federal agency designated as manager of the lands adjacent the designated river.

DRAFT

TITLE IV--NATIONAL FOREST SYSTEM

SEC. 401. The following units of the National Forest System are hereby expanded:

(1) Tongass National Forest by the addition of ___areas, containing _____acres of Federal lands;

(2) Chugach National Forest by the addition of _____areas, containing _____acres of Federal lands;

TITLE V--DESIGNATION OF WILDERNESS AREAS AND WILDERNESS STUDY AREAS WITHIN UNITS OR ADDITIONS TO UNITS OF THE NATIONAL FOREST SYSTEM

SEC. 501. In furtherance of the purposes of the Wilderness Act, and subject to valid existing rights, the following lands are hereby designated as wilderness and , therefore, as components of the National wilderness Preservation System:

(1) Within the Tongass National Forest the following areas are hereby designated:
(i) the area known as _____comprised of _____ acres of land
(ii) the area known as _____comprised of _____ acres of land
etc.

SEC. 502. In furtherance of the purposes of the Wilderness Act, the Secretary of Agriculture shall review each area designated by this section as to the suitability or nonsuitability of such area for preservation as wilderness and report his findings to the President and to Congress within three years after enactment of this Act:

(1) Within the Tongass National Forest the following areas are hereby designated for study:
(i) the area known as _____comprised of _____ acres of land;
(ii) the area known as _____comprised of _____acres of land;

ADMINISTRATIVE PROVISIONS

SEC. 503. (a) The provisions of this section are enacted in recognition of the unique character of the wilderness in Alaska. Nothing in this section shall be construed to expand, diminish, or modify the provisions of the Wilderness Act or the application or interpretation of such provisions with respect to lands outside of Alaska.

(b) Such measures may be taken as the concerned Secretary finds are necessary for the control of fire, insects, and diseases, subject to such conditions as he deems desirable to maintain the wilderness character of the area.

(c) Customary use of aircraft, motorboats, and snowmobiles where such use has already become established, shall be permitted to continue in areas designated as wilderness, subject to such restrictions as the concerned Secretary determines necessary to maintain the wilderness character of the area.

(d) Within national forest wilderness areas designated by this Act, the Secretary of Agriculture shall permit the taking of fish and wildlife on lands under his jurisdiction in accordance with applicable laws of the United States and the State of Alaska. Subsistence activities described in Title VII of this Act, including access by motorized vehicles shall also be permitted within wilderness areas designated under this Act.

(e) Previously existing public use cabins within national forest wilderness areas de ignated by this Act, may be permitted to continue and may be maintained or replaced subject to such restrictions as the Secretary of Agriculture deems necessary to preserve the wilderness character of the area. Also subject to such restrictions, the Secretary is authorized to permit the construction and maintainance of new cabins and shelters with wilderness areas designated under this Act for the purpose of protection of public health and safety, for the protection and preservation of the wilderness character of the area, or to meet minimum requirements for the administration of the area.

(f) Commercial services may be performed within the wilderness areas designated by this Act to the extent necessary for activities which are proper for realizing the recreational or other wilderness purpose of the areas.

(g) In any case where State-owned or privately owned land or mining claim land is completely surrounded by national forest lands ##### designated by this Act as wilderness areas, the State or private owner or interest holder shall be given such rights as may be necessary to assure adequate access to such State-owned, privately owned land, or ##### mining claim.

(h) In accord with principles of sound fisheries management, the appropriate Secretary is authorized to permit research, fish stocking, enhancement, rehabilitation and development activities and

the development of fish aquaculture and research sites within wilderness areas designated by this Act, ȣȿ/ȟȩ/ȣȩȴȩȓȓȋȟȩȡ/ȴȹ ƀȩ/ȟȩȩȩȿȿȣȳ/ȣȟȣ/ȣȩȿȋȓȩƀȴȩ to study, restore, augment, or sustain fish populations. Structures for any such research or fish aquaculture sites shall consist of only facilities essential to these operations. Such facilities shall be constructed in such manner as to minimize impact on the natural environment and the wilderness values for which the area was established. The Secretary of Agriculture is authorized to allow the State and/or holder of a permit for fish enhancement program or development reasonable access, including possible motorized access, for necessary fish and wildlife management activities. In addition, such reasonable access shall be provided for the evaluation of sites needed for fisheries research, enhancement, rehabilitation, and development and for the construction, operation and maintenance of authorized projects.

SENATOR MIKE GRAVEL

DRAFT

TITLE VI -- ALASKA FEDERAL-STATE LAND USE PLANNING COMMISSION

Sec. 601. (a) Following designation under Alaska State law of all lands patented or tentatively approved for patent to the State to be cooperatively managed with designated Federal lands, there is hereby established the Alaska Federal-State Land Use Planning Commission (hereinafter referred to as the "Commission").

(b) In addition to the designated State lands, the Commission shall have jurisdiction over all public lands in the State of Alaska under the management of the Bureau of Land Management, including the National Petroleum Reserve in Alaska.

(c) With the approval of the Commission, lands for which patents or interim conveyances have been issued to Native corporations under the terms of the Alaska Native Claims Settlement Act may be placed under the jurisdiction of the Commission pursuant to the procedures and conditions which shall be enacted by the State of Alaska.

Sec. 602. (a) (1) The Commission shall, subject to the provisions of Section 101, be composed of nine members as follows:

(A) One member appointed, after consultation with and concurrence by the Governor of Alaska, by the President of the United States, with the advice and consent of the

Senate, who shall be Chairman of the Commission;

(B) Four members appointed by the President of the United States, with the advice and consent of the Senate;

(C) Four members appointed by the Governor of the State of Alaska with the advice and consent of the State Legislature.

(2) Upon the first vacancy of a position under subparagraph (B) and subparagraph (C) (whether created by expiration of a member's term or otherwise) occurring on or after the date on which 80 per centum or more of all lands for which patents or interim conveyances have been issued have been dedicated by Native corporations for jurisdiction under the Commission, the President and the Governor, in filling those vacancies, shall appoint a Native (as that term is defined in the Alaska Native Claims Settlement Act) to fill the respective vacancy, and thereafter, as long as such lands remain so dedicated, at least one of such members appointed pursuant to subparagraph (B) and subparagraph (C) of subsection (a)(1) shall be a Native.

(b) (1) The Chairman shall be compensated at a rate to be determined by the president not to exceed the rate provided for GS-18 of the General Schedule under Section 5332 of Title 5, United States Code.

(2) All other members of the Commission shall be compensated at a rate to be determined by the President,

after consultation with and concurrence by the Governor of Alaska, not to exceed the rate provided for GS-16 of such General Schedule.

(3) Upon vouchers approved by the Chairman, all members of the Commission shall be reimbursed for necessary expenses incurred by them in carrying out their duties under this Act.

(c) The Commission, with the approval of the Chairman, is authorized to obtain the services of experts and consultants in accordance with Section 3109 of Title 5, United States Code.

(d) Members shall serve for a four-year term except that, of the initial members appointed pursuant to subparagraph (B) of subsection (a)(1), two members shall be appointed for two-year terms, and of the initial members appointed pursuant to subparagraph (C) of subsection (a)(1), two members shall be appointed for two-year terms. A vacancy in the membership shall not affect the Commission's powers but shall be filled in the manner provided in paragraph (2) of subsection (a). Any person appointed to fill a vacancy involving an unexpired term shall serve for the duration of that term. Except to the extent otherwise provided in subsection (a), members may be reappointed to serve additional terms.

(e) Six members of the Commission shall constitute a quorum, except that the Commission may establish a

lesser number for purposes of subsection (g).

(f) All Commission meetings shall be public and shall be duly noticed at least fifteen days prior to the date when the meeting is to take place.

(g) The Commission, or on its authorization, any subcommittee or member thereof, may hold such hearings, take such testimony, receive such evidence, and print such reports as are deemed necessary to carry out the functions specified in this Title.

(h) The Chairman shall have the authority, in accordance with regulations prescribed by the Commission, to create and abolish employments and position, including temporary and intermittent employments; to fix and provide for the qualification, appointment, removal, compensation, pension and retirement rights of Commission employees; and to procure needed office space, supplies and equipment.

(i) The principal office of the Commission shall be located in the State of Alaska.

(j) The federal government shall pay only 50 per centum of the costs and other expenses incurred in each fiscal year by the Commission in carrying out its duties under this Act.

(k) The Commission is authorized to use the services, equipment, personnel and facilities of Federal departments and other agencies, with or without reimbursement. Each department and agency of the Federal government shall cooperate

fully in making its services, equipment, personnel and facilities available to the Commission.

(l) The Commission is authorized to accept donations, gifts and other contributions and to utilize such donations, gifts and contributions in carrying out its functions under this Act.

(m) The Commission shall keep and maintain complete accounts and records of its activities and transactions, and such accounts and records shall be available for public inspection.

(n) The Commission shall, on or before March 1 of each year, prepare and submit to the President, the Governor of Alaska and the Congress an annual report summarizing its activities during the preceding calendar year, together with its recommendations.

Sec. 603. (a) It shall be the function of the Commission:

(1) to review resource inventories prepared by the managing agencies and other affected or concerned Federal and State agencies on lands under the jurisdiction of the Commission; and to initiate and conduct other such inventories and resource studies as may be needed;

(2) to develop comprehensive land use plans with respect to lands under the jurisdiction of the Commission;

(3) to make land classifications pursuant

to such plans, and to approve and to supervise the regulation of uses in accordance with such plans and classifications;

(4) to assure that such classifications would specifically identify lands which are suitable and open for the following primary uses:

(A) oil and gas exploration and possible development;

(B) mineral exploration and possible development;

(C) human habitation, permanent and seasonal;

(D) agricultural and aquaculture development;

(E) timber harvesting;

(F) tourism/recreational development;

(G) primitive or wilderness use;

(H) fish and wildlife habitat; and

(I) other resource uses as may be appropriate.

(5) to assist in the development and review of land-use plans for lands selected by Native corporations under the terms of the Alaska Native Claims Settlement Act which may not be designated for jurisdiction by the Commission; ~~to assist in the development and review of land use plans for State lands not designated for jurisdiction by the Commission;~~ and to assist in the development and review of land-use plans of municipal governments;

(6) to review existing withdrawals of Federal public lands and recommend to the President and Congress such additions to or modifications of such withdrawals as the Commission deems appropriate;

(7) to make recommendations to the President and the Governor regarding the programs and budgets of the Federal and State agencies responsible for the administration of the public lands of the United States and the State of Alaska;

(8) to make recommendations, from time to time, to the President, Congress and the Governor and the Legislature of the State of Alaska as to changes in laws, policies and programs relating to the public lands which the Commission deems necessary or desirable;

(9) to make recommendations to the appropriate officers of the governments of the United States and the State of Alaska to develop general plans which would insure that economic growth and development are orderly, planned and compatible with State and national economic, social and environmental objectives;

(10) to make recommendations to appropriate officers of the United States, the State of Alaska and municipal officials to improve coordination and consultation between the Federal, State and municipal governments in making resource allocations and land use decisions;

(11) to coordinate the implementation by Federal and State agencies the provisions of the following laws as they may affect lands under the jurisdiction of the Commission:

(i) Federal Water Pollution Control Act as amended;
(ii)Clean Air Act as amended;
(iii) Solid Waste Disposal Act;
(iv) National Environmental Policy Act of 1969;
(v) Coastal Zone Management Act of 1972 as amended;
(vi) Safe Drinking Water Act;

In order that Commission may review all pertinent actions in regard to the above mentioned laws, to insure that conflicts do not occur between the rules, regulations, or policies of the various federal and state agencies involved with the implementation of these laws, and to insure that uses being permitted under these laws are consistent with the overall land use plans and classifications developed by the Commission for particular lands under their jurisdiction, the federal agencies authorized with the administration of the various provisions of the above-described laws shall provide the Commission with copies of all orders, notices, or other material initiated by the agency concerning the implementation of the above-mentioned laws affecting any lands under the jurisdiction of the Commission.

Prior to the finalization of any rule, regulation, stipulation, policy or other action affecting uses of lands under the jurisdiction of the Commission, any federal agency authorized to implement terms or provisions of the above-mentioned laws shall solicit and receive comments on the proposed action from the Commission. The agency or Department shall take whatever actions or make modifications as are reasonable and in keeping with the provisions of the above-mentioned laws to obviate conflicts or problems which the Commission may identify in its comments.

(12) to determine the location of specific routes or corridors which would serve identified regional, statewide or national transportation or utility needs; approve rights-of-way across lands under its jurisdiction and make specific recommendations to the appropriate Federal or State officer or private landowner where such rights-of-way would cross lands not under the Commission's jurisdiction, and in

connection therewith the Commission shall evaluate alternative routes and modes and shall seek to recommend prudent and feasible routes and corridors which minimize environmental impacts.

(b) With respect to the uses under paragraph (4) of subsection (a), the Commission shall have the authority to pursue such uses on a lease basis under such terms as it may prescribe or under applicable provisions of the public land laws.

(c) With respect to all Federal lands subject to the jurisdiction of the Commission, the Secretary may veto a decision of the Commission. With respect to all State lands subject to the jurisdiction of the Commission, the Governor of Alaska may veto a decision of the Commission. With respect to any lands owned by Native corporations subject to the jurisdiction of the Commission, either the Secretary or the Governor may veto a decision by the Commission.

(d) Federal, State and Native corporation lands under the jurisdiction of the Commission shall continue to be managed by the respective agencies established under Federal and State law, and in the case of corporation lands, by the respective corporation owner, provided that uses shall be regulated in accordance with classifications made by the Commission. Except to the extent that they would be inconsistent with a Commission classification or the provisions of this Act, land use management decisions made by an agency shall be in accordance with the laws

and regulations which generally govern the functions of such agency.

(e) Lands under the jurisdiction of the Commission shall be withdrawn from all forms of disposition or appropriation under Federal or State public land laws, including mining and mineral leasing laws, until a land use plan has been completed for the particular area by the Commission and classifications imposed in regard to permissable land uses.

(f) In performing the functions described in Section 103 (a) the Commission shall hold public hearings in the specific locale or region for which specific land use plans, classifications or actions are being proposed or considered.

Sec. 604. Notwithstanding any other provision of law, Federal participation in the Joint Federal-State Land Use Planning Commission for Alaska, established in Section 17(a) of the Alaska Native Claims Settlement Act, shall cease 180 days following the date of enactment of this Act or upon establishment of the Commission provided for in Section 101 of this Title, whichever first occurs. Immediately upon termination of Federal participation, all unexpended funds appropriate to the Joint Commission and all property shall be returned, as appropriate, to the United States and the State of Alaska, unless the Commission provided for in Section 101 of this Title has been established, in which case all Federal funds and property shall be transferred to the Commission.

Sec. 605. (a) On or before the ninety-day period immediately preceding the date of the expiration of the ten calendar year period following the date on which the Commission takes effect, the Secretary of the Interior shall report to the President and the Congress with respect to the Secretary's views and recommendations concerning the desirability or non-desirability of continued Federal participation in the Commission.

(b) Unless otherwise hereafter provided by law, Federal participation in the Commission shall terminate upon the expiration of the ten calendar year period following the date on which the Commission takes effect.

DRAFT

TITLE VII-SUBSISTENCE

Findings

Sec. 701. The Congress finds and declares that-

(1) The continuation of subsistence uses by Natives of Alaska on the public lands and on their Native lands is essential to their physical, economic, and cultural existence.

(2) The continuation of subsistence uses by some other residents of the State of Alaska on the public lands is essential to their physical, economic, and traditional existence.

(3) The situation in Alaska is unique in that, in most cases, no practical alternative means are available to replace the food supplies and other items gathered from fish and wildlife which supply persons dependent on subsistence uses.

(4) Continuation of subsistence uses of resources on public and other lands in Alaska is threatened by the increasing population of Alaska, with resultant pressure on subsistence resources, by sudden decline in the populations of some wildlife species which are crucial subsistence resources, and by increased accessibility of

(5) In order to fulfill the policies and purposes of the Alaska Native Claims Settlement Act, and as a matter of equity, it is necessary for the Congress to invoke its constitutional authority over Native affairs and over management of the public lands to protect and continue subsistence uses on public lands by Alaska Natives and other Alaska residents.

(6) The national interest in the proper regulation, protection, and conservation of fish and wildlife on the public lands in Alaska and the continuation of the opportunity for a subsistence way of life by the inhabitants of Alaska require that an administrative structure be established for the purpose of enabling people who have personal knowledge of local conditions and requirements to have a meaningful role in the management of fish and wildlife (including habitat) and of subsistence uses on the public lands in Alaska.

Policy

Sec. 702. It is hereby declared to be the policy of Congress that-

(1) It is the purpose of this title to ensure that management policies on the public lands in Alaska will cause the least adverse impact possible on rural people who traditionally and consistently depend upon

constraints of sound biological management and the purposes for which conservation system units are established, designated, or expanded by or under this Act, the purpose of this title is to provide the opportunity for people engaged in a genuinely subsistence-oriented lifestyle to continue to do so if they desire and to allow such people to decide for themselves their own degree of subsistence dependency and the rate at which acculturation or adjustment to a nonsubsistence way of life may take place.

(2) Subsistence use of wildlife and other renewable resources shall be the first priority consumptive use of all such resources on the public lands of Alaska, and where it is necessary to restrict taking in order to assure the continued viability of a fish or wildlife resource or the continuation of subsistence uses of such resource, the taking of such resource for subsistence uses shall be given preference on the public lands over recreational, sport, or other consumptive uses.

(3) Except as otherwise provided by this Act or other Federal laws, Federal land managing agencies, in managing subsistence activities on the public lands and in protecting the continued viability of all wild renewable resources in Alaska, shall cooperate with

Corporations, appropriate State and Federal agencies, and other nations.

Definition

Sec. 723. As used in this Act, the term ''subsistence uses'' means customary and traditional uses in Alaska of wild, renewable resources for direct personal or family consumption as food, shelter, fuel, clothing, tools, or transportation, for the making and selling of handicraft articles including clothing, or for the customary trade or barter among subsistence users for personal or family consumption. Such uses may provide nominal cash supplement.

State Regulation

Sec. 724. (a) Except as otherwise provided by this Act and other Federal laws, during an interim period of 18 months beginning on the date of the enactment of this Act, the State of Alaska is authorized to regulate, in a manner not inconsistent with the policies set forth in section 722, the taking of fish and wildlife for subsistence uses on the public lands in Alaska. If the State fails to accept such authority, the Secretary shall regulate such taking during such period in a manner not inconsistent with such plicies.

(b) At the end of the 18-month interim period, the State of Alaska is authorized to regulate, in a manner consistent with the provisions of this Act, the taking of fish and

If the State fails to accept such authority, the Secretary shall regulate such taking in a manner consistent with the provisions of this Act, including applicable provisions of this ~~section concerning State~~ regulation.

(c) If the State wishes to exercise the authority conferred under paragraph (b) of this section, then within 18 months after the date of the enactment of this Act, the Governor of the State of Alaska shall submit to the Secretary a State program which shall include at least the following elements:

~~(1) A management plan which has as its central elements (A) the maintenance of the continued viability of the populations of fish and wildlife species on the public lands, and~~ (1) a system capable of monitoring subsistence and other consumptive uses of such species to ensure that timely and appropriate State action will be taken to carry out the purposes and policies of this title.

(2) The establishment of not less than five or more than twelve fish and game management regions which, taken together, shall include all public lands where the State is exercising regulatory authority under this title. After consultation with the Secretary, the Native Corporations, rural residents, and other

time determine the number and boundaries of such regions taking into account the exterior boundaries of Native Corporations, State fish and game management unit boundaries, ecosystems, the migration and movement of fish and wildlife utilized for subsistence purposes, the boundaries of boroughs, cities, towns, and unincorporated municipalities, and other relevant factors.

(3) A State law or regulation which-

~~(A) provides for the regulation of the taking of fish and wildlife on the public lands by a professionally staffed State agency which has an administrative structure compatible with the provisions of this section and which has adequate enforcement authority;~~

(A) provides priority for subsistence uses over other consumptive uses of fish and wildlife on the public lands; and

(B) provides that, when it is necessary to restrict the taking or other consumptive uses of subsistence resources in order to protect the continued viability of such resources or the continuation of subsistence uses of such resources, restrictions and limitations on and priorities for

basis of the following criteria: (i) customary and direct dependence upon the resource as the mainstay of one's livelihood, (ii) local residency, and (iii) availability of alternative resources.

(4) A system of local and regional fish and game councils within each management region referred to in paragraph (3). Each such council shall be composed of residents of the concerned region and shall have the following functions:

(A) Reviewing, developing, and evaluating proposals for regulations, policies, management plans, and other matters relating to the conservation and utilization of fish and wildlife in such region.

(B) Providing a forum for the expression of opinions and recommendations by persons interested in any phase of fish and game conservation and utilization.

(C) Maximizing local and regional participation in the fish and wildlife decisionmaking process.

(D) Preparing a subsistence management plan ~~for such region~~ or a general fish+wildlife management plan which includes subsistence uses for such region. The plan shall ~~be updated annually and shall~~ contain (i) an identification of current and anticipated subsistence uses of fish and wildlife in

basis of the following criteria: (i) customary and direct dependence upon the resource as the mainstay of one's livelihood, (ii) local residency, and (iii) availability of alternative resources.

(4) A system of local and regional fish and game councils within each management region referred to in paragraph (3). Each such council shall be composed of residents of the concerned region and shall have the following functions:

(A) Reviewing, developing, and evaluating proposals for regulations, policies, management plans, and other matters relating to the conservation and utilization of fish and wildlife in such region.

(B) Providing a forum for the expression of opinions and recommendations by persons interested in any phase of fish and game conservation and utilization.

(C) Maximizing local and regional participation in the fish and wildlife decisionmaking process.

(D) Preparing a subsistence management plan ~~for such region~~ or a general fish+wildlife management plan which includes subsistence uses for such region. The plan shall ~~be updated annually and shall~~ contain (i) an identification of current and anticipated subsistence uses of fish and wildlife in

basis of the following criteria: (i) customary and direct dependence upon the resource as the mainstay of one's livelihood, (ii) local residency, and (iii) availability of alternative resources.

(4) A system of local and regional fish and game councils within each management region referred to in paragraph (3). Each such council shall be composed of residents of the concerned region and shall have the following functions:

(A) Reviewing, developing, and evaluating proposals for regulations, policies, management plans, and other matters relating to the conservation and utilization of fish and wildlife in such region.

(B) Providing a forum for the expression of opinions and recommendations by persons interested in any phase of fish and game conservation and utilization.

(C) Maximizing local and regional participation in the fish and wildlife decisionmaking process.

(D) Preparing a subsistence management plan ~~for~~ or a general fish+wildlife management plan which includes subsistence uses for such region~~s~~ ~~such regions~~. The plan shall ~~be updated annually and~~ ~~shall~~ contain (i) an identification of current and anticipated subsistence uses of fish and wildlife in

anticipated subsistence needs for fish and wildlife in such region, (iii) a subsistence management strategy for fish and wildlife resources of such region, and (iv) proposals for policies, standards, guidelines, and regulations necessary to implement the plan.

(5) The ~~assignment of adequate and~~ provision of necessary staff to the regional councils and the distribution of all available, relevant technical and scientific support data to the local and regional councils.

(6) A requirement that the State agency referred to in paragraph (3)(A) or any other rulemaking authority shall adopt recommendations of the regional councils concerning the taking of fish and wildlife within their respective regions unless any such recommendation is not supported by substantial evidence, is violative of recognized principles of sound fish and wildlife management, or would be detrimental to the satisfaction of local subsistence needs.

(7) A requirement that if a recommendation of a regional council is rejected by the State agency referred to in paragraph (3)(A) or any other rulemaking authority, such agency or authority shall make findings of fact detailing the basis for its failure to adopt the

(d) The Secretary shall issue a certificate of approval for the State program and publish such program in the Federal Register if he finds that such program complies with the provisions of this section and is well adapted to achieve the purposes and policies of this Act. If the Secretary is unable to make such finding, he shall so notify the State and shall afford the State an opportunity to modify its program under a procedure similar to the procedure set forth in section 705. If the State fails to submit a State program within the 18-month period established in section 704(b), the State shall be deemed to have failed to accept the authority to regulate the taking of fish and wildlife on public lands in Alaska granted by this section.

Enforcement Duties of Secretary of the Interior

Sec. 705. (a) After issuance of a certificate of approval under section 704(d) of this title, the Secretary of the Interior shall monitor the implementation of the State program. If the Secretary determines that the program or its implementation is not in compliance with the requirements, purposes, or policies of this Act, he shall so notify the State and shall indicate changes in its program or its implementation which he considers necessary to bring the State into compliance.

In his review the Secretary shall consult with the local and regional councils referred to in Section 704(c)(4).

(b) Following any such notification of deficiencies in the State's program by the Secretary, the Secretary shall afford the State a hearing pursuant to the Administrative Procedures Act. If, after such hearing, the Secretary is not satisfied that the State is compliance with the provisions of this Act he shall issue a final notification to the State specifically indicating those provisions which he deems the State not to be in compliance with and indicating specific actions he believes the State need take to be in compliance with the provisions.

(c) If, after a reasonable opportunity, the State fails to make the changes in its program or its implementation as indicated by the Secretary of the Interior under subsection (b) of this section, the Secretary may temporarily suspend, in whole or in part, the certificate of approval issued under Section 704(d). Following any such temporary suspension, the Secretary shall afford the State an opportunity to appeal such temporary suspension. Within 30 days after receipt of such appeal, the Secretary shall afford the State a hearing pursuant to the Administrative Procedures Act, and within 30 days after such hearing, shall make his final decision of such appeal. If the Secretary

finds the State is in compliance with the State program and the requirements, purposes, and policies of this Act, he shall revoke his temporary suspension. If the Secretary finds the State is not in such compliance, he may suspend the certificate in whole or in part. Upon any such suspension, the Secretary of the Interior (or, as to lands under his jurisdiction, the Secretary of Agriculture) shall assume, in accordance with the requirements, purposes, and policies of this Act (including applicable provisions of section 704 pertaining to State regulation), responsibility for the regulation of taking of fish and wildlife on the public lands to which such suspension applies, until such time as the Secretary revokes such suspension or certifies that the State is in compliance with respect to such public lands.

(d) Notwithstanding any other provision of law, the Secretary, after adequate notice and public hearing, may temporarily close any of the public lands in Alaska (including those within a conservation system unit) or any portion thereof to subsistence or other uses when necessary for reasons of public safety or to assure the continued viability of one or more fish or wildlife species.

Cooperative Arrangements

Sec. 706. The Secretary is authorized to enter into cooperative agreements or otherwise cooperate with other

Federal agencies, the State of Alaska, Native corporations, and other appropriate persons and organizations (including, through coordination with the Secretary of State, and other nations) to effectuate the purposes and policies of this title.

Subsistence and Land Use Decisions

Sec. 707. In determining whether to withdraw, reserve, lease, or otherwise permit the use, occupancy, or disposition of public lands under any provision of law authorizing such actions, the head of the Federal agency having primary jurisdiction over such lands or his designee shall evaluate the subsistence needs of the persons who would be affected, the availability of other lands for the purposes sought to be achieved, and other alternatives which would reduce or eliminate the use, occupancy, or disposition of public lands needed for subsistence purposes. No such withdrawal, reservation, lease, permit, or other use, occupancy, or disposition of such lands which would significantly restrict subsistence uses shall be effected until the head of such Federal agency-

(1) gives notice to the appropriate local and regional councils described in section 704(c)(4) if such councils have been established,

(2) gives notice of, and holds, a hearing in the vicinity of the area involved, and

(3) determines that such significant restriction of subsistence uses is necessary and unavoidable.

Access

Sec. 708. The Secretary shall ensure that persons engaged in traditional or customary subsistence activities shall have appropriate access to subsistence resources on the public lands.

Snowmobiles and Motorboats

Sec. 709. Notwithstanding any other provision of this Act or other law, the Secretary shall permit appropriate use for subsistence purposes of snowmobiles, motorboats, and other means of surface transportation traditionally employed for such purposes, on the public lands, subject only to such reasonable regulations as are necessary to prevent abuse, waste, or damage to terrain or other natural values.

Research

Sec. 710. The Secretary of the Interior and the Secretary of Agriculture shall each undertake research on fish and wildlife and subsistence activities on the public lands, seek data thereon from subsistence users, consult such users frequently, and make findings concerning such research available to the State of Alaska, the local and regional councils described in section 724(b)(5), subsistence users, and other appropriate persons and organizations.

Periodic Reports

Sec. 711. Within five years after the date of the enactment of this Act and every two years thereafter, the Secretary of the Interior, in consultation with the Secretary of Agriculture, shall prepare and submit a report to the President of the Senate and the Speaker of the House of Representatives on the current status of fish and wildlife and subsistence and other uses of those resources on the public lands. The report shall include the following:

(1) An evaluation of the performance of the State of Alaska, if the State is then regulating the management and taking of fish and wildlife under this title.

(2) The status of fish and wildlife populations on the public lands.

(3) The number of persons engaged in subsistence uses and in other uses of fish and wildlife on the public lands.

(4) The status of subsistence uses in the economy and culture of rural Alaska.

(5) Any comments on the report made by the State of Alaska, the local and regional councils described in section 704(c)(4), and other appropriate persons and organizations.

(6) A description of those actions taken, or which

may need to be taken in the future, to permit the continuation of subsistence activities on the public lands, as well as recommendations for any legislation the Secretary deems desirable.

The report shall be published in the Federal Register and made available to the public.

Regulations

Sec. 712. The Secretary of the Interior and the Secretary of Agriculture shall each prescribe such regulations as are necessary and appropriate to carry out their respective responsibilities under this title.

Other Laws

Sec. 713. Nothing in this title shall be deemed to modify or repeal the provisions of the Fur Seal Act of 1966 (16 U.S.C. 1151 et. seq.), the Endangered Species Act of 1973 (16 U.S.C. 1531 et. seq.), the Marine Mammal Protection Act of 1972 (16 U.S.C. 1361 et. seq.), the Bald and Golden Eagles Protection Act (54 Stat. 250; 16 U.S.C. 668), the Fish and Wildlife Act of 1956 (70 Stat. 1119), the Migratory Bird Treaty Act (16 U.S.C. 701 et. seq.), or the Airborne Hunting Act (P.L. 92-159, as amended).

Limitations

Sec. 714. (a) Nothing in this title shall be construed as granting any property right in any fish, wildlife, or other resource of the public lands in Alaska.

(b) Nothing in this title shall be construed as permitting any subsistence use of the resources of any portion of the public lands (including any unit of the National Park System) where any such use was prohibited on the date of the enactment of this Act.

Reimbursement to State

Sec. 715(a). Upon the issuance of a certificate of approval described in Section 704(d) of this Title, the Secretary is authorized to reimburse the State agency described in Section 704(c)(3)(A), from funds appropriated for the Department of the Interior, for costs relating to the implementation of the State program. Sums paid under this section shall be in addition to any grants, payments or other sums to which the State is entitled under existing law. The purpose of such reimbursements shall be to assist the State in developing and implementing the State program described in Section 704. Such reimbursements shall not exceed 50 per centum of the costs of the program's development, implementation or support, as verified in such statement as the Secretary determines to be an adequate, accurate account.

(b) No reimbursements shall be paid under this Section for any costs incurred by the State during the period of a temporary or other suspension of the State program under Section 705.

(c) Total payments to the State under this Section shall not exceed the sum of $5 million in any one fiscal year.

(d) The Secretary shall periodically review the financial aspects of implementation of the State program, and shall advise the Congress at least once in every ten years as to the sufficiency of funds authorized by this Section to the proper implementation of the State program.

(e) In the event that adequate funds, are not appropriated for a particular fiscal year, the Secretary and the State shall, after public hearing, prioritize the requirements of this Title consistent with the policy and purposes of the Title and the availability of funds.

DRAFT

TITLE VIII - Native + State Land Conveyance

Conveyance of Core Township Lands

Sec. 801. (a)(1) Except to the extent that conveyance of a surface estate would be inconsistent with section 22(1) of such Act there is hereby conveyed to and vested in each Village Corporation (other than those Village Corporations to which the provisions of paragraph (2) of this subsection apply) for a village which has, by the date of enactment of this Act, been determined to be eligible for land pursuant to the Alaska Native Claims Settlement Act all of the right, title, and interest of the United States in and to the surface estate in the township or townships withdrawn for that village pursuant to section 11(a)(1)(A) or section 16(a) of such Act in which all or any part of that village is located.

(2) There is hereby conveyed to and vested in each Village Corportion which has, by the date of enactment of this Act, elected to acquire title to any estate pursuant to section 19(b) of the Alaska Native Claims Settlement Act all right, title, and interest of the United States in and to

DRAFT

those estates in a reserve set aside with respect to such Corporation referred to in such section.

(3) There is hereby conveyed to and vested in the appropriate Regional Corporation all of the right, title, and interest of the United States in and to the subsurface estate to which each Regional Corporation is entitled under the Alaska Native Claims Settlement Act by reason of the vesting of title under paragraph (1) of this subsection.

(b) As soon as possible after the date of enactment of this Act, the Secretary shall issue to the Native Corporations referred to in subsection (a) interim conveyances or patents to the lands identified in such subsection, but title shall be deemed to have passed on the date of enactment of this Act, notwithstanding any delay in the issuance of the interim conveyances or patents.

(c) A Village Corporation's obligation to reconvey lands under section 14(c) of the Alaska Native Claims Settlement Act shall arise only upon receipt of an interim conveyance or patent under subsection (b) of this section or under such Act. For purposes of sections 14(c), 14(f), and 22(g) of the Alaska Native Claims Settlement Act, interim conveyances and patents issued pursuant to this Act shall have the same effect as if issued pursuant to sections 14(a) and 14(b) of the Alaska Native Claims Settlement Act and shall be deemed to have been so issued. Disputes between or among Native

Corporations arising from conveyances under this Act shall be resolved in the same manner as described in section 12(e) of the Alaska Native Claims Settlement Act with respect to disputes over land selection rights and the boundaries of Village Corporations.

(d) With respect to all conveyances made by sections 801 and 802 of this Act, the provisions of the first two sentences of section 14(g) of the Alaska Native Claims Settlement Act, pertaining to valid existing rights, apply as if such conveyances were made under the Alaska Native Claims Settlement Act.

Other Conveyances to Native Corporations

Sec. 802. (a) If a Native Corporation qualified to receive land under the Alaska Native Claims Settlement Act wishes to utilize the expedited conveyance procedure of this section, then, within 180 days after the date of enactment of this Act, such Corporation shall file with the Secretary a document or documents which shall identify such Corporation's priorities for the conveyance of all their entitlement to lands under the Alaska Native Claims Settlement Act, other than those lands to which the provisions of section 801(a) of this Act apply.

(b)(1) Within 180 days after the filing of a priority identification by a Native Corporation under subsection (a) of this section, the Secretary shall-

(A) determine the extent to which each land selection contained in such priority identification is valid under the Alaska Native Claims Settlement Act; and

(B) subject to the provisions of subsection (c) of this section, determine the amount of such Corporation's total land entitlement under such Act, excluding land entitlements of such Corporation to which the provisions of section 821(a) of this Act apply.

Except as provided in paragraphs (2) and (3) of this subsection, or the tenth day following the making of such determinations, all of the right, title, and interest of the United States in and to the lands to which such Corporation is entitled according to such determinations and in accordance with such priority identification shall vest in and be conveyed to such Corporation.

(2) In any case in which the Secretary determines under paragraph (1)(A) of this subsection that a land selection-

(A) which is contained in the pricrity identification of a Native Corporation filed under subsection (a) of this section, and

(B) which appears in such priority identification at a level where the cumulative total of acreages of valid land selections ranked above such selection does not exceed the amount of such Corporation's total land entitlement determined under paragraph (1)(B) of this

subsection,

is ~~valid~~ invalid, total amount of lands conveyed by paragraph (1) of this subsection shall be reduced by an acreage which equals the acreage of the land selection determined to be invalid.

(3) In any case in which the Secretary, before the conveyance of lands to a Native Corporation by paragraph (1) of this subsection, determines that a Native Corporation's land selection described in subparagraphs (A) and (B) of paragraph (2) of this subsection is subject to valid selections under the Alaska Native Claims Settlement Act by one or more other Native Corporations, the total amount of lands conveyed by paragraph (1) of this subsection shall be reduced by an acreage which equals the acreage of the land selection determined to be validly selected by such other Corporations.

(4) Any reduction made under paragraph (2) or (3) of this subsection shall be effective until—

(A) the concerned Native Corporation accepts the Secretary's determination in writing;

(B) a final decision is rendered upon any contest by such Corporation of the Secretary's determination; or

(C) a final settlement or final decision settling the concerned contest among such Corporation and other Native Corporations is rendered.

On the tenth day following the occurrence of any one of the

events listed in the preceding sentence, all right, title, and interest of the United States in and to the lands to which such Corporaton is entitled as a result of such occurrence and in accordance with the priority identification filed by such Corporation under subsection (a) and the provisions of paragraph (1) of this subsection shall vest in and be conveyed to such Corporation.

(5) Within 90 days after the date of a conveyance under paragraph (1) or (4) of this subsection, the Secretary shall issue to the concerned native Corporation itserim conveyances or patents to the lands subject to such conveyance, but title shall be deemed to have passed on the date of such conveyance, notwithstanding any delay in the issuance of this itnerim conveyances or patents.

(c) In any case in which the land entitlement of a Native Corporaton under the Alaska Native Claims Settlement Act (other than the land entitlements of such Corporation to which the provisions of section 801(a) of this Act apply) has not been or cannot be precisely determined on the date of enactment of this Act, the Secretary shall determine such Corporation's minimum entitlement under the Alaska Native Claims Settlement Act and shall publish this figure in the Federal Register within 90 days after the date of enactment of this Act. Such minimum land entitlements shall be redetermined and any change therein published in the Federal

Register not less frequently than every six months thereafter. For purposes of subsection (b) of this section, the land entitlement under the Alaska Native Claims Settlement Act of any such Native Corporation shall be the most recent minimum figure published in accordance with this subsection until the total land entitlement of such Corporation is finally determined.

(d) Within 180 days after the date of each determination and redetermination made under subsection (c) of this section, the Secretary shall issue to the concerned Native Corporation interim conveyances or patents to those additional lands to which such Corporation, as a result of such determination or redetermination and in accordance with the priority identification made by such Corporation under subsection (a) of this section, is entitled under subsection (b) of this section, but title shall be deemed to have passed on the date of such determination or redetermination, notwithstanding any delay in the issuance of the interim conveyances or patents.

(e) Wh

conveyance procedure under Subsection (a) of this Section, the Secretary shall, at the time he determines the entitlement and validity of priority selections pursuant to subsection (b)(1) of this section, reduce the total excess land selections of such corporation to twenty-five percent of the amount of remaining land entitlement to which the corporation has not yet received all right, title and interest of the United States. Upon subsequent receipt by such corporation of all right, title and interest of the United States to other lands toward fulfillment of its entitlement, the excess land selections of such corporation shall be reduced pro rata to maintain a total of excess selections of twenty-five percent of the remaining entitlement which has not yet been conveyed to such corporation.

(e) For purposes of this section and sections 801(c) and 803 of this title, the term ''Native Corporation'' means any Village Corporation, any Regional Corporation, and any native group as such term is defined in section 3(d) of the Alaska Native Claims Settlement Act.

Administrative Provisions

Sec. 823. (a) Any other provision of law to the contrary notwithstanding, no conveyance of lands by section 821(a) of this Act made to a Village Corporation shall be subject to any easement, except an easement required to be reserved pursuant to section 14(g) of the Alaska Native Claims Settlement Act.

(b) With respect to Native lands (other than those lands conveyed by section 821(a) of this Act) hereby or hereafter conveyed, the Secretary shall only reserve those easements which are of a type described in section 14(g) or 17(b)(1) of the Alaska Native Claims Settlement Act.

(c) Whenever, after conveyances have been made pursuant to this Act or the Alaska Native Claims Settlement Act, the Secretary determines that an easement not reserved at the time of conveyance is required for any purpose specified in section 17(b)(1) of the Alaska Native Claims Settlement Act, he is authorized to acquire such easement by purchase or otherwise. The acquisition of such an easement shall be deemed a public purpose for which the Secretary may exercise his exchange authority pursuant to section 22(f) of the Alaska Native Claims Settlement Act.

withdrawn for selection by the Corporation under the Alaska Native Claims Settlement Act and to which no valid third-party rights have attached. To the extent lands described in the preceding sentence are insufficient to satisfy the entitlement of the Corporation to additional land under paragraph (2) of this subsection, the Secretary shall make available for selection by the Corporation other lands of like kind and character from the nearest available public lands which are outside the boundaries of a conservation system unit.

(d) Offers for noncompetitive oil and gas leases pursuant to the Mineral Leasing Act of 1920, as amended, which were filed over-the-counter or by simultaneous drawing but not accepted or approved on or before January 1, 1970, on lands selected by and conveyed to Native Corporations as part of their entitlement under the Alaska Native Claims Settlement Act shall not constitute a valid existing right within the meaning of section 14(g) of such Act or under this Act.

(e) This Act is not intended to modify, repeal, or otherwise affect any provision of the Act of January 2, 1976 (P.L. 94-224; 89 Stat. 1145), and shall not impose any additional restriction on the use or management of those lands described in section 22(k) of the Alaska Native Claims Settlement Act.

DRAFT

Sec. 805 State of Alaska Land Selections and Conveyances.

(a) In furtherance and confirmation of the State of Alaska's entitlement to certain National forest and other Public lands in Alaska for community development and expansion purposes, Section 6(a) of the Act of July 7, 1958, 72 Stat. 339, as amended, hereinafter referred to as the Alaska Statehood Act, is amended in part by addition of the following provision immediately following the last sentence of said subsection: "The State is hereby provided a ten-year extension of the time limit originally specified in this Act, that is, until January 3, 1994, within which to select its land entitlement under this subsection in its entirety."

(b) In furtherance and confirmation of the State of Alaska's entitlement to certain public lands in Alaska, Section 6(b) of the Alaska Statehood Act is amended in part by addition of the following provisions immediately following the last sentence of said subsection:

(1). The State is hereby provided a ten-year extension of the time limit originally specified in this Act, that is, until January 3, 1994, within which to select its land entitlement under this subsection in its entirety.

(2). The proviso regarding Presidential approval of land selections north and west of that line described in Section 10 of this Act is hereby repealed.

(c) The State of Alaska is hereby granted and shall be entitled to select until January 3, 1994, from surveyed or unsurveyed federal lands which are vacant, unappropriated and unreserved at the

time of their selection, those school indemnity lands to which the Territory of Alaska was entitled under Section 1 of the Act of March 4, 1915, as amended by the Act of March 5, 1952, and the Act of August 27, 1958, 72 Stat. 928; Provided, however, that this entitlement of the State to school indemnity lands is limited to lands in lieu of surveyed sections made unavailable for school reservation purposes by prior Federal disposal, appropriation or reservation for other purposes as of July 7, 1958, and shall not exceed 80,000 acres. The provisions of the Act of February 28, 1891 (26 Stat. 791, 43 USC Sec. 852), as amended, are made applicable to the selection and conveyance of indemnity lands granted by this subsection, insofar as such Act does not conflict with this subsection.

(d) All tentative approvals of State of Alaska land selections pursuant to the Alaska Statehood Act are hereby ratified and confirmed, subject only to valid existing rights and to land conveyances made pursuant to lawful selections filed by Native village corporations on or before December 18, 1974, pursuant to Sections 12(a) or 12(b) of the Alaska Native Claims Settlement Act, 85 Stat. 688 (1971), as amended, and the United States hereby confirms that all right, title and interest of the United States in and to such lands is deemed to have vested in the State of Alaska as of the date of tentative approval.

(1). Upon approval of land survey by the Secretary, such lands shall be patented to the State of Alaska.

(2). If the State elects to receive patent to any of the lands which are the subject of this subsection on the basis of protection surveys in lieu of field surveys, the Secretary shall issue patent to the State on that basis within six months after notice of such election.

(3). Future tentative approvals of State of Alaska Land Selections, when issued, shall have the same force and effect, and shall be treated in the same manner as those existing tentative approvals specified in this subsection.

(e) All valid State of Alaska land selections heretofore made pursuant to the Alaska Statehood Act are hereby confirmed, subject only to valid existing rights, conveyances made pursuant to lawful selections filed by Native village corporations on or before December 18, 1974 pursuant to Sections 12(a) or 12(b) of the Alaska Native Claims Settlement Act, 85, Stat. 688 (1971), as amended, and tentative approval and patent pursuant to Section 6(g) of the Alaska Statehood Act.

(1). Within one year after the date of passage of this Act, the Secretary shall issue tentative approvals to such State selections as required by section 6(g) of the Alaska Statehood Act, and pursuant to subsection (j) of this section. All right, title and interest of the United States shall vest in the State of Alaska upon issuance of such tentative approvals.

(2). Upon approval of land survey by the Secretary, such lands shall be patented to the State of Alaska.

(3). If the State elects to receive patent to any of the lands which are the subject of this subsection on the basis of protraction surveys in lieu of field surveys, the Secretary shall issue patent to the State on that basis within six months after notice of such election.

(4). Future ~~levid~~ VALID State of Alaska Land Selections, when filed, shall be treated in the same manner as those existing State Land Selections specified in this subsection.

(f) The State, at its option, shall be permitted to file selection applications for lands which are not, on the date of their selection, available lands within the meaning of section 6 of the Alaska Statehood Act. Each such selection application shall remain in effect as long as the State's entitlement under the specific grant remains unfulfilled, and shall become an effective selection upon the date such lands subsequently became available within the meaning of said section 6. Selections by the State made prior to the adoption of this Act shall be treated in the same manner, subject only to valid existing rights and to the provisions of the Alaska Native Claims Settlement Act, 85 Stat. 688 (1971), as amended.

(g) The State of Alaska may select lands exceeding by twenty-five per cent in total area the amount of State entitlement which has not been tentatively approved under each grant or confirmation of lands contained in the Alaska Statehood Act or other law. If its selections under a particular grant exceed such remaining entitlement, the State shall thereupon list all selections for that grant which have not been tentatively approved in desired priority order of conveyance, in blocs no larger than one township in size; Provided, however, that the State may alter such priorities prior to receipt of tentative approval. Upon receipt by the State of subsequent tentative approvals, such excess selections shall be reduced pro rata to maintain a maximum excess selection of twenty-five per cent of the entitlement which has not yet been tentatively approved to the State under each grant.

(1). The State of Alaska may, by written notification to the Secretary, relinquish any previously-filed selections of land prior to receipt by the State of tentative approval.

(2). Section 6(g) of the Alaska Statehood Act is amended in part by addition of the following provision immediately following the last sentence of said subsection: "As to all selections made by the State after January 1, 1979 pursuant to section 6(b) of this Act, the Secretary of the Interior, in his discretion, may waive the minimum tract selection size where such a reduced selection size would result in a better land ownership pattern or provide for improved land or resource management opportunities."

(h) In furtherance of its entitlement to lands under section 6(b) of the Alaska Statehood Act, the United States hereby conveys to the State of Alaska all right, title and interest of the United States in and to the following described vacant, unappropriated, and unreserved lands:

Description of Lands Listed Here

(i) Lands identified in subsection (h) shall be conveyed to the State subject to valid existing rights. All right, title and interest of the United States in and to such lands shall vest in the State of Alaska as of the date of this Act.

(1). Within one year after the date of passage of his Act, the Secretary shall issue to the State tentative approvals to such lands as required by section 6(g) of the Alaska Statehood Act and pursuant to subsection (j) of this section.

(2). Upon approval of land survey by the Secretary, those lands identified in subsection (h) shall be patented to the State of Alaska.

(3). If the State elects to receive patent to any of the lands which are identified in subsection (h) on the basis of protraction surveys in lieu of field surveys, the Secretary shall issue patent to the State on that basis within six months after notice of such election.

(j) Nothing contained in this section shall relieve the Secretary of the duty to adjudicate conflicting claims regarding the lands specified herein or otherwise selected under authority of the Alaska Statehood Act prior to the issuance of tentative approval, pursuant to the requirements of that Act and this section.

(k) The following withdrawals, classifications, or designations shall not, of themselves, remove the lands involved from the status of "vacant, unappropriated, and unreserved" lands for the purposes of this Act and the Alaska Statehood Act:

(1). Withdrawals for classification pursuant to section 17(d)(1) of the Alaska Native Claims Settlement Act, 85 Stat. 688 (1971), as amended;

(2). Withdrawals pursuant to section 17(d)(2) of said Act;

(3). Withdrawals pursuant to section 11 of said Act, and which are not conveyed pursuant to sections 12, 14, or 19 of said Act;

(4). Classifications pursuant to the Classification and Multiple Use Act, 78 Stat. 987 (1974);

(5) Classifications or designations pursuant to the Federal Land Policy and Management Act, 90 Stat. 2743 (1976).

(1) Nothing in this Act shall alter the rights or obligations of any party with regard to section 12 of the Act of Jaunuary 2, 1976, P.L. 94-204, and sections 4 and 5 of the Act of October 4, 1976, P.L. 94-456.

ACTION TO ENFORCE: JURISDICTION

SEC. 806. For a period of three years after the date of enactment of this Act any appropriate Federal district court shall have jurisdiction to hear, consider, and decide any action brought by the State or by any Native Corporation to enforce the provision of this title and to award appropriate attorney and witness fees and other costs of litigation to the prevailing party.

DRAFT

TITLE IX--TRANSPORTATION AND UTILITY RIGHTS-OF-WAY

SEC. 901(a) Notwithstanding any provisions of existing law to the contrary, the Secretary is hereby authorized to permit rights-of-way for a transportation or utility system across any lands designated under Title I, II, III, IV, or V of this Act.

(b) Upon receipt of any application for such transportation or utility right-of-way from any federal, state, or local agency, or any private person or organization, the Secretary shall afford the Commission established in Title VI of this Act the opportunity to review, study, and make recommendations on the application. ~~If, after receiving the recommendations from the~~

(c) In accordance with the provisions contained in Title VI of this Act, the Commission shall make recommendations to the Secretary regarding the approval of rights-of-way for transportation and utility systems across lands designated under Title I, II, III, IV, or V of this Act. Should the Secretary not approve a right-of-way recommended by the Commission he shall issue detailed findings which shall include the following:

(i) information indicating that the system subject to the application can not be constructed in a manner which would avoid significant damage or degradation to the natural resources and values for which the affected conservation system unit was established; and

(ii) findings that the natural values for which the unit was established and which would be potentially damaged or degraded by

the applied for transportation or utility system outweigh those public interest benefits which may be associated with development of the transportation or utility system;and

(iii) demonstration that there exists a feasible and prudent alternative to the applied for transportation or utility system which would result in less potential damage or degradation to the natural values of the conservation system unit involved or would be more compatible with the purposes for which the unit was established.

(d) Nothing contained in Section 603 (c) of Title VI relating to the veto authority of the Secretary over decisions of the Commission shall be construed as negating the Secretary's responsibilities under the terms of Section 901(c) of this Title.

DRAFT

TITLE X—ADMINISTRATIVE PROVISIONS

LAND ACQUISITIONS AND EXCHANGES

SEC. 1001. (a) Except as otherwise provided in this Act, in order to carry out the purposes of this Act, the Secretary is authorized to acquire by purchase, donation, or exchange any lands within the boundaries of any conservation system unit. Land owned by the State, a political subdivision of the State, a Native Corporation, or private owner may only be acquired for such purposes with the consent of the State, political subdivision of the State, Native Corporation, or private owner.

(b) The owner of an improved property on the date of its acquisition, as a condition of such acquisition, may

retain for himself, his heirs and assigns, a right of use and occupancy of the improved property for noncommercial residential or recreational purposes, as the case may be, for a definite term of not more than twenty-five years or, in lieu thereof, for a term ending at the death of the owner or the death of his spouse, whichever is later. The owner shall elect the term to be reserved. Unless the property is wholly or partially donated, the Secretary shall pay to the owner the fair market value of the property on the date of its acquisition, less the fair market value on that date of the right retained by the owner. A right retained by the owner pursuant to this section shall be subject to termination by the Secretary upon his determination that such right is being exercised in a manner inconsistent with the purposes of this Act, and it shall terminate by operation of law upon notification by the Secretary to the holder of the right of such determination and tendering to him the amount equal to the fair market value of that portion which remains unexpired.

(d) For the purposes of this section, the term "improved property" means: (1) a detached single family dwelling, the construction of which was begun before January 1, 1977 (hereinafter in this section referred to as the "dwelling"), together with so much of the land on which the dwelling is situated, such land being in the same ownership as the dwell-

ing, as the Secretary shall designate to be reasonably necessary for the enjoyment of the dwelling for the sole purpose of noncommercial residential use, together with any structures necessary to the dwelling which are situated on the land so designated, or (2) property developed for noncommercial recreational uses, together with any structures accessory thereto which were so used on or before January 1, 1977. In determining when and to what extent a property is to be considered an "improved property", the Secretary shall take into consideration the manner of use of such buildings and lands prior to January 1, 1977, and shall designate such lands as are reasonably necessary for the continued enjoyment of the property in the same manner and to the same extent as existed prior to such date.

(c) The Secretary shall give prompt and careful consideration to any offer made by the owner of any property within a conservation system unit to sell such property, if such owner notifies the Secretary that the continued ownership is causing, or would result in, undue hardship.

(d) In acquiring lands for the purposes of this Act, the Secretary is authorized to exchange lands (including lands within the National Forest System) or interests therein (including Native selection rights) with the corporations organized by the Native groups, Village Corporations, Regional Corporations, and the corporations organized by Natives

residing in Juneau, Sitka, Kodiak, and Kenai, all as defined in the Alaska Native Claims Settlement Act, and other municipalities and corporations or individuals, the State (acting free of the restrictions of section 6(i) of the Alaska Statehood Act (72 Stat. 342)), or any Federal agency. Exchanges shall be on the basis of equal value, and either party to the exchange may pay or accept cash in order to equalize the value of the property exchanged, except that if the parties agree to an exchange and the concerned Secretary determines it is in the public interest, such exchanges may be made for other than equal value.

(f) All lands, water, and interests therein acquired by the Secretary and located within the boundaries of any conservation system unit shall become part of such unit and subject to the laws and regulations applicable to such unit.

ACCESS

SEC. 1002. (a) The Secretary shall take such actions within (or outside the boundaries of conservation system units as may be necessary, including acquiring or providing easements or other interests in lands in accordance with the provisions of section 1201, to carry out any or more of the following purposes:

(1) providing access to subsistence lands for purposes of subsistence uses under this Act;

(2) providing access for purposes of administering units of the National Park, National Wildlife Refuge, National Forest, or Wild and Scenic Rivers Systems established or expanded by this Act;

(3) providing public access to conservation system units, consistent with the purposes for which the units are established or expanded;

(4) ensuring continued public access to areas conveyed to the State, particularly in cases where such areas are enclosed by one or more conservation system units, in such manner as is established by this Act and is consistent with the purposes for which the concerned conservation system units were established or expanded; or

(5) ensuring continued access to areas conveyed to the Native Corporations by those persons entitled to such access.

(b) Except as otherwise provided in ~~section 10(c) of the Wild and Scenic Rivers Act, section 607(b), section 710, or section 20 of this Act, or~~ any other provision of this Act, in administering the conservation system units in Alaska, the Secretary shall permit the continuation of customary patterns of travel across such units. Such travel, including the modes of travel, may be conditioned by such reasonable regulations as the Secretary shall promulgate to assure that such travel is consistent with the

purposes for which such unit was established. Before promulgating regulations under this section, the Secretary shall give at least sixty days public notice of the proposed regulations, including at least publication of the proposed regulations in a newspaper or newspapers having general circulation in each State judicial district in Alaska where the unit or units affected by the proposed regulations are located, and shall hold a public hearing or hearings concerning the proposed regulations at one or more locations convenient to the unit or units affected.

ARCHEOLOGICAL AND PALEONTOLOGICAL SITES

SEC. 1003. Notwithstanding any acreage or boundary limitations contained in this Act with respect to the conservation system units described in sections 201(2), 201(6), and 201(10), the Secretary of the Interior may acquire, by purchase, donation, or exchange any significant archeological or paleontological site in Alaska located outside of any such unit and containing resources which are closely associated with such unit. If any such site is so acquired, it shall be included in and managed as part of such unit. Property ~~owned by a State or unit of local government~~ may be acquired under this section only by donation or exchange. Not more than seven thousand five hundred acres of land may be acquired under this section for inclusion in a single conservation system unit. Before acquisition of any property

in excess of one hundred acres under the provisions of this section, the Secretary shall—

(1) submit notice of such proposed acquisition to the Committee on Interior and Insular Affairs of the House of Representatives and the Energy and Natural Resources Committee of the Senate; and

(2) publish notice of such proposed acquisition in the Federal Register.

COOPERATIVE INFORMATION CENTERS

SEC. 1004. (a) The Secretary of the Interior is authorized to establish, after consultation with other appropriate Federal agencies, on not to exceed one thousand acres of ~~Federal~~ State land at a site adjacent to the Alcan Highway, an information and education center for visitors to Alaska. The Secretary, ~~shall seek~~ and the Governor of the State shall jointly participate in the program planning, construction, and operation of the center ~~from appropriate agencies of the State and~~ and shall seek participation of representatives of Native groups in Alaska and may accept contributions of funds, personnel, and planning and program assistance from such State agencies, local agencies, Federal agencies, Native representatives, and other persons for purposes of such planning, construction, and operation. Before establishing any such center on any such site, the Secretary shall notify the appropriate committees of Congress of his intention to do so. The Secretary, and the State shall administer the center and its facilities in

accordance with the Act of August 25, 1916 (39 Stat. 535), and other provisions of law applicable to units of the National Park System and in accordance with such ~~special regulations~~ state laws as ~~he~~ may ~~promulgate~~ be applicable.

(b) The Secretary of the Interior is authorized to establish in both Anchorage and Fairbanks, Alaska, an information and education center for visitors to Alaska. The Secretary shall seek participation from the State, units of local government, and representatives of Native groups in Alaska and may accept contributions from State agencies, local agencies, Federal agencies, Native representatives, and other persons in the same manner and to the same extent as is authorized under subsection (a) in connection with the Alcan Highway Center. Before establishing any such center in any such city, the Secretary shall notify the appropriate committees of the Congress of his intention to do so. The Secretary is authorized to lease or acquire by purchase, donation, or exchange such property in Anchorage and Fairbanks, Alaska, as may be necessary to carry out the purposes of this subsection, except that (1) any property owned by a State or local government may be acquired for such purposes only by donation or exchange, and (2) any property owned by any other person may be acquired for such purposes only with the consent of such person.

ADMINISTRATIVE SITES AND VISITOR FACILITIES

SEC. 1005. (a) In conformity with the management plans prepared under section 1008 and the purposes of assuring the preservation, protection, and proper management of any conservation system unit, the Secretary may establish administrative sites and visitor facilities (1) within the unit, if compatible with the purposes of the unit and the other provisions of this Act, or (2) outside the boundaries of, and in the vicinity of, the unit. To the extent practicable and desirable, the Secretary shall attempt to locate such sites and facilities on Native lands in the vicinity of the unit.

(b) For the purpose of establishing administrative sites and visitor facilities under subsection (a)—

(1) The Secretary and the head of the Federal agency having primary authority over the administration of any Federal land which the Secretary determines is suitable for use in carrying out such purpose may enter into agreements permitting the Secretary to use such land for such purpose.

(2) The Secretary, under such terms and conditions as he determines are reasonable, may lease or acquire by purchase, donation, exchange, or any other method (except condemnation) real property (other than Federal land) which the Secretary determines is suitable for carrying out such purpose.

(3) The Secretary may construct, operate, and maintain such permanent and temporary buildings and facilities as he deems appropriate on land which is within, or in the vicinity of, any conservation system unit and with respect to which the Secretary has acquired authority under this subsection to use the property for the purpose of establishing an administrative site or visitor facility under subsection (a), except that the Secretary may not begin construction of buildings and facilities on land not owned by the United States until the owner of such land has entered with the Secretary into agreements the terms of which assure the continued use of such buildings and facilities to carry out the purposes of this Act.

REVENUE-PRODUCING VISITOR SERVICES

SEC. 1006. (a) Notwithstanding any other provision of law, the Secretary, under such terms and conditions as he determines are reasonable, shall permit any person who, on or before January 1, 1977, was engaged in adequately providing any type of visitor service within any area established or added to a conservation system unit to continue providing such type of service and similar types of visitor services within such area if such service or services are consistent with the purposes for which such unit is established or expanded.

(b) Notwithstanding provisions of law other than those

contained in subsection (a), in selecting persons to provide (and in contracting for the provision of) any type of visitor service for any conservation system unit, the Secretary, ~~in the following order:~~

(1) shall give preference to the Native Corporation which the Secretary determines is most directly affected by the establishment or expansion of such unit by or under the provisions of this Act; and

(2) shall give preference to persons whom he determines, by rule, are local residents.

(c) As used in this section, the term "visitor service" means any service made available for a fee or charge to persons who visit a conservation system unit, including such services as providing food, accommodations, transportation, tours, and guides.

LOCAL HIRE

SEC. 1007. (a) The Secretary shall establish a program under which any individual who, by reason of having lived or worked in or near a conservation system unit, has special knowledge or expertise concerning the natural or cultural resources of such unit and the management thereof (as determined by the Secretary) shall be considered for selection for any position within such unit without regard to—

(1) any provision of the civil service laws or regu-

(2)

lations thereunder which require minimum periods of formal training or experience,

(2) any such provision which provides an employment preference to any other class of applicant in such selection, and

(3) any numerical limitation on personnel otherwise applicable.

Individuals appointed under this subsection shall not be taken into account in applying any personnel limitation described in paragraph (3).

(b) Within one year after the date of the enactment of this Act, and annually thereafter during each of the following ten years, the Secretary shall prepare and submit to the Congress a report indicating the actions taken in carrying out the provisions of subsection (a) of this section together with any recommendations for legislation in furtherance of the purposes of this section.

MANAGEMENT PLANS

SEC. 1008. (a) At any time within five years after the date of the enactment of this Act ~~or, in the case of any conservation system unit established or expanded by title III with respect to which a wilderness review is required under section 601, at the same time the President submits his recommendation concerning such unit under such section~~

~~to the Congress~~, the Secretary shall submit, in writing, to the Committee on Interior and Insular Affairs of the House of Representatives and the Committee on Energy and Natural Resources of the Senate plans for managing each of the conservation system units established or expanded by titles I, II, ~~and~~ III, III, and V of this Act. At any time after submitting a plan under this subsection, the Secretary may revise such plan in accordance with the provisions of this section.

(b) The Secretary shall coordinate the development and preparation of management plans for conservation system units which have similar characteristics.

(c) Each plan described in subsection (a) shall identify management practices which will carry out the policies of this Act and will accomplish the purposes for which the concerned conservation system unit was established or expanded and shall include at least the following:

(1) Maps indicating areas of particular importance as to wilderness, natural, historical, wildlife, cultural, archeological, paleontological, geological, recreational, and similar resources and also indicating the areas into which such unit will be divided for administrative purposes.

(2) A description of the activities which will be permitted in such unit and of any restrictions or limitations which will be imposed with respect to such activi-

ties (including the maximum number of individuals who will be permitted to use such unit at any particular time for any particular purpose) and a list of the locations where such activities will be permitted.

(3) A description of the areas of potential or proposed development, indicating types of visitor services and facilities to be provided, the estimated costs of such services and facilities, and whether or not such services and facilities could and should be provided outside the boundaries of such unit.

(4) A plan for access to, and circulation within, such unit, indicating the type and location of transportation routes and facilities.

(5) A description of the programs and methods which the Secretary plans to use for the purposes of (A) encouraging the recognition and protection of the culture and history of the individuals residing, on the date of the enactment of this Act, in such unit and areas in the vicinity of such unit, and (B) providing and encouraging employment of such individuals.

(6) A plan for acquiring land with respect to such unit, including proposed modifications in the boundaries of such unit.

(7) A description (A) of privately-owned areas, if any, which are within such unit, (B) of activities

carried out in, or proposed for, such areas, (C) of the present and potential effects of such activities on such unit, (D) of the purposes for which such areas are used, and (E) of methods (such as cooperative agreements and issuance or enforcement of regulations) of controlling the use of such activities to carry out the policies of this Act and the purposes for which such unit is established or expanded.

(8) A plan indicating the relationship between the management of such unit and activities being carried out in, or proposed for, surrounding areas and also indicating cooperative agreements which could and should be entered into for the purpose of improving such management.

(d) In developing, preparing, and revising a plan under this section, the Secretary shall take into consideration at least the following factors:

(1) The specific purposes for which the concerned conservation system unit was established or expanded.

(2) Protection and preservation of the ecological, environmental, wildlife, cultural, historical, archeological, geological, recreational, wilderness, and scenic character of the concerned unit and of areas in the vicinity of such unit.

(3) Providing opportunities for native Alaskans

residing in the concerned unit and areas adjacent to such unit to continue performing in such unit activities which they have traditionally or historically performed in such unit.

(4) Activities being carried in areas adjacent to, or surrounded by, the concerned unit.

(5) The need to provide facilities & access to accommodate appreciation of the unit's values by the public.

(e) In developing, preparing, and revising a plan under this section, the Secretary shall hold at least one public hearing in the vicinity of the concerned conservation unit, hold at least one public hearing in a metropolitan area of Alaska, and, to the extent practicable, permit the following persons to participate in the development, preparation, and revision of such plan:

(1) Officials of the Forest Service, the Environmental Protection Agency, the Department of Energy, the Alaska Coordinating Council, and other Federal agencies whose activities will be affected by implementation of such plan.

(2) Officials of the State and of political subdivisions of the State whose activities will be affected by implementation of such plan.

(3) Officials of Native Corporations which will be affected by implementation of such plan.

(4) Concerned local, State, and national organizations and interested individuals.

(f) During the period beginning on the date of the enactment of this Act and ending on the date the final plan described in subsection (a) is submitted to the committees of the House of Representatives and the Senate referred to in subsection (a), the Secretary—

(1) shall keep such committees advised of the status of the plans described in subsection (a), of activities being carried out under this section, and of any information which the Department of the Interior has pertaining to any conservation system unit; and

(2) shall, at least once every twelve months, submit to such committees a report indicating the status of the plans described in subsection (a), particular problems being encountered with respect to developing such plans and managing conservation system units, and the anticipated date of submission of such plans.

SEC. 1009. As soon as practicable after this Act takes effect, a map and legal description of each conservation system unit, including each wilderness study area and each wilderness area, shall be filed with the Committee on Interior and Insular Affairs of the House of Representatives and with the Committee on Energy and Natural Resources of the Senate. Each such map and legal description shall have the same force and effect as if included in this Act, except that correction of clerical and typographical errors in each such legal description and map may be made. Each such map and legal description shall be on file and available for public inspection in the appropriate Offices of (1) the Director of the National Park Service, (2) the Director of the United States Fish and Wildlife Service, and (3) the Chief of the United States Forest Service, and appropriate offices of the

Alaska field directors of such services. Whenever possible, boundaries shall follow hydrographic divides or embrace other topographic features in all cases where straight line map boundaries approximate such features. Following publication of notice in the Federal Register and reasonable notice in writing to the Committee on Interior and Insular Affairs in the House of Representatives and the Committee on Energy and Natural Resources in the Senate of his intention to do so, the Secretary may make minor adjustments in the boundaries of any of the conservation system units.

MAJOR FEDERAL ACTIONS

SEC. 1010. No action concerning any conservation system unit in Alaska which is a major Federal action within the meaning of section 102(2)(C) of the National Environmental Policy Act of 1969 may be taken by the Secretary unless, in addition to meeting the other requirements of such Act, a report explaining in detail the action (and the basis and reasons therefor) and an environmental impact statement concerning such action, have been submitted to the Committee on Interior and Insular Affairs of the House of Representatives and the Committee on Energy and Natural Resources of the Senate at least sixty days prior to the commencement of such action.

DRAFT

TITLE XI--MISCELLANEOUS

MT.MCKINLEY (DENALI) STUDY AND DEVELOPMENT

SEC. 1101. (a) The purpose of this section is to initiate a study process leading to the construction of visitor facilities in and near the expanded Denali National Park designated in Title I of this Act. It is findings of Congress that due to the superlative natural scenery associated with the expanded Denali National Park, the close proximity of this area to most of the residents of Alaska and to major transportation systems utilized by out-of-state visitors to Alaska,&the present lack of access and facilities in or near the designated additions to this unit on the south side that it is deemed necessary and desireable that authorization be made for study and construction of visitor facilities to, adjacent, and within the southern addition to the Denali National Park designated in Title I of this Act.

(b) The Secretary is authorized to enter into cooperative agreements with the State, local governments and local organizations for the purpose of conducting studies and making recommendations regarding the location, design and other factors relating to the development of facilities necessary for the provision visitor services and accommodations to, adjacent and within the Denali National Park area.

(c) Within two years of passage of this Act, the Secretary shall submit a report to Congress containing detailed

proposals for development of visitor facilities and services to, adjacent, and within the designated Denali Park unit. Such report shall include the following:

(1) the findings of an economic evaluation indicating the potential visitation and market which facilities should and could be developed for;

(2) The findings of a transportation study indicating the cost and feasibility of development of a mass transportation system connecting the unit to Anchorage, Alaska, the cost and feasibility of development of a road connecting a new development site with the existing State highway system, the cost and feasibility of connecting a new development site with the existing Alaska Railroad, the cost and feasibility of the development of an airport near the unit;

(3) the findings of an engineering study indicating the cost and feasibility of developing an interpretive center, lodging facilities, related recreational facilities (including trails and a downhill ski area), a tramway and related viewing facilities and other related visitor facilities at or surrounding a site principally located within Denali State Park adjacent the designated expanded unit. Such a study should provide a range of costs and facilities designed to accommodate up to 10,000 overnight visitors and residents with the facilities necessary to accommodate

visitors and residents on a year-round basis.

(4) the findings of environmental study indicating potential impacts of facility development, actions which would mitigate any adverse impacts on the values for which the unit was established, and plans and data for such environmental considerations as sewage disposal, domestic water supply, local climatological information, avalanche or earthquake hazards and other such environmental components;

SEC. 1102. (a) There is hereby authorized to be appropriated the amount of two million dollars ($2,000,000) to carry out the provisions of Section 1101 of this Act for fiscal years beginning after the fiscal year 1978.

(b) There is hereby authorized to be appropriated the amount of $500,000,000 for the construction of mass transit system connecting Anchorage, Alaska, with a visitor center and development site in or near the Denali National Park designated in Title I of this Act, construction of visitor center associated with related visitor facilities within Denali State Park, and the construction of a tramway to provide visitor access from a visitor center and other facilities within Denali State Park to an observation site within Denali National Park.

IDITAROD NATIONAL HISTORIC TRAIL

SEC. 1103. (The language to create a new system of historic trails within the National Trails System and to designate the Iditarod as a national historic trail would come from S.929 sponsored by Senator Gravel) .

SEC. 1104.(a) It is the findings of Congress that under the terms of the Alaska Native Land Claims Settlement Act provision was made for reconveyance of lands to occupants of land located within areas selected and conveyed to Native corporations regardless of prior legal rights, that residents on lands withdrawn under Section 17 (d)(2) of the Alaska Native Claims Settlement Act were denied an opportunity to gain legal title to their primary places of residence, and furthermore, that such residents are not inconsistent with designations of these lands within nationalconservation systems in Alaska.

(b) The Secretary is authorized to convey to any person, upon application within one year from the date of enactment of this Act, the surface estate, not to exceed 5 acres of land, of land occupied by such person as a primary place of residence for a period of time exceeding 5 years commencing prior to enactment of the Alaska Native Claims Settlement Act of 1971 and continuing to the time of enactment of this Act which may be included within the boundaries of units designated in Title I, II, III, or IV of this Act. The Secretary shall make such conveyances unless he finds

that such conveyances would result in direct, significant adverse impact on the values for which the unit was established.

KLONDIKE GOLD RUSH NATIONAL HISTORICAL PARK

SEC. ~~1102~~ 1107. The second sentence of subsection (b) (1) of the first section of the Act entitled "An Act to authorize the Secretary of the Interior to establish the Klondike Gold Rush National Historical Park in the States of Alaska and Washington, and for other purposes", approved June 30, 1976 (90 Stat. 717), is amended to read as follows: "Lands or interests in lands owned by the State of Alaska or any political subdivision thereof may be acquired only by donation or exchange, and notwithstanding the provisions of subsection 6 (i) of the Act of July 7, 1958 (72 Stat. 339, 342), commonly known as the Alaska Statehood Act, the State may include the minerals in any such transaction.".

NAVIGATION AIDS AND OTHER FACILITIES

SEC. ~~1103~~ 1106. Within the conservation system units, reasonable access to, and operation and maintenance of, existing air and water navigation aids and related facilities and existing facilities for weather, climate, and fisheries research and monitoring shall be permitted in accordance with the laws and regulations applicable to the National Park, Wildlife Refuge, National Forest, and Wild and Scenic Rivers Sys-

SCENIC HIGHWAY STUDY

SEC. 1307. (a) Subject to valid existing rights, all public lands within an area, the centerline of which is the centerline of the "Denali Highway" between Cantwell and Paxson and the "Richardson Highway" between Paxson and Gakona (as those highways are depicted on the official maps of the Department of Transportation of the State of Alaska) and the boundaries of which are parallel to the centerline and one mile distant therefrom on either side, are hereby withdrawn from all forms of entry or appropriation under the mining laws and from operation of the mineral leasing laws of the United States.

(b) During the three year period beginning on the date of enactment of this Act, the Secretary shall study the desirability of establishing a Denali Scenic Highway to consist of all or part of the lands described in subsection (a) of this section. In conducting the studies, the Secretary, through a study team which includes representatives of the National Park Service, the State, and of each Regional Corporation within whose area of operation the lands described in subsection (a) are located, shall consider the scenic and recreational values of the lands withdrawn under this section, and the importance of providing protection to

those values, as well as the desirability of providing a symbolic and actual physical connection between the national parks in south-central Alaska and the desirability of enhancing the experience of persons traveling between those parks by motor vehicles. Members of the study team who are not Federal employees shall receive from the Secretary per diem (in lieu of expenses) and travel allowances at the rates provided for employees of the Bureau of Indian Affairs in Alaska in grade GS–15.

(c) In conducting the studies required by this section, the Secretary shall consult with the State, with each Village Corporation within whose area of operation lands described in this section are located, and with the owners of any lands adjoining the lands described in subsection (a), concerning the desirability of establishing a Denali Scenic Highway. The Secretary, through the National Park Service, shall also give such public notice of the study as he deems appropriate, including at least publication in a newspaper or newspapers having general circulation in the area or areas of the lands described in subsection (a), and shall hold a public hearing or hearings at one or more locations convenient to the areas affected.

(d) Within three years after the date of enactment of this Act, the Secretary shall report to the President the results of the studies carried out pursuant to this section

together with his recommendation as to whether the scenic highway studied should be established, and which of the lands described in subsection (a) should be included therein. The President shall advise the President of the Senate and the Speaker of the House of Representatives of his recommendations with respect to creation of one or both of the scenic highways, together with maps thereof, a definition of boundaries thereof, an estimate of costs, recommendations on administration, and proposed legislation to create such a scenic highway, if creation of one is recommended.

(e) The lands withdrawn under subsection (a) of this section shall remain withdrawn until such time as the Congress acts on the President's recommendation, but not to exceed two years after the recommendation is transmitted to the Congress.

AUTHORIZATION FOR APPROPRIATION

SEC. 1308. There are hereby authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act for fiscal years beginning after the fiscal year 1978.

O

SECTION-BY-SECTION SUMMARY
OF DRAFT CS HB 211 (Dated 4/10/78)

* SECTION I

AS 41.45.010 PURPOSE.

This section sets forth the purpose of this bill. This bill provides for the establishment of a common system of land use planning and classification for certain public and private lands in Alaska. Participation in this system is voluntary for all parties.

The effect of amendments to this section by the House Resources Committee was to; one, emphasize the authority of the Commission to classify land under its jurisdiction and not to manage those lands, and; two, emphasize the voluntary nature of participation in common management under this bill.

AS 41.45.020 POLICY.

This section states that it is state policy to accommodate to the rapidly changing demands upon land in Alaska through a flexible system of land classification for both state and federal land.

The effect of amendments to this section is to emphasize that this bill establishes a system of common classification for certain state, federal, and private lands and not a common management system.

AS 41.45.030 COMMISSION.

This section establishes the Alaska Land Commission.

AS 41.45.040 MEMBERSHIP.

The membership of the Alaska Land Commission is set at six members. Three of the six members are appointed by the Governor and confirmed by the Legislature. The Governor must designate one of the three state appointees to the Commission as state co-chairman.
