The membership of the Commission was set at an even number (six) with equal number of state and federal appointees at the recommendation of Senator Ted Stevens, Representative Don Young, and members of the Federal-State Land Use Planning Commission.

AS 41.45.050 TERM.

This section establishes the term of state appointees to the Commission as four years to coincide with the term of the Governor. The effect of this section would be to ensure the accountability of state appointees to the Commission. The provisions of this section were adopted at the recommendation of the staffs of the Federal State Land Use Planning Commission and the Steering Council for Alaska Lands.

AS 41.45.060 COMPENSATION.

This section provides that the salary for the state members of the Commission is set by the Alaska Salary Commission. This amendment would put the state commissioners to the Alaska Land Commission in the same position as commissioners of the Public Utilities Commission and the Pipeline Commission.

AS 41.45.070 DUTIES.

This section enumerates the duties of the Alaska Land Commission:

1) initiate and maintain a process of land use planning and classification for state and federal land in Alaska;
2) classify lands included in common management areas;
3) establish policies and procedures to guide the operation of the Commission;
4) recommend changes in state and federal laws and regulations;
5) review resource inventories prepared for common management areas;
6) recommend procedures which would enhance cooperation between state and federal agencies;
7) recommend procedures to ensure orderly economic growth;
8) recommend changes in state and federal land policies and programs;
9) comment upon inventory, planning, classification, management, and use of state and federal lands and to provide assistance to Native corporations;
10) recommend needed modifications in existing withdrawls of state and federal land;
11) recommend to the appropriate officials amendments to the programs and budgets of state and federal agencies responsible for the administration of land in Alaska; and
12) establish citizens' advisory committees to assist the Commission in fulfilling its legislative mandate and to offer to affected parties the opportunity to comment upon proposed actions of the Commission.

The substance of this section was adopted from the mandate of the existing Federal-State Land Use Planning Commission and the recommendations of Senators Stevens, and Gravel, Representative Young, and the Federal-State Land Use Planning Commission.

AS 41.45.080 POWERS.

The Alaska Land Commission shall have the authority to:

1) classify land within a common management area;
2) enter into common management agreements with private land owners and municipal corporations;
3) enter into agreements with state and federal agencies to accomplish the work of the commission; and
4) hire employees and consultants.

The effect of amendments to this section was to clarify the authority the commission to classify, but not manage, land within common management areas, to authorize the Commission to hire staff and consultants, and to authorize the Commission to enter into agreements with private land owners and municipal corporations.

AS 41.45.090 LAND MANAGEMENT IN COMMON MANAGEMENT AREAS.

The effect of this section is to clearly distinguish between the authority of the state and federal land managing agencies to manage land and the authority of the Alaska Land Commission to classify land within a common management area.

AS 41.45.100 PROPERTY TAX EXEMPTION.

This section provides for an exemption from property taxes and special assessments for those private lands covered by a common management agreement between the land owner and the Alaska Land Commission. Though Native regional and village corporations are cited as private entities which are eligible to receive the benefits of this section, they are not the only class of private land owners eligible to benefit from this section. If the land is withdrawn from a "common management area" before the end of a five year period, all taxes and special assessments against the land must be paid.

The committee was aware of the distinction between property taxes and special assessments for capital improvements and decided to include an exemption from special assments levied by local governments as well as property taxes for the period during which private land is included within a "common management area".

AS 41.45.110 TECHNICAL ASSISTANCE.

This section authorizes state agencies, at their discretion, to provide technical assistance in the form of trespass control, fire suppression, and mineral exploration to private land owners who have land included within a common management area.

AS 41.45.120 HEARINGS.

This section authorizes the Commission to hold hearings, receive testimony and evidence as it determines necessary.

AS 41.45.130 MEETINGS

The effect of this section is to require advance notice of Commission meetings be given and that all Commission meetings be public. This section was recommended by the staff of the Federal-State Land Use Commission.

AS 41.45.140 ANNUAL REPORT.

This section requires the Commission to submit annual report to the Legislature and the Governor on the activities of the Commission during the preceding calendar year.

AS 41.45.150 LAND FOR INCLUSION WITHIN COMMON MANAGEMENT AREAS.

This section establishes a procedure by which state land may be included within a common management area. If the Commission wishes to include state land within a common management area it must submit its recommendation to the Legislature. If the recommendation of the Commission is not disapproved in whole or in part, then it takes effect upon the adjournment of the session. Once state land is included within a common management area the authority of the Commission to classify land supersedes that of the Division of Lands. The state may withdraw any of its lands from a common management area after six months notice to the Commission.

AS 41.45.160 VETO.

This section grants to the Governor the authority to veto a decision of the Commission with respect to state land. The Governor must exercise his veto authority over the action of the Commission within 45 days after the action occurs.

This section was suggested by Senators Stevens and Gravel.

AS 41.45.170 EXECUTIVE COORDINATION COMMITTEE.

The effect of this section is to create a state cabinet level committee to coordinate state involvement with the Commission and its work. This section was suggested by the staffs of the Federal-State Land Use Planning Commission and the Steering Council for Alaska Lands.

AS 41.45.180 PRINCIPAL OFFICE.

The effect of this section is to require that the Commission locate its principal office in Alaska.

AS 41.45.190 FUNDING.

The effect of this section would be to commit the state to pay 50% of the costs of the Commission.

AS 41.45.200 EXPIRATION OF THE COMMISSION.

This section is a sunset provision. Unless the state decides to continue its participation in the Commission, the Commission will expire in ten years. This amendment is recommended by Senator Gravel and the Federal-State Land Use Planning Commission.

AS 41.45.210 JUDICIAL REVIEW.

This section specifically sets forth the right of a citizen to challenge the decision of the commission, if that decision adversely affects the citizen's interest in state land.

* SECTION 2

AS 39.23.060 REVIEW OF COMPENSATION AND BENEFITS; OFFICERS COVERED.

This section amends the existing law relating to the Salary Commission by making the salary of state commissioners to the Alaska Land Commission subject to the purview of the Salary Commission.

* SECTION 3

This section extends the Federal-State Land Use Planning Commission until 120 days after the Alaska Land Commission is established or until April 30, 1981, whichever comes first. The Land Use Planning Commission is scheduled to expire in 1979. This section will provide for the continuation of the Federal-State Land Use Planning Commission until the Alaska Land Commission is established in order to provide for continuity between the commissions.

* SECTION 4 FEDERAL MEMBERSHIP ON THE COMMISSION.

This section invites Congress to join the Legislature in establishing an Alaska Land Commission by authorizing federal participation in the Commission and by providing for the appointment of three members to the Commission.

* SECTION 5 EFFECTIVE DATE CLAUSE.

This clause extends the Federal-State Land Use Planning Commission until 1981 or until the Alaska Land Commission is established. The remainder of this bill takes effect on the same day as similar legislation passed by Congress. If Congress does not pass similar legislation by January 1, 1981, this act expires.

To:

From: Kathy Brown, A.A.
Bush Caucus

Date: April 12, 1977

Subject: House Bill 211 establishing the Alaska Land Commission

This bill will be up in House Resources on Thursday the 13th at 1:30. The bill will need a lot more work in order to satisfy the concerns of the bush caucus. The Resources Committee is under a great deal of pressure to move the bill out. Please review and comment on the attached paste-up of suggested amendments which I cooked up. The suggestions I made were just off the top of my head --- please let me know if there are any further critical changes which I may have overlooked.

Thanks.

IN THE HOUSE

CS FOR HOUSE BILL NO. 211

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to the Alaska Land Commission; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 41 is amended by adding a new chapter to read:

CHAPTER 45. ALASKA LAND COMMISSION.

Sec. 41.45.010. PURPOSE. The purpose of this chapter is to provide for a common system of planning and classification by the state, [a] AND PRIVATE LANDHOLDERS the United States, of mutually agreed upon areas of [public] land in Alas by establishing land use planning and classification institutions whic provide full protection of [nationally] significant natural values, enab a flexible response to energy and other commodity needs as they arise, and minimize conflicts among landowners and between competing land use

Comment: Throughout the bill I have included "private landholders" wherever there is reference to state and federal land. This is to make clear that Private and Native land owners should be included in any planning and classification scheme the state may enter into with the federal government. They should be considered equal partners with the state on the commission. It is hoped that by doing this, potential conflicts can be avoided or at least minimized.

Sec. 41.45.020. POLICY. The legislature recognizes the best use of the public domain will change with time and that only an active classification system can meet these changing needs. The legislature further recognizes that there is a valid national public interest in public land in Alaska, including state land, as well as a valid interest on the part of the people of Alaska in federal land in Alaska. *

Sec. 41.45.030. COMMISSION. There is established the Alaska Land Commission.

* THE LEGISLATURE ALSO FINDS THAT PARTICIPATION BY PRIVATE LAND HOLDERS IS CRUCIAL TO THE SUCCESS OF AN ACTIVE CLASSIFICATION & PLANNING SYSTEM.

Sec. 41.45.040. MEMBERSHIP. (a) The commission shall consist of six full-time members.

(b) Three members of the commission, one of whom shall be designated as state co-chairman, shall be appointed by the governor and shall serve at his pleasure. * AT LEAST ONE MEMBER SHALL REPRESENT NATIVE CORPORATION LAND HOLDERS IF THE CORPORATIONS COMMIT LANDS FOR CO-MANAGEMENT.

Comment: One member on the Commission will not necessarily give native groups any leverage in political decisions of the Commission. But the native member will provide a means for input from native groups and will help anticipate potential conflicts.

(c) Members appointed by the governor are subject to confirmation by a majority of the members of the legislature in joint session.

Sec. 41.45.050. TERM. The term of office of a state member of th commission is four years and//shall coincide with that of the governor.// A vacancy in the office of a member representing the state shall be filled by appointment by the governor. The appointee selected to fill the vacancy shall hold office for the balance of the full term for whic his predecessor was appointed. An appointee to an unexpired term shall be subject to the same confirmation requirements as any other appointee

Sec. 41.45.060. COMPENSATION. The three members of the commissio appointed by the governor shall receive an annual salary as established under AS 39.23. Members appointed by the governor are entitled to per diem and travel expenses authorized by law for boards and commissions.

Sec. 41.45.070. DUTIES. The commission shall

(1) initiate and maintain a continuing process of land use planning and classification, including but not limited to submitting recommendations to the governor and legislature of Alaska and the Congress of the United States concerning state and federal land to be designated as "common management areas", the identification of land amenable to special use designation, the determination of federal and state land which may be made available for disposal, and recommendations regarding the use of other land remaining in federal and state ownership;

(2) classify land included within common management areas;

(3) establish procedures to govern the performance of the business of the commission, including provision for public hearings to obtain public comment on existing and proposed land use planning and management programs of the state and federal governments;

(4) review and recommend to the federal government, and to the state, AND TO PRIVATE LANDHOLDERS changes in statutes and regulations affecting land in the state which is subject to cooperative management under this chapter which are necessary or desirable;

(5) review resource inventories prepared by the managing agencies of land designated as "common management areas";

(6) make recommendations to appropriate federal and state officials with respect to ways to improve coordination and consultation between the state and federal governments in wildlife management, transportation planning, wilderness review, and other governmental activities which appear to require regional or statewide coordination;

(7) make recommendations to appropriate federal and state officials with respect to ways to insure that economic development is orderly and planned and is compatible with state and national economic, social, and environmental objectives;

(8) make recommendations to appropriate federal and state officials with respect to those changes in laws, policies, and programs relating to public land and resources which the commission considers necessary;

(9) make recommendations to appropriate federal and state officials with respect to the inventory, planning, classification, management, and use of federal and state land, respectively, and to provide such assistance to Native corporations upon their request;

(10) make recommendations to appropriate federal and state officials with respect to needed modifications in existing withdrawals of federal and state public land;

(11) make recommendations to appropriate federal and state officials with respect to the programs and budgets of federal and state agencies responsible for the administration of public land in Alaska; and

(12) [establish citizens'] RECEIVE RECOMMENDATIONS FROM advisory committees to assist the commission in carrying out its duties and to ensure that affected [parties] PERSONS may comment upon actions proposed for consideration by the commission.

Comment: The amendments to this section absolve the commission from the duty of establishing advisory groups in favor of allowing all parties (federal, state and Native groups) to internally establish their own advisory groups for submitting recommendations to the commission.

Sec. 41.45.080. POWERS. The commission may

(1) classify state and federal land within a common management area;

(2) enter into common management agreements with private landowners and municipal corporations;

(3) enter into agreements with agencies of the state and federal government to implement the work of the commission;

(4) employ staff and consultants as necessary to perform the duties established in this chapter.

A new section should be added:

COMMON MANAGEMENT AGREEMENTS

The State and Federal Government may enter into common management agreements which are subject to the following constraints:

1) Agreements must be bilateral; both parties must agree to changes;

2) A Notice of Intent to Request Change in the Agreement must be given six months (?) prior to the proposed date of change.

3) Once an agreement has been reached, the State of Alaska and the U.S. government are bound for five years.

4) By mutual agreement, all parties may change classification of lands without loss of tax exemption to the private landholder

* * * * *

Comment: There were three major concerns expressed by the bush caucus in relevant to this bill. They were 1) representation on the commission should the Native Corporations commit their land for co-management, 2) provision for veto of commission decisions which the Native groups might find contrary to their best interests, and 3) assurance that taxation would not become a tool for blackmailing natives into committing their lands or, once Native lands have been committed, a means of keeping them in an unsatisfactory position under threat of having to pay back taxes.

All of these concerns could be satisfactorily dealt with by adding a new "Common Management Agreements" section. Representation on the commission and veto powers become less important when bilateral agreement is reached before land is committed. The rights of all parties are protected and each party is bound by the agreement for five years. any changes must be mutually agreeable to all. Either party may terminate the agreement with the concurrance of the other parties without payment of back taxes.

Requiring a Notice of Intent to Change the Agreement prior to the proposed date of change allows all parties sufficient time to reach a consensus on whether the change is acceptable or not. It also provides a means of identifying conflicts and issues that will have to be dealt with in subsequent five year agreements.

Sec. 41.45.090. LAND MANAGEMENT IN COMMON MANAGEMENT AREAS. The * NATIVE CEO OR CHIEF EXECUTIVE BODY
agency responsible under law for the management of that land included within a common management area shall retain that authority but shall b subject to the authority of the commission to classify land according t its beneficial uses.

Sec. 41.45.100. PROPERTY TAX EXEMPTION. If a private landowner, including, but not lmited to, any entity established under the Alaska Native Claims Settlement Act, enters into an agreement by which the commission classifies land owned or selected by the private landowner, for a minimum of five years, that land shall be exempt from any property tax or special assessment for capital improvements on the land during the time it is managed by the commission. [If the land is withdrawn from the common management area before the minimum five-year period, then all property taxes or special assessments for capital improvements on the land which would otherwise have been payable shall be due at the time the land is withdrawn.]

Comment: The deleted section is no longer needed since withdrawal from co-management is only possible with the consent of all parties, and therefore the tax penalty is not needed.

// Sec. 41.45.110. TECHNICAL ASSISTANCE. With respect to land which is the subject of a cooperative management agreement, state agencies may provide technical and other assistance in fire suppression, trespass control, and mineral exploration. This assistance may be provided without compensation if the agency determines that to do so would foster the intent of cooperative management and the public good. //

Sec. 41.45.120. HEARINGS. The commission or, on the authorization of the majority of its members, any subcommittee or member of the commission may, for the purpose of carrying out the provisions of this chapter, hold hearings, receive testimony and evidence, and sit and act at those times and places as the commission or subcommittee determines. Hearings shall be held, insofar as practicable, in communities and areas which are to be affected.

Sec. 41.45.130. MEETINGS. All commission meetings shall be public and notice of a meeting shall be given at least 15 days before the date when the meeting is to take place.

Sec. 41.45.140. ANNUAL REPORT. On or before January 10 of each year, the commission shall submit to the President of the United States, Congress, the governor and the legislature a written report with respect to its activities during the preceding calendar year. The report shall also include the activities that the commission contemplates over the next calendar year, and the amount of funding required.

Sec. 41.45.150. LAND FOR INCLUSION WITHIN COMMON MANAGEMENT AREAS. (a) The commission shall establish a process to provide for the identification and submission of recommendations concerning areas in federal and state ownership for inclusion in common management areas. Land designated for inclusion within common management areas shall be submitted by the commission to Congress and the legislature. A recommendation

land shall be presented to the legislature during the first 10 days of any regular session. The recommendation shall become effective at the adjournment of the session unless disapproved, in whole or in part, by a resolution concurred in by a majority of the members of each house of the legislature.

(b) Classification of state land within a common management area supersedes the authority of the director of the division of lands to classify the land under AS 38.05.300.

(c) The state may withdraw any portion of state land in a "common management area" with six months notice to the commission.

Sec. 41.45.160. VETO. With respect to all state land subject to this chapter, the governor may veto a decision of the commission, within 45 days of the action of the commission.

Sec. 41.45.170. EXECUTIVE COORDINATION COMMITTEE. There is established an Executive Coordination Committee composed of the commissioner of natural resources, fish and game, transportation and public facilities, environmental conservation, commerce and economic development, revenue, community and regional affairs, or their designees, and the state co-chairman of the Alaska Land Commission. The committee shall meet regularly in order to coordinate those programs and functions of their departments which could affect the administration of state and federal public land. The governor shall designate the chairman of the committee.

Sec. 41.45.180. PRINCIPAL OFFICE. The principal office of the commission shall be located in Alaska.

Sec. 41.45.190. FUNDING. The state shall pay 50 per cent of the costs and other expenses incurred by the commission in any one fiscal year.

Sec. 41.45.200. EXPIRATION OF THE COMMISSION. (a) On or before the ninth anniversary of the effective date of this Act, the governor shall present to the legislature a report on the desirability of continued state participation in the commission.

(b) State participation in the commission shall terminate on the tenth anniversary of the effective date of this Act, unless otherwise provided by law.

Sec. 41.45.210. JUDICIAL REVIEW. A person aggrieved by a decisio of the commission in any determination involving state land subject to the provisions of this chapter may seek review of the decision in the superior court.

ALASKA

United States Senate

WASHINGTON, D.C. 20510

April 4, 1978

The Honorable Hugh Malone, Speaker
Alaska State House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Hugh:

I want to thank you for all your help, attention and indulgence during my recent trip to Juneau. I sincerely hope that under your leadership we shall see some of the things we discussed come to fruition.

One topic of particular concern to me is the creation of a new federal-state land use planning commission. I greatly appreciated the copy of your bill, H.B. 211, which contained provisions for the state side of such a commission to complement federal legislation. Passage of such legislation by the State would be a tremendous lever for passage of federal provisions in the upcoming (d)(2) legislation. In general, your bill appears to contain all the basic elements for the creation of an effective commission and I congratulate you on your efforts.

As you know, I have long advocated a very strong commission which would have classification powers on virtually all federal and state lands outside units of the four conservation systems. I recognize that the dynamics of the Legislature may be such that adoption of all the provisions contained in my (d)(2) bill regarding the commission may not be possible. However, I would like to briefly point out some of the major differences which currently exist between our respective bills and to urge your reconsideration of these issues prior to reporting your bill out of Committee.

H.B. 211 provides for the commission to recommend state and federal lands to be included under their jurisdiction. I like the open-ended feature of this provision as opposed to the demarcation of special 5th system-type areas, but I would take the further step and designate all State lands. The Governor would retain a veto power over decisions affecting these lands so there would be no loss of sovereignty. By designating all

State lands not only would we be gaining a comprehensive, flexible planning process for our lands, but we would be insuring that a maximum amount of federal lands be anteed up to match our commitment. The ability to influence land uses on adjacent federal lands can not be overstated as evidenced by the frustrations we have experienced in the past with our federal landlord-tenant relationship.

While my bill contains language providing for nine commissioners, H.B. 211 provides for three federal and three state members. I had originally contemplated four federal and four state members but decided that a single chairman would provide stronger, more effective leadership. Additionally, an odd number of commissioners would lend itself to more efficient decision-making procedurially through the use of a tie-breaking vote. Because the chairman would be jointly appointed by the Governor and the President, such a person would not necessarily "side" with either the feds or the State and his vote would not necessarily be the tie-breaking vote as witnessed by the voting pattern on the current land use planning commission (which breaks out along resource use philosophies rather than government affiliation).

I do recognize that both the feds and the State may feel uneasy with an odd-number of commissioners and that the chairman could get into a rather schizophrenic relationship with his appointers. If this is going to be a real stumbling block to passage of either the federal or state bill I would be prepared to concede this point. However, I still feel eight rather than six members will be necessary. In addition to the commission responsibilities contained in H.B. 211, my bill directs the commission to study and make recommendations on transportation and utility rights-of-way and to coordinate implementation and environmental protection laws such as the Clean Air Act, Coastal Zone Management Act, and other laws. These responsibilities would be more than sufficient to keep eight commissioners working full-time. I would certainly encourage you to consider expanding the commission's duties to include these responsibilities also.

I commend you for including provisions under which private lands, notably Native corporations, can be brought under the commission. The use of tax incentives will probably prove to be the most effective way to bring in private lands and thereby insure true comprehensive land use planning for Alaska. In addition, I would recommend that the provisions of my bill or the provisions of the existing commission regarding Native representation on the commission be incorporated in your bill to attract the dedication of Native lands under the commission. If a certain percentage of Native lands were dedicated, for example 80%, then the state would appoint a Native as one of its three or four members on the commission.

In Sec. 41.45.090 of H.B. 211 private landowners would enter into an agreement whereby the commission would "manage" these lands. Just as you revised the use of the word "manage" under the duties of the commission, I would suggest that you omit the references to "manage" in this section. Rather, language to the effect of dedicating private lands under the jurisdiction of the commission for the purpose of land use planning and classification by the commission would seem more appropriate. Actual on-the-ground management should probably remain with the private landowner as long as it was consistent with the direction and policies set by the commission.

Under my bill there is no specific provision for opting out of commission's jurisdiction. Federal lands would be permanently dedicated for the life of the commission. With the veto provisions and with the basic commitment to work out problems to the satisfaction of the feds, the State, and any private landowners, I strongly feel there is no reason to want to opt out. Furthermore, I think the purposes of the commission could be seriously threatened if there was not a full and more or less permanent commitment of land under the commission. Although I think a five or ten year nomination of lands could be workable, the six-month notification provision for withdrawal of state lands contained in H.B. 211 appears to avoid a sincere commitment to the process of statewide land use planning. I can not envision a situation where, through hard negotiation, the study of alternatives and the use or threat of the veto, the State could not

secure decisions which were in line with reasonable land use principles and sound resource uses. If such an opt-out provision were to stand we probably could expect no more commitment on the part of the federal government.

A small difference exists between our versions with regard to the terms of the commissioners. I believe that staggered terms would provide a continuity of effort over the long-run and would help allay the fears of those who believe that the federal or the state side would represent a stacked deck totally favoring the policies and philosophies of the appointing Governor or President. Although I think a four-year term coinciding with that of the Governor could be workable, I again would encourage you to reconsider this provision.

The chances of identically complementary legislation emerging from the State Legislature and the Congress on this matter are, of course, slight. Without a doubt we will have to come back either in the Congress or the Legislature or both to make adjustments or modifications to effect the purposes of the two pieces of legislation. Thus, I think we will have opportunities in the future to work out some of these differences. However, I can not stress enough how important it is for the State to "strike the first blow" on this vital issue. State legislation including the major provisions of a new land use planning commission with real authorities over state, federal and hopefully private lands would provide the ultimate proof to the Congress of the State's commitment to and solidarity on joint land use planning and management. State action on this issue in the next month or two would turn the commission from a concept to a reality warranting swift Congressional attention.

Hugh, I again commend you on your efforts and your commitment to securing this vital legislation. I hope you will consider my comments in any further changes in your bill. If I can provide any assistance to you or your staff in drafting language, briefing other legislators or in any other way securing passage of this legislation please let me or Pat Pourchot

---

of my staff know.

With kind regards,

Sincerely,

Mike Gravel

IN THE HOUSE

CS FOR HOUSE BILL NO. 211

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to the Alaska Land Commission; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 41 is amended by adding a new chapter to read:

CHAPTER 45. ALASKA LAND COMMISSION.

Sec. 41.45.010. PURPOSE. The purpose of this chapter is to provide for a common system of planning and classification by the state and the United States of mutually agreed upon areas of public land in Alaska by establishing land use planning and classification institutions which provide full protection of nationally significant natural values, enable a flexible response to national energy and other commodity needs as they arise, and minimize conflicts among landowners and between competing land uses.

Sec. 41.45.020. POLICY. The legislature recognizes the best use of the public domain will change with time and that only an active classification system can meet these changing needs. The legislature further recognizes that there is a valid national public interest in public land in Alaska, including state land, as well as a valid interest on the part of the people of Alaska in federal land in Alaska.

Sec. 41.45.030. COMMISSION. There is established the Alaska Land Commission.

Sec. 41.45.040. MEMBERSHIP. (a) The commission shall consist of six full-time members.

(b) Three members of the commission, one of whom shall be desig-

nated as state co-chairman, shall be appointed by the governor and shall serve at his pleasure.

(c) Members appointed by the governor are subject to confirmation by a majority of the members of the legislature in joint session.

Sec. 41.45.050. TERM. The term of office of a state member of the commission is four years and shall coincide with that of the governor. A vacancy in the office of a member representing the state shall be filled by appointment by the governor. The appointee selected to fill the vacancy shall hold office for the balance of the full term for which his predecessor was appointed. An appointee to an unexpired term shall be subject to the same confirmation requirements as any other appointee.

Sec. 41.45.060. COMPENSATION. The three members of the commission appointed by the governor shall receive an annual salary as established under AS 39.23. Members appointed by the governor are entitled to per diem and travel expenses authorized by law for boards and commissions.

Sec. 41.45.070. DUTIES. The commission shall

(1) initiate and maintain a continuing process of land use planning and classification, including but not limited to submitting recommendations to the governor and legislature of Alaska and the Congress of the United States concerning state and federal land to be designated as "common management areas", the identification of land amenable to special use designation, the determination of federal and state land which may be made available for disposal, and recommendations regarding the use of other land remaining in federal and state ownership;

(2) classify land included within common management areas;

(3) establish procedures to govern the performance of the business of the commission, including provision for public hearings to obtain public comment on existing and proposed land use planning and

management programs of the state and federal governments;

(4) review and recommend to Congress and to the legislature changes in statutes and regulations affecting land in the state which is subject to cooperative management under this chapter which are necessary or desirable;

(5) review resource inventories prepared by the managing agencies of land designated as "common management areas";

(6) make recommendations to appropriate federal and state officials with respect to ways to improve coordination and consultation between the state and federal governments in wildlife management, transportation planning, wilderness review, and other governmental activities which appear to require regional or statewide coordination;

(7) make recommendations to appropriate federal and state officials with respect to ways to insure that economic development is orderly and planned and is compatible with state and national economic, social, and environmental objectives;

(8) make recommendations to appropriate federal and state officials with respect to those changes in laws, policies, and programs relating to public land and resources which the commission considers necessary;

(9) make recommendations to appropriate federal and state officials with respect to the inventory, planning, classification, management, and use of federal and state land, respectively, and to provide such assistance to Native corporations upon their request;

(10) make recommendations to appropriate federal and state officials with respect to needed modifications in existing withdrawals of federal and state public land;

(11) make recommendations to appropriate federal and state officials with respect to the programs and budgets of federal and state

agencies responsible for the administration of public land in Alaska; and

(12) establish citizens' advisory committees to assist the commission in carrying out its duties and to ensure that affected private parties are allowed input into the commission's decision-making process.

Sec. 41.45.080. POWERS. The commission may

(1) classify state and federal land subject to the authority granted in this chapter;

(2) enter into common management agreements with private landowners;

(3) enter into agreements with agencies of the state and federal government to implement the work of the commission;

(4) employ staff and consultants as necessary to perform the duties established in this chapter.

Sec. 41.45.090. LAND MANAGEMENT IN COMMON MANAGEMENT AREAS. The agency responsible under law for the management of that land included within a common management area shall retain that authority but shall be subject to the authority of the commission to classify land according to its beneficial uses.

Sec. 41.45.100. PROPERTY TAX EXEMPTION. If a private landowner, including, but not lmited to, any entity established under the Alaska Native Claims Settlement Act, enters into an agreement by which the commission manages land owned or selected under an Act of Congress by the private landowner, for a minimum of five years, that land shall be exempt from any property tax on the land during the time it is managed by the commission. If the land is withdrawn from the commission's management authority before the minimum five-year period, then all property taxes on the land which would otherwise have been payable shall

be due at the time the land is withdrawn.

Sec. 41.45.110. HEARINGS. The commission or, on the authorization of the majority of its members, any subcommittee or member of the commission may, for the purpose of carrying out the provisions of this chapter, hold hearings, receive testimony and evidence, and sit and act at those times and places as the commission or subcommittee determines. Hearings shall be held, insofar as practicable, in communities and areas which are to be affected.

Sec. 41.45.120. MEETINGS. All commission meetings shall be public and notice of a meeting shall be given at least 15 days before the date when the meeting is to take place.

Sec. 41.45.130. ANNUAL REPORT. On or before January 10 of each year, the commission shall submit to the President of the United States, Congress, the governor and the legislature a written report with respect to its activities during the preceding fiscal year. The report shall also include the activities that the commission contemplates over the next fiscal year, and the amount of funding required.

Sec. 41.45.140. LAND FOR INCLUSION WITHIN COMMON MANAGEMENT AREAS. (a) The commission shall establish a process to provide for the identification and submission of recommendations concerning areas in federal and state ownership for inclusion in common management areas. Land designated for inclusion within common management areas shall be submitted by the commission to Congress and the legislature. A recommendation which includes state land shall be presented to the legislature during the first 10 days of any regular session. The recommendation shall become effective at the adjournment of the session unless disapproved, in whole or in part, by a resolution concurred in by a majority of the members of each house of the legislature.

(b) Classification of state land within a common management area

supersedes the authority of the director of the division of lands to classify the land under AS 38.05.300.

(c) The state may withdraw any portion of state land in a "common management area" with six months notice to the commission.

Sec. 41.45.150. VETO. With respect to all state land subject to this chapter, the governor may veto a decision of the commission, within 45 days of the action of the commission.

Sec. 41.45.160. EXECUTIVE COORDINATION COMMITTEE. There is established an Executive Coordination Committee composed of the commissioners of natural resources, fish and game, transportation and public facilities, environmental conservation, commerce and economic development, revenue, community and regional affairs, or their designees, and the state co-chairman of the Alaska Land Commission. The committee shall meet regularly in order to coordinate those programs and functions of their departments which could affect the administration of state and federal public land. The governor shall designate the chairman of the committee.

Sec. 41.45.170. PRINCIPAL OFFICE. The principal office of the commission shall be located in Alaska.

Sec. 41.45.180. FUNDING. The state shall pay 50 per cent of the costs and other expenses incurred by the commission in any one fiscal year.

Sec. 41.45.190. EXPIRATION OF THE COMMISSION. (a) On or before the ninth anniversary of the effective date of this Act, the governor shall present to the legislature a report on the desirability of continued state participation in the commission.

(b) State participation in the commission shall terminate on the tenth anniversary of the effective date of this Act, unless otherwise provided by law.

Sec. 41.45.200. JUDICIAL REVIEW. A person aggrieved by a decision of the commission in any determination involving state land subject to the provisions of this chapter may seek review of the decision in the superior court.

* Sec. 2. AS 39.23.060 is amended to read:

Sec. 39.23.060. REVIEW OF COMPENSATION AND BENEFITS; OFFICERS COVERED. The commission shall conduct an on-going review of compensation and retirement benefits for members of the legislature; the governor; the lieutenant governor; commissioners, deputy commissioners, and division directors of each executive department; members of the Alaska Public Utilities Commission; members of the Alaska Pipeline Commission; members of the Alaska Transportation Commission; members of the Alaska Commercial Fisheries Entry Commission; state members of the Alaska Land Commission; and the judiciary, to determine the appropriateness of compensation and benefits.

* Sec. 3. AS 41.40.070 is amended to read:

Sec. 41.40.070. TERMINATION OF THE COMMISSION. The commission ceases to exist 120 days after the establishment of the Alaska Land Commission or on April 30, 1981, whichever comes first [ON JUNE 30, 1979].

* Sec. 4. FEDERAL MEMBERSHIP ON THE COMMISSION. Section 1 of this Act contemplates the authorization by Congress of legislation complementing the provisions of this Act. It is the intent of the legislature that Congress provide for the designation of three representatives to serve as members of the Alaska Land Commission.

* Sec. 5. Sections 1, 2, and 4 of this Act take effect on the effective date of legislation enacted by the Congress of the United States providing for the establishment of an Alaska Land Commission and containing provisions which are not in conflict with the provisions of this Act, if such legisla-

tion is passed by congress before January 1, 1981.

EFFECT OF AMENDMENTS TO HB 211

CONTAINED IN THE PROPOSED COMMITTEE SUBSTITUTE FOR HB 211

* Section 1

AS 41.45.010 PURPOSE.

This section is amended by adding new language after "Alaska" on line 13. The effect of this amendment is to enlarge the purpose of the act to include establishment of land use planning and management institutions which will minimize conflicting uses of land, provide for changing circumstances, and protect significant natural values on land in Alaska. This amendment was included at the suggestion of the staff of the Federal-State Land Use Planning Commission.

AS 41.45.020 POLICY.

This section is unchanged.

AS 41.45.030 COMMISSION.

This section is unchanged.

AS 41.45.040 MEMBERSHIP.

This section is amended as follows:

a) the membership is set at six full-time members; and

b) one of the three members appointed by the Governor is to be designated as state co-chairman.

The effect of these amendments is to set the membership of the commission at an even number (six) and to provide for a state co-chairman of the commission. The establishment of the membership of the commission at an even number with state and federal co-chairmen was recommended by Senator Ted Stevens, Representative Don Young and members of the Federal-State Land Use Planning Commission.

AS 41.45.050 TERM.

This section is amended to provide that the term of the state members of the commission coincides with that of the Governor. The effect of this amendment would be to ensure accountability of the state appointees to the commission. This amendment was recommended by the staffs of the Federal-State Land Use Planning Commission and the Steering Council for Alaska Lands.

AS 41.45.060 COMPENSATION.

This section is amended to provide that the salary for the state members of the commission is set by the Alaska Salary Commission. This amendment would put the state commissioners to the Alaska Land Commission in the same position as commissioners of the Public Utilities Commission and the Pipeline Commission.

AS 41.45.070 DUTIES.

This section is amended by substituting "classify" for "manage" (page 2, line 24) and by adding seven new subsections (page 3, lines 4-28). The effect of the first amendment is to make the commission responsible for classifying lands in the "common management areas". The responsibility for managing those lands would remain with the appropriate land management agency (i.e. Bureau of Land Management, Alaska Division of Lands, National Park Service, etc.). The management policies of the managing agencies would be guided by the land classifications of the commission. The second amendment the commission the responsible for participating in an advisory capacity in the land use planning, resource management, land management programs of the various land management agencies. The amendment to limit the commission's authority to land classification instead of land management was recommended by Senators Stevens and Gravel, Representative Young and the Federal-State Land Use Planning Commission. The additional duties of the commission contained in the second amendment were suggested by the Federal-State Land Use Planning Commission.

AS 41.45.080 POWERS.

The amendments to this section gives the commission authority to: a) classify land in the "common management areas" instead of managing them (page 4, line 1), b) authorizes the commission to hire staff and consultants as necessary (page 4, line 7-8), c) deleted the remainder of subsection (2) after "landowner". The effect of the last amendment is to permit the commission to enter into common management agreements with private landowners who own land that is not adjacent to other cooperative management areas. This last amendment was proposed by Representative Cowper.

AS 41.45.090 PROPERTY TAX EXEMPTION.

This entire section contains new language. The effect of this section is to grant an exemption from property taxes for those private lands covered by a common management agreement between the landowner and the commission. Native regional and village corporations are cited as specific private entities which are eligible to receive the benefit of this section. Private land committed to the jurisdiction of the commission must be subject to the commission for five years. If the land is withdrawn from a "common management area" before the end of five years, all taxes for the five year period must be paid.

AS 41.45.100 HEARINGS.

This section is unchanged.

AS 41.45.110 MEETINGS.

This is a new section. The effect of this section is to require advance notice of commission meetings be given and that all commission meetings be public. This amendment was recommended by the staff of the Federal-State Land Use Planning Commission.

AS 41.45.120 ANNUAL REPORT.

This section is unchanged.

AS 41.45.130 LAND FOR INCLUSION WITHIN COMMON MANAGEMENT AREAS.

This section is amended by adding a new subsection (c) which allows the state to withdraw its land from the jurisdiction of the commission following six months advance notice.

AS 41.45.140 VETO.

This is a new section which grants to the Governor the authority to veto a decision of the commission with respect to state land. This amendment was suggested by Senators Stevens and Gravel.

AS 41.45.150 EXECUTIVE COORDINATION COUNCIL.

This is a new section. The effect of this section is to create a state cabinet level committee to coordinate state involvement with the commission and its work. This amendment was suggested by the staffs of the Federal-State Land Use Planning Commission and the Steering Council for Alaska Lands.

AS 41.45.160 PRINCIPAL OFFICE.

This is a new section. The effect of this section will be to require that the commission have its principal office in Alaska.

AS 41.45.170 FUNDING.

This is a new section. The effect of this section would be to commit the State to pay 50% of the costs of the commission.

AS 41.45.170 EXPIRATION OF THE COMMISSION.

This is a new section. This section is a sunset provision. Unless the state decides to continue its participation in the commission, the commission will expire in ten years. This amendment is recommended by Senator Gravel and the Federal-State Land Use Planning Commission.

AS 41.45.180 JUDICIAL REVIEW.

This section is unchanged.

* Section 2

AS 39.23.060 REVIEW OF COMPENSATION AND BENEFITS; OFFICERS COVERED.

This section amends the existing law relating to the Salary Commission by making the salary of state commissioners to the Alaska Land Commission subject to the purview of the Salary Commission.

* Section

This section is amended by providing for the extension of the Federal-State Land Use Planning Commission until 120 days after the Alaska Land Commission is established or until April 30, 1981, whichever comes first. The Land Use Planning Commission is scheduled to expire in 1979 This section will provide for the continuation of the Federal-State Land Use Planning Commission until the Alaska Land Commission is established in order to provide for continuity between the commissions.

* Section 4

FEDERAL MEMBERSHIP ON THE COMMISSION.

This section is unchanged.

* Section 5

EFFECTIVE DATE CLAUSE.

This clause is amended to permit the extension of the Federal-State Land Use Planning Commission until 1981 or until the Alaska Land Commission is established. The remainder of this bill takes effect on the same day as similar legislation passed by Congress. If Congress does not pass similar legislation by January 1, 1981, this act expires.

Suggested Amendments to HB 211

by: Rep. Steve Cowper

p. 3, line 12: Omit all after "landowners".

Add new section:

Sec. 41.45.085. If a private landowner, including any entity established under the Alaska Native Claims Settlement Act, enters into an agreement by which the commission manages land owned or selected under an Act of Congress by such private landowner, for a minimum of five years, such land shall be exempt from any property tax on the land during the time it is managed by the commission. If the land is withdrawn from the commission's management authority before the minimum five-year period, then all property taxes on such land which would otherwise have been payable shall be due at the time the land is withdrawn.

COMMITTEE ON APPROPRIATIONS
WASHINGTON, D.C. 20510

February 24, 1978

Honorable Al Osterback
Chairman
House Resources Committee
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Al:

It is my understanding that the House Resources Committee will soon be considering House Bill 211. That legislation deals directly with issues embodied in pending d-2 legislation now before the Congress. The Legislature is aware of my interest in cooperative management of federal, state, and private lands and the creation of a federal-state land classification commission. Legislation I have introduced in the Senate would establish such a commission and provide a procedure for dedicating federal, state and private lands to the classification authority of the commission. For the benefit of the House Resources Committee, a copy of that legislation is enclosed. The specific details dealing with the commission can be found in Title XXXXII, on pages 68-73.

Upon review of House Bill 211, a number of thoughts come to mind, and I would like to take this opportunity to transmit some comments on the bill to you. My thoughts on the legislation before your Committee fall into specific categories and will be dealt with below. I request that this letter and a copy of S. 1787 be made a part of the record the Committee is compiling in consideration of H.B. 211.

Lands Under the Jurisdiction of the Commission

A major question is which lands, federal and state, the Commission will have jurisdiction over. My position on the federal side of this question has been consistent and is reflected in S. 1787. The establishment of a land classification commission is being discussed as part of the consideration of d-2 lands and should be restricted to those lands involved in that process.

Management of remaining federal lands are adequately provided for under the Bureau of Land Management and Federal Land Policy and Management Act of 1976.

My concept of the Commission reflects the need to insure that closely related federal, state, and private lands being considered within the d-2 context are managed compatibly with options for future land use decisions remaining open. Hearings on both sides of Capitol Hill have demonstrated the lack of information on many resources contained within these lands. The creation of a cooperative management program will provide future generations with the ability to determine appropriate uses of lands as such decisions become necessary.

The extent to which state lands should be dedicated to cooperative management is a decision that rests with the Legislature, and I do not wish to comment on any specific acreage or formulas which have been proposed by others. My legislation provides that the State of Alaska must commit a "substantial amount of state land" to a program of cooperative management prior to state participation on a classification commission. This provision was drafted in this manner to insure that the State Legislature makes the decision on state participation and is not presented with a "fait accompli" in which a cooperative management depends upon the State dedicating all of its lands without a meaningful debate on the matter.

Management of Lands Under the Commission's Jurisdiction

House Bill 211 provides that the Commission will manage lands under its jurisdiction. To the best of my knowledge, those advocating the creation of such a commission are unanimous that the commission's duties should involve classification of uses rather than daily management. Existing federal and state agencies are better equipped to continue management of lands under the direction of the commission through classification authority.

My legislation embodies this concept, as does the proposal of the Federal-State Land Use Planning Commission. Further thought to the concept of the commission as a management agency should be given. The commission's strengths can be best achieved if it provides direction to on-the-ground managers.

Commission Membership

The makeup of the commission is important and most parties agree that the commission should consist of an equal

number of state and federal appointees. To insure that the sovereignty of the State of Alaska and the United States is not compromised, it is advisable that the commission be co-chaired by a federal and state appointee. This system has worked well with the existing Federal-State Land Use Planning Commission and should be utilized in the establishment of a new classification commission.

The Committee should also address itself to specific issues regarding the qualifications of appointees, their length of term, and the method of replacement for filling vacancies on the commission. The Federal-State Land Use Planning Commission is presently compiling a list of options regarding these issues, and the Committee may wish to consult the LUPC on these matters.

Functions of the Commission

The specific duties of the Commission are of utmost importance. I envision the commission as a body with classification authority on those lands under its jurisdiction. This will be its most important function. It will draw up land use plans and coordinate and monitor the implementation of these plans.

Additionally, the commission can continue a number of functions now performed by the existing Federal-State Land Use Planning Commission. Among these are providing assistance to the federal and state agencies and private landowners in the area of land use planning and making recommendations as to necessary amendments to existing state and federal public land laws. A full list of the functions I think the commission should perform can be found on pages 71 and 72 of S. 1787.

It should be noted that the commission can play a role of particular importance in regards to transportation and access. Most parties agree that a process to insure reasonable and adequate access is provided across federal and state lands is needed. The commission can become part of that process as the major arbiter of method and means of access when such access becomes necessary. My legislation provides the commission with such authority.

Veto Over Commission Decisions

As stated previously, the protection of the sovereignty

of the State of Alaska and the United States is all-important if the commission concept is to be successful. To insure such sovereignty is not compromised, the Secretary of Interior and the Governor must be given a veto power over federal and state lands, respectively, which are part of a cooperative management program. The rationale for such a veto has been adequately examined and articulated by the existing Federal-State Land Use Planning Commission, in their testimony on the functions of a commission before the House and Senate of the United States Congress and before your Committee.

These comments summarize my thoughts on the concepts being considered in House Bill 211. I would be happy to provide you and other members of the Committee with further details if you are interested. House Bill 211 contains language contemplating complementary legislation to be enacted by the Congress. If I can be of any assistance to the Legislature to insure that federal and state legislation do complement one another, please let me know.

With best wishes,

Cordially,

Ted

TED STEVENS
United States Senator

Enclosure

DRAFT

PROPOSAL BY SENATOR MIKE GRAVEL FOR A FEDERAL-STATE LAND USE PLANNING COMMISSION

TITLE VI

----THE COMMISSION WOULD BE ESTABLISHED UPON THE PASSAGE OF STATE LAW DEDICATING STATE LAND FOR JURISDICTION UNDER THE COMMISSION.

----ALL FEDERAL LAND NOT INCLUDED IN CONSERVATION SYSTEMS OR MILITARY RESERVES WOULD BE PLACED UNDER THE COMMISSION

----THE STATE WOULD LEGISLATE A PROCESS BY WHICH PRIVATE NATIVE CORPORATION LANDS COULD BE VOLUNTARILY PLACED UNDER THE COMMISSION'S JURISDICTION AND RECEIVE CERTAIN ADVANTAGES SUCH AS PROPERTY TAX DEFERMENT.

----THE COMMISSION WOULD BE COMPOSED OF 9 MEMBERS: 1 CHAIRMEN JOINTLY APPOINTED BY PRESIDENT AND GOVERNOR, 4 FEDERAL MEMBERS BY PRESIDENT, AND 4 STATE MEMBERS BY GOVERNOR. 1 FEDERAL MEMBER AND ONE STATE MEMBER WOULD BE NATIVE IF 80% OR MORE OF CORPORATION LAND DEDICATED.

----MEMBERS WOULD BE FULL-TIME AND SERVE STAGGERED 4-YEAR TERMS

----FUNCTIONS AND AUTHORITIES OF THE COMMISSION WOULD INCLUDE:

- ----DEVELOPMENT OF LAND USE PLANS AND LAND CLASSIFICATIONS FOR VARIOUS LAND USES;
- ----INSURING THAT FEDERAL, STATE, AND LOCAL PLANNING AND LAND USES ARE HARMONIOUS
- ----COORDINATE IMPLEMENTATION OF AIR AND WATER POLLUTION LAWS, COASTAL ZONE MANAGEMENT LAW, AND OTHER ENVIRONMENTAL LAWS;
- ----DETERMINE LOCATION OF TRANSPORTATION AND UTILITY SYSTEM RIGHTS-OF-WAY ACROSS FED, STATE, AND PRIVATE LANDS;

-----VETO POWER WOULD BE RETAINED BY THE GOVERNOR AND THE SECRETARY OF INTERIOR OVER THEIR RESPECTIVE LANDS. EITHER THE STATE OR THE SECRETARY WOULD HAVE VETO OVER NATIVE CORPORATION LANDS.

----ON-THE-GROUND MANAGEMENT WOULD BE RETAINED BY THE NORMAL FEDERAL (BLM) AND STATE (DNR) AGENCIES.

----LANDS UNDER THE COMMISSION WOULD BE WITHDRAWN FROM ALL ENTRIES AND APPROPRIATIONS PENDING CLASSIFICATION BY COMM.

----THE COMMISSION WOULD TERMINATE AFTER 10 YEARS UNLESS RENEWED BY CONGRESS.

DRAFT

SENATOR MIKE GRAVEL

STATE LEGISLATIVE NEEDS TO COMPLEMENT FEDERAL LEGISLATION ESTABLISHING AN ALASKA FEDERAL-STATE LAND USE PLANNING COMMISSION

----DESIGNATION OF ALL STATE LANDS AS LANDS TO BE COOPERATIVELY MANAGED UNDER THE JURISDICTION OF A FEDERAL-STATE LAND USE PLANNING COMMISSION.

----IDENTIFICATION OF A SYSTEM BY WHICH NATIVE CORPORATION LANDS AND PERHAPS OTHER PRIVATELY OWNED LANDS COULD BE DEDICATED UNDER THE JURISDICTION OF THE COMMISSION. SUCH INCENTIVES AS TAX DEFERMENTS COULD BE INCLUDED. A TWO-YEAR STUDY OF A POSSIBLE STATE PROPERTY TAX SHOULD ALSO BE INCLUDED.

----IDENTIFICATION OF A SYSTEM BY WHICH STATE MEMBERS WOULD BE APPOINTED, CONDITIONS OF APPOINTMENT, PAY, ETC.

----AUTHORIZATION AND APPROPRIATION OF FUNDS NECESSARY TO COVER ONE-HALF THE COST OF THE COMMISSION.

----FORMALIZATION OF SYSTEM OF OBTAINING INFORMATION, SERVICES, AND INPUT FROM VARIOUS STATE AGENCIES TO THE COMMISSION.

----TO REQUIRE THE SUBMISSION OF ALL LOCAL GOVERNMENT PLANS TO THE COMMISSION FOR COMMENT AND APPROVAL.

----TO REQUIRE THE SUBMISSION OF ALL RULES, ACTIONS BY STATE AGENCIES REGARDING AIR AND WATER POLLUTION LAWS, COASTAL ZONE MANAGEMENT AND OTHER ENVIRONMENTAL LAWS TO THE COMMISSION. THE STATE AGENCIES SHOULD BE REQUIRED TO MODIFY POLICIES, ACTIONS, ETC., WITHIN LEGAL REQUIREMENTS, IN RESPONSE TO COMMISSION COMMENTS AND RECOMMENDATIONS. WHERE APPROPRIATE, AUTHORITIES ASSIGNED TO THE STATE UNDER VARIOUS ENVIRONMENTAL LAWS SHOULD BE ASSIGNED TO THE COMMISSION.

----IF NECESSARY, AUTHORIZE THE APPLICATION OF LEASE SYSTEMS FOR ALL LAND USES ON STATE LANDS.

----TEMPORARILY WITHDRAW ALL STATE LANDS FROM DISPOSAL OR ENTRY PENDING STUDY AND CLASSIFICATION BY THE COMMISSION.

----REQUIRE TERMINATION OF STATE PARTICIPATION IN COMMISSION 10 YEARS FOLLOWING CREATION UNLESS REAFFIRMED BY LEGISLATUIE

SENATOR MIKE GRAVEL

DRAFT

TITLE VI -- ALASKA FEDERAL-STATE LAND USE PLANNING COMMISSION

Sec. 601. (a) Following designation under Alaska State law of all lands patented or tentatively approved for patent to the State to be cooperatively managed with designated Federal lands, there is hereby established the Alaska Federal-State Land Use Planning Commission (hereinafter referred to as the "Commission").

(b) In addition to the designated State lands, the Commission shall have jurisdiction over all public lands in the State of Alaska under the management of the Bureau of Land Management, including the National Petroleum Reserve in Alaska.

(c) With the approval of the Commission, lands for which patents or interim conveyances have been issued to Native corporations under the terms of the Alaska Native Claims Settlement Act may be placed under the jurisdiction of the Commission pursuant to the procedures and conditions which shall be enacted by the State of Alaska.

Sec. 602. (a) (1) The Commission shall, subject to the provisions of Section 101, be composed of nine members as follows:

(A) One member appointed, after consultation with and concurrence by the Governor of Alaska, by the President of the United States, with the advice and consent of the

Senate, who shall be Chairman of the Commission;

(B) Four members appointed by the President of the United States, with the advice and consent of the Senate;

(C) Four members appointed by the Governor of the State of Alaska with the advice and consent of the State Legislature.

(2) Upon the first vacancy of a position under subparagraph (B) and subparagraph (C) (whether created by expiration of a member's term or otherwise) occurring on or after the date on which 80 per centum or more of all lands for which patents or interim conveyances have been issued have been dedicated by Native corporations for jurisdiction under the Commission, the President and the Governor, in filling those vacancies, shall appoint a Native (as that term is defined in the Alaska Native Claims Settlement Act) to fill the respective vacancy, and thereafter, as long as such lands remain so dedicated, at least one of such members appointed pursuant to subparagraph (B) and subparagraph (C) of subsection (a)(1) shall be a Native.

(b) (1) The Chairman shall be compensated at a rate to be determined by the president not to exceed the rate provided for GS-18 of the General Schedule under Section 5332 of Title 5, United States Code.

(2) All other members of the Commission shall be compensated at a rate to be determined by the President,

after consultation with and concurrence by the Governor of Alaska, not to exceed the rate provided for GS-16 of such General Schedule.

(3) Upon vouchers approved by the Chairman, all members of the Commission shall be reimbursed for necessary expenses incurred by them in carrying out their duties under this Act.

(c) The Commission, with the approval of the Chairman, is authorized to obtain the services of experts and consultants in accordance with Section 3109 of Title 5, United States Code.

(d) Members shall serve for a four-year term except that, of the initial members appointed pursuant to subparagraph (B) of subsection (a)(1), two members shall be appointed for two-year terms, and of the initial members appointed pursuant to subparagraph (C) of subsection (a)(1), two members shall be appointed for two-year terms. A vacancy in the membership shall not affect the Commission's powers but shall be filled in the manner provided in paragraph (2) of subsection (a). Any person appointed to fill a vacancy involving an unexpired term shall serve for the duration of that term. Except to the extent otherwise provided in subsection (a), members may be reappointed to serve additional terms.

(e) Six members of the Commission shall constitute a quorum, except that the Commission may establish a

lesser number for purposes of subsection (g).

(f) All Commission meetings shall be public and shall be duly noticed at least fifteen days prior to the date when the meeting is to take place.

(g) The Commission, or on its authorization, any subcommittee or member thereof, may hold such hearings, take such testimony, receive such evidence, and print such reports as are deemed necessary to carry out the functions specified in this Title.

(h) The Chairman shall have the authority, in accordance with regulations prescribed by the Commission, to create and abolish employments and position, including temporary and intermittent employments; to fix and provide for the qualification, appointment, removal, compensation, pension and retirement rights of Commission employees; and to procure needed office space, supplies and equipment.

(i) The principal office of the Commission shall be located in the State of Alaska.

(j) The federal government shall pay only 50 per centum of the costs and other expenses incurred in each fiscal year by the Commission in carrying out its duties under this Act.

(k) The Commission is authorized to use the services, equipment, personnel and facilities of Federal departments and other agencies, with or without reimbursement. Each department and agency of the Federal government shall cooperate

fully in making its services, equipment, personnel and facilities available to the Commission.

(l) The Commission is authorized to accept donations, gifts and other contributions and to utilize such donations, gifts and contributions in carrying out its functions under this Act.

(m) The Commission shall keep and maintain complete accounts and records of its activities and transactions, and such accounts and records shall be available for public inspection.

(n) The Commission shall, on or before March 1 of each year, prepare and submit to the President, the Governor of Alaska and the Congress an annual report summarizing its activities during the preceding calendar year, together with its recommendations.

Sec. 603. (a) It shall be the function of the Commission:

(1) to review resource inventories prepared by the managing agencies and other affected or concerned Federal and State agencies on lands under the jurisdiction of the Commission; and to initiate and conduct other such inventories and resource studies as may be needed;

(2) to develop comprehensive land use plans with respect to lands under the jurisdiction of the Commission;

(3) to make land classifications pursuant

to such plans, and to approve and to supervise the regulation of uses in accordance with such plans and classifications;

(4) to assure that such classifications would specifically identify lands which are suitable and open for the following primary uses:

(A) oil and gas exploration and possible development;

(B) mineral exploration and possible development;

(C) human habitation, permanent and seasonal;

(D) agricultural and aquaculture development;

(E) timber harvesting;

(F) tourism/recreational development;

(G) primitive or wilderness use;

(H) fish and wildlife habitat; and

(I) other resource uses as may be appropriate.

(5) to assist in the development and review of land-use plans for lands selected by Native corporations under the terms of the Alaska Native Claims Settlement Act which may not be designated for jurisdiction by the Commission; ~~to assist in the development and review of land-use plans for State lands not designated for jurisdiction by the Commission;~~ and to assist in the development and review of land-use plans of municipal governments;

(6) to review existing withdrawals of Federal public lands and recommend to the President and Congress such additions to or modifications of such withdrawals as the Commission deems appropriate;

(7) to make recommendations to the President and the Governor regarding the programs and budgets of the Federal and State agencies responsible for the administration of the public lands of the United States and the State of Alaska;

(8) to make recommendations, from time to time, to the President, Congress and the Governor and the Legislature of the State of Alaska as to changes in laws, policies and programs relating to the public lands which the Commission deems necessary or desirable;

(9) to make recommendations to the appropriate officers of the governments of the United States and the State of Alaska to develop general plans which would insure that economic growth and development are orderly, planned and compatible with State and national economic, social and environmental objectives;

(10) to make recommendations to appropriate officers of the United States, the State of Alaska and municipal officials to improve coordination and consultation between the Federal, State and municipal governments in making resource allocations and land use decisions;

(11) to coordinate the implementation by Federal and State agencies the provisions of the following laws as they may affect lands under the jurisdiction of the Commission:

(i) Federal Water Pollution Control Act as amended;
(ii)Clean Air Act as amended;
(iii) Solid Waste Disposal Act;
(iv) National Environmental Policy Act of 1969;
(v) Coastal Zone Management Act of 1972 as amended;
(vi) Safe Drinking Water Act;

In order that Commission may review all pertinent actions in regard to the above mentioned laws, to insure that conflicts do not occur between the rules, regulations, or policies of the various federal and state agencies involved with the implementation of these laws, and to insure that uses being permitted under these laws are consistent with the overall land use plans and classifications developed by the Commission for particular lands under their jurisdiction, the federal agencies authorized with the administration of the various provisions of the above-described laws shall provide the Commission with copies of all orders, notices, or other material initiated by the agency concerning the implementation of the above-mentioned laws affecting any lands under the jurisdiction of the Commission.

Prior to the finalization of any rule, regulation, stipulation, policy or other action affecting uses of lands under the jurisdiction of the Commission, any federal agency authorized to implement terms or provisions of the above-mentioned laws shall solicit and receive comments on the proposed action from the Commission. The agency or Department shall take whatever actions or make modifications as are reasonable and in keeping with the provisions of the above-mentioned laws to obviate conflicts or problems which the Commission may identify in its comments.

(12) to determine the location of specific routes or corridors which would serve identified regional, statewide or national transportation or utility needs; approve rights-of-way across lands under its jurisdiction and make specific recommendations to the appropriate Federal or State officer or private landowner where such rights-of-way would cross lands not under the Commission's jurisdiction, and in

connection therewith the Commission shall evaluate alternative routes and modes and shall seek to recommend prudent and feasible routes and corridors which minimize environmental impacts.

(b) With respect to the uses under paragraph (4) of subsection (a), the Commission shall have the authority to pursue such uses on a lease basis under such terms as it may prescribe or under applicable provisions of the public land laws.

(c) With respect to all Federal lands subject to the jurisdiction of the Commission, the Secretary may veto a decision of the Commission. With respect to all State lands subject to the jurisdiction of the Commission, the Governor of Alaska may veto a decision of the Commission. With respect to any lands owned by Native corporations subject to the jurisdiction of the Commission, either the Secretary or the Governor may veto a decision by the Commission.

(d) Federal, State and Native corporation lands under the jurisdiction of the Commission shall continue to be managed by the respective agencies established under Federal and State law, and in th case of corporation lands, by the respective corporation owner, provided that uses shall be regulated in accordance with classifications made by the Commission. Except to the extent that they would be inconsistent with a Commission classification or the provisions of this Act, land use management decisions made by an agency shall be in accordance with the laws

and regulations which generally govern the functions of such agency.

(e) Lands under the jurisdiction of the Commission shall be withdrawn from all forms of disposition or appropriation under Federal or State public land laws, including mining and mineral leasing laws, until a land use plan has been completed for the particular area by the Commission and classifications imposed in regard to permissable land uses.

(f) In performing the functions described in Section 103 (a) the Commission shall hold public hearings in the specific locale or region for which specific land use plans, classifications or actions are being proposed or considered.

Sec. 604. Notwithstanding any other provision of law, Federal participation in the Joint Federal-State Land Use Planning Commission for Alaska, established in Section 17(a) of the Alaska Native Claims Settlement Act, shall cease 180 days following the date of enactment of this Act or upon establishment of the Commission provided for in Section 101 of this Title, whichever first occurs. Immediately upon termination of Federal participation, all unexpended funds appropriate to the Joint Commission and all property shall be returned, as appropriate, to the United States and the State of Alaska, unless the Commission provided for in Section 101 of this Title has been established, in which case all Federal funds and property shall be transferred to the Commission.

Sec. 605. (a) On or before the ninety-day period immediately preceding the date of the expiration of the ten calendar year period following the date on which the Commission takes effect, the Secretary of the Interior shall report to the President and the Congress with respect to the Secretary's views and recommendations concerning the desirability or non-desirability of continued Federal participation in the Commission.

(b) Unless otherwise hereafter provided by law, Federal participation in the Commission shall terminate upon the expiration of the ten calendar year period following the date on which the Commission takes effect.

SENATOR GRAVEL'S DRAFT D-2 BILL--TITLE OUTLINE

TITLE I-IV---FOUR SYSTEMS DESIGNATIONS

------NO ACREAGES LISTED

------WILL DEVELOP MODERATE ACREAGE (50-80 MILLION)

-------WILL SEEK TO DRAW BOUNDARIES WHICH INCLUDE ONLY THOSE TRULY NATIONALLY SIGNIFICANT AREAS AND WHICH MINIMIZE CONFLICTS WITH OTHER SIGNIFICANT RESOURCES SUCH AS MINERALIZED AREAS.

------AREAS WOULD NOT TAKE AWAY ANY VALID STATE OR NATIVE SELECTIONS.

------BECAUSE PROPOSED REFUGES INVOLVE SO MUCH POTENTIAL OIL AND GAS SEDIMENTARY BASINS AND BECAUSE SECRETARY OF INTERIOR HAS NOT USED HIS AUTHORITIES TO LEASE FOR THESE RESOURCES ON EXISTING REFUGES IN ALASKA, THE BILL REQUIRES SECRETARY TO ESTABLISH SPECIFIC OIL AND GAS LEASE PROGRAM ON DESIGNATED REFUGES IN ALASKA.

------THE BILL AUTHORIZES A TRADE OF SUBSURFACE RIGHTS ON APPROXIMATELY 3% OF THE EXISTING ARCTIC GAME RANGE FOR STATE LANDS ADJACENT PROPOSED PARK OR REFUGE AREAS. EXPLORATION AND POSSIBLE DEVELOPMENT WOULD BE UNDER SURFACE REGULATIONS OF THE SECRETARY OF THE INTERIOR.

SENATOR GRAVEL'S DRAFT D-2 BILL--TITLE OUTLINE

TITLE V-------WILDERNESS

----------NOT ENOUGH KNOWN ABOUT RESOURCES OR POSSIBLE MANAGEMENT PLANS ON PROPOSED FOUR SYSTEMS LANDS TO DESIGNATE "INSTANT" WILDERNESS AT THIS TIME. NATURAL RESOURCES WILL NOT BE ENDANGERED IF WE WAIT SEVERAL YEARS TO MAKE WILDERNESS DETERMINATIONS; THIS WAS THE ORIGINAL MORTON PROPOSAL.

----------ONE EXCEPTION TO THIS IS SOUTHEAST ALASKA WHERE FOREST SERVICE PLANNING PROCESS NEARING COMPLETION. AFTER THE INFORMATION ALL IN AND ANALYZED THIS SPRING AND AFTER GETTING COMMENTS FROM CONCERNED GROUPS AND INDIVIDUALS IN SOUTHEAST, I PROPOSE TO COME BACK AND ADD IN WILDERNESS OR WILDERNESS STUDY AREAS IN THE TONGASS FOREST IN MY D-2 BILL.

----------INCLUDED IN BILL ARE SPECIAL MANAGEMENT GUIDELINES FOR WILDERNESS TO ALLOW FOR ACCESS AND CABIN USES WHICH ARE PRESENTLY GOING ON,PLUS POTENTIAL AQUACULTURE DEVELOPMENTS.

----------IT IS VERY UNFORTUNATE THAT THE DEPT OF AGRICULTURE BOWED TO POLITICAL PRESSURES AND JUMPED THE GUN ON THEIR WILDERNESS RECOMMENDATIONS FOR SOUTHEAST. THEY CUT THE MARGIN ON AVAILABLE TIMBER YIELD SO CLOSE AS TO ENDANGER THE JOBS AND WHOLE ECONOMY OF SOUTHEAST.

PROPOSAL BY SENATOR MIKE GRAVEL FOR A FEDERAL-
STATE LAND USE PLANNING COMMISSION

TITLE VI

----THE COMMISSION WOULD BE ESTABLISHED UPON THE PASSAGE OF STATE LAW DEDICATING STATE LAND FOR JURISDICTION UNDER T COMMISSION.

----ALL FEDERAL LAND NOT INCLUDED IN CONSERVATION SYSTEMS OR MILITARY RESERVES WOULD BE PLACED UNDER THE COMMISSION

----THE STATE WOULD LEGISLATE A PROCESS BY WHICH PRIVATE NATIVE CORPORATION LANDS COULD BE VOLUNTARILY PLACED UNDER THE COMMISSION'S JURISDICTION AND RECEIVE CERTAIN ADVANTAGES SUCH AS PROPERTY TAX DEFERMENT.

----THE COMMISSION WOULD BE COMPOSED OF 9 MEMBERS: 1 CHAIRMEN JOINTLY APPOINTED BY PRESIDENT AND GOVERNOR, 4 FEDERAL MEMBERS BY PRESIDENT, AND 4 STATE MEMBERS BY GOVERNOR. 1 FEDERAL MEMBER AND ONE STATE MEMBER WOULD BE NATIVE IF 80% OR MORE OF CORPORATION LAND DEDICATED.

----MEMBERS WOULD BE FULL-TIME AND SERVE STAGGERED 4-YEAR TERMS

----FUNCTIONS AND AUTHORITIES OF THE COMMISSION WOULD INCLUDE:

- ----DEVELOPMENT OF LAND USE PLANS AND LAND CLASSIFICATIONS FOR VARIOUS LAND USES;
- ----INSURING THAT FEDERAL, STATE, AND LOCAL PLANNING AND LAND USES ARE HARMONIOUS
- ----COORDINATE IMPLEMENTATION OF AIR AND WATER POLLUTION LAWS, COASTAL ZONE MANAGEMENT LAW, AND OTHER ENVIRONMENTAL LAWS;
- ----DETERMINE LOCATION OF TRANSPORTATION AND UTILITY SYSTEM RIGHTS-OF-WAY ACROSS FED, STATE, AND PRIVATE LANDS;

-----VETO POWER WOULD BE RETAINED BY THE GOVERNOR AND THE SECRETARY OF INTERIOR OVER THEIR RESPECTIVE LANDS. EITHER THE STATE OR THE SECRETARY WOULD HAVE VETO OVER NATIVE CORPORATION LANDS.

----ON-THE-GROUND MANAGEMENT WOULD BE RETAINED BY THE NORMAL FEDERAL (BLM) AND STATE (DNR) AGENCIES.

----LANDS UNDER THE COMMISSION WOULD BE WITHDRAWN FROM ALL ENTRIES AND APPROPRIATIONS PENDING CLASSIFICATION BY COMM.

----THE COMMISSION WOULD TERMINATE AFTER 10 YEARS UNLESS RENEWED BY CONGRESS.

SENATOR GRAVEL'S DRAFT D-2 BILL--TITLE OUTLINE

TITLE VII--SUBSISTENCE

-------PROVISIONS VERY SIMILAR TO THE COMPROMISE PUT TOGETHER IN THE HOUSE SUBCOMMITTEE WHICH RECEIVED WIDE AGREEMENT OR ACCEPTANCE BY THE MANY SIDES OF THE ISSUE.

-------THE STATE WOULD RETAIN PRIME RESPONSIBILITY FOR FISH GAME MANAGEMENT.

-------WHEN FISH AND WILDLIFE RESOURCES WERE SCARCE, SUBSISTENCE USERS WOULD BE GIVEN PREFERENCE IN USING THOSE RESOURCES

-------SUBSISTENCE USERS WOULD BE DEFINED ON THE BASIS OF RESIDENCE AND DEPENDENCE ON THE RESOURCES, NOT RACE OR ETHNIC BACKGROUND.

-------ALL LANDS, INCLUDING NATIONAL PARK LANDS, WOULD BE OPEN FOR SUBSISTENCE USES. ACCESS BY CUSTOMARY MEANS, INCLUDING MOTORIZED VEHICLES, WOULD BE PERMITTED ON ALL LANDS.

-------THE STATE WOULD CREATE A SYSTEM A REGIONAL BOARDS AND LOCAL ADVISORS. REGIONAL BOARDS WOULD HAVE PRIMARY RESPONSIBILITY, SUBJECT TO STATE OVERVIEW, FOR DEVELOPMENT OF FISH AND WILDLIFE POLICIES AND REGULATIONS.

-------THE SECRETARY WOULD MONITOR STATE SUBSISTENCE PROGRAM AND COULD SUSPEND PROGRAM IF SUBSISTENCE PROVISIONS NOT BEING FOLLOWED. STATE WOULD HAVE AMPLE HEARING OPPORTUNITIES AND TIME TO CORRECT PROGRAM.

-------FEDERAL FUNDS WOULD BE AUTHORIZED AND GRANTED TO THE STATE TO OFF-SET THE EXTRAORDINARY COSTS TO SET UP AND RUN THIS SPECIAL SUBSISTENCE PROGRAM

SENATOR GRAVEL'S DRAFT D-2 BILL--TITLE OUTLINE

TITLE VIII--STATE AND NATIVE LAND CONVEYANCE

---------ADOPTS LANGUAGE DEVELOPED BY NATIVE COMMUNITY FOR MORE OR LESS INSTANT CONVEYANCE OF ALL VALIDLY SELECTED NATIVE LANDS TO WHICH THEY ARE ENTITLED UNDER THE PROVISIONS OF ANCSA.

---------ADOPTS LANGUAGE DEVELOPED BY THE STATE FOR SPEEDY CONVEYANCE OF STATE LANDS, INCLUDING ALL THOSE SELECTED TO DATE AND THOSE REMAINING TO BE SELECTED IN THE FUTURE.

---------WOULD ALSO AMEND STATEHOOD ACT TO ALLOW LONGER TIME FOR STATE SELECTIONS (IN REALITY WOULD ONLY BE A SMALL AMOUNT WHICH COULD BE USED TO TIDY UP MISC. OWNERSHIP PATTERNS IN YEARS TO COME), AND ALSO CLEAR UP OTHER SELECTION PROBLEMS.

SENATOR GRAVEL'S DRAFT D-2 BILL--TITLE OUTLINE

TITLE IX--TRANSPORTATION AND UTILITY CORRIDORS

------DUE TO THE VERY LARGE AREAS PROPOSED FOR FOUR SYSTEMS, DUE TO THE JUXTAPOSITION OF THESE AREAS TO STATE AND NATIVE LANDS, AND DUE TO THE PRESENT UNCERTAINTIES AND UNKNOWNS INVOLVED IN POSSIBLE FUTURE RESOURCE DEVELOPMENTS IN ALASKA, IT IS NECESSARY TO ESTABLISH A MECHANISM BY WHICH TO ESTABLISH TRANSPORTATION AND UTILITY CORRIDORS ACROSS FOUR SYSTEM LANDS WHICH MAY BE NEEDED IN THE FUTURE.

-----EXISTING FEDERAL POLICIES AND REGULATIONS SIMPLY CAN NOT BE RELIED ON OR ARE NOT ADEQUATE TO DEAL WITH THESE KINDS OF FUTURE NEEDS, THUS THE LAND USE PLANNING COMMISSION ESTABLISHED IN TITLE VI WOULD TAKE THE LEAD IN THIS CASE.

-----THE COMMISSION WOULD CONDUCT STUDIES OF ALL PROPOSED TRANSPORTATION OR UTILITY SYSTEMS WHICH MAY BE PROPOSED. BASED ON WHAT THEY DETERMINED TO BE THE MOST PRUDENT AND FEASIBLE ALTERNATIVE THEY WOULD GRANT RIGHTS-OF-WAY ACROSS LANDS UNDER THEIR JURISDICTION. WHERE THE ROUTE WOULD CROSS FOUR SYSTEMS LANDS , THEY WOULD MAKE SPECIFIC RECOMMENDATIONS TO THE SECRETARY INVOLVED. UNLESS THE SECRETARY ISSUED SPECIFIC FINDINGS SHOWING THAT THE ROUTE WOULD RESULT IN SIGNIFICANT ADVERSE HARM TO THE PARTICULAR NATURAL RESOURCES INVOLVED AND THAT THERE EXISTED ANOTHER PRUDENT AND FEASIBLE ALTERNATIVE WHICH AVOIDED THESE IMPACTS, THE SECRETARY WOULD GRANT THE RECOMMENDED RIGHT-OF-WAY.

SENATOR GRAVEL'S DRAFT D-2 BILL--TITLE OUTLINE

TITLE X--ADMINISTRATIVE PROVISIONS

-------ADOPTS MUCH OF THE LANGUAGE OF THE HOUSE SUBCOMMITTEE WHICH WAS WIDELY AGREED TO.

-------AUTHORIZES LAND AQUISITION BY DONATION, TRADE, PURCHASE. INHOLDINGS CAN NOT BE CONDEMNED.

-------PROVISION OF ACCESS TO AND IN UNITS OF FOUR SYSTEMS

-------ESTALBISHED ALCAN HIGHWAY VISITOR CENTER

-------PROVIDES FOR LOCAL HIRE IN MANAGEMENT OF FOUR SYSTEMS

-------CALLS FOR DEVELOPMENT OF MANAGEMENT PLANS FOR UNITS

-------AUTHORIZES PURCHASE OF ISOLATED ARCHEOLOGICAL SITES

SENATOR GRAVEL'S DRAFT D-2 BILL--TITLE OUTLINE

TITLE XI--MISCELLANEOUS

--------CALLS FOR SPECIAL STUDY OF DEVELOPMENT OF VISITOR ACCESS AND FACILITIES ON SOUTH SIDE OF PROPOSED DENALI (MT. MCKINLEY) NATIONAL PARK.

--------WITHIN TWO YEARS OF ACT, SECRETARY WOULD REPORT ON ECONOMIC, ENVIRONMENTAL, AND ENGINEERING COSTS, PLANS AND FEASIBILITY OF RANGE OF DEVELOPMENTS

--------$2 MILLION IS AUTHORIZED FOR STUDY

--------$500 MILLION IS AUTHORIZED FOR CONSTRUCTION OF MASS TRANSIT SYSTEM FROM ANCHORAGE, VISITOR CENTER, AND TRAMWAY.

-------USING MY BILL, S. 929, A NEW CATEGORY OF NATIONAL TRAILS WOULD BE ESTABLISHED, NATIONAL HISTORIC TRAILS, AND THE IDITAROD WOULD BE DESIGNATED AS A NATIONAL HISTORIC TRAIL

-------THE SECRETARY OF INTERIOR WOULD BE AUTHORIZED TO CONVEY UP TO 5 ACRES TO INDIVIDUALS WHO OCCUPIED LAND AS A PRIMARY PLACE OF RESIDENCE PRIOR TO ANCSA PASSAGE AND UP TO PRESENT WHICH MAY BE INCLUDED IN FOUR SYSTEMS LAND

-------WOULD ALLOW STATE OR OTHER LANDS TO BE DONATED OR ACQUIRED FOR KLONDIKE GOLD RUSH NATIONAL HISTORICAL PARK

------CALLS FOR A SCENIC HIGHWAY STUDY ALONG DENALI HIGHWAY BETWEEN PARKS HIGHWAY AND GLENNALLEN AREA.

SENATOR GRAVEL'S DRAFT D-2 BILL--TITLE OUTLINE

MINERALS

------DID NOT INCLUDE A SPECIAL TITLE IN BILL FOR MINERAL PROVISIONS.

------SPECIAL PROVISIONS DEVELOPED THUS FAR BY HOUSE, AND ADMINISTRATION HAVE BEEN A NIGHTMARE OF COMPLEXITIES AND HAVE NOT BEEN WORKABLE.

------MUCH OF THE PROBLEM CAN BE SOLVED BY NOT PLACING VALUABLE MINERALIZED AREAS IN FOUR SYSTEMS LANDS.

------SOME MINERALIZED AREAS WILL UNDOUBTEDLY BE "LOST" WITHIN FOUR SYSTEM DESIGNATIONS AND WE SHOULD NOT KID OURSELVES INTO THINKING THAT SOME SEVEN-STEP PROCESS ENDING IN CONGRESS WILL ENABLE THE MINERALS TO BE DEVELOPED WITHIN A NATIONAL PARK--CONGRESS HAS ALREADY SPOKEN TO THAT TYPE ISSUE IN THE MINING IN THE PARKS ACT, WHICH DESPITE OUR EFFORTS TO EXCLUDE THE NICKEL DEPOSITS IN GLACIER BAY, SHUT THE DOOR ON US.

------HOWEVER, THE LEGISLATION SHOULD CALL FOR CONTINUED EXPLOR ATION IN ALL AREAS TO GIVE US A CLUE AS TO WHAT WE HAVE; OBVIOUSLY HOWEVER, PRIVATE INDUSTRY WILL BE VERY RELUCTANT TO EXPLORE IN AREAS WHICH ARE CLOSED TO CLAIM STAKING AND WE SHOULD RECOGNIZE THIS. THUS, USGS AND CONTRACT WORK WILL PROBABLY HAVE TO BE RELIED ON.

------IN THE CASE OF OIL AND GAS, MY BILL DIRECTS THE SECRETARY TO INITIATE A LEASE PROGRAM ON WILDLIFE REFUGE LANDS WHERE HE CURRENTLY HAS UNUSED AUTHORITIES.

TESTIMONY
BEFORE
HOUSE RESOURCES COMMITTEE
HOUSE BILL 211
AN ACT ESTABLISHING THE ALASKA LAND COMMISSION
AND PROVIDING FOR AN EFFECTIVE DATE
PRESENTED BY
WALTER B. PARKER
STATE CO-CHAIRMAN
JOINT FEDERAL-STATE LAND USE PLANNING COMMISSION
Friday, February 17, 1978

Mr. Chairman, it is a pleasure to appear before you and testify again on House Bill 211. When I testified last spring, the Land Use Planning Commission position on a future forum of a cooperative planning and management system for Alaska lands had not been finalized. That position was finalized at a meeting in September, 1977, and I would now submit the position paper for the record. Its title is "A Report of the Joint Federal-State Land Use Planning Commission For Alaska on Cooperative Planning, Management, and Organization."

At its September meeting, the Commission had before it the structure represented in H.B. 211 and also the cooperative management structure proposed by Secretary of the Interior Andrus in his amendments submitted to H.R. 39. We also had the cooperative management system proposed in Senator Stevens' Bill, S. 1787. The Commission considered these and other structures in reaching its decisions.

The Land Use Planning Commission has, for a long time, considered that the adjustment of the decisions on land and resources necessitated by the Alaska Statehood Act and the Alaska Claims Settlement Act will probably extend well into

the next decade if not beyond that time. There will be a continuing range of adjustments which must be dealt with and there is no substitute for a continuing strong coordinating mechanism between the Federal and State governments. Thus far, the Commission has defined some areas of concentration in land use planning which are especially acute. These are fish and game management, transportation planning, research coordination, and data collection coordination. We also have underway efforts at achieving some level of joint classification standards for land managers.

It is also important to recognize that Alaska Native corporations are the propritors of some of the State's prime wildlife habitat and resource production areas. Thus, any system of cooperative management must offer incentives to the Native corporations to participate if it is going to be completely successful.

It would be a grave error to assume that the Federal-State relationship always consists of the State seeking to impact Federal planning and programs. There is just as acute a need for the Federal government to coordinate with the State on programs where the State, through its regulatory regime and ownership of State lands and submerged lands, can have a major impact on the success of those Federal programs. Thus, we are very much talking about a partnership on equal footing except in those areas such as defense, foreign policy, endangered species, and others where either the Constitution or the Congress has preempted state rights.

It is equally important to recognize that the equal footing doctrine of the Constitution requires that Alaska be treated substantially as other states in the union in its relationships to the Federal government.

A very carefully structured Federal-State planning process seems to us to offer the best solution to the above problems. Such a process must respect the sovereign rights of each government and act as a coordinator and facilitator of communications between the affected agencies of those governments and between the Congress and the Legislature. It should ensure that each government is well aware of the impact that its actions will have upon the other and make recommendations to each on means by which conflicts can be resolved. Everything else that is subsumed under the phrase "cooperative management," such as joint classifications of lands, common criteria for resource development stipulations, common data systems, and other mechansims are simply a means for furthering as much cooperation as can be achieved between two governments. They are not the essence of the cooperation. The essence of the cooperation comes from the structure of a Federal-State body and the commitment to its success. Above and beyond this, we have the requirement for both governments to relate to the boroughs and municipalities. Much of this has already been stated by the Legislature in coastal zone legislation and it is important that any form of Federal-State cooperative management have strong formal linkages with the coastal zone management program, the North Pacific

Fisheries program, and other forms of coordination that exist between the three levels of government now.

I would now like to deal with the specifics of H.B. 211. The Land Use Planning Commission has recommended a membership of ten members with a Federal co-chairman and a State co-chairman rather than the seven members recommended in H.B. 211. House Bill 211 establishes an executive director elected by the commission. We believe that Presidential appointment on the Federal side and Governor's designation on the State side should be continued to provide strong leadership.

The distinction between a single chairman or co-chairmen, such as is utilized by the present Commission, is an important one. With the co-chairmen principle, the commission operates as a body where a certain level of Federal-State conflict is constantly worked out between the two chairmen prior to placing issues before the full commission. With a single chairman, such conflicts would be worked out between the Governor and the Secretaries of concern in the Federal structure before requiring resolution by the full commission. Thus, a single chairman would undoubtedly have more individual power than either of the two co-chairmen. The Commission has, as I have said before, elected to retain the co-chairmen principle as reflecting the most cooperative arrangement.

The Commission agrees with H.B. 211 in that Commission members should not be ex officio or institutional, that is,

State commissioners or Federal department or agency heads. The Commission has also recommended that appointments not be representatives of special interest groups. The Commission subcommittees that worked on this problem felt that special interest representation tends to institutionalize conflict rather than contribute to problem solution.

We feel that the commissioners should continue to be part-time, except for the co-chairmen. The general feeling was that full-time commissioners would tend to institutionalize their own perspective, while part-time commissioners are subject to other pressures and open to other viewpoints from various sectors which they are able to bring to commission decisions. In essence, part-time is felt to be more open to public input than full-time.

The present Commission also felt that commissioners should continue to serve at the pleasure of the appointing official rather than for terms. In this, its position differs from H.B. 211.

Regarding the duties of the commission, our recommendations differ only in degrees contained in H.B. 211. We have recommended that rather than manage "common management areas," the future commission should have classification powers over such lands, but that they should be managed by the existing line agencies. Classifications powers, of course, would imply a planning process which would lead to ultimate classification. The Commission also recommended that the future commission serve a special role in transportation planning across common management areas.

The present Commission has felt that equal access to the Legislature, the Congress, the Governor, and the President and his Secretaries has been the most powerful feature of the Commission. We have not felt that having only advisory powers in this area has been a weakness. Rather, because we have no land interests or program interests to protect and enhance, we have felt that this advisory role gives us entree into many necessary areas where a more narrowly circumscribed role with stronger program responsibilities would make our advice suspect.

With regard to the power of a future commission, it is the opinion of the present Commission that such powers should continue to be largely advisory but that the classification powers over common management land is an important new power that should be considered. Classification would have two aspects; the first would be those lands which the commission itself would classify, and the second being joint classification areas where the commission would aid the State and Federal governments in establishing joint classification standards with the Federal or State land managers then doing the actual land classification.

We have already begun a substantial dialogue with the Bureau of Land Management and the Division of Lands, and a draft copy of the four proposed joint classification areas which are under consideration is also submitted for the record at this time. The four joint classifications that have been proposed thus far are: (1) Settlement and settlement impact which are lands designated for settlement together

with adjoining rural lands within the sphere of community influence. This category also includes lands adjoining existing or proposed highways or other points of access which may be designated into this category if development of other off-road land uses is in the public interest in the particular area under consideration. (2) Resource management. This category is intended to apply to areas where various forms of resource development would be permited an encouraged. (3) Public preserves. This would apply to areas where the prime purpose of management is to protect the natural environment but where other activities would be permitted if they could be conducted in accordance with the primary objective, and (4) Wildlands, which is intended to apply to areas where the purpose of management would be to maintain lands in a natural state. I wish to emphasize that these four classification areas are still under review and development.

The major powers of the commission should continue, however, to be of a coordinating and facilitating nature. This is adequately represented in H.B. 211.

The Commission considered several other elements regarding a future commission which are not incorporated into H.B. 211.

Any future commission should be created for a period of ten years. This time frame will permit the general land ownership pattern to be set or certainly become less fluid and will provide the time for a number of important decisions to be made. While it is unlikely that the need for cooperative planning and management will decrease during this time, a

Congressional and Legislative review should be provided for by statute to occur during the period of the eighth year of the commission's work. This review would cover the first seven years of experience, would redirect the commission's work if necessary, and would recommend whatever actions were deemed appropriate upon expiration of the commission's mandate two years later. Thus, there would be a built in "sunset" provision.

It is most important to maintain sovereignty by providing for the veto power on the State and Federal sides. The major difference between the present Commission and other State-Federal organizations is that the State has the veto power and is therefore, at the commission level at least, the equal of the Federal government. We examined all other Federal-State organizations that we knew of and could find none other where this situation obtained. We think that it is important to retain this concept in a new commission.

There should be executive coordination committees established by both the State and Federal governments. It is especially important that there be a Federal executive coordinative committee in Washington at the Secretarial level. This committee would meet periodically in order to coordinate those programs and functions of their respective agencies which could affect administration of the lands, water, and resources in Alaska. The problem has been often that things are well coordinated at the State or regional level and then must be coordinated all over again with each

individual agency in Washington. Sometimes this can take several years. Therefore, we felt that it was very important to have this coordination occur on a regular basis so that the Federal government could react to the commission's proposals on a continuing basis.

Because the commission will be working more closely with the State agencies, the need for a State executive coordination committee is not as great as the need for the Federal committee. However, I think it would be effective for those Cabinet members with special concerns in land, water, and resources to meet on a regular basis to review commission proposals.

The commission should have a technical advisory committee consisting of the heads of Federal agencies with land-related responsibilites in Alaska and their State counterparts. Other advisory committees or task forces should be appointed as needed either on an area, issue, or functional basis. We have formed some embryo organizations in these areas and work has been generally effective so far. This technical advisory committee would be similar in composition to the commission proposed by Secretary Andrus. The Commission disagreed with the proposals submitted by the Secretary because it felt that a commission made up of various agency heads could not bring the independent perspective to the commission which was desired. Their perspective is available in the present structure of government and should be coordinated in any case. We strongly feel that the commission should be an independent neutral voice and that the members of such a commission should be picked with this in mind.

The policy of joint and equal funding should be continued. This has been an effective control upon the present Commission, in keeping it within the bounds of its mission, and it also serves to insure that Federal and State interests are balanced and that one government does not out budget the other to secure control of the commission.

I have tried to keep this testimony brief. There are several other areas I would be willing to expand upon at the Committee's discretion. Thank you for the opportunity to appear here today.

REPORT OF THE

JOINT FEDERAL-STATE LAND USE PLANNING COMMISSION FOR ALASKA

COOPERATIVE PLANNING, MANAGEMENT, AND ORGANIZATION

With some five years of first hand experience, the Joint Federal-State Land Use Planning Commission for Alaska remains concerned about Federal-State, intra and interagency cooperative planning and management that occurs in Alaska. After staff work, investigation by a subcommittee, and intensive outside review, the Commission, at its meeting of September 15 and 16, adopted the following recommendations.

The discussion of the recommendation is divided into four parts. First, the basic reasons for cooperative planning and management; second, the reasons for a joint Federal-State commission; third, the powers; and fourth, the organization that such a commission would have. An appendix has been added to the report which translates the Commission recommendation into legislative language. A bibliography is also attached.

I. Reasons for Cooperative Management

Basic reasons for cooperative planning and management in Alaska include:

1. There is a continuing State-Federal re .lionship. This did not begin and will not end with the disposition of the d-2 lands.

2. The land ownership pattern in Alaska is growing evermore complex as a consequence of the implementation of the Alaska Statehood Act and the Alaska Native Claims Settlement Act. Lands owned by the Federal government, the State, Native corporations, and other parties lie adjacent to each other in tracts of varying size which do not necessarily follow rational boundary lines. This intermixture of land ownership can easily jeopardize prudent management. A systematic approach to resources which are similar but owned by different parties must be initated to insure consistent and complementary management.

3. Private and State lands may be the essential buffer zone for certain of the more sensitive areas in Federal control. In other cases, the Federal government will own and regulate the mountain tops while the valleys are in State control, or the Federal government will have the wild and primitive areas while State lands will contain the people. Cooperative management is essential to protect the commonality of interest and to protect the national interest.

4. Resources have been divided by mixed ownership across the surface of the land, and between the surface and subsurface. The State, for example, owns the bed of navigable waterways and tidelands, while the water column within the Federal withdrawals will be controlled by various State and Federal regulations and may be subject to claim under the Federal Reserve Water Rights Doctrine. Ownership of the land surface and the underlying minerals may also be split between private owners and Federal agencies.

5. Migratory wildlife, e.g., caribou, waterfowl, etc., require extensive habitat that will occur on all land ownerships. Habitat must be maintained, and movement must remain free if these species are to survive.

6. Even if parks or refuges are contained ecosystems to the extent possible, there will be elements of the ecosystem that cannot be contained in area boundaries. Protection of entire ecosystems, and the full use of new knowledge about those systems will require extensive cooperation.

7. Issues may have a local significance but are actually regional, statewide or national, and they must be approached from that perspective. These include: (a) Outer Continental Shelf programs; (b) Coastal Zone Management; (c) international fisheries management; (d) marine mammals; (e) energy development; (f) fish and game management; (g) transportation; (h) wilderness study; (i) research; and (j) information systems.

8. The social, economic, and land use interweave is more fundamental in Alaska than in states with a more developed infrastructure. Any change can have an effect across the State.

9. National parks will become destination points for tourists. The State will be called upon to provide access and other infrastructure outside the parks. Close coordination and planning will be necessary to permit the State to provide these services without harmful impacts.

10. Ownership of land in Alaska is concentrated in government and corporate hands. Thus, there is no "grass roots" force to develop means of cooperation.

11. There are extensive federally owned areas in Alaska which remain largely in their natural state, and have natural values that are clearly of national importance. Nonrenewable and renewable resources found on these lands are largely unevaluated, and their possible importance in meeting future national and international needs for energy, minerals, wood

fiber, and food cannot be accurately estimated at this time. The existing Commission has recommended this area be placed in a new classification called Alaska National Lands. Decisions regarding these lands must be made cooperatively, within a national context over time.

12. Land exchanges between Federal and State governments or between governments and Native corporations may offer a viable solution to certain problems. Cooperative planning is needed to provide the broader perspective to undertake such exchanges.

II. Reasons for a Federal-State Commission for Alaska

The trend in Federal programs over the last 15 or so years has been toward greater State-Federal cooperation. Many programs or statutes permit or require cooperation, including Coastal Zone Management, Lakes Act, BLM Organic Act, etc. These and earlier programs such as the river basin commissions have had degrees of success or failure for various reasons. The new joint Federal-State commission in Alaska is designed to enhance the national interest and is particularly important for the following reasons.

1. Alaska is unique in being a one-state region as well as a state in which few land use patterns are set. Alaska offers an opportunity to attempt a vital, close, and unique effort in State-Federal cooperation. Thus, State-Federal cooperative planning and management may be evaluated in isolation from problems which emerge from multistate jurisdictions.

2. A joint Federal-State activity will provide a mechanism to which both the Federal (President, Secretary of Interior, Congress, etc.) and the State government (Governor, Fish and Game Commission, Legislature, etc.) may relate and which will institutionalize communications between the many interests.

3. Many of the decisions to be made in Alaska are too important, too big to be made within the mission of a single agency or even department. A joint commission will provide an umbrella agency allowing a nondepartmental, cross-functional area review, and a joint planning and coordination that must occur.

4. The existing record of many agencies in cooperative management is simply not very good. There are tools in existing laws which may be used in cooperative planning and management, but each lacks a third party, a motivating force to insure that dialogue takes place, and, as appropriate, is acted upon. A joint Federal-State commission provides both the vehicle stimulating Federal-State, interagency, and interdepartmental cooperation in and across functional areas such as transportation and fish and game, and energy and parks, and a means of unifying diverse elements into a coherent whole.

5. One of the major functions of any commission is to provide a public forum for the direct expression of ideas so issues and problems may not be hidden or ignored by line agencies.

6. State participation on the commission will also insure a meaningful State role in the governmental interface with Alaska citizens. In the absence of such participation, the Federal government would interact alone with private citizens, and many State responsibilities and regulatory approaches could be overlooked in the process. As a consequence, a traditional adjunct of American federalism might be jeopardized.

Should the State of Alaska decide not to join in a Federal-State effort, the Land Use Planning Commission recommends that a Federal commission be established which would coordinate Federal activities with particular emphasis on Alaska National Lands and such functional areas as transportation, fish and game management, research, information systems, and wilderness studies.

III. Powers

In order to carry out its intergovernmental, interagency, cooperative planning and management role, the Commission will need a certain limited range of powers.

"Donation" or "Matching" of Lands

Before proceeding with the discussion of "Powers," it is important to note that neither Federal nor State government is giving up, contributing, or donating land. Each is delegating only a portion of its regulatory authority and that subject to a veto by designated officials of the respective governments.

Joint Classification Areas

When land transfers are completed, there will be intermingled Federal, State, and local governmental and private ownership of numerous areas with key natural resources. Whether the public interest is best served by protection of natural values, by the development of needed resources or an appropriate blending, cooperative planning will be essential. With coordination, Federal, State, and private interests can all be served more compatibly; without it, conflicts may be aggravated and all interests frustrated. In those key areas, called Joint Classification Areas or JCAs, where the various interests are similar or complementary, land classification should be conducted jointly by the proposed Federal-State commission. General authority could be granted by Congress and the Alaska Legislature to the commission as part of its comprehensive planning function to identify JCAs and to classify the land.

JCAs would not encompass lands within or recommended as additions to the existing Federal land management systems. The State may also have sound reasons for reserving exclusive control over certain lands, and these would not be incorporated in JCAs. The prerogatives of the different governments should be further preserved by giving each government veto power within its sphere of ownership over joint commission classifications.

Private Lands

Cooperation of private landowners with the State and Federal government will be important in many areas. The commission should have the authority to include private lands in JCAs with the consent of the landholder.

Alaska National Lands

The existing Commission has recommended that Congress establish a new classification system to be called Alaska National Lands. Units of these lands are to be under the day-to-day management of one of the existing Federal agencies, but the Commission would be empowered within guidelines established by Congress to classify these lands. Even if Congress does not create Alaska National Lands, the other powers in this section will be needed if meaningful State-Federal cooperative planning and management is to become a reality.

Should Congress not establish the Alaska National Lands classification, there will remain a demanding need for a joint classification authority to work with JCAs.

Advisory Duties

The new commission should be empowered to continue the advisory functions of the present Commission. Specifically, the commission should be authorized to make recommendations to appropriate officials of both governments with respect to:

--ways to improve coordination and consultation in wildlife management, transportation planning, wilderness review, informative systems, research and other activities requiring regional or statewide coordination.

--programs and budgets of Federal and State agencies responsible for administration of public lands in Alaska.

Should an agency elect not to follow a commission recommendation, that agency shall, within 30 calendar days from the date of receipt of the recommendation, provide the commission a detailed, written report stating in full the reasons for rejecting the recommendation.

Operating Procedures

To avoid the complications of two sets of regulations, State and Federal, which differ, the commission should be authorized to establish its own personnel, property, procedural, etc., rules and regulations.

IV. Organization

Commission Structure

After discussion of several alternatives, the Land Use Planning Commission recommends the following structure for a future commission.

1. The commission should be created for a period of 10 years. This time frame will permit the general land ownership pattern to be set or certainly to become less fluid, and will provide the time for a number of important decisions to be made. While it is unlikely that the need for cooperative planning and management will decrease during this time, a congressional review should be provided for by statute to occur during the eighth year of the commission's work. This review would cover the first seven years of experience, would redirect the commission's work if necessary, and would recommend whatever actions are deemed appropriate upon expiration of the commission's mandate two years later. Thus, the commission would have a built-in "sunset" provision.

2. As indicated under Powers, there is to be a Federal veto over actions affecting Federal lands, and a similar veto provision for State lands. As actions move from the purely advisory mandate of the existing Commission to the classification authority of a new commission, the veto power should reside with the President and Governor. In the event of a veto, the appropriate official shall provide concurrent with the veto a written report stating in detail the reasons for such action.

3. The commission would consist of ten members, all of which would serve at the pleasure of the appointing official. The President would appoint a full-time Federal co-chairman, and four part-time commissioners.

   An equal number of commissioners, including a full-time co-chairman, would be appointed by the Governor.

   Qualifications for Federal members should be established, if possible, which will insure a national perspective. State member qualification should be established by State statute. With respect to both Federal and State members, the subcommittee recommended that appointments not be ex officio or institutional, i.e., State commissioners or Federal department

or agency heads. It was also recommended that appointments not be representatives of special interest groups. The subcommittee felt that special interest representation tends to institutionalize conflict rather than contribute to problem solution.

4. In all matters, the commission should be authorized to advise and work directly with the President, Governor, Presidential and Gubernatorial appointees, Congress, and the Legislature.

5. The commission should have a standing Technical Advisory committee consisting of the heads of Federal agencies with land related responsibilities in Alaska and their State counterparts. Other advisory committees or task forces should be appointed as needed on either an area, issue, or functional basis.

6. In order to assure a mutual understanding of joint problems, to develop common policy, and to insure that plans are implemented in the field, a Federal Executive Coordination Committee should be established in Washington at the Secretarial level. This committee would meet periodically in order to coordinate those programs and functions of their respective agencies which could affect administration of the lands and waters in Alaska.

7. A State Executive Coordination Committee should be established at the commissioner level by the Governor as the State's counterpart to the Federal Committee. This Committee would also meet periodically to coordinate those programs and functions wherever necessary to insure successful cooperative planning and management, and which interface with Federal lands and interest.

8. The commission's budget should be funded one-half by each government.

Introduction

Throughout the Nation, but particularly in the Western states where Federal ownership accounts for a major share of the land area, state governments are asking for a stronger voice in the planning and management of Federal lands. This assertiveness reflects the growing public awareness of land use and environmental matters. No longer are Federal lands viewed as islands, separate, and apart from other lands. People are realizing that Federal land management decisions in their state can have a powerful influence on surrounding land uses, and on the states' economic and social well-being.

During the September, 1977 Western Governors' Conference, emphasis was placed on the fact that Section 202(c)(9) of the Federal Land Policy and Management Act of 1976 requires that land use plans for Bureau of Land Management lands "shall be consistent with State and local plans to the maximum extent he (the Secretary of the Interior) finds consistent with Federal law and the purposes of this Act." The first resolution adopted by the sixteen governors asked for State and Federal coordination and cooperation in drafting the rules and regulations for the Federal Land Policy and Management Act.[1] Another resolution found that the Bureau of Land Management and the U.S. Forest Service planning systems did not provide adequate accountability, and asked that the rules and regulations for the new Act reduce administrative discretion and add accountability.[2] A number of ways of achieving this objective were set forth, including the establishment of State coordinators within Federal agencies; the exchange of timetables and schedules; and guidelines for combining State and Federal public meetings, review periods, and regulatory requirements.

In Alaska, the mutual interests of State and Federal landowners are especially strong. Alaska's Statehood land grant differs from those of other states not only in terms of the exceptionally large quantity of land involved, but, also, because Alaska was allowed to choose most of its grant "at large" from the unreserved and unappropriated public domain. The State has used its at-large selections to acquire lowlands, river valleys, resource rich regions, and the mountain passes which make natural transportation corridors. Further, the State holds title to the tidelands along the 47,300 miles of Alaska's coast and to the subsurface of all navigable waters. State ownership in Alaska generally encompasses more verdant and productive areas, and areas more suitable for human activity, than lands under Federal ownership. Much of the migratory waterfowl and wildlife of national significance in Alaska depend heavily on State-owned lowlands and tidelands. Thus, State ownership, though it will amount to only 28 percent of the total area of Alaska, as opposed to the Federal government's 60 percent, is of at least equal significance in terms of regional land use planning. In Alaska, development of cooperative Federal-State planning systems offer clear national as well as State benefits.

The recent debate over the Alaskan (d)(2) lands has highlighted the need for coordination between State and Federal landowners. By now it is clear that the land ownership patterns which are being established by Native selections and Federal withdrawals under the Alaska Native Claims Settlement Act and by State selections under the Alaska Statehood Act often divide naturally interrelated areas that should be planned and managed as a single unit. It is paradoxical that states and, by delegation, local governments should have the ability to regulate separate

private landowners to establish rational overall land use patterns, yet there is no comparable mechanism to lend unity to the land use decisions of separate public landowners.

In the future, land exchanges may be used to correct some of the worst problem areas. However, it appears that the only comprehensive means of lending an overall rationale to the planning and management of regions under divided ownership is for the separate landowners and managers to coordinate their planning processes. Doing so should place the primary focus on the total area and enable the development of a unified overall plan rather than separate plans focused on portions of the whole.

Coordinative planning should also serve to clarify and simplify communication between public agencies and the members of the public who use the land. If both levels of government are able to address the planning of a single interrelated area at the same time, using similar terminology for similar regulatory measures, then public land management should be a far more understandable process to the affected public.

Coordinating Federal and State planning processes is a matter of both timing and content. Research, public hearings, and policy decisions should be conducted by the State and Federal governments at the same time for the same region so that there can be a mutual exchange of information and mutual adjustment of planning policies to best fit the requirements of the total area and the interests of the public. Synchronized timing should help prevent situations where one level of government must act as a supplicant or lobbyist to the government with a preestablished plan. Instead, through a synchronized effort, the

focus should be on the total area. Boundaries of ownership should become less important than the nature of the land and the social and economic factors to be considered in developing a sound overall plan.

The second major component of coordinated Federal and State planning has to do with the language and method used in the planning process. This is more than a matter of descriptive terminology. There must be some agreement about the basic system of planning and land use regulation if planning terms and categories are to be compatible. This paper deals with this second component of coordinated land use planning, the use of a common language and method for land use planning. Mutual purposes are described and areas of possible conceptual agreement are suggested. Based on these concepts, a proposed system of planning categories for State and Federal use is outlined.

The Joint Federal-State Land Use Planning Commission for Alaska chose to analyze this subject at this particular time because both the Federal government and the State of Alaska are currently revising their land planning systems. The Department of the Interior is drafting rules and regulations for the 1976 Federal Land Policy and Management Act. Presumably these will spell out a new planning process which will modify the Bureau of Land Management's traditional "management framework planning" process. The ground rules for planning contained in the Federal Land Policy and Management Act are different from those for previous Bureau of Land Management planning programs. For the first time, coordination with State and local governments, with other Federal land managers and with "Indian tribes" is mandatory. Under different ground rules, the planning processes should be different.

Within Alaska, the Bureau of Land Management has recently responded to the planning mandate of the 1976 Act by establishing a regional planning program within each district office. In April, 1977, the State Director of Bureau of Land Management issued a Statement of Policy setting forth strategies and direction for Bureau planning through 1982. A core planning team will be formed within each district office and man weeks of time to be spent on planning were allocated. Within each district, areas were selected for priority attention, generally on the assumption that the most settled and populated areas should be planned first. Presumably, this planning program will eventually be restructured to accord with the rules and regulations which are promulgated in accordance with the Federal Land Policy and Management Act.

On the State side, the Alaska Department of Natural Resources has also adopted a new planning program in recent years. For the first time, the Department of Natural Resources has an active and well-staffed planning organization, equipped to provide the foundation of land planning policy which could lend cohesiveness to diverse land and resource management programs within the various divisions of the Department. Administratively, there has been a shift in emphasis from disposal to classification, and organizational changes have been made to reestablish the role of land planning and classification as the determining factor in any disposal action. As part of this effort, the Department is revising the existing State land classification regulations and plans to complete a proposed draft of new regulations during the coming winter. Thus, at the present time, both the Federal Department of the Interior and State Department of Natural Resources have an opportunity to incorporate changes in their

planning and classification systems which would facilitate intergovernmental coordination.

This report will proceed with a brief review of prior and existing planning and classification systems, a discussion of common purposes and objectives in land categorization, and, finally, recommendations about land planning categories and processes that would accommodate the purposes of both governments.

This analysis of Federal planning systems focuses primarily on planning of lands under the Bureau of Land Management rather than on lands within the national conservation systems. This choice was made because the Bureau of Land Management lands are essentially uncommitted, except to the ongoing principle of management on the basis of multiple use and sustained yield. Further, in Alaska, the Bureau of Land Management often manages those lands most closely interrelated with State or private lands, in regions where cooperative planning is particularly necessary.

The Bureau of Land Management has recently prepared plans for several areas of Alaska using what is called "management framework planning." This system, as it is spelled out in Departmental Manuals, places great emphasis on the process of inventory and analysis preceding the planning decision, but includes very little written policy to guide the decision makers' choice in determining land uses to be included in the plan. Unlike traditional urban land use planning and zoning, the Bureau of Land Management system does not include preestablished land use categories or classifications setting forth groups of compatible uses and policies that might govern such groupings. Thus, instead of assigning areas to various preestablished management categories or classifications, the Bureau of Land Management planner makes his decision on a case-by-case basis, tailoring each decision to fit circumstances as he sees them. Admittedly, his actions are guided by the body of public law governing different uses of the public domain. The Sikes Act, Taylor Grazing Act, Endangered Species Act, 1872 Mining Law, Mineral Leasing Act, Coal Leasing Act, Off-road Vehicle Executive Order 11644, American Antiquities Act, and Wild Horse Act each provide authority and establish guidelines for the management of particular uses; but in deciding which uses can co-exist and, if so, under what circumstances, the management framework planning process leaves the Bureau of Land Management decision maker considerable leeway and discretion.

The Wilderness and Wild and Scenic Rivers Acts differ from the other authorities. Essentially, these Acts establish classification categories governing permitted and prohibited uses within areas so classified.

These two pieces of legislation will be discussed later in this chapter as examples of how the use of planning categories might affect the Bureau of Land Management planning process.

The Bureau's one experience with a formal classification system in Alaska was between 1964 and 1969 during the period when the Classification and Multiple Use Act was in effect. This legislation authorized and directed the Secretary of the Interior to divide and classify areas into lands suitable for disposal and lands suitable for public retention and multiple use management. Thus, as an example, the classification of Alaska's White Mountains planning unit identified eight areas along the Steese highway, totalling approximately 11,000 acres, for entry by private parties under the Federal Homesite and Headquarters Site Legislation. The remaining 6,105,442 million acres were segregated from various forms of appropriation and reserved as public lands under multiple use management.

Though this division into two categories is a very simple and basic form of land use planning, the Classification and Multiple Use Act of 1964 represented a major gain in Bureau of Land Management land use planning authority at that time. No longer was the Federal public domain to be totally open to random entry by private parties under a multitude of Federal laws. Instead, the Act made it possible for the Bureau of Land Management to give an overall direction to the location and pattern of private land acquisition and settlement of the Federal public domain. The 1976 Federal Land Policy and Management Act provides similar planning authority, but with a far greater opportunity to develop a sophisticated and publicly accountable planning system.

In writing, at least, the State's classification regulations are more complex than the Federal Classification and Multiple Use Act. The Alaska Administrative Code outlines 16 different classification categories for a variety of purposes, ranging from very limited uses, such as residential, to general multi-purpose categories such as resource management. However, in actual practice, the most important distinction has been between the group of categories allowing land to be sold to private parties and categories dictating the retention of land in State ownership. Within the 7 categories permitting land sale, the use distinctions have only nominal significance, since State classifications have no power to regulate land use once title is conveyed to a private owner. The retention categories also merge when actual effects are considered. Most of the retention categories allow multiple use, provided the use is consistent with the primary purpose of the classification. The only other real distinctions are that some categories restrict mineral entry to a lease and permit system, whereas others allow mining claims and borough selection is permitted only in the reserved use classification.

The State's Administrative Regulations require that land be classified prior to disposal.[1] Unclassified areas are unavailable for sale or lease of surface rights, though mining claims and mineral leases are allowed.[2] In practice, this restriction has had an effect that is probably quite different from the intention of those who wrote the law. Classification, as it is set forth in the statutes and regulations, apparently was meant to provide the link between land planning and land management. Through planning the overall use pattern best serving the public interest would be determined; lands would be classified on the basis of an areawide plan; under certain classifications lands would be

made available for private ownership. Instead, pressures for disposal have motivated classification actions. Rather than guiding and directing areas of private acquisition and development, classification has generally served as a preliminary to disposal. Rather than blanketing whole regions to provide an overall framework for parcel by parcel decisions, classifications are spotted in areas of activity and large areas are unclassified and open to random entry through mining claims. Recently, however, the Department of Natural Resources and Division of Lands have made extensive administrative changes designed to realign planning, classification, and disposal to accord with the intent of the statutes and regulations.

Both State and Federal systems allow considerable administration discretion in determining uses of public lands, and both the State land classification system and the Federal management framework planning system have been criticized for failing to incorporate meaningful public participation.

The ease with which land plans and classifications can be changed depends in part on the legal requirements for public participation in the classification and reclassification process. A land use plan or land classification pattern which has been carefully wrought through a process of give and take with the public, other agencies, and adjoining landowners will be less vulnerable to administrative change than a plan developed wholly within the bureaucratic structure, particularly if a similar process of public involvement is required to amend the plan or classification pattern.

The State statutes require that affected local governments be consulted about proposed land use prior to sale or lease of State property.[1] Beyond this there is no requirement for public involvement and classifications have been established without public hearing and, until recent years, without requesting comment from other State departments and adjoining landowners. The Director of the Division of Lands has the power to establish classifications, but his determinations have had little durability. Classifications can be and have been readily changed to fit one purpose or another.[2]

The Bureau of Land Management's management framework planning system also grants a high degree of discretion to the administrative decision maker. Though the manual on management framework planning provides extensive detail about the process of collecting and evaluating information for the plan, there are few guidelines for the district manager who serves as decision maker. He is "presented with recommendations, alternatives, and analyses...," and must "weigh these recommendations and analyses and decide which ones to accept, reject, or modify."[3] Thus, the final planning decision is basically a matter of well informed judgment by the individual manager. In the absence of a system of land use categories, the district manager must decide on a case-by-case basis without the aid of preestablished policy governing typical combinations of uses.

The land use plans which have been developed in Alaska under the management framework planning system are in the form of maps with descriptive notations about plan decisions. In some cases, lines indicate approximate areas to which various decisions apply. For example, areas of the map are noted "manage for raptors" or "prohibit off-road vehicles." Occasionally, in other states, the Department of the Interior has formally withdrawn areas of Bureau of Land Management National Resource Lands for specific purposes such as historic conservation, recreation use, or preservation of primitive or natural characteristics. But even these more formal actions were specially designed for each case. Rather than choosing an appropriate category from a preestablished set of categories of policies and regulations, each withdrawal order was drafted specially for each area.

There are advantages to giving the decision maker the flexibility to tailor his plan to fit the individual situation. However, there are also significant drawbacks to this ad hoc approach, particularly when used by public agencies with an obligation to further the larger public interest, even where this may conflict with individual wishes. Without some reference to an established set of categories, there is no assurance that similar lands and situations will be treated similarly. Instead, it is likely that the policies of different district managers will vary considerably, depending on different points of view and the different pressures, both public and bureaucratic, to which the decision maker is subjected. With a variety of different approaches in similar areas, there is the danger that Federal policy will appear unnecessarily complex and inconsistent to the affected public. Since language and terminology are written separately for each situation, wording that means one thing in one area may have a different meaning in another area. Without a clear and specific written definition of the proposed policies under consideration for an area, State and local governments and private parties are handicapped when they attempt to participate in the planning process.

Further, a plan which is essentially a collection of descriptive statements about administrative policy decisions in various areas lacks durability and reliability. What can be decided by administrative fiat at one time can be readily changed or altered at another. Without a certain degree of continuity to planning decisions, affected parties have little assurance that their input is relevant to a significant and lasting decision or, for that matter, little way of knowing when their comments will be considered in the planning process.

As an example of an alternative approach to Federal land planning, it is useful to look at recent experience under the Federal Wilderness and Wild and Scenic Rivers legislation. Essentially, these two Federal laws establish land use categories, each with a set of management policies which can be applied wherever Federal lands are so designated.

On a full set of land use categories, ranging from urban development to minimal land use, wilderness and wild and scenic rivers would fall at one extreme of the spectrum. Nonetheless, the two Federal Acts serve to demonstrate how the possibilities for participatory planning are improved through the use of preestablished categories. In the process of considering a wilderness or wild and scenic river designation, affected parties have a clear statement about the nature of the regulatory measures under consideration. Because the nature and implications of the proposed classification are well defined, communication from the public and from other governmental agencies can be informed and constructive. Since the same set of policies have been used in other areas, there is a basis of previous experience with which to judge the effects of a new proposal.

The Wilderness and Wild and Scenic Rivers Acts set forth policies applicable to areas where the intent is to minimize human use of the land. There is no reason, however, why Federal planning categories could not be devised for use in areas where more extensive land and resource use is desirable. A balanced range of land use categories offers planners and members of the affected public a view of the full spectrum of alternatives before arriving at a decision. Value judgments and political considerations should be reflected in decisions about where and how

extensively various categories are applied; the set of available categories should be as balanced and unbiased as possible.

A full set of categories should probably allow more room for change and amendment than is possible under the Wilderness and Wild and Scenic Rivers Acts. There is need to find a reasonable balance between durability and flexibility in planning decisions. Perhaps such categories should be formulated through Federal regulation rather than by act of Congress. However, as under the Wilderness and Wild and Scenic Rivers Acts, the policies to be considered should be clearly and formally articulated, and the planning decision, once reached should have sufficient durability to warrant the effort required for participation by the affected public and other governmental levels.

Common Purposes

Both the Bureau of Land Management and the Division of Lands are directed by law to plan and manage lands in a way that will accommodate a variety of public purposes and private interests. The 1976 Federal Land Policy and Management Act tracks the original Bureau of Land Management mandate by directing that management be "on the basis of multiple use and sustained yield, unless otherwise specified by law."[1] The State's basic land policy, embodied in the Alaska Constitution, is "to encourage the settlement of its land and the development of its resources by making them available for maximum use consistent with the public interest."[2]

Both levels of government have seen this legal direction as a strong mandate to allow many uses of the public domain. The State has concentrated its land selections in areas with several overlapping potential uses or natural values. State Statutes prohibit classification which would close over 640 acres "to multiple purpose use" except by act of the State Legislature.[3] A comparable provision in the Federal Land Policy and Management Act provides that Congress must be given an opportunity to review and disapprove of any management decision or action that "excludes one or more of the principal uses or major uses for two or more years" from a tract of 100,000 or more acres.[4] Clearly the orientation of both the Federal Bureau of Land Management and the State Division of Lands is towards management which will permit a wide range of land uses.

Some may argue that the development and use of planning categories is contrary to multiple use objectives. Land use categories, by definition,

allow some uses, and limit or prohibit other uses. However, with or without categories, sorting and regulation of allowable uses is essential to multiple use management. Some uses must be prohibited in certain areas or they will preempt other uses. In fact, sorting and categorizing land uses to separate the location of incompatible activities is a means of increasing the multiple use of the land. Without separation, certain uses preempt the land for other purposes, just as the climax tree growth in a forest eventually overwhelms other species. The definition of multiple use in the Federal Land Policy and Management Act recognizes this concept by stating that multiple use can mean "the use of some land for less than all uses; a combination of balanced and diverse resource uses that takes into account the long-term needs of future generations for renewable and nonrenewable resources..., and not necessarily to the combination of uses that will give the greatest economic return or the greatest unit output."[5]

Multiple and varied land use is a commonly held goal, but what are the more specific Federal and State purposes to be served by a system of planning categories? Discussion with land planners in Alaska at both Federal and State levels, in combination with a review of written material, suggests five commonly held specific objectives:

(1) A need for comprehensive "first cut" planning of whole regions to provide basis and framework for more specific land use planning and management in certain areas. At both Federal and State levels, practicing planners see value in assessing land uses and values on a comprehensive regional basis. The Director of the Alaska Office of the Bureau of Land Management, in a

memorandum expressing the conclusion of a series of meetings with his staff, described the current management framework planning program as a "first cut" to make "broad land use allocations, ...address major statewide land issues, ...and develop land use policies and management direction for Bureau of Land Management on a regional basis."[6] The State Division of Lands has also recently queried staff involved in planning and classification decisions. The immediate intent was to identify problems associated with the existing State classification system, but comments often touched on needed land planning systems as well.[7] Here again, a recurring concern was for a process of preliminary regional planning which would be followed by more detailed planning in specific areas. A number of Division staff also thought there was a need for regional classifications that would establish basic management policies, such as control over mineral entry and extraction.

(2) A need to identify areas within the region as the focus for specific and detailed planning and management. Conversely, a need to identify other areas of the region where a simple holding program and basic maintenance management would be appropriate. At both governmental levels, the choice of areas where staff work should be concentrated is perceived as an important function of the regional planning process. The regional context should help to assure that priorities for detailed planning and management are not simply a response to immediate pressures, but instead, are chosen on the basis of a full assessment of options. Also, regional overview enables

an assessment of the interrelationship between different forms and intensities of land use and activity within the region. Transportation routes, areas for private land acquisition and settlement, watersheds, recreation areas, and other uses could be viewed and evaluated as a total pattern to determine changes of future directions that might reduce conflicts and improve interrelationships.

(3) A need to communicate clearly with private parties and other agencies and governments and to encourage and enable informed and constructive comment. Both the Bureau of Land Management and the Division of Lands are obligated to adopt a planning process which enables constructive participation by others. Under the new Federal Land Planning and Management Act, the Bureau's legal mandate to "provide for meaningful public involvement" is clearer than that of the State. State law only requires that affected communities be consulted about land use before any disposal of nearby State lands. But both entities have an equally strong professional obligation to obtain and consider the advice of affected parties, particularly the users of the public lands and the owners of adjoining lands. Not to do so undermines the reasons for planning. Planning that aims at maximizing public benefit from the land and improving interrelationships between land uses must be attuned to public wishes and aware of the plans of adjoining landowners.

Effective communication requires a clear definition of the public policies which may be applied to the area under consideration. Without such a definition there is no basis for public comment. This principle implies the use of some form of predefined planning or classification categories listing groups of permitted uses and defining alternative land management policies.

(4) A need to achieve a reasonable balance between durability and flexibility in land planning and management. Recent conventional wisdom has held that planning "is a process." Rather than "plans cast in concrete", there should be a flexible planning process that evolves to reflect changing circumstances. This concept is easily carried to an extreme that undermines the reasons for planning in the first place and, in effect, grants unlimited discretion to the planner. In turn, a land planning process that allows extensive administrative discretion is vulnerable to pressures from special interests.

Obviously, an excessively rigid plan is also undesirable. Conditions affecting land use vary over time, and a sound decision under one set of circumstances may lose its basis as circumstances change. Without a means for periodic adjustment, planning can become counter-productive. Thus, at any level of government, land plans should be sufficiently durable so that decisions arrived at in a public contest are reliable and are protected from the whims of special interest and administrative change. Yet the planning system should also have the ability

to make changes or adjustments when there is a sound public reason.

(5) A need to accommodate different and often conflicting public values about the use of the land. Within the basic constraint of the capacity of the land, both Federal Bureau of Land Management and State land managers must seek to accommodate the legitimate, but often conflicting interests of miners, conservationists, hunters, photographers, skiers, snowmobilers, agricultural developers, settlers, etc. Generally, the most workable solution is physical separation, creating a pattern of areas set aside for various management policies accommodating different sets of public values. If different sectors of the public can see that their interests are represented in the pattern, the plan has more durability.

This has occurred with the National Park, Wildlife Refuge and Forest Systems. Over time, each system has developed a constituency of loyal supporters from those people whose interests the system furthers and protects. In turn, a basis of public support gives each system stability and durability. Multiple use systems, without the use of planning categories, run the risk of being seen as all things to all people, offering little security for any one particular interest. Use of a clearly defined system of planning categories, each accommodating a different part of the spectrum of public interest, should counter this tendency and, in turn, add stability to planning decisions.

Kinds of Categories

Systems of land use planning categories typically combine categories applying to activities which use small quantities of land intensively with categories applying to uses which extend over large areas. This distinction between intensive and extensive land uses is important in developing a system of categories for regional planning. Intensive land uses include commercial, industrial, private recreation, and residential uses as well as material and mineral extraction; extensive uses include watershed, wildlife refuge, forests, and natural parklands. Agricultural uses can be either extensive or intensive, depending on the type of cultivation. There is a vast difference between a barley farm and a tomatoe greenhouse.

On a comparative scale, intensive uses require very little land; extensive uses cover large areas. Intensive land uses often have very exacting and specific locational requirements. An industrial or commercial site must have good access to transportation; for many people water frontage is essential to a desirable recreational site; mineral or material development must be located at a deposit where extraction is economically feasible. Another common characteristic of intensive uses is their impact on surrounding land uses, and their tendency to generate significant public costs for services and infrastructure. Industrial or commercial uses may draw heavy traffic and make adjoining residential or recreational lands less desirable. Residential land use requires a relatively high investment of public funds for schools and services such as fire and policy protection. In some locations, a mineral and material site can severly damage the surrounding environment. Land use conflicts typically

occur between intensive uses or when an intensive use is superimposed on an extensive use. In contrast, extensive uses normally extend over large areas, do not involve construction except as an accessory activity and generally have minimal impact on adjoining uses.

The State's existing land classification system is a mixture of categories for these different forms of land use. There are six intensive use categories, "commercial," "industrial," "private recreation," "residential," "material," and "mineral"; and five extensive use categories, "grazing," "timber," "resource management," "watershed," and "unclassified." Four of the State's categories, "agriculture," "utility," "reserve use," and "open-to-entry" fall in the middle ground between the intensive and extensive use. The "utility" classification is an all-purpose disposal category that has been used by the State to provide large tracts for speculative subdividers. The "reserve use" category was originally designed as an intensive use category to apply to specific sites needed for government agency purposes, but it is the classification designating areas for a municipal selection, which can amount to 10% of the State lands under municipal jurisdiction. The open-to-entry category was designed to designate extensive areas within which individuals could select their private recreation sites. It is an extensive classification within which intensive uses could be located. Categories allowing mining claims also operate on this principle.

Though the Federal Classification and Multiple Use Act of 1964 set forth only two formal classification categories, one for disposal and the other for retention for multiple use management, the accompanying regulations included a listing of land classifications which were to be

used to qualify lands for either disposal or retention. Like the categories in the State classification system, these classifications covered uses ranging from intensive, site-specific activities such as residential, commercial, and industrial and mineral extraction to categories for very extensive uses such as watershed protection, wilderness, and fish and wildlife.

The use of classification categories similar to the State and Federal examples described above is common practice in urban zoning. At the scale of an urban community, where most uses are intensive, such systems are workable. But application of a similar system at a regional scale can cause serious distortions. The basic difficulty is simple. Viewed in a regional context, intensive land uses require very little acreage. On maps at a regional scale a realistic portrayal of the land area required for most intensive types of land use is barely visible. Development in the Anchorage bowl occupies less than half a township. The area required for expansion of permanent settlement is also relatively small. As William H. Whyte has noted:

> "A metropolitan area can take care of a great many more people by only a very slight expansion of its radius. Once it is a certain size--say fifty miles across--a slight enlargement of the periphery will vastly increase the acreage, with each additional mile outward adding almost a fifth again as much area."[1]

At a regional scale it is impossible to depict the specific interrelationships that are important in dealing with intensive land uses. Further, used at a regional scale, intensive land use categories tend to be

handled as extensive categories, and areas far beyond realistic requirements designated for intensive use purposes.

In the past, this happened under the State Division of Lands where extensive areas along highways were classified "commercial," "industrial," or more commonly, "utility." The effect can be the equivalent of no planning at all. In areas where designation enabling disposal for commercial or industrial use far exceeds the realistic market demand for that type of land, development continues to occur at random and commercial structures intermingle with residential development. The net effect is that the area is blighted for both residential and commercial purposes. The sprinkling of commercial structures makes the land undesirable as a place to live, and, in turn, commercial development fails to gain the advantage of the added customer drawing power created by adjacency to other businesses.

The problems created by mixing intensive and extensive land use categories in planning on a regional scale could be avoided by writing regional land use categories that cover groups of uses that typically locate together in the same part of the region. For example, instead of commercial, residential, and industrial use categories, perhaps there should be a "settlement impact" category applicable to the whole range of settlement related uses, including the public recreational lands that should be interspersed with settlement. Such a category would be roughly parallel in dimension and level of generality to other extensive use categories applicable at a regional scale.

However, if this approach is used to show broad patterns of land use at a regional scale, it will be important to devise an effective system for planning at a more detailed scale in certain areas where intensive uses cluster and for isolated sites in more remote regions, for example, a mining site or an isolated coastal development. The following section details a proposal for broad regional planning categories combined with subsets of categories for "settlement impact areas" and for areas of intensive resource development, as well as a "conditional use permit" system for isolated intensive uses in remote regions.

Proposed Planning Categories

From the definition of purposes which both Federal and State governments seek to accomplish through their land planning systems, and from the examination of existing systems and categories that have been used previously, it is possible to propose elements of a system that would have utility at both Federal and State levels. In summary, these elements are as follows:

(1) For regional planning, use of broad categories covering extensive areas and including groups of uses. Rather than referring to a single use, or resource such as "residential" or "timber," the proposed regional categories would apply to extensive areas and include groups of land uses that either are compatible or could coexist compatibly, given appropriate regulatory measures. Categories would be differentiated by the degree or intensity of land uses permitted. Each category should be written with a well defined statement of intent and purpose. For clarity, this definition should list those uses which are unequivocally prohibited or permitted under the intent of the category. However, as is explained below, many uses would be permitted on the condition that they conform to a more detailed land use plan, or, for isolated intensive uses, on the condition that they meet certain criteria designed to accord with the intent of the regional category.

(2) Within regional planning categories, reference to subsets of more specific categories or criteria, applicable to spots or

groupings of intensive land uses. For many uses the regional category would simply state that permission or prohibition is on the basis of specific criteria or detailed land use planning developed at a more localized level. This two-tiered approach would make a clear distinction between the regional planning of extensive land uses or groups of land uses, and the area-specific, large scale consideration that should be applied to intensive land uses which may locate within the broader designations.

The two-tiered approach also offers a useful parallel with existing institutional structures. For Federal Bureau of Land Management planning, broad regional categories could be established nationally through the rules and regulations which are soon to be promulgated for the 1976 Federal Land Policy and Management Act. Development of categories and criteria for the more specific planning subsumed under the regional categories could be assigned to Bureau of Land Management State offices or, in a state such as Alaska where there are vast differences between regions, the job might be further delegated to the district office level. At a State level perhaps both the general and the specific categories and criteria should be developed in the central office, but, here again, it may be appropriate to reflect regional differences, and draw on district office experience in the drafting of the subsets of specific categories and criteria.

Since the State statutes, unlike the Federal Land Policy and Management Act, refer to classifications, the State's categories should be for classification. Regional classifications would establish broad management policy. The more specific criteria and classification categories for intensive uses should include adequate detail to guide day-to-day management decisions, for example, to serve as a basis for drafting lease specifications. This would correct a difficulty with the existing State land regulations which require that uses of leased lands be limited to the purpose of the classification, but fail to clearly specify prohibited and permitted uses under most classifications.

(3) Use of "conditional use permit" criteria to regulate intensive land uses which locate on isolated sites in remote areas. For uses such as mineral development or remote coastal development, feasible sites generally cannot be predetermined without the kind of investment that is practical only for the industry itself. Thus, if a public agency designates areas for isolated development prior to the industry's decision, the area is liable to be excessive, or the feasible and desirable site may be missed entirely.

A preferable approach to regulating isolated site development of public lands is by establishing criteria governing the choice of site and the nature of development. Under this system, permits for each use would be issued or denied on the basis of preestablished criteria and conditions. Criteria

would be set in accordance with the purposes and policy of the regional category encompassing the site under consideration.

Through case-by-case evaluation, development can be permitted, permitted with stipulations, or prohibited depending on how the individual site and project align with the criteria. For example, locations identified by State and Federal governments as "areas of environmental concern" could be specially protected by the terms of the criteria and conditions, and in areas of high scenic value mineral development might be restricted to locations that are not visible from roads and hiking trails.

Conditions and criteria should be clearly defined and the process of evaluating development applications against the conditions and criteria should be formally structured and conducted with public notice and hearing. These procedures should help protect the basic principle of equity in land use regulation, that similar situations be treated similarly. Further, by giving industry a clear definition and advance knowledge of the standards that will govern the choice of site and the nature of development, compliance is facilitated.

(4) Establishment of broad regional categories to cover the full spectrum of regulatory options, extending from minimal land use to intensive community development. Decisions about where to apply various categories should be developed with public participation and reflect the values and goals of the public. To this end, categories should be available to represent

various different public interests and values relating to land use. At least four types of regional planning categories should be offered. These are:

Wilderness, a category for areas where man would not alter the natural world. At a Federal level, this category is already formally embodied in the Wilderness Act of 1964. The Federal Land Policy and Management Act of 1976 made the provisions of the Wilderness Act applicable to Bureau of Land Management lands. State regional classification categories should also include wilderness. Though the State will probably be less likely to designate areas as wilderness, the category should be available to provide a balanced range of choice and to facilitate coordinated planning with Federal land managers.

Habitat/Watershed, a category applicable to areas where the primary purpose of management is to protect the natural environment, but where other activities could be permitted if they can be conducted in accordance with this primary objective. In such areas, human activity beyond hunting, fishing, recreation, research and inventory would be permitted or prohibited on a case-by-case basis under specific conditional use permit criteria.

Resource Management, a category applicable to areas where various forms of resource development would be permitted, subject to subarea plans for sustained yield management

of renewable resources and conditional use permitting for intensive uses. Under more detailed planning or classification categories, land uses could be separated into districts for public recreation and fisheries protection, timber cutting and agricultural development. Again, mineral development would be most appropriately managed through a conditional use permitting process. However, under the resource management category, the criteria for a permit would be more liberal than under the habitat/watershed category.

Settlement Impact, a category designed to encompass areas soon to be settled, together with adjoining rural lands within the sphere of community influence. Selected areas adjoining existing or proposed highways and other points of access may be designated under this category, if development or other off-road land uses are appropriate in the particular location. The settlement impact category assumes a subset of land use categories which could be applied at a larger scale. These subcategories should include the traditional community land uses such as industrial, commercial, and residential, as well as categories for the public open space and watershed lands that should surround and intersperse settled areas.

The "settlement impact" category should encourage a balanced combination of areas for private acquisition and development with public lands located so that population

from throughout the community can have ready and convenient access to natural lands. The initial regional designation of settlement impact areas, with the intent of planning the total pattern of public and private lands in a community, should counter previous tendencies by State and Federal governments to identify large areas for disposal without corresponding designation of public recreation lands in and around disposal sites. By including areas which will be impacted by community growth, such as lands to be subjected to intensive recreation use and areas where speculative land sale and subdivision are occurring, the settlement impact category will serve to flag such regions for more detailed planning and management.

At the State level, the settlement impact category could serve to designate areas appropriate for municipal selection. In this case the detailed planning for public lands and for various forms of private development within settlement impact areas should be the responsibility of the municipality.

Some may argue that the Federal and State governments cannot use the same categories for regional planning because the two governments hold differing goals and objectives for their public lands. It is true that there are considerable differences in policy and attitude, despite the fact that the State Division of Lands and the Federal Bureau of Land Management have a similar legal mandate to make wide and varied use of the public lands. As a more local form of government, State land manage-

ment is closer to political pressures from individuals and interest groups who seek rights to State lands for personal use or economic enterprise. Since the Bureau of Land Management serves a national constituency that tends to view Alaska more as a place to recreate in a natural setting, than as a place to settle and develop, Bureau of Land Management policy places greater emphasis on retention for public purposes. The new Federal Land Policy and Management Act begins with a policy of retaining Bureau of Land Management lands in Federal ownership, unless there is a documented national interest in disposal.

However, differences in Federal and State policy do not necessitate a difference in planning categories. Values and policies should be reflected in the way categories are applied to the planning region--in the extent and boundaries of areas assigned to various categories--not in the system of categories itself. In fact, to enable and encourage full consideration of differing values and policies, it is important that the set of categories be well balanced, with categories representing the full spectrum of choices, ranging from full development to no land use.

By avoiding a weighting either towards development or no development, the categories remain neutral and the application of value judgments is made at the point of planning decision with the benefit of comment from the public and other agencies and levels of government.

To achieve balance in its planning categories, each level of government should have, at a minimum, a category under which land would be preserved in its natural state, a category allowing land uses in accordance with a primary objective of protecting the natural environment, a category for

resource development, and a category for settlement and settlement impact areas. The Bureau of Land Management may plan more of its lands for the first two categories while the State may place more emphasis on the latter two categories, but, by using the same basic set of regional categories the two governments should be able to plan interrelated holdings as a unit and, in doing so, greatly improve their communication with the affected public.

MEMORANDUM

TO: Commission

REVIEWED BY: John W. Katz, Counsel

FROM: Liz Matthews, Legal Extern

SUBJECT: Existing Federal-State Governmental Entities

Introduction

This paper will take a short overview of the major existing Federal-state governmental entities. The first section of the paper presents a discussion of the principal features of each entity. The second section contains information taken from telephone interviews with personnel who work for two of the most interesting Federal-state commissions, the Delaware River Basin Commission and the Appalachian Regional Commission. The final section will identify the issues raised by the previous discussion for the purpose of helping the LUPC to determine the most desirable features of any proposed Federal-state entity in Alaska. Because the primary focus of this survey is on organization and structure, the substantive mandate of each commission will be only briefly touched upon.1/

I have surveyed the existing non-Federal-state regional bodies and have found that they contain interesting features, but none that is not exhibited in the Federal-state entities discussed below. Therefore, due to considerations of time and space, and given the Land Use Planning Commission's orientation, this paper will confine itself to the Federal-state form.2/

PART I

The best known Federal-state entities are those created by multi-state regionalism: the Regional Economic Development Commissions and the River Basin Commissions.3/ The first river basin commissions, such as TVA, were not joint Federal-state in nature; but the growth of interstate compacts led in 1961 to the first interstate compact to which the United States was a party: the Delaware River Basin Compact.4/ Viewed at the time as a daring experiment in federalism 5/, the Delaware River Basin Commission

is perhaps the most powerful of the Federal-state entities. In 1970 the Susquehanna River Basin Compact6/ created an essentially identical commission. The two commissions were established as regional administrative agencies of the signatory parties for water resource management in their respective river basins, and they have broad planning, regulatory, and coordinating powers within their regions. The specific mandate of the commissions is to "...develop and effectuate plans, policies, and projects relating to the water resources of the basin...adopt...uniform policies for water conservation, control, use, and management....[and] encourage the planning, development and financing of water resources projects according to such plans and policies...."7/ They also have power to allocate water resources, and their regulatory powers extend to pollution control and "...all powers necessary or convenient to carry out its express powers or which may be reasonably implied therefrom...."8/

Both compacts set up commissions composed of one member from each party state and one Federal representative. The state members are the governors or their alternates; the Federal member is appointed by the President. Commission action is by majority vote, but commission budgets must be approved unanimously. If the Federal member does not concur in a commission decision, Federal agencies within the basin are released from the requirement that their water resource activities with respect to that decision be in conformance with the commission's plan or regulations. Thus, the Federal representative, through his use of the nonconcurring vote, has significant power in the compact's implementation. Commission members appoint an executive director to serve at their pleasure. He, in turn, has direct appointment power of the staff, subject to commission rules and regulations.

The Delaware River Basin Commission, in particular, has facilitated significant cooperation with both Federal and state agencies.9/ The Federal representative is advised by a field interagency group, and when severe interagency disputes arise, he has recourse to an interdepartmental committee in Washington for a final resolution. The state alternate members have been, for the most part, the heads of state water resource or conservation agencies or have been on the governor's personal staff. This has insured a high level of state input since, under the compact, the alternates have authority to attend commission meetings and to vote in the place of their respective members. The DRBC has also maintained cooperative relationships with some of the larger local jurisdictions in the region, in particular some suburban Philadelphia counties and the Delaware Valley Regional Planning Commission. The Commission also has technical advisors from New York City and Philadephia.10/

In 1965, laws were enacted which created several types of Federal-state entities. Title V of the Public Works and Economic Development Act11/ created the various "Title V" regional economic commissions. The Appalachian Regional Commission was established by separate legislation: the Appalachian Regional Development Act.12/ The "Title II" river basin commissions, created under Title II of the Water Resources Planning

Act13/, arose out of the need for formal state and Federal cooperation in water management on a river basin basis, where most of the Federal water resource planning was being done.

Title II of the Water Resources Planning Act authorizes the President to establish river basin planning commissions. There are at present seven: the Pacific Northwest, the Upper Mississippi, the Missouri, the Ohio, the New England, the Great Lakes, and the Souris-Red-Rainy. Each commission's mandate is to "...serve as the principal agency for the coordination of Federal, state, interstate, local and nongovernmental plans for...its...river basin; prepare...a comprehensive, coordinated, joint plan for...development of water and related resources....recommend long-range schedules of priorities for the collection and analysis of...data...and...undertake such studies...as are necessary...."14/ Membership includes a Federal co-chairman appointed by the President, one member appointed by the head of each interested Federal agency, one member appointed by the governor of each state, and one member from any interested interstate compact agency. International representatives are included on the Pacific Northwest Commission, and coordination with international commissions is required in the case of the Great Lakes Commission. The state members elect a vice-chairman to represent them. The decision-making process operates by consensus, as provided in the Act:

> "...Every reasonable endeavor shall be made to arrive at a consensus...; but failing this, full opportunity shall be afforded each member for the presentation...of individual views: Provided, that at any time the commission fails to act by reason of absence of consensus the position of the chairman, acting in behalf of the Federal members, and the vice-chairman, acting under instruction of the state members, shall be set forth in the record...."15/

The unusual voting procedure stipulated by the Act places a premium on the exchange of information among Federal and state agencies rather than on regulation or management. This cumbersome procedure is perhaps appropriate under the mandate of the Act to "serve as the principal agency for the coordination of Federal, state, interstate, local, and nongovernmental plans...."16/

The Title II commissions have a relatively small staff. The Great Lakes River Basin Commission is the largest with 15 members. They depend on Federal and state agencies for their basic data, and the central staff has no way to force these scattered work groups to meet planning deadlines.17/

Section 207 of the Water Resources Planning Act states that each commission shall prepare and submit a budget, which in turn is further subject to the approval of the Water Resources Council. Section 207 also provides that each commission shall recommend what share of its budget should be paid by the Federal government. In practice, funding has developed into a system of matching grants, where the Federal government pays half of the operating costs and the state pays the rest.

The impact of most Title II commissions on state and Federal water policy has been variable. The New England River Basins Commission has had the most success, primarily because it receives substantial political support from the New England Governor's Conference, and because the New England States have a long history of working together.18/ Given their different legislative mandates, it is difficult to compare the performance of the Delaware River Basin Commission with Title II commissions, but the conclusion is unavoidable that the interstate compact commission is a much more efficient river basin planning tool.

Another well-known entity is the Appalachian Regional Commission, created in 1965 by the Appalachian Regional Development Act.19/ Its mandate is to promote the economic development of the Appalachian region by, among other things, developing comprehensive plans, sponsoring research and projects, reviewing Federal, state, and local programs, and providing a forum for consideration of regional problems. Membership consists of the Federal co-chairman appointed by the President and 13 state representatives, one from each state, who may be the governors or their designee. The Act authorizes a part-time state co-chairman who is elected by the state members. However, from the beginning, the states created the position of "states regional representative," who serves as their full-time permanent liaison on the Commission.

The Federal co-chairman has a small staff entirely federally funded. His main function is to coordinate the Commission's programs with other Federal agencies. The state's regional representative acts as the functional equivalent of the Federal co-chairman in the day-to-day affairs of the Commission. The representative's principal responsibility is to carry out policy directives of the governors and the state co-chairman. The representative has his own staff paid for by the member states, and he has a good deal of influence. The Commission has a relatively small but high caliber staff with offices in Washington, D.C. It is funded equally by the Federal government and the states.

Decisions by the Commission require a majority, including the affirmative vote of the Federal co-chairman. This veto power has seldom, if ever, been used, but it must have an effect on deliberations. In practice, much of the Commission's authority has been delegated to the "executive committee," a unit composed of the executive director (nonvoting), the Federal co-chairman, and the state's regional representative.

The Commission meets once a month. Between meetings, the "troika" executive committee takes charge of the day-to-day administration, as well as reviewing project proposals, program allocations, and state development plans. At each Commission meeting, the executive committee reports on its actions.

Over the years the Appalachian Regional Commission has developed a life of its own while still managing to be an effective agent of its Federal and state members. While the fairly rapid turnover in gubernatorial

membership due to changes in state administrations has harmed its performance as a policy-making body, the positions of executive director and state regional representative have remained relatively constant. Strong Federal and state ties, frequent meetings, and the efficient executive committee help make the Appalachian Regional Commission one of the most active Federal-state entities today.20/

The "Title V" regional commissions were created under Title V of the Public Works and Economic Development Act of 1965 21/, and their mandate is substantially the same as that of the Appalachian Regional Commission. There are seven in all: Coastal Plains, New England, Four Corners, Upper Great Lakes, Ozarks, Old West, and Pacific Northwest. The composition of each is identical under the Act: a Federal co-chairman appointed by the President, one member from each state who may be the governor or his designee, and a state vice-chairman elected by the state members from among their number. Decisions require the affirmative vote of the Federal co-chairman, as well as a majority of the state members. Each state member is to have an alternate appointed by the governor, and the President is to appoint an alternate for the Federal co-chairman. The alternate votes in the event of absence, removal, or resignation of the state or Federal co-chairman. The commissions meet on a quarterly basis, with the governors usually attending personally. The state members definitely recognize the affirmative vote requirement of the Federal co-chairman as a veto power. Although seldom used, its influence is felt.22/

The Federal government was authorized to pay the full costs of the commissions' operating expenses for the first two years. After that, the states were required to pay 50 percent. An amendment passed in 1967 (§ 509) authorizes the Secretary to provide funds to each Federal co-chairman to use as supplementary grants to help states or other entities to raise matching funds for Federal grant-in-aid programs.

The Federal co-chairman's role on the commission as both a member and an official of the Federal government is somewhat bifurcated. The Federal co-chairmen have their own staffs, located in Washington, and their main concern seems to be the commission's relationship with Federal agencies. The state co-chairman's office is rotated among the governors, and is not a full-time position. The Coastal Plains Regional Commission has followed the example of the Appalachian Regional Commission and created the position of state's regional representative. State alternates appointed by the governors keep up contact and interest between the governors' offices and the commissions. On the New England Regional Commission, alternates have considerable impact on programs. But, turnover is a problem with alternates; they are changed at least as often as new governors are elected, which makes for a problem in continuity.

In most regional commissions, there is an executive committee which has responsibility for supervising staff operations. The committee is composed of the Federal co-chairman, the state co-chairman, and the executive director (a nonvoting member). Usually, the governor who is

serving as state co-chairman does not become involved, so that the committee is not often a tool of leadership.

The Title V commissions have a dual staff system. The staff of the Federal co-chairman, which averages about five members, is responsible to him only. The commission staff, averaging about 19, operates separately and is responsible to the commission as a whole.

For the purposes of this paper, there is no need to discuss in detail the composition and structure of the Joint Federal-State Land Use Planning Commission, but only to note a few unique features. Since Alaska is, in many respects, a one-state region, it has the only joint Federal-single-state commission, thus avoiding some of the complexities with which the multi-state commissions must deal. The Federal and State representation is much more exactly balanced on the LUPC than elsewhere. Further, the LUPC is the only commission in which both the State and the Federal co-chairman have a veto.

Two forms of single state-Federal entities have been proposed in the past few years. Neither has become law, although both still have a good chance of doing so. The proposed Nantucket Sound Islands Trust is the result of Senator Edward M. Kennedy's (D.-Mass.) efforts, beginning in 1971, to achieve legislation to preserve the unique characteristics of a particular area of Massachusetts: the Nantucket Sound Islands.23/ As put forward in S. 67 (January 15, 1975), the Trust would create three Federal-state trust commissions: the Nantucket Trust Commission, the Martha's Vineyard Commission, and the Elizabeth Islands Commission.

The Nantucket Trust Commission is typical. There would be seven members who would serve three year staggered terms: one to be appointed by the Secretary of the Interior, one by the Governor of Massachusetts, two by the Board of Selectmen of Nantucket, two elected by the town meeting of Nantucket, and one appointed by the Nantucket Planning Board.24/ The chairman would be elected by the members themselves for a term not to exceed two years. Each commission would have its own staff and advisory committee. There would be a coordinating committee with three members from each commission. All three commissions would be eligible for grant programs administered by the Departments of Interior, Commerce, and Labor. The Nantucket Islands Trust legislation was reported out of the Senate Interior Committee in August, 1976, but was not enacted before the 94th Congress ended.

S. 632, the 1972 version of the Land Use Policy and Planning Act, contained a proposal to establish Ad-Hoc Federal-State Joint Committees to deal with jurisdictional and other problems concerning the planning and management of Federal lands and adjacent non-Federal lands. Membership would include representatives of the affected Federal agencies, to be appointed by the appropriate Secretary; representatives of affected user groups, including recreation and conservation interests, to be appointed by the Secretary of the Interior after consultation with the appropriate governor; officials of the affected state agencies, to be appointed by

the governor; and officials of local government units, to be appointed by the Secretary of the Interior after consultation with the governor. This provision was omitted from the next version of the Land Use Policy and Planning Act.

Two types of joint authorities were created by the Great Lakes Fishery Act of 1956 (16 U.S.C. 931 et. seq.), which was generated by the Convention on Great Lakes Fisheries between the United States and Canada. On the Great Lakes Fishery Commission, a United States-Canadian body, the United States is represented by three commissioners appointed by the President and serving at his pleasure without compensation. One must be an official of the United States Government, and two must be residents of the Great Lakes states. One of the two latter persons must be a state official. The United States section thus created is to appoint an advisory committee for each of the Great Lakes, upon which each bordering state may be represented by not more than four members. These members are selected from a list proposed by the governor, giving consideration to the interests of state agencies, commercial and sport fishing interests, and the public at large. Members of the advisory committees serve without compensation.

The Alaska Joint Federal-State Fish and Wildlife Advisory Team was created by §202 of the Trans-Alaska Pipeline Authorization Act.25/ to give environmental advice to the Alaska Pipeline Office (Federal) and the State Pipeline Coordinator's Office. A team of approximately 30 professionals, mostly biologists, were appointed by various interested State and Federal agencies. These staffers are paid by their respective agencies, which are then reimbursed by Alyeska. There is a Federal coordinator and a State coordinator; each has an assistant-alternate and a veto power, which is rarely used. The team serves as a technical advisor only.26/ One of the team's main strengths is its capacity to promote effective coordination between the State and Federal agencies which donate employees.

PART II

The following questions were asked of the Appalachian Regional Commission and the Delaware River Basin Commission in telephone interviews of February 10, 1977. Their reponses are as indicated, in the order in which the questions were asked.

1. Which members are full-time, if any?

   Appalachian: The Federal co-chairman is full-time.

   Delaware: Under the statute, the Federal member is the only full-time commissioner. In practice, the Federal co-chairman, who is the Secretary of the Interior, serves through an alternate. Every commissioner has an alternate, and the alternates are extremely important. While the Commission only meets annually, the alternates meet every month or oftener; sometimes they meet twice a week when the work load requires it.

2. Is there an alternate for every member?

Appalachian: Yes, all the governors have alternates who act for them in day-to-day administration but who have no authority to vote in the place of the governors on final policy decisions.

Delaware: Answer included in No. 1.

3. Who comprises your staff?

Appalachian: There is a staff of 110 in Washington, D.C., comprised of separate state and Federal staffs of about nine persons each, with the balance working under the executive director.

Delaware: Approximately 50 professionals.

4. How often do you meet and what are your views regarding this scheduling?

Appalachian: Every two to three months, which is no problem because the alternates are constantly available.

Delaware: Answer included in No. 1.

5. Is there an executive committee?

Appalachian: There was an executive committee until very recently, but at the moment, due to a change in personnel, its decisions are being made at Commission meetings instead. There will probably be another.

Delaware: There is an informal kind of executive committee which is called the "Directorate." It is composed of the Secretary, the public information officer, the chief engineer, and the general counsel. It meets whenever necessary on an ad hoc basis.

6. Do you have more than one office? If so, where are they located?

Appalachian: Yes, there is the main office in Washington, D.C., one in every state, and one in each of 69 local development districts.

Delaware: The main Commission office is in West Trenton, New Jersey. The Federal member has his office in Washington, D.C., and each state has its own local office in the individual states.

7. To what extent is the public involved in your proceedings?

Appalachian: The Commission travels from state to state to each of the local development districts and holds public hearings.

Delaware: A press release goes out to all the basin-wide media regularly, giving notice of future proceedings. The Commission also maintains a mailing list of interested parties. Public attendance

is very good. It is felt that this public input is very healthy and that the Commission is very responsive to it. Very often major project changes are made in response to the public hearing process.

8. What powers does your Commission have and do you feel they are sufficient to carry out the work which needs to be done?

Appalachian: No response.

Delaware: The Delaware River Basin Commission does not have the power of subpoena. Otherwise, the Commission has full enforcement powers. The Commission is both a legislative body and a quasi-judicial body, with the ability to hold adversary proceedings. After a decision at one of these proceedings, a party can take his action directly to the courts; there is no "exhaustion of remedies" problem. The Commission feels that it helps create a sense of public reponsiveness by providing a forum where private citizens can be heard in an adversary hearing without the expense of an attorney.

9. Do you use Federal or state procurement regulations or neither?

Appalachian: The Commission goes through the Department of Commerce.

Delaware: The Commission is not subject to Federal administrative procedures in any way. The Commission has its own regulations.

10. Is your staff comprised of Federal or state employees, or neither?

Appalachian: They are not civil service employees, but they have benefit schemes that are comparable to civil service personnel.

Delaware: The staff is composed of neither Federal nor state employees.

11. Do you relate to your respective legislative bodies directly, or must you go through the executive branch?

Appalachian: Directly.

Delaware: Directly.

12. What is your funding process and how does it work?

Appalachian: Funding is on a fifty-fifty basis. It is felt that the fact that the Commission is funded directly and is relatively independent, rather than being dependent on the Department of Commerce like the Title V commissions, is important to the Commission's success.

Delaware: The Delaware River Basin Compact specifies that the states and the Federal government will share the funding "equitably." By agreement, at present 77 percent of the Commission's funding comes from the states and 23 percent from the Federal government. The states feel that this correctly reflects the proper balance and helps give the Commission its necessary independence.

13. How are Federal-state relations on your Commission?

Appalachian: Answer included in No. 12.

Delaware: Federal-state relations are excellent. The individual states have good input; the smallest state has as much a say in Commission affairs as the largest state.

PART III

Subject to caveats respecting the fairly short operating history of most Federal-state entities and the varying mandates and functions of the existing entities, the following issues appear relevant in analyzing these entities or any proposed Federal-state land use entity for Alaska.

1. Should the agency be cast in the form of a commission? (Most of the questions listed below assume an affirmative answer.)

2. With what powers should the commission be vested? Should such powers be advisory only?

3. Should the commission be composed of full-time members, full-time co-chairmen and part-time members, or part-time members and a full-time executive director?

4. How many Federal and state commissioners should there be?

5. Should certain members of the commission be required to have particular professional or other qualifications? Within the Alaska context, should there be a requirement that one or more members be Natives?

6. Should commissioners be appointed to fixed terms or serve at the pleasure of the appointing authority?

7. Should there be alternatives and for whom?

8. Should there be a veto over commission decision-making? If so, should the veto reside in the Federal and state co-chairmen, acting separately, or in the Secretary of the Interior and the Governor, respectively?

9. Which is better, to meet fairly often for shorter periods or to meet less often and have longer meetings?

10. Is there need for an executive committee or its equivalent?

11. What mechanisms should be established to obtain public input? An advisory committee?

12. How should the commission be funded?

13. How should the commission be staffed?

14. Is it preferable to avoid using either Federal or state employment regulations and procurement procedures?

15. Should the commission have an office in Washington, D.C.?

16. Should a Federal agency coordinating body be established at the Secretarial level in Washington to assist the commission in performing its duties?

17. Should the commission be temporary or permanent?

TESTIMONY OF THE HONORABLE STEVE COWPER
BEFORE THE HOUSE NATURAL RESOURCE COMMITTEE
ON
H.B. 211
AN ACT ESTABLISHING THE ALASKA LAND COMMISSION

First I would like to commend the authors of HB 211 for taking the initiative in introducing this legislation. It serves as a message to congress and the Federal Government that Alaska in on the side of balanced and comprehensive land use planning and management.

President Carter issued his environmental message to Congress on May 23rd of last year. An entire section of that message was devoted to "Improving Government". In that part of his speech the President said, "In the past, our environmental policies have not always used the most practical tools, nor the least costly; they have sometimes imposed burdensome bureaucratic regulations...and they have occasionally ignored the need for different solutions in different areas of our diverse country. There is room for improvement." I submit that HB 211 creates a practical tool for land planning and management which recognizes the sovereignty of the State and Federal governments, but transcends chauvinism and political boundaries in order that the land and the wildlife may be managed on an ecosystematic basis. The Alaska Land Commission can reduce both State and Federal land and wildlife management costs by fostering co-operation and communication and thus minimizing unnecessary overlap, implementations of conflicting programs, and duplicate spending. This legislation fulfills the need for "a different solution here in Alaska", where traditional systems likely will prove to be less than optimal. HB 211 IS an improvement.

The (d)(2) Steering Council for Alaska Lands has adopted a policy statement an amendatory language aimed at (d)(2) legislation now before Congress, which is compatible with HB 211. I shall be happy to leave that language with you, and urge your favorable consideration of that language. The Councils' language by the way, embraces concepts set forth in the Hammond, Stevens, and Young's (d)(2) bill; in the Joint Federal Land Use Planning Commission (d)(2) proposal; and in Senator Gravel's proposal.

There are those of us, myself included, who don't buy the environmental battle which pits the preservationists and developers against one another. I believe that it is possible to protect the great Alaskan landscape and at the same time assure adequate growth and development and utilization of our vast resources. Such a "balancing act" requires that new, co-operative land management approaches be developed by the State of Alaska, the Federal Government and our Native citizens. Each of the groups will be major landholders in the Alaska of the future. The most conspicious landowner will be the Federal Government. Even after all the State and Native selections are made, the Federal Government, which now holds over 96% of Alaska under its control, will still control over 200 million acres. Much of the land ownership will be intermixed, and, for the forseeable future, at least, co-ordination of Federal, State, and private land use decision-making will be a necessity if rational management of Alaska's resources is to occur.

The passage of HB 211, and companion legislation in Congress, would provide a mechanism for balancing, Federal, State, and private interests in the Alaskan landscape. It would give the people of Alaska a say in decisions that would otherwise be made by a remote Federal bureaucracy in Washington. Such an Alaska Land Commission would give the State greater influence over Federal land management activities that it would otherwise have. In the past, such Federal land management activities were not particularly noteworthy. Now, however we have entered the era of intensive management and control of the public domain. This new era is symbolized

by the passage of the Federal Land Policy Management Act in the 94th Congress. An Alaska Land Commission as proposed here will give the people of Alaska a direct and meaningful way to make our concerns known to the federal policy makers, and assure that our land is managed in the best long term interest of Alaska.

The existing record of many agencies in co-operative management is simply not very good. There are tools in existing laws which may be used in co-operative planning and management, but each lacks a third party, a motivating force to insure that dialogue takes place, and, as appropriate, is acted upon. A joint commission provides both a vehicle stimulating federal-state, interagency and interdepartmental co-operation in areas such as transportation, fish and game management, minerals and energy, and a means of unifying diverse elements into a coherent whole.

If federal intervention in land use now seems an inevitable fact of life, it behooves the State of Alaska to insure we get something in return. I cannot help but feel that the approach advocated in HB 211, which is supported by the (d)(2) proposals of our Congressional delegation and Governor, the Land Use Planning Commission's (d)(2) proposal, and the (d)(2) Steering Council's amendments, is our best hope for the future. To quote Julius Caesar, "Take care how your present decrees may effect posterity."

M E M O R A N D U M 9 March 1977

SUBJECT: Federal Energy Administration Hearing
23 March 1977 -- Anchorage

TO: House Resources Committee Members

FROM: Al Osterback, Chairman
House Resources Committee Al Osterback jr

Attached is the schedule for the Joint Senate-House Resources meetings during the week of March 21-25, 1977.

Please note the Federal Energy Administration Hearing in Anchorage on Wednesday, March 23, 1977. I would like all House Resources Committee Members to go. If you like, Jeanne will make your travel arrangements, so let her know if you are going as soon as possible.

I am planning to leave on Tuesday, March 22 and return the evening of Wednesday, March 23.

Thank you.

MEMORANDUM
LEAGUE OF WOMEN VOTERS OF ALASKA

TO: House Resources Committee DATE: March 9, 1977

FROM: Joy Jamison, lobbyist for the League of Women Voters of Alaska

SUBJECT: HB 211, Establishing the Alaska Land Commission.

The League of Women Voters of Alaska supports the concept of a State Land Use Board with authority to formulate, implement and enforce a comprehensive plan for the use of all land in the State of Alaska. Citizen participation, education, communication and on-going evaluation must be essential elements in the comprehensive planning process. The public should be given alternatives with possible consequences of their choices on any given question calling for public input.

The goal of a State Land Use Plan should be the optimum use of the land as determined after considering environmental, social and economic interests against all available information concerning each area.

Land Use decisions should be made and enforced by the lowest level of government immediately concerned with the land in question, but such decisions must comply with the State Land Use Plan. Evaluation of social, environmental and economic impact should be required of all major public and private developments. Geographical regional planning should be established.

The Land Use Board should identify and plan for areas of critical concern to the state and for areas where land use decisions would have statewide impact. The Board should also compile and catalog resource inventories, not only to aid them in their decisions, but to be available to all citizens when preparing impact statements, appeals or testimony.

The Land Use Board should be an instrument to ensure coordination and cooperation among state, federal and private land owners. The state and federal governments should research and, if feasible, establish innovative resource management systems and cooperative uses of the land.

In view of the above statement of position, the League of Women Voters of Alaska supports HB 211. However, we urge the inclusion of required qualifications for commission members, as well as the executive director (AS 41.45.040). Members need not be land use planning experts, but should be knowledgeable and representative of the social, economic, environmental and political factors involved. Ex-officio members from federal agencies should be included to ensure communication among agencies concerned with planning for uses of the land.

We feel it is imperative to include some mechanism for coordinating with existing state and federal land management agencies (Alaska Division of Lands, BLM, USFS, etc.) since there will be other land such as national forests, state and national parks, etc. that are not included in the "common management areas".

We further urge that an appeals or arbitration procedure be established.

STATEMENT BY CONGRESSMAN YOUNG ON HB 211

I would like to thank you for the opportunity to comment on HB 211, a bill which would create the Alaska Land Commission for the purpose of managing cooperative lands in the State of Alaska.

As you know, I have supported the cooperative management system embodied in S. 787, a bill introduced to the U.S. Senate by Senator Ted Stevens. I think that cooperative management is a feasible alternative to the type of single-use land units now in existence on federal lands. I am pleased to see that the Alaska State Legislature has taken the initiative in proposing the establishment of a Commission that would work with these cooperative lands. It is indeed unfortunate that some Members of Congress have not taken the same initiative.

I do think that there are some changes which could be made in the bill to make it a more effective document. I trust that you will take these comments in the constructive vein in which they are offered.

Section ,040, dealing with membership, states that the Commission will consist of 3 members appointed by the State. It is envisioned that an additional 3 members will be appointed by the Federal Government. The last member of the Commission is to be appointed by majority vote of the first 6 members. This is a reduction in the number of members suggested by Governor Hammond, Senator Stevens, and myself. Although the number of members may not be important, I am concerned that the equal membership of 4 State and 4 Federal envisioned in S. 1787 is not maintained in this bill. Furthermore, the equal veto power of the Governor and the Secretary of Interior has not been included in this bill. I think that it is important to realize that the State and the Federal Government should be considered as equals in regard to cooperative land. By having an independent member and without veto power, this equality is considerably diminished.

One further point should be made in regard to membership. A number of people have suggested that Native Corporations and private landholders should have the option of being included in a cooperative management scheme. Although HB 211, in section .080, allows the Commission to enter into agreements with private landholders, there is no incentives for private landholders to take advantage of this offer.

I would suggest that, if a landholder does commit his lands to the cooperative management scheme, he be given a tax incentive and at least an advisory role in Commission decisions.

The final point I wish to discuss is section .070. This section empowers the Alaska Land Commission to "Manage land included within common management areas." I feel that it is a mistake to grant these powers to the Commission. Land management in Alaska is already divided between the State, at least three agencies of the federal government, and private landholders. By creating another management entity, we are merely confusing an already clouded management pattern. A recent case that was brought to my attention will illustrate my point. A gentleman wrote to me expressing his troubles with various agencies. He was living on land that had been selected by a particular Native village corporation. Although the Village was more than happy to let him live there, he was unable to construct a trail from his cabin to the main road because the land it would cross was in limbo due to conflicting ownership questions between the State and the Federal Government. After wading through paperwork at the federal level, he was finally referred to the State, who told him that patent on the land had not yet been granted and that the Federal government would have to issue the necessary permits. Can we honestly expect one more managing agency, which presumably will make decisions by majority vote, to help alleviate this sort of confusion?

Once again, let me say that I am glad to see the Legislature taking positive steps towards resolving the complex land issues we are dealing with. I do hope, however, that you will take these comments to heart and do what is necessary to establish a workable cooperative land management system in Alaska.

Address further inquiries directly to Congressman Don Young,
1210 Longworth House Office Building, Washington, D.C. 20515

FOREWORD

This report was prepared by Mr. George Utermohle of the Research Division staff at the request of Representative Mike Miller, chairman of the Legislative Council. This report expands upon an earlier and less extensive analysis of the d-2 issue prepared by Mr. Utermohle at my direction, and given limited distribution in July of this year. We believe the current report provides an accurate and concise summary of the major d-2 proposals now before Congress, and summarizes in tabular form all legislation relating to this issue.

A limited number of additional copies of this report are available from the Legislative Affairs Agency, Pouch Y, Juneau, Alaska 99811.

ALASKA NATIONAL INTEREST (D-2) LANDS

A HISTORY AND REVIEW OF LEGISLATION

PART I. D-2 LAND: A BACKGROUND REPORT

ALASKA STATEHOOD

Prior to 1959, virtually all land in Alaska was owned by the federal government. When Alaska became a state, it was granted the right to select a maximum of 104 million acres by 1984 as its statehood entitlement. The object of this large statehood entitlement was to provide the new state with title to lands which would provide a base for economic stability and development. During the early years of statehood, the state selected its entitlement slowly and deliberately because it was not financially prepared to immediately assume the costs associated with ownership of millions of acres and because it appeared that there was ample time in which to make selections.

NATIVE LAND CLAIMS

Concurrent with, but separate from the drive for Alaska statehood, was the movement for a settlement of the aboriginal land claims of Alaskan Natives. While the land claims issue had long been overshadowed by the statehood issue, once statehood was granted, the land claims became a prominent issue. In the early 1960s, Alaska's Native groups were becoming more active in demanding a resolution of their claims than ever before. In December, 1966 Secretary of Interior Udall, in response to the threat of numerous law suits by Native groups, placed a moratorium on the transfer of any federal lands from federal ownership in Alaska which were affected by a Native land claim. This action by Secretary Udall became known as the "land freeze". While the land freeze was in effect, the state could not receive approval of or patent to its selections in those areas affected by the freeze. The pressure for a settlement of the Native land claims increased when large quantities of oil were discovered at Prudhoe Bay in 1968 and 1969. With the prospect that any pipeline carrying Prudhoe Bay oil to market would traverse lands affected by Native land claims, it became evident that the claims had to be settled before a pipeline could be constructed. The Alaskan Natives' land claims thus had become an issue of national significance. Congress sought to finally resolve the issue by passing the Alaska Native Claims Settlement Act (ANCSA).

THE ALASKA NATIVE CLAIMS SETTLEMENT ACT

The Alaska Native Claims Settlement Act (P.L. 92-203) took effect on December 18, 1971. The settlement act awarded to Alaska's Natives $962 million in cash and almost 44 million acres of land. The selection of Native land was to occur within four years after the act became effective and was to have precedence over state selections.

As a result of the Alaska Statehood Act and the Native Claims Settlement Act approximately 148 million acres of federal domain in Alaska would be transferred to state or private ownership. An additional 149 million acres still remained in the vacant, unappropriated, and unreserved public domain in Alaska. In order to decide what would be done with the remaining public domain, Congress included a provision for land use planning in the Alaska Native Claims Settlement Act. This provision was included as Section 17:

Section 17(a) - established the Joint Federal-State Land Use Planning Commission for Alaska;

Section 17(b) - authorized the Commission to identify public easements across Native corporation land;

Section 17(c) - exempted from selection by the Native corporations any land which the Secretary of the Interior may withdraw as utility and transportation corridors;

Section 17(d)(1) - authorized the Secretary of the Interior to withdraw unreserved public land from all forms of appropriation, except locations for metalliferous minerals, if it is necessary to protect the public interest in those lands; (Lands withdrawn under this provision of the act are known as "d-1 lands".)

Section 17(d)-(2) - authorized the Secretary of the Interior to withdraw from all forms of appropriation or selection up to 80 million acres of unreserved public land which were suitable for addition to or creation as units of the National Park, Forest, Wildlife Refuge and Wild and Scenic Rivers Systems. (Lands withdrawn under this provision of the act are known as "d-2 lands".)

The Secretary of the Interior had until March, 1972 to designate d-2 lands and until December, 1973 to determine their suitability for designation as parks, refuges, forests, and wild and scenic rivers.

D-2 LANDS

In March of 1972 the Secretary of the Interior designated 79 million acres as d-2 lands and an additional 47 million acres as d-1 lands. The State of Alaska immediately filed a suit against the Secretary

because some of the land designated as d-2 land had been selected by the State for the acquisition under its statehood selection rights. In January, 1972, before the Secretary made his d-2 designations, the State had selected the remainder of its statehood entitlement (77 million acres) in order to establish its claim to the land which the State wanted. In an out of court settlement in September, 1972 the State relinquished approximately half of its January selections and the Secretary of the Interior surrendered some of his March d-2 designations, in order to permit state selection. Other d-2 lands were shifted to d-1 status.

During 1973 and early 1974 the State selected 2.4 million acres from the 11 million acres of public domain which still remained unaffected by Native claims or d-1 and d-2 designations. However, in March, 1974 the Secretary of the Interior withdrew all the remaining public domain for d-1 classification. This withdrawal halted further state selections because the State could not select land designated as d-1 or d-2.

In December, 1973, the second anniversary of the effective date of the act, the Secretary of the Interior submitted his recommendation to Congress for lands to be added to the National Park, Forest, Wildlife Refuge, and Wild and Scenic Rivers Systems. The Secretary's recommendation included proposals for 28 areas involving 83.5 million acres. All lands designated as d-2 lands in 1972, but which were not included in the 1973 recommendation to Congress, reverted to d-1 land status.

The Secretary of the Interior's recommendation for parks, forests, refuges, and wild and scenic rivers in Alaska was introduced in Congress in early 1974 by Senator Jackson (Wash.). Since then several bills have been introduced each year which would affect d-1 and d-2 lands. (See pages 5 through 9 for a list of the bills currently being considered by Congress.)

Congress has until December, 1978 to act upon the establishment of national parks, forests, wildlife refuges, and wild and scenic rivers from d-2 lands. After that time d-2 lands will revert to d-1 land status if they have not been added to the four systems. Congress may extend the deadline for action on the d-2 land beyond December, 1978 if it wishes, but the House and Senate committees working on this issue are preparing to act on d-2 land legislation before the end of 1977. The d-2 land issue would then go to conference committee where the final decisions will be made in 1978.

In the House of Representatives the subject of d-2 lands will be handled primarily by the Subcommittee on General Oversight and Alaska Lands of the Committee on Interior and Insular Affairs. This subcommittee is chaired by Representative Seiberling (Ohio). The Subcommittee on Fisheries and Wildlife Conservation and the Environment of the House Merchant Marine and Fisheries Committee will also be involved in formulation of d-2 legislation because it has jurisdiction over matters relating to wildlife refuges. The chairman of this subcommittee is Representative Leggett (Calif.). The House subcommittees have held committee briefings, overview hearings, and general hearings during the

spring and summer of 1977. In the Senate the d-2 lands issue will be handled by the Committee on Energy and Natural Resources (formerly the Committee on Interior and Insular Affairs) chaired by Senator Jackson (Wash.). The House subcommittees and the Senate committee dealing with d-2 lands have or will visit Alaska this summer or fall. The substantive work on the d-2 bills will begin during the fall of 1977.

The Alaska delegation in Congress and Governor Hammond have held meetings on the d-2 lands issue in order to formulate a State position. The result of these discussions has been a bill which was introduced in June, 1977 by Senator Ted Stevens. This legislation has been referred to as the "Alaska Consensus" Bill, although the state's other senator, Mike Gravel, has not supported it.

The Carter administration has not taken a position on the issue. This administration is not likely to introduce legislation, but will attempt to influence the substance of the d-2 legislation while the bills are in committee. The Department of the Interior is reviewing its past d-2 proposals in order to assure that they conform with the policy of the Carter administration. This review is due to be completed in September, 1977. The Department of the Interior's position will be very influential in affecting the outcome of the d-2 issue.

Another factor in determining the outcome of d-2 legislation is the report to Congress by the Joint Federal-State Land Use Planning Commission for Alaska. The Commission which was established by the Alaska Native Claims Settlement Act made its recommendations to Congress in spring, 1977. The Commission's recommendations contained proposals for smaller additions to the existing National Park, Forest, Wildlife Refuge, and Wild and Scenic Rivers Systems than contained in many of the bills before Congress. In addition, a new system of land management, the Alaska National Lands System, is proposed. This new land management system would be unique to Alaska. It would be designed to allow a high degree of flexibility in managing the lands by balancing protection of exceptional scenic, wildlife, and other values of these lands with the development and utilization of the resources which may exist on these lands. A proposal for cooperative management of federal, state, and private land is included in the Commission's recommendations.

The outcome of the d-2 land issue is more complicated than it would appear from a listing of each bill and the total acreage affected. Such listings, though useful for descriptive purposes, actually obscure the significance of each proposal. The location and amount of land placed into each of the federal land management systems varies with each proposal and thus the overall implications of each bill before Congress differ greatly. It is important to remember that much more is involved in the d-2 lands issue than just land. The final d-2 legislation passed by Congress will not only designate so many million acres of land as national parks, wildlife refuges, etc., but will also affect in some way or another, state management of wildlife resources, the subsistence life style of Native Alaskans, state selection of its remaining statehood entitlement, mineral and agricultural development, outdoor recreation, and any other human activity which is directly related to land and natural resources.

PART II. LEGISLATION CURRENTLY BEFORE CONGRESS

WHICH AFFECTS LAND IN ALASKA

U.S. HOUSE OF REPRESENTATIVES

H.R. 39 Rep. Udall (Ariz.)
The "Alaska National Interest Lands Conservation Act" establishes or enlarges 14 national parks, 14 wildlife refuges, and 23 wild or scenic rivers in Alaska. The bill also includes an authorization to enlarge the Chugach and Tongass National Forests by a maximum of 1,600,000 acres. The total area affected by these designations is 116,170,000 acres.

This bill also designates 30,470,000 acres of existing national parks, wildlife refuges, and national forests along with the 116,170,000 acres of parks, refuges, and wild and scenic rivers established by the Act as wilderness areas. The total area designated as wilderness in Alaska by H.R. 39 is 146,640,000 acres.

Surface management of the National Petroleum Reserve is transferred to the Fish and Wildlife Service.

Subsistence activities are permitted to continue on those areas affected by this Act.

State selections within areas affected by this Act are revoked. The state will be able to select areas of approximately equal acreage.

(H.R. 39 is reviewed in more detail on pages 11-18.)

H.R. 1207 Rep. Roe (N.J.)
The "Endangered American Wilderness Act of 1977" establishes eleven wilderness areas and seven wilderness study areas throughout the nation. This bill designates 405,000 acres of the Tongass National Forest as the West Chichagof-Yakobi Wilderness Area.

H.R. 1454 Rep. Alexander (Ark.)
This bill creates the Lake Clark National Park and authorizes a study of the park's wilderness potential.

H.R. 1652 Rep. Dingell (Mich.)
The "Alaska Refuges Act" establishes ten national wildlife refuges totaling 67,900,000 acres in Alaska. Among the refuges established are the North Slope Refuge, Bristol Bay Refuge, Yukon Flats Refuge, Gulf of Alaska Refuge, and the Kuskokwim Refuge.

H.R. 1720 Rep. Sebelius (Kan.)
This bill designates 2,603,547 acres of Katmai National Monument as wilderness.

H.R. 1907 Rep. Udall (Ariz.)
This bill designates parts of 39 national wildlife refuges and 12 national forests throughout the country as wilderness areas. Among the areas affected are ten wildlife refuges in Alaska.

H.R. 1974 Rep. Udall (Ariz.)
This bill is the same as H.R. 39.

H.R. 2082 Rep. Leggett (Calif.)
This bill revises the laws relating to the National Wildlife Refuge System and adds 70,750,000 acres to the Refuge System by enlarging two existing refuges and establishing 19 new refuges.

H.R. 2876 Rep. Udall (Ariz.)
This bill is the same as H.R. 39.

H.R. 3454 Rep. Udall (Ariz.)
The "Endangered American Wilderness Act of 1977" designates 13 wilderness areas and seven wilderness study areas. Among the areas established is the West Chichagof-Yakobi Wilderness Area consisting of 405,000 acres in Southeast Alaska. This bill is similar to H.R. 1207.

H.R. 4264 Rep. Udall (Ariz.)
This bill is the same as H.R. 3454.

H.R. 5505 Rep. Quillen (Tenn.)
This bill is the same as H.R. 39.

H.R. 5542 Rep. Udall (Ariz.)
This bill is identical to H.R. 3454.

H.R. 5605 Rep. Seiberling (Ohio)
This bill establishes the Admiralty Island National Preserve as a unit of the National Park System.

H.R. 6564 Rep. Murphy (N.Y.)
The "Alaska Conservation Act of 1977" establishes or enlarges eleven units of the National Park System, nine units of the National Wildlife

Refuge System, and four units of the National Forest System. Two national wild rivers and one national scenic river are also established. The total area affected by this bill is approximately 83,500,000 acres. This bill is similar to the Secretary of the Interior's proposal of December, 1973.

U.S. SENATE

S. 164 Sens. Stevens and Gravel (Alaska)
This bill establishes the Seward National Recreation Area consisting of 1,400,000 acres in the Chugach National Forest on the northeastern Kenai Peninsula.

S. 315 Sen. Jackson (Wash.)
This bill establishes wilderness areas in 26 national parks throughout the nation. In Alaska 2,600,000 acres of Katmai National Monument are designated as wilderness.

S. 499 Sen. Jackson (Wash.)
The "Alaska Conservation Act of 1977" establishes or enlarges eleven national parks, nine wildlife refuges, and four national forests. Two wild rivers and one scenic river are also established. The total area affected by this bill is approximately 83,500,000 acres. This bill is similar to the Secretary of the Interior's proposal of December, 1973.

S. 500 Sen. Jackson (Wash.)
The "Alaska National Interest Lands Conservation Act" establishes or enlarges 14 national parks, 14 wildlife refuges, and 23 wild or scenic rivers in Alaska. The bill also includes an authorization to add 1,600,000 acres to the Tongass and Chugach National Forests. The total area affected by these designations is 116,470,000 acres.

This bill also designates 30,970,000 acres of existing national parks, wildlife refuges, and national forests along with the 116,470,000 acres of proposed parks, refuges, and wild and scenic rivers as wilderness areas. The total area designated as wilderness is about 147,440,000 acres.

Surface management of the National Petroleum Reserve is transferred to the Fish and Wildlife Service.

Subsistence activities are permitted to continue on those areas affected by this Act.

State selections within areas affected by this Act made after December, 1971 are revoked. The State will be able to select areas of approximately equal acreage.

This bill is very similar to H.R. 39, but contains "technical improvements" proposed by the "Alaska Coalition", a group of conservationist organizations, and by staff counsel.

S. 1180 Sen. Church (Id.)
The "Endangered American Wilderness Act of 1977" designates ten wilderness areas and seven wilderness study areas throughout the nation. The West Chichagof-Yakobi area of the Tongass National Forest which comprises 405,000 acres is designated as a wilderness study area.

S. 1500 Sen. Metcalf (Mont.)
The "Alaska National Interest Lands Conservation Act" establishes or enlarges 14 national parks, 14 wildlife refuges, and 23 wild or scenic refuges in Alaska. This bill also authorizes an additional 1,600,000 acres for the Chugach and Tongass National Forests. The total area affected by these designations is 116,370,000 acres.

This bill also designates 27,570,000 acres of wilderness areas in existing national parks, wildlife refuges, and national forests, as well as in the 116,370,000 acres of proposed parks, refuges, and wild and scenic rivers. Ten areas in the Tongass National Forest totaling 550,000 acres are designated as wilderness study areas. The total area affected by S. 1500 is 145,490,000 acres.

The responsibility for surface management of the National Petroleum Reserve is transferred to the Fish and Wildlife Service.

Subsistence activities are permitted to continue on those areas affected by this Act.

State selections within areas affected by this Act which were made after December, 1971 are revoked. The State will be able to select areas of approximately equal acreages to compensate for those selections which are revoked.

Land which had been set aside for Native selection and which was not selected by a Native corporation will be added to the proposed national interest lands if the land lies within the boundaries.

This bill has evolved from H.R. 39 and S. 500. It is basically the same bill, but contains "technical improvements" to the previous versions.

S. 1546 Sen. Abourezk (S.D.)
This bill establishes the Admiralty Island National Preserve as a unit of the National Park System.

S. 1787 Sen. Stevens (Alaska)
The "Alaska National Interest Lands Act" establishes or enlarges seven national parks, eight national wildlife refuges and three national

forests. Three wild rivers are also established. The total acreage added to the four national conservation systems is 25,210,000 acres.

Additional areas of federal land are designated as Federal Cooperative Lands. The Federal Cooperative Lands are to be managed by either the Park Service, Fish and Wildlife Service, or Forest Service under the direction of the Alaska Land Classification Commission. The Commission shall be composed of four federal appointees and four state appointees. The Commission shall determine the appropriate uses for the land under its jurisdiction through its authority to classify the federal cooperative lands. A total of 56,890,000 acres of Federal Cooperative Lands is proposed.

The state must designate a significant proportion of state land as Alaska Cooperative Lands to be administered by the Alaska Land Classification Commission before the Commission can become operational.

This Act establishes a trust fund which receives a portion of state and federal revenues derived from national interest lands. This fund would be used to purchase land for inclusion in parks, refuges, and wild and scenic rivers outside of Alaska.

State and Native land selection rights are affirmed by this Act.

(S. 1787 is reviewed in more detail on pages 19-37.)

PART III. H.R. 39

"ALASKA NATIONAL INTEREST LANDS CONSERVATION ACT"

(Introduced by Representative Morris Udall)

SYNOPSIS

H.R. 39 as introduced by Representative Udall is meant to be a comprehensive land preservation package for Alaska and is offered as a countermeasure to that proposed by the Secretary of the Interior for the disposition of lands in Alaska which have been classified as National Interest Lands under Section 17(d)(2) of the Alaska Native Claims Settlement Act. Mr. Udall acknowledges that this bill affects vast areas of Alaska when compared with the contiguous United States, but he considers these areas as "merely samples of the vast and diverse federally owned landscapes of Alaska." In August, however, after hearings in Alaska, Mr. Udall was quoted as saying that some reduction in the amount of land that would be withdrawn under his bill would be appropriate.

This bill is directed at the allocation of National Interest Lands among the four national conservation systems (National Park System, National Wildlife Refuge System, National Wild and Scenic Rivers System, and the National Forest System) but also addresses Native subsistence issues and other administrative policies on the affected lands. The major provisions of the bill are summarized below.

116.17 million acres are dedicated as new units of the four national conservation systems.

-- 64.1 million acres are added to the National Park System

-- 46.4 million acres are added to the National Wildlife Refuge System

-- 4.07 million acres are added to the National Wild and Scenic Rivers System

-- A maximum of 1.6 million acres may be added to the existing National Forest System by Presidential Order.

All 116.17 million acres dedicated as new units of the four national conservation systems as well as 30.47 million acres of existing units of the national conservation systems are designated as units of the National Wilderness Preservation System. The total acreage of wilderness established by this bill is 146.4 million acres.

Surface management of the national petroleum reserve (Naval Petroleum Reserve No. 4) becomes the responsibility of the U.S. Fish and Wildlife Service.

Subsistence uses of natural resources are authorized to continue on the lands affected by this Act under regulations promulgated by the Secretary of the Interior. The regulations issued by the Secretary may prescribe the hunting season, bag limits, and methods of taking. Subsistence uses of resources have precedence over all competing consumptive uses. Subsistence users are defined in general terms by the Act. The right to subsist is granted to those who fit the definition of subsistence user and their direct descendents as long as they continue to fit the definition.

Hunting (undefined as to whether it is sport, commercial, or subsistence) will be permitted on the 12.6 million acres of national preserves established by the Act.

All lands designated by this Act as national parks, monuments, preserves, wildlife ranges, wildlife refuges, and national wild and scenic rivers are closed to further entry for mining and prospecting purposes. Existing claims and other existing mining rights are allowed to continue as long as regulations applicable to mineral location and mining activities on federal lands are followed.

Lands within the areas affected by this Act available for selection by Native village corporations but which are not selected shall be incorporated into the appropriate unit. The amount of land affected by this provision is unknown.

State land selections within the areas affected by this Act are revoked. Areas of approximately equal acreage will be made available to the State for selection.

The Secretary of the Interior is authorized to pursue cooperative agreements with state and private landowners who have land adjacent to units established by this Act in order to preserve the environments of the units.

SECTION-BY-SECTION SUMMARY

SECTION 1 (a) This subsection lists the titles of the Act and the national conservation systems which are affected.

(b) The intent of Congress is "to preserve unrivaled scenic and geologic values associated with natural landscapes; to provide for the maintenance of sound populations of, habitat for, resident and nonresident wildlife species...; to protect and preserve cultural values of indigenous peoples and the resources related to their subsistence needs; to protect and preserve historic and archeologic sites, rivers, and lands, and to preserve wilderness resource values and related recreational opportunities...; and to maintain opportunities for scientific research and undisturbed ecosystems."

(c) This subsection designates which maps are to be used to describe National Park Service, National Wildlife Refuge, and National Wild and Scenic River areas affected by this Act. These maps are to be available for public inspection in the office of the Secretary of the Interior. As soon as practicable after the passage of this Act, the Secretary shall publish in the Federal Register a map and legal description of each change in land management status.

TITLE I NATIONAL PARK SYSTEM

PART A ESTABLISHMENT OF NEW AREAS

SECTION 101 This section creates eleven additional national parks, monuments, and preserves affecting 56.0 million acres of federal land in Alaska. The specific areas established as part of the National Park System are given in Table 2b on page 45.

PART B ADDITIONS TO EXISTING AREAS

SECTION 102 This section adds a total of 8.1 million acres to existing national parks and monuments and redesignates the expanded Katmai National Monument and the expanded Glacier Bay National Monument as Katmai National Park and Glacier Bay National Park, respectively. The additional acreage allocated to each unit is given in Table 2b on page 45.

PART C ADMINISTRATIVE PROVISIONS

SECTION 103 This section requires the Secretary of the Interior to administer the new units established by this Title as part of

the National Park System except that hunting may be permitted under provisions of Section 702 of this Act.

TITLE II NATIONAL WILDLIFE REFUGE SYSTEM

PART A ESTABLISHMENT OF NEW AREAS

SECTION 201 This section establishes twelve new wildlife refuges or ranges on 31.7 million acres in Alaska. A list of the new units established and the acreages involved are given in Table 2c on page 47.

PART B ADDITIONS TO EXISTING AREAS

SECTION 202 This section adds 14.7 million acres to existing national wildlife ranges as well as merging or renaming certain units of the National Wildlife Refuge System. The additional acreage allocated to each unit is given in Table 2c on page 47.

TITLE III NATIONAL WILD AND SCENIC RIVERS SYSTEM

PART A ESTABLISHMENT OF NEW RIVERS

SECTION 301 This section establishes all or part of 23 rivers as wild rivers or scenic rivers. These wild or scenic rivers are to be managed by the National Park Service. Those rivers affected by this section and the acreage involved are listed in Table 2d on page 51.

PART B ADMINISTRATIVE PROVISIONS

SECTION 302 (a) This subsection authorizes the Secretary of the Interior to establish boundaries for wild and scenic rivers of at least two miles on each side of the river except that village corporation lands along the Anaktuvuk River, Melozitna River, Susitna River, Coleville River, and Gulkana River are excluded from inclusion in the system. The Secretary is further authorized to seek cooperative agreements with owners of non-federal land adjoining the wild and scenic rivers.

(b) This subsection requires the Secretary to establish the boundaries for the wild and scenic rivers within three years after the Act is passed.

TITLE IV NATIONAL FOREST SYSTEM

Within one year after the effective date of this Act, the President shall, after consultation with the Secretary of Agriculture and the Secretary of the Interior, add a maximum of 1.6 million acres to the Tongass and Chugach National Forests.

TITLE V NATIONAL PETROLEUM RESERVE IN ALASKA

Surface management of the National Petroleum Reserve (formerly Naval Petroleum Reserve, Number Four) shall be the responsibility of the U.S. Fish and Wildlife Service until Congress decides otherwise.

TITLE VI DESIGNATION OF WILDERNESS AREAS

SECTION 601 This section designates all lands added to the National Park System, National Wildlife Refuge System, and the Wild and Scenic Rivers System by this Act as components of the National Wilderness Preservation System. The total acreage affected by this section is approximately 116.17 million acres.

SECTION 602 This section designates a total of 7.3 million acres from existing portions of the National Park System as components of the Wilderness Preservation System.

SECTION 603 This section designates portions of nine existing wildlife refuges or ranges as components of the National Wilderness Preservation System. The total acreage affected is approximately 19.5 million acres.

SECTION 604 Six areas within the national forests in Alaska are designated as components of the National Wilderness Preservation System. The total acreage affected is approximately 5.0 million acres. Native village corporation lands within the areas designated as wilderness are excluded from the proposals.

SECTION 605 All wilderness lands designated by this Act are to be administered according to the Wilderness Act except that the responsibility for management is transferred to the Secretary of the Interior.

TITLE VII GENERAL ADMINISTRATIVE PROVISIONS

SECTION 701 (a) This subsection authorizes the Secretary of the Interior to permit the continuation of subsistence uses of fish and wildlife resources within the areas established by this Act. The Secretary is further authorized to establish regulations prescribing the hunting season, the number and species of game to be harvested, and the conditions under which subsistence uses are conducted. The Secretary may designate "Subsistence Management Zones" on those lands in and adjacent to national interest lands. The "Subsistence Management Zones" need not coincide with the boundaries of the national interest lands. In each "Subsistence Management Zone" the Secretary shall establish a "Regulatory Subsistence Board" consisting of ten subsistence users. These boards shall review all subsistence permit applications and advise the Secretary on matters of concern to subsistence users and other residents of the "Subsistence Management Zone". The Secretary is not obligated to comply with the recommendations of the boards.

(b) Subsistence uses of national interest lands shall receive preference over any competing consumptive use of resources. The Secretary may curtail subsistence uses of resources if it is necessary to protect the resource, but, unless an emergency exists, the Secretary must consult with the subsistence boards.

(c) Subsistence users are defined as those "people who exercise and continue to exercise customary, consistent, and traditional use of subsistence resources...and their direct descendants." Subsistence users will be permitted to continue subsistence activities "if they are primarily and directly dependent...upon local natural resources for either food, shelter", etc.

(d) This subsection requires the Secretary to conduct research on the use of subsistence resources, seek data from subsistence users, and make findings of the research available to the public.

(e) The Secretary is required to report to Congress on the effect of all hunting and fishing upon the flora and fauna of the national interest lands within ten years after this Act becomes effective and every five years thereafter. The Secretary must consult with the subsistence boards and the Alaska Department of Fish and Game.

SECTION 702 The Secretary may permit hunting in National Preserves established by this Act. The Secretary shall designate the zones and seasons for hunting by regulation and shall consult with the Department of Fish and Game, except in emergencies.

SECTION 703 (a) This subsection withdraws from appropriation under the mining laws and from operation of mineral leasing laws all lands designated as National Parks, National Monuments, National Preserves, National Wildlife Ranges, National Wildlife Refuges, and Wild and Scenic Rivers by this Act. Valid existing rights on these lands are reaffirmed.

(b) This section authorizes the Secretary to validate existing mineral leases, patents, or claims within his existing authority. All mining claims within these units must proceed toward patent within three years or they will lapse. The Secretary has the right of first refusal for mining inholdings which are offered for sale.

SECTION 704 (a) All lands lying within the units established by this Act which are subject to selection by Native village corporations but which are not selected shall be incorporated in the appropriate unit.

(b) Land selections by the State of Alaska which lie within the units established by this Act are revoked. An approximately equal acreage will be made available to the State for selection.

SECTION 705 The Secretary of the Interior and the Secretary of Agriculture are authorized to acquire lands or interest in lands within units established by this Act which are under their respective supervision.

SECTION 706 The Secretary of the Interior is authorized to purchase land outside of the boundaries of the Yukon-Charley National Preserve, Kobuk Valley National Monument, and Chukchi-Imuruk National Monument for the protection of archeological sites or construction of administrative or visitor facilities.

SECTION 707 (a) Whenever it is convenient and desirable for both parties, the administrative and visitor facilities for the areas established by this Act shall be located on adjacent Native-owned land.

(b) Before entering into any contract for provision of revenue-producing visitor services, the Secretary must grant the Native village or regional corporation the right of refusal to provide such services.

SECTION 708 (a) The Secretary of the Interior is authorized to identify Areas of Ecological Concern adjacent to any unit established by this Act. These areas contain resources that are part of the total ecosystem, geologic formation, or reflect a cultural heritage related to any unit of the national interest lands. For those lands within Areas of Ecological Concern, the Secretary may seek agreements with other federal agencies, the state, and private land holders that will assure the management and development of those lands in a manner consistent with preservation of the environmental quality of the units established by this Act.

(b) All federal agencies must consult with the Secretary of the Interior prior to undertaking any action in an area included in an Area of Ecological Concern.

(c) The Secretary is authorized to seek cooperative management agreements with the State of Alaska and its political subdivisions for lands adjacent to the units of the National Park System, National Refuge System, National Wild and Scenic River System, and the National Forests. Within three years the Secretary must report to Congress on whether the agreements have been consummated and whether the appropriate land use controls have been instituted by the state.

SECTION 709 The U.S. Fish and Wildlife Service and the National Park Service are required to cooperate on resource studies and planning in the National Parks, Wild and Scenic Rivers, and National Wildlife Refuges.

SECTION 710 The Fish and Wildlife Service, National Park Service, and Bureau of Outdoor Recreation are authorized to maintain regional offices in Alaska.

SECTION 711 The appropriation of such funds as are necessary to carry out the purpose of this Act is authorized.

PART IV. S. 1787

"ALASKA NATIONAL INTEREST LANDS ACT"

(Introduced by Senator Ted Stevens)

SYNOPSIS

This bill has been offered as an alternative to the Udall bill, H.R. 39, and the 1973 proposal of the Secretary of the Interior. By introducing this bill, Senator Stevens is proposing solutions to the conflicts surrounding the d-2 lands issue that are considered to be more favorable to the interests of the state and the people of Alaska. The significant proposals of S. 1787 include the designation of only 25.21 million acres as parks, refuges, wild and scenic rivers, and forests and the creation of a new land management mechanism by which certain federal, state and private land would be managed by a federal-state land commission.

S. 1787 is the result of consultations between Alaska's congressional delegation and Governor Hammond in an effort to reach an "Alaskan consensus" on the d-2 lands issue. Senator Gravel participated in the initial discussions but ultimately withdrew from the effort due to differences of opinion as to what provisions the bill should contain.

The major provisions of the bill are given below.

A total of 25.21 million acres is dedicated as units of the four national conservation systems.

- -- 10.45 million acres are added to the National Park System
- -- 8.04 million acres are added to the National Wildlife Refuge System
- -- 1.00 million acres are added to the National Wild and Scenic Rivers System
- -- 5.72 million acres are added to the National Forest System.

Another 56.89 million acres of federal land in Alaska are designated as Federal Cooperative Lands. These federal lands, as well as a significant portion of state lands, are to be managed by the Alaska Land Classification Commission. This commission will be a permanent joint state and federal commission with a structure similar to the existing Joint Federal-State Land Use Planning Commission for Alaska but with authority to implement its land management decisions on those lands subject to its jurisdiction.

Before the Alaska Land Classification Commission can become operational, the State of Alaska must commit a significant portion of its land to the care of the commission. The Secretary of the Interior shall determine what constitutes a significant portion of state land.

Private land owners may participate in the cooperative management system by dedicating their undeveloped land to cooperative management by the Alaska Land Classification Commission for a ten-year period. Exemptions from real property taxes, for those private lands which are dedicated as private cooperative lands, are possible if the state decides to grant them.

The State of Alaska retains jurisdiction over the management of fish and wildlife on those federal lands affected by this bill.

A review of the wilderness potential of all federal lands affected by this bill must be completed within five years after the effective date of this Act.

A trust fund is established from a portion of the state and federal revenues derived from the federal land affected by this bill. This fund will provide money to purchase privately owned lands in the "lower 48" states for addition to parks, refuges, and other areas.

State and Native land selections shall not be affected by the designation of National Interest Lands. Within 90 days after the effective date of this Act the Secretary of the Interior must make available for state selection all federal land not established as d-2 areas or part of existing federal reserves.

"ALASKA NATIONAL INTEREST LANDS ACT"

SECTION BY SECTION SUMMARY

SECTION 1 This section gives the Act its title.

SECTION 2 (a) This subsection lists the congressional findings, which declare that it is necessary to manage Alaska's national interest lands in order to protect values of national interest, to continue to catalog resource values on national interest lands in Alaska, and to promote cooperative management of federal, state, and private land.

(b) The purpose of this Act is to protect the national interest in federal lands in Alaska and to promote a program of flexible cooperative land management.

SECTION 3 This section defines the key words and phrases used in the Act.

TITLE I ANIAKCHAK CALDERA NATIONAL MONUMENT

SECTION 101 (a) The Aniakchak Caldera National Monument comprising 180,000 acres is established.

(b) A map and legal description of the monument should be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 102 Aniakchak Caldera National Monument is to be administered as a unit of the National Park System.

TITLE II CAPE KRUSENSTERN NATIONAL MONUMENT

SECTION 201 (a) The Cape Krusenstern National Monument comprising 190,000 acres is established.

(b) A map and legal description of the monument should be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 202 The Cape Krusenstern National Monument is to be administered as a unit of the National Park System.

TITLE III KOBUK SAND DUNES NATIONAL MONUMENT

SECTION 301 (a) The Kobuk Sand Dunes National Monument comprising 100,000 acres is established.

(b) A map and legal description of the monument should be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 302 The Kobuk Sand Dunes National Monument is to be managed as a unit of the National Park System.

TITLE IV GATES OF THE ARCTIC NATIONAL PARK

SECTION 401 (a) The Gates of the Arctic National Park comprising 3,550,000 acres is established.

(b) A map and legal description of the park should be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 402 The Gates of the Arctic National Park is to be administered as a unit of the National Park System.

TITLE V KATMAI NATIONAL PARK

SECTION 501 (a) The Katmai National Monument addition comprising 400,000 acres is established and the monument is designated as a national park.

(b) A map and legal description of the park should be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 502 The Katmai National Park is to be managed as a unit of the National Park System.

TITLE VI MOUNT MCKINLEY NATIONAL PARK ADDITION

SECTION 601 (a) The Mount McKinley National Park Addition comprising 1,130,000 acres is established.

(b) A map and legal description of the addition should be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 602 The Mount McKinley National Park Addition is to be administered as a unit of the National Park System.

TITLE VII WRANGELL-SAINT ELIAS NATIONAL PARK

SECTION 701 (a) The Wrangell-Saint Elias National Park comprising 4,900,000 acres is established.

(b) A map and legal description of the park should be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 702 The Wrangell-Saint Elias National Park is to be managed as a unit of the National Park System.

TITLE VIII ALASKA COASTAL NATIONAL WILDLIFE REFUGE

SECTION 801 (a) The Alaska Coastal National Wildlife Refuge comprising 150,000 acres is established.

(b) A map and legal description of the refuge should be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 802 The Alaska Coastal National Wildlife Refuge is to be administered as a unit of the National Wildlife Refuge System.

TITLE IX INNOKO NATIONAL WILDLIFE REFUGE

SECTION 901 (a) The Innoko National Wildlife Refuge comprising 600,000 acres is established.

(b) A map and legal description of the refuge should be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 902 The Innoko National Wildlife Refuge is to be managed as a unit of the National Wildlife Refuge System.

TITLE X KAIYUH NATIONAL WILDLIFE REFUGE

SECTION 1001 (a) The Kaiyuh National Wildlife Refuge comprising 190,000 acres is established.

(b) A map and legal description of the refuge should be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 1002 The Kaiyuh National Wildlife Refuge is to be managed as a unit of the National Wildlife Refuge System.

TITLE XI KANUTI NATIONAL WILDLIFE REFUGE

SECTION 1101 (a) The Kanuti National Wildlife Refuge comprising 430,000 acres is established.

(b) A map and legal description of the refuge should be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 1102 The Kanuti National Wildlife Refuge is to be managed as a unit of the National Wildlife Refuge System.

TITLE XII KOYUKUK NATIONAL WILDLIFE REFUGE

SECTION 1201 (a) The Koyukuk National Wildlife Refuge comprising 1,580,000 acres is established.

(b) A map and legal description of the refuge should be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 1202 The Koyukuk National Wildlife Refuge is to be managed as a unit of the National Wildlife Refuge System.

TITLE XIII SELAWIK NATIONAL WILDLIFE REFUGE

SECTION 1301 (a) The Selawik National Wildlife Refuge comprising 730,000 acres is established.

(b) A map and legal description of the refuge should be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 1302 The Selawik National Wildlife Refuge is to be managed as a unit of the National Wildlife Refuge System.

TITLE XIV SHISHMAREF NATIONAL WILDLIFE REFUGE

SECTION 1401 (a) The Shishmaref National Wildlife Refuge comprising 760,000 acres is established.

(b) A map and legal description of the refuge should be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 1402 The Shishmaref National Wildlife Refuge is to be managed as a unit of the National Wildlife Refuge System.

TITLE XV YUKON DELTA NATIONAL WILDLIFE REFUGE

SECTION 1501 (a) The Yukon Delta National Wildlife Refuge comprising 3,600,000 acres is established.

(b) A map and legal description of the refuge should be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 1502 The Yukon Delta National Wildlife Refuge is to be managed as a unit of the National Wildlife Refuge System.

TITLE XVI COLLEGE FJORD ADDITION TO THE CHUGACH NATIONAL FOREST

SECTION 1601 (a) The College Fjord Addition to the Chugach National Forest comprising 720,000 acres is established.

(b) A map and legal description of the addition should be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 1602 The College Fjord Addition to the Chugach National Forest is to be administered as a unit of the National Forest System.

TITLE XVII NELLIE JUAN ADDITION TO THE CHUGACH NATIONAL FOREST

SECTION 1701 (a) The Nellie Juan Addition to the Chugach National Forest comprising 280,000 acres is established.

(b) A map and legal description of the addition should be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 1702 The Nellie Juan Addition to the Chugach National Forest is to be administered as part of the National Forest System.

TITLE XVIII PORCUPINE NATIONAL FOREST

SECTION 1801 (a) The Porcupine National Forest comprising 2,590,000 acres is established.

(b) A map and legal description of the forest should be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 1802 The Porcupine National Forest is to be administered as a unit of the National Forest System.

TITLE XIX YUKON FLATS NATIONAL FOREST

SECTION 1901 (a) The Yukon Flats National Forest comprising 2,130,000 acres is established.

(b) A map and legal description should be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 1902 The Yukon Flats National Forest is to be administered as a unit of the National Forest System.

TITLE XX BIRCH CREEK NATIONAL WILD RIVER

SECTION 2001 (a) The Birch Creek National Wild River comprising 200,000 acres is established.

(b) A map and legal description of the wild river should be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 2002 The Birch Creek National Wild River is to be administered as a wild river within the Wild and Scenic Rivers System.

TITLE XXI CHARLEY NATIONAL WILD RIVER

SECTION 2101 (a) The Charley National Wild River comprising 400,000 acres is established.

(b) A map and legal description of the wild river should be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 2102 The Charley National Wild River is to be administered as a wild river within the Wild and Scenic Rivers System.

TITLE XXII NOATAK NATIONAL WILD RIVER

SECTION 2201 (a) The Noatak National Wild River, comprising 400,000 acres, is established.

(b) A map and legal description of the wild river should be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 2202 The Noatak National Wild River is to be administered as a wild river within the Wild and Scenic Rivers System.

TITLE XXIII KATMAI FEDERAL COOPERATIVE LANDS

SECTION 2301 (a) The Katmai Federal Cooperative Lands, comprising 1,590,000 acres, is established.

(b) A map and legal description of the Katmai Federal Cooperative Lands shall be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 2302 (a) The National Park Service shall manage the Katmai Federal Cooperative Lands in accordance with the regulations of the park service and the Alaska Land Classification Commission. If a conflict should arise between the regulations of the park service and the regulations of the Commission, the Commission shall prevail.

(b) The Katmai Federal Cooperative Lands may be opened to all uses allowed under the public land laws except those laws which permit conveyance of the land from federal ownership. Valid existing rights shall be continued.

TITLE XXIV GATES OF THE ARCTIC FEDERAL COOPERATIVE LANDS

SECTION 2401 (a) The Gates of the Arctic Federal Cooperative Lands, comprising 3,550,000 acres, is established.

(b) A map and legal description of the Gates of the Arctic Federal Cooperative Lands shall be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 2402 (a) The National Park Service shall manage the Gates of the Arctic Federal Cooperative Lands in accordance with the regulations of the park service and the Alaska Land Classification Commission. If a conflict should arise between the regulations of the park service and the regulations of the Commission, the Commission shall prevail.

(b) The Gates of the Arctic Federal Cooperative Lands may be opened to all uses allowed under the public land laws except those laws which permit conveyance of the land from federal ownership. Valid existing rights shall be continued.

TITLE XXV MOUNT MCKINLEY FEDERAL COOPERATIVE LANDS

SECTION 2501 (a) The Mount McKinley Federal Cooperative Lands, comprising 1,960,000 acres, is established.

(b) A map and legal description of the Mount McKinley Federal Cooperative Lands shall be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 2502 (a) The National Park Service shall manage the Mount McKinley Federal Cooperative Lands in accordance with the regulations of the park service and the Alaska Land Classification Commission. If a conflict should arise between the regulations of the park service and the regulations of the Commission, the Commission shall prevail.

(b) The Mount McKinley Federal Cooperative Lands may be opened to all uses allowed under the public land laws except those laws which permit conveyance of the land from federal ownership. Valid existing rights shall be continued.

TITLE XXVI WRANGELL-ST. ELIAS FEDERAL COOPERATIVE LANDS

SECTION 2601 (a) The Wrangell-St. Elias Federal Cooperative Lands, comprising 8,740,000 acres, is established.

(b) A map and legal description of the Wrangell-St. Elias Federal Cooperative Lands shall be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 2602 (a) The National Park Service shall manage the Wrangell-St. Elias Federal Cooperative Lands in accordance with the regulations of the park service and the Alaska Land Classi-

fication Commission. If a conflict should arise between the regulations of the park service and the regulations of the Commission, the Commission shall prevail.

(b) The Wrangell-St. Elias Federal Cooperative Lands may be opened to all uses allowed under the public land laws except those laws which permit conveyance of the land from federal ownership. Valid existing rights shall be continued.

TITLE XXVII LAKE CLARK FEDERAL COOPERATIVE LANDS

SECTION 2701 (a) The Lake Clark Federal Cooperative Lands, comprising 3,490,000 acres, is established.

(b) A map and legal description of the Lake Clark Federal Cooperative Lands shall be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 2702 (a) The National Park Service shall manage the Lake Clark Federal Cooperative Lands in accordance with the regulations of the park service and the Alaska Land Classification Commission. If a conflict should arise between the regulations of the park service and the regulations of the Commission, the Commission shall prevail.

(b) The Lake Clark Federal Cooperative Lands may be opened to all uses allowed under the public land laws except those laws which permit conveyance of the land from federal ownership. Valid existing rights shall be continued.

TITLE XXVIII CHARLEY RIVER FEDERAL COOPERATIVE LANDS

SECTION 2801 (a) The Charley River Federal Cooperative Lands, comprising 990,000 acres, is established.

(b) A map and legal description of the Charley River Federal Cooperative Lands shall be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 2802 (a) The National Park Service shall manage the Charley River Federal Cooperative Lands in accordance with the regulations of the park service and the Alaska Land Classification Commission. If a conflict should arise between the regulations of the park service and the regulations of the Commission, the Commission shall prevail.

(b) The Charley River Federal Cooperative Lands may be opened to all uses allowed under the public land laws except those laws which permit conveyance of the land from federal ownership. Valid existing rights shall be continued.

TITLE XXIX INNOKO FEDERAL COOPERATIVE LANDS

SECTION 2901 (a) The Innoko Federal Cooperative Lands, comprising 1,240,000 acres, is established.

(b) A map and legal description of the Innoko Federal Cooperative Lands shall be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 2902 (a) The Fish and Wildlife Service shall manage the Innoko Federal Cooperative Lands in accordance with the regulations of the Fish and Wildlife Service and the Alaska Land Classification Commission. If a conflict should arise between the regulations of the Fish and Wildlife Service and the regulations of the Commission, the Commission shall prevail.

(b) The Innoko Federal Cooperative Lands may be opened to all uses allowed under the public land laws except those laws which permit conveyance of the land from federal ownership. Valid existing rights shall be continued.

TITLE XXX CHANDALAR FEDERAL COOPERATIVE LANDS

SECTION 3001 (a) The Chandalar Federal Cooperative Lands, comprising 8,270,000 acres, is established.

(b) A map and legal description of the Chandalar Federal Cooperative Lands shall be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 3002 (a) The Fish and Wildlife Service shall manage the Chandalar Federal Cooperative Lands in accordance with the regulations of the Fish and Wildlife Service and the Alaska Land Classification Commission. If a conflict should arise between the regulations of the Fish and Wildlife Service and the regulations of the Commission, the Commission shall prevail.

(b) The Chandalar Federal Cooperative Lands may be opened to all uses allowed under the public land laws except those laws which permit conveyance of the land from federal ownership. Valid existing rights shall be continued.

TITLE XXXI SHISHMAREF-IMURUK FEDERAL COOPERATIVE LANDS

SECTION 3101 (a) The Shishmaref-Imuruk Federal Cooperative Lands, comprising 1,840,000 acres, is established.

(b) A map and legal description of the Shishmaref-Imuruk Federal Cooperative Lands shall be published in the Federal

Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 3102 (a) The Fish and Wildlife Service shall manage the Shishmaref-Imuruk Federal Cooperative Lands in accordance with the regulations of the Fish and Wildlife Service and the Alaska Land Classification Commission. If a conflict should arise between the regulations of the Fish and Wildlife Service and the regulations of the Commission, the Commission shall prevail.

(b) The Shishmaref-Imuruk Federal Cooperative Lands may be opened to all uses allowed under the public land laws except those laws which permit conveyance of the land from federal ownership. Valid existing rights shall be continued.

TITLE XXXII CAPE NEWENHAM FEDERAL COOPERATIVE LANDS

SECTION 3201 (a) The Cape Newenham Federal Cooperative Lands, comprising 240,000 acres, is established.

(b) A map and legal description of the Cape Newenham Federal Cooperative Lands in accordance with the regulations of the Fish and Wildlife Service and the Alaska Land Classification Commission. If a conflict should arise between the regulations of the Fish and Wildlife Service and the regulations of the Commission, the Commission shall prevail.

SECTION 3202 (a) The Fish and Wildlife Service shall manage the Cape Newenham Federal Cooperative Lands in accordance with the regulations of the Fish and Wildlife Service and the Alaska Land Classification Commission. If a conflict should arise between the regulations of the Fish and Wildlife Service and the regulations of the Commission, the Commission shall prevail.

(b) The Cape Newenham Federal Cooperative Lands may be opened to all uses allowed under the public land laws except those laws which permit conveyance of the land from federal ownership. Valid existing rights shall be continued.

TITLE XXXIII NOATAK FEDERAL COOPERATIVE LANDS

SECTION 3301 (a) The Noatak Federal Cooperative Lands, comprising 11,470,000 acres, is established.

(b) A map and legal description of the Noatak Federal Cooperative Lands shall be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 3302 (a) The Fish and Wildlife Service shall manage the Noatak Federal Cooperative Lands in accordance with the regulations of the Fish and Wildlife Service and the Alaska Land Classification Commission. If a conflict should arise between the regulations of the Fish and Wildlife Service and the regulations of the Commission, the Commission shall prevail.

(b) The Noatak Federal Cooperative Lands may be opened to all uses allowed under the public land laws except those laws which permit conveyance of the land from federal ownership. Valid existing rights shall be continued.

TITLE XXXIV YUKON DELTA FEDERAL COOPERATIVE LANDS

SECTION 3401 (a) The Yukon Delta Federal Cooperative Lands, comprising 1,500,000 acres, is established.

(b) A map and legal description of the Yukon Delta Federal Cooperative Lands shall be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 3402 (a) The Fish and Wildlife Service shall manage the Yukon Delta Federal Cooperative Lands in accordance with the regulations of the Fish and Wildlife Service and the Alaska Land Classification Commission. If a conflict should arise between the regulations of the Fish and Wildlife Service and the regulations of the Commission, the Commission shall prevail.

(b) The Yukon Delta Federal Cooperative Lands may be opened to all uses allowed under the public land laws except those laws which permit conveyance of the land from federal ownership. Valid existing rights shall be continued.

TITLE XXXV ANDREAFSKY FEDERAL COOPERATIVE LANDS

SECTION 3501 (a) The Andreafsky Federal Cooperative Lands, comprising 3,500,000 acres, is established.

(b) A map and legal description of the Andreafsky Federal Cooperative Lands shall be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 3502 (a) The Fish and Wildlife Service shall manage the Andreafsky Federal Cooperative Lands in accordance with the regulations of the Fish and Wildlife Service and the Alaska Land Classification Commission. If a conflict should arise between the regulations of the Fish and Wildlife Service and the regulations of the Commission, the Commission shall prevail.

(b) The Andreafsky Federal Cooperative Lands may be opened to all uses allowed under the public land laws except those laws which permit conveyance of the land from federal ownership. Valid existing rights shall be continued.

TITLE XXXVI ILIAMNA FEDERAL COOPERATIVE LANDS

SECTION 3601 (a) The Iliamna Federal Cooperative Lands, comprising 2,800,000 acres, is established.

(b) A map and legal description of the Iliamna Federal Cooperative Lands shall be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 3602 (a) The Fish and Wildlife Service shall manage the Iliamna Federal Cooperative Lands in accordance with the regulations of the Fish and Wildlife Service and the Alaska Land Classificaiton Commission. If a conflict should arise between the regulations of the Fish and Wildlife Service and the regulations of the Commission, the Commission shall prevail.

(b) The Iliamna Federal Cooperative Lands may be opened to all uses allowed under the public land laws except those laws which permit conveyance of the land from federal ownership. Valid existing rights shall be continued.

TITLE XXXVII CHUGACH FEDERAL COOPERATIVE LANDS

SECTION 3701 (a) The Chugach Federal Cooperative Lands, comprising 1,770,000 acres, is established.

(b) A map and legal description of the Chugach Federal Cooperative Lands shall be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 3702 (a) The National Forest Service shall manage the Chugach Federal Cooperative Lands in accordance with the regulations of the Forest Service and the Alaska Land Classification Commission. If a conflict should arise between the regulations of the Forest Service and the regulations of the Commission, the Commission shall prevail.

(b) The Chugach Federal Cooperative Lands may be opened to all uses allowed under the public land laws except those laws which permit conveyance of the land from federal ownership. Valid existing rights shall be continued.

TITLE XXXVIII PORCUPINE FEDERAL COOPERATIVE LANDS

SECTION 3801 (a) The Porcupine Federal Cooperative Lands, comprising 3,400,000 acres, is established.

(b) A map and legal description of the Porcupine Federal Cooperative Lands shall be published in the Federal Register and filed with th appropriate congressional committees as soon as practicabie.

SECTION 3802 (a) The National Forest Service shall manage the Porcupine Federal Cooperative Lands in accordance with the regulations of the Forest Service and the Alaska Land Classification Commission. If a conflict should arise between the regulations of the Forest Service and the regulations of the Commission, the Commission shall prevail.

(b) The Porcupine Federal Cooperative Lands may be opened to all uses allowed under the public land laws except those laws which permit conveyance of the land from federal ownership. Valid existing rights shall be continued.

TITLE XXXIX YUKON RIVER FEDERAL COOPERATIVE LANDS

SECTION 3901 (a) The Yukon River Federal Cooperative Lands, comprising 540,000 acres, is established.

(b) A map and legal description of the Yukon River Federal Cooperative Lands shall be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

SECTION 3902 (a) The National Forest Service shall manage the Yukon River Federal Cooperative Lands in accordance with the regulations of the Forest Service and the Alaska Land Classification Commission. If a conflict should arise between the regulations of the Forest Service and the regulations of the Commission, the Commission shall prevail.

(b) The Yukon River Federal Cooperative Lands may be opened to all uses under the public land laws except those laws which permit conveyance of the land from federal ownership. Valid existing rights shall be continued.

TITLE XXXX ALASKA COOPERATIVE LANDS

SECTION 4001 (a) In compliance with procedures established by Alaska State Law, state land may be committed for inclusion in a system of Alaska Cooperative Lands. The State of Alaska and the Secretary of the Interior shall determine the location and boundaries of the Alaska Cooperative Lands by mutual agreement. The Secretary of the Interior must find that a sub-

stantial proportion of state land is committed to the Alaska Cooperative Lands before the system becomes operational. The Alaska Cooperative Lands will be classified and managed by the Alaska Land Classification Commission. The State may exchange land at a later time for land initially included in the system, following consultation with the Commission and concurrence of the Secretary of the Interior.

(b) A map and legal description of those lands dedicated as Alaska Cooperative Lands shall be published in the Federal Register and filed with the appropriate congressional committees as soon as practicable.

TITLE XXXXI PRIVATE COOPERATIVE LAND

SECTION 4101 (a) Private landowners in the State of Alaska may dedicate their land as private cooperative lands for a period of ten years if the Alaska Land Classification Commission approves. Private cooperative lands shall be classified by the Commission and managed by the landowner.

(b) If the State of Alaska agrees, private cooperative lands may be exempted from state and local real property taxation as long as the land is not developed or leased to a third party.

(c) Private cooperative lands shall be open to all uses except those which are not permitted by the Commission. The landowner may remove his land from the private cooperative lands at any time, but if the landowner should remove his land prior to the expiration of a ten year period, the landowner shall be liable for accrued property taxes plus the interest due for delinquent taxes on the land.

TITLE XXXXII ALASKA LAND CLASSIFICATION COMMISSION

SECTION 4201 (a) When the Secretary of the Interior determines that the State of Alaska has dedicated a substantial proportion of its land to the Alaska Cooperative Lands, the Alaska Land Classification Commission shall be established. The Commission shall consist of eight members, one of which must be an Alaskan Native appointed by the President, with four members appointed by the Governor and four members appointed by the President. Co-chairmen shall be designated by the President and Governor respectively.

(b) The members of the Commission serve at the pleasure of the appointing authority. A vacancy in the membership shall be filled in the same manner as the original appointment.

(c) The Federal Co-chairman shall be compensated at a rate not to exceed that for a GS-18. The other federal appointees shall be compensated at a rate not to exceed that of GS-16. The state appointees shall be compensated as provided for in state law.

(d) Five members of the Commission constitute a quorum.

(e) The Secretary of the Interior, the Secretary of Agriculture, or the Governor of Alaska may veto a decision of the Commission which affects land under their respective jurisdiction.

(f) The two co-chairmen when acting jointly may hire and dismiss employees of the Commission and procure office space, supplies, and equipment.

(g) The Commission is authorized to use the services, equipment, and personnel of federal and other agencies.

(h) The Commission may accept donations and grants and utilize them to support its work.

(i) The Commission shall keep accounts and records.

(j) The federal government shall pay 50 percent of the expenses of the Commission.

(k) The principal office of the Commission shall be in Alaska.

(l) All Commission meetings shall be public.

(m) The Alaska Land Classification Commission shall:

1) inventory the land under its jurisdiction,

2) develop land use plans,

3) classify land pursuant to the land use plans,

4) assist in the development of land use plans for Native corporations,

5) review existing state and federal land withdrawals,

6) recommend changes in state or federal land law, policies, and programs,

7) make recommendations for orderly economic growth, and

8) suggest means of improving coordination of state and federal land use decisions.

(n) The Joint Federal-State Land Use Planning Commission for Alaska shall dissolve four months after the Alaska Land Classification Commission is established.

(o) If the State of Alaska fails to designate a significant proportion of state land as Alaska Cooperative Lands, those lands designated as federal cooperative lands shall be subject to the full jurisdiction of those agencies designated to manage them, as stated in Titles XXIII through XXIX of this Act.

TITLE XXXXIII MANAGEMENT AND ADMINISTRATION

SECTION 4301 The Alaska Land Classification Commission shall take action as necessary to guarantee access across the lands affected by this Act.

SECTION 4302 Mineral exploration and development shall continue on national interest lands classified for this purpose. Locatable minerals shall be developed under a location-lease system which is yet to be proposed.

SECTION 4303 (a) Minor revision in the boundaries of the national interest lands may be made following a publication of a notice in the Federal Register and notification of the appropriate congressional committees.

(b) The Secretary of the Interior, Secretary of Agriculture, and the Commission are prohibited from administratively enlarging or establishing units of the Park System, Refuge System, Forest System, or Wild and Scenic Rivers System in Alaska.

SECTION 4304 Fish and wildlife management on national interest lands shall be the responsibility of the State of Alaska. Subsistence harvests of fish and game shall take priority over other consumptive uses if a conflict should arise over resource allocation.

SECTION 4305 Long term leases may be granted for agricultural development on national interest lands where permitted by the Commission.

SECTION 4306 The appropriate federal land management agencies shall conduct a wilderness review of the national interest lands within five years. The Commission is authorized to conduct the wilderness review of federal cooperative lands.

SECTION 4307 Federal revenues derived from the lands affected by this Act as well as 50 percent of the state's share of revenues from those lands shall be placed in a fund to be used to purchase privately owned land in the "Lower 48" states for park, refuge, and wild and scenic rivers purposes.

SECTION 4308 State land selections are not to be adversely affected by the designation of national interest lands. For a period of at least 21 months following the passage of this Act the

state shall be eligible to make land selections from all federal land in Alaska except those lands dedicated to a particular use. Most of the land made available to the state shall be d-1 lands and relinquished Native selections.

SECTION 4309 Native land selections are not to be adversely affected by national interest land designations. Those Native land selections which lie within a designated national interest land but which are relinquished shall be incorporated into the national interest lands.

SECTION 4310 The Secretary of the Interior, Secretary of Agriculture, and the Commission are authorized to formulate cooperative management agreements among themselves and with any government unit (state, local, or international) or private individual.

SECTION 4311 The federal agencies managing the national interest lands may acquire land within their boundaries; however, state, local government or private lands cannot be acquired without the consent of the appropriate owner. The exchange of lands of equal value may be used to acquire land within the national interest lands. In certain instances the Congress may veto land exchanges.

TITLE XXXXIV MISCELLANEOUS

SECTION 4401 The Secretary of the Interior, Secretary of Agriculture, and the Alaska Land Classification Commission are authorized to issue regulations.

SECTION 4402 This Act shall supercede all conflicting provisions of federal law.

SECTION 4403 The invalidity of any provision of this Act shall not affect the remaining provisions.

SECTION 4404 Funds such as are necessary to carry out the provisions of this Act are authorized.

TITLE XXXXV LOCATION-LEASE SYSTEM FOR HARDROCK MINERAL EXPLORATION AND DEVELOPMENT

(The provisions of this title had not been made available as of 26 August 1977.)

TESTIMONY TO JOINT RESOURCES COMMITTEES
ALASKA STATE LEGISLATURE
March 9, 1977

Presented by
Walter B. Parker
State Co-Chairman

Joint Federal-State
Land Use Planning Commission
For Alaska

The Federal-State Land Use Planning Commission for Alaska is the only governmental entity of its particular type in the United States. The Commission was created by the Congress and the Alaska Legislature to serve as a coordinating mechanism and public forum for working out the implementation of the provisions of the Alaska Native Claims Settlement Act. The Commission was given specific roles in the review of easements and in providing technical planning assistance to regional and village corporations. It was also directed to provide recommendations to the Secretary of the Interior on national interest lands and to the Governor and the Alaska Legislature on State land selections.

Since these early directions, the Commission has received further requests from the Congress to provide an analysis of the many bills submitted on national interest (d)(2) lands and also to provide its own proposals for these lands. Additional problems which must be solved and which are underway involve systems and institutional mechanisms for insuring access to Alaska's energy and other mineral resources. We are also developing recommendations for cooperative institutions in wildlife management, data gathering, and information transfer systems. The Commission has strongly felt that only through strong cooperative management mechanisms can the future welfare of this State be assured.

In the controversy over the allocation of the great public land domain in Alaska--many have said that we must create the maximum possible number of National Parks, Wildlife Refuges, and other Federally designated units that provide the highest possible level of protection to the public lands--others have said that we must not inhibit the future growth and development of Alaska by too early a designation of restrictive land policies.

Management designations of national interest lands in Alaska are not simple choices between placing maximum acreages in protective categories or placing maximum acreages in categories open to all types of resource extraction and development. Instead, these management designations require the positioning of these lands in relation to all of Alaska and in relation to the use and ownership designations already made possible by Congress in providing selection rights to Alaska Natives and the State of Alaska. Throughout its deliberations, the Commission has carefully considered the national interest lands in this manner and kept four major objectives in mind:

to provide the highest possible level of enduring protection to the last significant wildlife populations of the United States---

to significantly increase national guarantees of wilderness oriented recreation and experience---

to provide a higher overall level of protection for certain lands that will either allow their later designation as wilderness or permit resource development to be undertaken with the highest possible level of protection for other values---

to establish land use planning and other management institutions which will better coordinate the needs of the citizens of the State and the national interests in Alaska.

The Commission has developed its position to meet these goals while allowing the necessary flexibility for Alaska's resident population to work out their future and inhibiting as little as possible Alaska's role as a source of resources to meet the Nation's present and future needs. When the Commission has discerned conflicting values in its assessments it has aimed toward solutions that would further the major goals stated above.

As the Commission was developing its proposals for Alaska's national interest (d)(2) lands, three key questions emerged which needed to be answered in the consideration of these lands:

1. Are wildlife, recreational, and scenic values of national importance adequately protected?

2. Are national energy objectives or needs for strategic minerals significantly inhibited?

3. Are conflicts with other values and uses with adjoining lands minimized?

In answering these questions it became clear that for much of the (d)(2) lands, none of the existing systems were fully adequate as a method of management. In Alaska, the nation was facing conditions and circumstances which were very different from those for which the existing systems had been designed. In summary, these circumstances are as follows:

1. The relative absence of existing land use patterns and trends in Alaska and the limited knowledge of the subsurface resources of the land which, together, make it premature to determine primary values or to choose between primary or multiple use systems for much of the (d)(2) lands at this time.

2. The unique national value of Alaska's scenic expanses. Alaska is the only part of the nation where large natural areas still exist.

3. State ownership in regions where unified natural systems extend across lands held by both Federal and State governments. In Alaska, State ownership is on a par with Federal ownership, not in terms of gross acreage, but in terms of State holdings of key lowlands, transportation corridors, and wildlife habitat that are vitally related to Federal lands.

In recognition of these unique circumstances, the Commission eventually adopted an approach which would assign lands to existing systems only when they had a clear and undisputable value for those systems. Other lands which also had high national value, but which combined scenic and wildlife values with other features such as subsistence useage and mineral potential, were assigned to a new management system, the Alaska National Lands. Thus, the Commission's proposal allocates 43 million acres to National Park, Wildlife Refuge, and Forest Systems, and 47 million acres to a new system, the Alaska National Lands.

In short, the Commission's recommendation, like that of the Governor's, places special emphasis on the creation of a lasting land management institution that will fit the special circumstances of Alaska. Such an institutional structure must be designed to:

1. Allow for a process of decision making over time so that land use choices can be made when new events and information make it timely and appropriate to render a decision.

2. Incorporate this decision making process within a planning entity with a high enough public profile to insure that land use decisions are responsive to changed circumstances, without sacrificing responsibility to the national interest.

3. Provide the high level of environmental protection that is warranted by the unique national value that is found in Alaska's great expanse of natural land.

4. Maintain sufficient flexibility so that environmental protection measures serve to guide rather than to totally preclude resource development in the national interest.

5. Provide for coordinated State and Federal land planning with an option for voluntary participation by private corporate owners of related lands.

Applying the above criteria resulted in the Commission developing a proposal which designates major additions to the National Park System in Alaska with emphasis on the creation of two great new parks in the Wrangell Mountains and the Brooks Range (Gates of the Arctic), plus additions to the large existing park units at Mount McKinley and Katami, and four smaller new units. The proposal recommends 13 new units and additions to five existing units to the Wildlife Refuge System with the aim of providing an enduring base for protection of Alaska's wildlife values and protection of those migratory waterfowl species which summer

in Alaska and other migratory species such as marine mammals. Seven additions are recommended for the National Forest System and five rivers are recommended for designation as part of the Wild and Scenic Rivers System. (See Appendix A for details.)

After designating key core areas for inclusion in the traditional Federal management systems, the Commission was faced with the problem of designation of several areas of outstanding scenic, wildlife, and other natural values which did not readily fit within the traditional systems. The Commission was also faced with the problem of establishing a coordinative mechanism to relate Federal, State, and Native land and resource management systems for the next several years as the provisions of the Alaska Native Claims Settlement Act are implemented. This led the Commission to the development of its so-called "fifth system" or Alaska National Lands. The title was chosen to clearly show that these are lands of national interest in Alaska and that it is a proposed management system unique to Alaska. Twelve very large units of Alaska National Lands throughout the State are proposed by the Commission. (See Appendix A for details.)

The Alaska National Lands System would represent a new approach to Federal land management. Instead of building determinations about primary values, or choices between primary use or multiple use into the system itself, as has been done with the existing Federal land management systems, Congress, in adopting the Commission's proposal would be establishing an institution equipped to handle such decisions as they become appropriate and timely in the future. This approach, substituting a continuing planning institution for absolute determinations on public lands at this time, is based on a recognition that our foresight in Alaska is limited, and that circumstances affecting the areas proposed for Alaska National Lands can change radically in the future.

One of the major problems with which the Commission had to wrestle was recognizing traditional hunting and fishing and other subsistence uses of Alaska's lands by Alaskan residents. These uses are the only permitted uses on Alaska National Lands prior to classification. Regulation of taking of fish and wildlife would be governed by the regulations of the State of Alaska, but, since these lands are recommended for retention in Federal ownership, the full strength and ability of Federal wildlife management can be brought to bear as well as that of the State, thus insuring as much as possible, maximum protection for such wildlife while allowing its continued utilization insofar as populations permit.

The Commission was also faced with the problem that much of the value of the subsurface estate in Alaska was unknown. The Alaska National Lands concept allows exploration of the lands to determine whether resources of significant national value are present but requires such exploration to be conducted under the highest possible environmental stipulations. Thus, if a potential resource of great value is located, the national options are still present for a choice for wilderness, recreation, or resource exploitation.

The Alaska National Lands are not intended as multiple use lands in the traditional sense. Otherwise, the Commission would have recommended designation in one of the multiple use systems already provided by the Congress. Neither are Alaska National Lands intended as a holding pattern for future designation in a traditional system. They are seen by the Commission as a new Federal system unique to Alaska. They are a system which allows a high degree of flexibility but which requires choices between wilderness and resource development to be made in a measured way under the oversight of a Federal-State commission. Congress could always, at some future date, change designation of Alaska National Lands to a traditional system, either preservation or multiple use oriented, but it is the intent of the Commission that these lands remain as Alaska National Lands and it is the Commission's position that they can best be managed under this concept for the foreseeable future. In consideration of Alaska National Lands, it must always be remembered that they were chosen for their scenic, recreational, and wildlife values, not for their subsurface values.

A keystone of the Alaska National Lands System would be a continuing joint Federal-State entity. This body would have responsibility for oversight of the Alaska National Lands with authority to plan and classify under Congressional guidelines when such actions become timely. Day-to-day management would be assigned to an existing land management agency. As a high profile body operating under Congressional guidelines, the entity would be structured to combine responsiveness to changed circumstances with a paramount responsibility for protecting national environmental values. Such a combination has been asked for by many of the parties and groups concerned with the (d)(2) lands.

The structure of the Federal-State entity which might classify and provide policy guidance over Alaska National Lands has not been formally agreed upon by the full present Commission. One point that I wish to emphasize at this time, is that an ongoing Federal-State entity would have a larger role than simply classifying and providing policy guidance over Alaska National Lands. Its principal role would be to serve as a focus for cooperative management systems which would affect all Alaska lands, Federal, State, and private.

The size of the Commission should be such that the major representatives on both sides, Federal and State, would be adequately represented.

The question of leadership of such a commission is probably the most difficult one to resolve. A single chairman such as proposed in House Bill 211 would undoubtedly provide the strongest type of leadership to the staff and be in a position to place firm policy recommendations for the full commission. He would have to relate to both Federal and State governments equally. Whether such single leadership, in contrast to the present system of Co-Chairmen from each government, would be acceptable to the two sovereign governments concerned is something that will need a good deal of further discussion with the Governor and the Secretary of

the Interior and other Federal leaders. Another option which exists is that leadership of staff be taken care of by an executive director who reports to the entire commission. In that way, a Federal co-chairman representing the President and a State co-chairman representing the Governor could be part-time positions, as are the other commissioners and would not be involved in day-to-day staff decisions. This alternative would not envision the executive director as a voting member of the commission.

The present Commission is involved in developing an Alaska resource information system which it sees as the data gathering arm of any future Federal-State entity. I wish to emphasize that the Alaska resource information system is needed for its own sake and could operate independently of any future Federal-State entity. It is viewed as the cornerstone of any cooperative future ventures. Its primary purpose is to insure that all non-proprietorial data is available to everyone with a need for land management data as easily as possible. That major data systems at both the national and State levels are able to interchange information quickly and easily and are operating from relatively common data bases. More than any other factor, this will make true cooperative management a reality.

Another system which we have just begun to explore is the formation of an Alaska science council which will serve as a scientific advisior to the Governor and a future Federal-State entity plus providing a strong local arm of the National Academy of Science and the National Science Foundation. This body would serve as a forum for providing scientific policy input to the commission and also for developing scientific policy for Alaska and the Arctic on its own. This body also can exist independently of any ongoing Federal-State entity but we do see it as an integral part of any future improved system or coordinated land and resource management in Alaska.

The Commission strongly feels that any future ongoing Federal-State entity is the most rational way to reconcile the State and national interests over the short, middle, and long-term futures in Alaska. We will continue to have a continuing series of problems on resource development that will affect land management long into the future, long after we have settled the boundaries of the major land managers and landowners. Such an entity will have the capacity to influence major Federal policy in a way that the State government operating by itself will not have because it will have strong Federal representation involved in the formulation of that policy. The Federal government, likewise, will benefit by having a forum to which its disputes with the State policy can be resolved.

A Federal/State Transportation Planning Organization has already been formed to aid the Commission in resolving the corridor and other transportation problems connected with Alaska's development. This group can operate separately as a coordinator of Federal/State transportation

problems or in conjunction with the Commission as necessary. It represents a long step forward in formalizing cooperative Federal/State relationships. Its basic structure is to bring together the leaders of the major Federal and State transportation agencies at the policy level with their respective planning officers operating as an intergovernmental intermodal planning group. When necessary to coordinate transportation efforts with land use planning, the policy group is expanded to include representatives of the Federal and State land management agencies plus the two Co-Chairmen of the present Land Use Planning Commission.

The Commission is also beginning to put together recommendations on how a more formalized overall cooperative effort between fish and wildlife managers and land managers might be structured. This would provide an umbrella under which many of the cooperative agreements now being developed between both Federal and State agencies and private landowners might be brought together into more comprehensive agreements on a regional basis. The Commission's position on fish and game management has long been that regulation of seasons, bag limits, and means of taking must remain with the State of Alaska and regulations must be promulgated under existing State statutes on all lands. Habitat management and its coordination between the various land managers is an area that is less clear and one that we will give a great deal of attention to in the immediate future with recommendations to both governments forthcoming as soon as a consensus can be reached.

Thus, if an ongoing Federal/State entity succeeds the Commission, there would be in place, structures for insuring a high level of cooperation in resource and land information, transportation planning, fish and wildlife management, and coordination of scientific research.

Twenty years ago, all of Alaska was owned by the Federal government with transfers from that ownership in small parcels to homesteaders, mining claimants, and other applicants under the public land laws. Aborginal claims had not been addressed.

Today, the State's land entitlement has been established in the Alaska Statehood Act. Native Claims have been settled in the Alaska Native Claims Settlement Act. Alaska can now have a land use and management pattern where: key natural areas are placed in one of the conservation systems; private lands for occupation and settlement are in areas best suited for those uses; and resource lands are either in State, Native, or other private ownership; or, if on Federal lands, in a system of management which allows development coupled with environmental control.

When the issues of subsistence, mining location, and transportation or access are addressed, with new institutions for assuring continued Federal-State coordination and cooperation, Congress will have established in Alaska in two decades, a pattern of land ownership, use, and management which will best serve the long-term interests of the Nation and Alaska.

The Commission has developed its proposal for a new fifth system of Alaska National Lands as a keystone of the new ownership and management pattern. It is intended to meet national interests but maintains some real flexibility for State interests. It is a new concept--one that the Commission will strongly promote and continue to refine unless a better alternative is offered for a strong Federal-State cooperative management system.

NORTHEASTERN ALASKA

Yukon Flats Withdrawal and Adjoining Uplands to the North

THE COMMISSION RECOMMENDS TWO LARGE AREAS TOTALLING APPROXIMATELY 2.3 MILLION ACRES AS A NATIONAL WILDLIFE REFUGE TO PROTECT HIGH DENSITY WETLAND WATERFOWL HABITATS AND SOME ADJOINING UPLAND HABITAT AND WILDLIFE VALUES.

SOME 5.5 MILLION ACRES OF SCENIC UPLANDS, UPLAND WILDLIFE, HABITAT, AND MEDIUM DENSITY LOWLAND WATERFOWL HABITAT ARE RECOMMENDED FOR INCORPORATION IN THE PROPOSED ALASKA NATIONAL LANDS SYSTEM TO BE MANAGED BY THE U.S. FOREST SERVICE.

TWO OF THE FREE-FLOWING STREAMS, THE PORCUPINE AND SHEENJEK, HAVE BEEN STUDIED AS POSSIBLE WILD OR SCENIC RIVERS AND ARE RECOMMENDED FOR POTENTIAL DESIGNATION PENDING EVALUATION DURING CLASSIFICATION OF THE NEW MANAGEMENT UNIT. THE RAMPART SECTION OF THE YUKON RIVER, DOWNSTREAM FROM THE YUKON FLATS, IS ALSO RECOMMENDED FOR POTENTIAL SCENIC RIVER DESIGNATION PENDING CLARIFICATION OF LAND STATUS IN THE AREA AND FURTHER STUDY AND CLASSIFICATION OF SURROUNDING LAND OR USES OF THE RIVER.

Upper Yukon River and Adjoining Uplands to the South and West

HAVING DETERMINED THAT THESE VALUES ARE OF NATIONAL INTEREST, THE COMMISSION RECOMMENDS THAT A RIVER CORRIDOR OF APPROXIMATELY 540,000 ACRES, ABOUT 100 RIVER MILES LONG AND AN AVERAGE OF 9 MILES WIDE, BE SET ASIDE AS A UNIT OF THE NATIONAL PARK SYSTEM. HUNTING, FISHING, AND TRAPPING, WHICH PRESENTLY OCCUR, ARE RECOMMENDED TO CONTINUE IN THE PROPOSED RIVER PARKLAND IN ACCORDANCE WITH STATE REGULATIONS AND IN COORDINATION WITH FEDERAL INTERESTS.

THE COMMISSION ALSO RECOMMENDS A 6.1-MILLION-ACRE ALASKA NATIONAL LANDS UNIT IN THE YUKON-TANANA UPLANDS TO BE MANAGED BY THE BUREAU OF LAND MANAGEMENT.

THREE OF THE FREE-FLOWING STREAMS, BIRCH AND BEAVER CREEKS AND THE CHARLEY RIVER, HAVE BEEN STUDIED AS POSSIBLE WILD RIVERS, AND ARE RECOMMENDED FOR POTENTIAL DESIGNATION PENDING CLASSIFICATION OF THE ALASKA NATIONAL LAND UNIT. THE CHARLEY RIVER DRAINAGE IS PROPOSED AS A PRIORITY WILDERNESS STUDY AREA TO INSURE THAT ITS NATURAL FEATURES ARE NOT ALTERED PENDING A DECISION ON POSSIBLE WILDERNESS DESIGNATION.

Areas Adjoining the Arctic National Wildlife Range

THOSE LANDS, TOTALLING 1.9 MILLION ACRES, DIRECTLY RELATED HYDROLOGICALLY AND ECOLOGICALLY TO THE EXISTING RANGE, ARE RECOMMENDED AS RANGE ADDITIONS. THOSE LANDS FARTHER WEST, TOTALLING 5.6 MILLION ACRES, AROUND THE CHANDALAR RIVER WITH SIMILAR VALUES, BUT LESS DIRECTLY RELATED TO THE RANGE, ARE

RECOMMENDED FOR INCORPORATION AS A UNIT OF THE ALASKA NATIONAL LANDS SYSTEM. THE U.S. FISH AND WILDLIFE SERVICE IS RECOMMENDED AS THE MANAGER OF THIS RESERVE.

FOUR OF THE FREE-FLOWING STREAMS, THE CANNING-MARSH FORK, IVISHAK, WIND, AND SHEENJEK, HAVE BEEN STUDIED AS POSSIBLE WILD AND SCENIC RIVERS AND ARE RECOMMENDED FOR POTENTIAL DESIGNATION PENDING EVALUATION IN THE WILDLIFE RANGE AND CLASSIFICATION OF THE LANDS IN THE PROPOSED NEW MANAGEMENT UNIT.

NORTHWESTERN ALASKA

Central Brooks Range

TO PROVIDE PROTECTION OF THE NATURAL VALUES OF NATIONAL INTEREST IN THE CENTRAL BROOKS RANGE, THE COMMISSION RECOMMENDS:

1. TWO LARGE AREAS WITHIN THE RANGE BE DESIGNATED UNITS OF THE NATIONAL PARK SYSTEM (5.2 MILLION ACRES);

2. TWO RIVERS WITHIN THE PROPOSED PARK UNITS, THE ALATNA RIVER AND THE NORTH FORK OF THE KOYUKUK-TINAYGUK, BE DESIGNATED WILD RIVERS:

3. LANDS BETWEEN THE TWO PROPOSED PARK UNITS NOT CONVEYED TO THE ARCTIC SLOPE NATIVE CORPORATIONS BE INCORPORATED WITHIN THE ALASKA NATIONAL LANDS SYSTEM (2.0 MILLION ACRES); BECAUSE OF THE VALUES RELATED TO THE PROPOSED ADJACENT PARK UNITS, THE NATIONAL PARK SERVICE IS RECOMMENDED AS THE MANAGER OF THIS UNIT; AND

4. FIVE RIVERS--KILLIK, NOATAK, ANAKTUVUK, JOHN, AND UPPER KOBUK--FLOWING THROUGH OR FROM THE PROPOSED PARK, ALASKA NATIONAL LANDS AND ADJOINING LANDS BE DESIGNATED POTENTIAL WILD OR SCENIC RIVERS FOR FURTHER EVALUATION IN ACCORDANCE WITH CLASSIFICATION OF THE ALASKA NATIONAL LANDS UNIT AND OTHER ADJOINING LANDS.

Noatak-Kobuk

THE COMMISSION HAS FOUND THESE VALUES TO BE OF NATIONAL INTEREST AND MAKES THE FOLLOWING RECOMMENDATIONS FOR THEIR PROTECTION:

1. DESIGNATION OF THE GREAT KOBUK SAND DUNES AND THE IMMEDIATE SCENIC ENVIRONMENTS (110,000 ACRES) AS A UNIT OF THE NATIONAL PARK SYSTEM.

2. DESIGNATION OF THE CAPE KRUSENSTERN (190,000 ACRES) AS A UNIT OF THE NATIONAL PARK SYSTEM TO PROTECT ITS ARCHAEOLOGICAL VALUES, UNIQUE GEOLOGIC FEATURES, AND ITS COASTAL BIRD AND OTHER HABITATS.

3. INCORPORATION INTO THE ALASKA NATIONAL LANDS SYSTEM OF THE LOWER AND MIDDLE SECTIONS OF THE NOATAK AND KOBUK RIVER DRAINAGES, THE BAIRD MOUNTAINS, AND THE DRAINAGES OF SEVERAL SMALLER RIVERS FLOWING INTO THE CHUKCHI SEA (11.9 MILLION ACRES). BECAUSE THE AREA IS AN IMPORTANT HABITAT FOR THE ARCTIC CARIBOU HERD AND SUSTAINS A VARIETY

OF OTHER WILDLIFE, THE U.S. FISH AND WILDLIFE SERVICE IS RECOMMENDED AS THE MANAGER FOR THIS RESERVE.

4. A PORTION OF THE NOATAK RIVER DRAINAGE IS RECOMMENDED AS A WILDERNESS STUDY AREA. THREE OF THE MANY FREE-FLOWING STREAMS, THE NOATAK, SALMON, AND WULIK RIVERS, HAVE BEEN STUDIED AS POSSIBLE WILD OR SCENIC RIVERS AND ARE RECOMMENDED FOR POTENTIAL DESIGNATION PENDING CLASSIFICATION OF THE RESERVE LANDS.

Selawik

THE COMMISSION RECOMMENDS DESIGNATION OF THIS AREA (1.5 MILLION ACRES) AS A WILDLIFE REFUGE TO PROTECT HABITAT AND PERPETUATE WILDLIFE POPULATIONS.

HUNTING, FISHING, AND TRAPPING WOULD CONTINUE UNDER STATE WILDLIFE MANAGEMENT REGULATIONS IN COORDINATION WITH FEDERAL WILDLIFE AND HABITAT MANAGEMENT.

Cape Lisburne and Cape Thompson

THE COMMISSION RECOMMENDS THAT THESE VALUES OF NATIONAL INTEREST BE PROTECTED BY DESIGNATING TWO SMALL NATIONAL WILDLIFE REFUGE UNITS, ONE AT CAPE LISBURNE OF 63,000 ACRES, INCLUDING THE DRAINAGES OF ADJOINING UPLANDS, AND 11,000 COASTAL ACRES AT CAPE THOMPSON.

IN RECOGNITION OF THE IMPORTANCE OF WILDLIFE IN THESE PROPOSED UNITS FOR MEETING THE SUBSISTENCE NEEDS OF LOCAL RESIDENTS, THE COMMISSION HAS RECOMMENDED THAT CONTINUED HUNTING, FISHING, AND TRAPPING BE ALLOWED UNDER STATE REGULATIONS UNLESS RESTRICTED BY THE U.S. FISH AND WILDLIFE SERVICE TO PROTECT MIGRATORY SPECIES.

Seward Peninsula

IN RECOGNITION OF THE IMPORTANT TERRESTRIAL WETLAND AND COASTAL HABITATS FOR MIGRATORY BIRDS AND MARINE MAMMALS, THE COMMISSION RECOMMENDS WILDLIFE REFUGE DESIGNATION FOR TWO UNITS, TOTALLING 1.5 MILLION ACRES.

THE COMMISSION FINDS THAT REINDEER GRAZING IS GENERALLY COMPATIBLE WITH PROTECTION OF HABITAT VALUES, AND RECOMMENDS THAT CONTINUED GRAZING BE ALLOWED UNDER REGULATION.

Koyukuk

THE COMMISSION RECOMMENDS THAT THIS AREA (2.5 MILLION ACRES) BE DESIGNATED A WILDLIFE REFUGE TO PERPETUATE THE VALUABLE WETLAND HABITATS AND WILDLIFE.

Kanuti Flats

THE COMMISSION RECOMMENDS AN AREA OF APPROXIMATELY 430,000 ACRES AS A WILDLIFE REFUGE TO PROTECT PRIME HABITAT AND WILDLIFE.

Bering Sea Islands

THE COMMISSION RECOMMENDS THAT FAIRWAY ROCK, SLEDGE ISLAND, AND PUNUK ISLANDS BE ADDED TO THE NATIONAL WILDLIFE REFUGE SYSTEM. IN THE EVENT THAT EGG AND BESBORO ISLANDS ARE NOT CONVEYED TO ALASKA NATIVE CORPORATIONS, THEY ARE ALSO RECOMMENDED FOR REFUGE DESIGNATION.

Other Wild and Scenic Rivers

TWO RIVERS WITHIN NATIONAL PETROLEUM RESERVE-ALASKA, THE IKPIKPUK AND UTUKOK, AND THE KOYUK RIVER ON THE SEWARD PENINSULA ARE RECOMMENDED FOR DESIGNATION AS POTENTIAL WILD AND SCENIC RIVERS PENDING FURTHER STUDY, EVALUATION, AND EVENTUAL CLASSIFICATION OF SURROUNDING LANDS.

SOUTHWEST ALASKA

Yukon-Kuskokwim Delta

THE COMMISSION RECOMMENDS THAT THE HIGH DENSITY WATERFOWL HABITAT ON PUBLIC LANDS WEST AND SOUTH OF THE YUKON RIVER, WEST OF THE KUSKOKWIM RIVER, AND WEST OF 161° WEST LONGITUDE BE ADDED TO THE WILDLIFE REFUGE SYSTEM (5.7 MILLION ACRES). AN AREA OF 3.5 MILLION ACRES NORTH OF THE DELTA AROUND THE ANDREAFSKY RIVER DRAINAGE CONTAINING MEDIUM TO HIGH DENSITY WATERFOWL AND UPLAND WILDLIFE HABITAT IS RECOMMENDED FOR INCLUSION IN THE ALASKA NATIONAL LANDS SYSTEM. BECAUSE THE AREAS CONTAIN UPLANDS AND LOWLANDS CLOSELY RELATED TO THE WATERFOWL AND THE WILDLIFE HABITAT OF THE YUKON DELTA. THE U.S. FISH AND WILDLIFE SERVICE IS RECOMMENDED AS THE MANAGER OF THIS UNIT.

Innoko Flats/Kaiyuh Slough

THE COMMISSION RECOMMENDS THAT THESE AREAS, TOTALLING ABOUT 2.2 MILLION ACRES OF NATIONALLY SIGNIFICANT WILDLIFE HABITAT, BE PROTECTED BY THEIR DESIGNATION AS UNITS OF THE NATIONAL WILDLIFE REFUGE SYSTEM.

Nowitna

IN RECOGNITION OF THE VARIETY OF VALUES PRESENT IN THIS AREA, THE COMMISSION RECOMMENDS 3.5 MILLION ACRES IN THE NOWITNA DRAINAGE BE INCORPORATED IN THE ALASKA NATIONAL LANDS SYSTEM AND THAT THE NOWITNA RIVER BE DESIGNATED AS A POTENTIAL SCENIC RIVER, PENDING FURTHER EVALUATION IN THE CLASSIFICATION PROCESS OF SURROUNDING LANDS. ADMINISTRATION OF THE NOWITNA UNIT BY THE U.S. FOREST SERVICE IS RECOMMENDED.

Unalakleet River

THE COMMISSION RECOMMENDS THAT A 60-MILE-LONG CORRIDOR ABOVE PRIVATE LANDS ALONG THE COAST BE DESIGNATED AS A WILD RIVER WITHIN THE NATIONAL WILD AND SCENIC RIVERS SYSTEM.

THE COMMISSION RECOGNIZES THE IMPORTANCE OF WILDLIFE FOUND ALONG THE RIVER IN MEETING THE SUBSISTENCE NEEDS OF LOCAL RESIDENTS, AND RECOMMENDS THAT HUNTING, FISHING, AND TRAPPING BE PERMITTED UNDER STATE REGULATIONS.

ALASKA PENINSULA - BRISTOL BAY

Areas adjoining Katmai National Monument

TO EXTEND PROTECTION TO THE NATURAL VALUES OF LANDS ADJACENT AND RELATED TO THE KATMAI NATIONAL MONUMENT, THE COMMISSION PROPOSES NORTHERN AND SOUTHERN ADDITIONS TOTALLING 1.1 MILLION ACRES. FURTHER, THE COMMISSION BELIEVES THE PROPOSED EXPANDED MONUMENT WITH ITS COMPLEX OF SCENIC GEOLOGIC FEATURES, WILDLIFE HABITAT, AND OTHER NATURAL VALUES, MERITS

REDESIGNATION BY CONGRESS AS A NATIONAL PARK. THE COMMISSION ALSO RECOMMENDS THAT A GROUP OF SO TINY ISLANDS, JUTE ISLANDS, PINNACLE ROCK AND COASTAL HEADLANDS NEAR JUTE PEAK AND CAPE AKLEK IN OR NEAR PUALE BAY TOTALLING 25,875 ACRES BE INCORPORATED AS A UNIT OF THE NATIONAL WILDLIFE REFUGE SYSTEM TO PROTECT SEABIRD ROOKERIES AND SEA MAMMAL HABITAT. SOME 0.88 MILLION ACRES OF SIGNIFICANT HABITAT FOR BEAR DENNING AND CON-EN_ RATION, CARIBOU, MOOSE, AND FISH, AND SCENIC VALUES BETWEEN KATMAI NATIONAL MONUMENT AND BECHAROF LAKE, ARE RECOMMENDED FOR INCORPORATION IN THE ALASKA NATIONAL LANDS SYSTEM WITH MANAGEMENT BY THE U.S. FISH AND WILDLIFE SERVICE.

Aniakchak Caldera National Monument

TO PRESERVE AND PROTECT GEOLOGICAL AND BIOLOGICAL PHENOMENA AND SCENIC VALUES OF THIS VOLCANIC AREA, THE COMMISSION PROPOSED THAT THE CALDERA AND PORTIONS OF THE VOLCANO'S OUTER SLOPES BE DESIGNATED A UNIT OF THE NATIONAL PARK SYSTEM. THE ANIAKCHAK RIVER IS RECOMMENDED FOR DESIGNATION AS A WILD RIVER.

CONTINUATION OF HUNTING IN THE PROPOSED WILD RIVER AREA IS RECOMMENDED UNDER STATE REGULATIONS.

Area Adjoining Cape Newenham National Wildlife Refuge

THE COMMISSION RECOMMENDS THAT THIS AREA OF 240,000 ACRES BE ADDED TO THE EXISTING CAPE NEWENHAM NATIONAL WILDLIFE REFUGE TO PROTECT WILDLIFE AND HABITAT.

Pacific Coast Islands Bordering the Alaska Peninsula

THE COMMISSION RECOMMENDS THAT A NUMBER OF THESE ISLANDS (EXCLUDING SELECTIONS CONVEYED TO ALASKA NATIVES) BE PROTECTED IN THREE UNITS OF THE NATIONAL WILDLIFE REFUGE SYSTEM TOALLING ABOUT 56,000 ACRES.

Withdrawn Areas Not Included in Commission Proposals

WILD RIVER DESIGNATION IS RECOMMENDED FOR AN APPROXIMATE 46-MILE SEGMENT OF THE MAINSTREAM OF THE ALAGNAK RIVER STARTING AT KUKAKLEK LAKE, AND THE 11-MILE NONVIANUK RIVER, THE PRINCIPAL TRIBUTARY.

THE COMMISSION ALSO RECOMMENDS THAT THE COPPER RIVER AT THE HEAD OF ILIAMNA LAKE, AND THE KARLUK RIVER IN THE KODIAK NATIONAL WILDLIFE REFUGE, BE DESIGNATED POTENTIAL WILD AND SCENIC RIVERS, PENDING OUTCOME OF LAND STATUS PATTERNS AND FURTHER EVALUATION OF FEASIBILITY.

FROM THE EASTERN TOGIAK AREA, THE COMMISSION HAS IDENTIFIED THE TOGIAK RIVER AS HAVING NATURAL FEATURES OF POTENTIAL NATIONAL INTEREST, AND RECOMMENDS DESIGNATION AS A POTENTIAL ADDITION TO THE NATIONAL WILD AND SCENIC RIVERS SYSTEM PENDING FURTHER EVALUATION.

FROM THE WESTERN SECTION OF THE TOGIAK WITHDRAWAL, THE COMMISSION RECOMMENDS WILD RIVER DESIGNATION FOR THE KANEKTOK RIVER WHICH HEADS IN THE AHKLUN MOUNTAINS AND FLOWS WESTERLY INTO KUSKOKWIM BAY (SOUTHWESTERN ALASKA PRESENTATION AREA). FROM KAGATI LAKE ABOUT 59 MILES OF THE MAIN STREAM OF THIS CLEAR-WATER, FREE-FLOWING RIVER ARE PROPOSED.

TAKING OF FISH AND GAME ALONG THE RIVER FOR SUBSISTENCE PURPOSES IS RECOGNIZED AS A LOCALLY IMPORTANT USE, AND CONTINUED HUNTING, FISHING, AND TRAPPING UNDER STATE REGULATIONS ARE RECOMMENDED.

Other Potential Wild and Scenic Rivers

WITHIN THIS PART OF ALASKA, THE COMMISSION ALSO RECOMMENDS THAT THE NUYAKUK RIVER, AND A SEGMENT OF THE MULCHATNA RIVER AND ITS TRIBUTARY THE CHILIKADROTNA, BE STUDIED BY THE STATE OF ALASKA FOR POSSIBLE LEGISLATIVE DESIGNATION BY THE STATE AND INCLUSION IN THE NATIONAL WILD AND SCENIC RIVERS SYSTEM.

CENTRAL ALASKA

Wrangell-Chugach

RECOGNIZING THIS RICH DIVERSITY OF NATURAL VALUES, THE COMMISSION MAKES THE FOLLOWING RECOMMENDATIONS FOR THEIR PROTECTION. THE MAIN MOUNTAIN AND GLACIER COMPLEXES ARE PROPOSED AS A NEW UNIT OF THE NATIONAL PARK SYSTEM CONTAINING 9.7 MILLION ACRES. TWO UNITS IN THE ALASKA NATIONAL LANDS SYSTEM ARE RECOMMENDED, ONE IN THE CHITINA VALLEY (1.0 MILLION ACRES). THE NATIONAL PARK SERVICE IS THE RECOMMENDED MANAGER FOR BOTH OF THESE UNITS BECAUSE OF THE RELATIONSHIP OF THEIR SCENIC, HABITAT, TRANSPORTATION, AND RECREATIONAL VALUES TO THE PROPOSED PARK. THE COMMISSION RECOMMENDS THAT PORTIONS OF THE LOWER COPPER RIVER AND CHUGACH MOUNTAINS (1.3 MILLION ACRES) BE INCORPORATED WITHIN THE EXISTING CHUGACH NATIONAL FOREST: AND THAT PRIME WATERFOWL, MIGRATORY BIRD, AND SEA MAMMAL HABITAT NEAR THE COPPER RIVER DELTA IN THE EXISTING CHUGACH NATIONAL FOREST BE DESIGNATED A NATIONAL WILDLIFE REFUGE UNIT (350,000 ACRES). FOUR RIVERS--THE CHITINA, LOWER COPPER, BREMNER, AND NABESNA--ARE RECOMMENDED FOR DESIGNATION AS POTENTIAL WILD AND SCENIC RIVERS PENDING FURTHER STUDY AND CLASSIFICATION OF ADJOINING LANDS.

Areas Adoining Mt. McKinley National Park

IN RECOGNITION OF THESE NATURAL VALUES AND THEIR INTEGRAL RELATIONSHIP TO THOSE OF THE PARK, THE COMMISSION RECOMMENDS THE ADDITION OF A SOUTHERN UNIT TO THE PARK TO COMPLETE THE SCENIC AND GEOLOGICAL COMPLEX AND TO INCLUDE ADDITIONAL LANDS FOR VISTOR USE. A SECOND ADDITION EXTENDING THE PARK TO MORE NATURAL BOUNDARIES IN THE NORTH IS PROPOSED TO COMPLETE A WILDLIFE ECOSYSTEM OF NATIONAL IMPORTANCE. THESE TWO ADDITIONS TOTAL 2.7 MILLION ACRES.

Lake Clark

THE COMMISSION FINDS THESE NATURAL VALUES TO BE OF NATIONAL INTERST AND RECOMMENDS THAT 3.5 MILLION ACRES BE INCORPORATED WITHIN THE ALASKA NATIONAL LANDS SYSTEM. BECAUSE OF ITS RELATIVE ACCESSIBILITY TO ALASKA'S URBAN AND TOURIST CENTERS, THE COMMISSION BELIEVES RECREATION SHOULD BE RECOGNIZED AS A PRIMARY USE OF THE PROPOSED UNIT IN THAT THE NATIONAL PARK SERVICE BE DESIGNATED AS THE MANAGER. THE TLIKAKILA RIVER AND THE UPPER FEDERALLY OWNED SEGMENTS OF THE MULCHATNA AND CHILIKADROTNA RIVERS ARE RECOMMENDED BY THE COMMISSION FOR DESIGNATION AS POTENTIAL WILD AND SCENIC RIVERS, WITH FURTHER STUDY, EVALUATION, AND CLASSIFICATION OF SURROUNDING LANDS TO AID IN FINAL RECOMMENDATIONS.

ON THIS BASIS, THE COMMISSION RECOMMENDS INCLUSION OF CERTAIN OF THE PRIVATE LANDS WITHIN THE LAKE CLARK UNIT BOUNDARIES ON THE BASIS OF THEIR SIGNIFICANT NATURAL VALUES, AND ENCOURAGES CONTINUED EFFORTS TO MINIMIZE THE AMOUNT OF PRIVATE INHOLDINGS WITHIN THE PROPOSED UNIT BY LAND EXCHANGES AND OTHER APPROPRIATE MEANS.

Kenai Peninsula and Prince William Sound

Areas adjacent to the Chugach National Forest

THE COMMISSION RECOMMENDS THAT THREE AREAS OF HIGH SCENIC VALUES AND SCIENTIFIC INTEREST BE ADDED TO THE CHUGACH NATIONAL FOREST.

THE COMMISSION ALSO RECOMMENDS THE NELLIE JUAN RIVER BE DESIGNATED A POTENTIAL WILD RIVER, AND THAT FURTHER STUDY AND EVALUATION ALONG WITH CLASSIFICATION OF SURROUNDING LANDS AID IN FINAL RECOMMENDATION

Peninsulas and Islands of the Kenai Peninsula

THE COMMISSION ALSO RECOMMENDS THAT THE SOUTHERN TIPS OF AIALIK AND HARRIS PENINSULAS, AND THE CHISWELL AND PYE ISLANDS TOTALLING ABOUT 19,630 ACRES BE ADDED TO THE NATIONAL WILDLIFE REFUGE SYSTEM.

Area Adjacent to the Kenai National Moose Range

THE COMMISSION RECOMMENDS THAT THIS AREA OF 40,000 ACRES BE ADDED TO THE EXISTING KENAI NATIONAL MOOSE RANGE TO ENCLOSE THE ENTIRE WATER-SHED, AND RELATED SCENIC, WILDLIFE, AND WILDERNESS VALUES WITH A BETTER NATURAL BOUNDARY.

Fortymile River Complex

THE COMMISSION RECOMMENDS THAT CERTAIN FORKS AND SEGMENTS OF THE FORTYMILE RIVER SYSTEM BE DESIGNATED "WILD," "SCENIC," OR "RECREATIONAL" RIVERS UNDER THE NATIONAAL WILD AND SCENIC RIVERS ACT. THE PROPOSAL INCLUDES A 4-MILE-WIDE CORRIDOR CONTAINING ABOUT 375 MILES OF RIVER AND 320,000 ACRES OF THE IMMEDIATE ENVIRONMENT. RECOMMENDED DESIGNATIONS INCLUDE 265 RIVER MILES AS "SCENIC," 161 MILES AS "WILD," AND 9 MILES AS "RECREATIONAL."

Other Wild and Scenic River Potential

THE COMMISSION RECOMMENDS THAT THE KENAI-RUSSIAN, DELTA, AND GULKANA RIVERS BE DESIGNATED POTENTIAL WILD AND SCENIC RIVERS WITH FURTHER STUDY AND EVALUATION AND CLASSIFICATION OF SURROUNDING LANDS TO AID IN FINAL RECOMMENDATIONS.

ALSO THE COMMISSION RECOMMENDS THAT THE STATE OF ALASKA STUDY KROTO CREEK (DESHKA) AND THE CHENA, CHATANIKA, TALACHULITNA, AND TAZLINA RIVERS FOR FEASIBILITY, POSSIBLE STATE LEGISLATIVE DESIGNATION, AND INCLUSION IN THE NATIONAL WILD AND SCENIC RIVERS SYSTEM.

SOUTHEASTERN ALASKA

Areas Adjoining Tongass National Forest

RECOGNIZING THE NATURAL VALUES OF THIS AREA, AS WELL AS THE MINERAL POTENTIAL, THE COMMISSION MAKES THE FOLLOWING RECOMMENDATIONS.

1. THE IMMEDIATE NORTHWESTERN SLOPES AND VALLEYS OF MT. FAIRWEATHER, (30,000 ACRES), BE ADDED TO THE GLACIER BAY NATIONAL MONUMENT. THIS PROPOSED ADDITION WOULD INCORPORATE THE REMAINING PORTION OF THIS SCENIC MOUNTAIN AND ITS IMMEDIATE VALLEY ENVIRONS, WITHIN U.S. OWNERSHIP IN THE MONUMENT.

2. ADD THE REMAINING PART OF THE ALSEK RIVER UNIT (1 MILLION ACRES) TO THE TONGASS NATIONAL FOREST.

FROM THE MANY POTENTIALLY SUITABLE RIVERS IN SOUTHEAST ALASKA, THE COMMISSION HAS IDENTIFIED FOUR AT THIS TIME WHICH IT RECOMMENDS FOR DESIGNATION AS POTENTIAL WILD AND SCENIC RIVERS. THE SITUK NEAR YAKUTAT, ALSEK, HASSELBORG CREEK ON ADMIRALTY ISLAND, AND THE LOWER REACH OF THE STIKINE AS IT BREACHES THE COAST RANGE ARE PROPOSED FOR FURTHER STUDY IN THE CONTEXT OF CLASSIFICATION OF SURROUNDING LANDS.

STATEWIDE SUMMARY-GEOGRAPHIC RECOMMENDATIONS

In order to protect natural areas and systems of varying characteristics of national interest in Alaska, the Commission recommends the following new units or additions to existing reserves in the following land conservation systems:

	Acres (million)
NATIONAL PARK SYSTEM: Aniakchak Caldera (0.18), Cape Krusenstern (0.19), Gates of the Arctic (5.22), Kobuk Sand Dunes (0.10), Wrangell-St. Elias (9.72), Yukon River (0.54), Glacier Bay National Monument addition (0.03), Katmai National Monument additions (1.08), Mount McKinley National Park additions (2.69)	19.75
NATIONAL WILDLIFE REFUGE SYSTEM: Arctic National Wildlife Range additions (1.89), Cape Newenham National Wildlife Refuge addition (0.24), Kenai National Moose Range addition (0.04), Kodiak National Wildlife Refuge islands addition (440 acres)(0.00), Copper River Delta (0.35), Innoko (1.99), Kaiyuh (0.19), Kanuti (0.43), Koyukuk (2.53), Selawik (1.48), Shishmaref (1.50), Yukon Delta (5.67), Yukon Flats (2.33), Alaska Coastal: Chukchi (Capes Lisburne and Thompson)(74,000 acres), Bering Sea (1,700 acres), Shumagin Islands (71,907 acres), Barren Islands (10,020 acres), Aialik (19,630 acres), Total Alaska Coastal (0.18)	18.82
NATIONAL FOREST SYSTEM: Chugach National Forest additions: College Fiord (0.72), Copper River (1.25), Kenai Fiords--Harding Icefield (0.52), Nellie Juan (0.28), Total additions (2.77)	
Tongass National Forest additions: Alsek River (1.03), Juneau Icefield (0.48), Kates Needle (0.47), Total additions (1.98)	4.75
"ALASKA NATIONAL LANDS" SYSTEM: Andreafsky (3.54), Becharof (0.88), Cathedral Spires (0.40), Chandalar (5.56), Chitina (1.05), Lake Clark (3.49), Nabesna (2.87), Noatak (11.87), Nowitna (3.52), Nunamiut (1.98), Porcupine (5.49), Yukon Mountains (6.05)	46.70
NATIONAL WILD AND SCENIC RIVER SYSTEM: Alatna (upper)*, North Fork Koyukuk-Tinayguk*, Aniakchak (0.07), Unalakleet (0.10), Fortymile (0.32), Alagnak (0.09), Kanektok (0.11) *Acreage included in parkland proposals	0.69
TOTAL ACREAGE - ALL SYSTEMS	90.71*

Of 54 selected rivers, 7 are currently recommended for designation as indicated above. Entire courses, mainstreams, or certain segments of 35 rivers are recommended for designation as potential wild, scenic, or recreational rivers. Similarly 8 other rivers flowing through a mixture of Federal and Native corporation selected lands, are also recommended for potential designation. These 43 rivers will be subject to study or further evaluation for feasibility. Approximately 2.01 million acres of land and water outside large area proposals would be involved in these study rivers. In addition, entire

courses, mainstreams, or certain segments of 14 rivers primarily or partly on State-owned or selected lands are recommended for study or further evaluation by the State for possible designation. Approximately 1.0 million acres would be involved in these study rivers.

* Federal lands and some Native corporation selected lands. Does not include corporate lands in the vicinity of Anaktuvuk Pass or on the Yukon-Kuskokwim Delta. Acreage of included corporation land selections is unsettled.

	Acres (million)

"The D-2 Book"

LANDS OF NATIONAL INTEREST IN ALASKA

FEDERAL-STATE LAND USE PLANNING COMMISSION FOR ALASKA

PRELIMINARY DRAFT
SUBJECT TO CHANGE

We too often find ourselves preoccupied with attempting to divine what will be our state ten, twenty-five, even fifty years hence. But what we often fail to realize is that every decision made, every voice heard and not heard, and every success and failure drastically affect that future. Instead of speculating on what the world might be like in the year 2000, we would do well to consider what mechanisms, what people, and what decisions must be attended to today in order to shape all the years to come.

--Leonard J. Duhl, Daedalus

PREFACE

Section 17(d)(2) of the Alaska Native Claims Settlement Act has stimulated discussion of national interests in Alaska's vast public land domain. Some people have said that we must create the maximum possible number of national parks, wildlife refuges, and other federally designated units that will provide the highest possible level of protection. Others have said that we must not inhibit the future growth and development of Alaska by a premature designation of lands in restrictive categories.

Management designations of national interest lands in Alaska are not simple choices between placing maximum acreages in protective categories or placing maximum acreages in categories open to all types of multiple use. Lands proposed for new national units must be seen in a statewide context. Those lands and values already protected by existing national conservation systems in Alaska must also be considered, as well as the lands selected by the State of Alaska under terms of the Alaska Statehood Act and those lands to be transferred into private corporate ownership of Alaska Natives. Throughout its deliberations, the Commission has carefully considered the national interest lands from this perspective and has kept four major objectives in mind:

To provide the highest possible level of enduring protection to major wildlife populations and undisturbed wildlife habitat of the United States.

To significantly increase national guarantees for wilderness-oriented recreation and experience, often amid scenic grandeur.

To provide a higher overall level of protection for certain lands that will either allow their later designation as wilderness or permit resource development to be undertaken with the highest possible level of protection for other values.

To establish land use planning and other management institutions which will, through coordination, permit full protection of values of national interest, enable responses to national needs as they arise, and minimize conflicts among major landholders.

The Commission has developed a set of recommendations that meet these goals while allowing the necessary flexibility for Alaska's resident population to decide their future. It has strived to maintain Alaska's role as a source or resources to meet the Nation's present and future needs. When the Commission has discerned conflicting values in its assessments it has aimed toward solutions that would further the major goals stated above.

As the Commission has been developing its proposals for Alaska's national interest (d)(2) lands, three key questions have emerged which need to be answered in the consideration of these lands:

1. Are wildlife, wilderness, and scenic values of national importance adequately protected?

2. Are national energy objectives or needs for strategic minerals significantly inhibited?

3. Are conflicts with other values and uses and adjoining landholders minimized?

Applying the above criteria, the Commission has identified major proposed additions to the National Park System in the creation of six new park units, additions to two existing parks. The proposal recommends 13 new units and additions to five existing units to the Wildlife Refuge System with the aim of providing an enduring base for protection of Alaska's wildlife values. Seven additions are recommended for the National Forest System and seven rivers are recommended for designation as part of the Wild and Scenic Rivers System.

After designating key core areas for inclusion in the traditional Federal management systems, the Commission was faced with the problem of designation of several areas of outstanding scenic, wildlife, and other natural values which did not readily fit within the traditional systems. The Commission was also faced with the problem of establishing a coordinative mechanism to relate Federal, State, and Native land and resource management systems for the next several years as the provisions of the Alaska Native Claims Settlement Act are implemented. This led the Commission to develop its so-called "fifth system," or Alaska National Lands. The title was chosen to clearly show that these are lands of national interest in Alaska and that it is a proposed classsification system unique to Alaska. Twelve large units of Alaska National Lands throughout the State are proposed by the Commission.

One of the major problems with which the Commission had to wrestle was the recognition of traditional hunting and fishing and other subsistence uses of Alaska's lands by Alaskan residents. These uses will be permitted on Alaska National Lands and on certain units proposed for other systems. Regulation of the taking of fish and wildlife will be governed by State of Alaska regulations, but, since these lands are recommended for retention in Federal ownership, the full strength and ability of Federal wildlife management can be brought to bear as well as that of the State. Thus, wildlife will be insured maximum protection as much as possible while allowing its continued utilization insofar as populations permit.

The Commission is also concerned that much of the value of the Alaska's subsurface estate is unknown. The Alaska National Lands concept allows exploration of the Alaska National Lands to determine whether resources of significant national value are present. Such exploration would be required to be conducted under the highest possible environmental stipulations. Thus, if a potential resource of great value is subsequently located, the national options are sill present for a choice between maximum protection of natural values or resource exploitation.

The Alaska National Lands are not intended as multiple use lands in the traditional sense. Otherwise, the Commission would have recommended designation in one of the multiple use systems already provided by the Congress. Neither is Alaska National Lands System intended as a holding pattern for future designation in a traditional system. It is seen by the Commission as a new Federal system unique to Alaska. It is a system which allows a high degree of flexibility but which requires choices between wilderness and resource development to be made in a measured way under the oversight of a Federal-State commission. Congress could always, at some future date, change designation of Alaska National Lands to a traditional system, either oriented toward preservation or multiple use; but it is the intent of the Commission that these lands remain as Alaska National Lands and it is the Commission's position that they can best be managed under this concept for the foreseeable future. In consideration of Alaska National Lands, it must always be remembered that they were chosen for their scenic, wilderness, wildlife, and recreational values, and not for their developable resource values.

The Commission has carefully considered the institutions under which Alaska's lands will be governed in the future. It has been instrumental in developing a Federal-State transportation planning organization with which to deal with the problems of access to Alaska's energy and other mineral resources. It is developing a similar institution for wildlife management along the same general patterns. These cooperative management institutions are intended to stand by themselves and yet can also work closely with a continuing Federal-State commission if such is deemed necessary by Congress for future coordination and land management.

In a Federal system there must always be a constant adjustment of values between the Federal and State governments. Alaska has been rent by several of these adjustments simultaneously, and this position on (d)(2) lands has been developed in a state of highly charged emotions and great controversy. It is hoped that it will provide the basis for more harmonious and logical adjustments of future Federal and State interests by completing the great triad of land dispositions--State, Native, and National interests--that began with Alaska's Statehood in 1958, and continue through the implementation of the Alaska Native Claims Settlement Act.

LEGISLATIVE HISTORY OF (d)(2) LANDS

By December 19, 1978, Congress has the task of determining what, if any additions to the National Park, Forest, Wildlife Refuge, and Wild and Scenic Rivers Systems will be made in Alaska. The direction for these congressional determinations is provided in the Alaska Native Claims Settlement Act which became effective December 18, 1971.1/

For the Alaska Native, the importance of the Act is unprecedented; it resolves their long-disputed land rights; and in exchange for extinguishing their aboriginal claims, compensates them with title to 44 million acres of land and $962.5 million. But of equal importance, the Act endorses the principle of Native self-determination and represents the opportunity for Alaska Natives to become a significant force in controlling their own destiny.

But the Alaska Natives were not the only group which benefited under Alaska Native Claims Settlement Act. The final version of the Act was the result of a long, carefully bargained-for compromise which coordinated four main interest groups--the State of Alaska, the Federal Government, the Natives, and the conservation--oriented among them all. The State had an interest in seeing the "land freeze" lifted so as to complete its land selections under the Statehood Act and facilitate the development of Alaska's energy resources at Prudhoe Bay. Conservation groups feared that this very development was a fast-approaching threat to Alaska's unique natural values and sought built-in safeguards. And, although the Federal government also had an interest in seeing the trans-Alaska pipeline built, Congress felt the obligation to see Native land claims equitably and permanently settled, and finally, to complete the land distribution begun in 1958 with the Alaska Statehood Act. Such were the diverse forces that shaped the Settlement Act as it finally emerged.

Although numerous bills for settlement of Alaska Native land claims had been introduced in the 4 years preceding the passage of the Land Claims Act, it was not until the introduction of Senate bill 35 in the 92nd Congress that provision was made establishing a Federal-State land use planning commission and directing the study and designation of Federal lands in Alaska to protect their natural values. Section 24(c) of that bill directed the Secretary of the Interior

> ...after consultation with the Planning Commission, (to) conduct detailed studies and investigations of all unreserved public lands in Alaska...which are suitable under existing statutory and administrative criteria for inclusion as recreation, wilderness, wild rivers, or wildlife management areas within the National Park and the National Wildlife Refuge Systems....

In the 92nd Congress, House of Representatives bill 10367 was reported out by the House Interior Committee without providing for either a land use planning commission or the withdrawal of national interest lands. When H.R. 10367 was being considered by the House of Representatives, the Saylor-Udall amendment was introduced calling for the designation of 50 million acres of national interest lands in addition to nearly 50 million acres of land previously classified for conservation systems.

Forty-eight million acres of land in Alaska had already been withdrawn in national forests, parks, and wildlife refuges. The amendment was rejected, and H.R. 10367 passed the House on October 20, 1971. Senate bill 35, as an amendment to H.R. 10367, passed the Senate on November 2, 1971.

The Conference Committee Report on H.R. 10367 (December 14, 1971) reflects some of the compromises made in hammering out the final version of the Settlement Act:

> "...there is general agreement on the principles of law involved and...there is general agreement on the structural elements which constitute the settlement....there are, of course, wide differences of opinion on specific issues: on amounts of money and land; on elements of the settlement; on some of the institutions established...the specific resolutions proposed...represent a compromise. These compromises were, however, recognized as being essential to the development of a conference report which will do justice to the Native People, insure a viable and economically healthy State Government, and allow the fulfillment of the reasonable expectations and legitimate interests of all Alaskans and all Americans....2/

It was agreed to grant the Natives $500 million to be taken from revenue from mineral resource development of Federal lands, most of which would have gone to the State under existing law. Normally the State would receive 90 percent, and the Federal Government 10 percent of such revenues; under the Act, 2 percent goes to Alaska Natives before the State's 90 percent is computed.3/ The State also agreed not to make any further selections toward fulfillment of its 103.5-million-acre entitlement under the Statehood Act until the Native lands were selected, while State selections made before the date of the Secretarial Order imposing a "land freeze" amounting to about 26 million acres were excluded from Native selection.4/

Sections 17(c) and 17(d)(3) provided for the creation of the proposed trans-Alaska oil pipeline corridor. In 17(d)(1) the Secretary was given new legislative authority (in addition to his authority under the Pickett Act and the inherent authority of the President) to withdraw all unreserved public lands in Alaska

> "...to insure that the purposes of this Act...are achieved, that the larger public interest in the public lands of Alaska is protected, and that the immediate and unrestricted operation of all the public land laws 90 days after date of enactment... does not result in a land rush, in massive filings under the Mineral Leasing Act, and in competing and conflicting entries and mineral locations...."5/

The planning commission proposed in the Senate bill was retained; it was modified by reducing the membership to 10 members and its proposed

regulatory and enforcement powers eliminated, making it a purely advisory body.

Conservation interests early recognized that not only were there other prime park, wildlife refuge, and forest lands in Alaska which in the national interest should be reserved from disposal to private individuals under the public land laws or to the State of Alaska under its selection rights, but that there were necessary additions to existing national interest lands to assure their boundaires and to assure a comprehensive conservation system throughout Alaska.

The withdrawal, study, and designation of some lands in Alaska for conservation management seemed to many a necessary counterbalance to the transfer of some 44 million acres of Federal public lands into private ownership. The land transfers into the corporate, private ownership of Alaska Natives were being made under terms which allowed little direction as to their location by either State or Federal agencies. These transfers, and those to the State of Alaska under the Alaska Statehood Act, were of a magnitude never before equalled in the United States.

It was also realized by those familiar with Alaska that recent major oil discoveries meant Alaska could no longer rely on remoteness, geographic barriers, or other physical obstructions to insure the protection of its natural values. Congress took explicit action to protect these values by including Section 17(d)(2) in the Alaska Native Claims Settlement Act.

The Alaska Native Claims Settlement Act, as a compromise between the House and Senate bills, included in Section 17 the establishment of the Joint Federal-State Land Use Planning Commission, and in Section 17(d)(2), gave direction to the Secretary of the Interior to:

> ...withdraw from all forms of appropriation under the public land laws, including the mining and mineral leasing laws, and from selection under the Alaska Statehood Act, and from selection by Regional Corporations pursuant to section 11, up to, but not to exceed, eighty million acres of unreserved public lands in the State of Alaska, including previously classified lands, which the Secretary deems are suitable for addition to or creation as units of the National Park, Forest, Wildlife Refuge, and Wild and Scenic Rivers Systems....

The subsection also provided a procedure and set time limits for terminating these withdrawals, and for transmitting recommendations to Congress.

With the passage of the Alaska Natives Claims Settlement Act, Congress also recognized that in addition to it obligations to treat fairly with the orignial inhabitants of Alaska--the Aleuts, Indians, and Eskimos which make up the Native population of Alaska--and to fulfill its statutory promise in the Statehood Act to the State of Alaska, there was an obligation to protect the national interest lands in Alaska.

AN APPROACH TO DECISIONS ON NEW NATIONAL INTEREST LANDS IN ALASKA

By December 18, 1978, Congress has the task of determining what, if any, Alaska lands will be designated as national interest lands for their outstanding wildlife, scenic, and other natural values. When the Federal-State Land Use Planning Commission commenced in August, 1972, its first task was to review temporary withdrawals made by the Secretary of the Interior in March, 1972, following passage of the Claims Act. The lands withdrawn were those which appeared at that time most likely to contain critical habitats, outstanding scenic areas, and other natural values. Boundary changes were recommended by the Commission: to add other areas of like character which had not been included in the March withdrawals; to assure natural boundaries; and to eliminate some areas with high potential for development of nonrenewable resources. The Secretary's withdrawals for study were made final on September 19, 1972.1/ During the next year the Commission held over 30 hearings throughout Alaska and in Seattle, Denver, San Francisco, and Washington, D.C., on the use of the (d)(2) lands. A 30-member resource planning team composed of Federal and State professionals from many disciplines, also compiled a resource inventory for the entire State.2/ In August, 1973, the Commission made its use recommendations to the Secretary. In December 1973, the Secretary made his first proposals to the Congress.3/

Various systems and tools available for protection of natural values were assessed by the Commission. In the course of its analysis, the Commission, while recognizing the primary national interest signified by Section 17(d)(2) to be the protection of natural values, took cognizance of national needs and policies for resources, particularly energy resources and important minerals. Potential conflicts deriving from the Alaska Native Claims Settlement and the designation of large areas in restrictive management categories were identified, and alternative resolutions studied.

Three key questions which guided the development of the Commission's proposed policies and which the Commission believes should be asked of all proposals for (d)(2) and related lands:

1. Are natural areas and values of national importance adequately protected?

2. Is the achievement of national energy and mineral objectives significantly inhibited?

3. Are conflicts with other values and uses and with adjoining landholders minimized?

Protection of Natural Areas and Values

Alaska has many prime scenic areas and extensive wildlife and waterfowl habitat as well as unique geologic features and ecosystems. Protected by remoteness and a sparse population, most of Alaska has remained roadless and largely undeveloped. All but the most heavily populated areas of the State could be considered wilderness by national standards.

The difficulty faced by those nominating, withdrawing, and studying the (d)(2) question and by Congress in making the (d)(2) determinations is to choose from this wilderness reservoir those superlative and unique scenic, habitat, and natural areas of national importance. There appears to be general agreement among all proposals of the prime areas to be designated. There is less agreement on size of the areas and their management.

National interests cannot be met simply by designating new units of the conservation systems. For example, wildlife and waterways know no boundaries, and they are not dependent on the Federal Government alone for their protection. The primary interest in the protection of natural values is best served by policies developed in concert with adjoining landholders and coordinated planning and management.

National Needs for Energy and Minerals

The major national interests to be met in Alaska, apart from natural values, are those for energy resources and important minerals. Decisions to place lands with potentially important mineral and energy resources into conservation systems could foreclose opportunities for their later development and hinder the attainment of national energy and mineral stockpile goals.

Much of Alaska's petroleum resource is not affected by proposals for new national interest lands in Alaska. Several of the State's petroleum provinces are located on Federal lands where their development could proceed, such as those lying under National Petroleum Reserve-Alaska and those on the Outer Continental Shelf. Other provinces are found on State and private lands.

With limited exploration to date, much of Alaska's mineral potential is unknown. Although some areas thought to be highly mineralized were excluded from areas withdrawn for study, lands now under discussion for inclusion in the national conservation systems have significant mineral potential. In the focal core areas of (d)(2) lands, placement in a protective category many mean foregoing the discovery and development of these resources. The choice to prefer the natural values over potential mineral values, in these instances, is a deliberate one. In so choosing, it is recognized that the natural attributes are without price.

In natural areas removed from these core areas, it may be possible by management and classification to provide protection for the natural values, while not foreclosing the possibility that energy and mineral resources can be developed to meet future needs. Decisions to develop resources in these natural areas should be made only if the resource can be developed without harm to the environment or if it is determined that adequate supplies of the resource are not available elsewhere for the Nation, and viable substitutes do not exist.

It must be remembered that national interests in both the protection of natural values and in the develoment of other resources can be met by lands not under Federal ownership and management. Care must be taken in

designating new national conservation units that resource developments on other lands are not unintentionally frustrated and the ability to respond to national needs as they arise is not critically reduced.

Potential Conflicts

In addition to the conflict between protection of natural values and mineral and energy development, the Commission has identified two major issues that have been specifically addressed in its analysis. They are the taking of fish and game by many of Alaska's residents to meet their subsistence needs, and the future expansion of Alaska's currently limited transportation system. The Commission in seeking means of averting and reducing these and other conflicts has identified needs for and means of coordination among Alaska's major landholders and has searched for planning mechanisms with the capability to respond to needs and conflicts that cannot now be anticipated. If present land management systems and tools are used in a context of broad ongoing coordinated planning, it is the Commission's conclusion that:

1. Natural values of national importance will be adequately protected.

2. The Nation's needs for energy and minerals can be met.

3. Conflicts among land users and owners can be largely avoided.

Footnotes/An Approach To Decisions On New National Interest Lands In Alaska

1/ 78.8 million acres were withdrawn.

2/ Alaska Resources Inventory (91 volumes of narrative on 17 subject fields, with 800 map overlays) and Resources of Alaska: A Regional Summary, prepared by the Resource Planning Team, Federal-State Land Use Planning Commission, December 1974.

3/ 83.47 million acres were contained in the Secretary's proposal for inclusion in one of the conservation systems; some (d)(1) lands were included.

THE STATUS OF ALASKA LANDS

After the Alaska Native Claims Settlement is fully implemented, Alaska's lands will be divided among three major landowners--the Federal government, the State of Alaska, and Alaska Natives as private corporations. The resulting land pattern will be one of patchwork ownership in most regions of the State. Most natural transportation routes will traverse State, private, and Federal lands; most wildlife and waterfowl habitats will not be under one jurisdiction. Land uses and management will vary significantly even on those lands under one ownership.

Private Lands and the Native Land Claims Settlement

Alaska Native corporations have selected those lands which have been traditionally used by them near villages along the coast and major rivers; and lands they have identified for their commercial resource values. Twelve landholding regional corporations will hold the surface and subsurface estates to a total of approximately 16.6-18.9 million acres that they have selected. Lands entitled to at least 192 village corporations total approximately 18.9-20.3 million acres. The surface estate to these village lands will be owned by the village, while the subsurface estate will be vested in the regional corporation of the area in which the village is located. An additional 2 million acres will be distributed among the various regional corporations for cemetery sites and other special purposes. In addition to this total entitlement of about 40 million acres, several villages have chosen to acquire title to their former reservations. In total, Alaska Native corporations will own about 44 million acres. The accompanying maps show the boundaries and the approximate projected entitlement of each Native region.

It should be underscored that once fee simple title is transferred these lands will be privately owned by the Native coporations and not held in any kind of reservation status. Although stocks in these corporations cannot be sold until 1991, corporations may divest themselves of land at any time after transfer of title. Corporate land may also be distributed among individual stockholders.

Several corporations have exercised selection rights on potential oil-bearing lands or on other lands where the presence of timber and metallic and industrial minerals were known or suspected. In the event of a major oil discovery, not only would the owning corporation be benefited, but monies derived would be distributed among the State's entire Native population through the revenue-sharing provisions of Section (7)(i) of the Act.1/ Just as the Statehood Act shifted primary responsibility for the economic and social well-being of Alaska's residents to the State, so the Claims Act shifted responsibility for economic well-being of Alaska Natives to the Natives themselves. One major consequence of the Claims Act is a massive redistribution of financial and natural resource wealth and associated political power to them.

EXISTING
STATE PARK SYSTEM
AREAS
SITES

The designation of new national interest lands in Alaska could effect the economic viability of Alaska Natives in two ways:

(1) The location and management designations of some national interest lands may restrict the transport of resources from Native lands to markets.

(2) Some management designations may inhibit reliance on fish and game resources to meet subsistence needs of Alaska Natives and other rural residents. While many lands have been selected by Native corporations because of their importance to subsistence, the range over which fish and game resources are taken extends well beyond those lands that will be in private ownership.

State Lands

In 1959, at statehood, about 99 percent of Alaska was federally owned. Over 80 percent of that Federal land was under the jurisdiction of the Bureau of Land Management as unreserved public domain. Lands reserved for particular purposes, including parks, forest, and wildlife refuges made up the balance of the Federal lands. Less than one percent of the State was in private ownership.

In the admission of Alaska as the 49th state, Congress was confronted with how this vast territory, with its small population and remoteness from the centers of trade and commerce, could become a viable member of the Union. It was believed by most that the viability of such a new state must come from its natural resources. To give the new state a resource base, Congress provided in the 1958 Statehood Act that 102.5 million acres of general grant lands from the "vacant, unappropriated and unreserved" lands of Alaska could be selected by the new state within 25 years. Alaska was also entitled to University and Mental Health lands granted before statehood, to 400,000 acres from the public domain, and 400,000 acres from the national forests for community development and recreation. Alaska also gained title to submerged offshore lands to the limits of the territorial sea and submerged lands of inland navigable lakes and streams.

To date, some 67 million acres have been selected. The remaining entitlement must be chosen by 1984, 25 years after statehood. While the State has never formally articulated a policy for land selections, it is clear from the pattern that has emerged that three principal objectives have been emphasized:

(1) provision of lands to meet existing and future settlement needs;

(2) control of lands along major highway corridors; and

(3) selection of lands with high potential for natural resource development.

Revenues deriving from petroleum development on State selected lands are already a major source of revenue for the State and are expected to remain so for many years to come. As shown on the accompanying map, the State has classified and designated substantial acreage it has selected in protective categories, such as parks, game sanctuaries, and critical habitat areas closed to hunting.

Designation of new national interest lands may effect State land interests in several ways. Some designations could restrict access to market for resources developed on State lands. Inasmuch as State selections may be made almost entirely from unreserved Federal public domain, the designation of new national interest lands, as well as Native selections, diminish State selection opportunities. However, Alaskan economic development can proceed independently of federally owned resources and Federal resource disposal policies, if other Federal actions do not unduly inhibit development on State and Native lands.

The Federal Estate in Alaska

All Federal lands in Alaska either have been withdrawn as reserves for particular purposes, including national conservation system units, military reserves, and National Petroleum Reserve-Alaska, or are currently withdrawn for Native selection or for classification. There are currently no public domain lands in Alaska open to entry under most public land laws. Nearly 60 percent of Alaska will remain in Federal ownership once the entitlements to Alaska Natives and the State have been satisfied.

There has already been designated in Alaska, either by Act of Congress or Executive Order, nearly 48 million acres for the protection of natural values. The reservation by Presidental Order of the Afognak "Timberland Reserve" in 1892, followed by designation in 1907 of the Tongass National Forest which encompasses most of southeastern Alaska, were the first reservations in Alaska of what have come to be called "national interest lands." An additional large unit of the National Forest System, the Chugach National Forest, and three large units of the National Park System--Mount McKinley National Park, and Katmai and Glacier Bay National Monuments--had been designated by the time Alaska became a state in 1959. There are also now 18 units of the National Wildlife Refuge System--the two most commonly known being the Kenai National Moose Range on the Kenai Peninsula, and the 9-million-acre Arctic National Wildlife Range which was created in 1960 by Secretarial Order. Sixteen generally smaller units of the Refuge System on the coasts of Alaska have been established to protect migratory waterfowl and sea mammals, particularly those for which the United States has international treaty obligations. These previous withdrawals from public domain lands give Alaska 11 percent of all national forests, 25 percent of all national parks, and over 70 percent of all lands reserved for national wildlife ranges and refuges. To date there are seven areas of 51,287 acres designated under the Wilderness Act in Alaska with more proposals for wilderness designation pending congressional action. The established areas are all in the Wildlife Refuge System.

The Federal estate in Alaska is not limited to existing reserves and the (d)(2) withdrawals. Over 103 million acres of Federal lands are currently withdrawn for classification under Section 17(d)(1) of the Claims Act, including some 45 million acres in Native withdrawals, which will fall back into (d)(1) status when Native selections have been finalized. Most of the Section 17(d)(1) withdrawals for classification are made under authority of the Pickett Act, which requires that the lands remain open to mineral entry for metalliferous minerals. Withdrawal under the inherent authority of the President, on the other hand, permits the closing to mineral entry. These (d)(1) lands may, in the future, be classified for State selection for other uses, including disposal under the public land laws.

Summary

Twenty years ago almost all of Alaska was owned by the Federal Government, with transfers from that ownership in small parcels to homesteaders, mining claimants, and other applicants under the public land laws. Aboriginal claims had not been addressed.

Today, the State's land entitlement has been established in the Alaska Statehood Act. Native claims have been settled in the Alaska Native Claims Settlement Act. Alaska can now have a land use and management pattern where: key natural areas are placed in one of the conservation systems; private lands for occupation and settlement are in areas best suited for those uses; and resource lands are either in State, Native or other private ownership or, if on Federal lands, in a system of management which allows development coupled with environmental controls.

With the issues of subsistence, mining location, and transportation or access addressed, with new institutions for assuring continued Federal-State coordination and cooperation, Congress will have established in Alaska, in two decades, a pattern of land ownership, use, and management which will best serve the long-term interests of the Nation and Alaska.

Footnote:

1/ Section 7(i) of the Alaska Native Claims Settlement Act provides:

> Seventy per centum of all revenues received by each Regional Corporation from the timber resources and subsurface estate patented to it pursuant to this Act shall be divided annually by the Regional Corporation among all twelve Regional Corporations organized pursuant to this section according to the number of Natives enrolled in each region.

ALASKA LAND VALUES AND USES

Preface

This chapter presents basic information about Alaska's natural values and renewable and nonrenewable resources. Those natural values of potential national interest have been identified in a statewide context. The State's resources that may be required to meet national needs have also been identified.

The current allocation of these primary values and resources among major public and private landowners is shown. Those natural values already protected in existing units of the national conservation systems and by the State of Alaska are identified. Areas where resource development is currently restricted are noted, as are past, current, and projected development trends. Some basic economic factors affecting the development of resources in Alaska and their related land use implications are also cited. Finally, the chapter shows in broad terms the relationships of these values and resources to proposals for new national interest withdrawals now under discussion. The general information compiled here provides a statewide context in which all proposals for new national interest reserves can be evaluated.

WILDERNESS

Most of Alaska could be considered primitive or characterized as wilderness in a national context. Applying the definition in the Wilderness Act of 1964, nearly all roadless tracts of 5,000 acres or more remain in their natural state. Alaska has more numerous and far larger primitive areas well in excess of 5,000 acres than do the conterminous states.

While most of Alaska remains largely in its natural state, development on private corporate and State-owned lands and resource development interests on Federal lands may significantly reduce the acreage now meeting wilderness standards. Consequently, decisions on the protection of Alaska's wilderness values may need to be more focused than would be necessary elsewhere in the Nation. These decisions will probably derive from findings on which of the many areas remaining in their natural state have unique or outstanding values that merit their special protection or designation as wilderness. The information on natural values and resources that follow in this section provides a basis to determine which lands merit retention in their natural state.

At present, approximately 75,000 acres on eight small national wildlife refuges on remote islands have been designated wilderness. Other opportunities for wilderness study and designation are myriad and exist in all regions of Alaska. Proposals for wilderness areas in existing national parks and wildlife refuges comprising some 6.1 million acres have already been submitted to Congress. Proposals for another estimated 16.8 million

acres on parks and refuges have been deferred because of possible new additions and ongoing changes in land status and planning needs. A total of 2.6 million acres in seven wilderness study areas have also been identified on the Tongass and Chugach National Forests. Finally, the recently enacted Federal Land Policy and Management Act of 1976 permits the classification of lands remaining in the large Federal public domain in Alaska as wilderness. The State of Alaska has established the Kachemak Bay State Wilderness Park encompassing over 200,000 acres and has developed management plans for other large State parks that identify wilderness zones.

Proposals now under discussion for new national interest land reservations in Alaska generally provide for wilderness study. One proposal, however, calls for the immediate designation of 5.4 million acres of wilderness on existing national forest lands. Proposed additions and new units of the national conservation systems and other new management systems, which could be subject to wilderness review, range from 67 million acres to 115 million acres. Under all proposals, wilderness review of land would occur in the Brooks, Alaska, and Aleutian Ranges; the Wrangell, Chugach, and St. Elias Mountains; and the Yukon River and other interior river drainages.

WILDLIFE

Due to Alaska's long winters, its wildlife habitats are frequently not as productive as in many other states. With the exception of waterfowl and seabirds, population densities are generally lower, for example, than those in Michigan. As a result, larger areas are generally required to maintain Alaska's terrestrial wildlife populations. Many of the animal species are far-ranging; e.g. large caribou herds use millions of acres.

Important waterfowl and wildlife populations and their habitats are currently protected in 18 national wildlife refuges (17 of which are also designated State Game Refuges), 1 national park, 2 monuments, and 2 national forests. The State and Alaska Native corporations have selected land with important waterfowl and wildlife habitat. On State lands, tidelands, and waters, the Alaska Department of Fish and Game manages or regulates a small but expanding system of 7 State wildlife refuges and sanctuaries, and 10 critical habitat areas. In addition, the Department has identified 46 areas where full or partial closures on the taking of fish and wildlife are in effect to protect key wildlife populations.

Unlike most wildlife populations in other states, Alaska's wildlife are considered an important food source for a large segment of the State's rural population. The taking of waterfowl, large mammals, furbearers, and fish also supports a relatively small but steady tourist industry and a significant commercial fishing industry.

Waterfowl and Seabirds

Twenty percent of the entire North American waterfowl population uses 70.4 million acres of breeding habitat in Alaska. This includes over 12 million ducks (pintail, canvasback, widgeon, scaup, and others), 1 million geese, 70,000 swans, and 150,000 cranes. The greatest waterfowl concentrations occur along the coast and certain interior river drainages. Geese migrate to Alaska from a number of southern wintering areas west of the Mississippi River, and some ducks from the entire North American continent summer in the State. Twenty areas of wetland habitats with high density nesting qualities, at least 50 major seabird colonies and 31 key migratory bird nesting, resting, feeding, staging, and molting areas are presently identified within the State. About half of the key migratory bird areas, portions of four of the high density nesting areas, and about two thirds of the seabird colonies are already protected in units of the national conservation systems. The State, which has selected major portions of these important habitat areas, has established refuges and critical habitat areas for waterfowl and fishery protection, and others are currently proposed.

Alaska has about 37.9 million acres of high density waterfowl habitat, of which 2.9 million acres are in existing national wildlife refuges. Another 0.5 million acres are located in established national forests. Proposals before Congress have contained from 10 percent to nearly all of Alaska's high density habitat in new proposed refuges.

Unique and Endangered Species

Habitat for several threatened or endangered species exist in Alaska, including the Aleutian Canada goose and American and Arctic peregrine falcon. Significant peregrine falcon habitat and populations exist at scattered locations shown on the map. They tend to live in areas where high hills or cliffs overlook waterfowl and shorebird nesting and rearing areas.

The bald eagle, endangered in the rest of the United States, has abundant populations in Alaska. They are especially abundant in the Chugach and Tongass National Forests, but extend throughout the State except in the far north and northwest. The State-managed Chilkat Refuge in southeastern Alaska was reserved specifically to protect a key area known for concentrations of bald eagles.

All of the Continent's trumpeter swans, Aleutian, cackling, taverners, emperor, and dusky Canada geese nest in Alaska. They each nest at sites that are identified on the accompanying map. While most of the nesting habitats for these birds are on Federal lands or in existing units of the national conservation systems, much of the taverners and emperor geese nesting areas have been selected by Alaska Native corporations.

Terrestrial Mammals

The Nation's only caribou, Dall sheep, polar bear, glacier bear, and musk-oxen are found in Alaska. The world's Dall sheep populations are found only in mountain ranges of Alaska and northwest Canada as shown on the map. Of 25 areas of sheep range distinguished for analysis, four are in existing State or national parks, wildlife refuges, and forests. Some of Alaska's best sheep habitat is in the Wrangell Mountains, which have been proposed for various management systems including parks and forests. Most proposals include varying amounts of sheep habitat in the Brooks Range, the Alaska Range, and the Chugach Mountains. Denning areas suitable for polar bear are found all along the northern and northwestern Arctic Coast, as shown on the map. One wildlife refuge proposal would include additional coastal polar bear habitat, primarily from National Petroleum Reserve-Alaska. The threatened glacier bear roams Gulf of Alaska coastal areas from Glacier Bay to the Copper River as shown on the map. Portions of its range are included in parks or forest additions in many legislative proposals.

Alaska's musk-oxen are now distributed in five small herds each having about 15-25 animals, and a larger herd of several hundred on Nunivak Island National Wildlife Refuge. These animals were reintroduced to Nunivak from Greenland after the State's original populations were exterminated in the late 1800's. All of Alaska's musk-oxen are descendants of this reintroduced Nunivak herd. Six major and seven minor caribou herds with a current total estimated population of 238,000 range in every region except southeastern Alaska. Caribou populations fluctuate greatly, with a total population usually between 200,000 and 600,000. Many Alaska residents, especially Native Alaskans, depend upon caribou for food and other necessities. About 38 percent of the ranges of three herds, the Porcupine, McKinley, and Kenai, are already protected in park and refuge units. Range for herds on the Alaska Peninsula and Aleutian Islands are contained in two wildlife refuges. (Three of the herds also use an additional 35 million acres of range in Canada.) Proposed parks and wildlife refuges contain from 5 to 29 percent of Alaska's 145.8 million acres of caribou range. The trans-Alaska oil pipeline traverses portions of the range of several caribou herds and a second proposed corridor traverses additional caribou range.

Wolves are found throughout most of Alaska and on most Federal, State and private lands. Similarly, brown-grizzly bear are present everywhere in the State except the Yukon-Kuskokwim delta. Populations are found in all of Alaska's existing national parks and forests and most of the wildlife refuges, as well as on most State and private land. The State-managed McNeil Game Sanctuary north of Katmai National Monument has been reserved specifically to protect brown bear and habitat. Black bear are common in most of the State's forested areas. Additional bear and wolf habitat would be contained in a number of the proposed units of national conservation systems that are under discussion in Congress.

Marine Mammals

Twenty-seven species of marine mammals, including whales, are found along Alaska's coastline. Most marine mammals are managed by the Federal Government under the Marine Mammals Act, with the exception of the walrus whose management has been returned to the State. Walrus Island, a State wildlife sanctuary, was established specifically to protect an important walrus rookery. The State has petitioned for the management of nine other marine mammals species, and a decision is pending. The valuable northern fur seal is managed according to international treaty on critical habitat in the Pribilof Islands. The once decimated sea otter is again relatively common along the Aleutian Islands and the Gulf of Alaska coast. Large portions of Alaska's coast and marine mammal habitat have been selected by Native-owned corporations. Many of these Natives hunt a variety of marine mammal species for food, clothing, and handicrafts. At least five coastal wildlife refuges have been designated in Alaska that contain important marine mammal habitat. About 10-15 percent of the coast will be privately owned including many of Alaska's important coastal habitat areas. Much of the remaining Federal marine mammal coastline habitat is contained within the range of proposed refuges and parks.

Fish

Alaska's marine waters are generally productive for a variety of sea life. Some areas providing particularly fine habitat for fin or shellfish are shown on the map. Inland rivers and lakes are important, with greater productivity generally occurring in the southern part of the State.

Lakes and streams support many fish including five kinds of salmon, steelhead and rainbow trout, lake trout, Dolly Varden, Arctic char, northern pike, various white fish, and Arctic grayling. Some of these fish attract sport fishermen from all over the world. Trophy size is attained in some waters, and many areas with marine and freshwater fishing opportunities are highly rated. Fly-in fishing to remote lakes and streams is a common activity. Marine and fresh waters accessible by road are crowded with fishermen, especially on weekends and holidays.

Alaska's fish are also ecologically important in food chains and nutrient cycles. Anadromous fish, especially, are an important food source for other animals such as the brown-grizzly bear, bald eagle, and beluga whale.

Significant spawning, rearing, and migration habitat for anadromous and freshwater fisheries, occur on Federal, State, and private lands. Recent land selections by Alaska Native corporations border many miles of stream and lakeshore. Commercial, subsistence, and recreational fishery values are intimately interrelated and are discussed in the Renewable Resources section to follow.

ANADROMOUS FISH
Primary Importance
Question: Should important offshore fin fish and shell fish areas also be shown on this map?
30

Almost all lakes and streams in Alaska have been designated "important to spawning and rearing of anadromous fish" by the State of Alaska and, as such, all developmental activities are subject to review and approval by the Alaska Department of Fish and Game.

Additions or new units proposed for inclusion in national conservation systems contain a diversity of generally undisturbed aquatic habitats. Proposed areas particularly notable for fishery and habitat values are in the vicinity of Iliamna Lake and, to a lesser degree, the Togiak area to the west and along the Alaska Peninsula. The Iliamna and Togiak areas are included in most proposals. Notably rich marine waters contained in some national interest proposals include the Kenai Fiords area and the northern coastal waters and lagoons of the Seward Peninsula.

SCENIC VALUES AND LANDSCAPES

Alaska has a diversity of landscapes, from broad low wetlands to high mountains and lake-dotted coastal plains to rain-drenched rugged coastlines. Large scale landforms of the State are divided into four major physiographic divisions: (1) Pacific Mountain System; (2) Intermontane Plateaus; (3) Rocky Mountain System; and (4) Interior (Arctic) Plains. These divisions are all northern extensions of physiographic divisions in the northern conterminous states and western Canada from the Pacific coast to the Great Plains. The four major divisions in Alaska are subdivided into 12 prominent physiographic provinces and many sections and subsections, each being relatively homogeneous in its landform characteristics. Each physiographic province is based on particular topography that characterizes it. In addition to the mountain systems of various kinds that will be discussed, there are other landforms prominent in parts of Alaska. Interior Alaska, the northernmost arctic Alaska, the Yukon Delta, and the western sector of the Alaska Peninsula contain several nearly flat extensive lowland basins between the mountains or coastal plains. The arctic foothills zone north of the Brooks Range contains mesas and long sections of linear cuestas. Perhaps not as spectacular as rugged mountains, these other landforms often possess scenic qualities, afford valuable wildlife habitats, and are expressions of various geologic events and processes.

Mountains

Seven major mountain ranges, the Coast Range in Alaska's southeastern "Panhandle", and the St. Elias, Wrangell, Chugach, Alaska-Aleutian, Talkeetna, and Brooks Ranges, traverse portions of the State. Three of these ranges include the 16 tallest peaks in the Nation and several of the highest in North America, including the continent's highest, Mt. McKinley at 20,320 feet. The Brooks Range, the only mountain system in the United States north of the Arctic Circle, contains peaks with elevations from 4,000 to 9,000 feet. Several other mountain ranges with elevations of 3,000 to 6,000 feet are located in interior and western

ALASKA
TAKEETNA
ST. ELIAS
COAST RANGE
32

Alaska. Alaska's mountains represent several kinds of mountain building processes, and outstanding examples related to size, local relief, origin, or glacial and water sculpturing are found in the State. When comparing Alaska's mountains with those in the rest of the United States, it is significant to note that all of of Alaska's mountains rise from sea level or near sea level elevations.

For the most part, the major Alaska mountain ranges remain in Federal ownership, although the State has selected a significant portion of the Talkeetna Mountains, sections of the Alaska and Brooks Ranges, portions of the Chugach Mountains, and large areas of lesser mountain ranges. There are few large privately owned tracts in mountainous areas.

Portions of the major ranges except the Wrangell and Talkeetna Mountains, and 11 of the Nation's 16 highest peaks are currently contained in existing national parks, wildlife refuges, and forests.

Proposals now under discussion for national interest reserves would designate areas of varying size within major mountain ranges not currently represented in national conservation systems, most notably in the central Brooks Range and in the Wrangell Mountains. Reserves proposed in the Brooks Range contain from 14.6 to 31.8 million acres, and those including the Wrangells contain from 8.6 to 18.1 million acres. Additions to the existing Mt. McKinley National Park in the central Alaska Range and to the Tongass National Forest from the Coastal Range are incorporated in almost all proposals. Portions of the Aleutian Range, southern Alaska Range, and Chugach and St. Elias Mountains are also included in most proposals.

Volcanos

Alaska has over 100 volcanos, 40 of which are considered active. Nearly all of the active volcanos in the United States are in Alaska. These are located primarily on the Alaska Peninsula and Aleutian Islands where there is considerable tectonic activity. Several of Alaska's volcanos are noted for their relatively recent activity and resulting features. Others are known for their height, symmetry, or scenic beauty.

Nearly all of the volcanos and other volcanic features in Alaska are on Federal lands. Twenty-four of the active volcanos are located in three existing national wildlife refuges and the Katmai National Monument. Various volcanic features are shown on the accompanying map.

In proposed legislation, Aniakchak Volcano, Mount Wrangell, and the three highest extinct volcanic peaks of the Wrangell Mountains are generally proposed for park status. Iliamna and Redoubt Volcanos are

ACTIVE
INACTIVE
NATIONAL NATURAL LANDMARKS
CALDERA
OTHER VOLCANIC FEATURE
34

within a land unit variously proposed as a park, forest, or other category. Mount Spurr, a third nearby volcano, is included in one of the park proposals. One or both of the volcanic fields on the Seward Peninsula are proposed by most bills for inclusion in units of various kinds.

Glaciers and Glacial Features

The Nation's largest glacier systems are associated with Alaska's major mountain ranges. Alaska has about 10.9 million acres of glaciers and icefields, most of which border the Gulf of Alaska. Glaciers of all kinds abound, including piedmont, valley, mountain, cirque, rock, hanging, and surging types. Major tidewater glaciers, fiords, moraines, sculptured mountain peaks, and other glacial features are identified on the map.

Most glaciers, icefields, and fiords are on Federal lands. The State of Alaska has selected some glacier and fiord areas, most notably in the Kachemak Bay State Park and in the Wood-Tikchik Lakes area currently proposed as a State Park. Portions of the Wood-Tikchik Lakes are also in private ownership. Substantial private land on Kodiak Island borders many of the fiords located there.

Most bills propose areas containing glaciers and glacial features for new units in the national conservation systems. These areas are in the Wrangell-Chugach-St. Elias Mountains and Coast Range, in the Harding Icefield-Kenai Fiords area, along the southern flank of the Mt. McKinley massif, in the vicinity of Lake Clark Pass, adjacent to Katmai National Monument, and in the central Brooks Range. One bill proposes units for wilderness designation in southeast Alaska that contain glacial features centered around the Rudyerd Bay-Walker Cove area, the Le Conte Glacier, and the Stikine River area.

Sand Dunes

Several sand dune areas are scattered around Alaska as indicated on the map. Little current recreational use is made of Alaska's sand dunes. Some of the sand dune areas are of scientific interest because of their arctic or subarctic settings and the nature of ecological succession in these areas. Prominent among these eolian landforms are the Great Kobuk Sand Dunes and the Nogahabara Sand Dunes. These are areas of active dunes of different kinds and shapes found in larger areas of windblown soils now stabilized by vegetation. Other smaller active dune areas include the Pic Dunes of the Arctic coastal plain, dunes of the southern coast of Nunivak Island, and areas along the Tana and Chitina Rivers within the Chugach Mountains. All of these are on Federal lands. Dunes of Nunivak Island are protected in the national wildlife refuge containing the island, and the Pic Dunes are included in the Teshekpuk Lake special management area of the National Petroleum Reserve-Alaska.

Proposals for preserving these landforms include parkland status for the Great Kobuk Sand Dunes in an area ranging from 0.11 million to 1.9

million acres. The Nogahabara Sand Dunes are included in a larger area proposed as a forest or a wildlife refuge. The lesser sand dune areas of the Tana or Copper Rivers are contained in large areas proposed for park, forest, or wildlife refuge designation.

Coastal Features

Alaska has about 34,000 miles of ocean coastline, including beaches, occasional bluffs and cliffs, lagoons, and barrier islands along the northern and western coasts. Aleutian Island coasts are more rocky and irregular, and the complex coasts bordering the Gulf of Alaska have numerous deep bays, fiords, islands, peninsulas, pocket beaches, precipitous cliffs, and a few notable and extensive stretches of sandy beach. Shorelines facing the Gulf of Alaska are often pounded by high waves. Pack ice pushes against the Arctic Ocean and Bering Sea coasts most months of the year, though the Bering Sea ice forms later and breaks up earlier than farther north. Ice forms in some of the protected coves of the southern coast during cold spells.

Most of Alaska's coastline remains in Federal ownership, although about 10-15 percent will soon be in private corporate ownership with the transfer of title to Native corporations. Private lands are particularly extensive along Alaska's western coast, the eastern coast of the Alaska Peninsula around Cook Inlet, and on the Kodiak Island group. The State of Alaska has selected lands along the Arctic coast, the western coast of the Alaska Peninsula, around Cook Inlet and along the northern Gulf of Alaska. With large existing national interest reserves in the Arctic (the Arctic National Wildlife Range and National Petroleum Reserve-Alaska) and around the Gulf of Alaska, a large portion of Alaska's coastlines can be expected to remain in Federal ownership. Other existing national conservation units along the Bering Sea and along the Alaska Peninsula and the Aleutian Islands assure that a significant portion of these coasts will also be retained by the Federal government.

The accompanying map identifies those areas of high scenic value or unique or rare coastal formations that may be of national interest. Other coastal values for waterfowl, seabird, and marine mammal habitat and of paleontological or archeological interest are discussed in other sections of this chapter. Natural harbors are referenced in the section on natural access.

All proposals for new national interest units in Alaska currently under discussion include substantial shoreline. Legislative options for the eastern Alaska Peninsula coast vary widely from two short segments in one proposal to the entire coastline in another. Most proposals contain shoreline along the western side of Cook Inlet and on the Gulf of Alaska around the Kenai and College Fiords and Malaspina Glacier. One proposal calls for inclusion of extensive lands bordering the northern Gulf of Alaska, which have been selected by the State. Including existing national conservation designations, new proposals could incorporate about half of the total Alaska coastline.

MAAR LAKES
TARN LAKES
THAW, OX-BOW, MEANDERING LAKES

Lakes

The State contains about 3 million lakes of 40 acres or larger and 94 lakes which are greater than 10 square miles in area. Most of the lakes are found in the interior and coastal lowlands. Iliamna Lake is the seventh largest in the Nation and 20 lakes in Alaska are among the 34 deepest lakes in the country, exceeding 250 feet in depth. Freeze up and thaw dates vary, but most lower elevation lakes are open from June through September. Many mountain lakes are not open until July. Alaska's lakes often serve as transportation routes and are extremely important in providing aircraft access to remote areas for recreation, subsistence activities, and resource exploration.

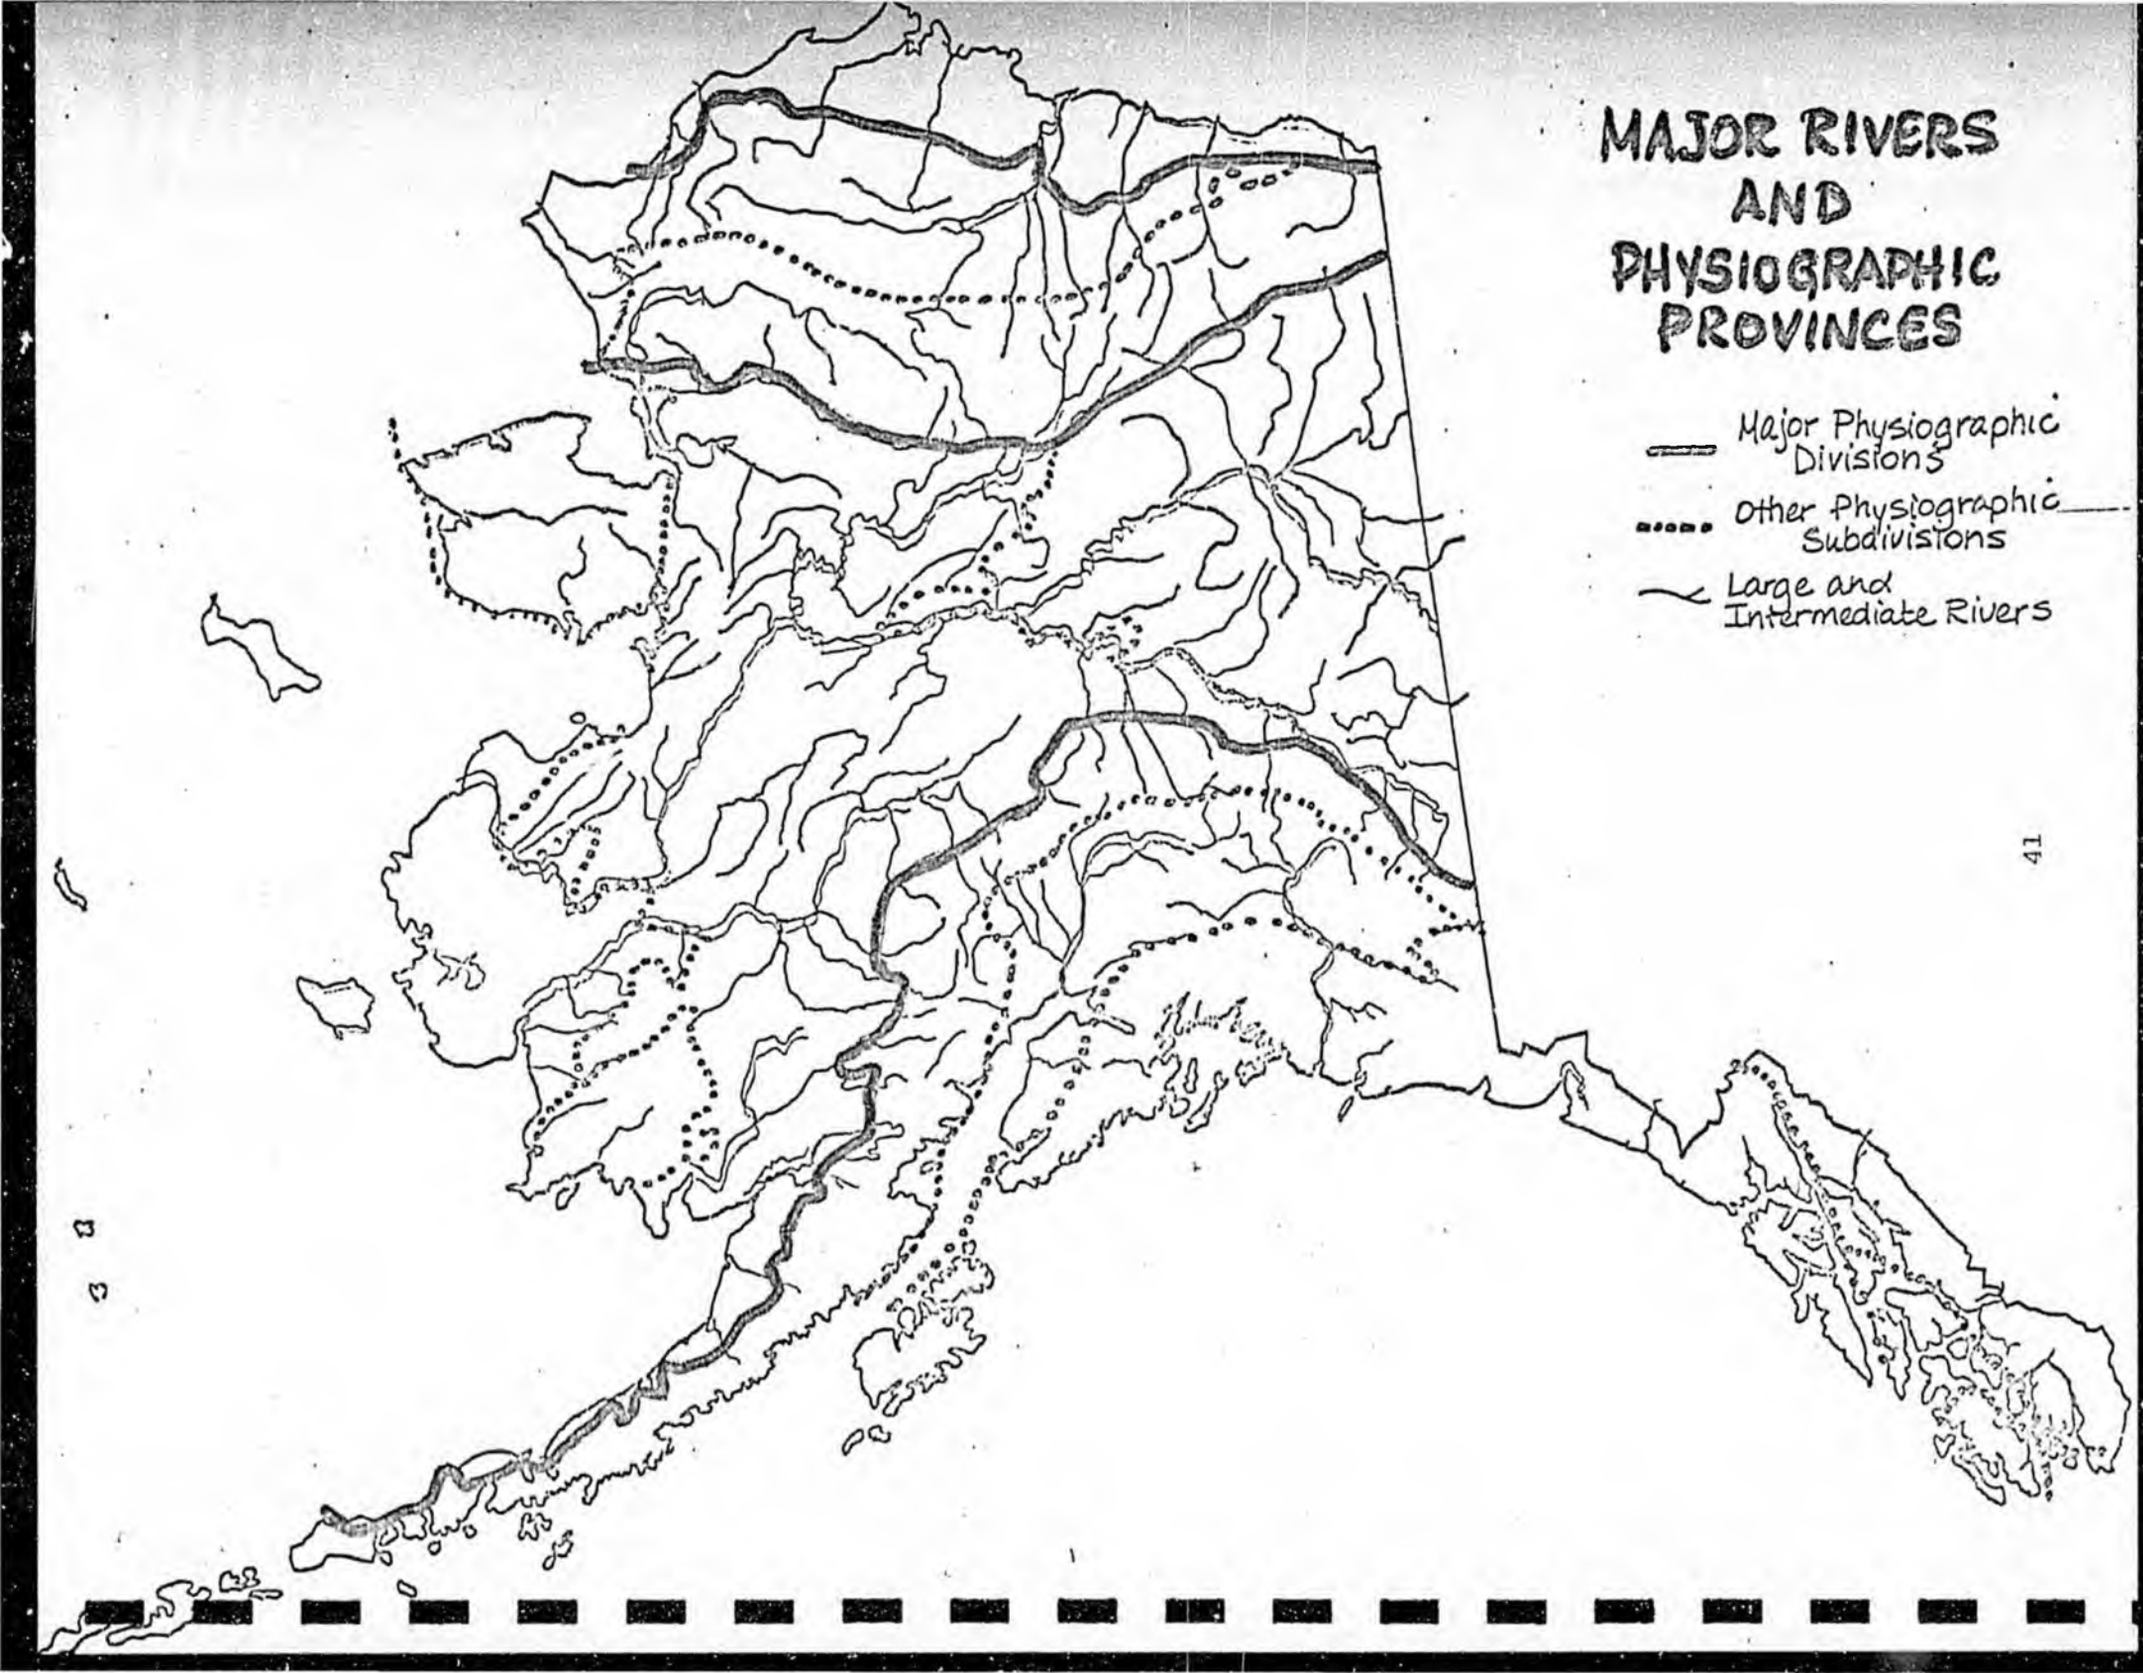
Recreational use of Alaska's lakes generally includes sightseeing, camping or picnicking, boating, fishing, and some swimming in warmer water. Because of their physical and biological characteristics, habitat, or other values, some lakes and their environs may not be suitable for intensive recreational use or shoreline development. Most lakes, with the exception of several near Alaska's largest cities, do not currently receive intensive use, relative to recreational lakes in the conterminous states. The geographical location of the major lake types, as well as Alaska's larger lakes with notable scenic values and recreational potential, are shown on the accompanying map.

Federal lands contain the greatest number and variety of lakes. Except for the maar lakes, which are found only on the Seward Peninsula, existing national conservation system units contain representative samples of all lake varieties. State and private selections also encompass many lakes or shoreline portions of larger lakes, resulting in mixed ownership around some significant larger lakes. The State has title to the submerged lands of navigable water bodies in most instances.

Most national interest proposals contain the different kinds of lakes across the State. Some contain a greater number of variety of lakes. Two proposals do not contain all lake types.

Rivers

Alaska has an estimated 10,000 free-flowing streams and rivers totalling more than 365,000 miles in length. The Yukon River, which drains 40 percent of the State, is the fifth largest in the Nation. Most waterways remain largely unaltered from their natural state. Rivers with glacial origins carry heavy silt loads in the summer, but many streams flow cl . except when flooding. Streams flow through rugged mountains and rolling uplands or meander placidly through lowlands. White water rapids are not uncommon. Varying gener lly with latitude, Alaska's rivers are usually frozen over by November or December with breakup occurring in April or May. Based primarily on runoff, Alaska has nine large rivers, the largest being the Yukon and Kuskokwim. Lower reaches of three other large rivers flow from Canada through southeastern Alaska. The largest compare with the Ohio and Mobile Rivers in size, and the



MAJOR RIVERS
AND
PHYSIOGRAPHIC
PROVINCES
Major Physiographic Divisions
Other Physiographic Subdivisions
Large and Intermediate Rivers

latter group with the Susquehanna, Illinois, and Willamette Rivers of the conterminous states. There are about 125 rivers in Alaska of intermediate size roughly comparable to such rivers as the Klamath in California and Patuxent in Maryland. These Alaska rivers are portrayed on the accompanying map.

Most communities are located on riverbanks or along the coast. Many of Alaska's waterways are used as transportation corridors for hauling freight, subsistence activities, and recreation. Recreational use of rivers occurs primarily as boating and fishing in the summer and early fall months. Swimming is not a major activity. During winter, some frozen waterways provide a thoroughfare for recreational travel by foot, dogsled, or snowmobiles. Some rivers are presently accessible by road, but most are remote from large population centers.

Considerable shoreline along the larger rivers and some tributary streams will be in private ownership with the transfer of title to Native corporations, including approximately one half the course of the Yukon River.

From 40-90 rivers have been identified within Alaska by the Bureau of Outdoor Recreation, various recreational groups, and others knowledgeable about Alaska rivers as water bodies of potential national interest. Some are representative examples of free-flowing clear-water and glacial streams of diverse character in the various natural regions of the State. Some have outstanding recreational potential for boating, hunting, fishing, or hiking alongside. Scenic features along the rivers may include colorful bluffs, canyons, rock outcroppings, mountains, rapids, falls, or a variety of vegetation. Wildlife observation opportunities are afforded by some, and others have prehistoric, geological, and paleontological values.

Many of these rivers have received detailed study by the Bureau of Outdoor Recreation and others, and studies of additional rivers are planned. Most, but not all, of the rivers are on Federal lands. About one-fourth of the rivers or segments are on State-selected lands. Private lands occur along some of the identified rivers. Some of the rivers are contained in larger areas proposed for national parks, forests, wildlife refuges, or other special land categories. To date, no Alaska rivers have been designated as wild or scenic rivers in the national system.

All proposals for national interest lands include rivers and segments of varying character. Some rivers have been identified for their recreational potential particularly in the context of wilderness recreation. Up to 23 rivers and as few as 3 rivers have been legislatively proposed for wild, scenic, or recreational designation in addition to comparable rivers within larger proposed national conservation units. As many as 8 rivers proposed for special designation are wholly or partially within existing national forests or wildlife refuges. A few legislative proposals do not address any wild and scenic river recommendations.

Most proposals call for immediate designation of identified rivers. Another proposal would place most rivers into a potential wild and scenic river classification to be evaluated further in the context of surrounding land use planning.

Vegetation

Alaska is covered by about 183 million acres of three major classes of tundra, 140 million acres of four broad classes of forest, 28 million acres of high and low brush and bog systems, in addition to 23.8 million acres of glaciers, lakes, and streams. Alaska's plant communities provide food and shelter for people and wildlife that have differing needs.

Forest communities of Alaska are present in most regions except the far western, northern, and southwestern portions of the State. Tundra systems predominate in the Brooks Range and Arctic lowland, on the Seward Peninsula, and on large areas of southwestern Alaska including the Alaska Peninsula and Aleutian Islands. Alpine tundra is largely found on mountain slopes above the tree line throughout the State, while wet tundra prevails in the coastal lowlands bordering the Bering Sea and Arctic Ocean.

Allocation of the four classes of forest lands is approximately as follows:

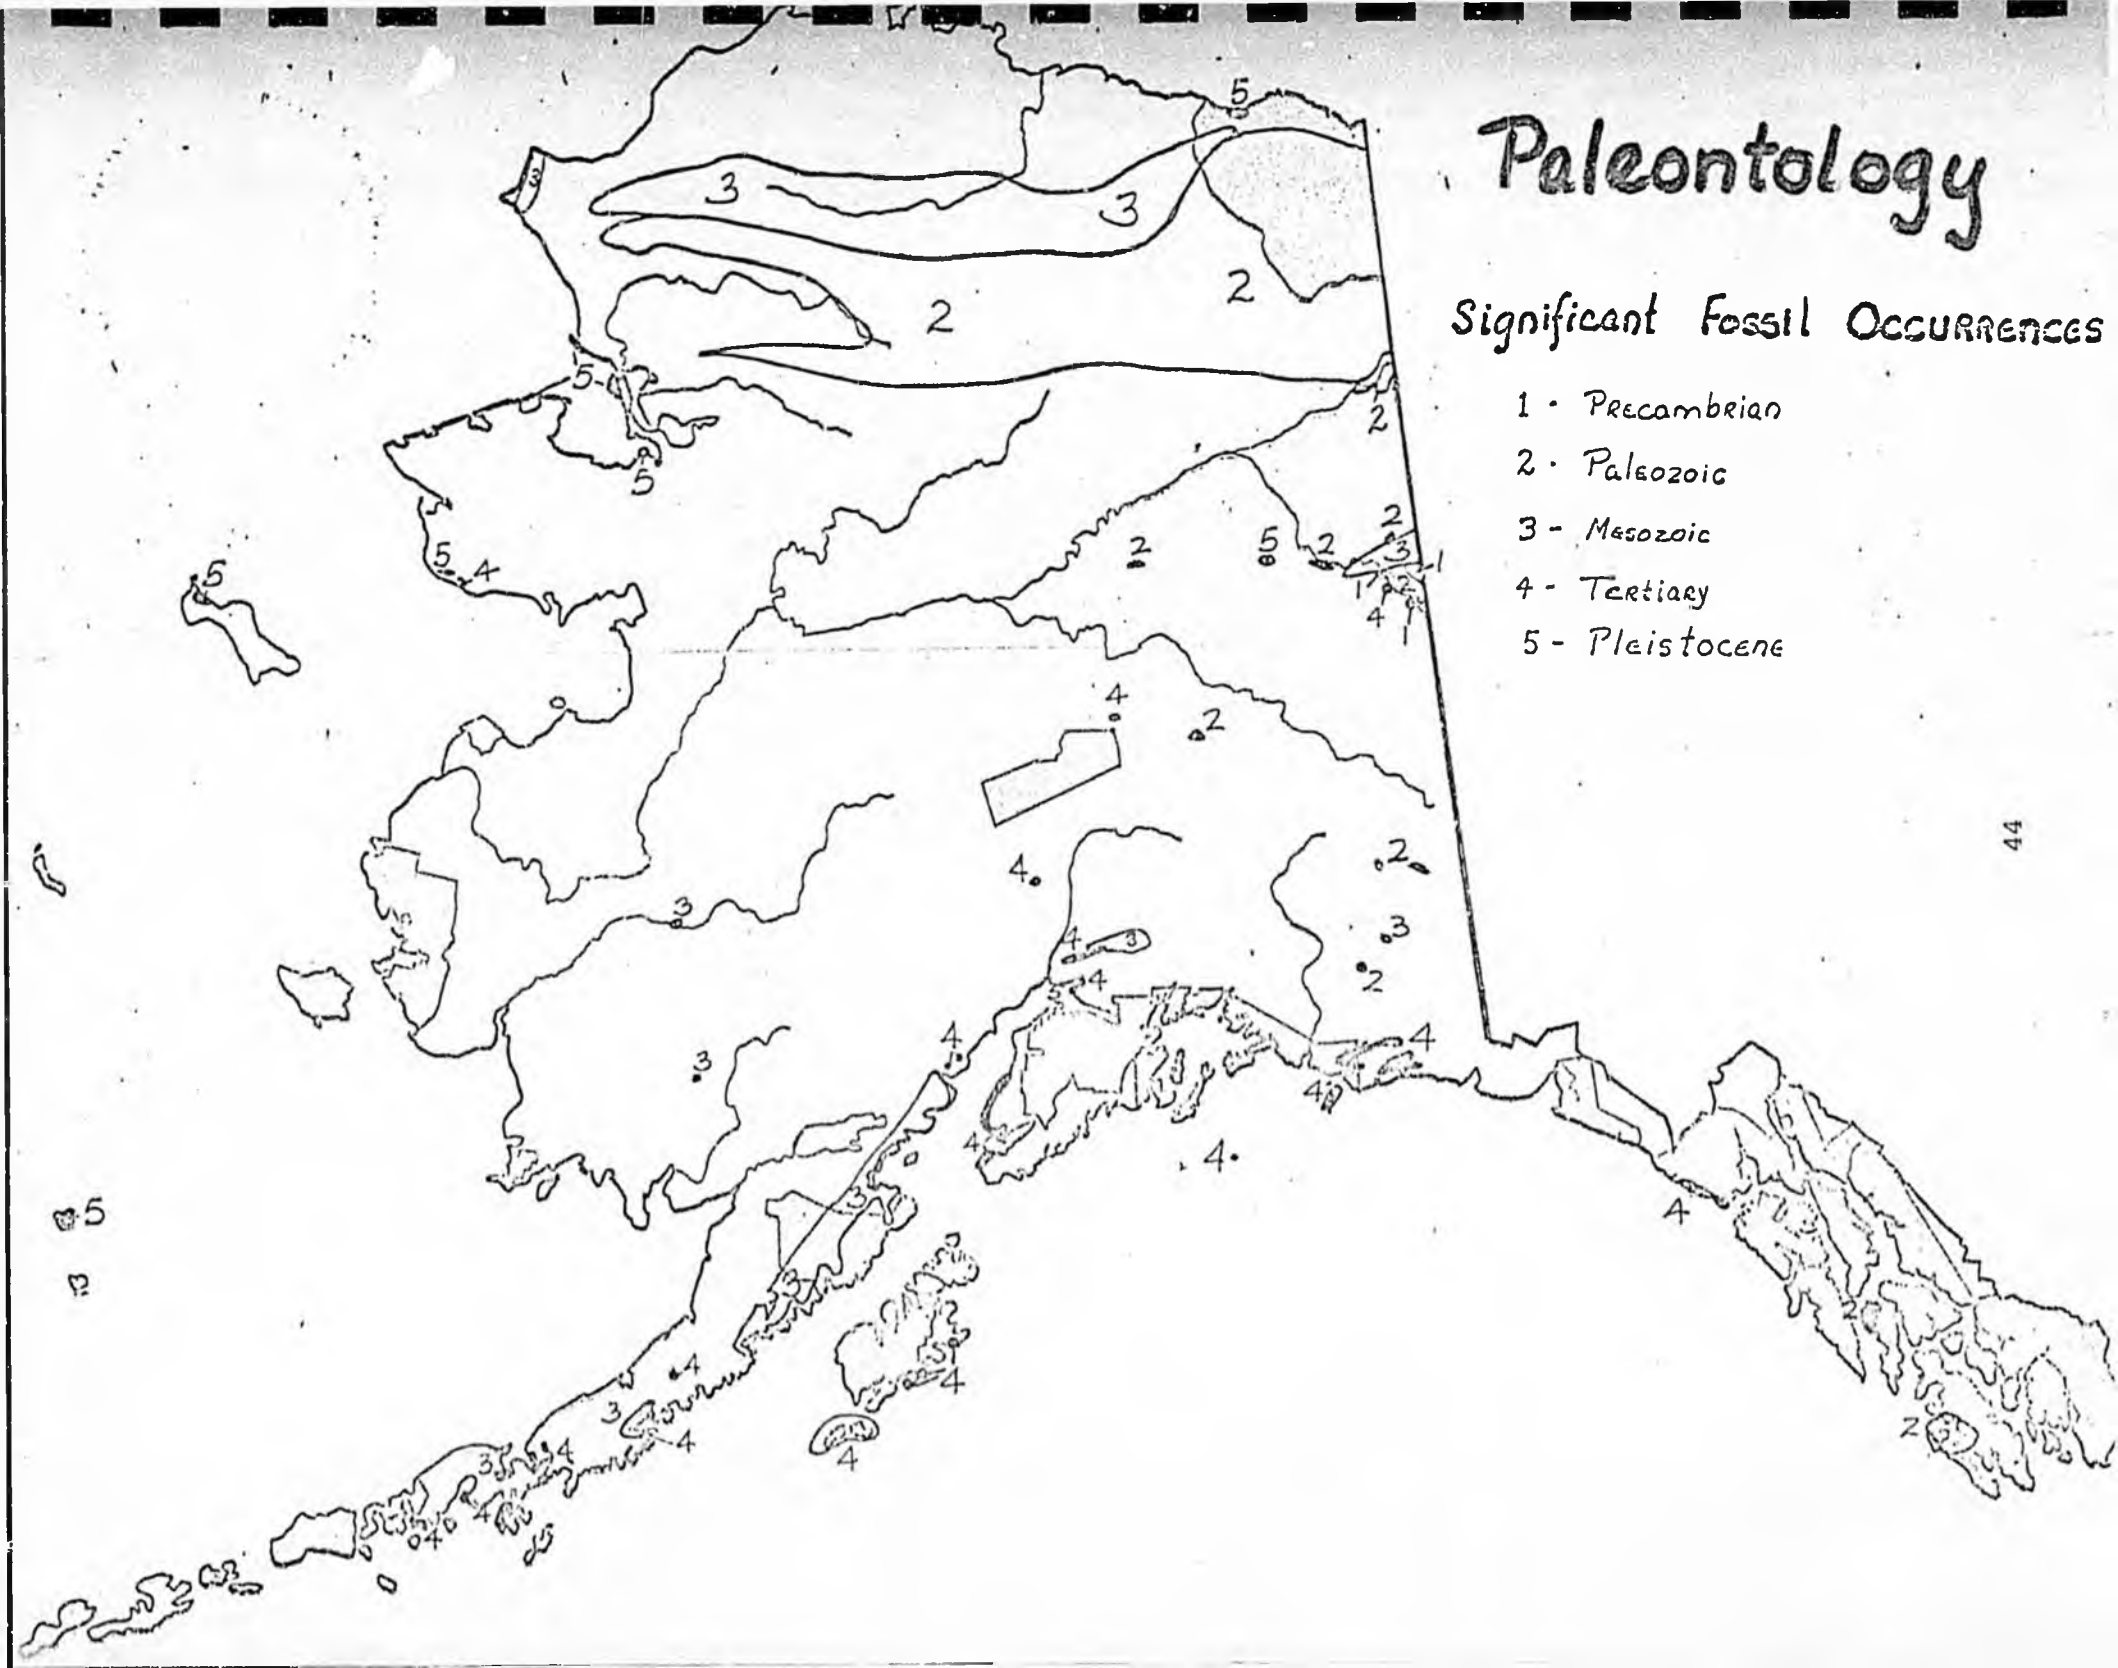
	Federal	State	Private
Coastal western hemlock-Sitka spruce	87%	6%	7%
Bottomland spruce-hardwood	58	20	22
Upland spruce-hardwood	64	24	12
Lowland spruce-hardwood	69	19	12

Additional State land selection could increase the percentage of State ownership in all categories except the coastal western hemlock-Sitka spruce forest.

The tundra communities are largely in Federal ownership, though substantial tracts are held by the State and private corporations.

With the exception of the coastal forest, all major plant communities are unique to Alaska, though there is some similarity in plant composition with communities of the northern states. The coastal western hemlock-Sitka spruce forest is the northern extension of the Pacific forest of coastal Oregon and Washington. The boreal forests of interior Alaska stretch eastward across Canada, but do not extend to the conterminous states.

Representative examples of the tundra, forest, and brush classes are presently contained in varying degrees in units of national conservation systems, with one exception. The bottomland spruce-hardwood forest occurring along major waterways of the interior is not included. The Tongass and Chugach National Forests contain a highly significant portion



Paleontology
Significant Fossil Occurrences
1 - Precambrian
2 - Paleozoic
3 - Mesozoic
4 - Tertiary
5 - Pleistocene

of the coastal Pacific forest. Katmai National Monument at the northern end of the Alaska Peninsula contains the southwestern-most extension of the interior boreal and coastal forest. The farthest north boreal forest is contained in the Arctic National Wildlife Range.

Proposals for new units or additions to national conservation systems generally include a wide variety of the major plant communities, as well as their subcommunities or variations. All proposals include varying amounts of all of Alaska's major vegetative classes, including the bottomland spruce-hardwood.

Paleontological Values

Known fossil remains of various kinds and from several periods of geologic history are located in several areas of Alaska. They range from pre-Cambrian to Quaternary in age.

Some scientifically noteworthy fossil occurrences based on rare, unique, or exemplary qualities are located on the accompanying map. Rare pre-Cambrian fossils are found in an area along the upper Yukon River, the only known site in northwestern North America.

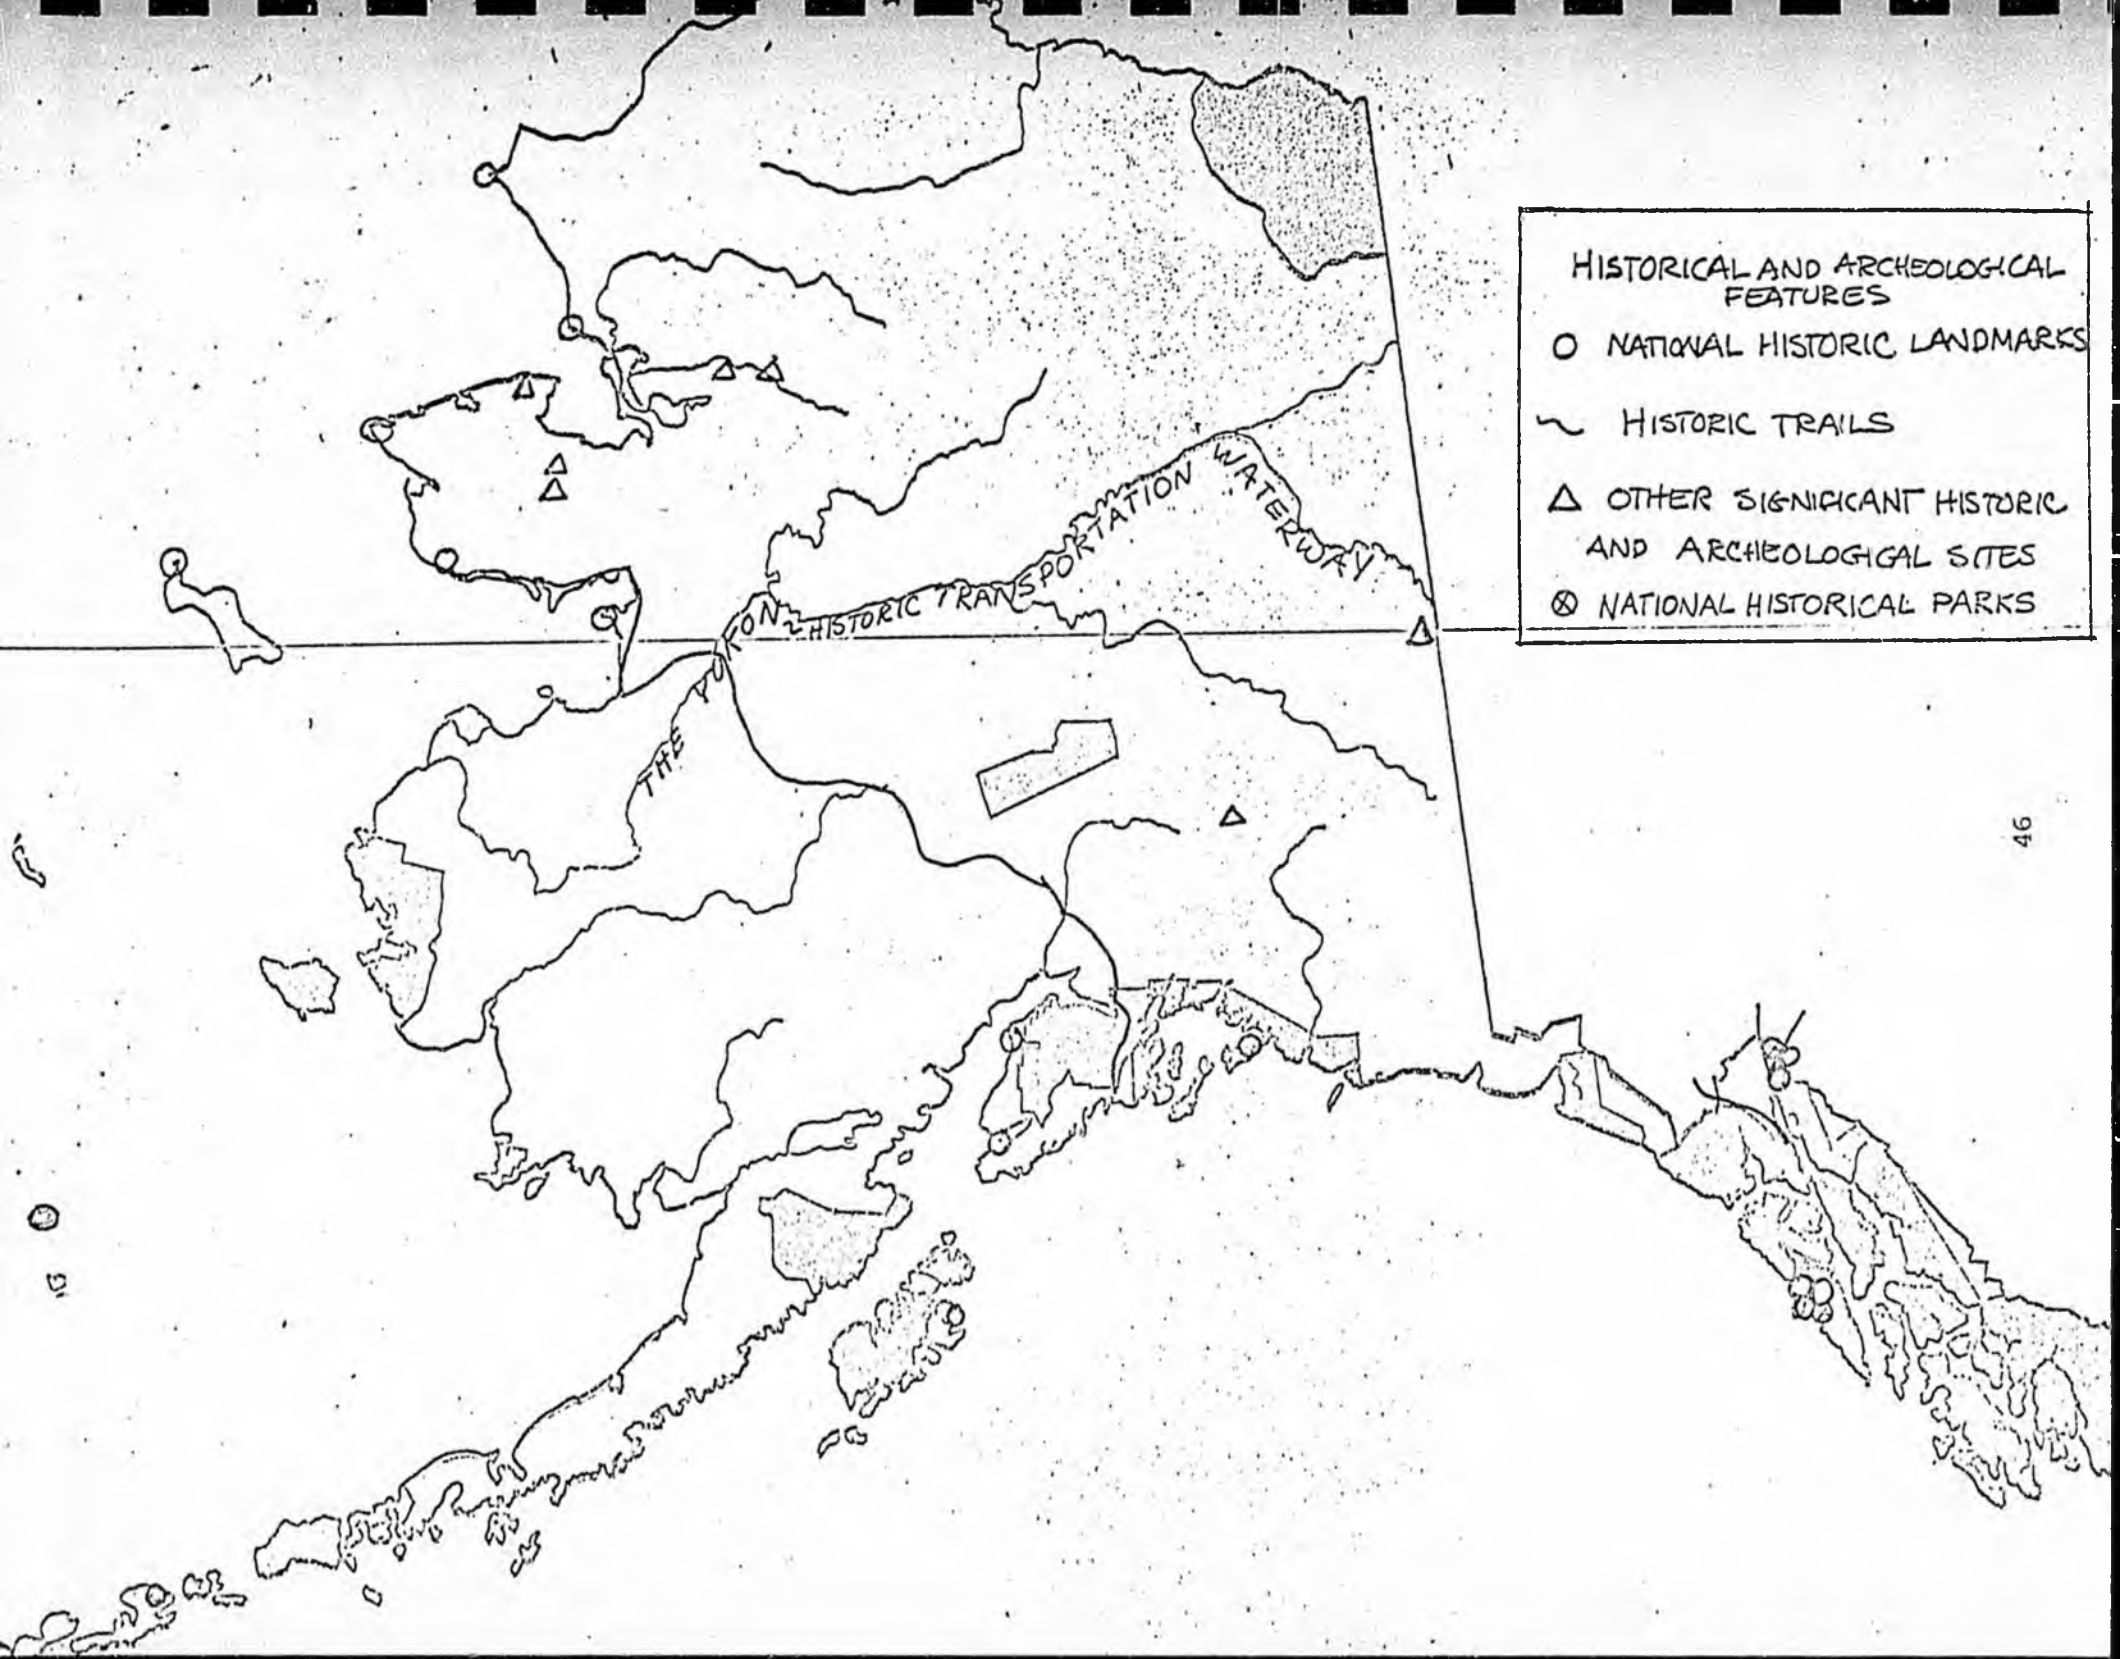
Several coastal sites have permanent scientific importance in international correlation of certain prehistoric events. A remarkably complete record of middle into late Mesozoic sediments rated as one of the better sections in the western hemisphere lies along the southeastern coast of the Alaska Peninsula.

Relatively small, but, in some cases, key portions or areas of fossil occurrences will be in private ownership. State lands also contain all or portions of several areas. The greater amount of acreage of fossil occurrence areas, however, will remain in Federal ownership. Some of the areas identified on the map are contained in existing national conservation system units.

Nearly all the proposals contain all or part of the areas of fossil occurrence described. Areas across the Brooks Range are contained, though only two bills have units that extend into the fossil-bearing Arctic Foothills to any significant degree. Fossil occurrences in the upper Porcupine River and at Capes Krusenstern and Espenberg are entirely contained in all proposals. Most proposals include the upper Yukon River area, though containment of significant rock strata varies from a narrow corridor to a much broader unit.

Historical and Archaeological Values

Alaska's historical and archaeological values derive from several prehistorical or historical periods. Principally, they are the prehistoric crossing of people from Asia to North America over the Bering Land Bridge and early aboriginal settlement; Russian discovery, settlement and rule of Alaska; and the late nineteenth and early twentieth century gold rushes.



HISTORICAL AND ARCHEOLOGICAL FEATURES
NATIONAL HISTORIC LANDMARKS
HISTORIC TRAILS
OTHER SIGNIFICANT HISTORIC AND ARCHEOLOGICAL SITES
NATIONAL HISTORICAL PARKS
THE YUKON HISTORIC TRANSPORTATION WATERWAY
46

Sites related to these historical periods are shown on the accompanying map. Sites of rich archaeological evidence of prehistoric cultures and early settlement have been located and researched in the State, particularly in the coastal areas. Most, however, remain largely unexplored. Remains of old Eskimo, Indian, and Aleut settlements are found throughout the State. Information on Alaska's historical and numerous archaeological sites is incomplete, but expanding.

Three areas in northwestern Alaska have known sites related to aboriginal culture and significant potential for further discovery. They are Cape Krusenstern, the Onion Portage Historic District on the Kobuk River, and the Seward Peninsula. Additionally, there are other identified sites of known significance mostly on private lands. Structures from or influenced by the Russian period have been preserved or restored at Kodiak and Sitka, sites of the first and last capitals of Russian America, and at Unalaska and Kenai. Sites, routes, and remnants of the gold rush days are scattered throughout most of Alaska. Though still recent history, World War II has special significance to Alaska because it was a U.S. Territory attacked and partly occupied by a foreign nation and became a focus for U.S. military action. Relics of the foreign invasion, ensuing American fortifications and battle sites, are scattered near Seward and Kodiak and southwestward along the Aleutian Islands to Attu.

by recent land selections, private Native corporations soon will acquire title to numerous sites along the coast and major rivers which have evidence of past Native cultures. The State has also acquired or selected lands of historical interest and has designated four sites to preserve features or commemorate significant periods in Alaska's past. Federal lands contain a great number of sites and considerable potential for further discovery. Sixty-five Alaska sites are now listed in the national Register of Historic Places, including 18 designated national historic landmarks. Several landmarks of Alaska Native, Russian, and gold rush significance are preserved and protected in the Sitka and Klondike Gold Rush National Historical Parks, and in Alaska's monuments, forests, and several wildlife refuges.

Most, but not all, proposals contain units on the Seward Peninsula and at Cape Krusenstern. While most proposals cover known sites, potential for future discoveries varies with the size of the proposed units. The Seward Peninsula unit varies from 1.5 to 4.5 million acres. However, the larger proposed units may be predicated more on protection of natural features than historic or prehistoric values.

ECOSYSTEMS - A SUMMARY

In the preceding sections, wildlife and scenic features have been identified and discussed separately as natural values of particular national interest. However, biota and their environments are not independent of each other, but function together through many interrelationships in ecosystems.

Alaska's ecosystems are unique to the United States. These associations of people, plants, animals, and their physical environment, though similar to some areas in the conterminous states, differ in many respects in plant and animal species, landforms, soils, and climate. The natural interrelationships of these systems are relatively undisturbed, and Alaskans in rural areas are strongly interwoven in the systems through their harvest of animals and plants.

When describing ecosystems, they are frequently tied to areas of characteristic vegetation which reflect certain soil types, wildlife, and other factors. They may be oriented to physiographic units or climatic zones. Or they may be specifically delineated to conform to the habitat of a particular animal species. Sometimes identification of ecosystems is predicated on a complex of these elements.

There is increasing public interest in preserving and maintaining representative as well as unique ecosystems for their scientific and other values. Additionally, there is concern for the well-being or functioning of the biological components in special land and water areas in parks, wildlife refuges, wilderness, other preserves, and along the coastal zone.

Except for smaller relatively discrete ecosystems, it appears that the land ownership of larger systems in Alaska will generally be shared by the Federal and State governments and private corporations. The mobility of some wildlife species makes it often difficult to circumscribe entire stable ecosystems under one ownership or administrative category. In addition to migratory birds, there are some marine mammals and anadromous fish whose ecosystems extend well beyond the State of Alaska. Large caribou herds range over many millions of acres. Wolves hunt over many miles of territory, and bear and moose may range extensively.

Most of Alaska's major ecosystems are represented to varying degrees in existing units of the national conservation systems. Some watersheds and wildlife habitat integrally related to existing national parks and refuges are not incorporated within their boundaries. Additions to these units, as well as national interest designations of discrete ecosystems and portions of more extensive ecosystem units, are now under discussion.

ENERGY RESOURCES

Oil and Gas

There are 23 possible petroleum provinces and basins in Alaska and its continental shelf. Production is ongoing from the Swanson River field in the Kenai National Moose Range and in upper Cook Inlet, and will commence near Prudhoe Bay on the North Slope as soon as the trans-Alaska oil pipeline is completed. Exploratory drilling has occurred in at least eight of the 23 petroleum provinces, and government-conducted

seismic exploration and test drilling will continue on National Petroleum Reserve-Alaska for three more years. Almost 1,000 wells have been drilled in Alaska and 19 proven oil and gas fields have been discovered totalling about 450,000 acres. Major oil corporations have entered into contracts with six regional Native corporations for exploration on private lands. Outer Continental Shelf (OCS) leases in the Gulf of Alaska province have been let and other lease sales in the lower Cook Inlet province may be scheduled in the near future. The State is currently considering lease sales in several State-owned areas. Other Federal OCS lease sales are also scheduled during the next several years, including a possible Federal-State lease sale being considered for a coastal portion of the Beaufort Sea.

Alaska has approximately 82 million acres of land having good potential for oil and gas based on rock structure data and possible reservoir size. Of the 60 million acres of Federal lands with petroleum potential 45 percent are in the following classifications:

national parks: 1.8 million acres
national wildlife refuges: 6 million acres
national forests: 0.5 million acres
National Petroleum Reserve-Alaska: 18.9 million acres

These lands are not available for additional State selection, with the exception of about 400,000 acres of national forest lands.

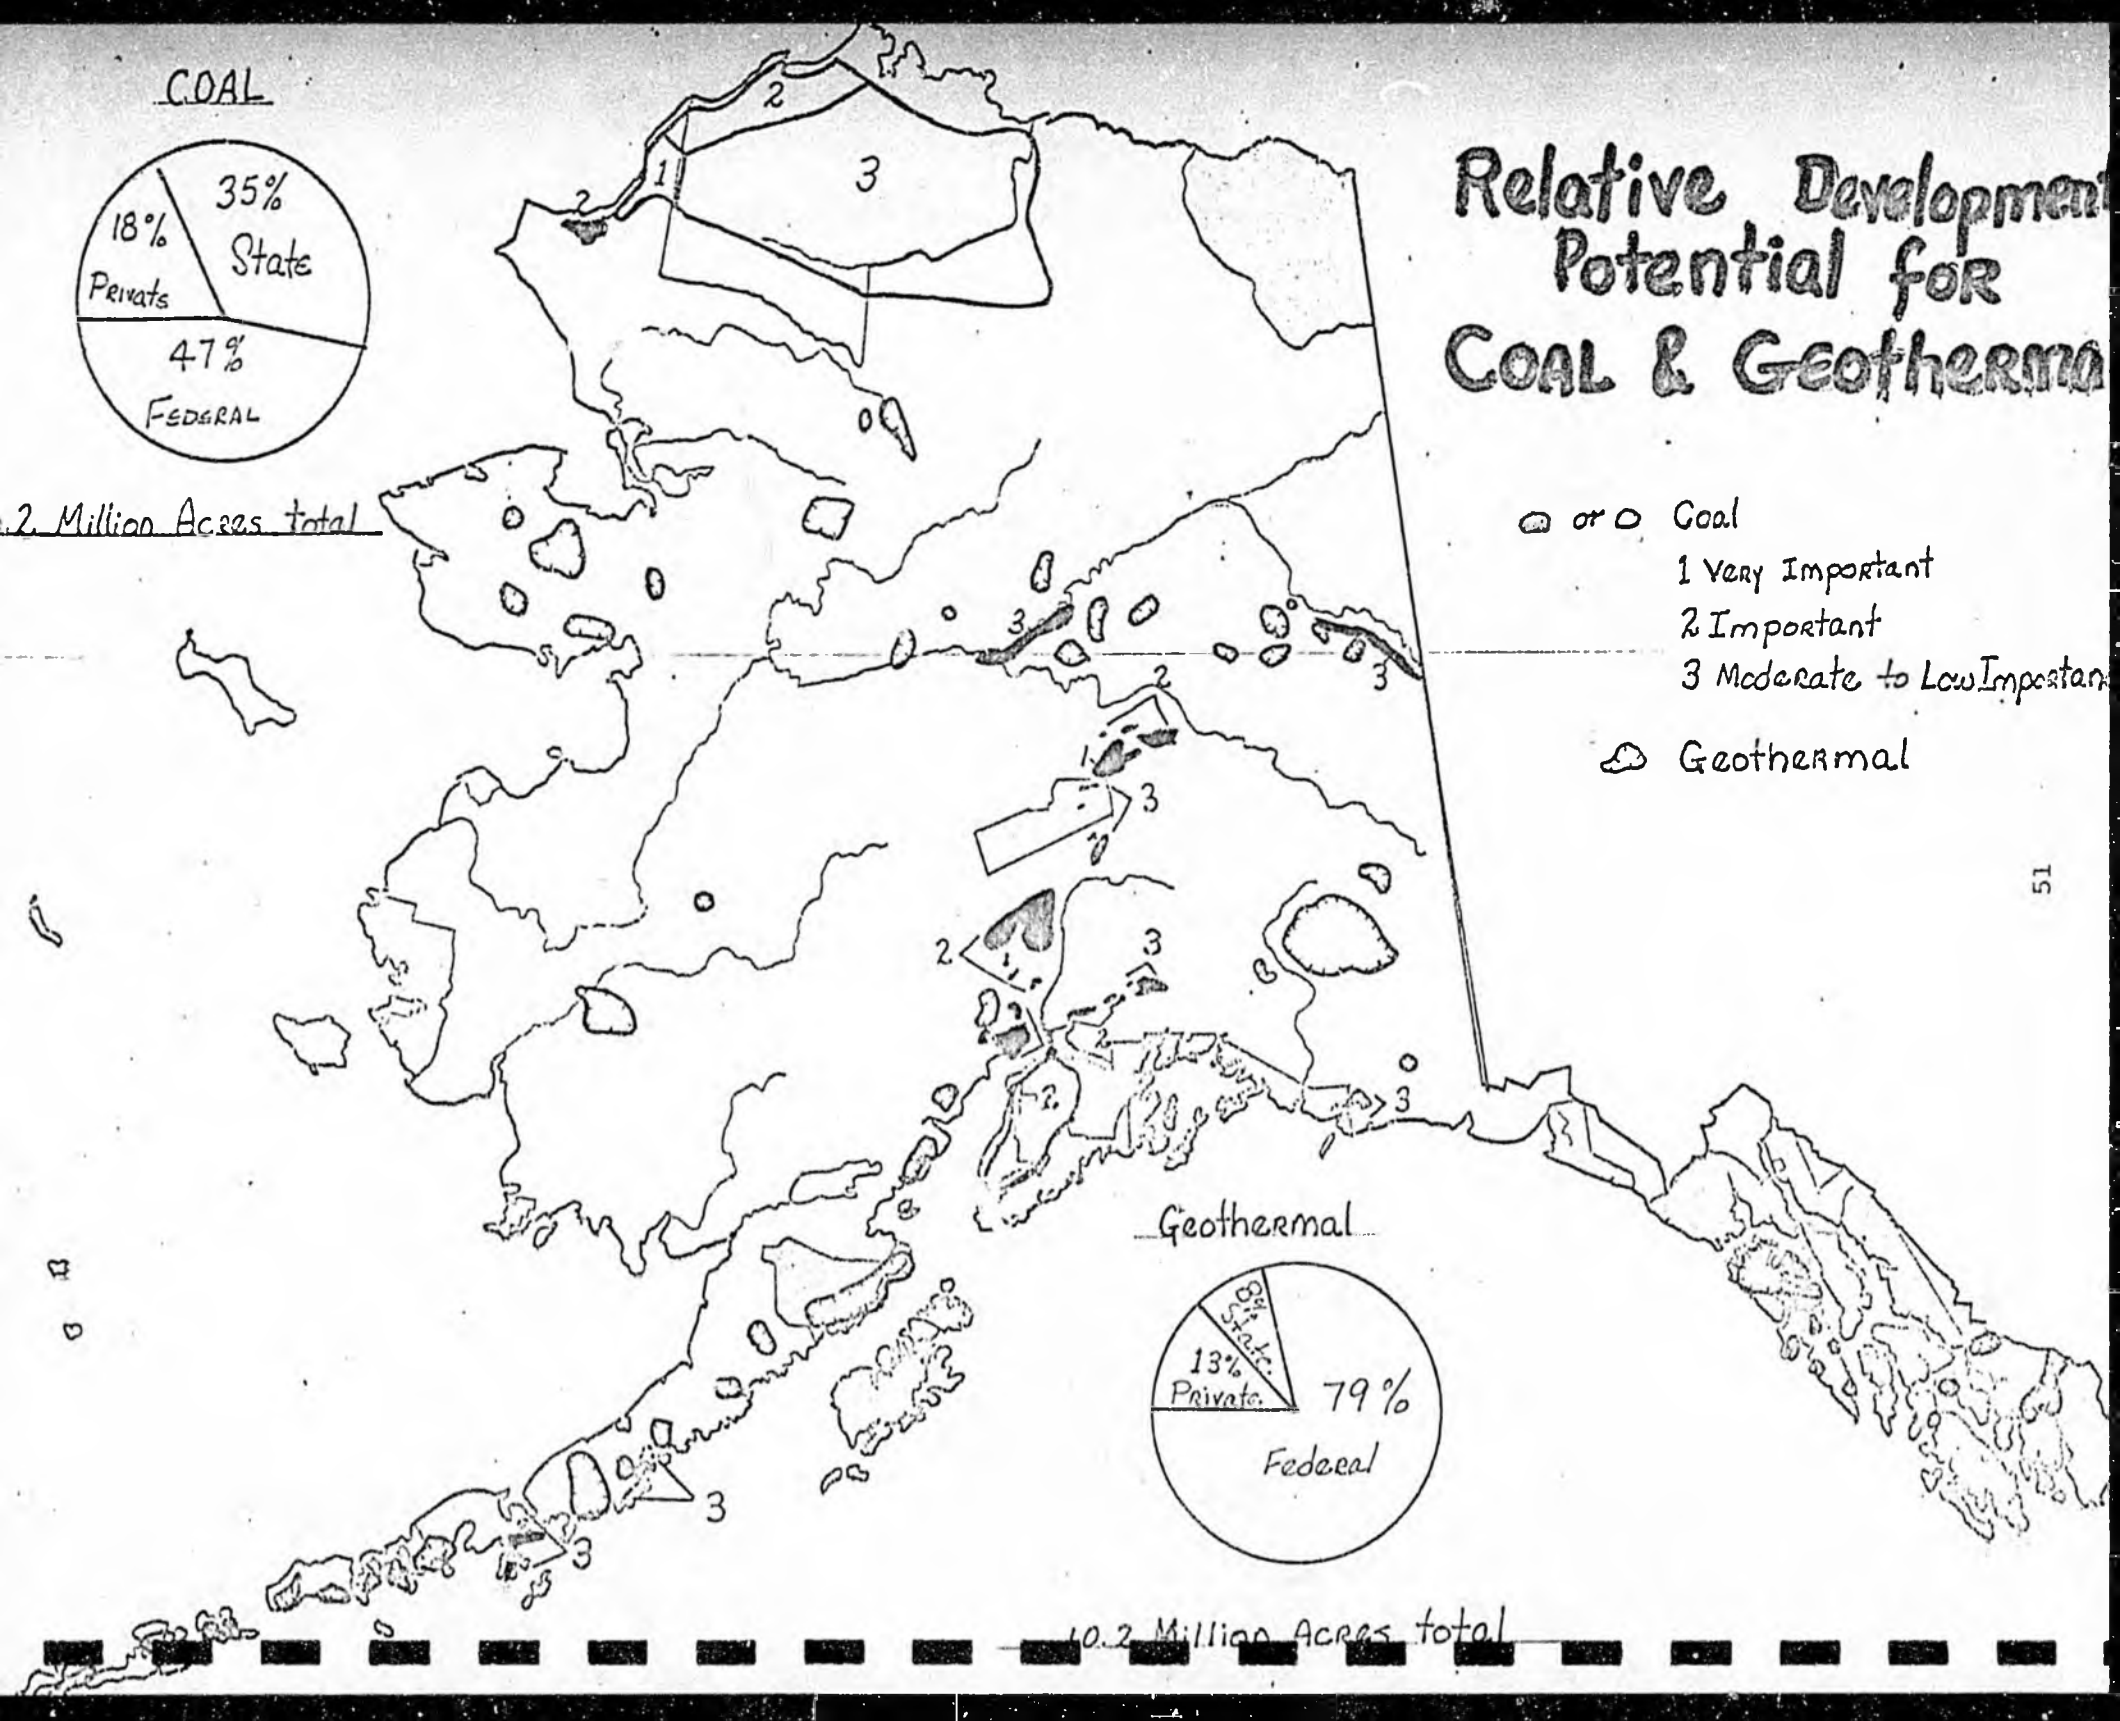
Oil from Alaska's reserves, which far exceed local needs, will mostly be exported. Transport of oil and gas in Alaska, especially from the remote northern regions, may be dependent upon pipelines to reach ice free, deep water ports, or distant overland markets. Unlike many natural resources in Alaska, market prices for oil are sufficiently high to compensate for exceptional costs of development in Alaska and create a current demand for the State's supplies.

The range of proposed parklands contains from 0.5 million to 6.3 million acres of land with oil and gas potential, and proposed refuge lands contain 2 million to 10 million acres of potential. Pending final decisions by Congress on these park and refuge additions, up to 22 million acres of Alaska's land with oil and gas potential will remain in the Federal public domain or reserves where petroleum development could be allowed. However, one legislative option would include all Federal lands having oil and gas potential within proposed wildlife refuges. Petroleum provinces frequently occur in areas of prime lowland waterfowl habitat or in rich offshore marine habitats. Pipelines or other means of petroleum transport will cross wildlife habitat and may traverse the migration routes of some species.

Coal

An estimated 130 billion tons of coal may be found in Alaska with major deposits concentrated in central Alaska and the northwestern Arctic. Alaska coals, usually characterized by low sulfur content and large deposits, are predominately subbituminous, and generally have high water

Relative Development Potential for Coal & Geothermal



and ash contents. The largest deposits of coal occur in lowland Arctic regions containing extensive permafrost, which may present technical difficulties. Some coal deposits adjoining the northwest Arctic coast may have coking characteristics. The Nenana coal field is Alaska's operating mine, currently producing for local markets. Of the 23.4 million acres of land having with known and potential coal deposits in Alaska, 6.2 million acres have been identified to be relatively important based on size and type of deposit, accessibility, and market demands.

Most of Alaska's coal must be strip-mined and each operation will require access roads or other means of bulk transportation. Costs of coal production in Alaska, particularly of the remote Arctic fields, will be relatively high and may forestall development.

Of the 6.2 million acres of land with important coal potential, almost 30 percent is located in the National Petroleum Reserve-Alaska. Fifteen percent of the areas with important coal potential are in existing parks and refuges, and up to 5 percent have been contained within proposed new parks and refuges before Congress. No additional coal deposits are contained in any new parks or refuges in one legislative proposal.

Geothermal

Approximately 75 areas with geothermal energy potential totalling 10.2 million acres are located in Alaska. Those areas with highest potential for energy generation are in the Wrangell Mountains and on the Alaska Peninsula and the Aleutian Islands. Utilization of geothermal resources might include the transfer of heat to nearby communities for space heating or small scale agricultural purposes. Some sites, if found suitable, might be used for on-site electrical energy generation. On-site development may be accompanied by unusually high noise levels. Most geothermal areas are distant from markets which may delay their development.

Existing parks and refuges currently contain 13 percent of Alaska's land with geothermal energy potential, and proposed legislation in Congress contains an additional 19 to 36 percent land with potential within new parks and refuges. Depending upon congressional action on these reserves, 27 to 47 percent of Alaska's land with geothermal possibilities will remain in other Federal ownership where geothermal development could occur. National forests, refuges, or other Federal reserves that are not available for additional State selections contain about one third of the lands in the State having geothermal energy potential. Many of the identified areas lie within mountainous regions or zones of historic volcanic activity having high scenic or scientific values.

Hydroelectric

Seventy-six hydroelectric sites involving relatively low development costs have been identified. Most of these sites are located in central and southeastern Alaska. Twenty-nine are located on lands already incorporated in existing units of the national conservation systems,

53

primarily the Tongass National Forest. Several sites, including some with the highest electrical generation potential and largest reservoirs, are located along major interior river drainages, most notably the Yukon River.

Eleven key major projects involving 14 sites, totalling 23 million kilowatts of installed capacity, are considered to have good potential based on regional distribution, physical suitability, and costs. Eight of these projects have potential installed capacity of at least one million kilowatts each, giving an installed capacity as large or larger than the John Day Dam on the Columbia River or the Hoover Dam on the Colorado River.

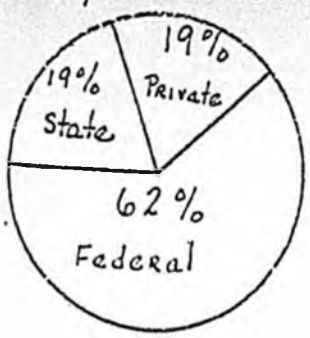
Of these 14 major potential sites, 2 are on State-selected land and 7 are projected to be in private ownership. Five are on Federal lands. None of these major sites or significant portions of their reservoirs are in any existing units of the national conservation systems.

The installed capacity of Alaska's hydroelectric plants that are already in operation is a little over 123,000 kilowatts, with government projects accounting for approximately 60 percent. These projects have been developed at two sites in southcentral where the bulk of the State's population lives, and at 12 sites in southeastern Alaska. Together they produce 16 percent of the State's total electrical energy.

Potential reservoirs at the 14 sites range from 106 square miles (Wood Canyon), to 10,000 square miles (Rampart), often encompassing wildlife, waterfowl, and salmon spawning habitat. One site would utilize an existing 26-square-mile lake and would cause no additional inundation. The development of hydroelectric projects may also affect downstream wildlife habitat, soils, vegetation, and aquatic habitat by regulating or eliminating fluctuating seasonal water flow. Development of three of the 14 sites could affect proposed national interest lands downstream. A number of the proposed projects (mainly on the Yukon) would decrease flood danger to downstream communities, while other communities upstream would have to be relocated to avoid inundation by reservoirs. Potential commercial forest lands and a number of sedimentary basins with potential for oil and gas or uranium would be affected to varying degrees, depending on the number and location of the sites developed. (The Rampart project would inundate one fourth of Alaska's soils with good agricultural potential, according to the Soil Conservation Service.)

Four of the 14 sites and major portions of four reservoirs of the other sites are contained within the spectrum of parks and refuges that have been proposed in Congress. Of the remaining six sites and reservoirs, five are on State or private land near urban areas where a combined annual output of 7.7 billion killowatt hours could be developed. The remaining project has its entire watershed and reservoir on the upper Yukon River in Canada with only generating facilities in Alaska. Its potential annual output is 21.0 billion kilowatt hours.

TOTAL ACREAGE –
78.9 MILLION



Sedimentary Basins
Having Uranium Potential

55

In a 1974 report, the Alaska Power Survey projected that in 1990, Alaskans would require 13.3 billion kilowatt hours of electrical power, and 27.5 billion kilowatt hours by the year 2000. These are mid-range projections based on current trends and growth rates. Low and high projections for the year 2000 range from 14.9 to 58.1 billion kilowatt hours.

Because of the great distances and high costs involved, it is unlikely in the near future that Alaska could meet a portion of the electric power or water demands of the rest of the United States, except possibly to supply energy for local processing of nationally significant resources found within the State.

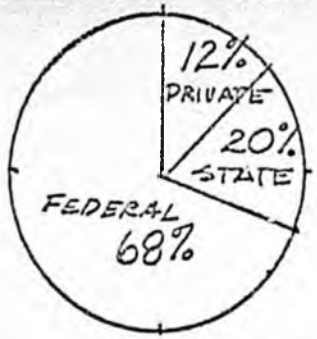
Uranium

Nineteen sedimentary basins favorable for uranium totalling 78.9 million acres are found in low-lying areas around the State. About 34.6 million acres of the lands with uranium potential are in classifications that are not available for State selection, including 16.6 million acres of potential uranium lands in National Petroleum Reserve-Alaska. There is currently no extraction, but some preliminary sampling and fly-over exploration efforts are underway. Low-lying basins with uranium potential often occur in areas of prime habitat for waterfowl and other wildlife. Seven percent of Alaska's land with uranium potential is contained in existing parks and wildlife refuges. An additional 6 to 7 percent of the land with uranium potential is contained the range of proposed new parks and refuges before Congress. Depending on the final size and location of these proposals, 25 to 28 percent of Alaska's land having uranium potential will remain in other Federal classifications where uranium development could be allowed. If uranium development in Alaska becomes feasible, it is likely to involve open-pit mining and floatation mills. The feasibility of an enrichment plant in Alaska would probably depend on an abundance of inexpensive coal or other fuel, and an adequate infrastructure.

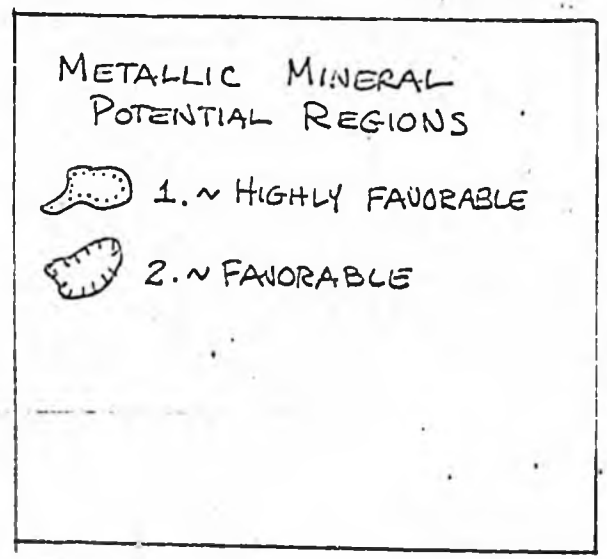
MINERAL VALUES

Alaska contains 18 important minerals that are of national interest. With the exception of gold and barite, all these minerals appear in the 1976 study by the Office of Technology Assessment, being updated in 1977, or the Stockpile Goals list of the Federal Preparedness Agency, October 1, 1976. Gold is included because of its increased use by the electronics industry. Barite is included because the entire statewide demand for barite-rock drilling needs can be met with Alaskan resources. The areas with the highest probability of containing these minerals are identified on the Bureau of Mines Metallogenic Provinces Map for Alaska. Those minerals addressed in this section are antimony, asbestos, chromium, copper, fluorine, gold, iron, barite, lead, mercury, molybdenum, nickel, platinum, silver, tin, titanium, tungsten, and zinc. Alaska also has uranium potential which is discussed in the Energy Values section.

METALLIC MINERALS



TOTAL ACRES ~ 257 MILLION



A number of recognized metallogenic provinces throughout the State have potential for antimony, asbestos, chromium, iron, nickel, platinum, titanium, copper, gold, silver, and molybdenum. Tin and tungsten have potential in several provinces in interior Alaska and on the Seward Peninsula. Provinces with lead and zinc potential are recognized to occur in southeastern, central, and northwestern Alaska. Provinces with potential for barite occur throughout the State, except in Western Alaska and the Alaska Peninsula. The Kuskokwim River area contains potential for mercury, and fluorine deposits are located on the western end of the Seward Peninsula.

Alaska is not the Nation's sole source of any of the identified minerals, though it may have relatively higher potential than other states where there is current extraction. Gold, lead, silver, and tin are currently produced in Alaska, but production is relatively small scale. In the past, Alaska has produced antimony, chromium, copper, gold, mercury, platinum, silver, tungsten, and zinc. Although mineral exploration efforts by both government and private industry are increasing, relatively little is known about Alaska's mineral potential compared to that of the rest of the United States. Future effective demand for Alaska's minerals will be influenced by additional resource information and changes in technology and international and domestic political factors.

The Bureau of Mines has estimated that 251 million acres in the State have some metallic mineral potential based on geological information, known deposits, and past mining history. Seven percent of these lands are included within existing national parks and wildlife refuges. Because the State has an interest in lands of high metalliferous mineral potential, it may make substantial future land selections on this basis. Approximately 46 percent of the Federal lands with mineral potential could be available for additional State selection.

The State, as well as a number of Native corporations, are conducting mineral explorations on lands they have selected. The Bureau of Mines and the U.S. Geological Survey are continuing their exploratory field work activities throughout the State. The Bureau of Mines has made particular efforts in the Brooks Range, central Alaska Range, Glacier Bay National Monument, and in the wilderness study areas in the Tongass National Forest.

With the important exception of oil and gas, high costs of production and exploration in remote Alaska may mean that only larger or higher grade mineral deposits will be feasible to extract in the foreseeable future. The harsh climate shortens the exploration and construction season, and acts to reduce productivity. Local markets are small and higher costs may make Alaska resources noncompetitive in worldwide markets. Lack of transportation and utility infrastructures in most areas of Alaska increase the required capital investment. For those

industries more labor intensive than the oil and gas industry, high salaries matching a cost of living 25 to 75 percent higher than that of the rest of the United States need to be taken into consideration in investment decisions.

Generally, underground mining is less likely to be economically feasible in Alaska except for gold and silver, or for very large higher grade deposits of other base metals. Lower grade underground mines may be precluded by high labor costs that could become more than 50 percent of the total operating cost. Consequently, most future mineral development in Alaska will probably be by open-pit methods.

The amount of land needed for an open-pit mine varies depending on the type of mineral(s) and the size of the deposit. The amount of land needed for a single mine in Alaska may vary from under 100 acres to over 1,000 acres. While only a few acres are needed for the actual mill site, the mine itself may cover several hundred acres. Related tailing piles and settling ponds may use at least as much land as the excavation site (often 2 or 3 times as much). Underground mines may need comparable acreage for milling, settling ponds, and tailings, although the mine itself will involve very little surface disturbance. In some cases, Alaska mining operations will generally need to be larger than other comparable U.S. Mines to be economically feasible in remote areas. Most will require ground transportation and/or nearby airstrips.

In some cases, winter haul roads have reduced or eliminated the need for a permanent access road for equipment and supplies. In the past, however, most extraction has taken place during the summer months. In the future, use of winter haul roads may continue and mining activity may be more likely to occur on a year-round basis.

Of the 170 million acres of Federal lands with mineral potential, 9 to 26 percent have been proposed for additions to new parks and refuges in a range of legislative options before Congress. If Congress establishes any of these legislative options, 107 to 137 million acres will remain in Federal ownership classifications where mineral extraction could be allowed. Due to the nature of geologic phenomena, minerals frequently occur in areas of high scenic beauty. Consequently, many areas proposed for additions to the national conservation systems contain both scenic and mineral values.

The following table summarizes some of the more important variables that may be addressed to determine the potential of the 17 minerals in Alaska of national interest that have been identified. The first column indicates what percent of the identified national resource is in Alaska. In some cases, little is known about a mineral's presence in the State, and some future discoveries may not be anticipated or reflected. The second column indicates if present or past production has taken place. The third column deals with the most likely methods of extraction and related primary processing and transportation needs. The fourth column mentions other factors that may be important in determining national interest in minerals in Alaska.

OF IDENTIFIED U.S. NATIONAL RESOURCE * INTEREST IN ALASKA		OR CURRENT PRODUCTION	TYPE OF OPERATION LIKELY IN THE FUTURE	OTHER FACTORS
Copper	9	Large past production	Mines would probably be open pit or large underground operations. On-site milling of the ore is required, and transportation of the resulting concentrate will require a road or other form of surface access.	If large quantities of copper are extracted from Alaska in the future, it may be possible to have one or more smelters located in the State.
Antimony	5	Past production; small current production in 1976.	Mines could be open pit or very high grade underground operations. Higher grade ores may not require on-site milling, and might be flown out. Lower grade product would require surface transportation.	In the past Alaska production has been from a number of small, high grade mines.
Silver	small	Past and current production	Mines could be underground or open pit. Underground mining for silver is more economically feasible than most other minerals because of its high unit value. On-site milling may not always be necessary. A high grade mill concentrate might be flown out. If by-products occur (antimony, copper, lead, zinc) then the ore will require surface transportation.	In Alaska silver is frequently mined as a principal product. Elsewhere in the U.S. 70 percent is mined as a by-product with other minerals.
Gold	no data	Past and current production	Mines could be placer, open pit, or high grade underground operations. Ore sometimes requires on-site milling. A high grade ore or mill concentrate could be flown out. Gold mine operations commonly produce large amounts of tailings.	In the past, Alaska has had a relatively high proportion of gold mines compared to the conterminous states.
Lead/ Zinc	no data	Past zinc production; and some current lead production	Mines could be open pit or large high grade underground operations. Smaller underground mines could be feasible if combined with high grade silver. The ore requires on-site milling and surface access for transportation.	Zinc has greater potential in than lead. However, they frequently occur together.

MINERALS OF NATIONAL INTEREST IN ALASKA	% OF IDENTIFIED U.S. RESOURCE *	HISTORIC OR CURRENT PRODUCTION	TYPE OF OPERATION LIKELY IN THE FUTURE	OTHER FACTORS
Nickel	3-9	None	Mines could be open pit or high grade underground operations. On-site milling of the ore is required. A higher grade mill concentrate might be flown out, but it generally requires surface transportation.	Most of the State's largest and and best known occurrences are located in Glacier Bay National Monument, which was recently closed to mining by Congress.
Barite	no data	Current production	Mines could be open pit or high grade underground operations. (Current extraction in Southeast is from below the mean high tide line.) On-site milling is required and surface transportation is needed for the milled product.	All current production in Alaska is used to make heavy drilling muds for use within the State. Additional production for Alaskan markets is to begin soon.
Platinum	up to 27	Past production	Similar to gold. All Alaska production to date has been from placer. The only platinum mine in Alaska or the U.S. closed this year after over 40 years of operation.	The future development potential for platinum in Alaska could increase if a cartel formed that would cause a substantial platinum price increase. Most of the world's platinum comes from South Africa, the United Kingdom, and USSR.
Chromium	less than 1	Past production	Mines would likely be open pit or possibly small shallow underground operations for high grade pods. A high grade ore may not require on-site milling. Low grade deposits would probably only be feasible near tidewater or existing transportation systems. Higher grade occurrences may be associated with a number of known ultramafic rock sequences in the State.	Current market prices appear to make Alaska production not economically feasible. But the possibility of a cartel by major producers could substantially increase the world price as well as Alaska's chromium development potential. Most of the world's chromium comes from South Africa USSR, Turkey and Rhodesia.
Tin	well over half	Past production	Mines could be open pit or placer operations. Open pit mines will require milling while the placer operations may not. A high grade ore or mill concentrate might be flown out. Lower grades need surface transportation.	The current international supply and demand is stable, but if market conditions change in the future, Alaska's tin resource could have increased development potential.

OF IDENTIFIED U.S. ATIONAL RESOURCE NTEREST IN ALASKA *	OR CURRENT PRODUCTION	TYPE OF OPERATION LIKELY IN THE FUTURE	OTHER FACTORS
Tungsten	less than 1	Past production	Mines could be open pit, high grade underground or possibly placer operations. All types would require on-site milling. Surface transportation for the mill concentrate would probably be necessary.	Sometimes tungsten occurs as a by-product from gold placer mines.
Fluorine	22	None	Mines would probably be open pit. On-site milling of the ore is required and surface transportation would be needed. (Financing needed for infrastructure costs may allow only large operations to be economically feasible.	Tentative production schemes have been proposed for a large deposit on the Seward Peninsula. However, its development may render the operation not economically feasible at this time.
Asbestos	no data	Insignificant past production.	Mines would probably be open pit operations. On-site milling is required and surface transportation for the mill concentrate would be needed. Asbestos mines will need at least 100 acres tailings, settling ponds, etc.	There has been some question about possible air or water pollution from the mine site resulting from waste fiber.
Molybdenum	3	None	Mines would probably be large open pit operations. The ore requires on-site milling, and the resulting concentarate needs surface transportation. Tidewater operations could utilize barges or ocean freighters.	A major deposit was recently discovered in southeast Alaska that could be developed in the future if environmental and marketing conditions allow.
Mercury	4	Past Production	Mines could be small to medium open pit or high grade underground operations. An on-site "retort" process (heat separation) would be required. Larger operations may also have milling. Retort product might be flown out.	Increased demand for mercury in the near future is in doubt due to industrial conservation efforts. In several decades, demand may increase again.

NERALS OF ATIONAL NTEREST IN	% OF IDENTIFIED U.S. RESOURCE IN ALASKA *	HISTORIC OR CURRENT PRODUCTION	TYPE OF OPERATION LIKELY IN THE FUTURE	OTHER FACTORS
Iron	7	None	Mines could be open pit or placer operations. On-site milling is generally required. The product needs inexpensive surface transportation like ocean freighters or railroad.	Some of Alaska's lode and placer beach deposits are magnetic which makes milling significantly cheaper.
Titanium	no data	None	Titanium would probably be mined as a by-product or co-product with iron near tidewater.	The Bureau of Mines has assessed the titaniferous content of many of Alaska's beach sand deposits and has not found high grade deposits.

*Office of Technological Assessment, 1976. This column reflects only known resources without regard to future potential discoveries.

RENEWABLE RESOURCES

Timber

Approximately 140.2 million acres of Alaska is forested, including 22.5 million acres of coastal forest and 117.7 million acres of interior forest stands. Coastal forests primarily of western hemlock and Sitka spruce with larger trees and higher growth rates are generally more productive than the interior forest types containing aspen, birch, balsam poplar, and black and white spruce in colder, drier climates. Of the 22.5 million acres of coastal forest, 5.6 million acres are considered commercial timber lands (based on annual growth rates of at least 20 cubic feet per acre). Wood volume for this area is estimated at 35 billion cubic feet.

Interior forest types fall into these three broad categories: lowland spruce-hardwood, bottomland spruce-poplar, and upland spruce-hardwood, totalling 117.7 million acres, with varied commercial potential. Existing parks and refuges contain about one percent of these interior forests lands. Existing national forests do not contain any interior forest types.

In 1968, the Forest Service's Alaska Forest Survey determined that 22.4 million acres of the interior forest types are defined as commercial, (based on the 20 cubic feet per acre annual growth), with a volume of 14.2 billion broad feet. This includes 9 billion cubic feet of merchantable trees 5 inches or larger in diameter. In 1976, in a report to Congress, the Forest Service reduced its estimate of commercial interior forest lands to 12.4 million acres. This more recent estimate excluded some forest lands on the basis of relative inaccessibility and high development costs. Bottomland forests along Alaska's major interior rivers often have larger tree size and higher growth rates. About half of these stands will be in State and private ownership. Upland spruce-hardwood stands on good sites on southerly slopes often have good growth rates also. About 36 percent of these upland forests are included in State or private ownership.

Large-scale commercial logging occurs primarily in southeastern Alaska, most of it within the Tongass National Forest, and, secondarily, on the southcentral coastal forest. Besides providing watershed and habitat values, Alaska's timber is utilized to produce pulp, cants, and chips, with a variety of uses. Very little dimensional lumber is produced, although some small mills, including several in the interior, produce house logs for local use. Generally, clearcutting is the only currently economically feasible method of timber harvest in Alaska. Because other U.S. markets for Alaska's resources are relatively remote, other Pacific Rim countries may be more likely to utilize Alaska forest products. Markets for Alaska's timber products are almost entirely foreign, with Japan the leading buyer. The timber industry in the Tongass National Forest is a major contributor to the southeastern local economy.

Tree species similar to those of Alaska's interior forests are found in Scandanavian countries where the harvesting of timber is relatively intensive. However, a generally milder climate and more highly developed social infrastructures presently increase the relative timber potential in Scandanavia.

Of the 117.7 million acres of interior forest land, legislation before Congress has incorporated from 6.2 to 28.5 million acres in proposed new parks and wildlife refuges. Up to 14.9 million acres of interior forest lands may also be included in proposed new national forests. Depending on the extent of new parks and refuges, 49.0 to 71.4 million acres of interior forest land could remain in other Federal classifications where timber harvest might be allowed. Some of this Federal land may be selected by the State of Alaska.

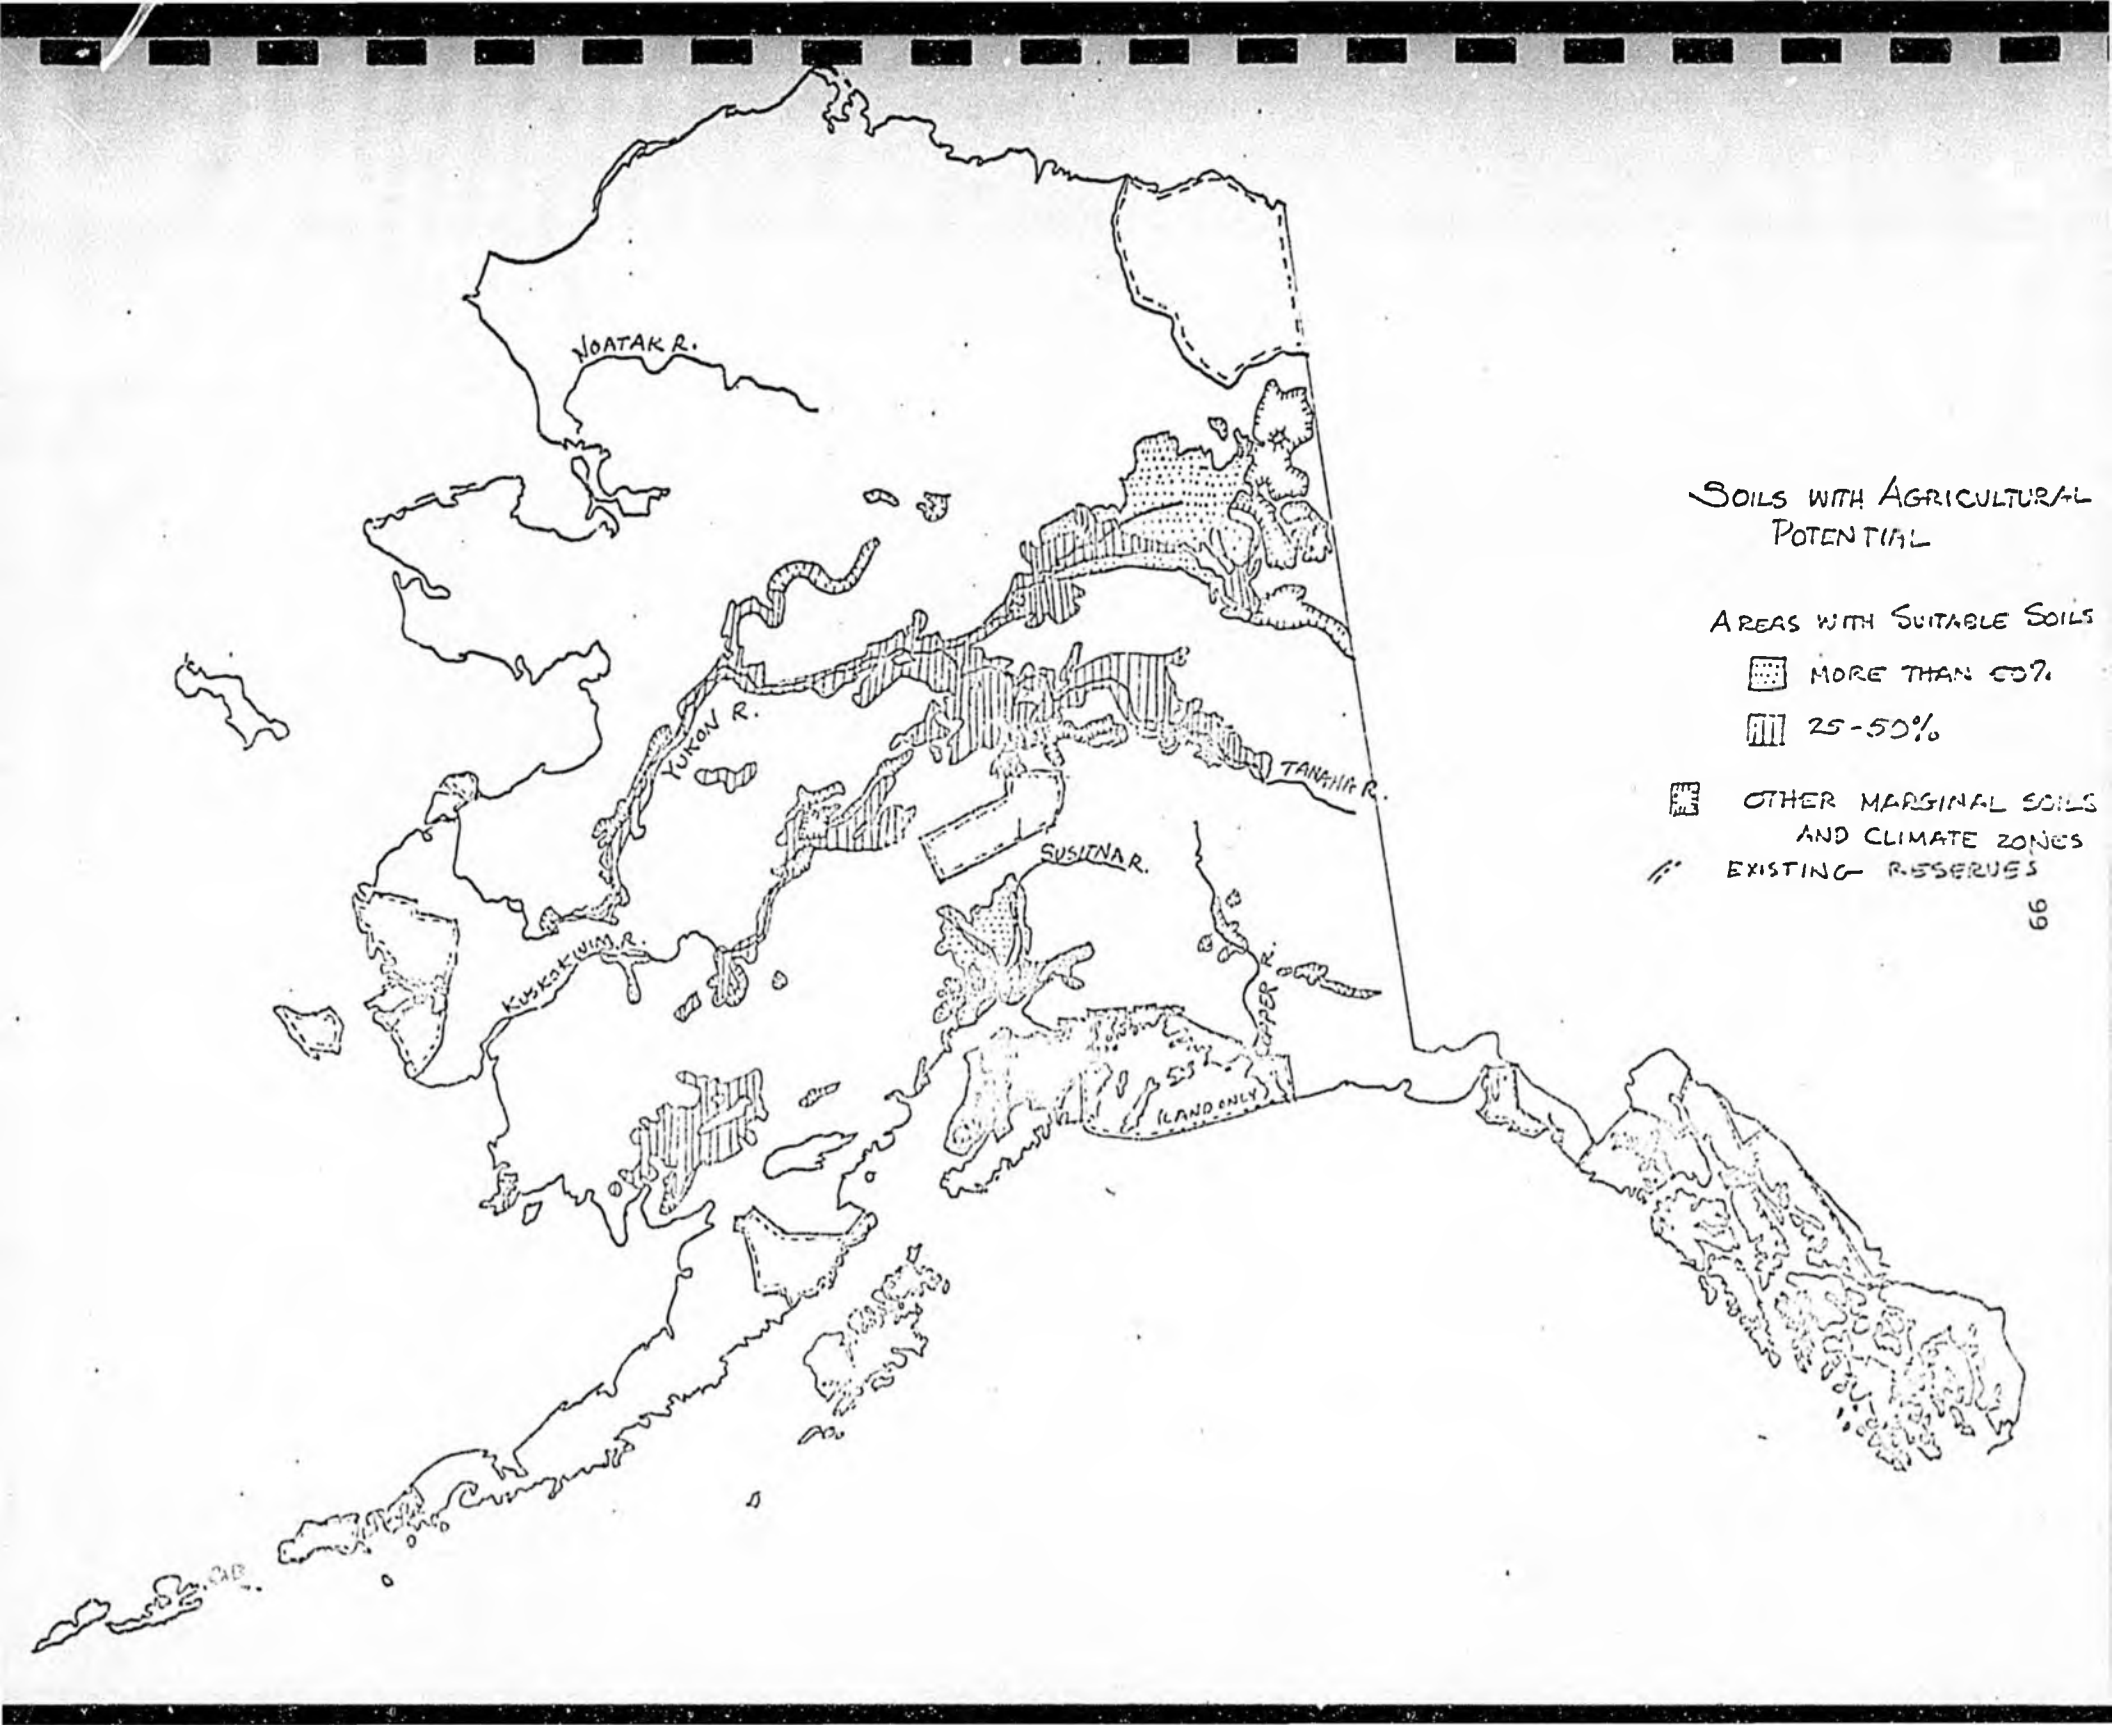
Cultivable Soils

Recent data from the Soil Conservation Service indicates that Alaska may have up to 102.3 million acres of soils with some agricultural potential. However, 81.9 million acres of this is considered poor because of severe soil, temperature, or rainfall limitations which are difficult to overcome and would require special treatment to grow even the hardiest crops.

What remains is 16.7 million acres of good soils and 3.8 million acres of fair soils. "Good" soils are those having few, if any, critical limitations. They can support all of the common Alaskan crops successfully using ordinary management practices. They are at least 18 inches deep, well-drained, and on slopes of less than 7 percent. They have adequate rainfall and are less likely to be subjected to flood, drought, frost, or wind erosion. "Fair" soils have identifiable soil or climate limitations that can be overcome by careful management and special practices. They are at least 10 inches deep, may be subject to short periods of excessive soil moisture during the growing season, and are on slopes of less than 12 percent. They are more likely to be subject to flood, drought, frost, or wind erosion.

The 20.5 million acres of good and fair soils are located primarily in the interior drainages of the Tanana, Yukon, and Kuskokwim Rivers and in the Bristol Bay and Cook Inlet Basins. Over half of the soils with good potential in Alaska occur on lowlands adjacent to the major interior rivers. About one quarter of Alaska's good soils are located in the Yukon Flats.

Soils in Alaska are suitable for growing crops of barley, oats, potatoes, and grasses for hay and silage. Other crops that have been produced successfully on a small-scale or family basis include cabbage, lettuce, carrots, celery, cauliflower, brussel sprouts, broccoli, turnips, peas,



SOILS WITH AGRICULTURAL POTENTIAL

AREAS WITH SUITABLE SOILS

MORE THAN 50%

25-50%

OTHER MARGINAL SOILS AND CLIMATE ZONES

EXISTING RESERVES

strawberries, and raspberries. Tomatoes and cucumbers are grown successfully in greenhouses. Significant agricultural research and experimentation has occurred in Alaska, and a variety of crop strains suitable for northern production have been developed.

At least half of the State's good and fair soils are likely to be divided among State and private landowners in the near future. Units presently within existing national conservation systems have relatively little acreage of cultivable soils.

Alaskan agriculture is currently small-scale and produces for local market only. There are under 75,000 acres of farms, mostly located in the Matanuska-Susitna Valley near Cook Inlet and in the interior Tanana Valley. To date, production and transportation costs have made the produce competitive only in local markets. Unlike most other kinds of natural resource development, agriculture implies permanent settlement and the cost of providing schools, roads, and other community facilities and services.

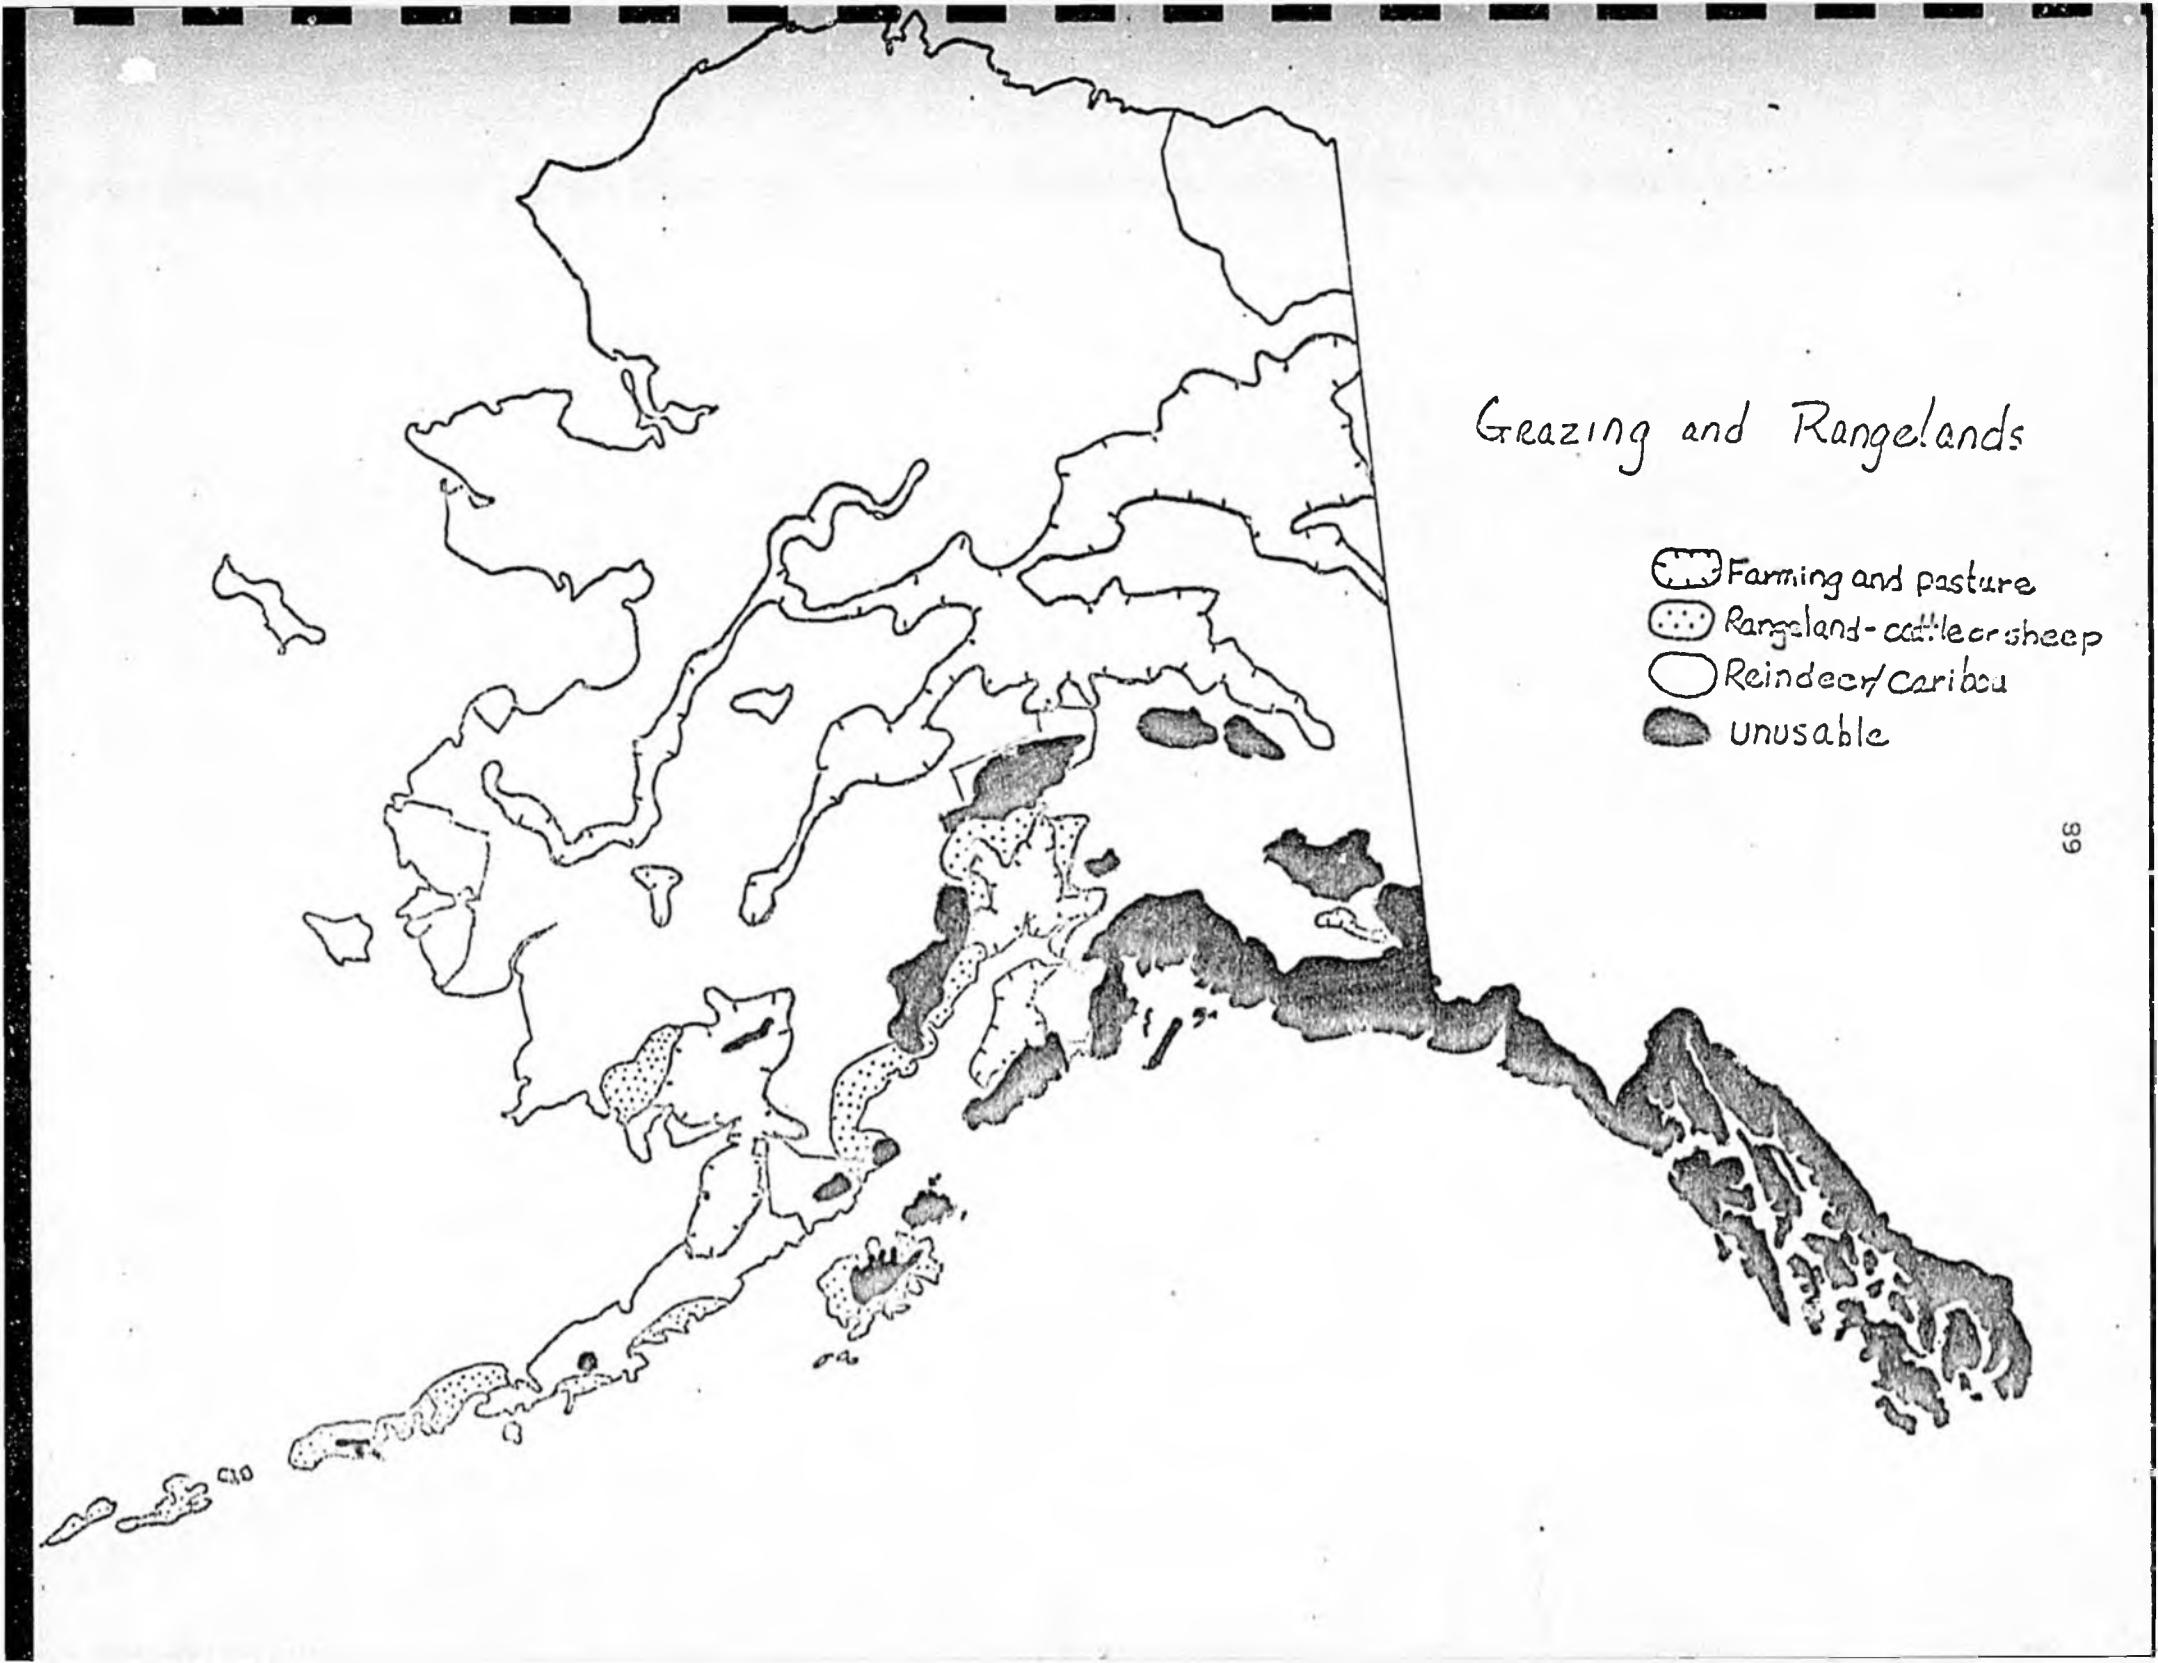
The feasibility of developing some agricultural soils in the future may depend upon flood control and irrigation facilities that could be constructed as part of several proposed hydroelectric projects, especially along the major interior rivers. However, some reservoirs have the potential for inundating large areas of cultivable lowlands.

The range of proposed additions to parks, refuges, and forests contain varying proportions of the potential agricultural soils in Alaska. All of the legislative options would place large portions or all of the Federal lands with good soils in the Yukon Flats within a national wildlife refuge or other classification. Other smaller tracts of cultivable soils found in the State have generally not been included to any significant extent in other proposed parks or refuges.

Lowlands with tillable soils frequently support high density waterfowl and furbearer populations, most notably in the Yukon Flats area which contains 4.7 million acres of good soils.

Rangelands

Alaska has about 18.6 million acres of land that may be suitable for domestic livestock grazing, primarily cattle and sheep. This includes 195,000 acres of good grazing lands principally on Kodiak and the Aleutian Islands where domestic livestock could successfully graze most of the year. The remainder is somewhat limited by a shorter growing season, periods of excessive wetness, or a predominance of less palatable vegetation. Over 20,000 dairy and beef cattle, sheep, goats, and horses are currently grazing on 1.5 million acres. The areas of greatest grazing potential are the Aleutian Islands, Alaska Peninsula, Kodiak Island, and scattered other locations in southcentral and interior Alaska and the Bristol Bay region. The grazing season in interior and



Grazing and Rangelands
Farming and pasture
Rangeland - cattle or sheep
Reindeer/Caribou
Unusable
89

on the coast north of Kodiak is limited to three or four months each year. Supplemental feeding and shelter is necessary during the winter months especially for cattle. Greatest potential would be achieved under a livestock economy with hardy range animals, development of forested grassland in proximity to croplands, and some shelter or controlled environment. Introduction and cultivation of grasses may extend the grazing season to approxmiately seven months. Domestic livestock grazing frequently overlaps wildlife habitat of a variety of species. Expansion of the use of Alaska's potential grazing lands could mean increased predator control, range competition with caribou or moose, and increased potential for wildlife disease.

Sheep in Alaska are raised primarily for wool production. Nearly the entire population of sheep is grazed year-around on Umnak and Unalaska Islands on Federal public domain lands or on private lands. Sheep are generally more self-sufficient than cattle, and are more suitable for the remote Aleutian Islands because they require less meat processing and transportation infrastructures than beef cattle. Sheep generally do not require supplemental winter feeding.

Less than 2 percent of the beef consumed in Alaska is raised in the State. Half of this comes from Kodiak Island, and most of the balance is from dairy cattle in the Matanuska-Susitna Valley near Anchorage. Dairying, which generally requires extensive landholdings, is currently threatened by urban expansion from the Anchorage area. Other areas in interior Alaska and the undeveloped Susitna lowlands could support expansion if they were made available.

Of the 18.6 million acres of potential domestic grazing lands in Alaska, from 3 percent to over half are contained in proposed parks and refuges.

Semidomesticated reindeer and musk-oxen are also raised in the State. Unlike domestic stock, these animals can survive in the harsher climate of northern and western Alaska. Lands suitable for reindeer grazing are present in nearly all lowland and upland areas of the State where wild caribou range. Much of Alaska's potential reindeer grazing lands have been selected by private corporations and the State of Alaska, but large amounts will remain on Federal lands. Currently there are eight to ten herds on several Bering Sea Islands, the Baldwin and Seward Peninsulas, and the Aleutian Islands, totalling 25,000 to 35,000 animals. Reindeer make a significant contribution to the economy of a number of rural Alaskans. Research to determine the commercial value of the hair and meat of the musk-oxen has been underway for several years. Potential musk-oxen range exists on the Seward Peninsula and along the Arctic coastal plain. Proposals before Congress for new parks, wildlife refuges, and forests have included varying amounts of rangelands for semidomesticated animals. In any case, a large portion of Alaska's rangelands will be on State, private, or Federal public domain lands where grazing might be allowed.

Fisheries

Alaska has valuable fisheries, both freshwater and marine. Marine fish and shellfish harvested in Alaska include salmon, halibut, sable fish, pollock, herring, king and tanner crab, and shrimp. Marine and anadromous commercial fisheries in the Gulf of Alaska and Bering Sea are harvested by several Pacific Rim countries prompting several past and current international fishery treaties. Significant foreign take of Alaska salmon and other fisheries has been one of the contributing factors leading to the recent U.S. enactment of a 200-mile fishery jurisdiction zone. Because of increasing number of U.S. and foreign fishing vessels competing for Alaska's marine fisheries, the State has legislatively instituted a limited entry fisheries program.

Commercial fishing is one of Alaska's major industries. In the years 1965-1970, prior to construction of the Alaska oil pipeline, average July employment in the fishing industry accounted for 17 percent of the State's total employment, and 37 percent of the employment in the coastal regions. During 1975, Alaska fisheries contributed nearly 438 million pounds or about 9 percent of the total U.S. catch. Value of the Alaska harvest was $143,836,000 or 14.8 percent of the value assigned to the total U.S. catch. The value of the salmon industry alone has totalled nearly $700 million from 1960 through 1974 with an average of approximately $46 million annually.

Many rural inhabitants depend upon fish as a primary food source to meet their subsistence needs. Some also participate in the commercial harvest of marine waters or major inland rivers. Substantial quantities of salmon, white fish, and other fish are caught for human and sled dog consumption.

Sport fisheries are an important factor in the State's tourism industry. Sport fishing has grown significantly since 1960. License sales have nearly tripled since 1961. In 1973, a statewide survey indicated that a total of 174,278 sport anglers caught an estimated 2.4 million finfish.

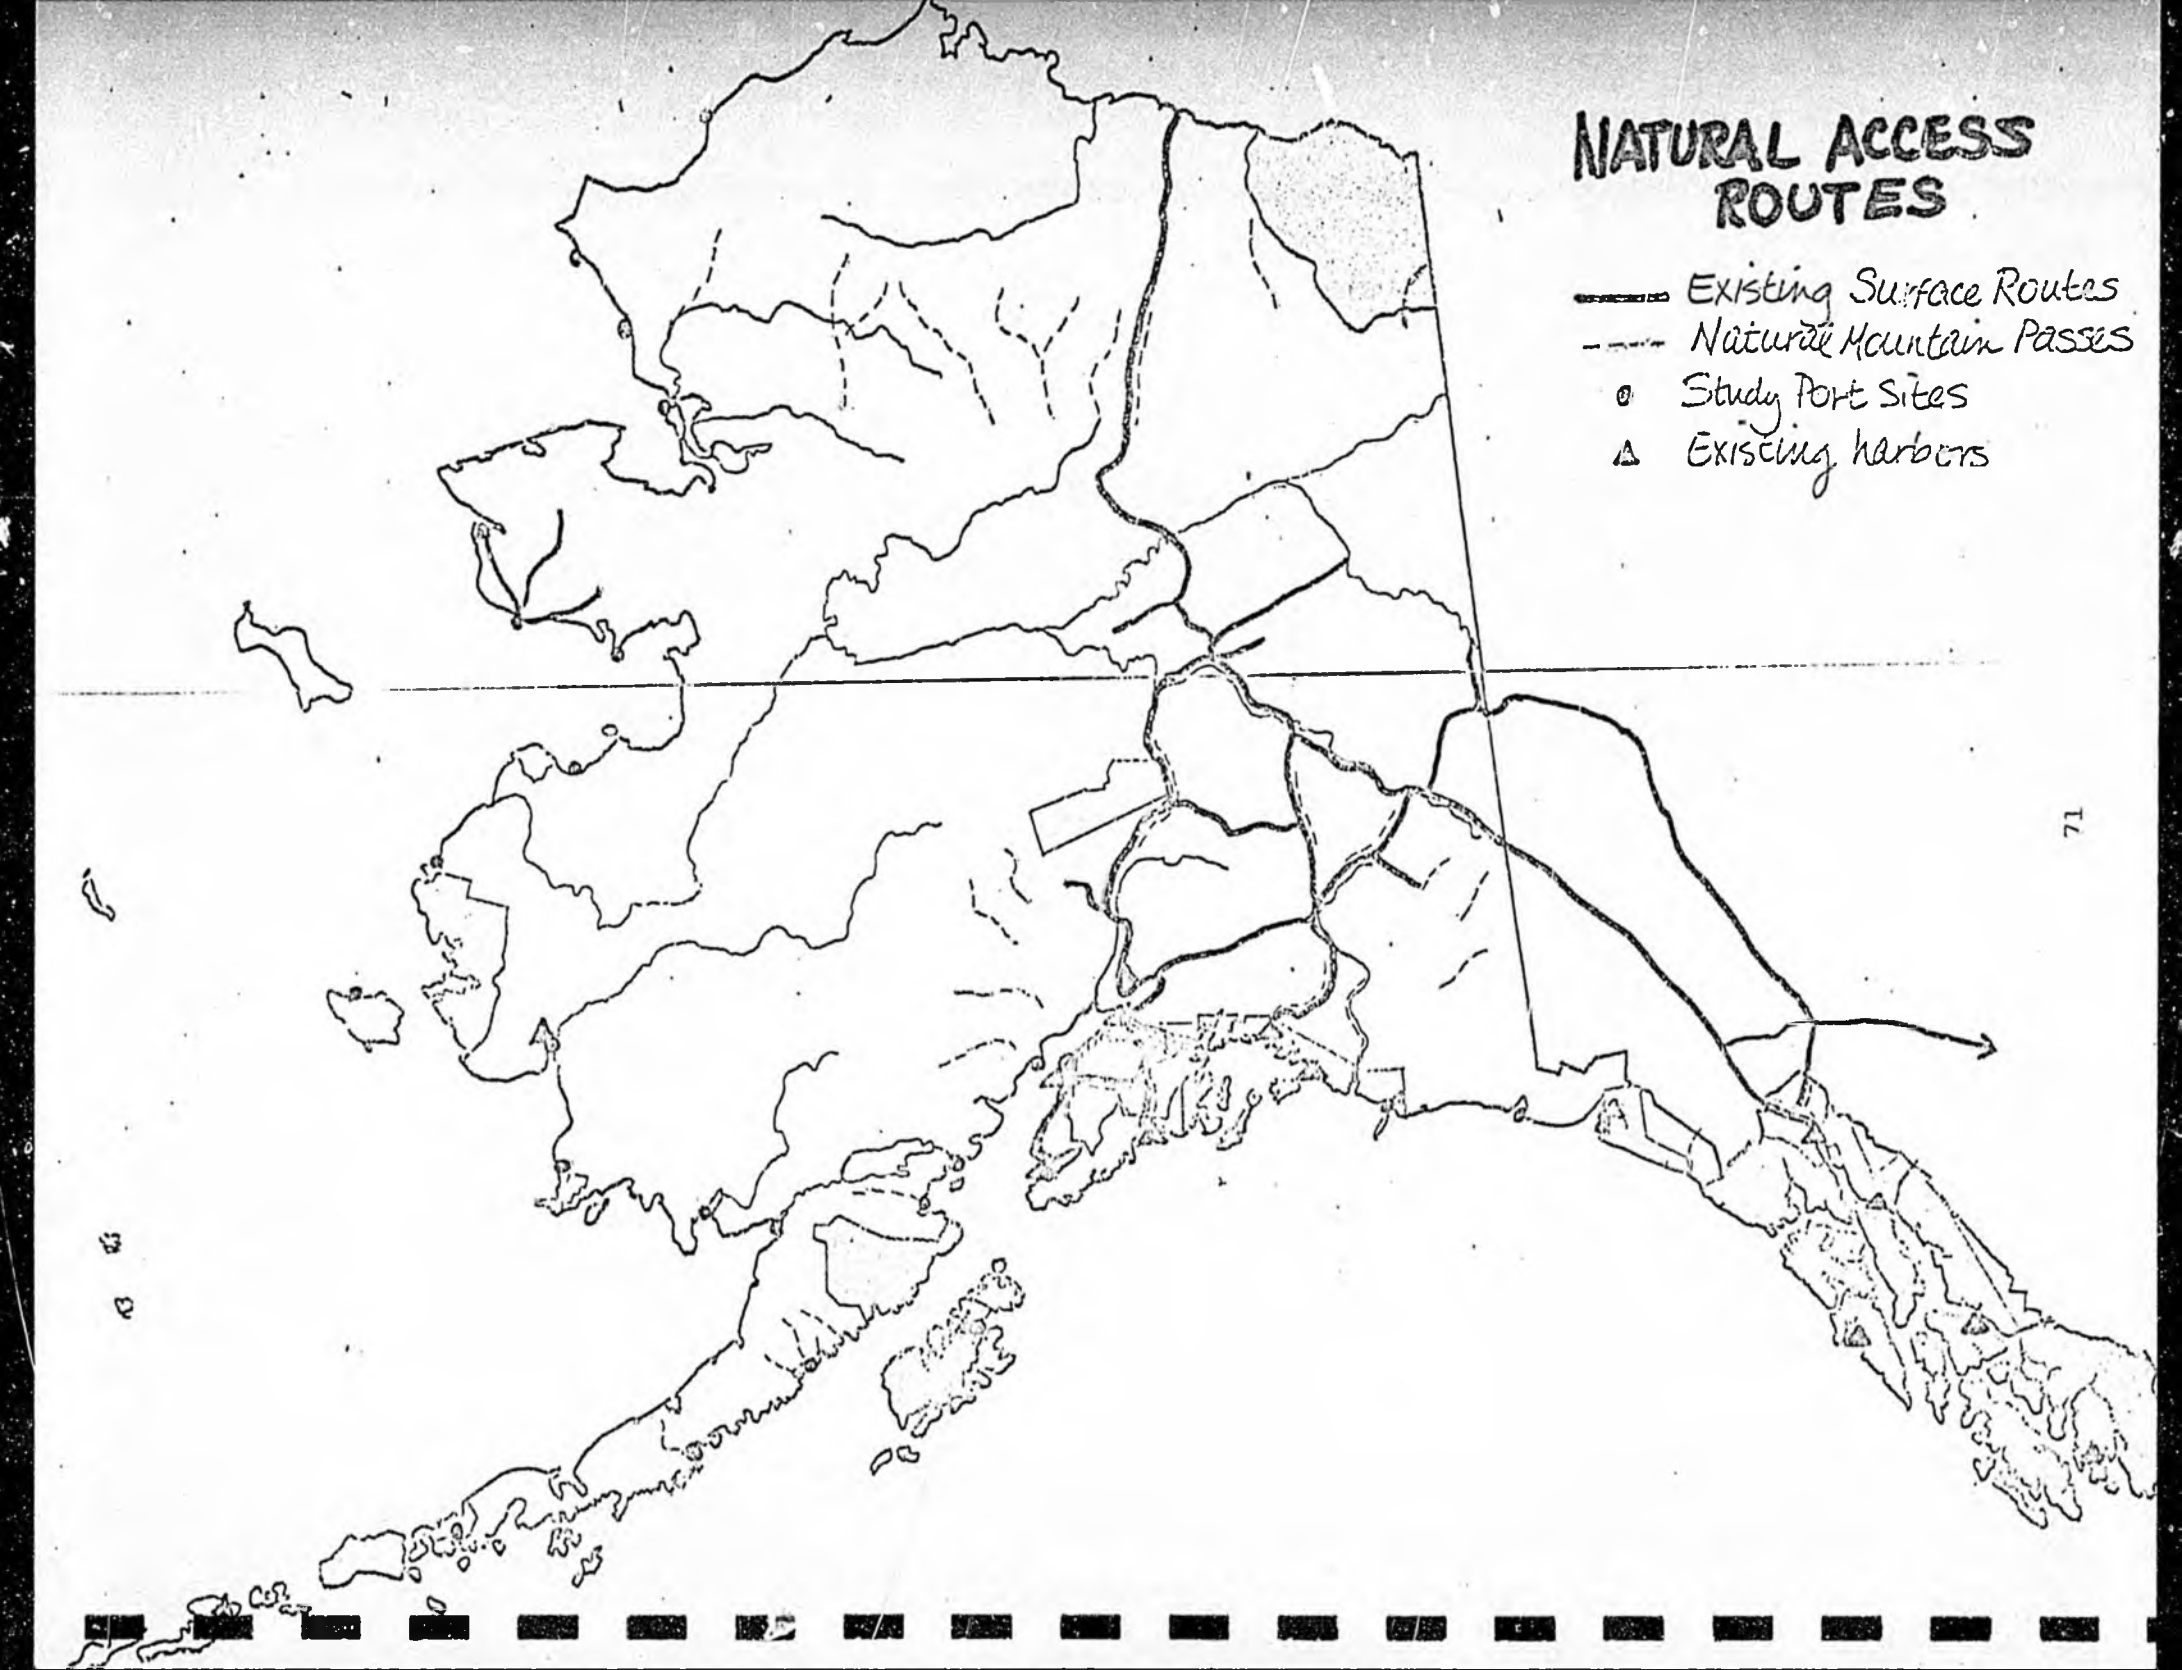
The State of Alaska conducts a fisheries improvement program designed to increase the availability of natural spawning and rearing areas. Artificial rearing of salmon stocks, and proposals for expanded and additional hatchery facilities are also part of the State's program.

Present ownership allocation as well as proposed containment of fisheries habitat in national conservation units are referenced earlier under "Fish". New units of national conservation systems and wilderness designation of some areas could impact State fishery management programs to some degree, particularly in the Bristol Bay regions.

OTHER USES

Natural Access Routes

Natural access refers to those physical features of the State that facilitate surface transportation or offer opportunities for the development



NATURAL ACCESS ROUTES
Existing Surface Routes
Natural Mountain Passes
Study Port Sites
Existing harbors

of transportation facilities. Among these features are major inland waterways for boat and barge travel, protected marine waterways of southeast Alaska and Prince William Sound; natural deep water harbors, numerous lakes and rivers allowing aircraft landings in remote areas, frozen ground and rivers in the winter for some cross-country movement of heavy equipment, mountain passes through major mountain ranges, and major river valleys.

Access to most parts of Alaska is currently achieved by air and water transportation. There is no ground access to western Alaska or the Alaska Peninsula, from the existing road system and only recently has a pipeline construction haul road extended north of the Yukon River to the Arctic region. The existing interconnecting road system is restricted to central Alaska and the northern corner of southeastern Alaska. A marine highway system of ferries operates between larger communities in the interisland-mainland waterways of southeast Alaska and Seattle. Other routes of this State-operated system are in Prince William Sound and between the Kenai Peninsula and Kodiak Island. Major airports or those suitable for larger jet aircraft are scattered at 26 locations. Numerous gravel airstrips are located at most of the 200 or more villages around the State and at mining or other resource development sites. Two railroads operate in the State: , the U.S. Government-owned Alaska Railroad from Seward to Anchorage and Fairbanks; and a Canadian-owned railroad between Skagway--an ocean port, and Whitehorse, Yukon Territory. Barge service operates in the summer on six major rivers and along much of the Alaska coast, and many lesser rivers are traveled by smaller craft.

Certain physical features of Alaska pose barriers to development of surface transportation facilities and routes. Among these are major mountain ranges and glaciers, major rivers and their attendant ice jams and flooding, permafrost, and vast areas of low wetlands. In some cases, natural routes or factors allow ground access through or across such obstacles, while others require certain construction methods. Development of surface facilities over many routes and across major barriers is extremely expensive.

Mountain passes or river corridors through major mountain ranges are limited. Between the southeastern tip of Alaska to Cook Inlet over a 1,000 mile distance, 10 basic natural routes breach the coastal mountains between the Gulf of Alaska and inland areas to the east or north. Roads have been built through four of these routes and railroads through three. Limited water transportation occurs in three others. A single route crosses through the Wrangell Mountains from the Chitina River valley to the White River valley of interior Yukon Territory. Nine natural routes pass through the Alaska Range, a 660-mile barrier across Alaska from the Canadian border to Iliamna Lake. Three routes contain ground transportation and communication facilities. Across the 600-mile-long Brooks Range in northern Alaska, about 10 basic natural routes

pass through the mountains between interior Alaska and the Arctic lowlands. More options exist on the western end of the Range. Anaktuvuk Pass in the center of this range is a historic route for foot and sled-dog travel. A winter haul road was developed over the route with the advent of North Slope oil exploration, however, it is no longer in general use. Atigun Pass, 60 miles east, is now crossed by the trans-Alaska oil pipeline and a gravel haul road constructed to facilitate installation of the pipeline. Alaska Peninsula crossings across the Aleutian Range from suitable harbors along the Pacific coast are limited. Other mountain ranges in the State tend to present fewer barriers to surface crossings.

In contrast with mountain crossings, many natural access routes follow the length of major river valleys. These routes may extend hundreds of miles and provide access to many of Alaska's communities.

Barriers relative to natural deep-water ports are also significant. Where some harbors exist, surrounding terrain excludes or hinders surface connections inland. Few good deep-water areas exist along the western and northern coasts in the relatively shallow waters of the extensive continental shelf. Those present may be extremely important. Seasonal ice pack effects seasonal use of these western and northern ocean waters and may extend as far south in the Bering Sea as the southwestern tip of the Alaska Peninsula.

Though many physical features of Alaska, such as wet lowlands, river crossings, or rough terrain, can be overcome by applied engineering techniques used elsewhere, permafrost soils pose special problems for development of transportation facilities. Large quantities of gravel, which may be limited in some locations, are necessary to overlay the tundra and insulate underlying soils to prevent thawing, subsidence, and erosion. Gravel is often available only in stream beds, and its removal can disturb aquatic habitats.

Most present transportation needs outside central Alaska are met by water and air modes. However, future resource development or land use in remote areas of the State may justify further ground transportation for people, processed goods, raw materials, or transmission of energy or communications. Additional surface facilities between some communities that may be necessary or desirable will cross presently undisturbed areas. Some of these areas are proposed for additions to the national conservation systems.

Proposals for new parks or refuges contain as many as nine and as few as seven of the natural routes through the Brooks Range, possibly all of five routes through the Alaska Range, and as many as three (two already partially used) routes through the Gulf Coast Mountains.

As many as seven major valleys or lowland basins identified as possible future routes by the Bureau of Land Management for transporting energy or other resources in whole or in key portions, are under deliberation for designation as new parks or refuges.

One harbor lying south of Katmai National Monument with potential for use and several possible Alaska Peninsula crossings would be wholly or partly contained within park and refuge proposals. Other suitable harbors along the Pacific coast of the Alaska Peninsula adjoin private lands.

Lands for Community Expansion and Habitation

Most Alaska towns and villages have developed on sea coasts and river banks. All except one are located at elevations below 2,000 feet, and the vast majority below 1,000 feet. The waterways have provided transportation corridors and harbors and ready access to foodstuffs and other resources. Set on low lying coastal lands or river floodplains, built on permafrost soils, or situated in active earthquake zones, many communities are exposed to one or more natural hazards.

Approximately 22.2 million acres of large tracts physically suitable for settlement have been identified in various areas of Alaska. Half of these lands are in Federal ownership, and the other half is divided among the State and private owners. Location rather than physical characteristics, however, appears to be the most important factor in community development. Lands desired for settlement are generally near areas already settled and existing transportation routes. Most such lands in Alaska are in State or private ownership. Foreseeable demands for lands for community expansion and year-round settlement in Alaska will be met by State and private lands. Even in southeastern Alaska which will remain almost entirely in Federal ownership, the State is entitled under the Statehood Act to select 400,000 acres from the Tongass National Forest for "community development and recreation purposes."

Unlike the land market for year-round settlement, demands for lands for seasonal recreational use are more widely dispersed. With the extensive use of small aircraft in Alaska, remote sites unsuitable for year-round habitation are becoming increasingly attractive as recreational property. Many of these sites lie well beyond State and private lands surrounding major population centers and are located on Federal lands. However, substantial land of high recreational value on riverbanks and lakeshores in most regions of Alaska has been selected by the State and private corporations.

As resource development occurs, there will be needs for some degree of settlement in remote locations. In developing certain resources, principally energy resources and minerals, permanent settlement may not be required. With few exceptions, temporary labor forces and facilities will likely satisfy industry's requirements. Agriculture and timber processing, on the other hand, may imply permanent occupancy.

Most lands that may be needed for community settlement are not found in existing or proposed national interest withdrawals, although some areas physically suitable, especially in the Yukon Flats, have been incorporated within proposals now under discussion. The Lake Clark and Lake Iliamna areas and major valleys adjoining the Wrangell Mountains, in particular, are areas of growing recreational use by Alaska's resident population and have been included in some proposals for new national interest reservations. Private or State lands in these areas, however, afford opportunities for recreational settlement.

MAJOR ISSUES AND OPTIONS: GENERAL RECOMMENDATIONS

WHAT MEANS SHOULD BE USED TO PROTECT WILDLIFE, WILDERNESS, AND SCENIC VALUES OF NATIONAL INTEREST IN ALASKA?

The primary decision to be made in assuring protection of natural values of national interest in Alaska is what means--management systems designation, regulations, planning, and study provisions--will be employed. Section 17(d)(2) suggests the inclusion of outstanding natural areas in one of the existing national conservation systems as new national forests, wildlife refuges, parks, or as wild and scenic rivers.

In its deliberations and study over the past 4½ years, the Commission has considered many combinations of management designation for the national interest (d)(2) lands. Before it, as there is now before the Congress, have always been the broad options of placing maximum (d)(2) areas in one or the other of the named management and classification systems; of placing minimum areas in single use systems and relying largely upon Federal and State environmental laws and regulations; or of recommending new management or classification systems.

Before it also were the major problems presented by each option, as well as the probable effect of each option on national, State, and Alaska Native interests. The Commission sought that combination of land management units, managers, and planning and classification systems which would best protect identified wildlife, wilderness, and scenic values, and which would create the fewest or solve the most management and use conflicts.

INCLUSION IN EXISTING FEDERAL CONSERVATION MANAGEMENT AND CLASSIFICATION SYSTEMS

Section 17(d)(2) indicates one of the major courses of action open to the Congress in protecting the national interest in wildlife, wilderness, and scenic values in Alaska. This is to place lands in the named Federal management systems--National Park, Wildlife Refuge, and National Forest--and in an existing Federal classification system, the National Wild and Scenic Rivers System.

The consequences of making what are, in effect, congressional classification decisions on a broad scale may vary depending upon the size, location, and predominant values of the particular (d)(2) units and the management system designated for each. The statewide combination of unit management designations and (d)(2) lands in relation to surrounding State and privately owned lands, particularly those held by Alaska Native corporations, and the consequences of each, have as much variety as there are numbers of management units, managers, and resource demands.

National Parks

By national standards, many of the (d)(2) areas as well as other Alaska lands have qualities that merit their consideration for inclusion in the

National Park System. Those areas of superlative wilderness, wildlife, or scenic value should be identified to focus decisions on designations of new parklands. The concept of a wilderness park, though not unique to Alaska, may be met in Alaska from many lands remaining in a natural state.

In those units designated for management by the National Park Service, use or management conflicts will usually be resolved in favor of the protection of natural, scenic, wildlife, or historical values. Park Service natural areas, exemplified in Alaska by the present Mt. McKinley National Park and Katmai and Glacier Bay National Monuments, are managed to place primary emphasis on the preservation of natural features and systems. Uses such as timber harvesting, mineral prospecting, mining, and the extraction of minerals or the removal of soil, sand, gravel, and rock are prohibited. Hunting is also prohibited, as is livestock grazing. Commercial fishing is sometimes allowed, including at Glacier Bay National Monument. Sport fishing is usually permitted. Transportation corridors and rights-of-way for private or corporate entities may be excluded entirely or require congressional action in natural and historic parks, unless specified upon establishment of the park. Hydropower development is generally precluded in natural areas, although resulting reservoirs are a basis for several recreation acreas in the National Park System elswhere in the Nation.

Recreation areas and national preserves are categories under Park Service management which may allow some uses compatible with the park purpose. In recreation areas, outdoor recreation is recognized as the dominant or primary resource management objective, though degree and kind of use may be affected by natural or historic values. Harvesting of timber, mineral prospecting, and removal of nonleasable minerals under applicable regulations may be permitted if such uses will not significantly impair the values of the area. In recreation areas and preserves, hunting or fishing may also be permitted governed by applicable State laws with Park Service designation of zones and periods during which no hunting or fishing is permitted for reasons of public safety.

Placing maximum acreages in the National Park System under present law and policies--particularly as natural areas or areas which now, or later, may be placed in wilderness classification--will mean foregoing the greatest number of present and potential resource uses of the land, e.g. mining, sport hunting, hunting for subsistence purposes, grazing, farming, and timber production. Placing maximum acreages in the National Park System in national recreation or national preserve categories may not totally preclude these uses, but maximum regulation would result. It will be difficult, without congressional action, to provide surface transportation corridors through park units, regardless of category.

Additional Federal control of wildlife, including resident species, would result. Large areas of wilderness, by law or management policy, are likely. Fewer areas would be open for sport hunting, even in national

recreation or national preserve categories. And, it is likely that two groups of Alaska visitors would be deterred to some degree by choosing the option of maximum acreages in the National Park System--visitors seeking wilderness hunting experiences if new parks largely preclude hunting, and visitors requiring modern visitor accommodation or desiring mechanized travel into remote scenic areas. National Park Service's long history of meeting visitor needs may raise expectations for services inconsistent with wilderness preservation.

National parks immediately adjoining privately owned lands or lands belonging to the State of Alaska may enhance the value of those adjoining lands for some purposes, such as for the provision of visitor or intensive use recreational facilities. Indirect effects on other lands also need to be considered. Among these "off-site" consequences of national park designation may be the application of air and water quality standards automatically assigned to or sought for parklands under present provisions of the Clean Air Act and may inhibit resource development activities on adjoining Federal, State, or privately owned lands.

At the same time that creation of extensive new parks, followed by wilderness classification, may provide the highest degree of protection for wilderness, wildlife and scenic values, this option may also create more conflicts with other resource needs of Federal lands to meet national needs for energy and other minerals, and may also create the most conflict with the use of lands in State, Native corporate, and other private ownership.

Wildlife Refuges

Through congressional action, several species of wildlife are protected by Federal regulation through such laws as the Endangered Species Act, the Migratory Bird Treaty Act, and the Marine Mammal Act. Much of Alaska's wildlife, however, are resident species traditionally under the management of the State of Alaska with the Federal Government maintaining responsibility on Federal lands for the protection of the habitat. Habitat management varies somewhat with the system and agency. National Park Service management is generally more passive, allowing natural processes to make the successional changes in habitat except where restoration or maintenance is achieved through prescribed burning. The Fish and Wildlife Service and Forest Service have active habitat manipulation programs in some areas applying a variety of tools. However, the largest part of wildlife refuge and forest acreage is not manipulated and directly managed only through protection measures.

The Wildlife Refuge System is maintained "for the fundamental purpose of wildlife conservation and rehabilitation." Refuges are established for the restoration, preservation, and management of wildlife and wildlands habitat; and for the protection and preservation of endangered or threatened species and their habitat. Only those uses which are compatible with the primary purpose are allowable by permit of the Secretary of the Interior. The Secretary may permit hunting, fishing, public recreation and accommodations, and access and easements for powerlines, pipelines,

and roads, whenever he determines that they are compatible with the refuge's purpose. In theory, the uses may include mineral location, leasing, exploration, and development, but, these practices are seldom allowed. The 20-year record, in Alaska, of the Swanson River and Beaver Creek oil and gas fields in the Kenai National Moose Range point to the ability of the Service to allow oil and gas leasing under strict environmental control.

The Federal-State relationship with respect to management of resident game species is a major issue. Although refuge lands opened to hunting are governed by the laws and regulations of the State, the Federal refuge manager has the authority to deny access to the refuge or to specify the mode of access. The refuge manager also has the authority to impose more strict, but not more liberal, regulation than that imposed by the State for the taking of fish and game resources from the refuge. This dual authority for fish and game management, coupled with the interdependent nature of habitat and species management, will require a high degree of Federal-State cooperation, if the wildlife which is counted as one of Alaska's greatest resources is to be protected.

Because of the arctic nature of much of Alaska, upland grazing mammals must range over many acres to sustain life. The large caribou herds of Alaska are extremely migratory. Many of Alaska's major caribou herds annually cross State and Native-owned lands, as well as areas within existing and proposed national interest withdrawals. There are numerous similar examples of State, Federal, and Native areas that together provide habitat for specific groups of migratory wildlife.

Because of the location of most proposed refuges in lowland areas where many predominantly Native villages are located, heavy reliance may be placed on the game stocks of the proposed refuge to meet subsistence needs. Proposed refuges may be traversed by navigable streams and contain navigable lakes where the State holds subsurface title to the submerged lands.

The physiographic concurrence in many instances of potential oil and gas basins within areas of high density waterfowl habitat, prompts a close look at the allowance of this use in new refuges, and may require from Congress explicit direction to the Service to open certain areas of high petroleum potential to oil and gas exploration and leasing. (An effect on State and Native interests of placing maximum acreages within the Wildlife Refuge System may be that revenues from oil and gas leasing on Federal lands will not be distributed under the Mineral Leasing Act. The Mineral Leasing Act, as amended by the Alaska Statehood Act and the Alaska Native Claims Settlement Act, provides for payment of 2 percent of revenues from these uses to Alaska Native corporations and 90 percent of the 98 percent remaining to the State of Alaska. Law pertaining to the The Wildlife Refuge System, U.S.C. Title 16, § 715s, however, provides for payment of only 25 percent to local governments and the balance in a dedicated fund for refuge management.)

The major "off-site" consequence for the use of other Federal, State, and privately owned lands adjoining or near wildlife refuges may not only be the application of air and water quality standards, but also the application of the so-called reserve water right doctrine to Federal reserves, which reserves to a refuge, for example, all waters necessary for refuge purposes. Since many proposed refuges are identified for their migratory and shorebird breeding and nesting characteristics, this doctrine may have future long-range effect on uses of adjoining lands requiring quantities of water.

Refuges to some degree have a built-in conflict between wilderness preservation and other allowable resource management. While most of a refuge may be found suitable for wilderness designation, portions may be excluded from wilderness recommendations to accommodate certain kinds of habitat manipulation, as well as possible development of renewable and nonrenewable resources.

Maximum refuge designations raise access and transportation corridor conflicts similar to those raised by maximum park designation.

National Forests

Lands with timber and range value, attendant wildlife habitat, recreational, primitive, watershed, and other values may be placed under the management of the Forest Service in the Department of Agriculture. The Forest Service has primary responsibility for the protection and development of the Nation's forestry resources. With its research mission, particularly in silviculture, the Forest Service has developed a particular set of expertise not only in timber management, but in the management of lands to meet multiple-use demands. The Forest Service permits, with regulation, timber cutting, grazing, mining, hunting, fishing, and trapping, in addition to general outdoor recreation activities, and has broad authority for classification of land areas of special interest for scenic, geological, historical, botanical, and zoological values.

Fewer use conflicts are seemingly presented by large acreages under Forest Service management because multiple uses are allowed. The competition among uses of national forest lands, however, is growing stronger with increasing demand for wilderness and recreation uses and habitat concerns. Protection of natural values in national forests may be enhanced by the recent adoption of long-range standards by the Service under the Forest and Rangeland Renewable Resources Planning Act and emphasis on environmental assessment of agency decisions and adoption of a public process of determining allowable uses.

Also serving to reduce conflicts with adjoining landholders, this Service with a long history of multiple use and sustained yield direction, has had extensive contact with local residents and has delegated considerable decision-making authority to its local officers.

Transportation corridors, hydroelectric development, and mining activities may be more readily allowed on national forest lands than on either park

or wildlife refuge lands. Like the Wildlife Refuge System, the National Forest System provides habitat management with hunting and fishing governed by applicable law and regulations of the State. As a means of coordinating Federal-State management, Sikes Act agreements have been signed by the U.S. Forest Service and the State of Alaska. Sikes Act agreements are valuable tools for the coordination of habitat and fish and game management activities, but fall short of the comprehensive coordinated Federal-State planning and management which may be required in some areas.

Wild and Scenic Rivers System

Alaska's rivers, as discussed in the preceding section, are widely relied upon for access and transport. Access to many regions of the State is only by air or water. Rivers in many instances are the only means for transport of supplies and provide the readiest access to foodstuffs and other natural resources on adjoining lands. While most Alaska rivers remain largely undisturbed, uses of them are of significant and often singular importance.

The Wild and Scenic Rivers System is a congressional classification established in 1968. As designation of a wilderness area under the Wilderness Act does not change the proprietorship of the area, neither does designation of a wild and scenic river in many cases. It does establish certain controls on riverfront development and use, however. All rivers in the national system must be substantially free flowing, have high quality water, and be of sufficient length to provide a meaningful experience for the river traveler. Regulation and management of rivers in the system vary somewhat depending on which of three categories--wild, scenic, or recreation--are applied, and the agency assigned to administer the river.

Wild rivers are essentially in a primitive state and inaccessible except by trail. They are free of impoundments, with watersheds or shorelines essentially primitive and waters unpolluted. Scenic rivers, or sections of rivers, are free of impoundments, with shorelines and watersheds still largely primitive and undeveloped, but accessible in places by roads. Recreational rivers are readily accessible by road or railroad, may have some development along their shorelines, and may have undergone some impoundment or diversion in the past.

Any use, such as hydroelectric projects which would change the free-flowing characteristic of the river, would be precluded; and depending upon the management system of surrounding lands or the river category, hunting or mining may be denied on the river corridors designated. Even within larger management units which allow mining and the acquisition of title under the 1892 Mining Act, some restriction may be placed on the mining operation by classification of the river as a part of the Wild and Scenic River System. For instance, the issuance of a patent to any mining claim affecting lands within the system confers title only to the mineral deposits and such rights to the use of only those surface resources

that are reasonably required for carrying on prospecting or mining operations. Minerals in lands which constitute the bed or bank or are situated within any river designated as a wild river will be withdrawn, subject to valid existing rights, from all forms of appropriation under the mining laws and from operation of the mineral leasing laws. No such withdrawals are made in scenic or recreational river areas, but safeguards against pollution of the river and unnecessary impairment of the scenery within the area are provided for by strict regulation even where mining is allowed.

With almost all of Alaska's rivers meeting the criteria for designation as units of the Wild and Scenic Rivers System, Commission review was on a statewide basis to assure that representative rivers were considered. Of chief concern to Alaska residents has been possible restrictions of this classification upon hunting, fishing, and other subsistence activities, as well as the use of the rivers for transport.

Wilderness System

The Wilderness Act of 1964 provides the statutory basis for study and designation of wilderness. The Act gives general definitions and guidelines for identifying candidate areas and for their management once designated as wilderness. Nearly all Federal lands may now be subject to review as potential wilderness study areas. Wilderness study normally includes mineral reconnaissance and assessment with the submission of findings to Congress by the President and congressional designation. Lands to be presented for wilderness status must be undeveloped Federal land of no less than 5,000 roadless acres. This criteria would apply to much of Alaska.

Subject to prior existing rights, policies for wilderness areas are determined by management principles of the administering agency, and, except as otherwise provided, there are no roads, motorized access, permanent structure, or commercial enterprises. Where already established, use of aircraft and motorboats may continue; and fire, insect, and disease control may be undertaken. State and private lands within wilderness are guaranteed rights to customary modes of access. Water development projects may be permitted on national forest wilderness. During the wilderness study period, uses may be restricted pending congressional designation.

Wilderness classification may create many of the same use and management conflicts cited in the previous discussion on National Park and Wildlife Refuge Systems, particularly with respect to access or transportation corridors or means through areas classified as, or under study for wilderness. Recreation of certain kinds, subsistence activities, oil and gas and other mineral exploration and development, might be precluded or made impractical, or less easy, by preclusion of roads or exclusion of motorized vehicles.

DESIGNATIONS IN OTHER EXISTING FEDERAL LAND MANAGEMENT SYSTEMS

National Resource Lands

Congress has the option of designating minimum new units of existing National Park, Wildlife Refuge, and National Forest management systems and Wild and Scenic Rivers and Wilderness classification systems. Federal lands in Alaska not included in one of the conservation management systems would then revert to the (d)(1) category for classification and management by the Bureau of Land Management along with other (d)(1) lands.

Remaining State land entitlement of approximately 33-35 million acres must be met from the (d)(1) or (d)(2) lands.

After proper classification, some other lands could be classified to permit transfer out of Federal ownership. Claims to certain lands could be made under the 1872 Mining Law, the Homestead Act, or other public land laws. The Bureau of Land Management also has interim managing authority at present over the (d)(2) lands, lands selected by, but not yet conveyed to Native corporations, and surface management of National Petroleum Reserve-Alaska.

The recently passed Federal Land Policy and Management Act of 1976 confirms BLM management on the basis of "multiple use and sustained yield," unless otherwise specified by law. General policy articulated in the Act also directs retention in Federal ownership in most instances. However, the homestead laws, for example, continue to apply in Alaska for 10 years, while they have been repealed for the rest of the Nation. Mining on BLM lands is conducted under the 1872 Mining Law, and hunting is allowed with seasons, bag limits, methods, and means of harvest set by the Alaska Department of Fish and Game. BLM's new organic act gives this agency enforcement and closure authority on lands under its jurisdiction. Lands under BLM management are now eligible for study and classification as wilderness under the Wilderness Act, as are rivers eligible for nomination under the Wild and Scenic Rivers Act. Other classifications in recognition of natural features and recreation sites may also be made.

Like the forest lands, national resource lands under BLM management would permit a variety of uses with fewer use conflicts, but would present greater difficulties in the protection of wildlife, wilderness, and scenic and other natural values.

CREATION OF NEW CLASSIFICATION AND/OR MANAGEMENT SYSTEMS

A new management system

One option available as an alternative to existing management and classification systems is to restructure an existing agency, create a new Federal agency, or even a joint Federal-State agency with classification and management responsibilities for lands now withdrawn under Section 17(d)(2). Through the establishment of such an agency it would be possible to reduce some duplication of effort and expertise in Federal land management. But the diversity of Alaska's Federal lands, the values they contain, and the variety of public interests, are such that within such a management structure it would soon be necessary to develop divisions serving many of the same purposes and needs now met by the existing Federal land managing agencies. Many land units would be singled out for management and protection of dominant values.

The chief benefit from the establishment of an Alaska Office of Land Management would be its ability to tailor standards, criteria and regulations to the unique size and predominantly wild character of Alaska's lands. Alaska seldom fits national standards and criteria. As has been noted much of Alaska could qualify as wilderness under the Wilderness Act; most of its rivers qualify as wild or scenic rivers; most of its lands qualify for inclusion in conservation management systems.

Certain problems may result from removing Federal land management in Alaska from the mainstream of r ional policy making and funding. There would also be a time lag for such an agency to become functional, to say nothing of the necessity to test its regulations and decisions through the courts. A further detriment might also be the tendency to give a one-dimensional across-the-board treatment to a variety of lands and resources.

A new classification system

A new means of classification could be instituted without necessarily establishing a corresponding new management authority. Classification actions could be implemented by an existing land management agency. The presence of numerous State and private inholdings in areas of nationally important scenic and wildlife values and the ecological relationship of Federal lands to adjoining State and private lands are not easily considered in existing classification systems where the State does not participate. Current classification of Federal lands may have no correlation to classification of State lands of similar character, and Federal, as well as State, land management objectives may be frustrated, as a result. Joint Federal-State classification of some land areas is, therefore, an option to be considered.

PROTECTION OF NATURAL AND HISTORIC VALUES ON LANDS NOT FEDERALLY OWNED:

The Federal Government has options through which it can achieve certain interests or carry out preservation programs on lands not in its ownership or jurisdiction.

Cooperative Programs and Agreements

Many acts provide for cooperation between the Federal and State governments in wildlife protection, restoration, and management. Some make funds available to the States, transfer certain authorities to manage some wildlife species such as marine mammals, and encourage private landowners to maintain wildlife habitat. One of the most recent is the Sikes Act which provides for expanded cooperative Federal-State wildlife programs on national forests, national resource lands, and military reservations, with federal funds helping support such cooperative endeavors. While some of these programs are clearly mandated by law, others involve voluntary cooperative agreements, which may be limited in scope and duration, and may change depending upon the dispositions of new unit managers or bureau directors. There are many cooperative agreements between Federal agencies and often between Federal and State agencies usually dealing with a single subject matter or a single geographic area.

Two Federal programs are concerned with identification of natural areas and historic sites of national significance. National Natural Landmarks and National Historic Landmarks are generally identified regardless of their location or ownership. The administrators or owners of designated sites are encouraged to manage the areas in a manner that preserves the qualities identified in the site. Federal funds may be applied in part towards preservation of historic sites. Landmarks are also afforded certain means of protection from federally funded projects such as a road which might have adverse impact on a site. Long term protection is dependent on the owner or administrator who may decide to use the area or site in a manner that would degrade or destroy the landmark values.

Another option of broad involvement with respect to Federal interests is through cooperative planning and management. This can be applied to specific areas, adjoining national parks or wildlife refuges, or other Federal reserves that contain a mix of land ownership or interests. In certain instances, broader areas, regions, and subregions are specified for cooperative planning and management.

Boundaries for such cooperative planning and management areas that may involve several State and Federal agencies and interests, borough governments, and the private sector, can be established legislatively or by the executive branch.

In some instances the flexibility implicit in such arrangements involving negotiations toward the accommodation of all interests may jeopardize the goals of single or primary purpose withdrawals or unduly restrict certain land uses.

Land exchanges

Areas of high scenic, primitive, or wildlife values integrally related to existing or proposed park and wildlife refuge units have been selected by the State or Alaska Natives. For those areas perceived to have long lasting values to the Nation, an available option is to consider land exchanges. Such exchanges could take place in the general vicinity of the area in question or could be far removed involving Federal lands elsewhere in the State. With respect to Native corporation lands, exchanges for new lands in other Native corporation regions of the State may be affected by certain factors. For example, an exchange area close to corporate selections by another regional corporation might influence the development opportunities for a particular resource. This could be a positive or negative impact in some cases. With respect to State lands, new substitute State lands might be removed from a zone of greater State interests.

Proximity of land areas to national park or wildlife refuges may enhance or diminish the value of such lands to State or private owners, depending on their character and location. Other lands in Federal ownership may have more real value to State and private owners for resource development and revenue generation purposes. On the other hand, adjoining lands may afford opportunities for more intensive recreational use and development of facilities than allowed in the parks and refuges and be of potential profit to the State and private owners.

Another option raised with respect to State selected lands that have not yet been patented in certain areas of high natural values is for the Congress to revoke these selections if this can legally be done. The State also has an option of relinquishing certain selections if it wishes. This course may only be taken if the State is assured of selection rights in areas of particular interest to the State.

Joint Classification Areas

Within the existing land ownership pattern in Alaska, two general situations emerge relative to national interests in natural values. Large blocks of federally owned land exist with known natural values and renewable surface resources but largely unknown subsurface values. On the other hand are areas of mixed land ownerships adjoining existing or proposed key park or wildlife refuge lands which may have in addition to natural values meriting Federal protection, developable resources of Federal, State, or private interest. Each government manager or owner using its own classification system might classify lands in an incompatible manner.

Without regional governments in much of rural Alaska, there has not been time to formulate coordinating mechanisms on a regional level. Thus, there is need of a coordinative body in which Federal and State governments fully participate, both at a Federal and State level.

An option available relative to these factors where there is high Federal interest in scenic, primitive, wildlife, or other related values, but where there is State interest or concern for other uses or values, is to establish a joint land use classification area with classification participation by both governments. The joint classification area concept can be applied singly to either Federal or State land units or to areas of combinations of Federal and State lands and even private lands, on a voluntary basis. Using a single classification system, environmental protection, resource development, transportation needs and other interests would be worked out to protect various interests to the extent possible. This could be accomplished through a separate joint planning and classification mechanism or through an effort involving the Federal and State land managers.

Joint classification areas could be administratively or legislatively established. Complementary legislation by the Congress and State legislature may be appropriate. Veto power could be provided for the Federal and State governments regarding classification on respective lands if felt improper. Administration of lands within joint classification areas could be assigned to a Federal or State agency managing an adjoining large reserve, or the Federal and State governments could administer their respective lands assigning preferred agencies.

State Area Designations

Several areas of scenic or other natural values of national significance have been selected by the State of Alaska as part of its general land entitlement under the Statehood Act. The State can designate such areas for protection of their natural values as State parks or wildlife sanctuaries or classify them as critical habitat. Areas already designated and classified in these protective categories are shown on the accompanying map, and others have been proposed.

Two particular national programs which allow for the incorporation of State-owned areas of administered in national systems are the National Wild and Scenic Rivers Systems and the National Trails System. Certain wildlife habitat, scenic, and recreational areas designated by the State adjoin existing or proposed national parks and refuges. Their management can complement that of the Federal reserves. For example, a State park adjoining a national wilderness park may afford opportunities for visitor accommodation and intensive recreational uses that are not compatible with wilderness. State tideland and submerged land areas of significant habitat have been designated in some instances adjacent to national wildlife refuges to complement the values of the Federal reserve.

Existing Regulations

Several Federal laws and regulations apply to State as well as Federal lands and act to protect and preserve environmental values. Provisions of the Coastal Zone Management Act, and those pertaining to clean air, water quality, and solid waste management are particularly significant. While these laws help protect certain natural values, they do not altogether govern or control certain land uses so as to maintain primitive values, restrain development from critical or significant habitats, or prevent degradation of scenic values.

Application of certain air or water quality standards to classes of Federal reserves such as parks may have impact on adjoining lands. Stringent standards may require any resource development activity to institute pollution batement systems and increase costs to industry on State and Native-owned lands.

GENERAL RECOMMENDATIONS

Systems Designations

The Commission found that application of existing classifications and management systems to some of Alaska's lands had merit where there was a clear and outstanding value to be protected or managed by the system. But the Commission also determined that there are circumstances and conditions over many of Alaska's lands that indicated a need for a combination of a high degree of environmental protection and flexible land classification over time in response to new knowledge and changing needs. To provide a consistent basis for designating lands for different systems and classifications the Commission adopted the policies set fourth below.

Additions to National Parks, Refuges, and Forests

With respect to additions to areas already in national parks, wildlife refuges, and forests in Alaska, the Commission believes they should be made for the purpose of including lands with complementary resource values or completing or enhancing ecosystems or other natural features and otherwise improving unit boundaries for administrative purposes. This involves such areas as upper portions of watersheds, uncontained sections of significant scenic or geologic features, the remainder or addition of an important habitat, lands on both sides of a river, lands perceived to complete an ecosystem for an animal species or complex of wildlife, or inclusion of particular lands for recreation purposes.

New Units of Existing National Land Systems

New units in the National Park, Wildlife Refuge, or National Forest System should be established in Alaska only in those areas which have outstanding values appropriate for management by that system. Commission

criteria for the determination of the appropriateness of an area for management under an existing system are listed as follows:

National Wildlife Refuge System:

(1) The basic criteria is assigning land to the National Wildlife Refuge System should be a finding that the lands are a key part of a national network of lands and waters associated with wildlife, particularly migratory birds and endangered species.

(2) In addition, recommended areas for new refuges in Alaska should be oriented primarily towards migratory bird habitat, particularly waterfowl and shorebirds, with emphasis on endangered species. Unit boundaries generally shall encompass the highest density nesting areas and other key migratory bird habitat. If much of the high density waterfowl habitat found in a proposed area is to be transferred to Native corporations, medium density habitat can be included to help offset in part some possible future habitat loss on the private lands for the general area.

(3) Uplands habitats added to the National Wildlife Refuge System should be limited primarily to additions to those existing national wildlife refuges and ranges in Alaska that were initially reserved for protection of upland game species. This policy is based on a Commission finding that diversity of upland wildlife and habitat is already well represented in existing national wildlife refuges and ranges.

National Park System:

Recommended units for the National Park System should include areas of superb scenery; superlative, exemplary, rare or unique natural features; archaeological or historical sites, buildings, or objects of exceptional value or quality; or recreational opportunities of national value.

National Forests:

National forests exist to protect and conserve forests, rangelands, and watersheds. Values within these areas that are planned and managed for are recreation, wilderness, wildlife and fish, range, timber, land and water values, and the needs the areas meet for human and community development through natural resource management activities. New forest units should contain some or all of these elements and be in locations where they can best serve national needs for these values.

Institutional Recommendations

The Commission recommends that Congress adopt the following approach in addressing wilderness and wild and scenic river designations in the (d)(2) legislation:

Wilderness

A comprehensive preliminary assessment to determine areas of prime wilderness potential is particularly necessary in Alaska where nearly all of the Federal lands meet the national study criterion of at least 5,000 roadless areas. Proposed areas should be evaluated in a statewide context. Individual proposals should be evaluated as they relate to other existing and potential wilderness areas throughout the State. The goal should be a wilderness system that includes a range of environments and is rationally distributed around the State.

New units and additions to the National Park, Wildlife Refuge, and Forest Systems should be studied to determine their suitability for wilderness designation within three years of the establishment. This recommendation is in accordance with congressional practices in other new areas established and studied in recent years.

Lands which may be classified under a new system should be studied to determine their suitability for wilderness designations prior to classification.

Wild and Scenic Rivers

From the many candidate rivers in the State meeting wild, scenic, or recreational river criteria previously established, the Commission has selected entire, mainstreams, or segments of over 50 rivers for which it makes recommendations. These rivers were selected on the basis of developing an initial statewide system of protected rivers of differing characteristics in the various natural regions of Alaska. In addition to a free-flowing provision for rivers and possession of various natural, historic, and recreational attributes, other factors were considered by the Commission in its selections. These included approaching identification and selection on a statewide basis, provision in the National Wild and Scenic Rivers Act for inclusion of State owned, designated and administered rivers; inclusion of some rivers with potentially complex land ownership problems, but considered to be of prime value and public interest; study and positive evaluation by the Bureau of Outdoor Recreation and others; and that many other suitable rivers presently exist in Alaska for future study and consideration.

Four categories of river recommendations are made by the Commission at this time.

1. Rivers primarily on Federal lands recommended for immediate designation.

2. Rivers primarily on Federal lands recommended for designation as potential rivers to be further studied and evaluated in the context of classification of surrounding lands to determine whether they should be incorporated in the National Wild and Scenic River System. The Commission makes this recommendation in the belief that the river study should be part of the larger planning process for an area. River classification should not occur before other classifications in the same area are commended, but the identified rivers should receive interim protection.

3. Rivers recommended for potential designation flowing through a mix of Federal and Native corporation selected lands. These rivers are recommended because they are believed to have fine attributes, but the bordering private lands raise issues to mutually resolve if possible before final recommendations can be made. The comments made for group 2 apply here as well.

4. In addition, certain rivers or sections of rivers in State ownership are recommended for study by the State of Alaska for possible inclusion in the National Wild and Scenic Rivers System. The Commission believes that, in several instances, the Wild and Scenic Rivers System should include entire rivers and, for this purpose, State and private as well as federally owned segments of a river should be studied for possible designation.

New Classification System

From the Commission's extensive study on (d)(2) lands, it became clear that for much of the (d)(2) lands, conditions and circumstances were different from those for which the existing systems were generally designed. In summary, these circumstances are:

1. The unique national value of large expanses of primitive, scenic, and wildlife habitat areas in Alaska.

2. Limited knowledge of subsurface resources.

3. Dependence of rural people on extensive areas for subsistence living involving fish, game, and plants.

4. Relative absence of development or trends at present.

5. Concern for minimizing possible conflicts with owners and users of lands adjoining Federal reserves.

Considering these and other factors, the Commission recommends:

1. A new national classification system for some of Alaska's national interest lands with known natural values.

2. Joint classification areas composed of: (1) land units in the new Federal classification system; and (2) areas of other Federal or State lands or in combinations that contain values of concern adjoining parks, wildlife refuges, wild and scenic rivers, or units of the new classification system.

Areas selected and delineated for the new classification system should possess characteristics as follows:

1. Predominate Federal public ownership.

2. Natural or scenic values:

   a. Primitive character of most of the lands and waters.

   b. Wildlife habitats of medium or greater value in terms of habitat quality, variety, and significance or variety of wildlife species present.

   c. Scenic, geological, botanical, zoological, ecological, archaeological, or historical features or values of national interest.

   d. Water fearures--river, lake, or both--which enhance the area scenically, have scientific values, or provide recreation opportunities.

3. Hunting, fishing, and other recreational opportunities.

In addition to the natural values indicated for a new classification of national interest lands, areas with the following characteristics seem particularly suitable for inclusion in the system rather than in existing systems:

1. Lands containing other important resources such as minerals, timber, or range.

2. Areas of mixed land ownerships, in most cases Native corporation selected lands.

3. Lands with very high subsistence oriented uses.

4. Lands adjacent to tracts of high natural values in other systems, to provide complete watersheds, habitats, coherent management units, or otherwise insure their integrity and protection of prime values.

Two kinds of joint classification areas are recommended: (1) units of the new classification system described above; and (2) other

areas of Federal or State lands or combinations which are deemed integrally important to park, wildlife refuge, wild and scenic rivers, or Alaska National Lands units but where other resources occur and resource use development is generally deemed appropriate.

The joint classification areas other than the new classification system lands are recommended to Congress only for those areas where there is a clear interrelation between Federal and State interests, and where coordinated planning is obviously a matter of high priority.

Qualities for identifying and delineating these joint classification areas should include related factors such as:

1. Watershed and water quality concerns.

2. Scenic values.

3. Integral habitat values.

4. Other natural values.

5. Recreational opportunities.

Joint classification areas of this nature should be established by complementary legislation of Congress and the State Legislature. As other needs for joint classification arise in the future, additional joint classification area could be proposed by the continuing commission.

Other general recommendations with respect to the foregoing classifications include:

Boundary Delineation

Boundaries around reserves established to contain natural values have not always been established in the best places with respect to ecological concerns, or easy physical identification. Prior land status and use, political factors, and the rectangular survey system applied to most of the country have influenced boundary delineation in many instances.

With some exceptions due to State and private land selections, boundaries around proposed national interest lands in Alaska can be drawn to contain watersheds and "ecosystems," thereby encompassing a more complete natural unit. Many reserve boundaries are not likely to be surveyed for years or decades because of more pressing survey needs elsewhere, so that natural boundaries easily identified in the field become more important. To the extent they are consistent with the values and uses of the unit, boundaries should follow hydrologic, physiographic, and other natural features that are easily identified on the ground.

Private Inholdings

Generally, boundaries should be drawn to exclude large privately owned areas. However, in some cases, establishing a rational unit requires inclusion of private lands which would become inholdings in the unit.

This concern is somewhat clouded at present because of Native corporation over-selections of land necessary in many cases. Further prioritization of selections for conveyance will help clear this picture.

The Commission adopted the following guidelines in seeking the resolution between containment of national interest natural features in logical units and the rights and needs of Native corporations and the State. Privately owned or projected private lands could be enclosed in accord with the following: (a) scattered small tracts including mineral claims within key areas may be included; (b) relatively small amounts of private lands may be incorporated in peripheral areas where such tracts are inside the best natural boundaries for the unit; (c) Native selected lands may be contained where it appears that these lands are over-selections of low priority to Native corporations and may not be conveyed; and (d) small areas of other Native selected lands may be included as inholdings in the unit where it is believed that the lands have national significance and are better suited for public ownership, and opportunities for alternative selection or a voluntary land exchange are afforded.

Coastal boundaries

Coastal boundaries of proposed units should extend offshore to enclose marine waters and submerged lands which are crucial to the existence of mammals or birds associated with the terrestrial portion of the unit.

Terrestrial ecosystems do not generally end at mean high tide along the ocean coast or at the edge of large lakes. There are often strong interrelations between the land and sea relative to food chains and feeding, hauling and resting areas, and rookeries and migration routes. Sea birds, migratory waterfowl, and marine mammals generally use both the land and sea in concentration areas. Other marine life may be obtained for food along the littoral by terrestrial mammals.

WILDLIFE MANAGEMENT/HUNTING/SUBSISTENCE

Major issues with respect to Alaska's wildlife are the following:

What should be the Federal-State relationship with respect to the management of resident fish and game species in the 17(d)(2) areas? Should hunting be permitted within units of the National Park System? What provisions should be made for subsistence?

The existing Federal-State relationship concerning resident fish and wildlife management is extremely complex. The State has the responsibility for managing resident fish and wildlife except where preempted by Federal law (e.g. Mt. McKinley National Park and the Marine Mammal Protection Act).

Despite the large size of the (d)(2) areas, most cannot be considered complete ecosystems. Migratory habits of many species such as anadromous fish, waterfowl and other birds, and caribou, plus the large range requirements of others, precludes sensible managment on less than a population or herd basis. In most cases, statewide programs are essential for long-term maintenance of the species and the human life-styles dependent on them. Fragmented management can be averted by providing for statewide coordinated resource management.

One of the most sensitive issues involves subsistence. The State of Alaska Constitution allows for preferential treatment of beneficial uses but not on an ethnic basis. The State has given priority to subsistence uses through legislation, regulations, and administrative policies. Many of the subsistence user demands, however, may exceed the limits of the Alaska Constitution.

There is no universally acceptable definition of subsistence, although there is a State law defining it and several Federal and State policies recognizing it. It is apparent that a rigid interpretation of Alaskan subsistence needs will only alienate many of the users and demonstrate bureaucratic insensitivity. Noticeable human use differences geographically and between species are thought to exist.

Subsistence and the (d)(2) Lands

The Commission has long recognized that for many Alaskans, particularly but not exlusively Alaska Natives, subsistence hunting and fishing is and will continue to be a vital source of livelihood. The report, Alaska Natives and The Land, written by the Federal Field Committee for Development Planning in Alaska in 1969, wrote of the Eskimos of the Yukon-Kuskokwim Delta: "Simply put, it must be emphatically said that without the seasonal round of subsistence harvest of fisheries, wildlife, and berries, most people would die."1/

Since the date of that statement, it has been argued that, with the infusion of cash from the Alaska Native Claims Settlement Act, Native peoples are no longer dependent on subsistence. In contrast to these

assertions, surveys indicate that, though the monetarized sector of the Alaska Native economy has increased in recent years, subsistence hunting and fishing still provide large portions of the Natives' diets and employs large parts of their time, even for those living in the large communities.2/

Circumstances affecting the villages economy indicate that the reliance on fish and game to meet subsistence needs will continue for sometime. Further, for many Native people, the year's round of hunting, fishing, and other subsistence gathering is the way of life they have always known. Age-old patterns of life and culture do not change rapidly.

In most small Alaska villages there are limited sources of cash income, and there is little immediate likelihood that new local industry, except in a few cases, will produce markedly more jobs and cash. Cash disbursements to Native villages under the Alaska Native Claims Settlement Act have been minor to date. Thus subsistence hunting and fishing remain a vital source of livelihood for many Alaska villagers.

Even with the infusion of cash from the Alaska Native Claims Settlement Act, subsistence hunting and fishing still provides large portions of the diets of these Alaska Natives and other rural Alaskans and employs large parts of their time, even for those living in the larger communities.3/

In recent years, wildlife resources have been increasingly hunted by Alaska's growing urban populations as well as by sport hunters coming to the State from other areas. Only, a few years ago, it was customary for residents of Fairbanks and Anchorage to drive out of the city in the fall to harvest a moose or several caribou for the winter. But now, game animals have been so heavily hunted near Alaska's growing urban areas, particularly along the road system, that this is no longer possible, except for the lucky hunter. As a result, urban dwellers have extended their reach into more remote lands by chartering small aircraft, using offroad vehicles, or traveling by riverboat. Technology also has allowed rural Alaskans to range farther and take more game than in the past. These changes in both urban and rural Alaska are increasing the competition for scarce wildlife resources.

Some of the lands under (d)(2) withdrawal have long been used by Alaska Natives to meet their subsistence needs. During the Commission's hearings on the use of the (d)(2) lands, speaker after speaker described how Native people hunted, fished, or gathered berries or other subsistence materials from areas under (d)(2) withdrawal. In Alaska, big game animals are extremely migratory, and to hunt them for subsistence purposes involves long trips of often 1-3 weeks.

Regardless of what approach is taken in establishing the Federal-State fish and wildlife management on Federal lands, the system to which the land is assigned and specific boundaries must be carefully selected. Mechanisms for time and area zoning could be considered.

Policy Alternatives Appear to be as Follows:

a. Wildlife Management

(1) Each of the proposed systems could adopt the existing management frameworks peculiar to each agency. Under this option Congress would likely treat exceptions (i.e. hunting in parks, subsistence provisions, etc.) individually in the organic legislation.

(2) Congress could develop some co-equal fish and wildlife management scheme between State and Federal agencies, especially for those systems where extensive or intensive management of the fish and wildlife or their habitat is warranted and desirable.

(3) Congress could consolidate statewide resident species management under the State with guaranteed participation of Federal agencies. Continued trespass and habitat management authority would rest with the Federal land managing agency.

(4) Congress could completely preempt the traditional management role of the State over all (d)(2) lands. This could also be considered individually for each system or area.

b. Subsistence

(1) Management

(a) Leave subsistence under State authority to be treated through its normal administration, regulatory and legislative processes.

(b) Provide for specific subsistence uses by area or for each Federal agency's authority.

(c) Provide for Secretarial discretion by area or for all (d)(2) areas.

(d) Provide policy discretion by establishing relative priority of subsistence use.

(2) User

(a) Provide specific criteria for determining subsistence users by:

- economics
- residency
- past use
- race

(b) Leave user definition to administrative discretion of regulating agency.

c. Hunting in National Parks

(1) Congress could choose to make no special use exceptions for parks.

(2) Congress could make special case-by-case exceptions allowing any combination of hunting, fishing and trapping uses.

(3) Congress could assign key parcels to the National Park System under special categories (i.e. national preserves or national recreation areas) which traditionally allow for these types of uses under cooperative management programs.

With respect to the alternative of having subsistence matters involving fish and game managed largely by the State, the policies established by the Commission of Fish and Game and the Fish and Game Board of Alaska are of interest.

The Fish and Game Board and the Commissioner of Fish and Game recognize that existing cultures and life styles in Alaska are of great value and should be preserved.

The Board and the Commissioner believe that, although limitations on the productivity of fish and game stocks prohibit continued increases in the numbers of subsistence resource users, domestic utilization is still of fundamental importance to many Alaskans. Accordingly it is assigned the highest priority among beneficial uses.

Within legal constraints, fish and game will be allocated to subsistence users on the basis of need. Needs of individuals, families, or cultural groups differ in type and degree, and it is recognized that subjective judgment will be an unavoidable necessity in weighing actual need. Elements considered in establishing the level of need include cultures and customs, economic status, alternative resources (availability of social services), location, and voluntary choice of life-style.

The Board of Commissioner also understand that subsistence requirements will not affect all resources in all areas equally, and recreational and commercial uses will continue to be permitted where and to the extent that they do not interfere with or jeopardize subsistence resource use.

Considering all of the foregoing, the Commission has continued to recommend in favor of a policy which would give preference to subsistence hunting and fishing in areas where there is a conflict for the resource with sport hunting and fishing. But this policy has been made part of an overriding policy which emphasizes preservation or renewing of healthy populations of wildlife and species as the primary objective of State fish and game management.

Commission policy is stated in the Commission's Interim Report to Congress in May, 1976, regarding wildlife management and subsistence, as follows:

(a) the primary objective in fish and wildlife management should remain the preservation of health populations of wildlife species;

(b) State and Federal policy affecting hunting and fishing should recognize subsistence taking as a preferred beneficial use of wildlife resource;

(c) for administrative purposes, a definition of subsistence should be based on local residency; and

(d) subsistence should be controlled through State game regulations utilizing a permit system when necessary.

In regard to wildlife management, hunting in national parks, and subsistence, the Commission recommends that this policy be extended to congressional (d)(2) legislation through the following measures:

Since boundaries of certain National Park System units may also be the boundaries of areas where hunting is prohibited, it is particularly important to delineate park units to avoid areas of heavy subsistence hunting. For the most part, national parks should be no-hunting regions. Where prime park values necessarily overlap exceptionally important areas for subsistence hunting, congressional legislation should provide for continued subsistence activities within the park through a statement of intent or application of Park System categories which would allow subsistence hunting.

Congressional direction to give preferences to subsistence hunting should define those preferred by residency rather than by race, in keeping with the expressed intent of the Claims Act to establish no "permanent racially defined institutions."

Congressional direction to allow hunting should confirm the traditional role of the State in the management resident species of fish and game, although responsibility for habitat management may be in the National Park Service or other Federal agencies.

A number of areas that are relied upon by Alaska Natives and other Alaska residents to meet their subsistence needs have natural values of national importance. One of the Commission's purposes in recommending a new classification system is to make a special provision for continued hunting and fishing where subsistence use areas and national interest lands cannot be separated. The recognition of subsistence as a priority use in taking of fish and game should be incorporated as a basic management guideline extending to all areas under new classification.

TRANSPORTATION AND (d)(2) LANDS

The (d)(2) lands extend across regions where there is virtually no existing ground transportation, except for occasional winter trails. Remote villages near the (d)(2) lands are linked to the State's larger cities by air transportation and, on the coast, by occasional summer barge service. A highway system, comparable to that of other states, exists only in the southcentral part of Alaska connecting Anchorage, Fairbanks, and the Kenai Peninsula, with a link to the Alaska Highway through Canada. In southeastern Alaska, the larger communites are linked by a ferry system. The one major incursion of land transportation into Alaska's vast roadless regions is a gravel haul road adjacent to the trans-Alaskan oil pipeline which runs north from the Yukon River to Prudhoe Bay on the Beaufort Sea.

The possibility of other land transportation routes to remote Alaska has been extensively studied and debated in recent years, and several proposals for pipelines, railroads, and highways have been advanced. Most of these proposed routes have been intended to provide transportation to areas of expected resource development. Proposals for land transportation for movement of people to remote Alaska have been opposed by Native corporations and conservation interests who fear damage to subsistence hunting and fishing and the social disruption that might be brought by the road connections between small villages and Alaska's major cities. Further, the costs of constructing and maintaining roads over hundreds of miles of extremely difficult terrain may indicate that air transportation is a preferable mode for the movement of people in remote sections of Alaska.

In the future, issues of transportation development in remote Alaska will continue to rise, particularly as resource development possibilities materialize. Inevitably, some of these route proposals will involve (d)(2) lands. The (d)(2) areas are, often, so large that potential transportation crossings cannot be entirely avoided. For this reason, the Commission recommends that Congress incorporate a method of deciding about future transportation corridors in its (d)(2) determinations.

At least four major options can be applied to this issue. Lands [(d)(2)] can be placed in systems whose present management authorities and

philosophies are closest to presently perceived access needs. Existing law governing systems could be amended as deemed desirable to more accurately reflect desires regarding access. Congressional reservation of specific corridors in (d)(2) legislation could be effected. Another option is to establish procedures and/or institutions to make future recommendations or designations for access as needs arise.

The following measures are recommended to Congress as an approach to the issue of transportation across (d)(2) lands:

1. No corridors should be designated at this time across any of the (d)(2) lands. This recommendation is based upon Commission participation in a detailed and thorough review of recent Bureau of Land Management transportation corridor proposals (Multi-modal Transportation and Utility Corridor System in Alaska: A Preliminary Conceptual Analysis). The Commission found that no corridors could be justified on the basis of intercommunity needs or known resource development potential at this time.

2. Where possible, without jeopardizing the protection of key natural values, boundaries of (d)(2) areas should avoid potential transportation corridors.

3. Transportation decisions involving any region of the State, including the (d)(2) lands, should be made in the context of statewide planning for a transportation system. Such a system should employ different transportation modes in a manner that will further the economic and social well-being of the State and maintain environmental quality.

4. The following policies should be established as congressional guidelines for transportation planning:

   a. Transportation planning must be informed by and incorporated within land use planning.

   b. Transportation facilities should be constructed across (d)(2) lands only after finding that no feasible alternatives exist, and that the proposed facilities can be constructed in a manner that will minimize any adverse impact on primary values and designated uses of (d)(2) areas.

   c. In choosing among alternative transportation routes and modes, prime consideration should be given to the route or facility with least adverse environmental, cultural, and social impacts.

   d. Where possible, different transportation modes should be combined in the same corridor so that the number of corridors can be reduced.

e. Land use within transportation corridors should be strictly controlled to minimize the environmental and social impacts of the transportation corridor on lands within the corridor, as well as adjoining lands.

f. As a matter of general policy, transportation development should not be justified because such development would serve as a subsidy for resource development.

5. For (d)(2) lands placed under existing Federal land management systems, the planning recommendations would be advisory. Final decision about transportation corridors crossing national parks, wildlife refuges, and national forests or areas within the Wild and Scenic Rivers System in Alaska would be made on the basis of existing laws and regulations regarding rights-of-way and corridors.

6. For (d)(2) lands which may be placed in a new classification system, and other lands in joint classification areas, corridors would be designated as part of the classification process. Land management agencies assigned to particular land units would be responsible for approving and administering actual rights-of-way within corridors established by classification.

7. Issues involving minor problems of access across (d)(2) lands, which do not involve designations, would continue to be handled by existing Federal land management agencies.

MINERAL DEVELOPMENT ON (d)(2) LANDS

Mining has played an important role in the history of Alaska. Gold rushes highlighted the pre-statehood era, and expectations that Alaska contained an abundance of mineral wealth were an important argument for statehood. In recent years, oil and gas discoveries in the Cook Inlet and the North Slope have heightened prospects for similar discoveries in geologically favorable basins elsewhere in Alaska.

Miners and other parties with an interest in mineral development have expressed apprehension about the recent changes in Federal land status in Alaska, because of reduction in the area open to claim staking. Differences between mineral and conservation interests have been highlighted by the (d)(2) withdrawals which were intended to place lands in one of the Nation's conservation-oriented land management systems. In recognition of the arguments advanced by the mining community the Department of Interior encouraged by the State, attempted to exclude highly mineralized areas when the boundaries of the (d)(2) withdrawals were established. Despite some exclusions, certain mineralized lands are included within the (d)(2) withdrawals, most notably in the Wrangell and Chugach Mountains, upper Yukon River, central Brooks Range, Mt.

McKinley, Lake Clark, and Kobuk River areas. Thus, the conflict remains to be dealt with by Congress in the forthcoming (d)(2) legislation.

The issue of mineral exploration and development in (d)(2) areas is primarily involved with hardrock minerals. The (d)(2) withdrawals exclude large areas with identified high potential for petroleum development. Further, Federal law pertaining to leasable minerals, i.e. petroleum deposits and coal, is much more compatible with conservation-oriented land management than present law pertaining to hardrock mineral development. The development of petroleum resources falls under the Mineral Leasing Act of 1920. Assuming adequate lease stipulations and proper enforcement, the mechanisms for controlling the location and nature of petroleum exploration and development provided by this Act are adequate as a system of mitigating adverse environmental impact in areas where mineral leasing is permitted.

Hardrock mineral exploration and development, on the other hand, falls under the location-patent system established in the Mining Law of 1872 which gives prospectors an absolute right to stake a mineral claim on any public lands not closed to such activities. This law applies to areas that are open to mineral entry within the National Forest System and to most lands under BLM management, as well as to National Wildlife Refuge System lands when specifically opened to entry. Because of its widespread significance for the (d)(2) decisions, the Commission has devoted considerable study to the impact and implications of the 1872 Mining Law. They found this system to be inadequate for the national interest lands in the following respects:

1. If provides for the acquisition of patent to the land surface and subsurface minerals, but fee title to the surface estate is not deemed a necessary concomitant of mineral development;

2. It allows no method by which the government can effectively control the environmental and land use impacts of mining activity;

3. There is no mechanism which will allow the public to derive a fair return from the extraction of minerals located on the public lands;

4. There is no requirement in the present mining laws that private industry provide resource information to the government on a confidential basis;

5. The assessment work requirement of expending so much time and money per year in mineral claim exploration or development, which is the principal performance standard provided in this law, has often failed to operate as envisioned; and

6. Frequently changing administrative and judicial standards for what constitutes a valuable discovery create uncertainty of lands tenure prior to meeting the requirements of a patent.

Policy alternatives with respect to exploration and development of the locatable group of minerals on (d)(2) lands must deal with two basic questions: Where should mineral development be permitted? What system should be utilized to dispose of hardrock minerals located on (d)(2) lands?

At present, national parks are closed to mineral development for the most part; wildlife refuges are closed unless specifically opened; national forests and national resource lands are open on a multiple use basis; and riverbeds and banks of wild rivers are closed.

Applicable laws or policies could be changed to allow mineral development on lands of certain classifications, or exceptions could be applied to specific areas or portions of areas. Some conflicts between mineral development and other land uses can be avoided by drawing boundaries to excise mineralized areas. Such a resolution is not always possible because of the existence of other considerations, such as the need to protect important scenic features.

Hardrock mineral disposal can continue under existing law; or the law could be changed to provide a modified location-patent system, or a permit and lease system. A number of variations are possible in these latter two systems.

Given the background issues, the Commission's recommendations to Congress on methods of resolving conflicts between mineral values and scenic and other natural values in (d)(2) lands are as follows:

1. Where possible, the Commission recommends that Congress draw the boundaries of new units and additions to the National Park System in a way that would reduce conflicts between park related values and areas of high mineral potential. This approach is based on the assumption that existing law prohibiting mineral development in certain national parklands will continue to apply in the future. The Commission believes that some areas should be maintained without mining in Alaska and that national parks are appropriate areas for closure.

2. In a number of cases where lands with scenic and natural values of national interest are significantly mineralized, the Commission recommends inclusion under a new classification system. Elements of this recommended system pertaining to mineral exploration and development are as follows:

   a. Inventory of the mineral potential of such lands should be conducted by the U.S. Geological Survey and the U.S. Bureau of Mines. Such assessment should include geochemical and geophysical sampling as well as geological mapping. The Commission believes that studies of this nature will provide

adequate preliminary knowledge of the mineral potential to enable informed planning and classification decisions.

b. Following planning and classification under congressional guidelines, mineral exploration and development will be allowed in areas so classified, under a permit and lease system. For leasable minerals and mineral materials, the Mineral Leasing Act of 1920 and the Mineral Materials Act are adequate. For hardrock mineral exploration and development, a lease and permit system should be developed. The Commission has been developing a proposal for such a system, and details will be submitted to Congress in subsequent recommendations.

3. Within the units of National Wildlife Refuge, Forest, and Wild and Scenic Rivers Systems, the Commission recommends that existing legislation, policies, and regulations apply; except that a lease and permit system, referred to in 2.b. above, should be utilized in areas where hardrock mining is permitted. This recommendation is based on Commission findings that the Mining Law of 1872 is inadequate for areas that may be added to existing Federal land management systems or for other (d)(2) lands.

NEW INSTITUTIONS

In the preceding section, the Commission made its general recommendations relevant to existing conservation classification and management systems and policies and how they should apply in Alaska. Needs for a new classification system for certain lands of national importance in Alaska were indicated.

More detailed recommendations follow regarding these new concepts and institutions. In addition, specific recommendations are made regarding transportation planning and mineral exploration and development as they might be applied to the (d)(2) and related lands in Alaska.

Based on differing conditions and characteristics of much of Alaska's lands of national interest, the argument is made for a continuing institutional structure that would:

1. Allow for a process of decision making over time, so that land use choices can be made when new events and information make it timely and appropriate to render a decision.

2. Insure that land use decisions are responsive to changed circumstances without sacrificing responsibility to the national interest.

3. Provide the high level of environmental protection that is warranted by the national value that is found in Alaska's great expanse of natural land.

4. Maintain sufficient flexibility so that environmental protection measures serve to guide rather than to totally foreclose opportunities for future resource development in the national interest.

5. Provide for coordinated State and Federal land planning with an option for voluntary participation by major private corporate landholders of related lands.

Alaska National Lands

Based on these criteria, the Commission has developed a new classification system for many of Alaska's national interest lands to be called the Alaska National Lands System.

Designation of certain Federal lands as part of the Alaska National Lands System would represent a lasting commitment to the national interest in that (1) lands assigned to the system would be permanently withdrawn for Federal ownership; and (2) congressional guidelines for the system would emphasize a high level of environmental protection as a guiding standard when any land use is permitted. Unlike the National Resource Lands, managed by the Bureau of Land Management, Alaska National Lands could not be made available for State selection or other forms of permanent disposal from Federal ownership.

The land classification system which the Commission is proposing to fulfill these needs would provide a new approach to Federal land management.

Instead of subsuming determinations about primary values, or choices between primary use or multiple use under the designation decision, as has been done with the existing Federal land management systems, Congress, in adopting the Commission's proposal would be establishing an institution equipped to handle such decisions as they become appropriate and timely in the future. This approach, substituting a continuing planning institution for determination at this time, is based on a recognition that our foresight in Alaska is very limited and that circumstances affecting the areas proposed for Alaska National Lands may change radically in the future.

The Alaska National Lands System is intended to apply to national interest lands having outstanding wildlife, scenic, and other natural values and renewable and nonrenewable resources, whose real value is not known at this time. The system would be established by Congress, and lands designated for the system would be permanently withdrawn from public ownership by the Federal Government. Guidelines for planning and classification of the Alaska National Lands would be established by Congress, and where classification permits resource utilization, regulations would be directed towards protection of the natural and wild character of the land. Lands thought potentially suitable for wilderness designation would be identified, studied, and could be recommended for inclusion within the National Wilderness Preservation System.

Guidelines for Management

The following management guidelines are recommended to apply generally to lands in Alaska National Lands, both before and after classification:

1. A high level of protection shall be the guiding element in managing uses of the lands.

2. Hunting and fishing shall be allowed in accordance with Alaska Department of Fish and Game regulations and statewide species management plans developed with the participation of the habitat manager. Subsistence uses shall be given priority in the taking of fish and game.

3. Such activities should be allowed as necessary to acquire an adequate knowledge of the area for classification.

The following management guidelines for land uses are recommended to apply after planning and classification in areas where classification permits those uses:

1. Mineral exploration and development shall be conducted through a permit and lease system.

2. Lands suitable for grazing or farming shall be leased for use only at such time as there is a demonstrated justification or necessity.

3. Prior to location of major roads and other transportation facilities, a thorough environmental impact analysis shall be conducted.

4. Timber may be harvested when practical in areas so classified.

Managers for Alaska National Lands

The Commission recommends that units of the Alaska National Lands System be administered by existing Federal land management agencies, with the assignment of a manager to be based on known values and characteristics of units and the adjoining land management system. Minimizing the number of Federal land managers of large areas within regions to the extent practical should be an objective.

Coordinated Planning and Classification Mechanism and Powers

With respect to classification of the Alaska National Lands, the Commission recommends establishment of a continuing joint Federal-State commission. Self perpetuation of the existing joint Commission for Alaska is not intended nor of interest. Rather, the Commission believes that a commission as recommended can take an active and helpful role in resolving Alaska land issues in the future. The commission should have two main types of duties and responsibilities: (1) specific responsibilities for planning and classification of areas; and (2) broad responsibilities for statewide coordinative planning.

Unlike the present Joint Federal-State Land Use Planning Commission, the proposed commission would have more than advisory powers and be permanent in nature. This body would have responsibility for oversight of the Alaska National Lands with authority to plan and classify under congressional guidelines when such actions become timely. Day-to-day management would be assigned, as previously indicated, to an existing land management agency. As a public body, operating under congressional guidelines, a commission would be structured to combine responsiveness to changed circumstances and public interests with a paramount responsibility for protecting national environmental values. The commission would be jointly constituted, including representatives appointed by both Federal and State governments.

In addition, those Federal lands proposed for the Alaska National Lands system, certain other areas where there is a complex Federal-State ownership pattern and where coordinated planning is highly desirable, should be jointly classified. Areas could be established by congressional act and complementary State legislation. Classification of these lands could also be assigned to the proposed joint Federal-State commission.

Joint classification areas should not encompass lands within or recommended as additions to the existing Federal land management systems, nor include State-owned lands that are highly important to the State for settlement and resource development purposes. The Commission believes that both governments have sound reasons for reserving exclusive control over certain lands, and for this reason, does not propose incorporating such lands in joint classification areas. The prerogatives of the different governments would be further preserved by a veto system giving each level of government veto power within its sphere of ownership over joint-commission classifications.

Should other areas emerge after additional State selections are made where joint classifications appear desirable, the commission could recommend their designation.

The commission's broader responsibilities for statewide coordinative planning should include the following elements:

1. Planning and coordination to assist in the satisfactory completion of the land reallocation mandated by the Alaska Statehood Act and the Alaska Native Claims Settlement Act. The commission would strive to effect on ownership pattern most in accord with the interests and capabilities of the major landowners and management units that correspond to natural units to the extent possible. This duty would include findings and recommendations regarding State selections, Federal withdrawals, and land exchanges between Federal, State, and Native entities.

2. Provision of a forum for discussion and coordination of policy-setting and management practices in areas where the Federal and State governments share jurisdiction of the same lands, for example, in areas where the Federal government owns and controls the habitat of wildlife populations managed by the State government. .

3. Coordination of intragovernmental operations of Alaska's Federal agencies and between the Federal and State governments in those area where separate governmental entities own or manage adjacent tracts within interrelated natural systems. Alaska's coastal zone is a prime example of a region where a coordinating mechanism is needed to bring Federal and State governments together to resolve common planning problems.

4. Facilitation and coordination of statewide planning for those land use elements, e.g. wilderness, transportation which should be analyzed on a statewide system basis.

5. Encouragement of voluntary participation in cooperative planning efforts by large private landowners.

6. Broad responsibilities for facilitating and coordinating the planning of a statewide transportation system. With respect to (d)(2) lands placed under existing Federal land management systems, the joint commission's transportation planning recommendations would be advisory. For lands which may be placed in the proposed Alaska National Lands system or for other designated joint classification areas, the joint commission would designated corridors as part of its classification authority. The Federal and State governments would retain veto power over commission transportation designations on Federal or State lands, respectively, just as veto power is retained over other commission classifications.

COMMISSION FINDINGS ON NATIONAL INTEREST VALUES AND RECOMMENDATIONS FOR THEIR PROTECTION

In assessing the natural values and other national interests in (d)(2) withdrawals, the Commission has examined areas adjoining the withdrawals and other locations of high natural value. In some instances, the Commission has found other resource values, in addition to the natural values of (d)(2) lands, to be of sufficient interest or concern to recommend that all or part of some areas not be included in a national conservation system. Correspondingly, the Commission has identified national interests in lands adjoining (d)(2) withdrawals, including, in some instances, lands selected by the State of Alaska or by Alaska Natives. In such instances, some of these lands have been suggested as subjects for future land exchange discussions. Native land selections presently exceed entitlement; and as the land status pattern becomes clearer, some boundary adjustments may be recommended by the Commission to exclude certain lands if selected or to honor State selection rights. The resulting proposals are, therefore, an admixture of lands with complementary values of national interest.

The Commission's proposals are presented in major geographic groupings in order to make apparent many natural and socioeconomic interrelationships.

NORTHEASTERN ALASKA

Northeastern Alaska, as delineated here, is essentially bounded on the west by the trans-Alaska oil pipeline, on the north by the Arctic Ocean, and on the east by the Canadian border, and consists of about 95,000 square miles (60,800,000 acres). The southern boundary roughly follows the crest of the Yukon-Tanana uplands. The eastern Brooks Range and Arctic coastal plain, and the upper Yukon River basin are contained within the region. Although historical activity has occurred, most of the region remains in its natural state. All streams are free flowing. Adjoining the Yukon River lies some of the Nation's prime waterfowl habitat. Major caribou herds migrate through the region. Significant populations of Dall sheep and grizzly bear are also present. South of the Brooks Range crest are spruce, poplar, and birch forests, with low brush bogs and shallow lakes predominating in the Yukon Flats. To the north, the alpine tundra of the Brooks Range gives way to the moist and wet tundra of the Arctic plain.

Northward from the summit of the Brooks Range an Arctic climate prevails, with persistent winds and fog along the coast, brief summers, desert-like annual precipitation levels on the Arctic plain, and average temperatures for January of -17°F and in July of +41°F. The climate of the southern interior portions is continental, with 90 frost-free days a year on the average. Precipitation here is also low. Some of Alaska's greatest temperature extremes occur in this area with ranges from -70°F to 100°F.

Mineralized zones and oil and gas provinces underlie the region. Some of interior Alaska's most extensive stands of timber are found along the Yukon River and tributary streams, as is a significant portion of those lands in Alaska with soils and climate suitable for agriculture.

Although Fairbanks, the largest city of Alaska's interior, lies near the southwestern corner, this region of Alaska is sparsely populated. Several small communities, all of which are well under 1,000 in population and largely inhabited by Athabascan Indians, are located along the Yukon River and its tributaries. There is one small predominantly Eskimo settlement on the Arctic coast. With the exception of the North Slope haul road (currently closed to public use) which follows the trans-Alaska oil pipeline, Alaska's road network does not extend north of the Yukon River. Access to most of the region is by air, or in the summer months by water. Aside from several small mining operations, local sawmills, and current oil exploration there is no significant industry in the Yukon basin. On the Arctic slope, however, the oilfields near Prudhoe Bay are nearly ready for production. Fish and game are still relied upon to a significant degree by local residents to meet their subsistence needs. Tourism has been relatively low, although recreational and sport hunting use is increasing, particularly in the southern portions of the region.

After the entitlement of Alaska Native corporations for land selections in the region has been satisfied, the Federal Government will retain ownership of approximately 70 percent of the lands. These private corporations will own approximately 15 percent of the region. To date, around 15 percent of the land area has been selected by the State and more may be selected by 1984.

The 8.9-million-acre Arctic National Wildlife Range is located in this region. Four withdrawals for study as national interest lands, totalling 13.6 million acres, were made under Section 17(d)(2) by the Secretary of the Interior. They are: a 100-mile corridor withdrawal along the upper Yukon River extending from the Canadian border westward (960,000 acres); two areas adjoining the Arctic National Wildlife Range (2.5 million acres); and the Yukon Flats (10.2 million acres). In addition, three narrow river corridors along the Charley River and Birch and Beaver Creeks were withdrawn for study as possible National Wild and Scenic Rivers.

Yukon Flats Withdrawal and Adjoining Uplands to the North

The Yukon Flats of the upper Yukon basin is one of the largest waterfowl habitats in a natural state in the Nation, with the highest duck nesting density of any large area in Alaska. The primary duck species present are scaup, pintail, and widgeon, and 10 to 15 percent of the North American continent's population of canvasbacks. Canada and white-fronted geese nest here as well. Caribou range through the Sheenjek, Coleen, and Porcupine River drainages. The upper Porcupine River is a key habitat for the endangered peregrine falcon. A variety of other wildlife, including grizzly bears, moose, wolves, and small furbearers, are present.

Several major streams flow freely through the area. A few large lakes of recreational value receiving current use are located in the uplands. Networks of small lakes and streams occur in the lowlands. Mixed spruce-hardwood forests line the major rivers and adjacent slopes.

THE COMMISSION RECOMMENDS TWO LARGE AREAS TOTALLING APPROXIMATELY 2.3 MILLION ACRES AS A NATIONAL WILDLIFE REFUGE TO PROTECT HIGH DENSITY WETLAND WATERFOWL HABITATS AND SOME ADJOINING UPLAND HABITAT AND WILDLIFE VALUES.

SOME 5.5 MILLION ACRES OF SCENIC UPLANDS, UPLAND WILDLIFE HABITAT, AND MEDIUM DENSITY LOWLAND WATERFOWL HABITAT ARE RECOMMENDED FOR INCORPORATION IN THE PROPOSED ALASKA NATIONAL LANDS SYSTEM TO BE MANAGED BY THE U.S. FOREST SERVICE. Taking of fish and game for local subsistence purposes is a common and important practice. Hunting, fishing, and trapping would continue under State regulations and in accordance with Federal interests in wildlife and habitat preservation. Other uses would occur as permitted by wildlife refuge management policies. The primary purpose of the new management system is the protection of the assortment of natural values present, while other compatible uses may be permitted under congressional guidelines after Federal-State classification. Hunting, trapping, and fishing on the new management units are permitted in accordance with State wildlife management plans and regulations developed in coordination with Federal agencies. There has been increasing expression of interest in interior Alaska's forests and possible development of a forest industry within this extensive area. The U.S. Forest Service appears particularly well suited to manage the Porcupine River area because of its research capabilities and the need to develop appropriate silvicultural methods and other management programs for these and similar lands and their several values. Research findings developed here could be of value to other private landholders and State and Federal land administrators in the general area.

TWO OF THE FREE-FLOWING STREAMS, THE PORCUPINE AND SHEENJEK, HAVE BEEN STUDIED AS POSSIBLE WILD OR SCENIC RIVERS AND ARE RECOMMENDED FOR POTENTIAL DESIGNATION PENDING EVALUATION DURING CLASSIFICATION OF THE NEW MANAGEMENT UNIT. THE RAMPART SECTION OF THE YUKON RIVER, DOWNSTREAM FROM THE YUKON FLATS, IS ALSO RECOMMENDED FOR POTENTIAL SCENIC RIVER DESIGNATION PENDING CLARIFICATION OF LAND STATUS IN THE AREA AND FURTHER STUDY AND CLASSIFICATION OF SURROUNDING LAND OR USES OF THE RIVER.

Two potential oil and gas basins, one with potential for uranium underlie portions of the proposed refuge and Alaska National Lands unit, but extend beyond their boundaries onto private and other public lands. Exploration, development, and extraction could be allowed on the new management unit if in compliance with congressional guidelines and where permitted by eventual Federal-State classification. Exploration and development on the proposed refuge would be permitted only at the discretion of the Secretary of the Interior.

Two proposed hydroelectric projects (Rampart and Porcupine), if constructed, would inundate large parts of the proposed units and, therefore, are incompatible with the protection of their natural values. There is

currently no significant demand for the potential power, flood control, or water storage. Accordingly, the Commission has concluded that development of these sites is not now in the national interest. The proposed new management system unit contains portions of metallogenic provinces with potential for copper, silver, gold, nickel, lead, zinc, tin, iron, barite, platinum, chromium, tungsten, titanium, and asbestos. Under the Commission's recommendations, if eventual Federal-State classification allows, the exploration and extraction of these minerals could occur.

A substantial portion of Alaska's potentially cultivable lowlands, as well as some upland soils in climatically suitable zones, lie within the proposed new management unit and refuge. Similarly, some large timber stands which may become commercially valuable are located on portions of the units. Adjoining lands selected by Alaska Native corporations have potential for agriculture and timber harvesting. Proposed boundaries have been drawn to exclude some potentially cultivable areas for possible State selection. Farming and timber harvesting may be permitted on Alaska National Lands units if classification permits.

Particular needs for coordination in this area are:

(1) Large widespread blocks of Native-selected land include significant portions of the best waterfowl habitat. Coordination with these private landowners will be necessary to fully protect the national interests in waterfowl.

(2) The Yukon River is a navigable international waterway involving State interests, and is currently used for transportation and access through the region.

Upper Yukon River and Adjoining Uplands to the South and West

The historic Yukon River flowing from Canada courses through bluffs, bottomland forests, and wetlands, with higher mountains providing scenic backdrop. Structures of historical interest extending back to the Klondike gold rush era, and a significant rock formation sequence and fossil evidence of the geological past are found on the banks. A variety of wildlife including bear, moose, waterfowl, and small furbearers can be seen along the river. Key habitat for peregrine falcon is present. The Commission finds this area to be a particularly scenic section of one of the Nation's major waterways.

The adjacent Yukon-Tanana uplands contain a variety of upland wildlife species including bear, moose, wolves, and furbearers. Scattered groups of Dall sheep occupy the White Mountains and Charley River areas. Caribou range through much of these mountains south of the Yukon River. Several clear water streams flow freely through the area. Mixed spruce-hardwood forests line the valleys and lower slopes, with tundra on the higher slopes. Considerable medium and low density waterfowl habitat is present in and adjoining the Yukon Flats.

HAVING DETERMINED THAT THESE VALUES ARE OF NATIONAL INTEREST, THE COMMISSION RECOMMENDS THAT A RIVER CORRIDOR OF APPROXIMATELY 540,000 ACRES, ABOUT 100 RIVER MILES LONG AND AN AVERAGE OF 9 MILES WIDE, BE SET ASIDE AS A UNIT OF THE NATIONAL PARK SYSTEM. HUNTING, FISHING, AND TRAPPING, WHICH PRESENTLY OCCUR, ARE RECOMMENDED TO CONTINUE IN THE PROPOSED RIVER PARKLAND IN ACCORDANCE WITH STATE REGULATIONS AND IN COORDINATION WITH FEDERAL INTERESTS. The proposed corridor extends to benchlands and ridges and encloses the immediate scenic environment and habitats. The intended primary uses are recreational and scientific, with other uses as permitted by National Park Service policies.

THE COMMISSION ALSO RECOMMENDS A 6.1-MILLION-ACRE ALASKA NATIONAL LANDS UNIT IN THE YUKON-TANANA UPLANDS TO BE MANAGED BY THE BUREAU OF LAND MANAGEMENT. Administration of this unit by the Bureau of Land Management is deemed appropriate because of the multiple values present and the anticipation of multiple classification for future use and preservation. Compatible uses may be permitted under congressional guidelines after Federal-State classification. Hunting, trapping, and fishing would be permitted under State wildlife management plans and regulations developed in coordination with Federal agencies.

THREE OF THE FREE-FLOWING STREAMS, BIRCH AND BEAVER CREEKS AND THE CHARLEY RIVER, HAVE BEEN STUDIED AS POSSIBLE WILD RIVERS, AND ARE RECOMMENDED FOR POTENTIAL DESIGNATION PENDING CLASSIFICATION OF THE ALASKA NATIONAL LAND UNIT. THE CHARLEY RIVER DRAINAGE IS PROPOSED AS A PRIORITY WILDERNESS STUDY AREA TO INSURE THAT ITS NATURAL FEATURES ARE NOT ALTERED PENDING A DECISION ON POSSIBLE WILDERNESS DESIGNATION.

Potential provinces for oil and gas, uranium, and coal, underlie portions of the units, but extend well beyond their boundaries. If Federal-State classification allows, development or extraction in these provinces could be allowed on the proposed Alaska National Land units. Two proposed hydroelectric projects (Rampart and Woodchopper), if constructed, would create reservoirs inundating much of the Yukon River corridor and portions of the adjoining uplands. There is currently no significant demand for the potential power, flood control, or water storage. Construction of these projects is therefore considered not now in the national interest. A metallogenic province with potential for antimony, gold, silver, and molybdenum underlies a portion of both the proposed park and the proposed new management unit, but extends well beyond the recommended boundaries. The proposed Alaska National Lands unit also partially contains provinces with potential for asbestos, chromium, copper, iron, lead, nickel, platinum, tin, titanium, and zinc. Most of three historical gold mining areas are included in the new management unit, with a portion of one in the proposed Yukon River corridor.

Some timber stands of possible commercial value and soils and climate suitable for agriculture are found in the Alaska National Land unit and in the proposed park unit. Opportunities for timber and agricultural development exist in adjoining areas. The Commission has delineated the boundaries of its Yukon River proposal to allow these uses outside of those scenic and wildlife habitat areas immediately adjoining the river.

Particular needs for coordination in this area include:

1. Management of tributaries and watersheds adjoining the park unit may be necessary to protect natural values.

2. The Yukon River is an international navigable waterway involving State and Canadian interests, and is currently used for some transport and access through the region. Two roads from the south connecting with the State's highway network extend to the Yukon River at either end of the proposed park unit.

3. Some significant historical sites in the area are in private ownership or under local public jurisdictions.

Areas adjoining the Arctic National Wildlife Range

Areas adjacent to the Arctic National Wildlife Range to the south and southwest have primary value for their upland game habitat. The area to the southwest lies in the rugged and scenic eastern Brooks Range containing populations of grizzly bear, Dall sheep, and wolf. Habitat for the international Porcupine caribou herd numbering about 100,000 is present in both areas. A number of in their natural state flow through the areas. The area to the south of the existing wildlife range contains additional habitat for bear, moose, and other upland game.

THOSE LANDS, TOTALLING 1.9 MILLION ACRES, DIRECTLY RELATED HYDROLOGICALLY AND ECOLOGICALLY TO THE EXISTING RANGE, ARE RECOMMENDED AS RANGE ADDITIONS. THOSE LANDS FARTHER WEST, TOTALLING 5.6 MILLION ACRES, AROUND THE CHANDALAR RIVER WITH SIMILAR VALUES, BUT LESS DIRECTLY RELATED TO THE RANGE, ARE RECOMMENDED FOR INCORPORATION AS A UNIT OF THE ALASKA NATIONAL LANDS SYSTEM. THE U.S. FISH AND WILDLIFE SERVICE IS RECOMMENDED AS THE MANAGER OF THIS RESERVE. This choice was made in part to help facilitate coordinated management of the wildlife which use habitat in both the Arctic National Wildlife Range and the Alaska National Lands unit.

FOUR OF THE FREE-FLOWING STREAMS, THE CANNING-MARSH FORK, IVISHAK, WIND, AND SHEENJEK, HAVE BEEN STUDIED AS POSSIBLE WILD AND SCENIC RIVERS AND ARE RECOMMENDED FOR POTENTIAL DESIGNATION PENDING EVALUATION IN THE WILDLIFE RANGE AND CLASSIFICATION OF THE LANDS IN THE PROPOSED NEW MANAGEMENT UNIT.

The areas contain some potential for petroleum, copper, nickel, zinc, lead, tin, barite iron, platinum, chromium, tungsten, titanium, and asbestos. These provinces extend beyond the boundaries of the proposed units. Exploration and extraction of these resources may be permitted under Secretarial discretion on the wildlife range extension, and on the Alaska National Lands unit wherever eventual classification may permit.

Use of the withdrawn gas pipeline corridor included within the wildlife range or proposed Alaska National Lands unit will not be precluded by the designation of these units.

Recognizing that the range of the Porcupine caribou herd is extensive and larger than any one management unit or landholding, and subject to change, there is a particular need for coordinated wildlife management in this region.

NORTHWESTERN ALASKA

Northwestern Alaska, as used here, is a 156,000 square-mile area (99,900,000 acres) generally west of the trans-Alaska oil pipeline and northwest of the Yukon River. Included in the region are the western Arctic coastal plain and foothills, the Noatak, Kobuk, and Koyukuk River drainages heading in the central and western Brooks Range, the Selawik River drainage, the Seward Peninsula, and St. Lawrence Island. The area is bounded on the north by the Beaufort Sea, on the northwest by the Chukchi Sea of the Arctic Ocean, and on the southwest by Norton Sound in the Bering Sea. Although historical activity has occurred in various parts of the region, e.g., gold mining on the Seward Peninsula and whaling on the Arctic coast, the region remains largely unaltered from its natural state. Four of Alaska's major rivers run through this region, and all streams are free flowing. Important waterfowl and seabird habitats are found in several areas. The major western Arctic caribou herd migrates through much of the region, and significant populations of grizzly and black bear, Dall sheep, wolf, moose, and other wildlife also reside here. A variety of marine mammals, including seal, walrus, and occasional polar bear, are present in the coastal and offshore areas. The vast treeless tundra of the Arctic plain is marshy, dotted by frequent shallow lakes, and traversed by sluggish meandering streams. The wet tundra of the plains and moist tundra of the foothills give way to the drier alpine tundra on the slopes of the rugged Brooks Range. On the southern slopes of the Range, broad river valleys with scattered spruce-hardwood forests intersperse the tundra-covered mountains. Forest cover is more extensive in the interior river drainages, where it is mixed with areas of muskeg bog and low brush. Most of the coastal zone and Seward Peninsula are covered with tundra and brush.

Precipitation is generally low throughout the region, varying from an annual average of 4 inches on the Arctic coast to around 14 inches in the southern interior river drainages. Greater amounts fall in the mountain ranges. Annual frost-free days vary, with an average of 10 days on the Arctic coast, 93 around Kotzebue Sound, and over 100 days in some sections of the southern interior. Mean daily January and July temperatures for 5 representative locations are:

	January	July
Barrow (Arctic Coast)	-16°F	39°F
Colville region (northern foothills and Brooks Range)	-11°F	45°F
Kotzebue (Kotzebue Sound-Chukchi Sea)	-6°F	53°F
Nome (Norton Sound-Bering Sea)	+4°F	50°F
Galena (lower Koyukuk drainage)	-11°F	59°F

Togiak National Wildlife Refuge
Clarence Rhode National Wildlife Range
Kenai National Wildlife Refuge
Copper River Delta

As in northeastern Alaska, temperature ranges are greater in the interior. On the Arctic coast, there is nearly continuous darkness from November 18 to January 24 and uninterrupted daylight from May 10 to August 2.

Mineralized zones and oil and gas provinces underlie much of the region. Several areas of geothermal energy potential are present. There is some timber, mostly along major rivers, of possible commercial value and some lands marginally suitable for agriculture.

This region, while also sparsely populated by national standards, has a larger population than northeastern Alaska. Settlements tend to be of larger size and three communities, Kotzebue, Nome, and Barrow, serve as regional centers having growing populations of over 2,000. Fairbanks, located to the southeast, has socioeconomic ties with the region. Aside from tourism in the major population centers, mineral exploration, some small-scale mining and logging, and recent oil and gas exploration, there is little industry activity within the region. Most of the region is predominantly populated by Inupiat Eskimos, with the exception of the Koyukuk drainage settled by Athabascan Indians. Fish and game and other products of the land are still taken by many of the region's residents to meet their subsistence needs. The State's road network does not extend into the region, but a few local roads radiate from Nome. Access is by air or by water in the summer months.

When the land entitlement to Alaska Native corporations is satisfied, approximately 15 percent of the region will be privately owned. Another 3 percent has been selected by the State of Alaska which may make other selections in this region to complete its entitlement. Eighty-two percent or less, depending upon future State selections, will then be retained in Federal ownership.

One large Federal reserve of 23.1 million acres, National Petroleum Reserve-Alaska, lies in the region as does the small Chamisso National Wildlife Refuge. The following areas for study as national interest lands were withdrawn under Section 17(d)(2) by the Secretary of the Interior:

1. two small areas around Cape Lisburne (74,000 acres) and Cape Thompson (10,000 acres);

2. a large section of the Central Brooks Range (8.17 million acres);

3. a large portion of the Noatak River (7.5 million acres) and Kobuk River (2.8 million acres) drainages;

4. a section of the Koyukuk River drainage (3 million acres);

5. the Kanuti Flats (750,000 acres);

6. the Selawik River basin (2.1 million acres); and

7. a part of the Seward Peninsula (3.3 million acres).

Central Brooks Range

The Brooks Range is the continent's only Arctic mountain range. One of its most rugged and scenic sections is the central portion, with waves of ridges and peaks up to 8,000 feet. Broad, glacially carved valleys with clear, free-flowing rivers intersperse the mountains. On the Range's southern slopes, valleys are forest-lined with birch, aspen, spruce, and poplar; while on the north, alpine tundra predominates with occasional willows and other brush along watercourses. The rolling Arctic foothills just north of the Brooks Range is an area characterized by irregular buttes, knobs, and elongated scarps. Scenic peaks within the central section of the Range include Arrigetch Peaks with steep granite walls, buttresses, and spires; Mt. Igikpak, the highest peak in the Central Brooks, towering above its surroundings; Frigid Crags and Boreal Mountain forming "The Gates of the Arctic"; and other mountains of interesting geological origin, formation, shape, and historical note. River canyons and several large lakes, including Walker Lake and Kurupa Lake, are also found in this area. Small glaciers and glacial tarns enhance the scenery in certain mountainous areas. The western Arctic caribou herd migrates throughout the area. Dall sheep, grizzly bear, and wolf are also present.

TO PROVIDE PROTECTION TO THE NATURAL VALUES OF NATIONAL INTEREST IN THE CENTRAL BROOKS RANGE, THE COMMISSION RECOMMENDS:

1. TWO LARGE AREAS WITHIN THE RANGE BE DESIGNATED UNITS OF THE NATIONAL PARK SYSTEM (5.2 MILLION ACRES);

2. TWO RIVERS WITHIN THE PROPOSED PARK UNITS, THE ALATNA RIVER AND THE NORTH FORK OF THE KOYUKUK-TINAYGUK, BE DESIGNATED WILD RIVERS;

3. LANDS BETWEEN THE TWO PROPOSED PARK UNITS NOT CONVEYED TO THE ARCTIC SLOPE NATIVE CORPORATIONS BE INCORPORATED WITHIN THE ALASKA NATIONAL LANDS SYSTEM (2.0 MILLION ACRES); BECAUSE OF THE VALUES RELATED TO THE PROPOSED ADJACENT PARK UNITS, THE NATIONAL PARK SERVICE IS RECOMMENDED AS THE MANAGER OF THIS UNIT; AND

4. FIVE RIVERS--KILLIK, NOATAK, ANAKTUVUK, JOHN, AND UPPER KOBUK--FLOWING THROUGH OR FROM THE PROPOSED PARK, ALASKA NATIONAL LANDS AND ADJOINING LANDS BE DESIGNATED POTENTIAL WILD OR SCENIC RIVERS FOR FURTHER EVALUATION IN ACCORDANCE WITH CLASSIFICATION OF THE ALASKA NATIONAL LANDS UNIT AND OTHER ADJOINING LANDS.

The Commission has attempted in these recommendations to protect representative cross-sections of the major terrestrial and aquatic ecosystems and landforms of the central Brooks Range. In addition, the Commission finds that adjacent lands in the lower Alatna River drainage currently selected by the State of Alaska have natural values of national interest and potential suitable for designation as Alaska National Lands. The Commission proposes that these lands be a subject of future land exchange discussions between the State and Federal governments. Should the lower Alatna River drainage be acquired by the Federal government, the Commission

recommends that the National Park Service be designated as manager to facilitate coordinated planning and management with adjacent lands in the National Park System.

The proposed park and Alaska National Lands units contain portions of a large petroleum province receiving current exploration. The petroleum province extends well beyond the boundaries of the recommended units. Two areas of geothermal energy potential are located within the proposed western park unit, but another potential source is found further to the west near the headwaters of the Selawik River and outside any recommended national interest reserves. The park units are traversed by three mineral belts with potential for copper, silver, gold, nickel, lead, zinc, tin, iron, barite, molybdenum, platinum, chromium, tungsten, titanium, and asbestos. All of the three mineral belts extend into adjoining lands, or into the proposed Alaska National Lands unit where mineral exploration and extraction could be allowed if eventual classification permits.

Areas with wildlife populations used extensively by residents of the area for subsistence purposes have largely been excluded from the proposed park units. Where these areas have natural values of high national interest, they have been incorporated in the new management system, where hunting, fishing, and trapping would be permitted.

Coordinated planning and management in the Central Brooks Range and adjoining areas is needed to insure adequate protection of the caribou range and herd. Major surface access routes to the Arctic and western coast and to potential mineral development zones adjoining the proposed park units have been identified in this region, necessitating coordinated planning among various landowners and managers to assure future access needs as they arise. Land ownership in this area is fragmented, with private inholdings or valid existing claims a likelihood in any future management unit.

Noatak-Kobuk

Free-flowing rivers traverse the area, coursing through bluffs, canyons, forest, and tundra, with mountains in some sections providing a scenic backdrop. Important scenic features are the Great Kobuk Sand Dunes, a unique geologic occurrence in a setting of forests, mountains, marshes, and ponds; the canyons along the Noatak, Salmon, and other rivers; and certain formations in the Baird and Delong Mountains. The area provides rangelands for the Arctic caribou herd and one of Alaska's few small herds of musk ox. Waterfowl nest in the region, with particularly high density concentrations along the Kobuk River and places along the coast. There are several sites of prehistoric aboriginal settlement, most notably those at Cape Krusenstern and Onion Portage. A relatively diverse Arctic flora grows along the Noatak River.

THE COMMISSION HAS FOUND THESE VALUES TO BE OF NATIONAL INTEREST AND MAKES THE FOLLOWING RECOMMENDATIONS FOR THEIR PROTECTION:

1. DESIGNATION OF THE GREAT KOBUK SAND DUNES AND THE IMMEDIATE SCENIC ENVIRONMENTS (110,000 ACRES) AS A UNIT OF THE NATIONAL PARK SYSTEM.

2. DESIGNATION OF THE CAPE KRUSENSTERN AREA (190,000 ACRES) AS A UNIT OF THE NATIONAL PARK SYSTEM TO PROTECT ITS ARCHAEOLOGICAL VALUES, UNIQUE GEOLOGIC FEATURES, AND ITS COASTAL BIRD AND OTHER HABITATS.

3. INCORPORATION INTO THE ALASKA NATIONAL LANDS SYSTEM OF THE LOWER AND MIDDLE SECTIONS OF THE NOATAK AND KOBUK RIVER DRAINAGES, THE BAIRD MOUNTAINS, AND THE DRAINAGES OF SEVERAL SMALLER RIVERS FLOWING INTO THE CHUKCHI SEA (11.9 MILLION ACRES). BECAUSE THE AREA IS AN IMPORTANT HABITAT FOR THE ARCTIC CARIBOU HERD AND SUSTAINS A VARIETY OF OTHER WILDLIFE, THE U.S. FISH AND WILDLIFE SERVICE IS RECOMMENDED AS THE MANAGER FOR THIS RESERVE.

4. A PORTION OF THE NOATAK RIVER DRAINAGE IS RECOMMENDED AS A WILDERNESS STUDY AREA. THREE OF THE MANY FREE-FLOWING STREAMS, THE NOATAK, SALMON, AND WULIK RIVERS, HAVE BEEN STUDIED AS POSSIBLE WILD OR SCENIC RIVERS AND ARE RECOMMENDED FOR POTENTIAL DESIGNATION PENDING CLASSIFICATION OF THE RESERVE LANDS.

Some potential for oil and gas exists within the proposed units, but the provinces extend well beyond the recommended boundaries. Four proposed hydroelectric projects (Agashashok, Misheguk, Nimiuktuk, and Kobuk), if constructed, would inundate large parts of the proposed units and are incompatible with the protection of the natural values. Several small areas of bituminous coal deposits, two of which are in the proposed Alaska National Lands unit lie in the Kobuk valley. Major coal deposits are found to the north of the proposed units. The proposed park and new management unit is underlain by metallogenic provinces with potential for copper, gold, silver, nickel, lead, zinc, tin, iron, barite, molybdenum, platinum, chromium, tungsten, titanium, and asbestos. Exploration and extraction may occur on the Alaska National Lands wherever eventual classification allows.

Hunting, fishing, and trapping for subsistence purposes are intensive and widespread along the coast, the lower reach of the Noatak, and along the Kobuk River valley. THE COMMISSION RECOGNIZES THIS CONTINUING NEED OF LOCAL RESIDENTS FOR THE FISH AND GAME IN THE AREA, AND RECOMMENDS THAT HUNTING, FISHING, AND TRAPPING BE ALLOWED IN ALL PROPOSED UNITS, INCLUDING THE TWO RECOMMENDED FOR NATIONAL PARK SYSTEM STATUS. The boundaries of the proposed wilderness study area along the Noatak River have been delineated to make available some opportunities for future mineral development in the general area. The lower reach of the Noatak River, which is used more intensively for subsistence activities, is excluded.

If the important caribou herd and range of this area is to be protected, coordinated management will be required. In addition, access through this region to the western Arctic for energy resources of potential national interest may become necessary and would require coordinated planning.

Selawik

This middle section of the Selawik River drainage contains high density waterfowl habitat supporting migratory birds and other wildlife. This habitat is used for summering, nesting, molting, feeding, and resting during migration.

Significant populations of pintail, scaup, widgeon, old squaw, and scoter ducks; white-fronted geese; and sandhill cranes nest here, as well as the cackling and taverner's subspecies of Canada geese. Two to five percent of the whistling swans using the Pacific Flyways nest in the area. Migrating snow geese, numbering 200,000 to 300,000 birds, feed and rest around Kotzebue Sound, as do raptors and some Asiatic birds. Moose and caribou use the Selawik River drainage as winter habitat.

THE COMMISSION RECOMMENDS DESIGNATION OF THIS AREA (1.5 MILLION ACRES) AS A WILDLIFE REFUGE TO PROTECT HABITAT AND PERPETUATE WILDLIFE POPULATIONS.

A sedimentary basin with petroleum and uranium potential underlies part of the area, but the basin extends well beyond the proposed refuge boundaries. A metallogenic province with potential for tin and molybdenum also underlie portions of the proposal, but extends beyond the proposed boundaries.

Taking of fish and game for local subsistence purposes is a common and important practice. HUNTING, FISHING, AND TRAPPING WOULD CONTINUE UNDER STATE WILDLIFE MANAGEMENT REGULATIONS IN COORDINATION WITH FEDERAL WILDLIFE AND HABITAT MANAGEMENT.

Adequate protection of the Arctic caribou herd and range and the extensive waterfowl habitat will require intergovernmental coordination with the involvement of private landowners. Coordinated planning for any future development of access through this area to the western Arctic will also be necessary.

Cape Lisburne and Cape Thompson

The prime natural value of these areas is their coastal cliff habitat for northwest Alaska's largest seabird colonies, with estimated populations of 2 to 3 million birds. The beaches and coastal waters also provide resting and feeding areas for migratory birds and hauling out grounds for marine mammals. Birds of prey, including gyrfalcons, golden eagles, and peregrine falcons, frequent the cliffs. Loons and a variety of other waterfowl, shorebirds, and perching birds are also present. Walrus, seal, whale, and occasional polar bear are seen along the coastal waters. The beaches, scenic cliffs, and adjoining tundra-covered uplands at Cape Lisburne form a relatively small ecosystem containing a coastal area and representative uplands of the northwest Arctic coast.

THE COMMISSION RECOMMENDS THAT THESE VALUES OF NATIONAL INTEREST BE PROTECTED BY DESIGNATING TWO SMALL NATIONAL WILDLIFE REFUGE UNITS, ONE AT CAPE LISBURNE OF 63,000 ACRES, INCLUDING THE DRAINAGES OF ADJOINING

UPLANDS, AND 11,000 COASTAL ACRES AT CAPE THOMPSON. An area adjacent to the proposed Cape Thompson unit is noted for its scientific values and has received extensive ecological research. Most of the adjacent area has been selected by the Arctic Slope Regional Corporation.

Both units contain small portions of a potential oil and gas province. The proposed unit at Cape Lisburne contains some coal potential, and portions of Cape Thompson have potential for uranium, copper, lead, antimony, barite, and molybdenum. All these provinces extend well beyond the boundaries of the proposed units.

IN RECOGNITION OF THE IMPORTANCE OF WILDLIFE IN THESE PROPOSED UNITS FOR MEETING THE SUBSISTENCE NEEDS OF LOCAL RESIDENTS, THE COMMISSION HAS RECOMMENDED THAT CONTINUED HUNTING, FISHING, AND TRAPPING BE ALLOWED UNDER STATE REGULATIONS UNLESS RESTRICTED BY THE U.S. FISH AND WILDLIFE SERVICE TO PROTECT MIGRATORY SPECIES.

Seward Peninsula

A combination of ocean currents, barrier islands, coastal lagoons, and estuaries make the northwestern coast of the Seward Peninsula an important coastal habitat for migrating birds and marine mammals. Breeding habitat for pintail and scaup ducks and white-fronted geese is provided, as well as nesting areas for black brant, whistling swans, and a resting and feeding area for migrating snow geese. Sea mammals, mainly seal, walrus, and the Beluga whale, are seen in the coastal waters. Seals occasionally come ashore. Grizzly bear, wolf, wolverine, and smaller animals occur throughout. The area has uncommon scenic and scientific qualities, including the volcanic maar lakes near Devil Mountain, hot springs, scenic rock outcroppings, and pingos and other frost phenomena. The Seward Peninsula has significance as a relic of the Bering Land Bridge with evidence of past migration of animals, plants, and aboriginal peoples. Several archaeological sites have been identified in the area.

IN RECOGNITON OF THE IMPORTANT TERRESTRIAL WETLAND AND COASTAL HABITATS FOR MIGRATORY BIRDS AND MARINE MAMMALS, THE COMMISSION RECOMMENDS WILDLIFE REFUGE DESIGNATION FOR TWO UNITS, TOTALLING 1.5 MILLION ACRES. Nearby scenic areas with scientific and recreational values are included in the larger eastern unit.

A potential oil and gas province underlies part of the proposed unit but extends well beyond the recommended boundaries. A sedimentary basin with potential for uranium lies within the larger unit and is one of approximately 20 such basins in Alaska having potential for these minerals. Four areas on the Seward Peninsula, in addition to the hot springs incorporated within the proposal, are considered to have geothermal energy potential. Mineral provinces with potential for fluorine, silver, lead, zinc, tin, and tungsten underlie small portions of the proposed refuge, but extend under adjoining lands as well.

Taking of fish and game in the coastal zone for subsistence purposes is common and important to local residents. Hunting, fishing, and trapping would continue under State regulations in coordination with Federal

wildlife habitat and population objectives. The Seward Peninsula has an active reindeer industry, and reindeer grazing occurs under lease within the proposed refuge units. THE COMMISSION FINDS THAT REINDEER GRAZING IS GENERALLY COMPATIBLE WITH PROTECTION OF HABITAT VALUES, AND RECOMMENDS THAT CONTINUED GRAZING BE ALLOWED UNDER REGULATION.

Koyukuk

The lower Koyukuk River is composed of an extensive network of streams and lakes among forest, marsh, and brush, providing high density waterfowl habitat. Prevalent duck species include scaup, pintail, widgeon, and scoters. White-fronted geese and Canada geese are common nesters. Caribou and moose winter in the general area. Scenic features of scientific interest are the Nogahabara Sand Dunes, and the exemplary variety of oxbow, meander scroll, and thaw lakes in the Three Day Slough area.

THE COMMISSION RECOMMENDS THAT THIS AREA (2.5 MILLION ACRES) BE DESIGNATED A WILDLIFE REFUGE TO PERPETUATE THE VALUABLE WETLAND HABITATS AND WILDLIFE.

Most of the unit is underlain by a sedimentary basin with potential for oil and gas and uranium. Nearly half of the basin lies outside the proposed boundaries. Hydroelectric power could potentially be developed within the area at the Dulbi site and another site downstream from the proposed unit. If developed, much of the lowlands would be inundated by reservoirs and natural values lost or altered. At present there is no significant demand for this development. A metallogenic province with potential for tin and molybdenum underlies portions of the proposed refuge, but extends beyond the recommended boundaries.

The proposed unit is largely forested and contains some timber stands of future commercial potential, particularly along the rivers. However, adjacent areas are also forested and may have greater potential. Some small tracts of lowlands bordering the rivers within the unit have agricultural potential, but cultivable soils are also found downstream and upstream from the proposed refuge. Continued hunting, fishing, and trapping are allowed under State regulations in coordination with Federal habitat management and population concerns.

Coordinated management of the wide-ranging Arctic caribou herd is necessary if its population and habitat are to be fully protected.

Kanuti Flats

The Kanuti Flats in the middle Koyukuk drainage is a relatively small lowland basin containing an area of prime wetland waterfowl habitat. Duck species of importance that nest in this area are scaup, pintail, widgeon, and scoter. Canada and white-fronted geese also nest here. A network of lakes, streams, marshes, and forest supports other wildlife as well, including moose, black bear, and wolf. The western Arctic caribou herd periodically uses the area as winter range. THE COMMISSION RECOMMENDS AN AREA OF APPROXIMATELY 430,000 ACRES AS A WILDLIFE REFUGE TO PROTECT PRIME HABITAT AND WILDLIFE.

A petroleum province of unknown potential underlies a portion of the area. A small portion of a metallogenic province with potential for copper, nickel, iron, chromuim, platinum, titanium, and asbestos is within the area, but extends beyond the proposed refuge boundaries. Mineral exploration, development, or extraction may occur at the discretion of the Secretary of the Interior through a permit and lease system.

The proposed unit is covered primarily by lowland forests, with some bottomland spruce-poplar of potential commercial value along the Koyukuk River and its south fork. This forest extends beyond the unit boundaries. Hunting, fishing, and trapping would continue under State wildlife management regulations. Other uses of the area would be allowed as permitted by U.S. Fish and Wildlife Service policies.

Bering Sea Islands

Five islands in the Bering Sea along the Seward Peninsula and in Norton Sound include some of the better seabird colonies along the northeastern rim of the Bering Sea. Fairway Rock (60 acres) a granitic island rising steeply to an elevation of 500 feet, supports 100,000 to 150,000 seabirds and provides a resting place for songbirds migrating across the Bering Sea. The 700-acre Sledge Island is rocky and generally flat-topped except for a 760-foot jagged mountain on the south. It is located about 25 miles west of Nome and contains ruins of an abandoned village. Over 35 species of birds nest here, including murres, auklets, black-legged kittiwakes, and common eiders. Egg Island (60 acres) is located 40 miles southwest of Unalakleet. About 2,000 thick-billed murres and 3,000 puffins nest here with several thousand other seabirds. Besboro Island (720 acres) supports populations of murres, auklets, puffins, and jaegers. The small Punuk Islands (160 acres) located just offshore of St. Lawrence Island provide hauling out habitat for a high density population of harbor seals. The Islands have a variety of seabirds, including pelagic cormorants, and significant archaeological values relating to the St. Lawrence Eskimos.

THE COMMISSION RECOMMENDS THAT FAIRWAY ROCK, SLEDGE ISLAND, AND PUNUK ISLANDS BE ADDED TO THE NATIONAL WILDLIFE REFUGE SYSTEM. IN THE EVENT THAT EGG AND BESBORO ISLANDS ARE NOT CONVEYED TO ALASKA NATIVE CORPORATIONS, THEY ARE ALSO RECOMMENDED FOR REFUGE DESIGNATION. These islands have no apparent resource uses that would be precluded by their designation as refuge units. Total area of all islands is about 1,700 acres.

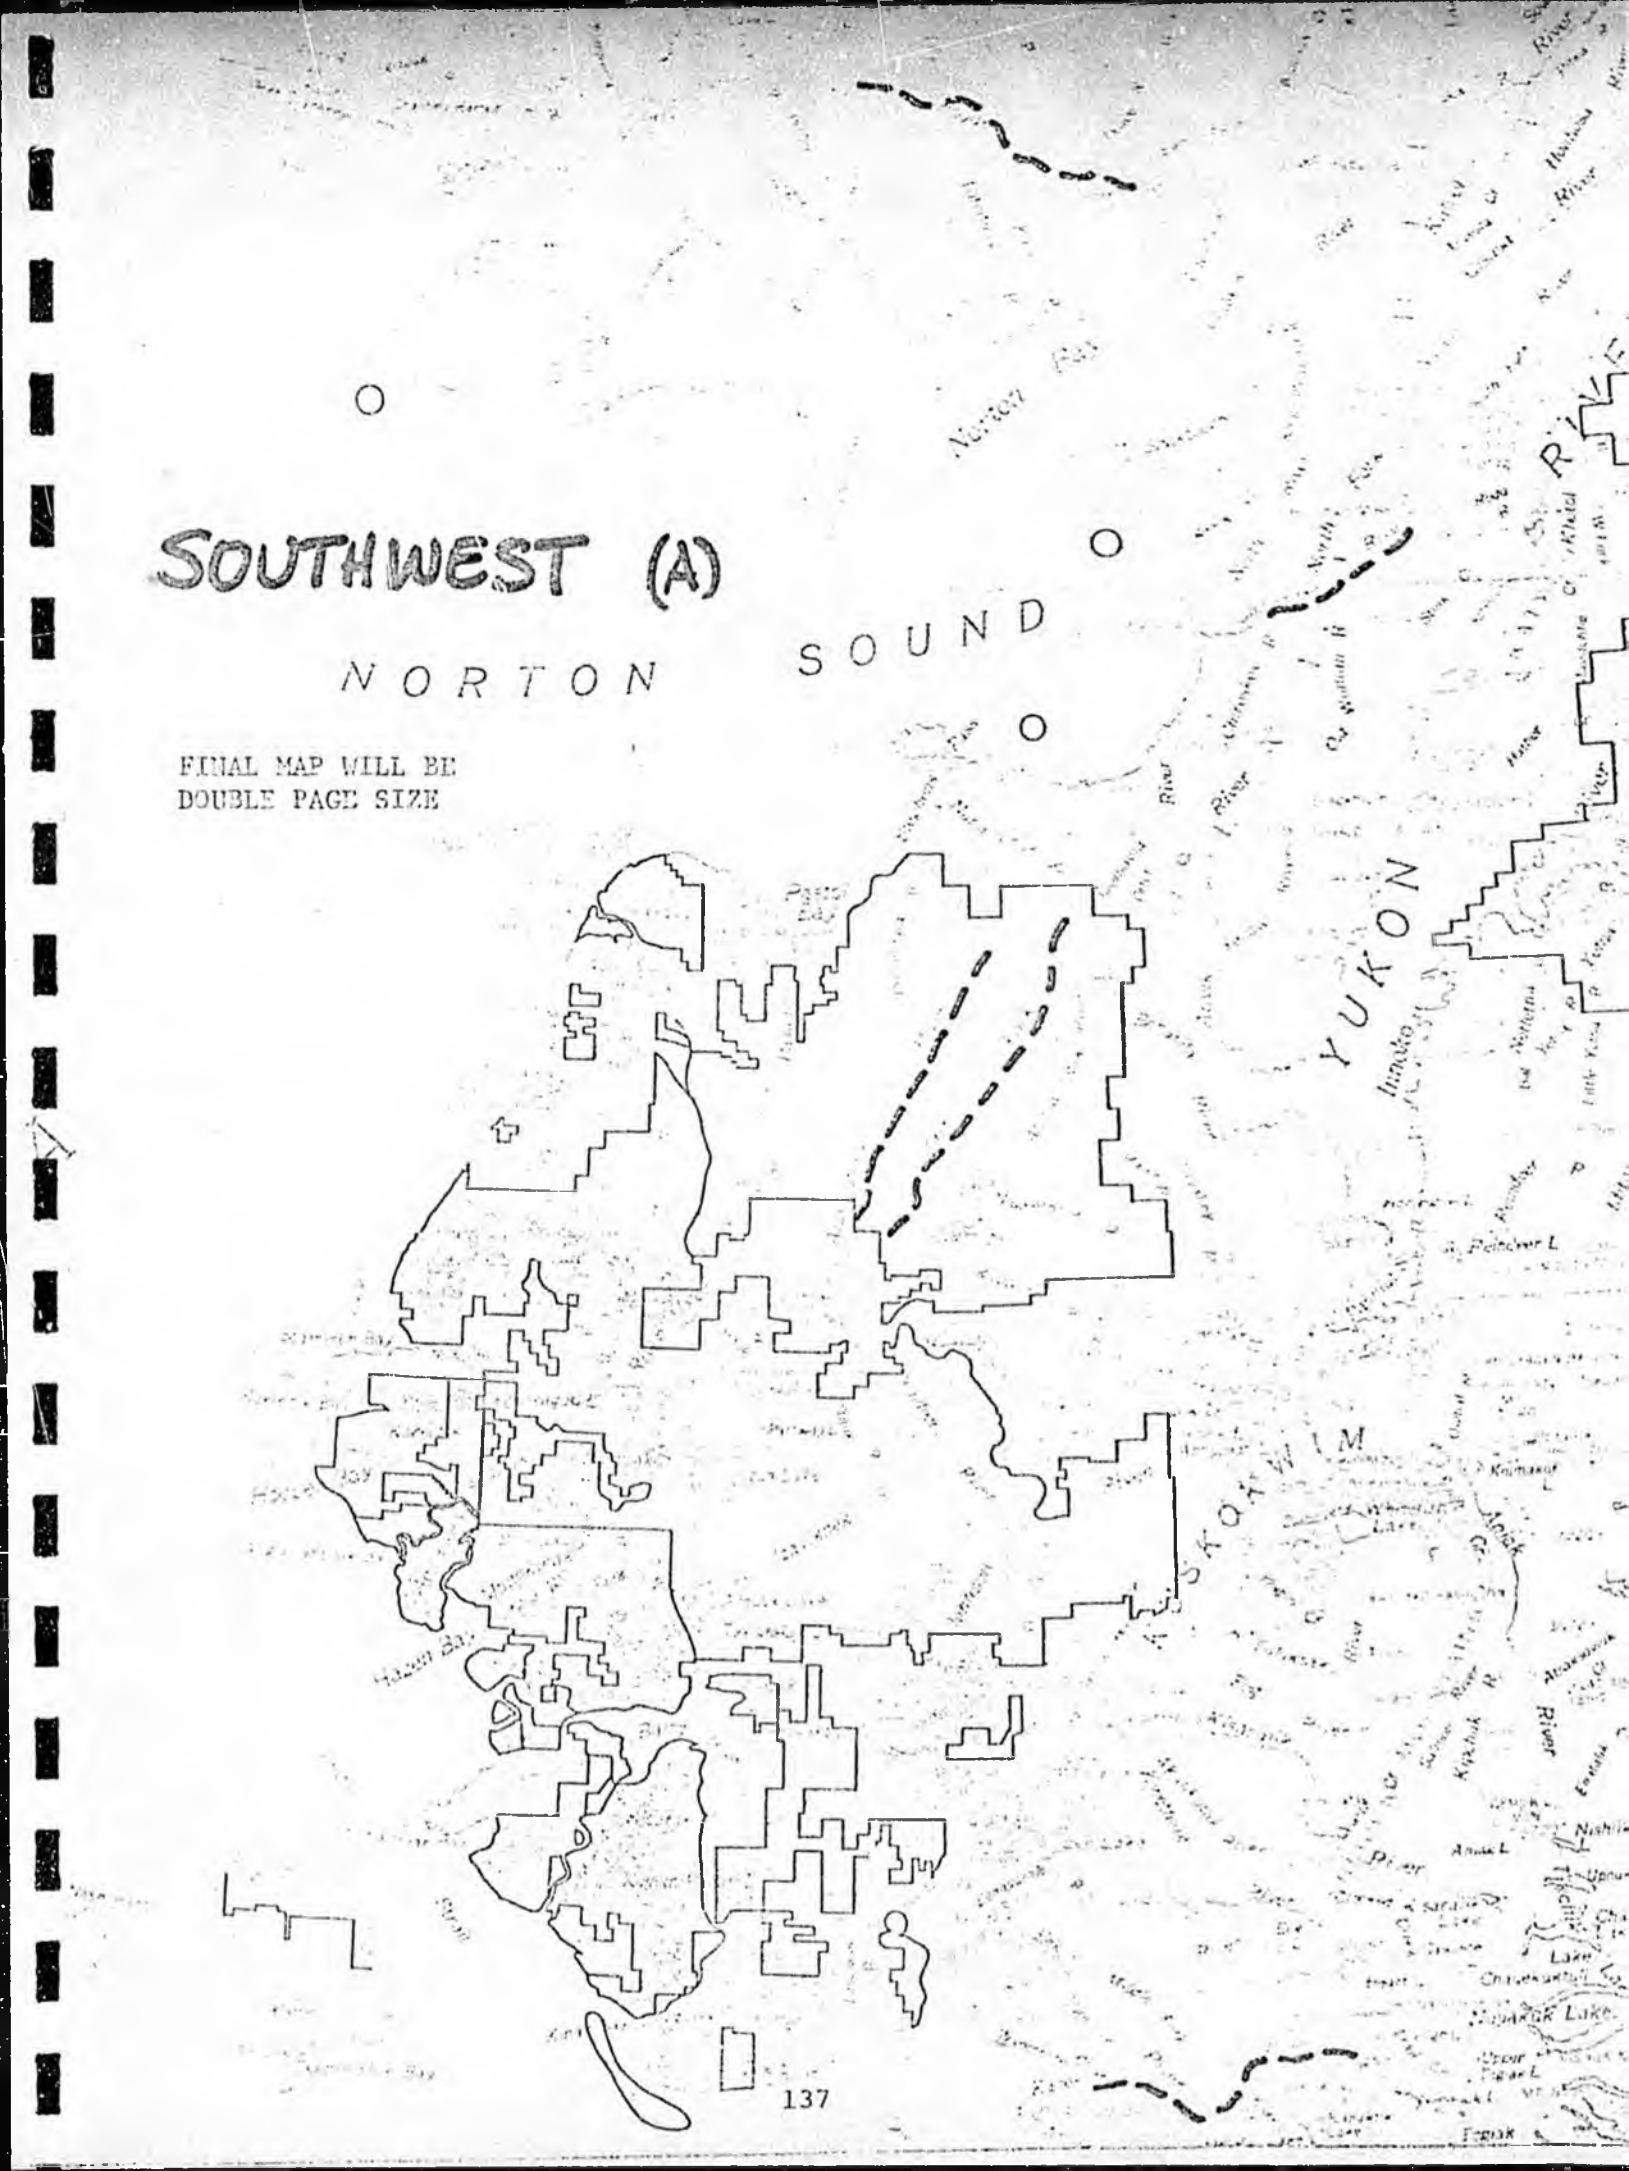
Other Wild and Scenic Rivers

TWO RIVERS WITHIN NATIONAL PETROLEUM RESERVE-ALASKA, THE IKPIKPUK AND UTUKOK, AND THE KOYUK RIVER ON THE SEWARD PENINSULA ARE RECOMMENDED FOR DESIGNATION AS POTENTIAL WILD AND SCENIC RIVERS PENDING FURTHER STUDY, EVALUATION, AND EVENTUAL CLASSIFICATION OF SURROUNDING LANDS.

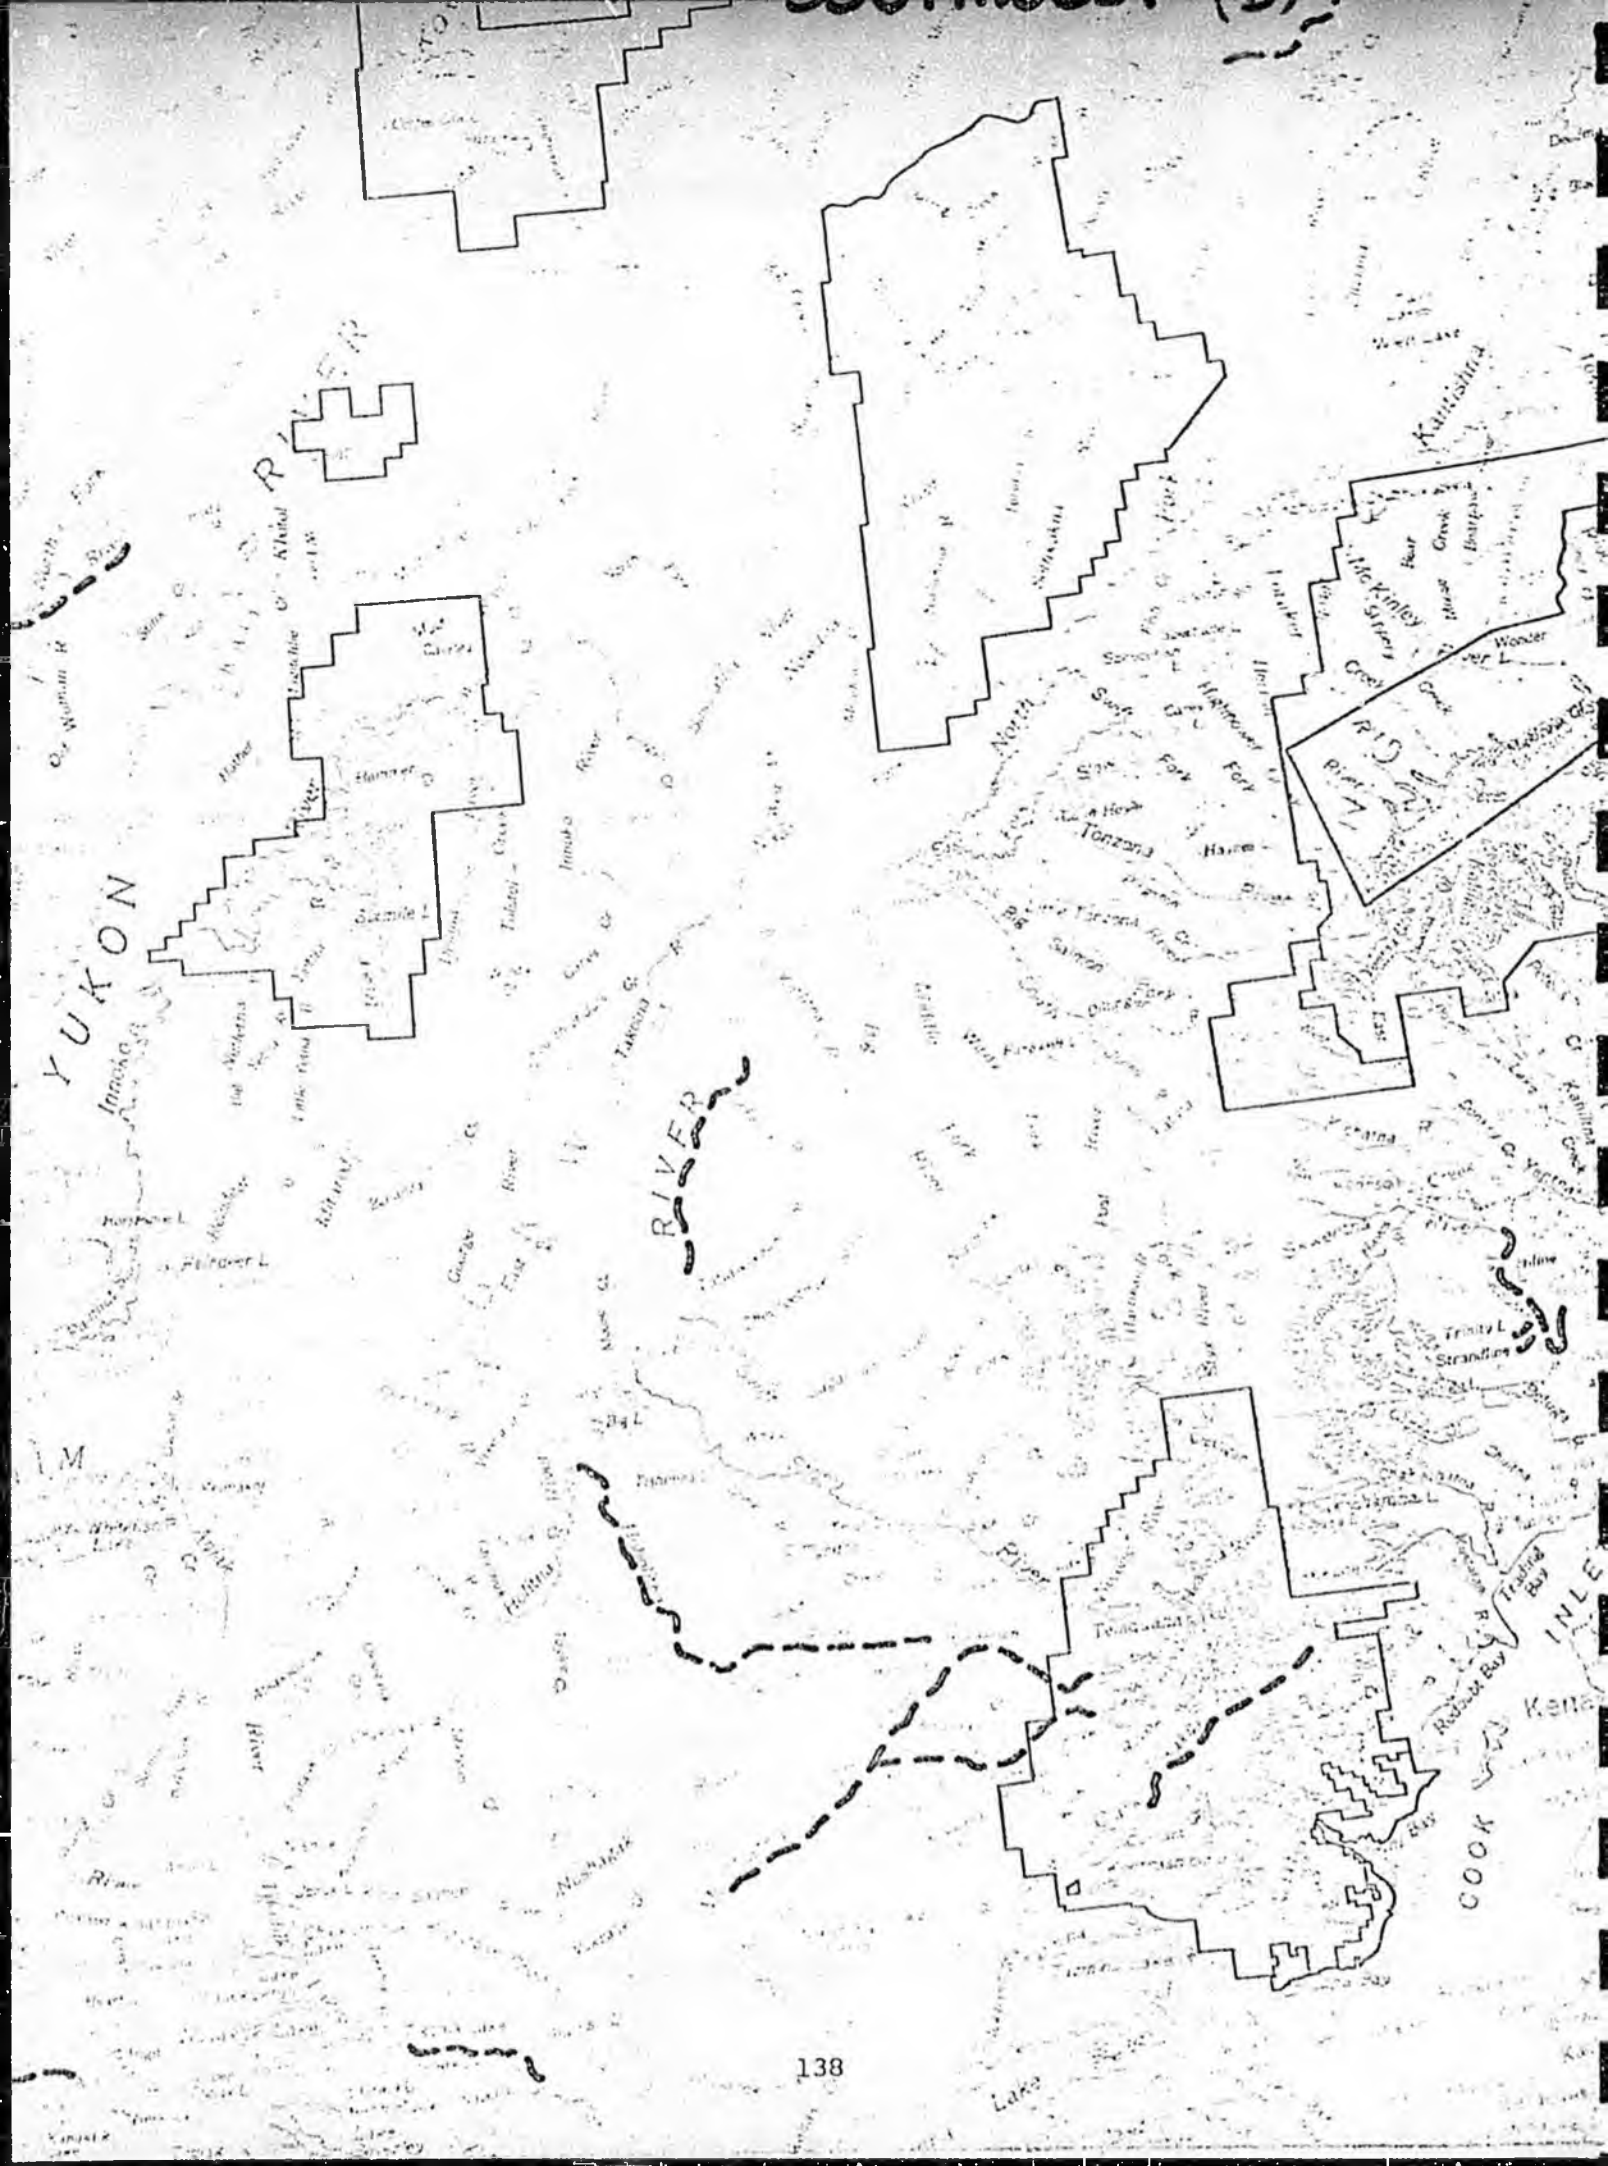
SOUTHWESTERN ALASKA

The approximately 110,000-square-mile (70,400,000 acres) southwestern region of Alaska is drained by two of Alaska's major rivers, the Yukon and the Kuskokwim. The region is bordered on the west by the Bering Sea

SOUTHWEST (A)



FINAL MAP WILL BE
DOUBLE PAGE SIZE



YUKON
RIVER
COOK INLET

and contains the central and lower two thirds of Alaska's Yukon drainage and its large delta, and the entire Kuskokwim drainage. Nunivak and several other smaller islands of the Bering Sea are in the region. Broad floodplains with hundreds of thousands of lakes, meandering streams, marshes and bogs, and low river plains are dominant landscapes. The Kuskokwim Mountains and portions of the Nulato Hills and Ahklun Mountains trend southerwesterly through the area. Most of the interior lowlands and uplands are partially forested with spruce, aspen, birch, and balsam poplar. Forest gives way to tundra communities in most of the coastal areas west of the mountains, except for scattered stands along the two major rivers and parts of Norton Sound. This region is the most productive waterfowl area in Alaska. Significant portions of the North American populations of several varieties of swan, geese, and ducks breed and nest here. Other wildlife, including black and brown bear, moose, wolf, wolverine, and caribou, are present. Sea mammals are found in some locations along the Bering Sea coast.

Near the coast, average annual precipitation levels are 15 to 20 inches, and wind is common. Subarctic conditions prevail in the interior with less precipitation, clearer skies, warmer summers, and colder winter. The first freeze generally occurs in early September with the last spring freeze in late May, leaving approximately 100 frost-free days each year. All streams remain frozen generally between November and May. July highs at Bethel average 62° and January lows average -3°. Ruby, which is farther from the coast, has an average July high of 70° and an average January low of -12°.

Portions of the region have potential of oil and gas, as well as metallic minerals. Inland from the coast there are some timber stands of potential commercial value and some lands that are suitable for cultivation, mostly along the major rivers. There is extensive acreage suitable for reindeer grazing throughout the region.

Although the region's population of nearly 20,000 is relatively high for rural "bush" Alaska, and over 50 communities are located here, the land remains largely undeveloped and unaltered. There is one regional center, Bethel, with a growing population of over 3,000. All other settlements are small villages with populations generally less than 400. Inhabitants are predominantly Eskimo with some Athabascan Indians in the upper drainages. There is little industry in the region except for some commercial fishing. Most of the available employment is related to government. Cash incomes and educational attainment levels are relatively low.

When Native entitlement is complete, approximately 15 percent of the land in this region, or about 10 million acres, will be in private ownership. The State of Alaska has selected nearly 17 million acres, roughly constituting 25 percent of the region. The State may make additional selections within this region, although it relinquised its selection rights to lands west of 161° longitude by agreement with the Secretary of the Interior in 1972. Discounting any future State selections, the Federal Government will retain ownership of up to 60 percent of the region.

Four national wildlife refuges have been established in the region to protect migratory waterfowl and other birds and musk-oxen of national interest. They are the Hazen Bay and Clarence Rhode refuges (2.8 million acres combined), the Nunivak Island refuge (1.9 million acres), and the relatively small Bering Sea refuges (41,000 acres). Four withdrawals were made under Section 17(d)(2) by the Secretary of the Interior in 1972: 5,352,000 acres in the Yukon Delta, 3,249,000 acres in Innoko Flats, 952,000 acres around the lower Nowitna River, and 319,000 acres in the Kaiyuk Slough.

Yukon-Kuskokwim Delta

This large delta along the Bering Sea was formed by sediments deposited by the Yukon and Kuskokwim Rivers creating a broad plain with many thousands of lakes, streams, and ponds. The nearly flat wetlands are broken only by the rolling hills and bluffs of scattered island remnants. North of the Yukon River, gently sloping mountains form the Nulato Hills.

The entire Yukon-Kuskokwim Delta region provides high density and key waterfowl habitat for 100 million marine and terrestrial birds of 150 species. Virtually all the white-fronted geese using the Pacific Flyway and 80 to 90 percent of the North American populations of cackling and emperor geese nest and breed here.

THE COMMISSION RECOMMENDS THAT THE HIGH DENSITY WATERFOWL HABITAT ON PUBLIC LANDS WEST AND SOUTH OF THE YUKON RIVER, WEST OF THE KUSKOKWIM RIVER, AND WEST OF 161° WEST LONGITUDE BE ADDED TO THE WILDLIFE REFUGE SYSTEM (5.7 MILLION ACRES). AN AREA OF 3.5 MILLION ACRES NORTH OF THE DELTA AROUND THE ANDREAFSKY RIVER DRAINAGE CONTAINING MEDIUM TO HIGH DENSITY WATERFOWL AND UPLAND WILDLIFE HABITAT IS RECOMMENDED FOR INCLUSION IN THE ALASKA NATIONAL LANDS SYSTEM. BECAUSE THE AREAS CONTAIN UPLANDS AND LOWLANDS CLOSELY RELATED TO THE WATERFOWL AND THE WILDLIFE HABITAT OF THE YUKON DELTA, THE U.S. FISH AND WILDLIFE SERVICE IS RECOMMENDED AS THE MANAGER OF THIS UNIT.

Nearly the entire delta area contains potential for oil and gas. The provinces extend beyond the proposed refuge and new management system boundaries onto adjacent private and State-owned submerged lands. The wildlife refuge proposal contains potential for uranium, gold, silver, antimony, molybdenum, and tungsten, but the metallogenic provinces also extend beyond the proposed boundaries onto private and other public lands.

The proposed refuge contains some bottomland spruce-poplar forest of potential commercial value, but the major portions of the forest lie on adjacent private lands and upstream along the Yukon and Kuskokwim Rivers. The proposed Alaska National Lands unit contains stands of spruce-hardwood forest of possible commercial value along the valleys. Opportunities for commercial timber harvest in the general delta area would not be foreclosed by the designation of either of these units.

While lowland cultivable soils extend into the general area, they are climatically impaired. Primarily, the suitable cultivable soils lie upstream on private lands along the two major rivers. Potential exists in the delta lowlands for controlled reindeer grazing, and would not be precluded by refuge designation. Reindeer grazing potential in the Andreafsky uplands could be in conflict with maintenance of caribou, wolf, and bear populations in the area. Allowable grazing will be in accord with land classification developed for this Alaska National Land unit.

A relatively large number of people populate villages scattered about the delta area. Reliance on fish, waterfowl, and game for subsistence purposes is intensive and widespread. Hunting, fishing, and trapping under State regulation would continue on the proposed refuge and Alaska National Lands units unless restricted by the U.S. Fish and Wildlife Service. The Commission recognizes a need for coordination among the area landowners to protect the extensive waterfowl habitat found in different ownerships, to provide for any future needs for transportation development, and to best provide for continued subsistence needs which require extensive areas.

Innoko Flats/Kaiyuh Slough

These two areas of western interior Alaska are characterized primarily by wetland bogs and scattered black spruce, with a network of lakes and streams interspersed by occasional rolling hills. They provide high density wetland habitat for a variety of waterfowl. The Innoko Flats support an average of 53 ducks per square mile, while the Kaiyuh Slough provides habitat for about 67 ducks per square mile. Predominant species represented include widgeon, scaup, scoter, and goldeneye. An estimated population of 100,000 pintail ducks use the Innoko Flats, and nearly 50,000 geese nest in each of the proposed units. Both areas have significant populations of large mammals and furbearers, especially beaver.

THE COMMISSION RECOMMENDS THAT THESE AREAS, TOTALLING ABOUT 2.2 MILLION ACRES OF NATIONALLY SIGNIFICANT WILDLIFE HABITAT, BE PROTECTED BY THEIR DESIGNATION AS UNITS OF THE NATIONAL WILDLIFE REFUGE SYSTEM.

Oil and gas provinces partially underlie the proposed units, but extend well beyond their boundaries. The development of a possible hydroelectric project at Holy Cross would be incompatible with the protection of the prime natural values in the Innoko and Kaiyuh areas. Currently, there is no significant demand for development. The Innoko unit contains a metallogenic province with potential for gold, silver, antimony, molybdenum, and tungsten. This province extends well beyond the proposed boundaries.

The proposed Innoko unit contains some bottomland spruce-poplar forest of potential commercial value along two major waterways, as well as extensive stands of open lowland forests. Some lowland soils suitable for agriculture are also present, but more extensive areas of cultivable soils border the nearby Yukon River.

Nowitna

The Nowitna River is a major tributary in the central drainage of the Yukon River. The northern sector of the Nowitna drainage contains waterfowl habitat with low to medium density populations. Migratory waterfowl using the area include pintail, widgeon, scaup and scoter ducks, and white-fronted and Canada geese. Trumpeter swans also nest in the area. Caribou, moose, wolf, beaver, and other furbearers, are supported by the wetland and upland habitats. The free-flowing Nowitna River passes through a variety of landforms including scattered scenic bluffs and canyons. Fossil exposures are present in some stretches. The southern zone contains a mountainous area of forest and alpine tundra somewhat more scenic than other large expanses of the Kuskokwim Mountains. Forest cover is extensive and composed of varying mixtures of white and black spruce, aspen, birch, and balsam poplar. From the Yukon River to the southern headwaters of the Nowitna tributaries, the area is an exemplary cross section of interior Alaska landforms and ecosystems.

IN RECOGNITION OF THE VARIETY OF VALUES PRESENT IN THIS AREA, THE COMMISSION RECOMMENDS 3.5 MILLION ACRES IN THE NOWITNA DRAINAGE BE INCORPORATED IN THE ALASKA NATIONAL LANDS SYSTEM AND THAT THE NOWITNA RIVER BE DESIGNATED AS A POTENTIAL SCENIC RIVER, PENDING FURTHER EVALUATION IN THE CLASSIFICATION PROCESS OF SURROUNDING LANDS. ADMINISTRATION OF THE NOWITNA UNIT BY THE U.S. FOREST SERVICE IS RECOMMENDED.

There has been increasing expression of interest in interior Alaska's forests and possible development of a forest industry within this extensive area. The U.S. Forest Service appears particularly well suited to manage the Nowitna River area because of its research capabilities and the need to develop appropriate silvicultural methods and other management programs for these and similar lands and their several values. Research findings developed here could be of value to other private landholders and State and Federal land administrators in the general area.

A potential petroleum basin underlies a portion of the area. Downstream hydroelectric potential at the Ruby site, if developed, would largely inundate the waterfowl habitat of the lowlands along the Nowitna and Yukon Rivers. A metallogenic province of unknown type has been identified in the southern portion and on adjoining public domain lands.

Forest stands of potential commercial value lie on the benches adjoining the Nowitna and Yukon Rivers. Lowland and upland soils suitable for cultivation are found in the northern zone and along the eastern bank. Taking of fish and game for subsistence purposes occurs commonly in the northern portion and would be permitted under the Alaska National Lands system. Boating use on the Nowitna River would continue.

Unalakleet River

This free-flowing clear-water river drains the Kaltag Mountains and flows southwest to the eastern shore of Norton Sound. It courses for 90 miles between slopes and rounded summits up to 2,800 feet. The valley floor supports spruce, birch, and willow stands, with scattered small

lakes in the lower reaches. The area includes habitat for a variety of large mammals, such as caribou, moose, and bear, as well as for small furbearers, waterfowl, and fish. A segment of the historic Iditarod trail parallels the river. THE COMMISSION RECOMMENDS THAT A 60-MILE-LONG CORRIDOR ABOVE PRIVATE LANDS ALONG THE COAST BE DESIGNATED AS A WILD RIVER WITHIN THE NATIONAL WILD AND SCENIC RIVERS SYSTEM. A potential oil and gas province crosses the proposal, but extends well to either side of the proposed corridor. The forests along the river have little commercial value beyond local use. THE COMMISSION RECOGNIZES THE IMPORTANCE OF WILDLIFE FOUND ALONG THE RIVER IN MEETING THE SUBSISTENCE NEEDS OF LOCAL RESIDENTS, AND RECOMMENDS THAT HUNTING, FISHING, AND TRAPPING BE PERMITTED UNDER STATE REGULATIONS.

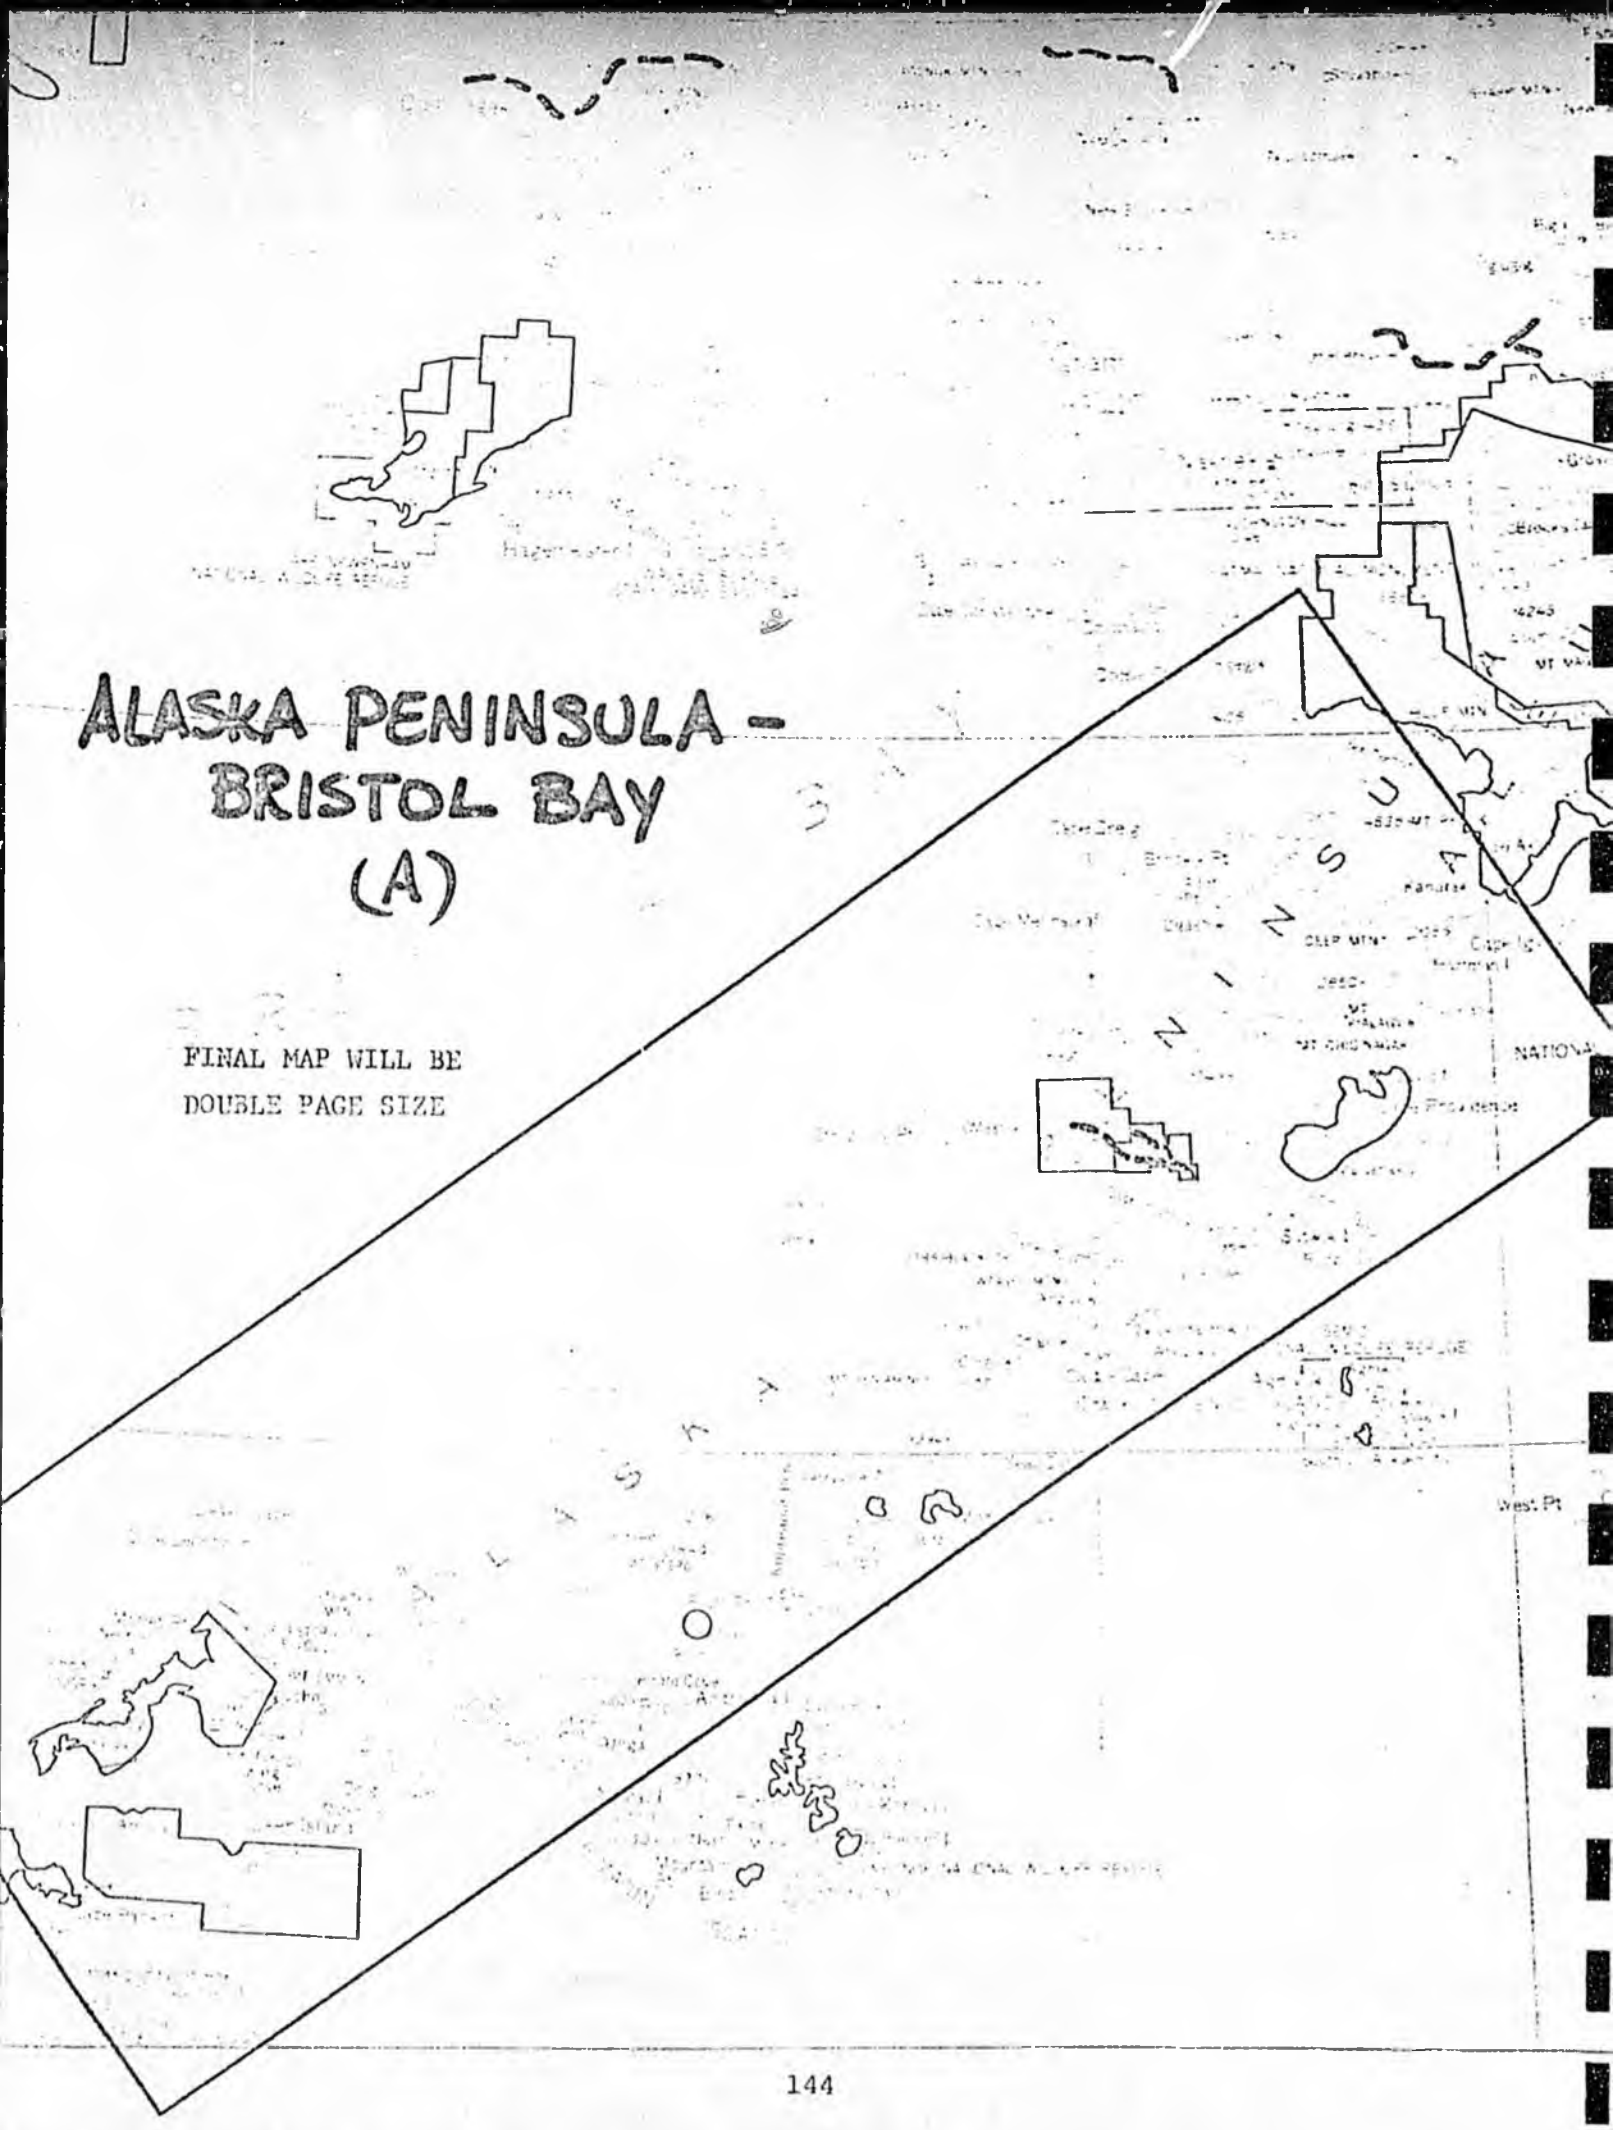
Other Wild and Scenic Rivers

TWO OTHER RIVERS IN THIS REGION, THE ANDREAFSKY AND ITS EAST FORK, AND A SEGMENT OF THE MIDDLE KUSKOKWIM, ARE RECOMMENDED FOR DESIGNATION AS POTENITAL WILD AND SCENIC RIVERS WITH FURTHER STUDY, EVALUATION, AND CLASSIFICATION OF SURROUNDING LANDS TO AID IN FINAL RECOMMENDATIONS.

ALASKA PENINSULA - BRISTOL BAY

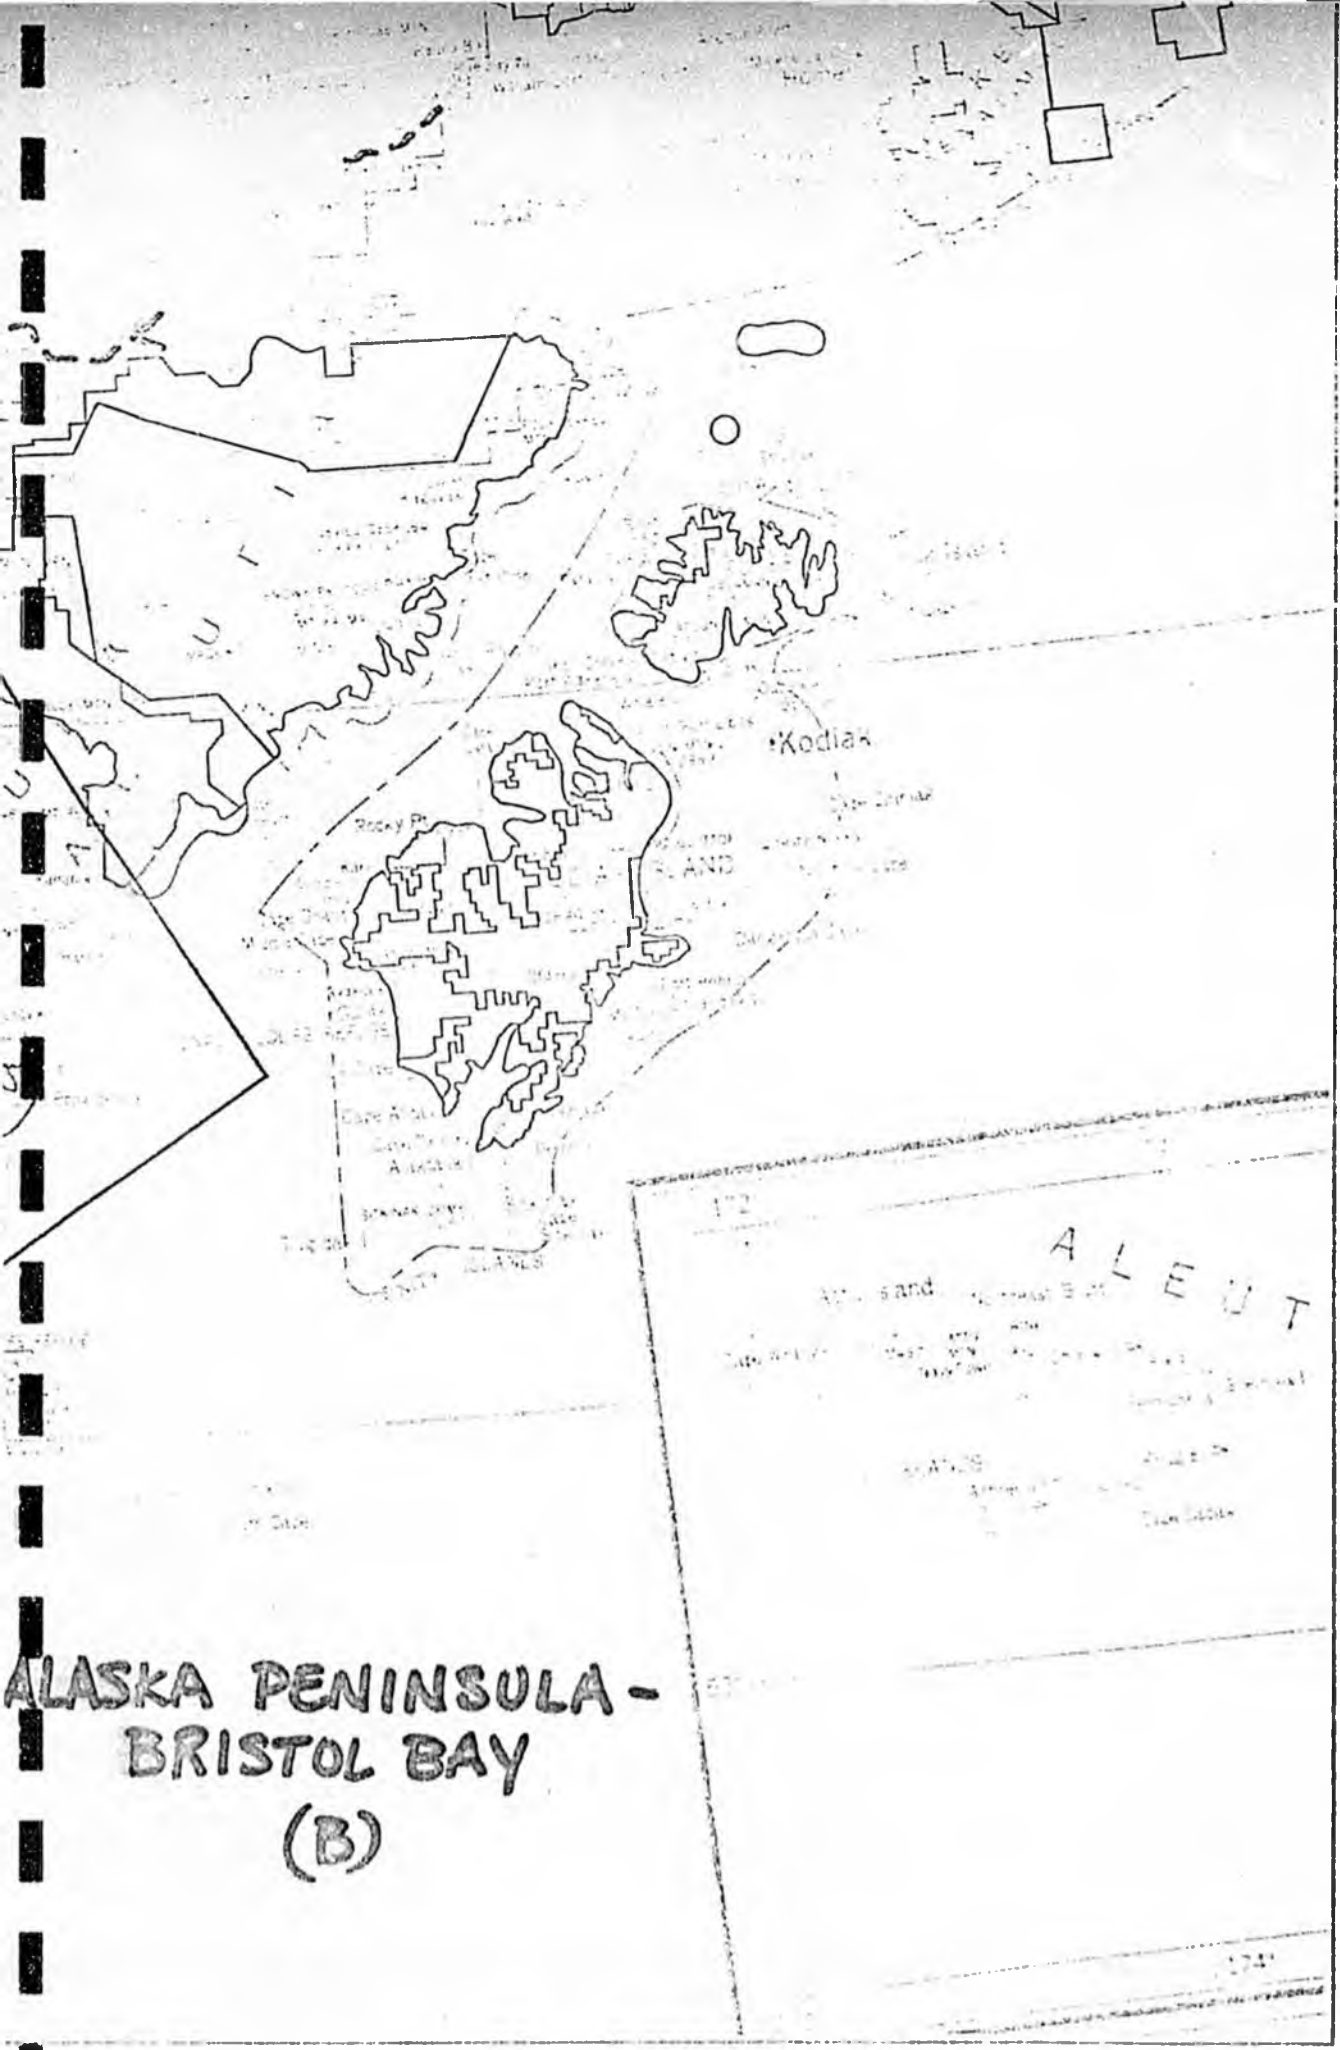
The Alaska Peninsula extends to the southwest from southcentral Alaska and trails off into the 1,200-mile chain of the Aleutian Islands that separates the Bering Sea from the North Pacific Ocean. Also included within the region are the drainages north of Bristol Bay, the Kodiak Island complex, and numerous small islands located in the western Gulf of Alaska off the Alaska Peninsula's eastern coast. This region has some of the most productive freshwater and marine fisheries in the world. The Bristol Bay drainages provide rich spawning grounds for a variety of salmon; and shellfish are abundant in the cold waters of the North Pacific. Among the prominent scenic features of the region are a chain of volcanos and other mountain features, and an irregular, often rugged coast extending down the Alaska Peninsula and Aleutian Islands. Several lake districts in the Bristol Bay drainages and upper Alaska Peninsula are notable for their scenic, habitat, and recreational values. Predominant vegetation of the area is tundra communities, with forest covering less than 10 percent of the region and generally restricted to Afognak Island and northern portions of Kodiak Island and the upper Kvichak and Nushagak River drainages. Wildlife, particularly brown bear, moose, and caribou, are prevalent on the Alaska Peninsula. Concentrations of various seabirds and sea mammals, including the sea otter, are found at places along the coast and on various islands. The Pribilof Islands are noted for their northern fur seal rookeries.

In most of this region's maritime zone, annual precipitation averages from 30 to 70 inches, and frost-free days range from 100 in northern Bristol Bay to nearly 180 on the southern Aleutians. Winters are by Alaska standards relatively mild, and summers cool. Wind and fog are common climatic occurrences. Inland areas north and east of Bristol Bay have slightly colder winters and warmer summers. Mean daily temperatures in January at King Salmon are +13° and in July is 55°F; at Cold Bay +28°F for January and 50°F for July; and at Shemya near the western end



ALASKA PENINSULA - BRISTOL BAY (A)

FINAL MAP WILL BE
DOUBLE PAGE SIZE



ALASKA PENINSULA - BRISTOL BAY (B)

of the Aleutian Islands, the mean daily temperatures are slightly warmer for January and slightly cooler for July than at Cold Bay.

This region of approximately 50,000 square miles (32 million acres) has less than 25,000 people. There is only one large community in the region, Kodiak, with a population of approximately 5,000. All other settlements have populations of less than 1,000, except two isolated military bases on the Aleutian Islands. Except for these military bases and Kodiak, the population is predominantly Aleut and Eskimo. No roads extend into the region and access is by air or water. The region remains almost entirely in its natural state. Major industries are commercial fishing and tourism, with some small-scale timber cutting mostly on Kodiak Island and some grazing of reindeer, sheep, and domestic stock. Three focal points of tourism are Kodiak Island, the Pribilof Islands, and Katmai National Monument. Recreational use of the Lake Iliamna and the Wood River-Tikchik Lakes area and sport hunting on the Alaska Peninsula by residents and nonresidents are increasing.

When their entitlement to lands within this region is satisfied, Alaska Native corporations will own approximately 25 percent of the region. The State of Alaska has currently made selections, totalling 15 percent of the region. Discounting any further selections the State may make, the Federal Government will retain ownership of about 60 percent of the region. Existing Federal reserves include the Afognak Island portion (458,000 acres) of the Chugach National Forest; four large wildlife refuges (Aleutian Islands, 2.7 million acres; Kodiak Island, 1.8 million acres; Izembeck, 415,000 acres; and Cape Newenham, 265,000 acres); three small wildlife refuges (Semidi, Simeonof, and Bogoslof) totalling 20,190 acres; and the 2.8-million-acre Katmai National Monument. Small areas of critical habitat are reserved at the Pribilof Islands for northern fur seal management.

The following withdrawals were made by the Secretary of the Interior under Section 17(d)(2): over 2 million acres near Lake Iliamna, slightly under 3 million acres centered on the Togiak River drainage, approximately 600,000 acres on the south and 1 million acres on the north of Katmai National Monument, over 800,000 acres around Aniakchak Caldera, Hagemeister Island (77,000 acres), and two island groupings (Shumagin Islands, 15,300 acres, and Barren Islands, 10,500 acres). In addition, several other areas on the Alaska Peninsula and along the Bristol Bay coast were withdrawn by the Secretary of the Interior as replacement lands for those lands in existing wildlife refuges selected by Alaska Native corporations.

Areas adjoining Katmai National Monument

Areas adjoining Katmai National Monument contain scenic mountains, canyons, lakes, streams, and coastline of recreational and scientific interest, as well as important wildlife habitat. Some areas contain upper reaches or parts of watersheds in the present Monument. South of the Monument, Alinchak and Puale Bays are surrounded by colorful mountain slopes and cliffs. Rocky islets frequented by seabirds and marine mammals are found in the bay. The islands and headlands of Puale Bay support 200,000 black-legged kittihawks. The craggy summit of Mt. Kejulik, an extinct volcano, rises north of the extensive shoreline of

Becharof Lake. American Creek flows into the Monument from glacial tarns and Murray and Hammersly Lakes in the mountains to the north. Nearby Kulik Lake lies between steep mountain slopes and provides access for water oriented activities and hiking trips through the scenic mountains to the Monument in the south. North of the Monument the Kamishak-Douglas Rivers area contains scenic mountain and valley formations enhanced by occasional cascades and waterfalls. Areas north and south contain important brown bear denning and feeding habitats in the vicinity of several streams with anadromous fish runs. Bear movement between the existing Monument and adjoining areas is believed to occur. These areas also serve as habitat for moose, caribou, and other wildlife.

TO EXTEND PROTECTION TO THE NATURAL VALUES OF LANDS ADJACENT AND RELATED TO THE KATMAI NATIONAL MONUMENT, THE COMMISSION PROPOSES NORTHERN AND SOUTHERN ADDITIONS TOTALLING 1.1 MILLION ACRES. FURTHER, THE COMMISSION BELIEVES THE PROPOSED EXPANDED MONUMENT WITH ITS COMPLEX OF SCENIC GEOLOGIC FEATURES, WILDLIFE HABITAT, AND OTHER NATURAL VALUES, MERITS REDESIGNATION BY CONGRESS AS A NATIONAL PARK. THE COMMISSION ALSO RECOM-MENDS THAT A GROUP OF 80 TINY ISLANDS, JUTE ISLANDS, PINNACLE ROCK AND COASTAL HEADLANDS NEAR JUTE PEAK AND CAPE AKLEK IN OR NEAR PUALE BAY TOTALLING 25,875 ACRES BE INCORPORATED AS A UNIT OF THE NATIONAL WILDLIFE REFUGE SYSTEM TO PROTECT SEABIRD ROOKERIES AND SEA MAMMAL HABITAT. SOME 0.88 MILLION ACRES OF SIGNIFICANT HABITAT FOR BEAR DENNING AND CONCENTRATION, CARIBOU, MOOSE, AND FISH, AND SCENIC VALUES BETWEEN KATMAI NATIONAL MONUMENT AND BECHAROF LAKE, ARE RECOMMENDED FOR INCORPORATION IN THE ALASKA NATIONAL LANDS SYSTEM WITH MANAGEMENT BY THE U.S. FISH AND WILDLIFE SERVICE.

A metallogenic province with potential for copper, silver, gold, lead, zinc, iron, and molybdenum traverses the proposed extensions and existing Monument, but extends farther to the north and south onto adjacent public and private lands.

Coastal forests of western hemlock and Sitka spruce are located along the Kamishak River. Some interior mixed spruce-hardwood forests grow in the vicinity of Nonvianuk Lake. These forests may have some potential commercial value, but more extensive forests in better growing conditions are found farther north. The taking of fish and game by local residents to meet their subsistence needs is common in the area west of the existing Monument. Some areas with wildlife populations to help meet these needs have been excluded from the recommended additions, to the Monument. Some are included in the Alaska National Lands unit where hunting and fishing are permitted.

Habitat for the significant brown bear populations of this area are under several different jurisdictions. If the brown bear is to be perpetuated and adequately protected in the Katmai area, coordinated management of the bears and significant bear habitat adjoining the Monument will be required.

Aniakchak Caldera National Monument

Aniakchak Volcano is a large volcano about 4,000 feet high located on the Alaska Peninsula about 400 miles southwest of Anchorage. The volcano

contains a 30-square-mile steep-walled caldera with warm springs, areas of high ground temperature, cinder cones, and other colorful rock formations. Also within the caldera is Surprise Lake from which the Aniakchak River rushes out of the caldera through a deep gash and then flows on to the Pacific Ocean. The river, the largest on the Pacific side of the Peninsula, runs for 25 miles varying in character from rapids as it issues from the caldera to quieter waters downstream with good boating potential. Mountain peaks in the general area range from 2,000 to 4,000 feet in altitude. Brown bear, moose, and caribou are found in the vicinity, as well as some smaller mammals and birds.

TO PRESERVE AND PROTECT GEOLOGICAL AND BIOLOGICAL PHENOMENA AND SCENIC VALUES OF THIS VOLCANIC AREA, THE COMMISSION PROPOSES THAT THE CALDERA AND PORTIONS OF THE VOLCANO'S OUTER SLOPES BE DESIGNATED A UNIT OF THE NATIONAL PARK SYSTEM. THE ANIAKCHAK RIVER IS RECOMMENDED FOR DESIGNATION AS A WILD RIVER. The proposed river corridor includes the watershed of the river extending from the caldera to the ocean, including the tributaries to the north. The two units combined contain 250,000 acres.

The proposed park and river lie within a petroleum province. Some of the area also contains a metallogenic province with potential for copper, silver, gold, lead, zinc, iron, and molybdenum. These petroleum and mineral provinces extend well beyond the proposed boundaries onto adjoining Federal, State, and private lands. The caldera and immediate slopes of the volcano have geothermal energy potential, but similar potential in volcanic areas is present both north and south of the proposed unit.

Sport hunting, primarily for brown bear and moose, has taken place primarily along the coastal zone. CONTINUATION OF HUNTING IN THE PROPOSED WILD RIVER AREA IS RECOMMENDED UNDER STATE REGULATION.

Area adjoining Cape Newenham National Wildlife Refuge

The area adjoining the Cape Newenham National Wildlife Refuge is characterized by broad valleys and tundra-covered rolling uplands. It adjoins a bay bordered by cliffs, beach, and estuaries. The area contains medium density waterfowl nesting habitat and a coastal zone habitat important for migrating waterfowl. Salt water estuaries containing eel grass are important gathering areas for the spring and fall migrations of black brant, Canada and emperor geese, and eiders. Lowlands and uplands include habitat for brown bear, moose, wolf, wolverine, and smaller wildlife. THE COMMISSION RECOMMENDS THAT THIS AREA OF 240,000 ACRES BE ADDED TO THE EXISTING CAPE NEWENHAM NATIONAL WILDLIFE REFUGE TO PROTECT WILDLIFE AND HABITAT. Most of the land involved in this addition has been withdrawn as replacement lands for those refuge lands selected by Alaska Native corporations.

The area has little apparent potential for other resources. An area adjoining the existing refuge on the northwest has been a valuable source of platinum, and the potential province extends well northward but it does not appear to extend within the proposed refuge boundaries. Reindeer grazing potential exists, but extensive similar habitat lies north of the area.

Pacific Coast Islands Bordering the Alaska Peninsula

Off the eastern shores of the Alaska Peninsula lie hundreds of relatively small, rocky, weather beaten islands. Most of these are generally barren of vegetation or are covered by a thin mantle of grasses or heath. Collectively, these islands provide high density habitats for a variety of waterfowl and marine mammal species.

THE COMMISSION RECOMMENDS THAT A NUMBER OF THESE ISLANDS (EXCLUDING SELECTIONS CONVEYED TO ALASKA NATIVES) BE PROTECTED IN THREE UNITS OF THE NATIONAL WILDLIFE REFUGE SYSTEM TOTALLING ABOUT 56,000 ACRES.

One unit, named for the Shumagin Islands, contains seven island groups including the Puale Bay group previously mentioned. The Koniuji Island group (36,932 acres) supports over half a million horned puffins; the 2,165-acre Chiginigak Island group provides habitat for 183,000 tufted puffins; Bird Island (4,300 acres) supports 43,000 black-legged kittiwakes; the Mitrofania group (1,095 acres) contains nesting habitat for over 200,000 murres; the Sandman Reefs (927 acres) shelter fork-tailed petrils, cormorants, and glaucous-winged gulls; Karpa Island (610 acres) provides habitat for over a quarter of a million seabirds, primarily murres. Many of the proposed refuge islands also provide rookeries and resting grounds for harbor seals, seal lions, and sea otters.

The second unit consists of approximately 440 acres of numerous rocks and islets offshore from Kodiak Island that are proposed for addition to the existing Kodiak National Wildlife Refuge. These relatively barren islands support pelagic cormorants, tufted puffins, black-legged kittiwakes, pigeon guillemots, and glaucous-winged gulls. Bald eagles also nest along the shorelines. Many similar rocks and islets would also be suitable additions, if not eventually conveyed to Alaska Native corporations from lands they have currently selected.

The third island group is the Barren Islands complex (10,020 acres). These weather beaten islands near the entrance to Cook Inlet, including the Latax Rocks encompass the most important known nesting areas for marine birds in a 1,000-mile arc along the Gulf of Alaska. The islands support 700,000 seabirds, as well as significant populations of sea otters, sea lions, and harbor seals. The noisy sea lion rookery at Sugarloaf Island in the Barren Islands may be the largest in Alaska.

A metallogenic province with potential for copper, nickel, iron, platinum, chromium, titanium, and asbestos possibly traverses the proposed Barren Islands Refuge. However, the province extends onto public and private lands on the Kenai Peninsula mainland to the north, and onto Afognak Island (part of the Chugach National Forest) and the State-selected Shuyak Island to the south. Portions of the Shumagin Islands group lie within a large major oil and gas province, but the relatively small acreage reserved would not significantly inhibit future oil and gas development in the region.

Withdrawn Areas Not Included in Commission Proposals

Four other areas primarily within the Bristol Bay-Alaska Peninsula area were withdrawn for study under Section 17(d)(2) of ANCSA.

Lands of the Kvichak River drainage mostly around Iliamna Lake and of the Alagnak River drainage to the south, including Kukaklek and Nonvianuk and other smaller lakes, were identified principally because of their fisheries habitat (including major red salmon runs); bear, moose, and other wildlife habitat; forest; and recreational values. Large areas bordering Iliamna Lake have been selected by Native village corporations. The State of Alaska may have selection rights on lands interspersed among the private lands. An oil and gas basin underlies the western end, and a metallogenic province with copper potential traverses the area. Believing that management of this area should focus principally on protection and enhancement of the fish populations and habitats, and in consideration of the emerging land pattern and the considerable State interest and regulatory authority, the Commission does not recommend the designation of the Iliamna Lake area as a unit of the national conservation systems. WILD RIVER DESIGNATION IS RECOMMENDED FOR AN APPROXIMATE 46-MILE SEGMENT OF THE MAINSTREAM OF THE ALAGNAK RIVER STARTING AT KUKAKLEK LAKE, AND THE 11-MILE NONVIANUK RIVER, THE PRINCIPAL TRIBUTARY. Both rivers are relatively small clearwater streams that flow freely from large lakes at first through moderately incised canyons, then through lowlands having low local relief and varying forest cover. Forests along the river have little commercial value, and better potential occurs on the private lands along the lower reach that is not recommended for designation. A sedimentary basin with oil and gas and uranium potential courses the lower reach but extends well beyond to the north, south, and west. THE COMMISSION RECOGNIZES THE IMPORTANCE OF WILDLIFE ALONG THE RIVER IN MEETING SUBSISTENCE NEEDS OF LOCAL RESIDENTS AND RECOMMENDS CONTINUED HUNTING, FISHING, AND TRAPPING UNDER STATE REGULATIONS. Coordination may be needed in this area with respect to possible future surface transportation across the lower reach of the river.

THE COMMISSION ALSO RECOMMENDS THAT THE COPPER RIVER AT THE HEAD OF ILIAMNA LAKE, AND THE KARLUK RIVER IN THE KODIAK NATIONAL WILDLIFE REFUGE, BE DESIGNATED POTENTIAL WILD AND SCENIC RIVERS, PENDING OUTCOME OF LAND STATUS PATTERNS AND FURTHER EVALUATION OF FEASIBILITY.

The Togiak area is characterized by broad valleys, numerous scenic lakes, clear streams, often rugged mountains, and vegetative cover mostly of tundra or brush communities. The various terrestrial and aquatic habitats support fish, waterfowl, brown bear, moose, and other smaller animals. A metallogenic province with potential for copper, nickel, iron, titanium, chromium, platinum, and asbestos traverses the western portion. In reviewing the Togiak withdrawal, the Commission has considered possible State interest in the western sector for mineral potential.

The mountain, lake, and river complex of the Togiak and Kulukuk River drainages, though scenic and possessing some wildlife values, does not of itself appear to be of national significance. However, it does have values complementary to the adjacent State-owned Wood-Tikchik Lakes area that is of outstanding significance and being considered as a State

park. If the Wood-Tikchik area is further considered through land exchange as a possible national park, then the Togiak area should be reassessed for its national interest. FROM THE EASTERN TOGIAK AREA, THE COMMISSION HAS IDENTIFIED THE TOGIAK RIVER AS HAVING NATURAL FEATURES OF POTENTIAL NATIONAL INTEREST, AND RECOMMENDS DESIGNATION AS A POTENTIAL ADDITION TO THE NATIONAL WILD AND SCENIC RIVERS SYSTEM PENDING FURTHER EVALUATION.

FROM THE WESTERN SECTION OF THE TOGIAK WITHDRAWAL, THE COMMISSION RECOMMENDS WILD RIVER DESIGNATION FOR THE KANEKTOK RIVER WHICH HEADS IN THE AHKLUN MOUNTAINS AND FLOWS WESTERLY INTO KUSKOKWIM BAY. (SOUTHWESTERN ALASKA PRESENTATION AREA). FROM KAGATI LAKE ABOUT 59 MILES OF THE MAIN STREAM OF THIS CLEAR-WATER FREE-FLOWING RIVER ARE PROPOSED. The river is boatable with scenic values and fishing opportunities and passes through a mountain valley in the upper portion and a flat tundra area in the lower section. TAKING OF FISH AND GAME ALONG THE RIVER FOR SUBSISTENCE PURPOSES IS RECOGNIZED AS A LOCALLY IMPORTANT USE, AND CONTINUED HUNTING, FISHING, AND TRAPPING UNDER STATE REGULATIONS ARE RECOMMENDED. The metallogenic province mentioned above extends north and south of the river corridor.

Hagemeister Island, originally withdrawn as part of the Togiak unit, contains a seabird colony at its southern tip, an unusual sandspit, and some hauling out habitat for walrus and other sea mammals. The island is essentially primitive in nature and is currently under lease for reindeer grazing. The Commission does not recommend that Hagemeister Island be designated as a unit of the national conservation systems at this time. Its wildlife and other values can be adequately protected through management plans for the island.

Chernabura Island, one of the Shumagin group, was withdrawn by the Secretary as one of a series of coastal islands. It contains little significant seabird habitat of national interest relative to other islands in the area with much higher and more varied bird and sea mammal populations. Therefore, the Commission does not recommend that it be designated a unit of the national conservation systems.

Other Potential Wild and Scenic Rivers

WITHIN THIS PART OF ALASKA, THE COMMISSION ALSO RECOMMENDS THAT THE NUYAKUK RIVER, AND A SEGMENT OF THE MULCHATNA RIVER AND ITS TRIBUTARY, THE CHILIKADROTNA, BE STUDIED BY THE STATE OF ALASKA FOR POSSIBLE LEGISLATIVE DESIGNATION BY THE STATE AND INCLUSION IN THE NATIONAL WILD AND SCENIC RIVERS SYSTEM.

CENTRAL ALASKA

Central Alaska includes the Kenai Peninsula, the Matanuska, Susitna, and Copper River drainages, the Wrangell and Chugach Mountains, most of the Alaska Range, the interior Tanana Valley, and the area around Lake Clark on the western side of Cook Inlet. The region covers about 135,000 square miles. On the south, the region borders Cook Inlet and the Gulf of Alaska. Nearly three quarters of the State's population lives here.

Population is concentrated, for the most part, in several large centers, leaving most of the region unpopulated and insignificantly altered from its natural state. Slightly under half of the State's 400,000 residents live in the immediate environs of Alaska's largest city, Anchorage. Approximately 60,000 people reside in the Fairbanks area, Alaska's second largest city and interior Alaska's major population center. Other relatively densely populated areas are the Kenai Peninsula with four of Alaska's larger towns, the Matanuska Valley adjoining the Anchorage area, and two towns on Prince William Sound (Valdez and Cordova). The remainder of the region's population lives in very small, scattered communities. Most inhabitants are Caucasians intermixed with Alaska Natives, blacks, and Orientals.

The State's road network lies almost entirely within this region, as does Alaska's only federally owned and operated railroad running from Seward to Fairbanks. Major industry and sources of employment are largely urban, such as government, construction, and wholesale and retail sales and services which are not directly related to resource development. However, oil and gas development is a significant industry on the Kenai Peninsula and in upper Cook Inlet, and leases have been sold for offshore development in the Gulf of Alaska. Commercial fishing occurs in the lower Cook Inlet, Gulf of Alaska, and Prince William Sound. There are several, mostly small-scale, mining operations. Timber-cutting occurs in the coastal forest along the Gulf Coast and Cook Inlet areas, with most of the production exported to Japan. A number of small farms operate in the Matanuska Valley near Anchorage and the Tanana Valley near Fairbanks.

Nearly all of the continent's highest peaks above 14,500 feet, including North America's highest, Mt. McKinley, are in this region, as are the continent's largest glaciers and icefields. Fiords, wave-beaten beaches, and rocky coasts are found along the Gulf of Alaska. The region contains both coastal and interior forests, intermixed with lowland bogs and tundra.

Nearly every species of large northern land mammal, including brown and black bear, moose, sheep, goat, caribou, and wolf can be found in the region. Several kinds of sea mammals are present at places along the coast. The region contains some prime habitat for waterfowl, eagles, and seabirds.

Climate varies widely in the region. In general, winters are colder, summers hotter, and precipitation less in the interior than in the coastal areas. Fairbanks has a mean daily January temperature of -16°F, a July mean of 60°F (with frequent summer days with high temperatures in the 70's and 80's), an average of 89 frost-free days per year, and annual precipitation only slightly exceeding 11 inches. Anchorage on Cook Inlet, by comparison, has mean January and July temperatures of 12°F and 58°F, respectively, with approximately 125 frost-free days each year, and an annual precipitation level of nearly 15 inches. Winter temperatures and precipitation are highest along the Gulf of Alaska coast, where the waters are generally ice free.

Oil and gas provinces underlie portions of the region. The Wrangell and Chugach Mountains and the Alaska Range have significant mineral values. Some timber stands in the coastal and interior forests are of commercial value, and a significant percentage of those cultivable soils in suitable climatic zones lie within this region.

A substantial portion of the State of Alaska's land entitlement has been satisfied through selections in Central Alaska, totalling about 30 percent of the region. Selections by Alaska Native corporations will constitute another 10 percent. Discounting future State selections, the Federal Government will retain jurisdiction over about 60 percent of the region. Existing Federal reserves in the region include the Chugach National Forest covering over 4 million acres, the 1.7-million-acre Kenai National Moose Range, Mt. McKinley National Park of nearly 2 million acres, a small Tuxedni National Wildlife Refuge, and several large military reserves totalling some 2.3 million acres. The following 12 withdrawals from the region were made by the Secretary of the Interior in 1972 under Section 17(d)(2):

Chugach Mountains (7,280,000 acres)
Wrangell Mountains (3,870,000 acres)
Land around Mt. McKinley National Park (3,050,000 acres)
Lake Clark (3,090,000 acres)
College Fiord (395,000 acres)
Nellie Juan Valley (276,000 acres)
Land to the south of the Kenai National Moose Range (62,000 acres)
Harding Icefield (50,000 acres)
Granite-Chiswell Islands (6,000 acres)
Aialik Peninsula (5,000 acres)
Pye Islands (5,000 acres)

Wrangell-Chugach

This corner of central Alaska lies adjacent to the Canadian border and includes portions of four major mountain systems, Wrangell, Chugach, St. Elias, and the Alaska Range. The area encompasses most of the major North American mountains from 14,500 to 18,000 feet, as well as the continent's largest glaciers and icefields. The massive mountains bordered by lesser peaks rise from broad, forested river valleys and the wave-beaten coast of the Gulf of Alaska. Among the scenic features of the area are the subalpine Tebay Lakes; the steep-walled Chitistone Canyon; the sprawling Malaspina Glacier, largest piedmont glacier in North America, over 40 miles wide along its terminal lobe; and a still steaming volcano, Mt. Wrangell.

This area, especially around the Wrangell Mountains, contains some of Alaska's finest Dall sheep habitat and some of the largest Dall sheep. The Copper River corridor and the Gulf Coast are major migration routes for birds, and the lower Copper River and delta is a key nesting, resting, and feeding place. Most of North America's trumpeter swans and nearly all dusky Canada geese nest there. Hauling out areas for marine mammals, including sea lions and harbor seals, are found on the coastal beaches and islands near the delta and the Malaspina Glacier forelands. Three

caribou herds and two small herds of introduced bison range through the area's interior valleys. Goat, bear, wolf, and smaller mammals are also present.

RECOGNIZING THIS RICH DIVERSITY OF NATURAL VALUES, THE COMMISSION MAKES THE FOLLOWING RECOMMENDATIONS FOR THEIR PROTECTION. THE MAIN MOUNTAIN AND GLACIER COMPLEXES ARE PROPOSED AS A NEW UNIT OF THE NATIONAL PARK SYSTEM CONTAINING 9.7 MILLION ACRES. TWO UNITS IN THE ALASKA NATIONAL LANDS SYSTEM ARE RECOMMENDED, ONE IN THE CHITINA VALLEY (1.0 MILLION ACRES), AND THE OTHER ON THE NORTH SIDE OF THE WRANGELL MOUNTAINS (2.9 MILLION ACRES). THE NATIONAL PARK SERVICE IS THE RECOMMENDED MANAGER FOR BOTH OF THESE UNITS BECAUSE OF THE RELATIONSHIP OF THEIR SCENIC, HABITAT, TRANSPORTATION, AND RECREATIONAL VALUES TO THE PROPOSED PARK. THE COMMISSION RECOMMENDS THAT PORTIONS OF THE LOWER COPPER RIVER AND CHUGACH MOUNTAINS (1.3 MILLION ACRES) BE INCORPORATED WITHIN THE EXISTING CHUGACH NATIONAL FOREST; AND THAT PRIME WATERFOWL, MIGRATORY BIRD, AND SEA MAMMAL HABITAT NEAR THE COPPER RIVER DELTA IN THE EXISTING CHUGACH NATIONAL FOREST BE DESIGNATED A NATIONAL WILDLIFE REFUGE UNIT (350,000 ACRES). FOUR RIVERS--THE CHITINA, LOWER COPPER, BREMNER, AND NABESNA--ARE RECOMMENDED FOR DESIGNATION AS POTENTIAL WILD AND SCENIC RIVERS PENDING FURTHER STUDY AND CLASSIFICATION OF ADJOINING LANDS. Taken together, the proposals form a protective system for the range of natural values and ecosystems found in this subregion, while not foreclosing opportunities for hunting of game species or use of energy resources and strategic minerals of potential national interest.

Potential for oil and gas and uranium exists in the coastal areas. Portions of the oil and gas province and the uranium basin, as well as the offshore areas with apparent higher potential for oil and gas, have not been incorporated in the proposed units. Coal potential around the Bering River lie on existing national forest lands and Federal lands proposed for a national forest addition, where exploration and extraction could be allowed. Coal also occurs on some State and private lands adjoining the proposed units. There are three locations with geothermal energy potential in the proposed units. One small area is located in the recommended park and another in an Alaska National Lands unit. The largest area, centered in the park, extends beyond into the two Alaska National Land units and other public and private lands. Three hydroelectric sites along the Copper River (Wood Canyon, Cleave, Million Dollar), if developed, would inundate portions of the proposed units altering their natural features and submerging historical and archaeological sites. A major salmon run would also be disrupted. Considering the absence of any current significant demand for power, the Commission does not find hydroelectric development warranted at this time.

The proposed park and Alaska National Land units contain three metallogenic provinces with potential for copper, gold, silver, nickel, lead, zinc, iron, barite, platinum, chromium, titanium, molybdenum, antimony, tungsten, and asbestos. Two of the three provinces extend well beyond the recommended boundaries. Portions of the third province, containing the areas of major lead, zinc, and barite potential, are located on proposed Alaska National Lands where exploration and/or extraction may occur wherever

eventual classification permits. Similar potential for lead and zinc is located outside the proposed units in the upper Copper River drainage and in the Talkeetna Mountains. The proposed park and Alaska National Land unit boundaries were drawn to exclude many of the mineralized areas with higher potential from the park. However, several existing mineral claims are contained within the proposed park unit. Mineral exploration or extraction on the adjacent Alaska National Lands could be allowed if eventual classification permits. Mining may occur on forest lands under the permit-and-lease system recommended by the Commission and can be permitted on refuges by Secretarial discretion if compatible with habitat protection.

All units contain some forest stands of potential commercial value. Timber-cutting could be allowed in the forest unit and may be allowed in the new management system units if eventual classification allows. Some cultivable soils suitable for agriculture exist in the Chitina Valley, but this area lies in a zone climatically marginal for production.

Coordinated management of park, forest, and Alaska National Land units with adjoining landowners will be important with respect to recreational use, transportation development, and wildlife management.

Areas adjoining Mt. McKinley National Park

Lands adjoining Mt. McKinley National Park on the south contain portions of the Mt. McKinley massif and related mountains and glacial features, while some of the lands to the north provide habitat for large mammals of the existing Park.

Sheep, moose, grizzly bear, wolf, and caribou range north from the Park for varying distances onto adjoining lands of forest, tundra, lakes, and ponds. A variety of smaller wildlife such as fox and marten are also prevalent in areas north of the Park.

Mt. Hunter and peaks of the Alaska Range south of Mt. McKinley National Park have high scenic values. Recreational potential for cross-country and downhill skiing, hiking, camping, and scenery observation exists primarily along the southern margin of the high mountains and large glaciers where forest gives way to alpine tundra. Chelatna Lake, largest lake in this section of the Alaska Range, is a point of air access to surrounding backcountry, and provides opportunities for water-oriented recreational activities. Among the scenic highlights of this area are the Great Gorge of the Ruth Glacier with its nearly mile-high, pinkish granite cliffs, the large Kahiltna Glacier, and the varicolored moraines of the Yentna Glacier.

IN RECOGNITION OF THESE NATURAL VALUES AND THEIR INTEGRAL RELATIONSHIP TO THOSE OF THE PARK, THE COMMISSION RECOMMENDS THE ADDITION OF A SOUTHERN UNIT TO THE PARK TO COMPLETE THE SCENIC AND GEOLOGICAL COMPLEX AND TO INCLUDE ADDITIONAL LANDS FOR VISITOR USE. A SECOND ADDITION EXTENDING THE PARK TO MORE NATURAL BOUNDARIES IN THE NORTH IS PROPOSED TO COMPLETE A WILDLIFE ECOSYSTEM OF NATIONAL IMPORTANCE. THESE TWO ADDITIONS TOTAL 2.7 MILLION ACRES. Two areas selected by the State of Alaska, one

around Chelatna Lake and the other in the northeastern corner of the proposed northern addition, have natural values of national interest. The Commission recommends that these lands be the subject of future exchange discussions with the State.

Some potential exists for oil and gas and uranium in the proposed park additions, but the provinces extend well beyond the new unit boundaries. Coal deposits are found along the northeastern and southern boundaries of the proposed additions, but there are similar and larger deposits as well as an ongoing coal operation located on adjacent lands. Two potential hydroelectric sites, Carlo and Healy, are located nearby along the Nenana River. If developed, they would inundate portions of the eastern edge of the existing park. Metallogenic provinces with potential for copper, gold, silver, nickel, lead, zinc, tin, iron, barite, antimony, platinum, chromium, molybdenum, tungsten, titanium, and asbestos underlie the existing Park and proposed extensions. These provinces, with the exception of a belt favorable for lead and zinc, extend beyond the proposed boundaries. Another potential lead and zinc province lies to the southwest of the recommended southern addition and could be open to exploration and mining. Two areas in the proposed northern addition, Kantishna and Stampede, are currently mined for gold and antimony. While new mineral exploration and extraction will not be allowed in the extended park, valid existing claims will be governed by National Park Service mining regulations.

Some cultivable soils with agricultural potential extend up the Toklat and Kantishna Rivers in the northern extension, as do some forest stands of possible commercial value. More extensive sections of cultivable soils and forested areas lie in lower elevations to the north of the recommended park extension.

The area around Mt. McKinley is near the major growing urban and tourism centers of Alaska. Mt. McKinley National Park cannot meet all recreational demands on the area. Coordination, then, among all landowners and administrators will be needed to plan recreation, transportation, and utility facilities, and to assure that recreational uses and resource development are compatible with the natural values.

Lake Clark

Lake Clark is located in the rugged and scenic southwestern section of the Alaska Range. The lake itself, 50 miles in length and averaging about 4 miles wide, is one of the larger lakes in Alaska. It is bordered in part by high steep mountains, and lower slopes are wooded. Other lakes of scenic interest are found in the mountain valleys and along the western flank of the Range. Among the scenic mountainous features are two symmetric 10,000-foot volcanos, Redoubt and Iliamna; pinnacles near Merrill Pass; and numerous hanging glaciers at Lake Clark Pass. Several free-flowing clear-water and glacial rivers begin in these mountains that are cut by many interconnecting valleys. The lower eastern and western flanks of the Range and some major valley bottoms are forested. Wildlife of the area includes sheep, moose, caribou, wolf, grizzly bear,

and other smaller animals. Seabirds, harbor seals and a noted clam beach are found along the coast.

THE COMMISSION FINDS THESE NATURAL VALUES TO BE OF NATIONAL INTEREST AND RECOMMENDS THAT 3.5 MILLION ACRES BE INCORPORATED WITHIN THE ALASKA NATIONAL LANDS SYSTEM. BECAUSE OF ITS RELATIVE ACCESSIBILITY TO ALASKA'S URBAN AND TOURIST CENTERS, THE COMMISSION BELIEVES RECREATION SHOULD BE RECOGNIZED AS A PRIMARY USE OF THE PROPOSED UNIT AND THAT THE NATIONAL PARK SERVICE BE DESIGNATED THE MANAGER. THE TLIKAKILA RIVER AND THE UPPER FEDERALLY OWNED SEGMENTS OF THE MULCHATNA AND CHILIKADROTNA RIVERS ARE RECOMMENDED BY THE COMMISSION FOR DESIGNATION AS POTENTIAL WILD AND SCENIC RIVERS, WITH FURTHER STUDY, EVALUATION, AND CLASSIFICATION OF SURROUNDING LANDS TO AID IN FINAL RECOMMENDATIONS.

The eastern boundary of the proposed unit overlaps a small portion of an oil and gas province underlying Cook Inlet. Potential for uranium exists along the coast, but the sedimentary province with potential for these minerals extends well into other adjoining lands. Two areas with geothermal energy potential are present in the proposed unit. Other similar volcanic areas lie north and south of the proposal. Two potential hydroelectric sites, Crescent Lake and Ingersol, are within the proposed unit. If constructed, some natural values would be altered or lost.

Metallogenic provinces with some potential for copper, gold, silver, lead, zinc, tin, molybdenum, and tungsten underlie most of the area, as well as on some adjoining lands. Exploration and/or extraction may occur on Alaska National Lands wherever eventual classification permits.

Timber potential exists primarily in the coastal forest along the west side of Cook Inlet. Stands are much more extensive to the north where they are harvested.

Substantial acreage within the Lake Clark proposal has been selected by Cook Inlet Native regional corporation near the midsection of Lake Clark and along the Cook Inlet coast. These areas were selected because other lands closer to the existing Native villages were not available. The Federal and State governments have been working closely with the private corporations to retain the Lake Clark area in public ownership and provide more suitable lands for corporate selection. ON THIS BASIS, THE COMMISSION RECOMMENDS INCLUSION OF CERTAIN OF THE PRIVATE LANDS WITHIN THE LAKE CLARK UNIT BOUNDARIES ON THE BASIS OF THEIR SIGNIFICANT NATURAL VALUES, AND ENCOURAGES CONTINUED EFFORTS TO MINIMIZE THE AMOUNT OF PRIVATE INHOLDINGS WITHIN THE PROPOSED UNIT BY LAND EXCHANGES AND OTHER APPROPRIATE MEANS.

Kenai Peninsula and Prince William Sound

The Kenai Peninsula and Upper Prince William Sound area are located south and east of Anchorage along the coast. Most of the area is included in two existing reserves, the Kenai National Moose Range and the adjacent Chugach National Forest. The western side of the Kenai Peninsula is blanketed by State and private lands. The following proposals lie within this area.

Areas adjacent to the Chugach National Forest

The lands adjoining the existing Chugach National Forest are characterized by rugged scenic peaks, massive icefields, fiords, and tidewater glaciers. Coastal areas contain a variety of terrestrial and marine animals. THE COMMISSION RECOMMENDS THAT THREE AREAS OF HIGH SCENIC VALUES AND SCIENTIFIC INTEREST BE ADDED TO THE CHUGACH NATIONAL FOREST. The Harding Icefield-Kenai Fiords area (520,000 acres) includes one of North America's major icefields surrounded by scenic peaks, steep icefalls, and radiating valley glaciers, some reaching the sea. Three large irregularly shaped peninsulas are separated by fiords which support sea lions, harbor seals, occasional whales, and numerous seabirds. Black bear and goat inhabit some parts of the area. Ocean waters about this area are highly productive of marine life.

The Nellie Juan River valley, Nellie Juan Lake, and much of the Sargent Icefield (totalling 280,000 acres) form a scenic river valley with glaciers descending its upper slopes. The valley supports some moose, goats, black and brown bears, and smaller mammals. This addition encloses a major watershed already partially included in the existing Chugach Forest. THE COMMISSION ALSO RECOMMENDS THE NELLIE JUAN RIVER BE DESIGNATED A POTENTIAL WILD RIVER, AND THAT FURTHER STUDY AND EVALUATION ALONG WITH CLASSIFICATION OF SURROUNDING LANDS AID IN FINAL RECOMMENDATIONS.

A third proposed addition, the College Fiord area (720,000 acres), also forms a complete watershed unit with the existing forest. It contains a scenic complex of mountains, fiords, and numerous tidewater glaciers. The coastal fringes and waters provide habitat for goat, black bear, wolverine, harbor seal, and seabird colonies.

The College Fiord area contains a metallogenic province with potential for copper, gold, silver, lead, barite, antimony, zinc, molybdenum, and tungsten that extends onto other public lands beyond the forest boundary. All three proposed national forest additions contain some stands of western hemlock and Sitka spruce along the shores and valley bottoms and on some relatively steep slopes. These stands have little potential commercial value relative to other extensive stands in the general area. Some Native selections have been made in the Kenai Fiords, but are not yet conveyed.

Peninsulas and Islands of the Kenai Peninsula

THE COMMISSION ALSO RECOMMENDS THAT THE SOUTHERN TIPS OF AIALIK AND HARRIS PENINSULAS, AND THE CHISWELL AND PYE ISLANDS TOTALLING ABOUT 19,630 ACRES BE ADDED TO THE NATIONAL WILDLIFE REFUGE SYSTEM. These two areas and adjoining waters provide key habitat for 65 species of seabirds and 23 species of marine mammals, including over 4,000 sea lions on the Chiswell and Outer Islands.

Area adjacent to the Kenai National Moose Range

A mountainous area containing the southwestern half of the scenic Sheep Creek drainage borders the southern tip of the Kenai National Moose

Range. It contains wildlife habitat for moose, goat, sheep, and other upland wildlife. THE COMMISSION RECOMMENDS THAT THIS AREA OF 40,000 ACRES BE ADDED TO THE EXISTING KENAI NATIONAL MOOSE RANGE TO ENCLOSE THE ENTIRE WATERSHED, AND RELATED SCENIC, WILDLIFE, AND WILDERNESS VALUES WITH A BETTER NATURAL BOUNDARY.

Fortymile River Complex

The Fortymile River originates in the eastern Yukon-Tanana uplands and flows northeasterly to its confluence with the Yukon River in Canada. The River and its 1,000 miles of tributaries are clear and free-flowing. More than 95 percent of the drainage lies within Alaska. Most of the river remains in its natural state. The river courses in segments through narrow gorges, bluffs, and rocky cliffs several hundred feet high, where the geologic structure of the area is exposed. Salmon, pike, and whitefish are found in the lower streams, and grayling in the upper parts. The area provides habitat for caribou, moose, bear, wolf, sheep, beaver, and smaller animals. Several species of duck and raptors, such as mallards and the peregrine falcon, are also present. Historic and cultural features of the Fortymile River area include the site of the first gold discovered in interior Alaska; cabins, settlements, and equipment associated with past and present gold mining; and the abandoned Eagle to Valdez military telegraph line which was part of a larger military Washington-Alaska communications system. Remains of a few old Athabascan Indian settlement sites are within the area.

THE COMMISSION RECOMMENDS THAT CERTAIN FORKS AND SEGMENTS OF THE FORTYMILE RIVER SYSTEM BE DESIGNATED "WILD," "SCENIC," OR "RECREATIONAL" RIVERS, UNDER THE NATIONAL WILD AND SCENIC RIVERS ACT. THE PROPOSAL INCLUDES A 4-MILE-WIDE CORRIDOR CONTAINING ABOUT 375 MILES OF RIVER AND 320,000 ACRES OF THE IMMEDIATE ENVIRONMENT. RECOMMENDED DESIGNATIONS INCLUDE 265 RIVER MILES AS "SCENIC," 161 MILES AS "WILD," AND 9 MILES AS "RECREATIONAL."

A potential hydroelectric site along the main Fortymile River, if developed, would inundate the lower reaches of the proposal and certain values would be altered or lost. Metallogenic provinces favorable for copper, gold, silver, nickel, lead, zinc, iron, antimony, molybdenum, tungsten, chromium, platinum, titanium, and asbestos have been identified in the area, but extend well beyond the river corridor boundaries. Mining would be allowed in the scenic and recreational segments under a permit and lease system. No mining would be allowed in the bed or banks of wild segments. Some stands of timber along the rivers have possible potential for future commercial use, but similar stands lie outside the corridors.

Coordination with respect to access and possible future transportation development in this area is particularly important.

Other Wild and Scenic River Potential

THE COMMISSION RECOMMENDS THAT THE KENAI-RUSSIAN, DELTA, AND GULKANA RIVERS BE DESIGNATED POTENTIAL WILD AND SCENIC RIVERS WITH FURTHER STUDY AND EVALUATION AND CLASSIFICATION OF SURROUNDING LANDS TO AID IN FINAL RECOMMENDATIONS.

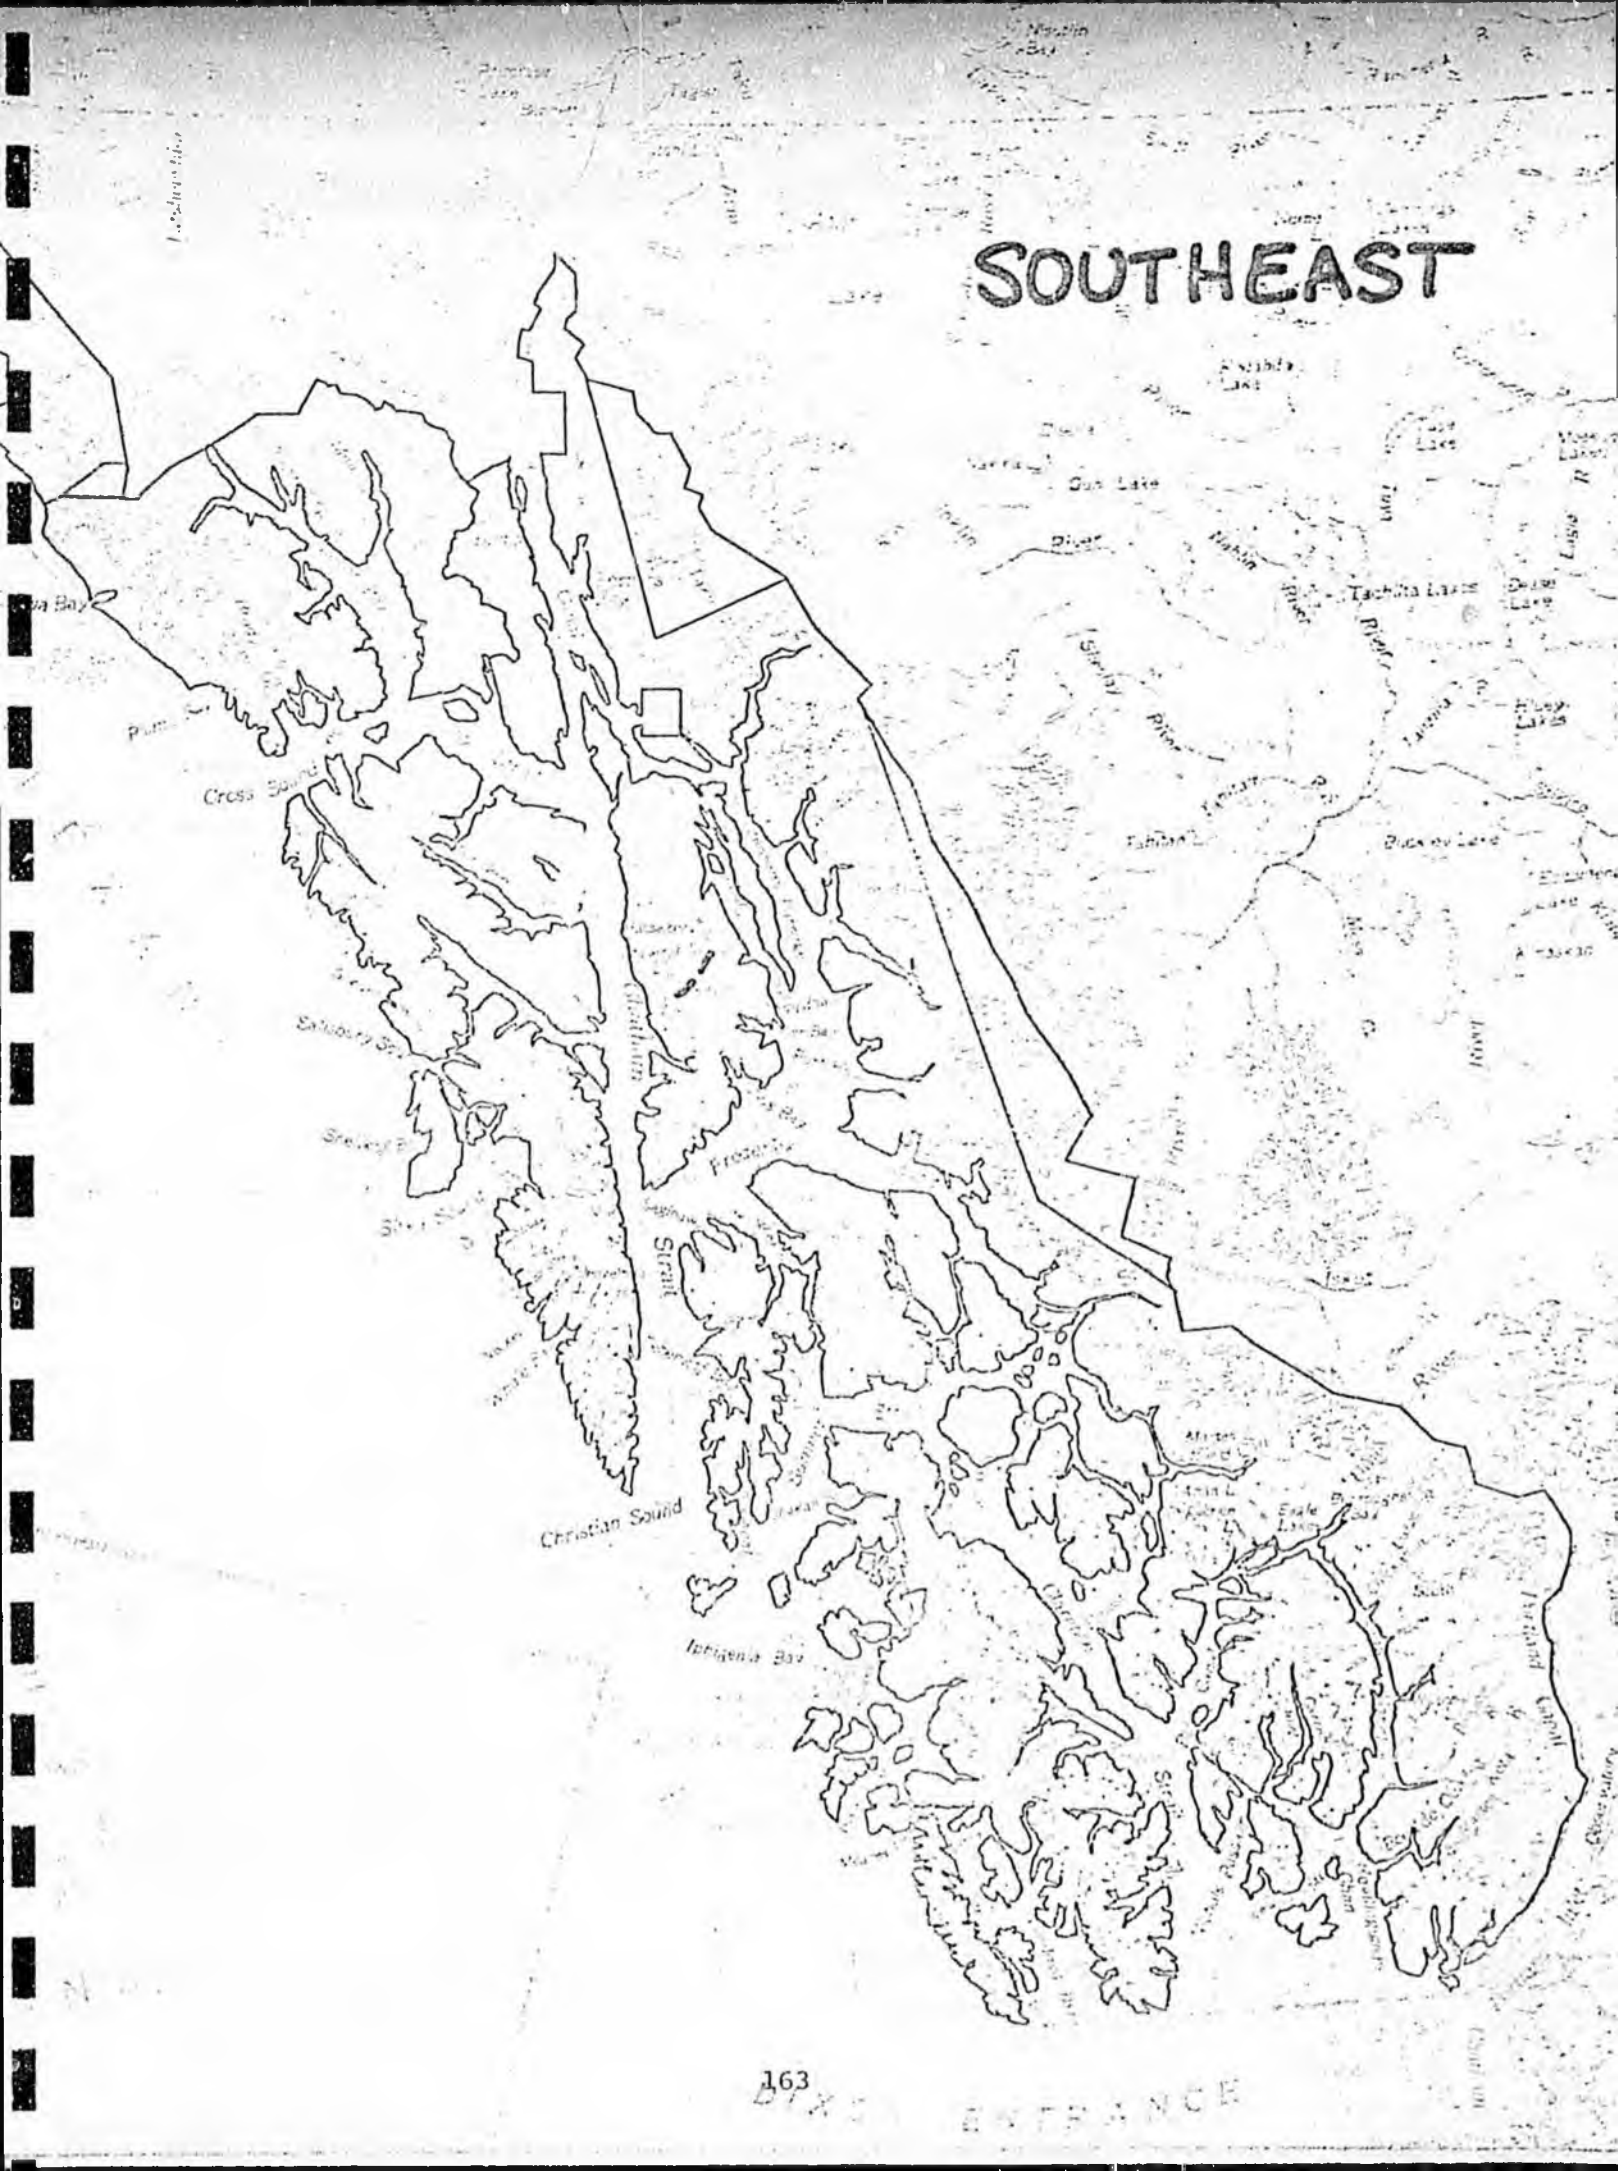
ALSO THE COMMISSION RECOMMENDS THAT THE STATE OF ALASKA STUDY KROTO CREEK (DESHKA) AND THE CHENA, CHATANIKA, TALACHULITNA, AND TAZLINA RIVERS FOR FEASIBILITY, POSSIBLE STATE LEGISLATIVE DESIGNATION, AND INCLUSION IN THE NATIONAL WILD AND SCENIC RIVERS SYSTEM.

SOUTHEASTERN ALASKA

Southeastern Alaska, the 40,000-square-mile Alaska "Panhandle," is an archipelago of large forested islands and a narrow mainland strip backed by mountains and icefields bordering Canada. Short mountain streams tumble into "inside" ocean passages. Wildlife populating the region include black bear (and its rare variation, the glacier bear), brown bear, Sitka black-tailed deer, bald eagle, and mountain goat. The productive fisheries habitat produces a variety of salmon, trout, herring, halibut, and shellfish. Although resource development has occurred and the region is relatively densely populated by Alaska standards (one person per square mile), the land largely remains in its natural state. The region has numerous sites of historical interest related to the indigenous Indian cultures, the Russian period, and the Klondike Gold Rush. The coastal rain forests are composed primarily of giant Sitka spruce and western hemlock.

Approximately 200 wet days occur each year in the southern portion of the region; less than 100 wet days are experienced, on the average, in the drier northern sections. Low clouds, fog, and frequent strong winds are characteristic of this region's climate. Temperatures in this largely maritime zone are moderate, with mean daily temperatures at sea level in January averaging near or above freezing, and mean July temperatures near 60°F. Precipitation is high with annual averages ranging from 61 inches at Haines in the north and 91 in Juneau, to 154 in Ketchikan, and in some locations, over 200 inches. There is potential for several minerals, and mining for uranium, gold, copper, and limestone, among others, has occurred. Much of the forest in this region has been evaluated to be of commercial quality. Commercial logging is extensive and long term timber sale contracts are in effect. Much of the current cut is exported to Japan as cants or pulp processed at two plants.

Southeastern Alaska was one of the first regions settled by Caucasians, and has some of the oldest communities in the State. The total population of the region is approximately 50,000, about 75 percent of which is Caucasian. Tlingit, Haida, and Tsimshian Indians constitute most of the remainder. Several of the communities here are relatively large. Juneau, the State capital, and Ketchikan, the region's southernmost town, have area populations greater than 10,000. Other communities of significant size include Sitka, site of the old Russian capital, Petersburg, Wrangell, Haines, and several predominantly Indian villages. Because of topographical obstacles, no road network connects the communities of the region. Access is by air or by boat, with a State-operated ferry system on the "marine highway." Waters in this region are generally ice free. Major industries are government, timber, commerical fishing, and tourism.



SOUTHEAST
Cross Sound
Christian Sound
Tachita Lake
Duck Inlet
Eagle Lake
Glacier Bay
Icy Strait

With the exceptions of about 800,000 acres of State selected or entitled lands and Native corporation selections, together totalling some 1.3 million acres or about 4 percent of the region, lands are and will remain under Federal jurisdiction. Major existing units in national conservation systems are the 16-million-acre Tongass National Forest and the 2.8-million-acre Glacier Bay National Monument. There are two small national historical parks, Sitka and Klondike Gold Rush, and three national wildlife refuge units (St. Lazaria, Hazy Island, and Forester Island) totalling 3,000 acres. Two withdrawals originally made under Section 17(d)(2) of approximately 475,000 acres each were made by the Secretary of the Interior, one near Kates Needle and the other around the Juneau Icefield.

Areas Adjoining Tongass National Forest

When the original National Forest withdrawals were made in southeastern Alaska, four major areas were excluded from the forest boundaries for various reasons, paramount apparently being a paucity of forest growth on the generally rugged glacier and snowclad mountains of the areas.

One of these areas near the head of Lynn Canal has now been largely selected by the State. Two other areas, around the Juneau Icefield and Kates Needle, are public domain lying between the Tongass National Forest and the Canadian border. Valleys, slopes, and peaks of these areas form the upper watersheds and scenic backdrop for the forested lower slopes of the National Forest. THE COMMISSION FINDS NO RESOURCE VALUES OR OTHER REASONS TO WARRANT CONTINUED EXCLUSION OF THESE AREAS FROM THE NATIONAL FOREST AND, THEREFORE, RECOMMENDS THAT THE JUNEAU ICEFIELD AND KATES NEEDLE AREA, TOTALLING 950,000 ACRES, BE ADDED TO THE TONGASS NATIONAL FOREST WHERE CLASSIFICATION OF THESE AREAS WOULD BE INCLUDED WITHIN OVERALL FOREST PLANNING.

Between the northwestern corner of Glacier Bay National Monument and the Yakutat unit of the Tongass National Forest is another largely mountainous zone of high peaks and extensive glaciers, through which the major Alsek River flows from Canada. The southern portion around the Alsek River and Deception Hills extends to the Gulf of Alaska coast. Much of this fourth major area of unreserved public domain provides a watershed and scenic background for existing Tongass National Forest lands.

The area adjoining the Glacier Bay National Monument, north to the Alsek River, contains scenic rugged mountains, glaciers, and coastal seascapes. The Alsek River corridor is of scientific interest because it is apparently the major migration passage through an immense mountain barrier for plants and animals between the coastal zone and the interior. In addition, its coastal flora, unlike that of most of the surrounding region, has not been significantly altered by recent glaciation.

RECOGNIZING THE NATURAL VALUES OF THIS AREA, AS WELL AS THE MINERAL POTENTIAL, THE COMMISSION MAKES THE FOLLOWING RECOMMENDATIONS.

1. THE IMMEDIATE NORTHWESTERN SLOPES AND VALLEYS OF MT. FAIRWEATHER, (30,000 ACRES), BE ADDED TO THE GLACIER BAY NATIONAL MONUMENT.

THIS PROPOSED ADDITION WOULD INCORPORATE THE REMAINING PORTION OF THIS SCENIC MOUNTAIN AND ITS IMMEDIATE VALLEY ENVIRONS, WITHIN U.S. OWNERSHIP IN THE MONUMENT.

2. ADD THE REMAINING PART OF THE ALSEK RIVER UNIT (1 MILLION ACRES) TO THE TONGASS NATIONAL FOREST.

FROM THE MANY POTENTIALLY SUITABLE RIVERS IN SOUTHEAST ALASKA, THE COMMISSION HAS IDENTIFIED FOUR AT THIS TIME WHICH IT RECOMMENDS FOR DESIGNATION AS POTENTIAL WILD AND SCENIC RIVERS. THE SITUK NEAR YAKUTAT, ALSEK, HASSELBORG CREEK ON ADMIRALTY ISLAND, AND THE LOWER REACH OF THE STIKINE AS IT BREACHES THE COAST RANGE ARE PROPOSED FOR FURTHER STUDY IN THE CONTEXT OF CLASSIFICATION OF SURROUNDING LANDS.

A mineral zone generally following the crest of the Fairweather-St. Elias Mountains extending northwestward from the Glacier Bay National Monument has potential for copper, nickel, iron, platinum, chromium, titanium, and asbestos, and underlies the more mountainous portion of this proposed unit. Deposits of nickel-copper have been located in Glacier Bay National Monument and on Yakobi Island to the south. No further mineral claims may be made in the Monument by direction of Congress.

STATEWIDE SUMMARY-GEOGRAPHIC RECOMMENDATIONS

In order to protect natural areas and systems of varying characteristics of national interest in Alaska, the Commission recommends the following new units or additions to existing reserves in the following land conservation systems:

	Acres (million)
NATIONAL PARK SYSTEM: Aniakchak Caldera (0.18), Cape Krusenstern (0.19), Gates of the Arctic (5.22), Kobuk Sand Dunes (0.10), Wrangell-St. Elias (9.72), Yukon River (0.54), Glacier Bay National Monument addition (0.03), Katmai National Monument additions (1.08), Mount McKinley National Park additions (2.69)	19.75
NATIONAL WILDLIFE REFUGE SYSTEM: Arctic National Wildlife Range additions (1.89), Cape Newenham National Wildlife Refuge addition (0.24), Kenai National Moose Range addition (0.04), Kodiak National Wildlife Refuge islands addition (440 acres)(0.00), Copper River Delta (0.35), Innoko (1.99), Kaiyuh (0.19), Kanuti (0.43), Koyukuk (2.53), Selawik (1.48), Shishmaref (1.50), Yukon Delta (5.67), Yukon Flats (2.33), Alaska Coastal: Chukchi (Capes Lisburne and Thompson)(74,000 acres), Bering Sea (1,700 acres), Shumagin Islands (71,907 acres), Barren Islands (10,020 acres), Aialik (19,630 acres), Total Alaska Coastal (0.18)	18.82
NATIONAL FOREST SYSTEM: Chugach National Forest additions: College Fiord (0.72), Copper River (1.25), Kenai Fiords--Harding Icefield (0.52), Nellie Juan (0.28), Total additions (2.77)	
Tongass National Forest additions: Alsek River (1.03), Juneau Icefield (0.48), Kates Needle (0.47), Total additions (1.98)	4.75
"ALASKA NATIONAL LANDS" SYSTEM: Andreafsky (3.54), Becharof (0.88), Cathedral Spires (0.40), Chandalar (5.56), Chitina (1.05), Lake Clark (3.49), Nabesna (2.87), Noatak (11.87), Nowitna (3.52), Nunamiut (1.98), Porcupine (5.49), Yukon Mountains (6.05)	46.70
NATIONAL WILD AND SCENIC RIVER SYSTEM: Alatna (upper)*, North Fork Koyukuk-Tinayguk*, Aniakchak (0.07), Unalakleet (0.10), Fortymile (0.32), Alagnak (0.09), Kanektok (0.11) *Acreage included in parkland proposals	0.69
TOTAL ACREAGE - ALL SYSTEMS	90.71**

Of 54 selected rivers, 7 are currently recommended for designation as indicated above. Entire courses, mainstreams, or certain segments of 35 rivers are recommended for designation as potential wild, scenic, or recreational rivers. Similarly, 8 other rivers flowing through a mixture of Federal and Native corporation selected lands, are also recommended for potential designation. These 43 rivers will be subject to study or further evaluation for feasibility. Approximately 2.01 million acres of land and water outside large area proposals would be involved in these study rivers. In addition, entire courses, mainstreams, or certain segments of 14 rivers primarily or partly on State-owned or selected lands are recommended for study or further evaluation by the State for possible designation. Approximately 1.0 million acres would be involved in these study rivers.

** Federal lands and some Native corporation selected lands. Does not include corporate lands in the vicinity of Anaktuvuk Pass or on the Yukon-Kuskokwim Delta. Acreage of included corporation land selections is unsettled.

	Acres (million)		
	Proposed	Existing	Total
Primary purpose lands			
National Park System	19.75	7.55	27.30
National Wildlife Refuge System	18.82	19.91	38.73
National Wild & Scenic Rivers (recommended & proposed)	2.70	-0-	2.
Alaska National Lands	46.70	-0-	46.70
Total	87.97	27.46	115.43
Multiple purpose lands			
National Forest System	4.75	19.71	24.46
National Resource Lands (est. remaining Federal public lands after State selections are completed)	57.67	-0-	57.
Total	62.42	19.71	82.13
Lands closed to hunting			
National Park System	18.92	7.55	26.
Lands closed to mineral development			
National Park System	19.75	7.55	27.
National Wildlife Refuge System (open only at Secretarial discretion)	18.82	19.91	38.
Wild Rivers (bed and bank)	**	-0-	
Total	38.57	27.46	66.03
Lands that may be open to mineral development in whol or part following classification			
National Forest System	4.75	19.71	24.46
Alaska National Lands	46.70	-0-	46.
Scenic and Recreational Rivers	**	-0-	
National Resource Lands	-0-	57.67	57.67
Total	51.45	77.38	128.

Several areas of the State or Native-selected lands have been included within the boundaries of the recommended national conservation systems units, to enclose prime natural values of national interest, or to effect a more natural boundary.

State-owned or selected lands suggested for land exchange consideration and inclusion in proposed conservation units are principally:

	Area	Proposed Unit
1.	Lower Reed River	Gates of the Arctic, west unit
2.	Lower Alatna River	Alaska national lands, Alatna unit Gates of the Arctic, west unit
3.	Teklanika-Savage Rivers	Mt. McKinley National Park, north additi
4.	Chelatna Lake	Mt. McKinley National Park, south addi
5.	Lower John River and Wolverine Creek	Alaska national lands, Nunamiut unit

Principal Native corporation selected land areas suggested for land exchange are:

1.	Bremner River	Wrangell-St. Elias
2.	Lakes Clark-Kontrashibuna	Alaska national lands, Lake Clark unit

Federal areas suggested for land exchange with State:

1. Lake Selby-upper Kobuk River; location, central Brooks Range
2. West Fork Chulitna River; Mt. McK ley area

** Acreage will depend on final recommendations and number of rivers.

A RESOLUTION IN SUPPORT OF ALASKA HOUSE BILL NO. 225,
ESTABLISHING THE TALKEETNA MOUNTAINS STATE GRAZING RESERVE

WHEREAS, The Matanuska-Susitna Borough Assembly and Planning Commission has proposed an act establishing the Talkeetna Mountains State Grazing Reserve, and

WHEREAS, the proposed act provides for multiple-use concept with local agencies' control, and

WHEREAS, the proposed act provides a larger tax base which will assist in keeping our tax burden at a lower level,

NOW, THEREFORE, BE IT RESOLVED that the Matanuska-Susitna Taxpayers' Association go on record as supporting House Bill No. 225 to establish the Talkeetna Mountains State Grazing Reserve.

PASSED AND APPROVED by the Matanuska-Susitna Taxpayers' Association, the 18th day of March, 1977.

RE: H.B. #225, Talkeetna Mountains State Grazing Reserve

Mr. Mr. Osterback:

In reply to your request for the City of Palmer to take a position on subject bill, this letter is to inform you of the position taken by the City Council of the City of Palmer in action at the March 8, 1977 meeting.

Accordingly, we are enclosing a copy of the City Council minutes of that meeting, together with a copy of the newspaper article which appeared in the local newspaper.

Sincerely yours,

CITY OF PALMER

William E. Curtis

CITY OF PALMER
CITY COUNCIL REGULAR MEETING
TUESDAY, MARCH 8, 1977
CITY COUNCIL CHAMBERS

A. CALL TO ORDER: at 8:02 P. M. by Mayor Jack E. Maze.

B. ROLL CALL, DETERMINATION OF A QUORUM, APPROVAL OF AGENDA:

Present were Mayor Maze and Councilmen Pedersen, Dolenc, Ekstedt, Johnson and Hanson which established a quorum. Councilman Ingalls was out of the state with an excused absence. City Manager Curtis and City Attorney Biss were also present.

Changes to agenda:

Council unanimously approved, by request of Mayor Maze, the call for an executive session at the close of this agenda for the purpose of discussing personnel and contracts. They also approved the presentation of the Federal Highway Act to be placed on the agenda earlier in the meeting.

C. PLEDGE OF ALLEGIANCE: led by Councilman Ekstedt.

D. MINUTES OF PREVIOUS MEETING:

1. Minutes of regular meeting of Tuesday, February 22, 1977 were approved as presented with no changes or corrections.

E. COMMUNICATIONS AND APPEARANCE REQUESTS: none

F. HEARINGS, ORDINANCES AND RESOLUTIONS: none

G. BIDS: none

H. OLD BUSINESS:

1. Request by Sr. Citizens to Utilize Apartment in Community Center

Speaking on behalf of the Senior Citizens, Edna Wehking said they had inspected the apartment which she felt would be would be adequate for their purpose, but requested that the city remove one wall partition which separates the kitchen from the living room. City Manager is to get approval from the Alaska Railroad that this could be done. The council concurred to the rent free arrangement to the Senior Citizens, provided it meets with the approval of the Railroad.

2. Request to take Position on Hatcher Pass Grazing Reserve - H. B. #225

City Manager Curtis explained this bill was originally drafted by Robert Risley who is in support of the area being utilized for agricultural purposes rather than recreational. He said Mr. Risley also spoke before the Chamber of Commerce in this regard. Mr. Curtis said that several years ago, development plans were made for a very large recreational area with state lands to be leased to individual business comprised mainly of mining business and private individuals which was a very lengthy bill. He said he personally feels that this H. B. #225 is overly simplified for that large amount of acreage and would not pass legislation in this form. He also felt the Board of Directors is out of proportion wherein there is some representation from the Commissioner level vs. the Director of the Division of Agriculture. He did not feel there would be 20,000 sheep grazing in that area, but rather his recommendation was that the area be utilized for recreation if handled properly which would also help the economy.

Councilman Johnson agreed with the comments of Mr. Curtis and questioned how all those cattle would be fed during the winter season. Councilman Ekstedt said he is opposed to the park concept because it is so restrictive. He mentioned the Borough is presently in a hastle with the State and questioned if action taken opposing this bill may have a bearing on the amount of land the Borough is eligible for.

Councilman Dolenc preferred some flexibility and stated he did not favor the idea of the bill written in such a manner that grazing is the primary use. He said he is under the impression that all those serving on the Board of Directors should have equal say. City Manager Curtis said he felt it is poor to do it in that manner from a political angle and from an administrative level, i.e. the Director of the Division of Agriculture may be reluctant to vote against two commissioners on the apparent four man board.

Mayor Maze noted the bill does provide for an advisory group which includes a Borough representative as well as local committees who would have an input into it and could control this particular area. Councilman Hanson stated he felt the intent of this bill is not specifically to support grazing, but possibly a method of paving the way for local people to have some control over the uses of the area.

MOVED EKSTEDT, SECONDED PEDERSEN that the City of Palmer go on record as being in support of the CONCEPT of the Talkeetna Mountain State Grazing Reserve Bill, House Bill No. 225. MCU.

Administration was directed to send copies of this action to Mr. Al Osterback, Chairman of the House Resources Committee, Mr. Risley, Senator Kerttula and Representative Ose.

3. Bike Trails Matter:

City Manager Curtis said this plan was originally triggered by Mrs. Helena Myers and a Bike Trails Committee. The Borough presently has plans to construct bike trails to the new Palmer High School and coming in from the Butte along the Glenn Highway alternate and would now like to know what the city can do to establish bike trails within the city limits to connect with these proposed routes. He said the City Council previously approved the Bike Trails Master Plan but did not commit anything as far as funding is concerned. From an engineering and construction standpoint, he said there are problems since the majority of the street improvements are paid for by adjoining property owners and we cannot expect them to pay for bike trails. He said the priority exists for roads, curb, gutter and sidewalks which is needed a lot more than bike trails.

MOVED HANSON, SECONDED EKSTEDT to table this matter until the next meeting in order to get more information on it.

In discussion, Councilman Johnson asked what more information we can get, feeling we have all we need. He said it is a matter that the city cannot justify spending money for bike trails and we do not have a place to put them. City Manager Curtis said the Borough should have an overall plan for the entire Borough noting to date, the city has only had copies of the plan for the City of Palmer. Councilman Hanson commented that the Bike Trails Master Plan for Palmer was brought up rather suddenly and in all fairness, his recommendation was as stated in his motion, to have this matter deferred to the next meeting. MCU.

4. Request from Credit Union - to Utilize Airport Lands for Gardening

City Manager Curtis said he discussed this possibility with Mr. Paul Crippen of the Credit Union and felt if there is sufficient interest, it would be possible to provide a small amount of land at the airport. Councilman Hanson estimated five acres to be more than adequate for this purpose. Some points brought up for consideration in furnishing land is the fact that it not be in the construction area, the city would not be liable, tilled land is subject to wind, accessibility and the availability of water if needed.

MOVED JOHNSON, SECONDED PEDERSEN that the City Manager be authorized to negotiate a plan with the Credit Union for garden plots at the airport. MCU.

5. Establish Terms of Lease with F.A.A. for New Flight Service Station Facilities:

City Manager Curtis explained the original plan was to lease space in the new Flight Service Station facility to F.A.A. In planning this, we detected the city is required to comply with certain handicap requirements such as the installation of elevators, etc. In our meeting with them, we have now determined their attitude has changed and they perhaps won't need the space at all since they will be going remote because of lack of funds and closing them down. He said he explained to them that the city has planned the building for their use with 100% grant funds and in order to comply with E.D.A. requirements of commencing construction within 90 days of acceptance of grant offer and the 150-day completion date, there is no way the city can now change the plans. He said they offered no further explanation until F.A.A. has had an opportunity to review the entire operation.

Mr. Curtis added they originally informed us this would be a regional office and all of a sudden, they tell us they will not be maning anything and everything will be remote. Legally, they can only lease on a year-to-year basis. He said the city is somewhat commited, since part of this space was designed specifically for F.A.A. and the grant offer from EDA has been accepted. He inquired of the council if they would be willing to lease space to FAA on a "no rent" basis with them paying all utilities and basic costs. Councilman Ekstedt stated he could not see how FAA could possibly close it down because the airport is used a lot and this facility is badly needed. Councilman Johnson spoke in favor of constructing the building for the future since things do have a way of changing.

MOVED HANSON, SECONDED JOHNSON that the City Manager be authorized to negotiate terms with F.A.A. for leasing the new Flight Service Station facilities. MCU.

Grazing bill backed

Despite "problems" with a bill to create a Talkeetna Mountains State Grazing Reserve, the Palmer City Council gave the measure its endorsement Tuesday night.

Consideration of the bill, HB 225, introduced in Juneau by Rep. Al Ose (D-Dist. 6), had been held over from a previous meeting.

"I have problems with this bill," said City Manager Bill Curtis, "I feel it is overly simplified. It covers such a vast area of thousands of acres, but it's taken care of in a couple of pages."

"It's an ag bill from the word go," he commented on the legislation that originally was drafted by Robert Risley, member of the Matanuska-Susitna Borough Planning & Zoning Commission.

Risley has been an advocate of agricultural uses as opposed to recreation alone for the Hatcher Pass area.

Curtis's principal criticism was that the grazing reserve would be administered by a board of directors headed by the director of the state Division of Agriculture. The board also would include the department commissioners of Highways and Fish and Game, as well as a representative of the Matanuska-Susitna Borough.

"Actually," Curtis continued, "the director of agriculture is on a very low level in this state, not equal with the commissioners."

He did not mention Allan K. Linn, the current director, whose headquarters are in Palmer. The division is part of the Department of Natural Resources.

"My opinion of the bill is that it's a ragtag kind of thing that's thrown together. It will never get through the Legislature."

The city manager added some comments that he said represented "old Bill Curtis talking."

Referring to arguments that 20,000 sheep could be grazed in the Talkeetna Mountains, Curtis said: "To me, personally, it's ridiculous. To me, the potential of the area is recreational."

Mayor Jack Maze supported the provision in HB 225 for an advisory group largely representing recreational organizations that use the Hatcher Pass area.

"These people will have great input on the management of the grazing area," he said.

The motion to support HB 225 was made by Jim Ekstedt with the second of Everett Pederson. The vote was unanimous.

In other matters, the council:

• Agreed with Edna Wehking that it would be suitable to permit senior citizens to occupy an apartment in the Community Center. Approval will be sought from the Alaska Railroad, owner of the former depot.

• Tabled action on the matter of establishing bike trails through the city to connect routes reserved by the Matanuska-Susitna Borough that now come to the city limits. "In no good conscience can I recommend the city spend money on bike trails," said Curtis. "We need roads, sidewalks, curbs and gutters a heck of a lot more than we need bike trails."

He explained that by existing law, bicycles are not allowed to travel over sidewalks. The real problem, he added, is from an engineering and construction standpoint. "Our streets are built by special improvement money — by the adjoining property owners. Who's going to pay for bike trails?"

Credit union bill nears vote

James Love, director of the Alaska Public Interest Research Group, said in Palmer Wednesday his group is sponsoring legislation to permit state-chartered credit unions.

"The bill should be coming to a vote in the next couple of weeks," Love said in an interview following his talk to the Greater Palmer Chamber of Commerce Wednesday.

In comparison to federally chartered credit unions, which offer consumer and personal loans, the state-chartered institutions would be able to compete in the mortgage market and offer a limited form of personal checking account, Love said.

City eyes downtown auto race

An auto race through the streets of downtown Palmer may be considered as an attraction for the 1977 Midsummer Festival.

City Manager Bill Curtis, who also serves as president of the Greater Palmer Chamber of Commerce, told the council Tuesday night some of the plans that are aimed at bringing visitors into the central business district.

Curtis admitted he didn't know what the liability would be for the city to permit stock car racing. It would be similar to an event at the Anchorage Fur Rendezvous.

The possible race course would follow S. Alaska Street to the Old Glenn Highway, then proceed across the Alaska Railroad tracks and return along S. Valley Way.

He said the race courses would

this bond request.

Both of the schools will eventual two-story wooden frame structures, ing 600.

Big Lake, with only about 75 stu this year, is still a long way from ne the whole thing. The planned additio add four basic classrooms to the t there now, plus a gym and multi-pur room, media center, offices and nu station.

The addition would be joined to existing school by a long windo corridor leading toward the rear o property. Play areas would be behind the two buildings.

Boundaries for this school woul generally from Houston to the Rain Lakes area, according to Rousey, pr ed those lines keep the enrollment u 140.

Until this school opens, some yo sters will continue at Iditarod, and ot will be moved into portables on the that are now being used as music physical education rooms. Inclu equipment, it would come to $ .6 mill

SU VALLEY SHOP

The proposed Susitna Valley H school vocational building is another planned to develop in stages.

This phase has a wood shop, m shop, two classrooms, shop office, room and storage space. Besides the s classes, an English-social studies c and the music practice area will move the new building. A home econom curriculum will take over what is now small shop area in the main building.

With completion of this project, desi ed as a separate building done in the s wooden, steep-roofed style as the orig al, the high school could add another youngsters to its 180 capacity.

Future additions to the vocatio building might include an expan metal-auto shop, theater, drafting ro and band-chorus room. The main build was also designed for additions, to a t of 400 students.

Principal Vern Olson says the pres shop is inadequate, with much of equipment having to be kept in stor

Re: 00-3077
House Bill #225

File

Mr. Alvin Osterback, Chairman
House Resources Committee
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Mr. Osterback:

Please refer to your letter dated February 19, 1977 requesting a position paper and material we may have on subject House Bill #225.

This department has neither a position paper or any other material which may be helpful to your committee and know of no fiscal implication at this time. We would, however, suggest that you contact the Department of Natural Resources if you have not already done so. Their input would quite possibly be much more meaningful to the endeavors of your committee.

Sincerely,

H. D. Scougal

H. D. Scougal
Commissioner of Highways

CC: Fran Ulmer, Governor's Office

HOUSE RESOURCE COMMITTEE - Minutes - February 17, 1976
Subject: HCR 82; HB 580 and HB 664
Present were Eliason, Huntington, Osterback, Smith, Rhode, Hershberger, Brown, Staff Assistant Van Doren and Chmn. Anderson.

Chmn. Anderson opened with several general statements, including the fact that the governor has a bill ready for introduction similar to + Talbeatra HCR 82. Anderson has written a letter to Bradner, and one to the governor, asking for the FLUPC to study the agreement on Cook Inlet before the committee takes action. "My stand is that I want a closer look at the bill. The terms are complex. I don't feel I can recommend to the House approval at this time."

Discussion as to the legal deadline for the legislature to act upon the bill brought to light the fact that the "Terms and Conditions" document mentioned in HCR 82 contains the 60-day limit, which will be met on March 12. Any change in that date would have to be approved by the Secretary of Interior.

Rep. Rhode expressed concern about the complexity of the problem--but that everyone had given something--federal, state, and natives. He moved a DO PASS.

Chmn. Anderson read to the group the rough draft of the bill to be presented by the governor on Cook Inlet. Although the bill was not officially before the committee, there was general agreement that it was better than the resolution, since it was clearer on subsurface rights.

Discussion ensued as to whether a bill could be introduced as a Committee Substitute for a Resolution. Answer - No.

It was moved that HCR 82 be given a Do Pass recommendation by unanimous consent. Motion carried.

- ----------

Rep. Huntington moved a Do Pass on CSHB 664.

Smith stated that HB 580 does create a multiple use management area within the park, the state's first effort along those lines.

Huntington urged acceptance of HB664 because it puts the people in charge.

Smith mentioned a possible problem with miners coping with a prime agricultural use, as laid out in HB 664.

Anderson noted that in HB 580, the prime use is recreation, and yet the people themselves living in the area don't consider recreation to be prime.

In answer to Rep. Browns concern about permissible uses in both bills, Smith responded that he agreed neither was perfect, but a decision needed to be reached on which bill to work on.

Rep. Rhode stated his criteria for analyzing bills--Is it needed, will it work, and how much does it cost?

Mr. Smith moved to table HB664 with unanimous consent asked. Chmn. Anderson asked for a withdrawal of the motion in the interests of continuing action.

Chairman Anderson appointed Mr. Smith, Mr. Brown and Mr. Ose to work out problems in HB664, since that appeared to be the bill the committee wanted to mark up. Work is to be done Wed. at 4:30.

Vote on tabling HB664 failed.

Meeting recessed.

Tape 5 Side 1
1261 - 2030

HOUSE RESOURCE COMMITTEE - Minutes - February 13, 1976

Present were Osterback, Hershberger, Huntington, Smith, Swanson, Staff Assistant Van Doren and Chmn. Anderson.

Subject: HB 664 and HB 580 Tabled

Sponsor Ose stated that description corrections have been made in the Committee Substitute. Also, due to the request of the Borough, wording in the original bill pertaining to Sections 10 - 60 ...fff.. are deleted. Regarding the "advisory committee", the word "active" was added.

Mr. Smith reminded the committee that there is a motion pending to substitute the wording of SB 603 for the description in HB 580. The motion carried.

Sponsor Ose stressed passing HB 663--there are enough park projects in the area. Uncertainty of land status needs to be cleared up so as to relieve the anxieties of the people. There is no quarrel with recreational uses of the area--only the "lock up" that a park would cause.

Rep. Swanson expressed concern that Natural Resources still remains in charge of the area, in the CS.

Mr. Smith asked the sponsor whether there are people in the area experienced in management of agricultural and recreational aspects involved; also whether persons are available to handle the physical management of a recreational area. It is Smith's understanding that at least one group in the area wants the state to get involved in maintenance, to get the burden off the back of locals. In response to Ose's comment that locals have been doing o.k., Smith said he had a differing opinion--locals want help. Enforcement also would be necessary. He suggested an amendment be drawn up re: enforcement.

Swanson expressed concern about bureaucracy--rules and regulations force a team of "bureaucracy" to arrive on the scene. However, Swanson stated he is not against the bill.

Rep. Smith noted that the description in HB580 has more agricultural land involved than HB664. Maybe the descriptions should be reversed.

Rep. Huntington stated that we need to get away from having private property within parks, which then has to be bought up by the state at a future date. What is needed is clear title to park lands before they become parks.

Meeting was recessed.

February 2, 1976 - Talkeetna State Park--Agricultural Reserve Hearings

Robert Risely - presented copy of MSB code title 16 - 8/20/74

Ed Martin, Sr., a resident, favors multiple use. There hasn't been enough exploration of the land to determine what the use should be. Not in favor of either bill--favors multiple use.

Mrs. Gene Woods, a resident, supports 664 with changes. She opposes 580. People can live with HB 664.

Miss Barbara Woods, a resident, favors HB 664. Multiple use, with some control.

A.L. Renshaw, a resident, is a 3rd generation mining engineer. He represents the Alaska Miners Association, and the people of the area. This is the 5th hearing on this issue. The proposals have hampered mineral exploration because of uncertainty. The Willow Creek Mining District has good gold potential. There are 2000 jobs involved--and a 10 billion dollar industry. HB 580 is a rehash of the Committee Substitute for last session from the mountaineering club. It is restrictive. Mr. Renshaw questioned Ln. 5 Pg. 5. Does this mean no development? How do you get access if no motor vehicles are allowed. He was also concerned with MAY wordings, veto power of the Park Dept., and Ln. 21 Pg. 6--reasonable to the state--Does not mention private This could lead to possible condemnation. There is no responsibility for protecting in-holdings. Re: U.S.G.S. 10004--the recreation zone has shaded patented claims and survey areas--but does not show unpatented lands. Mr. Renshaw also stated that the Chief Planner had said that the recreation area was unmanageable. It is heavily mined. There is stored dynamite--a tremendous hazzard. There would have to be restriction on public activities. There would have to be insurance for liability for the owners. Responsibility would have to be spelled out. Traditionally this has been a multiple use area...grazing, recreation, mining, etc. He opposes HB580. "Put the bill to rest--it keeps coming up" HB664 defines a reasonable multiple use for the area--the mining people can live with this.

Henry Hill, a resident, and involved in mining in the area. His family owns property in the area. Leave it exactly as it is. No one bothered it until recreation came in, then agriculture, now mining. Everybody used it before without any classification. Why change it. Existing laws will take care of it. HB580 allows one use--he's opposed. HB664--possibility of good economic source. Possible problem of revenue source vs. recreation source. In HB664 the management responsibility is too far removed from the people.

Mr. Harry Luckwald, a resident: There is gold potential in the area. Mining laws hold precedent--grandfather rights. Against HB580. HB664 is a giant step forward. People used to mine up high near Eagle River, but the Borough stopped them by use.

Anchorage Motor Mushers Club--600 members--supports HB664.

Dean Bunker, a homesteader near the area. We do not need any more parks There is Denali Park expansion. This park could expand.

Susitna VAlley Kiwanis Club: We do not need more parks, but if there is a need for this park HB664 is more palatable.

Russ Cahill, Director of Parks, State of Alaska: HB580 is concerned with the area. It is a departure from normal parks, in that it has a corridor of multiple use within it. The Dept. is taking into consideration all mining claims patented and active. The intent of the Park is to NOT purchase land within the Park unless it is essential to campground or management. If land is to be purchased it will be at fair market value. Ranger patrols will be in effect. There will be a possible loss of revenue. Re: HB 664, this is 430,000 acres. 13% is good for agricultural purposes. 87% is not good for agriculture. Cahill is not in favor of this proposal. Only one Department and one man should run the system. If he does not do a good job, he can be removed.

Dr. Deerborn, a resident of the area: Is opposed to all regulations to create a park. It would cripple recreational potential by private ownership. Why not further develop Chugiak Park for Anchorites.

Virginia Del Piaz: President, Upper Cook Inlet Conservation Society: I favor HB580 strongly. 150,000 people in 1975 were opposed to HB664. The majority of the land is above 12,000 ft., and should be included within a Park. The area is not agricultural land. (Del Piaz lives in the area)

Wayne Bowens, a local dairy man: Favors HB664. The multiple use concept is best. Don't lock it up as a park. There is a grazing area, and some crops can be grown.

Arthur Criter, of the Willow Creek Miners: Is opposed to a Park which affects the ming area. Tired of fighting the issue of parks. Prepared to initiate lawsuits (31) Re: HB664, three mining claims additional would be working if not for the cloud of a Park over them.

Pete Green, a local realtor, and member of the Realtors Association: (30 members) Is not too concerned with either bill. Multiple use concept best--protect --put rights and mining first. Park people haven't shown him that they can manage parks. Costs haven't been brought up. Central location, and one agency, to which the people could go to secure all necessary permits, is necessary.

Sig Rigstad, a resident: 1 million acres of parks within the Borough now. There would be more than an acre per person if Talkeetna Mt. Park is enacted. It was mining that opened the area. Parks should take small areas and manage them for the people who would use them. Only outdoor people who are healthy can use the proposed Park areas. There is considerable expense to run a park even if it is not developed. Invest in the parks that are already established. Re: HB664, there is an option if the land has to be tied up. The Adv. ory Committee is important. But this committee should have as a criteria the size of the organizations involved--not naming specific organizations.

Pat Carney, a dairy farmer: Is opposed to HB664. Is it proper for members of the committee to voice their opinions at this hearing? Feels we are facing a special interest group (mining) who is against HB580 and using HB664. Feels that the HB664 cannot stand as it is. There is not enough agricultural land to justify the bill.

George Parkee: Enjoys parks, but there is a need for agricultural reserve. Supports multiple use, but need to maintain agricultural land. Need for mining--the proven area is needed for recreation also.

Tape 4 Side 2

HOUSE RESOURCE COMMITTEE - Minutes - Feb. 10, 1976

Present were Smith, Huntington, Hershberger, Osterback, Brown
Staff Assistant Van Doren and Chmn. Anderson

Subject: HB 664 and HB 580 Talkeetna

Rep. Al Ose began testimony. (Chmn. Anderson requested the hearing to begin without a quorum.) Mr. Ose stated that grazing, mining, and recreation were the main uses of the area. The people living there do not want a park, but they do want recreation. A Park status would essentially close the area to mining. It would also take away a tax base from the Borough. Mining would involve major investment if the people involved knew it was to remain open. Now, under current uncertain conditions, the people won't invest. (Above statements refer to HB 680)
(Chmn. Anderson announced that a quorum was now present). Mr. Ose expressed opposition to HB 580, stating that it is too large an area to lock up in a park.

Ron Hawk, of the Alaska Chapter of the Sierra Club, expressed concurrence with HB 580 and opposition to HB 664. The wilderness experience in the Talkeetna area is great. The scenic resource alone justifies the park status. The area cannot absorb the tremendous growth pressures. Park designation would provide a management vehicle. The proposal of agriculture as the basic use does not make sense since recreation is in fact the basic use. He stressed that grazing and mining are possible in a multiple use area. He also stressed that there should be hearings in Anchorage with at least a week's notice.

Rep. Huntington stated that many people living in the area of the proposed park are against it. Mr. Hawk said that all people should decide what to do with the area.

Rep. Ose mentioned that there is no trouble in the area yet, but there will be if a park is made.

Russ Cahill, Director of Parks for the state, presented the written testimony he had used up north. He added that HB 580 does provide for mining now in existence. However, there are other mining areas that are not included in the bill. The grazing issue is real; however, the bill does not take away anything or any use now in existence. Mr. Cahill feels that the opposition is coming from a distrust of parks per se. He also mentioned the over-speculation of land in the area now because of the capitol move issue.

Chmn. Anderson: Does the Division of Parks enforce how land is to be used? If not, who can do it?

Cahill answered that Fish and Game or Parks could enforce, depending on the major use of the land. Major uses of this area are driving for pleasure, camping, hang-gliding, fishing, hunting, berry picking, skiing, snowshoeing, snowmobiling and bird hunting.

Chmn. Anderson asked how prohibiting motirized vehicles would help the area. He was answered by Cahill stating that most of the problems with land being damaged is because of misuse by motorized vehicles. Anderson asked if Fish and Game could regulate the moose hunting in the area? (This was in response to a statement that the moose herd was on the decline because of overhunting) Answer--Yes, if it were responsible for it.

Chmn.Anderson asked why Cahill was proposing a committee to manage the area, when he had previously stated that a committee was not a good way to manage? Cahill replied that this proposed committee was for "masterplanning", not managing.

Chmn. Anderson stated that it appeared that the people of the area were having problems with the wording on Page 5, Line 14 of HB 580 stating that the Commissioner would designate the uses that were compatable under the bill. Anderson felt that the land residents should have input into the use of the land. Cahill stated that the Senate version of the bill allows local input, and also takes out the Willow part of the proposal--it is a smaller proposal.

Rep. Hershberger asked how recreational use would be affected if the area were not a park. Cahill stated that now there is excess and unsafe shooting--it needs to be limited. Also there is uncontrolled auto use. Furthermore, recreation users bother the mines and miners. Rangers on duty in a park could patrol and cut down the problems.

Chmn. Anderson stated that recreation uses shouldn't weigh more than domestic uses of those living in the area.

Rep. Smith moved that on Pg. 5, Line 19, HB 580, after the word "B", add "reviewed by the Matanuska-Susitna Borough and". Motion carried unanimously.

Rep. Smith moved that on Line 27, Pg. 5, HB 580, after "management", add "of land specified in 425 A of this chapter and". Motion carried

Regarding HB 664, Chmn. Anderson stated that grazing was considered primary, with other uses to be controlled accordingly. He asked Mr. Cahill what his arguments were against HB 664. Cahill stated that his basic objection was the setting-up of agriculture as the dominant use. Also, having the Director of Agriculture as the Land Manager for the area wasn't correct, since agriculture was not the primary use of the area.

Chmn. Anderson mentioned that HB 664 was a plan made up directly by the people of the area--one of the first such plans, and as such is a good example of what can be done. Cahill replied that Parks did consult with the people of the area before drawing up the bill--(HB 580)

Rep. Smith suggested that the Senate description of the park be put into HB 580.

Phil Holdsworth, member, Joint Land Use Planning Commission, stated that hearings were needed in the north. Many of the people there did not find out about the hearings until they were over. He expressed disapproval of the statement in HB 580 which limits activities in the proposed park to those activities in existence prior to Jan. 1, 1976. This would not allow persons operating unpatented claims to develop the claims, and access to the claims, as well as processing the claims. No new mining would be allowed. He also stressed that park rangers couldn't begin to control problems in the area when city police can not do it in cities.

Richard Gordon, of the Alaska Wilderness Council, stated that the primary objective of HB 580 was to provide extensive recreational value, including scenic values. For instance, very few areas in the state have extensive alpine lakes such as this one does. Within the proposed park natural separations would enhance camping. However, funds need to appropriated for staff within the park. This park would allow the new capitol city to be surrounded by "green belt".

Sharon Lobaugh, of the Alaska Conservation Society, expressed support of HB 580 with the amendments and adding endorsement by local groups to the management plan.

Des Dooley, of the Alaska Department of Highways stated that this proposal does not conflict with any current highway plans,---there is no 4-F conflict. However, there seems to be a problem with the park description in the Jonesville area.

Chmn. Anderson recessed the meeting until Friday, Feb.13, at 8:00 a.m.

Tape 5 Side 1

HB 580 is a rehash of the Committee Substitute for last session from the mountaineering club. It is restrictive. Mr. Renshaw questioned Ln. 5 Pg. 5. Does this mean no development? How do you get access if no motor vehicles are allowed. He was also concerned with MAY wordings, veto power of the Park Dept., and Ln. 21 Pg. 6--reasonable to the state--Does not mention private This could lead to possible condemnation. There is no responsibility for protecting in-holdings. Re: U.S.G.S. 10004--the recreation zone has shaded patented claims and survey areas--but does not show unpatented lands. Mr. Renshaw also stated that the Chief Planner had said that the recreation area was unmanageable. It is heavily mined. There is stored dynamite--a tremendous hazzard. There would have to be restriction on public activities. There would have to be insurance for liability for the owners. Responsibility would have to be spelled out. Traditionally this has been a multiple use area...grazing, recreation, mining, etc. He opposes HB580. "Put the bill to rest--it keeps coming up" HB664 defines a reasonable multiple use for the area--the mining people can live with this.

Henry Hill, a resident, and involved in mining in the area. His family owns property in the area. Leave it exactly as it is. No one bothered it until recreation came in, then agriculture, now mining. Everybody used it before without any classification. Why change it. Existing laws will take care of it. HB580 allows one use--he is opposed. HB664--possibility of good economic source. Possible problem of revenue source vs. recreation source. In HB664 the management responsibility is too far removed from the people.

Mr. Harry Luckwald, a resident: There is gold potential in the area. Mining laws hold precedent--grandfather rights. Against HB580. HB664 is a giant step forward. People used to mine up high near Eagle River, but the Borough stopped them by use.

Anchorage Motor Mushers Club--600 members--supports HB664.

Dean Bunker, a homesteader near the area. We do not need any more parks There is Denali Park expansion. This park could expand.

Susitna VAlley Kiwanis Club: We do not need more parks, but if there is a need for this park HB664 is more palatable.

Russ Cahill, Director of Parks, State of Alaska: HB580 is concerned with the area. It is a departure from normal parks, in that it has a corridor of multiple use within it. The Dept. is taking into consideration all mining claims patented and active. The intent of the Park is to NOT purchase land within the Park unless it is essential to campground or management. If land is to be purchased it will be at fair market value. Ranger patrols will be in effect. There will be a possible loss of revenue. Re: HB 664, this is 430,000 acres. 13% is good for agricultural purposes. 87% is not good for agriculture. Cahill is not in favor of this proposal. Only one Department and one man should run the system. If he does not do a good job, he can be removed.

Dr. Deerborn, a resident of the area: Is opposed to all regulations to create a park. It would cripple recreational potential by private ownership. Why not further develop Chugiak Park for Anchorites.

Virginia Del Piaz: President, Upper Cook Inlet Conservation Society: I favor HB580 strongly. 150,000 people in 1975 were opposed to HB664. The majority of the land is above 12,000 ft., and should be included within a Park. The area is not agricultural land. (Del Piaz lives in the area)

Wayne Bowens, a local dairy man: Favors HB664. The multiple use concept is best. Don't lock it up as a park. There is a grazing area, and some crops can be grown.

Arthur Criter, of the Willow Creek Miners: Is opposed to a Park which affects the ming area. Tired of fighting the issue of parks. Prepared to initiate lawsuits (31) Re: HB664, three mining claims additional would be working if not for the cloud of a Park over them.

Pete Green, a local realtor, and member of the Realtors Association: (30 members) Is not too concerned with either bill. Multiple use concept best--protect --put rights and mining first. Park people haven't shown him that they can manage parks. Costs haven't been brought up. Central location, and one agency, to which the people could go to secure all necessary permits, is necessary.

Sig Rigstad, a resident: 1 million acres of parks within the Borough now. There would be more than an acre per person if Talkeetna Mt. Park is enacted. It was mining that opened the area. Parks should take small areas and manage them for the people who would use them. Only outdoor people who are healthy can use the proposed Park areas. There is considerable expense to run a park even if it is not developed. Invest in the parks that are already established. Re: HB664, there is an option if the land has to be tied up. The Advisory Committee is important. But this committee should have as a criteria the size of the organizations involved--not naming specific organizations.

Pat Carney, a dairy farmer: Is opposed to HB664. Is it proper for members of the committee to voice their opinions at this hearing? Feels we are facing a special interest group (mining) who is against HB580 and using HB664. Feels that the HB664 cannot stand as it is. There is not enough agricultural land to justify the bill.

George Parkee: Enjoys parks, but there is a need for agricultural reserve. Supports multiple use, but need to maintain agricultural land. Need for mining--the proven area is needed for recreation also.

HOUSE RESOURCE COMMITTEE - Minutes - Feb. 10, 1976

Present were Smith, Huntington, Hershberger, Osterback, Brown
Staff Assistant Van Doren and Chmn. Anderson

Subject: HB 664 and HB 580 Talkeetna

Rep. Al Ose began testimony. (Chmn. Anderson requested the hearing to begin without a quorum.) Mr. Ose stated that grazing, mining, and recreation were the main uses of the area. The people living there do not want a park, but they do want recreation. A Park status would essentially close the area to mining. It would also take away a tax base from the Borough. Mining would involve major investment if the people involved knew it was to remain open. Now, under current uncertain conditions, the people won't invest. (Above statements refer to HB 680)
(Chmn. Anderson announced that a quorum was now present). Mr. Ose expressed opposition to HB 580, stating that it is too large an area to lock up in a park.

Ron Hawk, of the Alaska Chapter of the Sierra Club, expressed concurrence with HB 580 and opposition to HB 664. The wilderness experience in the Talkeetna area is great. The scenic resource alone justifies the park status. The area cannot absorb the tremendous growth pressures. Park designation would provide a management vehicle. The proposal of agriculture as the basic use does not make sense since recreation is in fact the basic use. He stressed that grazing and mining are possible in a multiple use area. He also stressed that there should be hearings in Anchorage with at least a week's notice.

Rep. Huntington stated that many people living in the area of the proposed park are against it. Mr. Hawk said that all people should decide what to do with the area.

Rep. Ose mentioned that there is no trouble in the area yet, but there will be if a park is made.

Russ Cahill, Director of Parks for the state, presented the written testimony he had used up north. He added that HB 580 does provide for mining now in existence. However, there are other mining areas that are not included in the bill. The grazing issue is real; however, the bill does not take away anything or any use now in existence. Mr. Cahill feels that the opposition is coming from a distrust of parks per se. He also mentioned the over-speculation of land in the area now because of the capitol move issue.

Chmn. Anderson: Does the Division of Parks enforce how land is to be used? If not, who can do it?

Cahill answered that Fish and Game or Parks could enforce, depending on the major use of the land. Major uses of this area are driving for pleasure, camping, hang-gliding, fishing, hunting, berry picking, skiing, snowshoeing, snowmobiling and bird hunting.

Chmn. Anderson asked how prohibiting motirized vehicles would help the area. He was answered by Cahill stating that most of the problems with land being damaged is because of misuse by motorized vehicles. Anderson asked if Fish and Game could regulate the moose hunting in the area? (This was in response to a statement that the moose herd was on the decline because of overhunting) Answer--Yes, if it were responsible for it.

Chmn.Anderson asked why Cahill was proposing a committee to manage the area, when he had previously stated that a committee was not a good way to manage? Cahill replied that this proposed committee was for "masterplanning", not managing.

Chmn. Anderson stated that it appeared that the people of the area were having problems with the wording on Page 5, Line 14 of HB 580 stating that the Commissioner would designate the uses that were compatable under the bill. Anderson felt that the land residents should have input into the use of the land. Cahill stated that the Senate version of the bill allows local input, and also takes out the Willow part of the proposal--it is a smaller proposal.

Rep. Hershberger asked how recreational use would be affected if the area were not a park. Cahill stated that now there is excess and unsafe shooting--it needs to be limited. Also there is uncontrolled auto use. Furthermore, recreation users bother the mines and miners. Rangers on duty in a park could patrol and cut down the problems.

Chmn. Anderson stated that recreation uses shouldn't weigh more than domestic uses of those living in the area.

Rep. Smith moved that on Pg. 5, Line 19, HB 580, after the word "B", add "reviewed by the Matanuska-Susitna Borough and". Motion carried unanimously.

Rep. Smith moved that on Line 27, Pg. 5, HB 580, after "management", add "of land specified in 425 A of this chapter and". Motion carried

Regarding HB 664, Chmn. Anderson stated that grazing was considered primary, with other uses to be controlled accordingly. He asked Mr. Cahill what his arguments were against HB 664. Cahill stated that his basic objection was the setting-up of agriculture as the dominant use. Also, having the Director of Agriculture as the Land Manager for the area wasn't correct, since agriculture was not the primary use of the area.

Chmn. Anderson mentioned that HB 664 was a plan made up directly by the people of the area--one of the first such plans, and as such is a good example of what can be done. Cahill replied that Parks did consult with the people of the area before drawing up the bill--(HB 580)

Rep. Smith suggested that the Senate description of the park be put into HB 580.

Phil Holdsworth, member, Joint Land Use Planning Commission, stated that hearings were needed in the north. Many of the people there did not find out about the hearings until they were over. He expressed disapproval of the statement in HB 580 which limits activities in the proposed park to those activities in existence prior to Jan. 1, 1976. This would not allow persons operating unpatented claims to develop the claims, and access to the claims, as well as processing the claims. No new mining would be allowed. He also stressed that park rangers couldn't begin to control problems in the area when city police can not do it in cities.

Richard Gordon, of the Alaska Wilderness Council, stated that the primary objective of HB 580 was to provide extensive recreational value, including scenic values. For instance, very few areas in the state have extensive alpine lakes such as this one does. Within the proposed park natural separations would enhance camping. However, funds need to appropriated for staff within the park. This park would allow the new capitol city to be surrounded by "green belt".

Sharon Lobaugh, of the Alaska Conservation Society, expressed support of HB 580 with the amendments and adding endorsement by local groups to the management plan.

Des Dooley, of the Alaska Department of Highways stated that this proposal does not conflict with any current highway plans,---there is no 4-F conflict. However, there seems to be a problem with the park description in the Jonesville area.

Chmn. Anderson recessed the meeting until Friday, Feb.13, at 8:00 a.m.

COMMITTEE SUBSTITUTE FOR HOUSE BILL NO. 233

For an Act entitled: "An Act relating to land under the Alaska Native Claims Settlement Act; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. PURPOSE AND STATEMENT OF POLICY. (a) Section 17 (d)(2) of the Alaska Native Claims Settlement Act of 1971 directed the Secretary of the Department of Interior "to withdraw from all forms of appropriation under the public land laws, including the mining and mineral leasing laws, and from selection under the Alaska Statehood Act . . . up to, but not to exceed, eighty (80) million acres of unreserved public lands in the State of Alaska . . . . which the Secretary deems are suitable for addition to or creation as units of the National Park Forest, Wildlife Refuge, and Wild and Scenic Rivers System."

(b) Congress is now considering bills calling for up to one hundred fourteen (114) million acres for inclusion in the aforementioned systems. The legislature finds it essential that Alaskans be provided an opportunity to affect the system and nature of public land management in Alaska in order to insure that the rights of the State of Alaska under the Statehood Act are fully recognized. The Legislature further finds it is in the best interest of the Nation and the State not to immediately classify the large tracts of Alaska Public Lands.

* Sec. 2. STEERING COUNCIL FOR d-2 LAND. There is created in the Office of the Governor the Steering Council consisting of nine members as follows: the state co-chairman of the Joint Federal-State Land Use Planning Commission for Alaska, four members appointed by the governor, two members of the house of representative appointed by the speaker of the house, and two members of the senate appointed by the president of the senate. The Steering Council may select one of its members as chairman.

* Sec. 3. COMPENSATION. Members of the Steering Council receive the same travel pay and per diem as provided by law for boards and commissions.

* Sec 4. STAFF. The Council may employ those persons necessary to carry out the purposes of this Act, including but not limited to regular or temporary employees, consultants or other experts in the field.

* Sec. 5. (a) The Steering Council shall develop a unified lobbying and informational effort to make Alaska's needs and future land use requirements known to Congress and the public in all matters relating to land withdrawals and classifications under the Alaska Native Claims Settlement Act or any other federal act, regulation, or order.

(b) The Steering Council is to provide a forum for Alaskans interested in the d-2 land to develop recommendations to protect Alaska's present and future needs and to assist Alaskans in presenting their views on Alaskan land questions before Congress.

(c) The Steering Council may expend funds to enable independent Alaskan groups to make presentations before Congress and the public.

(d) The Steering Council may do other things considered advisable for maximizing the development of positions on the issues of withdrawal and the effectiveness of presentation of these positions to Congress and the public.

* Sec. 6. This Act takes effect immediately in accordance with AS 01.01.070(c).

Section (d) of ANCSA

February 23, 1977

Honorable Alvin Osterback, Representative
Pouch V
Juneau, Alaska 99811

Dear Representative Osterback:

The Department of Interior published proposed regulations for the Proposed Amendment of Principals and Procedures for Land Classifications in the January 19, 1977 Federal Register. The period for comment expired February 22, 1977. Little or no other publicity was made regarding the proposed regulations and they could apparently go into effect with few revisions.

Our attention was drawn to the notice on February 17th, thus, leaving no meaningful time for comment. Contact with the Alaska Division of Lands on that date indicated that there was casual concern on the impact of such regulations if they were promulgated.

Since then we have learned the state will be asking for an additional 120 days to prepare comments. They also are proposing to have the Department of Interior combine regulations necessary to interpret Section 17(d)(1) of ANCSA and the BLM Organic Act.

These proposed regulations have to do with the classification of land set aside by Section 17(d)(1) of the Alaska Native Claims Settlement Act. None of the proposed regulations appear to honor the 90 day preference right provided in the Alaska Statehood Act.

It must be made clear that these regulations pertain to the (d)(1) lands and not the (d)(2)(National Interest) lands. Your awareness to this important issue cannot be over emphasized. Review of the States interest may be warranted by the legislature or appropriate committee.

Sincerely,

Dale P. Tubbs

E [illegible] PROTECTION [illegible]

A[illegible]

[40 CFR Part 52]

[FRL 672-7]

ILLINOIS

pproval and Promulgation of State Implementation Plans; Emergency Episodes

On January 31, 1972, the State of linois submitted to the Administrator the United States Environmental Protection Agency an implementation plan achieve and maintain the National mbient Air Quality Standards. The an was approved by the Administrator May 31, 1972 (37 FR 10862) with sevral exceptions, including disapproval regulations pertaining to Prevention Air Pollution Emergency Episodes. hese deficiencies were corrected and the isode plan was fully approved on tober 23, 1973 (38 FR 29297).

On April 9, 1976, the Illinois Pollution ntrol Board revised its emergency isode regulations after due notice and blic hearings. The regulations (Illinois llution Control Board Regulations, hapter 2, Part IV) took effect on April , 1976 and were submitted to U.S. Environmental Protection Agency (EPA) July 22, 1976 as revisions to the linois State Implementation Plan IP).

The new regulations primarily address one episode situations, and would revise the plan as follows: (1) The regulations specifically state that Illinois Environmental Protection Agency has sole thority for declaring episode stages;) The requirement for a forecast of hours of poor dispersion before an one episode can be declared has been vised to allow the declaration of an isode whenever specified ozone levels cur one day and are expected to recur e next day, or if an air stagnation adsory is received for any area within the ate; (3) The term Ozone Advisory reaces the former designation of Ozone atch, and is issued when a 2 hour aver- e of 0.07 ppm of ozone is measured;) Episode stages have been set for contration levels occurring for a one ho - ried at any monitoring station as fols: ozone yellow alert level has been ised from 0.10 to 0.17 ppm; ozone red rt level has been decreased from 0.40 0.30 ppm; ozone emergency level has en decreased from 0.50 to 0.50 ppm;) The regulations establish a procere for filing emission reduction conagency plans and requirements for rection of pollution levels during periods high concentrations. Indirect sources pollution such as large government encies, parking garages, and fleet vele operations are included among urces required to file emission reduc- n contingency plans.

Approval of the revisions depends on ir consistency with the requirements forth in section 110(a)(2)(A)-(H) the Clean Air Act, as amended, and implementing regulations found in CFR Part 51. The Administrator has ceived the submission and found it to a necessary revision to the existing

The Administrator is also [illegible] these proposed changes to the Illinois plan for the purpose of securing public comments. Any interested party may make a comment on the proposed rulemaking in writing by addressing correspondence to Region V's Air Programs Branch, Air and Hazardous Materials Division, 230 South Dearborn Street, Chicago, Illinois 60604. All comments received no later than thirty days from the date of this notice will be considered. Receipt of comments will be acknowledged.

Copies of the proposed regulations and public hearing transcript of hearings conducted by the State of Illinois are available for public inspection during normal working hours at the Illinois Pollution Control Board, 309 West Washington Street, Suite 300, Chicago, Illinois 60606. Copies of the proposed regulations are also available at the Illinois Environmental Protection Agency, 2200 Churchill Road, Springfield, Illinois, 62706; and at Air Programs Branch, Air and Hazardous Materials Division, EPA, Region V, 230 South Dearborn, Chicago, Illinois 60604.

Authority: 42 U.S.C. 1857c-5(a)

Dated: January 11, 1977.

GEORGE R. ALEXANDER, Jr.,
Regional Administrator.

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[43 CFR Part 2400]

ALASKA

Proposed Amendment of Principles and Procedures for Land Classifications

This proposed amendment of and addition to the regulations contained in Part 2400 of Title 43 of the Code of Federal Regulations is being made to add the authority for classification and reclassification of lands in Alaska contained in section 17(d)(1) of the Alaska Native Claims Settlement Act (43 U.S.C. 1616(d)(1)), and to place all classification criteria and procedures relating to lands in Alaska under the proposed Subpart (2480).

It is hereby determined that the publication of this proposed rulemaking is not a major Federal action significantly affecting the quality of the human environment and that no detailed statement pursuant to section 102(2)(C) of the National Environmental Policy Act of 1969 (42 U.S.C. 4332(2)(C)) is required.

The Department of the Interior has determined that this document does not contain a major proposal requiring preparation of an Inflation Impact Statement under Executive Order 11821 and OMB Circular A-107).

In accordance with section 310 of the Federal Land Policy and Management Act of 1976, public participation is invited in rulemaking. Interested parties may [illegible] of [illegible] the [illegible] before [illegible] 22, 1977. Comments, suggestions, or objections made with respect to this notice will be available for public inspection at the foregoing address during regular working hours (7:45 a.m. to 4:15 p.m.).

It is therefore proposed to revise Chapter II, Subchapter B, Group 2400 of 43 CFR as set forth below.

JACK O. HORTON,
Assistant Secretary of the Interior.

JANUARY 14, 1977.

PART 2400—LAND CLASSIFICATION

1. Section 2400.0-2 is amended by designating the existing paragraph as paragraph (a) and adding a new paragraph (b) to read as follows:

§ 2400.0-2 Objectives.

* * * * *

(b) Procedures for land classification in Alaska are contained in Subpart 2480 of this part.

§ 2400.0-3 [Amended]

2. Section 2400.0-3 is amended by deleting the words "In the case of Alaska" from the first sentence in paragraph (f).

3. Section 2400.0-3 is amended by deleting paragraph (h) and renumbering paragraphs (i) and (j) accordingly.

4. Part 2400 is amended by adding new Subparts 2480 to 2485 to read as follows:

Subpart 2480—Land Classification; Alaska

Sec.
2480.0-2 Objectives.
2480.0-3 Authority.
2480.0-4 Responsibility.
2480.0-5 Definitions.
2480.0-7 Applicability.

Subpart 2480—Land Classification; Alaska

§ 2480.0-2 Objectives.

Various statutes, many of which are cited in § 2480.0-3, authorize the Secretary of the Interior of classify Federal lands. The objectives of this subpart are (a) to [illegible] of the Secretary's authority and (b) to establish [illegible] for the prompt and efficient exercise of this authority with the knowledge and participation of interested parties, including the general public.

§ 2480.0-3 Authority.

The Secretary of the Interior, or his delegate, is authorized by 43 U.S.C. 2 to perform all executive duties in anywise respecting the public lands of the United States. He is also authorized by 43 U.S.C. 1624 to enforce and carry into execution by appropriate regulations every part of the provisions of the Alaska Native Claims Settlement Act (ANCSA). The following statutes, among others, authorize land classification by the Secretary:

(a) Section 17(d)(1) of the ANCSA (43 U.S.C. 1616(d)(1)) authorizes the

[illegible] in Alaska withdrawn for classification and to open such lands to appropriation in accord with such classification. By various Public Land Orders, lands have been withdrawn from all forms of appropriation under the public land laws, including State selections (some exceptions); from location and entry under the mining laws, with some exceptions for locations for metalliferous minerals (30 U.S.C. Ch. 2); and from leasing under the Mineral Leasing Act of February 25, 1920, as amended (30 U.S.C. sections 187–287 (1970)). By these Orders, all such lands not otherwise withdrawn or appropriated are subject to classification and reclassification.

(b) The Recreation and Public Purposes Act, as amended (43 U.S.C. 869–869–4), authorizes the Secretary to classify lands for lease or sale for recreation or public purposes.

(c) The Act of August 30, 1949, as amended (43 U.S.C. 687b), authorizes the Secretary to sell at public auction lands that he classifies as suitable for industrial or commercial purposes, including construction of housing.

(d) Section 6(d) of the Wild and Scenic Rivers Act (16 U.S.C. 1277(d)) authorizes the Secretary to exchange federally owned property which he classiqes as suitable for exchange or other disposal for nonfederal property within the authorized boundaries of any federally administered component of the national wild and scenic rivers system.

§ 2480.0–4 Responsibility.

Except where specified to the contrary in this subpart, the authority of the Secretary to classify lands and make other determinations in accordance with the regulations of this part has been delegated to officials of the Bureau of Land Management.

§ 2480.0–5 Definitions.

As used in the regulations of this subpart—

(a) "Agricultural" refers to the growing of cultivated crops; it does not include grazing or the production of native grasses or native forage plants.

(b) "Authorized Officer" refers to the head of a Bureau of Land Management field office who has been delegated authority to make classification decisions.

(c) "Bureau" means the Bureau of Land Management.

(d) "Classification" means a positive determination as to whether certain Federal lands will be subject to appropriation under specified law(s) or will remain in Federal ownership and control.

(e) "Appropriation" means, but is not limited to, grant, sale, exchange, selection, entry, or location for purposes of transfer of title from Federal ownership; or a lease under the Recreation and Public Purpose Act (43 U.S.C. 869, et seq.) or under the Act of May 24, 1928, as amended (49 U.S.C. 211–214).

(f) "Land Use Plan" means a plan, as of a given point in time, that sets out the future use(s) of the land based upon a systematic analysis of physical, environ- [illegible] affecting the land.

(g) "Secretary" means the Secretary of the Interior.

(h) "State Director" means the Director of the Alaska State Office, Bureau of Land Management.

§ 2480.0–7 Applicability.

The regulations of this Subpart govern all classification of lands administered by the Bureau that are made pursuant to the authorities described in § 2480.0–3. They also apply to lands not administered by the Bureau where the head of the administering agency agrees and the specific classification authority applies; e.g., the Recreation and Public Purposes Act (43 U.S.C. 869, et seq.). Classification is a prerequisite to the approval of all appropriations [illegible] following parts, [illegible] of this chapter: Exchanges—Part 2200; Cadastral, Additional [illegible] and Unsurveyed Homesites—Subpart 2511, 2512, [illegible] Indian Allotments—[illegible] and Manufacturing Sites—Subpart 2562; State Grants—Subpart 2627; Recreation and Public Purposes—Part 2740 and Subpart 2912; Airports—Subpart 2911.

Subpart 2481—Classification Principles

Sec.
2481.1 General.
2481.2 Requirements.

Subpart 2481—Classification Principles

§ 2481.1 General.

The authorities in § 2480.0–3 of Subpart 2480 of this part grant the Secretary full discretion, subject to statutory guidelines and limitations, to determine whether to classify any particular tract of Federal Lands for appropriation. The regulations in this subpart contain the principles and procedures which personnel of the Department of the Interior shall consider and follow in the exercise of land classification authority delegated to them by the Secretary.

§ 2481.2 Requirements.

(a) In arriving at the classification decision the authorized officer must find that the lands involved have the geographical, physical, and economic attributes to support the use or values upon which the classification decision is based.

(b) In arriving at a classification decision under the regulations of this part, the authorized officer shall consider:

(1) Federal uses, policies, programs and plans, including Bureau Land use plans and applicable policies and objectives set forth in Group 1700 of this chapter;

(2) State and local governmental uses, policies, programs, plans and laws, including zoning and other land use regulations, to the extent such are consistent with Federal uses, policies, programs and plans;

(3) Reasonably ascertainable present and potential uses and users of the lands;

(4) Environmental effects, including economic and social impacts; [illegible] could be [illegible] and [illegible] ity of [illegible] for [illegible] of the [illegible];

(6) Effects on the administration of other public lands;

(7) The impact on resources utilized for subsistence purposes.

Subpart 2482—Classification for Appropriation

Sec.
2482.1 General.
2482.2 Relative values for types of appropriation.
2482.3 Land classified for appropriation under particular laws.

Subpart 2482—Classification for Appropriation

§ 2482.1 General.

When lands are classified for appropriation, the classification decision shall specify the particular public land law(s) under which they may be appropriated and, where applicable, the particular type(s) of use and appropriation for which the lands will be open under such law(s).

§ 2482.2 Relative values for types of appropriation.

Where lands are found to have value for more than one type of nonfederal use or appropriation under more than one public land law, the law or laws specified in the classification decision shall be chosen so as to give the most benefit to the public, as determined by the authorized officer, with particular regard to the considerations in § 2481.2 (b) of Subpart 2481 of this part.

§ 2482.3 Classification for appropriation under particular laws.

(a) A Classification allowing appropriation for a homestead (Part 2510 and Subpart 2567 of this chapter) may be made if the lands are (1) chiefly valuable for agriculture, (2) suitable for development as a home and farm, (3) sufficient to provide an adequate return anticipated for the farm family, and (4) in an area where rainfall or groundwater and/or irrigation water is adequate and available under Alaskan law in sufficient quantity to permit agricultural development of the particular lands.

(b) A classification allowing appropriation for an Indian allotment (Part 2530 of this chapter) may be made if (1) the lands are chiefly valuable for agriculture; (2) the lands are, on the whole, suitable for a home, and (3) the anticipated agricultural use would support the allottee and the allottee's family.

(c) Needs in relation to subsistence living will be considered in investigations of the classification of lands for possible appropriation for headquarter sites, homesites, or trade and manufacturing sites (Subparts 2563 and 2562 of this chapter).

(d) The authorized officer will not finalize a proposed classification allowing appropriation solely for exchange unless the estimated fair market values of the offered and selected lands are approximately equal. Where the exceptions con-

[illegible] 17 of the Act of Jan[illegible] (89 Stat. 1156) are desired [illegible] used by the authorized officer, the [illegible] will not become final without the specific approval of the Secretary.

Subpart 2483.1—Applications

2483.1-1 Application or Bureau Motion.
2483.1-2 Filing.
2483.1-3 Rejection or suspension.
2483.1-4 Administrative Review.

Subpart 2483.2—Proposed Classification

2483.2-1 Commencement of Classification Action.
2483.2-2 Proposed Classification Decisions.
2483.2-3 Protests.

Subpart 2483.3—Classification

2483.3-1 Involving an environmental impact statement.
2483.3-2 In absence of protests.
2483.3-3 With protests.
2483.3-4 Classification by Secretary without certain procedures.
2483.3-5 Administrative Review.

Subpart 2483.1—Applications

§ 2483.1–1 Application or Bureau Motion.

Lands may be classified for appropriation in response to either an application for appropriation or on Bureau Motion.

§ 2483.1–2 Filing.

(a) An application must be on an approved form. Application forms and lists indicating the proper office for the filing of applications may be obtained from any office of the Bureau. All applications must be submitted in accordance with the applicable provisions of Subpart 1821 of this chapter and all other regulations concerning filing.

(b) The filing of an application gives no right to enter, occupy, or settle upon the lands.

(c) All filing fees which accompany applications submitted in accordance with the regulations of this Subpart shall be earned upon the filing of such applications with any office of the Bureau.

§ 2483.1–3 Rejection or suspension.

The classification authorities cited in § 2480.0–3, authorize classification action and applications requesting classification may be rejected without classification action at the discretion of the authorized officer or as provided by other regulations of this chapter.

(b) If the requested lands have already been classified and the application is for a type of appropriation not allowable by the existing classification, the application shall be rejected.

(c) An application for a type of appropriation not allowable under a proposed classification decision shall be suspended until the proposed decision is vacated or a final decision is issued.

(d) Applications shall also be rejected where the provisions of Subpart 2091 and other regulations of this chapter concerning segregation apply. However, applications shall not be rejected solely on the basis that the land is withdrawn pending classification under this Part.

(e) Upon finality of a classification decision, any inconsistent applications which are then pending, will be rejected.

(f) Decisions rejecting applications will contain a statement giving the reasons for rejection and advising the applicant of corrective steps, if any, that may be taken.

(g) Upon finality of a decision rejecting an application, any advance payments on other such monies, except filing fees and reimbursement payments, submitted with the application will be returned or refunded.

§ 2483.1–4 Administrative review.

A rejection or suspension of an application pursuant to § 2483.3(a) through (e), supra, shall not be appealable to the Board of Land Appeals.

Subpart 2483.2—Proposed Classification

§ 2483.2–1 Commencement of classification action.

If an application is not rejected or suspended, or if the classification action is initiated by Bureau motion, the authorized officer shall proceed to examine the lands and prepare a proposed classification decision.

§ 2483.2–2 Proposed classification decision.

(a) Before issuing a proposed classification decision, the authorized officer shall determine whether the proposed action requires preparation of an environmental impact statement (an EIS) under section 102(2)(c) of the National Environmental Policy Act (43 U.S.C. 4332 (2)(c)). In those instances where he determines that an EIS is required, the authorized officer shall proceed to prepare an EIS based on the proposed classification decision.

(b) The authorized officer shall make and issue a proposed classification decision which shall (1) state whether the lands will be retained or offered for appropriation; (2) if appropriation, state the extent or under which authority (ies) appropriation will be allowed as provided in § 2482.1 of Subpart 2482 of this part; (3) state whether an EIS has been or is being prepared; (4) identify any and all applications filed for the land; (5) if no application has been filed and disposition is contemplated, state that the land will be open to application by all qualified persons on an equal-opportunity basis after public notice; (6) contain a statement of reasons in support of the decision proposed; and (7) specify a period of not less than 30 days during which protests shall be received. Should the authorized officer find good cause, the protest period may be shortened, and, if so shortened, the proposed decision shall contain the reason(s) in support of such lesser period of time.

(c) Such decisions shall be served upon (1) each applicant for use or appropriation of the land; (2) each permittee, licensee, or lessee using the land; (3) the local governing board, planning commission or other official body having [illegible] central authority [illegible] where the land is located; [illegible] ermental officials or agencies [illegible] whom written comments concerning [illegible] ture use of the lands have recently been received; and (5) such other persons as the authorized officer deems appropriate.

(d) A proposed classification decision that would classify more than 2,560 acres shall be published in the FEDERAL REGISTER and in a newspaper having general circulation in the vicinity of the lands. A proposed classification decision for 2,560 acres or less may be also so published if it is deemed appropriate by the authorized officer.

(e) The authorized officer shall hold a public meeting on the proposal if the proposed classification is for more than 100,000 acres, or he determines that sufficient public interest exists to warrant the time and expense of a meeting.

§ 2483.2–3 Protests.

After a proposed classification decision has been issued, any interested party may file a written protest with the State Director during the period specified in the proposed decision. No particular form of protest is required. The protest must be sufficient to identify the specific proposed decision being protested.

Subpart 2483.3—Classification

§ 2483.3–1 Involving an environmental impact statement.

If, under § 2483.2–2(a) of Subpart 2483.2 of this part, it was determined that an EIS is necessary, no classification will become final until the final EIS has been filed. In such cases, the authorized officer shall issue a final classification notice or decision as appropriate.

§ 2483.3–2 In absence of protests.

If no protest is filed within the time allowed, the proposed classification shall become final, and the authorized officer shall serve a notice of final classification upon those served with the proposed decision. A notice shall also be published in the FEDERAL REGISTER and a local newspaper if the proposed decision was so published.

§ 2483.3–3 With protests.

If a protest to the proposed classification decision is timely filed, the following procedures shall apply:

(a) The protest shall be reviewed by the State Director. At the conclusion of the review, the State Director shall either vacate, affirm, or modify the proposed classification decision. Notice of his decision shall be served upon those served with the proposed classification decision and upon all protestants. It shall also be published in the FEDERAL REGISTER and a local newspaper if the proposed classification decision was so published.

(b) For a period of 30 days after service of the notice of the State Director's decision, any interested person may petition the Secretary for review. Notice of the filing of a petition with the Secretary

must be served on the State Director within the 20-day period.

(c) If within the 30-day period, the State Director does not receive notice of petition to the Secretary, the decision shall become the final classification decision.

(d) If a petition is timely received, including service on the State Director, the State Director's decision shall be suspended. Notice of suspension shall be given to the same persons and in the same manner as notice of the State Director's decision. Therefore, the Secretary shall make the final classification decision. Notice of the Secretary's action shall be given to the same persons and in the same manner as the notice of suspension.

§ 2483.3–4 Classification by Secretary without certain procedures.

Where the Secretary determines that the public interest would be served thereby, he may issue a final classification decision without following any or all of the procedures in §§ 2483.2–2(b) through 2483.2–3 of Subpart 2483.2 of this part and §§ 2483.3–2 and 2483.3–3 by publishing his decision in the FEDERAL REGISTER and a newspaper having general circulation in the vicinity of the lands being classified.

§ 2483.3–5 Administrative Review.

No person shall be entitled to any administrative review of a classification decision other than that provided by § 2483.3–3.

Subpart 2484—Opening of Lands

Sec.
2484.1 Preference rights.
2484.2 Appropriation in absence of preference rights.
2484.3 Right to enter, occupy, or settle.

Subpart 2484—Opening of Lands

§ 2484.1 Preference rights.

(a) No applicant shall have a preference right unless it is expressly provided by law.

(b) If it should be necessary for any reason to reject the application of the first applicant entitled to a preference right, other qualified applicants who filed prior to classification shall succeed to the preference right in order of filing.

§ 2484.2 Appropriation in absence of preference rights.

Where there is no preference right, the authorized officer shall, in accordance with the specifics of the classification:

(a) Seek application for the land from an applicant where there is only one possible qualified applicant, e.g., the State of Alaska.

(b) Publish a notice setting a time and place at which the land will be sold to the highest bidder.

(c) Publish a notice providing for a period during which applications may be filed, with the successful applicant to be determined by a drawing among all qualified applicants.

(d) In the event there is no response to the specific notices given in paragraphs (b) and (c) of this section, the authorized officer, in his discretion, may cancel the classification or allow the classification to stand until the first qualified applicant submits a proper application, or the classification terminates for other reasons.

§ 2484.3 Right to enter, occupy, or settle.

(a) A classification for appropriation does not give a right to enter, locate, occupy, or settle upon the lands unless the classification decision expressly opens the lands. If a classification decision does not so provide, no person shall be entitled to possession or use of the land until otherwise expressly authorized by the authorized officer. Entry, location, occupancy, or settlement on the land prior to that time constitutes a trespass.

(b) After lands have been classified, all the laws and regulations governing the particular type of appropriation must be complied with in order for title to vest or other interest to pass. The final determination on whether an applicant has satisfied all requirements of the appropriation need be made until the lands have been classified. No conveyancing instrument or lease shall be executed until the lands are opened.

Subpart 2485—Termination of Classification

§ 2485.1 Continuance.

A final classification shall continue in full force and effect until it is revoked, until it terminates by its own terms or by operation of law, or until the lands are reclassified. Lands may be reclassified at any time.

§ 2485.2 Recreation and public purpose classifications.

If no application is received for lands classified for appropriation under the Recreation and Public Purposes Act, as amended (43 U.S.C. 869—869–4), within 18 months of the date of classification, the classification shall automatically terminate.

Office of the Secretary

[43 CFR Part 29]

TRANS-ALASKA PIPELINE LIABILITY FUND

Establishment of Non-Profit Corporation

The United States Department of the Interior, in order to implement section 204(c) of the Trans-Alaska Pipeline Authorization Act, 43 U.S.C. 1653(c) (the Trans-Alaska Pipeline Liability Fund), proposes to adopt regulations pursuant to the Act for the purpose of establishing a non-profit corporate entity to be strictly liable without regard to fault for all damages sustained by any person or entity as a result of discharges of oil from vessels engaged in the coastwise transportation of oil from the terminal facilities of the Trans-Alaska Pipeline to a port under the jurisdiction of the United States. Specifically, the contents of these proposed regulations are [illegible] with the requirements of section 204 of the Act.

[illegible] public comment on these proposed regulations so that [illegible] public and parties affected may have their views. Written comments should be submitted to the Office of the Secretary, U.S. Department of the Interior, 18th & C Streets, N.W., Washington, D.C. 20240, on or before March 7, 1977. Following the close of the comment period, and after review of the comments, the Secretary may amend these proposed regulations to reflect necessary and permissible changes. The Secretary shall then publish final regulations in the FEDERAL REGISTER.

THOMAS S. KLEPPE,
Secretary of the Interior.

It is proposed to add a new CFR Part 29 as follows:

PART 29—TRANS-ALASKA PIPELINE LIABILITY FUND

Sec.
29.1 Definitions.
29.2 Creation of the fund.
29.3 Fund administration.
29.4 General powers.
29.5 Officers and employees.
29.6 Financing of the fund.
29.7 Imposition of strict liability.
29.8 Notification and advertisement.
29.9 Claims, settlement and adjudication.
29.10 Subrogation.
29.11 Investment.
29.12 Borrowing.
29.13 Termination.
29.14 Audit.

AUTHORITY: Sec. 204(c), Trans-Alaska Pipeline Authorization Act, 43 U.S.C. 1653(c).

§ 29.1 Definitions.

As used in this part:

(a) "United States" includes the various States of the United States, the District of Columbia, the Commonwealth of Puerto Rico, the Canal Zone, Guam, American Samoa, the Virgin Islands, and the Trust Territory of the Pacific Islands.

(b) "Secretary" means the Secretary of the Interior or his authorized representatives.

(c) "Act" means the Trans-Alaska Pipeline Authorization Act, Title II of Pub. L. 93–153.

(d) "Trans-Alaska Pipeline System" means any pipeline or terminal facilities constructed by the Permittees.

(e) "Fund" means the Trans-Alaska Pipeline Liability Fund established as a non-profit corporate entity by Sec. 204 (c)(1) of the Trans-Alaska Pipeline Authorization Act.

(f) "Person" means an individual, a corporation, a partnership, an association, a joint stock company, a business trust, an unincorporated organization, or a Government entity.

(g) "Oil" means petroleum in any form including crude oil, refined products, and other liquid hydrocarbons which have

served on the State Director within the 20-day period.

(c) If within the 30-day period, the State Director does not receive notice of petition to the Secretary, the decision shall become the final classification decision.

(d) If a petition is timely received, including service on the State Director, the State Director's decision shall be suspended. Notice of suspension shall be given to the same persons and in the same manner as notice of the State Director's decision. Therefore, the Secretary shall make the final classification decision. Notice of the Secretary's action shall be given to the same persons and in the same manner as the notice of suspension.

§ 2483.3–4 Classification by Secretary without certain procedures.

Where the Secretary determines that the public interest would be served thereby, he may issue a final classification decision without following any or all of the procedures in §§ 2483.2–2(b) through 2483.2–3 of Subpart 2483.2 of this part and §§ 2483.3–2 and 2483.3–3 by publishing his decision in the FEDERAL REGISTER and a newspaper having general circulation in the vicinity of the lands being classified.

§ 2483.3–5 Administrative Review.

No person shall be entitled to any administrative review of a classification decision other than that provided by § 2483.3–3.

Subpart 2484—Opening of Lands

Sec.
2484.1 Preference rights.
2484.2 Appropriation in absence of preference rights.
2484.3 Right to enter, occupy, or settle.

Subpart 2484—Opening of Lands

§ 2484.1 Preference rights.

(a) No applicant shall have a preference right unless it is expressly provided by law.

(b) If it should be necessary for any reason to reject the application of the first applicant entitled to a preference right, other qualified applicants who filed prior to classification shall succeed to the preference right in order of filing.

§ 2484.2 Appropriation in absence of preference rights.

Where there is no preference right, the authorized officer shall, in accordance with the specifics of the classification:

(a) Seek application for the land from an applicant where there is only one possible qualified applicant, e.g., the State of Alaska.

(b) Publish a notice setting a time and place at which the land will be sold to the highest bidder.

(c) Publish a notice providing for a period during which applications may be filed, with the successful applicant to be determined by a drawing among all qualified applicants.

(d) In the event there is no response to the specific notices given in paragraphs (b) and (c) of this section, the authorized officer, in his discretion, may extend the classification to stand until the first qualified applicant submits a proper application, or the classification terminates for other reasons.

§ 2484.3 Right to enter, occupy, or settle.

(a) A classification for appropriation does not give a right to enter, locate, occupy, or settle upon the lands unless the classification decision expressly opens the lands. If a classification decision does not so provide, no person shall be entitled to possession or use of the land until otherwise expressly authorized by the authorized officer. Entry, location, occupancy, or settlement on the land prior to that time constitutes a trespass.

(b) After lands have been classified, all the laws and regulations governing the particular type of appropriation must be complied with in order for title to vest or other interest to pass. No final determination on whether an applicant has satisfied all requirements of law for appropriation need be made until the lands have been classified. No conveyancing instrument or lease shall be executed until the lands are opened.

Subpart 2485—Termination of Classification

§ 2485.1 Continuance.

A final classification shall continue in full force and effect until it is revoked, until it terminates by its own terms or by operation of law, or until the lands are reclassified. Lands may be reclassified at any time.

§ 2485.2 Recreation and public purpose classifications.

If no application is received for lands classified for appropriation under the Recreation and Public Purposes Act, as amended (43 U.S.C. 869—869–4), within 18 months of the date of classification, the classification shall automatically terminate.

IN THE HOUSE

HOUSE BILL NO. 233

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to land under the Alaska Native Claims Settlement Act; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. STEERING COUNCIL FOR d-2 LAND. There is created in the Office of the Governor the Steering Council consisting of nine members as follows: the state co-chairman of the Joint Federal-State Land Use Planning Commission for Alaska, four members appointed by the governor, two members of the house of representatives appointed by the speaker of the house, and two members of the senate appointed by the president of the senate. The Council may select one of its members as chairman.

* Sec. 2. COMPENSATION. Members of the Steering Council receive the same travel pay and per diem as provided by law for boards and commissions.

* Sec. 3. STAFF. The committee may employ those persons necessary to carry out the purposes of this Act, including but not limited to regular or temporary employees, consultants or other experts in the field.

* Sec. 4. DUTIES. (a) The Steering Council shall develop a lobby effort to represent Alaska's interest before Congress in matters relating to land withdrawals under sec. 17(d)(2) of the Alaska Native Claims Settlement Act (43 U.S.C. 1601 et seq.).

(b) The Steering Council ~~is to~~ may provide coordination for Alaska representation on the d-2 land and may ~~a forum for parties interested in the d-2 land to develop and maintain a common broad front on the issues and to develop a capability for these interested parties to adequately present their views before Congress~~ expend funds to carry out the purposes of this act.

[(c) ~~In order to insure the widest possible presentation of Alaska's views before Congress the Steering Council may make grants from the funds~~

available to it to independent groups for the purpose of presentations before Congress on these issues. These groups must have an interest in the issue of d-2 withdrawal, but their position need not be identical to the position of the Steering Council of the state or the official position of the executive branch of government of the state. The interest may concern specific issues or particular portions of the land being withdrawn.

(d) The Steering Council may do other things considered advisable for maximizing the development of positions on the issues of withdrawal and the effectiveness of presentation of these positions to Congress.

* Sec. 5. The provisions of AS 39.50 (conflict of interest) apply to the Steering Council for d-2 land created by this Act.

* Sec. 6. This Act takes effect immediately in accordance with AS 01.10.-070(c).

Section 1. Purpose and statement of Policy

Section 17 (d) (2) of the Alaska Native Claims Settlement Act of 1971 directed the Secretary of the Department of Interior "to withdraw from all forms of appropriation under the public land laws, including the mining and mineral leasing laws, and from selection under the Alaska Statehood Act.... up to, but not to exceed, eight million acres of unreserved public lands in the State of Alaska.... which the Secretary deems are suitable for addition to or creation as units of the National Park, Forest, Wildlife Refuge, and w[illegible]d and Scenic Rivers System."

Congress is now considering bills calling for up to 114 million acres for inclusion in the aforementioned systems. The legislature finds it essential that Alaskans be provided an opportunity to affect the system and nature of public land management in Alaska in order to insure that the rights of the State of Alaska under the Statehood Act ~~will be fully~~ are recognized and that needs ~~and well being~~ of all Americans ~~are considered when Congress acts upon the status of Alaska's Public Lands.~~

Section 4 (a) The Steering Council shall develop a unified lobbying and informational effort to make Alaska's needs and future land use requirements known to Congress and ~~throughout the other 49 states~~ in all matters relating to land withdrawals under ~~Section 17 (d)(2)~~ of the Alaska Native Claims Settlement Act.

(b) The Steering Council is to provide a forum for Alaskans interested in the d-2 land to develop recommendations to protect Alaska's present and future needs and to assist Alaskans in presenting their views on the ~~d-2~~ land questions ~~to~~ Congress, ~~and the American public~~.

(c) The Steering Council may ~~make grants from the~~ funds available to it to independent Alaskan groups ~~for the purpose of~~ presentations before Congress ~~on these issues~~.

Suggested Amendments to HB 233

Section 1. Purpose and statement of Policy

Section 17 (d) (2) of the Alaska Native Claims Settlement Act of 1971 directed the Secretary of the Department of Interior "to withdraw from all forms of appropriation under the public land laws, including the mining and mineral leasing laws, and from selection under the Alaska Statehood Act.... up to, but not to exceed, eight million acres of unreserved public lands in the State of Alaska.... which the Secretary deems are suitable for addition to or creation as units of the National Park, Forest, Wildlife Refuge, and wild and Scenic Rivers System."

Congress is now considering bills calling for up to 114 million acres for inclusion in the aforementioned systems. The legislature finds it essential that Alaskans be provided an opportunity to affect the system and nature of public land management in Alaska in order to insure that the rights of the State of Alaska under the Statehood Act ~~will be fully~~ are recognized. ~~and that needs and well being of all Americans are considered when Congress acts upon the status of Alaska's Public Lands.~~ The legislature finds it essential that Alaskans be provided an opportunity to affect the system and nature of public land management in Alaska in order to insure that the rights of the State of Alaska under the Statehood Act are fully recognized, and that the needs and well-being of all Americans are considered when Congress acts upon the status of Alaska's Public Lands. In the best interest of the Nation and the State it is necessary that Alaskans be provided an opportunity to affect the system and nature of public land management in Alaska.

Section 4 (a) The Steering Council shall develop a unified lobbying and informational effort to make Alaska's needs and future land use requirements known to Congress and throughout the other 49 states in all matters relating to land withdrawals under Section 17 (d) (2) of the Alaska Native Claims Settlement Act.

(b) The Steering Council is to provide a forum for Alaskans interested in the d-2 land to develop recommendations protective of Alaska's present and future needs and to assist Alaskans in presenting their views on the d-2 land question to Congress and the American public.

(c) The Steering Council may make grants from the funds available to it to independent Alaskan groups for the purpose of presentations before Congress on these issues.

Their rights to Alaska Public Lands

Suggested Amendments to HB 233

Section 1. Purpose and statement of Policy

Section 17 (d) (2) of the Alaska Native Claims Settlement Act of 1971 directed the Secretary of the Department of Interior "to withdraw from all forms of appropriation under the public land laws, including the mining and mineral leasing laws, and from selection under the Alaska Statehood Act.... up to, but not to exceed, eight million acres of unreserved public lands in the State of Alaska.... which the Secretary deems are suitable for addition to or creation as units of the National Park, Forest, Wildlife Refuge, and wild and Scenic Rivers System."

Congress is now considering bills calling for up to 114 million acres for inclusion in the aforementioned systems. LEGISLATIVE AFFAIRS AGENCY

M E M O R A N D U M February 22, 1977

SUBJECT: Land questions (Work Order #3369)

TO: Representative Alvin Osterback

FROM: Joel F. Bennett
Legislative Counsel

You asked several questions relating to lands matters. As I understand it, they were as follows:

(1) What can the so-called "D-2 lands" be used for, and can the uses be changed?

The "D-2" lands were those federal lands withdrawn by the Secretary of the Interior under sec. 17(d)(2) of the Alaska Native Claims Settlement Act for designation by Congress as additions to or new National Parks, National Forests, Wild and Scenic Rivers, and Wildlife Refuges (approximately 80 million acres). Congress has until December, 1978 to act on "D-2" withdrawals. Until then, no state selections can be made on the lands. After lands are designated to be included within the four systems, no state selections within them may occur. Lands not designated by Congress under 17(d)(2) will be open to selection by the state. Uses within the four federal systems are restricted according to the provisions of the respective federal laws governing those systems and cannot be changed by the state. Change must thereafter come by congressional action. (The state eventually will be able to select from lands within the following: native withdrawals not chosen by the natives; "D-2" lands not acted upon by Congress; and "D-1" lands withdrawn to insure that the public interest is adequately protected, and not acted upon).

(2) What can the state do with the lands it selects?

After selection, the state has broad powers of classification for its lands under AS 38.05.300. The director of lands is directed to make a preliminary classification for surface use of "all lands in areas where he considers it necessary

and proper for future development." This must be transmitted to the commissioner, with a land use plan, for his approval, modification of rejection. However, no state land, water, or land and water area shall, except by act of the state legislature, be closed to multiple purpose use, if the area contains more than 640 acres. So although lands can be classified as agricultural, commercial, industrial, utility, grazing, mineral, timber etc., large areas over 640 acres closed to multiple purpose use (i.e., parks, recreation areas) must be done by act of the legislature.

Following its classifications, the state may dispose of it in accordance with those classifications; retaining it for public use (for ex, parks, recreation areas), leasing it (for ex, minerals) or selling it (for ex, as residential, utility land), or otherwise disposing of it (for ex, the sale of timber).

(3) Can the state select land specifically for timber harvest?

Yes, under the present classification system, state lands can be classified as timber lands and although this does not preclude other uses, they must conform to its primary use as timber land. Once classified, the state may contract for the sale of the timber on the land, but not for the sale of the land itself. Presumably, the state in many cases does select land with the primary intention of disposing of its timber resources. (See AS 38.05.110-125, generally).

(4) If land is put into state parks, can it later be withdrawn for timber and mineral development?

Whether the park is 640 acres or more makes a difference. If it is, it can be changed and devoted to timber development only by act of the legislature. If it is not over 640 acres, the director of lands can reclassify it (or any other category) for use as timber lands when the public interest warrants it (see AS 38.05.300).

RE: HB 234

TO: Steve Cowper, Chairman
House Finance Committee

FROM: Alvin Osterback, Chairman
House Resources Committee

The House Resources Committee recommends the following amendment for HB 234:

Section 2 becomes Section 3 and a new Section 2 will read:

* Sec. 2. The sum of $20,000 is hereby appropriated to the Department of Legislative Affairs for the purpose of paying travel and other necessary expenses of members of the legislature on d-2 lands.

The intent of Section 1 is to appropriate for the operation of the Steering Council, including the travel and per diem of all members of the Council.

The intent of the new Section 2 is to appropriate for a special legislative committee to provide for additional legislator participation on the d-2 question.

SUBJECT: HB 250

Representative Severson is getting a fiscal note prepared on this for $161,225.

M E M O R A N D U M

February 9, 1977

SUBJECT: Advisory Committee member travel and per diem costs

TO: Representative Martin Seversen

FROM: Joel F. Bennett
Legislative Counsel

Regarding your advisory committee member bill request, the rough figure given to me by the administrative branch of the Department of Fish and Game for travel and per diem costs is $110,000 - $130,000.

The breakdown, according to their calculations, is as follows:

There are 23 committees that are "areawide", out of a total of 53 in the state. Of the 23, 16 are not on a road system. That makes 126 members. Assuming one-fourth of the members live in the town where the meeting is held, that makes a basis of 92 members.

Figuring 4 meetings a year, at one and one-half days per diem each ($65) and travel costs per member per meeting, ($200) you get the following:

	$73,600	- travel
	$35,880	- per diem
Total:	$109,480	for non-road system expenses
plus	$ 19,500	for costs of used road system members
	$128,980	

I hope this is of assistance to you. After you introduce the bill, a detailed, more exact fiscal note will be prepared by the department.

JFB:hjd

32,245 + 128,980 = 161,225

RESOLUTION FROM NUSHAGAK ADVISORY COMMITTEE

TO

ALASKA BOARD OF GAME

REGUARDING: FUNDING FOR TRAVEL AND PER DIEM FOR ADVISORY COMMITTEE MEMBERS

The State of Alaska has recognized the value of the advice of local residents by the formation of Advisory Committees to council the State Boards of Fisheries and Game. Many of the areas represented by these local Advisory Committees are geographically large and members must travel long distances to attend meetings.

At the present time, the members from the outlying villages must pay for travel, meals, and lodging from their own pockets. Since their advice is deemed desirable, and since the State has encouraged these Committees, some provision should also be made to reimburse those individuals who must travel and pay their own expenses while attending Advisory meetings. This will relieve those members of an unfair burden and encourage good representation from the villages.

Juneau, Ak. 99811

Dear Representative Osterback:

We request your support of CS for House Bill #264 "An act relating to fisheries enhancement". This bill will enact many factors needed for sound well rounded planning for, and funding of, future salmon enhancements projects. The cause is good, the need is great. The fishermen and community feel this is a motherhood and apple pie issue.

We would offer a small wording change suggestion for what we consider the betterment of the bill.

Sec: 16.10.375, Regional Salmon Plan; The commissioner shall designate regions of the State for the purpose of salmon prodution and shall develop and amend as necessary a comprehensive salomn plan for each region including (for) both public and private non profit hatchery systems.

We appreciate you consideration of that one word change.

Sincerely,

Bob Blake

JUNEAU ALASKA 99811

DEAR MR. OSTERBACK:

IN REGARD TO HB 264, PRINCE WILLIAM SOUND AQUACULTURE CORPORATION WOULD LIKE TO EMPHASIZE TO YOUR RESOURCE COMMITTEE, THE VALUE THAT OUR CORPORATION PLACES ON THE VOLUNTARY METHOD OF ASSESSMENT COLLECTION. TO DATE WE HAVE COLLECTED OVER $440,000.00 LOCALLY AND HAVE HAD OVER 90 PERCENT VOLUNTARY PARTICIPATION RATE FROM FISHERMEN AND FISH PROCESSORS. WE WOULD LIKE TO SEE ANY LEGISLATION THAT IS CONSIDERED ALLOWED FOR BOTH VOLUNTARY OR MANDATORY ASSESSMENT DEPNDING ON WHAT EACH REGIONAL CORPORATION ITSELF DECIDES.

WE WOULD ALSO LIKE TO EXPRESS THE POSITIVE VALUE WE PLACE ON JOINT REGIONAL PLANNING BETWEEN THE REGIONAL CORP-ORATION AND THE ALASKA DEPARTMENT OF FISH & GAME WITH ALL USER GROUPS BEING REPRESENTED. WE SEE THIS AS A WAY TO AVOID USER GROUP CONFLICTS AND PROVIDE A COORDINATED APPROACH TO RESOLVE REGIONAL FISHERY PROBLEMS. WE LOOK TO FURTHER WORK WITH THE A. D. F. & G. IN PLANNING AND REVIEWING PROPOSALS FOR OUR AREA AND TAKE A VERY POSITIVE VIEW OF SUCH JOINT PLANNING EFFORT.

PRINCE WILLIAM SOUND AQUACULTURE CORPORATION SUPPORTS THE POWERS TO CREATE A SALMON ENHANCEMENT AUTHORITY AS A NECESSARY TOOL TO RECEIVE FEDERAL SUPPORT AND IN THE FUTURE RAISE MONEY THROUGH BONDING AUTHORITY. THE POWER TO CREATE A SALMON ENHANCEMENT AUTHORITY WILL HELP US TO BE A SELF SUSTAINING HATCHERY SYSTEM AND NOT BE A BURDEN ON EITHER THE STATE OR FEDERAL GOVERNMENT.

THE REVISIONS TO THE LOAN BILL NECESSARY, ESPECIALLY THE FORGIVENESS OF PAYMENTS OF INTEREST AND PRINCIPLE FOR THE FIRST SIX YEARS. THIS IS NEEDED AS FOR THE FIRST THREE FISH CYCLES THE ECONOMIC RETURN IN SUCH A RENEWABLE RSOURCE CANNOT BE COUNTED ON AS A SURE METHOD OF LOAN REPAYMENT.

THE ORGANISATIONAL GRANTS SHOULD BE AVAILABLE TO ALL REGIONAL HATCHERY GROUPS SO THAT THE FORMATION, ORGANIZATIONAL AND EDUCATIONAL COSTS CAN THE SHARED AND NOT BE AN EXCESSIVE BURDEN ON THE REGIONALS CORPORATION.

IN CONCLUSION WE FEEL THAT THE SUPPORT THAT THE STATE OF ALASKA AFFORDS THE REGIONAL HATCHERY CORPORATIONS WILL COME BACK TO THE STATE OF ALASKA THROUGH THE BETTERMENT OF THE COMMON PROPERTY FISHERY, GRATER EMPLOYMENT, AND GREATER INVESTMENT BY FISH PROCESSORS IN ALASKA. WE ARE STRIVING TO BE A SELF SUSTAINING SYSTEM. THIS NEXT MONTH WE WILL RELEASE OUR FIRST 10 MILLION FRY FROM OUR FIRST HATCHERY.

IF YOUR COMMITTEE HAS PROBLEMS WITH THIS BILL THAT WOULD DELAY PASSAGE, PLEASE LET US KNOW AND WE WOULD BE WILLING TO OFFER TESTIMONY AND EXPLAIN OUR VIEWS. SINCERELY,

PRINCE WILLIAM SOUND AQUACULTURE CORPORATION

MARK KAZAZEAN GENERAL MANAGER

NON-PROFIT HATCHERY PROGRAM

Under Present Law As Amended by HB 264

The present concept calls for the creation of regional wide non-profit corporations throughout the State of Alaska. Presently, one exists at Prince William Sound, and a second regional corporation for Southern Southeast Alaska, from Petersburg south to the Canadian Boarder. Those regional corporations are qualified under the present Non-Profit Hatchery Program. The Commissioner of the Alaska Department of Fish & Game qualified the structure of the corporations in light of AS16.10.380 which states that the corporation must be broad based in its board of directors and encompass all of the user groups within the area including commercial fishermen, processors sport fishermen, subsistance fishermen, municipalities and other user group entities.

The establishment of such a region into a cohesive functional unit requires an immence amount of energy, time and money. The above mentioned user groups have never in history been united together. In the Southern Southeast Region over 30 to 40,000 dollars has been expended in organizational and planning efforts. Primarily to inform the fishermen within the area of the basic concept, what is possible, why hatcheries should be built, who should build them, the economics of doing so, the requirement of an assessment upon the fishermen to help pay for it, and various other matters.

AS16.10.510(9) Organizational and Planning Grants

HB 264, AS16.10.510(9) provides for additional grant monies for further organizaitional effort on the human level and also to begin site preparation and site selection so that some pilot projects can be commenced.

An Assessment Program

The next step in establishing the private non-profit corporation is to move from the organizational planning stage into site selection and also an assessment program for the fishermen. AS16.10.530(e) is a new section proposed by HB 264. This establishes and sets up a rather detailed and extensive means of establishing an assessment within a qualified regional association. At this point, the regional boundaries have been established, the initial board of directors has been created and the Commissioner of the Dept. of Fish & Game has authorized that corporation to represent the area within its boundaries.

The present law allows for two different means of arriving at an assessment on the fishermen. One under section AS16.10.530 and one under section AS16.10.540. The Prince William Sound Corporation has opted to establish, is assessment under section 540, primarily based upon the inherent make-up of their area prior to the non-profit hatchery legislation being introduced. They have a very cohesive marketing association to which most fishermen in that area belong to. That is very different from the experience in Southeastern and other parts of Alaska where there is no cohesive unit to which most of the fishermen in the area belong to.

AS16.10.530 provides a means by which the fishermen in the area encompassed by the regional corporation can decide whether to impose an assessment upon <u>all</u> of the fishermen. Basicly section 530 states that if the Regional Corporation follows the proceedures outlined in 530(e) and a majority of the limited entry permit holders which participate

in the fishery within the boundaries of the corporation, vote to have an assessment imposed upon their gr ss income, then that assessment will be imposed upon the gross income of all of the fishermen who participate in the fishery in that area. The reason being that the money will go towards the construction of hatcheries within the regional area which will produce fish for the benefit of all of the fishermen in the area.

HB 264 also amends the law regarding participation with the State Dept. of Fish & Game in drawing up a comprehensive plan for the implementation of the non-profit hatchery program within each regional area throughout the State. The present law called for the development of the comprehensive plan and HB 264 further defines the language and sets up a regional planning team composed of department personnel and personnel from the regional corporations to develop a plan and such plan would then be subject to approval by the Commissioner of the Dept. of Fish & Game.

Financing Opportunities

AS16.10.520(b) 100% Loan Financing

The remainder of HB 264 deals with the financing structure and opoprtunities for the regional corporations to begin to develop a viable hatchery program. AS16.10.520(b) is deleted from the present law. That provision provided that the State would lend up to 75% of the total project costs as determined by the Commissioner. Such a loan cannot exceed three million dollars per hatchery as limited in AS16.10.520(a). It has been the experience of the regional corporation in Prince William Sound and the regional corporation in Southern Southeast Alaska

that it is near impossible to come up with 25% of the cost of building a production size facility without time delays of many years. The estimated cost for such a facility is 2 to 4 million dollars which means front money of 500,000 to 1 million dollars. To this date the Southeastern Region has not been able to raise that type of money through the private industry sector. Total annual assessment of all expenses is 350,000 dollars.

The second factor in beginning one of these types of facilities on loan money less than 100%, is the fact of the uncertainty of the venture. There is a long lag time before the possible return of any money through surplus fish back to the hatchery, potentially 6 to 10 years. Since hatcheries are non-profit entities it is difficult to generate capital from normal outside private sources when there is no possibility for large profits.

Assessments from fishermen are not large enough to finance a viable hatchery program. A 3% assessment on gross income of fish caught within the boundaries of the Southern Southeast Regional Aquaculture Assoc. over historical catch periods range from 200 to 400,000 dollars per year. That is not a sufficient amount of money to participate in the present loan program and at the same time provide operating capital to run a hatchery program on an area wide basis. If assessment monies are tied up as front money for the loans, they are unavailable for operating costs to run the hatcheries. The hatchery program would be delayed up to two years while the assessment monies would be collected in a bank account in order to come up with enough money to front end the loan program.

AS16.10.510(8) Deferment of Principle & Interest

The present law, AS16.10.510(8) as amended by HB 264, defers payment on principle and interest for loans from the State up to a period of 6 years and states that interest shall not accrue on those loans during that 6 year period. That provision is necessary due to the fact there may be no return to the hatchery for a 6 to 10 year period and therefore no money to make payments on the loans. If hatchery corporations must set aside assessments as collateral to repay loans they will be unable to build more than one hatchery.

For the private sector venture to succeed we have to look down the road for a twenty or thirty year period and look for methods and means by which to institutionalize the regional non-profit corporate concept and their financing. In order to enable the regional corporation to undertake the job or rebuilding the salmon runs, they must have a financing base. The corporation must have access to the assessment monies for the operating revenues of the regional corporation itself to create strong and viable organizations and to continue to site and develop more hatcheries.

AS16.10.600 - Creation Of Regional Salmon Enhancement Authority

The bill from page six to the end of the bill deals with the creation of a regional salmon enhancement authority and gives that authority a quasi-public status. The purpose of that portion of the bill is to allow the regional corporation the option of forming a regional salmon enhancement authroity and obtaining a quasi-public status for openning up greater opportunities for financing from sources other than the state revenues. Primarily this is to become elegible for

Federal Economic Development Authority grant monies, EDA. The Prince William Sound Regional Aquaculture group recently had an experience in which they were eligible for a substantial amount of grant money from EDA under a certain program if they were able to qualify as a quasi-public organization. There are also other programs presently in the Congress which are being investigated at this time which eligibility may require a quasi-public status.

It should be noted that in no way is the state encumbered financially by the establishment of such an authority. Specifically AS16.10.690 on page 15 of the bill, it is stated that 'the credit of the state is not pledged.' It should be noted that this bill is identicle to SB 39 which has passed out of the Senate Resources and is in Senate Commerce.

PRIVATE SECTOR

SALMON ENHANCEMENT AND REHABILITATION IN ALASKA

J.N. Milnes SSRAA

THE PROBLEM:

The annual harvest of salmon in Alaska has been steadily declining since 1936 and is in a severe state of depression in this decade. The following chart illistrates those facts:

ALASKA SALMON HARVEST
(in thousands of fish)

	30 year consecutive high (average Harvest)	1960-1975 (average harvest)	1973-1975 (average harvest)
SOUTHEASTERN	38,200	14,862	8,118
PRINCE WILLIAM SOUND	8,000	4,575	3,509
COOK INLET	4,100	3,422	2,423
KODIAK	10,700	7,513	2,339
CHIGNIK	9,900	4,483	1,679
BRISTOL BAY	15,700	9,067	3,304
ARCTIC-YUKON KUSKOKWIM	800	845	2,309
STATEWIDE	83,300	45,108	23,111

Source: Alaska Department of Fish and Game
American Fisheries Institute Speech
Cordova, March, 1976

This is very comparable to a forest which has been harvested but not replanted or permitted to reforest itself. The salmon as a renewable resource simply has not been renewed.

The decimation of the resource has resulted in the decimation of the salmon industry so that it no longer has the capital to rebuild itself. Nor does the industry have the cohesion to create industry organizations whose role it would be to rebuild the salmon runs.

Technology exists to correct this problem. It has to be tried in Alaska and corrected to fit the Alaskan biology.

Hatchery technology has been well established in the Northwest for many years in Oregon, Washington, and British Columbia. Those states have embarked upon programs of immense investments to further utilize the salmon resource. Oregon has granted the right to private-profit based hatcheries, the most major effort being made by the Weyerhauser Corporation, who intends to release 25,000,000 Coho smolt by 1978 and ultimately 85,000,000. Washington state has planned several hundred million dollars for salmon enhancement, as has British Columbia.

Overseas, Japanese hatcheries are releasing 1,000,000,000 fry annually and intend to increase that to 1,500,000,000 by 1985. Russia has a similar program.

Alaska's current production of hatchery salmon is miniscule by comparison.

Besides a reliance upon hatchery production, Alaska also has a tremendously cheap resource in its abundant streams which once provided the rich harvests of 30 years ago. However, fishery resource management techniques have lacked the precision to adequately control the decline of the salmon run.

Stream rehabilitation and significant improvement in management also offer a high leverage correction to this loss.

THE APPROACH TO A SOLUTION

The people of Alaska consider this subject vital to their well-being and to the well-being of the future of the state. It is a renewable resource currently employing thousands of fishermen and consequently supporting tens of thousands of individuals. Furthermore, it can be increased in its capacity to support a stable population and the supply chain which feeds it.

As a renewable resource, it is one of the prize possissions of the state of Alaska.

One strategy of "fixing" the current loss of resource is for the state of Alaska to have its government department build and run hatcheries and do the whole job of rebuilding the salmon runs.

A second strategy might be for the private sector to take over the job.

Since this entire effort is in its infancy in Alaska, such a dichotomy is not practical. Alaska must use all the available capabilities it has on hand.

Ultimately, it would be desirable for the private sector to perform this function, as it does in agriculture, and in forestry. For it to do so, there unfortunately must be government intervention to provide the funds and the technology to develop the capability of that sector. Once in place, however, the private sector would be paying its own way by developing revenues and capital to cover the costs of the public administration (A.D.F.&G.), improved research and development, and the operation of the rehabilitation and enhancement programs directly.

An objective which might be suggested for this effort is:

> To create a healthy industry; one which is profitable, and supporting a large stable population in the year 2000 - providing pleasure in sports fishing, capital to aid fisheries, and monies to pay its own way.

The means to achieving that require:

- sound financing
- good organization of experienced personnel
- well developed base of experience
- salmon marketed at a price adequate to deliver profit to the people and enterprises in the industry.

The tack to take at this moment is one of getting into a safe level of production as fast as possible to obtain the best base of experience as quickly as possible. With a project of this scale, experience is the vital factor. It reduces costs, it increases productivity, it opens the door to new solutions and will accelerate the program with safety.

However, "scared money" in a situation having so many new factors and variables in itself creates problems. So, the funding source, currently the legislature, must make itself aware of the risks inherent in

- forming new social groups called "Regional Associations"
- operating hatcheries with no prior cost experience
- rebuilding brood stocks to levels adequate to start a major enhancement facility
- managing mixed stock fisheries so that native runs are not damaged.

In private enterprise, it is the role of "venture Capital" to fund the high risk start-up from its inception through its likely commercial success. The capital covers all costs associated with the venture - engineering and construction, staff, raw materials, equipment, operations and maintenance - including interest on short term debt.

Since venture capital is not available in Alaska,... because of the NONPROFIT nature of the current legislation, the loan program provides a means to get started and assures that the state of Alaska has its money returned.

This implies that the loans must serve the same purpose as venture capital; i.e. assure that there is adequate monies available to assure a high probability of success.

Creating self-help financing is not new to government. The U.S. government intervened prior to and during the Depression in agriculture financing by forming and initially funding the Farm Credit System; the P.C.A.;the Federal Land Banks, and the Bank for Co-ops.

The following typical kinds of costs associated with operating a regional association and a hatchery facility illustrate the need for completeness in the financing arrangements.

POSSIBLE SCENARIO FOR SOUTHEAST ALASKA

Using the chart on page 1, a likely goal for Southeast Alaska would be to return the salmon to the previous levels of 38, 000,000 from the current 8,000,000. A gain of 30,000,000 returning salmon would be required.

Assume half of that could come from rebuilding the native run using management techniques and that the other half of 15,000,000 would be obtained from hatchery production.

Let's also assume that those 15,000,000 salmon were chum salmon.

At current prices of $6.00 per adult chum salmon, the increased value for 30,000,000 adults would be $180,000,000. Everybody hopes the price will hold or inflate in time.

Currently, a hatchery to produce 1,000,000 returning adult chum salmon would cost approximately $2,000,000 to construct and about $300,000 annually to operate. If all the brood stock were available at the time of start-up (which is a remote possibility), it would take 3 to 5 years for that initial 1,000,000 to return. More realistically, it would take 8 to 10 years.

Approximately 20% of the salmon might escape the commercial fishery and return to the hatchery,... 200,000 salmon. 55,000 of those would be needed for spawning the next year's production; leaving approximately 155,000 surplus fish to be sold by the hatchery to cover the cost of operations and repayment of the debt. Those 155,000 chum salmon at $6.00 each would be worth $900,000.

Since each hatchery produces 1,000,000 adult salmon returning to the fishery, it would take 15 hatcheries to meet the production targets. Each hatchery would need the $2,000,000 for construction and 5 x $300,000 per year for a total of $3,500,000 to start up and to reach break-even. 15 of these facilities would require $57,000,000 in total capitalization to achieve the goal.

If 4 facilities of this magnitude were installed in Southeast, their combined surpluses would generate $2,400,000 annually in capital... each facility contributing $600,000 to the capital pool. These 4 facilities, once they reach their full capacity, would become an economic generator which would supply the capital for the rest of the region to expand.

So, for an investment of $15,200,000, the State of Alaska levers its money to a total of $57,000,000 worth of capital, ultimately producing $180,000,000 in additional sales. 15 facilities would employ maybe 75 - 100 people directly and the harvest of 30,000,000 adults would employ at least several thousand fishermen.

The fishermen of the area would have assessed themselves for nearly 8 years at 3% of their gross salmon catch, contributing nearly $1,000,000 per year. However, the overhead of running a region of that magnitude

- the administration, accounting and legal costs
- the site development costs
- the stream rehabilitation costs

could possibly use half to three-fourths of that assessment, leaving little surplus for the repayment of debt or to cover the operating costs of the facilities.

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

This would fund the grants to three regional hatchery associations at $100,000 each for $300,000 total. It also provides $300,000 for the additional matching grants from these three regional associations. It is not likely there will be more than three regional hatchery associations in FY '78, thus $600,000 should fully cover all applicants.

JUNEAU ALASKA

MEMORANDUM

2 March 1977

TO: House Resources Committee

FROM: Alvin Osterback, Chairman
House Resources Committee Al Osterback jr

SUBJECT: HB 289 Caribou Transplant

During the Ninth Alaska State Legislature, SCSHCR 93 passed, requesting Caribou transplant. This bill is the appropriation for SCSHCR 93.

Upon receiving the first estimate for $98,420 I met with Bob Rausch, Director of the Game Division. I expressed my concern over the high cost. Mr. Rausch agreed to work up a new estimate, operating out of Cold Bay and catching the animals in Stepovak Bay. As you can see, the new estimate for transplanting 40 caribou would be $28,660.

2/22/77

February 18, 1977

The Honorable Alvin Osterback, Chairman
House Resources Committee
Pouch V
Juneau, Alaska 99811

Dear Representative Osterback:

My staff has prepared the requested cost estimate for transporting 40 caribou from the Alaska Peninsula to Nagai Island, using Cold Bay as the base of operations. The estimate follows:

Caribou Transplant

40 Caribou to Nagai - from Cold Bay

Helicopter @ $325 X 5 hrs per day = $1,625/day X 7 days helicopter time =	$11,375
Goose 3 hr. round trip X 7 trips @$720 = (perhaps less if we can catch caribou in Stepovak Bay)	5,040
Room and board chopper pilot, $55 X 10 days =	550
Fuel at Cold Bay, 945 gal. at .48/gal. =	453
Per diem 3 biologists for 10 days =	1,650
Transportation of staff =	700
Drugs & equipment =	5,000
	$24,768
If helicopters are not available locally, ferry time from Anch. to Cold Bay and return =	3,900
	$28,660

This estimate does not include personnel costs which the division will absorb.

Sincerely,

Robert A. Rausch
Director
Division of Game

February 7, 1977

The Honorable Alvin Osterback, Chairman
House Resource Committee
Pouch V
Jureau, Alaska 99811

Dear Representative Osterback:

Re: Caribou transplants as requested in SCSHCR 93.

My staff has completed preliminary surveys and estimates preparatory to inaugurating the transplants requested in SCSHCR 93. If the attached plans are satisfactory, specific authorization is required in order to implement the activity. Because the thrust of the activity will primarily result in production of food animals, rather than recreation, it would seem appropriate to fund the activity from the general fund rather than from the dedicated Fish and Game Fund which is comprised of hunting and sport fishing license and tag receipts.

Agreements with the appropriate Native Corporations have not been initiated. This requirement will await fiscal authorization of the activity. If you desire further assistance or information please contact me.

Sincerely,

James W. Brooks

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

Above figures represent impact on additional administrative personnel, office space, duplicate records and communications modifications. Part of above increase would be offset by corresponding reductions of $66,400 in Public Safety, Office of the Commissioner BRU. The housing program impact is not included in these figures, but increases would be offset by identical decreases in the Public Safety housing program. A figure of $20,000 is included for unforeseen contingencies. See attached detailed analysis.

IV. DATE 4/1/77 PREPARED BY Jeff Morrison
AGENCY Fish and Game

33-001 (Rev. 10/76)

Attachment to Fiscal Note to HB 337

All direct costs associated with the Protection Division, including space rental and vehicle rental, are included in the Protection Division budget. Any fiscal impact on the Department of Fish and Game may be divided into increased indirect charges and increased direct charges. Increased indirect charges would include: 1) funding additional personnel in administrative services (personnel, supply, accounting); 2) funding an increase in the housing program; 3) possible increase for a separate records center and central radio dispatch units. Increased direct charges would include: 1) rental of additional space to relocate protection offices where they currently share space with Alaska State Troopers, and 2) replacement or modification of communication equipment so as to become compatible with Fish and Game frequencies. The fiscal impact of these items is detailed below:

Indirect Expenses

1) Additional personnel in administrative services. In 1972, when Protection was transferred to Public Safety, the Department of Fish and Game transferred three positions from the administrative services component. Since that time the Protection Division has grown to a total of 120 personnel in the FY78 Governor's request, up from 74 total personnel in FY72. If Protection is returned, four positions would be required in Fish and Game Administrative Services: a Clerk Typist III in headquarters Personnel, an Accounting Clerk II in Juneau and Accounting Clerk III in Anchorage; and a Supply Clerk in headquarters supply. The annual cost of these positions (including benefits) will be $66,400. It is assumed that desks, chairs, etc. would be transferred from Public Safety. Any increase for these transferred positions should be offset by a corresponding decrease in the Department of Public Safety's administrative services budget.

2) Housing program. The Department of Public Safety provides housing for Protection Officers in remote areas. The budget for expenses related to housing is in a separate component and totals $680,500 for the entire department (FY78 Governor's request). Any expenses related to housing for Protection officers would be transferred from the Housing budget in Public Safety to the housing budget in Fish and Game, with no net increase to the State. A precise figure is unavailable at this time because the entire state housing policy is under review at this time, and some units may be disposed of. It is suggested that the proposed legislation allow for the transfer of necessary funds between departments in the event that Protection is transferred, in order to accommodate the delay involved in obtaining good estimates on this matter and other matters.

3) Central dispatch and records center. Protection officers currently use central dispatching units manned 24 hours a day by the Department of Public Safety in six locations: Ketchikan, Juneau, Anchorage, Soldotna, Kodiak and Fairbanks. These dispatch centers provide the following service to all public safety personnel, including Protection officers: 1) 24 hour monitoring of

emergency frequencies for emergencies or public safety matters; 2) forward complaints to officers in area of the complaint; 3) monitor whereabouts of employees in order to follow up on officers who have left radio contact to investigate an activity or question someone (in case officer encounters foul play and is unable to report back); 4) assign complaint/case numbers to all reported complaints; 5) respond to requests for immediate records search at central records center in Juneau. In the event that Protection is transferred, these services can be retained in one of two eays: either the Department of Fish and Game can operate its own central dispatch units, or the Protection division can continue to use the Public Safety central dispatch units. Operation of one CDU would cost about $90,000 annually in personal services alone. Initial and operating costs of communications equipment makes this alternative prohibitive, leaving the only remaining alternative of continuing to use the existing Public Safety CDUs. The only function now being performed by the CDU which might cause problems if it were continued, is the assigning of complaint/case numbers. This would seem to be a minor administrative problem to overcome.

The operation of the records center in Public Safety integrates the case files of both Protection and State Trooper cases. They are currently intermingled in a consecutive numbering system and I anticipate that Public Safety will continue to require access to Protection case files. If Protection officers use Public Safety CDUs for records checks, it will be mandatory to have Protection case files in the Public Safety records center. At such time as Protection is transferred, then,it would be necessary to have a duplicate set of all Protection case files made for protection headquarters. This one-time expense should hopefully not exceed $5,000 (4 temporary clerks for about one month, plus copying expenses and new file cabinets). In the future, Protection would need to forward copies of all case files and case numbers to the Public Safety records center. There is currently one data control clerk for Protection in Juneau. If this position is integrated into the records center staff, it may be necessary for Public Safety to include an additional position as a replacement in their fiscal note to the bill.

Direct Expenses

1) Office space. Protection offices are currently located together with other Public Safety offices in many locations. The transfer of Protection to Fish and Game would require that most of those offices be relocated into Fish and Game offices or other separate offices in order to confirm their identity with the new department in the public's mind. In the following locations, Protection offices already exist independently or with Fish and Game, and would require no changes: King Salmon, Soldotna, Sand Point, Bettles, Seward, Wrangell, McGrath (office in home), Tok (office in home), and Talkeetna (office in home). In the following locations, Protection offices may be combined with existing Fish and Game offices, with the only charges being for moving expenses and minor modification: Sitka (rearrange court building); Glennallen; Delta Junction (renovated facility); Cordova; Yakutat; Nome and Dillingham. New stations planned for Aniak, Dutch Harbor, Galena, and St. Mary's would be initially set up as Fish and Game protection offices. In the following locations there are no Fish and Game offices and it may not be desirable or possible

to relocate due to relative shortage of office space: Cantwell and Haines. Total estimated cost for moving expenses and minor modifications in the preceding locations is $10,000.

The following locations will require the transfer of Protection offices into new office space which would need to be leased in addition to existing Fish and Game offices: Anchorage, Ketchikan, Kodiak, Kotzebue, Fairbanks, Juneau, Petersburg, Valdez, Palmer, and Homer. Due to lease commitments, it may not be possible to use the funds budgeted for the Public Safety leases for leases of the new office space. Fiscal projections assume the worst case situation, wherein previous obligations must be honored for a complete year. It is also assumed that the Director's office and staff would relocate from Anchorage to Juneau. Cost estimates for new space are as follows: Anchorage $24,000 (2000 sq. ft. @ $1.00); Ketchikan $3,000 (remodel expanded space in court building); Kodiak $8,400 (700 sq. ft. @ $1.00); Kotzebue $3,000 (assumes City of Kotzebue will rent space @ $250/mo.); Fairbanks $19,400 (1200 sq. ft. @ $1.35); Juneau $18,000 (1500 sq. ft. @ $1.00 - for both Headquarters and Region); Petersburg $2,400 (200 sq. ft. @ $1.00); Valdez $3,600 (300 sq. ft. @ $1.00); Palmer $2,400 (200 sq. ft. @ $1.00); and Homer $3,600 (300 sq. ft. @ $1.00). Total estimated additional space costs are $87,800. Since this is an annual figure, delays in moving would generate some savings; this savings would then be applied to pay for moving expenses. Total direct costs related to office space is estimated at $97,800.

2) Communications equipment. The Protection Division was appropriated $133,200 for communications equipment for FY77, and most of this is on order or in use. The status of their communications equipment in FY78 will be very good, and will have the capacity to provide communications between most field stations and Public Safety's Central Dispatch Units. Adding the capability to communicate with Fish and Game offices will involve adding or replacing frequencies to the existing or new equipment. This cost will be minimal, and has been estimated at not-to-exceed $2,000 by the Division of Communications. Troopers and protection officers currently employ a single frequency VHF reporter network along the Alaskan highway network. Continued use of this frequency for protection law enforcement activities will probably be necessary, and will interface with the Central Dispatch Units discussed previously in this analysis. Fish and Game frequencies (4504 and 3230) will be used by Protection offices for administrative communications not related to actual enforcement activities. Mel Hoversten, Director of Communications, indicates no major problems in the conversion unless Public Safety denies the use of their single frequency VHF repeater network to Protection officers. If this is the case, the conversion cost will undoubtedly go up, assuming the Department of Fish and Game would care to retain the capabilities offered by the VHF repeater network.

Summary

The forseeable increased costs related to the transfer of Protection are: $66,400 for four administrative positions; $5,000 for duplicate records; $97,800 for office space; $2,000 for communications modification; and an unspecified amount for transfer of housing units. The increased expenses for

housing and the 4 administrative positions would be offset by corresponding reductions in Public Safety budgets for housing and general administration. The total net increase would then total $104,800. It would be highly advisable to appropriate an additional $20,000 for unforseen contingencies in line 800. This money would only be released, then, when authorized by the Governor when it can be shown that other funding was insufficient

The projections above are based on several assumptions which may change, particularly regarding use of Public Safety communications facilities (CDUs and VHF network). If any assumptions change, the fiscal impact is likely to change also.

An amendment to the bill to allow transfers of funds and positions between departments in accordance with legislative intent would assist greatly in the administration of this bill, as it is unlikely that firm figures will be available regarding the housing program.

Representative Alvin Osterback, Chairman
House Resources Committee
Pouch V
Juneau, Alaska 99811

Dear Representative Osterback,

We somewhat reluctantly support House Bills #337 and 338; returning the Fish and Wildlife Protection back over to the Dept. of Fish and Game. One of the main reasons we support those bills is because #337 will create a Division of Fish and Game Protection. If protection was returned at its old status, we would definitely not support its return.

Sincerely,

Bob Blake

PUBLIC SAFETY EMPLOYEES ASSOCIATION
P. O. Box 4-2624
Anchorage, Alaska 99502

April 4, 1977

The Honorable Alvin Osterback
House of Representatives
State Capitol Building
Pouch V
Juneau, Alaska 99811

Dear Mr. Osterback:

H. B. 337 and any similar legislation that proposes transferring the Division of Fish and Wildlife Protection back to the Department of Fish and Game is of extreme concern to us. Since many of the members of Fish and Wildlife Protection are members of our group, the Public Safety Employees Association, anything that affects their status affects all of us. In the five years the Fish and Wildlife Protection officers have been members of the Department of Public Safety, their numbers have increased approximately 50%, and their morale has increased to the point where the vast majority strongly oppose returning to the Department of Fish and Game. Their communications equipment has improved from almost nothing to participation in the best system in the State, and their professionalism as law enforcement officers has dramatically improved with increased training and closer association with other law enforcement professionals. We feel that implementation of the standards set by the Alaska Police Standards Council and the further training of members as advocated by the Public Safety Employees Association will further enhance the stature and effectiveness of our Protection officers.

The Public Safety Employees Association is convinced that a transfer of the Division of Fish and Wildlife Protection back into the Department of Fish and Game would be a great disservice to the people of the State and to the protection of their fish and wildlife resources. Such a transfer would throw the enforcement of our fish and game laws back into the debilitating struggle between special interest groups. The enforcement of our laws, whether they are criminal or resource-related, belongs in the hands of law enforcement professionals. No one is claiming that everything is perfect in the Division of Fish and Wildlife Protection, but it is much better than it ever has been. We firmly believe that there is a much better chance of improvement in the Department of Public Safety than in the Department of Fish and Game.

The Public Safety Employees Association would like to go on record as strongly opposing any legislation or administrative action that would encourage or consummate in the transfer of the Division of Fish and Wildlife Protection back to the Department of Fish and Game. Our interest in retaining Fish and Wildlife within the Department of Public Safety is not self-seeking, as our attorney is of the opinion that, even in the Department of Fish and Game, Protection officers - as Peace officers - would remain in our bargaining unit. Our overriding concern is the quality of enforcement given to our fish and game laws.

Sincerely,

Joseph Hoffbeck

Joseph Hoffbeck, President
Public Safety Employees Association

TESTIMONY OF JIM REARDEN
MEMBER OF THE BOARD OF GAME

Thank you Mr. Chairman. My name is Jim Rearden, I'm a member of the Alaska Board of Game, I've been a resident of Alaska for 27 years and in that time I have been professionally involved in Fish and Game Management in various ways. I was head of the Department of Wildlife Management at the University of Alaska for 4 years, I've been a guide, I've been a commercial fisherman, I was area biologist for Commercial Fisheries in Cook Inlet for 11 years for the Alaska Department of Fish and Game, I have worked for the Fish and Wildlife.Service as a Game Biologist, presently I am the outdoors editor for the Alaskan Magazine and the Alaska Field Editor for Outdoor Life Magazine. I have strong feelings on this issue, philosophically I think you are absolutely right that the enforcement of Fish and Game regulations belong with the Department of Fish and Game. Looking at the history of the enforcement division under the Department of Fish and Game the enforcement division was a bastard division, they were to be put up with and supported, but they didn't have a full share in the operations of the Department, their input was ignored or negligiable, their budget was poor, there was quite a change in personnel in some years it was as high as 50% I believe, turnover within the division. I attribute this largely to the fact that these people were not what you'd call career professional people, and not career conservationists. Of the 67 officers who were with the Department of Fish and Game at the time it was transferred to Public Safety, 27 now remain, in 5 years 40 officers have left the Division. I believe 2 by retirement and I think there has been 1 death. At the time that the Division was

with the Department of Fish and Game the requirements for becoming an officer were a high school diploma, a driver's license and pass a physical examination. The present requirements are identical, with the Department of Public Safety. The training that the men have received since they have been with the Department of Public Safety are at closer alliance with the Court System, with the District Attorney's Offices, has strengthened them in presenting cases, in collecting evidence and in handling the enforcement of role. I submit that all of the improvements that we have seen in these areas could just have well have come under the Department of Fish and Game. The problem, I talked with some of the Field Officers recently of communication between the officers in the field and the Biolcgists, the Game Biologists, and the Fisheries Biologists who are charged with management within the various areas, the communications is very poor. If a Fisheries Biologist feels that patrols, stakeout crews or whatever, are necessary in a specific area he can request it if the protection officer doesn't really agree with him the protection officer can pretty well go his own way and no one is really telling him to do it, to what the Biologist the land, the man in charge of the area from the resource standpoint requires Now, I maintain at this point that the Division is more effective now, where it is, then it was before. But I maintain that we need a stronger Division, a far stronger and better protection division then we have, and I maintain that it belongs with the Department of Fish and Game and I maintain that it should be a full partner in the management of the resource and in the planning for the protection and handling of the Fish and Game resources throughout the state. And my recommendations would be to leave it right where it is, until and unless you are fully prepared to establish a top-notch, top

quality protection division of people who are career minded, who will remain with the State and remain in the position for a long enough time to pay for their training and pay for all the costs to the State, and I maintain that this requires first that a man have a college degree of some sort when he is hired, now I would not fire everbody that you have now, I'd give grandfather rights to the officers who are working for the protection of Wildlife, Fish and Wildlife Division as it is now called, and allow those who wish to be transferred back to the Department of Fish and Game to go, but here after I would require a college degree, whether it would be in Law Enforcement, Fisheries Management, Biology, Wildlife Management. From here I would then require them to attend the police academy at Sitka or a similar school to receive the absolutely essential law enforcement work, the next step I would require that they attend a 3 to 4 month intensive program on Fish and Game Management within Alaska so that they will have a knowledge of the reasons behind the regulations and the policies of the Department of Fish and Game, they'll have the conservation information they need to defend the regulations and to explain them to the public. Now, you say a school like this would be costly, I don't think it necessarily would have to be. We have within the Department of Fish and Game some of the finest Fish and Game scientists within the United States and they are recognized as such throughout the United States, these people could very easily prepare a curriculum and teach such a school to the Protection Officers and one other factor I think that is extremely important is that I believe strongly in what I call preventive enforcement and preventive enforcement to me means that an officer who is aquainted with an area doesn't get transfered every

6 months or every year or every 2 years, an officer would be stationed in an area and he would remain there, he would become a part of a community, he would become intimately acquainted with the physical features of the area, the resources of the area, the people of the area, so that he could become truly effective. Now if the officer isn't any good, he isn't gonna, and this happens why, you aren't gonna get any place anyway, so you've got to be sure that the officers are good before you put them in there and there has to be a constant reading process through the recruitment and the training program. This is done in other states and it is quite successful. At the moment an officer represents really the state when he checks fishing licenses, when he watches sportsman on the stream, when he watches hunters out in the field, they have at the moment, no real reason to defend the program of the and the regulations of the Department of Fiah and Game, if they don't believe in them the tendency is frequently to say well, yea it's a screwy regulation but I got to enforce it. That basically is about all I have to say Mr. Chairman.

QUESTIONS AND ANSWERS

Rep. Osterback - Mr. Rearden are you aware we have a bill in the House on the floor today, I voted against it but it passed, didn't it pass, and directing the regulations for the Board, or the Department of Fish and Game to follow and the only reason bills like that are coming up is because nobody is satisfied with the way the Department of Public Safety and the Department of Fish and Game are run. When they are coming to the legislators and asking them to pass the laws there has got to be something wrong somewhere along with the Department of Fish and Game or something and this is what we are trying to do

down here where we can get a Department what can handle our resources and try to build them up. The way they have been going the last few years, we've been going down hill and until we do something we are going to keep on going down hill.

Rep. Malone - Thank you Mr. Chairman. Mr. Rearden, Basically what you are saying is that simply moving the Division back and forth isn't gonna help things, it's gonna have to be upgraded and that it should be logically in the Department of Fish and Game and it is not gonna do much good to move it back there unless the State's willing to make a commitment to provide for proper education and training and professionalism on the part of the people in that Division. Is that right?

Mr. Rearden - That's it exactly, yes sir.

Rep. Eliason - Jim I think I agree with most of what you have to say especially about the training programs for the enforcement officers however, I get just a little, I'm gonna put this politely, I get a little bit tired with this college degree syndrome we have when it come to Biologists versus the common ordinary everyday citizens. It seems that a good example today on the floor of the House there has been some, we have been listening and doing and performing what their recommendations have been for years and it seems like they don't have all the answers ither. I don't know what the qualifications are for a ordinary State Trooper who is charged with the responsibility of protecting the human resources, I don't suspect that they have to have a college degree so I think that would be just as important, I don't think there is anything in our law that says you have to have a college degree to sit in on Board of

Fish of on the Board of Game. They have some real responsible decisions to make. But it seems to me that we could find very capable people without having the necessary type of qualifications you are looking for.

Mr. Rearden - Representative Eliason let me explain my reasoning and my thinking behind it. As I pointed out the Divison of Protection under the Department of Fish and Game was a very weak division it was not a full partner in the operations of the Department of Fish and Game. There were reasons for this. When there was input, frequently it was not well thought out input. There was a social barrier between the professional scientists of the Department of Fish and Game many of whom have masters degrees at the very least, and to have individuals who have a high school diploma and a drivers license essentially and they were very, basically the Division were young men and it still is young men because of the tremendous turnover, there is a barrier there communications barrier and a 3 months or 4 months intensive course in Fish and Game Management is not gonna remove that barrier. I want people who are equal and knowledgable in management of the resources. Looking at each other across the table within the Department of Fish and Game to develop a program in Protection and Management. I don't want this so called social inequality, I want these people to be a full partner and I feel that if you did not increase your educational requirements to equal those of the scientists that we require to have college degrees working for the Department of Fish and Game then you are going to have this problem. Now there are exceptional individuals now, there are some

of them sitting in this room right at thsi minute. Protection Officers who do not have degrees who could, did and can sit right across the table from any professional and do just as fine as job but the chances of your getting a full staff capable of doing this without requiring this do not seem as great to me.

Rep. Eliason - This is one of the reasons why they split it off to start with, is that right, it was because they had, it was, they were taking the back seat, so to speak.

Mr. Rearden - Mr. Eliason, I think there were many many reasons. I can't really give them all to you.

Rep. Eliason - I can understand the full need for full partnership, but realistically you would think that if we did transfer this Division with college graduates and this training to Fish and Game that they would be given the same consideration as the Division of Commercial Fish or the Division of Sport Fish?

Mr. Rearden - I think it would have to be, they, it would be essential, I think that the Department should be structured so that perhaps the top man in protection would be a Deputy Commissioner and it would be a very strong Division.

Rep. Malone - This is just a question relating to the education question that Dick asked, and that is, to what extent do you think that a person's experience, and we have some people with considerable amount of experience within t' Division now, would be a substitute for you know, that educational background that you are talking about.

It's one thing to have somebody coming in off of the street, with say a driver's license and a high school diploma, another thing to have somebody come in from the field with 10 years of experience under their belt, to what extent do you think that that is a substitute?

Mr. Rearden - I think it could be a full substitute in some instances and I think it should be considered, certainly.

Rep. Malone - Thank you Mr. Chairman.

Ernie Haugen - Mr. Chairman I am not in your committee but

Rep. Osterback - Well you are free to speak any time you want with the legislature.

Ernie Haugen - You know I've seen both sides of this here situation when we had the enforcement in the Department and some of the problems that you discussed and the status of the people in protection, but a what's wrong with the Biologists while they are out in the field because a Fish and Game Protection Officer wasn't present that they could make the same arrest as the guy that has protection status?

Mr. Rearden - Some of the Biologists all of whom have authority to make cases . . .

Ernie Haugen - Do they exercise it?

Mr. Rearden - Some do, some do not, some avoid it.

Ernie Haugen - Isn't that probably the reason that Eagan , with all the things that are being developed here made a decision they weren't compatable?

Mr. Rearden - I don't know why Governor Eagan made . . .

Ernie Haugen - Well, I remember. I'm a commercial fisherman and I've seen it all and a last Fall in a certain area there happened to be only one protection officer between Bays that were open but there were Biologists on the ground, violations were taking place and they weren't a, they weren't doing anything in the way of enforcement. Do you think that is right.

Mr. Rearden - It is not right sir and the Commissioner has informed the Boards

REST OF TESTIMONY NOT RECORDED DUE TO TAPE RECORDER COMPLICATIONS. (APROXIMATELY 3 - 5 MINUTES OF QUESTION/ANSWER)

Mr. Chairman:

My name is Don Tetzlaff, I have been a resident of Alaska since 1956.

In 1961, I started working for the Department of Fish and Game as a Biologist Aide for the Game Division.

In 1965, I transfered from the Game Division to the Protection Division and have been so employed as a Fish and Wildlife Protection officer ever since.

I am presently the Detachment Commander for Southeast Alaska, and have been for the last five years. I presently hold the rank of lieutenant.

Mr. Chairman, I am against House Bill 337, or any bill to transfer the Fish and Wildlife Protection Division to another department.

Over the years, and especially since our transfer in 1972 from the Department of Fish and Game to the Department of Public Safety, we have built one of the best working Fish and Wildlife Divisions in the country.

Even Commissioner Brooks, in his white paper submitted to Gov. Hammond and the Board of Fisheries and Game readily admitted that the 1972 transfer of our division to the Department of Public Safety created, and I quote "better directed and disciplined performance" and said "protection officers now have high morale, enjoy more security in an orderly disciplined work environment".

All of these points are true, plus, I assure you, our goals and objectives when we were with the Department of Fish and Game and those of today are the same, and those are:

1. Protection of resources.
2. To gain a reasonable level of compliance to the state's regulations and laws.

So I ask you, why should we be transfered again? What will this transfer prove? What will be accomplished by the transfer? Will it mean better and more protection of the resources?

Statements have been made that we are more interested in playing cops and robbers and that we are more interested in making a case rather than protecting the resources. NOT TRUE.

Cases are made, yes, it's part of our job to issue citations to those individuals that violate the state's laws and regulations pertaining to our Fish and Wildlife resources, but I assure you the protection of resources comes first, not the case. In fact, my written policy here in Southeast is quality in cases not quantity and prevention of violations, not letting them happen. And by quality I mean those violations that do damage to the resource and not administrative type infractions.

And for the record, let me state, I am not a cop, I was a Fish and Wildlife Protection Officer when we were under the Department of Fish and Game and I am still a Fish and Wildlife Officer under the Department of Public Safety.

It has been stated, that all we are interested in is making cases and that we are not protecting the resource. Point of fact, last year the 11 officers that I have in Southeast logged some 3,626 vessel hours, that's 3,626 patrol hours which were patrols that are initated with the sole purpose of trying to protect the resources, being seen, and preventing violations. We use stake-out teams in some situations, yes, but last year only 550 some odd hours were logged in as stake-out operations versus the 36 hundred hours that were logged in as preventive type enforcement. Sure some cases were made, what are we suppose to do, look the other way? If those 36 hundred hours are not accepted as an effort to protect the resources, I don't know of any other facts that would.

It has been said that our tactics are equal to "riot squads of Chicago". I'm not sure how this person reached this conclusion, but let me say this, Fish and Wildlife Officers within this department are trained, schooled, taught drilled and encouraged to use discretion, and common sense, be fair but firm and always professional, and consider the resource and the intent of

the regulation. However, if the fish and wildlife user is going to sneak in taking illegal game, so are we going to play sneak to catch him.

It has been stated that our transfer to Public Safety from the Department of Fish and Game has created a communications gap that cannot be bridged, gentlemen, we had communications problems when we were with the Department of Fish and Game and under the same roof, the problem is no greater now. But communications is a two way street. Over the past five years I've probably averaged 50 to 60 visits per year to the Department of Fish and Game offices to communicate with Fish and Game staff. My field officers have a much higher average. How many times have I had a Department of Fish and Game employee come to my office to communicate with me? Well, I can count the times using the fingers on one hand. In fact, just recently I was very impressed with a new Department of Fish and Game employee that had just started working with the Fish and Game department when he came to my office one morning and introduced himself, we discussed fish and game matters to quite some extent and I was really impressed, then prior to his leaving he produced a speeding ticket that he had received the night before and wanted to know if I could help him in any way with the ticket.

In summary, our objectives, which have not changed from Department of Fish and Game days, are:

1. Protection of the Fish and Wildlife resources of the state of Alaska.
2. To gain a reasonable level of compliance to the state's fish and wildlife regulations.
3. (I'm quoting here from a past commissioner's policy memo which is still in effect today) "To develop a group of law enforcement officers who's specialty is enforcement of statutes and regulations as they pertain to Alaska's fish and wildlife resources. To provide to the state, the citizens, and the resources, meaningful, professional and effective law enforcement".

Once again, I ask that you do not approve House Bill 337, for I feel that it would be more damaging to the resources of this great state, rather than an advantage. Thank you.

Presentation to

HOUSE RESOURCE COMMITTEE

and

Joint Session

of the

BOARDS OF GAME & FISH

April 1, 1977

By: Capt. Don M. Roberts
Division of Fish & Wildlife Protection
Department of Public Safety

My name is Don Roberts. I'm a 25-year resident of the state and have 20 years experience in fish and wildlife law enforcement in Alaska. I have worked for the U. S. Fish & Wildlife Service, the Alaska Department of Fish & Game, and the Alaska Department of Public Safety. I'll draw my paycheck each month regardless of whether I work for the Department of Fish & Game or the Department of Public Safety. Also, I'm eligible for retirement in eight months. I'm telling you this because I want you to understand that I speak to you without any axes to grind or fear of reprisal.

There are two primary concerns that we should consider when discussing the fate of the Division of Fish and Wildlife Protection: They are the resource and the resource user. The question then is, "under the supervision of which department can the Fish and Wildlife Officer best serve the public and the resource?"

There are approximately 27 officers of our present staff that were members of the Division when we were part of the Department of Fish and Game. We were horrified at the news on March 28, 1972, that by the stroke of a pen, we were transferred to the Department of Public Safety. We were convinced that it would never work. After all, with the exception of Oregon, wildlife law enforcement in the U. S. had historically been administered by fish and game departments. Our minds were really locked in to this concept. However, as time progressed, it became more and more evident that our stereotyped idea of how an enforcement program should be conducted was completely out of touch with reality.

Under Fish & Game, only a small percentage of our officers had formal law enforcement training; our communications system was poor at its best; we had no dispatch system, which meant that during the time that officers were conducting the majority of patrols (4:30 pm to 8:00 am, weekends & holidays), they had no radio contact with their office or headquarters or other patrol units. This type of program puts the officer's life in jeopardy.

The Division's requests for appropriate equipment and more officers failed to receive the support of the Fish & Game Commissioner's Office. The various commissioners did not comprehend the needs of law enforcement.

Also, under Fish & Game, a portion of our time was devoted to fish and game management type duties such as assisting in test netting lakes, poisoning and restocking lakes, game counts, stream surveys, etc. At the time of our transfer to Public Safety, there was a plan in Fish & Game to assign more of these type of duties to the Protection Officer. That was one of the bones of contention within the division that helped perpetuate the move from Fish & Game to Public Safety.

With the pressures that are on our wildlife resources today, wildlife law enforcement must be conducted on a full-time basis by professional wildlife enforcement officers. We now have those kind of officers.

One of my duties with the Division of Fish & Wildlife Protection is to conduct Division Reviews. It's another way of saying inspections.

In this capacity, I travel statewide and inspect our programs, personnel, office and warehouse equipment, and so forth. In every area I travel to, I call upon the local judges, district attorneys, fish and game personnel and other agencies that our officers do business with. The purpose of my visits to these agencies is to determine what our working relationship is with each of them. Almost without exception, I have received glowing reports from those interviewed. The judges and district attorneys have told me how impressed they are with the professional manner in which our officers handle their cases. Alaska Department of Fish and Game biologists tell me that they feel that we are giving them better service than we did when we were a member of their department. The biologists also tell me that they feel that the rapport among our officers and their staffs is excellent.

One of the points that has been used by those who desire to put Protection back in Fish & Game is that communication between biologists and enforcement officers is essential to a good management program. I most certainly agree. From what the biologists tell me, that communication is there. We must remember one thing however: If two people are not going to communicate because of personality conflicts of one sort or another, they won't communicate even if they are occupying the same room eight hours a day.

As I said earlier in this presentation, the question is, "Under the supervision of which department can the Fish & Wildlife Officer best serve the resource and the public?" My advice, having worked on both sides of

the fence, is to leave the Division in the Department of Public Safety.

You have a fish and wildlife enforcement agency that you can be proud of. That agency is giving you the best wildlife law enforcement program Alaska has ever had, and, under the Department of Public Safety, is improving each year. Other western states are watching us and are considering following suit. I believe that the Alaska Division of Fish and Wildlife Protection is setting the pace for the nation in modern fish and wildlife law enforcement.

STATE of ALASKA

MEMORANDUM

TO: The Honorable Jay S. Hammond
Governor
State of Alaska

DATE : May 6, 1976

FROM: Richard L. Burton, Commissioner
Department of Public Safety

SUBJECT: Response to Resolution 76-2 of the Boards of Fisheries and Game

Attached are memoranda of response from two individuals - Colonel Fred Woldstad, Director of the Division of Fish and Wildlife Protection; and Colonel James P. Wellington, Director of the Division of Alaska State Troopers. I asked Colonel Wellington to respond because at the time of the transfer of the Division of Fish and Wildlife to the Department of Public Safety, Colonel Wellington was Deputy Commissioner of the Department of Public Safety.

My comments are simple and are as follows.

In my opinion, the Division of Fish and Wildlife Protection should remain within the Department of Public Safety for the following reasons:

1. The officers are better trained than they were when they were in the Department of Fish and Game.

2. The officers are better equipped.

3. The Division has better communications.

4. The level of enforcement and the quality of the cases put together by the enforcement officers are better than ever before.

The primary mission of the Department of Public Safety is law enforcement and regulation. That is also the prime mission of the Division of Fish and Wildlife Protection; which is different than the mission of the Department of Fish and Game.

These comments briefly summarize those contained in the two attached memoranda.

If you have any questions or desire further information on the matter, please contact me, the Deputy Commissioner, or either of the two Colonels mentioned above.

Attachments

STATE of ALASKA

MEMORANDUM

TO: Richard L. Burton
Commissioner

DATE : April 28, 1976

FROM: Col. Fred M. Woldstad
Director
Fish & Wildlife Protection
Department of Public Safety

SUBJECT: Board Resolution 76-2

To respond objectively to the Alaska Board of Fisheries and Alaska Board of Game Joint Board Resolution No. 76-2 regarding the Division of Fish and Wildlife Protection, it should be appropriate to analyze the cause for such a resolution. The style of this resolution neglects to define the "WHEREAS" portion commonly used as prefacfe to the resolution itself, and thus appears to open the subject for general debate rather than responding to specific issues.

Initially, it must be assumed that there are objections or doubt that the Division of Fish and Wildlife Protection belongs within the Department of Public Safety. This organizational structure certainly is a severence from tradition, and the pattern of 47 other states, but it should also be recognized that Alaska does not follow the national standard for conservation enforcement in other fashions that are of importance to this discussion. Conservation Officers nationally comprise 32.2 percent of all employees in state fish and wildlife agencies and account for an average annual operating budget outlay of 27.4 percent. In Alaska, Fish and Wildlife Officers comprise only 16.5 percent of all employees in the Alaska Department of Fish and Game and account for only 18.76 percent of the operating budget. A chart depicting this comparison is attached and reproduced from a 1973 study published by the Wildlife Mangement Institute. Several additional tables are provided to further complete the comparison.

While Alaska is considerably below national standards in personnel and funding, its officers can be favorably compared to any within the country. An article published by the Wildlife Society in the Spring of 1973, describes rather accurately the position of the wildlife enforcement officer nationwide and is worth reproducing. Oddly enough this article recognizes a national problem of intra-department communication in wildlife law enforcement.

Comparing twelve years of accomplishment for a Division under one department with four years of accomplishment with another department is most difficult. The objectives of the Protection Division are simply stated within the budget document and reads; "The primary goal of Fish and Wildlife Enforcement is to protect the renewable resources of the state and to provide an adequate level of enforcement to insure an optimum opportunity for management of Alaska's fish and wildlife resources on a sustained yield basis."

To accomplish this objective, requires both personnel and operating funds.

Under the State system of budgeting, the commissioner of each department exercises authority over the growth of divisions within a department. Upon this initial review system, the growth is then determined by the administration and then the legislature. Growth of the Division of Fish and Wildlife has been less than spectacular at any time during the 16 year history of the division. It can be accurately said, however, the growth potential has been far greater under the Department of Public Safety than at any time during the sixteen years, based primarily on the ability to at least reach administrative and legislative review steps. Prior to 1973, growth was competitive to research and management, and enforcement failed to receive priority status, remaining number six among six divisions.

Growth in ability to achieve the goal of an adequate level of enforcement depends upon financial ability and efficiency. Efficiency without financial assistance has limits, and reaches a point of necessity to select priorities. The selection of priorities is not compatible for satisfaction to the general public or to management and ultimately the Boards of Fish and Game. It can be called lack of communication, coordination, or poor relations, but it is lack of financial ability to meet the needs of the public and management at their level of expectation. The basic difference of the Division of Fish and Wildlife under the Department of Public Safety is that enforcement is not assuming the subservient posture that had characterized twelve years within the Department of Fish and Game, and the morale of the officer produces quality and efficiency, as compared to frustration.

Selection of priorities is not limited to allocation of manpower to activity, but also it is placing a priority on the amount of time an officer spends with his primary responsibility-enforcement-compared to other functions, management assistance and support, hunter safety, etc. Traditionally, the Division of Protection participated actively in sealing programs, nuisance animal problems, collecting programs, permit monitoring and similar management responsibilities. This support has been minimized in favor of enforcement and protection of the resources with minimum dilution of enforcement responsibility.

The Board of Fish and Game has contributed greatly to the problems which seem apparent today. They have given eager reception to management proposals and various refinements to sporstman ethics, administratively legislating regulations for the hunter and fisherman. A notable difference between the Board and the state legislature is the attachement of a fiscal note to the output. Means to accomplish the ends has not been part of the role for the Board. Regulations have been promulgated regardless of enforcement potential or even enforceability of the regulation. The system has reached the point of crisis.

Alaska's resources are being managed, using 20th century philosophy and the complexities of the regulations near exceed the ability of the average sportsman to comprehend. The commercial fisherman needs Loran and radar to determine his legality and the sportsman who leaves familiar terrain has to visit an office of the Department to clarify his legal obligations. Obviously, personnel of the Department of Fish and Game believe in adequate law and regulation, but are unable to distinguish between that which is morally wrong and legally wrong, and firmly believe in the 19th century enforcement philosophy that has been taught in the nation's colleges to resource students for the past forty years, that good research data cannot be secured when involved with legality.

The basic difference between the Department of Public Safety and the Department of Fish and Game is essentially, one is concerned with people and their behavior, and the other fish and animals with their related behavior and needs. Enforcement is people management and it is a full time profession. The behavior of our citizens directly influence the quality and quantity of our resources. Social behavior, patterns and values have displayed dramatic changes within a very short period of time. The right to question the competence of professional theory is not a stranger in Alaska's resource management, nor is the right to challenge the validity and authority of resource laws and regulations. People management and biological management of resources are not in harmony in Alaska, nor elsewhere. Each has its own peculiar need for competence and professionalism and that need can only be accomplished if neither is diluted to the point of inefficency. A department separation of both functions is the only means to secure a maximum benefit to the resources.

Wildlife Enforcement is not apart from any career in law enforcement, and it demands knowledge, high standards of ethics and personal conduct. The law enforcement officer must have personal attributes to allow the job to be done efficiently, such as physical, emotional, intellectual, social and moral. The combination of these attributes in an organization produces an esprit de corps that promotes quality and efficiency and commands respect for the organization and the goals of the organization. These attributes are not part of a wildlife management curiculum and are not attainable within a department that confines its standards to biological considerations.

The material benefits and merits of retaining the Protection Division within the Department of Public Safety have not been elaborated upon, but essentially, are obvious and include:

1) recruit training of the highest standard nationwide
2) in-service training
3) quality vehicular equipment, including aircraft and marine applications
4) communications

All of these are essential to law enforcement, and perhaps the greatest benefit that can be secured is support, both in manpower and practical knowledge.

The state is not financially willing or capable of supporting a Division of Fish and Wildlife Protection that can serve the protection needs of the resources and yet supply a service and maintenance section for the Department of Fish and Game, similar to the traditional pattern of ther states. To meet a national standard, would require the addition of 158 new positions in the Division of Protection, and to meet only a western state's standard would require 110 new positions.

To address a statement to present and potential relationship of Protection and Fish and Game Management personnel, is to assume the Board has been convinced that poor relationship is detrimental to resources and poor relationship now exists. It is unfortunate the concern of the Board becomes evident four years after the crisis, and the management plan is being considered with only one set of charts and graphs. Basically, the Division of Protection feels there is a state of being mutually or reciprocally interested in the same objective, but a lack of affinity. This lack of kinship is caused by wide differences in opinion towards professional standards. Mandates will not alter this problem and it is most difficult to associate this with benefits towards resources. Sound management requires wise judgement to accomplish and should include consideration of all sources of pertinent data to achieve the desired end. It took twelve years to gain a seat at the table of deliberation before the Board of Fish and Game, and only when enforcement was accountable to another department was input accepted that was contrary to the fixed posture of management proposals. At the present, relationship is healthy for resources and this should be the objective of the state. The potential relationship will remain healthy to the extent that enforcement is permitted to offer input for consideration.

Arrests/Officer	48	53.7	32.6	54.6	48.7	25	13.5*
Average Fine Collected	27.17	22.29	31.03	22.96	25.12	-----	100.00
Arrests per 1,000 Licenses	5.9	5.0	5.6	8.6	6.4	8.3	6.4

National Statistics shown are for the year 1972, the last year when national statistics were available.

*Arrests/Officer is a function proportionate to the size of the area patrolled and population density. Because of overall size of the state and lower comparative population, Alaska cannot compete in National averages in this category. Arrests are directly proportionate to user contacts, and because of size and lesser density of user, contacts are less than other states. The marked decline in arrests/officer from 1972 compared to 1976 results from a forced reduction in hours worked per day by each officer, and days worked per week by each officer created by budget limitations for overtime payment.

In 1972, officers were on a straight salary basis and work performed as required. Mandatory overtime in 1976 with severe budget limitations for overtime payment has resulted in less hours worked, fewer contacts per officer, hence less arrests per officer.

LAW ENFORCEMENT—ONE THIRD OF THE TRIANGLE

WILLIAM B. MORSE, *Wildlife Management Institute, Portland, Oregon*

Abstract: Law enforcement is as important as research and management in administration of wildlife resources but it has not received proportionate attention from administrators and researchers. Enforcement accounts for ⅓ of the personnel and over ¼ of the budget of state wildlife agencies. Trends show a continued dilution of law enforcement effort per hunter and angler, and an increase in the number of laws enforced. Conservation officers will some day become recreation enforcement officers, but should remain a part of fish and wildlife departments. Recommendations for improving law enforcement include a productive research program, uniform records system, adequate officer numbers for the workload, professional enforcement communications between states, and obtaining general police powers for all conservation officers.

Management of fish and wildlife resources in the United States involves three fundamental activities: research, management, and law enforcement. Research has received primary professional emphasis from The Wildlife Society in both interest and publications. Management is the primary task of administrative agencies, which put research knowledge into operation on the land in order to improve habitat, and to regulate harvests of game species to achieve sustained yields. Law enforcement is the effort, both passive and active, to secure public compliance with the laws and regulations that management uses as tools.

Too often, enforcement is looked upon as a necessary evil, even as an anachronism that must be accepted simply because it exists. Nothing can be further from the truth. Without adequate law enforcement, the finest research and management will have little or no effect in protecting the resource. Scientist and manager alike must realize that wildlife depends on three-way teamwork, and must help give enforcement the stature and tools it needs to operate.

Law enforcement requires consideration, thought, research, and planning in order to be conducted as the major conservation business that it is. On January 1, 1972, there were more than 5,800 employees in state wildlife and fisheries law enforcement, comprising 32.2 percent of all employees of state wildlife agencies. Authorized enforcement budgets exceeded $72 million per year, or 27.4 percent of the annual operating budgets of state agencies (Morse 1972). Yet a hard analytical look at overall state enforcement operations will show that there has been only limited improvement in many years. Most of these improvements have been simple: officers now have automobiles, two-way radios, some jet boats and airplanes, and there have been improvements in recruiting and teaching. Other needs have been overlooked consistently during a period when both research and management techniques have entered the space age. For example, does the officer know why the violator violates? Can he use theory of games on a search for jacklighters? Can he check an offender's record by radio?

Enforcement officers tend to feel alienated to some degree because they are not always considered essential or professional. Better intra-department communication would reduce this feeling. Administrators could help increase the officers' morale, prestige and feelings of worth by spending more time with the officers in the field to learn their problems and needs. Regional forums, where officers from several states could gather to discuss and coordinate mutual problems, would also help. These forums should be in addition to regional association meetings and should be similar to symposia held on individual wildlife species.

Long overdue changes and improvements in enforcement will not be forthcoming until there is a change in attitude of agency administrators and an emphasis on selling improvements in enforcement to budget-approving personnel and agencies. Even in the most progressive states, the officer in the field still operates by the seat of his pants and his instincts rather than as a modern technician striving to accomplish planned and programmed goals with techniques developed by many disciplines. If law enforcement is to meet present, let alone future needs, it must receive administrative interest commensurate with its personnel numbers, expenditures, and importance as a member of the three-way wildlife and fisheries team. Such co-equal recognition of enforcement with research and management efforts is one of the principal tasks facing wildlife agencies in the '70s.

STATE of ALASKA

MEMORANDUM

TO: Richard L. Burton, Commissioner
Department of Public Safety
Juneau

DATE: April 26, 1976

FROM: Colonel J. P. Wellington, Director
Alaska State Troopers
Anchorage

SUBJECT: Division of Fish and Wildlife Protection - Retention Within the Department of Public Safety

As you know, Commissioner, when the Division of Fish and Wildlife Protection was transferred from the Department of Fish and Game to the Department of Public Safety I was the Deputy Commissioner of the Department of Public Safety and am therefore familiarwith some of the problems that we experienced during the transition.

What we found was that we inherited a division that was financially in tough shape, the morale was down and there were a number of factions within the division which were creating problems.

Now Commissioner, I don't want to pick at old sores or try to create any problems because I think the Division of Fish and Wildlife Protection, since coming to Public Safety, has operated quite efficiently and quite effectively; but I think if there is any attempt to move the Division back to Fish and Game, then we have to look objectively at what the Division was when it arrived in Public Safety.

TRAINING - For the most part the officers did not have any formal training program. Some of them attended the State Trooper Academy and others attended various short courses and also the Division conducted a yearly meeting which was a mixture of partying and training, but for the most part lasted no more than three or four days. In other words, they had no formal training program, which is now afforded them at the Public Safety Academy in Sitka.

EQUIPMENT - For the most part their equipment was in a poor state of repair and in a lot of cases not appropriate for the work to be performed. As you will probably recall yourself, a majority of the Protection officers were equipped with station wagons which certainly is not the type of vehicle that is geared to do the type of work that the Protection Officers do. This would include off-road travel plus hauling outboard motors, moose meat, gasoline, etc. Apparently the station wagons were very comfortable for the Protection Officer to ride in, but certainly were not functional, and since the Division has come to Public Safety a majority of the vehicles have been changed over to a functional pickup.

As far as radio communication is concerned, the Protection Officers had no radio contact with anybody after 4:30 or on week ends and holdidays. At the present time they are tied in with the Department of Public Safety network and have radio communications

in all the major areas, plus the use of the Department teletype system. This was all put in after the Division came to Public Safety. Since coming to Public Safety additional vessels have been acquired and additional aircraft. Again, because the Department of Public Safety is primarily law enforcement oriented and a need for adequate equipment is thoroughly understood, the Division of Fish and Wildlife Protection has benefited from this progressive thinking within the Department, both in the past and at the present.

It appeared, Commissioner, as if the purchasing of equipment was kind of on a haphazard method, with each regional supervisor determining what he needed. As a result of that there appeared to be an overbuying in certain areas and underbuying in other areas. For example, each Protection Officer had a pair of hip boots, a spotting scope, binoculars and a very expensive Pen-tex camera; but they had no radio equipment, either portable or mobile, they had no hard copy communication system, and did not even carry suitable firearms when in the field.

ORGANIZATIONAL STRUCTURE AND SUPERVISION - This is the area, Commissioner, that gets a little touchy, but I think in order to thoroughly evaluate the problem you have to look at the guts of the organization that the Department of Public Safety inherited.

It appeared as if there was very little control from the top, or if there was, the supervisors took an indifferent attitude to supervision and therefore many things were going on within the Division which would not be tolerated by you or I and certainly are not tolerated today.

When the Division came over to Fish and Wildlife Protection, the aircraft were being utilized for semi-personal business, such as transporting moose meat, personal gear, signtseeing, etc. The stakeout camps were also being utilized as pesonal hunting lodges and departmental equipment was being utilized for personal use, such as boats, binoculars, hip boots, etc. were all being used support private hunting or fishing trips. In addition, their evidence handling, recording and disposition procedure left a lot to be desired. In fact, to the embarrassment of the Department, we found that at least two polar bear hides were improperly disposed of, one being given to the Catholic Church in Fairbanks for a raffle and the other being lost which cost the State in excess of $6,000.

In other words, Commissioner, the whole administrative operation seemed to be very shoddy and without proper direction, thus creating several embarrassing situations for the State and the Division.

Now I'm sure that somebody might say that these situations could all be taken care of within the Deparment of Fish and Game if the Division was transferred back; and my answer to that would be, "Why wasn't it done during the first ten years?"

CONCLUSION - I feel that the Division of Fish and Wildlife Protection, since coming to the Department of Public Safety, is better equipped, better trained, better disciplined

and has better morale than it did while being under the Department of Fish and Game. Also I feel that the enforcement effort has been increased as a result of having better equipment, better communications, better training and better direction.

I think an individual who proposes that the Division be transferred back to Fish and Game should objectively look at what the Division was and doing prior to its coming to Public Safety and what it has accomplished after coming to Public Safety; and I think if you objectively review both situations, you will find that the Division is functioning 100% better today than it was when it was transferred.

I think also that people who have worked under both systems would readily admit that the procedures today are better than they were under Fish and Game. Now I know that we still have some individuals who are not inclined to support the fact that the Division is functioning better today than it was four years ago; and to that I can only say, Commissioner, those individuals are probably the ones who were misusing the State equipment, abusing their authority and creating problems for the Director of Fish and Wildlife Protection while it was under Fish and Game.

I think also it is important to look at what the Department of Fish and Game is designed to do and what the Department of Public Safety is designed to do. By this I mean primarily the Department of Fish and Game is research orientated, whether it be commercial fishery research and rehabilitation or wildlife research and rehabilitation, whereas the Department of Public Safety is primarily a law enforcement agency. As we have so often said, the enforcement of the Fish and Game laws are no different than the enforcement of our criminal statutes. All the rules of criminal procedure apply, and I think the records will reflect, and I'm sure the D.A.'s will concur, that the cases being made by the Division of Protection in the last three years are considerably better than the cases made prior to the Division's transfer. This can only be attributed to the increase in training and the administrative review given the report.

Again, I think one should ask: "What is being done today versus what was being done under the old concept," and I defy anybody to substantiate with hard facts the proposition that the Division of Fish and Wildlife Protection should be returned to the Department of Fish and Game.

Governor

Attached Resolution 76-2 of the Boards of Fisheries and Game

At the request of the Boards of Fisheries and Game, I am asking that each of you carry out the request of the Boards enunciated in their Resolution 76-2.

I would ask that you submit your initial response to me by May 15. After review by myself, I will then ask each of you to respond to the points raised in that input.

Additionally, I would request that each of you in your initial submission include a section of pertinent questions which would be addressed, in questionnaire form, to appropriate enforcement and management personnel at the field level.

ALASKA BOARD OF FISHERIES AND ALASKA BOARD OF GAME

JOINT BOARD RESOLUTION NO. 76-2

REGARDING THE DIVISION OF FISH AND WILDLIFE PROTECTION

The Board of Game and the Board of Fisheries, meeting in joint session on April 2, 1976 in Anchorage, Alaska, respectfully request the Governor to direct the Commissioners of Fish and Game and Public Safety to prepare a "white paper" statement regarding the relative merits of the Protection Division under the jurisdiction of their respective departments. Such statements should include but not be limited to:

1. Objectives of the Protection Division

2. Present and potential relationship of Protection and Fish and Game management personnel

Following the preparation of the "white paper" said Commissioners should prepare briefs of response to each others statement.

The Governor is further requested to provide the Boards with all, or part, at his discretion, of said "white paper" and responses. Further, should the Governor wish comment from the interest of the public, that he seek response from one or more disinterested but knowledgeable person or persons on this subject.

Gordon Jensen, Chairman of the
Joint Session of the
Alaska Board of Fisheries and
Alaska Board of Game

DATED: April 2, 1976
Anchorage, Alaska

[redacted]

I am responding to your recent telephone request for inf mation regarding fishery law enforcement in the State of Washington.

The enclosed material was taken from our budget requests and, for the most part, should be self explanatory. It shows the overall agency organization and then details the law enforcement division under the Field Services Program with a written summary of duties and responsibilities of that division.

If you require someone from the Department to testify on House Bills 337 and 338, I recommend you contact Mr. Bruce Gruett, Assistant Director for Field Services. Mr. Gruett was instrumental in developing the Department's present enforcement program and can (and will) speak candidly on any phase of it.

Sincerely,

Henry O Wendler

Henry O. Wendler, Manager
Intergovernmental Operations

PROGRAM	050	FIELD SERVICES
ELEMENT		PROGRAM NARRATIVE

INTRODUCTION

The Field Services Program is made up of long-established elements in the Department. During the reorganization, which took place in August 1975, the Patrol and Licensing Sections were taken out of Category Support and placed in a separate program, Field Services. The elements within this program are Law Enforcement, representing all patrol activities; Shop Support, which was formerly part of the Patrol Division; Licenses; and Administrative Support.

Law Enforcement

The Law Enforcement, or Patrol element, is responsible for the enforcement of all fisheries laws and regulations pertaining to fishing (both sport and commercial), habitat protection, and protection of State facilities. Such work pertaining to the sport and commercial fisheries for salmon involves over 57 marine and Columbia River management areas for one to five species; over 12,000 licensed commercial fishermen and dealers; several thousand Indian fishermen; and over 580,000 sports fishermen. In addition to the salmon fisheries, the Fisheries Patrol Officers must protect the shellfish and marine fish resources by enforcing the various fishing regulations. These same officers must also enforce the rules and regulations pertaining to the Hyraulics Code, Forest Practices Code, and other similar laws designed to protect the state's fisheries resources by other resource users.

The goal of Law Enforcement is to attain maximum compliance with food fish and shellfish laws and regulations by members of the three user groups: Indian, non-Indian, and sport. Prior to 1974 it was evident that in order to attain that goal, a steady and continuing increase in manpower and equipment would be necessary. The full impact of the "Boldt" decision must now be recognized and the need for sharp increases in effort must be met if we are to restore order to the fishery.

During the past several years the growing complexities of the fishing regulations and needs to meet the conditions set by the Federal courts resulted in over 162 separate regulation changes in 1975, more than double the preceding year. Such a variety of changes has multiplied the workloads for our Fisheries Patrol Officers without a similar increase in staffing. A further complicating factor has been the setting of different fishing seasons, areas, and gears for Indian and non-Indian commercial fishermen. This discrepancy encourages law violations and vastly complicates the job of gaining compliance with the law.

The Patrol Division is organized with a Chief, Assistant Chief, Program Supervisor, four Sergeant districts, and an aircraft support section. The Sergeant districts cover different areas throughout the state and each presently has eight patrol officers, an equivalent number of vehicles, and various numbers of boats ranging from 8-foot prams to 40-foot ex-Coast Guard vessels.

The Federal Government has provided law enforcement with funds for 12 Fisheries Patrol Officers through the Federal fiscal year ending September 30, 1977. State funding is requested for the remainder of the 1978-79 State biennium in order to continue with that program in case those Federal funds are not available in the Federal fiscal year beginning October 1, 1977.

The Patrol Division has found it necessary to concentrate men and equipment in "hot spots" on emphasis patrols. Up to now this has been done by taking men from their assigned duty areas for several days and sometimes weeks at a time. This practice was acceptable until recently due to the limited number of occasions during the course of a year when the need for emphasis patrols occurred. This is no longer the case due to the frequent need for emphasis patrols in high-violation-rate areas. We are asking for a unit consisting of a Patrol Sergeant and six officers to handle those problems.

In order to meet present-day problems, Harvest Management people must have accurate and timely statistical data to work with. Our experiences since the "Boldt" decision graphically show that much stronger emphasis must be placed on enforcement of fish ticket regulations in order that all catches are properly recorded and reported.

We have for many years been called upon to patrol the Pacific Ocean coastal waters and the offshore waters in order to gain compliance with our laws and regulations. We do not have patrol boats suitable for that type of patrol, and are asking for funds to purchase a 60-foot vessel at a cost of $225,000. This vessel would be used primarily in coastal waters for law enforcement purposes but would also be available to the Salmon, Marine Fish, and Shellfish Programs for test fishing purposes. We believe part of the costs of operating this vessel will be recovered by contracting with the Federal Government as a result of the Extended Jurisdiction Law.

Most of the small boats we are now operating have been used for many years under difficult, hard-use conditions. We are asking for funds to replace five of our older 19-foot fiberglass, inboard-outboard drive boats with 23 footers.

Aircraft Support

The Aircraft Support Section consists of two surplus DeHavilland Beaver aircraft, both on floats, one of which is amphibian. These aircraft are flown and maintained by two pilots and a pilot-mechanic. All programs within the Department utilize these aircraft for a variety of Departmental functions and, in Fiscal Year 1976, these two aircraft logged over 824 hours on Department duties. Such aircraft usage has greatly aided the Department in meeting its pyramiding obligations without a similar increase in staffing.

Shop Support

This element was, prior to reorganization, split in the Patrol and Research & Management Divisions, and has since been

GENERAL JUSTIFICATION MATERIAL

	Code	Title
AGENCY	480	WASHINGTON DEPARTMENT OF FISHERIES
PROGRAM	050	FIELD SERVICES
ELEMENT		PROGRAM MANAGEMENT

transferred to the Field Services Program. Its functions are to provide maintenance and repair for marine and marine-oriented equipment and Department-owned and operated vehicles in all programs.

This consists of helping to maintain the many boats, motors, vehicles, and other equipment needed to keep the patrol functioning. Such work involves the repairs and normal maintenance of 35 patrol vehicles, 30 boats, and 11 outboard motors. This section has also experienced an increased workload brought on by greater usage of the equipment and an increase in the number of officers.

We are asking for one additional person in that element to cope with this increased workload.

Licenses

The Fisheries License Division processes approximately 21,000 license applications, renewals, and transfers annually. In addition, it is responsible for several other functions such as privilege tax collection, issuance of special buoy brands, herring fishing validation decals, and special permits.

Both the salmon license moritorium and herring validation laws caused many new, time-consuming problems for our license people, adn this increased workload will be extended and possibly expanded as a result of Phase II of the salmon license moritorium and limited-entry laws.

We are asking for an increase of 1.5 FTE's and the appropriate funds to handle that [illegible].

Administrative Support

Field Services Administration [illegible] overseeing and guiding all activities carried out [illegible].

During the 1975-77 biennium we [illegible] to provide special services to user groups in [illegible] over and above that which could be provided [illegible] offices. Most of the problems and [illegible] offices are enforcement and license-related, [illegible] who have a great deal of knowledge and [illegible]. For that reason, we will staff the [illegible] offices with a Fisheries Patrol Officer and a [illegible].

The fifth FTE requested for this element [illegible] Assistant Director, Field Services, [illegible] gram. This position, created during the [illegible] been utilizing a vacant Patrol Officer [illegible] and funding of this Assistant Director [illegible] Patrol Officer position to report to [illegible] needed.

10 MARCH 1977

HARRY WENDLER, WITH THE STATE OF WASHINGTON DEPARTMENT OF FISH & GAME WILL BE SENDING US A RUN DOWN ON THEIR PROTECTION PROGRAM. IT IS HANDLED WITHIN THE DEPARTMENT. IT IS CONSIDERED A "MODEL" PROGRAM. IN WASHINGTON, THE FISH & GAME BIOLOGISTS WORK RIGHT ALONG WITH THE FISHERMEN IN THE STREAM & TICKET THEM ON THE SPOT FOR VIOLATIONS.

Alaska State Legislature

House

JUNEAU ALASKA

M E M O R A N D U M 10 March 1977

SUBJECT: Fish & Game Protection

TO: Fellow Legislators

FROM: Alvin Osterback, Representative

I am concerned with the management of the fisheries resource, particularly the fisheries protection program in our State. The Department of Public Safety is handling enforcement from a "cop and robber" viewpoint, rather than from one of protecting and saving the resource. I think these two bills are a step in the right direction towards saving the resource.

As it is now, the Department of Fish and Game makes the regulations, expecting Public Safety to enforce them. Many times this causes discrepancies between regulating and enforcing. The Departments are not coordinating these activities, which are so valuable to saving the resource.

For example, we see the Fish and Game people involved on a daily basis up here in the legislature. They are always here to testify pro or con. Sometimes they do not even come to testify (usually when they have testified on the particular bill at a previous meeting) but the Department

always makes sure there is someone here to answer questions on Fish and Game matters. Many discussions focus around enforcement matters -- and who is our expert advisor? Not the Department of Public Safety, but Fish and Game.

I do see one problem that may arise with this bill. That is whether or not the stream surveillance guards will be allowed to be trained at the Sitka Police Academy. I realize that this is an inhouse problem, so Fish & Game will have to work this out with Public Safety.

I know the fishermen in my district will back me up on this legislation. As a matter of fact, I think fishermen all over the state will support this legislation. I asked Phil Daniels before I drafted this bill about the merits of it. He is here tonight to answer any questions you may have on the fisherman's viewpoint.

Banks hire their own security guards. Likewise, I think with Fish and Game doing their own security work, we'd be buying our insurance to save the resources, since this is the Department's overall concern.

I was concerned about this matter long before the Commissioner of Public Safety gave some testimony before my committee regarding stream surveillance. At that time he said (and I quote) "You wouldn't get me to go out there and stand with a sign on my head saying I'm standing there, not

unless I had a twin 50 caliber machine gun to back me up." Personally, I would expect this way of thinking from a riot squad in Chicago, but never from a typical Alaskan.

I look forward to this legislation accomplishing better management of our fish and game resources. I know it will bring about better coordination between regulations and enforcement.

"WHITE PAPER"

on

Relative Merits of Fish and Game Protection Under the Jurisdiction of the Department of Public Safety Versus the Department of Fish and Game.

by

James W. Brooks
Commissioner of Fish and Game

Submitted to Governor Jay S. Hammond
May 15, 1976

Relative Merits of Fish and Game Protection Under the Jurisdiction of the Department of Public Safety Versus the Department of Fish and Game.

Governor Hammond requested that the Commissioner of the Department of Public Safety and the Commissioner of the Department of Fish and Game respond to the Board of Fisheries and Board of Game Joint Resolution 76-2 which sought the preparation by each Commissioner of a "white paper" statement "...regarding the relative merits of the Protection Division under the jurisdiction of their respective departments." In addition, the statement was to include a discussion of the objectives of the Protection Division and the present and potential relationship of protection and fish and game management personnel. (A copy of Resolution 76-2 is appended.) The Governor further requested that each Commissioner prepare a list of pertinent questions which would be addressed to appropriate enforcement and management personnel at the field level.

Background

The responsibility for fish and game protection was assigned to the Department of Fish and Game with the enactment of Title 16 in 1959, and remained there until transferred to the Department of Public Safety in March, 1972, by Governor Egan's Administrative Order No. 16 (copy appended).

An explanation of the circumstances and reasons that prompted the Governor to take such action is germane to this review. Because I was not associated with the state government at the time of these events, the following account relies on reports by fish and game personnel, my own observations after being appointed Commissioner in August, 1972, and discussions with Governor Egan.

The basic trouble seemed to be rooted in a lack of effective leadership and control during the year or two preceding the transfer. Protection personnel were permitted a loose, undisciplined mode of individual activities. Each officer was generally allowed to function independently and establish and record his own duty hours. In some cases, unverified compensatory time claims totaled several weeks or even months annually. One officer is reputed to have lived in Hawaii several months a year on compensatory time (I have no means of substantiating this statement, but it enjoyed wide circulation in 1972). Such autonomy of protection personnel yielded extremes in performance. In the Kodiak-Alaska Peninsula area, management and protection personnel developed highly cooperative working relationships and their programs were superior. Unfortunately, there were other places, where at times, protection programs were notably poor. It appears that where the protection program went well, it was due to the initiative and conscientious efforts of field personnel rather than leadership and a structured system that encouraged good performance.

During 1971 and early 1972, several protection officers organized a Fish and Game Protection Officer's Association to bring pressure both within and outside of normal administrative channels to further their special interests. Their demands were widely published in newspapers and other media and were directly conveyed to the Legislature. At this point, it was evident to all that the Commissioner and the Director of the Protection Division had allowed the situation to deteriorate beyond their ability to effect immediate remedy.

With the problems in the open and their causes reasonably well understood, there were various actions indicated and available to correct the wrongs and reestablish an orderly, properly administered protection program. However, only one of the options promised instant effectiveness and that was the Governor's choice. He transferred the Protection Division out of ADF&G and into the Department of Public Safety. The aircraft section went along intact; several of the smaller vessels were also transferred although the larger vessels remained with the Department of Fish and Game.

Transition Period 1972-1975

The immediate effect of placing the Protection Division within the Department of Public Safety was to disorganize the clique that presumed to represent most protection officers and bring a stop to their unauthorized power thrusts and expressions. Within a short time, some officers resigned and others were reassigned. A colonel in the troopers was soon placed in charge of the Division. There was a period of a year or two when many officers felt great uncertainty about their status, although each change seemed to contribute to improved stability. The independent work habits of protection personnel gave way to a better directed and disciplined performance. Training programs in police science enhanced the professional capabilities of the officers and seemed to improve their stature and pride in their positions. Perhaps the peer relationship with troopers in contrast to their former association with resource managers was beneficial to morale. While the early period of transition from ADF&G to DPS was indeed traumatic to many individuals and to the protection program, accommodation to

the new organization has been rapid. Program changes have been significant with genuine improvement in some functional areas and some deficiencies in others.

The early deliberate effort to dissociate protection from the Department of Fish and Game, which understandably followed on the Governor's action, caused a serious diminution of effective protection work. With insufficient communications between protection and management personnel, the deployment of protection effort sometimes bore no apparent relationship to resource needs. It will not further the purpose of this review to dwell on or document incidents, although I will cite a couple that reveal how unpredictable decisions could misdirect effort. In late summer of 1972, a rather critical period with respect to protection of commercial fisheries (salmon escapement being vulnerable to poaching off stream mouths) every protection officer was ordered to Anchorage for a training session. Salmon losses occurred. In 1973, protection officials disagreed with certain of the Board's fishing regulations in the Kuskokwim River. When the managers failed to waive the regulations(they lacked the authority), every protection officer was removed from the entire river for the duration of the season. During the past two years, however, actions of the above described nature have ceased to occur. Some improvement in communication and coordination between management and protection can be noted, but many believe it is still inadequate.

Present Protection Program

Administrative Status:

Within the past year and a half, senior protection officers have replaced troopers in certain key leadership positions in the Division

of Fish and Wildlife Protection. All protection personnel who made the transition from pre 1972 years now seem to have high morale, enjoy new security and an orderly, disciplined work environment. They are paid overtime according to a fair and reasonable schedule in contrast to the irregular compensatory time arrangements that prevailed in the Department of Fish and Game. Administrative areas adopted by Public Safety originally differed from those established by Fish and Game and precipitated real difficulties in field communication during the early years, but such problems have been largely resolved. Administratively, protection officers and troopers enjoy parity, and as mentioned earlier, this has stimulated professional pride. It appears that the administrative structure of the Division of Fish and Wildlife Protection within the Department of Public Safety is tight and sound, a situation that may be aided by deemphasizing the use of temporary employees in favor of permanent staffing.

Functional Status"

There is near-consensus among fish and game managers that, once violations are known, protection personnel generally do an excellent job of police work, of putting together a case that will result in a court conviction. The training and orientation of protection officers seems to be directed toward such skills. There is also high praise for protection efforts in connection with easily predictable and accessible problem areas. The Director of Sport Fisheries is most gratified with the protection recently given recreational fisheries along road and river systems. A lesser degree of satisfaction with the protection field program is voiced

by commercial fisheries and game managers, who believe that more emphasis must be placed on preventive enforcement and directing effort more precisely into situations where resource values are high. It is recognized that the protection program suffers from limitations of manpower, equipment and money. Nevertheless, there is pessimism among commercial fish and game managers that any amount of protection effort that might materialize would be effectively directed according to conservation requirements.

Protection Objectives

The basic objectives of fish and game protection include at least the following elements:

1. Protection of fish and game from taking outside of the approved management regime. Such illegal taking could involve numbers, time, place, or mode of taking, license violations or other infractions of laws or regulations.

2. Apprehension of violators, including the development of evidence and preparation of cases for prosecution.

There are numerous other collateral things that might be considered second order objectives although they are more in the nature of actions that relate directly to one or the other basic objective. The following responsibilities are among those that would fall into this category:

1. Rendering assistance to the public.

2. Promoting public appreciation of fish and game resources.

3. Promoting an understanding of and respect for fish and game laws.

4. Developing good communications with resource managers.

5. Striving to be at the right place at the right time, etc.

There can be little doubt that the issue of whether the fish and

game protection program should be administered by ADF&G or DPS will turn on the relative importance that is placed on each of the basic objectives. Both objectives are absolutely essential, but it is possible that the proper balance between them can only be struck within the administrative structure and environment of one or the other department. This question is discussed later in the evaluation of the proposal to return the protection function to Alaska Department of Fish and Game.

Comments on the Status Quo:

1. It's easier not to change. Any major organizational shift is disrupting to people and established programs.

2. The Department of Public Safety projects authority; public attacks on it aim less at programs than on incidents of alleged misconduct of individual officers. Complaints reaching the office of the Commissioner of Fish and Game declined in relation to public awareness that protection was being administered by Public Safety. This decline was probably real and did not altogether represent a redirection of complaints.

3. Protection officers receive excellent police training and have back up support of the troopers' investigative resources. While the same training and support might be furnished to protection officers in ADF&G, it was not obtained for various reasons prior to the Protection Division transfer.

4. Protection officers are paid overtime in common with troopers. In ADF&G, biologists are not paid overtime. It is likely that problems would arise where two types of professionals were compensated differently.

5. Protection officers and troopers meet common qualifications, wear uniforms, and frequently assist each other which obviously enhances their professional relationships. Should the Division of Fish and Wildlife Protection be returned to ADF&G, a different relationship would exist between managers and protection personnel. Great care would be necessary in making certain that equality was preserved; that mutual respect and cooperation dominated attitudes.

6. It is probable that more efficient use of aircraft, vessels, and their support resources would be possible if these were consolidated in the Department of Fish and Game. Presently, management and protection field personnel rarely share equipment because of the complexities of coordinating use and, to some degree perhaps, a covetous attitude about it.

7. The protection program presently appears to give priority to law enforcement with the aim of apprehending violators and making good strong cases, as opposed to preventing as many violations as possible by promoting the idea that detection is highly certain. As mentioned earlier, this view is strongly supported by commercial fisheries managers whose knowledge about the vulnerability of resources and the incentives to violate does not regularly mesh with the protection efforts in their areas. This problem may represent more than poor communications.

Evaluation of Options

The basic question being examined in this report is whether the responsibility for fish and game protection should remain in DPS or be returned to ADF&G. It is perfectly clear that either arrangement can work if given the support and direction it needs, but it is probable that one could be superior in long term results.

Fish and Game personnel recognize the excellent job of case development and pure law enforcement work that is being accomplished in the existing system, but they maintain that it does not offer sufficient resource protection, too often coming after the damage is done.

Whether right or not, experienced resource managers insist that certainty of being found guilty and punished after being caught does not inhibit violations. Rather, probability of being detected and caught in the act does discourage attempts to violate. Thus, commercial fisheries and game managers want preventive enforcement directed at protecting resources; their concerns are not allayed by the large number of convictions for license and similar technical violations. While such laws and regulations have a good purpose and must be enforced, they should not demand inordinate attention in relation to the potentially large losses of resources through illegal harvests, particularly in our commercial fisheries. Resource managers fear that protection will never complement management well enough to bring about the best possible conservation program if it remains isolated both administratively and functionally The intimate association with the troopers may well encourage an increased orientation toward strict law enforcement allowing the greater charge of resource protection to be less influential in setting priorities and deploying effort. It is probable, however, that the actions of protection personnel to operate with the barest minimum of formal contacts with fish and game personnel during the early transition period is partly responsible for the evolution of presently held opinions.

There are practical constraints to be dealt with if ADF&G were to once again assume the primary responsibility for protection. Because administrative support for the Fish and Wildlife Protection Division is shared with the troopers, it seems unlikely that it could readily be split off and transferred to ADF&G. Similarly, there may be problems in separating the record processing and storing functions. Then too, the office space vacated by the Protection Division when it left ADF&G has long since been filled, requiring in several locations that new space be rented to accommodate the return of protection personnel. All of these matters could be dealt with properly only if advance planning and preparations were carried out.

In summary, fair consideration of most pertinent element lends to the conclusion that there are advantages and disadvantages associated with any course of action. Looking to the best long term performance, the weight of opinion of resource managers favors the return of protection to ADF&G. They believe that the partnership of purpose that exists between resource management and resource protection cannot be satisfactorily implemented in the field while separate departments are involved. Policy and programs aimed at promoting proper priorities and coordination would, they fear, simply break down before achieving their intended purposes. They point out that 48 of the 50 states have reached the same conclusion, partly at least, for the same reasons.

Recommendations

1. Planning and budgeting procedures should be initiated to provide for the transfer of primary fish and game protection responsibility back to the Department of Fish and Game on July 1, 1977. These actions can go forward without immediate

need for a final decision, pending further evaluation of the desirability of such transfer.

2. Direct that both Commissioners attempt to find policy and procedural remedies to shortcomings of the present protection program as identified in this report.

Questions to Protection and Management Personnel

1. Do you believe that management personnel should participate in development of protection priorities involving field operations?

2. Do you believe that communications on a day-to-day basis between management and protection personnel are adequate? If not, is improvement achievable?

3. Do you believe that management personnel should be paid overtime on the same basis as protection officers?

4. Do you believe that case development and convictions are more important than preventive type functions?

5. Do you believe that the declining use of temporary protection officers and stake-out activities are justified by the benefits of strengthening a permanent corps of officers?

6. Do you believe that the overall, long term performance of the protection program will be better served by retention of the protection responsibility in the Department of Public Safety? Please state reason, but avoid reciting incidents or names.

ALASKA BOARD OF FISHERIES AND ALASKA BOARD OF GAME

JOINT BOARD RESOLUTION NO. 76-2

REGARDING THE DIVISION OF FISH AND WILDLIFE PROTECTION

The Board of Game and the Board of Fisheries, meeting in joint session on April 2, 1976 in Anchorage, Alaska, respectfully request the Governor to direct the Commissioners of Fish and Game and Public Safety to prepare a "white paper" statement regarding the relative merits of the Protection Division under the jurisdiction of their respective departments. Such statements should include but not be limited to:

1. Objectives of the Protection Division

2. Present and potential relationship of Protection and Fish and Game management personnel

Following the preparation of the "white paper" said Commissioners should prepare briefs of response to each others statement.

The Governor is further requested to provide the Boards with all, or part, at his discretion, of said "white paper" and responses. Further, should the Governor wish comment from the interest of the public, that he seek response from one or more disinterested but knowledgeable person or persons on this subject.

Gordon Jensen, Chairman of the
Joint Session of the
Alaska Board of Fisheries and
Alaska Board of Game

DATED: April 2, 1976
Anchorage, Alaska

Appendix II

STATE OF ALASKA

OFFICE OF THE GOVERNOR

ADMINISTRATIVE ORDER

#16

Pursuant to the authority vested in me by Article III, Section 23 of the Constitution of the State of Alaska, it is hereby ordered:

1. That the Division of Protection within the Department of Fish and Game is now and hereafter shall be a Division within the Department of Public Safety;

2. That the Commissioner of Public Safety shall exercise full supervisory and administrative authority over all personnel assigned to the Division of Protection, over budgetary items allocated to the Division and equipment and facilities used primarily in its work and currently assigned to the custody of the Department of Fish and Game;

3. That the responsibility for the enforcement of statutes and regulations enacted or adopted for the protection of the State's fish and game resources which involve criminal or civil penalty shall henceforth be administered by the Department of Public Safety;

4. That this order is effective immediately as to the direction, supervision and administrative authority over personnel of the Division. The Commissioner of Public Safety is authorized, according to law, to make such changes in the organization of the Division and the assignment of responsibilities among its personnel as he deems appropriate to the efficient administration of the Division and the performance of its duties;

5. That during a transitional period, the Department of Fish and Game in cooperation with the Department of Public Safety shall continue to do all things necessary or appropriate in the maintenance of administrative services, payroll maintenance, the upkeep of equipment and facilities and the exercise of other responsibilities necessary to assure a smooth transition;

6. That as the Commissioner of Public Safety determines the readiness of the Department of Public Safety to assume responsibility for such support activity, facilities and equipment he shall from time to time in consultation with the Commissioner of Fish and Game issue directives effecting such transfers which shall have the same force and effect as this order;

The transfer of the Division of Protection from the Department of Fish and Game to the Department of Public Safety constitutes a change in the organization of the executive branch and in the assignment of functions among its units considered necessary for efficient administration and not requiring statutory change. This Administrative Order, implementing that transfer, takes effect March 28, 1972.

William A. Egan
Governor

STATE of ALASKA

MEMORANDUM

TO: The Honorable Jay S. Hammond
Governor
State of Alaska

DATE : May 6, 1976

FROM: Richard L. Burton, Commissioner
Department of Public Safety

SUBJECT: Response to Resolution 76-2 of the Boards of Fisheries and Game

Attached are memoranda of response from two individuals - Colonel Fred Woldstad, Director of the Division of Fish and Wildlife Protection; and Colonel James P. Wellington, Director of the Division of Alaska State Troopers. I asked Colonel Wellington to respond because at the time of the transfer of the Division of Fish and Wildlife to the Department of Public Safety, Colonel Wellington was Deputy Commissioner of the Department of Public Safety.

My comments are simple and are as follows.

In my opinion, the Division of Fish and Wildlife Protection should remain within the Department of Public Safety for the following reasons:

1. The officers are better trained than they were when they were in the Department of Fish and Game.

2. The officers are better equipped.

3. The Division has better communications.

4. The level of enforcement and the quality of the cases put together by the enforcement officers are better than ever before.

The primary mission of the Department of Public Safety is law enforcement and regulation. That is also the prime mission of the Division of Fish and Wildlife Protection; which is different than the mission of the Department of Fish and Game.

These comments briefly summarize those contained in the two attached memoranda.

If you have any questions or desire further information on the matter, please contact me, the Deputy Commissioner, or either of the two Colonels mentioned above.

Attachments

STATE of ALASKA

MEMORANDUM

TO: Richard L. Burton
Commissioner

DATE : April 28, 1976

FROM: Col. Fred M. Woldstad
Director
Fish & Wildlife Protection
Department of Public Safety

SUBJECT: Board Resolution 76-2

To respond objectively to the Alaska Board of Fisheries and Alaska Board of Game Joint Board Resolution No. 76-2 regarding the Division of Fish and Wildlife Protection, it should be appropriate to analyze the cause for such a resolution. The style of this resolution neglects to define the "WHEREAS" portion commonly used as prefacfe to the resolution itself, and thus appears to open the subject for general debate rather than responding to specific issues.

Initially, it must be assumed that there are objections or doubt that the Division of Fish and Wildlife Protection belongs within the Department of Public Safety. This organizational structure certainly is a severence from tradition, and the pattern of 47 other states, but it should also be recognized that Alaska does not follow the national standard for conservation enforcement in other fashions that are of importance to this discussion. Conservation Officers nationally comprise 32.2 percent of all employees in state fish and wildlife agencies and account for an average annual operating budget outlay of 27.4 percent. In Alaska, Fish and Wildlife Officers comprise only 16.5 percent of all employees in the Alaska Department of Fish and Game and account for only 18.76 percent of the operating budget. A chart depicting this comparison is attached and reproduced from a 1973 study published by the Wildlife Mangement Institute. Several additional tables are provided to further complete the comparison.

While Alaska is considerably below national standards in personnel and funding, its officers can be favorably compared to any within the country. An article published by the Wildlife Society in the Spring of 1973, describes rather accurately the position of the wildlife enforcement officer nationwide and is worth reproducing. Oddly enough this article recognizes a national problem of intra-department communication in wildlife law enforcement.

Comparing twelve years of accomplishment for a Division under one department with four years of accomplishment with another department is most difficult. The objectives of the Protection Division are simply stated within the budget document and reads; "The primary goal of Fish and Wildlife Enforcement is to protect the renewable resources of the state and to provide an adequate level of enforcement to insure an optimum opportunity for management of Alaska's fish and wildlife resources on a sustained yield basis."

To accomplish this objective, requires both personnel and operating funds.

Under the State system of budgeting, the commissioner of each department exercises authority over the growth of divisions within a department. Upon this initial review system, the growth is then determined by the administration and then the legislature. Growth of the Division of Fish and Wildlife has been less than spectacular at any time during the 16 year history of the division. It can be accurately said, however, the growth potential has been far greater under the Department of Public Safety than at any time during the sixteen years, based primarily on the ability to at least reach administrative and legislative review steps. Prior to 1973, growth was competitive to research and management, and enforcement failed to receive priority status, remaining number six among six divisions.

Growth in ability to achieve the goal of an adequate level of enforcement depends upon financial ability and efficiency. Efficiency without financial assistance has limits, and reaches a point of necessity to select priorities. The selection of priorities is not compatible for satisfaction to the general public or to management and ultimately the Boards of Fish and Game. It can be called lack of communication, coordination, or poor relations, but it is lack of financial ability to meet the needs of the public and management at their level of expectation. The basic difference of the Division of Fish and Wildlife under the Department of Public Safety is that enforcement is not assuming the subservient posture that had characterized twelve years within the Department of Fish and Game, and the morale of the officer produces quality and efficiency, as compared to frustration.

Selection of priorities is not limited to allocation of manpower to activity, but also it is placing a priority on the amount of time an officer spends with his primary responsibility-enforcement-compared to other functions, management assistance and support, hunter safety, etc. Traditionally, the Division of Protection participated actively in sealing programs, nuisance animal problems, collecting programs, permit monitoring and similar management responsibilities. This support has been minimized in favor of enforcement and protection of the resources with minimum dilution of enforcement respensibility.

The Board of Fish and Game has contributed greatly to the problems which seem apparent today. They have given eager reception to management proposals and various refinements to sporstman ethics, administratively legislating regulations for the hunter and fisherman. A notable difference between the Board and the state legislature is the attachement of a fiscal note to the output. Means to accomplish the ends has not been part of the role for the Board. Regulations have been promulgated regardless of enforcement potential or even enforceability of the regulation. The system has reached the point of crisis.

Alaska's resources are being managed, using 20th century philosophy and the complexities of the regulations near exceed the ability of the average sportsman to comprehend. The commercial fisherman needs Loran and radar to determine his legality and the sportsman who leaves familiar terrain has to visit an office of the Department to clarify his legal obligations. Obviously, personnel of the Department of Fish and Game believe in adequate law and regulation, but are unable to distinguish between that which is morally wrong and legally wrong, and firmly believe in the 19th century enforcement philosophy that has been taught in the nation's colleges to resource students for the past forty years, that good research data cannot be secured when involved with legality.

The basic difference between the Department of Public Safety and the Department of Fish and Game is essentially, one is concerned with people and their behavior, and the other fish and animals with their related behavior and needs. Enforcement is people management and it is a full time profession. The behavior of our citizens directly influence the quality and quantity of our resources. Social behavior, patterns and values have displayed dramatic changes within a very short period of time. The right to question the competence of professional theory is not a stranger in Alaska's resource management, nor is the right to challenge the validity and authority of resource laws and regulations. People management and biological management of resources are not in harmony in Alaska, nor elsewhere. Each has its own peculiar need for competence and professionalism and that need can only be accomplished if neither is diluted to the point of inefficency. A department separation of both functions is the only means to secure a maximum benefit to the resources.

Wildlife Enforcement is not apart from any career in law enforcement, and it demands knowledge, high standards of ethics and personal conduct. The law enforcement officer must have personal attributes to allow the job to be done efficiently, such as physical, emotional, intellectual, social and moral. The combination of these attributes in an organization produces an esprit de corps that promotes quality and efficiency and commands respect for the organization and the goals of the organization. These attributes are not part of a wildlife management curiculum and are not attainable within a department that confines its standards to biological considerations.

The material benefits and merits of retaining the Protection Division within the Department of Public Safety have not been elaborated upon, but essentially, are obvious and include:

1) recruit training of the highest standard nationwide
2) in-service training
3) quality vehicular equipment, including aircraft and marine applications
4) communications

All of these are essential to law enforcement, and perhaps the greatest benefit that can be secured is support, both in manpower and practical knowledge.

The state is not financially willing or capable of supporting a Division of Fish and Wildlife Protection that can serve the protection needs of the resources and yet supply a service and maintenance section for the Department of Fish and Game, similar to the traditional pattern of ther states. To meet a national standard, would require the addition of 158 new positions in the Division of Protection, and to meet only a western state's standard would require 110 new positions.

To address a statement to present and potential relationship of Protection and Fish and Game Management personnel, is to assume the Board has been convinced that poor relationship is detrimental to resources and poor relationship now exists. It is unfortunate the concern of the Board becomes evident four years after the crisis, and the management plan is being considered with only one set of charts and graphs. Basically, the Division of Protection feels there is a state of being mutually or reciprocally interested in the same objective, but a lack of affinity. This lack of kinship is caused by wide differences in opinion towards professional standards. Mandates will not alter this problem and it is most difficult to associate this with benefits towards resources. Sound management requires wise judgement to accomplish and should include consideration of all sources of pertinent data to achieve the desired end. It took twelve years to gain a seat at the table of deliberation before the Board of Fish and Game, and only when enforcement was accountable to another department was input accepted that was contrary to the fixed posture of management proposals. At the present, relationship is healthy for resources and this should be the objective of the state. The potential relationship will remain healthy to the extent that enforcement is permitted to offer input for consideration.

	WEST	MIDWEST	NORTHEAST	SOUTHEAST	NATIONWIDE	1972 ALASKA	1976 ALASKA
Percent Enforcement Personnel compared to Total Fish & Game Staff	22.5	26.8	31.9	42.7	32.3	16.5	16.5
Percent Budget for Enforcement compared to Total Fish & Game Budget	22.8	28.5	27.9	32.3	27.4	19.0	18.76
Average Patrol District Per/Officer Sq. Miles	1,204	605	182	412	543	8,623	7,239
Arrests/Officer	48	53.7	32.6	54.6	48.7	25	13.5*
Average Fine Collected	27.17	22.29	31.03	22.96	25.12	-----	100.00
Arrests per 1,000 Licenses	5.9	5.0	5.6	8.6	6.4	8.3	6.4

National Statistics shown are for the year 1972, the last year when national statistics were available.

*Arrests/Officer is a function proportionate to the size of the area patrolled and population density. Because of overall size of the state and lower comparative population, Alaska cannot compete in National averages in this category. Arrests are directly proportionate to user contacts, and because of size and lesser density of user, contacts are less than other states. The marked decline in arrests/officer from 1972 compared to 1976 results from a forced reduction in hours worked per day by each officer, and days worked per week by each officer created by budget limitations for overtime payment.

In 1972, officers were on a straight salary basis and work performed as required. Mandatory overtime in 1976 with severe budget limitations for overtime payment has resulted in less hours worked, fewer contacts per officer, hence less arrests per officer.

LAW ENFORCEMENT—ONE THIRD OF THE TRIANGLE

WILLIAM B. MORSE, *Wildlife Management Institute, Portland, Oregon*

Abstract: Law enforcement is as important as research and management in administration of wildlife resources but it has not received proportionate attention from administrators and researchers. Enforcement accounts for ⅓ of the personnel and over ¼ of the budget of state wildlife agencies. Trends show a continued dilution of law enforcement effort per hunter and angler, and an increase in the number of laws enforced. Conservation officers will some day become recreation enforcement officers, but should remain a part of fish and wildlife departments. Recommendations for improving law enforcement include a productive research program, uniform records system, adequate officer numbers for the workload, professional enforcement communications between states, and obtaining general police powers for all conservation officers.

Management of fish and wildlife resources in the United States involves three fundamental activities: research, management, and law enforcement. Research has received primary professional emphasis from The Wildlife Society in both interest and publications. Management is the primary task of administrative agencies, which put research knowledge into operation on the land in order to improve habitat, and to regulate harvests of game species to achieve sustained yields. Law enforcement is the effort, both passive and active, to secure public compliance with the laws and regulations that management uses as tools.

Too often, enforcement is looked upon as a necessary evil, even as an anachronism that must be accepted simply because it exists. Nothing can be further from the truth. Without adequate law enforcement, the finest research and management will have little or no effect in protecting the resource. Scientist and manager alike must realize that wildlife depends on three-way teamwork, and must help give enforcement the stature and tools it needs to operate.

Law enforcement requires consideration, thought, research, and planning in order to be conducted as the major conservation business that it is. On January 1, 1972, there were more than 5,800 employees in state wildlife and fisheries law enforcement, comprising 32.2 percent of all employees of state wildlife agencies. Authorized enforcement budgets exceeded $72 million per year, or 27.4 percent of the annual operating budgets of state agencies (Morse 1972). Yet a hard analytical look at overall state enforcement operations will show that there has been only limited improvement in many years. Most of these improvements have been simple: officers now have automobiles, two-way radios, some jet boats and airplanes, and there have been improvements in recruiting and teaching. Other needs have been overlooked consistently during a period when both research and management techniques have entered the space age. For example, does the officer know why the violator violates? Can he use theory of games on a search for jacklighters? Can he check an offender's record by radio?

Enforcement officers tend to feel alienated to some degree because they are not always considered essential or professional. Better intra-department communication would reduce this feeling. Administrators could help increase the officers' morale, prestige and feelings of worth by spending more time with the officers in the field to learn their problems and needs. Regional forums, where officers from several states could gather to discuss and coordinate mutual problems, would also help. These forums should be in addition to regional association meetings and should be similar to symposia held on individual wildlife species.

Long overdue changes and improvements in enforcement will not be forthcoming until there is a change in attitude of agency administrators and an emphasis on selling improvements in enforcement to budget-approving personnel and agencies. Even in the most progressive states, the officer in the field still operates by the seat of his pants and his instincts rather than as a modern technician striving to accomplish planned and programmed goals with techniques developed by many disciplines. If law enforcement is to meet present, let alone future needs, it must receive administrative interest commensurate with its personnel numbers, expenditures, and importance as a member of the three-way wildlife and fisheries team. Such co-equal recognition of enforcement with research and management efforts is one of the principal tasks facing wildlife agencies in the '70s.

STATE of ALASKA

MEMORANDUM

TO: Richard L. Burton, Commissioner
Department of Public Safety
Juneau

DATE: April 26, 1976

FROM: Colonel J. P. Wellington, Director
Alaska State Troopers
Anchorage

SUBJECT: Division of Fish and Wildlife Protection - Retention Within the Department of Public Safety

As you know, Commissioner, when the Division of Fish and Wildlife Protection was transferred from the Department of Fish and Game to the Department of Public Safety I was the Deputy Commissioner of the Department of Public Safety and am therefore familiarwith some of the problems that we experienced during the transition.

What we found was that we inherited a division that was financially in tough shape, the morale was down and there were a number of factions within the division which were creating problems.

Now Commissioner, I don't want to pick at old sores or try to create any problems because I think the Division of Fish and Wildlife Protection, since coming to Public Safety, has operated quite efficiently and quite effectively; but I think if there is any attempt to move the Division back to Fish and Game, then we have to look objectively at what the Division was when it arrived in Public Safety.

TRAINING - For the most part the officers did not have any formal training program. Some of them attended the State Trooper Academy and others attended various short courses and also the Division conducted a yearly meeting which was a mixture of partying and training, but for the most part lasted no more than three or four days. In other words, they had no formal training program, which is now afforded them at the Public Safety Academy in Sitka.

EQUIPMENT - For the most part their equipment was in a poor state of repair and in a lot of cases not appropriate for the work to be performed. As you will probably recall yourself, a majority of the Protection officers were equipped with station wagons which certainly is not the type of vehicle that is geared to do the type of work that the Protection Officers do. This would include off-road travel plus hauling outboard motors, moose meat, gasoline, etc. Apparently the station wagons were very comfortable for the Protection Officer to ride in, but certainly were not functional, and since the Division has come to Public Safety a majority of the vehicles have been changed over to a functional pickup.

As far as radio communication is concerned, the Protection Officers had no radio contact with anybody after 4:30 or on week ends and holdidays. At the present time they are tied in with the Department of Public Safety network and have radio communications

in all the major areas, plus the use of the Department teletype system. This was all put in after the Division came to Public Safety. Since coming to Public Safety additional vessels have been acquired and additional aircraft. Again, because the Department of Public Safety is primarily law enforcement oriented and a need for adequate equipment is thoroughly understood, the Division of Fish and Wildlife Protection has benefited from this progressive thinking within the Department, both in the past and at the present.

It appeared, Commissioner, as if the purchasing of equipment was kind of on a haphazard method, with each regional supervisor determining what he needed. As a result of that there appeared to be an overbuying in certain areas and underbuying in other areas. For example, each Protection Officer had a pair of hip boots, a spotting scope, binoculars and a very expensive Pen-tex camera; but they had no radio equipment, either portable or mobile, they had no hard copy communication system, and did not even carry suitable firearms when in the field.

ORGANIZATIONAL STRUCTURE AND SUPERVISION - This is the area, Commissioner, that gets a little touchy, but I think in order to thoroughly evaluate the problem you have to look at the guts of the organization that the Department of Public Safety inherited.

It appeared as if there was very little control from the top, or if there was, the supervisors took an indifferent attitude to supervision and therefore many things were going on within the Division which would not be tolerated by you or I and certainly are not tolerated today.

When the Division came over to Fish and Wildlife Protection, the aircraft were being utilized for semi-personal business, such as transporting moose meat, personal gear, sightseeing, etc. The [illegible]akeout camps were also being utilized as pesonal hunting lodges and departmental equipment was being utilized for personal use, such as boats, binoculars, hip boots, etc. were all being used support private hunting or fishing trips. In addition, their evidence handling, recording and disposition procedure left a lot to be desired. In fact, to the embarrassment of the Department, we found that at least two polar bear hides were improperly disposed of, one being given to the Catholic Church in Fairbanks for a raffle and the other being lost which cost the State in excess of $6,000.

In other words, Commissioner, the whole administrative operation seemed to be very shoddy and without proper direction, thus creating several embarrassing situations for the State and the Division.

Now I'm sure that somebody might say that these situations could all be taken care of within the Deparment of Fish and Game if the Division was transferred back; and my answer to that would be, "Why wasn't it done during the first ten years?"

CONCLUSION - I feel that the Division of Fish and Wildlife Protection, since coming to the Department of Public Safety, is better equipped, better trained, better disciplined

and has better morale than it did while being under the Department of Fish and Game. Also I feel that the enforcement effort has been increased as a result of having better equipment, better communications, better training and better direction.

I think an individual who proposes that the Division be transferred back to Fish and Game should objectively look at what the Division was and doing prior to its coming to Public Safety and what it has accomplished after coming to Public Safety; and I think if you objectively review both situations, you will find that the Division is functioning 100% better today than it was when it was transferred.

I think also that people who have worked under both systems would readily admit that the procedures today are better than they were under Fish and Game. Now I know that we still have some individuals who are not inclined to support the fact that the Division is functioning better today than it was four years ago; and to that I can only say, Commissioner, those individuals are probably the ones who were misusing the State equipment, abusing their authority and creating problems for the Director of Fish and Wildlife Protection while it was under Fish and Game.

I think also it is important to look at what the Department of Fish and Game is designed to do and what the Department of Public Safety is designed to do. By this I mean primarily the Department of Fish and Game is research orientated, whether it be commercial fishery research and rehabilitation or wildlife research and rehabilitation, whereas the Department of Public Safety is primarily a law enforcement agency. As we have so often said, the enforcement of the Fish and Game laws are no different than the enforcement of our criminal statutes. All the rules of criminal procedure apply, and I think the records will reflect, and I'm sure the D.A.'s will concur, that the cases being made by the Division of Protection in the last three years are considerably better than the cases made prior to the Division's transfer. This can only be attributed to the increase in training and the administrative review given the report.

Again, I think one should ask: "What is being done today versus what was being done under the old concept," and I defy anybody to substantiate with hard facts the proposition that the Division of Fish and Wildlife Protection should be returned to the Department of Fish and Game.

JPW:me

OFFICE OF THE GOVERNOR

Commissioner James Brooks
Commissioner Richard Burton

April 19, 1976

Jay S. Hammond
Governor

Attached Resolution 76-2 of the Boards of Fisheries and Game

At the request of the Boards of Fisheries and Game, I am asking that each of you carry out the request of the Boards enunciated in their Resolution 76-2.

I would ask that you submit your initial response to me by May 15. After review by myself, I will then ask each of you to respond to the points raised in that input.

Additionally, I would request that each of you in your initial submission include a section of pertinent questions which would be addressed, in questionnaire form, to appropriate enforcement and management personnel at the field level.

ALASKA BOARD OF FISHERIES AND ALASKA BOARD OF GAME

JOINT BOARD RESOLUTION NO. 76-2

REGARDING THE DIVISION OF FISH AND WILDLIFE PROTECTION

The Board of Game and the Board of Fisheries, meeting in joint session on April 2, 1976 in Anchorage, Alaska, respectfully request the Governor to direct the Commissioners of Fish and Game and Public Safety to prepare a "white paper" statement regarding the relative merits of the Protection Division under the jurisdiction of their respective departments. Such statements should include but not be limited to:

1. Objectives of the Protection Division

2. Present and potential relationship of Protection and Fish and Game management personnel

Following the preparation of the "white paper" said Commissioners should prepare briefs of response to each others statement.

The Governor is further requested to provide the Boards with all, or part, at his discretion, of said "white paper" and responses. Further, should the Governor wish comment from the interest of the public, that he seek response from one or more disinterested but knowledgeable person or persons on this subject.

Gordon Jensen, Chairman of the
Joint Session of the
Alaska Board of Fisheries and
Alaska Board of Game

DATED: April 2, 1976
Anchorage, Alaska

DEPARTMENT OF PUBLIC SAFETY
TESTIMONY
10 FEBRUARY 1977

Mr. Chairman, my name is Dick Burton. I'm the Commissioner of the Department of Public Safety.

I didn't know until now we were in paratroop business. It's news to me.

Unfortunately, after listening to the testimony of the sponsor of the bill that is was introduced with good faith and with good intent. However, limited entry, Mr. Ron Rickey, Fish and Game, or no one else is responsible for stake out crews except me and this is the first time I've had an opportunity to speak to the bill. I wasn't afforded the opportunity to have any input into the bill and some factual figures prior to its drafting and introduction. I have some copies, not enough to go around, but I'll share them with you when I have comments from the Director of Fish and Wildlife and then I have a few comments of my own. For the record I'd like to read one of the major impacts of the bill, the comments some from Colonel Walstead. Implementation of the Bill would have severe detrimental results to the fisheries resources unless an approximate 400% increase in temporary man months were funded to provide stream guards for protection of salmon spawning streams. In addition to the temporary man power, additional support funds would be necessary to provide field gear, such as, tents, skiffs, outboard motors, matresses, cots, etc. - everything that goes to support a man in the field. Implementation of the bill is legislation of enforcement methods and provides a license to steal. It would afford and offer the maximum advantage to theft of fish stocks by commercial fisherman that can be envisioned. Perpetuation of fish stocks would be limited to those areas where a stream guard was stationed

to the funding provided for temporary personnel. Southeast Alaska alone has an excess of 2,500 spawning streams and each should be protected. It would be physically and financially impossible to thoroughly protect the areas unless the fisherman is faced with the prospect of apprehension during the violation thru a means he cannot predetermine under the terms of the bill absence of a visible stream guard would assure the fisherman that the stream is unprotected and vulnerable.

I have a fiscal note attached to this. As near as we could figure in the time we had allowed for what it would take to provide adequate protection we figure in just temporary man months for a fishing season throughout the state of 459 man months and with extra commodities and equipment involved, a very conservative figure of $1.3 million just for stream guards during the summer.

I equate this with, its like saying there are 2,500 First National Banks scattered around and you have people in 100 of them. The other 2,400 not even having cashiers, tellers at the windows. You can go in and help yourself to the money. I consider stealing resources from the state every bit as important as stealing money from a bank. People who steal 20-30,000 fish are as much a criminal and felon as the guy who holds up the bank. I would say that in the same respect, if we're going to have to stand out there and be visible on those few streams that we can barely afford to cover because of manpower and money requirements, that if this was a fair way to enforce the law, perhaps on the patrol cars of our troopers we should have a sign saying we are answering a call to an armed robbery at the bank and let them have a chance to get out of there, or we only answer calls to these banks on Wednesdays or Thursdays and not on Mondays or Fridays. Thats a little facetious but its the same kind of approach. I wish I would have been afforded the opportunity to have this discussed with us and with the people responsible for this prior to it.

I think we could have come to an equitable solution, whether it be budget approach or whatever to increase the enforcement capability. When you take the coastline of Alaska and we're responsible for the 3 mile off shore limit and we're responsible for 38,000 miles of shoreline, that makes roughly 105 square miles of water to cover alone. With 86 men I couldn't even cover that, let alone the land mass of the state.

Snider: Commissioner, what other forms of surveillance do you use in comparison to the number of stream guards? And what is the stream guard's salary on a temporary basis in the summer months?

Mr. Herman, Director of Administrative Services, Department of Public Safety: $3,375/summer (3 months), $2,000 overtime, and equipment $3,3000/man.

Burton: other methods of surveillance aircraft, boats, we move the people

The combined Board of Fish and Game at their last meeting in Soldotna, came on record very strongly about wanting to increase the stakeout and stream guard program in use in the same manner as it is now. We've met with the seine boat associations around southeast and other people and the honest fishermen, they're after us to increase this type of enforcement effort. Prior to statehood, this was used to a good degree and they had alot of temporary manpower. Of course the dollar an hour figure has changed with today's collective bargaining and everything. But they had a great number of people involved in those programs and it was successful and it can be. And we had apprehended people in major areas prior to them taking the fish out of there. We've made some significant changes, particularly in Mr. Osterback area this last year. I opened a post at Sand Point. It was the first time they've had anyone there in a long time. The overlength gear

well a serre forts. You probably read recently we had a $19,000 fine from on a crab boat from out there, a major (ill). We're still working after the boat too. Although for the area and the amount of people we got to cover I would venture a guess that 30%-40% of all crab and shrimp taken out in that area, not just salmon, is taken illegally and that is taken in closed areas. I don't have the copy with me, I had it on my desk this morning comparing this past year with 4 years ago, the type of cases being made where protected resources are not and the number of cases for fishing in closed areas has increased several hundred percent over what it was a few years past. Alot of this is attributed to the stream guard. I do not know about anybody parachuting into the alders until I heard it here. That is news to me. I'd like to know about that. It may have been some other department because nobody talked to me about it.

Snider: Do you know of any stream guards being shot at because of sneaking around in the brush or camoflague techniques?

Burton: I've been in law enforcement since 1954 starting in 1954 in Ketchikan, mostly Southeast Alaska, and I've heard over the years many stories of people. They'll go in and shoot up a beach, whether they know there is anyone there or not -- just to let them know they're coming in and anybody thats fished knows this. We had a case years ago of a federal stream guard that flat disappeared off the face of the earth, don't know what happened to him except that we're pretty sure it was a homicide. Sure, that happens. I doubt if I could hire anybody, especially the temporaries that you get who are college kids and so forth. You wouldn't get me to go out there and stand with a sign on my head saying I'm standing there,not unless I had a twin 50 caliber machine gun to back me up.

I would like to have more stream protection, but just the impact of this HB 111 to try to provide and identify the major streams of where

we would put people to meet the requirements of what we'd have to feel we were providing some protection, with the changes of this bill would take an additional $1.3 million.

Malone: Commissioner, I don't understand. You say if you don't have anyone there you say its protected now?

Burton: They don't know where we're at. We have stream guard in one area.

Malone: Just a minute, you said 30-40% of the catch was being taken illegally.

Burton: In the crab and shrimp area out in that Aleutian Peninsula Ch.in. I'm talking about crab/shrimp. We don't have spawning streams for that. Pure and simple manpower coverage.

Malone: What were the recommendations of the Board regarding increased stream surveillance.

Burton: Well, most of their recommendations is they just want it done. Thats all. They just want to see it increased.

Malone: To what extent?

Burton: They didn't convey that to me. I just got it off the minutes when they were discussing it with the Department of Fish and Game.

Malone: Well, do you think it needs to be increased?

Burton: Certainly

Malone: Does that increase reflecting the Department's budget?

Burton: As best we could reflect it, yes.

Malone: What sort of increase is planned for the budget year?

Burton: Presently, right now, in the budget for Fish and Wildlife protection, an additional 10 new officers and I couldn't quote you the number of temporary man months for temporaries in the summer, which was increased, but is was increases over the last year. We've got a significant increase.

Malone: Do you have any estimate the value of confiscated catches or gear equipment by stream guards?

Burton: I don't have it broken down like that we could do it.

Lt. Tedsloff, Commander of Southeast Region who operates stream guard programs

Malone: Do you have any way of estimating what the illegal catch do to stream robbers right now, in terms of dollars?

Lt. Tedsloff: I think you'd first have to establish what you're talking about, crab, shrimp, salmon, and are we talking about the

Sound or Cook Inlet or Bristol Bay. Each area's different you see and I can speak on Southeast in Southeast, maybe 10-20% salmon is taken illegally. I feel in good control of Southeast Alaska Peninsula, Kodiak, etc., is a completely picture.

Burton: It would take a concerted effort by several agencies to come up with a scientific guess of how many fish are being caught illegally. We'd like to think that all the ones fishing illegally are the ones we're catching but we know better than that, so it's strictly an assumption.

Burton:You got a problem and I'll tell you in a minute, regardless of whether stream guards are going to be standing out there with signs on them, visible or hidden. It's a summer time, temporary employee you're hiring. This is why we've cut down in the past few years on our temporary and asked for more permanent, full time, trained, professional offices because you've got these kids that are out of school, you have a training problem, you have a problem when they get out there and see a couple boat loads of fishermen, it makes your knees shake a little bit and your hands shake a little bit to go up and approach them. We have it, but not in every case. We do have some good young people. The other problem that comes around is about the time the D.A.'s and the fisherman defense funds and everything gets involved and drag it out until time to go to court, that kid's back in college. He might be in South America and then the D.A. won't prosecute because the witness is not there. Those are real problems, but I don't think we're going to change anything by having stream guards standing out there where everybody can see them.

Burton: It would be fruitful to get together and talk this over but an alternative would include the same thing that this does and it gets down to bucks... I would welcome the opportunity to talk to somebody... Any questions you have, a subcommittee on it, or anything

else, we'd be more than happy to.

This is the first contact I've had with anyone on this bill. I did not know exactly what was wanted, what was expected, or what was going to be asked as far as preparing for this. If you'd like as was discussed earlier, for a small group of us to get together we'd certainly be more than happy to sit down and make all the information that we can get together.

BC-Wildlife Protection - ? Takes, 460-920
SE: REFILE FOR PMS
By G. MICHAEL HARMON
Associated Press Writer
JUNEAU AP -Legislation to transfer fish and wildlife protection officers from the Department of Public Safety to the Department of Fish and Game has lifted the lid from a intense tug-of-war which has been simmering behind the scenes for more than a year.
The discoveries include previously undisclosed exchanges between the two agencies over the issue, including bitter allegation from the Department of Public Safety questioning the motives of proponents within the Department of Fish and Game.
In return, supporters have accused the Department of Public Safety of fostering un-Alaskan, riot squad attitudes.
The controversy surfaced with a bill HB337 by House Resources Chairman Alvin Osterback, D-Sand Point, to return fish and wildlife protection officers to the Department of Fish and Game.
The Division of Protection was moved to the Department of Public Safety five years ago by then-Gov. Bill Egan.
Osterback, who has scheduled a hearing on the bill April 1 in connection with a joint meeting of the fish and game boards, says he introduced the legislation after concluding that the Department of Public Safety is "more interested in playing cops and robbers than protecting our resources."
In an enforcement program aimed exclusively at obtaining convictions, Osterback says protection officers sit by and watch as salmon stream robbers net and boat thousands of fish before making arrests.
"They could arrest these people after they catch three or four fish," Osterback says. "But they are letting them get 50,000. I want them to protect our resources and stop crime before it occurs."
Osterback says attitudes in the Department of Public Safety were graphically demonstrated during a recent appearance before his committee by Commissioner Richard Burton.
Burton was appearing in opposition to another Osterback-backed bill to require stream guards to remain visible under the premise that crime prevention in the area of fish and wildlife protection is more important than arresting offenders.
Based on a tape recording of the committee meeting, Osterback quoted Burton as saying: "You would'nt get me to go out there and stand with a sign on my head saying I'm standing here, not unless I had a twin 50 caliber machine gun to back me up."
"Personally," Osterback replied, "I would expect this way of thinking from a riot squad in Chicago, but never from a typical Alaskan.
"The Department of Public Safety is handling enforcement from a 'cop and robber' viewpoint, rather than from one of protecting and saving the resource."
Burton was out of town and could not be reached for comment, and Fish and Game Commissioner James Brooks declined to discuss the issue because Gov. Jay Hammond has not reached a position on the controversy.
More

1935
un 16 03
BC-Wildlife Protection - 1st add, 450
SE: REFILE FOR FMS
JUNEAU: controversy.
But the opposing views of Burton and Brooks were gleaned from position papers they prepared last May in response to a joint resolution from the boards of fish and game.
In his paper, Brooks acknowledged that the transfer to Public Safety was prompted by a lack of effective leadership and control within the agency which led to a ''loose, undisciplined mode of individual activities'' by protection personnel.
He also readly admitted that the 1972 transfer to the Department of Public Safety created ''a better directed and disciplined performance,'' and said protection officers now ''have high morale, enjoy new security and an orderly, disciplined work environment.''
But Brooks added that ''the protection program presently appears to give priority to law enforcement with the aim of apprehending violators and making good strong cases, as opposed to preventing a many violations as possible by promoting the idea that detection is highly certain.''
In conclusion, Brooks supported the view of managment personnel in his department that ''the partnership of purpose that exists between resource management and resource protection cannot be satisfacorily implemented in the field while separate departments are involved.''
In his position paper, Burton appeared to substantiate the claim that under the Department of Public Safety, fish and wildlife officers are more interested in enforcement than protection.
Like the department, Burton said the ''prime mission'' of the division is law enforcement and regulation and should not be moved.
Burton's position paper also included the comments of Alaska State Troopers Director J. P. Wellington who reiterated Brooks' acknowledgement of poor control from the top during the previous organization and hinted that things may not have changed.
''Now I'm sure that somebody might say that these situations could all be taken care of within the Department of Fish and Game if the division was transferred back,'' Wellington said. ''And my answer to that would be, 'Why wasn't it done during the first ten years.' ''
Wellington said he was aware of criticism of his agency and moves to regain control of protection officers from within the Department of Fish and Game and concluded that ''those individuals are probably the ones who were misusing the state equipment, abusing their authority and creating problems for the director of fish and wildlife protection while it was under fish and game.''
Asked for comment, Hammond said he had not made up his mind on the issue, but the transfer proposal picked up the support of House Speaker Hugh Malone, D-Kenai.
Hammond said he had questions about ''the costs required to make the change and whether this change would really solve problems or if it is more cosmetic in nature.''

Alaska State Legislature

House

JUNEAU ALASKA

M E M O R A N D U M 10 March 1977

SUBJECT: Fish & Game Protection

TO: Fellow Legislators

FROM: Alvin Osterback, Representative

I am concerned with the management of the fisheries resource, particularly the fisheries protection program in our State. The Department of Public Safety is handling enforcement from a "cop and robber" viewpoint, rather than from one of protecting and saving the resource. I think these two bills are a step in the right direction towards saving the resource.

As it is now, the Department of Fish and Game makes the regulations, expecting Public Safety to enforce them. Many times this causes discrepancies between regulating and enforcing. The Departments are not coordinating these activities, which are so valuable to saving the resource.

For example, we see the Fish and Game people involved on a daily basis up here in the legislature. They are always here to testify pro or con. Sometimes they do not even come to testify (usually when they have testified on the particular bill at a previous meeting) but the Department

always makes sure there is someone here to answer questions on Fish and Game matters. Many discussions focus around enforcement matters -- and who is our expert advisor? Not the Department of Public Safety, but Fish and Game.

I do see one problem that may arise with this bill. That is whether or not the stream surveillance guards will be allowed to be trained at the Sitka Police Academy. I realize that this is an inhouse problem, so Fish & Game will have to work this out with Public Safety.

I know the fishermen in my district will back me up on this legislation. As a matter of fact, I think fishermen all over the state will support this legislation. I asked Phil Daniels before I drafted this bill about the merits of it. He is here tonight to answer any questions you may have on the fisherman's viewpoint.

Banks hire their own security guards. Likewise, I think with Fish and Game doing their own security work, we'd be buying our insurance to save the resources, since this is the Department's overall concern.

I was concerned about this matter long before the Commissioner of Public Safety gave some testimony before my committee regarding stream surveillance. At that time he said (and I quote) "You wouldn't get me to go out there and stand with a sign on my head saying I'm standing there, not

unless I had a twin 50 caliber machine gun to back me up." Personally, I would expect this way of thinking from a riot squad in Chicago, but never from a typical Alaskan.

I look forward to this legislation accomplishing better management of our fish and game resources. I know it will bring about better coordination between regulations and enforcement.

348

Representative Alvin Osterback
Chairman, House Resources Committee
Pouch V
Juneau, Alaska 99811

1220 "F" Street
Anchorage, Alaska 99501
April 22nd, 1977

Dear Representative Osterback:

I realize that this session of the legislature is rapidly drawing to a close. However, since it still has to make it through the House Finance Committee, the full House, and then the Senate, if it is ever to be enacted into law, and since so far as I'm aware your committee hasn't yet held any hearings on it or given it any consideration, I hope that you will do your best to take action on H.B. 348, dealing with tax assessment of agricultural lands in our state. I believe that the passage of this bill is vital to the future of agriculture in our state, and I urge your favorable consideration of it at the earliest possible time.

I am, Sincerely,

Gerald R. Brookman

Hon. Alvin Osterback,
Chairman, Resources Committee
Alaska House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Mr. Osterback:

Upon reading House Bill No. 348, "An Act Relating to Assessment of Farm Use Lands," I was most favorably impressed. It is my desire to see legislation of this sort passed, and I strongly support the intent and general wording of this bill.

Having come to Alaska eight years ago, I obtained 120 acres of land near Homer with the intent of developing its agricultural potential. Not being an experienced farmer, and lacking great amounts of capital, I have been forced to proceed slowly, confining my efforts to research, small scale experimentation, and fence building, while supporting myself as a teacher. As a cooperator with the Soil Conservation District, I am starting to formulate a long-term agricultural plan and am attempting to develop my land in a methodical, responsible, environmentally sound manner. I do not look forward to enjoying any significant income from the land in the near future, therefore.

It has so far been my experience that those people who eventually have success with the land are willing to make a long term commitment to their goals, while those expecting a rapid return on their investments most frequently fail, destroying the quality of their land in the process. Unfortunately, the existing system of assessing and taxing land has served to discourage those patient people who could best manage our valuable agricultural lands. Conversely, this system supports and encourages the land speculator who is characteristically concerned with nothing but personal, short term, financial gain.

In our area, land values remained rather constant until the population expansion resulting from North Slope oil development and the resulting Alyeska Project became evident. At this time various individuals began to subdivide and market small parcels of land at relatively high prices. As inflation devalued our dollars, and high wages from oil related employment made more cash available, demand for real property increased dramatically. Much of the land, as I am sure you know, was and is purchased as a defense against inflation or for further speculation. Under existing law, of course, the local assessor values all

lands in the vicinity of such activity at or near the price of most recent sale, and there is a corresponding rise of everyone's tax rate. This is almost meaningless for the new property owner who holds small acreage, and the speculator is able to compensate through tax credit maneuvering or increased sale prices (in turn further inflating land values). What is the effect upon the agriculturalist, who must retain relatively large parcels of land, while enjoying at the most a modest income? Obviously we both know what happens as this process unfolds. Unable to support the expanding tax burden, farmers are forced to sell their holdings and the land is subdivided, further increasing what are already intolerable conditions for those who continue to pursue the agricultural course. This is, of course, a major reason that agricultural land in the United States is being removed from production at a rate of 1-1/4 million acres each year.

Since obtaining my property in 1971, I have watched the above mechanism function, raising my taxes by 130% in 1975, while this year my assessment forms indicate an intended increase of 82% over that high figure. Continuing at this rate, few years will be required to make it impossible for me to exist on this land. How can it be just for people such as myself to be destroyed while unscrupulous promoters are encouraged to realize as high as 1000% profit from sales of 1/4 acre, muskeg lots to youngsters from California who come seeking the Alaskan dream?

If the State of Alaska does, as stated so frequently, wish to encourage agriculture, a bill such as H.B. 348 is needed now. I would support any effort to establish such protection for the farm, while suggesting that two items be considered for inclusion in the final legislation. In Section 1(a) the bill refers to a "farm unit." To protect those of us now engaged in agricultural development, this should be clearly defined in such a way as to allow us to be qualified for agricultural assessment. Please do not allow this term to be so structured as to apply only to those areas of the state where new developments are being proposed. Then, in the last line of Section 2, the phrase "not compatible with farm use" appears. So as to avoid the error of forcing the clearing of land at a rate which is inconsistent with sound soil management and long-term planning, be sure to include lands held in the natural state in the "farm use" classification. With the application of the penalty clause to be found in Section 1, the bill can protect against abuse of the law by speculators claiming to be farmers.

Perhaps I am a fool to persist in the idea that this Alaskan soil of ours means more than dollars. As I sit and look across it, however, I see open space for people and wildlife, wholesome food for a hungry world, and the promise of a non-destructive integration of human effort with abundant resources. Without your continuing support, such a vision may well prove to be an impossible delusion, however.

Sincerely,

Michael S. O'Meara

HB 348

March 14, 1977

The Honorable Hugh Malone
Speaker of the House
Alaska State Legislature
Juneau, Alaska 99811

Dear Mr. Speaker:

Under the authority of art. III, sec. 18 of the Alaska Constitution, and in accordance with AS 24.30.060(b) and the Uniform Rules of the Alaska State Legislature, I am transmitting a bill relating to the assessment of farm use land.

The bill would create an enforcement mechanism by which the state could recover funds it currently pays to municipalities to reimburse them for revenues lost as a result of the differential assessment of farm use land under AS 29.53.035. The current statute provides that the owner of the land is liable to the state for this money when the land is converted to a use incompatible with farm use, but there is no mechanism for collection of these funds. Experience has shown that it is virtually impossible to do so, particularly since a change in land use frequently follows a change in ownership, and the previous owner frequently is outside the jurisdiction of the Alaska court. This bill would provide a mechanism for collection of this money following a change in land use by creating a lien in favor of the state against the property. The lien becomes enforceable on change of the land to a purpose not compatible with farm use.

The bill also would eliminate an apparent contradiction in the existing statute.

Sincerely,

Jay S. Hammond
Governor

Honorable Kris W. Lethin
House of Representatives
Alaska State Legislature
Pouch V
Juneau, Alaska 99801

Dear Mr. Lethin:

RE: Proposed Alaska Homestead Act, HB 359

I appreciate your request for input on your proposed "Alaska Homestead Act," (HB 359). The Commission has also been considering methods of State land disposal to private parties. You may have read Agenda for State Lands which is our basic background analysis of this issue. We have come to a conclusion about State land disposal methods which is different from yours. Our recommendation is for a range of disposal methods carefully tailored to meet the differing needs of people who want to acquire State property.

We believe a diversified approach is needed because the land requirements of parties seeking to acquire State lands vary widely depending on the use and purpose proposed. In southeastern Alaskan communities, there is a shortage of sites for expansion of the permanent community. Here the supply of usable land is extremely scarce, and lots should be laid out so that service by urban utilities is feasible. Careful subdivision planning to make good use of scarce buildable land is essential in this situation. On the other hand, in areas of Alaska where the demand for State land is for agricultural use, tracts should be large enough to enable economic farming. As much as 640 acres per unit may be necessary for some forms of agriculture. In other areas of Alaska, people want to acquire State land so they can build a cabin for weekend recreation. For this purpose, sites fronting on a lake large enough for a float plane, or sites with road access, are at a premium. In this case, as in the urban situation, the State supply of suitable land is extremely limited, and the method of disposal should be designed to make land available to as many potential users as possible. To do so, lots or tracts must be sized to fit the purpose of the user. Industrial developers also have very specific locational requirements, and often prefer a leasehold interest to fee ownership.

To accommodate these and other different needs for State lands, now and in the indefinite future, the Commission believes that the State should utilize a range of land disposal methods fitting a variety of situations. Fulfilling the constitutional intent to make land available for "maximum use and development consistent with the public interest" requires careful consideration of the varying needs of different users in terms of location, accessibility, tract size, and method of tenure. As our

733 W. FOURTH AVENUE, SUITE 400
ANCHORAGE, ALASKA 99501

background study revealed, a major failing of the large tract disposals of the past was that properties were acquired by parties whose primary purpose was speculative and the individual who actually wanted to use and develop the land was preempted.

As you analyze the practical effects and long-range impacts of your proposal, we suggest consideration of the following questions:

1. How would you equalize the distribution of benefits under your grant program? Won't the few parties who are able to acquire 160 acres in an accessible location receive an enormous windfall, while most would receive inaccessible and therefore unusable land?

2. The State's main source of leverage in relation to the Federal government in the forthcoming d-2 decision lies in the fact the State controls vast acreages which are intermingled with Federal lands. Land use in one area of ownership affects the other. On this basis, various parties, including Governor Hammond, Senator Stevens, Representative Young, Senator Gravel and this Commission, have proposed a cooperative management system giving the State a voice in the management of Federal lands. If up to 80 percent of the State land is committed to private ownership, as proposed in your bill, would the State severely weaken its voice in the planning of Federal lands?

3. Is the State's responsibility regarding State-owned lands limited to residents as of 1977? What about future generations?

4. What are the implications of your proposal in terms of public demand for roads, schools, and fire and police services?

5. What we know as the Alaska way of life has a great deal to do with the availability of accessible public lands where people can hunt, fish, and enjoy nature without confronting "no trespassing" signs State lands are essentially the close-in public lands accessible to the average citizen. How will closure of these lands to public access alter the Alaska life style?

There are numerous other questions that come to mind about the impact of the proposed bill, but I expect you are analysing these and other matters in the process of your review.

Again, we appreciate the opportunity to comment on your proposal.

Sincerely,

Walter B. Parker

IV. DATE April 25, 1978 PREPARED BY Douglas Mutter
AGENCY Department of Natural Resources
PHONE 279-5577

Original: Legislative Finance
cc: Budget and Management
Prime Sponsor (First Legislator Named)

Background
Fiscal Analysis
of the
Homestead Initiative/HB 359

Two scenarios are presented for estimating costs and revenues possibly resulting from enactment of the Homestead Initiative in November. The low scenario assumes 100,000 applicants the first year -- a figure estimated by the Initiative sponsors. The high scenario assumes 250,000 applicants the first year -- this is approximately the estimated eligible population as of January 1979.

Costs developed for each scenario may be low due to the fact that a person may apply for a grant every 90 days under the Initiative, even though they can receive only one grant per year. Conceivably then, each person could make four applications per year. Costs are even more difficult to predict for succeeding years because population growth, re-applications, applications of newer versus longer term residents, etc. are dynamic factors affecting use of the "homesteading" program.

The Department is prepared to develop additional fiscal information for scenarios of 500,000 applicants or 1,000,000 applicants (with the assumption that the 3-year residency is struck down to 30 days by the courts) at the request of the legislature.

Scenario A: 250,000 Applicants

Applicant Costs

1. A $6.00 fee is normally required per recording:

   $6.00 X 250,000 applications = $1,500,000

2. Each application must be accompanied by a

   $75.00 fee (if applicant forwishes title search) or $100.00 fee (if no title search is submitted):

   assume: 100,000 applications X $75.00 and;
   150,000 applications X $100.00 = $22,500,00

3. A successful applicant must provide a survey within 5 years to gain patent. Survey costs for the first years grants would be (although costs may occur over a five year period, for convenience this figure represents costs resulting from the first years activity; in succeeding years, new applicant's survey costs would further complicate annual estimates):

   assume: $1,500 per 40 acres X 250,000 grants = $375,000,000

4. Each applicant must publish notice of his application once a week for three consecutive weeks in a local newspaper:

   assume: $23.00/3 lines/3 days X 250,000 = $5,750,000

5. TOTAL applicant costs, first year = $404,750,000

Lost Revenues

1. Possible revenue lost to the public because state lands will be gratis (assuming the state sold all acres and not considering lease possibilities, inflation over the time it would take for state disposals of this size, etc.):

   assume: an average cost of $500 per acre, so:
   $500.00 X 40 acres X 250,000 = $500,000,000

2. Revenue lost to the public because property taxes are not paid until one year after patent (which will mean 6 years because patent comes after the 5 year survey requirement is met):

   this depends on assessed value of land, whether located in a borough and which one, annual assessment procedures, etc. = $ unknown

3. TOTAL lost revenues, first year = at least $500,000,000

Unaccounted Taxpayer or Landowner Costs

1. Many services will be required by 'homesteaders' including roads (at $15,000 to $150,000 per mile, construction only), schools (as required by law), utilities, police, fire, health, etc. The provision withholding state services for 15 years is questionable, in the case of schools at least, and still leaves costs at year 16 to be accounted for = $ unknown

Administrative Costs

1. The sheer volume of paperwork, legal requirements, verification, notification, etc. for the anticipated number of applications will require the manpower/ dollars outlined in the following table, or a tremendous backlog and delay in the title clearing process will be encountered. TOTAL = $27,297,238

Revenue

1. Revenue to the State resulting from the $5.00 filing (recording) fee would be:

   $5.00 X 280,000 applications = $1,500,000

2. Revenue to the State resulting from the $75.00 to $100.00 application fee, based upon the above cost breakdown, would be = $22,500,000

3. TOTAL revenues to the State = $24,000,000

Summary of Estimated
First Year Administrative Costs
@ 250,000 Applicants -- Homestead Initiative

Agency	No. Employees	Personal Services	Travel	Contractual	Commodity	Equipment	Totals
Department of Natural Resources							
A. Planning & Classification	4	$ 116,574	$ 7,601	$ 33,195	$ 1,377	$ 1,732	$ 160,55
B. Survey & Records	693	16,599,249	50,000	5,400,000	500,000	450,000	22,999,24
C. Land & Water Management	50	1,299,213	5,000	140,000	25,000	50,000	1,519,21
D. Administration	30	552,223	2,874	38,880	51,000	6,040	651,01
E. Subtotal	777	$16,567,259	$65,555	$5,612,075	$577,377	$507,772	$25,330,03
Department of Administration & Court System							
A. Recording	83	$ 1,601,400	$14,900	$ 210,900	$140,000	$ -0-	$ 1,967,20
TOTALS	860	$20,168,659	$80,455	$5,822,975	$717,377	$507,772	$27,297,23

Note: See the appendix for a detailed cost breakdown of this scenario.

Scenario B: 100,000 Applicants

Applicant Costs

1. A $5.00 fee is normally required per recording:

   $5.00 X 100,000 applications = $500,000

2. Each application must be accompanied by a

   $75.00 fee (if applicant furnishes title search) or
   $100.00 fee (if no title search is submitted):

   assume: 40,000 applications X $75.00 and;
   60,000 applications X $100.00 = $9,000,000

3. A successful applicant must provide a survey within 5 years to gain patent. Survey costs for the first years grants would be:

   assume: $1,500 per 40 acres X 100,000 grants = $150,000,000

4. Each applicant must publish notice of his application once a week for three consecutive weeks in a local newspaper:

   assume: $33.00/8 lines/3 days X 100,000 = $2,300,000

5. TOTAL applicant costs, first year = $161,800,000

Lost Revenues

1. Possible revenue lost to the public because state lands will be gratis (assuming the state sold all acres and not considering lease possibilities, inflation over the time of state disposals of this size, etc.):

   assume: an average cost of $500 per acre, so:
   $500.00 X 40 acres X 100,000 = $200,000,000

2. Revenue lost to the public because property taxes are not paid until one year after patent (which will mean 6 years because patent comes after the 5 year survey requirement is met):

   this depends on assessed value of land, whether located in a borough and which one, annual assessment procedures, etc. = $ unknown

3. TOTAL lost revenues, first year = at least $200,000,000

Unaccounted Taxpayer or Landowner Costs

1. Many services will be required by "homesteaders" including roads (at $15,000 to $150,000 per mile, construction only), schools (as required by law), utilities, police, fire, health, etc. The provision withholding state services for 15 years is questionable, in the case of schools at least, and still leaves costs at year 16 to be accounted for = $ unknown

Administrative Costs

1. The sheer volume of paperwork, legal requirements, verification, notification, etc. for the anticipated number of applications will require the manpower/ dollars outlined in the following table, or a tremendous backlog and delay in the title clearing process will be encountered (calculated at 90% of the costs of scenario A). TOTAL = $10,738,896

Revenue

1. Revenue to the State resulting from the $6.00 filing (recording) fee would be:

   $6.00 X 100,000 applications = $600,000 .

2. Revenue to the State resulting from the $75.00 to $100.00 application fee, based upon the above cost breakdown, would be = $9,000,000

3. TOTAL revenues to the State = $9,500,000

Summary of Estimated
First Year Administrative Costs

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

Scenario A

The above costs assume all eligible Alaskans (about 250,000) will make only one application during the first year. See attached background fiscal analysis.

Scenario B

The above costs assume 100,000 Alaskans will make only one application during the first year. See attached background fiscal analysis.

IV. DATE April 25, 1978 PREPARED BY Douglas Mutter

AGENCY Department of Natural Resources

PHONE 279-5577

Original: Legislative Finance

cc: Budget and Management

Prime Sponsor (First Legislator Named)

03-001 (Rev. 12/77)

Background
Fiscal Analysis
of the
Homestead Initiative/HB 359

Two scenarios are presented for estimating costs and revenues possibly resulting from enactment of the Homestead Initiative in November. The low scenario assumes 100,000 applicants the first year -- a figure estimated by the Initiative sponsors. The high scenario assumes 250,000 applicants the first year -- this is approximately the estimated eligible population as of January 1979.

Costs developed for each scenario may be low due to the fact that a person may apply for a grant every 90 days under the Initiative, even though they can receive only one grant per year. Conceivably then, each person could make four applications per year. Costs are even more difficult to predict for succeeding years because population growth, re-applications, applications of newer versus longer term residents, etc. are dynamic factors affecting use of the "homesteading" program.

The Department is prepared to develop additional fiscal information for scenarios of 500,000 applicants or 1,000,000 applicants (with the assumption that the 3-year residency is struck down to 30 days by the courts) at the request of the legislature.

Scenario A: 250,000 Applicants

Applicant Costs

1. A $6.00 fee is normally required per recording:

   $6.00 X 250,000 applications = $1,500,000

2. Each application must be accompanied by a

   $75.00 fee (if applicant furnishes title search) or
   $100.00 fee (if no title search is submitted):

   assume: 100,000 applications X $75.00 and;
   150,000 applications X $100.00 = $22,500,00

3. A successful applicant must provide a survey within 5 years to gain patent. Survey costs for the first years grants would be (although costs may occur over a five year period, for convenience this figure represents costs resulting from the first years activity; in succeeding years, new applicant's survey costs would further complicate annual estimates):

   assume: $1,500 per 40 acres X 250,000 grants = $375,000,000

4. Each applicant must publish notice of his application once a week for three consecutive weeks in a local newspaper:

   assume: $23.00/8 lines/3 days X 250,000 = $5,750,000

5. TOTAL applicant costs, first year = $404,750,000

Lost Revenues

1. Possible revenue lost to the public because state lands will be gratis (assuming the state sold all acres and not considering lease possibilities, inflation over the time it would take for state disposals of this size, etc.):

   assume: an average cost of $500 per acre, so:
   $500.00 X 40 acres X 250,000 = $500,000,000

2. Revenue lost to the public because property taxes are not paid until one year after patent (which will mean 6 years because patent comes after the 5 year survey requirement is met):

   this depends on assessed value of land, whether located in a borough and which one, annual assessment procedures, etc. = $ unknown

3. TOTAL lost revenues, first year = at least $500,000,000

Unaccounted Taxpayer or Landowner Costs

1. Many services will be required by "homesteaders" including roads (at $15,000 to $150,000 per mile, construction only), schools (as required by law), utilities, police, fire, health, etc. The provision withholding state services for 15 years is questionable, in the case of schools at least, and still leaves costs at year 16 to be accounted for = $ unknown

Administrative Costs

1. The sheer volume of paperwork, legal requirements, verification, notification, etc. for the anticipated number of applications will require the manpower/ dollars outlined in the following table, or a tremendous backlog and delay in the title clearing process will be encountered. TOTAL = $27,297,238

Revenue

1. Revenue to the State resulting from the $6.00 filing (recording) fee would be:

   $6.00 X 250,000 applications = $1,500,000

2. Revenue to the State resulting from the $75.00 to $100.00 application fee, based upon the above cost breakdown, would be = $22,500,000

3. TOTAL revenues to the State = $24,000,000

Summary of Estimated
First Year Administrative Costs
@ 250,000 Applicants -- Homestead Initiative

Agency	No. Employees	Personal Services	Travel	Contractual	Commodity	Equipment	Totals
Department of Natural Resources							
A. Planning & Classification	4	$ 116,574	$ 7,681	$ 33,195	$ 1,377	$ 1,732	$ 160,55
B. Survey & Records	693	16,599,249	50,000	5,400,000	500,000	450,000	22,999,24
C. Land & Water Management	50	1,299,213	5,000	140,000	25,000	50,000	1,519,21
D. Administration	30	552,223	2,874	38,880	51,000	6,040	651,01
E. Subtotal	777	$18,567,259	$65,555	$5,612,075	$577,377	$507,772	$25,330,03
Department of Administration & Court System							
A. Recording	83	$ 1,601,400	$14,900	$ 210,900	$140,000	$ -0-	$ 1,967,20
TOTALS	860	$20,168,659	$80,455	$5,822,975	$717,377	$507,772	$27,297,23

Note: See the appendix for a detailed cost breakdown of this scenario.

Scenario B: 100,000 Applicants

Applicant Costs

1. A $6.00 fee is normally required per recording:

   $6.00 X 100,000 applications = $600,000

2. Each application must be accompanied by a

   $75.00 fee (if applicant furnishes title search) or
   $100.00 fee (if no title search is submitted):

   assume: 40,000 applications X $75.00 and;
   60,000 applications X $100.00 = $9,000,000

3. A successful applicant must provide a survey within 5 years to gain patent. Survey costs for the first years grants would be:

   assume: $1,500 per 40 acres X 100,000 grants = $150,000,000

4. Each applicant must publish notice of his application once a week for three consecutive weeks in a local newspaper:

   assume: $23.00/8 lines/3 days X 100,000 = $2,300,000

5. TOTAL applicant costs, first year = $161,900,000

Lost Revenues

1. Possible revenue lost to the public because state lands will be gratis (assuming the state sold all acres and not considering lease possibilities, inflation over the time of state disposals of this size, etc.):

   assume: an average cost of $500 per acre, so:
   $500.00 X 40 acres X 100,000 = $200,000,000

2. Revenue lost to the public because property taxes are not paid until one year after patent (which will mean 6 years because patent comes after the 5 year survey requirement is met):

   this depends on assessed value of land, whether located in a borough and which one, annual assessment procedures, etc. = $ unknown

3. TOTAL lost revenues, first year = at least $200,000,000

Unaccounted Taxpayer or Landowner Costs

1. Many services will be required by "homesteaders" including roads (at $15,000 to $150,000 per mile, construction only), schools (as required by law), utilities, police, fire, health, etc. The provision withholding state services for 15 years is questionable, in the case of schools at least, and still leaves costs at year 16 to be accounted for = $ unknown

Administrative Costs

1. The sheer volume of paperwork, legal requirements, verification, notification, etc. for the anticipated number of applications will require the manpower/ dollars outlined in the following table, or a tremendous backlog and delay in the title clearing process will be encountered (calculated at 40% of the costs of scenario A). TOTAL = $10,738,896

Revenue

1. Revenue to the State resulting from the $6.00 filing (recording) fee would be:

   $6.00 X 100,000 applications = $600,000

2. Revenue to the State resulting from the $75.00 to $100.00 application fee, based upon the above cost breakdown, would be = $9,000,000

3. TOTAL revenues to the State = $9,600,000

DRAFT INFORMATION
FEB. 23, 1978

MEMO TO: Theodore G. Smith, Director
Division of Land and Water Management

FROM: Claud M. Hoffman
Chief Cadastral Engineer

SUBJECT: Land Disposal Cost Projections
Homestead Initiative. Your Memo
January 19, 1978 (Mike Beirne's Bill)

In order to supply data as requested the following assumptions (A through G) have been made. Also I suggest a serious review be given to the establishment of several small area offices in specific areas, where the action is going to be (State land ownership). These offices would operate with lines of responsibility to the District Manager. No Engineering cost is provided for such as I envision our operations at the District and State level.

(A) A.D.L. LAND RECORDS: (Land Status Plats, Historical Indexes and Serial Pages). This has been broken into four phases of work as discussed below. We consider that each "grant" is acted upon independant of how many "grants" an individual may legally obtain, i.e. 40, 80, 120 or 160 acres of land under the terms of the proposed law.

Phase No. 1. In compliance with Section 38.05.420, Sub-paragraph 2. At this time the "recorded application" for a land grant is acknowledged, a Serial Page is constructed, location data shown on the status plat, a historical plat constructed, blueprint copies submitted to the respective district offices and copies placed in the A.D.L. Public Land Office and the microfilming of plats and serial pages is accomplished.

MEMO TO: Ted Smith, Director

Phase No. 2. In compliance with Section 38.05.430. During, or at, the end of the 90 days and/or whenever "notification" is given, the same data as discussed in Phase No. 1 is again updated on our Land Records, plus, at this time, an entry is made on the Historical Index Plats that were constructed in Phase 1.

Phase No. 3. In compliance with Section 38.05.440. At the time a "copy of the survey" is sent to the Director, data is again updated and entered into the Public Land Records as discussed in Phase No's, 1 and 2.

Phase No. 4. In compliance with the issuance of the "patent" the proceedures as we now utilize are to be complied with and again data is entered into our Public Records as discussed in Phase No's. 1, 2 and3 above.

(B) A.D.P. LAND RECORDS: For A.D.P review and estimation purposes we are assuming the Public Land Records Automation System has to be updated harmoniously with any and all changes on the Public Land Records for each land "grant"; therefore Phases' 1 through 4 for "tracking of land", In order to enable the Director and his staff to make management decisions, has to be compiled with,

(C) AN OVERVIEW ASSUMPTION OF THE PUBLIC LAND RECORDS: The system that we now have on a "rectangular survey Grid System" is to continue as the basis of maintaining our Public Land Records and the system of land recordation and records location is a 40-acre, and/or aliquot part of a section concept

MEMO TO: Ted Smith, Director

and is to continue to be in harmony with the system that we now "maintain manually".

(D) CADASTRAL SURVEYS: Although no surveys are to be reviewed in the field (the proposed law is quite explicit as to our survey functions and responsibilities), within Section 38.05.440 it is discussed that "the survey shall conform to "regualtions" adopted by the Division of Lands and in force on the effective date of this act". I am assuming that we will come forth with "simple regulations" whereby we concentrate our total manageme· and technical functions and efforts to the last paragraph of that section which states "a copy of the survey shall be sent to the Director" (I interpret this as meaning a final survey plat). We must remember the plat at this stage, according to the proposed law, has already been filed in the Recording Office thereby we will review this plat as a final plat for title passage purposes. It has been accepted for recordation by the appropriate Magistrates Office. If we, during a cursory review, do happen to find errors (of which I would gather ten percent of the plats will have) that we feel is critical to the passage of State title to land, the "amendment process" will have to be accomplished by the surveyor and the claimant prior to when a state land title for the alienation of state lands can be accomplished. Statutory title may exist but still no state document is issued.

(E) INFORMATION AND EDUCATION (REFERENCE TO RECORDS AND CADASTRAL SURVEYS) Due to the impact of requests and information surrounding such a program, I feel that it mandentory for each ADL district to have a Cadastral Surveyor II on the managers staff to do nothing but handle general survey

MEMO TO: Ted Smith, Director

problems for this "Land Act". This surveyor would not "per-sey" be doing any preliminary survey plat review but be offering over-the-counter oral and written assistance to locators, surveyors, title companies and the public. Again my overall concept being, no "preliminary plats" are to be reviewed by this office, as per the intent of the law. The surveyor has before him a final product, the plat and possibly an affidavit with the private surveyor being totally responsible for his product. These three Cadastral Surveyor II's, Grade 20, would cost $108,657. each year, and their services would be "pro-rated" for all land grants issued within the confines of the ADL district they are assigned to.

(F) LAND RECORDS FOR OWNERSHIP TITLE REVIEW: It is anticipated that .4 of an hour is necessary for a Grade 14, L.M.T. II per "grant" for Land Title work to accomplish a general review of the applicant (grant) with no specific "in depths" review given. This is just a quick title check of status at the time action on a land grant comes about in Public Records Unit. This = .4 X $11.93 = $4.77 per grant.

(G) STATISTICAL DATA:

1) LAND RECORDS: For each of the 4 phases as discussed and per each applicant for a grant, 1/10 of an hour for a Clerk IV is necessary; 3/10 of an hour for Draftsman II work; $3.00 for blueprints; $1.00 for microfilming of our plats and serial register.

In summary for each applicant (grant) this consists of 4/10 of an hour for a Clerk IV; 1.2 hours for a Draftsman II; $12.00 for blueprinting and $4.00 for microfilming.

MEMO TO: Ted Smith, Director

It is estimated that "Phases' 1 through 4" work would most likely be accomplished on our land records during the first year, but Phase Four could be accomplished anytime during the grant term of 5 years. Therefore I consider the impact being annually for all grants. This computes at a cost of $31.07 per site for Land Records only. (Does not include title review, Land Registration, A.D.P of Records or general typing and filing work)

2) DATA PROCESSING:

(a) PHASE 1. Again 1/10 of an hour for a Clerk IV for Serial Pages and 1/10 of an hour for a Clerk IV for Status Plats is necessary to continue the system we now have.

(b) PHASES' 2, 3 and 4: The same work time discussed above would be applicable and/or a total time of 8/10 of an hour for a Clerk IV for the "maintenance of automation" of A.D.L. Land Records per applicant (grant). (Again Phase 4 could be accomplished during the fifth year).

A total cost per applicant (grant) for A.D.P. =$6.83; with an Overall Land Records Cost being - $37.90 per grant (Does not include title review, Land Registration or general typing or filing work.)

3) CADASTRAL SURVEYS:

The emphasis herein is that only minimum control regulations will be effected due to background of the intent of the proposed law to quickly get lands into private hands as of

MEMO TO: Ted Smith, Director

the passage date of the act thereby only a final plat would be critiqued, via a Cadastral Surveyor I, Grade 19. It is estimated that each critiqueing would be 2 hours per (grant) applicant thereby the cost per application for two hours is $34.48 (per platted grant).

(H) TYPING AND FILING WORK: For General Survey Correspondence for Inter-office and public - .3 man hours for correspondence typing and filing of data per grant and .3 man hours for general Land Records and title information typing is needed. This = .6 man hours for a Clerk Typist III = $4.82 per grant.

(I) LAND REGISTRATION ACT: After the first year, each and every grant document will have to be recorded via the statement of Real Property Ownership.

This consists of .3 man hours for a Clerk III per document to type an entry and cross-reference the system we now use. This .3 equals $2.41 per grant for years 2 through 5 or whetever.

(J) STATE WIDE PLATTING: Section 38.05.450 (b) prohibits re-subdivision until after 1 year. Although our "control" is limited never-the-less an impact does exist. The impact is herein estimated that 25% of the total grants will have action annually for the first 5 years, this being due to the scarcity of lands. It is estimated that each such grant will consume 1 man hour therefore a .25 average per grant overall for a Grade 20 Cadastral Surveyor II. $18.57 X .25 hrs. = $4.64 per grant for overall years 2 through 5 of the grogram or whetever.

(K) SUMMARY OF IMPACT: What does the above indicate:

MEMO TO: Ted Smith, Director

(I) Each grant will cost $31.07 for normal serial page, status plat work and H.I. Plat work; $6.83 for continuation of Automation of Records; $34.84 for a final plat critique; $4.77 per title check; Typing and filing = $4.82; $2.41 per grant for Land Registration; $4.64 per grant for State-wide Platting and $108,657.00 for Cadastral Information and Education concerning the program at the District level, this cost being distributed equally to all "grants" within a respective A.D.L. Land Office Districts.

The cost per applicant (grant) = $31.07 + $6.83 + $34.48 + $4.77 + $4.82 + $2.41 + $4.64 = $89.02 + Undetermined District Surveyors cost due the variable; i.e. Scenario data.

(L) SUMMARY OF TOTAL MANHOURS FOR LAND RECORDS, TITLE SEARCH, A.D.P., CADASTRAL REVIEW, LAND REGISTRATION AND STATE-WIDE PLATTING PER APPLICANT (GRANT):

To process each grant the manhours computes to: Clerk IV = 1.2 hrs.; Draftsman II = 1.2 hrs., Cadastral Surveyor I = 2.0 hrs.; L.M.T.II = .4 hr.; Clerk Typist III = .6 hrs; Clerk III = .3 hrs.; Cadastral Surveyor II .25 hrs. and again the variable for the District Surveyor cost, i.e. Scenario data. This computes to 6.0 manhours per grant (does not include blueprinting and microfilming costs).

(M) CONCLUSIONS:

SCENARIO "A"

(a) Land Records (Land Status and A.D.P. - Does not include Land Registration)

(I) 1.2 manhours per applicant (grant) X 250,000 applications = 300,000 manhours, 300,000 manhours ÷ 1,950 manhours per year = 154 Clerk positions.

MEMO TO: Ted Smith, Director

(2) 1.2 manhours per applicant (grant) for drafting = 154 Drafting positions.

(3) 250,000 applicants X $12.00 per applicant (grant) for blueprinting + $4.00 for microfilming = 250,000 X $16.00 = $4-million.

(4) .4 manhours per applicant (grant) for general land title check = 250,000 X .4 ÷ 1,950 = 51 L.M.T.II positions.

(5) .3 manhours per applicant (grant) for general typing and filing = 250,000 X .3 ÷ 1,950 = 39 Typists.

(b) LAND REGISTRATION:

(1) .3 manhours per applicant (grant) for processing the "Statement of Real Property Ownership" = 250,000 X .3 ÷ 1,950 = 39 Clerks.

(c) STATE-WIDE PLATTING:

(1) .25 manhours for state-wide plat processing per applicant (grant) = 250,000 X .25 ÷ 1,950 = 32 Cadastral Surveyors.

(d) CADASTRAL SURVEY REVIEWS (NOT INCLUDING THE DISTRICT SUPPORT SURVEYOR OR STATE-WIDE PLATTING)

(1) 2 manhours per applicant (grant) X 250,000 applicants = 500,000 manhours ÷ 1,950 = 256 Cadastral Surveyors.

(2) .3 manhours per applicant (grant) for general typing and filing = 250,000 X .3 ÷ 1,950 = 39 Typists.

MEMO TO: Ted Smith, Director

ANNUAL COST - 1ST YEAR FOR 250,000 APPLICANTS (GRANTS) ("C" STEP & 1.22 FACTOR)

(1)	154 Clerk IV's X $16,646.	=	(Land Records)	$ 2,563,484.
(2)	154 Draftsman II's X $18,929.	=	(Land Records)	$ 2,915,066.
(3)	256 Surveyor I's X $33,613.	=	(Cadastral)	$ 8,604,928.
(4)	$16. per applicant for paper/film	=	(Printing)	$ 4,000,000.
(5)	51 L.M.T. II's X $23,263.	=	(Land Records)	$ 1,186,413.
(6)	78 Typist III's X $15,650.	=	(Land Records and Cadast.)	$ 1,220,700.
	For 250,000 applicants (grants)		SUB-TOTAL =	$ 20,490,591.
				(20.5 million
(7)	District Surveyors (C.S. II)= (36,219 X 3)	=		$ 108,658.
(8)	Space (Office -693 People)	=		$ 400,000.
(9)	Travel, Per Diem, Commodities, Equipment	=		$ 1,000,000.
(10)	Special ADP/EDP Funds to handle increase in the Records System to meet demands	=		$ 1,000,000.
	SCENARIO "A" TOTAL 1ST YEAR	=		$ 22,999,249. (23.0 M)
	(23.0 M ÷ 250,000 grants = $92.0 per grant total 1st year)			

SCENARIO "A" 2ND YEAR THROUGH ??

1 through 6 above	=	$ 20,490,591.
7 through 9 above	=	$ 1,508,658.
10 above (adjusted for per year)	=	$ 500,000

IN ADDITION:

LAND REGISTRATION & STATE-WIDE PLATTING

(1a) 39 Clerk III's X $15,650.	=	$ 610,350.

MEMO TO: Ted Smith, Director

SCENARIO "A", SECOND YEAR (CONT.)

(1b) 32 Cadastral Surveyor II's X 36,219	=	$ 1,159,008.
TOTAL 2ND YEAR AND THROUGH ??	=	$24,268,600.
(Inflation not considered)		(24.3 M)

(24.3 M ÷ 250,000 grants = $97.07 per grant total 2nd year and thereafter)

MEMORANDUM

DEPARTMENT OF NATURAL RESOURCES
DIVISION OF LAND AND WATER MANAGEMENT

TO: DICK LeFEBVRE
Chief
Lands and Water Section

DATE: March 8, 1978

FILE NO:

TELEPHONE NO:

FROM: LAR KRUG
Administrative Officer
Administrative Services Section

SUBJECT: Impact of Bierne Bill

The following items will affect the Administrative Services Section in the following manner:

A. Accounting:

1. Filing fees - Accounting Clerks II will be needed to process 1750 application receipts per day. This would necessitate 10 clerks and 10 typewriters and/or desk areas to process for first 3-month cycle, and then level off to 1/2 that number on successive land openings or disposal area announcements.

2. Additional forms must be ordered or special receipt form used. 500,000 forms would be necessary for the assumption of multiple filings

3. Impact on computer listings and data people outside Accounting would occur.

4. Office space, storage space (cabinets, files) and procedures, policies and supervision will be necessary - this would require the function of an Accountant III position to oversee and implement this function.

B. Word Processing:

1. At 5 minutes a letter and assuming 50,000 letters issued over 3 months for disclaiming applicant rights would take 8 Clerk Typist II or III's with Mag. II typewriters to do that volume. Drop-off levels of various proportion would occur.

2. Office space, equipment, supervision, policy development, and procedures would upgrade Clerk IV to Word Processing Supervisory to 12 or 14 position.

C. Mail Room/Supply:

1. Additional forms, ordering, registered mail, deliveries and pick-ups would require 3 full-time additional positions to carry on additional functions.

2. Office space, mailing costs, equipment, and increased supervision would result in elevating supervisor to 14 level of Administrative Assistant II - long-term carryover will result.

D. Personnel:

1. At least 14 new people in the Administrative Section alone plus additional staff in Land and Water Management and Records with additional requirements for training, orientation, paperwork, and payroll would require 2 more positions of Personnel Assistant I plus a Clerk Typist II position to handle volume.

2. Additional office space, equipment and files plus tremendous numbers of forms and supplies needed to process state-wide staff concerns.

3. Personnel Assistant I increased responsibilities elevated to Personnel Assistant II.

E. Administration:

1. Another Administrative Assistant I would be needed to coordinate efforts of expanded service demands, budget controls, and back-up necessary to coordinate state-wide Division services.

2. Increased workload requirements and system structure on Administrative Officer I would require upgrading or temporary positioning of Administrative Officer II duties.

3. Additional space requirements, equipment, and storage will be necessary to be provided.

The entire effect on our Administrative Services Section would be felt greatly unless these services were incorporated into Lands and Water Management. Such a step would critically impair any continuity of services with Juneau. Ongoing projects and requirements would suffer immensely without additional staff to carry the extra load, some of which would be temporary.

F. Juneau:

1. Increased staffing within the Division would likewise strain Administrative Services in Juneau to carry the backlog of paper, bills, and policy necessary for major onslaughts to the entire system.

***

Special Note: Without provisions for staff time to submit their applications for land we can expect initial high absenteeism to be

"first in line" etc., so that Division employees can have their cake, too. It is my understanding that all state employees will be eligible under this Homestead Act.

cc. Mike Smith.

Division of General Services & Supply
Anchorage

The Alaska Homestead Act

This Initiative will have a substantial impact on the Recording Section as it requires that every application be recorded (Sec 38.05.420(a)(1)).

The Division of Lands estimates that there are 250,000 Alaskans who are eligible to apply for a grant. It is prudent for an applicant to record an application on more than one parcel. I think it is reasonable to expect about 500,000 recordings the first year and most of these will occur in the first 90 days.

We propose to maintain our regular business hours for the normal recording and filings. The section has insufficient staff even for this, but there is no reason to cause this facet of our service to suffer any more than it now does.

In most districts, recordings under the Initiative will be processed by 2 night shifts. Hand carried applications to be recorded will be accepted between 8 AM and 4:30 PM daily and will be placed in a receptacle in the order in which they are received. Applications arriving in the mail will be recorded in random order after all hand carried applications have been recorded. The recording stamp date will not be changed until all applications received that day have been recorded. Such applications must be accompanied by a check or money order for the recording fee.

An application form is being designed in cooperation with the Division of Lands. Although its use cannot be mandatory, we are hoping that the majority will use the form as it will provide uniformity in the location of information, acknowledgments and place for the recording stamp. We are also asking Lands to consider a self-mailer design so we can merely fold, tape and put postage on the copies to be returned. At a minimum, we would want the return address to fit a window envelope.

The best estimate of cost must be based on the number of recordings and our present cost per transaction. The only costs that wouldn't be duplicated are for office space, equipment maintenance, and there would be only one State Recorder and one Assistant.

Based on these assumptions, we estimate our costs to be:

FY 79 Budget	$996.3
Plus personal services underfunding	18.6
Less State Recorder & Assistant	(62.4)
Less equipment	(26.3)
Less rent	(21.3)
Total	$904.9

Estimated Number of Transactions	230,000
Cost per transaction	$ 3.9343
Cost of 500,000 additional transactions	$1,967,150
Fees charged for 500,000 additional transactions	$3,000,000

It's unfortunate that the drafters of the Initiative didn't consult with the people who have to do their work. The recording of applications should not have been necessary. Instead, applications could have been submitted directly to Lands. The order of filing could have been resolved other than thru the medium of the recording as Lands used a satisfactory procedure on their Homesites Act (A.S. 38.08.040(b)).

The Recording Section should not become involved until the State issued patents to the land and the conveyance is recorded.

A more important defect in the Initiative is that the only rights-of-way are on section lines. There will be interior parcels without access and whole areas of Alaska that will be inaccessible to surface travel because the section lines are impassible. There should be a 50 foot easement on both sides of every property line and at least a 25 foot easement around lakes and on each side of waterways. Also, they could have reserved a part of each section (1/4, 1/16, etc.) for public use.

cc: Commissioner Allen
Javan Beitinger

NOTE: In further conversations with Tom Main and Rick Barrier, Alaska Court System, the following cost breakdowns were identified to cover the recording aspects of the Initiative:

Personal Services	=	$1,601,400
Travel	=	14,900
Contractual	=	210,900
Commodities	=	140,000
Equipment	=	-0-
TOTAL		$1,967,200

Anchorage, Alaska 99501

Dear Mr. Smith,

The House Resources Committee will be reviewing HB 383 relating to State Land Leasing and HB 387 an Act relating to the Leasing of State Land other than for the extraction of Natural Resources; and providing for an effective date on Monday March 28, 1977 at 1:15 p.m. in room 118 of the Capitol Building.

Please supply us with position papers or material you have on these bills by the time of the meeting. If you have any information pertinent to these topics, the Committee would appreciate receiving that, too. If you know of other interested groups, please contact them.

If you have suggested amendments, please supply the staff with copies of that prior to the meeting.

If there are fiscal implications and notes are necessary, please prepare them and submit them to the Committee -- preferably prior to the meeting.

Thank you for your cooperation.

Sincerely,

STATE OF ALASKA

WILLIAM A. EGAN, Governor

DEPARTMENT OF EDUCATION

BOARD OF EDUCATION / POUCH F — ALASKA OFFICE BUILDING
JUNEAU 99801

April 8, 1977

Honorable Alvin Osterback, Chairman
House Resources Committee
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Chairman Osterback:

HB 383, relating to state land, was introduced at the request of the Governor on March 22 and is, we hope, among those bills that he indicated he would not press for passage this year.

In HB 383 we see areas of public concern that require review, record search and fuller public discussion. We do not oppose the bill at this time, but we recommend that action not be taken on it this year.

We believe HB 383 has certain drafting deficiencies and uncertainties, and we would hope these might be addressed between sessions. To mention one substantive point of concern, we think it too early to charge management costs against trust land income. We believe that the history of those lands and their management and proceeds should first be traced before the Legislature makes such a determination. Whatever such search reveals, we believe it inappropriate that some government agencies enjoy free use of trust lands while (under HB 383) such remaining trust lands as do yield income are charged for management costs. We believe this an unwitting subversion of such lands' intended purpose; namely, to create income for stated public programs. At very least, free use should be weighed against charging management costs to some trust lands.

Now that HB 383 has been introduced, we hope to make necessary analyses and to put them before this Legislature's second session.

We note that HB 387, introduced a day later, touches on at least one of the same

AGO 935765

subjects addressed by HB 383. Because of that, and because HB 387 is not in a form that permits ready comparison of the existing statutes with the proposed bill's new language, we suggest that legislative action on HB 387 also be deferred.

Sincerely,

Katherine T. Hurley

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPARTMENT OF NATURAL RESOURCES

DIVISION OF LANDS / 323 E. 4TH AVENUE – ANCHORAGE 99501

April 7, 1977

Representative Alvin Osterback
House Resources Committee
Pouch V
Juneau, Alaska 99811

Dear Representative Osterback:

Thank you for giving the members of the Governor's Ad Hoc Advisory Committee on State Land Practices and Procedures the time to testify before the House Resources Committee recently. There are several points that may not have been mentioned in detail that we wish to follow up on:

1) Sec. 38.05.108 in H.B. 383. The Committee wants to delete the word [illegible] at Line 11 so that it will be the Board of Land Appeals. In paragraph (c), the same section, Lines 2-4, page 6, we want to make a change to have the Land Appeals Board function in the place of the Commissioner in hearing appeals, with further appeal to the Superior Court.

2) It is the intention of the Committee that H.B. 383 contain language assuring that future leases will be at the rate set at inception by the Director of the Division of Lands throughout the life of the lease. Such language would probably fit best in Section 8 on page 3. Thus, only the fee value would change at the periodic reappraisals.

3) The lessees focussed considerable discussion on the provision for a 100% ceiling on increases at reappraisal. The Committee selected this ceiling based on experience in recent years in the Anchorage and Matanuska-Susitna markets where most of the leased land is. It should be kept in mind that this is a ceiling and that the actual rental value would be determined by appraisal. We would strongly oppose the lessees' contention that they are entitled to a leasehold interest in land leased by the State, such an interest resulting when the rental value is below market. When the State leases a piece of ground, it should only be providing a place from which to make a profit from development, not an opportunity for speculation.

4) Section 9, page 4, line 29. After the effective date of this Act should be changed to before the effective date of conversion. The effect of this would be to tie the rental value at conversion to a new lease to the date of conversion rather than to a date which might have no relation to the date of conversion.

AGO 935767

The Committee has also requested staff to prepare legislation requiring the State to record contracts of land sale, leases and modifications in lease or sale documents in the recording district where the land is located. This will make it easier for persons away from Anchorage to check on the status of State lands and make erroneous sales and leases less likely.

The Committee has also recommended that the Division of Lands establish as a matter of policy that where feasible appraisals be done by independent fee appraisers. We feel this would make the Division's operations more efficient and also lead to greater confidence in the appraisals.

Again, thank you for giving us time before the Resources Committee. Please call on us if you think we can be of assistance.

Best regards,

Hugh Gellert

Re: HB 383 (state land)
Our file no. J-77-136-77

Dear Representative Osterback:

We just noticed that the bill heading for HB 383, which was introduced March 22 and referred to your committee, mentions an effective date, but the bill does not contain a special effective-date clause. For this bill, the constitutional 90-day effective date would suffice, and page 1, lines 6 and 7 should be amended by deleting "; and providing for an effective date."

Thank you.

Yours truly,

AVRUM M. GROSS
ATTORNEY GENERAL

Dear Representative Osterback:

Thank you for giving the members of the Governor's Ad Hoc Advisory Committee on State Land Practices and Procedures the time to testify before the House Resources Committee recently. There are several points that may not have been mentioned in detail that we wish to follow up on:

1) Sec. 38.05.108 in H.B. 383. The Committee wants to delete the word Lease at Line 11 so that it will be the Board of Land Appeals. In paragraph (d) of the same section, Lines 2-4, page 6, we want to make a change to have the Land Appeals Board function in the place of the Commissioner in hearing appeals, with further appeal to the Superior Court.

2) It is the intention of the Committee that H.B. 383 contain language assuring that future leases will be at the rate set at inception by the Director of the Division of Lands throughout the life of the lease. Such language would probably fit best in Section 8 on page 3. Thus, only the fee value would change at the periodic reappraisals.

3) The lessees focussed considerable discussion on the provision for a 100% ceiling on increases at reappraisal. The Committee selected this ceiling based on experience in recent years in the Anchorage and Matanuska-Susitna markets where most of the leased land is. It should be kept in mind that this is a ceiling and that the actual rental value would be determined by appraisal. We would strongly oppose the lessees' contention that they are entitled to a leasehold interest in land leased by the State, such an interest resulting when the rental value is below market. When the State leases a piece of ground, it should only be providing a place from which to make a profit from development, not an opportunity for speculation.

4) Section 9, page 4, line 29. After the effective date of this Act should be changed to before the effective date of conversion. The effect of this would be to tie the rental value at conversion to a new lease to the date of conversion rather than to a date which might have no relation to the date of conversion.

AGO 935771

The Committee has also requested staff to prepare legislation requiring the State to record contracts of land sale, leases and modifications in lease or sale documents in the recording district where the land is located. This will make it easier for persons away from Anchorage to check on the status of State lands and make erroneous sales and leases less likely.

The Committee has also recommended that the Division of Lands establish as a matter of policy that where feasible appraisals be done by independent fee appraisers. We feel this would make the Division's operations more efficient and also lead to greater confidence in the appraisals.

Again, thank you for giving us time before the Resources Committee. Please call on us if you think we can be of assistance.

AGO 935772

HB 383
SB 159

The Honorable Rep. Alvin Osterback
Alaska State Legislature
Pouch V
Juneau, Alaska 99801
MAIL STOP 3100

Dear Rep. Osterback:

We, as State land leaseholders, are about to be faced with huge increases in the rentalrates of our leased property (Lot 5, B lock 1, Kasilof Pioneer Subdivision, With two homes on it). These new rates, if imposed, will force a severe hardship on us financially and may even force us to give up our lease.

Such rates substantially reduce the value of our improvements which we have worked long and hard at and spent substantial money on. We feel the present policies of the Division of Lands are not in our best interest, nor in the best interest of the State of Alaska.

We therefore urge you to support legislation currently on the floor which would:

1. Set a 25 year period of fixed rental, giving us time to finance and pay for our improvements.

2. Establish a six percent rate and a fifty percent ceiling on rent increases so we can compute what we will pay in rent over the 55 year period. Due to the present policies, it is almost impossible to finance improvements on our lease.

3. Provide for independent appraisal of our lease. Appraisal by our landlord, as is now done, is an obvious conflict of interest.

4. Provide a grandfather clause whereby we, as existing leaseholders, can take advantage of a new lease.

Passage of a law with the above provisions is critical if we are to be able to continue leasing our land.

Thank you for your help.

Very truly yours,

Mr. and Mrs. L. B. Watts

Anchorage, Alaska 99501

Dear Mr. Etukeok:

Thank you for the telegram in support of HB 387, an act relating to the leasing of state lands.

As prime sponsor, I certainly will support the bill, although, I expect it to go through serious study in the House Resources Committee before being passed out.

If you have specific comments and suggestions on how the bill may be improved, I would appreciate them.

Again, thank you for taking the time to telegram your feelings.

Sincerely yours,

Bill Miles

THIS IS TO ADVISE YOU THAT THE ALASKA NATIVE BROTHERHOOD ANCHORAGE CAMP 33 STRONGLY ENDORSES HB387 AN ACT RELATING TO THE LEASING OF STATE LANDS. WE ASK YOUR SUPPORT OF THIS BILL.

ROBERT H ETUKEOK

ALASKA NATIVE BROTHERHOOD CAMP 33

265-5241 OR 279-7707

1977 APR 1 02 13

AGO 935793

SB 159 - HB 387

1. In 1976 the Division of Lands raised rentals to what was considered an onerous level. This level is such that there is serious doubt of the practibility of continuing the present use of the land.

2. Because of the uncertainity occasioned by the actions of the Division of Lands, both commercial and residential development of the leases became "non-bankable" in terms of loans because of no feasible upper limit of rent could be determined.

3. The proposed bill corrects this situation by:

    a. Extending the initial period to 25 years to provide stability in the development stage, and providing for three additional reappraisals instead of about eight.

    b. Allows the mortagor to assume the payments in the event of a late payment or default by the lessee.

    c. Protects the state's interest by increasing the precent of the rental fee to 10%. The original appraisal will have to be correctly done.

    d. Results in a definable upper limit of the sum of the rental payments over the life of the lessee. This amount in 9 1/2 times the original appraisal. For example, for each $1,000 of the original appraisal value, the lessee will pay $9,500 in rent over a 55 year period.

4. A word on the fiscal note prepared by the Division of Lands and which states that passage of the Bill will result in a "substantial less in revenue". At best, this is half truth, since the result is subject to manipulation. Under the argument given, if the Division should decide to raise the rentals to an even higher rate, the "substantial less" would be higher. Accumulation of revenue is not the chief function of a state agency. Balanced development is a valid function. To follow the unmodified policy of the Division of Lands in this matter is to be counter productive.

MEMORANDUM State of Alaska

TO: The Honorable Guy R. Martin
Commissioner
Department of Natural Resources

DATE: June 4, 1976

FILE NO:

TELEPHONE NO:

FROM: AVRUM M. GROSS
ATTORNEY GENERAL

SUBJECT: Waiver of reappraisal and adjustment of rent

BY: Rodger W. Pegues
Assistant Attorney General

This is further to the opinion of June 1, 1976, by Assistant Attorney General Reeves on this subject. In that opinion, we advised that you were without authority under then existing law to grant a blanket waiver of all rental increases exceeding 100 percent which was requested by the Alaska Land & Lease Owner's Association. Since that opinion was written, new legislation was adopted which further restricts your authority to grant a waiver. FCCS SCSHB 139.

AS 38.05.105 has been amended to delete the language authorizing a waiver or extension of reappraisal "when development of the land is not otherwise possible due to special conditions" and to provide for an extension or waiver "only if residential development actually occurs, and only if it is necessary for obtaining primary long-term financing." As a result of the amendment, the Director of the Division of Lands may now grant a waiver or lengthen

HB 387

ALASKA LAND AND LEASE OWNERS ASSOCIATION

A number of Alaskans have leased State land from the Alaska Division of Lands. Most leases were written for a period of fifty-five years with renewal rights, subject to appropriate application and approval.

During the past year, ADL has reviewed the rental rates on a number of lots and parcels and, in some cases, has raised them over 1000%, others at a lesser rate but most increases seem excessive. Much of this land is in the Matanuska Susitna Borough.

We recognize that there has been a great deal of speculation on fee simple land in the Borough because of the publicity attendant to the Capitol relocation. These speculative values, however, do not necessarily apply to lease lands. However, we have been informed by ADL personnel that the new rental rates have been arrived at by appraising a limited number of fee simple parcels (not leased parcels), estimating their sales value and taking 6% of that figure as the annual rent.

A.S. 38.05.105 says "rental payment is subject to adjustment at five-year intervals and charges or adjustments shall be based primarily on a reappraised annual rental value" i.e. not sale value.

There is no direct relation between the value of a title and the value of a lease, particularly when most rural land in Alaska is undeveloped. The situation differs with apartment rentals whereby when the supply is short and demand great rental value increases, but even there Governor Hammond has set up rent control boards to limit rent increases to a reasonable amount.

There are many reasons why a State leasehold cannot be equated to a title. Let me cite a few:

1. Bank financing is virtually unobtainable on lease land because of the uncertainties associated with the "five year adjustment" clause.

2. Renewal of lease is not assured at end of a 55 year period.

3. Use of land may be limited at ADL's discretion.

4. No equity accruses in the property.

In regard to point No. 4, most rural fee simple property could be purchased in a ten to twenty year period outright at or close to many of the new State rental fees and, most important, a great deal of rural land is available for fee simple purchase from individual owners, reducing the relative value of State Lease Lands, in view of the long term unpredictability of State Lease payment levels and absence of any accrued equity after long term lease.

AGO 935801

We feel that ADL's method for adjusting lease rentals is not a fair or a correct procedure and, in fact, is in violation of State Statutes. We also feel that the procedures being used, particularly the "five year clause" deny much needed tax revenue to local governments. Putting the problem on a personal basis, many Alaskans will be forced to terminate their State leases, give up hopes for planned development, and sacrifice valuable improvements if the present policies and reappraisal methods are not improved.

We recommend several possible solutions:

1. Lands could be sold outright rather than leased.

2. Lands could be leased with an option to purchase at end of five years.

3. Rental could be:

   a. Fixed for the fifty-five year lease period with lessee charged a percentage of any gain realized.

   b. Increased annually at a fixed rate such as five percent.

   c. Increased at the inflation or recession rate reflected in the Consumer Price Index.

The members of theAlaska Land and Lease Owners Association will appreciate and remember any positive action that can be taken on behalf of all State Land Leaseholders.

We appreciate you already having taken time to hear our views.

Respectfully Submitted:

William M. Mack
Chairman, Board of Directors
Alaska Land and Lease Owners Association

MEMORANDUM

September 14, 1976

SUBJECT: Surface Leasing Policy of State Owned Lands

TO: The Honorable Kay Poland

FROM: Elke Kallab
Research Analyst

This memorandum addresses various issues which have been raised in conjunction with recent rent increases on state leased lands and, as you requested, comments on points brought up by leaseholders protesting the readjustment of their rents on a variety of grounds. Only the area of surface leasing of state owned lands has been investigated.

In summary we found that the rent increases appear to be in compliance of current, applicable statutes. However, we did discover numerous irregularities and inconsistencies in the regulations which govern surface leasing of state lands. We believe that the various shortcomings and ambiguities of the regulations have contributed significantly to the leaseholders' perceptions that the increases are illegal or arbitrary. The information and data pertaining to surface leasing regulations have been submitted to the chairman of the Administrative Regulation Review Committee, as is a copy of this memorandum.

* * * * * * * * * * * * * *

I. Rent Increases

Substantial increases of rents in the process of reappraisal did not begin this year. Attached to this report are two lists which show the old and current rental rates on every state lease which came up for reappraisal in 1975 and 1976 as supplied to us by the Division of Lands. As can be seen, some of the steeper increases occurred in 1975.

AGO 935803

Records show that the Division of Lands adopted the policy to use "market rental rates" for appraisals and reappraisals of state lands, when and where a comparable private rental market existed, as early as March 10, 1975. This decision was made because the Division of Lands believed that enough private leases existed by then which were comparable to certain types of state leases to institute market rental rates rather than charging contract rents at the rate of six percent of the fair market value of the property as was and continues to be the case when no market exists. So far, this policy has been limited in application primarily to industrial and commercial leases in the Anchorage area, since a private market for other types of leases does not exist at this time. However, a subdivision is presently being built in Anchorage in which the lots are being leased rather than being sold. Therefore, state leased lands in Anchorage which are classified as residential may soon be (re)appraised on the basis of economic rather than contract rental rates as established by the Division of Lands.

Current private market rates in Anchorage are comparable to those charged leaseholders in the Anchorage Industrial Subdivision according to the Division of Lands. (The Alaska Industrial Subdivision is located on Sec. 16 school land in downtown Anchorage.) For instance, we have been advised by the Division of Lands that Alaska Industrial Park, a private industrial subdivision on the southwest corner of C and 44th Streets charges an annual rental of eight percent of the "appraised fair market value," with a periodic five year rent adjustment provision part of the lease. Calais Company and Carr-Gottstein Properties lease their industrial lands at a rate of seven percent. However, unlike Alaska Industrial Park, they will not subordinate their lands; i.e., take a "back seat" to the improvements on the land which have been financed by a third party.

Leaseholders have charged that the Division of Lands has not used comparable parcels or proper appraisal methods when it reappraised certain leases in the Alaska Industrial Subdivision in Anchorage and a utility lease in the Matanuska Valley. However, all attempts to have these charges substantiated by the leaseholders with supporting data have been unsuccessful to date. We have looked at a randomly selected appraisal done by the Division of Lands to familiarize ourselves with appraising methods employed by the Division of Lands. Although we claim no special expertise in this field, the appraisal appeared to be thorough, extensive and impartial.

The Constitution (Article VIII, Sec.2) and various sections of Title 38 direct that state lands shall be selected, sold or leased to provide the maximum benefits to the people of the state. It is therefore difficult to find fault with the Division, in the absence of some other statutory definition, for attempting to maximize the monetary returns on state leased lands. How they set about doing it, however, is another subject.

The decision to use market rental rates was further refined and delineated when the Board of Education instructed the Division of Lands at its August 28, 1975 meeting in Kodiak that henceforth the Division was to obtain "fair market rental" 1/ on all leased school lands. Since Sec. 16 and 36 lands were conveyed to the state to generate school revenues, it is only reasonable to expect that rents should reflect this when they come up for periodic adjustment, particularly in light of the directive issued by the Board of Education to charge market rental value.

The Division of Lands is quite willing to admit that in the past the Appraising Section in the Division of Lands was viewed as a "poor relation", which accounts for the continuing low rents over the years in violation of the law which provides that "... no land may be sold or leased for less than the approved, appraised market value..." (38.05.310). The Division is now applying the law, thereby correcting past neglect which resulted in low rental rates on state leased lands, benefitting the individual leaseholders, but not necessarily the people of Alaska in general.

A legal opinion (copy attached) from the Attorney General's office to Commissioner Martin prevents the Commissioner from waiving or lowering the increases.

II. Rate of Contract Rents

The statutes provide that the initial rent shall be determined based on the "approved, appraised market value" (38.05.310), and that subsequent readjustments of the rents be based on a "reappraised annual rental value" (38.05.105)

Much controversy has arisen over the term "annual rental value". Protesting leaseholders claim that rental value cannot be pegged to the market value, that it is something less. The sources we have checked for a definition of rental value state that rental value is--

> "(T)he monetary amount reasonably expectable for the right to the agreed use of real estate.... Usually, it is established by competitive conditions." 2/

1/ Memo from W. Bruce Atkinson, ADL, to File, dated November 17, 1975.

2/ Real Estate Appraisal Principles and Terminology, Society of Real Estate Appraisers, p. 164; and Real Estate Appraisal Manual, Jerome Knowles, Jr. and Associates, p. 286.

From the above it appears that rental value is established by market conditions. The problem which has and continues to exist in Alaska, though, is that in most instances the state (Division of Lands) makes its own market. There is no private market to speak of for agricultural, grazing, recreational and other classified lands. Therefore, the state historically has used a percentage rate of the fair market value instead of rental value to determine rents on leased lands. As mentioned earlier, where a private market exists the Division is charging market rental value.

Until 1968 this rate was five percent. There is nothing in writing which explains why the rate was set at five percent, but we have been told that the five percent figure was a minimim amount derived from the Public and Charitable Use statute of the Alaska Land Act which stipulates that the rental shall be not less than five percent of the fair market value on school, university and mental health, or acquired lands (38.05.315(d)). Also, the rate of interest on the unpaid balance of contract sales of state lands was five percent at that time, and the reasoning, according to Division personnel, was to standardize the contract sale and contract rent rates. In 1968, then Commissioner of Natural Resources, Tom Kelly, raised the rate to six percent because he felt five percent was too low. Again, there is nothing in writing which would substantiate this. The Division of Lands now charges six percent of the fair market value when there is no private lease market and the lease is of a non-revenue producing nature. The Division charges up to eight and one-half percent (8 1/2%),or the market rental rate, when a private lease market exists and when the land is a potential revenue producer; i.e., land which is classified and/or zoned commercial, industrial, or residential.

The raising of the lease rental percentage rates, in some instances (such as the Alaska Industrial Subdivision), together with reappraising the leases based on fair market value have been responsible for the steep increases. The Division of Lands is quite cognizant of the potential hardships such a policy creates for certain leaseholders, particularly for those individuals who hold non-income producing leases. 3/

Much of the bad feeling that was generated over the rent increases probably could have been avoided if the Division of Lands had been more approachable and open in what it was doing. By not being advised of significant changes in policy, even when they are justifiable and defensible, and by being confused by or ignorant of appraisal terminology as used by the Division of Lands, it is not surprising that leaseholders feel that the Division has been acting arbitrarily and capriciously.

3/ Memo from W. Bruce Atkinson, ADL, to Michael C. T. Smith, ADL, dated November 4, 1975.

III. Special Provisions on Certain Leases Limiting Reappraisal to One Time

According to the Division of Lands, four leases exist which have a special provision on the back side of the last page which indicates that the lease will be reappraised but once five years after issuance of the initial lease. These leases have been reappraised now for a second time, and the four leaseholders are protesting the reappraisals.

A legal opinion issued by the Attorney General's office, dated October 3, 1975, holds that the Division of Lands exceeded its authority granting the special provisions on several grounds.

A. No statutory authority existed to grant the exemption from five year rent adjustments. Apparently all four leases were issued prior to passage of a 1964 bill which amended 38.05.105 providing for waivers due to special conditions.

B. However, even if they had been issued after this amendment became law, the special provision would still be invalid since 38.05.075 stipulates that a lease has to be on a form approved by the attorney general. Clearly, these leases were not on an approved form.

C. Finally, the special provisions are invalid because the leases were offered at public auction without the special provision being part of the terms of the lease.

As a result of the above legal opinion, parts of regulation 11 AAC 58.120, which allows for the special provision on university and school lands, should be changed immediately.

While checking into the above matter, we found that the Division of Lands is apparently in violation of 38.05.075 - Leasing Procedures. This section states that "(T)he director or his representative shall immediately issue a receipt containing a description of the land or interest leased, the price bid, and the terms of the lease." According to Division of Lands personnel this has never been done. It would appear that either the Division of Lands should provide the bidder the "terms of the lease" at the time it issues the receipt, or the reference to the "lease terms" should be removed from 38.05.075.

IV. Improvement to Leased Properties

The charge has been made by several leaseholders in the Alaska Industrial Subdivision that their land has been reappraised improperly because improvements to the land have been taken into consideration, even though the lease states quite clearly that the land is to be reappraised in a state of improvement similar to that of the land described in the lease at the time the lease was issued.

("... in a state of improvement similar to that of the land described herein at the time this lease was entered into.").

The Division of Lands maintains that while leaseholders cannot be and, for that matter, have never been penalized for the improvements made to their leased lands, improvements which were made at public expense and which as a consequence raised the value of the area or the lands under lease should be reflected in the reappraisal. We are told that this practice is consistent and standard procedure in the reappraising business. While we are not appraisers, the reasoning seems to make sense.

Short of being provided with data by the leaseholders (which we have asked for but not received) which would bear out their charge that improvements they have made to their properties were being included in the reappraisal, we cannot assume that the Division is not reappraising the properties exclusive of improvements owned by the individual leaseholders, or that they are not applying professional standards when appraising lands.

* * * * * * * * * *

Conclusions

Our investigations indicate that substantive and/or long term relief to the leaseholders regarding the periodic rent adjustment of their leaseholdings is probably not possible under the existing statutes. If it is believed that increases of rents should be limited in some way , or that rents be readjusted on a different basis than percentage of fair market value or fair market rental value as is the practice now, it will be necessary to legislate to that effect.

No new legislation will be necessary to require the Department of Natural Resources (Division of Lands) to bring their regulations into compliance with existing, applicable statutes or to "clean them up" so that the ambiguities regarding meaning and the inconsistencies of the language and definitions used in the regulations are eliminated. While no new legislation is necessary for the revision and up-dating of the regulations, it is recommended that the applicable, authorizing statutes be revised as necessary to be consistent and clear throughout. They are not now, in some instances.

cc: The Honorable Jalmar Kerttula

DL-37
Revised July, 1960

STATE OF ALASKA
DEPARTMENT OF NATURAL RESOURCES
DIVISION OF LANDS
344 Sixth Avenue
Anchorage, Alaska

Lease No. ADL 03066

LEASE AGREEMENT

THIS INDENTURE made and entered into this 2nd day of May 19 61, by and between the STATE OF ALASKA, through the Director of the Division of Lands, with the consent and approval of the Commissioner of the Department of Natural Resources, acting for and on its behalf under and pursuant to Chapter 169, SLA 1959, as amended, and the regulations promulgated thereunder, as amended or hereafter amended, hereinafter referred to as the LESSOR; and James E. Rigsbee, Jr. of 2005 - 20th Avenue, Anchorage, Alaska. hereinafter referred to as the LESSEE:

WITNESSETH, that whereas the Lessor has classified the lands herein demised as: Commercial - Industrial lands on April 24, 19 61, pursuant to Chapter 169, SLA 1959, as amended; and

WHEREAS, the Lessor has caused the lands herein demised to be appraised and such appraisal was made and approved on or after February 23, 1961; and

WHEREAS, the Lessor has caused a notice of intent to lease the lands herein demised to be published as required by law or caused notices of intent to lease to be posted as required by law; and

WHEREAS, an auction of the within demised property was held at the time and place designated by notice and said sale was approved by the Director of the Division of Lands, Department of Natural Resources, State of Alaska:

NOW THEREFOR, the Lessor has agreed to let and does hereby let and demise to the Lessee, and the Lessee has agreed to take and does hereby take from the Lessor all that lot, piece, or parcel of land more particularly bounded and described, as follows: Lots One (1), and Two (2), Block Ten (10), First Addition to the Alaska Industrial Subdivision, within the Northeast Quarter of Section Sixteen, Township Thirteen North, Range Three West, Seward Meridian, containing 0.61 acres, more or less, according to the official plat thereof, on file and of record with the Recorder of Deeds, Anchorage Recording Precinct, Anchorage, Alaska.

TO HAVE AND TO HOLD the said demised premises for a term of fifty-five (55) years commencing on the 2nd day of May, 19 61 and ending at 12 o'clock midnight on the 1st day of May, 2016, unless sooner terminated as hereinafter provided.

The Lessee shall pay to the Lessor rental as follows: Equal quarterly payments, in advance, on or before the 2nd day of August, November, February and May of every year during said term at the rate of Two Hundred and Fifty-five and NO/100---------- Dollars ($ 255.00-------) per quarter

AGO 935809

such payments to be subject to adjustment at each five year interval from the effective date hereof, if the lease term hereof exceeds five years, such adjustment to be based primarily upon a reappraised annual rental value of land in a state of improvement similar to that of the land described herein at the time this lease was entered into.

It is hereby mutually covenanted and agreed that this indenture is made upon the foregoing, and upon the following agreements, conditions, covenants, and terms, VIZ:

1. The word "Lessor" as and wherever used in the lease, shall be construed to include, and shall include, bind and inure to the benefit of, the State of Alaska, its successor and assigns, at any time during the term of this lease or any renewal thereof; and the word "Lessee" as and wherever used in this lease shall be construed to include and shall include and bind and inure to the benefit of the Lessee, his successors and assigns.

2. It shall be the responsibility of the Lessee to properly locate himself and his improvements within the confines of the property leased herein.

3. The Lessor, Alaska, hereby expressly saves, excepts and reserves out of the grant hereby made unto itself, its lessees, successors, and assigns forever, all oils, gases, coal, ores, minerals, fissionable materials, and fossils of every name, kind or description, and which may be in or upon said lands above described, or any part thereof, and the right to explore the same for such oils, gases, coal, ores, minerals, fissionable materials, and fossils, and it also hereby expressly saves and reserves out of the grant hereby made, unto itself, its lessees, successors, and assigns forever, the right to enter by itself, its or their agents, attorneys, and servants upon said lands, or any part or parts thereof, at any and all times, for the purpose of opening, developing, drilling and working mines or wells on these or other lands and taking out and removing therefrom all such oils, gases, coal, ores, minerals, fissionable materials and fossils, and to that end it further expressly reserves out of the grant hereby made, unto itself, its lessees, successors, and assigns forever, the right by its or their agents, servants and attorneys at any and all times to erect, construct, maintain, and use all such buildings, machinery, roads, pipelines, powerlines, and railroads, sink such shafts, drill such wells, remove such soil, and to remain on said lands or any part thereof for the foregoing purposes and to occupy as much of said lands as may be necessary or convenient for such purposes hereby expressly reserving to itself, its lessees, successors, and assigns, as aforesaid, generally all rights and power in, to and over said land, whether herein expressed or not, reasonably necessary or convenient to render beneficial and efficient the complete enjoyment of the property and rights hereby expressly reserved.

Provided, however, no rights shall be exercised by Alaska, its lessees, successors or assigns, until provision has been made by Alaska, its lessees, successors or assigns, to pay to the owner of the land, upon which the rights herein reserved to Alaska, its lessees, successors, or assigns are sought to be exercised, full payment for all damages sustained by said owner, by reason of entering upon said land; provided, that if said owner for any cause whatever refuses or neglects to settle said damages, Alaska, its lessees, successors or assigns or any applicant for a lease or contract from Alaska for the purpose of prospecting for valuable minerals, or option contract or lease for mining coal or lease for extracting petroleum or natural gas, shall have the right, after posting a surety bond with the Director in a company qualified to do business in Alaska or in a form as determined by the Director, after due notice and opportunity to

be heard, to be sufficient in amount and security to secure the said owner full payment for all such damages, to enter upon the land in the exercise of said reserved rights, and shall have the right to institute such legal proceedings in a court of competent jurisdiction wherein the land is situated, as may be necessary to determine the damages which the surface lessee of such lands may suffer.

4. The lands leased herein have been classified as shown on page 1 of this agreement and in accordance with the Classification Regulations, Title 11, Division 1, Chapter 1, Subchapter 1, and any use thereof which shall be in material conflict with said classification shall, if not remedied after due notice thereof has been served on the Lessee, constitute a breach of this lease and the Lessor may thereupon terminate same in accordance with provisions herein contained. The Lessor does not warrant that by such classification the land is ideally suited for the use authorized thereunder and the Lessor gives no guaranty, actual or implied, that the utilization under said classification will be profitable.

5. All coal, oil, gas and other minerals and all deposits of stone or gravel valuable for extraction and utilization and all materials subject to Title 11, Division 1, Chapters Four (4), Five (5), and Six (6), Alaska Administrative Code, as amended or as shall hereafter be amended are excepted from the operation of this lease. Viz: The Lessee shall not sell or remove for use elsewhere any timber, stone, gravel, peatmoss, or any other material valuable for building or commercial purposes; provided, however, that material required in the enjoyment of this lease may be used after a written permit therefor has been obtained from the Lessor.

6. The Lessor expressly reserves the right to grant easements or rights-of-way across the land herein leased if it is determined to be in the best interests of the State to do so; provided, however, that the Lessee shall be entitled to compensation for all improvements or crops which are damaged or destroyed as a direct result of such easement or right-of-way.

7. The Lessee shall not commit waste or injury upon the lands leased herein. Any violation of this agreement shall not only subject the offender to civil liability, but upon conviction thereof he may be fined in any sum not exceeding $1000.00.

8. If the lands leased herein are classified and leased as grazing or agricultural lands the Lessee shall not prevent or deny the lawful pursuit of the hunting of game or the taking of fish; provided, however, the Director, upon request in writing, may allow the lands leased herein, or portions thereof, to be posted to prohibit hunting and fishing when it appears necessary in order to properly protect the Lessee and his property.

9. Should the lands herein leased lie within the jurisdiction of any authorized building or zoning authority they shall be utilized in accordance with the rules and regulations promulgated by said authority.

10. The Lessee shall take all reasonable precaution to prevent, and take all reasonable action to suppress grass, brush and forest fires on the land herein leased.

11. The Lessee shall allow the Lessor, through its duly authorized representative, to enter upon the leased premises, at any reasonable time, for the purpose of an inspection thereof.

12. When the Lessee shall use the lands leased herein to construct any form of hydraulic project or employ any equipment or engage in any activity which will use, divert, obstruct, pollute or change the natural flow or bed of any river, lake or stream or that will utilize any of the waters of the State or materials from any river, lake or stream beds, the Lessee shall, prior to the commencement of any such operations, procure the approval of the Commissioner of the Department of Fish and Game and the original or an image copy thereof shall be filed with the Lessor prior to the commencement of such activity.

13. The Lessee may assign the lands, or portion thereof, herein demised, provided, he first makes application to the Lessor for a permit and the Lessor, in his discretion, may issue such permit if he finds it to be in the best interest of Alaska. Upon an assignment being granted, the assignee thereunder shall become subject to and be governed by the provisions of this lease in the same manner as though he were the original Lessee.

14. This lease may not be modified orally or in any manner other than by an agreement in writing signed by all parties hereto or their respective successors in interest.

15. This lease may be cancelled, in whole or in part, under one or more of the following conditions:

A. While in good standing by the mutual agreement in writing of the respective parties hereto.

B. If issued in error with respect to material facts.

C. If the leased premises are being used for an unlawful purpose.

16. If the Lessee should default in the performance of any of the terms, covenants or stipulations herein contained or of the regulations promulgated pursuant to Chapter 169, SLA 1959, as amended, and said default shall not be remedied within 30 days after written notice of such default has been served upon the Lessee by the Lessor, the Lessee shall be subjected to such legal action as the Lessor shall deem appropriate, including but not limited to, the forfeiture of this lease. No improvements may be removed by the Lessee during any period in which this lease is in default. In the event that this lease shall be terminated because of a breach of any of the terms, covenants, or stipulations contained herein the annual rental payment last made by the Lessee shall be retained by the Lessor as liquidated damages.

17. Any notice or demand which must be given or made by the parties hereto shall be in writing, and shall be complete by sending such notice or demand by United States registered or certified mail to the address shown on the lease or to such other address as the parties shall designate in writing from time to time. A copy of any such notice shall be forwarded by the Lessee to any lienholder who has properly recorded his interest in the lease with the Lessor.

18. In the event that this lease is terminated as herein provided, by summary proceedings or otherwise, or in the event that the demised lands, or any part thereof, should be abandoned by the Lessee during the term of this lease, the Lessor may immediately, or at any time thereafter, enter or re-enter and take possession of said lands, or any part thereof, and without liability for any damage therefor, remove all

persons and property therefrom either by summary proceedings or by a suitable action or proceeding at law; provided, however, that the words "entry" and "re-entry" as used herein, are not restricted to their technical legal meaning. Any entry or re-entry possession, repossession, dispossess, and/or disposession by the Lessor, whether had or taken by summary proceedings, or otherwise, shall not be deemed to absolve, relieve, release or discharge the Lessee, either in whole or in part, from any liability hereunder.

19. Upon the expiration, termination or cancellation of this lease, unless the same has been renewed, the Lessee shall quietly and peaceably leave, surrender and yield up unto the Lessor all of the leased land on the last day of the term of the lease.

20. The receipt of rent by the Lessor, with or without knowledge of any breach of the lease by the Lessee or of any default on the part of the Lessee in observance or performance of any of the conditions or covenants of this lease, shall not be deemed to be a waiver of any provision of this lease. No failure on the part of the Lessor to enforce any covenant or provision herein contained, nor any waiver of any right hereunder by the Lessor, unless in writing, shall discharge or invalidate such terms or covenants or affect the right of the Lessor to enforce the same in the event of any subsequent breach or default. The receipt by the Lessor of rent or any other sum of money or the termination, in any manner, of the term herein demised, or after giving by the Lessor of any notice hereunder to effect such termination, shall not reinstate, continue, or extend the resultant term herein demised, or destroy, or in any manner impair the efficacy of any such notice of termination as may have been given hereunder by the Lessor to the Lessee prior to the receipt of any such sum of money or other consideration, unless expressed in writing and signed by the Lessor.

21. The Lessee, after written request therefor has been filed with the Lessor and prior to the commencement of such work, may receive credit toward current or future rentals, provided the contemplated work, to be accomplished thereon, off the area leased herein, in the discretion of the Lessor, shall result in increased valuation to other State owned lands. The Lessee's authorization to proceed with the work for rental credit, if granted, shall stipulate the type and extent of improvements, standards of construction to be followed and the maximum allowable rental credit therefor; provided further that no credit shall inure to the Lessee until the work has been completed and the Lessee has submitted such evidence thereof as may be required to determine if the work is in the provisions of said authorization.

22. If, upon the expiration of this lease, the Lessee desires a renewal lease on the lands, properties or interests covered herein, he shall within 30 days before the expiration of this lease, make application to the Lessor on Form DLNR-74 entitled "Application for Renewal of Lease," in which he must certify under oath as to the character and value of all the improvements existing upon the land, the purpose for which he desires a renewal and such other information as the Director of the Division of Lands may require. Along with the application the applicant shall deposit a sum equal to 50% of the current annual rental, as provided herein, but in no event to exceed the sum of $50.00. The Lessor may thereupon lease said lands in compliance with the provisions herein enumerated, Chapter 169, SLH 1959, as amended, and the rules and regulations promulgated thereunder, allowing a preference right to the Lessee herein.

23. The Lessee hereunder shall, upon the expiration of this lease or the prior termination thereof by mutual agreement, be allowed a preference right to re-lease the lands leased herein if all other pertinent factors are substantially equivalent. If the renewal lease does not require public auction the preference rightholder shall exercise his right within 30 days before the expiration of this lease by written notice directed

to the Lessor and failure to do so shall result in forfeiture and cancellation of such preference right. In the event that the lease is subject to and is offered at public auction the preference rightholder shall, at the close of bidding, indicate his desire to exercise his preference right and meet the highest bid. In the event the preference right holder does not elect to exercise his right and fails to do so at this time his preference right shall be forfeited and forever lost.

24. Improvements owned by a Lessee on Alaska lands shall within 60 days after the termination of the lease be removed by him; provided, such removal will not cause injury or damage to the lands; and further provided, that the Lessor may extend the time for removing such improvements in cases where hardship is proven. The retiring Lessee or permittee may, with the consent of the Lessor, sell his improvements to the succeeding lessee or permittee.

If any improvements and/or chattels having an appraised value in excess of $10,000.00 as determined by the Lessor are not removed within the time allowed, such improvements and/or chattels shall upon due notice to the Lessee, be sold at public sale under the direction of the Lessor. The proceeds of sale shall inure to the Lessee who placed such improvements and/or chattels on the lands after paying to Alaska all rents due and owing and expenses incurred in making such sale. In case there are no other bidders at any such sales, the Lessor is authorized to bid, in the name of Alaska, on such improvements and/or chattels. The bid money shall be taken from the fund to which said lands belong and the said fund shall receive all monies or other value subsequently derived from the sale or leasing of such improvements and/or chattels. Alaska shall acquire all the rights, both legal and equitable, that any other purchaser could acquire by reason of said purchase.

If any improvements and/or chattels having an appraised value of $10,000.00 or less, as determined by the Lessor, are not removed within the time allowed, such improvements and/or chattels shall revert to and absolute title shall vest in Alaska.

25. If any clause, or provision, herein contained, shall be adjudged to be invalid, it shall not affect the validity of any other clause or provision, of this lease or constitute a cause of action in favor of either party as against the other.

It is agreed that the covenants, terms and agreements herein contained shall be binding upon the successors and assigns of the respective parties hereto.

IN WITNESS WHEREOF, the State of Alaska, Lessor, acting through the Director of the Division of Lands of the Department of Natural Resources, lawfully authorized thereunto, has caused these presents to be executed at Anchorage, Alaska, in duplicate and the said Lessee has hereunto set his hand, agreeing to keep, observe and perform the rules and regulations promulgated under Chapter 169, SLA 1959, as amended, the terms, conditions and provisions herein contained, on the Lessee's part to be kept, observed and performed; and executed said instrument, in duplicate on the 15th day of May, 19 61.

APPROVED:

Director, Division of Lands

I. SUMMARY OF THE COMMITTEE'S FORMATION, MISSION, AND ACCOMPLISHMENTS

On October 8, 1976 the Governor's Ad Hoc Advisory Committee on State Land Practices and Procedures met for the first time. The mission of the committee was outlined by Guy Martin, Commissioner of the Department of Natural Resources. He said that the Governor desired a small, precise, and efficient panel to find new ways to improve state land practices and procedures, not to set policy but to address the legal and technical aspects of disposal and other contractual relationships. Judgments, criticisms, and new recommendations were to be effected. Michael C. T. Smith, Director of the Division of Lands, clarified the mission further by adding that the committee should:

1) consider primarily revenue production, as opposed to social benefits, in its analysis;

2) make no assumptions as to state policy regarding the number, size, and location of land sales or other disposals; and

3) recommend changes that will be applicable to any likely state land policy.

AGO 935820

The committee made a dedicated attempt to accomplish its mission. The tasks of studying existing statutes, regulations, and practices, and examining them in light of current land disposal and contractual relationships was formidable, but many members worked successfully to this end. Uncovering and identifying disposal and contractual problems involved considerable time and effort. Correct identification of a particular problem of this nature is a major step toward solving it. Perhaps the greatest success of the committee was discerning from Division of Lands personnel and state lessees the exact nature of their problems and concisely defining them. This action will have a lasting effect on Division of Lands personnel who are charged with formulating policy and procedures for land disposals and contractual relationships. The committee did make significant recommendations to effect changes in statutes, regulations, and Division procedures and policy. The lease form used by the State was revised to include terms and conditions that would offer benefits to both the State and the lessee. The recommendations of the committee in general give the State more flexibility to respond to client needs. Both client and State will benefit greatly if the committee's recommendations are carried out. The mission of the committee has been accomplished with admirable success in this regard.

Selected areas were covered, specifically those of sales and leasing. The committee states that this report is not meant, by any means, to be all-inclusive.

II. THE INDIVIDUALS ON THE COMMITTEE

The individuals who served on the committee volunteered considerable time and effort. Each member was selected on the basis of having specialized knowledge and expertise. The following list of present members and their qualifications shows considerable diversity.

Mike Colletta - State Senator

Hugh Gellert - President of Bear Fritz, Inc., a land development company with interests in Anchorage and the Kenai Peninsula.

Herb Lang - President of Anchorage Sand and Gravel.

Jamie Love - Director of the Alaska Public Interest Research Group (AkPIRG).

David McCabe - Private Appraisor.

William Mack - Chairman of the Alaska Land and Lease Holders Association.

Carl Marrs - Land Manager for Cook Inlet Region, Inc.

John Norman - Attorney specializing in the area of corporate and natural resources law.

AGO 935822

Lidia Selkregg - Anchorage Assemblywoman; Professor of Regional Planning at the Arctic Environmental Information and Data Center in Anchorage.

Theodore G. Smith - Former State Representative; present Director of the State Division of Land and Water Management.

AGO 935823

III. COMMITTEE WORK PROCESS

The committee worked in a series of sessions which were all open to the public. Meetings were held weekly from October 8, 1976 to March 30, 1977 with the exception of 12/17/76 - 1/5/77, when the committee recessed for the holidays. Two additional evening work sessions were held, and two evening meetings to hear public comments took place on 12/1/76 and 3/3/77. The meetings were loosely structured to accomodate those attending and to provide time for public comment.

The committee addressed the area of sales in its first sessions and proceeded to the area of leases in the later sessions. There was considerable public input from concerned individuals, and organizations, and many persons with specialized knowledge were invited. A great deal of support was provided by many state agencies, particularly by the State Division of Lands and the Department of Law. Considerable time was spent in information gathering. The Division often was requested to provide information on current procedures. Considerable information on Division activities was compiled. The changes recommended were made cautiously and are well supported by the information gathered. The committee's recommendations were made in the form of motions which were voted on by majority vote at the meetings. Recommendations were made freely as each subject area was explored.

AGO 935824

Many meetings, including the two evening public comment sessions, were advertised in two newspapers. Press releases and newspaper articles appeared locally. Mass mailouts provided general information and announced upcoming meetings; lists of meeting dates were available at all sessions. The interested public was encouraged to contact the Division of Lands with any verbal or written questions and comments. Copies of materials used by the committee were available to the public and public comment was specifically taken on the committee's interim recommendations and draft bill to the Governor.

Almost all sessions were tape recorded in their entirety. Written minutes of meetings were time-keyed to the tapes to allow verification. The public is welcome to listen to or make copies of these tapes by contacting the Division of Lands.

AGO 935825

IV. FINDINGS AND RECOMMENDATIONS OF THE COMMITTEE

The findings of the committee were numerous but can be grouped into major categories:

1) State lessees are dissatisfied with the state interpretation of lease contract terms especially those relating to appraisal. Many lessees testified before the committee as to their grievances.

2) The Division's regulations covering sales and leases are often outdated and conflicting with statutes in some cases.

3) The State's lease contract form is not in line with commercial contracts and has many ambiguities in it.

4) Some state statutes in Title 38.05 are vague and unclear.

5) Payment methods for state sales contracts do not match those used in the private sector and may contribute to ballooning land values.

AGO 935826

These findings outline the basis for the committee's recommendations which follow.

The recommendations of the committee concern statute, policy, and regulation changes, and can be grouped by topic.

The following three items are of general concern:

1. The committee wishes to note that in the course of public testimony it was apparent that Division of Aviation lessees had significant problems with their current leases. This subject was not within the scope of the committee's deliberations and, therefore, not addressed.

2. To comply with new statutes the committee recommends a major overhaul of Division of Lands regulations. The committee has found many of the regulations now in effect to be outdated and superceded by statutes.

3. The committee recommends that the Legislature apply the provisions found in Title 38 to those in Title 3, Title 19, and Title 35. The rationale would be to make land laws uniform among the Division of Aviation, Department of Highways, and Division of Lands.

AGO 935827

In order to provide predictability in appraisals and reappraisals, for the benefit of the State and the public, the committee recommends the following:

1. At present many lessees are suffering hardship due to rent increases of several hundred percent. To provide for this relief and as a curative for such future increases the statutory provisions found in section nine of the attached bill are recommended. Provision for optional conversion of present leases to ones that will place a ceiling of 100% on rental increases every five years will largely prevent future hardship cases and resolve satisfactorily the present cases. With a rent ceiling, lease rental increases will be more predictable resulting in more financial stability for the lessee. (The Alaska Industrial Subdivision hearing panel recommends insuring predictability by placing some control over the size of the rental increase through utilization of a ceiling on the size of the increase in rental every five years.)

   Sections 8 and 9 of the attached bill will accomplish the above recommendations.

2. The committee recommends that land offered over the counter be reviewed at 90 to 120 day intervals to determine if an increase in value has occurred. This

AGO 935828

review is desired so that parcels are not undervalued by progressive changes in the market.

Section 10 of the attached bill would accomplish this.

3. Since public notice is covered in AS 38.05.345 the change to " ppraisal" for AS 38.05.310 is warranted by its present content. The committee recommends that land may be appraised 120 days in advance of a sale or lease. The change from 90 to 120 days would be desirable in that minimum bid information could be given to the public well in advance of the actual sale or lease auction. In addition 11 AAC 54.140 should be repealed.

Section 10 of the attached bill will accomplish this.

4. In order to provide a workable solution to the problems of confidentiality of appraisal data, the committee recommends that the Director of the Division of Lands refrain from including confidential information in any appraisal prepared for the Division of Lands use. The committee recommends adoption of the following policy statement:

AGO 935829

The director may make confidential those portions of appraisals and supporting data which contain information provided the appraiser in confidence. Such appraisals shall be subject to review by the local chapter of the American Institute of Real Estate Appraisers or the Society of Real Estate Appraisers to determine if the appraisal is acceptable under the professional practices and guidelines of the reviewing organization.

5. The committee believes that the word "primarily" may imply special consideration to some lessees. In order to treat all lessees fairly and equitably the committee recommends that the word "primarily" be stricken. Deleting "primarily" would clarify the basis for reappraisal. (This was also recommended by the Alaska Industrial Subdivision hearing panel.)

Section 8 of the attached bill will accomplish this.

To improve accounting policies, the following are recommended:

1. The committee recommends that all sales contracts over $400.00 per year have the option of paying in quarterly installments instead of annual installments. It is the committee's belief that this would ease the financial

strain on the buyer and yet not add significantly to the State's administrative costs. To provide quarterly payments would require a change in AS 38.05.065 with the present annual payments deleted and the quarterly payment provision adopted in its place.

Section 3 of the attached bill would accomplish this.

2. The committee recommends that a $10.00 fee charge to cover administrative costs be given to those who make sale or lease payments with checks that are returned. It is a standard business practice to provide for such charges and is recommended to protect the State's interests.

3. The committee recommends instituting default charges for late sale or lease payments. A present, there exists no penalty and many payments are late. The form of penalty recommended is notification charges to all delinquent payments and penalty charges to payments delinquent more than 30 days. The notification charge would be $5.00 for the first notice, $20.00 for the second notice and a penalty charge of 6 percent of the payment.

It is suggested that the fee charges be adopted as a regulation under authority of AS 38.05.035 (4)(5) as follows:

11 AAC 54.365. Delinquent Payments.

In the event of a delinquent payment, the following charges will apply:

1. A $10.00 penalty for payment with a check that is returned.

2. A $5.00 penalty for notification of payments over thirty-five days late.

3. A $20.00 penalty for a second notification of payments more than fifty days late.

4. A penalty of 6 percent of the rental or sale payment for payments delinquent by more than thirty days.

(Eff. ___ ___ Register _____)Authority AS 38.05.035.

In order to achieve more flexibility and simplicity in handling land disposal transactions, the following are recommended:

1. The committee recommends that the State charge a market rate of interest in its sales contracts. The interest rate, at present 6%, is below market levels and may have contributed to inflated prices at state land sales. By setting interest rates at market levels, the State would help prevent inflated land prices and at the same time return more income to the State. To provide for a market rate of interest in sales contracts, no change in AS 38.05.065 would be required. The addition of a statement of market rate in this statute would be desirable, however.

Section 3 of the attached bill would accomplish this.

2. The committee recommends that the State adopt a system of level payments in place of declining payments in its sale contracts. The system of level payments is in common use in the business world, and the payment figures are easily set forth in a contract. The disadvantage of the present method is that interest must be recalculated every year and the payments decrease each year. From both the State's and the buyers' viewpoints, the level payment method would be preferred. The State would receive slightly more in interest payments over the contract terms and the buyer would not have to make as high initial payments. To provide

level payments would require a change in AS 38.05.065 with the present system deleted and the level payment system adopted in its place.

Sections 2 and 3 of the attached bill would accomplish this.

3. The committee recommends that in Title 38.05 the term "fair market value" be used in place of "fair appraised market value" and "market value." The meaning is felt to be the same in all cases. The committee would like to see one standard term used to avoid confusion and misunderstanding.

Sections 4, 5, 7, and 13 of the attached bill would accomplish this.

4. The current procedures for informing the public of state lands transactions are covered in AS 38.05.305 and AS 38.05.345. The two procedures do not mesh in a clear manner. The committee recommends that the procedures be clarified in a manner that will be flexible enough to inform the public fully and yet not require multiple advertising for minor negotiated transactions.

Section 11 of the attached bill will accomplish this.

5. The committee recommend that the Director be given the authority to set the payment period from one to twenty years. This type of flexibility would allow the State and buyers greater market possibilities. To provide for this would require that the installment clause in AS 38.05.065 be deleted and replaced by the one to twenty year provision.

Section 3 of the attached bill would accomplish this.

6. The committee recommends that the State be given more flexibility to resolve contract of sale violations. This is necessary to prevent foreclosure as the only remedy for minor contract violations.

Section 3 of the attached bill would accomplish this.

To institute improvements in the leasing system, the following are recommended:

1. To implement the new lease provisions recommended by this committee new lease forms for various types of leases will be required. It is the committee's recommendation that the Division draft new lease forms to comply with the statutes adopted, and that the new forms be reviewed by this committee.

The attachments to the standard lease in Appendix C accomplish this.

2. The committee recommends that all state leases to other public agencies be at the normal fair market value rate of payment.

This reflects a regulation change.

3. The committee recommends that state government agencies get out of residential leasing.

This would reflect a policy change.

4. To provide the lessee insurance against a land boom or unexpected increase the committee recommends that rental increases at the five year reappraisal periods not exceed 100 percent of the prior existing annual rental rate. This action would increase the predictability of the lessee's payments. The stability thus created would add significant borrowing power for the lessee to finance improvements on the leased ground.

Section 8 of the attached bill would accomplish this.

AGO 9358 36

5. The duration of a lease and the economic life of substantial improvements, such as stores or factories, may not coincide. In order to see that state leased land is used in a rational, economically productive manner the committee recommends that lessees of long-term leases be given a renewal option for up to fifteen years. This type of option would grant the lessee more flexibility in maximizing his investment returns, especially during the final years of his lease. It would also increase the lessee's planning possibilities for use of the leased ground. This action would also soften the impact of termination of the lease. Specifically, this would permit a lessee to make substantial repairs to a building when the remaining term of the lease would not otherwise justify it.

Section 6 of the attached bill would accomplish this.

6. The committee agrees that a lease should be converted at its present classification, and the leaseholder should then have the option to change classification subject to Division of Lands approval.

This reflects an implementation recommendation in the event that House Bill 383 passes.

7. The committee recommends that a level term for recreational leases not be provided.

8. The Alaska Industrial Subdivision hearing panel recommends that in accord with the provisions of the lease, lessees should be encouraged to record expenses incurred in site preparation so that the "original condition" can be more adequately ascertained.

The Ad Hoc committee concurs. This recommendation is handled in the attached lease document.

9. The Alaska Industrial Subdivision hearing panel recommends that lease language should be clarified to remove any possible inconsistencies with 11 AAC 58.520 (Adjustment of Rental).

The Ad Hoc committee concurs.

10. The Alaska Industrial Subdivision hearing panel recommends eliminating the floating easement. The State could exercise the right of eminent domain to condemn. The condemnation would probably result in greater compensation for damages to the lessee, especially in view of the Supreme Court decision in State v. Hammer,

550 P.2d 830, thus the lease would be more attractive to the leasing market. Additionally, the language in the current lease is ambiguous as to damages compensable. This ambiguity only encourages litigation.

The Ad Hoc committee concurs. This has been accomplished in the attached lease form.

11. The Alaska Industrial Subdivision hearing panel states that, if its recommendations are adopted, the State would be assured a competitive position in the lease market, would encourage development of the leaseholds consistent with the intent of the leasing regulations, and would be equitable to the lessee. The hearing panel also believes the State should be able to obtain a good return on its land. Accordingly, the rental rate should be changed to reflect the removal of the undesirable aspects of the state lease.

The Ad Hoc committee concurs. Continuing to include rate as an appraisal element will accomplish this objective. This change is found in the attached lease form.

To provide a vehicle for arbitrating protests and appeals involving land transactions, the following is recommended:

1. The Division of Lands has had many protests from private parties over the past few years leading the committee to believe that a board of appeals is highly desirable and needed at this time. At present there exists no arbitration board or board of appeals to handle appeals allowed by Division of Lands regulations. The creation of a board of appeals would effect a responsive mechanism for solving most problem cases arising out of Division of Lands transactions that affect private parties. The board of appeals would be faster and less costly to private parties than legal recourse, which would still be available. The board is structured to maintain adequate expertise while attempting to eliminate bias in favor of the Division of Lands. The appeal board would substitute for the Commissioner in the present appeal process. (The Alaska Industrial Subdivision hearing panel also recommends such an appeal process.)

   Section 9 of the attached bill would accomplish this.

The committee recommends the following to improve trust land management:

AGO 935040

1. The committee believes that state trust lands (school, mental health, and university) are now and have been managed at low intensity. These lands may be returning only a fraction of their potential value that could be realized by a small, full-time management staff. The Division manages these lands at no charge to the various trust funds and receives no reimbursement for its services. Therefore, it has traditionally placed low priority on management of these lands. This committee recommends that the State Legislature authorize each trust board the authority to freely contract with any agency or private firm for the management of its lands for revenue production in accordance with the State's land act.

2. In order to provide a uniform 55 year limit for all long-term leases the committee recommends deletion of the 99 year provision found in 38.05.070(c) for school lands.

Section 6 of the attached bill would accomplish this.

V. APPENDIX A

LIST OF PUBLIC GIVING COMMENTS AT AD HOC MEETINGS

GRAHAM, Joe

AKERS, Merle (Anchorage International Airport Pilots' Association)

FORD, R. G. (Anchorage Camper Center--Alaska Industrial Subdivision)

IN THE HOUSE

BY THE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

HOUSE BILL NO. 383

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to state land; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 38.05.030 is amended by adding a new subsection to read:

(f) Each trust for which the director exercises land management functions shall be assessed the cost of that management which shall be negotiated annually between the division and the respective trust boards.

* Sec. 2. AS 38.05.055 is amended to read:

Sec. 38.05.055. SALE PROCEDURES. Except as provided in sec. 315(d) of this chapter, the sale shall be made at public auction to the highest qualified bidder as determined by the director. An aggrieved bidder may appeal to the commissioner within five days after the sale for a review of the director's determination. The sale shall be conducted by the director or his representative, and at the time of sale the successful bidder shall deposit an amount <u>determined by the director but not less than five per cent</u> [EQUAL TO ONETENTH] of the purchase price. The director or his representative shall immediately issue a receipt containing a description of the land or property purchased, the price bid, and the terms of sale, which receipt shall be acknowledged in writing by the bidder. A contract of sale on a form approved by the attorney general shall be signed by the purchaser and, after approval of the commissioner, the contract shall also be

signed by the director on behalf of the state.

* Sec. 3. AS 38.05.065 is amended to read:

Sec. 38.05.065. TERMS OF CONTRACT OF SALE. The contract of sale shall require the remainder of the purchase price to be paid over a period of not more than 20 years, to be set for each sale by the director. Installment payments plus interest must be set on the level-payment basis. The interest rate to be charged on installment payments is the prevailing rate on similar land transactions at the time the contract is signed, as determined by the director, but in no case may it be below five per cent per year or above the current usury rate as set by AS 45.45.010(b) and (d) [IN ANNUAL INSTALLMENTS OF NOT LESS THAN 10 PER CENT OF THE PURCHASE PRICE, WITH INTEREST AT THE RATE OF NOT LESS THAN FIVE PER CENT A YEAR]. The director, with the consent of the commissioner, may also impose conditions, limitations and terms which he considers necessary and proper to protect the interest of the state. Violations of any provision of this chapter or the terms of the contract of sale subject the purchaser to appropriate administrative and legal action, including but not limited to specific performance, foreclosure, ejectment, or other legal remedies in accordance with applicable state law [LEGAL ACTION, INCLUDING A FORECLOSURE ACTION IN ACCORDANCE WITH APPLICABLE STATE LAW].

* Sec. 4. AS 38.05.067(b) is amended to read:

(b) The director shall not sell the lands under this section at less than their fair [APPRAISED] market value. The director shall make regulations necessary to ensure that lands sold under this section are for bona fide residential use and not for speculation.

* Sec. 5. AS 38.05.068(a) is amended to read:

(a) Before offering to the public any land which is subject to a valid existing United States Forest Service permit in effect in a

state-selected area at the time the area was patented to the state, or which is subject to a lease issued under sec. 87 of this chapter, the director shall offer the land for sale to the permittee or his successor in title, if he can be found, at not less than its fair [APPRAISED] market value before offering to the general public.

* Sec. 6. AS 38.05.070(c) is amended to read:

(c) A lease may be issued for a period up to 55 years, if it appears to be in the best interest of the state and if the commissioner approves. A lease for a period in excess of 25 years must grant the lessee an option entitling him to extend the term of the lease for up to three consecutive five-year periods in addition to the original term. If the commissioner determines that the land or a part of it which is the subject of a grazing lease is not being used for the purpose issued, the lease may be declared void. [HOWEVER, A NON-RENEWABLE LEASE FOR SCHOOL LANDS MAY BE ISSUED FOR A PERIOD NOT TO EXCEED 99 YEARS.]

* Sec. 7. AS 38.05.087(a) is amended to read:

(a) Before offering to the public any land for lease which is subject to a valid existing United States Forest Service permit in effect in a state-selected area at the time the area was patented to the state, the director shall offer the land for leasing to the permittee at not less than its fair [APPRAISED] market value before offering it to the general public.

* Sec. 8. AS 38.05.105 is amended to read:

Sec. 38.05.105. PERIODIC RENTAL ADJUSTMENTS. (a) Each lease shall stipulate that the annual rental payment is subject to adjustment at five-year intervals and changes or adjustments shall be based [PRIMARILY] on a reappraised annual rental value. Any increase due to reappraisal may not exceed 100 per cent of the annual rental for the

preceding five-year period. However, if the director of the division of lands determines that residential development is the best use for the land, the reappraisal period may be lengthened or the readjustment waived in accordance with regulations adopted by the commissioner. Before a waiver of rental readjustment is issued, the land shall have a current reappraisal. A waiver is valid only if residential development actually occurs, and only if it is necessary for obtaining primary long-term financing. The regulations adopted under this section shall ensure that the state receives a fair return from the land.

(b) The 100 per cent limit on increases in annual rental applies only to leases executed after the effective date of this Act and to leases converted under sec. 106 of this chapter.

* Sec. 9. AS 38.05 is amended by adding new sections to article 3 to read:

Sec. 38.05.106. CONVERSION OF LEASES. (a) Any person holding a valid lease under secs. 70 - 106 of this chapter, or who is an approved assignee of such a lessee under the terms of the lease, may convert his lease to obtain the benefits described in (b) of this section, which were not available to him at the time his lease was originally entered, if he makes all payments due under the lease as computed according to this section and is not in violation of any other lease provision.

(b) Those lease benefits which must be made available to a lessee qualifying under (a) of this section are all of those lease provisions authorized to be included in new leases executed by the state after the effective date of this Act.

(c) The effective annual rental value at conversion shall be based on the most recent reappraisal if reappraisal was within two years after the effective date of this Act. In all other cases, the

annual rental value at conversion shall be based on the next reappraisal after conversion.

(d) The rate which is applied to the fair market value of lease property to compute annual rental value shall be the current market rate except the director may reduce it to not less than six per cent.

(e) Any lease conversion as to trust lands is effective only if approved by the appropriate board of trustees.

(f) Applications for conversion must be made within three years after the effective date of this Act.

Sec. 38.05.108. STATE BOARD OF LAND APPEALS; REGULATIONS. (a) There is created in the department a Board of Land Lease Appeals of five members, one of whom is the commissioner or his designated representative. The other members of the board are to be appointed by the governor from the general public, after consideration of the desirability of legal, natural resource, or real estate training and experience as criteria.

(b) The director shall provide administrative support for the board.

(c) The terms of the public members are three years each, except that the initial terms of one of the members first appointed under this chapter shall be for one year and one member for two years. The public members are entitled to compensation in the amount of $50 a day for each day or portion of a day spent in actual meeting or on authorized official business incident to their duties, and to all transportation and per diem allowances authorized by AS 39.20.180.

(d) Jurisdiction of the board extends to matters arising under secs. 70 - 106 of this chapter related to the leasing of state land other than for the extraction of natural resources from which an appeal may be taken under statute or regulation to the commissioner

from a decision of the director. The board in all those appeals filed after the effective date of this Act has the authority to hear evidence and recommend decisions to the commissioner when the director's decision is appealed to the commissioner. The commissioner,, after consultation with the board, shall adopt regulations governing the procedures of the board.

* Sec. 10. AS 38.05.310 is amended to read:

Sec. 38.05.310. NOTICE AND APPRAISAL. (a) No land may be sold or leased, or a renewal lease issued [WITHOUT PUBLIC NOTICE,] except in the case of an oil or gas or mineral lease, unless it has been appraised within 120 [90] days before the date of [FIXED FOR THE] sale or lease. For over-the-counter sale under (b) of this section, an appraisal [WHEN LAND IS OFFERED AT PUBLIC SALE BUT IS NOT SOLD AND IS AVAILABLE AT PRIVATE SALE, NO REAPPRAISAL] is required unless the director finds [CONSIDERS] that a change in value of the lands has not [MAY HAVE] occurred. A grazing lease may be granted to a lessee of federal grazing lands without prior appraisal, if his federal lease was cancelled to allow the state to select the lands under lease. No land may be sold or leased for less than fair [THE APPROVED, APPRAISED] market value, except as provided in secs. 315 and 320 of this chapter and secs. 75 - 85 of this chapter. No land or interest in land may be sold, leased, or otherwise disposed of without public notice.

(b) When land is offered at public sale but is not sold, it may be available for sale over the counter. The director shall review the list of parcels of land available on a quarterly basis and shall certify that there has been no change in value since the last reappraisal. If an increase in value occurs in any parcel, the director shall withdraw that parcel from sale over the counter.

* Sec. 11. AS 38.05.345(a) is amended to read:

(a) Public notice of an auction sale [, LEASE OR OTHER DISPOSAL] of land or interest in it shall be substantially as follows.

* Sec. 12. AS 38.05.345 is amended by adding a new subsection to read:

(e) Public notice of a sale, lease, or other disposal of land or an interest in it other than by auction, or notice of a classification or other action concerning land, shall conform to the requirements of sec. 305 of this chapter and of this subsection. That notice must comply with the provisions of (b) and (d) of this section, except that the disposal may be made more than five weeks following the last appearance of the published notice.

* Sec. 13. AS 38.05.365 is amended by adding a new paragraph to read:

(24) "market value" or "fair market value" means the price, estimated in terms of money, which the property would bring if exposed for a sale for a reasonable time in the open market, with a seller, willing but not forced to sell, and a buyer, willing but not forced to buy, both being fully informed of all the purposes for which the property is best adapted or could be used.

AGO 935850

V. APPENDIX C

DEPARTMENT OF NATURAL RESOURCES

DIVISION OF LANDS

323 East Fourth Avenue

Anchorage, Alaska 99501

ADL NO._____

LEASE AGREEMENT

THIS Lease agreement made and entered into this _____ day of _____, 19___, by and between the State of Alaska, through the Director of the Division of Lands, with the consent and approval of the Commissioner of the Department of Natural Resources, acting for and on its behalf under and pursuant to AS 38.05, as amended, and the regulations promulgated thereunder, as amended or hereafter amended, hereinafter referred to as the LESSOR; and ___ _____ of _____ hereinafter referred to as the LESSEE:

WHEREAS, the Lessor has caused the lands herein demised to be appraised and such appraisal was made and approved on or after _____, 19_____; and

WHEREAS, the Lessor has caused a notice of intent to lease the lands herein demised to be published as required by law or caused notices of intent to lease to be posted as required by law; and

WHEREAS, an auction of the herein demised property was held at the time and place designated by notice and said sale was approved by the Director of the Division of Lands, Department of Natural Resources, State of Alaska:

AGO 935851

NOW THEREFOR, the Lessor has agreed to let and does hereby let and demise to the Lessee, and the Lessee has agreed to take and does hereby take from the Lessor the surface estate of all that lot, piece, or parcel of land more particularly bounded and described, as follows:

_____

_____

_____

_____

_____

Located in the _____ Recording District, State of Alaska.

TO HAVE AND TO HOLD the said demised premises for a term of _____ ( ) years commencing on the _____ day of _____, 19____, and ending at 12 o'clock midnight on the _____day of _____, _____, unless sooner terminated as hereinafter provided.

The Lessee shall pay to the Lessor rental as follows: Equal _____ payments, in advance, on or before the _____ day of _____ of every year during said term at the rate of _____ Dollars ($_____) per _____; such payments to be subject to adjustment as hereinafter required from the effective date hereof, as provided herein.

It is agreed that each of the covenants, terms and agreements herein contained shall be binding upon the parties and upon their respective successors and assigns.

1. Appertenances, and Encumbrances-- Lessor leases and grants to Lessee all easements, parking and loading rights, rights of ingress and egress, fixtures and appurtenances now or hereafter belonging or pertaining to said premises. The des-

cribed premises are leased, subject to patent restrictions, easements, rights-of-way, if any, zoning and building restrictions and statutes and governmental regulations now in effect or hereafter adopted by any governmental authority.

2. Payment of Taxes and Assessments-- Lessee agrees to pay to the public authorities charged with collection thereof, promptly as the same may become due and payable, all taxes, permit, inspection and license fees and other public charges, whether of a like or different nature, except for general and special assessments lawfully levied upon the leasehold estate and any buildings, structures, fixtures, improvements or leasehold interest now or hereafter located thereon, or arising in respect of the occupancy, use or possession of the leased Premises, and which are charged against and are, or may become, a lien during the term of this lease; and Lessee agrees to exhibit to Lessor, on demand receipts evidencing payment of all taxes, fees and other similar public charges so payable by Lessee. Lessee shall also pay all charges of water, sewer, gas, electricity, power or other public utility services rendered on or to the Premises during the term of this lease as such charges become due.

3. Documentation of Improvements-- Lessee must within 90 days of completion of any site improvements, including but not limited to clearing, leveling, excavation, and backfill, and exclusive of any structures, file with the lessor adequate and reasonable documentation of such improvements including any applicable costs and quantities. Such documentation is intended to aid in future determinations of the original condition of the Premises.

4. Notification and Late Payment Charge-- In the event lessee becomes 30 days delinquent in payments due, a late payment charge of 6% of such amount due shall be levied against the lease. Additionally, a charge for notification for payments 30 days late shall be made at the rate of $5.00 for the first notice and $20.00

for the second notice.

5. Permitted Uses-- (a) The Lessee shall use the leased Premises for uses and purposes consistent with those cited in Attachment 1, and in conformance with applicable local zoning ordinances. At any time Lessee may request a change in permitted uses, provided that Lessee's existing or proposed use of the Premises is consistent with existing zoning. If the Lessor concurs with such change of permitted use, then this lease shall terminate, and a new lease, upon a form and containing terms, appraisal and rental rate applicable to the changed classification; shall be executed for the balance of the unexpired lease term, or renewal term if applicable, then remaining.

b. Lessee may request that part of the leased Premises be severed from the Premises for purposes of changing of that part for a use or uses not permitted under the then existing permitted uses of the Premises. If the Lessor concurs, then this lease shall terminate as to the part so severed, and a new lease, upon a form and containing terms, appraisal and rental rate applicable to the changed permitted uses; shall be executed for the balance of the unexpired lease term, or renewal term if applicable, then remaining. The annual rentals applicable to the original leased Premises shall be adjusted to reflect the effect of severance of the part permitted by this paragraph for the balance of the original lease term or the renewal term, if applicable. If severance of a portion of the Premises is permitted, Lessee shall comply with all state and local laws and ordinances regarding the subdivision of real property, and shall bear the expenses and costs attributable to survey, recording and other compliance with said laws and ordinances.

6. Compliance with Laws' Ordinance and Regulations-- Lessee shall comply with all applicable laws, ordinances and regulations of duly constituted public au-

thorities now or hereafter in existence which in any manner affect the leased Premises or the sidewalks, alleys, streets, and ways adjacent thereto, or any buildings, structures, fixtures or improvements or the use thereof. Lessee further agrees that it will not permit any unlawful occupation, business or trade to be conducted on the Premises, or any use to be made thereof contrary to any law, ordinance or regulation applicable thereto.

The lessee, at its own cost and expense, shall keep the leased Premises and all improvements which at any time during the term of this lease may be situated thereon, in good maintenance, condition and repair during he entire term of this lease, and hereby expressly waives any right to make repairs to the Premises at the expense of Lessor which may be allowed by any statute or law in effect at the time of the execution of this lease or any amendment thereof, or by any other statute or law which may be hereafter passed during the term of this lease. The Lessee's rights under this Lease may be terminated by the Director, in whole or in part, if the leased Premises are used for a purpose unlawful under Federal or State law or regulation, or local Government ordinance as applicable.

7. Lessee's Rights of Occupancy and Use-- Lessee, when not in default of performance of any of its obligations hereunder, shall have the following rights, during the term of this Lease; from time to time and in such manner, and to such extent, as Lessee may in its sole judgment deem advisable, except where any of said rights is conditioned upon prior approval of Lessor: (a) The right to demolish, remove or otherwise dispose of any improvements presently or subsequently situated upon the leased Premises; (b) The right to erect, place, or install upon the leased Premises buildings, structures, and improvements as from time to time it shall deem advisable; (c) The right to make such alterations, additions and repairs to the leased Premises as it may desire.

8. Disposition of Improvements Upon Termination— (a) All buildings, structures and permanent improvements, including any signs which are installed, placed or attached in or about the leased Premises by Lessee, shall remain the property of Lessee at the expiration or termination of this lease, or of any renewal term thereof. The lessee shall within 60 days after termination or expiration of the lease remove all improvements located on the leased Premises, provided that such removal will not cause injury or damage to the leased Premises; and further provided that the Lessor may extend the time for removing such improvements in a case where hardship is demonstrated. Following removal Lessee shall leave Premises in a safe and natural condition. The retiring Lessee may, with the consent of the Lessor, sell his improvements to the succeeding lessee.

(b) If any improvements and/or chattels having an appraised value in excess of $10,000.00, as determined by the Lessor, are not removed within the time allowed, such improvements and/or chattels shall, upon due notice to the Lessee, be sold at public sale under the direction of the Lessor. The proceeds of sale shall inure to the Lessee who placed such improvements and/or chattels on the lands after payment to the Lessor of all rents due and owing and expenses incurred in holding such sale. In case there are no other bidders at any such sale, the Lessor is authorized to bid on such improvements and/or chattels. The Lessor shall acquire all rights, both legal and equitable, that any other purchaser could acquire by reason of said sale and purchase.

(c) If any improvements and/or chattels having an appraised value of $10,000.00 or less, as determined by the Lessor, are not removed within the time allowed, such improvements and/or chattels shall revert to, and absolute title shall vest in, the Lessor.

9. Freedom From Liens-- Lessee will not permit any mechanics', laborers', or

materialmens' liens to stand against the leased Premises or improvements for any labor or materials furnished to Lessee, or claimed to have been furnished to Lessee or to Lessee's agents, contractors, or sublessees, in connection with work of any character performed on said Premises or improvements by or at the direction or sufferance of Lessee; provided, however, that Lessee shall have the right to contest the validity or amount of any such lien or claimed lien. In the event of such contest, Lessee shall give to Lessor such reasonable security as may be demanded by Lessor to insure payment thereof and to prevent any purported sale, foreclosure or forfeiture of the premises or improvements by reason of such non-payment. Such security need not exceed one and one-half times the amount of such lien or such claim of lien. Lessee shall record such bond as contemplated by Section 34.35.072, Alaska Statutes upon Lessor's demand. Lessee shall immediately pay any judgment rendered on any proven claim of lien, together with all proper costs and charges, and shall have such lien released or judgment satisfied at Lessee's own expense. The State may file such notices of non-responsibility as it may deem necessary, pursuant to A.S. 34.35.065.

10. Lawful Use of Premises-- The Lessee may use and occupy the leased Premises for any lawful purpose provided such purpose is allowed under Attachment 1 of this Lease.

11. Indemnity to Lessor— Lessee will indemnify and hold Lessor harmless from and against all claims and demands for loss or damage, including property damage, personal injury or wrongful death, arising out of or in connection with the use or occupancy of the Premises by Lessee or any other person under Lessee, and from any accident or fire on the Premises and from any nuisance made or suffered thereon, and from any failure by Lessee to keep the Premises in a safe condition, and Lessee will reimburse Lessor for all its costs and expenses, including reasonable attorneys' fees, incurred in the defense of any such claims; and Lessee will hold all goods,

materials, furniture, fixtures equipment, machinery and other property whatsoever on the Premises at the sole risk of Lessee, and will save Lessor harmless from any claim of loss or damage thereto by any cause whatsoever. If all or part of the improvements placed by Lessee on the demised premises are destroyed by fire, earthquake or other cause, Lessee shall remove the debris and clean up the affected area within 60 days of the occurrence of such destruction, and may surrender to Lessor this lease, together with any interest of Lessee and of any mortgagee in the remaining insurance proceeds and Lessee may thereby be relieved of any further obligation hereunder.

12. Default— If Lessee at any time during the term or renewal term of this lease (and regardless of the pendency of any bankruptcy, reorganization, receivership, insolvency or other proceedings, in law, in equity or before any administrative tribunal, which has or might have the effect of preventing Lessee from complying with the terms of this lease) (a) shall fail to make payment of any installment of rent or of any other sum herein specified to be paid by Lessee, or (b) shall fail to observe or perform any of Lessee's other covenants, agreements or obligations hereunder, and if any such default shall not be cured as to (a) within ten days after Lessor shall have given Lessee written notice of such failure to make payment, or as to (b) within thirty (30) days after Lessor shall have given to Lessee written notice specifying such default or defaults, Lessee shall not have commenced diligently to cure such default; or if Lessee has filed a voluntary petition or has become subject to an involuntary petition under any provision of the Bankruptcy Act, 11 U.S.C. 701 et. seq; or if Lessee finally and without further possibility of appeal or review is adjudicated a bankrupt or insolvent; or if Lessee has a receiver or a Trustee appointed for all or substantially all of its business or assets on the ground of Lessee's insolvency; or if Lessee has itself appointed as debtor-in-possession in a proceeding for a reorganization or an arrangement; or if Lessee shall make an assignment for the benefit of its creditors, then in any such event Lessor shall have the right,

at its election, then or at any time thereafter, and while such default, defaults or events shall continue, to give Lessee written notice of Lessor's intention to terminate this lease and all of Lessee's rights hereunder, on the date specified in such notice, which date shall not be less than thirty (30) days after the date of giving of such notice; and on the date specified in such notice this lease and all rights granted Lessee hereunder shall terminate as fully as if the lease had then expired by its own terms; and Lessee hereby covenants to peaceably and quietly surrender to Lessor said leased Premises and all structures, buildings improvements and equipment located thereon, subject to paragraph 7 (a) above and to execute and deliver to Lessor such instrument or instruments which may be required by Lessor to properly evidence termination of Lessee's rights and interest hereunder.

In the event of termination of this lease as provided in this paragraph 12, Lessor shall have the right to repossess the leased Premises and such structures, buildings, improvements and equipment, thereon and subject to paragraph 5 above either with process of law or through any form of suit or proceeding, as well as the right to sue for and recover all rents and other sums accrued up to the time of such termination, and damages arising out of any breach on the part of Lessee, including damages for rent for the balance of the lease term not then accrued. Lessor shall also have the right, without taking possession of the premises or terminating this lease, to sue for and recover all rents and other sums, including damages, at any time and from time to time which may accrue hereunder as a result of any default of Lessee.

13. Condemnation-- If the whole or any part of the demised premises shall be taken for any public or quasi-public use, under any statute or by right of eminent domain or private purchase in lieu thereof, by any public or quasi-public body vested with the power of eminent domain, then when possession shall be taken thereunder of the leased Premises, or any part thereof, the following provisions

shall control:

a. Taking of All Premises— If all of the Premises are taken by condemnation the term of this lease and all rights of the Lessee hereunder shall immediately terminate, and the rent shall be adjusted as of the time of such termination so that Lessee shall have paid rent only up to the time of such taking. Lessor shall be entitled to the full condemnation proceeds, except that portion thereof attributable to the value of the buildings or improvements placed on the Premises by Lessee.

b. Taking of Substantial Part of Premises-- If the taking by condemnation reduces the ground area of the leased Premises by at least thirty percent (30%), or materially affects the use being made by the Lessee of the demised premises, Lessee shall have the right, by written notice to Lessor made not later than one hundred eighty (180) days after possession shall be taken, to elect to terminate or to not terminate this lease under the provisions set forth herein. If the election to terminate is made the provisions of (a) of this paragraph relating to the taking of the whole Premises shall govern. If the election not to terminate is made the lease shall continue and Lessor shall be entitled to the full condemnation proceeds except the portion thereof attributable to the value of the buildings or structural improvements placed on the Premises by Lessee; and rent at the existing rate and amount shall be adjusted as of the date of the taking of possession, and the rent for the balance of the term, except as modified from time to time under paragraph 1 of attachment 1 hereof, shall be reduced so that the new rent shall be that part of the former rent (before condemnation) which the unimproved value of the untaken Premises (appraised after the taking) bears to the unimproved value of the entire Premises immediately before the taking. Any dispute, controversy or claim arising out of or relating to the fixing of the new rent shall be settled by arbitration as provided herein.

c. Taking of Insubstantial Part of Premises— If the taking is of such an insubstantial portion of the ground area that the use being made by Lessee of the leased premises is not materially affected, the provisions of this paragraph regarding Lessee's election not to terminate shall govern.

14. Quiet Enjoyment— Provided Lessee is not in default hereunder, Lessor covenants that Lessee shall have peaceful and quiet enjoyment of the leased Premises without let or hindrance on the part of Lessor, and Lessor will warrant and defend Lessee in the peaceful and quiet enjoyment of the leased Premises.

15. Notices-- All notices required or permitted under this agreement shall be made by certified or registered mail, postage prepaid, to the parties at the following addresses.

To The Lessor: _____

To The Lessee: _____

16. Rights or Remedies-- Except as may be inconsistent with or contrary to any provision of this lease, no right or remedy herein conferred upon or reserved to Lessor shall be exclusive of any other right or remedy, and each and every right or remedy shall be cumulative and in addition to any other right or remedy given hereunder, or now or hereafter existing at law or in equity or by statute.

17. Waiver or Forebearance— The receipt of rent by the Lessor, with or without knowledge of any breach of the lease by the Lessee, or of any default on the part of the Lessee in the observance or performance of any of the conditions or covenants of this lease, shall not be deemed to be a waiver of any provision of this lease. No failure on the part of the Lessor to enforce any covenant or provision herein

contained, nor any waiver of any right hereunder by the Lessor, unless in writing, shall discharge or invalidate such term or covenant; nor shall any forebearance or written waiver affect the right of the Lessor to enforce any term or covenant in the event of any subsequent breach or default. The receipt by Lessor of rent or any other sum of money or the termination, in any manner, of the lease term or the giving by Lessor of any notice hereunder to effect such termination, shall not reinstate, continue, or extend any term herein leased, or destroy, or in any manner impair the validity of any such notice of termination as may have been given hereunder by the Lessor to the Lessee prior to the receipt of any such sum of money or other consideration, unless the contrary effect shall be expressed in writing and signed by the Lessor.

18. Inspection— Lessor shall, at all reasonable times have access to the Premises for the purpose of inspection.

19. Successors in Interest-- This Lease shall be binding upon and inure to the benefit of the respective heirs, successors in interest and assigns of the parties hereto.

20. Assignment or Subletting— Lessee shall not sublet or assign the leased premises or any part thereof, without the prior written consent of Lessor to such subletting or assignment, which consent shall not be unreasonably withheld, subject to use provisions of this lease. However, Lessee, without prior authorization may assign this Lease, or any part thereof, to a duly licensed and authorized lending institution for loan security purposes, provided that this right to assign shall not operate as a subordination of Lessor's rights hereunder, nor a subordination of its fee. Lessor agrees that upon receipt of application for assignment by Lessee, it will consent to or deny a proposed subletting or assignment by Lessee. No assignment or subletting of the Premises or any portion thereof by Lessee shall void Lessee's

obligation to pay the rent herein reserved for the full term of this sublease or any extensions thereof. Anything contrary in the foregoing notwithstanding, Lessee shall have the right to sublease all or any portion of the enclosed space in any building which Lessee may construct upon the leased Premises without prior written approval of Lessor.

21. Soil Conditions and Water Drainage-- Lessor makes no warranty and assumes no liability regarding the soil conditions or water drainage upon the leased premises.

22. Mineral Reservation-- The Lessor hereby expressly saves, excepts and reserves out of the grant hereby made, unto itself, its lessees, successors, and assigns forever, all oils, gases, coal, ores, minerals, fissionable materials, and fossils of every name, kind or description, and which may be in or upon said lands above-described, or any part thereof, and the right to explore the same for such oils, gases, coal, ores, minerals, fissionable materials and fossils. All coal, oil, gas and other minerals and all deposits of stone or gravel valuable for extraction or utilization, are excepted from the operation of a surface lease. Specifically, the lessee of the surface rights shall not sell or remove for use elsewhere any timber, stone, gravel, topsoil, or any other material valuable for building or commercial purposes; provided, however, that material required for the development of the leasehold may be used. It also hereby expressly saves and reserves out of the grant hereby made, unto itself, its lessee, successors, and assigns forever, the right to enter by itself, its or their agents, attorneys, and servants upon said lands, or any part or parts thereof, at any and all times, for the purpose of opening, developing, drilling and working mines or wells on these or other lands and taking out and removing therefrom all such oils, gases, coal, ores, minerals, fissionable materials and fossils; and to that end it further expressly reserves out of the grant hereby made, unto itself, its lessees, successors, and assigns forever, the right by

its or their agents, servants and attorneys at any and all times to erect, construct, maintain, and use all such buildings, machinery, roads, pipelines, powerlines, and railroads, sink such shafts, drill such wells, remove such soil, and to remain on said lands or any part thereof for the foregoing purposes and to occupy as much of said lands as may be necessary or convenient for such purposes, hereby expressly reserving to itself, its lessees, successors, and assigns, as aforesaid, generally all rights and power in, to and over said land, whether herein expressed or not, reasonably necessary or convenient to render beneficial and efficient the complete enjoyment of the property and rights hereby expressly reserved.

Provided, however, no rights shall be exercised by the Lessor or its mineral lessees, until provision has been made by the Lessor or its mineral lessees to pay to the Lessee of the land, upon which the rights herein reserved to the Lessor or its mineral lessees, are sought to be exercised, full payment for all damages sustained by said Lessee, by reason of entering upon said land; and provided that if said Lessee for any cause whatever refuses or neglects to settle said damages, the Lessor or its mineral lessees, or any applicant for a mineral lease or contract from the Lessor or its lessees for the purpose of prospecting for valuable minerals, or option contract or lease for mining coal or lease for extracting petroleum or natural gas, shall have the right, after posting a surety bond with the Director issued by a corporation qualified to do business in Alaska and licensed to sell insurance in Alaska, or a bond executed by one or more individual sureties approved by the Director, after due notice and opportunity to be heard, to be sufficient in amount and security to secure the said Lessee full payment for all such damages, to enter upon the land in the exercise of said reserved rights, and shall have the right to institute such legal proceedings in a court of competent jurisdiction wherein the land is situated, as may be necessary to determine the damages which the surface lessee of such lands may suffer.

23. Mortgage of Leasehold Interest of Tenant— A leasehold mortgagee, a beneficiary of a deed of trust, or a security assignee shall have and be subrogated to any and all rights of Lessee with respect to the curing of any default hereunder by Lessee. If the holder of any such mortgage, the beneficiary of any such deed of trust, or the security assignee shall give Lessor, before any default shall have occurred in the Lease, a written notice containing the name and post office address of such holder, Lessor shall thereafter give to such holder a copy of each notice of default by Lessee at the same time as any notice of default shall be given by Lessor to Lessee; and Lessor will not thereafter enter into any modification of this Lease without the prior written consent of such mortgagee, beneficiary or security assignee. If by reason of any default of Lessee, either this Lease or any renewal thereof shall be terminated at the election of Lessor prior to the stated expiration thereof, Lessor shall enter into a new Lease with the leasehold mortgagee, the beneficiary of a deed of trust, or the security assignee, for the unexpired portion of the lease term, effective as of the date of such termination, at the rent and on the terms herein contained, subject to the following conditions.

Mortgagees, beneficiary or security assignee shall do the following:

a. make written request to Lessor for a new lease within forty (40) days after the date of such termination; and such written request shall be accompanied by payment to Lessor of all sums then due Lessor under this lease as if termination had not occurred but with such costs as are permitted under this Lease.

b. pay to Lessor, at the time of the execution and delivery of such new Lease, any and all sums due thereunder, in addition to those which would at the time of the execution and delivery thereof be

due under this Lease but for such termination, and in addition thereto, any reasonable expenses, including legal and attorneys' fees to which Lessor shall have been subjected by reason of such default.

c. on or before the execution and delivery of such new Lease, perform all other conditions required to be performed by Lessee, to the extent that Lessee shall have failed to perform such conditions.

24. Arbitration— Any dispute between the parties arising under this lease or through the performance or non-performance of any term of this lease shall be first subject to resolution by arbitration, under the authority and procedures contained in Alaska Statutes 09.43. Appointment of an arbitrator shall be made by agreement between the parties. If no agreement can be reached, each party shall appoint an arbitrator, who shall by agreement between themselves appoint a third arbitrator. If any State Board of Land Appeals is later created which shall have jurisdiction over disputes which may arise under this lease, such Board shall assume jurisdiction and no requirement for arbitration shall thereafter be imposed during the pendency of such jurisdiction.

25. Integration and Modification— This document including attachments which by reference are made a part hereof, contains the entire agreement of the parties hereto. All negotiations, statements, representations, warranties, and assurances, whether oral or written, which are in any way related to the subject matter of this lease, and the performance by either party hereto, are merged and integrated into the terms of this document.

This Lease may not be modified nor amended except by a writing signed by both parties hereto, and any purported amendment or modification is without

effect until reduced to a writing signed by both parties hereto.

AGD 935867

IN WITNESS WHEREOF the State of Alaska, Lessor, acting through the Director of the Division of Lands of the Department of Natural Resources, lawfully authorized thereunto, has caused these presents to be executed at Anchorage, Alaska, in duplicate, and the said Lessee has hereunto set his hand, agreeing to keep, observe and perform the rules and regulations promulgated under AS 38.05, as amended, the terms, conditions and provisions herein contained, on the Lessee's part to be kept, observed and performed.

Juneau, Alaska 99811
(907) 465-3715

13 April 1977

Lee McAnerney, Commissioner
Department of COmmunity and Regional Affairs
Pouch B
Juneau, Alaska 99811

Dear Commissioner,

The House Resources Committee will be reviewing HB 425 An Act relating to erosion control and HB 426 An Act making a special appropriation to the Department of Community and Regional Affairs to provide funds for the erosion control grant program; and providing for an effective date on Tuesday April 19, 1977 at 1:15 p.m. in room 118 of the Capitol Building. The Committee will also be reviewing HB 459 An Act establishing the position subsistence economist within the Department of Community and Regional Affairs. HB 459 has not been scheduled yet. We will notify you later in regards to the date, time and location of the meeting.

Pease supply us with position papers or material you have on these bills by the time of the meeting. If you have any information pertinent to these topics, the Committee would appreciate receiving that, too. If you know of other interested groups, please contact them.

If you have suggested amendments, please supply the staff with copies of that prior to the meeting.

If there are fiscal implications and notes are necessary, please prepare them and submit them to the Committee -- preferably prior to the meeting.

Thank you for your cooperation.

Sincerely,

Al Osterback

STATE
of ALASKA

MEMORANDUM

DEPARTMENT OF COMMUNITY AND REGIONAL AFFAIRS

TO: Eric Lee, Director
Community & Rural Development

DATE : April 7, 1977

FROM: Sue Taylor
Field Training Officer

SUBJECT: Erosion

I talked with Jerry Raychel of the Corps of Engineers who informed me that the Corps did not have any statewide report on the risks or occurances of erosion and/or erosion control projects. The Corps, however, can respond to inquiries about communities on an individual basis.

For example, they are involved with three (3) projects at present: Eagle, Kotzebue, and Seward. Kotzebue and Seward are part of a new (federal) experimental program of low-cost shoreline erosion prevention projects. At present, they have some evidence of erosion, but there is no emergency. As low cost erosion prevention projects, the estimated total project cost in each community is $140,000, 25% of which the local community must contribute. (e. g. $30 - 35,000). In Eagle, the Corps is involved with a Section 14 Erosion project for which they have been given a (federal) ceiling of $250,000. However, their estimated project cost was $750,000.00.

Jerry said that more information about erosion projects and costs could be had from Bob Smith, one of their planners, at 752-2020.

My own involvement with Karluk indicates that erosion and erosion control projects are costly. In the early stages of the problems at Karluk, the Corps estimated $12,287 for the repair of one (1) washout in the most favorable weather condition. The Borough's consulting engineer estimated $31,500 for the repair of two washouts under adverse weather conditions. To do the most basic work in Karluk, surely a stopgap measure, the cost of the project is now $47,136.00, $12,320.00 of which is coming through our Department under an RDA Grant.

In a more recent survey of Karluk, the Borough consulting engineer, Dell and Jones, determined that $450,000 - 600,000 would be needed immediately to do the very minimum amount of work needed. Many consider this a very low estimate.

I also expect an application soon from Old Harbor for RDA funds in the amount of $12,000 - 15,000 for an erosion project. This project is "not a major one", and will simply provide gabions and/or creosoted pilings for 1200 to 1300 feet of shoreline. The $12-15,000 figure reflects what will be requested thru an RDA Grant. The total project cost will be about $25,000.

Finally, Nancy Gross has been working on an erosion project in Port Heiden. I believe her latest information from that community is that materials needed, as recommended by the Corps, alone will cost $77,000.00

In all of these figures, I believe there is no cost figured in for engineering studies or surveys. In some cases, the Corps of Engineers could provide this expertise, but in many other cases, communities would also have to have additional funds for hiring engineers. The costs reflect materials, labor, equipment and transportation.

Obviously, erosion control is necessary but costly.

ATTENTION: Ed Huizer

Dear Commissioner,

The House Resources Committee will be reviewing HB 444, An Act relating to the confidentiality of fishery reports on Thursday, April 14, 1977 at 1:15 p.m. in Room 118 of the Capitol Building.

Please supply us with a position paper or material you have on this bill by the time of the meeting. If you have any information pertinent to this topic, the committee would appreciate receiving that, too. If you know of other interested groups, please contact them.

If you have any suggested amendments, please supply the staff with copies of that prior to the meeting.

If there is a fiscal implication and a note is necessary, please prepare it and submit it to the committee -- preferably prior to the meeting.

Thank you for your cooperation.

Sincerely,

Al Osterback

RE: HB 444 Confidentiality of Fishery Reports

TO: House Resources Committee Members

Please note the attached Committee Substitute. Perhaps this will clear up some of the problems that the Committee had with the bill.

Introduced: 4/7/77
Referred: Resources

IN THE HOUSE BY GARDINER

HOUSE BILL NO. 444

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the confidentiality of fishery reports."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 16.05.815 is repealed and re-enacted to read:

Sec. 16.05.815. CONFIDENTIAL NATURE OF CERTAIN RECORDS. Reports required by regulations of the department concerning the landing of fish, shellfish, or fishery products, and annual statistical reports of buyers and processors required by regulations of the department, insofar as they are in the form of individual records, are confidential. They may be released to the Department of Revenue, the ~~Department of Public Safety~~ DIVISION OF FISH & WILDLIFE PROTECTION, and the Commercial Fisheries Entry Commission to assist them in carrying out their statutory responsibilities. ~~They may also be released to the North Pacific Fisheries Management Council, the University of Alaska, and the Department of Commerce and Economic Development in conjunction with research and statistics projects.~~ However, the commissioner may not release a report if he determines that to do so would abuse the intent of this section, and he may limit or condition any release to insure that proper confidentiality is maintained. Confidential reports held by the department, or received from the department by the agencies and organizations mentioned in this section, may not be communicated or distributed in the form of individual records to any other agency, organization, or individual unless required by a court order.

The Department of Commerce and Economic Development may obtain records for an individual fisherman if the fisherman signs a written release of authorization.

North Pacific Fishery Management Council

CHAIRMAN
Mr. Elmer Rasmuson
P.O. Box 600
Anchorage, Alaska 99501

EXECUTIVE OFFICE
Suite 32, 333 West 4th Avenue
Post Office Mall Building
Phone: 907-274-4563
Mailing Address: P.O. Box 3136DT
Anchorage, Alaska 99510

April 14, 1977

The Honorable Al Osterback
Chairman, House Resources Committee
House of Representatives
Alaska State Legislature
Pouch Y, State Capitol
Juneau, AK 99811

Dear Mr. Osterback:

I asked Steve Pennoyer of the Alaska Department of Fish and Game and Keith Specking to speak for the North Pacific Council during your review of HB 444 on this date.

The requirement for the North Pacific Fishery Management Council to have access to catch reports and industry statistics is necessitated by their development of management plans for the fishery resources off Alaska. The Council is currently engaged in developing plans for the groundfish fisheries of the Gulf of Alaska and the Bering Sea and Aleutian Islands, for the tanner crab fisheries and for the ocean troll salmon fishery. Management plans on the other fisheries off Alaska will be started as soon as these high priority units are well underway, probably late this fall. After the plans are completed and in effect they will be constantly monitored, revised and updated. All of this will require access to the material covered in the confidentiality section of HB 444.

There is no fiscal implication that we can identify and the section as written appears to be satisfactory for the Council's purposes. Your support in furthering this Bill will be greatly appreciated.

Sincerely,

Jim H. Branson

Jim H. Branson
Executive Director

Dear Mr. Chairman:

Thank you for your letter of April 12, requesting our comments on HB 444, relating to the confidentiality of fishery reports.

As this department is continually involved with fisheries research and projects, we would support this legislation which would make vital data more readily available to us.

Yours truly,

H. Phillip Hubbard
Commissioner

15

HB

4352

Rural Alaska
Community Action Program, Inc.

January 12, 1978

The Honorable Don Young
United States House of Representatives
1210 Longworth House Office Building
Washington, D.C. 20515

Dear Congressman Young:

We noted with interest your proposal to the Legislature, presented last Monday, that a General Fund appropriation of $5 to $10 million finance a massive lobbying effort against the passage of HR 39. We believe such an effort, at this time, would be unwise.

At a time when the credibility of Alaska is at a low ebb in Congress, primarily due to the generally uninformed rhetoric of various groups and individuals who purportedly represent an "Alaskan position" on d-2 (generally) and HR 39 (specifically), a lobbying effort such as has been proposed would probably be interpreted as a waste of money (from a state which constantly tries to extract more money from the federal coffers). As well, it would constitute an admission that the State has been reduced to blind advocacy in opposition to one proposal without a responsibly-developed alternative. Also, it would be an insult to the many Alaskans who support all, or at least part of, the concepts embodied in the Sub-Committee print (of HR 39) used for mark-up this month. In short, Congressman, were the State to act favorably on the proposal, we believe the effort would be counter-productive to a final resolution of the d-2 issue on terms generally acceptable to most Alaskans.

It is our belief that there is no Alaskan consensus on d-2 (save, perhaps, a majority which takes a knee-jerk stand in opposition to a "federal lock-up" of Alaskan lands). And we would submit that the reason for this is that there has been little responsible public discussion of the issue which might have served to develop consensus among Alaskans.

Organizations such as the Alaska Federation of Natives, regional non-profit corporations in the Bush and RurAL CAP possess the interest and capability to assist in the development of consensus among their respective constituencies. We can do this, despite severly limited resources, because we have recognized the over-riding imperative of achieving federal protection of Native subsistence options in any d-2 legislation which finally emerges.

All of this is not to suggest that it is too late to build Alaskan consensus on the issue (or, at least, parts of it; i.e. resource management). Neither do we suggest that the role of the Legislature in appropriating General Fund monies and providing some leadership on the issue is entirely inappropriate. It is our belief that the Congress would be receptive (indeed, would welcome) evidence that the State is taking steps to put its house in order and to involve its citizens in the

Administration • P.O. Box 3-3908 Anchorage, Alaska 99501 • (907) 279-2441

formation of positive recommendations to be made to the Congress. What follows is a series of recommendations which, if followed, would strengthen the State's position in Congress.

1) Begin, in earnest, a series of State-funded workshops to discuss the most appropriate methods of decentralizing the decision-making authority of the Boards of Fish and Game. These workshops should be held throughout the State, adequate materials should be prepared and disseminated to the participants, a real effort should be made to notify in advance and prepare local people to participate, and costs for the workshops should be borne by the State.

(We have been involved in two meetings called by Commissioner Skoog to discuss this topic and applaud the Administration's initiative; however, the first meeting yielded only a consensus that another one was needed, while the second one quickly degenerated into a debate between those who favored decentralization and those who opposed it. Other meetings are planned, but there isn't any indication that the outcome will be any more positive. As well, in neither of the above instances did the State pay any transportation costs for participants, nor were adequate working papers made available.

2) Hold similar conferences on other issues being addressed by d-2 legislation; i.e. land conveyance to Native Corporations and the State, easement policies, the proposed Land Bank, the environmental protection of all federal (public) lands through various administrative devices, the equated economics of "preservation vs. development," the actual proposals for various designations of d-2 lands, state land selection procedures and goals, etc.

3) Increase or initiate funding to appropriate management entities which rely, at present, almost exclusively on federal funds (i.e. the Divisions of Sport Fish and Game within ADF&G, the Coastal Zone Management program, etc.), in order to demonstrate a good faith effort by the State to manage the lands and resources which are presently its responsibility.

4) Support, through adequate financing, State participation in the "interim management plan" called for by AFN President Byron Mallott last week, thereby adding credibility to the State's frequent assertion that subsistence uses are the number one priority of resource allocation decisions and that the State recognizes (and accepts) its partnership role with the federal government in these matters.

5) Recognize that the proposed public lands designations and management systems are, in fact, national concerns and their ultimate disposition is quite properly a subject of national debate and Congressional determination.

In our opinion, if any or all of the above suggestions were positively acted upon, and forthrightly implemented, the "Alaskan position" in Congress and throughout the United States would be far more palatable.

Again, I express our sincere reservations about the wisdom of the approach you have suggested, and reiterate our proposal that the State initiate a positive effort with its own citizens prior to funding a major lobbying effort in Washington, D.C.

Thank you for your attention to these remarks.

Sincerely,

Phil Smith

Dear Representative Osterback;

The Bristol Bay Borough strongly supports the following House Bills.

a. H.B. 450 establishing administrative regional offices for the Department of Health and Social Services.

b. H.B. 451 establishing administrative regional offices for the Department of Community, and Regional Affairs.

c. H.B. 452 establishing administrative regional offices for the Department of Fish & Game.

Locating regional offices in Naknek will provide a central location for these state activities and result in faster and more adequate services to residents of Bristol Bay, Alaska Peninsula and the Iliamna Lake Clark Areas.

Your support of these three Bills will be greatly appreciated.

Sincerely,

Stuart H. Bowdoin

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

This program, conducted by a Research Analyst III or possibly an economist knowledgeable on Alaska and the traditional lifestyle would:

1. Quantify the amount and value of food taken from the land to determine the actual value of "subsistence" by regions.
2. Determine the impact of the various D-2 lands selection proposals on subsistence hunting and fishing, and
3. evaluate the compatibility of present and projected subsistence needs and activities with the State and Federal Government fish & game management structures, policies, and regulations, investigate alternatives, and recommend legislative action.

This position would set up hearing schedules, interview various groups on their views on subsistence, coordinate travel, research existing rules and regulations that deal with subsistence and attempt to determine the impact of D-2 lands on subsistence hunting, fishing and gathering activities.

Re: HB 459

Subject: Letter of Intent

Dear Mr. Speaker,

In adopting HB 459, it is the intent of the Resources Committee that the subsistence economist provided for by this legislation shall:

1. Quantify the amount and value of food taken from the land to determine the actual value of "subsistence" by regions.

2. Determine the impact of the various (d)(2) lands selection proposals on subsistence hunting and fishing, and

3. evaluate the compatibility of present and projected subsistence needs and activities with the State and Federal Government fish and game management structures, policies, and regulations, investigate alternatives, and recommend legislative action.

This position shall set up hearing schedules, interview various groups on their views on subsistence, coordinate travel, research existing rules and regulations that deal with subsistence and attempt to determine the impact of (d)(2) lands on subsistence hunting, fishing and gathering activities.

Dear Mr. Chairman:

Thank you for your letter of April 13 requesting our comments on House Bill 459 which would establish the position of Subsistence Economist within this department.

We support this bill and believe the establishment of this position would increase our ability to respond to Native issues and problems. It would also add expertise to aid in formulating basic State policy decisions.

We would appreciate the opportunity to testify on this bill when it is scheduled for committee action. A Fiscal Note has been submitted indicating a $52.3 expenditure for FY '78. If we can provide additional information, we would be pleased to respond.

Yours truly,

H. Phillip Hubbard
Commissioner

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)
This program, conducted by a Research Analyst III or possibly an economist knowledgeable on Alaska and the traditional lifestyle would:

1. Quantify the amount and value of food taken from the land to determine the actual value of "subsistence" by regions.
2. Determine the impact of the various D-2 lands selection proposals on subsistence hunting and fishing, and
3. evaluate the compatibility of present and projected subsistence needs and activities with the State and Federal Government fish & game management structures, policies, and regulations, investigate alternatives, and recommend legislative action.

This position would set up hearing schedules, interview various groups on their views on subsistence, coordinate travel, research existing rules and regulations that deal with subsistence and attempt to determine the impact of D-2 lands on subsistence hunting, fishing and gathering activities.

ATTENTION: Pat Conheady

Dear Commissioner,

The House Resources Committee will be reviewing HB 477 An Act relating to the sale of state land on Thursday 28 April 1977 at 1:15 p.m. in room 118 of the Capitol Building.

Please supply us with a position paper or material you have on this bill by the time of the meeting. If you have any information pertinent to this topic, the committee would appreciate receiving that, too. If you know of other interested groups, please contact them.

If you have suggested amendments, please supply the staff with copies of that prior to the meeting.

If there is a fiscal implication and a note is necessary, please prepare it and submit it to the committee -- preferably prior to the meeting.

Thank you for your cooperation.

Sincerely,

Al Osterback

Dear Representative Osterback:

During the last regularly scheduled meeting of the State Board of Education on March 24 & 25, 1977, the following resolution was passed:

WHEREAS, the State Board of Education was only last year given authority to participate in a meaningful way in the administration of school trust lands, and

WHEREAS, the Board is of the belief that all categories of state trust lands are in need of comprehensive policy review and is moving in that direction in cooperation with the Division of Lands and others, and

WHEREAS, various bills concerning state lands have been introduced in the present legislature,

BE IT RESOLVED, that the State Board of Education requests the legislature to withhold action on these bills until the Second Session of the Legislature in order to provide time for a sufficient analysis and more public discussion.

Sincerely,

Marshall L. Lind
Commissioner

HOUSE BILL NO. 477

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the sale of state land; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 38.05.035(a)(9)(A) and (B) are amended to read:

(A) the name of the person nominating or applying for the sale, lease, or other disposal of lands by lottery or competitive bidding;

(B) before the announced time of opening, the names of the proposed purchasers or bidders and the amounts of the bids;

* Sec. [2.] 1 AS 38.05.035(b) [and] (4) [are] amended to read:

[(2)] grant preference rights for the lease or purchase of state land without competitive bid or lottery in order to correct the past or future errors or omissions of a state or federal administrative agency when inequitable detriment would otherwise result to a diligent claimant or applicant due to situations over which the claimant or applicant had no control; the exercise of this discretionary power operates only to divest the state of its title to or interests in land and may be exercised only with the express approval of the commissioner;

(4) dispose of lands by lottery [or competitive bid] for less than their appraised value when, in his judgment, past scarcity of land in any particular area has resulted in unrealistic land values;

* Sec. [3.] 2 AS 38.05.055 is amended to read:

Sec. 38.05.055 SALE PROCEDURES. (a) Except as provided in sec. 315(d) of this chapter and at the discretion of the director, the sale

shall be made by lottery or at public auction to the highest qualified bidder as determined by the director. If a lottery is used, the land shall be sold at its fair market value. EXCEPT AS PROVIDED IN AS 38.05.035(b)(2) An aggrieved potential purchaser or bidder may appeal to the commissioner within five days after the sale for a review of the director's determination. The sale shall be conducted by the director or his representative, and at the time of sale the purchaser [SUCCESSFUL BIDDER] shall deposit an amount equal to NOT LESS THAN five per cent [ONE-TENTH] of the purchase price. The director or his representative shall immediately issue a receipt containing a description of the land or property purchased, the price of the land [BID,] and the terms of sale, which receipt shall be acknowledged in writing by the purchaser [BIDDER]. A contract of sale on a form approved by the attorney general shall be signed by the purchaser and, after approval of the commissioner, the contract shall also be signed by the director on behalf of the state.

(b) To qualify for participation in a sale of land by lottery under (a) of this section, a potential purchaser shall

(1) at the time of application have attained the age of 18;

(2) submit proof acceptable to the commissioner that he has been a resident of the state for not less than three years immediately preceding the date his application was submitted;

[(3) be the only member of his household to apply for the purchase of land by lottery.] THIS DELETION IS SUGGESTED DUE TO EXPENSE IN ADL DETERMINING THIS. ALSO PARAGRAPH NOT PERTINENT.

* Sec. 4. AS 38.05.065 is amended to read:

Sec. 38.05.065. TERMS OF CONTRACT OF SALE. The contract of sale shall require the remainder of the purchase price to be paid over a period of not more than 20 years, to be set for each sale by the director. Installment payments plus interest must be set on the level-payment basis. The interest rate to be charged on installment payments

is the prevailing rate on similar land transactions at the time the contract is signed, as determined by the director, but in no case may it be below five per cent per year or above the current usury rate as set by AS 45.45.010(b) and (d) [IN ANNUAL INSTALLMENTS OF NOT LESS THAN 10 PER CENT OF THE PURCHASE PRICE, WITH INTEREST AT THE RATE OF NOT LESS THAN FIVE PER CENT A YEAR]. The director, with the consent of the commissioner, may also impose conditions, limitations and terms which he considers necessary and proper to protect the interest of the state. Violations of any provision of this chapter or the terms of the contract of sale subject the purchaser to appropriate administrative and legal action, including but not limited to specific performance, foreclosure, ejectment, or other legal remedies in accordance with applicable state law [LEGAL ACTION, INCLUDING A FORECLOSURE ACTION IN ACCORDANCE WITH APPLICABLE STATE LAW].

* Sec. 5. This Act takes effect immediately in accordance with AS 01.10.-070(c).

ADL (DON HANSON) POSITION IS that the 5% ~~was~~ instead of 10% Terms for down payment, etc should properly be addressed in HB 383 and 159 — I don't agree since they may never reach Governor's desk in that form.

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPARTMENT OF NATURAL RESOURCES

DIVISION OF LANDS / 323 E. 4TH AVENUE – ANCHORAGE 99501

April 28, 1977

Representative Al Osterback, Chairman
House Resources Committee
Pouch V
Juneau, Alaska 99811

Dear Mr. Chairman:

I am pleased to be able to support the concept embodied in H.B. 477. The auction process of land sales is in many cases a significant contributor to inflated land prices. I do not advocate free land since in my view this is a benefit to a few at the expense of all the people of the state, but neither do I think the state's best interests are always served by accepting more than the appraised market value of land. The lottery system proposed by H.B. 477 would provide a needed alternative to public auction. We do have a number of amendments to the bill which I believe will preserve the concept while improving the effectiveness of the bill.

1. There is no logical reason to keep confidential the name of anyone proposing a disposal by lottery or a purchaser by lottery, therefore:

   Page 1, Lines 9-14: Delete all material.

2. A preference right is an individual adjudication, a procedure to correct an administrative error in a specific case. There is no opportunity for multiple entitlements nor a lottery to determine the successful applicant, therefore:

   Page 1, Line 15: Delete "(2) and"; Change "are" to "is."

3. The provision for competitive bid erases any opportunity for relief from artificially high prices otherwise provided by A.S. 38.05.035 (b) (4). In the one case where such a reduction was made, the bidding process pushed prices well above the original appraisal, therefore:

   Page 1, Line 24: Delete "or competitive bid."

4. The provision for such reduction should be available where appropriate, therefore:

   Page 2, Line 3: Following "value" add "except as provided in A.S. 38.05.035 (b) (4)."

5. The provision for a 20 year sale period is addressed in other legislation, specifically H.B. 383 and H.C.S.C.S.S.B. 159. In order to avoid confusion with these bills and keep the focus of H.B. 477 specifically on the lottery issue:

~~Page 2, Line 8: Delete proposed new language.~~
Page 2, Lines ~~12-29~~: Delete all material. → 22-23
~~Page 3, Lines 1-14: Delete all material.~~

6. There would be a substantial number of problems with defining "household" and with policing the provision in A.S. 38.05.055 (b) (3). Since the disposal would be at fair market value, there seems no good reason to impose the restriction and incur those problems. I recommend:

Page 2, Lines 22 & 23: Delete all material.

Please contact me if I can be of further assistance.

Yours truly,

Theodore G. Smith, Director
Land and Water Management

OFFICE OF THE COMMISSIONER / POUCH D – JUNEAU 99811

April 26, 1977

Honorable Al Osterback
Chairman
House Resources Committee
Pouch V
Juneau, Alaska 99811

Dear Mr. Chairman:

Thank you for your letter of April 13 requesting our comments on House Bill 459 which would establish the position of Subsistence Economist within this department.

We support this bill and believe the establishment of this position would increase our ability to respond to Native issues and problems. It would also add expertise to aid in formulating basic State policy decisions.

We would appreciate the opportunity to testify on this bill when it is scheduled for committee action. A Fiscal Note has been submitted indicating a $52.3 expenditure for FY '78. If we can provide additional information, we would be pleased to respond.

Yours truly,

H. Phillip Hubbard
Commissioner

Alaska State Legislature

House

JUNEAU ALASKA May 4, 1977

Memo to: Sally

From: Ruth

George Utermohle, of Legislative Affairs, Research, has looked over HB 506, at our request, to find any possible problem areas in the bill.

Briefly, his comments are:

Most of the bill is the same as previous law. Exceptions are:
page 1, Line 10, after "meeting" through line 13, after "sooner", is new.

page 2, Line 11, after "requested," through line 29, "made", is new.

page 3, Line 4 through line 16 is new.

According to Utermohle, the bill is a good way to handle some of the subsistence law problems.

Suggested changes in the new sections are:
page 2, Line 15, add "and report" after "investigation"

page 2, Line 19 through 21--this may not be possible since the information may not be available except in areas where harvest tickets are necessary. Even then the game involved may not have adequate records.

Page 3, Line 13, "biomass"-----this is a scientific term and would include all plant life, animal life, and any other parts of an ecosystem. The term should probably be replaced with another phrase, such as "biomass of the species under consideration" or something similar.

Suggested changes in existing language, to tie up currently existing problem areas:
Page 1, Line 10. include after "or"---"at a special meeting held after"----

Page 1, Line 16 and 17 (1)
There are currently problems in coordination between the Department of Fish and Game and the Department of Public Safety regarding regulations--the enforcement division doesn't see the regs until after they're adopted, and can't forstall problems until after they're created.

Suggested change is to add after "e idence:"---"or recommendation of Division of Fish and Wildlife Protection"

Page 3, Line 24 and 25, add similar wording as above.

Regarding the term "subsistence hunting" it is stressed that everyone is now a subsistence hunter, except trophy hunters. Where subsistence hunting is contrasted with recreational hunting, there is no definition of recreational hunting--so the phrase using the contrast actually means nothing.

Another problem area could be that departmental staff are not listed among the ones able to call a meeting. Also, the bill doesn't clarify what "area of the public" the 100 or 25 people are from, as mentioned on page 1 Line 19 through 22.

Other than that, Utermohle says it is a "good" bill. Possibly either a sponsor substitute or a committee substitute would be easier than amendments.

Thanks.

Hope this helped,

RA

TO: The Honorable Rep. Osterbach, Chairman, and members of the House Resources Committee

FROM: Peggy Berck, Alaska Legal Services Corporation

RE: H.B. 506

DATED: May 4, 1977

1. Introduction The clients of Alaska Legal Services corporation are strongly in support of H.B. 506. Although I shall be unable to attend the Resources Committee hearing scheduled for May 5, 1977, in order to present oral testimony on this bill, I have drafted the following written comments. My absence should not be construed as a reflection of any disinterest on behalf of my clients with respect to this bill. I shall be in Chicago on that date in order to present testimony before the U.S. House Subcommittee relative to the impact of D-2 legislation now under consideration upon the subsistence activities of rural Alaskans. Should there be additional opportunity for testimony on this bill, I shall be available any time after May 8, 1977.

2. Summary H.B. 506 would essentially accomplish three things. First, the Bill would permit the declaration of a subsistence hunting unit within 120 days of either; the receipt of a petition, or, a majority vote of the active local advisory committees, calling for the establishment of a subsistence area.

Second, the Bill would mandate the Department of Fish and Game to provide the petitioners or the advisory committee with information they can use to determine for themselves whether a subsistence zone is needed. At the hearing, the petitioners or advisory committees would have the opportunity to present this information in the posture most suited to their position and to dispute the informaiton that the Board would most likely base its determination upon.

Third, the Bill sets forth certain standards upon which the Board must make its determination. These standards would preclude the Board from making decisions in an arbitrary or capricious manner and, furthermore, would provide some means to challenge a decision if not based on those designated standards.

3. Why this Legislaton is Needed Current law provides that the Board of Game may delcare a subsistence zone only once

a year at their annual meeting. H.B. 506 would allow the proponents to raise the issue at any time. This is necessary since the issue may become critical at a time other than that set for the annual meeting.

4. The subsections (Section 1 (c)(2) - (4) requiring the Department to investigate and submit a factual report to the proponents provides the proponents with an opportunity to presnet their case upon biological evidence rather than merely upon their personal observations. Thus the amendments require the Board to provide information that currently they do not ordinarily have to provide.

This requirement is needed in order to allow the proponents more input into the determination, by giving them the information necessary to present their case and to question the Board of Game's determination.

This information is to be given to the proponents at least 45 days prior to the determination by the Board of Game as the time for the public hearing.

Additionally, Section 1(c) (1) would require that one department game biologist responsible for that particular unit and two members of theBoard of Game attend the public heairng. This is needed so that responsible and informed persons might be able to answer the questions of the people living in the area to be affected. Furthermore, it is essential that the Board of Game have personal, first hand knowledge of what is happening in a particular area requesting subsistence regulations.

5. The subsections (Section 4, subsections (f) (1) - (4)) setting forth the standards upon which the Board must make its determinations are necessary in order to prevent an improper delegation of the legislative function which licenses the fact finder to create its own standards in each case. Without reasonably clear standards there exists an invitation to arbitrary and capricious determination.

6. The Board of Game is reluctant to use this statute for various reasons; such as, that they do not want to establish any precedents and that they can accomplish the same result without creating subsistence zones. This attitude does not follow the intent of the legislature which is to create areas of hunting which are to be used primarily by the subsistence user. The effect of the H.B. 506 would require the Board to take a serious look at each proposal for a subsistence zone.

cc: Rep. Nels Anderson

HB 506 An Act relating to subsistence hunting.

Nels Anderson, the sponsor testified in favor of the bill

Introduced: 4/26/77
Referred: Resources

IN THE HOUSE BY ANDERSON

HOUSE BILL NO. 506

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to subsistence hunting."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 16.05.257 is repealed and re-enacted to read:

Sec. 16.05.257. SUBSISTENCE HUNTING REGULATIONS. (a) The Board of Game, at its regularly scheduled annual meeting, or within 120 days ~~from~~ after the vote conducted under (2) of this subsection, or within 120 days ~~from~~ after the ~~date~~ receipt of a petition ~~is~~ submitted under (3) or (4) of this subsection, whichever comes sooner, may adopt regulations providing for subsistence hunting in a game management unit or subunit or a portion of a unit or subunit upon

(1) recommendation of the department, based on biological evidence; OR RECOMMENDATION OF DN. OF FISH & WILDLIFE PROTECTION

(2) the majority vote of the active local advisory committee for that game management unit or subunit;

(3) the written petition of not less than 100 interested residents of that game management unit or subunit; or

(4) the written petition of not less than 25 interested residents of an area which is requested for establishment as a subsistence area within a game management unit or subunit.

(b) The regulations may include but are not limited to the following:

(1) the establishment of subsistence hunting areas;

(2) the regulation of transportation methods and means to protect subsistence hunting within subsistence hunting areas, including

the prohibition or limitation of pack animals and mechanized vehicles and aircraft, other than watercraft or wheeled vehicles operating on a road maintained by public funds;

(3) the establishment of open and closed seasons and areas to protect subsistence hunting;

(4) the limitation of hunting to only one sex of the animal.

(c) At least 45 days before the determination made in (a) and (b) of this section the department shall,

(1) after reasonable notice, hold public hearings, at least one of which must be at or in close proximity to the area for which a subsistence area is requested, with at least one department game biologist responsible for the unit or subunit in which the subsistence area is located and two members of the Board of Game in attendance at these hearings;

(2) make an adequate biological investigation, including but not limited to the carrying capacity of the species under consideration, the concentration of other species, and competition among species which are found in the unit or subunit under consideration;

(3) make an adequate report of the numbers of the species that are being harvested and who is harvesting them, including but not limited to residents, nonresidents, subsistence hunters and recreational hunters;

(4) make the reports submitted under (2) - (3) of this subsection available to the advisory committees voting under (a)(2) of this section or to the persons who petitioned under (a)(3) or (4) of this section.

(d) Comments to the reports submitted under (c)(2) - (3) of this section may be submitted to the Board of Game at least 10 days before a determination to adopt regulations under (a) and (b) of this section is made.

(e) A petition submitted under (a)(3) or (4) of this section shall contain a complete description of the area requested as a subsistence area, a specification of the species within the area considered necessary for subsistence use, and a statement as to why a subsistence area is being requested, including but not limited to the availability of the species for subsistence harvest and the competition between subsistence and nonsubsistence users.

(f) Subject to (g) of this section, the determination by the Board of Game to provide for subsistence hunting shall be based on the following:

(1) the past and present dependence of the area for subsistence use of the species;

(2) the extent of the biomass in the area;

(3) the population trends of the species in the area; and

(4) whether the population is able to support nonsubsistence harvest.

(g) No subsistence area may be created under this section if the Board of Game determines that biological evidence indicates that the creation of such an area is likely to adversely affect a resource in that it would fall below the level of sustained yield determined to be adequate.

(h) The Board of Game at any time may review and change the boundaries of a subsistence area upon

(1) the recommendation of the department, based on biological evidence; recommendations of the Dir of Fish & Wildlife Protection

(2) the written petition of not less than 25 interested residents of that area; or

(3) the majority vote of the active local advisory committees for that area.

(i) The department shall submit a report to the legislature during the first 10 days of each (REGULAR) legislative session beginning after January 1, 1977. The report shall include, but is not limited to, a listing of the specific subsistence areas established or modified during the preceding year and the species subject to subsistence use within those areas.

(j) In this section

(1) "subsistence hunting" means the taking of game animals by a state resident for food or clothing for personal or immediate family use;

(2) "subsistence hunting area" means an area designated by the board as primarily important for subsistence use and in which it is unlikely that subsistence needs will be met if recreational hunting, including hunting for trophy purposes, is permitted or if certain methods and means are continued.

DEFINE RECREATIONAL HUNTING AS OPPOSED TO SUBSISTENCE HUNTING

IN THE SUPERIOR COURT FOR THE STATE OF ALASKA

Ellison HB 506

FOURTH JUDICIAL DISTRICT

TANANA VALLEY SPORTSMEN'S ASSOCIATION, INC., and MARK A. WARTES, Plaintiffs, vs. THE STATE OF ALASKA, Defendant.	OPINION

No. 76-1958

The declining population of the Western Arctic caribou herd brought about a meeting of the Alaska Board of Game in Fairbanks commencing September 20, 1976. The testimony documented the decrease of caribou, and game biologist Jim Davis testified, without contradiction, that, "Biologically, and considering the caribou population exclusively, it would be desirable to have zero human utilization." Minutes, Public Hearing, p. 13. Presumably this means that it would be best for the caribou herd if no caribou were killed by people.

Apparently the Game Board showed more concern with what it considered to be the needs of the people of the western Arctic than with the declining caribou population, since the final decision was to allow the taking of 3,000 bulls. Only hunters issued permits are allowed to take caribou. The 3,000 permits are to be distributed on the basis of a quota system with a set number to be distributed by department personnel in each village in the western Arctic.

September 1976 read as follows:

> "(17) the taking of caribou in Units 23, 24, 26A and 26B shall be by permit only and such permits shall be issued by department agents in designated villages. Quotas of permits for each village and persons living outside of villages shall be based on the recommendation of village councils and corporations on the basis of population, need, availability of other food sources and employment, and other facts which may assist in meeting the minimum sustenance needs."

It is clear that the intent of the original emergency regulation was to restrict the issuing of permits to members of native corporations and that the only reason for issuing any permits was the Board's finding that the people of the regions in question need caribou. No facts are set forth to show why the Game Board decided the caribou were needed to maintain minimum sustenance needs.

A permanent regulation became effective on December 29, 1976. The permanent regulation set forth the number of permits to be issued by department personnel from each village. As the State points out in its brief at page 2:

> " . . . the change in wording from the emergency regulation to the permanent regulation had nothing to do with the criteria by which permits were to be issued to individual applicants. A close reading shows that the deleted phrases indicated the method by which the total number of permits were to be allocated to issuing agents in different parts of the affected areas. The deletion was made because the next section of the regulations actually made this allocation, so the deleted phrases were totally unnecessary. The specific allocations were made by the Board using the criteria specified, namely minimum sustenance needs, thus underlining the Board's directive to the Department that need be a criteria for issuance of individual permits." State's Opposition Memorandum, p. 2.

made in permit issuance are between sports hunters and true sustenance or 'need' hunters". State's Opposition Memorandum, p. 3.

The State justifies this differentiation between "sports" hunters and "need" hunters as follows:

> " . . . this distinction is no more invalid than is a graduated income tax or Aid to Dependent Children -- all cases in which public resources are allocated in such a manner as to avoid undue hardship on those truly in need. Thus 'need' is a perfectly proper and legal basis on which to allocate preferences among users of this resource." State's Opposition Memorandum, p. 3, 4.

The crux of the controversy is clear: Does the Game Board have the authority to allocate the resource, i.e., caribou, on the basis of the "needs" of some of the people to the exclusion of the rest at a time when any "human exploitation" of the caribou is unwise from a game management standpoint?

It is clear to the Court that the actions of the Board violate the following provisions of the Constitution of the State of Alaska:

> "The legislature shall provide for the utilization, development and conservation of all natural resources belonging to the State . . . for the maximum benefit of its people." Alaska Constitution, Article VIII, §2.
>
> "Whenever occurring in their natural state, fish, wildlife, and waters are reserved to the people for common use." Alaska Constitution, Article VIII, §3.
>
> "Fish, forests, wildlife, grasslands, and all other replenishable resources belonging to the State shall be utilized, developed, and maintained on the sustained yield principle, subject to preferences among beneficial uses." Alaska Constitution, Article VIII, §4.

> "Laws and regulations governing the use or disposal of natural resources shall apply equally to all persons similarly situated with reference to the subject matter and purpose to be served by the law or regulation." Alaska Constitution, Article VIII, §17.

Based upon the testimony of Jim Davis and the recommendation of the Department staff, no caribou should be killed by people. Allowing the harvesting of 3,000 bulls because of an alleged need is certainly not conserving caribou for the maximum benefit of all the people of Alaska. No convincing argument can be made that the animals are being reserved to the people for common use or that they are being utilized on the sustained yield principle. It also seems clear that the designation of permits for hunting caribou to those claiming to need them is regulating the resource unequally.

There is no question that the Game Board has the authority to limit the taking of fish and game for the purpose of preserving the resource. This does not mean that the Board has the authority to distribute the resource to a certain designated category of persons (i.e., "the needy") while specifically ignoring uncontradicted testimony that no caribou should be killed by people.

The State argues that AS 16.05.257 allows the Game Board to designate who may take certain animals on the basis of need. This statute was adopted in 1975 and amended in 1976. It allows the Board of Game to adopt regulations providing for subsistence hunting in a game management unit. AS 16.05.257(h)(1) defines "subsistence hunting" as the taking of game animals by a state resident for food or clothing for personal or immediate family use. There is no qualification that the "subsistence hunter" "need" the game animal.

AS 16.05.257 cannot be read to allow the Game Board to establish a subsistence hunting game management unit allowing the taking of animals from a depleted herd when the uncontradicted biological evidence militates against further depletion.

Additionally, even if the Game Board had the authority to designate who could hunt or how many permits could issue on the basis of need, proper guidelines and regulations would have to be established to determine need. The Game Board did not publish or adopt any guidelines or regulations telling why 3,000 permits were issued or explaining reasons for the allotment of a certain number of permits to a certain village or town area.

In summary, the Court finds that the Board of Game has violated the applicable Constitutional requirements set forth herein. It cannot justify its actions by relying on AS 16.05.257, and it has failed to adopt or publish standards and guidelines for the allotment of a certain number of permits to a certain area.

Plaintiff's Motion for Summary Judgment is GRANTED. Defendant is restrained from enforcing that emergency regulation pertaining to the taking of caribou as adopted in Spetember of 1976 and amended in December of 1976.

An Order will enter accordingly.

DATED at Fairbanks, Alaska, this 6 day of April, 1977.

Testimony

of

Morris Thompson

Vice President

Northwest Alaskan Pipeline Company

Before

House Resource Committee

On House Bill 563

February 9, 1978

Mr. Chairman, members of the Committee, I am Morris Thompson, Vice President of the Northwest Alaskan Pipeline Company, and appreciate the opportunity to appear before you today. We have examined House Bill 563, together with the amendments proposed by Speaker Malone.

Northwest Alaskan supports the principle that the communities through which the pipeline passes should have access to the gas subject to the following conditions: (1) The community has acquired rights to a gas supply, (2) The community can be economically served, and (3) The parties involved have received appropriate authority. We feel that it is commendable that the State of Alaska is endeavoring to provide natural gas for the communities and the boroughs through which the pipeline will pass and expect that a likely source for the gas is a portion of the State's Royalty Gas.

We believe that the United States Congress has already adequately provided for such use of natural gas in Alaska. Section 13(b) of the Alaska Natural Gas Transportation Act of 1976 provides as follows:

> "(b) The State of Alaska is authorized to ship its royalty gas on the approved transportation system for use within Alaska and, to the extent its contracts for sale of royalty gas so provide, to withdraw such gas from the interstate market for use within Alaska; the Federal Power Commission (now the Federal Energy Regulatory Commission, or FERC) shall issue all authorizations necessary to effectuate such shipment and withdrawal subject to review by the Commission only of the justness and reasonableness of the rate charged for such transportation."

In accordance with this provision and the Natural Gas Act, as amended, we plan to include connections for delivery of the State's gas in the list of facilities presented to the Federal Energy

Regulatory Commission (FERC) for inclusion in the final Certificate of Public Convenience and Necessity. It is our intention to discuss the location of the connections with the state prior to submitting our application. We will also propose the method for recovering the costs of the transportation service, which method also will have to be approved by the FERC.

In essence, what we are saying is that we are planning to work with the State to provide connections within Alaska. For the foregoing reasons, we believe it is unnecessary to amend the State's Right-Of-Way Leasing Act, as it is now being proposed. We would be pleased to assist the State of Alaska in its planning to optimize the uses of its gas.

This concludes our formal statement. We have some technical comments the Committee may want to consider.

We will be happy to answer any questions you may have. Thank you.

Technical Comments Offered By
Northwest Alaskan Pipeline Company
on H.B. 563

We offer the following comments on the substantive provisions of the proposed Bill and Speaker Malone's proposed amendments:

It is unclear to us, from reading line 14 to line 16 of the Bill, exactly what is being proposed. Is it the intent of this Bill to provide a means of extracting natural gas from the pipeline for distribution by the boroughs through which the pipeline will pass, or is the intent to extract the State's entire royalty share, plus whatever other gas which may be purchased for use or processing in the State, in each borough that presently or may in the future meet the requirements set forth in the Bill to qualify for such extraction facilities? In either case, it seems clear that there is no need to provide facilities capable of extracting an amount at least equal to the State's entire royalty share in each borough which qualifies for such facilities. We believe this definitely needs clarification.

We believe that the word "process" in line 16 should be changed to "deliver".

HOUSE BILL NO. 704

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act making an appropriation to the Department of Natural Resources, division of land and water management; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. The sum of $1,200,000 is appropriated from the general fund to the Department of Natural Resources, division of land and water management, for the purpose of reducing the backlog of land and water applications.

* Sec. 2. The unexpended and unobligated portion of this appropriation lapses into the general fund June 30, 1979.

* Sec. 3. This Act takes effect immediately in accordance with AS 01.10.-070(c).

Original sponsors: Swanson, Bennett, Bradley, et al

IN THE HOUSE BY THE RESOURCES COMMITTEE

CS FOR HOUSE BILL NO. 563

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to the location of connections and interchange facilities in certain pipelines; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 38.35.120(a)(6) is repealed and re-enacted to read:

(6) notwithstanding any other provision, it shall

(A) as to any gas pipeline subject to the provisions of this section the construction of which commences after the effective date of this Act, provide one connection with appropriate valves and appurtenances and necessary metering devices and accessories required to ~~extract~~ deliver an amount at least equal to any state royalty share of the natural gas stream, [at the expense of the company,] within ~~any~~ a time rate or general law borough in which the pipeline is located; the connection shall be located within the borough at a place designated by the commissioner of the Department of Environmental Conservation after consultation with officials of the borough government; and

(B) provide connections and interchange facilities at state expense at such other places the state considers necessary;

* Sec. 2. This Act takes effect immediately in accordance with AS 01.10.070(c).

Proposed amendments

for CS HB 563

by MALONE

LISTED IN ORDER OF IMPORTANCE.

AM #1 { LINE 17 - delete "general law"
LINES 18, 19, 20
delete:
LINE 18 - delete everything after "LOCATED"
LINE 19 - delete entire line 20 delete semicolon and all language before semicolon
— Would allow Kenai Boro to take advantage of act

AM 2 { LINE 17 - delete "general law"
allows all other boroughs (North Slope & Anchorage, Mat-Su, for example) to also benefit by act

(CONTINUED ON reverse)

Am #3 — Line 16 - delete the words "process at least one-eighth" and insert in its place:

"extract an amount at least equal to any state royalty share"

— takes care of problem with word process
— also allows the state to take out more than 1/8 if the royalty share is greater for some future field.

Am #4 — Line 21 & 22 - delete on Line 21 "borough" insert the word "state"

On Line 22 - delete the words "Dept of Envir. Cons." insert "borough"

argument — since we are talking about royalty gas, which belongs to all the people in the state, maybe the state ought to decide where the tax goes — borough assemblys would have a difficult problem taking all state interests into account.

ALASKA
STATE LEGISLATURE

MEMORANDUM

February 2, 1978

TO: Diane Nelson, A.A. for Representative Alvin Osterback

FROM: Adelheid Herrmann, A.A. for Representative Nels A. Anderson, Jr.

SUBJECT: Back up material for HB 625 and HB 566

Diane - Enclosed is back up material for the two house bills. I will be getting more information to you as I collect it.

P.O. Box 91
Dillingham, Alaska 99576

January 9, 1978

Hi Ron:

Me again. This letter is my written testimony on my proposals that I'm personally sending in. Would appreciate it if you would have it read at your Board of Game meeing in March.

In the last seven (7) years I've flown over 3,000 hours, of which, 95% was in unit 17. A good 2,000 of it while hunting and trapping. I've flown the whole unit not just part of it, every year. I've noticed this past two (2) years a real noticable drop in the moose population. The only place I kept records was the Tikchik River in 1975-76-77. In February 1975 I counted some 249 moose in the Tikchik River. In February of 1976, 178 and in January 1977 only 38. Nick Steen done one in 1977 also and I believe his count was around 35. I don't know if he done any the other two years. I've also noticed the Sunshine Vally herd has dropped, how much I cannot say. I did not keep track. The Muklung-Iowithla herd as I call them, are holding out better as the area where they seem to orginiate is heavily timered, not to many big lakes or streams, making fall hunting hard.

Thus the hunting pressure comes in the winter when the "excess" animals come over the hill down the Iowithla in an attempt to reach the main river.

The past two years these moose were hit hard -- I don't believe 10% made it through, including cows and calves.

This year I counted 35 moose on top in November. I spotted 7 kills before the season opened in the same area. I've seen as many as 70 this same time of year in this same area. I believe these moose are the main source for replenishing the lower river.

In conclusion I believe we can take our 21 days winter season, split the time in half and put it on front of our fall season which we can open 10 days earlier and not do any harm and at the same time cut our hunting time by 1/3, reduce the cow take and hopefully get a increase in moose population again.

Thank you for your time and considerations.

Sincerely,

Leon C. Braswell

BOARDS OF FISH AND GAME

Proposal #1

Sec. 5 AAC 81.320 BIG GAME HUNTING, Moose, Unit 17. Change in dates. Delet present dates and add August 20 - September 10. Page 84

JUSTIFICATION: To encourage the taking of bulls only. No one here likes to eat tough rutting bulls. Bigger bulls are being passed up because of the present season being in the rut. Meat hunters would rather shoot smaller bulls and tender cows than taking a chance on smelly, tough bulls. In a ~~late~~ Early season, on the other hand, a big bull would be preferred in late August before he starts to run which makes him tough, and before he mates which makes him tougher and rather smelly.

Proposal #2

Sec. 5 AAC 81.320 BIG GAME HUNTING, Moose, Unit 17. Delete the December season only. Page 84

JUSTIFICATION: We need to protect our cows, being as their the choice meat in winter and poaching of cows is easy during winter days when there isn't much light and nite travel is no problem. Almost impossible to enforce.

Proposal #3 REQUIRE SPECIAL CONSIDERATION SECTION NOT OPEN.

Sec. 5 AAC 84.270 FUR ANIMAL TRAPPING, Beaver

Keep the same season February 1-28/29. Keep same bag limit, 15 per person. Open ALL of Unit 17.

JUSTIFICATION: The beaver made their comeback. Proven by villager's and all interested local people traveling the rivers. Also proven by biological studies done this fall on beaver by State Officials.

Proposal #4

Sec. 5 AAC 81-070 BIG GAME, Prohibit the use of Track Vehicles. Pg. 23 & 24

JUSTIFICATION: Moose tend to yard up in wintering areas making it easier to take. Moose close to villages are readily taken this time of the year in these yarding areas. Moose population is down considerably in Unit 17. Man's mode of travel in winter is so modern now that he can go over

frozen rivers, deep snow, bare tundra, frozen marshes, up hills and over mountains, around large nigger heads, through small brush, through litely timered area's without to much effortand time with one piece of machinery which keeps it max. energy for long periods of time. The poor moose has only what God gave him 4 hoofs with legs to match. He sinks out of sight in soft snow, slips on the ice and tires after a short while of trying to escape at his top speed, slows down and becomes an easy take. Cows and small bulls are again the choice take as big bulls remain tough and skinny through the winter months.

STATE OF ALASKA
JAY S. HAMMOND, GOVERNOR
DEPARTMENT OF FISH AND GAME
OFFICE OF THE COMMISSIONER
SUBPORT BUILDING - JUNEAU 99801

January 26, 1978

THE ALASKA DEPARTMENT OF FISH AND GAME COMMENTS ON
(HB 569) "Transplant of caribou to Various Locations in the Shumagin and Aleutian Islands."
Sponsor: Osterback, Hayes and Snider

Background on Relevant Department Activities:

The Department supports the concept of developing some unoccupied habitats through the introduction of appropriate wildlife. Such introductions should proceed with care to avoid undue adverse impact upon resident species of plant and animal life. If the proposed introductions meet this criteria, plus the balance of the items mentioned below, we generally support such introductions.

Evaluating the effect of introductions is complex; for example, introductions may have an adverse effect upon indigenous animals or plants. Once established, the transplanted species may not be available for harvest because of difficult terrain, logistics or the lack of available access. The land owners and the State should enter into cooperative agreements to insure appropriate management of the introduced animals. Management costs, traditionally provided for by sport hunters, should be evaluated to insure equity to the various users. These are a few of the items which should be considered prior to making an introduction.

The Department will be transplanting caribou from the Alaska Peninsula to Nagai Island in the Shumagins in early spring 1978 in compliance with a Statute enacted in 1977. We should learn a considerable amount about logistics and the cost of transplant operations in the lower Alaska Peninsula on this operation. This island chosen does have some reasonably good habitat and several beaches are suitable for aircraft landing, which will facilitate the transplant.

Specific Comments:

Islands under consideration in House Bill 569 are discussed individually as follows:

Big and Little Koniuji Islands - The community of Sand Point is approximately 40 miles to the northwest of these islands. The islands are under consideration for inclusion in the U.S. Federal refuge system as a part of the (d)(2) issue. Topography is steep and favorable habitat may not be present in sufficient volume to support a caribou population of any size. The islands themselves are relatively small.

Ukolnoi Island - Sand Point is approximately 50 miles east of this island. The land ownership is not indicated to change as a result of the Native Claims Settlement Act. The topography is relatively steep and at this time we are not certain that it will support a caribou population

over a long period of time.

Korovin Island - Sand Point is approximately 20 miles to the west. Land ownership status is not indicated as changing as a result of the Native Claims Settlement Act. Some of the island does not appear suitable for caribou habitat, and again, the island may be too small to support a long-term population of caribou.

Tigalda Island - The Village of Akutan is approximately 20 miles to the west; Cape Sarichef Coast Guard Station approximately 20 miles to the north and Cold Bay is 70 miles to the northeast. No indicated land ownership change as a result of the Native Claims Settlement Act. The island is rather small and we are not in a position to evaluate its ability to carry caribou for a long period of time.

Deer Island - This island is located immediately south of Cold Bay. It had an established caribou population prior to the turn of the century with reported migrational movements to the mainland. By 1900 the caribou were no longer present. Obviously the island will support caribou, but there may have been problems because of its size, or other factors that are unknown.

Akutan Island - This island is located west of Unimak Pass; the island has one community of approximately 90 people. The island will probably support a small, carefully managed population of caribou, but the herd should be closely managed to prevent overpopulation and subsequent decline. Transportation to the island is restricted to salt water landings by amphibious aircraft or boat.

Unga - The island is located immediately west of Sand Point and has about 430 people. The island probably can support a population of caribou. Unga was largely selected under A.N.C.S.A.

The foregoing are preliminary comments and not based upon personal experience on these islands. The Department has had considerable experience with island populations of reindeer and caribou with mixed results. It seems probable that many of the proposed locations will support small, carefully managed herds, but some additional evaluation of each site would be beneficial.

Fiscal Impact:

We estimate that transplants to all islands stipulated in HB 569 would require funding at approximately $352,000. With no experience at present in transplanting to these locations, fiscal estimates are, at best, rough estimates. We expect to be able to refine these after conducting the Nagai transplants this spring.

Program Impact:

We feel we could conduct this program with relatively little disruption to ongoing programs, using personnel from King Salmon and Anchorage.

Overall Position:

The Department concurs transplants may be beneficial to some of these islands, but we need a great deal more information on each island before we can make definite recommendations. Of the islands listed, Akutan and Unga appear, at this time, to be the best suited for caribou transplant.

SUBJECT: Caribou Transplants - Aleutian Islands

As directed, this is an update on the feasibility of transplanting caribou to specific islands in the Aleutians, SCSHCR 93.

In a previous memo the islands that had the best possibility of supporting a caribou population were specified. They were: Unalaska, Nagai, and Akutan. This memo will attempt to spell out the procedures that will be followed to capture and move caribou to those specified islands and the cost involved.

Because of the remoteness of Umnak and the high cost of operating that far from supply points, it is suggested that caribou be captured from the Port Heiden area and not Umnak. The number of caribou in the Port Heiden area is at least 10,000 compared to an unknown herd size on Umnak but probably much less than 1,000.

A Jet Ranger 206B helicopter will be used to dart caribou using M-99 and Rompun as the immobilizer. The caribou will be moved to holding facilities at Port Heiden as they are captured until a Goose load is acquired, approximately six animals. Six animals in a day is a realistic number and obtainable weather permitting. Because of the long days, animals could be moved to the islands the same day captured.

From information gathered from past transplants, a three female to one male ratio is desirable and capturing pregnant cows provided a bonus of two animals for one if the transplant can be done in May before calving.

At least three biologists will be needed to capture and handle the animals to be transplanted. No personnel or facilities will be needed at the transplant sites. The animals will simply be released on the islands.

Thirty-five to forty animals should be released at each location the first year. The cost of the operation is estimated to be in the neighborhood of $92,420.

The cost to make only one transplant would be approximately one-third or about $38,000. It would be easier to make only one transplant in order to evaluate the techniques and watch the progress of the herd for the first year before doing the other two transplants. Because of the proximity of Nagai Island to Port Heiden, it would be easiest to make the first transplant there.

Salaries are not included in the cost

02-001A

Sometime between now and the actual transplant a reconnaissance should be made of the island or islands to check on the range and release site.

Because of the time frame and the uncertainties of the first transplant it may not be possible to do all three transplants and the spring photo surveys on the Mulchatna and Peninsula caribou herds. Frankly, considering all manpower and money problems we would much prefer May of 1978.

Estimated cost of Aleutian Island caribou transplant

Helicopter

Ferry Time	12 hours	$325/hr.	=	$ 3,900
Day Operation	5 hours	$325/hr.	=	$ 1,625

Director
Division of GAme

SUBJECT: Car ibou Transplants
Aleutian Islands

This is an update on the feasibility of transplanting caribou onto specific islands in the Aleutians as requested in SCSHCR 93.

There are a number of islands that might support caribou, but in the opinion of the field staff those with the best characteristics are Unalaska, Nagai and Akutan. This summary plan provides an overview of the procedures to be followed in the capture and movement of caribou to the specified islands, and the cost involved.

Because of the remoteness of Umnak and the high cost of operating that far from supply points, it is recommended that caribou be captured from the Port Heiden area instead of Umnak. The number of caribou in the Port Heiden area is at least 10,000 compared to herds of unknown size on Umnak.

A jet ranger 206B helicopter will be used to dart caribou using M99 and Rompun as the immobilizer. The caribou will be moved to holding facilities at Port Heiden as they are captured until a load is acquired, approximately six animals if we use a Grumman Goose. Capture of six animals per day, and their movement, weather permitting, is realistic considering the long days and the accessibility of the animals. If at all possible the animals will be moved the same day captured.

Information gathered from past transplants suggests a three female to one male ratio is desirable, and capturing pregnant cows provides a bonus of two for one when the transplants can be accomplished in May or earlier.

At least three biologists will be needed to capture and handle the animals for transplant. No personnel or facilities will be needed at the transplant sites. The animals will simply be released on the islands.

Thirty-five to forty animals should be released at each location the first year. The cost of the operation is estimated to be in the neighborhood of $98,000. The cost to make only one transplant would be approximately one-third or about $38,000. It would be much easier to make only one transplant the first year in order to evaluate the techniques and watch the progress of the herd for a year before doing the additional work. Because of the proximity of Nagai Island to Port Heiden, it would be easiest to make the first transplant there.

Sometime between now and the actual transplant a reconnaissence should be made of the island, or islands, to fully evaluate the range and release site. Because of the time-frame and the uncertainties of the first transplant and the necessity of negotiating management agreements with appropriate native corporations once funds are available, it may not be possible to do all three transplants and the spring photo surveys of the Mulchatna and Alaska Peninsula caribou herds with our existing manpower. Frankly, considering all factors, including money and manpower I would prefer to carry out this activity in late winter and early spring 1978. However, our activities will be directed by the wishes of the legislature.

In an earlier memo I had mentioned that this Division worked closely with the National Marine Fisheries, in developing a plan to move reindeer from St. Paul Island to St. George Island next summer. We have coordinated this effort with Walt Kirkness. In a telephone conversation Thursday, February 3, 1977, he mentioned the possibility that they might use an alternate source of stock. Nevertheless, we will cooperate with this agency by providing species experts and individuals skilled in handling animals.

TELEPHONE NO:

SUBJECT: Caribou transplant to Nagai Island

House Bill No. 289, sponsored by A. Osterback of Sand Point, directs the Department of Fish and Game to transplant 40 caribou from Cold Bay to Nagai Island. In anticipation of this transplant, an aerial survey of the island, using a Widgeon aircraft, was flown on August 23, 1977. Participating in the survey were James Faro, Area Game Biologist, Nick Steen, Assistant Area Game Biologist, John Nickels, Fisheries Technician from Sand Point, and Orin Siebert, Pilot.

Nagai Island lies approximately 19 miles east of Sand Point and is about 31 miles long by 11 miles wide at the widest point. Its ragged coastline forms deep cut fiords. Maximum elevation on the island is 1,842 feet, with numerous elevations exceeding 1,500 feet. The north and south quarters consist of rolling hills covered with what appears to be a lichen. These two areas comprise the majority of habitat appearing suitable for caribou. The central portion is mountainous, with the lower approximately 900 feet covered with alder, willow, and dense beach grass that is not believed suitable habitat for caribou. The upper reaches of the mountains, above 900 feet, change into the same type of habitat found on the extremities of the island. This provides a limited amount of additional caribou range, although it is not contiguous to the extremities. Sufficient range is believed to exist at these higher elevations to permit caribou to freely migrate the length of the island.

The beach fringe of Nagai Island consists mainly of rocky inter-tidal areas bordering steep cliffs. There were, however, several areas that appeared suitable for landing wheel equipped aircraft. Most of these were not in areas considered to have good caribou habitat and were therefore ruled out as release sites. Three locations which seemed to have potential as release sites were investigated from the ground.

The first location was inside a gravel spit on the south side of Eagle Harbor. The gravel had sufficient sand to form a hard base. The spit is affected by tides and landing should be considered only on falling or low tides. The nearest available habitat is high on an adjacent mountain. To reach it, the caribou would have to travel through approximately one mile of dense alder and grass. As a release site, it should be considered poor.

The second location was a sandy beach located on the southwest side of Northeast Bight. It is also below high tide and usable only during part of the day. The nearest suitable habitat is approximately one mile north through dense beach grass and short willows. The site is believed to hold a good potential for a successful release of caribou.

The final area investigated is an isthmus in the southern portion of the island known as "Saddlers Mistake". The west side of the isthmus consists of a wide, flat, white sand beach. The majority lies above the mean high tide mark, and would be usable at all but very high tides. It has no obstruction for several miles on either end providing outstanding approaches for landing aircraft. The nearest available caribou range is approximately one mile southwest through dense beach grass. The lack of tidal restrictions and the easy access to suitable habitat make this the best location for potential caribou release.

The August 23 aerial survey of Nagai was brief and intended only to provide a general over-view of the island. The areas believed suitable for caribou were not checked on the ground and were considered suitable only because they compared favorably to known caribou range. Any herd resulting from the released caribou should be restricted in numbers until much more information is available on the quantity and quality of the range. The herd should be restricted in size to 500 caribou. This herd size is arbitrary and assumes the animals will utilize all available habitat on the island. If they restrict their movements to the habitat in the vicinity of the release site, the size should be reduced to 300 caribou. The limited extent of the caribou range observed on the August 23 survey makes it doubtful if the island could indefinitely sustain a population exceeding the recommended levels. The management goal for the island should be for a long term population, not a boom and bust herd such as occurred on St. Matthews Island.

LEGISLATIVE AFFAIRS AGENCY

January 13, 1978

MEMORANDUM

SUBJECT: Transmittal of Supporting Material for H. B. 569

TO: The Honorable Alvin Osterback

FROM: George Utermohle
Research Analyst

The sum of $352,000 is necessary to fund transplants of caribou to eight islands in the Aleutian and Shumagin Islands during Fiscal Year 1979.

The Department of Fish and Game estimates that it will cost about $700 per animal to transplant caribou to the Shumagin Islands and about $1,500 per animal to transplant caribou to the Aleutian Islands. It is assumed that a minimum of forty animals must be transplanted to insure that a viable population is established.

The estimated cost of the transplants is determined as follows:

Shumagin Islands

Transplants of 40 caribou at $700 per caribou to Unga Island, Korovin Island, Big Koniuji Island, and Little Koniuji Island $112,000

Aleutian Islands

Transplants of 40 caribou at $1500 per caribou to Ukolnoi Island, Deer Island, Akutan Island, and Tigalda Island will cost.....$240,000

ESTIMATED TOTAL COST $352,000

Supporting material supplied by the Department of Fish and Game is attached.

SUBJECT: Transplants of Caribou to Various Locations in the Shumigan and Aleutian Islands

Developing a cost estimate for moving reindeer or caribou to various locations in the Shumigan and Aleutian Islands has proven to be frustrating. This occurs because of the many variables introduced by the uncertainties of weather, the cost of logistic support and the availability of animals for transplanting. Nevertheless, I have made several estimates of cost that you may use, but I caution that these estimates are not based upon recent experience in moving animals in this area, nor have we had time to obtain firm costs on air charter for any of these operations. The information for the transplant to Nagai is considered reasonably firm and we'll be attempting that move in early 1978. The estimates for moving animals to the Shumigans should remain as we have projected the cost for that island--approximately $700.00 per animal. Similar cost projections for the Aleutians are less firm, but if we use caribou from the Alaskan Peninsula, I believe a cost of $1,500.00 per animal moved is not unreasonable.

There are a host of items that must be solved prior to inauguration of any such move. These items include land ownership patterns on the proposed release sites, the capability of the areas selected to support reindeer or caribou, the relationships of an introduced species to indigenous flora and fauna, provision for harvest in the event of success, provision for access to effect harvest (since the use of public funds are contemplated) and the availability of reindeer for transplant purposes as opposed to caribou from the Alaskan Peninsula (there are reindeer on Umnak and Unalaska, but their availability for use in such an endeavor as has been proposed in unknown at this time). There may be other problems that I have not addressed. To acquaint you with some of the considerations that we entertained when considering the Nagai transplant, I have attached Departmental memoranda dealing with that subject. If I can be of further assistance, please feel free to call upon me.

February 18, 1977

The Honorable Alvin Osterback, Chairman
House Resources Committee
Pouch V
Juneau, Alaska 99811

Dear Representative Osterback:

My staff has prepared the requested cost estimate for transporting 40 caribou from the Alaska Peninsula to Nagai Island, using Cold Bay as the base of operations. The estimate follows:

Caribou Transplant

40 Caribou to Nagai - from Cold Bay

Helicopter @ $325 X 5 hrs per day = $1,625/day X 7 days helicopter time =	$11,375
Goose 3 hr. round trip X 7 trips @$720 = (perhaps less if we can catch caribou in Stepovak Bay)	5,040
Room and board chopper pilot, $55 X 10 days =	550
Fuel at Cold Bay, 945 gal. at .48/gal. =	453
Per diem 3 biologists for 10 days =	1,650
Transportation of staff =	700
Drugs & equipment =	5,000
	$24,768
If helicopters are not available locally, ferry time from Anch. to Cold Bay and return =	3,900
	$28.660

This estimate does not include personnel costs which the division will absorb.

Sincerely,

Robert A. Rausch
Director
Division of Game

TELEPHONE NO.:

FILE NO.:

FROM: John S. Vania
Management Coordinator
Division of Game
Anchorage

SUBJECT: Nagi Island Caribou
Transplant Cost Estimate

The following is a cost estimate for transplanting caribou to Nagi Island from Cold Bay. The cost of ferry time for the helicopter from Anchorage to Cold Bay and return is separated out.

Helicopter cost per day 5 hours @ $325/hr. $1625	
6 caribou/day for total of 40 caribou 7 days @ $1625/day	$ 11,375
Goose time to Nagi $240/hr. 3 hr. round trip $720	
6 caribou per trip 7 trips @ $720	5,040
Room and board for helicopter pilot 10 days @ $55/day	550
Fuel for helicopter at Cold Bay 945 gal. @ .48 gal.	453
Per diem 3 biologists 10 day @ $55/day	1,650
Transportation	700
Drugs and equipment	5,000
Total	$ 24,768
Ferry time helicopter Anchorage to Cold Bay & Return	3,900
Total with ferry time	$ 28,660

We have checked with most of the helicopter companies in Anchorage and at least two now have contract work on the Alaska Peninsula for this coming spring. None are sure at this time of any contract work for the spring and summer of 1978.

We would make a strong effort to use any suitable helicopter company that is working in the area to avoid ferrying costs; however, we are very skeptical that one will be found. It has been our experience that most helicopter pilots are not qualified to fly a darting operation. Unless they have exceptional flying ability, more time is wasted attempting to dart the animals than is spent ferrying a good pilot and helicopter to the area. This type of low-level flying is also very hazardous and the staff will not fly with just any pilot who happens to be working on the Peninsula.

Jet fuel is available at Cold Bay for 48 cents a gallon if we can purchase it wholesale. No costs are projected for ferrying fuel into the field if it becomes necessary to do so.

The costs you see are bare bones. Everything would have to fall exactly in place to accomplish the transplant at or less than the figures provided.

cc: J. Faro

MEMORANDUM State of Alaska

SUBJECT: Thoughts concerning caribou transplants from Alaska Peninsula to offshore islands

The following are somewhat disorganized thoughts concerning the proposed transplants of caribou during the summer of 1977 to offshore islands in the vicinity of the Alaska Peninsula. Unfortunately, there is not time to more thoroughly prepare this memo, but these should be helpful in synthesizing the program at this stage of its development.

1. Sources of Caribou:

A. Unimak Island: The island has a healthy caribou herd that is virtually unharvested. Little data are available concerning their patterns of movement and location of concentrations during summer months. In general I would expect them to be on the western portion of the island on the slopes of Pogromni Volcano. Logistics would have to be based out of Cold Bay and only one large landing strip (Cape Sarichef) exists on the island. Large lakes and lagoons exist that could facilitate transportation for amphibious aircraft. The island is part of the U.S.F.W.S. Refuge system and restrictive regulations exist concerning the use of aircraft for transportation of hunters. Problems could exist insuring that transplant activities do not conflict with wilderness management programs of the Refuge. Either of the two main segments of the Alaska Peninsula caribou herd on the mainland could probably supply adequate caribou for the transplant at reduced operational cost.

B. Black Hills-Caribou River: An estimated 3 to 5 thousand caribou occupy the westernmost tip of the Alaska Peninsula. Calving has been documented in these areas the past two years with about 2,500 animals counted from census photographs. Movement patterns after calving are poorly documented and logistics would be best based from Cold Bay. Large strips exist at David River, Cathedral River and Canoe Bay which could facilitate handling of caribou after they have been captured.

C. Ilnik: This is the primary calving ground of the northern portion of the Alaska Peninsula caribou herd. It is the best documented segment of the herd. Approximately 5 to 6 thousand caribou have concentrated in the area for calving in recent years. Following calving, the animals move northward to the upper Meshik River area before they begin to scatter in late June. Logistics could be based from Port Heiden. No large air strips exist in the immediate area to facilitate transportation of captured animals,

but amphibious landings could be made at Wildman Lake, Black Lake or in the inter-tidal area at Ilnik.

D. Cinder River: In the past several years a secondary calving ground has developed near the mouth of the Cinder River. This would be the closest group of animals to Port Heiden if that runway were selected as a logistic center for the transplant (approximately 30-40 miles). The number of caribou to select from would be smaller than from other possible transplant sources (approximately 2-3 thousand). Large pumice patches exist on the upper drainage of Cinder River that could be utilized as a collection point for captured animals prior to actual transplant. In addition, the Department of Public Safety cabin at Pumice Creek could be used as a logistic center.

2. Potential Transplant Areas:

Problems in land ownership have been discussed elsewhere. In addition to private ownership and trespass problems, these should include discussions of the impact on lands within the U.S.F.W.S. Refuge system and perhaps the need to file an environmental impact statement before altering the natural ecology of any Aleutian Island. These comments are made without practical field time on the proposed transplant islands.

A. Deer Island: Located immediately south of Cold Bay, this island had an established caribou population prior to the turn of the century with reported migrational movements to the mainland. By 1900 the caribou were no longer present. This indicated that the island is probably too small to support a permanent population without intensive management to restrict caribou numbers at a level compatible with available habitat. No human settlement occurs on the island, and hunters would have to travel to the island by boat, which means the herd would probably not see a high level of use. The Alaska Peninsula caribou population between False Pass and Nelson Lagoon are nearly as accessible to residents of King Cove as would be a Deer Island population. Residents of Cold Bay presently have both the mainland population and the Unimak Island population available for their use. No developments exist on the island to facilitate receipt of transplant. Saltwater landings or boat transportation of captured caribou would be necessary. For these reasons I would give any transplant to this island a low priority.

B. Akutan Island: Located west of Unimak Pass, this island has one community of approximately 90 people. If a transplant occurs, there would be a resident population available to utilize the caribou once they became established, as well as use by commercial fishermen. Presently the closest population of caribou to residents of the island is on Unimak Island, about 30 miles away. There is no reported history of caribou ever being present on Akutan. Because of the island's small size, the herd would have to be closely managed to prevent over-population and subsequent decline. Transportation to the island is restricted to saltwater landings by amphibious aircraft or by boat.

C. Unalaska Island: The largest island of the proposed transplant sites and located west of Akutan. The island has a human settlement at Dutch Harbor-Unalaska of approximately 250 persons. A transplanted caribou herd could be used by local residents and the commercial fishing fleet. Again no history of caribou existing on the island. A reindeer herd on adjacent Umnak Island is available to hunters with transportation (either boat or aircraft) to that island. Caribou are available on Unimak Island, approximately 80 miles to the east. A large landing strip exists at Dutch Harbor that could facilitate the transplant, otherwise access would have to be by float plane or boat. This island appears to be the most viable of the proposed transplant sites.

D. Nagai Island: Located immediately southeast of Sand Point, a transplant could provide a herd for residents of that community (approximately 430 persons) and commercial fishermen. No history of caribou existing on the island. Access to the island will have to be saltwater landings by amphibious aircraft or boat. One local Naknek resident with experience in the area states areas for entry onto the island are quite limited. The island's small size will require that herd be regulated to prevent over-population. Because of its close access to Sand Point, hunting might be capable of maintaining the population at a level compatible with available habitat, but this is an opinion that can be proven only if a herd becomes established.

E. Metrofania Island: Located between Chignik and Perryville, this island has no history of caribou. Presumably, use of a transplanted herd would be by residents of these communities (approximately 275 persons total, and each about 30 air miles away) and commercial fishermen. Chignik residents have access to the main body of the Alaska Peninsula caribou herd, but residents of Perryville need to travel a much greater distance to take animals for meat. No developments exist on the island that could facilitate the transplant effort. Because of the island's small size, it is doubtful that suitable habitat exists to maintain a viable transplant without intensive management. Logistics are such that hunters would probably not exercise adequate control of the population.

F. St. George Island: One of the Pribilof Islands located well out in the Bering Sea. It has a human population of approximately 160 persons who could make use of a caribou herd. The island once had a reindeer herd transplanted that grew in numbers then crashed. For this reason, it would be inadvisable to transplant caribou without sufficient knowledge to insure a re-occurrence of this pattern did not occur. In addition, it is the most remote of the proposed transplant sites and would have the most expensive logistics. In spite of developments on the island this could facilitate the transplant.

3. Logistic Centers for Transplant:

A. Port Heiden: Located in the central portion of the Alaska Peninsula. This area would be the closest to Anchorage from which many of the materials, supplies and equipment items would have to

be transported. Its primary asset is the close association with the largest numbers of caribou from which to select transplant animals. The movements of the group of caribou calving at Ilnik are the best documented and the secondary calving area exists at Cinder River which could provide animals. Transplant personnel could be housed at the Reeves station if prior arrangements were made. Fuel for helicopters and amphibious aircraft could be delivered to the runway by Reeves Aleutian Airlines.

Disadvantages are:

(1) The lack of fuel for helicopters and perhaps fixed wing aircraft would necessitate additional transport cost.

(2) The area is furthest from most of the proposed transplant sites.

(3) No air charter service exists at Port Heiden that could facilitate or support transplants.

(4) Housing may not be available as the terminal is often fully booked by oil companies.

(5) Few additional landing sites are available for amphibious aircraft except Black Lake, Wildman Lake, or saltwater landings. Particularly if Transplant occurs in July after caribou have moved into the Meshik River area.

B. Cold Bay: Located near the southwestern tip of the Alaska Peninsula. At this time I am inclined to prefer this location over Port Heiden, even though the Department has less adequate data concerning the availability of caribou.

Advantages are:

(1) An abundant supply of jet fuel and av-gas is available at the Cold Bay Airport, so it would not be necessary to transport fuel to the area.

(2) Housing facilities are available at both the Reeves station and the Flying Tigers terminal.

(3) A large, all-weather airport could be an asset for the operation during periods of inclement weather.

(4) Large strips exist at David River, Cathedral River, and Canoe Bay which could serve as a staging station for collection of captured animals. These strips are in the immediate area of the calving grounds.

(5) Both Winship Air Service and Peninsula Airways should have Gruman Gooses stationed in the area. These air services could be an asset to the transplant program, although aircraft might not be available on call.

(6) Closer to transplant sites of Unalaska and Akutan than Port Heiden. About equal distance to Nagai Island or St. Paul, but a significantly greater distance to Metrofania Island.

(7) The availability of a Department office in the area or the U.S.F.W.S. Refuge office to facilitate logistics.

Disadvantages are:

(1) Additional distances from Anchorage would increase cost of transportation of materials, helicopter, and personnel. Savings in fuel cost would probably compensate for that.

(2) Less data available on location and movements of caribou from which to obtain transplant animals. Smaller numbers of caribou to select from.

(3) Area frequently has inclement weather, however, for two of the proposed transplant sites, the same weather factor would be a factor even if working from Port Heiden.

Additional Justification for Selection of Cold Bay area for Logistic Center:

Data for all big game species in the south tip of the Alaska Peninsula is extremely limited. Associated with the capture work, it might be possible to conduct ground composition counts on caribou following calving. Tentatively, we hope to do some photo censusing work this spring.

Also, the area immediately north of the calving grounds has an embryonic moose population of undetermined size. Additional funds could be expended to gather data on its status. Present observations are on a "target of opportunity" basis only.

All personnel associated with the program could be required to fill out observation forms on all big game species except bears. For bears only the locations of dens should be noted. In addition, the skulls of beach dead otter could be collected for Karl Schneider. Skulls from this area closely resemble those of the California or southern sea otter sub-species and are of taxoromic importance. These activities could be accomplished without additional cost to the program.

4. Timing of Transplant:

Calving occurs earliest on the northern portion of the Alaska Peninsula. In general calving occurs about June 1 at Cinder River and Ilnik and about June 15 on Unimak Islands. The Black Hills-Caribou River calving segment falls between these dates. This timing of calving is a factor to be considered in programming the transplant once the logistic center and source of animals has been determined.

May: If animals can be captured prior to calving, then it might be possible to augment the transplant with natural reproduction the first year. This should be attempted only if there is a reasonable certainty that drugs or handling would not result in a high mortality among the cows or their fetus.

Without a spring bear season, both Nick and I would be available to assist the transplant and it would not be necessary to pull as many

personnel from Anchorage or other areas. Weather is normally fair to good during this period, but sub-freezing temperatures and snow storms can occur.

June: At this time it would probably be inadvisable to capture pregnant cows. This would restrict capture efforts to bulls and yearlings. With yearlings, more animals could probably be carried aboard the transplant aircraft. Caribou would still be bunched in large post calving concentrations.

Major activities that the King Salmon office would be associated with would be moose calving surveys, monitoring the moose collaring research done in April, preparing for the McNeil River field season, and perhaps getting the Walrus Island program started. Additional personnel would have to be pulled from other areas, as it is doubtful that both Nick and I could be available for the full program.

Weather is normally excellent with warmer temperatures. Bad storms are not common, but fog could ~~hamper~~ hamper work.

July: Again, capture would be limited to bulls and yearlings as it would probably not be possible to capture both the cow and her calf. In addition, I seem to recall reading there is an initial high mortality in calves immediately following capture (Adak transplant). Caribou would be starting to scatter and it might require additional helicopter time to capture animals. In addition, capture activities could cause abandonment of new born calves.

The King Salmon office should not have major field activities pending. McNeil River (and Round Island?) should be established and on "auto-pilot". Monitoring of collared moose should be completed or require only minimal time. Both Nick and I could probably be associated with the full program.

Weather normally remains good, but it can deteriorate with abundant southeastern rain storms in the later portion of the month, so work would best be done early.

5. Methods of Logistics for Transplant Animals:

A. State Gooses: I have been informed that State aircraft cannot transport "freight" that could be carried by private sector. Transplanting caribou could fall into that definition. Also, during June and July these aircraft may be committed to the commercial fish enforcement program and unavailable. The availability of these planes should be determined well in advance or other arrangements made.

B. Peninsula Airways: Penn Air has recently purchased two Gooses from Reeves Aleutian Airways. One of these planes will be stationed in King Salmon and the other at Cold Bay. The King Salmon Goose should be available in May, but in June and July, it will be committed to hauling passengers for Kulik Lodge and Brooks Camp. The Goose stationed at Cold Bay will be committed to mail runs on three days a week and unavailable on those days. Widgeons could also be available, but with a greatly reduced payload.

C. Winship Air Service: This air charter service has stationed a Goose at Cold Bay in the past. I have no knowledge of its availability this summer, but it has worked for the RCA station on the Aleutians and for the commercial fishing fleet at Dutch Harbor.

6. Personnel:

Chuck Irvine - experienced with capture work on caribou and field conditions on the Alaska Peninsula.

Lee Miller - extensive experience on Alaska Peninsula under field conditions.

Al Franzmann - extensive experience with capture work on moose (caribou?). Should have some experience on Alaska Peninsula following moose work this spring.

Jerry Sexton - very thorough in preparation of equipment and materials, competent under field conditions. Has worked on Alaska Peninsula.

Jim Davis - has his work given him expertise in handling caribou with drugs?

Larry Jennings- has experience with transplant of large game animals (bison and musk ox). His expertise could facilitate handling of animals.

Egbert, Hardy, Modafferi, or Palmer - could fill manpower needs and work could broaden their background knowledge of both work technique and different areas of the State.

For lack of time, I'll leave it at this. My sincerest condolences to whoever has to put it all together - stop looking at me like that!.

HOUSE BILL NO. 572

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act making a special appropriation to the Department of Fish and Game for travel and per diem for the Board of Fisheries to meet with advisory committees; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. The sum of ~~$200,000~~ $105,000 is appropriated from the general fund to the Department of Fish and Game for the purpose of providing funds for travel and per diem to the Commissioner and ~~three members of the~~ Board of Game for joint meetings with local advisory committees ~~at Kodiak, Sand Point, Unalaska, Naknek, and other~~ in the public and rural communities of the state.

* Sec. 2. The unexpended and unobligated portion of this appropriation lapses into the general fund on June 30, 1979.

* Sec. 3. This Act takes effect immediately in accordance with AS 01.10.-070(c).

HB 572 Comm 4/6/78

Commissioner Ron Skoog
Department of Fish and Game
Subport Building
Juneau, Alaska 99811

hello Ron,

Thank you very much for your prompt response to my March 14 letter on advisory board travel. We were quite surprised that the travel of the chairman was approved for the spring round of Fish and Game boards hearings. As a matter of fact, two of the Chairmen did not receive their State TR's in time, so we had to buy their ticket. Please ask your staff to send us a complimentary copy in the future to facilitate travel.

First, we feel that the Fiscal 79' budget request for Advisory Board travel within the Boards of Fish and Game is inadaquate. Your staff is well aware that a majority of the 27 rural boards that require travel have not met or used the funds this year. We all hope that the revitalization of the entire regulatory process through Hammond Administration and d-2 for fish and game will soon have these boards functioning like the three boards in the Delta. If this occurs, the travel funds allocated will be inadaquate to handle the basic costs of 4 meetings a year. The travel cost of our three boards. representing 45 villages, ¼ of all the subsistence villages in the State, will equal $8-10,000 for their four regulatory meetings, not including travel to the master board meetings. You know that AVCP through Nunam Kitlutsisti is handling the the additional costs in order to make the system work. Our Board is committed to this effort, but its funding has a time limit. We would suggest that the Department approach the Governor will a supplemental request of $90,000 for basic travel.

Second, we would like to be alerted of when the Legislature would discuss this issue so that an AVCP representative could inform the logislators of the complete costs from a rural perspective of this worthwhile system.

In peace,
harold sparck, director

HB 572

Subject: Proposals to improve public input to the existing fish and game regulatory process.

Sorry for the delay in getting this information on the results of the recent workshop to you earlier, but we had some problems in assembling some of the information. The enclosed material represents a summary of the many excellent thoughts which were expressed and will be given every consideration in determining how best to improve the public participation process. As identified at the workshop, basically there are three options which were examined by the three working groups: 1) The "Regional Council" concept; 2) The present system modified; and 3) The Regional Regulatory Authority concept.

In addition to the three proposals and working group comments, we have included a copy of the proposed criteria for issuance of subsistence permits which was discussed at the Anchorage meeting. Included also in the material are the comments relative to the Administration proposal raised at the Governor's meeting on December 13 in Juneau. You may recall there was a request made at the meeting in Anchorage for opinions on constitutional and legal constraints that may be applicable to the proposals under consideration. Due to previous travel commitments, Assistant Attorney General Jeff Haynes, our Advisor in the Department of Law, has not been able to comply with this request; however, these will be available by the time of the Fairbanks meeting.

These proposals will be examined more thoroughly at future public meetings. The next meeting will be at Fairbanks on February 9-10, at Bethel on February 27 through March 2, and at Petersburg, tentatively on February 16.

Thank you for your participation in the workshop. In the Department's view, the workshop was constructive and worthwhile and your views were much appreciated. We are looking forward to additional comments in the forthcoming public meetings.

Sincerely,

Ronald O. Skoog
Commissioner

Meeting with Governor Hammond concerning Regional Councils Proposal- 12/13/77

December 13, 1977 - Governor's Conference Room (Continuing later that day in the auditorium of the Alaska Department of Fish and Game).

The following people were in attendance: Messrs, Anderson, Cross, Ohlsen, Allen, Smith, Eaton, Jones, Jensen, McHutt, Fanning, Holloway, Bergstrand, Whitehead, Palmer, Specking, Boddy, Jensen, Frost, Newman Kaill, Haynes, Huizer, Lane, Paddock, Dinnerline, Belous, Skoog, Demientieff, Newmann, See; Ms. Lease, Lobaugh, Moulton, Jablonski, and others.

Introduction by Governor Hammond

GENERAL COMMENTS WITH REFERENCE TO DRAFT PROPOSAL OF 11/18/77

Statewide Boards should be comprised of Regional Council Chairmen.

10-year residency is unrealistic.

Regional Council membership is not clear to individuals.

Many problems are foreseen trying to get area people together to solve problems.

Burden of proof must rest with the Master Boards.

We should convince the public how serious threat is from Federal level. Keep in mind what Congress is doing.

Only a particular issue brings people to advisory committee meetings. This proposal will not do it.

Proposal avoids issue of subsistence. We should come up with a definition of subsistence. Broad guidelines on subsistence should be set to apply to all Alaskans.

We should take into consideration other boundaries rather than Game Management Units.

Consider more thoroughly the makeup of regional and local groups. They will be vulnerable to Federal Advisory Procedures Act. The members must actively participate--if not, the statute applies.

Chairman and Vice Chairman of Advisory Committees should sit on regional Council. May be desirable to go one step further and have someone from local community sit on the Master Boards.

Provide forum for groups that are concerned with Title 7 to come together within context of State proposed plan.

Contact D2 Associated agencies - get input on establishment of new statewide schemes.

Straw vote taken on going with our proposal:

Board System as it stands now: 4

Regional Council Proposal with changes: 19

Proposal as it now stands: 2

QUESTIONS

Should the power now given to the advisory committees re emergency closures be given to Regional Councils?

Will there be any accompanying changes within the Department?

To what extent is this approach an effort to really decentralize authority and to really get grass roots input and to what extent is it to derail action Congress takes?

Are 52 committees representative of all people?

How much is the State willing to spend? Legislature has been reluctant to give what is needed as far as funding. Could this money be used better on management and research within the Department?

What is the definition of subsistence user?

How well does the proposed Department of Fish and Game reorganization mes' with the proposal?

Should we have different boundaries for regions?

How membership of Boards, Advisory Committees and Regional Councils is established?

Selection of members when term expires?

Should we give more authority to Regional Councils?

SUGGESTED AGENDA
ITEMS FOR FORTHCOMING WORKSHOP

1. Level of Authority
   a. Centralized i.e. Governor, Commissioner, Boards.
   b. Regional or local.
2. Expansion of Present System
   a. Expansion of advisory system.
   b. How to get broad representation.
3. Composition of Statewide Boards
   a. How chosen
   b. Adequate distribution throughout State.
   c. Change in statutes.
4. Composition of Regional Councils
   a. How chosen.
   b. Adequate distribution throughout State.
   c. Residency requirements.
   d. Representation from advisory committees.
5. Regional Boundaries
   a. Game management units
   b. Resource distribution
   c. Election districts
   d. Population Centers (1 man/1 vote concept)
   e. Choosing areas which force people to review other people's problems and consider resource conflicts
6. Implementation
   a. Legislative authority (change in statute) or by existing authority (regulatory)
   b. Funding
   c. Staffing

Working Group Comments

Proposal: 3
Regional APA Authority

This working group felt that since this would be a totally new system they were at a disadvantage due to time constraints. They were primarily concerned with local use of the resources. Consensus was not reached on some points.

Pros

1. Decentralized authority would maximize participation.

2. The need for regions to better recognize regional differences.

3. Regional authority provides adequate representation to better satisfy local resource needs.

4. Regions are better able to implement the State's policies on priority of resource use.

5. Regional authority would promote the development of wildlife management plans for each region.

6. Regional rulemaking groups have a better opportunity to get close to their constituents.

Cons

1. There are potential problems in completely delegating responsibility to the region.

2. Additional cost in splitting up staff of the Department.

3. Need for overriding view of responsibility for wildlife conservation and management within the state.

4. Possible need for changes in the Administrative Procedures Act.

Conclusion

The group suggested statutory establishment of a two-tier system of authority.

They suggested that the number of regions be based on a study and public hearing process.

The group felt that rather than subsistence management plans being developed, the aim should be for regional wildlife management plans.

Board members should be selected from Regions.

Every region should have its own staff which would be separate from the centralized State staff.

PROPOSAL: 3

Advisory Committees and Regional Councils with A.P.A. Authority

A. Elements

1. Retain present Advisory Committees.

   a. Committees advisory to one Regional Board only.

   b. Committees advisory on all species: Big and small game, finfish, shellfish, furbearers, etc.

      (1) Option: The Regional Board to specify which Advisory Committee(s) have authority for which species groups.

   c. Appropriate Regional Board administers Advisory Committee system in its Region: appointments, organization and rules, correspondence with Board, notification of deadlines, etc.

      (1) Regional Board to determine where a specfic number of Advisory Committees will be located.

      (2) Option: Office of the Commissioner take over (retain) the coordination/administration function regarding Advisory Committees.

2. Create Regional Boards with specifically assigned geographical areas of jurisdiction.

   a. Membership.

      (1) Appointed by the Governor, staggered terms.

      (2) Five (5) to seven (7) members.

      (3) To represent all major user groups.

      (4) Not members of Advisory Committees.

   b. Authority:

      (1) In compliance with APA, has rule-making authority.

         (a) on all sections of the regulation

         (b) Option: on season and bag limits only, with general provisions, methods and means, etc., promulgated by the Commissioner, acting on recommendations from the Boards.

3. Proposals for regulatory change submitted by public, Advisory Committees and staff to Regional Boards, who compile, publish, hold hearings and promulgate.

continued ...

4. Regulations adopted by Regional Boards sent to Commissioner, who reviews for uniformity.

   a. Commissioner may veto regulatory changes in the broad public interest.

      (1) Would require changes in Titles 44 and 16.

   b. Appeals Board to review and approve all proposed Commissioner vetoes.

      (1) Action of the Appeals must be exempted from APA with regard to 30 day notice.

   c. Regulations revert to existing form in case of veto.

   d. Commissioner retains authority for promulgation of emergency regulations.

5. Each Regional Board provided legal counsel by Department of Law.

6. Each Regional Board provided with administrative assistance, e.g., a permanent secretary, with office and support.

7. Appeals Board appointed by Governor, with one member from each of the five (5) Regional Boards.

PROPOSED ELIGIBILITY CRITERIA - SUBSISTENCE PERMITS

Although subsistence fishing permits for salmon have been distributed for many years, no general set of eligibility standards have been established. This is desirable if the Board determines that subsistence fishing should be permitted on the basis of need or hardship or other criteria.

A number of options were developed which could be imposed as regulations within the General Provisions framework of the regulations. Then on an area by area, regional, subarea, district or other geographical unit basis the various criteria deemed applicable within each area could be imposed.

The proposed eligibility criteria include:

1. Age

    a) 60 years - same as free sport fishing and hunting license (but without 30-year longevity)

2. Residency

    a) Twelve (12) months - same as sport fishing and hunting licensing

3. Physical Disability

    a) Add a proxy to permit if necessary

    b) Need affidavit of disability or proof of injury

4. Past participation in subsistence fishery

    a) Number of years can vary by area

5. Demonstrable abnormal difficulty in obtaining protein food supply

6. Income

    a) Scaled by region or area

    b) Minimum set at welfare eligibility standard

    c) Sliding scale based on family or household size

7. Longevity within the area

    a) Fifteen (15) years - suggested

8. Severe Hardship

    a) Natural disaster temporarily and unavoidably affecting the applicant's ability to provide essential food supplies

continued....

9. Availability of food resource that could be kept for personal use from a commercial taking

10. Availability of alternate subsistence permits or resources

11. Willingness of applicant to combine with another family unit to share one household limit

12. Opportunity to take an equivalent amount by recreational use

13. Past history of fish and game violations

14. Lottery

15. Allocation based on aboriginal title

ANCHORAGE WORKSHOP
December 28-29, 1977

Working Group Comments

Proposal: 2
Retention of Present
Board System

The working group examined the question of retaining the present regulatory system of advisory committees and two Boards - Fisheries and Game, who have the final authority to promulgate regulatory proposals. It was the consensus of this study group that the present system should be retained but should be improved in a number of ways to expand the effectiveness of the local advisory committees and provide for a different way to select the members of the local advisory committees and of the Boards of Fisheries and Game.

Pros

1. Provides for consistent statewide management policies,

2. Minimizes regional resource ownership concept.

3. Provides opportunity for consideration of resource needs of game and fish by specialized boards.

4. Provides for continuation of present Board system as regulatory and management entity for interface with North Pacific Fisheries Management Council.

5. Cost of administration is moderate.

Cons

1. At present, local committees are self-perpetuating within the membership restricting new members and/or user group representation.

2. Does not allow equal participation by all user groups.

3. Does not allow for accurate representation of user groups in a particular area.

4. Political method of selection is undesirable.

5. Boards do not reflect a geographically representative cross-section of significant user groups.

Conclusion

A strong recommendation was made to provide financial support to local advisory committees and to provide an annual salary for Board of Fisheries and Game members.

The group felt that members should be elected by popular election at a meeting of the local advisory committee called for that purpose with nominations from the public and a nominating committee. To accomplish selection of Board members, the State should establish a mechanism for popular elections within each of not more than 7 regions; the total number of members on each board.

Proposal: 2
Present System - Boards of Fisheries and Game

I. Elements

A. Fifty two advisory committees statewide representing varied resource user groups within all geographic areas

B. Statewide Boards of Fisheries and Game

1. Fisheries Board

a. Seven members appointed by Governor

b. Required by statute to hold 5 meetings or hearings per year in designated areas of the state

(1) Upper Yukon-Kuskokwim-Arctic

(2) Western Alaska (including Kodiak)

(3) Southcentral

NEWS

IMMEDIATE RELEASE JANUARY 9, 1978

STATE EXAMINES FISH AND GAME OPTIONS

JUNEAU---Alaska's fish and game regulatory system may be in for some major changes. The State is studying a number of proposals which could substantially alter the present system.

In a workshop session in Anchorage Dec. 28-29, the Department of Fish and Game presented a proposal which would add five regional councils to the present system of local advisory committees and the Boards of Fisheries and Game. Representatives of a broad cross-section of user groups were invited to the workshop to critique the propos

During the workshop members of the public developed the State's proposal further, and began work on two more. One of the latter would consist simply of modifications to the present system, while the other would place all regulation-making authority in local hands.

The State plans to hold another public participation meeting in Fairbanks Feb. 9-10, starting at 10:00 a.m. at the Fairbanks Traveler's Inn, during which all three proposals will be examined in greater detail. That will be followed by a third session scheduled for Feb. 27 - March 2 in Bethel. The joint Boards of Fisheries and Game will be present in Bethel to meet with interested members of the public.

####

ANCHORAGE WORKSHOP
December 28-29, 1977

Working Group Comments

Proposal: 1
Advisory Committees/
Regional Council/
Master Boards

Discussion on the proposal centered around:

1. Regional Boundaries
2. Number of regions
3. Authorities of Regional councils
4. Authority mechanisms for establishing Regional councils
5. Protection of subsistence user under HR-39. Identification of subsistence
6. Concerns over specific individual sections of the proposal as drafted
7. Qualifications for serving on councils

Concensus was not reached within the group on most points. While the committee could not reach concensus there was general support for the regional concept with modifications.

Pros

1. Most committee members supported a minimal number of regions.
2. General agreement that Councils should not have regulatory authority.
3. Committee members supported establishment of Regional Councils by existing authority rather than legislation.

Cons

1. Proposed regional boundaries were generally unacceptable.
2. Committee identified need for definition of subsistence.
3. Guiding industry does not seem protected or considered.
4. Ten (10) year residency requirement is excessive.

Conclusion

In general, the goals of the Regional Council concept seem desirable; public input and dialogue is certainly to be sought.

STATE OF ALASKA

JUNEAU

November 18, 1977
DRAFT PROPOSAL

A REVISED SYSTEM FOR

1) THE ADOPTION OF FISH AND GAME REGULATIONS BY THE ALASKA BOARDS OF FISHERIES AND GAME, AND
2) THE DEVELOPMENT OF SUBSISTENCE AND MANAGEMENT PLANS

BY MEANS OF INCREASED LOCAL AND REGIONAL PUBLIC PARTICIPATION

BACKGROUND

In recent years, the inadequacy of public participation in the present system of fish and game regulatory procedures has become increasingly apparent. Although the system in use by the Boards of Fisheries and Game since statehood has provided more public participation than exists in most states, the size of Alaska, widely dispersed communities, changing land use and ownership patterns, and the increasing complexity and competition of consumptive and nonconsumptive uses makes it necessary to modernize substantially the system. With these factors in mind, the Governor and the Department of Fish and Game have developed the attached proposal.

IMPLEMENTATION OF PROPOSAL

The proposal is now being reviewed with Congressional and Legislative leaders, Boards of Fisheries and Game members, appropriate user-group representatives and individuals. The proposal will be modified in accord with the recommendations developed during this review phase. The modified draft proposal will be presented to the Boards of Fisheries and Game for their consideration and final action in accordance with public notice and hearing provisions of the Administrative Procedure Act. The timetable calls for the implementation of the plan by July 1, 1978, so that the new system will be operational for the Board meetings in the Fall of 1978.

POLICY CONSIDERATIONS OF PROPOSAL

A. THERE IS AN OVERRIDING NEED TO HAVE GREATER LOCAL AND REGIONAL PARTICIPATION IN THE DEVELOPMENT OF FISH AND GAME REGULATIONS.

The proposal addresses this need by retaining the existing local advisory committee system and establishing a new system of "Regional Councils."

Five Regional Councils are proposed representing logical geographic and resource areas of the State. Each Regional Council will have seven members, consisting of the chairmen of Local Committees within the region. Provisions are made for those situations where either more or less than seven Local Committees exist in a region. All regulatory proposals affecting the regions and all proposals of a Statewide nature will be processed by the Boards and sent to the appropriate Local Committees and Regional Councils for their review. Regional Councils will consider Local Committee recommendations together with public and agency comments in the development of the recommendations they submit to the Boards. These recommendations and all other regulatory proposals will be considered by the Boards prior to final action and adoption of regulations. It is the stated intent that the Boards will follow the recommendations of the Regional Councils except for specific reasons listed in the proposal. The proposal also requires reconsideration by the Boards if a majority of the five Regional Council members in attendance at a Board meeting oppose any decision of the Boards.

B. THERE IS A NEED TO SUPPORT LOCAL, REGIONAL AND STATEWIDE BOARD MEETING ATTENDANCE BY MEANS OF A FINANCIAL COMMITMENT ON THE PART OF THE STATE TO REIMBURSE TRAVEL EXPENSES FOR LOCAL COMMITTEE AND REGIONAL COUNCIL MEMBERS.

In recognition of this need, the proposal specifies that travel expenses for the following activities will be reimbursed by the State: (1) participation of Local Committee members at Local Committee meetings; (2) participation of Local Committee chairmen (and vice chairmen in some cases) at Regional Council meetings; and (3) participation of Regional Council chairmen at meetings of the Boards of Fisheries and Game.

C. THERE IS A NEED FOR LOCAL AND REGIONAL LEADERSHIP IN THE PREPARATION OF PROPOSED SUBSISTENCE MANAGEMENT PLANS FOR CONSIDERATION AND IMPLEMENTATION BY THE BOARDS OF FISHERIES AND GAME.

In recognition of this need, the proposal specifies that Local Committees will cooperate with Regional Councils in the preparation of a proposed Subsistence Management Plan, together with implementing regulations, for the region. The elements of the plan and the framework for the adoption of the Subsistence Management Plans and implementing regulations by the Boards are described in the proposal. Subsistence use will continue to be the top priority use of our fish and wildlife resources.

D. THERE IS A NEED FOR INCREASED STATE AGENCY STAFF SUPPORT FOR LOCAL COMMITTEE AND REGIONAL COUNCIL ACTIVITIES.

In recognition of this need, the Administration supports the appropriation of funding for five regional staff coordinators in the Department of Fish and Game. The coordinators will work closely with Local Committees and Regional Councils regarding; (1) the preparation and review of regulatory proposals and the transmittal of recommendations to the Boards; (2) the preparation of subsistence plan proposals for the Boards; and (3) the review of fish and game management plans in conjunction with appropriate Department of Fish and Game biologists. The Departments of Fish and Game and Public Safety will provide technical and scientific

expertise as requested. The Department of Law will provide legal assistance to Local Committees and Regional Councils regarding the regulatory process. In addition, the increased staff support now being provided to the Boards of Fisheries and Game will enable them to work more closely with and provide better support to the Local Committees and Regional Councils.

ALASKA ADMINISTRATIVE CODE

TITLE 5.

FISH AND GAME

PART 7.

FISH AND GAME COMMITTEES AND COUNCILS
BOARDS OF FISHERIES AND GAME

CHAPTER 96.

LOCAL FISH AND GAME COMMITTEES AND
REGIONAL FISH AND GAME COUNCILS

ARTICLE 1.

LOCAL FISH AND GAME COMMITTEES

5 AAC 96.001. ESTABLISHMENT OF LOCAL FISH AND GAME COMMITTEE SYSTEM. Under authority of AS 16.05.260, there is established a system of local fish and game committees (hereafter local committees) to provide a forum for the collection and expression of opinions and recommendations on matters relating to fish and game resources.

5 AAC 96.002. CREATION OF LOCAL COMMITTEES. Three or more interested persons in the State may petition the Boards of Fisheries and Game for creation of a local committee. A local committee must be approved by the boards before commencing its operations. The boards will designate the locus of the committee.

5 AAC 96.003. COMPOSITION OF COMMITTEES. Each local committee shall be comprised of a membership which, to the extent possible, is representative of the full range of user groups of the general area. The number of committee members shall be not less than five nor more than fifteen, with the exact number to be determined in accordance with procedures set forth in sec. 006 of this chapter.

5 AAC 96.004. QUALIFICATIONS FOR MEMBERS. To qualify for membership on a local committee, a candidate must be a resident of the state and the area served by the committee, informed and experienced with regard to the fish and game resources of the area, and be of a reputation within the community consistent with the responsibility of committee membership.

5 AAC 96.005. FUNCTIONS OF LOCAL COMMITTEES. Local committees shall be responsible for:

(1) developing regulatory proposals for submission to the boards;

(2) advising the appropriate regional fish and game council on needed measures for the conservation and utilization of fish and game resources;

(3) evaluating regulatory proposals submitted to it and making recommendations to the appropriate regional council;

(4) providing a forum for the expression of opinions and recommendations by persons interested in any phase of fish and game conservation and utilization;

(5) cooperating with the appropriate regional council in the development of subsistence management plans; and

(6) cooperating and consulting with interested persons and organizations (including government agencies) in order to accomplish the foregoing.

5 AAC 96.006. UNIFORM RULES OF OPERATION. All actions undertaken in conjunction with the formation or operation of a local committee shall comply with the uniform rules of operation, which are as follows:

(1) Organization. The committee shall be organized under authority of AS 16.05.260 and shall be administered by the Boards of Fisheries and Game.

(2) Responsibilities. The committee shall be responsible for performing the functions described in sec. 005 of this chapter in accordance with the provisions of Chapters 96 and 97 of this title.

(3) Title. The committee shall have a title.

(4) Membership. The committee is composed of not less than five nor more than fifteen persons who have been appointed by or confirmed by the boards. The boards shall approve the first five members of the committee. Thereafter, nominations for additional members may be submitted by committee members or by local citizens. The committee shall vote on all nominations at regular public meetings. A majority of the members of the committee is necessary to elect a new member. Newly elected members have full voting and office holding rights until confirming action is taken by the boards. Any proposed member refused confirmation by the boards loses membership status when his nomination is refused. The committee may commence its operations as soon as the first five members are appointed by the boards.

(5) Terms of Members. Terms shall be set by the boards so that not more than one third of the committee members terms expire in one calendar year. Terms shall commence on January 1 and expire on December 31 of the year designated, or until a successor has been duly elected at the next meeting scheduled.

(6) Vacancies. Vacancies shall be filled through nomination and election by the committee as set forth in (4) above. However, if a vacancy causes the number of committee members to fall below five, the boards shall fill the vacancy, or dissolve the committee. Terms for members filling vacancies shall be set in accordance with (5) above. A vacancy in the committee shall be declared by the chairman on the happening of any of the following events:

(A) the death of, the resignation, of or the refusal to accept election by, any member;

(B) the recurring absence of a member from regularly advertised meetings without reasonable justification, as determined by a majority vote of the committee; or

(C) removal of a member by the boards for cause.

(7) Nominations. A nomination for committee membership may be submitted to the committee by a member or by a local citizen at any regular meeting or in writing to the chairman. The committee shall vote on all nominations at the next regular meeting.

(8) Officers. The officers of the committee shall consist of a chairman, a vice-chairman, and a secretary.

(9) Terms of Officers. The term of office for officers is two years commencing January 1 and ending December 31 of the following year, or until the next meeting that new officers can be elected, or ending at the end of the term of the member, when such term is for less than two years.

(10) Chairman. The chairman shall be elected by a majority vote of the committee and shall be the presiding officer; the chairman may call meetings of the committee.

(11) Vice Chairman. The vice chairman shall be elected by a majority vote of the committee and shall assist the chairman and assume his duties when the chairman is absent.

(12) Secretary. The secretary shall be elected by a majority vote of the committee and may, but need not, be a member of the committee. The secretary shall carry out the usual duties associated with this office. If the secretary is not a committee member, he shall have no vote in committee business.

(13) Resignation of Officers. If an officer withdraws before his term expires a special election shall be held to fill the office for the unexpired term.

(14) Meetings. The committee shall meet at such times as are necessary to participate in the process described in 5 AAC 97.061, and at such other times as considered desirable to formulate regulatory proposals and consider other appropriate matters including subsistence management policies.

(15) Public Meetings. Public meetings at which any interested persons may submit statements to the committee may be held from time to time on any matter relating to the purposes for which the committee is formed.

(16) Public Proceedings. Meetings and hearings of the committee shall be open to the public and advertised in the locality where the committee is organized.

(17) Quorum. A majority of the members serving on the committee constitutes a quorum for the transaction of business. Every act or decision done or made by a majority of the members present at a meeting of the committee duly held, at which a quorum is present, is the act of the committee.

(18) Rules of Meetings. The meetings of the committee shall be conducted according to the latest edition of Robert's Rules of Order.

5 AAC 96.007. REPORT OF ACTIVITIES. The chairman of each local committee shall annually, no later than December 31, furnish the boards with a current list of the names and addresses of those members of the committee and the expiration date of term for each member of the committee. Written reports of committee activities for the calendar year shall be made to the Boards during the ensuing January. This provision shall be satisfied if minutes of each meeting and all changes in membership status are submitted to the boards on a regular basis after each meeting throughout the year.

5 AAC 96.008. INTERACTION WITH REGIONAL FISH AND GAME COUNCIL. Local committees shall, to the fullest extent possible, coordinate their activities with those of the applicable regional council so that their respective functions and actions are complimentary. In selecting a chairman, local committees shall insure that the individual elected meets the qualifications of sec. 054 of this chapter.

5 AAC 96.009. ATTENDANCE AT MEETINGS. If funding is approved in conformance with 5 AAC 97.033 (b), the chairman (or his designee) of each local committee not selected under sec. 053 (c) of this chapter shall attend meetings of the applicable regional council. Each local committee shall cooperate with other local committees on matters of mutual interest and concern, and may hold joint meetings to effectuate this purpose.

ARTICLE 2.

REGIONAL FISH AND GAME COUNCILS

5 AAC 96.050. ESTABLISHMENT OF REGIONAL FISH AND GAME COUNCIL SYSTEM. Under authority of AS 16.05.260, there is established a system of regional fish and game councils (hereafter regional councils) to provide a regional forum for the collection and expression of opinions and recommendations on matters relating to fish and game resources.

5 AAC 96.051. CREATION OF REGIONAL COUNCILS. (a) There are created five regional councils, each of which shall operate in and be responsible for the following areas:

(1) Region I - Game Management Units 1 - 5 and that portion of Unit 6A from Cape Suckling to the boundary of Unit 6 with Unit 5;

(2) Region II - Game Management Units 6 (exclusive of the area described above as part of Region I), 7,9A, 13,14,15, and 16;

(3) Region III - Game Management Units 8,9B,9C,9E,17, and 19;

(4) Region IV - Game Management Units 12,18,19,20,21,24, and 25;

(5) Region V - Game Management Units 22,23, and 26.

(b) Each of the above regions include any adjacent marine waters subject to the jurisdiction of the state.

5 AAC 96.053. COMPOSITION. (a) Each regional council shall be composed of seven members.

(b) In regions containing seven local committees, the membership of the regional council shall be comprised of the chairmen of the local committees in the region.

(c) In regions containing more than seven local committees, the members of the regional council shall be selected by lottery from among the chairmen of the local committees of the region, except that the lottery shall be conducted so that the members of the regional council are distributed to represent all game management units or subunits of the region.

(d) In regions containing fewer than seven local committees, the members in addition to the local chairmen shall be selected by lottery from a list of local committee vice chairmen.

(e) All lotteries snall be conducted in accordance with procedures promulgated by the Boards of Fisheries and Game.

5 AAC 96.054. QUALIFICATIONS FOR MEMBERSHIP To qualify for membership on a regional council, a candidate must meet the following qualifications:

(1) resident of the region for at least ten years;

(2) informed and experienced with regard to fish and game resources of the region; and

(3) free of fish and game violations (including disciplinary action) for the previous five years.

5 AAC 96.055. NONVOTING MEMBERS. In addition to the seven voting members on each regional council, a regional council at its discretion may appoint up to a total of three nonvoting members from among the federal and state natural resource management and enforcement agencies active in the region.

5 AAC 96.056. FUNCTIONS OF REGIONAL COUNCILS. (a) Each regional council shall be responsible for:

(1) reviewing, developing, and making recommendations to the Boards of Fisheries and Game on proposals for regulations, policies, management plans, and other matters relating to the conservation and utilization of fish and game resources in accordance with the procedure set forth in 5 AAC 97.061 (see page 11);

(2) providing a forum for the expression of opinions and recommendations by persons interested in any phase of fish and game conservation and utilization;

(3) maximizing local and regional participation in the fish and game decision-making process; and

(4) cooperating and consulting with local committees and with other interested persons and organizations (including government agencies) in order to accomplish the foregoing.

(b) In addition, each regional council shall prepare a proposed "Subsistence Management Plan" for the region. The plan shall contain the following elements:

(1) identification of current and anticipated subsistence uses;

(2) evaluation and definition of subsistence needs;

(3) identification of users, zones, and other elements and concepts which must be recognized in any plan;

(4) proposed subsistence management strategy for the region; and

(5) proposals for policies, standards, guidelines, and regulations necessary to implement the subsistence management plan.

(c) The Subsistence Management Plan described in (b) shall be prepared in consultation with the local committees, affected users, interested individuals and organizations, and state and federal fish and wildlife management agencies. The plans shall be submitted so as to be considered and approved by the boards at a meeting designated by the boards, and shall be updated annually by the regional council.

5 AAC 96.057. INTERACTION WITH LOCAL COMMITTEES. (a) Regional councils shall provide direction to and assist local committees in obtaining the opinions and recommendations of interested persons on fish and game matters in a manner which maximizes local participation in the fish and game decision-making process. Where differences of opinion exist between local committees, the regional council shall attempt to explore areas of compromise before taking its own position on the matter.

(b) Regional councils may make recommendations to the boards on the creation, consolidation, distribution, or other matters pertaining to the operation of the local committee system.

5 AAC 96.058. UNIFORM RULES OF OPERATION. All actions undertaken by a regional council shall comply with the uniform rules of operation contained in sec. 006, of this chapter, except that the rules set forth in the remainder of this section shall supplant the corresponding rule in sec. 006.

(2) Responsibilities. The council shall be responsible for performing the functions described in sec. 056 of this chapter in accordance with the provisions of chapters 96 and 97 of this title.

(4) Membership. Membership is governed by sec 053 of this chapter.

(6) Vacancies. Vacancies are declared by the chairman as described in local committee rule (6), sec. 006 of this chapter. Vacancies are filled in the same manner as the original appointment.

(7) Nominations. Nominations are made in accordance with sec.053 of this chapter.

5 AAC 96.059. REPORT OF ACTIVITIES. The requirements of sec. 006 of this chapter apply to regional councils.

5 AAC 96.060. ATTENDANCE AT MEETINGS. The chairman (or his designee) of each regional council shall attend meetings of the Boards of Fisheries and Game. Each regional council shall cooperate with other regional councils on matters of mutual interest and concern, and may hold joint meetings to effectuate this purpose.

Chapter 97.

OPERATING PROCEDURES OF THE BOARDS OF FISHERIES AND GAME

Article 1.

ADMINISTRATION OF LOCAL FISH AND GAME COMMITTEES

5 AAC 97.001. OPERATION OF LOCAL FISH AND GAME COMMITTEE SYSTEM. The boards will endeavor to provide the necessary assistance to local committees and to maintain the local committee system in a manner which will obtain maximum public input on local fish and game resources in the decision making process and which will permit the boards to be fully aware of local opinions and conditions in conjunction with their proceedings.

5 AAC 97.002. DISTRIBUTION OF LOCAL COMMITTEES. The boards will, to the extent possible, provide for a local committee system and a distribution of local committees which allows a reasonable opportunity for all citizens to take advantage of the system.

5 AAC 97.003. REVIEW OF PETITIONS FOR LOCAL COMMITTEES. The boards will review petitions for the creation of local committees at the meeting following receipt of the petition. Factors which will be evaluated by the boards include, but are not limited to,

(1) existing committees in the area;

(2) representation of user groups in the area on existing committees;

(3) the likelihood of active participation on the proposed committee by residents of the area;

(4) the likelihood of a sufficient number of qualified persons being interested in serving on the proposed committee;

(5) logistical problems in providing assistance to the proposed committee;

(6) the probability that the committee will enhance participation in the decision-making process by persons dependent on fish and game resources; and

(7) recommendations of the appropriate regional council.

5 AAC 97.004. REVIEW OF NOMINATIONS FOR MEMBERSHIP ON LOCAL COMMITTEES. (a) The boards will review nominations for membership on local committees at the meeting following receipt of such nominations. Factors which will be evaluated by the Boards include, but are not limited to:

(1) whether the candidate meets the qualifications of 5 AAC 96.004;

(2) whether confirmation of the candidate will enhance the purposes of the local committee as described in 5 AAC 96.001 and 5 AAC 96.005; and

(3) whether confirmation of the candidate would result in broader or more balanced representation of user groups in the area.

(b) The commissioner of public safety will provide the boards with information concerning violations of the fish and game laws (including pending charges) and disciplinary proceedings involving any candidate for committee membership prior to consideration of the candidacy the the boards. The determination of the boards on any candidacy is final.

5 AAC 97.005. REGULAR AND SPECIAL MEETINGS. The boards will provide direction to local committees so that their meetings may be timed in a manner which will maximize their participation in fish and game deliberations. In addition, the boards may request any local committee to meet and to formulate recommendations on a subject or issue identified by the boards.

5 AAC 97.006. DISSOLUTION OF LOCAL COMMITTEES. A local committee may be dissolved by the boards if the committee becomes inactive, or if membership falls below the minimum number required, or for failure to act in accordance with the provisions of chapters 96 and 97 of this title.

Article 2.

ADMINISTRATION OF REGIONAL FISH AND GAME COUNCILS

5 AAC 97.030. OPERATION OF REGIONAL FISH AND GAME COUNCIL SYSTEM. The boards will endeavor to provide the necessary assistance to regional councils and to maintain the regional council system in a manner which will enable the councils to realize their purposes and functions as described in 5 AAC 96.050 and 056. Special emphasis will be placed on the preparation of proposed Subsistence Management Plans for each region.

5 AAC 97.031. STAFF ASSISTANCE. Provided that adequate funding exists and that such action is in compliance with applicable law, the boards will assign the necessary staff to each regional council so that their interaction with local committees and with the boards is maximized. Staff persons assigned to regional councils will be under the supervision of the executive director to the boards.

5 AAC 97.032. REGULAR AND SPECIAL MEETINGS. The boards will provide direction to regional councils so that their meetings may be timed in a manner which will maximize their participation in fish and game deliberations. In addition, the boards may request any regional council to meet and to formulate recommendations on a subject or issue identified by the boards. The boards may remand any recommendation received from a regional council for further action, or may require that a regional council act in concert with another regional council on matters of mutual concern.

5 AAC 97.033. ATTENDANCE AT MEETINGS. (a) Provided that adequate funding exists and that such action is in compliance with applicable law, the boards will reimburse regional council members for travel and expenses incurred in attending regional council meetings required or requested by the boards, and will reimburse each regional council chairman or his designee for travel and expenses incurred in attending meetings of the Boards of Fisheries and Game where approved by the boards.

(b) Provided that adequate funding exists and that such action is in compliance with applicable law, the boards will provide funds to regional councils to be used by the council to reimburse local committee members for travel and expenses incurred in attending local committee meetings and to reimburse each local committee chairman or his designee for travel and expenses incurred in attending regional council meetings. Distribution of funds shall be at the discretion of the regional council except to the extent limitations are imposed by the boards.

(c) At least one member of the Board of Fisheries or the Board of Game shall attend each meeting of a regional council to the extent practicable.

5 AAC 97.034. DIRECTION FROM THE BOARDS. The boards may give direction to the regional councils on the nature and format of their actions to enhance the usefulness of the work of the regional councils in conjunction with the deliberations of the boards.

Article 3.

ADOPTION OF FISH AND GAME REGULATIONS

5 AAC 97.060. MEETINGS. The Board of Fisheries will hold at least two regular meetings annually. The Board of Game will hold at least one regular meeting annually. The joint boards will hold at least one meeting annually to consider matters of mutual concern including matters relating to the local committee and regional council system.

5 AAC 97.081. PROCEDURE FOR DEVELOPING, CONSIDERING, AND IMPLEMENTING FISH AND GAME REGULATIONS. (a) For the purpose of developing, considering, and implementing fish and game regulations, the boards will observe the procedure set forth in this section. The dates constituting deadlines for each phase will be set by the boards for each meeting and will be announced to the local committees and regional councils and to the public.

(b) The procedure governing the regulatory process is as follows:

(1) Phase 1. The boards will solicit proposed regulations. The boards may limit, after receiving concurrence from the regional councils, those sections or portions of the existing regulations which will be open for change in conjunction with each meeting to facilitate their deliberations. The boards may provide forms to be used in preparing proposals. Notices soliciting proposals will be distributed statewide. In order to be considered the proposals must be received by the boards before the designated deadline.

(2) Phase 2. After the deadline for receiving proposals, those proposals received (including all proposals from the Alaska Department of Fish and Game staff and other government agencies) will be compiled by the board staff and distributed to the public through departmental offices. Proposals also will be sent to local committees for review, except that local committees will review only those proposals affecting their region together with proposals regarding general provisions. However proposals affecting more than one region will be reviewed by the local committees of all regions affected.

(3) Phase 3. Local committees will review at a public meeting all proposals received, and shall forward their recommendations to their appropriate regional council.

(4) Phase 4. Regional councils shall review at a public meeting all of the proposals sent to the local committees for that region in the context of recommendations made by the local committees and the public. The regional councils may accept written and oral testimony as they desire. After consideration, regional councils shall forward their recommendations to the boards together with all of the proposals.

(A) regional councils shall, to the extent possible within time limitations, consult with user groups, local committees, and other interested organizations and individuals.

(B) regional councils can request technical and scientific support data and/or prepared testimony from the department's staff as desired.

(C) regional councils shall explore areas of compromise where there are conflicting points of view and shall attempt to reach a consensus before making a recommendation to the boards.

(D) in forwarding their recommendations to the boards, regional councils shall provide a justification or explanation for their action.

(E) regional councils, in addition to recommending for or against particular proposals, may recommend a package of proposals for implementation, a management plan, policy for implementation, administration, or enforcement of any proposal.

(5) Phase 5. The boards will legally notice all the proposals, or the subject matter to be considered, after the recommendations have been received from the regional councils. In accordance with procedures required by the Administrative Procedure Act (AS 44.62), the boards will hold a public hearing and will consider and vote on each proposal, or develop alternatives on the subject matter legally noticed, after reviewing the recommendations of regional councils and local committees. While the final determination on all proposals is the province of the boards, it is the general intent of the boards that the recommendation of a regional council will be followed unless one of the following circumstances is present:

(A) the regional council recommendation is not supported by the evidence;

(B) there are conflicting recommendations from regional councils on the same matter;

(C) there is a need for statewide uniformity on a particular matter, which would not be achieved if the regional council recommendation was followed;

(D) the action recommended by the regional council would be inconsistent with the Constitution or the laws of the State of Alaska or the United States;

(E) the action recommended by the regional council, if followed by the boards, would be contrary to the public interest, conservation of the resources, or would be inconsistent with the duties and obligations of the boards as trustees for the fish and wildlife resources of Alaska.

(F) A majority vote of the five chairmen (or their designees) of the regional councils in attendance at a board meeting that opposes any decision of the boards will serve to have that decision reconsidered by the boards in conference with the regional council representatives. The second decision by the boards after reconsideration will be final.

(6) Phase 6. After completion of procedures required by the Administrative Procedure Act, the boards will notify the regional councils and local committees of the actions taken and the reasons therefore.

5 AAC 97.062. SUPPLEMENTAL REGULATIONS AND ACTIONS. The boards may adopt other regulations take other action necessary to implement, administer, or enforce the regulations adopted in conjunction with the procedure set forth in sec. 061 of this chapter.

5 AAC 97.063. SPECIAL MEETINGS. In conjunction with any special meeting, the boards will follow the procedure set forth in sec. 061 of this chapter to the extent time permits. However, the boards may use a modified or different procedure if it would be more suitable for any particular special meeting.

5 AAC 97.064. MODIFICATION. The boards may modify or make exceptions to the procedure set forth in sec. 061 of this chapter in conjunction with any regular meeting if to do so would enhance public, committee, or council participation in the deliberations of the boards.

5 AAC 97.065. STAFF ASSISTANCE. The boards, through their executive director and the staff assigned to the executive director, will provide assistance to regional councils and local committees and to the public in conjunction with the procedures and proceedings of the boards.

Article 4.

GENERAL PROVISIONS

5 AAC 97.081. REMOVAL FOR CAUSE. The boards may remove any member of a local committee or a regional council for cause. As used in this section, "cause" includes:

(1) repeated unjustifiable absence from meetings;

(2) malfeasance or misfeasance in office;

(3) conviction of a crime or administrative disciplinary action for behavior inconsistent with the responsibility of committee or council membership;

(4) disregard for or disobeyance of the provisions of chapters 96 and 97 of this title governing the committee and council system and the intent behind such provisions; or

(5) failure, at any time, to meet the qualifications for committee or council membership.

5 AAC 97.082. CONSTRUCTION OF TERMS. As used in chapters 96 and 97 of this title, the term "boards" means:

(1) the Boards of Fisheries and Game, acting jointly, on matters relating to the administration of the local committee and regional council system and on procedures for board meetings; or

(2) the Boards of Fisheries and Game, acting individually, on substantive matters relating to fish or game.

5 AAC 97.083. SUPPLEMENTAL ACTION. The boards may take any action necessary and proper for the administration, enforcement, or implementation of chapters 96 and 97 of this title regardless of whether it is expressly mentioned herein.

Article 5.

EMERGENCY CLOSURES BY LOCAL COMMITTEES

[Incorporate existing regulations on emergency closures by advisory committees and change "advisory committees" to "local committees". Jurisdictional changes may be in order to correspond to the newly created regions.]

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPARTMENT OF COMMERCE & ECONOMIC DEVELOPMENT

OFFICE OF THE COMMISSIONER / POUCH D – JUNEAU 99811

January 25, 1978

The Honorable Alvin Osterback
Chairman
House Resources Committee
Alaska State Legislature
Juneau, Alaska 99811

Put in files

Dear Mr. Chairman:

Thank you for your letter of January 19 requesting our position on several bills which will be considered by your committee.

At this time, we will confine our comments to HB 581 (commercial fishing loans), as the other bills mentioned do not fall within our jurisdiction as presently written.

House Bill 581 will enable this department to make loans on limited entry permits and accept the permit as collateral. At the present time, we are receiving loan applications for permits. However, most fishermen do not have the collateral required to secure the loan. The proposed legislation will simplify this process. As evidenced by the fiscal note accompanying this bill at the time of introduction, we expect any fiscal impact to be minimal.

Yours truly,

H. Phillip Hubbard
Commissioner

cc: Pete Jeans, Director

COMMERCIAL FISHERIES ENTRY COMMISSION

POUCH KB – JUNEAU 99801

January 26, 1978

The Honorable Alvin Osterback
Chairman
House Resources Committee
Pouch V
Juneau, Alaska 99811

Dear Representative Osterback:

Re: Committee Substitute for HB 573

Sections 4 through 7 of CS for HB 573 were originally drafted with the concurrence of the Department of Commerce and the Commercial Fisheries Entry Commission as HB 581. As the substantive portions of 581 have been incorporated verbatim in CS for HB 573 sections 4 through 7, the Commission concurs with the Department of Commerce as to those specified sections of CS for HB 573 and endorses passage of these sections.

Sincerely,

John N Garner
Commissioner

THIS [X] BILL [ ] RESOLUTION

has been prepared by the staff of the Legislative Affairs Agency in response to the request and at the direction of the sponsoring member or committee. The staff has attempted to place the document in proper legal and clerical form, subject to any special limitations or instructions of the requestor.

Any staff questions or comments as to legality, constitutionality, and form have been included in the memorandum addressed to the requestor and kept in the work file. If we may be of further assistance in this matter, please contact the Director of Legal Services or the Director of Research Services, as appropriate.

IN THE HOUSE BY THE RESOURCES COMMITTEE

CS FOR HOUSE BILL NO. 573

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act amending the Commercial Fishing Loan Act; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 16.10.310(a)(1) is amended by adding a new subparagraph to read:

(C) corporations, partnerships, or joint ventures 51 per cent of which are owned by individual commercial fishermen who have been state residents for a continuous period of five years, and have had ~~a commercial fishing license~~ for three years for the purchase, construction, repair or upgrading of fishing vessels or gear;

* Sec. 2. AS 16.10.320 is amended to read:

Sec. 16.10.320. LIMITATIONS ON LOANS. A commercial fishing loan may not exceed $500,000 [$150,000]. A loan may not run longer than 15 years or bear interest exceeding seven per cent, and it shall be secured by a first lien and appropriate security agreements, except that a lien in favor of the state is not required for loans guaranteed fully by the federal government under the Federal Ship Financing Act of 1972 (46 U.S.C. secs. 1271-1279b; 86 Stat. 909), as amended. In the case of a security agreement given to secure a loan made under secs. 300 - 370 of this chapter and covering a vessel documented under the laws of the United States and so long as the Ship Mortgage Act of 1920 (46 U.S.C. secs. 911-934; 41 Stat. 1000), as amended, and the Shipping Act of 1916 (46 U.S.C. secs 801-842; 39 Stat. 728), as amended, remain ambiguous with respect to whether or not a state or state agency qualifies as a

citizen of the United States for purposes of those Acts, the first lien requirement of this section may be satisfied by the recordation and endorsement of a first preferred ship mortgage under the Ship Mortgage Act of 1920, and by perfection of a security interest under the Uniform Commercial Code - Secured Transactions (AS 45.05.690 - 45.05.794), if the approval of the Secretary of Commerce is obtained under 46 U.S.C. sec. 839 for the transfer to the department of the interest in a vessel documented under the laws of the United States. In the case of a security agreement given to secure a loan made under secs. 300 - 370 of this chapter and covering a vessel documented under the laws of the United States, the first lien requirement of this section may also be satisfied by use of a trust deed and bond issue under it, if the trustee is a citizen of the United States and obtains a first preferred ship mortgage on the vessel under the Ship Mortgage Act of 1920, and the approval of the Secretary of Commerce is obtained under 46 U.S.C. secs. 839 and 961 for the transfer of the bond or bonds to the department if the trustee is not a trustee approved by the Secretary of Commerce under 46 U.S.C. secs. 808, 835 and 961. Loans may not exceed 75 per cent of the appraised value of the collateral used to secure the loan.

* Sec. 3. AS 16.10.320 is amended by adding a new subsection to read:

(b) No more than one commercial fishing loan may be made to any person for the purchase, construction, repair or upgrading of a fishing vessel or its gear. A loan to an associate of the borrower is considered to be a loan to the borrower. For the purposes of this section, "associate of the borrower" means

(1) a corporation or other organization of which the borrower is an officer, director or partner, or is, directly or indirectly, the beneficial owner of 10 per cent or more of any class of equity securities;

(2) a person who is, directly or indirectly, the beneficial owner of 10 per cent or more of any class of equity securities of the borrower;

(3) a trust or other estate in which the borrower has a substantial beneficial interest or as to which the borrower serves as trustee or in a similar fiduciary capacity;

(4) a relative or spouse of the borrower or a relative of the spouse, who has the same home as the borrower;

(5) a person directly or indirectly controlling, controlled by, or under common control with, the borrower.

* Sec. 4. AS 16.10 is amended by adding new sections to read:

Sec. 16.10.333. LOANS FOR PURCHASE OF ALASKA LIMITED ENTRY PERMITS. (a) Loans under secs. 300 - 370 of this chapter may be made to an individual commercial fisherman for the purchase of a limited entry permit upon certification by the commission that the fisherman is a person who qualifies as a transferee for the permit under ch. 43 of this title and the regulations adopted by the commission.

(b) Upon approval by the commissioner, the permit to be purchased may be pledged as security for a loan under (a) of this section, if

(1) the certificate for the pledged permit lists the commissioner as the legal owner of the permit;

(2) the certificate for the pledged permit lists the debtor as the equitable owner of the permit;

(3) all annual permit cards issued under the pledged permit list the name of the debtor;

(4) all obligations and responsibilities of a permit owner are assumed by the debtor;

(5) co-signers or other sureties for performance under the note are not vested with any rights in the pledged permit and their

obligation is limited to satisfaction of the note and payment of costs directly incurred by the department in administering the loan.

(c) The commissioner is not liable for any act or omission resulting from permit ownership nor will that act or omission affect his title to the permit or his rights under it.

(d) Upon satisfaction of the note by the debtor, the commissioner shall certify to the commission that the note has been satisfied.

(e) Upon certification as provided in (d) of this section, the commission shall amend the permit certificate to list the debtor as the legal owner.

Sec. 16.10.335. DEFAULT AND FORECLOSURE. (a) If the debtor defaults upon a note for which a limited entry permit has been pledged as security under sec. 333 of this chapter, the commissioner shall provide the debtor, by registered or certified mail sent to his last known address on file with the commissioner, with a notice of default which includes

(1) a description of the security given for the note including the number assigned to the pledged permit by the commission;

(2) the date upon which the default occurred;

(3) the amount of arrearages as of the date of the notice, the total amount remaining on the note less unearned interest, and the amount of daily interest;

(4) a statement that the debtor may, within 15 days of the postmark date of the notice, request a hearing at which he may submit evidence showing he has not defaulted;

(5) a statement that the note may be reinstated if brought current within 60 days from the postmark date of the notice;

(6) a statement that the note may be paid in full less unearned interest within 90 days from the postmark date of the notice;

(7) the place where reinstatement or payment in full may be made; and

(8) a notice in at least 10-point bold type stating: "IMPORTANT: YOUR FAILURE TO REINSTATE OR PAY THIS NOTE IN FULL BY THE DATE SPECIFIED WILL RESULT IN A FORFEITURE OF ALL RIGHTS TO THE PERMIT AND THE POSSIBILITY OF LEGAL ACTION BEING INSTITUTED AGAINST YOU."

(b) Upon the debtor's failure to reinstate or satisfy the note within the time specified in (a) of this section, his equitable interest is terminated by operation of law without further notice. Any entry permit cards issued to him under the permit shall be cancelled immediately upon receipt by the commission of a certificate of termination containing a copy of the notice required by (a) of this section issued by the commissioner.

Sec. 16.10.337. DEFICIENCIES AND TRANSFER OF ENTRY PERMITS AFTER FORECLOSURE. (a) Upon a foreclosure on an entry permit as provided in sec. 335 of this chapter, the commissioner shall offer the commission a right of first refusal if the permit is subject to a buy-back program under AS 16.43.290 - 16.43.330 at a price equal to the amount outstanding on the note plus any costs the department directly incurred in administering the loan.

(b) If the commission does not exercise its right of first refusal within 30 days after it receives the offer, or if the permit is not subject to a buy-back program under AS 16.43.290 - 16.43.330, the department shall promptly notify the debtor of this fact. The debtor has 30 days after receiving this notice to nominate a person qualified to assume the note. The person nominated must qualify under the requirements of sec. 333(a) of this chapter. If qualified, he may assume all rights and liabilities of the original debtor.

(c) If the debtor is unable to nominate a qualified person to

assume the note under (b) of this section, the permit must be made available to a qualified person, chosen as provided in this section, who must assume the note subject to all rights and liabilities of the original debtor. The commission shall provide the commissioner with a list of persons chosen by lottery who qualify as transferees of entry permits under ch. 43 of this title and regulations adopted by the commission and who have met the residency and commercial fishing participation requirements of sec. 310(a) of this chapter. The commissioner then shall determine, in order of presentation, any remaining qualifications. The commissioner shall allow the first applicant meeting all qualifications to assume the note.

(d) Nothing in this section affects the right of the commissioner to institute legal action for a deficiency resulting from a default on a note given under sec. 333 of this chapter. In addition to any deficiency, the debtor is liable for the costs of administering the note and for costs and attorney fees.

Sec. 16.10.339. REGULATIONS. The commission, with the approval of the department, shall adopt regulations to implement secs. 333 - 337 of this chapter.

* Sec. 5. AS 16.10.360 is amended by adding new paragraphs to read:

(3) "commission" means the Commercial Fisheries Entry Commission;

(4) "debtor" means an individual commercial fisherman who either initially contracts for a loan under secs. 333 - 337 of this chapter or assumes a loan as provided in those sections.

* Sec. 6. AS 16.43.150(g) is amended to read:

(g) Except as provided in AS 16.10.333 - 16.10.337, an [AN] entry permit may not be:

(1) pledged, mortgaged, leased, or encumbered in any way;

(2) transferred with any retained right of repossession or foreclosure; or

(3) attached, distrained, or sold on execution of judgment or under any other process or order of any court.

* Sec. 7. AS 16.43.170(a) is amended to read:

(a) Except as provided in AS 16.10.333 - 16.10.337, entry [ENTRY] permits and interim-use permits are transferable only through the commission as provided in this section and sec. 180 of this chapter and under regulations adopted by the commission.

* Sec. 8. This Act takes effect July 1, 1978.

MEMORANDUM

January 18, 1978

SUBJECT: Commercial Fishing Loan Bills
(Work Order No. 4657)

TO: DiAnn Nelson
House Resources Committee

FROM: Kenneth E. Vassar
Legislative Counsel KEV

You have requested a brief summary of the bills currently in the House Resources Committee which relate to the commercial fishing loan act. Those bills are HB 573, HB 574 and HB 581.

House Bill 573 would amend the commercial fishing loan act in two ways. First, it would allow the Department of Fish and Game to make loans to corporations, partnerships, or joint ventures. Under current law, the department may only make loans to individual fishermen. Second, it would allow loans made for the repair, restoration, or upgrading of existing vessels and gear or for the purchase of gear and the construction and purchase of fishing vessels to be secured by a second mortgage. Presently, the law requires a first mortgage as security for any commercial fishing loan.

House Bill 574 makes the following four changes in the present act:

(1) it raises the maximum allowable loan from $150,000 to $300,000;

(2) it increases the maximum term of a loan from 15 years to 20 years;

(3) it lowers the interest charged from 7 percent to 5 percent;

(4) it allows loans to be made for up to 90 percent of the appraised value of the collateral used to secure the loan; loans currently are limited to 75 percent.

House Bill 581 adds sections to the loan act which would allow the department to make loans to individual commerical fishermen for the purchase of limited entry permits.

In summary, while each bill is related to the commercial fishing loan act, each addresses separate and independent issues. If I can provide any further assistance, please let me know.

HOUSE RESOURCES COMMITTEE

Alvin Osterback, Chairman

Pouch V, State Capitol
Juneau, Alaska 99811
(907) 465-3715

26 January 1978

MINUTES

The meeting was called to order at 1:30 p.m. in Room 118 of the Capitol Building by Rep. Alvin Osterback, Chairman.

Members Present	Absent
Rep. Osterback, Chairman	Rep. Eliason
Rep. Snider, Vice Chairman	
Rep. Malone	
Rep. Miller	
Rep. Smith	
Rep. Akers	
Rep. Bennett	
Rep. Urion	

CSHB 573 Amending Commercial Fishing Loan Act.

Testimony: Pete Jeans, Director, Division of Business Loans, testified that in the first section the requirements on residency for loan applicants should be increased to 75% or 100%. He pointed out an ambiguity concerning the language on residency which should be clarified. On the fourth section of the bill he testified that the division favored the change. He also indicated that the increased expenditures set out in the fiscal note resulted from general increase in loan activity and did not derive directly from this particular proposed change in the loan program.

Billy Berrier, Director, Division of Legal Services, testified that there may be constitutional problems with requiring that loan applicants be Alaskan residents but that under the Higland case these requirements should be able to withstand challenge. Increasing the requirement from 51% to 100% should make no difference on the constitutionality question.

David George, attorney from Limited Entry Commission, pointed out that the Committee Substitute refers only to fishing licenses and that under current law there are only limited entry permits, interim-use permits and crew member licenses.

The committee asked that a second Committee Substitute be prepared to specify that 100% of the loan participants be Alaskan residents, to clarify the ambiguous language, and to correct the language on commercial fishing licenses. No other

action was taken on CSHB 573.

HB 569 Appropriation to transplant caribou to Aleutian and Shumagin Islands

Testimony: George Utermohle, Research Analyst, Division of Research Services, explained the substance of the bill.

Bob Hinman, Deputy Director, Division of Game, stated that the department supports the concept of this bill. Careful watch should be kept to insure adequate control on the size of the herd. Akutan and Unga Islands are the two islands best suited to a transplant of caribou.

Discussion followed on the past experiences of the Division of Game in other wild game transplants. Questions were raised about future access to some of the islands which are owned by the federal government or by Native Corporations.

MOTIONS

Rep. Urion moved that HB 569 be amended to (1) change the amount of the appropriation from $352,000 to $116,000 and to (2) limit the transplants to Akutan, DeerIsland and Unga Island.

A vote was taken:
In favor: Bennett, Malone, Miller, Snider, Urion
Opposed: Akers, Osterback
Absent: Eliason, Smith
The motion carries.

Rep. Urion moved that his amendment be considered a committee substitute to HB 569. The vote was identical to the vote on the previous amendment.

Rep. Miller moved that CSHB 569 be passed out of committee.

A vote was taken:
In favor: Akers, Bennett, Malone, Miller, Osterback, Snider
Absent: Eliason, Smith
The motion carries.

The meeting adjourned at 2:45 p.m.

LEGISLATIVE AFFAIRS AGENCY

MEMORANDUM

January 18, 1978

SUBJECT: Commercial Fishing Loan Bills
(Work Order No. 4657)

TO: Diann Nelson
House Resources Committee

FROM: Kenneth E. Vassar
Legislative Counsel KEV

You have requested a brief summary of the bills currently in the House Resources Committee which relate to the commercial fishing loan act. Those bills are HB 573, HB 574 and HB 581.

House Bill 573 would amend the commercial fishing loan act in two ways. First, it would allow the Department of Fish and Game to make loans to corporations, partnerships, or joint ventures. Under current law, the department may only make loans to individual fishermen. Second, it would allow loans made for the repair, restoration, or upgrading of existing vessels and gear or for the purchase of gear and the construction and purchase of fishing vessels to be secured by a second mortgage. Presently, the law requires a first mortgage as security for any commercial fishing loan.

House Bill 574 makes the following four changes in the present act:

(1) it raises the maximum allowable loan from $150,000 to $300,000;

(2) it increases the maximum term of a loan from 15 years to 20 years;

(3) it lowers the interest charged from 7 percent to 5 percent;

(4) it allows loans to be made for up to 90 percent of the appraised value of the collateral used to secure the loan; loans currently are limited to 75 percent.

House Bill 581 adds sections to the loan act which would allow the department to make loans to individual commerical fishermen for the purchase of limited entry permits.

In summary, while each bill is related to the commercial fishing loan act, each addresses separate and independent issues. If I can provide any further assistance, please let me know.

KEV:jpd

January 10, 1978

The Honorable Hugh Malone
Speaker of the House
Alaska State Legislature
Juneau, Alaska 99811

Dear Mr. Speaker:

Under the authority of art. III, sec. 18 of the Alaska Constitution, and in accordance with AS 24.30.060(b) and the Uniform Rules of the Alaska State Legislature, I am transmitting a bill authorizing the Department of Commerce and Economic Development to accept a limited entry permit as collateral for a commercial fishing loan used to purchase that permit. Under existing law, a limited entry permit may not be mortgaged or otherwise encumbered, transferred with any retention of rights thereunder, or executed on for satisfaction of any debt.

Experience has shown that otherwise qualified commercial fishermen are unable to obtain commercial fishing loans to join the commercial fishing fleet through purchase of both a boat and limited entry permit. To use a commercial fishing loan to purchase a limited entry permit, an otherwise qualified commercial fisherman must supply as collateral for the loan either an unencumbered boat or other unencumbered property. This bill will permit the limited entry permit purchased with the loan proceeds to serve as collateral for that loan. However, as under existing law, it could not be used for any other purpose.

Sincerely,

S/JSH

Jay S. Hammond
Governor

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

The projected costs cover additional expenses that the Commercial Fisheries Entry Commission will incur providing legislation is enacted. These costs include data processing, RSA agreements with the Department of Revenue, postage and advertising. Because only one-half of the year remains in FY 78, its figures reflect only half the amount of money requested. The data processing costs will be for semi-annual and annual updates and to provide programming support to generate printouts (e.g., qualified buyers, market surveys on price printouts and verification of costs of permits sold through income tax records). Postage is for computer printout listings provided to various outside user groups. Advertising will also be necessary in conjunction with any necessary regulatory proposals. RSA agreements will be necessary as much of the data base necessary to determine the fair market value of permits will be contained in income tax returns which, due to confidentiality, are accessible only by Department of Revenue personnel.

LETTER OF INTENT

8 March 1976

The Honorable Hugh Malone
Speaker of the House

Dear Speaker Malone:

With regard to the adoption of CSHB 590, the House Resources Committee intends that the forms available for applications required under AS 16.05.400(b) and other sections of Title 16 be on the premises of all licensed vendors, as well as all of the offices of the Department of Fish and Game throughout the State, in order to avoid any har ship on any person wishing to comply with the statutes therein but are unable to obtain such forms.

Alvin Osterback

Alvin Osterback, Chairman
House Resources Committee

HB190

January 10, 1978

The Honorable Hugh Malone
Speaker of the House
Alaska State Legislature
Juneau, Alaska 99811

Dear Mr. Speaker:

Under the authority of art. III, sec. 18, of the Alaska Constitution, and in accordance with AS 24.30.060(b) and the Uniform Rules of the Alaska State Legislature, I am transmitting a bill which provides that those individuals who are exempt from sport fishing, hunting and trapping license requirements, because they are 60 years of age or more and have been a resident of this state for 30 consecutive years or more, must carry a card, to be issued by the Department of Fish and Game, indicating their exempt status while they are engaged in sport fishing, hunting and trapping activities. The Alaska Department of Fish and Game has estimated that it will issue approximately 1,200 of these licenses annually.

While the cards are currently available, their possession in the field is not mandatory. The bill would aid in enforcement of the license requirement, by identifying those who are truly exempt.

Sincerely,

S/JSH

Jay S. Hammond
Governor

THE LEGISLATURE OF THE STATE OF ALASKA

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

The passage of this bill will allow the issuance of a permanent identification card to residents over 60 years of age with more than 30 years of consecutive residency. In order to simplify administrative handling, all cards will be issued by the headquarters office of the Division of Sport Fish. Cost of the cards is minimal and can be absorbed within the existing budgets.

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPARTMENT OF FISH AND GAME

OFFICE OF THE COMMISSIONER

SUBPORT BUILDING – JUNEAU 99801

January 27, 1978

The Honorable Alvin Osterback
Chairman, House Resources Committee
Alaska State Legislature
Pouch V, State Capitol
Juneau, Alaska 99811

Dear M.. Osterback:

H.B. 590 can be considered as an oversight bill to Ch. 180 SLA 1972. The original bill exempted those persons 60 years of age or more with 30 years or more of consecutive residency in the State from the provisions requiring a sport fishing, hunting and trapping license.

Several problem areas became immediately apparent. These include:

1) A qualified person could be checked for a license and not having one or adequate proof of qualification, could be required to provide such proof to a Fish and Wildlife Enforcement Officer or Department of Fish and Game employee. This situation could occur several times in any given year to an individual.

2) A license number is normally required in various areas of the Department regulations. For example, when legally taken fish or game is given to another person; when furs legally taken are sold or exported; or when applying for special hunts.

It was determined by the Department that an unnecessary burden would be placed on this segment of our residents if the original legislation was implemented without modification. The Department, on its own initiative and expense, decided to provide those qualified residents with an unofficial identification card if they would complete an appropriate affidavit attesting to their meeting the qualifications as prescribed in Ch. 180 SLA 1972 (16.05.400(b)).

Since inception of this I.D. program, the Sport Fish Division has issued approximately 1,200 cards per year. There are no legal requirements for such I.D. cards or penalties for falsification of application. H.B. 590 would formalize this procedure presently in existence.

Sincerely,

Ronald O. Skoog
for Commissioner

Dear Mr. Osterback:

For the information of the House Resources Committee, I am enclosing nine copies of statements prepared by the Fish and Game Licensing Section of the Department of Revenue concerning sport fishing and hunting license fees and commercial fishing gear and license fees as follows:

1. Sport fish and game receipts for the calendar year 1977 by type and number of licenses and tags.

2. Commercial fish license receipts for the calendar year 1977 by type and number of licenses and gear.

3. Gross commercial fishing gear and license receipts for the calendar years 1968 through 1977 by type of gear and license.

Very truly yours,

R. D. Stevenson

Dear Representative:

We of the Kodiak Area Native Association are concerned about the threat to private salmon enhancement efforts posed by House Bill 638 introduced by Representative Ernie Haugen. Salmon fishing has always been the mainstay of the Kodiak Island economy, and the private non-profit hatchery program permits Kodiak fishermen and others who benefit from the salmon resource to help rebuild the salmon stocks to their former heights.

We appreciate your past support of the salmon resource and of the private non-profit hatchery program, and we request that you do whatever necessary to defeat H.B. 638.

Again, we thank you for your continued support of the salmon resource.

Sincerely.

KODIAK AREA NATIVE ASSOCIATION

Dear Al:

Thank you for your letter of January 20, 1978, regarding the proposed legislation, H.B. 638.

After reviewing H.B. 638, I am somewhat surprised. I have always believed that the State was in the business, along with its' citizenry, to protect, promote, and enhance the growth of our greatest resources. That is the salmon resources. Now it appears as though this is not so. HB 638 would,in effect,kill off the valuable salmon stocks we are all working to enhance.

As you know, we on the Aleutians are making every attempt, through our Association, to develop and enhance the salmon stocks in some of our Island communities. We have been working on enhancement programs for the last several years. We are realizing success and only wish to see it continue.

Therefore, our Association is totally against HB 638. We do not believe that it will serve the best interests of the State or its' people. Please do all that is possible to insure the defeat of HB 638.

I look forward to hearing from you soon on this matter.

Sincerely yours,

Pat Pletnikoff

HB 638

CITY OF KING COVE

P. O. Box 37 · King Cove, Alaska 99612 · (907) 497-2340

RESOLUTION NO. 78-02

A RESOLUTION OF THE CITY COUNCIL OPPOSING ALASKA STATE LEGISLATURE HOUSE BILL 638 WHICH PROPOSES TO PROHIBIT NON-PROFIT SALMON HATCHERIES UPON ADOPTION.

WHEREAS, the City Council has reviewed Alaska State House Bill 638 and has considered the effect of said House Bill and finds that the proposed bill would prohibit non-profit salmon hatcheries such as is located in Sand Point after adoption of said House Bill; and

WHEREAS, the City Council does not view such prohibition to be in the interest of residents of the Aleutian region.

NOW THEREFORE BE IT RESOLVED THAT, the City Council oppose adoption of Alaska State House Bill 638.

PASSED AND ADOPTED BY A UNANIMOUS VOTE THIS 31st DAY OF January, 1978.

Don L. McCallum
Mayor, City of King Cove

HB 638

February 2, 1978

Alvin Osterback, Chairman
House Resources Committee
Pouch V - State Capitol
Juneau, AK 99811

Dear Mr. Chairman:

House Bill 638, a bill, providing for a termination date for receipt of applications for permits under the private non-profit hatchery program has come to my attention. I am opposed to this bill for many reasons.

As we all know the status of our Alaskan salmon resources are at a low ebb and a means of rehabilitating those runs without large scale closures is needed. Our Alaskan fishermen and those associated with those fisheries cannot afford that. It seems obvious that a hatchery program is needed. A hatchery program that has local involvement from the planning, financing, building, operating, and other obvious areas is the best way to proceed.

912 East 15th Avenue, Anchorage, Alaska 99501, Phone (907) 274-4558

Chugach Natives, Inc.

The private non-profit hatchery is a means to rehabilitate our fisheries with a method to get private and other capital not available to a state program while providing more local input, some local controls, stimulates the economy on a local level. If my own experience is an indicator it provides a total commitment and involvement by the user groups.

I would hope that the State of Alaska would try to further assist such a program that would benefit all "Alaskans" by what means they have at their disposal.

Sincerely,

G. R. Andersen Jr.
President, Chugach Natives, Inc.

Attn: Alvin Osterback

Dear Sirs:

House Bill 638 was recently brought to my attention. I must urge you to the utmost to defeat this bill! It should be plain to see the benefits of the non-profit hatchery just by the results of Sheldon-Jackson College this last fall. It would be a grave mistake to put a deadline date on an infant program which has such a great potential.

The small hatchery operating here in Sand Point which I supervise provides tremendous opportunities for high school students to receive "hands on"training in the field of salmon culture. Several other communities have inquired about setting up a small educational facility as our own and the non-profit hatchery is a very good means to do it.

We have not had any returns as yet to our hatchery, but expect over 300 pink salmon to return this fall from the 33,000 released last spring. These fish were all spawned and cared for by the students in the aquaculture program. Our returns on silver salmon will not arrive until 1980.

Humboldt Creek, where our hatchery is located, is a small stream that has very depleated runs of both silver salmon and pink salmon. In the fall of 1976, only 60 pink salmon returned to spawn; as you can see, a return of over 300 fish in 1978 will increase the run five fold. This amount of fish is not of commercial importance, but they do supply many local residents and their children with a good sport fishery. This fishery would not exist without the present hatchery program. I ask you to cautiously consider the effects of HB 638 before you take action. The rejection of this bill will benefit Alaska and Alaskans far into the future.

Sincerely,

Timothy L. Joyce

Honorable Representative Alvin Osterback, Chairman
House Resources Committee
Pouch V State Capitol
Juneau, Alaska 99801

Dear Mr. Osterback:

We are shocked and dismayed at the intent of HB 638 and whoever introduced it should be ashamed. Kodiak now has begun an aggressive positive move to establish a non-profit salmon hatchery program in this region where such a program is needed. If the program is not available to Kodiak then all funding for all such programs should be ended immediately. We are incensed at this blatant attempt by the haves to deprive and discriminate against the have-nots. HB 638 is wholly unworthy of any consideration.

Respectfully,

KONIAG, INC.

Alaska State Legislature
House of Representatives
Committee on Resources
Pouch V
Juneau, Alaska 99811

Attn: Rep. Alvin Osterback

We are surprised that legislation has proposed (HB 638) which would effectively kill the private nonprofit salmon hatchery program and strongly oppose this move. These hatchery programs are just getting started not only on the Kuskokwim and Yukon Rivers but in the Cook Inlet, Sand Point, Kodiak, PWS and Southeast areas and need the strongest possible support from the Legislature and State and Federal agencies. The success of the Port San Juan and Sheldon Jackson programs has been notable and we can see no justification whatever for discouraging these programs.

We unconditionally and emphatically oppose HB 638.

Sincerely,

Oscar Kawagley, President

TELEPHONE NO:

TRANSMITTED TO LB&A

DEC 13 1977

PASSED 1-12-78

FROM: Ronald B. Lind, Director
Division of Budget & Management
Office of the Governor

SUBJECT: Department of Fish & Game
Request to Receive and Expend
$200,000 in Federal and Private
Funds

SET UP CONTRACTS FUNDS RESTRICTED

The Department of Fish & Game requests authority to receive and expend $200,000 in federal and private funds. These funds will be used to compile and print three comprehensive volumes on Alaska's fish and wildlife. Two of the books, the Alaskan Fisheries Atlas, Volumes I and II, will provide information on the distribution and general habitat requirements for anadromous and fresh water finfish, herring, and shellfish. The third book, Alaska's Wildlife and Habitat, Volume II, will be a companion volume to an existing book, Alaska's Wildlife and Habitat, Volume I, published by the Department. Alaska's Wildlife and Habitat, Volume I, described information on the distribution and general habitat requirements of big game, marine mammals, water fowl and sea birds. Alaska's Wildlife and Habitat, Volume II will describe information on fur bearers, small game, upland game birds, and selected raptors.

These books will provide valuable information on fish and wildlife to State and Federal agencies. These agencies will be aided in the planning, research, and the management of Alaska's fish and game resources. This information will also be of interest to research and educational institutions. Additionally, the general public has expressed considerable interest for information on their State's fish and wildlife. The first book, Alaska's Wildlife and Habitat, Volume I, was mainly sold to orgar.izations, businesses, libraries, and individuals. Over 2,000 copies of this book have been sold.

Total funding for this project will consist of $200,000 requested in this revised program and $217,900 in program receipts which will be requested as a FY 78 supplemental budget request. The Department currently has verbal committments for almost $100,000 in federal funds. Also, the Department expects to solicit $100,000 from private industry. The $217,900 supplemental will be based on Program Receipts generated by sales of the volumes.

The Department expects to sell 2,000 sets of the fishery volumes and 1,500 copies of the game volume. The selling price of volume will be determined by the degree of financial participation from federal and private sources. If the full $200,000 in federal and private funds is realized, the volumes will sell at $40.00 each and the project will require a supplemental budget of $217,900 in program receipts.

213985

Speedinet @ Moore Business Forms, Inc.

Actual implementation of the project will not commence until sufficient funds from federal and private sources are committed. Once these funds are committed, the Department will commence preparation of the fish and wildlife volumes so that, assuming the FY 78 supplemental appropriation passes, printing of the documents may be started as soon as possible.

Since this project will continue past June 30, 1978 it is requested that the balance of these funds be carried forward to FY 79 on July 1, 1978. Additionally, these funds will be restricted pending receipt of signed contracts.

Ronald B. Lind, Director
Division of Budget & Management
Office of the Governor

Approved this 12 day of Dec., 1977.

Jay S. Hammond, Governor
State of Alaska

Legislative Budget & Audit Committee
Date: _____

02-C011,15 v. 107761

STATE
of ALASKA

MEMORANDUM

TO: Ronald Skoog, Commissioner
Department of Fish and Game

DATE: September 27, 1977

FILE NO:

TELEPHONE NO:

FROM: Jay S. Hammond, Governor
State of Alaska

SUBJECT: Federal Assistance in the Production and Publication of Three Books on Alaska Fish and Wildlife

Recently I have learned about the difficulties your Department has encountered in funding the compilation and printing of three books on Alaska's Fish and Wildlife. I hate to add to your problems, but I find it necessary to deny your revised program request to receive and expend book sale revenues (program receipts) to finance the production of these books. Your request to interpret book sale revenues as trust funds does not meet the criteria set forth in the Attorney General's definition of trust or custodial funds (see memo from Ron Lind, Director, Division of Budget & Management, to All Commissioners, dated 9/20/77).

I understand the value of this proposed project and believe that it will provide innumerable benefits to non-resident as well as resident Alaskans. I am pleased to see that various federal agencies recognize the importance of this project and are interested in contributing approximately $179,000 to defray the total production costs of these books. As long as federal funds are available, I would favorably welcome your request for FY 78 supplemental funds ($262,500 program receipts) to finance the State's share of this project. As you know, the Legislature is the final authority for appropriating monies for state expenditures. However, I assure you that I will do my utmost to secure passage of a supplemental appropriation for this project.

Federal-State
Land Use Planning Commission
For Alaska

May 3, 1977

Honorable Jay S. Hammond
Governor
State of Alaska
Pouch A
Juneau, Alaska 99811

Dear Governor Hammond:

Tha Alaska Department of Fish and Game has presented a proposal to publish an Alaskan Fisheries Atlas (two volumes) and Volume II of Alaska's Wildlife and Habitat. These volumes, along with Volume I of Alaska's Wildlife and Habitat which was published in 1973, will provide the type of comprehensive fish and wildlife resource information that is needed by all agencies concerned with our natural resources.

The Joint Federal-State Land Use Planning Commission has assisted in this project and we will continue to support the proposal. We consider these publications to be both a timely and necessary component of the statewide resource inventory that is needed for land-use planning and management. It is our hope that your administration and the Alaska Legislature will assist the Alaska Department of Fish and Game in the publication of this valuable data.

Sincerely,

Walter B. Parker

Walter B. Parker
State Co-Chairman

MEMORANDUM

OCT 28 Rec'd

TO: Jeff Morrison, Director
Administration, Juneau

DATE: October 26, 1977

FROM: Ed Klinkhart
Special Projects, Anchorage

SUBJECT: Printing proposal

Attached is our proposal for publishing the fish and wildlife books. Our original proposals were in a blue cover. If any of these are around, throw them away. Everything you will need for the supplimental should be in here. If not, call me.

Here is the cost per volume based on varying amounts of grant money:

Total Grant (thousands)	Game/volume	Fish/set of two
0	$76	$152
25	71	142
50	67	134
75	62	124
100	58	116
125	53	106
150	49	98
175	44	88
200	40	80

April 14, 1978

SUBJECT: CSHB 712: GO Bonds for parks and recreations facilities

TO: House Resources Committee

ATTN: Diann Nelson, Administrative Assistant

FROM: John B. Chenoweth, Legislative Counsel

The additional facilities have been incorporated into the Committee Substitute and the total recomputed as follows:

Total of all projects:	$3,835,300
Amount allowed for costs related to preparation and sale of bond (.0035%) rounded up to nearest hundred dollars:	13,500
	$3,848,800

An amount is allowed for costs of bond sales for all state general obligation bonds, and an increase made in the total accordingly.

DON GILMAN
MAYOR

MAR 23 1978

The Honorable Hugh Malone
Speaker of the House of Representatives
State Capital
Pouch V
Juneau, Alaska 99811

Dear Mr. Malone:

The Division of Parks has asked the Kenai Peninsula Borough to give up Borough selected land and Borough patented land for the development of wayside parks. Our Planning Commission has recommended this use of land, but has questioned the availability of adequate manpower and funds by the Division of Parks to maintain these parks properly.

The funding and manpower of the Division of Parks for maintenance in the Kenai district is inadequate. The problem results from the large numbers of people from the Anchorage area who use these parks on weekends. The funding in the governor's budget for park maintenance in the Kenai district needs to be tripled. Another matter is House Bill 712. The Whiskey Gulch wayside, at a minimum, should be added with an amount of $400,000.

Without proper facilities and maintenance the residents of our state cannot enjoy outside recreation activities. I ask your support of these requests.

Sincerely,

Donald E. Gilman

Re: Alaska House Bill 712

Dear Mr. Osterback:

It has come to our attention that the House Rules Committee sponsored the above bill which was referred to your committee. As you know, this bill provides for the issuance of general obligation bonds, which the sum of $200,000 may be expended for the construction of bicycle trails.

BMA strongly supports this legislation. We urge you and the other members of your committee to act affirmatively on this legislation and otherwise lend your assistance to insure its prompt passage.

One of the primary objectives of this Association is to encourage the construction of more bicycle facilities. You no doubt appreciate the many benefits of cycling. It is healthy exercise and is a fine recreational outlet. For many, it is an alternate means of transportation which consumes no energy and does not pollute the atmosphere. These are but a few of the reasons why cycling should be encouraged. One way to do so is by providing better bicycle facilities. The House Rules Committee bill is certainly a step in this direction.

Would you be kind enough to note our interest in this bill and alert us of any committee hearings at which we could testify in its favor. Thank you, and we deeply appreciate the work your committee is doing in the interests of cycling in Alaska.

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPARTMENT OF NATURAL RESOURCES

OFFICE OF THE COMMISSIONER

11TH FLOOR, STATE OFFICE BLDG.
POUCH M – JUNEAU 99811

February 28, 1978

The Honorable Alvin Osterback
Chairman, Resources Committee
Alaska House of Representatives
Juneau, Alaska 99801

Dear Mr. Osterback:

In response to the request from your Administrative Assistant, the Department of Natural Resources proposes the following changes to HB 720:

Amendment 1: On page 1, line 11, delete "7,000,000 acres of state", and delete Section 3 and insert in ~~lieu~~ thereof:

*Section 3 AS 38.08.010(a) is amended to read:

(a) The director shall classify, survey, and plat for homesite entry (25,000 ACRES OF) state land which is otherwise vacant, unappropriated and unreserved and is suitable for erection of residential dwellings to use as a permanent abode.

Rationale: The present language subsumes the homesite program as the major vehicle for disposal of habitable lands in the State. As was pointed out in the testimony of the Federal-State Joint Land Use Planning Commission a range of varying needs for lands exists within the State and there is a finite amount of fair to good land suitable for habitation. Mandating disbursal of most of the habitable land within one program precludes a rational, well-rounded disposal program leaving little acreage suitable for disbursal through other mechanisms such as open-to-entry, agriculture, remote cabins, land sales, etc.

Amendment 2: On page 1, delete Section 2.

Rationale: As was discussed at the previous hearing on this measure, the legal restraints placed upon disposal of interests in state lands makes the time frame set out in this section impossible to meet. If the question raised by this section was merely one of cost, we would have set forth the expenditures necessary to accomplish this mandate. However, in order to comply with this directive, a major overhaul of the methods of disposing of interest in state lands would be required.

Amendment 3: One page 1, line 24, delete "In each annual offering" and insert in lieu thereof "annually".

Rationale: Employment of the phrase "In each annual offering" allows for construing legislative intent to a limit of one offering per year, which we do not believe to be the intent of the Legislature.

Amendment 4: On page 3, delete section 10.

Rationale: State law already provides for section line easements, and for easements to provide access to navigable and public waters. The fact that this is a subdivision type of disposal means that preliminary planning will have to be undertaken to insure roads and utility easements in accordance with platting requirements. The additional language does not do anything in that regard.

Amendment 5: No specific language has been developed but we believe that an amendment should be prepared which changes the nature of the entry permit to a contract with provision for an assignable interest. This would facilitate financing of improvements on the homesites prior to obtaining title to the parcel.

Your consideration of these amendments is greatly appreciated.

Sincerely,

Robert E. LeResche
Commissioner

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)
A. Asumptions:

* That sections 2 and 3 are requiring that a total of 35,000 acres be classified, surveyed and platted by June 30, 1979 and will therefore be the required amount for FY 79.

34,000 acres into five acre sites equal 6,800 sites times $600.00 per site. Average cost = $4,080.00. Cadastral rectangular survey of the 34,000 acres at $11.72 per acre equals $398,400. Total survey cost for FY 79 equals $4,478,400.

Survey contract funds needed for each remaining year are:
25,000 acres into 5 acre sites equals 5,000 sites tiems $600.00 per site equals $3,000,000. Cadastral rectangular survey of the 25,000 acres at $11.72 per acre equals $293,000. Total survey cost per year $3,293,000.

*Due to the problem of negotiating for survey contracts, even with immediate passage of the bill it is impossible to implement Section 2 during FY 78 and therefore has been combined with FY 79.

HB 211 Creating the Alaska Land Commission

TRANSCRIPT

MR. GRAVEL:

I really appreciate the opportunity to come forward. I received the invitation from the Speaker and President of the Senate to give my annual talk as other members of the delegation to the legislature. I'll be doing that. I think we have communicated back in March, about the 28th in the morning, if that would be the morning most desirable. From my point of view that is when we are having our Easter recess and I'll be in State for that whole period. What I wanted to do at this particular meeting in which you graciously afforded me the opportunity to do is to float, literally float, the draft of legislation on d-2 which I have promised to our collective constituencies that I would do at the beginning of the year, and I have it here and I met previously with the Steering Council and gave them copies of it since it is germane to their area of inquiry. And, also as I understand it, it is also germane to your area as a committee as the subject you are going through, so I would (indisc) submit for deliberation a copy of this Bill. Would appreciate your input and would hope to introduce this in the Senate sometime right around the 15th of March. The Bill does not have the magic numbers of acreage for the very simple reason, we could have easily done it, but since all of our attention is focused on acreage I thought it would detract from the substance of legal language in question to just worry about acreage and I thought it would be more advantageous to concentrate of substance, it would be easy to put some figures together that would hopefully cast us in a compromise mood with other pieces of legislation in that regard.

Before launching into this in some detail, because there is one element from my personal point of view in paramount. I would like to speak about two pieces of legislation. I think one is the reason you are having these hearings. Two pieces of legislation that involve land in Alaska and would have some unusual impact. One piece of legislation is HB 720 which apparently

is a substitute piece of legislation for HB 211. The Beirne bill is -- which is the Beirne bill?

UNIDENTIFIED VOICE: 720

MR. GRAVEL

720 - let me speak on that one first. If I were to suggest a piece of legislation that would destroy Alaska's position in Washington on d-2 I would think that this would be the piece of legislation. I want to make sure I've got the legislation properly. HB 720 as I understand it is a substitute. That is a new piece of legislation. If the initiative were to pass I think you would see the Congress react and this would foreclose the need of my -- initiatives. My testimony to you today is very (indisc). I would hope that this legislation would come into being and it would foreclose the need for (indisc). The reason is that, and I will use two cliches, we have federal laws right now that keeps us from doing what that initiative would do. As a result of those land scandals we have had in Florida and Arizona. If we were to parcel out chunks of land to the people wholesale, as I understand it, during the initial 15 year period there would be no responsibility at all for providing utilities or any planning process whatsoever, that essentially we would be selling unsubdivided land and this would be viewed by the Congress of (indisc) responsibility and would give real credence to the environmentalist community's charge, some elements of the environmentalist community, that Alaskan's are irresponsible and therefore we need a very strong d-2 bill because we don't know how to handle our own situation. Yet I can appreciate that the referendum, the initiative, would have a great deal of popular support. In fact one of the fears I would have and it's the reason why I'm talking about it now publicly -- I only found out about the initiative, I confess, not all that long ago and I couldn't believe it when somebody described to me what this initiative was going to do. And so realizing that it has a great deal of popularity and realizing that I may be treading on some individuals' toes -- I would respectfully apologize for treading on anybody's toes -- but the utilization of land and development of land is something that I feel a certain professional confidence in. I made my living in it. I've seen how people have butchered land from the state and how unconscionable this impact can be on the balance of society because once you've butchered it up, you spend the rest of your life paying to correct the deficiencies you've created structurally. And so what we'd be doing with this kind of initiative (indisc). And like I say, if you try to do this in the private sector, you'd be put in jail for trying to do it. And so trying to do it collectively as a society, you've got to realize what kind of an impact this would have in the United States and on the Congress. Therefore, the approach that's been taken with HB 70 in my mind is a very mature approach to try and sort of save the day because we've got so far down the road in the other approach. I can only commend to

your attention the capacity to effect legislation. (indisc) in general terms.

The next item I'd like to speak to is HB 211 which is a piece of legislation that was introduced last year, (indisc) Mike Miller, Mr. Speckling. I don't know if they have other co-sponsors. I was very impressed with it. Here again I find by noticing a lot of things that you're doing, that you're just doing a lot of good work and this essentially is the tactic that I'm here to recommend that the state employ in order to regain the initiative that we lost on the entire d-2 issue. We've got a chance now as the legislation comes into the Senate to take up the initiative. If we don't coalesce to some degree -- and I'll speak to how we can coalesce and still maintain our individual positions. But if we don't coalesce, we're just going to get run over as we have in the House. But one of the recourses that we will have at our disposal would be Senator Stevens and I would just wage a filibuster. I think we have the seniority and the capability and experience to wage a very effective one and I think we (indisc) legislation. I have never been one to be proud of negative acts because you're really not contributing anything, you're just stopping something from happening. But I think the task at hand is to bring something about not just stop something -- to bring something about that's worthwhile. So we have the opportunity to do this. In the legislation that I have here, there presupposes state legislation to accompany this. That's essentially what you have in HB 211, is state legislation. So if that could be flushed out and developed and passed in a reasonable period of time, that could be our position in the Congress. It wouldn't be Mike Gravel's position or Don Young's position or Steven's position, it would be the Alaska Legislature has so spoken. There's no question it's not going to be cast in concrete but it'll be a darn sight more powerful than anything else I can think about (indisc) that anybody else would have. And so if you can meet a time frame of early mid-March before the hearings reconvene, we could have a new product to present to the Congress -- the parties behind it, the State Legislature, the Governor would probably endorse it. I certainly endorse it and I think the balance of the delegation would endorse it. Let me now speak as to what would be the key elements of my endorsement and I've tried in the past to discuss the subject to varying degrees with success, with varying degrees of comprehension. Where I am right now I can say very simply, last year this document would not have been politically possible to introduce or to float under any elective official's name. We talked privately last year as to the efficacy of having cooperative management over the entire sub-continent of Alaska. And mind you, I'm specifically using the word sub-continent and not the state, the entire sub-continent. That would have been viewed quite oddly and very suspiciously, but we've all gone through a maturing process since last year and taking the position that they just can't do it to us is not a position, it's merely a reaction. That's all we've been

doing. They can't do it to us. That's why we have no initiative. That's why we have no collective posture. But what has happened is that we now see that every one of the state-wide leaders are talking the same rhetoric. They're talking the rhetoric of collective management. And so we're not far at all. When people in politics and society can begin to use the same words, then the only transition is to go from interpretative approaches to these words. So I would just like to share with you an analysis of what does collective cooperative management mean? And what would it mean from a tactical point of view as we would try to affect a compromise in the Congress. Let's take the first part of it. What does cooperative management mean? We could say in Alaska, in this area where they have federal lands, and part of those federal lands will be in four systems, one area, one level. Next we are going to have lands not in the four systems which would be under the BLM, which would be general lands under the Organic Act. That could quote be a fifth system, if you want to use that (indisc.) Then you've got state lands. That could be a sixth system. Then you've got Native lands, that could be a seventh system. And then somebody decides, well, there's a chunk of land here that maybe we ought to study or (indisc.) a little different, so let's make that a seventh (sic) system and we'll call that -- that's land that we think we're going to work and study together. And then you could have municipal lands, that's the eighth system and whatever lands that are held in patent today, you could develop and call it a system. You've just got a whole plethora of activity and definition on lands. And, in only one area where you have federal/state cooperation do you call that cooperative management. For my mind, if it's worthwhile to have cooperative management on one acre of ground -- if there's any merit to that concept at all, since there's really only two governmental entities on to themselves (indisc.) the federal government and the state government, then if it's worthy of having some cooperative management, then why just put it as part of it? Why pick up capriciously or arbitrarily ten million acres and say we're going to study that as cooperative management. If there's some merit to cooperative management, let's just do the whole thing in cooperative management. And then when you begin to think of it in that respect and the rhetoric is there for that, every one of the elected high officials quote, so to speak, are talking that rhetoric. We may have differences in the definition of cooperative management, but at least we're there.

Now let's look at what that would do. On the four systems lands, there's no way that you're going to have cooperative management. You usurp the powers of the Congress, literally. But (indisc.) you could very well do that. In a society of representative government, power is many times knowledge. Not always, but many times. And so if we set up a system, like the Land Use Planning Commission which is a vehicle for cooperative management, that Land Use Planning Commission has the ability to acquire knowledge

through research efforts, then that knowledge places them in a superior position than the individual members of Congress, or for that matter even yourselves, as individual legislators. And the reason why they have more knowledge is because they'd be more expert in the one particular area. The legislature and the Congress have a whole (indisc.) of issues that effect all facets of human life that we have to deal with continuously. So that simple fact that the Land Use Planning Commission in Alaska would be the major repository of land information and its use and adjudication would give it an edge that when it made a pronouncement or a study on something, that study would have great credibility in the Congress and I mean considerable credibility. Just as the present Land Use Planning Commission today, which is merely a voluntary organization, so to speak, when they'd come in and testify before the Interior Committee, it carried every bit as much weight as an individual member of the Congress. So you begin to see where the shift would take place. Ask youself why the House of Representatives under the leadership of Mr. Udahl and Seiberling don't want a Land Use Planning Commission that has any muscle. In fact the one that I introduced in 1971 had police powers and came out of the Senate that way. It was diluted in the conference on the House side. The reason why it was diluted was because they did not want to see a diminution in the power at the federal level. Well if those fellows back there think that there's a diminution of power at the federal level, where do you think that power goes. It's going to come back at this level, maybe in federal hands, but really what's happening just in that process alone and in the process that takes place on federal lands that are handled by the Bureau of Land Management, you've shifted the center of gravity from the federal government in Washington to the federal government in Alaska, meaning that there's a great principle of government that's closest to the people (indisc.). So if we now have the Land Use Planning Commission that will adjudicate all federal lands save the four systems, but will have an effect on the four systems because of their superior knowledge, we've made quite a gain. Now that's on the federal side. On the state side, if we take all the state lands that are presently there except lands that are in municipalities and boroughs and that they would come under (indisc.) of the Land Use Planning Commission and then offer entry into this to the Native community so that the Natives would voluntarily bring their lands in -- that could be very simply -- you could initiate a study of possible taxation would take place -- the Native community, properly so, has great fear over the possibility of future property taxes. They could be land poor. Their land could be under development and that they would have no ability to have a cash flow to handle that form of taxation. So they rightfully, from their point of view, would like to see them absolved of this. That could be the ingredient that would bring them in on a voluntary basis. I think not to do it more than on a voluntary basis might cause some real acrimony since they would feel that they received

their lands as part of a legacy, the land claims, and then if we pulled a win by fiat, I think they'd feel that they had been violated. And rightly so in the one sense. The balance of the land that's in boroughs is already subject to a planning process. We have that in state law and so there need not be a duplication. There need but be a liaison relationship established so that a community that develops a plan, or borough or municipality, it would have a five year projection of what that plan would be, they'd submit that plan to the Land Use Planning Commission, and the Land Use Planning Commission would give it it's seal, would sign off on it. But the function would be done by the municipality. This would solve the obvious problem of where individual governments come together, the frictions and the discoordinated activity is handled intelligently. So in this way, you look at the continent and I've just enumerated a process where all lands in Alaska is now under the aegis either directly, the Land Use Planning Commission or (indisc.) through the knowledge process of the four systems. Where that becomes a valuable tactic is that when we now talk to and negotiate in the Senate with the environmental community, national community and say we don't think that we need to put in a hundred million acres or ninety million acres into the four systems because we have a device that will continually adjudicate the use of land on an intelligent basis as a product of study. And so they're cast in a mode of saying well no we don't want to do something before we study it. Let's put it there before we study it. I don't think that's a very credible position for anybody to have. In fact when you look historically at why the environmental community has its extreme posture in some areas, it's because they could not get a resolution of the problem as they saw it in a legitimate fashion. And so what happens -- it's a simple process -- if you don't permit evolution, you have revolution. And so since we don't have a (indisc.) process in the United States of America, those people who are deeply concerned about the misuse of land and the atrocities that took place in the past and you need to travel this great country to see these atrocities then they are so fed up and their cup runith over with such reaction, that all they can think of is that we just don't trust anybody. We don't trust anybody so let's just lock it up. And in some cases you can look around and there's valid reasons for that posture. And I would say that if we passed that referendum, that on the national point of view there would be a valid reason to lock up major portions of Alaska. So they're at where they're at because there wasn't a process that permitted the intelligent organized adjudication of land. So what I'm proposing here is that we lay down a device that will have definitive powers which will be able to adjudicate the land on the sub-continent. Of course you get this attitude -- the brokers say well I'm not too keen on that commission because obviously they're going to put a bunch of environmentalists on that commission and they're going to stop growth. Then you talk to some environmentalist and they say

well boy I'm not to keen on that commission because they are going to put a bunch of chamber of commerce types on there and they'll rip up the country. Essentially what both parties are saying is that they have no confidence in our system of representative government because, you know, what's the point of having a legislature, you might get some dingalings elected to it and many times we do. We've had them in the Congress and we've had them here occasionally. So that doesn't mean that we don't develop a system of representative government because sometimes it fails to work. We don't have any options. Either anarchy or we develop a pattern of evolving things in an orderly fashion and this, of course, is what I think would be a most compelling argument in the Congress. Looking at individuals, Scoop Jackson has passed a land using planning bill twice in the Senate. It's failed both times in the House. I think (indisc.) I think many other members would view this from the environmental community, Senators in that area, would view this as an unusual opportunity to establish a prototype. I think that we could -- in the future I would recommend that we have a sunset feature in this. We don't know if this is going to work. We'll say this law is going into effect for ten years. At the end of ten years the Congress has to renew its charter of the law, of the situation, and so would the state legislature. So if it succeeds, it will build its constituency of success and it will be easy to renew and if it's not working very well, it will have an alternate constituency and it will be very easy to stop its renewal. And I think that that really could ward off a lot of serious criticism and would permit us to negotiate down the quantity of acres to something reasonable and something obvious because there are obvious easy decisions to be made in placing land in the four systems. But it's the quantities that we find disturbing and the fact that we don't have the vehicle to make changes. But if we've learned anything from the Statehood Act and from the Native Claims Act is that we've had a steady stream of people to Washington trying to resolve all of those problems that have been placed with the Congress. Well if that doesn't tell us something that we should have a body that should be deliberating on these problems daily. The other thing that I would recommend is that we take the Clean Air Act, the Solid Waste Act, the Coastal Zone Management Act and the Clean Water Act and place this under the aegis of the Land Use Planning Commission. Let me give you an example. Right now supposing we took the interior of Alaska -- somebody wanted to build an asbestos mine and a cement factory, let's say two of the real bad polluting elements, and it was a group of Natives that had a mountain and they made a joint venture with some Japanese interests and New York interests and they're going to come in and they're going to build a cement plant, maybe we'll build a dam and other devices, that we'll need some cement and the economic success would warrant it here in Alaska. How does that take place? Well presently what you do is you deal at the borough level, then you turn around -- if it's in the borough, if not you just go to the state level and you're bicycled

around to the various interests be it land, be it for water, be it for access. The access is very much undetermined. You don't know what the access is going to be. But under the plan I'm suggesting, you'd develop your plan and you'd go to the Land Use Planning Commission. The Land Use Planning Commission would do exactly what the legislature's done which I think has shown great maturity. You've got to hire some consultants to evaluate this for me, I'm not in the cement business, I don't know anything about cement. Come in and tell me what that means. Come in and tell me what the access requirements are going to be and how (indisc.) with this possible development up there. Analyze for me if (indisc.) what the air pollution will be. Do all those things as one coordinated body. And then when you know all the facts, these nine individuals will say yes or no. That's it. And when they state their approval, that's it. You don't have to go over there, or getting dragged here or having a catch-22 there. You're getting it all done at once. That to me is efficient from an economic point of view and from a knowledged decision judgmental point of view, it's just excellent. Because the people will be expert in this area. That's all they will do. They'll be handsomely paid and they will have research capabilities. And then a decision will be made. Yes or no (indisc.). Another question -- people want land. There's no reason why people cannot have land and I certainly in my opposition to the referendum, I hope that it won't ever be construed that Mike Gravel's against people having land in this state. I believe in private property. I think it's an excellent base to our free enterprise system. But there's got to be something reasonable to it, because when you give somebody a piece of property, it's got to be a legitimate piece of property. And legitimate means you've got to have access to it, he's got to have water, he's got to have air that he can breathe on his property. He's got to be sure that he's not invaded or polluted by his neighbors in that regard. So there's got to be an orderly process. There's no reason why if a person wants to go out and live in a wilderness, that he can't go to the Land Use Planning Commission and say hey, I want five acres. I want to go out and chop trees and haul water to a cabin in a bucket. And there's no reason why the Land Use Planning Commission can't look at this and say, hey, here's your five acres, go at it -- and bring an orderly process to that type of existence. There's no reason why that can't be done. So we can handle every facet of this. The only thing that I'm (indisc.) begging for is that by God we're intelligent human beings, let's do it in an orderly fashion and set up a vehicle to do it in an orderly fashion and essentially that's the case. I could go through and perhaps we could stop at this point for some question and answers and then in this draft proposal, this deals specifically with the Land Use Planning Commission which is really the guts of this proposal. This proposal is essentially the collective conventional wisdom of where we're at in the whole d-2 situation. Subsistence is no longer a gut, backbreaking issue. The fact that we're going to legislate state land, title land, Native land titles is something that's pretty well accepted, a whole host of things. What's new probably in here is an authorization for five hundred million dollars for a

transportation system to Mt. McKinley. That would be a new element in there. That's a simple thought that if it works this way, we're going to have the greatest park in the United States and probably the greatest park in the world, we'd darn well better make it accessible to the American people. It's tough to get there right now. I get there, I get there in a helicopter, but that's not the way it should be available to the American people. So I've got an authorization in there if Congress wants to make a great park, they've got to pay to let the American people see it.

The other key element (indisc. -- cough) this draft here of the language. On the second page of this draft I've detailed what I would recommend as suggestions and I really want to underline suggestions. It's all a product of how much thought you want to effect on an issue and so when you people start your deliberations and marking up the legislation, you're going to think of things that we haven't thought of and to that end, when you get to that point, where you decide to go that, I would have Pat Prusho (ph) on my staff spend some time in Juneau so we can monitor what's going on so that we understand your thinking processes so that we stay on the same wave length. These are just, these are suggestions of what I think the state legislation should encompass and I can't help but be struck by the parallel with HB 211 and so HB 211 in my mind is a vehicle that you should ---. You already have introduced. It's under hearing now. When your hearings are complete, you can begin markup on it. I would hope you'll just consider these suggestions to be incorporated into HB 211 and if you have HB 211 out as a product by mid-March -- and if CMAL -- and I have every reason to beleive that CMAL might be willing to endorse such a proposal. I can't speak for the other members of the delegation but I think that they would all be happy with a coalesce that might take place as a result of your actions. So let me just close with that point and you can proceed with questions and answers.

CHAIRMAN OSTERBACK:

Representative Malone.

MR. MALONE:

Thank you Mr. Chairman. Senator, first I'd like to thank you for making yourself available to the committee in this type of setting. As far as I know this is the first time a committee of the legislature during this legislature at least on the (indisc.) question has had an opportunity to meet in a hearing setting with a member of our congressional delegation. As legislator to legislator, I appreciate that. To begin with, some of the legislation that you

discussed at the beginning of your presentation, specifically HB 359 and the initiative which is now certified to the ballot in Alaska (indisc.) initiative, while I personally think that there's some problems with that legislation (indisc.) approaches that were set out in HB (indisc.) last year and HB 720, to be candid about it I would have to say with regards to this position of state lands, I'm usually relatively suspicious of recommendations coming from the federal arena. (Indisc.). On the two different approaches the homestead initiative versus the home site program, I think of the two that the more modern one is probably the better at least at this time. Coming down to HB 211 -- I don't think it's really any accident that that legislation parallels the possible compromise position that might be reached in the Senate. It did go out of consultation between members of the legislature and I think the congressional delegation and state administration last year and also through consultation with members of the Federal/State Land Use Planning Commission but my basic question on that approach, the management program approach as opposed to the classification and lockup of large amounts of federal land in Alaska is how realistic is the approach? How likely is the Congress, at least the Senate, to adopt on a consensus basis, or adopt that approach as a compromise position because that's the information we need to know in the legislature in order make a realistic determination as to what strategy we should pursue on the whole d-2 question. I gather from some of your remarks, that I think a compromise is possible. That Senator Jackson, yourself and others would be able to adopt an approach like this and perhaps sell it to the Senate and that work by the legislature on this question and putting an effort and interest in the concept would be valuable in reaching a compromise position on d-2 lands in the U. S. Congress. Is that correct then? Do you think that there's a real chance of a compromise being developed perhaps along these lines in the Congress?

MR. GRAVEL:

(Indisc.) I think the international environmental community has felt (indisc.) over their success and support both in the White House and the House of Representatives. In order for them to be placed into a compromise mode they have to fear that they will lose something. I've tried to convey as much as possible from my particular office that without this land use planning process, without a mechanism that I would be prepared to filibuster the bill. And the very simple reason is that I just feel that we'll never have an opportunity again to effect a planning process. It's such a complicated issue in the national arena. People are so afraid of it. And we're now pressured into a situation that we're prepared to now accept a planning process. And it's because we're about to be run over and so if that is what saves the day, I think it will turn around and be constructed to not only save the day but making

a significant contribution to human advancement in the process of how we deal with ourselves in society. We have to develop a planning process. I think that when they're faced with a situation that they're not going to get entirely what they want, and realize some of the things that we have (indisc.) compromise may prevail on their side. I have not been criticized in this approach and like I say I've covered it now for over a year or more privately, sometimes publicly, depending on the forum and I've never been criticized by anybody in the community for the idea. The only negative criticism has been well, that kind of people won't be appointed to the commission. To me that's not a valid criticism. That's the only criticism that's been heard. So I think it will be appreciated. And some environmentalists will realize that if this succeeds in Alaska, this is the (indisc.) of the nation. And if it doesn't succeed in Alaska, we'll go back to square 1. So both sides are going to have to give a little bit. Where the acreage will finally wind up, anybody can guess. That's really (indisc.) conference where you're shouting each other down and that process is not going to be all that logical. But the question is (indisc. -- pounding) to the conference. And so if we can do our work in the Senate in the conference, it's every man for himself. I think we'll clear ourselves very well on that. It's tough to argue against this. We're talking about -- it's tough to argue an orderly approach to things, regardless of how you feel, very tough to argue against that. That's the essence of what I'm proposing. The rest is already accepted by and large. So it's land use planning, how much it covers and the size -- how many acres. That's what we're down to in the whole process. How many acres, land use planning process and one sort of can balance out the others because if you have a process, you don't need so much acreage and you don't have to be afraid of locking up or putting away so much acreage into a system. You've got a process to deal with it. So in brief, to answer your question, I think we have a good chance to develop the elements of a compromise. Not to speak of the coalesce thing that will take place within the Alaska community which is lacking now for -- and probably for a very fundamental reason -- not so much I've got a personality and they have their personality -- we are all representatives of some degree of element in our contituency and I think the lack of coalesce is because we weren't at a mature level to coalesce. And I don't mean just the four of us in state-wide office, I mean just the whole (indisc. -- cough). This year has been a very sobering year. And I think we're getting there fast. The question is, we'd better get there real fast if we want to take the positive approach. If we don't get there fast enough then we can take the destructive negative approach.

CHAIRMAN OSTERBACK:

Thank you Senator. Are there any more questions from the committee.

MR. MILLER:

Yes, Senator Gravel, you were talking about the four systems -- (indisc.) but do I understand that what you're proposing still does

have a generous (indisc) of national park, wild scenic rivers, residues of the national forest and that sort of thing? More then 25 million acres.

MR. GRAVEL.

Considerably. The base would be twice that much, as I would say the negotiations would begin somewhere between 50 and 80. So we will tighten up between 50 and 80 and enlarge and be guided by your reaction in that area. I obviously would, with my staff, sit down with Pat and others and yourself when you get back there and go over maps. It truly is somewhat ...You know there is and I know there is, The summer season is nothing. You know areas and I certainly know areas that I would have no difficulty at all in making decisions as to what system we go to.

MR. CHAIRMAN.

Are there any other questions?

I would like to ask a question. Since we have native land claim settlement going on in our communities to determine land to build a home on, how long do you think it would be before title to your land, where they could build?

MR. GRAVEL.

The title problem in this proposal we are talking about here again I think we are (indisc.) at this point when we settle d-2 we are going to settle the land transfer question right then and there. We are tired of being dragged and delayed and working with an uncooperative bureaucracy, so it's (indisc) for this process here.

MR. MALONE.

Could I bring up one ...

MR. GRAVEL.

I have had, not from you, Hugh, but a couple of members of the legislature called me for my views on a trip back in Washington and characterized by some that they all want to get together and go back to Washington. I think that would be a terrible mistake for everybody to get on a plane and go back to Washington for several reasons. One: You would gobble up all the offices of Senator Stevens, myself and Don Young, and we would be doing nothing but handling your presence which would not permit us to be working effectively. Two: It would be viewed very much

by the Congress and by the national media as conspicuous consumption, and three, that many people visiting Washington the members of Congress would be a little oppressed. What I would suggest would be to appropriate monies for every member of the Alaska legislature to come to Washington and that they be staggered out, come in pairs, two and threes, not too much more than that and they would start right after your session has been terminated and I think it would be very beneficial as to what could be accomplished and I think you could do effective lobbying and come in and talk about areas of your expertise and interest to various members of the committee, the staff and Congress. Too, I think when you come back there you are going to get a feeling of what's going on in Washington, perceptions and I think that base of knowledge (indisc) regardless of the d-2 issue and as you pursue your political careers it will help you very much. There is one detriment to that and that is obviously some of you will come back and covet the offices of those of us that are already there. That is a gamble that we will have to take and if we treat you nice in the future we might not have to be harassed so extensively, in forms of a challenge I might say. I have never seen harassment in any other form. You have always been gracious. So in responding to those phone calls privately I have outlined this and I don't think I went into this much detail because I hadn't given that much thought to it but I would hope that you would look at it in those terms and that it would be a good investment for the public officials to come back, but to come back in very small numbers and to come back stretched out over a period of time and you will be surprised because this issue is not going to be solved either beneficially or negatively prior to the probably the first of October of next year. We have all summer.

CHAIRMAN OSTERBACK.

Representative Malone.

MR. MALONE.

Thank you, Mr. Chairman. First of all (indisc - cough) follow up statement on your last questions, in this question of transfer of title and the disposition of the different land settlements, it occurs to me that in addition to the resolution and legal entanglements there may be, and I haven't (indisc.) there may be a problem with the ability of bureaucracy to deal with the sheer volume that they are facing. Recently I think we have come to the conclusion in the State of Alaska that a similar situation exists with respect to the dispostion of some of the state lands they are owning and quite often the answer is money so I would think that in addition to the legal resolution that if the Congress is serious about expediting settlements that they would respond to your urgency to appropriate money to make the process take place within a reasonable period of time. A certain question with regard to trips by members of the legislature to go to Washington on the d-2 crisis, an additional suggestion was made by Senator Stevens during his visit with the legislature

that it might be his thought to appropriate funds for allowing members of the Congress to visit the State and meet with people and perhaps view some of the areas that are proposed for the classification. What is your reaction to that?

MR. GRAVEL.

Last year I felt very strongly about that and suggested that in our deliberations when the four of us were meeting. I felt strongly then because we had the whole month of August of last year and I had about ten members of the Senate that had agreed to come up here and that was just the beginning and it expanded that we had thirty or forty members of the Senate. We were unsucessful in getting federal money at the time and the subject did not have the (indisc.) of state legislature coming up with the money to do this. Now you have only got two opportunities. You have the 4th of July recess and you've got the Labor Day recess. There is no August recess because it's election year and they are going to try and get out early to campaign. The time frame is so short and it is a very difficult time to bring people up in that regard. The other is, you know it becomes a little sobering, it's not an easy task to do that and it cost a lot, a lot of money. I'm told (indisc. cough) that it was over a million dollars (indisc. cough) to bring us up here so you are talking about a considerable commitment of money and a million dollars would only be for four, five or six members to come up here and handle it properly. Whenever members come up, I am sure Senator Stevens devotes a lot of time, and I know that two years ago when I had five members of the Senate coming to Alaska, it took literally over forty days of the time of my Administrative Assistant and then a lot of time within staff and during the trip I spent all my time with each member making sure that each detail functioned during that whole ten day period, so these are all the things you would have to provide for and if they came here and didn't have a good trip you would have spent your money and done as much damage as you could have possibly have done. The other thing is that we have had -- Udal and Seiberling spent a lot of time in Alaska and didn't do us that much good on the particular views that we hold, but it cuts several different ways and I think that as we get closer to the frame here I would hope that we would not panic and you know throw things every different way and I remember that old cliche that when the going gets tough - the tough get going. That is where we are at. That is where we are going to take the measure of ourselves. We aren't going to run around like a little white mouse holding our hands (indisc) so just throwing money isn't going to be the answer. It could be very damaging. Alaska does have the perception in the eyes of the American people of being very wealthy. We confirm that perception every time we do something out of the ordinary. Sending the Alaska Legislature to Washington is (indisc.). I don't know if it ever has been done in American history. Inviting the entire United States Senate and the House of Representatives on us to Alaska and prepare to

pay their way is a little out of the ordinary. You know there would be a greater exodus then they had at the Battle of Bull Run if the time were right, so we have to be careful. I think there is some merit in it but I think it should be done (indisc.)

CHAIRMAN OSTERBACK.

Thank You. Mr. Parker.

MR. PARKER.

$31,500 is not a great deal of money. We spent over $800,000 on the Steering Committee to go back and convince certain people in Congress that we would like to have a little bit more of input on the d-2 lands, so if we are talking about $31,500 (indisc) I don't know for each member.

That's for each member.

MR. PARKER.

That's the total. (Indisc. simultaneous speech). We get per diem. We get per diem while we are here. $31,500. You could spend the rest of the year saying it didn't cost very much money but it looks like a hell of a lot. (indisc.)

I think this is the time Alaska should make full determinations and something like this might catch your imagination.

MR. GRAVEL.

You know the old days of rah-rah type of activities, you know like statehood, that's not what we are asking for. We are asking for the Congress to be generous in its adjudication of federal land - not state land - federal land. This land belongs to everybody so the guy, remember Seiberling's statement, remember the cliche that was used by an Alaska, boy this is a big federal land grab and the environmentalists are grabbing all this land in Alaska and Seiberling came along and said yah there is a land grab going on. The people of Alaska are trying to grab our land. Our means federal government. We live here, we get confused with the language as to whether its federal or state, but remind you the state it is 430,000 and with the federal it is 220 million. A big difference. If you were to send back the whole Alaska legislature all at once -- you know the only place I think we differ is that I think it is very important for you to go back. I would only differ in the way you go back. I would like to see you go back quietly without fanfare and do things in a nice

(indisc) fashion rather than swamp us back there and that is literally -- literally swamp us, and we wouldn't be able to handle it, the appointments -- you might plan the trip and then all of a sudden we might have four or five key votes in the Senate on the Panama Canal Treaty in the House and you might have four or five key votes on some (indisc) legislation and you would all be sitting there with your bare faces hanging out. You can't plan, things change very quickly. So the worst that could happen if you string it out you might have a couple bad visits by two, three or four people, not by the whole (indisc.) I don't think -- there is a page out of the book of the Wealthy Philadelphian, it was during the depression, and it was one of the few places in the world that they did this, was that when the depression is (indisc) you don't drive Cadillacs. (indisc. cough). Just keep a low profile. And that is why Texas has had such difficulty it is because they have been too spectacularized, and what we in Alaska have to do is give a low profile and just go get the goods. That's what the natives have done, they handle the federal bureaucracy very well. Just come in slowly, two or three at a time, the only time we ever had the whole native (indisc) was on Alaska Day. But up until that it was a steady stream and we still have a steady stream. There is probably no crowd of people on this earth that better handled the federal government than these Alaska Indians and I think we should take a page out of their book and keep a fairly low profile, and they got in trouble when they had high profile, you know when you heard statements well we are going to do this and we are going to vote, and that always hurt their cause. When they kept a low profile and did their homework they did well. I didn't mean to (indisc.)

No, No, it's getting back to a initiative, you know, it might be far out, but nevertheless it's a serious initiative and 22,000 people (indisc.). People are frustrated with the fact that they are surrounded by land can't (indisc.) $20,000 for a lot to build on undeveloped land and we have nothing but land so I can understand (indisc).

MR. GRAVEL.

The worst thing we could do is pass a law telling people we are doing something for them when you are not. When you talk in terms of giving somebody land you have got to give them access, you have got to give them air, you have got to give them water, you have got to give them all those things, otherwise if it just a little piece of paper that they own land and they can't experience that ownership you thought they were frustrated before they'll go beserk, because you cheated them.

MR. PARKER.

I'm not speaking in favor of it, I am just speaking the way it is.

MR. GRAVEL.

Oh, no, I agree with you. That is exactly the way it is.

MR. PARKER.

Of course we have a problem here is that we have endorsed more or less a compromise, it might not be much, (indisc.) but what would happen if it was approved by the voters of Alaska how would that affect d-2 specifically. Would they lock everything else up?

MR. GRAVEL.

Like I said I don't (indisc.) the last month. I am supposed to be generally informed. I know that the Congress is not knowlegeable about this referendum and I'll bet you that when it does become known, and this public meeting here is going to carry it to the Congress. I mean, the environmentalists would absolutely be fools from their practical point of view if they didn't jamb this down our throat one little piece of paper at a time, and I would have no response. If I were testifying (indisc. cough) and somebody said well, Senator, you say that you people can handle the management process up there, the referendum has 22,000 Alaskans that want to carve up the land the way they used to do it in the land frauds of Arizona and Florida, do you really think that you can make the people in Alaska mature enough to handle the problem. Don't you think we should lock up a major part of Alaska. How do you think I would be able to answer that? How would you answer it?

MR. PARKER.

That's after the fact. (indisc). Wouldn't it be just as bad to give them, say through this piece of legislation, 20 million acres as a sort of a compromise, wouldn't that be (indisc).

MR. GRAVEL.

The process here would be to give them the land and the other process is to give them a piece of paper, which has evidence of land. The paper could be fraudulant. See, that's the difference between, you know I could buy land in Florida and go down there and plot it and see that it's got a road to it, see that there is electricity to it, see that there is a municipality, proper plan, and that it is zoned properly, or I could have sent in my $100 down payment, my $5.00 a month for the next twenty years and then I go down there later when I am ready to retire and I find out that it is under water. It's a valid piece of land, you know, but it floods four or five times a week. I have been cheated. There is no road to it. I have been cheated. That's why we pass federal laws so we can't - we can't sell these mail order properties, so

what we did, we designed a referendum capitalizing on the frustration and the lack of knowledge of the people, and we are going to give them a bunch of pieces of paper that's going to be useless, absolutely useless. (Indisc.) supposing I send in and say I want a piece of land right here. It is not in any native entitlement. I want that piece of land, I want 200 acres. So somebody sends, the Department of Natural Resources or whoever sends me a deed. I've got my deed. I wait around and then I finally take a plane up there and maybe hire somebody to drive me out to my property and it's nothing but a sheer cliff. You know, it's about a 45 degree angle (indisc.) What do I do, I've got my deed in my hand, I've spent a lot of money to get it. I would be so hopping mad at whoever was elected to office, whoever thought of this concocted scheme I would shoot them on sight.

MR. PARKER.

Let me finish this, I guess my question is, what do we do about it now? (indisc. simultaneous speech and laughter).

I think Hugh said it, I am here to legislate (indisc.) I don't pay (indisc.) answers. I think we have one heck of a problem.

MR. GRAVEL.

I thought of one, are all of these things valid that people just thought out (indisc. simultaneous speech - laughter). I am starting to do things in my life that I haven't thought out. It is a real tragedy, it really is. The fact that 20 some odd thousand signatures you know the only thing I can say is that that is not a majority of Alaska.

MR. CHAIRMAN.

Mr. Malone.

MR. MALONE.

Thank you, Mr. Chairman. On that subject, of course, I think that the referendum to a large extent does capitalize on people's frustrations and I think those frustrations are unlikely to be relieved if the referendum should be adopted. There will be problems of access, there will be problems of services, there will be problems of getting clear titles and there are only really two courses of action that the legislature can take at this time. One is to adopt an alternative program that would preclude the ballot measures, I don't know if there is a responsible program that would really preclude the ballot measures under the laws of the Constitution, of the State of Alaska and make an attempt

in that direction. The other thing is responsible measures at least to point out the shortcomings of the proposed initiative. I think the ideas behind it are probably valid at least at the root but I think it something that is not going to work once adopted and I expect it to be adopted because on the ballot at least it would be today. It might be time to change the (indisc.) between now and the election,not right now, I admit, but I think there are going to be some problems in even gaining the piece of paper that Senator Gravel is talking about there will be worse problems when it comes to access and should people manage to settle on the land they will need some kind of access and get their title. They are not going to get any form of governmental services whatsoever or most likely an economic basis to generate anything for a long, long time. In addition to the problems that might create in terms of perceptions in the Congress of the United States, I think the problems are of internal program that should be raised on the question on the ballot and I don't see any other course or anything other than those two courses of action (indisc.) I don't think that the question should be ignored. I don't think that is responsibility either even if the ballot measure should fail it is going to come back again.

MR. GRAVEL.

I was hoping to sit this year out, but if that's the situation that the legislature does not have the power to correct, change the setbacks we have, I am sure I will be out there campaigning against this and the only way that would be possible if a lot of others like you would join me and be out there campaigning (indisc.) I'll volunteer to lead the charge and reap whatever I reap figures in.

MR. PARKER.

Senator, getting back to HR39. I mentioned earlier that if all else fails you and Senator Stevens would engage in a filibuster wouldn't that also preclude any hope at all for next years (indisc.) of state land transference and land (indisc.).

MR. GRAVEL.

The question is that everything is delayed. We are held in suspension, it might even trigger a freeze by the executives in retaliation, but that could be in my mind a better situation then having a permanent bad situation forced upon us. So, you know, it's not much but again it's better (indisc.). I think the environmentalist and the leadership in the House certainly recognize that this is serious business. I've seen many times where you march up the hill and all of a sudden you pull the power and you don't have the ability to get back up the hill again and they are marching up the hill, they are doing quite well, you know maybe it is the time to compromise. It's only a fool in a moral contest that doesn't compromise.

MR. CHAIRMAN.

(Indisc.) any other questions? (Indisc.)

No thank you, Mr. Chairman, I am going to be testifying on this other committee.

CHAIRMAN OSTERBACK:

Any other questions. Representative

Just one point, Mike, you were talking about low profile. This is in view of the Capital move and even worse financing the gap of the pipeline.

MR. GRAVEL.

On the gas pipeline you have just been given a presentation. I'll have some real specific requirements in that area. I need some time myself to study that. I'll be going to New York I think on the second to speak to a group on Wall Street, a group of Bankers, which is what I did several times during the Alyeska deal (indisc.) to talk to them about Alaska's future and so I will have a little better feel on that situation. (indisc. simultaneous speech, laughter). It used to be back in Washington and travelling around the country, it used to be I would be asked about wolves, in fact I can recall once in my hotel on my pillow there was a little note stating save the wolves. Probably the (indisc.) historically has been about wolves. Our mail has not run heavily nationally but wherever I go it used to be how cold is it in Alaska, now it is oh, you are moving your Capital, huh? How is that going? For some reason it has captured the imagination of the American people. I think I stated earlier that I felt it had some (indisc.) because anybody who could afford to move the Capital has got to have a little wealth, and, now I must confess, I don't feel all those decrements (ph) taking place in the quarry but they could be there subconsciously and you just don't know. Of course you can't psychoanalyze every body that you meet, but you do know that every so often when you propose a piece of legislation where you are going for an appropriation all of a sudden everybody in the room votes against you, you smellyour breath to see if you have bad breath, you can't understand why out of no where everybody is against you. When that phenomena occurs and its occurred to me several times, I know it's occurred to Senator Stevens, I know it has occurred to Don Young. You ask yourself, is there something wrong with me or is there something going on that I can't perceive in the subconscience of the bodies I am dealing with. I went to a hearing once on a housing issue unbelievably meritorious and my colleagues in the Senate they were having to hear it (indisc) and they started making statements, well you Alaskans got it all, (indisc.) this (indisc.) is a very very serious thing. It is almost impossible to handle, so you know we can talk about the Capital move contributing to that, I don't know. I suspect that that is about the extent of it. So far it is just an oddity.

(indisc. simultaneous speech - laughter)

It occurred to me when you said it might not be too smart for us to be out of the ordinary does the figure 4.4 billion dollars (indisc.). Is that a little out of the ordinary? Is that the figure you are talking about?

MR. GRAVEL.

Let me respond by saying this. When the Congress focuses on whatever the cost is and they focus on the fact that maybe it is a conspicuous consumption you can bet your bottom dollar that somebody is going to say if you want to do it you do it on your money. You are not going to use my money. I think that will eventually happen. Roberto Compos (ph), I don't know if you know the name, is the Brazilian Ambassador to the Court of St. James. He is the architect of the economics of Brazil, (indisc.) Brazil. Brazil is one of the five super powers of the world. It is unbelievable what is going on and Roberto is one of the great renaissance of our society in his area, he is every bit as important of a person as Henry Kissinger. He resigned from his position over the Brazilian question, and when I saw him in London when I was coming out of the North Sea,boy he just assaulted me on (indisc)so if anyone wants to get a speaker up here that wants to take that side invite him and three good speakers on the other side. I didn't mean to dodge your question. (indisc. simultaneous speech - laughter).

(indisc.) you had a question?

CHAIRMAN OSTERBACK.

Just one before we let you go. (indisc.) I have been there twice and they have a different system than we have. If they have a big buzzer in a committee room. (indisc.) a couple times we went in to see a couple Senators, and the buzzer rang and they said we have to go, there is an issue on the floor and we have to go to vote, and then they leave, so if the buzzer rings you are left standing by yourself. And their committee rooms are real small. Sometimes two chairs and I don't know what 60 people would do. They don't have room to stand. Like you said get the money and travel two or three at a time.

MR. GRAVEL.

I think this may be the beginning of doing it every two or three years. Maybe during your two year tenure that one trip should be authorized for each member so they could get acquainted with their interrelationship with federal government.

Not only d-2 and looking into the future, but do you anticipate anything more important in Washington, D.C. then d-2 in Alaska?

MR. GRAVEL.

Not at this time.

Down the road?

MR. GRAVEL.

Yes. In economic terms, yes, but nothing of permanent nature. D-2 is on the order of native claims, on the order of statehood, on the order of purchase of Alaska. Once we are by that we are by the issue, the rest will warrant attention and will obviously be important as was the pipeline. But nothing of a permanent nature, d-2 is the biggest thing we have got going. No question about that. But I am persuaded that you do your jobs much better here when you interface more directly with your Congress rather than through our office. Thank you very much. It has been a pleasure being here.

CHAIRMAN OSTERBACK. Thank you very much, Senator.

MR. COWPER:

It is going to be a great help to the Congressional Delegation and instead of going into all the reasons why we should have this and why it is such a good thing, I think that has been pretty well covered, I would like to bring up one thing and I have a specific suggestion for an amendment on the Bill. The AFN has suggested that we place in any such legislation as this an authorization for the commission or whatever it is called, to enter into cooperative agreements with private land owners and the incentive for submitting our private to the jurisdiction of the commission would be that there would be no real estate taxes on any lands put in under the jurisdiction of the commission for a period of not less than five years. This is endorsed by AFN and I think it is a good idea and I think we should have a joint management agency or joint management system as to what land is being managed, particularly contiguous land (indisc.) I would like to suggest the following amendments and then I will yield to Mr. Parker. On Page 3, line 12, omit all the language after the word "land owner". Because we would like to, I think it might be well not to restrict those agreements just to contiguous land. Then add the following section in the appropriate place. SEction 41.45.085 seems like a good place to add it. If a private land owner, including any entity established under the Alaska Native Claims Settlement Act, enters into an agreement by which the commission manages undeveloped land, cross out undeveloped, I think, by which the commission manages land owned or selected under an Act of Congress by such private land owners, for a minimum of five years such land shall be exempt from any property tax on the land for the time it is managed by the commission. If the land is withdrawn from the commission's management before the minimum five year period then all property taxes on such land which would otherwise have been payable shall be due at the time the land is withdrawn. Now as you know we don't have a tax on unorganized borough right now but we might at some future time and I believe that this concept has been endorsed not only by the AFN but also at least by certain members of the congressional delegation. I think it is a good idea and it provides (indisc.) that consistent management plan spread not only the public land but the private land. Mr. Chairman that's all I have and I have this Amendment which I'll be glad to pass to the staff. Unfortunately it is not typed and it is sorta scratched out.

CHAIRMAN OSTERBACK.

Representative Malone.

MR. MALONE.

I just have one quick question, Mr. Chairman. Steve, you have been working on this stuff and all, what's your ideas in respect to the reality of adopting common management approach as an alternative, I won't say compromise, because it is not a compromise.

MR. COWPER.

Well, I think that the possibility is very real. I think what we have to do is take care of the fear that people have and I am speaking very frankly of the environmental community that the State will have effective control over the management of all federal lands in Alaska, or a substantial portion of it, without any (indisc.) I think if we come in and we establish a management system by which a joint commission manages not only federal but also state and native lands or private land, and we also provide a (indisc) by the land owners so that if the land owner doesn't like the decision being made it goes back to the drawing board and I think it should be acceptable, as Senator Gravel said, the main problem is not in the concept really but everybody says this isn't acceptable because they'll appoint somebody who is unacceptable to run it. They are afraid the system won't work just because they are not sure who is going to be administering the system. That's the problem everywhere. No system works if it isn't administered by good people. But I think there is a real chance of doing it. There is not any chance of doing it in the House. But I think it is a concept that has been advanced so many times at that level that when it comes back to them from the Senate they do not even look at it twice. That's my interpretation of what I have seen of it.

CHAIRMAN OSTERBACK.

Are there any other questions? (indisc.)

Why did you leave out the undeveloped (indisc.)

MR. COWPER.

Ah, Rick (ph) this is just to be consistent with AFN's position. I don't think that a real estate tax as such is all that way of getting into that sort of thing anyway. But, it it is consistent with AFN's position. I rather suspect that land which is developed in the sense of having a village on it or something like that isn't going to be turned over to the land (indisc) commission to manage. It is not precluded for instance personal property tax is the (indisc.) on pipeline property or production property on the slope. It would not preclude that and also it wouldn't preclude the severance taxes. I would think that the way you would get income being generated into land that is under the commission's jurisdiction would be through income taxes.

CHAIRMAN OSTERBACK.

Any other questions?

MR. COWPER.

Thank you, Mr. Chairman. I will have this proposed amendment

typed out and sent down to Committee (indisc.)

CHAIRMAN OSTERBACK.

Thank you. Mr.

Thank you, Mr. Chairman and Committee members. I would like to note that Commissioner Holdsworth(ph) is here also and he tells me he testified before you yesterday. This is the second time I have testified on House Bill 211. I testified last year. I didn't have much to offer except my personal opinions because the commission had not taken a (indisc.) position on the future land use planning commission. They finalized their position at a meeting in September of 1977 and that is contained in a Position paper which I will submit for the record for your concurrence as part of this testimony. I have some brief record testimony also which I would like to submit for the record and just highlight that, if that's alright. The need for a continuing commission as well said by Senator Gravel and Representative Cowper, I think that the main point that needs to be made what does a continuing commission offer for the state that the existing federal - state relationship does not offer. I think for me the important thing it offers is a thermo entry for the state through the commission into the federal planning process in the early stage. It also offers a form for mitigating and coordinating effects of single agency management. Whatever comes out of the d-2 legislation we are going to see a substantially stronger position for all federal land management and resource management agencies in Alaska. I think it's to the advantage of the people of Alaska that they have some form in which they don't have to be (indisc.) in which all the agencies are brought together and force to bounce from one position to another. It would be (indisc.) under its new organic act the thing that has extremely strong powers and if Alaskans are going to have any real say in future management of federal lands in the state I think that some form of commission structure is vitally important and therefore I strongly support the concepts expressed in HB 211. The points that Representative Cowper made on the native lands I strongly support also because as both the commission's inventory reveals and the state inventory, the native selected lands are prime lands for wildlife habitat and resource development (indisc.). They are also key strategic lands of transportation and are in effect the strategic lands of the state because of their relationship to the coast line and the rivers, primarily. So it is imperative that they be encouraged to cooperate to the maximum extent in the future system.(indisc.) has not taken a real position on state lands in this and the reason for that is that in dealing with the d-2 situation it did restrict itself to dealing with the federal lands and in dealing with the state land, of course was recently made a good many recommendations

to this committee and I think if you want a position from the commission on whether it feels all state lands should come under a future commission or a portion of the state lands we could certainly attempt to give you that but we have not had one as yet. In any case, to get to the specifics of HB 211 as our recommendations relate to it, the commission has recommended to continue the membership of 10 members with 2 co-chairmans rather than 7 members recommended in HB 211 and also recommends the continuation of the presidential appointment on the federal side and the governor's designation on the state side to continue to provide strong leadership with such a commission. The difference between the assembly chairman and the co-chairman is an important one. As a single chairman I think would be extremely powerful individual. He would probably be appointed by the President with the concurrence of the Governor and Legislature and the advice and consent of the U.S. Senate, and if he was able to get through all those steps then there is no doubt about it he would have a predominant role in the state. Whereas, if you have the two co-chairman, they tend between them to adjust a good many federal state conflicts before they get to the full commission or to the congress or to the legislature, so it depends between a single chairman and co-chairman how strong you would want the future commission to be in its relationship to both governments. The commission agrees with HB 211 in that the commission members do not be institutional or ex-officio. We found that having state commissioners sit on the commission is not in the best interest of the state commission or the commission because he has to represent the administrations point of view in his particular area and very strongly rather then reasonably independent point of view. And we also recommend the appointants not be representatives of special interests because the sub-committee that worked on this felt that special interest representation tended to institutionalize conflict rather than to contribute to problems solution. What the commission is supposed to do is to resolve problems before they become problems that require either legislative action or extreme action by the President or the Governor. They also felt that the commissioner should continue to be part time except for the co-chairman. The general feeling was that full time commissioners would tend to institutionalize its own perspective while part time commissioners were subject to other pressures and open to other viewpoints from the various sectors in which they operate when they are not being commission members. Also part time was felt to be more open to public input then full time. And, the present commission also felt that the commission should serve at the pleasure of the appointed official rather than (indisc.) this position differs from HB 211. The primary reason for this was that it was felt that the commission should relate strongly to whatever political views of either federal administration and state administration was. Of course, if you are appointed for a term then the commission once again has much more independence in itself so once again it depends on how strong you want that commission to be.

Regarding the duties of the commission our recommendations differ only in degress to those contained in HB 211. The major difference Commissioner Holdsworth(ph) went into with you yesterday. We see the commission's role on (indisc.) plans as classified. Whereas management would be continued by the land agencies for any of the federal and state side. That is an important distinction. You don't want to create another bureaucracy in this position to give the management powers well then you have to give him the man power to manage. The idea is to keep the commission very small in policy making and research groups, and certainly no larger then the federal commission. If it does expand why then it would inevitably tend to become another government agency and (indisc.) One of the things that we have felt to be a real power in the present commission in which future commissions should continue, the commission should be (indisc. cough) the Governor and the Legislature and to the President and the Congress, and being an advisory role only you certainly have (indisc.) committee programs (indisc.) if you have program responsibility. We think that needs to be continued and the only exception would be the classification of common management plans. Also in some spelled out roles in cooperative planning insuring both governments that Fish and Game managements would lean towards acceptable manner, the transportation planning would lean toward acceptable manner, research coordination and day assistance coordination are the four areas where we felt we really need a lot of mileage if you can coordinate them strongly and keep the agencies on either side from dealing in the territorial (indisc.) too heavily. The other area strongly stressed is the system of joint classification. As we have seen the future thus far the difference between the commission classifying common management land and the joint classification would be the commission would bring the two governments together to establish joint classification standards and (indisc. cough) the state and then BLM on one side or the other federal agency and the Division of Lands would use those classification standards and work them between the two of them with some commission over sight would arrive at joint classification for those particular areas. So in those areas rather then doing it yourself well the commission would encourage the cooperation existing to the maximum extent possible.In time we would approach what we would call total (indisc) HR 39. We would do it with cooperation between the two governments rather than proposed by HR 39 by standard refuge of park boundaries. (Indisc. cough) Because no matter how much those refuge or park boundaries they are going to protect those refuge and park boundaries you are not going to protect the entire critical areas that are entire watersheds. Eventually you have to get to this strong cooperating system anyway. One thing that is missing from HB 211 is the veto power on the state and federal side. We think it is important that you protect the sovereignty of both governments by incorporating that veto power. One thing that this present commission has that no other federal-state entity we studied has is the veto power of the state and that is very important to retain. It certainly made the present commission operate totally different from any other state organization that I have been associated with, and we did some research on some other organizations

and I will offer that for the record, Commission Memo dated March 15th, 1977, which has a rather comprehensive research on other federal-state entities. When we made our position we examined HB 211 of course, from last year, and we Secretary Andres (ph) amendments to HR39 (indisc. cough) operating management and we also had Senator Steven's Bill on cooperating management and so we considered all of those in reaching our decision. We then had the Seiberling which was contained in committee print 3 of HR39 before us but as I understand it that's changed little from committee print 2, so the comments which we enclosed in our letter to Congressman Seiberling on January 17th of this year would still be germane as to how we feel about that particular language and also that's for the record with this testimony. I am getting a big mound of paper here dealing with cooperative management and hopefully it will shed a little more light in particular areas. One other important area that we feel very strongly about is the executive coordination committees being established by both the state and federal government to review the commission's work. This is especially important at the federal level because you can coordinate all you want to in Alaska and get all the agencies meeting in unison and take it back to Washington you will have to go in and deal with each department separately. It wasn't always that way, the old Federal Appeal Committee for Development Planning Alaska we did have an executive review agency which was chaired by the Secretary of Commerce but which also reported to the White House but we were able to get good use out of that executive review committee during the earthquake relief and during the early stages of the land claim settlement. I think we just erred in not re-establishing that to relate to the present commission. We should have made sure Congress put it in the legislation report and it's not as critical at the state level to have that kind of executive review since the commission works on a continuing basis review level committees where the commission is concerned to review the commissioner's work on a state level also.

We do feel also that you need a more direct relationship between the commission and the land and resource management agencies on both sides. The way we do that is simply forming them together into a technical advisory committee to the commission which would have to come together composed of the land and resource managers on both state and federal sides that would have to come together and either relate to commission for the propositions that were put before them or they could develop propositions which they wish to put before the commission. Right now we don't have that kind of institutionalized dialogue between management agencies and the commissions and we try to institute it constantly but it's not spelled out in the legislation so the agencies can either come together or not if they feel whether they can get away with it or not, and usually they are pretty good about coming together on the issues we've developed but having it in the language would give the commission much stronger coordinating powers and that briefly are the major concepts that we would like to see incorporated in HB 211. We would certainly be willing to either

draft suggested amendments or work with you in any way we can.

CHAIRMAN OSTERBACK.

Representative Malone.

Mr. Malone.

Thank you, Chairman. Well, I would like to start out by asking my basic question on this thing. In your understanding and knowlege of activities that take place in the Congress and also the attitudes that may exist in the different federal bureaucracies, how realistic is this approach if it could work if it were adopted?

MR.

Of course it has been a while since I came on the commission and I can't -- don't know what the relationship was with the previous federal chairman or the previous state chairman of the federal agency, but the commission was able to make some steps forward when the federal administration changed and the d-2 perceptions in the interior and the conveyance of native lands in several other areas. I was the only chairman at that time in the interim between Mr. Sokof (ph) leaving and Mrs. Warnecke (ph) appointment but even though I wasn't the federal chairman, even though I was a state chairman why the door was open and we were able to get initiatives launched last spring that probably would have been delayed until late summer or fall, the spring of '77 I am talking about now, which if it had to have gone through the conventional route through the agencies and the difference, of course, that I was saying that I was going in and saying to the secretary was on native conveyances you've got a problem. The natives are not getting their land fast enough, BLM isn't working fast enough and obviously BLM isn't going to go say that to him, or the Assistant Secretary for Lands and Waters. On the d-2 issue HR 39 had just come out and of course that was Secretary Andres (ph) (indisc) and was able to immediately put before him critical areas on Fish and Game Management and Wilderness and the other points of disagreement with HR 39 so he could start relating to those. It's unfortunate that in the House of Representatives the sub-committee who handled that took its original draft from the Alaska Coalition and represented only that perspective and since the commission didn't agree with the original HR 39 they really hand's used it to the extent that they could. In April they practically threw us out of the hearing and by July they said well, this is good stuff and they started to use it but on the Senate side we have always had an excellent relationship directly and you know, we don't go through administration, we go directly to Congress.

CHAIRMAN OSTERBACK.

Representative Malone.

Mr. MALONE.

Yes I have a number of questions, but I have a follow-up question on that one. Considering that the commission is basically is a (indisc.) of Congress in the first place how come the House at least in the early stages decided to by-pass. (Indisc.)

MR.

The sequence of events is simply that the committee chairman and the sub-committee chairman knew that the commission's position wasn't the position they wanted so they (indisc. blank tape)

MR. MALONE.

How is it they work again at present, how is it they work?

On the Washington level there is no institutionalized coordination on Alaska matters. Right now they've got a group which was set up to coordinate gas lines for the gas pipe line. There is no d-2 coordinating group that brings all departments together to coordinate d-2 matters so the way d-2 is coordinated in the federal government is that in the last days of August and the last week of August and the first week of September the Interior sent out its information for comments and comments came back and they all put it together at a meeting and it was kind of a rushed process. If there had been a continuing executive review committee of the commission's actions why all these things that the commission had developed over the last five years would have been considered by these departments in Washington on a continuing basis, as it was every department just reacted to the Department of Interiors initiative. The only reason things went (indisc.) was that we took it upon ourselves in the spring of '76 to coordinate d-2 with all of the federal agencies concerned, transportation, energy, defense, and so forth, but it would be a lot easier to have them all in the same room rather than to have to go to each one individually but that's what we were up against.

MR. MALONE.

One final question. What would be possible in addition to us getting an advanced copies of proposed amendments of HB 211. Would it be possible for the commission to provide somebody to sit in on a mark up session of the bill?

CHAIRMAN OSTERBACK.

Yes, we could do that.

MR. MALONE.

Thank you.

CHAIRMAN OSTERBACK.

What we discussed, we had a meeting with Senator Mike Gravel and(indisc.) and he will send one of his staff members to work up a mark up session and we have a holiday coming up now. But the thing is you said you wanted to get something in from the legislators what we are all going to back and bring it in and he will take it up before the Senate or down there, correct me if I am wrong, and with the legislators behind he thinks it will carry a lot of weight instead of someone coming in with a different amendment all the time, come up with a package saying this is what the state is backing. Diann?

MS. NELSON.

One thing that we discussed is that we would assign Mr. George (indisc.) and Bill Berrier(ph) and Jack (indisc.) and would work with one member of the Steering Council staff and your office, Walt, and possibly come up with a committee substitute within a week or so. Something that we could bring before this committee as a mark-up copy and bring it back.

CHAIRMAN OSTERBACK.

Representative Malone.

MR. MALONE.

Mr. Chairman, I wonder if that schedule isn't a little optomistic. I don't object to the speed except (indisc. noisy tape)

MS. NELSON.

Can we schedule a meeting for next week in the evening?

(WHEREUPON due to bad noise on the tape I was only able to pick up selected portions of the discussions)

CHAIRMAN OSTERBACK.

What I was going to suggest is that we get everything together for a mark up (Indisc.)

Re: "Financing Alaska Commercial-Fisheries Businesses:
Problems and Alternative Solutions"
by Franklin L. Orth, Alaska Sea Grant Program/
School of Management, University of Alaska
for Legislative Affairs Agency, State of Alaska

Dear Mr. Osterback:

We have received Mr. Orth's report on financing Alaska commercial fisheries businesses and believe that he did a commendable job of analyzing the available alternatives.

Mr. Orth's suggestion of a Cooperative Fisheries Development Bank, owned and controlled by its Alaskan patrons, appears to us to have considerable merit. The concept of a cooperative financing organization established on a basis that would make it eligible to obtain funds from the Bank for Cooperatives seems to us to be a viable one and would have our Bank's support.

Sincerely,

A. E. Van Winkle

Rep. Al Osterback, Chairman
House Resources Committee
Pouch V State Capitol
JUNEAU, AK 99811

Dear Al:

As reported to your office by phone on March 27, I would recommend that the Resources Committee consider the following changes to HB763:

1) Section 1 - FINDINGS

The concept of the target group for assistance throughout Section 1 (fishermen and farmers) could be expanded to include processing firms and other businesses whose primary function is to service farmers and fishermen, by referring to "agriculture and fishing businesses" instead of "farmers and fishermen". This would appear to make the FINDINGS more consistent with Sec. 41.45.210 POWERS OF THE BANK as written (and as proposed for change in the remainder of this letter).

Sec. 41.45.210 POWERS OF THE BANK

Para (1) line 25, remove; replace with , and to seafood and agriculture processors, marketers and firms providing technical services to the agriculture and fishing industries for projects which will establish a facility within Alaska or which will establish or expand a market for the harvests of resident commercial fishermen or farmers.

Para (7) and (8) could be clarified by merging them and defining target projects as defined under para (1). This could be done by adding of the type approved under para (1) of this section at the end of line 7. Paragraphs (7) and (8) would then be replaced by a single paragraph:

(7) invest in projects conducted by shareholders of the bank of the type approved under para (1) of this section by purchase of the capital stock of corporations involved in such projects, except that no investment in capital stock may exceed 49 percent of the capital stock of a corporation;

I am hopeful that these comments will be of assistance. If any clarification is needed, please contact me.

Sincerely,

Frank

ALASKAN STATE LEGISLATURE COPY MESSAGE , FONE ASAP

JUNEAU AK 99801

REFERENCE HOUSE BILL 763 DUE FOR MARKUP SESSION OF RESOURCES COMMITTEE, PLEASE CONSIDER THE FOLLOWING THE FEDERAL INTERMEDIATE CREDIT BANK OF SPOKANE UNDER THE FARM CREDIT ACT OF 1971 IS CHARGED WITH THE SUPERVISION OF PROVIDING SHORT AND INTERMEDIATE TERM CREDIT FOR AGRICULTURE, INCLUDING FARMERS, RANCHERS AND HARVESTERS AND PRODUCERS OF AQUATIC PRODUCTS FOR THE STATE OF ALASKA BY PRODUCTION CREDIT ASSOCIATION AND OTHER FINANCING INSTITUTIONS. COMMENCING IN THE LATE 60S THE NORTHWEST LIVE STOCK PRODUCTION CREDIT ASSOCIATION HAS EXTENDED AGRICULTURAL CREDIT TO QUALIFIED FARMERS AND RANCHERS IN ALASKA. IN 1973, NORTHWEST LIVE STOCK PRODUCTION CREDIT ASSOCIATION ALSO BEGAN FINANCING FISHERMAN FISHING IN ALASKAN WATERS. TO DATE, EXPERIENCE HAS BEEN SATISFACTORY.

THE FEDERAL INTERMEDIATE CREDIT BANK OF SPOKANE WOULD NOT REGISTER OBJECTION TO THE CREATION OF A COMMERCIAL FISHING AND AGRICULTURAL COOPERATIVE DEVELOPMENT BANK AS PROPOSED IN HOUSE BILL 763. IN FACT, THE FICB OF SPOKANE LOOKS FORWARD TO WORKING CLOSELY WITH THE BANK WHEN AUTHORIZED IN ITS CREATION. THIS IS PARTICULARLY IMPORTANT BECAUSE THE PROPOSED BANK SHOULD BE STRUCTURED SO AS TO QUALIFY FOR DISCOUNTING LOANS WITH THE FEDERAL INTERMEDIATE CREDIT BANK OF SPOKANE.

FOR FURTHER INFORMATION, CONTACT THE FEDERAL INTERMEDIATE CREDIT BANK OF SPOKANE WEST 705 FIRST AVE SPOKANE WASHINGTON 99204, TELEPHONE (509) 456-7380. SINCERELY,

MEMORANDUM

SUBJECT: HB 763: W.O. #15/R

TO: The Honorable Alvin Osterback

FROM: John Williams
Research Analyst

You have asked that we prepare an analysis of HB 763, an Act relating to commercial fishing and agriculture. Following is a general description of the bill. We will first discuss the bill from a general perspective and then specifically address the issues of the purpose of the development bank, the structure, financial aspects, and the eligibility requirements.

OVERVIEW

HB 763 repeals the commercial fishing loan act (AS 16.10.300-370) and creates the Commercial Fishing and Agriculture Cooperative Development Bank (it does not repeal the Alaska Agricultural Loan Act--AS 3.10). The bank is subject to the provisions of the cooperative corporation laws (AS 10.15.005-600) except as otherwise specifically provided for in the bill.

The bank is to be initially capitalized via purchase by the State of non-voting preferred stock in the corporation. The initial seed money is to be repaid to the State within 20 years from the profits of the bank and from the purchase of stock by fishermen and farmers. If the State's initial investment is not returned within 20 years, the commissioner of Commerce and Economic Development may dissolve the corporation.

The bank may borrow money, lend money, guarantee loans, joint venture in loans with institutions of both the public and private sectors, hold equity interest in enterprises of its members (not to exceed 49%), and may issue bonds.

PURPOSE

Section 2 of HB 763 describes five purposes of the Act (economic assistance for Alaskan commercial fishermen and farmers, to encourage utilization of agrarian and fishery resources, encourage technological devel-

opment in those two renewable resource industries, and to promote a more rapid development of the agricultural industry). The bill will also have the effect of encouraging members of those industries to form cooperatives and perform decision making through peer group processes. The intended impact, however, is to insure the availability of financial resources for expansion of the fishing and agricultural industries in the State.

STRUCTURE

The bank is clearly modeled after components of the federal farm credit system, which were initially financed by the federal government and subsequently fully owned and financed by the members. The federal seed money was repaid, at which time federal involvement in the system was terminated (other than as a regulatory overseer).

The Commercial Fishing and Agriculture Cooperative Development Bank is established as an instrumentality of but separate from the Department of Commerce and Economic Development (Sec. 3). It is governed by a Board of Directors (three in number), with the initial directors appointed by the Governor. Subsequent directors are elected by the shareholders and serve three year terms. The directors are charged with filing the articles of incorporation and with adopting bylaws. They shall also establish the value for and issue stock in the bank, as well as set out a schedule of guidelines for loans made by the bank. A director of the bank is prohibited from voting on matters for which he or she has a conflict of interest (Sec. 41.45.190).

FINANCIAL ASPECTS

Capitalization

The bank is initially capitalized by the sale of preferred stock to the State (60-80% of issuance) and to members. Membership stock is issued in the amounts and with the value determined by the Board of Directors.

Sections 41.45.120-180 provides for bonding powers. The bank may issue bonds at its discretion, except that the maturity of any issue may not exceed 30 years, and the bank may not pledge the full faith and credit of the State. All property and bond issuances of the bank are tax exempt and legal investments for fiduciaries.

Sec. 41.45.210(15) allows the bank to borrow money and issue secured or unsecured evidence of indebtedness.

Lending

As mentioned earlier, the bank is fashioned after the farm credit system. To be eligible to borrow from the bank, a lendee must be a participant in the bank. The farm credit system specifies that a member must own at least 10% of the value in stock of an outstanding loan. A minimum participation is not specified in HB 763.

The bill leaves broad discretion to the Board of Directors in determining loan policy. Sec. 41.45.210 specifies that the bank may make variable rate or fixed rate loans, provide for extensions of loan terms (for poor fishing or farming seasons), make loans jointly with other public or private institutions, guarantee or endorse obligations of other corporations, and accept subordinate leins as security.

Sec. 41.45.210(18) allows the bank to provide "technical services" to shareholders to enhance their ability to obtain financial assistance from the bank.

Investments

The bank is given broad powers to invest its resources. Sec. 41.45.210(7) provides for the bank to "invest in projects conducted by shareholders of the bank by purchase of the capital stock of corporations involved in such projects, except that no investment in capital stock may exceed 49 per cent of the capital stock of a corporation". Subparagraph (8) of the same section provides for the bank to invest in projects relating to the development of farms, storage and processing of farm produce, etc. except that no investment may exceed 49% of the capital stock. There is no similar provision specifically allowing the bank to invest in "vertically integrated" fishing operations.

ELIGIBILITY

Sec. 41.45.210(1) describes the eligibility requirements. Applicants must be members of the bank to be eligible to receive loans. Eligible recipients are defined as "commercial fishermen and farmers or...corporations, partnerships, or joint ventures 51 per cent of which are owned by commercial fishermen or farmers who are state residents...."

Eligible activities do not appear to be limited to strictly fishing or farming. Subparagraphs (7) and (8) of Sec. 41.45.210 allow the bank to invest in activities conducted by shareholders of the bank. Subparagraph (7) is not specific as to what kinds of projects the bank may invest in, other than the projects must be projects "conducted by the shareholders". Subparagraph (8) specifies that bank investments may be made in the development and operation of vertically integrated activities relating to farming.

The bill is not specific as to what loan applications are eligible for consideration by the bank, except that loans are made only to members and members must be either commercial fishermen or farmers. Loan applications submitted by members for projects outside the purview of either fishing or agriculture are presumably eligible, unless otherwise provided for by the Board of Directors in the articles of incorporation or bylaws.

LEGISLATIVE AFFAIRS AGENCY

MEMORANDUM April 18, 1978

SUBJECT: Draft CS for HB 573 (Finance); W.O. #24/R

TO: The Honorable Terry Gardiner

FROM: John Williams
Research Analyst

You have asked that we prepare a sectional analysis of the draft Finance Committee Substitute for HB 573. The following is a general description of the bill and a more detailed sectional analysis.

There are four major revisions and one minor revision of the commercial fishing loan program contained in the Committee Substitute. Section 1 provides for a minor revision--clarifying the present eligibility requirements for applicants. Section 2 expands the eligibility requirements for applicants. Section 3 raises the loan size to $500,000 and provides for the state to assume a subordinate lien in some instances. Section 4 adds language that would allow applicants to receive a loan to purchase a limited entry permit.

SECTION 1

The section adds language to clarify the legislative intent with regard to eligible fishermen who may apply for commercial fishing loans. The language added specifies that eligible applicants must have been residents for five continuous years prior to making application for a loan, and must have been commercial fishermen for any three of those five years (and actively participated in a fishery).

SECTION 2

The present commercial fishing loan program is available only to individual commercial fishermen. Section 2 expands the eligibility

standards to include business ventures owned 100 percent by individual commercial fishermen. The allowable business arrangements are joint ventures, partnerships, and corporations.

Commercial fishing has become a major business activity for a large number of Alaskan fishermen, many of whom can no longer avoid taking advantage of the various business arrangements which allow them to limit liability, leverage capital, share risk, and take advantage of several other benefits offered by incorporation or other business arrangements. Present language would not allow a fisherman to receive a loan in the name of his fishing business or to apply with other fishermen for a loan to be utilized by a consortium. The provisions provided in section 2 should allow for a greater number of Alaskan fishermen to utilize the loan program.

SECTION 3

Paragraph (a) of section 3 (AS 16.10.320) provides for the limit on commercial fishing loans to be raised from $150,000 (existing law) to $500,000. The language also reorganizes the section so that loan terms are clearly presented. The paragraph contains no other changes in present law.

Paragraph (b) is contained in existing law.

Paragraph (c) is new language which sets out conditions whereby the state may accept a subordinate lien as loan security for the purchase of a new or existing vessel. The conditions are that (1) the borrower must have prior written agreement from a private lending institution to

accept a first lien on the vessel; (2) the size of the state loan may not exceed 35 percent of the vessel appraised value or $1 million, whichever is less; (3) the term of the loan shall not exceed 15 years; and (4) the interest on the loan shall be between 7 and 8 percent at the discretion of the Department of Commerce and Economic Development.

Paragraph (d) prohibits more than one commercial fishing loan being made to an individual or associate of the individual, except as provided in paragraph (e).

Paragraph (e) allows for two or more eligible commercial fishermen to jointly obtain a loan, the size of which cannot exceed $500,000 times the number of participating fishermen applying for the loan. The terms of the loan are identical to provisions in section 3, paragraph (a) of the bill.

SECTION 4

This section adds new language to AS 16.10 which allows the commercial fishing loan program to make loans to fishermen for the purpose of buying limited entry permits. Terms for loans shall be the same as provided in section 3, paragraph (a)[1]. Paragraph (b) defines the procedure that would be utilized for entry permit loans; specifically that the commissioner of Commerce and Economic Development shall be the legal owner of the permit; the fishermen shall be listed as equity owner and debtor; and the debtor shall be issued the annual permit cards and shall bear full responsibility as permit owner. Paragraph (c) stipulates that

---

[1]The term provisions are not specified in the draft CS. At page 5, line 6 of the work draft, delete "secs. 300-370" and insert "sec. 320(a)".

the commissioner is not liable for any act (or lack thereof) with respect to the permit. Once the debtor has satisfied his debt, the commissioner shall so notify the Commercial Fisheries Entry Commission (paragraph (d)) and shall amend the permit to list the debtor as legal owner (paragraph (e)).

Sec. 16.10.335 of section 4 specifies the actions to be taken by the commissioner if a debtor falls in arrears on an entry permit loan. The debtor shall be notified and given 60 days from the postmark of the notice to correct the situation. If he does not respond within the time allowed, any interest he may have in the permit may be terminated.

Sec. 16.10.337 specifies the means of disposing of permits which by default are the property of the state. The Commercial Fisheries Entry Commission is given first option to buy the permit (if the permit is for a fishery which has a buy-back program) for the amount outstanding on the loan (plus handling charges). If the commission does not exercise its option within 30 days, the person listed as debtor may name a qualified fisherman to whom he wishes to assign his former rights. If the nominated individual meets all necessary requirements to hold a limited entry permit, he may assume all rights and responsibilities of the original debtor. If the original debtor does not nominate a successor, the commissioner shall select at random, from a list provided by the Commercial Fisheries Entry Commission, a fisherman who may assume the loan.

Sec. 16.10.339 provides for the Entry Commission to adopt regulations to implement this portion of the bill.

Sec. 16.10.342 creates a foreclosure expense account from the "excess" interest earned on loans made with second mortgages (section 3,

paragraph (c)). Money may be expended from the account when necessary to protect the state's interest in collateral on loans granted under this chapter or to defray expenses incurred during foreclosure proceedings after a default.

Sections 5 and 6 of the bill provide for technical amendments (definitions and amendments to chapter 43). Section 8 is the effective date clause. The bill would take effect on July 1, 1978.

Please let us know if we may be of further assistance.

JW:jm

Juneau, Alaska
March 28, 1978

Hon. Hugh Malone, Speaker of the House of Representatives
Alaska State Legislature
Juneau, Alaska

Dear Mr. Malone,

Attached is a memorandum and comments listing additional support for the findings in CS HB763. I would list these ~~as~~ additional findings in three categories as stated.

In response to your closing comments last night regarding the lack of findings in the legislation as it is written in the books, I would only say that this is unfortunate indeed. The findings should form the most important part of any legislation, for it is only through the statement of the findings that one can adequately determine the fulfillment of the intent of any legislation.

In scientific terminology the findings correspond to the identification of a problem. The final creature created by legislation, in this case the bank, can only be tested for purpose by comparing it with the original problem stated.

I would suggest that if the laws existing on the books have not been written to include findings in the past that the legislature do something to correct this practise.

I enjoyed testifying before the House Resources Committee last evening as much as you did creating the bill. Thank you for the opportunity.

Sincerely,

Jack

Jack O. Hakkila

Enc. Comments requested on findings

cc. Chairman Osterbach
Mr. Gorder

To: Speaker of the House, Hugh Malone

From: Jack O. Hakkila

Date: March 28, 1978

Re: Comments on findings in CS HB763

My comments last night regarding the findings as presented in the committee substitute HB763 were as follows:

The first step in writing be it in business, government or science involves the proper identification of a problem. I concur with the committee in the statement of the problem regarding fisheries and the need for the creation of a credit source for the industry immediately.

I also identified a similar problem facing agricultural development.

The third element that should be brought together concerning these two areas is the inadequacy of banking in the rural communities.

While I do not have any data regarding these other two areas I will draw together some supporting evidence from the top of my head which may serve as additional findings or support for findings already identified.

Attached are my comments.

1. Fisheries:

The fisheries industry will support an additional one hundred thirty processing plants which will serve an additional eight hundred vessels.

For every person employed on water, seven persons are employed on shore. Five people employed per boat identified above would result in four thousand people employed on the water adding another twenty-eight thousand persons employed on shore.

The total immediate investment required for the processing plants and vessels above is approximately two billion dollars.

2. Agriculture:

The total of agricultural land which can be farmed in the state is approximately twenty million acres. An additional one hundred million acres of rangeland exists.

Current land in agriculture is 17,500 acres.

Within the decade ninety to ninety-nine percent of the agricultural lands in private ownership within the state will be in the hands of Alaska natives as a result of the ANCSA. This will not only give Alaska natives the opportunity to farm some five and one half million acres but will also be a mandate to do so since by 1991 these lands will be a part of the taxable lands within their respective areas. Individual native corporations which have begun agricultural planning such as Ruby and Galena contain twenty to thirty thousand acres of good farmland apiece.

3. Banking:

Banking within the state is totally inadequate within the state to finance the agricultural and fisheries development stated above.

Lending sources available include the following:

Total state lending of commercial banks is approximately one billion dollars. Total assets of commercial banks are approximately 2.6 billion dollars.

The state fund for commercial loans, fisheries and tourism has made approximately fifty million dollars in loans to date in all segments. Experience has been excellent. Only five thousand dollars in loans has been uncollectable.

Lending requirements for all banking will far exceed any ability to create financing in the coming years. The oil and gas industry will alone generate the requirement for additional financing to include petrochemical development far outstretching the requirements needed by fisheries and agriculture. Some examples of possibilities include:

The construction of a destructive dehydrogenation facility to upgrade the production of crude oil. This facility which would be located near Fairbanks could produce thirty to forty percent more crude oil by upgrading the distillates.

No one has come forth with a proposal for financing a required one billion dollar plus gas purification facility which will be necessary before natural gas is placed in the gasline being built by Northwest Alaska Energy.

Depending upon world marketing, the Northwest gas line will support the addition of a one billion dollar petrochemical plant per year in Alaska for each of the first ten years of operation of the pipeline.

It should be clear, then that the requirements for financing for the above types of ventures and the supportive ventures necessary for them will outstretch even the potential creation of capital through the creation of the permanent fund added onto existing lending capacities of Alaska lending institutions.

Juneau, Alaska
May 16, 1978

Ms. Diann Nelson
House Resources Committee
for Rep. Osterback

Re: CSHB 763

Diann:

I have the following comments to offer after briefly glancing over the revised version of HB 763 which you gave me yesterday:

§§1 & 2 (1) In stating the need for the bill, the problems and possibilities inherent in beginning large-scale agricultural production and marketing are not adequately defined.

§3 p.10 (2) In Section 41.45.210, Powers of the Board, items 7 and 8 are redundant. The establishment of a bank with State monies whereby the bank is allowed 49% ownership in projects raises a serious question regarding the nature of the bank. Is this to be a State institution or ultimately a private bank? Obviously through 49% control of a large number of corporations the State bank would not be encouraging private enterprise but rather controlling it. It would be my observation that the bank should not be competing with the enterprise it seeks to establish but only acting as a facilitator in the lending community.

(3) The overall intent of the bill and the structuring of a private institution which will ultimately stand on its own is an excellent concept. There is a very strong need for this bank in Alaska immediately. I would suggest that in further defining the need for the bank a summary of current banking in the rural areas of Alaska as well as the availability of sound bank financing in Alaska as a whole be included.

(4) In summary, the ultimate strength of this bank will not come through State participation but through the ability of a local people in rural areas which is harnessed into the structure of the bank from inception. I do not see any provision for local participation defined in the bill.

Jack Hakkila

Attachment: Resume

RESUME

Jack O. Hakkila

Born: Willimantic, Connecticut. June 26, 1940

Raised on poultry farm in Canterbury, Connecticut. Father retired in 1959 turning farming operation over to me at that time. Raised poultry there and on other farms in Eastern Connecticut until 1969 when moved to Fairbanks, Alaska

Education:

1961: Bachelor of Science, University of Connecticut, Storrs, Connecticut in Poultry Science. The University of Connecticut is the land grant institution in the State of Connecticut with the main campus at Storrs.

1969 Master of Science University of Connecticut, Storrs, Connecticut Agricultural Economics.

Professional Experience:

1959-69: Poultry operations in Eastern Connecticut. Served on Boards of Directors, United Cooperative Farmers, Inc. and Willimantic Egg Auction, Inc. United Cooperative Farmers, Inc. is a feed manufacturer and marketing cooperative with headquarters in Fitchburg, Massachusetts serving the New England area. The Willimantic Egg Auction, Inc. was an egg marketing cooperative in Southern New England.

1969-70: Assistant Professor, Economics, University of Alaska, Fairbanks, Alaska. The University of Alaska is the land grant institution for the State of Alaska with the main campus located at Fairbanks. The Department of Economics is part of the School of Business, Economics, and Government with a vital role in providing direction for the State of Alaska during a dynamic period of change with the advent of Prudhoe Bay oil discoveries and development.

1970-74: Field Underwriter, New York Life Insurance Co., Fairbanks, Alaska. New York Life Insurance Co. is one of the three largest mutual life insurance companies in the United States. During this time the first life insurance sales office for any major company was opened in Interior Alaska at Fairbanks. 1973, led the North Pacific Region in group insurance sales.

1974: Self employed as partner in First Industrial Financiers of Alaska. First Industrial Financiers represented over one billion dollars of loan packages to outside financial institutions.

1975: Account Executive trainee, Merrill Lynch, Pierce, Fenner & Smith, California Street Office, San Francisco. Merrill Lynch is one of the nation's leading brokerage firms. The California Street office is one of the major offices within the firm structure. Training was specific relating to Alaskan industrial development. All projects of First Industrial Financiers were turned over to Merrill Lynch.

1975-76: Self employed, Patent Development. Worked closely with Mr. Joseph C. Balch of Salcha, Alaska in developing certain patents related to soils refrigeration. Mr. Balch is holder of over thirty patents. The initial soils refrigeration patent was one of the ten Award of Merit exhibits at the annual new products exhibits at the New York Coliseum in 1966.

October 1976-May 1977: Assistant Project Director, Village Management Assistance Program, Tanana Chiefs Conference, Inc. Fairbanks, Alaska. The Tanana Chiefs Conference, Inc. is the non-profit corporation serving the area encompassed by Doyon Ltd., one of the twelve regional corporations established by the Alaska Native Claims Settlement Act. The Village Management Assistance Program was established to provide management assistance to village corporations established by the ANCSA. The Assistant Project Director was in charge of the staff of eight people,involving considerable travel throughout the region to identify needs of village corporations. The villages of Galena and Ruby responded most favorably to an educational approach with a request for further assistance.

May 1977: Sales Manager, first Tundra Times Special Summer Edition. The Tundra Times Special Summer Edition was directed as a free advertising mailer to the state's native community north of the Alaska Range. The content of the paper featured Alaskan agriculture.

June, 1977-August, 1977: Instructor in Agriculture, University of Alaska Regional Learning Center, Galena, Alaska. The Regional Learning Center was officially founded in the beginning of June, 1977 to serve the villages in the Middle Yukon, Koyukuk areas. The Instructor in Agriculture assumed responsibilities to establish an experimental station in Galena with teaching responsibilities in Ruby and Galena in agriculture.

September, 1977: Contractor to prepare a grant for agricultural development, Notaaghleedin, Ltd. Galena, Alaska. Notaaghleedin, Ltd. is the village corporation of Galena, Alaska. The service agreement with the Notaaghleedin, Ltd. provides for the preparation of a grant/ or legislative application for agricultural development for the Notaaghleedin, Ltd.

October, November, 1977: Presently employed as Assistant Wildlife and Parks Officer, Tanana Chiefs Conference, Inc. This position includes responsibilities to arrange and assist in holding meetings with the Tanana Chiefs Advisory Fish and Game Council and the State of Alaska Fish and Game Advisory Committees in Tanana, Fort Yukon, Galena, Holy Cross, and McGrath.

Professional awards, conferences, and papers:

1962: One of four International Farm Youth Exchange delegates to Switzerland, May-November. The International Farm Youth Exchange Program was organized to promote better understanding between and among farm peoples in 128 countries worldwide.

1962: One of three American delegates to the Third World Rural Youth Conference, Luntern, Holland. Held in June, 1962, the Thirld World Rural Youth Conference was sponsored by the World Assembly of Youth, New York, New York. Conference attendees came from throughout the free world to discuss mutual problems of rural life.

1969: Author, Oil, Catalyst for Alaskan Economic Growth, a paper presented at the 20th Alaska Science Conference, Fairbanks, Alaska.

1975: Co-Author with Joseph C. Balch, Permafrost: From the Bottom Up, a paper presented at the Third Port and Ocean Engineering Conference Under Arctic Conditions, University of Alaska, Fairbanks, Alaska.

1976: Author, Oil,Energy and Balanced Economic Growth in Alaska, a paper presented at the 27th Alaska Science Conference, University of Alaska, Fairbanks, Alaska.

1977: Author, Alaska, the Nation's Powerhouse, a paper presented at the Fairbanks town meeting on Energy, Fairbanks, Alaska, March, 1977.

1977: Attended Safety of Structures under Dynamic Loading, Trondheim, Norway. The conference considered problems of construction of offshore drilling platforms in Northern latitudes with the best known lecturers in several fields over a period of ten days.

1977: Attended annual meetings of the American Agricultural Economics Association, San Diego, California. Representative of Citizens for the Management of Alaska Lands.

Presently: Co-Chairman with Dr. Wayne E. Burton in organizing a symposium for the annual meetings of the American Agricultural Economics Association in Blacksburg, Virginia, "Creating a Northern Agriculture, the Alaskan Case." These will be the first ever joint meetings of the American and Canadian Agricultural Economics Associations.

1977: Author, Editorial for Tundra Times supporting the Northwest Pipeline route and concurrent petrochemical development in Interior Alaska. The Tundra Times is the state's oldest newspaper with emphasis on news delivery to native communities.

Member: Alpha Gamma Rho, Professional Agricultural Fraternity.
Gamma Sigma Delta, Honorary Agricultural Fraternity
American Agricultural Economics Association

December, 1977- present: Under contract with the Bureau of Indian Affairs to organize the Alaska Agricultural Development Foundation. The founding convention was held at the Alaska Methodist University January 26-28, 1978. As one of the founding directors, currently working on financing the foundation.

February, 1978- April, 1978: Consultant to the University of Alaska to begin teaching programs in Contemporary Business, Accounting, and Typing in the villages of Allakaket and Bettles, Alaska.

March 16, 1978

I am currently developing a paper on financing agricultural development in Alaska which will be delivered at the symposium on Alaskan agriculture at the American Agricultural Economics Association annual meetings at Blacksburg, Virginia mentioned above. My research to date has included visits to the Federal Reserve Board in Washington, D. C. as well as to the Federal Land Bank,Federal Intermediate Credit Bank and the Bank for Cooperatives in Washington, D. C. I first became aware of the House Bill 763 at the Federal Intermediate Credit Bank office in Spokane, Washington last week.

MESSAGES FROM THE GOVERNOR

"February 22, 1978

The Honorable Hugh Malone
Speaker of the House
Alaska State Legislature
Juneau, Alaska 99811

Dear Mr. Speaker:

It is my expressed objective to encourage and assist commercial development of presently under-utilized Alaska fish resources. Development activities which are economically sound and will lead to healthy community and State growth are of the highest priority. Therefore, I am committed to the establishment of a resident Alaska fishing fleet on bottom fish stocks and on-shore processing facilities.

If bottom fish development is to occur within a schedule more rapid than would occur in normal market operation, State Government must act as a catalyst, taking positive actions, now. I am convinced that the industry and Alaska coastal communities can and must develop in harmony with rational planning. This is especially true for the Aleutian Islands - Alaska Peninsula region where substantial fisheries activities have occurred with little or no regard to community needs.

To provide for the coordination of such efforts emanating from the Legislature, the Executive, and the University of Alaska, I invite your designation of two members of the House to join with an Administration team to consider and expand or modify the following action plan:

1. Identify the financial and administrative requirements necessary for a comprehensive infrastructure development plan for Alaska coastal communities.

   a. Concentrate efforts in the areas of greatest potential and need.

   b. Consider present and future support needs of a fishing industry and requirements for healthy community development.

   c. Review the New Cities Act as an instrument for infrastructure development, should new communities be required.

   d. Recommend specific comprehensive port development projects.

2. Provide funds to support bottom fish production trials by existing in-shore vessels using gear types other than single vessel trawls. Through an educational system, encourage experienced technicians and fishermen from other states and countries to participate in this and other similar research and development projects.

3. Actively seek and encourage responsible investment, both domestic and foreign, through organized development groups to promote investment opportunities.

4. Prepare analyses of capital requirements whereby State financial programs may provide incentives for on-shore processing plant investments.

5. Prepare a work document to determine technical and financial assistance necessary to assure that properly equipped vessels are prepared to enter the fishery as markets and handling facilities are established.

6. Investigate the desirability and feasibility of obtaining a waiver to the Jones Act for temporary use of American manned foreign vessels during conversion to a U.S. Fleet.

7. Identify and recommend favorable areas for future trade development activities and assist in the development of an aggressive marketing program nationally and internationally.

8. Continue administration and analysis of existing assistance programs to processors. Continue application and administration of EDA technical assistance grants to support fishing operations.

9. Coordinate State participation with private industry and federal involvements encompassing bottom fish development activities.

Thank you Mr. Speaker for your encouragement and support. I firmly believe that this cooperative effort will result in a comprehensive, coordinated approach to the development of this vital State resource.

Sincerely,

Jay S. Hammond
Governor

Copies of the Governor's letters have been placed on each member's desk.

SPOKANE BANK FOR COOPERATIVES

FARM CREDIT BANKS BUILDING
W. 705 FIRST AVENUE
SPOKANE, WASHINGTON 99204
TELEPHONE: (509) 456-7340

April 20, 1978

The Honorable Alvin Osterback
House of Representatives
Pouch V
Juneau, Alaska 99811

Dear Mr. Osterback:

I appreciated the opportunity to visit with you last week regarding the Bank for Cooperatives' potential involvement with the Commercial Fishing and Agriculture Cooperative Development Bank. We would be pleased to assist in the development of the bylaws, lending guidelines and other policies and procedures of the new Cooperative Development Bank. Our Senior Vice President, A. E. Van Winkle, who has had over thirty years experience with our Bank, would be available to assist the board and management of the Cooperative Development Bank in the development of policies and procedures.

I have enclosed the index of our Bank's Policy and Operations Manual and a copy of the Credit and Business Development Department section of this manual. Toward the end of this section is a Credit Report Format which may be of interest. The Credit Report is the document used by our loan analysts to present a loan proposal to the Loan Committee for its approval or rejection. All sections of our Policy and Operations Manual are available to you and would be made available to the Board of Directors of the Cooperative Development Bank.

Also enclosed is a copy of the Bylaws of Growers Credit Corporation. Growers Credit Corporation is a cooperative organized to make loans to its grower-members. This cooperative obtains its funds from the Bank for Cooperatives and lends those funds plus its own net worth to its members.

The enclosed documents are only an indication of the type of information that is available. We would be pleased to provide any information that you may request. Senator Kerttula, Jim Edenso and Keith Specking have requested that we send copies of the enclosed information to them also. I have mailed this information to them under separate cover.

Mr. Van Winkle and I plan to be in Juneau during the month of May. We would like to meet with you at that time and I will call to make an appointment. If we may be of any assistance prior to that time, please do not hesitate to call on us.

Very truly yours,

Larry K. Butterfield
Assistant Vice President

17. Loan Agreement and Note Forms

18. Loan Closing and Servicing Forms

19. Appraisal Report Forms

20. Lien Documents and Forms

21. Fiscal and Accounting Forms

A. APPLICATION PROCESSING PROCEDURES

Business analysts' responsibilities in connection with loan accounts will include processing applications for loans, processing other requests made by the borrowers, calling to the attention of the Vice President-Credit or other Bank officer unusual circumstances which may jeopardize the loan or the Bank's relationship with the borrower, and generally serving as the Bank's primary contact with the borrower.

A set of application forms should usually be sent to borrowers with seasonal loans at least 60 days prior to the expiration date of the loan. A set of application forms will include an Application for Loan (Form BC 126), Resolution of the Board of Directors (Form BC 126-C), and a Corporate Certificate (Form BC 126-B for repeat borrowers and Form BC 126-D for new borrowers). Sample forms are attached in the Appendix. More than one type of loan may be applied for by the use of one set of application forms.

Credit Department personnel will be assigned to applicants or borrowers by the Vice President-Credit. The account will then remain the responsibility of the person so designated until it has been reassigned. Applications should be reviewed for adequacy upon receipt. Generally defective or incomplete application papers should be returned to the borrower immediately for correction in order that the attorney's opinion can be completed before the application is presented to the Loan Committee. However, if the discrepancy is such that it will not hinder completion of the attorney's opinion, the application paper(s) may be returned to the borrower for completion following approval of a loan commitment by the Loan Committee.

Increases in applications and applications for increases in existing loans may be accepted by letter or verbally and need not be accompanied by the usual Application for Loan and Corporate Certificate if received within 12 months of a previous, complete application. Likewise, applications for a different type of loan may be accepted by letter or verbally, and need not be accompanied by the usual Application for Loan form and Corporate Certificate if received within 90 days of a previous, complete application. In either case, a replacement Resolution of the Board of Directors will be needed to support the increased amount.

B. CREDIT ANALYSIS AND REPORTING PROCEDURES

1. General:

All loan actions by the Loan Committee shall be taken on the basis of information presented within a written memorandum, credit report or supplemental credit report. Such reports normally shall be prepared prior to a loan commitment action by the Loan Committee. In unusual cases where it is necessary to make a commitment without a written report, a post-commitment written report shall be prepared containing the relevant information upon which the commitment was considered and made.

In order to facilitate reading and understanding credit report information, such reports should utilize a consistent, uniform format to the extent appropriate to the circumstances.

The credit report shall contain sufficient information to allow members of the Loan Committee and, where appropriate, representatives of the Central Bank for Cooperatives and Farm Credit Administration, to make independent judgments relative to credit report recommendations. In general, the amount of time, effort and thoroughness of credit analysis shall vary depending on such factors as:

a. Loan amount

b. Loan quality

c. Loan complexity

d. Bank's experience with applicant - An original application requires more analytical detail than a supplemental. An applicant that has not borrowed from the Bank for some time requires more analysis than one upon which a credit report has recently been written.

e. Type of applicant - An applicant with an operation of a type unusual or unfamiliar to Bank personnel requires a more exhaustive analysis than one of a type commonly handled. Material prepared by outside consultants should be made part of the credit report whenever necessary for adequate analysis.

f. Special handling requirements - Additional credit report detail is needed on loans requiring Farm Credit Administration's approval since their representatives may not have access to background information available to Bank personnel.

2. Credit Reports:

The primary purpose of a credit report is to summarize, communicate and document the information needed for a loan decision. A credit report should be prepared in connection with most loan applications. An exception may be made if there is a recent credit report on file and there have been no major changes. In such cases the application may be presented by a memorandum supported by the last credit report.

A total credit report will be in two parts - a "Credit Report" (format shown in Exhibit 1) which presents the application and current supporting information and a "Permanent Report" (format shown in Exhibit 2) which covers matters that usually do not change much from year to year. The current credit report should make reference to the permanent report and any significant changes since the permanent report was prepared. The total credit report and permanent report combined should be self-contained to the extent that representatives of the Central Bank for Cooperatives, Farm Credit Administration, and others not closely associated with the association will have information and background necessary for a decision.

3. Other Memoranda:

a. Amendments - A request for an amendment in loan terms should be presented by a memorandum prepared by the assigned business analyst.

Normally changes in loan agreement provisions should be handled by an amendment to the existing loan agreement.

b. Miscellaneous - Other actions which require analysis by the Credit Department need to be initiated by a memorandum setting forth the necessary information.

C. BORROWER RELATIONS

In addition to the handling of various loan servicing activities, analysts assigned to specific borrower accounts shall have a major responsibility to develop and maintain good borrower relations. Inasmuch as such analysts usually serve as the Bank's primary contact with the borrower, a two-way communication liaison role is essential to good Bank-borrower relations.

D. NEW BUSINESS DEVELOPMENT

The following shall be developed and maintained by the Credit Department:

1. Names and addresses of operating cooperatives in the District and a record of new business development contacts made by Bank representatives.

2. A separate "Loan Inquiry" file containing information regarding inquiries from potential borrowers and the Bank's response.

3. A separate "New Cooperative Organization Inquiry" file containing information regarding inquiries from groups desiring information or assistance in forming a cooperative.

E. HANDLING OF SPECIAL ATTENTION LOANS

In order for the credit staff to have an effective format to deal with loans needing special attention and to provide the association with a detailed time-framed program for seeking a solution to the problems identified, the following procedure is to be used:

1. A Special Attention Loan List will be maintained by the Vice President-Credit and Business Development identifying loans which have serious credit weaknesses. This list will be reviewed and updated at the monthly credit staff meeting at which time any changes in the condition or status of a listed loan will be discussed in detail. During the week following the credit staff meeting, the Loan Committee will review the list and during the succeeding month may add loans to the list as it reviews the respective loan proposals.

   Loans in this special attention category are to have significant credit weaknesses including one or more of the following:

   a. Inadequate working capital;

   b. History of low earnings or recent substantial decrease in earnings;

   c. Management change, or poor management;

   d. Inventory or receivable problems;

   e. Problems in providing normal statements or reports to the Bank;

f. Cash flow problems or delinquency with major creditors;

g. Highly leveraged position;

h. Recent significant change in sales; and

i. Evidence of speculation in either marketing commodity or supply inventory.

Any loan of the Bank having such weaknesses should be considered for inclusion on this Special Attention Loan list. Efforts should be made, however, to keep the number of loans on this list to a minimum so that the credit staff can maximize its efforts on those accounts which need priority attention.

2. When a loan is added to the Special Attention Loan List for the first time, a meeting will be requested with the association's management, and in most cases, the board within 30 days after the loan has been put on the Special Attention Loan List. This meeting should be attended by the business analyst handling the account and a junior or senior officer. The following areas will be discussed during that meeting:

a. Evaluation of problem;

b. Discussion of alternatives for solution of the problem, or problems;

c. Determination of a format and timetable for corrective action.

Sufficient information will have been gathered prior to this meeting by the Bank staff to determine the format for the meeting and prepare any necessary comparisons, ratios, charts and graphs, or other information to assist the manager and/or Board in identification of the problem and in determination of a solution to the problem. After the meeting with the association, the business analyst will prepare a report for the Loan Committee which will cover the following areas:

a. The extent of the problem or problems which caused the loan to be classified as a special attention loan will be explained including the extent of the impairment of the financial condition and/or the potential loss involved.

b. The cause of the problem will be identified and discussed;

c. A program for corrective action will be described with specific dates for completion of each corrective step proposed. Ideally, this program will have been presented to the board of directors, or determined during the meeting with the association so as to have had the concurrence of the manager and board. An example of a proposed time format is attached as Exhibit "A".

4. The program will then be presented by the analyst to the Loan Committee and the Loan Committee will have the responsibility of reviewing the program and implementing any follow-through action.

5. An outline of the program including each corrective step with appropriate time frames will be described in a letter to be sent to the board thereby reinforcing the Bank's concern about the problems involved and reconfirming deadlines of action to be taken by the association.

6. The Vice President-Credit and Business Development will maintain a master calendar for all loans included in the special attention loan category which will show all actions required by the program submitted to the Loan Committee and the respective deadlines for each step therein. These programs will be reviewed at least monthly with the credit staff, or more often as necessary.

7. Unless specifically waived by the Loan Committee, all special attention loans will have the following requirements:

   a. Monthly financial statements; and

   b. Monthly or more frequent collateral reports.

8. In order to facilitate the action program with the association, it may be suggested at the meeting with the board and management that a committee of the board be formed to work with the Bank determining and implementing the solution to the financial problems of the association.

9. If at any time a loan is not responsive to these special loan handling procedures or otherwise merits more concentrated "problem" loan administration, then the matter should be brought to the attention of Loan Committee and the Loan Closing and Services Department.

CREDIT REPORT FORMAT

Appl. No.
Date

TO: Loan Committee

FROM: (name of analyst)

APPLICANT: (name and address of association)

PRODUCT OR SERVICE AND RECENT LOAN HISTORY

1. Brief description of services provided, products handled, and in some cases, the area or areas served.

2. Schedule summarizing recent loans and those now in effect showing loan number, date, amount of commitment, amount brought forward, advances, peaks, lows (seasonal only) and current outstanding balance.

Generally, the low shown for a seasonal loan should be the low to date for the season being financed by the loan. This schedule should be followed by brief comments, as appropriate, concerning such things as the period during which the seasonal loan was zeroed out, reasons for a carryover in a seasonal loan or an increase in a carryover, payment status of the term loan, security provisions for the term loan (if such will not be presented later), etc.

REFERENCE TO PERMANENT REPORT

The following statement should be used in referring to the Permanent Report:

This report is supplemented by a Permanent Report dated _____ which contains information concerning this association that does not ordinarily change much from year to year. The Permanent Report has been reviewed and remains correct in all material respects except the following:

AMOUNT APPLIED FOR AND PURPOSE

1. Description of amounts applied for and purposes for which funds will be used.

2. Comments as required regarding:

   a. Reasons for a difference in the loan proposed from that applied for on the written application
   b. Reasons for an increase in a seasonal line
   c. The adequacy of the seasonal line to do the job.

3. Schedules listing expenditures should not only be structured to convey information to the Loan Committee, but should also be designed so they can be used for, or at least provide, a meaningful basis for the "Schedule of Expenditures Report" which will be required of the borrower. The "breakdown" to be used in the "Schedule of Expenditures Report"

should be coordinated with the borrower when possible.

4. For term loans, areas to be considered and commented on may include:

   a. Whether major construction projects are covered by firm contracts
   b. Plans regarding performance bonds
   c. Timing of capital expenditures and expected completion dates
   d. Need for the facility and expected benefits
   e. Whether all property is covered by existing mortgage
   f. Whether new property is deeded or leased
   g. Who designed major construction
   h. Site preparation and testing
   i. Whether used equipment is included in purchases.

Other information that would be included in this section when appropriate:

a. Schedule showing all loans and commitments to this borrower by the Bank now in effect and being proposed
b. Indication of a participation loan
c. Indication of loans requiring prior or post approval by Farm Credit Administration
d. Description of other lines of credit, if any, and the terms of such lines
e. A reminder if special handling is required; for example, when a member of the District Board, Central Bank or Federal Farm Credit Board is also an officer, employee, or Board member of the association
f. Whether other creditors are to be paid, the amounts, plans, and other pertinent information
g. When other creditors are involved, who holds the insurance policies
h. Comment regarding whether filing to cover "equipment of the type used in farming" is necessary.

RECOMMENDATIONS

This section should include a summary of recommendations regarding loan terms and related matters including, as appropriate:

1. Amounts and types of loans
2. Security
3. Advance limits
4. Repayment amounts and dates and commitment expiration dates
5. Requirements for performance bonds, contracts, mortgagee title insurance, working capital, and other conditions
6. Waiver if collateral reports are not to be required
7. Outstanding balance clause amount for new or supplemental mortgages
8. Clearance for planned equity redemptions, facility expenditures, etc.
9. Waiver if filing to cover "equipment of the type used in farming" is not necessary
10. Requirements regarding liens of other creditors
11. Review date if considered necessary
12. Special provisions.

Unless stated otherwise, it will be understood that the loan agreement will also include the terms in the standard printed loan agreement for the type of loan under consideration.

SECURITY

1. Describe the book and appraised values of the recommended fixed asset security.
2. Describe exclusions.
3. Show the percent the proposed and existing term loans are of the book and appraised values of the recommended security. If a portion of the seasonal loan rests on term security, this portion should be included in the foregoing percentage.
4. Indicate values of secondary security. If equities in other cooperatives are used as secondary security, indicate whether the issuing company has waived its rights of offset.
5. Describe existing mortgages as to date, outstanding balance clause amount, and whether existing mortgages cover all of the recommended security.
6. If a new or supplemental mortgage is needed, indicate if it is to cover deeded or leased land, and whether there are any existing liens. If property is leased, give name of the owner. If the owner is other than a major railroad, consider (and make appropriate recommendation in Recommendations section) the need to obtain a lien search against the owner and the need to require that the lease be recorded.
7. Provide information to support recommendations for mortgagee title insurance.

   Total amount of mortgagee title insurance required =

   $$\text{Est. total security appraisal value} \times \frac{\text{Total loan amount}}{\text{Est. dollar appraisal value of real property security}}$$

8. Provide information to support recommendation for outstanding balance clause.
9. If used equipment is being obtained, indicate if a lien search against the vendor has or should be made. If the association has obtained such a search, copy of its search may do. If not, consideration should be given to whether Bank should request a lien search. Generally, a search should be required unless the used equipment is only a nominal part of the total security.
10. Field investigation should include a check on procedures and values used in reporting collateral.
11. Collateral report format should be coordinated with the borrower.
12. Indicate whether pool products pledged as security are covered by a grower contract giving adequate authority to pledge the products covered and whether substantially all growers have signed the contract.

FINANCIAL CONDITION

Comparative financial statements prepared as indicated on the instruction cards attached and identified as Exhibits _____ through _____ should be attached to each credit report.

Comments should be made as required in the circumstances on balance sheet accounts and in some cases on the figures on Exhibit "B" to the credit report (the net worth reconciliation -- source and use figures). Only accounts or changes of major significance require comments. Some of the more common comments and concerns would cover:

1. Receivables

   a. Comparative b[illegible] down
   b. Comparative aging or number of days' sales covered, or both
   c. Description of credit policy, both written and practiced
   d. Adequacy of reserve for bad debts
   e. Bad debt experience
   f. Current condition of growers in the area. Have they had a particularly bad year?

2. Inventories

   a. Comparative breakdown
   b. Basis of valuation, i.e. cost, market or other basis
   c. Position -- Is level or number satisfactory?
   d. Whether costs that must be paid have been reserved when inventories have been valued at market
   e. Obsolescence or dead wood
   f. Inventory control procedures
   g. Inventory turnover.

3. Net Facilities

   a. Additions made or planned
   b. Adequacy of the facilities
   c. Condition of the facilities.

4. Other Notes and Contracts

   a. Reasons for
   b. Repayment terms
   c. Security for
   d. Whether clearance is to be required or is to be waived
   e. Business analyst should make it a practice to review UCC information requests before credit examinations and discuss indicated liens of other creditors with association. Other liens are to be discouraged. If a lien of a creditor other than this Bank is to be tolerated, the credit report should reflect the reasons and need for this lien, the value of the property covered, and a recommendation regarding clear nce or waiver of clearance.

5. Due Growers

   a. Indicate what account consists of
   b. Indicate expected returns on pools and comparison with prior years, area cash market, etc.
   c. Whether "capital retains" from the pool or pools covered are still in this figure or are in net worth.

6. Net Worth

   a. Revolving plans and program
   b. Adequacy of revolving program
   c. Whether approval of a planned retirement is being requested or has already been approved
   d. Adequacy of capital generation to fund satisfactory revolving program
   e. Describe adjustments shown on the net worth reconciliation if significant in amount.
   f. Terms and conditions of capital stock and equities are normally described on Exhibit "B" of the comparative financial statements. Bank should have sample copies on file of certificates or other writings (including letters of notification).
   g. Due-dated capital should be shown in the term liabilities section of the balance sheet and should be called to the Loan Committee's attention.

CONTINGENT LIABILITIES

1. Describe.
2. If no contingent liabilities, so state.
3. Expected results of pending lawsuits or damage claims
4. Adequacy of liability insurance protection.

WORKING CAPITAL

1. Projection to the next harvest, next fiscal year-end, or both
2. Comparison with prior years
3. Capital flow planning. Borrowers should be encouraged to project capital flows ahead five years or so and to update their projections at least annually. A format for making such projections is attached as Exhibit _____.
4. Comment as to the adequacy of working capital.

CURRENT OPERATIONS

1. Expected results of current year's operations, taking care to indicate the amount of patronage refunds included in net margin figure
2. Expected tonnage or volume
3. Expected pool returns and comparison with prior years, area cash market, etc. (if not already covered under "Due Growers")
4. Significant developments that might bear on association's operations; for example, crop failure, closing down of major local industry, adequacy of irrigation water, pollution control requirements, changes in government regulations, etc.
5. Industry trends
6. Member support
7. Present and future needs by members for the goods and services provided. Possible need to change "goods and service" mix in the future.
8. New competition.

INSURANCE

1. Amounts and types of coverage for:

    a. Buildings and equipment
    b. Inventories
    c. Product, automobile, operations and premises liability
    d. Employee dishonesty
    e. Business interruption

2. Building and equipment insurance, cash value or replacement cost
3. Frequency of insurance appraisals
4. Comment as to adequacy of insurance coverage.

ATTORNEY'S OPINION

1. Statement as to attorney's findings
2. Report any qualifying statements made by attorney in his opinion and make recommendations where required.

SOURCE OF INFORMATION

1. Sources of information and date(s) of visit or recent telephone or other contacts.

MANAGEMENT

1. Manager
2. Age (approximation if exact age is not known)
3. Years in position
4. Comments -- If management continues to be satisfactory, then omit No. 4. (This section will be used to discuss any changes or problem areas appropriate, including those listed below.)

    a. Comments on any changes in management during the past year including reasons for the change and background and experience of the new manager
    b. Comments on management ability if operating results or observations would indicate that management is not or may not be able to perform adequately
    c. If present management is anticipating retirement in the near future, comment on the availability or lack of potential management within the organization and, if possible, the age and experience of the probable replacement.
    d. Observations concerning any problems between the board and management
    e. Any dissensions or problems with the board.

PERMANENT REPORT

Exhibit 2
Section I

Prepared by:

HISTORY: Date of incorporation -
Mergers, acquisitions or major additions -

This section includes the date of incorporation and any significant events that have occurred since that date, including but not limited to major construction projects, mergers, acquisitions, changes in operations, etc.

These events are listed chronologically and each item to be preceeded by the year in which the event occurred. If available, any construction project also to include the price of the project.

OPERATIONS: Type of service or product -
Location of facilities -
Major supplier, marketing affiliate or agency -
Terrority served -
Percent of volume in area -
Type of agriculture -
Method of operation -
If pool, timing of payments -
Brand names -
Marketing contract - ; Cancellation provisions -

TAX STATUS: Exempt -
Compliance with 1962 Revenue Act -
Method of notification to members -

COOPERATIVE ASPECTS:
Corporate paper are adequate -
Provision for eliminating voting rights of inactive members -
Voting member limited to one vote -
or limit of 10% stock dividend -
Voting by proxy allowed -
Voting by mail allowed -

CAPITAL: Type Voting Div. (%) Cum. Revolved Estates Due Date Sour

History and Status of Capital Retirement Program

Date Amount Year % of Net Worth

The first part of the capital section lists each type of net worth on capital and indicated whether each type of capital has voting rights, pays dividends, is revolved or paid to estates, is due dated, and also how that type of capital is provided.

The second section is intended to show the effectiveness of the association's capital retirement program and includes a summary of the association's recent year's history of repaying capital.

It is expected that these sections will not only show the association's commitment to maintaining an annual revolve, but also will indicate how quickly the capital is turning over. It is expected that after the permanent reports have been updated, this consolidated comparative data will provide useful information concerned in the normal percentage of revolving capital retired each year per industry.

- Length of term -
- Limitation of no. of years -

Past & Present Management Name Years in Position

AMENDED BY-LAWS

OF

GROWERS CREDIT CORPORATION

ARTICLE I

OFFICES

The principal office of the corporation in the State of Washington shall be located in the City of Wenatchee, County of Chelan. The corporation may have such other offices, either within or without the State of Washington, as the Board of Directors may designate or as the business of the corporation may require from time to time.

The registered office of the corporation required by the Washington Business Corporation Act to be maintained in the State of Washington may be, but need not be, identical with the principal office in the State of Washington, and the address of the registered office may be changed from time to time by the Board of Directors.

ARTICLE II

SHAREHOLDERS

Section 1. ANNUAL MEETING. The annual meeting of the shareholders shall be held on the first Tuesday in the month of February in each year, beginning with the year 1971, at the hour of 10:00 o'clock A.M., for the purpose of electing Directors and for the transaction of such other business as may come before the meeting. If the day fixed for the annual meeting shall be a legal holiday in the State of Washington, such meeting shall be held on the next succeeding business day. If the election of Directors shall not be held on the day designated herein or any annual meeting of the shareholders, or at any adjournment thereof, the Board of Directors shall cause the election to be held at a special meeting of the shareholders as soon thereafter as conveniently may be.

Section 2. SPECIAL MEETINGS. Special meetings of the shareholders, for any purpose or purposes, unless otherwise prescribed by statute, may be called by the President or by the Board of Directors, and shall be called by the President at the request of the holders of not less than 10 per cent of all outstanding shares of the corporation entitled to vote at the meeting.

Section 3. PLACE OF MEETING. The Board of Directors may designate any place, either within or without the State of Washington, as the place of meeting for any annual meeting or for any special meeting called by the Board of Directors. A waiver of notice signed by all shareholders entitled to vote at a meeting may designate any place, either within or without the State of Washington, as the place for the holding of such meeting. If no designation is made, or if a special meeting be otherwise called, the place of meeting shall be the principal office of the corporation in the State of Washington.

Section 4. NOTICE OF MEETING. Written notice stating the place, day and hour of the meeting, and in case of a special meeting, the purpose or purposes for which the meeting is called, shall, unless otherwise prescribed by statute, be delivered not less than ten, nor more than fifty days before the date of the meeting, either personally or by mail, by or at the direction of the President, or the Secretary,

or the persons calling the meeting, to each shareholder of record entitled to vote at such meeting. If mailed, such notice shall be deemed to be delivered when deposited in the United States mail, addressed to the shareholder at his address as it appears on the stock transfer books of the corporation, with postage thereon prepaid.

Section 5. CLOSING OF TRANSFER BOOKS OR FIXING OF RECORD DATE. For the purpose of determining shareholders entitled to notice of or to vote at any meeting of shareholders or any adjournment thereof, or shareholders entitled to receive payment of any dividend ,or in order to make a determination of shareholders for any other proper purpose, the Board of Directors of the corporation may provide that the stock transfer books shall be closed for a stated period, but not to exceed, in any case, fift days. If the stock transfer books shall be closed for the purpose of determining shareholders entitled to notice of or to vote at a meeting of shareholders, such books shall be closed for at least ten days immediatel preceding such meeting. In lieu of closing the stock transfer books, the Board of Directors may fix in advance a date as the record date for any such determination of shareholders, such date in any case to be not more than fifty days, and, in case of a meeting of shareholders, not less than ten days prior to the date on which the particular action, requiring such determination of shareholders, is to be taken. If the shareholders entitled to notice of or to vote at a meeting of shareholders, or shareholders entitled to receive payment of a dividend, the date on which notice of the meeting is mailed or the date on which the resolution of the Board of Directors declaring such dividend is adopted, as the case may be, shall be the record date for such determination of shareholders. When a determination of shareholders entitled to vote at any meeting of shareholders has been made as provided in this section, such determination shall apply to any adjournment thereof.

Section 6. VOTING LISTS. The officer or agent having charge of the stock transfer books for shares of the corporation shall make a complete list of the shareholders entitled to vote at each meeting of shareholders or any adjournment thereof, arranged in alphabetical order, with the address of and the number of shares held by each. Such list shall be produced and kept open at the time and place of the meeting and shall be subject to the inspection of any shareholder during the whole time of the meeting for the purposes thereof.

Section 7. QUORUM. A majority of the outstanding shareholders of the corporation entitled to vote, represented in person or by proxy, shall constitute a quorum at a meeting of shareholders. If less than a majority of the outstanding shares are represented at a meeting, a majority of the shares so represented may adjourn the meeting from time to time without further notice. At such adjourned meeting at which a quorum shall be present or represented, any business may be transacted which might have been transacted at the meeting as originally noticed. The shareholders present at a duly organized meeting may continue to transact business until adjournment, notwithstanding the withdrawal of enough shareholders to leave less than a quorum.

Section 8. PROXIES. At all meetings of shareholders, a shareholder may vote in person or by proxy executed in writing by the shareholder or by his duly authorized attorney in fact. Such proxy shall be filed with the Secretary of the corporation before or at the time of the meeting. No proxy shall be valid after eleven months from the date of its execution, unless otherwise provided in the proxy.

Section 9. VOTING RESTRICTIONS. No shareholder shall be entitled to more than one vote upon each matter submitted to a vote at a meeting of shareholders, regardless of the number of shares of stock in this corporation which such shareholder may own. At each election

for Directors, every shareholder entitled to vote at such election shall have the right to one vote, in person or by proxy, for each director position then being voted upon, but he shall not be entitled to cumulate his votes.

Section 10. VOTER QUALIFICATIONS. In order to vote, a shareholder must at the time of such vote be a current bonafide producer of agricultural and horticultural products within the State of Washington or an association of such producers, and, in addition thereto, must be a current patron of this corporation. In the event that a shareholder shall fail to qualify as a current producer and patron as herein required, such shareholder shall, during such non-qualifying period, have no rights in the management of affairs of the corporation other than the right to participate, in accordance with the law, in case of dissolution, and to receive the par value or book value of such stock, whichever is less, in the event of a sale or transfer of such stock, as provided in the Articles of Incorporation.

Section 11. SHAREHOLDER WARRANTY. By subscribing or applying for, or becoming a holder and owner of record of the common stock of this corporation, each subscriber, applicant or owner or holder of record or acceptor expressly warrants that he is, or will at once become and continue to be eligible to be a common shareholder of this corporation, and expressly agrees that if and when the Board of Directors finds him to be ineligible as a shareholder, that during the period of such ineligibility he shall have no voice or right as a shareholder in the management of the affairs of this corporation and all such management shall be determined and conducted as though such subscription or application for, or issuance of, such stock has never been made.

Section 12. VOTING OF SHARES BY CERTAIN HOLDERS. Shares standing in the name of another corporation may be voted by such officer, agent or proxy as the By-Laws of such corporation may prescribe, or in the absence of such provision, as the Board of Directors of such corporation may determine.

Shares held by an administrator, executor, guardian or conservator may be voted by him, either in person or by proxy, without a transfer of such shares into his name. Shares standing in the name of a trustee may be voted by him, either in person or by proxy, but no trustee shall be entitled to vote shares hold by him without a transfer of such shares into his name.

Section 13. INFORMAL ACTION BY SHAREHOLDERS. Any action required to be taken at a meeting of the shareholders, or any action which may be taken at a meeting of the shareholders, may be taken without a meeting if a consent in writing, setting forth the action so taken, shall be signed by all of the shareholders entitled to vote with respect to the subject matter thereof.

Section 14. COPIES OF ARTICLES AND BY-LAWS. Every shareholder shall be provided a copy of the corporate articles and by-laws upon first becoming a shareholder. Copies of all amendments to the Articles of Incorporation and By-Laws shall be distributed to all shareholders upon the adoption of such amendments.

ARTICLE III

BOARD OF DIRECTORS

Section 1. GENERAL POWERS. The business and affairs of the corporation shall be managed by its Board of Directors.

Section 2. NUMBER AND TENURE. The number of directors of the corporation shall be seven. There shall be one director who is a resident of and/or a producer of agricultural and horticultural products in Chelan County, one director who is a resident of and/or a producer of agricultural and horticultural products in Douglas County, and one director who is a resident of and/or a producer of agricultural and horticultural products in Okanogan County, each of whom shall hold office for a term of three years and until his successor shall have been elected and qualified. The remaining four directors shall be directors at large and each shall hold office for a term of two years and until his successor shall have been elected and qualified. The names and addresses of the directors in office as of the date of these restated amended by-laws, that is February 20, 1973, are as follows:

(1) Director at Large, Position No. 1, now filled by Stanton H. Cain whose address is P.O. Box 126, Malott, Washington 98829.

(2) Director at Large, Position No. 2, now filled by Carroll P. Rank whose address is P.O. Box 243, Cashmere, Washington 98815.

(3) Director at Large, Position No. 3, now filled by Robert R. Brunner whose address is Rt. 3, Box 3197, Wenatchee, Washington 98801.

(4) Director at Large, Position No. 4, now filled by H. Leslie Carpenter whose address is Rt. 1, Box 72, Manson, Washington 98831.

(5) Chelan County Director, now filled by Robert M. Todd whose address is P.O. Box 217, Entiat, Washington 98822.

(6) Douglas County Director, now filled by William G. Stewart whose address is 2480-4th Street SE, East Wenatchee, Washington 98801.

(7) Okanogan County Director, now filled by Leonard R. Hutchinson whose address is Rt. 1, Box 105, Tonasket, Washington 98855.

Section 3. DIRECTOR QUALIFICATIONS. Each director shall be a common shareholder of this corporation or the authorized representative of an association which is a shareholder of this corporation. All directors at the time of their election and at all times during the term of their office shall, either individually or through the associations which they represent, meet the voting restrictions and voting qualifications and stock ownership requirements imposed upon the stockholders of this corporation pursuant to its Articles of Incorporation and By-Laws.

Section 4. REGULAR MEETINGS. A regular meeting of the Board of Directors shall be held without other notice than this By-Law immediately after, and at the same place as, the annual meeting of shareholders. The Board of Directors may provide, by resolution, the time and place, either within or without the State of Washington, for the holding of additional regular meetings without other notice than such resolution.

Section 5. SPECIAL MEETINGS. Special meetings of the Board of Directors may be called by or at the request of the President or any two directors. The person or persons authorized to call special meetings of the Board of Directors may fix any place, either within or without the State of Washington, as the place for holding any special meeting of the Board of Directors called by them.

Section 6. NOTICE. Notice of any special meeting shall be given at least two days previously thereto by written notice delivered personally or mailed to each Director at his business address, or by telegram. If mailed, such notice shall be deemed to be delivered when deposited in the United States mail, so addressed, with postage thereon prepaid. If notice be given by telegram, such notice shall be deemed to be delivered when the telegram is delivered to the telegraph company. Any director may waive notice of any meeting. The attendance of a director shall constitute a waiver of notice of such meeting, except where a director attends a meeting for the express purpose of objecting to the transaction of any business because the meeting is not lawfully called or convened. Neither the business to be transacted at, nor the purpose of, any regular or special meeting of the Board of Directors need be specified in the notice or waiver of notice of such meeting.

Section 7. QUORUM. A majority of the number of Directors fixed by Section 2, of this Article III, shall constitute a quorum for the transaction of business at any meeting of the Board of Directors, but if less than such majority is present at a meeting, a majority of the directors present may adjourn the meeting from time to time without further notice.

Section 8. MANNER OF ACTING. The act of the majority of the Directors present at a meeting at which a quorum is present shall be the act of the Board of Directors.

Section 9. ACTION WITHOUT A MEETING. Any action that may be taken by the Board of Directors at a meeting may be taken without a meeting if a consent in writing, setting forth the action so to be taken, shall be signed before such action by all of the Directors.

Section 10. VACANCIES. Any vacancy occurring in the Board of Directors may be filled by the affirmative vote of a majority of the remaining directors. A director elected to fill a vacancy shall be elected to serve until the next election of directors by the shareholders. Any directorship to be filled by reason of an increase in the number of directors may be filled by election by the Board of Directors for a term of office continuing only until the next election of directors by the shareholders.

Section 11. EMPLOYMENT OF GENERAL MANAGER. The Board of Directors shall have the power to employ a general manager and such other employees as may be necessary to carry out the purposes of the corporation and to fix the compensation for such general manager and other employees. No director shall serve as general manager.

Section 12. COMPENSATION. The compensation of the director, and President of the corporation may be fixed at any annual or special meeting of the shareholders. The directors shall fix the compensation of the general manager and all other employees of the corporation.

Section 13. INDEMNIFICATION AND INSURANCE. (a) The Corporation shall indemnify each person who is or was a a Director or officer, of the corporation against any and all liability and reasonable expense that may be incurred by him in connection with or resulting from any threatened, pending or completed claim, action, suit, or proceeding whether civil, criminal, administrative or investigative, or in connection with an appeal relating thereto, in which he may become involved, as a party or otherwise, by reason of his being or having been a director or officer of the corporation, or by reason of any past or future action, taken or not taken in his capacity as such director or officer whether or not he continues to be such at the time such liability or expense is incurred, provided such person

acted in good faith and in a manner he reasonably believed to be in or not opposed to the best interests of the corporation, and, with respect to any criminal action or proceeding, he had no reasonable cause to believe that his conduct was unlawful. As used in this section, the terms "liability" and "expense" shall include but shall not be limited to, attorneys' fees, judgments, fines and amounts paid in settlement, actually and reasonably incurred by him, in connection with such action, suit or proceeding. The termination of any claim, action, suit or proceeding, whether civil or criminal, by judgment or settlement (whether with or without court approval) or conviction or upon a plea of guilty or of nolo contendere, or its equivalent, shall not create a presumption that a director or officer did not meet the standards of conduct set forth in this section.

(b) In the event of a threatened, pending or completed action or suit against a person, by or in the right of the corporation, to procure a judgment in its favor by reason of the fact that such person was or is a director or officer, of the corporation, then in such event, before indemnification shall be made the standards and qualification imposed in subparagraph (a) of this section shall be met and, in addition thereto, no indemnification shall be made in respect to any such claim, issue or matter as to which such person shall have been adjudged to be liable for negligence or misconduct in the performance of his duty to the corporation unless and only to the extent that the court in which such action or suit was brought shall determine upon application, that, despite the adjudication of liability, but in view of all circumstances of the case, such person is fairly and reasonably entitled to indemnity for such expenses which the court shall deem proper.

(c) Any such director or officer referred to in this section who has been wholly successful, on the merits or otherwise, with respect to any claim, action, suit, or proceeding of the character described herein shall be entitled to indemnification as of right. Except as provided in the preceding sentence, any indemnification hereunder shall be made only upon a determination that such is proper in the circumstances and that the standards imposed herein have been met. Such determination shall be made as follows:

(1) By the Board of Directors by a majority vote of a quorum consisting of directors who were not parties to such action, suit or proceeding, or

(2) If such a quorum is not obtainable or, even if obtainable, a quorum of disinterested directors so directs, by independent legal counsel in a written opinion, or

(3) By the shareholders of the corporation.

(d) Expense incurred with respect to any such claim, action, suit or proceeding may be advanced by the corporation prior to the final disposition thereof upon receipt of an undertaking by or on behalf of the recipient to repay such amount unless it shall ultimately be determined that he is entitled to indemnification under this section. The rights of indemnification provided in this section shall be in addition to any rights to which any person concerned may otherwise be entitled by contract or as a matter of law, and shall inure to the benefit of the heirs, executors, and administrators of any such person. The right of indemnification herein provided is secondary to any insurance possessed by a director, or officer of the corporation or by the corporation itself which covers any of the risks of loss for which indemnification is herein provided.

(e) The corporation, acting through its officers and Board of Directors, shall have the power and authority to purchase and maintain insurance on behalf of any person who is or was a director or officer of the corporation, against any liability asserted against him and incurred by him in any such capacity or arising out of his status as such whether or not the corporation would have the power to indemnify him against such liability under the provisions of this section.

ARTICLE IV

EXECUTIVE COMMITTEE

Section 1. APPOINTMENT. The Board of Directors by resolution adopted by a majority of the full board, may designate three of its members to constitute an Executive Committee. The designation of such committee and the delegation thereto of authority shall not operate to relieve the Board of Directors, or any member thereof, of any responsibility inposed by law.

Section 2. AUTHORITY. The Executive Committee, when the Board of Directors is not in session, shall have and may exercise all of the authority of the Board of Directors except to the extent, if any, that such authority shall be limited by the resolution appointing the Executive Committee and except also that the Executive Committee shall not have the authority of the Board of Directors in reference to amending the Articles of Incorporation, adopting a plan of merger or consolidation, recommending to the shareholders the sale, lease or other disposition of all or substantially all of the property and assets of the corporation otherwise than in the usual and regular course of its business, recommending to the shareholders a voluntary dissolution of the corporation or a revocation thereof, or amending the By-Laws of the corporation.

Section 3. TENURE AND QUALIFICATIONS. Each member of the Executive Committee shall hold office until the next regular annual meeting of the Board of Directors following his designation and until his successor is designated as a member of the Executive Committee and is elected and qualified.

Section 4. MEETINGS. Regular meetings of the Executive Committee may be held without notice at such times and places as the Executive Committee may fix from time to time by resolution. Special meetings of the Executive Committee may be called by any member thereof upon not less than one day's notice stating the place, date and hour of the meeting, which notice may be written or oral, and if mailed, shall be deemed to be delivered when deposited in the United States mail addressed to the member of the Executive Committee at his address. Any member of the Executive Committee may waive notice of any meeting and no notice of any meeting need be given to any member thereof who attends in person. The notice of a meeting of the Executive Committee need not state the business proposed to be transacted at the meeting.

Section 5. QUORUM. A majority of the members of the Executive Committee shall constitute a quorum for the transaction of business at any meeting thereof and action of the Executive Committee must be authorized by the affirmative vote of a majority of the members present at a meeting at which a quorum is present.

Section 6. ACTION WITHOUT A MEETING. Any action that may be taken by the Executive Committee at a meeting may be taken without a meeting if a consent in writing, setting forth the action so to be taken, shall be signed before such action by all of the members of the Executive Committee.

Section 7. VACANCIES. Any vacancy in the Executive Committee may be filled by a resolution adopted by a majority of the full Board of Directors.

Section 8. RESIGNATIONS AND REMOVAL. Any member of the Executive Committee may be removed at any time with or without cause by resolution adopted by a majority of the full Board of Directors. Any member of the Executive Committee may resign from the Executive Committee at any time by giving written notice to the President or Secretary of the corporation, and unless otherwise specified therein, the acceptance of such resignation shall not be necessary to make it effective.

Section 9. PROCEDURE. The Executive Committee shall elect a presiding officer from its members and may fix its own rules of procedure which shall not be inconsistent with these by-laws. It shall keep regular minutes of its proceedings and report the same to the Board of Directors for its information at the meeting thereof held next after the proceedings shall have been taken.

ARTICLE V

OFFICERS

Section 1. NUMBER. The officers of the corporation shall be a President, one or more Vice-Presidents (the number thereof to be determined by the Board of Directors), a Secretary, and a Treasurer, each of whom shall be elected by the Board of Directors. Such other officers and assistant officers as may be deemed necessary may be elected or appointed by the Board of Directors. Any two or more offices may be held by the same person, except the offices of President and Secretary.

Section 2. ELECTION AND TERM OF OFFICE. The officers of the corporation to be elected by the Board of Directors shall be elected annually by the Board of Directors at the first meeting of the Board of Directors held after each annual meeting of the shareholders. If the election of officers shall not be held at such meeting, such election shall be held as soon thereafter as conveniently may be. Each officer shall hold office until his successor shall have been duly elected and shall have qualified or until his death or until he shall resign or shall have been removed in the manner hereinafter provided.

Section 3. REMOVAL. Any officer or agent may be removed by the Board of Directors whenever in its judgment, the best interests of the corporation will be served thereby, but such removal shall be without prejudice to the contract rights, if any, of the person so removed. Election or appointment of an officer or agent shall not of itself create contract rights.

Section 4. VACANCIES. A vacancy in any office because of death, resignation, removal, disqualification or otherwise, may be filled by the Board of Directors for a term of office continuing only until the next election of directors by shareholders.

Section 5. BOND. The Directors may, at their discretion, require any or all officers and employees of the corporation to furnish such fidelity bond or bonds as the Directors may determine; the corporation to pay all premium charges on such bonds furnished.

Section 6. PRESIDENT. The President shall be the principal executive officer of the corporation. He shall, when present, preside at all meetings of the shareholders and of the Board of Directors. He

may sign, with the Secretary or any other proper officer of the corporation thereunto authorized by the Board of Directors, certificates for shares of the corporation, any deeds, mortgages, bonds, contracts, or other instruments which the Board of Directors has authorized to be executed, except in cases where the signing and execution thereof shall be expressly delegated by the Board of Directors or by these By-Laws to some other officer or agent of the corporation, or shall be required by law to be otherwise signed or executed; and in general shall perform all duties incident to the office of President and such other duties as may be prescribed by the Board of Directors from time to time.

Section 7. THE VICE PRESIDENT. In the absence of the President or in the event of his death, inability or refusal to act, the Vice President shall perform the duties of the President and when so acting, shall have all the powers of and be subject to all the restrictions upon the President. Any Vice President may sign, with the Secretary or an Assistant Secretary, certificates for shares of the corporation; and shall perform such other duties as from time to time may be assigned to him by the President or by the Board of Directors.

Section 8. THE SECRETARY. The Secretary shall: (a) keep the minutes of the proceedings of the shareholders and of the Board of Directors in one or more books provided for that purpose; (b) see that all notices are duly given in accordance with the provisions of these By-Laws or as required by law; (c) be custodian of the corporate records and of the seal of the corporation and see that the seal of the corporation is affixed to all documents the execution of which on behalf of the corporation under its seal is duly authorized; (d) keep a register of the post office address of each shareholder; (e) sign with the President, or a Vice President, certificates for shares of the corporation, the issuance of which shall have been authorized by resolution of the Board of Directors; (f) have general charge of the stock transfer books of the corporation; and (g) in general perform all duties incident to the office of Secretary and such other duties as from time to time may be assigned to him by the President or by the Board of Directors.

Section 9. THE TREASURER. The Treasurer shall : (a) have charge of and be responsible for all funds and securities of the corporation; (b) receive and give receipts for monies due and payable to the corporation from any source whatsoever, and deposit all such monies in the name of the corporation in such banks, trust companies or other depositaries as shall be selected in accordance with the provisions of Article VI of these By-Laws; and (c) in general perform all of the duties incident to the office of Treasurer and such other duties as from time to time may be assigned to him by the President or by the Board of Directors.

Section 10. ASSISTANT SECRETARIES AND ASSISTANT TREASURERS. The Assistant Secretaries, when authorized by the Board of Directors, may sign with the President or a Vice President certificates for shares of the corporation the issuance of which shall have been authorized by a resolution of the Board of Directors. The Assistant Treasurers shall respectively, if required by the Board of Directors, give bonds for the faithful discharge of their duties in such sums and with such sureties as the Board of Directors shall determine. The Assistant Secretaries and Assistant Treasurers, in general, shall perform such duties as shall be assigned to them by the Secretary or the Treasurer, respectively, or by the President or the Board of Directors.

Section 11. GENERAL MANAGER. The General Manager shall be the chief administrative officer of the corporation in control of all administrative functions and in general charge of all of the business of the corporation. His powers shall include the right and authority to make and deliver receipts for the payment of any indebtedness owing

and paid to the corporation and to execute valid releases of any and all security instruments or mortgage liens given to the corporation as security for such indebtedness.

ARTICLE VI

SAVINGS

Section 1. ALLOCATION OF SAVINGS. The corporation is hereby obligated to allocate to the shareholders who patronize it the net patronage savings as defined in the By-Laws (Article VI, Section 4) for each fiscal year on a patronage basis, which allocation shall be paid in whole or in part in cash, or in whole or in part in credits, as hereinafter stated. The amount allocated to each patron shareholder of the corporation and not paid in cash shall be credited to Retained Patronage Earnings in the name of such patron shareholder on the books of the corporation. All amounts so credited to any patron shareholder of the corporation shall have the same status as though the amount so credited had been paid in cash to the patron shareholder and the patron shareholder had then furnished a corresponding amount of capital to the corporation. As soon as practicable after the close of each fiscal year, a statement shall be issued to each patron shareholder showing the amount of Retained Patronage Earnings that said patron shareholder has been credited with by the corporation in that fiscal year.

Section 2. REFUNDING OF EXCESS RETAINED PATRONAGE EARNINGS. In order to further the cooperative character of this corporation, it shall refund its Retained Patronage Earnings at such time as the Board of Directors finds that the financial condition of the corporation will so permit. The Board of Directors of the corporation shall annually determine the capital requirements of the corporation and after so doing shall review the capital made available by each patron to the corporation. If the Board of Directors determines that a patron has contributed capital in excess of his proportionate share of the total capital requirement of the corporation, said excess may be refunded to the patron as funds are available. In so doing, the Board of Directors may establish priorities, based upon the percentage of excess capital, for payments to patrons who the Board determine have contributed capital in excess of their proportionate share.

Section 3. ALLOCATION OF LOSSES. Whenever a net patronage loss occurs, said loss shall be borne, insofar as possible, by patrons in the year of said loss in accordance with their respective patronage with the corporation during the year of said loss and shall be charged to said patron shareholders' capital accounts in the following manner and order:

(1) Against the Retained Patronage Earnings standing to the credit of said patron shareholder or to which he may be entitled, until such loss is satisfied in full or the Retained Patronage Earnings or other amounts to which he may be entitled, have been fully depleted.

(2) After fully depleting the Retained Patronage Earnings, the balance of the loss shall next be applied against the Reserve Fund standing to the credit of said patron shareholder or to which he may be entitled, as provided in Article VII, Section 6 of these By-Laws.

(3) If the applications set out in subsections (1) and (2) above are not sufficient to fully satisfy the loss so allocated to any patron shareholder, the balance of the loss remaining shall

be borne by the patron shareholder to whom said loss has been allocated and/or all patron shareholders of the corporation on as equitable a basis as the Board of Directors in its sole discretion finds practicable.

The principal on which this section is based is that the corporation is operating at cost and that any charge made against the Retained Patronage Earnings or any other capital funds constitutes an additional assessment to the patron shareholders to cover said deficiencies. Whenever a net non-patronage loss occurs, the corporation shall first apply said loss, to the extent allowable, in accordance with the carry back and carry forward provisions of the applicable income tax codes and regulations. Any balance remaining may be charged to the shareholders' Retained Patronage Earnings, Allocated Capital Retain or Reserve Fund as determined by the Board of Directors.

Section 4. DEFINITIONS. As used in these By-Laws the term:

(a) "Net Patronage Savings" means the excess of income directly related to loans made to borrowers less applicable expenses, as provided by the income tax codes and regulations.

(b) "Net Patronage Losses" means the excess of expenses over income directly related to loans made to borrowers as provided by the income tax codes and regulations.

(c) "Net Non-Patronage Income" means the excess of income from sources not related to loans made to borrowers less applicable expenses as provided by the income tax codes and regulations.

(d) "Net Non-Patronage Losses" means the excess of expenses over income not related to loans made to borrowers as provided by the income tax codes and regulations.

Section 5. SHAREHOLDER TAX REPORTING. Each person, firm or corporation, who hereafter becomes a shareholder in this corporation, and each shareholder of this corporation on the effective date of this By-Law who continues as a shareholder after such date, shall by such act alone, consent that the amount of any assessment for allocated capital retain and reserve fund and distribution with respect to any patronage occurring after the effective date of this By-Law which are made in written notices with respect to such assessments and/or distributions (as defined in 26 U.S.C. 1388) and which are received by said shareholder from the corporation, will be taken into account by said shareholder at their stated dollar amounts in the manner provided in 26 U.S.C. 1385 (a) in the taxable year in which such written notices with respect to such assessments and/or distributions are received by said shareholder.

Section 6. LIEN. The Retained Patronage Earnings standing to the credit of the borrower are the property of the borrower, subject to a first lien to this corporation for any indebtedness owed by the holder thereof to the corporation and dissolution provisions all as provided herein.

Section 7. CONSENT AND AUTHORIZATION. By becoming a shareholder of the corporation or continuing as a shareholder after notice of this change in its By-Laws a shareholder agrees to be bound by the Savings provisions set forth herein.

ARTICLE VII

SPECIAL FUNDS

Section 1. ALLOCATED CAPITAL RETAIN. The corporation shall establish a capital fund known as "Allocated Capital Retain". When a member first joins the corporation, he shall pay into the Allocated Capital Retain fund a per packed box amount, as established by the Board of Directors from time to time, of his average annual production for the preceding three years. In addition thereto, each patron shareholder shall each year pay into said fund an amount equal to a percentage, as established from time to time by the Board of Directors, of interest charges on loans made to him by the corporation. Funds collected shall be credited in full to a capital account maintained in the name of each patron. The funds so collected may be used as collateral for borrowing and loaning purposes by the corporation at the discretion of the Board of Directors.

Section 2. REFUNDING ALLOCATED CAPITAL RETAIN. In order to further the cooperative character of this corporation, it shall refund its Allocated Capital Retain at such time as the Board of Directors finds that the financial condition of the corporation will so permit. The Board of Directors of the corporation shall annually determine the capital requirements of the corporation and after so doing shall review the capital made available by each patron to the corporation. If the Board of Directors determines that a patron has contributed capital in excess of his proportionate share of the total capital requirement of the corporation, said excess may be refunded to the patron as funds are available. In so doing, the Board of Directors may establish priorities, based upon the percentage of excess capital, for payments to patrons who the Board determines have contributed in excess of their proportionate share.

Section 3. TRANSFER OF ALLOCATED CAPITAL RETAIN. The allocated Capital Retain standing to the credit of a patron who is not then a current borrower, may, with the prior permission of the Board of Directors, be transferred. The holder of Allocated Capital Retain shall request the secretary of the Corporation to transfer his Allocated Capital Retain.

Section 4. SALE OF ALLOCATED CAPITAL RETAIN. The Allocated Capital Retain standing to the credit of a patron who is not then a current borrower may, with the prior permission of the Board of Directors, be sold by the holder thereof.

Section 5. LIEN ON ALLOCATED CAPITAL RETAIN. Allocated Capital Retains standing to the credit of the owner thereof are the property of said owner, subject to a first lien to this corporation for any indebtedness owed by the holder thereof to the corporation, dissolution provisions and subject to the provisions set forth herein.

Section 6. RESERVE FUND. The corporation shall establish and maintain a "Reserve Fund" to be used for bad debts and for losses as set forth herein in Article VI, Section 3. The funds collected may be used as collateral for borrowing or may be loaned by the corporation to its members, all at the discretion of the Board of Directors. Each Patron shareholder shall pay into said fund an amount equal to a percentage, as established from time to time by the Board of Directors, of interest charges on loans made to him by the corporation. The funds collected shall be credited in full to a separate capital account known as the Reserve Fund maintained in the name of each patron.

Section 7. REVOLVING OF RESERVE FUND. The Reserve Funds remaining after reduction for losses as provided in Article VI, Section

3 hereof, may be revolved to patron shareholders at the discretion of the Board of Directors. Upon revolving said fund, the oldest outstanding Reserve Funds by years shall be revolved first.

Section 8. LIEN ON RESERVE FUND. The Reserve Fund standing to the credit of the borrower are the property of said borrower, subject to a first lien to this corporation for any indebtedness owed by the holder thereof to the corporation, dissolution provisions, bad debts and net patronage losses, all as provided herein.

Section 9. ACCOUNTING. The corporation shall account to its patrons for the funds collected for both Allocated Capital Retain and Reserve Funds during the corporation's fiscal year. Such accounting shall be made within eight and one-half months from the close of the fiscal year.

Section 10. CONSENT AND AUTHORIZATION. By becoming a shareholder of the corporation or continuing as a shareholder after notice of this change in its By-Laws a shareholder agrees to be bound by the Special Funds provisions set forth herein.

ARTICLE VIII

DISSOLUTION

Upon dissolution or winding up of the corporation in any manner, after paying all debts and after retiring all outstanding common stock at par, the remaining assets shall be distributed as follows: (1) all allocated Capital Retain book entry holders shall first be paid in full or pro-rata without priority at the fac value of their Capital Retain as shown on the books of the Corporation; (2) all Reserve Fund book entry holders shall next be paid in full or pro-rata without priority the face amount of their book entry as shown on the books of the Corporation; (3) the balance of all corporate assets shall next be distributed, without priority, to the holders of Retained Patronage Earnings in proportion to their respective credits thereof as shown on the books of the corporation.

ARTICLE IX

CONTRACTS, LOANS, CHECKS AND DEPOSITS

Section 1. CONTRACTS. The Board of Directors may authorize any officer or officers, agent or agents, to enter into any contract or execute and deliver any instrument in the name of and on behalf of the corporation, and such authority may be general or confined to specific instances.

Section 2. LOANS. No loans shall be contracted on behalf of the corporation and no evidences of indebtedness shall be issued in its name unless authorized by a resolution of the Board of Directors. Such authority may be general or confined to specific instances.

Section 3. CHECKS, DRAFTS, ETC. All checks, drafts or other orders for the payment of money, notes or other evidences of indebtedness issued in the name of the corporation, shall be signed by such officer or officers, agent or agents of the corporation and in such manner as shall from time to time be determined by resolution of the Board of Directors.

Section 4. DEPOSITS. All funds of the corporation not otherwise employed shall be deposited from time to time to the credit of the corporation in such banks, trust companies or other depositaries as the Board of Directors may select.

ARTICLE X

CERTIFICATES FOR SHARES AND THEIR TRANSFER

Section 1. CERTIFICATES FOR SHARES. Certificates representing shares of the corporation shall be in such form as shall be determined by the Board of Directors. Such certificates shall be signed by the President or a Vice President and by the Secretary or an Assistant Secretary and sealed with the corporate seal or a facsimile thereof. All certificates for shares shall be consecutively numbered or otherwise identified. The name and address of the person to whom the shares represented thereby are issued, with the number of shares and date of issue, shall be entered on the stock transfer book of the corporation. All certificates surrendered to the corporation for transfer shall be cancelled and no new certificate shall be issued until the former certificate for a like number of shares shall have been surrendered and cancelled; except that in case of a lost, destroyed or mutilated certificate a new one may be issued therefor upon such terms and indemnity to the corporation as the Board of Directors may prescribe.

Section 2. TRANSFER OF SHARES. No shares shall be transferred without the prior approval of the Board of Directors. Transfer of shares of the corporation shall be made only on the stock transfer books of the corporation by the holder of record thereof or by his legal representative, who shall furnish proper evidence of authority to transfer, or by his attorney thereunto authorized by power of attorney duly executed and filed with the Secretary of the corporation, and on surrender for cancellation of the certificate for such shares. The person in whose name shares stand on the books of the corporation shall be deemed by the corporation to be the owner thereof for all purposes.

ARTICLE XI

MISCELLANEOUS PROVISIONS

Section 1. FISCAL YEAR. The fiscal year of the corporation shall begin on the first day of June and end on the thirty-first day of May in each year.

Section 2. CORPORATE SEAL. The Board of Directors shall provide a corporate seal which shall be circular in form and shall have inscribed thereon the name of the corporation and the state of incorporation and the words, "Corporate Seal".

Section 3. WAIVER OF NOTICE. Whenever any notice is required to be given to any shareholder or director of the corporation under the provisions of these By-Laws or under the provisions of the Articles of Incorporation or under the provisions of the Washington Business Corporation Act, a waiver thereof in writing signed by the person or persons entitled to such notice, whether before or after the time stated therein, shall be deemed equivalent to the giving of such notice.

ARTICLE XII

AMENDMENTS

These By-Laws may be altered, amended or repealed and new By-Laws may be adopted by the shareholders at any regular or special meeting of the shareholders.

Alaska Fisheries Development Corporation (Informational)

BOX 969
CORDOVA, ALASKA 99574
(907) 424-3116

March 13, 1978

The Honorable Terry Gardiner
House of Representatives
State Capitol Building
Juneau, Alaska 99811

Dear Representative Gardiner,

The Alaska Fisheries Development Corporation (Corporation) is a not-for-profit Alaska corporation recently formed by members of the Alaska fishing industry. The organization has been carefully structured so that its voting membership will equitably reflect both the harvesting and the processing sectors of the industry. Since December 3, 1977, a representative group of fishermen and processors has worked cooperatively to both form the Corporation and to draft a comprehensive bottomfish proposal which would win industry's support. Both goals have been realized.

Though many factors have encouraged this promising effort on the part of historically opposed segments of the industry, the most persuasive has been the promise of 2.7 million dollars in federal funding which the industry was led to believe would be available from Saltonstall-Kennedy Fund monies for the development of the Alaska bottomfish industry. Because it was necessary to have a viable legal entity which could receive and manage such monies and programs, the industry was compelled to coordinate its efforts and form the corporation. The current bottomfish proposal is the first of the research and development projects which the Corporation anticipates it will undertake.

Though early indications from NMFS and NOAA are encouraging the Corporation has been informally advised that contrary to earlier agency assurances the full 2.7 million dollars is not available for Alaska. Concurrently a hard look is being taken at this somewhat surprising cooperative effort on the part of industry. Skeptics lurk at every corner despite the demonstrated ability of this organization to perform well and to be flexible as well as resourceful.*

*Though timely filed with NMFS the proposal was modified by by industry at the urging of both NMFS staff and high-level NOAA personnel. The revised proposal includes the independently submitted proposal of the Aleutian-Pribloff Fisheries Cooperative additional supporting marketing and economic data and a change from a one to a two year time frame.

To date members of the industry have volunteered their time with the understanding that incurred travel, telephone and printing expenses will be reimbursed. Similar organizations in other areas of the United States have and are obtaining funding for such initial activities through federal channels. Alaska's request to NMFS for such seed money was denied, though the Alaska Sea Grant program donated $2000 for travel expenses to insure that working sessions were attended by fishermen as well as processors.

The Corporation is aggressively seeking funding with a membership drive and from donations of supportive components of the industry. Though the response has been excellent the process is a slow one. In order to maintain interest in and committment to the Corporation and the proposal and to attract future funding, it is imperative that the proposed projects are implemented as soon as the money is available. A qualified staff, a solid budget and a base of operations are all prerequisites to the successful management of the projects.

Thus the Corporation seeks a grant of $100,000 from the State of Alaska. It is essential that such funding be appropriated immedeately for two reasons: 1) to indicate to both federal agencies and the industry itself that the State endorses this activity and has confidence in the industry's ability to look after its own needs and 2) to insure that there is a management team in place as soon as possible.

It is crucial that the viability of the Corporation be insured; that it is poised to swing into action as soon as the allocation of S-K funding for Alaska is confirmed so that no momentum is lost. Delay could well result in denial of funding for 1979 and beyond, not to mention the impact that such failure would have on the development of this most important fishery.

Thank you in advance for considering this request for a grant for $100,000. Your concern and support of the fishing industry in Alaska does not go unnoticed. It is the industry of the future for Alaska.

Respectfully,

The Board of Directors
Alaska Fisheries Development
Corporation

BUDGET SUMMARY

Project		Federal Funds	Other
1.	Alaska Fisheries Development Corporation	$ 236,250	$
2.	Full-year Offshore Trawling Demonstration	1,200,000	
3.	Aleutian/Pribilof Bottomfish Development	300,000	
4.	On-board Fishermen Trainee Program	473,530	
5.	Kodiak to Chignik Bottomfish Development	300,000	
6.	Prince William Sound Bottomfish Assessment	300,850	49,000
7.	Test Fishery for Cod, Rockfish, and other Bottomfish	300,000	
8.	Longline and Trawl Fishing Demonstration in Eastern Gulf of Alaska	300,000	
9.	Technical Assistance in Adopting New Gear for Bottomfish Fishing		141,000
10.	Project Evaluation	75,000	
	Total Estimated Costs	$3,485,630	$190,000

INDUSTRY CURRENT AND PROJECTED DIRECT CONTRIBUTIONS TO THE AFDC PROGRAM

Estimated out-of-pocket expenses by individual fishermen and processors to participate in planning meetings and ADFC formation	$ 267,000
Estimated costs which will be incurred by participating fishermen in the AFDC program	1,981,000
Estimated costs which will be incurred by processors to participate in AFDC program	881,000
Total	$3,079,000

The above figures are considered conservative and do not include values or capital costs of vessels or processing facilities now in place or expected to be built.

PROJECT OUTLINES

1. Formation of non-profit corporation; application to IRS for non-profit status
2. Solicitation of member organizations and member processors
3. Review of submitted project proposals
4. Solicitation of funding for future projects
5. Appointment of executive director and setting up office in Anchorage

BUDGET SUMMARY

	Cost	Government Contribution	Industry Contribution
Start-up expenses (18 Committee members, 4 meetings)			
Printing (est.)	$ 200.00		$ 200.00
Travel		$ 2,000.00	$12,700.00
Professional services	$18,000.00		$18,000.00
Telephone (est.)	$ 500.00		$ 500.00
Note: to date memberships have contributed			$ 285.00
Executive Director (salary 12 months)	$54,000.00		
Secretary	$14,400.00		
Travel	$36,000.00		
Phone	$ 9,600.00		
Legal Fees	$12,000.00		
Office Rental and overhead (6 months)	$15,000.00		
		$236,250.00	

(Looking for state funding - $10,000.00/$15,000.00)

$101,250 is requested for FY78 and $135,000 is requested for FY79.

Re: HB 763

Dear Dr. Daniels:

Enclosed for your attention and information is a copy of the bill that came from your proposal on an Alaskan Fish Development Bank which you set forth on the meeting with the consultants in December of last year.

Please review the bill at your earliest convenience and let us know what your thoughts are on any suggested amendments or revisions.

The bill has not been scheduled for hearings to date but it is anticipated that it will be scheduled within a month's time. Your speedy reply, therefore, would be greatly appreciated.

We are very grateful for your input into this legislation during the Interim. Representative Terry Gardiner is eager to work with the Committee on the Renewable Resources aspect and the impact this bill would have on it, which is a question you might also want to consider in looking the bill over. The Committee will want it to be as good as it can be.

Thanks again for your cooperation.

Sincerely,

Susan Hunter

days while the
Dawn

A1 —

— A new idea on the question of 2ND MORTGAGES BY STATE LOAN PROGRAM.

~~[illegible]~~ State will take second mortgages, but:

1) charge a premium rate (say 12%) for any loans which start in an 2ND position. Premium rates ~~would~~ (portion above regular rate) to go into reserve fund to offset losses.

2) LIMIT STATE PARTICIPATION TO SAY 25% of total loan.

3) LIMIT AMOUNT OF ANY ONE LOAN, TO SAY $100,000.

This would make sure that

1) All losses (if any)
are properly offset by
higher rates on 2ND MTGS.

2) Chance of Loss reduced
by 1) Limiting amount and
% of participation

Would help financing
Secondary to program,
overcoming the Dept.'s
Objections.

RE: Dr. Frank Orth's recommended amendments for CSHB 763

1. Section 1, (1) - (6), replace all words of "fishermen and farmers" with "fishing businesses and agriculture" respectively.

2. Page 9, Section 41.45.210, line 25, replace the ";" with "," and add the following: "and to seafood and agriculture processors, marketers, and firms providing technical services to the agriculture and fishing industries for projects which will establish a facility within Alaska or which will establish or expand a market for the harvest of resident commercial fishermen or farmers.".

3. Page 10, Section 41.45.210, paragraphs (7) and (8) should be collapsed and combined, with lines 12 and 13 removed from paragraph (8) "relating to the development of farms, storage and processing of farm produce, livestock and machinery", with the added referral to paragraph (1) in Section 41.45.210.

LEGISLATIVE AFFAIRS AGENCY

MEMORANDUM

February 23, 1978

SUBJECT: HB 791 and HB 792

TO: The Honorable Al Osterback, Chairman
House Resources Committee

FROM: Richard G. Haggart
Research Analyst

This memorandum is in response to yesterday's request from Ms. Diann Nelson of your staff that we prepare a summary analysis of HB 791 and HB 792 which are currently before your committee.

HB 791

This bill would amend AS 38.05.180(n) relating to oil and gas conservation agreements arising from issuance of state leases. Specifically, the bill would make it mandatory for any lease containing a cooperative or unit plan of development or operation to also include a provision giving the commissioner of Natural Resources authority to regulate (for purposes of accomplishing objectives of Alaska's general oil and gas conservation statute [AS 31.05]) the rates or quantities of oil or natural gas produced from such leases. The current statute makes inclusion of such production authority in a lease-related unit plan a matter of departmental discretion.

HB 792

HB 792 would amend AS 31.05.110(o) relating to the state's oil and gas conservation authority. Specifically, the proposed legislation would:

Sec. 1. Remove the present requirement that at least 62.5% of the royalty owners approve any change or amendment in a unit operating agreement promolgated under AS 31.05.

Sec. 2. Remove the present requirement that at least 62.5% of the royalty owners approve initial unit operating agreements promolgated under AS 31.05.

AGO 547806

In essence, HB 792 reserves all decisions regarding unit operating agreements to those leaseholders with an operating interest and the Department of Natural Resources--as opposed to the present system, under which all decisions pertaining to unit agreements or their modification must be ratified by at least 62.5% of the royalty owners.

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPARTMENT OF FISH AND GAME

OFFICE OF THE COMMISSIONER

SUBPORT BUILDING - JUNEAU 99801

March 16, 1978

The Honorable Hugh Malone
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Mr. Malone:

The following information is provided in accordance with your request for use in the House Resources Committee concerning CSHB 807.

First you requested a fiscal note showing:

a. Revenues produced by the bill

b. Expenses incurred as a result of the bill

The fiscal note is enclosed, though a separate fiscal note is also being prepared by the Department of Revenue concerning this bill. We have provided them with the following base from which to project costs and estimate revenue.

Using our experience with the free punch card, our staff estimates that 100,000 cards would be required to meet the anticipated demand. Our experience also indicates that up to 50% of the cards picked up may not be used.

With a $5.00 stamp several uncertainties are present:

a. There may be initial resistance to the price, at least until the angler sees the first king salmon caught.

b. The $5.00 price will deter the casual pick-up of stamps, as happened with the free punch cards. On the other hand, stamp collectors may offset this somewhat.

c. What affect the opening of additional streams will have on attracting new anglers is unknown, but most likely will increase participation by new anglers.

d. The run strength will have a definite impact on the sale of stamps. If the word is out that lots of kings are in and are being caught, sales will be high. If the run is poor and the catch is down, sales of stamps would be reduced.

The Sport Fish staff estimates, under these uncertain conditions, that stamp sales during the first years of implementation would be near 50,000 sold.

Second, you requested an explanation of the financial aspect of the bill and a short narrative showing the relationship between the Fish and Game Fund revenues and expenditures.

The Fish and Game Fund was established to meet Federal requirements regarding State participation in the Fish and Wildlife Restoration Programs, commonly called the "D-J program" (Sport Fish) and the "P-R program" (Game). The Fish and Game Fund may be made up of the following monies:

- money received from the sale of State sport fishing and hunting licenses and special permits;
- proceeds received from the sale of furs, skins and specimens taken by predator hunters and other employees;
- money received in settlement of a claim or loss caused by damage to the fish and game resources of the State;
- money received from Federal, State, or other governmental units or from a private donor for fish and game purposes;
- money from any other source (§ 17 Art 1 Ch 94 SLA 1959)

In actuality, almost all of the funds deposited in this account have been derived from the sale of sport fishing and hunting licenses.

In 1975 and 1976 the Fish and Game Fund was depleted to the point where cash flow problems were present and difficulty occurred in covering daily expenses in spite of monthly claims for reimbursement on Federal contracts. The Sport Fish budgets in FY 1974, 1975, 1976, 1977 and 1978 were below-maintenance level budgets due to inadequate reserves in this fund. In 1977, the Division was given $539.8 in general funds by the Legislature to help cover the shortage of funds in the account and, during that session, legislation was passed to increase the resident and non-resident sport fishing, hunting and trapping licenses and certain tag fees. In the period (1974-1978), the Division restructured its programs and established and partially implemented a lay off list for permanent staff. This occurred during a period when angler pressure on the resource and the numbers of anglers entering the fishery were rapidly increasing. The Sport Fish budget and funding sources have been as follows for FY '77 and '78:

Funding Sources	FY 1977	FY 1978
Federal Receipts	$1,267.0	$1,269.9
General Funds	539.9	-0
Fish and Game Funds	1,040.6	1,816.8
	$2,847.5	$3,086.7

Anticipated revenue from license sales under the new rate during calendar 1977 was expected to replace the special General Fund allowance during 1978. This has occurred, as approximately $1,935.7 was collected in Sport Fish license sales.

In spite of the additional revenue generated by the basic license fee increase several years ago, part of the increase was committed to replace the General Fund appropriations provided the prior year, and annual increased costs of doing business attributed to inflation has effectively taken its share of the balance. In addition, increasing benefits are provided to Alaskans through the sport fishing and hunting license structure that singly appear inconsequential, but collectively do have a definite impact on revenues to the Fish and Game Fund, e.g., license exemption of those over 60 years of age with 30 years of residency and the 25¢ hardship licenses; for which there are definite indications of abuse. Therefore, there is a remaining need for the money that could be generated by the king salmon stamp. For more detail, please note the material included.

In summary, the king salmon stamp should generate approximately $200,000. Associated costs for king salmon investigations and punch card management could cost approximately $156,000, if it was available and allocated, leaving approximately $50,000 surplus to collections. It is felt that revenue from the king salmon stamp could provide the necessary funding to manage the recreational Cook Inlet king salmon stocks.

Sincerely,

for Ronald O. Skoog
Commissioner

Enclosures

Cost estimates to implement a Cook Inlet King Salmon punch card fishery program have been defined as follows:

Approximately 108,000-122,000 anglers fished in Cook Inlet in 1977 and will expend close to 200,000 man days of effort during 1979.

A. Punch Card Costs:

I. Printing costs for punch card:

100,000 @ $75/1000 = $7,500

Postage based on 40% return of 72,000 cards (includes $150 for permit) = $3,900

Subtotal $11,400

II. Distribution and Collection of Punch Card: books. One man-month Aide time, $1,500

travel costs/or Anchorage, Matanuska Valley and Kenai Peninsula areas $ 500

Subtotal $ 2,000

The following listing will provide for a release of existing funds and include the costs for providing a program to monitor and manage the punch card fishery as directed by the Board.

Lower Kenai Streams - Existing program-additional funds will ~~permit release~~ now of some permanent personnel (presently 5 permanent staff are committed to this program during the limited weekends fishery) to pursue their other assigned projects. Additional Aides will permit the continuation of this project. Additional cost is minimal - Aide time, $4,000.

Kasilof River - New opening-stratified creel census designed by a Biometrician will be used at four access points. There will be no boat census initially; Aerial boat counts are planned. Since this is a new fishery, we will evaluate the relative effort originating at each access point and, after evaluation, adjust our sampling effort accordingly. No additional equipment is needed but additional costs total $5,500.

Kenai River - Effort by the public will likely result in over 10,000 angler interviews for catch and effort data. Changes to existing programs will entail increased aerial boat counts to provide a more adequate coverage of this large river system with increased Aide time. At present, estimates of stock status (run size) is unknown. Aircraft use for these systems must rely heavily on helicopters with the increased costs associated with this method. Cost $25,000.

Deep Creek Marine Fishery - Data collected to date indicates stock seperation of Kenai Peninsula kings from Susitna fish is possible with a quite high degree of reliability. Stocks from various Kenai Peninsula streams can be separated with less reliability. A stratified creel census will be conducted with an increase in scale sampling. Cost $15,000.

Susitna Streams - Five east side and three west side streams will be open to angling. Since we are unsure of how this new fishery will react, the Division plans to place two Aides on each stream during the open periods. In addition to collecting standard data on the catch, we will be evaluating the best way to manage these fisheries. Therefore, rather than establishing a statistically valid census design, we will conduct a nearly steady census. Since many anglers will be boaters, east and west side crews will have to be closely coordinated. In all, approximately nine man months of Aide time will be required in addition to permanent staff participation. Cost $16,500.

Total Management: $66,000

With the 14 streams, plus the marine area open to king salmon angling, the Sport Fish Division will, in future years, not be able to continue to provide catch estimates as precise as they are currently providing. However, with overall management of the Susitna stocks still undecided and the obvious potential to over-harvest runs in the Kenai River, the Division is married to a long-term, expensive monitoring program if anglers are to continue to benefit from this resource.

III. Punch card data work-up:

2 man months secretarial (clerk typist)	$2,200
1 man month biologist/ biometrics.	$2,500
Telephone or mail questionnaire for cards not returned	$1,900
Subtotal	$6,600
Total	$20,000

B. Management Implications to the Program.

The punch card fishery has remained relatively small over the years. The recent rapid growth of the Cook Inlet area in numbers of anglers, has placed a budgetary impact on the limited resources available to the Sport Fish Division. In the past, a small punch card fishery was absorbed into the existing program with only minor impact. Current demands, plus the expansion contemplated, will seriously impact all programs in Cook Inlet to the eventual exclusion of all but the punch card king salmon effort. Additional revenue sources will permit continuation of critical programs involving other species and problems, while providing the necessary funds to adequately conduct a sound king salmon punch card effort.

In addition, research must be more adequately pursued to provide the necessary information on which adequate management decisions must be made. Programs which are presently identified and for which funding is not available include:

1. Stock separation - king salmon destined for upper inlet streams must be more critically determined from those stock on the Kenai Peninsula and the Kenai River. Timing, magnitude of runs, and migratory routes must be determined.

2. Early life history studies to determine seaward migration and enumeration of smolts.

3. Extensive background work is required to determine stock status on the Kenai River. A $50,000 engineering feasiblity study is in the current CIP Budget for an adult/smolt weir trap facility for this system. The Kenai River is the largest king salmon system on the Peninsula. No data exists on the magnitude of this run.

4. Pre-enhancement (stocking) evaluation will be required before (and after) artificial propagation programs can begin or their effects measured.

The research investigations outlined above will cost approximately $70,000.

MEMORANDUM

March 23, 1978

SUBJECT: King Salmon Sport Fishing Stamp
CSHB 807

TO: Representative Hugh Malone

FROM: Kenneth E. Vassar
Legislative Counsel

As you requested, I am including herein a work draft copy of a revised draft of CSHB 807 (fee stamp system for king salmon sport fishing). The draft includes a provision for the channeling of revenues received from the sale of the fee stamps to the division of sport fish within the Department of Fish and Game.

As you know, Article IX, Section 7, of the state constitution prohibits dedication of the proceeds of any state tax or license, except "when required by the federal government for state participation in federal programs." The existing provisions of AS 16.05.100 - 16.05.130, at least insofar as the dedication of fish and game licenses is concerned, is authorized under this clause of the constitution by virtue of the requirement in 16 U.S.C. 669 and 16 U.S.C. 777. These federal statutes require the dedication of state fishing and hunting license proceeds in order for the state to qualify for federal assistance. Section 777 provides in part:

> No money apportioned under this Act to any State, except as hereinafter provided, shall be expended therein until its legislature, or other State agency authorized by the State constitution to make laws governing the conservation of fish, shall have assented to the provisions of this Act and shall have passed laws for the conservation of fish, which shall include a prohibition against the diversion of license fees paid by fishermen for any other purpose than the administration of said State fish and game department...

This federal statute clearly was intended to provide for the conservation of fish (not just sport fish), and in that regard it specifically provides that license fees paid by fishermen be dedicated to the administration of the state's fish and game department. It could be argued that the provision of this redraft of CSHB 807 is in contravention of that statute by dedicating certain license fees to the administration of a division of the department, thus reducing the department's effectiveness in conserving fish in relation to fishing activities other than sport fishing. If the provision is not in compliance with the federal statute, it would clearly be prohibited under the state constitution as an unlawful dedication of the proceeds of a state license.

If you would like to replace the original draft with this one, please return the original to me; and we will provide a final draft of this version. If I can provide any further assistance, please let me know.

GENERAL INFORMATION

Purpose of the fish and wildlife restoration acts

Fish and wildlife in the United States are valuable natural resources. Recreational benefits alone dependent upon fishing and hunting each year exceed 700 million man-days. Some 33 million hunters and fishermen who enjoy this recreation annually spend more than $4 billion for the pleasure. In recognition of the value of these recreational activities to Americans and the need to conserve and restore the fish and wildlife resources that make them possible, Congress passed two important acts to assist State fish and game departments in their stewardship. These acts were intended to stimulate progressive research and management through programs financed in part by Federal grants in aid to the States.

The Federal Aid in Wildlife Restoration Act, approved September 2, 1937, and popularly known as the Pittman-Robertson Act, was designed to help check the depletion of the Nation's wildlife and to insure efficient administration in its restoration.

The Federal Aid in Sport Fish Restoration Act, approved August 9, 1950, and popularly known as the Dingell-Johnson Act, was designed to help protect and restore the Nation's sport-fishery resources.

The Acts provide that the Federal Government may pay up to 75 percent of the cost of work performed by the States on approved projects.

Sources of revenue

Funds available under the Pittman-Robertson program are derived from a manufacturers' excise tax of 11 percent on sporting arms and ammunition.

The revenue that supports the Dingell-Johnson program comes from a manufacturers' excise tax of 10 percent on fishing rods, creels, reels, and artificial lures, baits, and flies.

Moneys collected by the Treasurer of the United States during each fiscal year are authorized to be appropriated for the succeeding fiscal year for carrying out the purposes of the Acts.

Merged administration of the acts

To ensure economy, efficiency, and operational uniformity in the execution of these closely related laws, the Secretary of the Interior delegated administration of both to the Bureau of Sport Fisheries

and Wildlife of the United States Fish and Wildlife Service. Many of the procedures developed to carry out the wildlife-restoration program have been adopted wholly or in part for its fisheries counterpart. This is evident in the single set of regulations and standards and in the merged administration of the two activities.

How States qualify to participate

To participate in these programs, a State must assent to the provisions of the Dingell-Johnson and Pittman-Robertson Acts "and shall have passed laws for the conservation of fish (wildlife) which shall include a prohibition against the diversion of license fees paid by fishermen (hunters) for any other purpose than the administration of said State fish and game departments."

All States have assented to the provisions of the Acts.

Only fish and game departments or other authorities vested, under State laws, with fish and wildlife conservation functions are eligible to receive reimbursement for approved projects under the Acts.

Project initiation and accomplishment

When a State desires to obtain Federal Aid funds, its fish and game department submits a project statement to the Bureau of Sport Fisheries and Wildlife, describing the restoration work proposed and the estimated cost. If the project statement meets the requirements of the law, is substantial in character and design, and fulfills the requirements of the Secretary's Rules and Regulations, it is approved.

The State fish and game department then sends the Bureau a signed project agreement with full and detailed information, including a financial plan and sufficient supporting data to justify obligation of funds for the work described. Approval of a project agreement by the Bureau represents a contract for work mutually agreed upon between the Secretary of the Interior and the State fish and game department.

An amount is then set aside from the sum apportioned to the State, to meet the Federal Government's share of the project's cost. When the project is completed, or from time to time as work progresses, reimbursement is claimed by the State and paid by the Federal Government for work satisfactorily completed.

Types of suitable project activities

To carry out the purposes of these grant-in-aid programs—to restore populations of fish and wildlife and thereby increase hunting and fishing opportunities—it is a basic requirement that all fish and wildlife restoration projects be substantial in character and design. They may include activities of the following types:

Coordination.—Reimbursement can be approved for the planning and supervision of projects by State personnel to insure effective administration of the work.

Research.—Studies designed to develop new knowledge of fish, wildlife, or their habitats are approvable.

Surveys and inventories.—Studies designed to provide fish or wildlife management data such as current stocks, harvest information, and fisherman or hunter use can be approved.

Land purchase.—States must have adequate control of restoration units prior to the development of capital improvements or the programing of substantial investments on land units. Control may be obtained through purchase, gifts, long term easements, or leases. The costs for such acquisitions can be approved.

Land and water developments.—Development activities designed to increase hunter and fisherman use of restoration units are approvable. Examples of such work are constructing public fishing lakes, developing access areas to public hunting grounds and fishing waters, planting food and cover crops, and stocking birds, mammals, or fish where needed. A State must assure the Bureau that adequate planning and design has preceded actual work to insure substantial results.

Maintenance.—Federal Aid funds can be approved for the upkeep and repair of capital improvements acquired or constructed under Federal Aid Projects.

Management.—Work concerned with the harvest or control of wild birds, mammals, and fish as a means of managing the resource is approvable.

Activities not approvable under the Acts

There are limitations on types of conservation activities that can be funded by the Acts. Conservation programs carried out through law enforcement, information and education, and extension activities, important as they may be, cannot be financed. Congress intended that funds appropriated should be used for fact-finding and in direct action programs for restoration of sport fishes and wildlife.

Maintenance and management activities

The Acts require that projects completed under their provisions shall be maintained by the States. A State may not spend more than 25 percent of the moneys apportioned to it under either Act in any fiscal year to help defray maintenance costs.

The Pittman-Robertson Act authorizes expenditures for the management of wildlife areas and resources, but limits expenditures for such purposes to not more than 30 percent of the amount apportioned to a State in any fiscal year. No such limitation on management activities is contained in the Dingell-Johnson Act.

Ownership and administration of restored units

All lands acquired become the property of the States and are maintained and administered by them under State laws. All structures built and all equipment purchased with these cooperative funds likewise become State property.

Incidental benefits

One of the critical needs to meet today's demands for outdoor recreation is space. Some land and water areas made available through the Federal Aid in Fish and Wildlife Restoration Programs may also be suitable for other types of outdoor recreation. If the associated recreation activities interfere with the primary objectives of the Acts, Federal Aid participation in total costs must be limited to the part concerned with fish or wildlife restoration. On areas acquired and managed by Federal Aid in Fish and Wildlife Restoration funds, fishing or hunting must be given primary consideration and must not suffer by competition from other forms of outdoor recreation.

Method of allocating funds to the States

The method of allocating Pittman-Robertson funds to each State is as follows: Half in the ratio that the area of the State bears to the total area of all the States, and half in the ratio that the number of paid hunting-license holders of the State bears to the total number of paid hunting-license holders of all the States.

Dingell-Johnson money is apportioned to each State as follows: Forty percent in the ratio that the area of the State (including coastal or Great Lakes waters) bears to the total area of all the States, and sixty percent in the ratio that the number of persons holding paid licenses to fish for sport or recreation in the State bears to the number of such persons in all the States.

Under each Act an initial deduction, not to exceed 8 percent, is made for administering the Act, and deductions are made for apportionments to Guam, Puerto Rico, and the Virgin Islands.

Disposition of unused funds

If a State wishes to use funds available under the Acts, it must notify the Secretary of the Interior each year within 60 days after receiving the certification of apportionment of funds, of its desire to participate. If such notification is not made, or if a State declines to participate, or if it fails to expend or obligate its entire apportionment within the period the funds are available, such apportionments or unused balances are then available for expenditure by the Secretary in carrying out programs of the Bureau of Sport Fisheries and Wildlife. Unused Dingell-Johnson funds revert to the Bureau's fishery research program and unused Pittman-Robertson funds help pay for work conducted under the Migratory Bird Conservation Act.

Period of availability of funds

Money apportioned to any State for any fiscal year unobligated by an approved project at the close of that fiscal year is available for obligation in that State until the close of the succeeding year. For example, funds that became available for expenditure on July 1, 1965, could be obligated for work on projects as late as June 30, 1967, provided the State complied with the requirement of notifying the Secretary of the Interior of its desire to use apportioned funds and continues to be eligible.

RULES AND REGULATIONS OF THE SECRETARY OF THE INTERIOR FOR ADMINISTRATION OF THE FEDERAL AID IN FISH AND WILDLIFE RESTORATION ACTS

§ 80.1 **Definitions.** As used in this part, terms shall have the meanings ascribed in this section.

(*a*) **Federal Aid Act(s).** (1) The Act of Congress, approved September 2, 1937, entitled "An Act to provide that the United States shall aid the States in wildlife restoration projects, and for other purposes" (50 Stat. 917, as amended; 16 U.S.C., sec. 669-669i), commonly referred to as the Pittman-Robertson Act; and (2) the Act of Congress, approved August 9, 1950, entitled "An Act to provide that the United States shall aid the States in fish restoration and management projects, and for other purposes" (64 Stat. 430, as amended; 16 U.S.C., sec. 777-777k), commonly referred to as the Dingell-Johnson Act.

(*b*) **State.** Any State of the United States, the territorial areas of Guam and the Virgin Islands, and the Commonwealth of Puerto Rico.

(*c*) **State Fish and Game Department.** Any department or division, or commission, or official of a State empowered under its laws to exercise the functions ordinarily exercised by a State Fish and Game Department, the Secretary of Agriculture of Puerto Rico, or the Governor of Guam or the Virgin Islands.

(*d*) **Fish and wildlife.** (1) The term "fish" is limited to aquatic, gill breathing, vertebrate animals bearing paired fins; and (2) the term "wildlife" is limited to wild birds and wild mammals.

(*e*) **Project.** A sound and substantial undertaking with the general objective of restoring or managing fish and wildlife populations now and for the future and for the preservation and improvement of sport fishing, hunting, and related uses of these resources.

(*f*) **Project substantiality.** A substantial project is one which will provide benefits to hunters and fishermen commensurate with cost, and which is designed in accordance with accepted fish and wildlife conservation and management practices and sound engineering principles.

(*g*) ***Project segment.*** An essential part or division of a project, usually separated as a period of time, occasionally as a unit of work.

(*h*) **Land acquisition.** The acquisition of lands, waters, or interests therein, by purchase, condemnation, lease, or gift.

(*i*) **Development.** Improving areas of land or water through the construction of works and facilities, improvement of soil and water conditions, establishing or controlling vegetation and animal populations, and including operation and protection of the areas.

(*j*) **Research and surveys.** Investigations into problems of fish and wildlife management necessary for the efficient administration of these resources, including:

(1) **Research.** Studies designed to supply new information about fish and wildlife, their environment, or the development of new methods for management of these resources.

(2) **Surveys and inventories.** Routine collection of data on the abundance and utilization of fish and wildlife, or the condition of their environment, through the application of established methodology.

(*k*) **Management.** For purposes of the limitation on the use of Federal Aid in Wildlife Restoration funds for the management of wildlife areas and resources, the term includes measures and facilities for the harvest and control of wild birds and mammals.

(*l*) **Maintenance.** Repair and upkeep of capital improvements acquired or constructed under the Federal Aid Acts. A capital improvement is any successfully established improvement having an expected useful life in excess of 5 years. For the purpose of qualifying for maintenance, a project is completed when the lands have been acquired, or capital improvements have been finished.

(*m*) **Coordination.** The selection, planning, direction, supervision, and coordination of projects within a State's Federal Aid program, including the coordination of this program with other related activities of the fish and game department.

(*n*) **Administration.** As used in Section 1 of each of the Federal Aid Acts, relating to diversion of license fees, in this part of administration of a fish and game department includes all of the normal operations and functions of such an organization.

§ 80.2 **Apportionment and certification.** The Secretary shall apportion funds in the manner prescribed in the Acts, as soon as possible after receiving notification of the amounts which have become available for the purposes of the Acts. He shall promptly certify to the Secretary of the Treasury and to each State Fish and Game Department, the respective sums which he has deducted for administering and executing the Acts and the respective sums which he has apportioned to each State for the ensuing fiscal year.

322-030—65——2

§ 80.3 **Notice of desire to participate.** Any State Fish and Game Department desiring to avail itself of the benefits of the Acts, shall notify the Secretary within 60 days after it has received from him a certificate of apportionment of funds available to the State.

§ 80.4 **Period of availability of funds.** Funds are available to a State for expenditure or obligation during the fiscal year for which they are apportioned and until the close of the succeeding fiscal year. For the purpose of this section, obligation of apportioned funds occurs when a project agreement or amendment thereto is signed by the Secretary or his authorized representative.

§ 80.5 **Diversion of funds.**

(*a*) Conditions to participation in the benefits of these Acts are that a State's hunting and fishing license revenues must be used only for administration of its Fish and Game Department and Federal Aid funds granted under the Acts must be used for the purposes of approved projects. A diversion of license fees occurs when a State Fish and Game Department, through legislative action, or otherwise, loses control of the expenditure of any portion of its hunting license or sport fishing license revenues, or expends such revenues for any purpose other than the administration of the State Fish and Game Department. A diversion of Federal Aid funds occurs whenever they are applied by a State to activities or purposes which are not a part of an approved project, or when real property acquired or constructed with Federal Aid funds under these Acts passes from the control of the State Fish and Game Department or is used for unapproved purposes in a manner or to an extent which interferes with the accomplishment of project purposes as they were approved by the Secretary, or as they may be amended with the approval of the Secretary.

(*b*) When a diversion of funds occurs, a State thereby becomes ineligible to receive Federal Aid funds under the pertinent Act from the date the diversion occurs until (1) action is taken to return the administration of hunting and sport fishing license fees to the State Fish and Game Department; (2) hunting and sport fishing license fees used for purposes other than the programs of the State Fish and Game Department are replaced; (3) Federal Aid funds used for purposes or activities which are not a part of an approved project are replaced; (4) Federal-Aid financed real property which has passed from the control of the State Fish and Game Department is restored to that control, or a property of equal value at current market prices and with commensurate benefits to fish and wildlife is acquired with non-Federal funds to replace it; or (5) uses of Federal-Aid financed real property which interfere with the accomplishment of approved project objectives are ceased: *Provided, however,* That, where any projects were approved in compliance with the terms of the pertinent Act prior to diversion, and Federal Aid funds were obligated to carry out such projects, such funds shall remain available therefor until expended, without regard for the intervening period of the State's ineligibility under the Federal Aid Acts: *Provided, further,* That, when the State shall find, and the Secretary agree, that a property is no longer useful for the purposes for which it was acquired or constructed, and that it is not practical to convert the property to other fish or wildlife restoration, development, or management purposes, the State may sell the property and apply the proceeds of sale as the State Fish and Game Department and the Secretary may then agree: *Provided, further,* That, when required by this section to acquire a property with non-Federal funds, a State shall be given a reasonable time, up to 3 years, to accomplish this, before becoming ineligible to receive Federal Aid funds.

§ 80.6 **General information for the Secretary.** Before any Federal funds may be obligated for any project to be undertaken in a State, there shall be furnished to the Secretary upon his request, information regarding the laws affecting fish or wildlife conservation and the authority of the State Fish and Game Department and of local officials with respect to the establishment and maintenance of projects; and the existing provisions of the State constitution or laws relating to revenues for the protection, restoration, and management of fish or wildlife.

(*a*) **Document signature.** The Secretary of State of each State or any authorized official of the State shall certify as to the duly appointed official(s) authorized in accordance with State law to commit the State to participation under the provisions of the Acts and to sign Federal Aid project documents. The Secretary shall be advised promptly of any change made in such authorizations to sign Federal Aid documents.

(*b*) **Program information.** The Secretary may, from time to time, request and the State Fish and Game Department shall furnish information relating to the administration and maintenance of any project established under the Acts.

(*c*) **Planning-Programing-Budgeting System.** To promote the most efficient use of the financial resources of the Federal Government, Federal funds are budgeted according to a Planning-Programing-Budgeting System. In order that Federal funds for financing projects under the Federal Aid Acts may be budgeted under this system, States must furnish such plans and programs as the Secretary may require for this purpose.

§ 80.7 **Hunting and fishing license information.**

(*a*) Information concerning the number of paid hunting-license holders and the number of persons holding paid licenses to fish for sport or recreation in the State in the preceding year shall be furnished the Secretary by the Fish and Game Department of each State on or before December 15 of each year in form specified by the Secretary.

(*b*) This information shall be certified as accurate by the Director of the State Fish and Game Department. He shall furnish, when requested by the Secretary, evidence used in determining accuracy of the certification.

§ 80.8 **Activities prohibited.** Neither law enforcement nor public relation activities which are not incidental to custodial functions on an approved Federal Aid project may be financed under the programs.

§ 80.9 **Uses other than for fish and wildlife.** With respect to projects which are designed to include uses other than for fish or wildlife, reimbursement of costs from funds under the Federal Aid Acts shall be limited to the extent of the benefits to fish and wildlife resulting from such projects. Participation in maintenance of completed projects shall be similarly limited. Also, the costs of maintenance shall be appropriately shared according to the use of the area and facilities; Federal Aid funds shall not be applied to maintenance required by use other than for approved project purposes.

§ 80.10 **Minimum Federal participation.** A minimum Federal Aid participation of 10 percent in the cost of each project is required as a condition of approval.

§ 80.11 **Project statement.** A project statement shall be submitted for each proposed project which shall contain such fundamental information as the Secretary may require, in order that he may determine if a project meets the requirement of being substantial in character and design in accordance with standards set forth in the Federal Aid in Fish and Wildlife Restoration Manual. This Manual is distributed to all program participants and is available at the Washington and Regional Offices of the Bureau of Sport Fisheries and Wildlife.

§ 80.12 **Financial plan.** A budget or spending plan listing estimated expenditures by activities (land acquisition, development, research, management, maintenance, and coordination) as related to the elements of Planning, Programing, and Budgeting shall be submitted for each project in a State covering the work to be performed over a specified period.

§ 80.13 **Plans, specifications, and estimates.** The annual financial plan shall be accompanied by supporting documents listing and describing the work to be performed with the funds listed therein. These

shall be as follows: (*a*) Engineering plans, specifications, and estimates shall be submitted for major construction activities. (*b*) Plans in job description form shall be submitted for each logical and effective unit of research activity. (*c*) Work plans, listing the development activities to be carried out under the financial plan shall be submitted. (*d*) Schedules of supervisory and technical personnel to be employed and major items of equipment to be purchased shall be provided.

§ 80.14 **Project agreement.** After the Secretary shall have approved project statements and the required plans, specifications, and estimates, the mutual obligations to be undertaken by the cooperating agencies shall be evidenced by an agreement to be executed between the State Fish and Game Department and the Secretary. An agreement shall cover the financing proposed in one financial plan and the work items described in the documents supporting it.

§ 80.15 **Officials not to benefit.** No member of or delegate to Congress, or resident commissioner, shall be admitted to any share or any part agreement, made under the Federal Aid Acts, or to any benefit that may arise therefrom.

§ 80.16 **Equal employment opportunity.** Each project agreement shall contain the equal employment opportunity provision of Part III of Executive Order 11246 (30 F.R. 12319) and as it may be amended.

§ 80.17 **Submission of documents.** Papers and documents required by the Acts or by the regulations in this part shall be deemed submitted to the Secretary from the date of receipt by the Director of the Bureau of Sport Fisheries and Wildlife, or by the appropriate Regional Director of the Bureau.

§ 80.18 **Divergent opinions over project merits.** Any difference of opinion about the substantiality of a proposed project, nature of development required, or appraised value of land to be acquired, are considered by qualified representatives of the Bureau of Sport Fisheries and Wildlife and the State. Final determination in the event of continued disagreement rests with the Secretary.

§ 80.19 **Land control.** The State Fish and Game Department must control lands or waters on which improvements are made. Control may be exercised through fee title, lease, easement, or agreement. Control must be adequate for protection, maintenance, and use of the improvement throughout its useful life.

§ 80.20 **Samples of materials to be submitted.** Whenever requested, suitable samples of materials to be used in construction work shall be submitted to the Secretary by or on behalf of the State Fish and Game Department to be tested for suitability and conformity with standard specifications.

§ 80.21 **Contracts.** Contracts shall be solicited and awarded according to the laws and regulations of the State except as otherwise provided in this part.

§ 80.22 **Safety and accident prevention.** In the performance of each project, the State shall comply with all applicable Federal, State and local laws governing safety, health and sanitation. The State shall be responsible that all safeguards, safety devices, and protective equipment are provided and will take any other needed actions reasonably necessary to protect the life and health of employees on the job and the safety of the public and to protect property in connection with the performance of the work.

§ 80.23 **Statements and payrolls.** The regulations of the Secretary of Labor applicable to contractors and subcontractors (29 CFR Part 3), made pursuant to the Copeland Act, as amended, (40 U.S.C. 276c), and to aid in the enforcement of the Anti-Kickback Act (18 U.S.C. 874) are made a part of this regulation by reference. The State Fish and Game Department will comply with these regulations and any amendments or modifications thereof and the State Prime Contractor will be responsible for the submission of statements required of subcontractors thereunder. The foregoing shall apply except as the Secretary of Labor may specifically provide for reasonable limitation, variations, tolerances, and exemptions.

§ 80.24 **Prosecution of work.**

(*a*) The State Fish and Game Department shall carry all approved projects through to satisfactory completion with reasonable promptness. Projects with activities extending over a period of years may be financed from a number of succeeding apportionments as appropriate to the schedule.

(*b*) Research work shall be continuously coordinated with other studies conducted by the State and other agencies in order to avoid unnecessary duplication.

(*c*) All work shall be performed in accordance with applicable State laws.

(*d*) Appropriate and adequate means shall be employed to insure economy and efficiency in the completion of the project.

§ 80.25 **Personnel.** The State Fish and Game Department shall employ adequate and competent personnel to initiate and carry Federal Aid projects through to satisfactory completion.

§ 80.26 **Maintenance of completed projects.** The State Fish and Game Department shall exercise all reasonable means to insure permanent and proper management and maintenance of each completed acquisition or development of lands or waters.

§ 80.27 **Production of income.** Federal Aid funds shall not be spent for the purpose of producing income; e.g.,

(*a*) Producing agricultural crops in excess of those required for attracting, conserving, and enhancing wildlife populations.

(*b*) In connection with the acquisition of lands, paying for readily marketable timber or the salvage value of structures either of which are excess to project purposes when the State can secure immediate reimbursement through removal and sale.

(*c*) Purchasing transportation, construction, or farming equipment not needed for its full life on activities which are approvable for Federal Aid assistance.

(*d*) Conducting public hunting and fishing activities where user fees substantially pay for these costs.

Federal Aid funds used for such purposes shall be replaced as required under § 80.5, "Diversion of funds."

§ 80.28 **Inspection.** Supervision of each project by the State Fish and Game Department shall include adequate and continuous inspection. The project will be subject at all times to Federal inspection.

§ 80.29 **Civil rights.** Approval of each agreement shall be conditioned upon the acceptance by the United States of an assurance executed in writing by the properly authorized representative of the contracting State agency, or political division of the contracting State, supported by proper certification, guaranteeing that the program will be conducted in accordance with Title VI of the Civil Rights Act of 1964 and with the rules and regulations promulgated thereunder by the Secretary and published as 43 CFR Part 17 (filed December 3, 1964) to that end.

§ 80.30 **Federal Aid payments.** Payments under the Federal Aid Acts, including such preliminary costs and expenses as may be incurred in and about such projects, shall not be made unless the project statement, such plans, specifications, and estimates as are required by the Secretary, and all other documents that may be necessary or required in the administration of these acts, shall have first been submitted to and approved by the Secretary. Payments shall be made only by way of reimbursement for expenditures reported and certified by the State Fish and Game Departments. Payments shall be made only to the State office or official designated by the State Fish and Game Department and authorized under the laws of the State to receive public funds of the State.

(*a*) Federal Aid payments shall not exceed 75 percent of the cost of a project or the amount specified in the agreement, whichever is less: *Provided*, That Federal Aid payments to the territorial areas of Guam, the Virgin Islands and the Commonwealth of Puerto Rico

shall not exceed the amount specified in the agreement and in no event shall they be required to pay an amount which will exceed 25 percent of the cost of any project.

(*b*) Federal Aid payments on projects terminated prior to completion shall be limited to the cost of benefits produced, provided the work accomplished is substantial in character and design.

(*c*) Payments for acquired real property shall not exceed 75 percent of the fair and reasonable value of the property as approved by the Secretary.

(*d*) Overhead and preliminary costs which are clearly tied to an approved project may be reimbursed provided the claims are supported by accurate records.

§ 80.31 **Form of vouchers.** Vouchers on forms provided by the Secretary and certified as therein prescribed, showing amounts expended and the amount of Federal Aid funds claimed to be due on account thereof, shall be submitted to the Secretary by the State Fish and Game Department.

§ 80.32 **Records and reporting.** Reports shall be furnished as requested by the Secretary. Cost records shall be maintained separately for each project. In projects containing multiple activities, costs for research, acquisition, development, and coordination shall be segregated. The accounts and records maintained by the State, together with all supporting documents, shall be open at all times to the inspection of authorized representatives of the United States, and copies thereof shall be furnished when requested.

§ 80.33 **Records retention period.** The records, accounts, and supporting documents required to be maintained under the regulations in this part for each project shall be retained by the State Fish and Game Department until the expiration of 3 years after final payment of reimbursement to the State on the project.

§ 80.34 **Convict labor.** The State shall not employ any persons undergoing sentence of imprisonment at hard labor to perform work on projects approved under the Federal Aid Acts.

§ 80.35 **Water pollution control.** In the performance of each project, the State shall take necessary action to avoid pollution of water as a direct or indirect result of project activity. Water quality must be maintained at a level consistent with State water quality standards approved by the Secretary.

§ 80.36 **Purchase of equipment.** Advance approval by the Secretary is required for the purchase with Federal Aid participation of items of equipment costing in excess of $500.

§ 80.37 **Patents.** Every project agreement and subcontract, having as a purpose the conduct of experimental or research work, shall contain a patent article conforming to the President's Statement of Government Patent Policy, issued October 10, 1963, 28 F.R. 10943.

§ 80.38 **Fish and wildlife planning.** It is desirable that the expenditure of funds made available under the Federal Aid Acts be guided by long-range fish and wildlife plans. Therefore, undertakings of statewide planning for fish and wildlife are of the highest priority for Federal Aid Financing.

expended for such purpose. (Sept. 2, 1937, ch. 899, § 8, 50 Stat. 919; July 24, 1946, ch. 605, § 2, 60 Stat. 656; August 12, 1955, ch. 861, § 2, 69 Stat. 698.)

SEC. 8(a). The Secretary of the Interior is authorized to cooperate with the Commissioner of Agriculture and Commerce of Puerto Rico, the Governor of Guam, and the Governor of the Virgin Islands, in the conduct of wildlife-restoration projects, as defined in section 2 of this Act, upon such terms and conditions as he shall deem fair, just, and equitable, and is authorized to apportion to Puerto Rico, Guam, and the Virgin Islands, out of money available for apportionment under this Act, such sums as he shall determine, not exceeding $10,000 each for Puerto Rico, Guam, and the Virgin Islands, in any one year, which apportionments, when made, shall be deducted before making the apportionments to the States provided for by this Act; but the Secretary shall in no event require any of said cooperating agencies to pay an amount which will exceed 25 per centum of the cost of any project. Any unexpended or unobligated balance of any apportionment made pursuant to this section shall be available for expenditure in Puerto Rico, Guam, or the Virgin Islands, as the case may be, in the succeeding year, on any approved project, and if unexpended or unobligated at the end of such year is authorized to be made available for expenditure by the Secretary of the Interior in carrying out the provisions of the Migratory Bird Conservation Act. (Sept. 2, 1937, ch. 899, § 8(a), as added Aug. 14, 1941, ch. 367, 55 Stat. 632, and amended Aug. 9, 1950, ch. 528, 64 Stat. 369; July 2, 1956, ch. 489, § 2, 70 Stat. 473; Aug. 1, 1956, ch. 852, § 7, 70 Stat. 903; June 25, 1959, Public Law 86-70, § 15, 73 Stat. 143.)

SEC. 9. Out of the deductions set aside for administering and executing this Act and the Migratory Bird Conservation Act, the Secretary of the Interior is authorized to employ such assistants, clerks, and other persons in the city of Washington and elsewhere, to be taken from the eligible lists of the Civil Service; to rent or construct buildings outside of the city of Washington; to purchase such supplies, material, equipment, office fixtures, and apparatus; and to incur such travel and other expenses, including purchase, maintenance, and hire of passenger-carrying motor vehicles, as he may deem necessary for carrying out the purposes of this Act. (Sept. 2, 1937, ch. 899, § 9, 50 Stat. 919; 1939 Reorg. Plan No. II, § 4(f), eff. July 1, 1939, 4 F.R. 2731, 53 Stat. 1433.)

SEC. 10. The Secretary of the Interior is authorized to make rules and regulations for carrying out the provisions of this Act. (Sept. 2, 1937, ch. 899 § 10, 50 Stat. 919; 1939 Reorg. Plan No. II, § 4(f), eff. July 1, 1939, 4 F.R. 2731, 53 Stat. 1433.)

FEDERAL AID IN SPORT FISH RESTORATION ACT

(DINGELL-JOHNSON ACT OR FEDERAL AID IN FISH RESTORATION ACT)

[Act of August 9, 1950 (64 Stat. 430), as amended (16 U.S.C. 777–777k)]

SEC. 1. The Secretary of the Interior is authorized and directed to cooperate with the States through their respective State fish and game departments in fish restoration and management projects as hereinafter set forth: No money apportioned under this Act to any State, except as hereinafter provided, shall be expended therein until its legislature, or other State agency authorized by the State constitution to make laws governing the conservation of fish, shall have assented to the provisions of this act and shall have passed laws for the conservation of fish, which shall include a prohibition against the diversion of license fees paid by fishermen for any other purpose than the administration of said State fish and game department, except that, until the final adjournment of the first regular session of the legislature held after passage of this Act, the assent of the governor of the State shall be sufficient. The Secretary of the Interior and the State fish and game department of each State accepting the benefits of this Act shall agree upon the fish restoration and management projects to be aided in such State under terms of this Act, and all projects shall conform to the standards fixed by the Secretary of the Interior. (Aug. 9, 1950, ch. 658, § 1, 64 Stat. 430)

SEC. 2. For the purpose of this Act the term "fish restoration and management projects" shall be construed to mean projects designed for the restoration and management of all species of fish which have material value in connection with sport or recreation in the marine and/or fresh waters of the United States and include—

(a) such research into problems of fish management and culture as may be necessary to efficient administration affecting fish resources;

(b) the acquisition of such facts as are necessary to guide and direct the regulation of fishing by law, including the extent of the fish population, the drain on the fish supply from fishing and/or natural causes, the necessity of legal regulation of fishing, and the effects of any measures of regulation that are applied;

(c) the formulation and adoption of plans of restocking waters with food and game fishes according to natural areas or districts to which such plans are applicable, together with the acquisition of such facts as are necessary to the formulation, execution, and testing the efficacy of such plans;

(d) the selection, restoration, rehabilitation, and improvement of areas of water or land adaptable as hatching, feeding, resting, or breeding places for fish, including acquisition by purchase, condemnation, lease, or gift of such areas or estates or interests therein as are suitable or capable of being made suitable therefor, and the construction thereon or therein of such works as may be necessary to make them available for such purposes, and such preliminary or incidental costs and expenses as may be incurred in and about such work. The term "State fish and game department" shall be construed to mean and include any department or division of department of another name, or commission, or official or officials, of a State empowered under its laws to exercise the functions ordinarily exercised by a State fish and game department. (Aug. 9, 1950, ch. 658, § 2, 64 Stat. 431; July 2, 1956, ch. 459, § 3, 70 Stat. 473; as amended July 12, 1960, § 12, 74 Stat. 413.)

SEC. 3. To carry out the provisions of this Act, there is authorized to be appropriated an amount equal to the revenue accruing from tax imposed by section 3406 of Title 26, on fishing rods, creels, reels, and artificial lures, baits, and flies during the fiscal year ending June 30, 1951, and each fiscal year thereafter. The appropriation made under the provisions of this section for each fiscal year shall continue available during the succeeding fiscal year. So much of such appropriation apportioned to any State for any fiscal year as remains unexpended at the close thereof is authorized to be made available for expenditure in that State until the close of the succeeding fiscal year. Any amount apportioned to any State under the provisions of this Act which is unexpended or unobligated at the end of the period during which it is available for expenditure on any project is authorized to be made available for expenditure by the Secretary of the Interior in carrying on the research program of the Fish and Wildlife Service in respect to fish of material value for sport and recreation. (Aug. 9, 1950, ch. 658, § 3, 64 Stat. 431.)

SEC. 4. So much, not to exceed 8 per centum, of each annual appropriation made in pursuance of the provisions of section 3 of this Act as the Secretary of the Interior may estimate to be necessary for his expenses in the conduct of necessary investigations, administration, and the execution of this Act and for aiding in the formulation, adoption, or administration of any compact between two or more States for the conservation and management of migratory fishes in marine or fresh

waters shall be deducted for that purpose, and such sum is authorized to be made available therefor until the expiration of the next succeeding fiscal year. The Secretary of the Interior, after making the aforesaid deduction, shall apportion the remainder of the appropriation for each fiscal year among the several States in the following manner, that is to say, 40 per centum in the ratio which the area of each State including coastal and Great Lakes waters (as determined by the Secretary of the Interior) bears to the total area of all the States and 60 per centum in the ratio which the number of persons holding paid licenses to fish for sport or recreation in the State in the second fiscal year preceding the fiscal year for which such apportionment is made, as certified to said Secretary by the State fish and game departments, bears to the number of such persons in all the States: *Provided*, That such apportionments shall be adjusted equitably so that no State shall receive less than 1 per centum nor more than 5 per centum of the total amount apportioned to all of the States: *Provided, further*, That where the apportionment to any State under this section is less than $1,500 annually, the Secretary of the Interior may allocate not more than $1,500 of said appropriation to said State to carry out the purposes of this Act when said State certifies to the Secretary of the Interior that it has set aside not less than $1,500 from its fish-and-game funds or has made, through its legislature, an appropriation in this amount for said purposes. So much of any sum not allocated under the provisions of this section for any fiscal year is authorized to be made available for expenditure to carry out the purposes of this Act until the close of the succeeding fiscal year, and if unexpended or unobligated at the end of such year such sum is authorized to be made available for expenditure by the Secretary of the Interior in carrying on the research program of the Fish and Wildlife Service in respect to fish of material value for sport or recreation. (Aug. 9, 1950, ch. 658, § 4, 64 Stat. 432.)

SEC. 5. For each fiscal year beginning with the fiscal year ending June 30, 1951, the Secretary of the Interior shall certify to the Secretary of the Treasury, and to each State fish and game department, the sum which he has estimated to be deducted for administering and executing this Act and the sum which he has apportioned to each State for such fiscal year. Any State desiring to avail itself of the benefits of this Act shall notify the Secretary of the Interior to this effect within sixty days after it has received the certification referred to in this section. The sum apportioned to any State which fails to notify the Secretary of the Interior as herein provided is authorized to be made available for expenditure by the Secretary of the Interior in carrying out the provisions of the fish-research program of the Fish and Wildlife Service. (Aug. 9, 1950, ch. 658, § 5, 64 Stat. 432.)

SEC. 6. Any State desiring to avail itself of the benefits of this Act shall, by its State fish and game department, submit to the Secretary of the Interior full and detailed statements of any fish-restoration and management project proposed for that State. If the Secretary of the Interior finds that such project meets with the standards set up by him and approves said project, the State fish and game department shall furnish to him such surveys, plans, specifications, and estimates therefor as he may require: *Provided, however*, That the Secretary of the Interior shall approve only such projects as may be substantial in character and design, and the expenditure of funds authorized shall be applied only to such approved projects and if otherwise applied they shall be replaced by the State before it may participate in any further apportionment under this Act.

Items included for engineering, inspection, and unforeseen contingencies in connection with any works to be constructed shall not exceed 10 per centum of the cost of such works and shall be paid by the State as a part of its contribution to the total cost of such works. If the Secretary of the Interior approves the plans, specifications, and estimates for the project, he shall notify the State fish and game department and immediately certify the fact to the Secretary of the Treasury. The Secretary of the Treasury shall thereupon set aside so much of said appropriation as represents the share of the United States payable under this Act on account of such project, which sum so set aside shall not exceed 75 per centum of the total estimated cost thereof. No payment of any money apportioned under this Act shall be made on any project until such statement of the project and the plans, specifications, and estimates thereof shall have been submitted to and approved by the Secretary of the Interior. (Aug. 9, 1950, ch. 658, § 6, 64 Stat. 432.)

SEC. 7. When the Secretary of the Interior shall find that any project approved by him has been completed or, if involving research relating to fish, is being conducted, in compliance with said plans and specifications, he shall cause to be paid to the proper authority of said State the amount set aside for said project: *Provided*, That the Secretary of the Interior may, in his discretion, from time to time, make payments on said project as the same progresses; but these payments, including previous payments, if any, shall not be more than the United States pro rata share of the project in conformity with said plans and specifications. Any construction work and labor in each State shall be performed in accordance with its laws and under the direct supervision of the State fish and game department, subject to the inspection and approval of the Secretary of the Interior and in accordance with the rules and regulations made pursuant to this Act. The Secretary of the Interior and the State fish and game department of each State may jointly determine at what times and in what amounts payments, as work progresses, shall be made under this Act. Such payments shall be made against the said appropriation to such official or officials, or depository, as may be designated by the State fish and game department and authorized under the laws of the State to receive public funds of the State. (Aug. 9, 1950, ch. 658, § 7, 64 Stat. 433.)

SEC. 8. To maintain fish-restoration and management projects established under the provisions of this Act shall be the duty of the States according to their respective laws: *Provided*, That beginning July 1, 1953, maintenance of projects heretofore completed under the provisions of this Act may be considered as projects under this Act: *Provided further*, That not more than 25 per centum of the allocation from Federal funds in any one year after July 1, 1953, may be set aside for such maintenance projects. Title to any real or personal property acquired by any State, and to improvements placed on State-owned lands through the use of funds paid to the State under the provisions of this Act, shall be vested in such State. (Aug. 9, 1950, ch. 658, § 8, 64 Stat. 433.)

SEC. 9. Out of the deductions set aside for administering and executing this Act the Secretary of the Interior is authorized to employ such assistants, clerks, and other persons in the District of Columbia and elsewhere, to be taken from the eligible lists of the civil service; to rent or construct buildings outside of the District of Columbia; to purchase such supplies, materials (equipment, office fixtures, and apparatus; and to incur such travel and other expenses, including publication of technical and administrative reports, purchase, maintenance, and hire of passenger-carrying motor vehicles, as he may deem necessary for carrying out the provision of this Act. (Aug. 9, 1950, ch. 658, § 9, 64 Stat. 433.)

SEC. 10. The Secretary of the Interior is authorized to make rules and regulations for carrying out the provisions of this Act. (Aug. 9, 1950, ch. 658, § 10, 64 Stat. 434.)

SEC. 12. The Secretary of the Interior is authorized to cooperate with the Commissioner of Agriculture and Commerce of Puerto Rico, the Governor of Guam, and the Governor of the Virgin Islands, in the conduct of fish restoration and management projects as defined in section 2 of this Act, upon such terms and conditions as he shall deem fair, just, and equitable, and is authorized to apportion to Puerto Rico, Guam, and the Virgin Islands, out of money available for apportionment under this Act, such sums as he shall determine, not exceeding $10,000 each for Puerto Rico, Guam, and the Virgin Islands, in any one year, which apportionments, when made, shall be deducted before

making the apportionments to the States provided for by this Act; but the Secretary shall in no event require any of said cooperating agencies to pay an amount which will exceed 25 per centum of the cost of any project. Any unexpended or unobligated balance of any apportionment made pursuant to this section shall be available for expenditure in Puerto Rico, Guam, or the Virgin Islands, as the case may be, in the succeeding year, on any approved project, and if unexpended or unobligated at the end of such year is authorized to be made available for expenditure by the Secretary of Interior in carrying on the research program of the Fish and Wildlife Service in respect to fish of material valve for sport[1] recreation. (Aug. 9, 1950, ch. 658, § 12, 64 Stat. 434; July 2, 1956, ch. 462, § 4, 70 Stat. 473; Aug. 1, 1956, ch. 852, § 8, 70 Stat. 908; June 25, 1959, Public Law 86–70, § 16, 73 Stat. 143.)

SEC. 13. The effective date of this Act shall be July 1, 1950

IN THE HOUSE BY THE RESOURCES COMMITTEE

CS FOR HOUSE BILL NO. 807

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to a fee stamp system for king salmon sport fishing; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 16.05.251 is amended by adding a new paragraph to read:

(13) implementation of a fee stamp system, for king salmon sport fishing in areas designated by the board.

* Sec. 2. AS 16.05.340(a) is amended by adding a new paragraph to read:

(20) Resident king salmon sport fishing stamp . . . . . 5(A)

However, a person who possesses a 25-cent license, as provided in (5) of this subsection, may receive a king salmon sport fishing stamp without charge. The stamp is nontransferable and shall be signed by the bearer before use.

* Sec. 3. AS 16.05.940 is amended by adding a new paragraph to read:

(26) * "license" includes fee stamps issued for the current fishing season as provided in sec. 340(a)(20) of this chapter.

* Sec. 4. This Act takes effect January 1, [1980.] 1979

*Take out the word "Resident" (could apply that only residents would have to buy or pay for the stamps). Removal recommended by Sen Rardisla.

A. Obtaining a stamp does not preclude the need to obtain a sport fishing license in order to take king salmon.

Dear Cal:

I am having legislation drafted regarding the king salmon punch card and fee system.

I'll send a copy to you, when I receive it, for your comments.

Thank you for your letter.

Very truly yours,

Hugh Malone

Dear Hugh:

Concerning the king salmon punch card and fee bill. Have you had time yet to consider if you would want to submit it?

I feel the fee stipulation is a very important consideration as to whether or not we will have a punch card or game tag system here on the Kenai. The department just does not feel they can carry the cost of a card or tag unless it pays for itself.

If you do submit it, are there any persons in particular, myself or sport fish biologists should contact to help it along?

According to the testimony we (Fish Bd.) heard in Anchorage in October and again in December you can assume the public is solidly in support of the card or tag and a fee if necessary to assure it.

Warm regards,
Calvin Fair

SANDLAKE COMMUNITY COUNCIL
7703 Arlene St.
Anchorage, Alaska 99502

April 16, 1978

The Honorable Alvin Osterback
Chairman
House Resources Committee
Pouch V
Juneau, Alaska 99801

Re: House Bill 814, "An Act Creating the Anchorage Recreation Area"

Dear Mr. Osterback:

Several of the community councils in the Anchorage area have taken a strong interest in the future of the above bill designating certain state-owned land as recreation sites.

This council is particularly interested in Parcel No. (3), the Connors Lake area, since it is located within our boundaries. A portion of this area has been in use for several years as a snow machine area under a lease arrangement with the municipality. It is our understanding that the area covered in the bill would include this already heavily-used area, plus additional land extending around Connors Lake to Strawberry Road. Recreational land is in extremely short supply in most of Anchorage, and the rapid population growth is making heavy demands upon what is available. We understand that the ultimate aim is to transfer the lands in the bill to the Municipality of Anchorage for their development and maintenance. The Sand Lake area is one of the areas in which growth pains are currently being heavily felt, and it is urgent that lands be set aside now to meet the parks and recreational needs of this area.

We have been informed that there is considerable work necessary on this bill to correct and clarify it. The Sand Lake Community Council would like to urge that this work be completed as soon as possible, and that the bill be acted upon during this session of the legislature.

Sincerely yours,

John S. Phillips, President
SandLake Community Council

HOUSE BILL NO. 814

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act creating the Anchorage Recreation Area."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 41.20 is amended by adding new sections to read:

ARTICLE 9A. ANCHORAGE RECREATION AREA.

Sec. 41.20.346. DECLARATION OF PURPOSE. The designation of certain state-owned land for recreational use in the Municipality of Anchorage is essential to relieve the pressure of an expanding urban population. The state land described in sec. 348 of this chapter is waterfront land which is scarce in the Anchorage bowl, and is best shared by all people.

Sec. 41.20.348. DESIGNATED STATE LAND RESTRICTED TO USE AS PUBLIC RECREATIONAL AREA. State-owned land lying within the parcels described in this section are designated as the Anchorage Recreation Area in accordance with AS 38.05.295.

(1) Spenard Lake Area. Township 13 North, Range 4 West, Seward Meridian
Section 35: NE1/4 NW1/4 NW1/4, NE1/4 NW1/4, NE1/4 SE1/4 NW1/4

(2) Point Woronzof/Point Campbell Area. Township 13 North, Range 4 West, Seward Meridian
West of ~~runway clear zones in~~ clear zone for North South runway Sections 20, 21, 28, 29, 32, and 33

(3) Connors Lake Area. Township 12 North, Range 4 West, Seward Meridian

Section 1: SW1/4 NW1/4 and SW1/4
Township 13 North Range 4 West Seward Meridian
Section 35: SE1/4
Section 36: S1/2 SW1/4, NW1/4 SW1/4

Sec. 41.20.340. DESIGNATION OF MANAGEMENT RESPONSIBILITY. The land described in sec. 348 of this chapter is assigned to the Department of Natural Resources for control, development, and maintenance as a state recreation area.

Sec. 41.20.351. INCOMPATIBLE USE PROHIBITED. The commissioner of natural resources shall designate by regulation incompatible uses within the boundaries specified in sec. 348 of this chapter, and those incompatible designated shall be prohibited or restricted, as provided by regulation. Picnicking, day camping, cross-country skiing, and snowmobiling at places designated by the Department of Natural Resources, are expressly authorized uses, at times and in a manner considered appropriate by the commissioner of natural resources.

Municipality of Anchorage

POUCH 6-650
ANCHORAGE, ALASKA 99502
(907) 264-4356

GEORGE M. SULLIVAN
MAYOR

DEPARTMENT OF CULTURAL AND RECREATIONAL SERVICES

March 6, 1978

D.F.T. S.T.

Honorable Alvin Osterback, Chairman
Resources Committee
House of Representatives
State of Alaska
Pouch V
Juneau, Alaska 99811

Dear Representative Osterback:

RE: House Bill 814

The Municipality has had the opportunity to further assess HB-814 and offers the following comments and clarification of those contained in our letter on March 1, 1978.

It has long been and still is the position of the Municipality of Anchorage that additional land is needed for recreational purposes within the urban area of the Municipality, and particularly the area in question. Included in the Municipality's long range plan for park, recreation, and open space lands has been the use, eventually, of portions of the lands designated in HB-814 for such purposes. Toward this end, the history of the Municipality's involvement in these areas as concerns recreational usage, is as follows:

1. POINT WORONZOF: The Municipality has long sought transfer of title from the State to the Municipality of certain portions of the Woronzof lands for recreational purposes, negotiating in the past with the Division of Aviation, and more recently with the Department of Transportation. Would HB-814 preclude possible transfer of title to the Municipality in the future? This would not be desirable.

2. CONNORS LAKE: The Municipality has leased the Connors Lake area for the past six years for recreational purposes. It is most desireable for the Connors Lake area to be fully committed to recreational purposes as HB-814 proposes.

3. SPENARD LAKE: Presently the Municipality leases a small area on the north side of Spenard Lake from the Division of Aviation for swimming beach and picnic purposes. Recently the Municipality awarded a contract for paving the parking area of this recreational area.

While the Municipality supports the designation of recreational lands within the areas cited in HB-814, we cannot offer full support to the bill as currently written. There are areas of concern and many unanswered questions. Some of them are:

1. The Municipality's sewage treatment plant is located within the Point Woronzof lands designated in the bill. We would not want the land necessary for existing and future use of the sewage treatment plant to be designated as recreational land. Such usage would appear to be an incompatible use as set forth in Sec. 351 of the bill.

2. The Municipality has a facility, presently used for alcoholic treatment purposes, located within the Point Woronzof lands designated in the bill. How would Sec. 351 affect its usage?

3. The legal descriptions as set forth in HB-814 are too all encompassing and infringe upon other existing and necessary usages. The areas designated for recreational purposes must be closely reviewed and the bill should more clearly define the boundaries of any portion so designated, taking into account existing usage and the need for same.

4. Sec. 340 should more clearly spell out what is intended by "control, development and maintenance as a state recreation area." The questions posed in our letter of March 1, 1978, need to be addressed:

   ---Is it the intent of the bill that the Department of Natural Resources shall have full control and responsibility for this area?

   ---Does the Department of Natural Resources want this responsibility?

   ---Under this bill, could the Department of Natural Resources lease the land to the Municipality for recreational purposes? If so, the bill should be amended to reflect this.

5. Under this bill, could the State transfer title of these lands to the Municipality for recreational purposes at a later date? This feature should be included in the bill.

6. Has consideration been given to this area being made available to the Municipality under the 10% land selection provision of Title 29 after it is assigned to the Department of Natural Resources? Would this bill prohibit this land from eventually being available for selection by the Municipality under this program? If so, this would not be desirable.

Should the Municipality's areas of concern be accommodated by amendments to the bill, we would like the opportunity to comment on the bill at that time in light of any amendments.

It is requested that copies of this letter by made available to all members of the Resource Committee. Thank you for your consideration of our comments.

Respectfully,

Wilda G. Hudson

Planning & Classification

SUBJECT: HB 814 Land Status

Pursuant to your request for a land status check of the proposed park lands delineated in House Bill #814 I have prepared the attached status plats and brief written narrative.

(1) Spenard Lake Area - Township 13 North, Range 4 West, Seward Meridian, Section 35: NE1/4 NW1/4 NW1/4, NE1/4 NW1/4, NE1/4 SE1/4 NW1/4. I checked with Roger Mead of the Division of Aviation concerning this site and he informed me that the eastern portion of the shoreline of Spenard Lake is in private ownership. He also said that the northern and southern shores of Spenard Lake were purchased from the Municipality through a federal funding program. This program stipulates that the funds be utilized for aviation purposes only. Therefore, the Division of Aviation feels that the proposed legislation (Sec. 41.20.346) conflicts with the federal funding requirements.

(2) Point Woronzof/Point Campbell Area - Township 13 North, Range 4 West, Seward Meridian, West of runway clear zones in Sections: 20, 21, 28, 29, 32 and 33. The subject lands within section 20 and 21 are encumbered by Municipal ownership and an ILMT to the Division of Aviation (note attached status plat). The Division of Aviation land has been identified for future aviation related purposes. The subject lands within sections 28 and 29 are mostly federal lands with the exception of an approximate 180 acre tract of state land that is encumbered under ILMT 21236 to the Division of Aviation. The remaining subject lands have been encumbered by leases to the Municipality, ILMT 21236, and Division of Aviation OSL-367 lands. The OSL-367 lands are in the clear zone for the International Airport. The area outside the clear zone has been identified by the Division of Aviation as a potential future general aviation site (note attached status plats).

(3) Connors Lake Area - Township 12 North, Range 4 West, Seward Meridian, Section 1: SW1/4 NW1/4, SW1/4; Township 13 North, Range 4 West, Seward Meridian, Section 35: SE1/4; Section 36: S1/2 SW1/4, NW1/4 SW1/4. These lands are made up of University and School Trust Lands. Both the University and the State School Board should be contacted. The subject lands within section 36 are encumbered by lease #42596 to the Municipality for a sanitary landfill and by lease #30266 to the Pacific Seal Co. of Alaska, Inc. The subject lands within section 35 are within the International Airport clear zone - OSL-57 (note attached status plats). The lands within section one of township 12 north, range 4 west are presently under a letter of non-objection to the Municipality for snowmachine uses (Letter Permit 62979). The Division of Aviation has no objection to the utilization of these areas for park purposes. However, much of these lands are presently encumbered by leases.

In conclusion, I feel that the Municipality should be contacted regarding the possible utilization of their lease lands in the Connors Lake area for the proposed recreation site. The remaining proposed areas are probably not well suited for recreation purposes due to their high value as aviation lands. However, the lands within Section 20: Township 13 North, Range 4 West that are owned by the Municipality appear to have good potential for recreational utilization. The Municipality should be contacted concerning this possibility.

STATE OF ALASKA
DEPARTMENT OF NATURAL RESOURCES
DIVISION OF PARKS / 323 E. 4TH AVENUE
ANCHORAGE 99501
JAY S. HAMMOND, GOVERNOR

March 1, 1978

HB 814 "An Act Creating the Anchorage Recreation Area"

Testimony by Neil C. Johannsen
Chief of Planning, Division of Parks

I am Neil C. Johannsen, Chief of Planning with the Division of Parks.

The Division of Parks strongly supports the creation of additional park lands in the Greater Anchorage Area.

As far back as 1973 local citizen surveys indicated the importance of park land and recreational facilities. Over 93% of those responding to an Anchorage recreation survey said "recreation was vital" to them (Rowan Group 1973). Today these feelings remain strong as our citizens respond with intense interest to the draft Anchorage Municipal Trails Plan and the draft General Development Plan for Chugach State Park.

It is not, however, the desire of this division to operate the proposed Anchorage Recreation Area. Rather, we recommend that once the facility is established that its planning, operation and maintenance be taken over by the Anchorage Municipal Parks & Recreation Department. Recent discussions with Bob Robertson, Director of that department, indicate strong support for this arrangement.

Such a transfer of responsibility is consistent with the Division of Parks' emphasis on outdoor recreation areas and parks and similarly consistent

with intensively developed urban recreation areas managed by the Anchorage Municipality. At this time, the Division of Parks is negotiating the transfer of areas to local parks departments in both Anchorage and Fairbanks which are oriented to local urban populations in metropolitan areas. The proposed Anchorage Recreation Area should be similarly handled.

The bill needs to clarify proposed boundaries to avoid disputes with private interests and other state agencies. In particular, the Department of Transportation and Public Facilities should be consulted.

The fiscal note prepared for the bill represents a possible future for the area. Proposed construction items draw heavily from preliminary surveys completed by the Anchorage Municipal Parks and Recreation Department including a $3.5 million proposal for an 18 hole golf course.

In summary, the Division of Parks strongly supports the bill trusting that the problem of land status is resolved and that the Anchorage Municipal Department of Parks and Recreation assumes authority for the area after its establishment.

LETTER OF INTENT

The Honorable Hugh Malone
Speaker of the House

Dear Mr. Speaker:

By reporting HB 821 out of the House Resources Committee it is the intent of the Committee that the State take immediate steps to develop fisheries rehabilitation programs in Northern and Western Alaska and that the best place to begin such a program is in the Kotzebue Sound area as referred to in HB 821.

The appropriation contains money for the studies required for the site and other environmental considerations in the construction of the hatchery, as well as an appropriation for an estimated amount to take approximately one year minimum. Due to this, the Finance Committee should consider the appropriateness of alternate funding, including a direct appropriation during this Legislative session, as contained in this bill, general obligation bonds, and possibly an appropriation during the next Legislature.

Regardless of the most appropriate funding source for the construction, the Department of Fish and Game and the Legislature must give attention to this area of the State in developing the fisheries resource to become a more significant element in the economy of the State.

Juneau, Alaska

Dear Mr. Osterback,

The Kotzebue Sound Area Fisheries Cooperative would like to go on record supporting HB 821, an Act making a special appropriation to the Department of Fish and Game to plan and construct a chum salmon demonstration hatchery on the Noatak River.

The Board feels very strongly that a hatchery facility in this area would enhance stability in our commercial fishing industry, which I might add, is the only viable economic base in the Kotzebue Area. Since the beginning of our Commercial fishing in the summer of 1962, the numbers of fish caught have varied tremendously because of Climital conditions affecting the spawning areas. We cannot control the climate but we can control the future stock through the hatchery system.

The commercial fishing industry, although seasonal, is a million dollar industry in the Kotzebue area. When all the oil and minerals are extracted from this the fish will always return to provide millions of dollars to the residents of the Kotzebue Area presently and in the years to come. Thank you for your concern and support for protecting and promoting our renewable resources.

Sincerely,

Bobby Schaeffer, President

Rep. Schaffer

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPARTMENT OF FISH AND GAME

OFFICE OF THE COMMISSIONER / SUBPORT BUILDING – JUNEAU 99801

March 29, 1978

The Honorable John C. Sackett
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Senator Sackett:

The cost estimates for salmon hatchery development in Northwestern Alaska are enclosed per your recent request. The estimate for site investigations is for one year's activity only, with a goal to select two of the best sites in the region. A second year of investigation at the two sites will be necessary prior to hatchery design and construction. The estimate of total development costs is for the hatchery layout shown. The total cost may vary drastically from this estimate because of unknowns at the site to be selected.

The funding of investigations for a chum salmon hatchery in Northwestern Alaska will indicate a major commitment for the State to fully assess the potential and to proceed with hatchery development as soon as artificial propagation appears economically feasible there.

The data necessary for an evaluation of the economic feasibility of chum salmon hatcheries in Northwestern Alaska is currently not available to us. The high value of the large chum salmon in the Kotzebue area together with potential spring water sources adjacent to the highway system near Nome are optimistic indicators for the feasibility of hatcheries in the area.

Sincerely,

for Ronald O. Skoog
Commissioner

EC 3-16-78

AGO 935875

an application for extension is filed by the record title holder or an assignee whose assignment has been filed for approval, or an operator whose operating agreement has been filed for approval.

(d) The commissioner may provide for extension of the term of a lease whether competitive or noncompetitive, if all or part of the lease is included in an approved unit plan or program of secondary recovery operation to bring about or restore production.

(e) All noncompetitive oil or gas leases issued under this section shall be conditioned upon the payment by the lessee in advance of an annual rental of 50 cents an acre or fraction of an acre. All competitive oil and gas leases issued under this section shall be conditioned upon the payment of an annual rental, before discovery on the leased lands, of $1 an acre or fraction of an acre. A minimum royalty of $1 an acre instead of rental is payable at the expiration of each lease year beginning on or after a discovery of oil or gas in paying quantities on the lands leased.

(f) Repealed by § 7 ch 30 SLA 1964.

(g) An offeror for a federal oil and gas lease whose lease was issued after January 2, 1959, or a qualified applicant for a preference right under the Act of July 3, 1958, (72 Stat. 322) whose application for a preference right was filed before January 3, 1959, has a preference right to a state lease on the shorelands included within the exterior boundaries of the federal lease.

(h) If lands described in the offer for a federal lease are covered by nontidal water and are excluded from the federal lease on the basis of navigability, the state shall, upon application within 60 days after notice of the exclusion, if not previously filed, grant a preference lease for the areas excluded, carrying the same provisions as an ordinary state lease on the same lands, except that the term of the state lease shall conform in all respects to that of the adjoining federal lease including extended terms. The state shall issue a shorelands preference lease where a federal lease has been issued before March 31, 1960, and application is made to the state before July 1, 1960. Where a federal lessee or offeror failed before January 3, 1959, to file a proper application for a preference right under the Act of July 3, 1958, he may apply for a state preference lease under this section, subject to the rights of intervening applicants.

(i) Where the lands are classified as competitive, they shall be leased by competitive bidding. The holder of the preference right has 10 days after receipt of notice in which to submit an amount equal to the highest bid plus the rental for the first year.

(j) Upon timely application as provided by regulation, the state shall issue to the holder of a federal lease a state shorelands lease covering land within the exterior boundaries of the federal lease which has been excluded on the basis of navigability or which are later administratively or judicially determined to be "shorelands." The term of every shoreland lease shall conform to that of the adjacent federal lease including

AGO 935876

extended terms. The authority of the state to classify the lands as competitive or noncompetitive shall not be impaired.

(k) Instead of the foregoing procedure, the federal lessee or his assignee may, at his option, exercise his preference right for a state lease on the shorelands included within the exterior boundaries of his federal lease by applying to the division of lands, Department of Natural Resources. If, at the time of applying, the lands are classified as noncompetitive, the state shall, upon application, issue a lease covering whatever shorelands are included within the exterior boundaries of the federal lease. If, at the time of applying, the shorelands included in the federal lease are classified as competitive lands, the lands shall be leased by competitive bidding. The competitive lease shall be issued to the federal lessee or his assignee upon payment to the state of an amount equal to the highest bid for the lease, plus the rental for the first year, payment to be made within 10 days after the lessee's or assignee's receipt of written notice from the director of the division of lands of the amount of the highest bid. These leases, whether competitive or noncompetitive, shall carry the same conditions as an ordinary state lease on the same lands, except that the term of the state lease shall conform to that of the adjoining federal lease, including extended terms, and shall terminate if the federal lease is terminated for any reason. The lease shall provide for annual rental at the rate of $100 a unit of 640 acres or part thereof of the lands included within the federal lease until agreement is reached between the state and the Secretary of the Interior of the United States, or his authorized representative, as to the actual area of the shorelands included in the federal lease, and as to the apportionment between the state and federal government of the rental theretofore paid under the federal lease.

(l) The lease of a record lessee of a federal oil and gas lease who filed, or whose predecessor in interest filed, between July 3, 1958, and January 3, 1959, a proper preference right application under the Act of July 3, 1958, (72 Stat. 322) to have included in the lease the shorelands within the exterior boundaries of the lease and which lease or any part of it has terminated or failed as to the shorelands due to mispayment of or failure to pay the required rental as to the shorelands in advance of the anniversary date of the federal lease, shall be revived and reinstated as to the shorelands upon payment to the Bureau of Land Management of the United States Department of the Interior or to the state of all rental payable as to the shorelands under the lease since January 3, 1959. The rights under this section terminate 60 days after receipt of notice from the director, but not later than March 31, 1961. Nothing herein operates to extend a lease beyond its stated term.

(m) To conserve the natural resources of all or a part of an oil or gas pool, field, or like area, (whether or not the part is then subject to a cooperative or unit plan of development or operation), lessees and their representatives may unite with each other, or jointly or separately with

others, in collectively adopting or operating under a cooperative or a unit plan of development or operation of the pool, field, or like area, or a part of it, whenever determined and certified by the commissioner to be necessary or advisable in the public interest. The commissioner may, with the consent of the holders of leases involved, establish, alter, change, or revoke drilling, producing, rental minimum royalty, and royalty requirements of the leases and make regulations with reference to the leases, with like consent on the part of the lessees, in connection with the institution and operation of a cooperative or unit plan as he determines necessary or proper to secure the proper protection of the public interest. The commissioner may provide that oil and gas leases issued under this section shall contain a provision requiring the lessee to operate under a reasonable cooperative or unit plan, and he may prescribe a plan under which the lessee shall operate. The plan shall adequately protect all parties in interest, including the state.

(n) A plan authorized by (m) of this section, which includes lands owned by the state, may contain a provision vesting the commissioner, or a person, committee, or state agency with authority to alter or modify from time to time the rate of prospecting and development and the quantity and rate of production under the plan. All leases operated under a plan approved or prescribed by the commissioner are excepted in determining holdings or control under § 140 of this chapter. The provisions of this section concerning cooperative or unit plans are in addition to, and do not affect AS 31.05

(o) Producing acreage on a known geologic structure of a producing oil or gas field is excluded from chargeability as against the acreage limitation provisions of § 140 of this chapter.

(p) When separate tracts cannot be individually developed and operated in conformity with an established well-spacing or development program, a lease, or a portion of a lease, may be pooled with other lands, whether or not owned by the state, under a communitization or drilling agreement providing for an apportionment of production or royalties among the separate tracts of land comprising the drilling or spacing unit when determined by the commissioner to be in the public interest. Operations or production under the agreement shall be considered as operations or production as to each lease committed to the agreement.

(q) The commissioner may, on conditions which he prescribes, approve drilling, or development contracts made by one or more lessees of oil or gas leases, with one or more persons, whenever, in his discretion, the conservation of natural products or the public convenience or necessity requires it or the interests of the state are best served. All leases operated under approved drilling, or development contracts, and interests under them are excepted in determining holding or control under § 140 of this chapter.

(r) To avoid waste or to promote conservation of natural resources, the commissioner may authorize the subsurface storage of oil or gas, whether or not produced from state lands, in lands leased or subject to lease under this section. This authorization may provide for the payment of a storage fee or rental on the stored oil or gas, or, instead of the fee or rental, for a royalty other than that prescribed in the lease when the stored oil or gas is produced in conjunction with oil or gas not previously produced. A lease on which storage is so authorized shall be extended at least for the period of storage and so long thereafter as oil or gas not previously produced is produced in paying quantities.

(s) Each oil or gas lease issued by the state shall contain a provision requiring the lessee to furnish the Department of Labor a quarterly report regarding the employment on the leased property of state residents. The commissioner of labor shall promulgate regulations necessary to carry out the provisions of this subsection. (§ 3(7) art VIII ch 169 SLA 1959; am § 18 ch 61 SLA 1960; am § 1 ch 124 SLA 1962; am §§ 4—7 ch 30 SLA 1964; am § 20 ch 70 SLA 1964; am § 2 ch 91 SLA 1967; am § 1 ch 65 SLA 1969; am § 1 ch 86 SLA 1970)

Revisor's note (1970). — In ch. 86, SLA 1970, subsection (s) of AS 38.05.180 was incorrectly designated (t).

Cross references. — See note to AS 38.05.020. As to establishment of drilling units for pools, see AS 31.05.10[illegible] As to gross production tax, see AS 43.55.010.

Purpose of subsection (a). — The provisions of subsection (a) of this section were intended to insure that leases on valuable oil and gas producing state lands will be made available to the public on a fair and equitable basis, that the state will be adequately compensated for its natural resources, and that the state's resources are developed in an orderly fashion. For the commissioner to decide that these purposes are furthered by providing for bidding by cash bonus cannot be said to be unreasonable. Kelly v. Zamarello, Sup. Ct. Op. No. 705 (File Nos. 1255, 1256), 486 P.2d 906 (1971).

And construction thereof. — The only reasonable construction that can be placed on subsection (a) of this section is that the legislature intended to give the commissioner broad authority to determine the kind of bonus he will accept. The legislature at the time it passed subsection (a) was undoubtedly aware that under competitive bidding procedures different forms of bonuses might be offered. It did not itself prescribe a particular form, but instead provided that competitive bidding shall be "under general regulations," and that lands shall be leased upon the payment of "such bonus as may be accepted by the commissioner." The plain language of the statute shows that royalties were to be fixed independently of the acceptance of the highest bonus. Kelly v. Zamarello, Sup. Ct. Op. No. 705 (File Nos. 1255, 1256), 486 P.2d 906 (1971).

Power to change law respecting lease extensions is vested in state. — The governmental power to change the law respecting the granting of lease extensions, vested in Congress prior to statehood and preserved by § 6(k) of the Alaska Statehood Act, became vested in the state when the lands subject to the lease were granted to the state as its property. Kirkpatrick v. Commissioner, Dep't of Natural Resources, Sup. Ct. Op. No. 201 (File No. 388), 391 P.2d 7 (1964).

And has been exercised by the Alaska Land Act. — The state has exercised its power to change the law respecting lease extensions by the Alaska Land Act and by regulations adopted under its authority. Kirkpatrick v. Commissioner, Dep't of Natural Resources, Sup. Ct. Op. No. 201 (File No. 388), 391 P.2d 7 (1964).

Subsection (c) has no application to pre-statehood federal leases. — Read in the context of article 6 of this chapter, it becomes apparent that subsection (c) of this section, as to extensions, relates only to leases issued by the state under the authority of the Alaska Land Act, and is not pertinent with respect to pre-statehood federal leases. Kirkpatrick v. Commissioner, Dep't of Natural Resources, Sup. Ct. Op. No. 201 (File No. 388), 391 P.2d 7 (1964).

Subsection (c) of this section, relating to extensions of state oil and gas leases, has no application to federal leases of lands

AGO 935877

Editor's note. — Section 10, ch. 136, SLA 1977, provides, in subsection (a): "If a court of competent jurisdiction invalidates the differential economic limit factor computation under AS 43.55.013(a) and (b), the economic limit factor contained in (b) of that section shall be used for computation of the economic limit for all oil."

Section 11, ch. 136, SLA 1977, provides: "This Act applies to production during the month of July, 1977 and succeeding months."

Sec. 43.55.015. Tax per barrel of oil.

Repealed by § 9 ch 136 SLA 1977.

Editor's note. — The repealed section derived from § 4, ch. 101, SLA 1972; § 2, ch. 4, FSSLA 1973.

Section 11, ch. 136, SLA 1977, provides: "This Act applies to production during the month of July, 1977 and succeeding months."

Legislative committee report. — For report on ch. 101, SLA 1972 (FC CS HCSSB 168), see 1972 House Journal, p. 963.

Sec. 43.55.016. Gas production tax. (a) There is levied upon the producer of gas a tax for all gas produced from each lease or property in the state, less any gas the ownership or right to which is exempt from taxation The tax is equal to either the percentage-of-value amount calculated under (b) of this section or the cents-per-Mcf amount calculated under (c) of this section, whichever is greater, multiplied by the economic limit factor determined for gas production of the lease or property under § 13 of this chapter. If the amounts calculated under (b) and (c) of this section are equal, the amount calculated under (b) of this section shall be treated as if it were the greater for purposes of this section.

(b) The percentage-of-value amount equals 10 per cent of the gross value at the point of production of the taxable gas produced from the lease or property.

(c) The cents-per-Mcf amount equals $.064 per thousand cubic feet of taxable gas produced from the lease or property as adjusted by § 12 of this chapter. (§ 1 ch 136 SLA 1977)

Editor's note. — Section 11, ch. 136, SLA 1977, provides: "This Act applies to production during the month of July, 1977 and succeeding months."

Sec. 43.55.017. Relation to other taxes. (a) Except as provided in this chapter and in ch. 58 of this title, the taxes imposed by this chapter are in place of all taxes now imposed by the state or any of its municipalities, and neither the state nor a municipality may impose a tax upon

(1) producing oil or gas leases;

(2) oil or gas produced or extracted in the state;

(3) the value of intangible drilling and exploration expenses.

(b) The taxes imposed by this chapter are in place of all taxes imposed by a municipality upon oil or gas in place or nonproducing oil or gas leases or properties.

(c) The taxes imposed by this chapter are not in place of the tax imposed by ch. 57 of this title or income taxes, franchise taxes or taxes upon the retail sale of oil or gas products. (§ 1 ch 136 SLA 1977)

Editor's note. — Section 11, ch. 136, SLA 1977, provides: "This Act applies to production during the month of July, 1977 and succeeding months."

Sec. 43.55.018. Credit against tax. (a) There shall be allowed as a credit against the taxes levied under this chapter for a lease or property the early development incentive credit accrued for that lease or property under AS 43.58.180. In no event may the credit allowed for a lease or property exceed 50 per cent of the taxes levied under this chapter for that lease or property.

(b) The credit shall be allowed on a monthly basis. (§ 2 ch 159 SLA 1975)

Editor's note. — Section 8, ch. 159, SLA 1975, contains a severability clause.

Section 9, ch. 159, SLA 1975, effective June 26, 1975, provides: "AS 43.58.030, 43.58.180, and AS 43.55.018 are included in this Act so as to avoid double taxation of the same interest in oil and gas and as an incentive for the early production of oil and gas discovered in the state. The legislature believes that the inclusion of these sections granting tax credits does not in any manner change the intent, validity or enforceability of the basic ad valorem tax imposed by the Act. If the inclusion of these sections results in a judicial decision that the ad valorem tax imposed by AS 43.58.010 is invalid, these sections shall be void and of no effect whatsoever and the Act shall be read as if these sections had never been included."

Sec. 43.55.020. Payment of tax. (a) The gross production tax on oil or gas shall be paid monthly. The tax is due on the 20th day of each calendar month on oil or gas produced from each lease or property during the preceding month. If the tax is not paid before the end of the month in which it becomes due, the tax becomes delinquent.

(b) The gross production tax on oil or gas shall be paid by or on behalf of the producer

(c) Repealed by § 7 ch 101 SLA 1972, effective July 1, 1972.

(d) In making settlement with the royalty owner the producer may deduct the amount of the tax paid on royalty oil or gas, or may deduct royalty oil or gas equivalent in value at the time the tax becomes due to the amount of the tax paid.

(e) Gas produced in excess of that needed for safety purposes, except gas used in the operation of a lease or property in drilling for or producing oil or gas, or for repressuring, is considered, for the purpose of this chapter and in the amount used, as gas produced from a lease or property. Gas flared beyond the amount authorized for safety by the Department of Natural Resources under AS 31.05.170(11)(H) is considered as gas produced, except that it is subject to a penalty equal to the tax computed under § 16 of this chapter as adjusted by § 12 of this chapter per thousand cubic feet of gas for the month in which the gas was flared.

Construction and effect of statutes regulating production of oil or gas in a manner or under conditions constituting waste, 86 ALR 431.
58 C.J.S. Mines and Minerals § 234.

Sec. 31.05.030. Powers and duties of department. (a) The department has jurisdiction and authority over all persons and property, public and private, necessary to carry out the purposes and intent of this chapter.

(b) The department shall investigate to determine whether or not waste exists or is imminent, or whether or not other facts exist which justify or require action by it.

(c) The department shall adopt rules, regulations and orders and take other appropriate action to carry out the purposes of this chapter.

(d) The department may require

(1) identification of ownership of wells, producing leases, tanks, plants and drilling structures;

(2) the making and filing of reports, well logs, drilling logs, electric logs, lithologic logs, directional surveys, and all other subsurface information on a well drilled for oil or gas, or for the discovery of oil or gas, or for geologic information, and the required reports and information shall be filed within 30 days after the completion, abandonment, or suspension of the well;

(3) the drilling, casing and plugging of wells in a manner which will prevent the escape of oil or gas out of one stratum into another, the intrusion of water into an oil or gas stratum, the pollution of fresh water supplies by oil, gas or salt water, and prevent blowouts, cavings, seepages and fires;

(4) the furnishing of a reasonable bond with sufficient surety conditions for the performance of the duty to plug each dry or abandoned well or the repair of wells causing waste;

(5) the operation of wells with efficient gas-oil and water-oil ratios, and may fix these ratios;

(6) the gauging or other measuring of oil and gas to determine the quality and quantity of oil and gas;

(7) every person who produces oil or gas in the state to keep and maintain for a period of five years in the state complete and accurate records of the quantities of oil and gas produced, which shall be available for examination by the department or its agents at all reasonable times.

(e) The department may regulate, for conservation purposes

(1) the drilling, producing and plugging of wells;

(2) the shooting and chemical treatment of wells;

(3) the spacing of wells;

(4) the disposal of salt water, nonpotable water and oil field wastes;

(5) the contamination or waste of underground water.

AGO 935881

(f) The department may classify wells as oil or gas wells for purposes material to the interpretation or enforcement of this chapter. (§ 4 ch 40 SLA 1955; am § 2 ch 75 SLA 1960; am § 1 ch 209 SLA 1970)

Applied in Bradley v. State, 2 Alaska L.J. No. 6, pg. 88 (June-July, 1964).

Sec. 31.05.035. Confidential reports. (a) For all wells for which a permit to drill has been issued by the department since January 3, 1959, the department may require:

(1) the making and filing of reports, well logs, drilling logs, electric logs, lithologic logs, directional surveys, and all other subsurface information on a well drilled for oil or gas, or for the discovery of oil or gas, or for geologic information; and

(2) the filing of all logs, except experimental logs, dipmeter surveys, and velocity surveys run on a well and not required by (1) of this subsection.

(b) Reports and information required under (a)(1) and (2) of this section shall be filed within 30 days after the completion, abandonment, or suspension of a well. However, under (a)(1) of this section, the department may not require the making of a log on a well completed, abandoned or suspended before June 19, 1970.

(c) The reports and information marked confidential shall be kept confidential for 24 months following the 30-day filing period unless the owner of the well gives written permission to release the reports and information at an earlier date. Well location, depth, status and production data and production reports required by the department to be filed subsequent to the 30-day filing period shall be considered public information and shall not be classified confidential. Production data, as used in this subsection, means volume, gravity and gas-oil ratio of all production of oil or gas after the well begins regular production. (§ 2 ch 209 SLA 1970)

Sec. 31.05.040. Rules and regulations of department. (a) The department shall prescribe rules and regulations governing practice and procedure before it under this chapter.

(b) All orders issued by the department shall be in writing, shall be entered in full and indexed in books kept by the department for that purpose, and shall be public records open for inspection at all times during reasonable office hours. A copy of an order certified by the department, under its seal, shall be received in evidence in all courts of the state with the same effect as the original. (§ 9 1, 5 ch 40 SLA 1955)

Revisor's note. — Subsection (b) of this section and AS 31.05.050—31.05.080 are generally superseded by the Administrative Procedure Act (AS 44.62).

However, the department seems to have power to hold hearings and make orders relating to "pooling," etc. (AS 31.05.100 and 31.05.110), which may or may not fall under the Administrative Procedure Act. If those hearings and orders do not fall under the Administrative Procedure Act, then the procedure in (b) of this section and in AS 31.05.050—31.05.080 would apply.

Sec. 31.05.050. Notice. (a) A notice required by this chapter shall be given in accordance with the Administrative Procedure Act (AS 44.62).

(b) Procedures to be followed under (a) of this section do not apply if the nature of the notice is not of a statewide or general application but is concerned only with operations on a single well or within a single field and the modification of procedure is within the authority delegated to the department under § 30 of this chapter. A notice required by this chapter shall be given by one publication in a newspaper published in the borough in which the hearing is to be held, or if none is published in the borough, in a newspaper published in this state and circulating within the borough, and posted in at least one public place within the borough, at least 10 days before the date of the hearing. The notice shall be issued in the name of the state, shall be signed by the department, and shall specify the style and number of the proceeding, the time and place of the hearing, and shall briefly state the purpose of the proceeding. The department may also give, or require the giving of, additional notice in a proceeding, or class of proceeding, which it considers necessary or desirable. (§ 9 4 ch 40 SLA 1955; am § 1 ch 190 SLA 1968; am § 1 ch 87 SLA 1969)

Revisor's note. — See Revisor's note to AS 31.05.040.

Legislative committee reports. — For report on ch. 190, SLA 1968 (CSHB 595), see 1968 House Journal, p. 748. For report on ch. 87, SLA 1969 (HB 49 am S), see 1969 Senate Journal, p. 897.

Sec. 31.05.060. Action by department. The department may act upon its own motion, or upon the petition of an interested person. On the filing of a petition concerning a matter within the jurisdiction of the department under this chapter, the department shall promptly fix a date for a hearing, and shall cause notice of the hearing to be given. The hearing shall be held without undue delay after the filing of the petition. The department shall enter its order within 30 days after the hearing. (§ 9 6 ch 40 SLA 1955)

Revisor's note. — See Revisor's note to AS 31.05.040.

C.J.S. reference. — 58 C.J.S. Mines and Minerals § 242.

Sec. 31.05.070. Attendance and testimony of witnesses. (a) The department may summon witnesses, administer oaths, and require the production of records, books and documents for examination at a hearing or investigation conducted by it. No person may be excused from attending and testifying, or from producing books, papers and

records before the department or a court, or from obedience to the subpoena of the department or a court, on the ground or for the reason that the testimony or evidence, documentary or otherwise, required of him may tend to incriminate him or subject him to a penalty or forfeiture. This section does not require a person to produce books, papers or records, or to testify in response to an inquiry not pertinent to some question lawfully before the department or court for determination. No natural person is subject to criminal prosecution or to a penalty or forfeiture for or on account of any transaction, matter or thing concerning which, in spite of his objection, he may be required to testify or produce evidence, documentary or otherwise, before the department or court, or in obedience to its subpoena. However, no person testifying is exempt from prosecution and punishment for perjury committed in so testifying.

(b) If a person fails or refuses to comply with the subpoena issued by the department, or refuses to testify as to any matter regarding which he may be interrogated, any court of record in the state, upon application of the department, may issue an attachment for the person and compel him to comply with the subpoena, and attend before the department and produce the records, books, and documents for examination, and give his testimony. The court may punish for contempt as in the case of disobedience to a subpoena issued by the court, or for refusal to testify in court. (§ 10 ch 40 SLA 1955)

Revisor's note. — See Revisor's note to AS 31.05.040.

Sec. 31.05.080. Rehearings and appeals. (a) Within 20 days after written notice of the entry of an order or decision of the department, or such further time as the department grants for good cause shown, a person affected by it may file with the department an application for the rehearing in respect of the matter determined by the order or decision, setting forth the respect in which the order or decision is believed to be erroneous. The department shall grant or refuse the application in whole or in part within 10 days after it is filed, and failure to act on it within this period is a refusal of it and a final disposition of the application. If the hearing is granted, the department may enter a new order or decision after rehearing as may be required under the circumstances.

(b) A party to the rehearing proceeding, dissatisfied with the disposition of the application for rehearing, may appeal from it to the superior court in the judicial district in which any property affected by the decision of the department is located, by filing a petition for the review of the action of the department within 20 days after the entry of the order following rehearing or after the refusal of rehearing as the case may be. The petition shall state briefly the nature of the proceedings before the department and shall set out the order or decision of the department complained of and the grounds of invalidity of it upon

AGO 935882

which the applicant will rely. However, the questions reviewed on appeal shall be only questions presented to the department by the application for rehearing. Notice of appeal shall be served upon the adverse parties and the department in the manner provided for the service of summons in civil proceedings. The trial upon appeal shall be without a jury, and the transcript of proceedings before the department, including the evidence taken in hearings by the department, shall be received in evidence by the court in whole or in part upon offer by either party, subject to legal objections to evidence, in the same manner as if the evidence was originally offered in the superior court. The department's action complained of is prima facie valid and the burden is upon the party seeking review to establish the invalidity of the action of the department. The court shall determine the issues of fact and of law and shall, upon a preponderance of the evidence introduced before the court, which may include evidence in addition to the transcript of proceedings before the department, and the applicable law, enter its order either affirming or vacating the order of the department. Appeals may be taken from the judgment or decision of the superior court in the same manner as provided for appeals from any other final judgment entered by a superior court.

(c) The pendency of proceedings to review does not of itself stay or suspend operation of the order or decision being reviewed, but during the pendency of the proceedings, the superior court may, upon its own motion or upon proper application of a party, stay or suspend, in whole or in part, operation of the order or decision pending review, on the terms the court considers just and proper and in accordance with the rules of civil procedure. The court, as a condition to staying or suspension of operation of an order or decision, may require that one or more parties secure, in the form and amount as the court considers just and proper, one or more other parties against loss or damage due to the staying or suspension of the department's order or decision, if the action of the department is affirmed.

(d) The rules of practice and procedure in civil cases govern the proceedings for review and appeal to the extent they are consistent with this chapter. (§ 11 ch 40 SLA 1955)

Revisor's note. — See Revisor's note to AS 31.05.040.

Article 2. Regulation of Operations.

Section
90. Permits and fees to drill wells
100. Establishment of drilling units for pools
110. Unitization and unitized operation of pools and integration of interests by agreement
120. Use of gas from well to manufacture carbon products without permit is prima facie waste

AGO 935883

Sec. 31.05.090. Permits and fees to drill wells. A person desiring to drill a well in search of oil or gas shall notify the department of his intent on a form prescribed by the department and shall pay a fee of $100 for a permit for each well sought to be drilled. Upon receipt of notification and fee, the department shall promptly issue a permit to drill, unless the drilling of the well is contrary to law or a regulation or order of the department, or unless the person is in violation of a department regulation, order or stipulation pertaining to drilling, plugging or abandonment of a well. The drilling of a well is prohibited until a permit to drill is obtained in accordance with this chapter. (§ 5 ch 40 SLA 1955; am § 1 ch 120 SLA 1970)

Sec. 31.05.100. Establishment of drilling units for pools. (a) For the prevention of waste, to protect and enforce the correlative rights of lessees in a pool, and to avoid the augmenting and accumulation of risks arising from the drilling of an excessive number of wells, or the reduced recovery which might result from too small a number of wells, the department shall, after a hearing, establish a drilling unit or units for each pool. The establishment of a unit for gas shall be limited to the production of gas.

(b) Each well permitted to be drilled on a drilling unit shall be drilled under the rules and regulations and in accordance with the spacing pattern as the department prescribes for the pool in which the well is located. Exceptions to the rules and spacing pattern may be granted where it is shown, after notice and hearing, that the unit is partly outside the pool, or for some other reason a well so located on the unit would be nonproductive, or topographical conditions are such as to make the drilling at such a location unduly burdensome. If an exception is granted, the department shall take such action as will offset any advantage which the person securing the exception may have over other producers by reason of the drilling of the well as an exception, and so that drainage from developed units to the tract with respect to which the exception is granted will be prevented or minimized, and the producer of the well drilled as an exception will be allowed to produce no more than a just and equitable share of the oil and gas in the pool.

(c) When two or more separately owned tracts of land are embraced within an established drilling unit, persons owning the drilling rights in it and the right to share in the production from it may agree to pool their interests and develop their lands as a drilling unit. If the persons do not agree to pool their interests, the department may enter an order pooling and integrating their interests for the development of their lands as a drilling unit for the prevention of waste, for the protection of correlative rights, or to avoid the drilling of unnecessary wells. Orders effectuating such pooling shall be made after notice and hearing, and shall be upon terms and conditions which will afford to the owner of each tract the opportunity to recover or receive his just and equitable share of the oil and gas in the pool without unnecessary expense. Operations incident to

the drilling of a well upon a portion of a unit covered by a pooling order shall be considered for all purposes to be the conduct of the operation upon each separately owned tract in the unit by the several lessees of it. The portion of the production allocated to the lessee of each tract included in a drilling unit formed by a pooling order shall, when produced, be considered as if it had been produced from the tract by a well drilled on it. If pooling is effectuated, the cost of development and operation of the pooled unit chargeable by the operator to the other interested lessee is limited to the actual and reasonable expenditures for this purpose, including a reasonable charge for supervision. As to lessees who refuse to agree upon pooling, the order shall provide for reimbursement for costs chargeable to each lessee out of, and only out of, production from the unit belonging to such lessee. In the event of a dispute relative to the costs, the department shall determine the proper costs upon notice to all interested parties and hearing. Appeals may be taken from the determination as from any other order of the department. If a lessee drills and operates, or pays the expense of drilling and operating the well for the benefit of others, then in addition to any other right conferred by the pooling order, the lessee drilling or operating has a lien on the share of production from the unit accruing to the interest of each of the other lessees for the payment of his proportionate share of such expenses. All the oil and gas subject to the lien, or so much of the oil and gas subject to the lien as is necessary shall be marketed and sold by the creditor, and the proceeds applied in payment of the expenses secured by the lien, with the balance, if any, payable to the debtor.

(d) The department shall, in all instances where a unit has been formed out of lands or areas of more than one ownership, require the operator, upon request of a lessee, but subject to the right of the operator to market production and collect the proceeds with respect to a lessee in default, as provided in (c) of this section, to deliver to the lessee or his assigns his proportionate share of the production from the well common to the drilling unit. The lessee receiving his share shall provide at his own expense proper receptacles for the receipt and storage of it.

(e) If persons owning the drilling or other rights in separate tracts embraced within a drilling unit fail to agree upon the pooling of the tracts and the drilling of the well on the unit, and if the department is without authority to require pooling as provided by this section, then, subject to all other applicable provisions of this chapter, the lessee of each tract embraced within the drilling unit may drill on his tract, but the allowable production from the tract shall be the proportion of the allowable production for the full drilling unit as the area of the separately owned tract bears to the full drilling unit. (§ 6 ch 40 SLA 1955)

Cross reference. — As to oil and gas, see AS 38.05.180.

adjoining owners as to pumping oil, 5 ALR 421.

AGO 935884

Sec. 31.05.110. Unitization and unitized operation of pools and integration of interests by agreement. (a) To prevent, or to assist in preventing waste, to insure a greater ultimate recovery of oil and gas, and to protect the correlative rights of persons owning interests in the tracts of land affected, these persons may validly integrate their interests to provide for the unitized management, development, and operation of such tracts of land as a unit. Where, however, they have not agreed to integrate their interests, the department, upon proper petition, after notice and hearing, has jurisdiction, power and authority, and it is its duty to make and enforce orders and do the things necessary or proper to carry out the purposes of this section.

(b) If upon the filing of a petition by the department and after notice and hearing, all in the form and manner and in accordance with the procedure and requirements provided in this section, the department finds that (1) the unitized management, operation and further development of a pool or portion of a pool is reasonably necessary in order to effectively carry on pressure control, pressure-maintenance or repressuring operations, cycling operations, water flooding operations, or any combination of these, or any other form of joint effort calculated to substantially increase the ultimate recovery of oil and gas from the pool; (2) one or more of the unitized methods of operation as applied to the pool or portion of it is feasible, and will prevent waste and will with reasonable probability result in the increased recovery of substantially more oil and gas from the pool than would otherwise be recovered; (3) the estimated additional cost, if any, of conducting such operations will not exceed the value of the additional oil and gas so recovered; and (4) the unitization and adoption of one or more of the unitized methods of operation is for the common good and will result in the general advantage of the owners of the oil and gas rights within the pool or portion of it directly affected, it shall make a finding to that effect and make an order creating the unit and providing for the unitization and unitized operation of the pool or portion of it described in the order, upon the terms and conditions, as may be shown by the evidence to be fair, reasonable, equitable, and which are necessary or proper to protect, safeguard and adjust the respective rights and obligations of the several persons affected, including royalty owner, owners of overriding royalties, oil and gas payments, carried interests, mortgages, lien claimants and others, as well as the lessees. The petition shall set out a description of the proposed unit area with a map or plat of it attached, shall allege the existence of the facts required to be found by the department as provided in this paragraph and shall have attached to it a recommended plan of unitization applicable to the proposed unit area and which the petitioner considers to be fair, reasonable and equitable.

(c) The order of the department shall define the area of the pool or

portion of it to be included within the unit area and prescribe with reasonable detail the plan of unitization applicable to it. Each unit and unit area shall be limited to all or a portion of a single pool. Only so much of a pool as has been defined and determined to be productive of oil and gas by actual drilling operations may be so included within the unit area. A unit may be created to embrace less than the whole of a pool only where it is shown by the evidence that the area to be so included within the unit area is of a size and shape as may be reasonably required for the successful and efficient conduct of the unitized method of operation for which the unit is created, and that the conduct of it will have no material adverse effect upon the remainder of the pool. The plan of unitization for each unit and unit area shall be one suited to the needs and requirements of the particular unit dependent upon the facts and conditions found to exist with respect to it. In addition to other terms, provisions, conditions and requirements found by the department to be reasonably necessary or proper to carry out the purpose of this chapter, and subject to the further requirements of this section, each plan of unitization shall contain fair, reasonable and equitable provisions for

(1) the efficient unitized management or control of the further development and operation of the unit area for the recovery of oil and gas from the pool affected; under such a plan the actual operations within the unit area may be carried on in whole or in part by the unit itself, or by one or more of the lessees within the unit area as the unit operator subject to the supervision and direction of the unit, dependent upon what is most beneficial or expedient; the designation of the unit operator shall be by vote of the lessees in the unit in a manner provided in the plan of unitization and not by the department;

(2) the division of interest or formula for the apportionment and allocation of the unit production, among and to the several separately owned tracts within the unit area such as will reasonably permit persons otherwise entitled to share in or benefit by the production from such separately owned tracts to produce and receive, instead thereof, their fair, equitable and reasonable share of the unit production or other benefits of it; a separately owned tract's fair, equitable, and reasonable share of the unit production shall be measured by the value of each such tract for oil and gas purposes and its contributing value to the unit in relation to like values of other tracts in the unit, taking into account acreage, the quantity of oil and gas recoverable from it, location on the structure, its probable productivity of oil and gas in the absence of unit operations, the burden of operations to which the tract will or is likely to be subjected, or so many of these factors, or such other pertinent engineering, geological or operating factors as may be reasonably susceptible of determination; unit production as that term is used in this chapter means all oil and gas produced from a unit area from the effective date of the order of the department creating the unit

regardless of the well or tract within the unit area from which the same is produced;

(3) the manner in which the unit and the further development and operation of the unit area shall or may be financed and the basis, terms and conditions on which the cost and expense of it shall be apportioned among and assessed against the tracts and interests made chargeable with it, including a detailed accounting procedure governing all charges and credits incident to such operations; upon terms and conditions as to time and rate of interest as may be fair to all concerned, reasonable provision shall be made in the plan of unitization for carrying or otherwise financing lessees who are unable to promptly meet their financial obligations in connection with the unit;

(4) the procedure and basis upon which wells, equipment and other properties of the several lessees within the unit area are to be taken over and used for unit operations, including the method of arriving at the compensation for it, or of otherwise proportionately equalizing or adjusting the investment of the several lessees in the project as of the effective date of unit operation;

(5) the creation of an operating committee to have general overall management and control of the unit and the conduct of its business and affairs and the operations carried on by it, together with the creation or designation of other subcommittees, boards or officers to function under the authority of the operating committee as may be necessary, proper or convenient in the efficient management of the unit, defining the powers and duties of all the committees, boards and officers, and prescribing their tenure and time and method for their selection;

(6) the time when the plan of unitization becomes effective;

(7) the time when and the conditions under which and the method by which the unit shall or may be dissolved and its affairs wound up.

(d) No order of the department creating a unit and prescribing the plan of unitization applicable to it becomes effective until the plan of unitization has been signed or ratified in writing, or approved by the lessees of record of not less than 62.5 per cent of the unit area affected by it and by the owners of record of not less than 62.5 per cent (exclusive of royalty interests owned by lessees or by subsidiaries of any lessee) of the normal one-eighth landowners' royalty interest in and to the unit area, and the department has made a finding either in the order creating the unit or in a supplemental order that the plan of unitization has been so signed, ratified or approved by lessees and royalty owners owning the required percentage interest in and to the unit area. Where the plan of unitization has not been signed, ratified or approved by the lessees and royalty owners owning the required percentage interest in and to the unit area at the time the order creating the unit is made, the department shall, upon petition and notice, hold additional and supplemental

AGO 935885

hearings as may be requested or required to determine if and when the plan of unitization has been signed, ratified or approved by lessees and royalty owners owning the required percentage interest in and to the unit area and shall, in respect to the hearing, make and enter a finding of its determination in this regard. If the lessees and royalty owners, or either, owning the required percentage interest in and to the unit area have not signed, ratified or approved the plan of unitization within a period of six months from the date on which the order creating the unit is made, the order creating the unit ceases to be of further force and effect and shall be revoked by the department.

(e) Except as otherwise expressly provided in this section, all proceedings held under this chapter, including the filing of petitions, the giving of notices, the conduct of hearings and other action taken by the department shall be in the form and manner and in accordance with the procedure provided in §§ 40—60 of this chapter. Additional notice shall be given as the department requires.

(f) From the effective date of an order of the department creating a unit and prescribing the plan of unitization applicable to it, the operation of a well producing from the pool or portion of it within the unit area defined in the order by persons others than the unit or persons acting under its authority or except in the manner and to the extent provided in the plan of unitization is unlawful and is prohibited.

(g) The obligation or liability of the lessees or other owners of the oil and gas rights in the several separately owned tracts for the payment of unit expense shall at all times be several and not joint or collective and in no event shall a lessee or other owner of the oil and gas rights in the separately owned tract be chargeable with, obligated or liable, directly or indirectly, for more than the amount apportioned, assessed or otherwise charged to his interest in such separately owned tract under the plan of unitization and then only to the extent of the lien provided for in this chapter.

(h) Subject to such reasonable limitations as may be set out in the plan of unitization, the unit has a first and prior lien upon the leasehold estate and all other oil and gas rights (exclusive of a one-eighth landowners' royalty interest) in and to each separately owned tract, the interest of the owners in and to the unit production and all equipment in the possession of the unit, to secure the payment of the amount of the unit expense charged to and assessed against such separately owned tract. The interest of the lessee or other persons who by lease, contract or otherwise are obligated or responsible for the cost and expense of developing and operating a separately owned tract for oil and gas in the absence of unitization shall, however, be primarily responsible for and charged with any assessment for unit expense made against the tract and resort may be had to overriding royalties, oil and gas payments, royalty interests in excess of one-eighth of the production, or other interests which otherwise are not chargeable with these costs, only in

the event the owner of interest primarily responsible fails to pay the assessment of the production to the credit thereof, or production is insufficient for that purpose. If the owner of any royalty interest, overriding royalty, oil or gas payment, or any other interest which under the plan of unitization is not primarily responsible for it pays in whole or in part the amount of an assessment for unit expense for the purpose of protecting such interest, or the amount of the assessment in whole or in part is deducted from the unit production to the credit of such interest, the owner of it is to the extent of the payment or deduction subrogated to all the rights of the unit with respect to the interest or interests primarily responsible for the assessment. A one-eighth part of the unit production allocated to each separately owned tract shall be regarded as royalty to be distributed to and among, or the proceeds of it paid to, the royalty owners free and clear of all unit expense and free of any lien for it.

(i) Property rights, leases, contracts and all other rights and obligations shall be regarded as amended and modified to the extent necessary to conform to the provisions and requirements of this chapter and to any valid and applicable plan of unitization or order of the department made and adopted under this chapter, but otherwise remain in effect.

(j) Nothing contained in this chapter shall be construed to require a transfer to or vesting in the unit of title to the separately owned tracts or leases on them within the unit area, other than the right to use and operate them to the extent set out in the plan of unitization; nor shall the unit be regarded as owning the unit production. The unit production and the proceeds from the sale of it shall be owned by the several persons to whom it is allocated under the plan of unitization. All property, whether real or personal, which the unit may in any way acquire, hold or possess, shall not be acquired, held or possessed by the unit for its own account but shall be acquired, held and possessed by the unit for the account and as agent of the several lessees and shall be the property of the lessees as their interests appear under the plan of unitization, subject, however, to the right of the unit to the possession, management, use or disposal of the same in the proper conduct of its affairs, and subject to any lien the unit may have on it to secure the payment of unit expense. Neither the unit production or proceeds of the sale of it, nor the other receipts shall be treated, regarded, or taxed as income or profits of the unit; but instead, all such receipts shall be the income of the several persons to whom or to whose credit the same are payable under the plan of unitization. To the extent the unit may receive or disburse the receipts it shall only do so as a common administrative agent of the persons to whom the receipts are payable.

(k) The amount of the unit production allocated to each separately owned tract within the unit, and only that amount, regardless of the well or wells in the unit area from which it may be produced and regardless

AGO 935886

of whether it is more or less than the amount of the production from the well or wells, if any, on any such separately owned tract, shall for all intents, uses and purposes be regarded and considered as production from the separately owned tract, and, except as may be otherwise authorized in this chapter, or in the plan of unitization approved by the department, shall be distributed among or the proceeds of it paid to the persons entitled to share in the production from the separately owned tract in the same manner, in the same proportions, and upon the same condition that they would have participated and shared in the production or proceeds of it from such separately owned tract had not the unit been organized, and with the same legal effect. If adequate provisions are made for the receipt of it, the share of the unit production allocated to each separately owned tract shall be delivered in kind to the persons entitled to it by virtue of ownership of oil and gas rights in it or by purchase from the owners subject to the rights of the unit to withhold and sell the same in payment of unit expense under the plan of unitization, and subject further to the call of the unit on such portions of the gas for operating purposes as may be provided in the plan of unitization.

(l) No agreement or plan for the development and operation of a field or pool of oil or gas as a unit, if approved by the department for the purpose of conserving oil or gas, violates a statute of the state prohibiting monopolies or acts, arrangements, agreements, contracts, combinations or conspiracies in restraint of trade or commerce.

(m) Operations carried on under and in accordance with the plan of unitization shall be regarded and considered as a fulfillment of a compliance with all of the provisions, covenants and conditions, express or implied, of the several oil and gas leases upon lands included within the unit area, or other contracts pertaining to the development of it insofar as the leases or other contracts may relate to the pool or portion of it included in the unit area. Wells drilled or operated on any part of the unit area no matter where located shall for all purposes be regarded as wells drilled on each separately owned tract within the unit area.

(n) Nothing in this section or in any plan of unitization shall be construed as increasing or decreasing the implied covenants of a lease in respect to a common source of supply or lands not included within the unit area of a unit.

(o) The unit area of a unit may be enlarged to include adjoining portions of the same pool, including the unit area of another unit, and a new unit created for the unitized management, operation and further development of the enlarged unit area, or the plan of unitization may be otherwise amended, all in the same manner, upon the same conditions and subject to the same limitations as provided with respect to the creation of a unit in the first instance; except that where the amendment to the plan of unitization relates only to the rights and obligations as between lessees the requirement that it be signed, ratified, and approved by royalty owners of record of not less than 62.5 per cent of the unit area

AGO 935887

ALR reference. — Operator's or lessee's responsibility for production of oil or gas in excess of allowance as affected by his ignorance of excess production or his failure to profit thereby, 150 ALR 1149.

Sec. 31.05.120. Use of gas from well to manufacture carbon products without permit is prima facie waste. The use of gas from a well producing gas only, or from a well which is primarily a gas well for the manufacture of carbon black or similar products predominantly carbon is declared to constitute waste prima facie, and the gas well shall not be used for this purpose unless it is clearly shown at a public hearing held by the department, on application of the person desiring to use the gas, that waste would not take place by the use of the gas for the purpose applied for, and that gas which would otherwise be lost is now available for such purpose, and that the gas to be used cannot be used for a more beneficial purpose, such as for light or fuel purposes, except at prohibitive cost, and that it would be in the public interest to grant the permit. If the department finds that the applicant has clearly shown a right to use the gas for the purpose applied for, it shall issue a permit upon terms and conditions it finds necessary in order to permit the use of the gas and at the same time require compliance with the intent of this section. (§ 8 ch 40 SLA 1955)

Article 3. Levy of Tax and Disposition of Funds.

Section

130 — 140. [Repealed]

Secs. 31.05.130 — 31.05.140.

Repealed by § 2 ch 247 SLA 1970.

Editor's note. — Section 2, ch. 247, SLA 1970, effective July 1, 1970, provides that this repeal does not prevent the expenditure of funds authorized by other disaster relief legislation.

The repealed article derived from §§ 151, 152, ch. 40, SLA 1955.

Article 4. General Provisions.

Section

150. Penalties
160. Injunctive relief
170. Definitions

Sec. 31.05.150. Penalties. (a) A person who wilfully violates a provision of this chapter, or a rule, regulation or order of the department adopted under this chapter is subject to a penalty of not more than $1,000 for each act of violation and for each day that the violation continues, unless the penalty for violation is otherwise provided for and made exclusive in this chapter.

(b) If a person, for the purpose of evading this chapter, or any rule, regulation or order of the department adopted under this chapter, wilfully makes or has made a false entry in a record, account or memorandum required by this chapter, or by a rule, regulation or order, or wilfully omits, or causes to be omitted, from a record, account or memorandum, full, true and correct entries as required by this chapter, or by a rule, regulation or order, or removes from the state or destroys, mutilates, alters or falsifies such record, account or memorandum, the person is guilty of a misdemeanor, and upon conviction is punishable by a fine of not more than $5 000, or by imprisonment in jail for not more than six months, or by both.

(c) A person who knowingly aids or abets another person in the violation of any provision of this chapter, or a rule, regulation or order of the department adopted under this chapter is subject to the same penalty as that prescribed by this chapter for the violation by the other person.

(d) The penalties provided in this section are recoverable by suit filed by the attorney general in the name and on behalf of the department in the superior court of the judicial district in which the defendant resides or in which any defendant resides, if there is more than one defendant, or in the superior court of the judicial district in which the violation occurs. The payment of a penalty does not relieve a person on whom the penalty is imposed from liability to any other person for damages arising out of the violation.

(e) The commissioner of natural resources may impose a penalty payment on every 1,000 cubic feet of natural gas flared, vented or otherwise determined to be waste as defined in § 170(11) of this chapter. The penalty shall be the fair market value of the natural gas at the point of waste. (§ 12 ch 40 SLA 1955; am § 1 ch 195 SLA 1968)

C.J.S. reference. — 58 C.J.S. Mines and Minerals § 241.

Sec. 31.05.160. Injunctive relief. (a) Whenever it appears that a person is violating or threatening to violate any provision of this chapter, or any rule, regulation or order of the department, the department shall bring suit against that person in the superior court of the judicial district where the violation occurs or is threatened, to restrain the person from continuing the violation or from carrying out the threat of violation. In the suit, the court shall have jurisdiction to grant to the department, without bond or otherwise undertaking, such prohibitory and mandatory injunctions as the facts warrant.

(b) If the department fails to bring suit to enjoin a violation or threatened violation within 10 days after receipt of written request to do so by a person who is or will be adversely affected by the violation, the person making the request may bring suit in his own behalf to restrain the violation or threatened violation in the court in which the department may bring suit. If the court finds that injunctive relief should be granted, the department shall be made a party and shall be substituted for the person who brought the suit, and the injunction shall be issued as if the department had at all times been the plaintiff. (§ 13 ch 40 SLA 1955)

Sec. 31.05.170. Definitions. In this chapter, unless the context otherwise requires

(1) "and" includes "or" and "or" includes "and";

(2) "correlative rights" mean the opportunity afforded, so far as it is practicable to do so, to the owner of each property in a pool to produce without waste his just and equitable share of the oil or gas, or both, in the pool; being an amount, so far as can be practically determined, and so far as can practicably be obtained without waste, substantially in the proportion that the quantity of recoverable oil or gas, or both under the property bears to the total recoverable oil or gas or both in the pool, and for such purposes to use his just and equitable share of the reservoir energy;

(3) "department" means the Department of Natural Resources;

(4) "field" means a general area which is underlain or appears to be underlain by at least one pool, and includes the underground reservoir containing oil or gas; and the words "pool" and "field" mean the same thing when only one underground reservoir is involved, but "field" unlike "pool" may relate to two or more pools;

(5) "gas" includes all natural gas and all hydrocarbons produced at the wellhead not defined as oil;

(6) "oil" includes crude petroleum oil and other hydrocarbons regardless of gravity which are produced at the wellhead in liquid form and the liquid hydrocarbons known as distillate or condensate recovered or extracted from gas, other than gas produced in association with oil and commonly known as casinghead gas;

(7) "owner" means the person who has the right to drill into and produce from a pool and to appropriate the oil and gas he produces from a pool for himself and others;

(8) "person" includes a natural person, corporation, association, partnership, receiver, trustee, executor, administrator, guardian, fiduciary or other representative of any kind, and includes a department, agency or instrumentality of the state or a governmental subdivision of the state;

(9) "pool" means an underground reservoir containing, or appearing to contain, a common accumulation of oil or gas. Each zone of a general structure which is completely separated from any other zone in the structure is covered by the term "pool";

(10) "producer" means the owner of a well or wells capable of producing oil or gas or both;

(11) "waste" means, in addition to its ordinary meaning, "physical waste" and includes

AGO 935888

(A) the inefficient, excessive, or improper use of, or unnecessary dissipation of, reservoir energy; and the locating, spacing, drilling, equipping, operating or producing of any oil or gas well in a manner which results or tends to result in reducing the quantity of oil or gas to be recovered from a pool in this state under operations conducted in accordance with good oil field engineering practices;

(B) the inefficient above-ground storage of oil; and the locating, spacing, drilling, equipping, operating or producing of an oil or gas well in a manner causing, or tending to cause, unnecessary or excessive surface loss or destruction of oil or gas;

(C) producing oil or gas in a manner causing unnecessary water channeling or coning;

(D) the operation of an oil well with an inefficient gas-oil ratio;

(E) the drowning with water of a pool or part of a pool capable of producing oil or gas, except in so far as and to the extent authorized by the department;

(F) underground waste;

(G) the creation of unnecessary fire hazards;

(H) the release, burning, or escape into the open air of gas, from a well producing oil or gas, except to the extent authorized by the department;

(I) the use of gas for the manufacture of carbon black, except as provided in this chapter;

(12) "cubic foot" of natural gas means the volume of gas contained in one cubic foot of space measured at a pressure base of 14.65 pounds per square inch absolute and a temperature base of 60 degrees Fahrenheit. (§ 2 ch 40 SLA 1955; am §§ 2, 3 ch 195 SLA 1968)

Chapter 15. Common Purchasers of Oil.

Section	Section
10. Hearing on question of discrimination	40. Penalty
20. Determination of common purchaser	50. Definitions
30. Responsibility of common purchaser	

Sec. 31.15.010. Hearing on question of discrimination. (a) Upon the complaint of a person having an interest in the production of oil from a field, the commission shall hold a hearing or hearings, or, at the commission's own discretion, the commission may hold a hearing or hearings to determine if there has been unjust and unreasonable discrimination in purchases of oil offered for purchase within the state,

(1) in favor of one or more owners of oil produced as against another owner in the same field; or

(2) in favor of one or more fields in reasonably close proximity to each other.

(b) In determining whether there has been unjust and unreasonable discrimination in favor of one or more owners of oil produced from a field, the commission shall consider the kind and quality of the oil, the sales prices of the oil, and other related matters.

(c) In determining whether there has been unjust and unreasonable discrimination in favor of one or more fields in reasonably close proximity to each other, the commission shall consider the kind and quality of the oil, the sales prices of the oil, the size and location of the fields, the maximum efficient rate of production from the pools, the cost and mode of transporting the oil from the fields, the term of the offerings, and other related matters. (§ 1 ch 7 FSSLA 1973)

Sec. 31.15.020. Determination of common purchaser. (a) Where a purchaser is purchasing from a field and the commission finds that the purchaser has unjustly and unreasonably discriminated in purchases with regard to oil offered for sale in favor of one or more owners of oil produced in the field, he shall order the purchaser to be a common purchaser with respect to oil offered for sale from the field.

(b) Where a purchaser is purchasing from fields in reasonably close proximity to each other and the commission finds that the purchaser has unjustly and unreasonably discriminated in purchases with regard to oil offered for sale in favor of one or more of the fields, he shall order the purchaser to be a common purchaser with respect to oil offered for sale from each field involved.

(c) A purchaser cannot be ordered to be a common purchaser on the basis of purchases of oil taken in kind by the United States or the State of Alaska, or on the basis of the payment of royalties, overriding royalties, net profits, carried interests or similar interests, whether in kind or in value or on the basis of a producer taking its own production. (§ 1 ch 7 FSSLA 1973)

Sec. 31.15.030. Responsibility of common purchaser. (a) A common purchaser purchasing in this state shall purchase ratably without unjust and unreasonable discrimination in favor of any owner or producer over any other owner or producer offering to sell oil produced from a field where it is a common purchaser or from fields in reasonably close proximity to each other where it is a common purchaser.

(b) If a purchaser is a common purchaser in more than one field in reasonably close proximity to each other, the commission may order the purchaser to purchase ratably from the fields involved in proportions which will prevent unjust and unreasonable discrimination among the fields.

(c) The commission may make inquiry in each field concerning the connections of the various producers and when unjust and unreasonable discrimination is found to be practiced by any common purchaser as defined in this chapter the commission shall issue an order to the common purchaser to make reasonable extensions of their lines and reasonable connections as will prevent the discrimination. (§ 1 ch 7 FSSLA 1973)

Sec. 31.15.040. Penalty. A person violating an order issued under this chapter shall be assessed by the commission a civil penalty of not less

AGO 935889

than $1,000 nor more than $10,000. Each day a violation continues constitutes a separate offense. (§ 1 ch 7 FSSLA 1973)

Sec. 31.15.050. Definitions. In this chapter

(1) "commission" means the Alaska Pipeline Commission;

(2) "field" means a general area which is underlain or appears to be underlain by at least one pool, and includes the underground reservoir containing oil or gas; and the words "pool" and "field" mean the same thing when only one underground reservoir is involved, but "field" unlike "pool" may relate to two or more pools;

(3) "oil" includes crude petroleum oil and other hydrocarbons regardless of gravity which are produced at the wellhead in liquid form and the liquid hydrocarbons known as distillate or condensate recovered or extracted from gas, other than gas produced in association with oil and commonly known as casinghead gas;

(4) "pool" means an underground reservoir containing oil; each zone of a general structure which is completely seperated from any other zone in the structure is covered by the term "pool";

(5) "purchaser" means a person who purchases oil in the state. (§ 1 ch 7 FSSLA 1973)

Chapter 30. Miscellaneous Provisions.

Section	Section
10. Damages for wrongful extraction of oil or gas	40—70. [Repealed]

Sec. 31.30.010. Damages for wrongful extraction of oil or gas. (a) If oil or gas has been or is extracted from any existing or subsequently drilled well by any person without right but who asserts a claim of right in good faith or who is acting under an honest belief as to the law or the facts, the measure of damages, if there is any right of recovery under existing law, shall be the value of the oil or gas at the time of extraction, without interest, after deducting all costs of development, operation, and production. The costs shall include taxes and interest on all expenditures from the date of the expenditures.

(b) In this section "oil or gas" includes all hydrocarbon minerals. (§ 1 ch 73 SLA 1964)

Secs. 31.30.040—31.30.070.

Repealed by § 4 ch 170 SLA 1975.

Editor's note. — The repealed sections derived from § 1, ch. 170, SLA 1975.

Legislative committee report. — For report on ch. 170, SLA 1975 (CSHB 258 am S), see 1975 House Journal, p. 524.

MEMORANDUM

March 21, 1978

SUBJECT: Draft Resources Committee Substitute for SSHB 830

TO: The Honorable C. V. "Chat" Chatterton

FROM: Gregg K. Erickson
Director of Research

As you directed, we have engrossed the language you presented us yesterday into a work draft committee substitute for SSHB 830. The draft committee substitute is attached herewith.

Although we have incorporated your language into SSHB 830, as you specifically directed, we would caution that doing this has introduced a number of uncertainties into the bill. Among these are the following:

1. Sec. 31.05.015 COMPENSATION OF MEMBERS OF THE COMMISSION. By deleting the phrase "equal to that of a commissioner of a principal executive department" after the word "salary", you are presumably reserving to later legislative action the establishment of commissioners' salaries. If this is to be done in the course of the budgetary process, I would suggest that the staff of the Legislative Finance Division be contacted to insure that the salary allocation is made a separate line item, or that other appropriate steps are taken to insure that legislative intent with respect to salaries, whatever it might be, is fulfilled. If it is the legislative desire to have the members of this commission treated for salary purposes the same way as members of all other regulatory commissions, then it will be necessary to amend the Alaska Salary Commission Act (AS 39.23.060) in order to include the commission in the purview of the salary review body.

2. Sec. 31.05.023(b) and (c). The effect of your change to subsection (b) is to place the professional staff of the commission and the personal secretaries of each commissioner in the exempt service. If this is your intention, it would be desirable, although not strictly required, that a conforming amendment to AS 39.25.110 be adopted as well. The effect of your change will be to give the commission pretty much complete discretion with respect to establishing the salaries of its

AGO 935896

professional staff members (with the exception of the executive director) and the commissioner's personal secretaries, subject only to the overall constraint of having to live within their budget. Since you did not delete (d), we assume you wish to leave the executive director's salary pegged to that of a commissioner of a principal executive department.

3. Sec. 31.05.025 CONFLICT OF INTEREST. The language you provided would make employees, consultants and members of the commission subject to AS 39.50 and AS 39.51. We would call your attention to the fact that *Sec. 2 of the bill already brings the commissioners under chapter 50. If it is desired to bring the employees and consultants of the department under this chapter, amendment to AS 39.50 will be required. Bringing consultants and employees under AS 39.50 will, of course, mean that they will be subject to the full public disclosure requirements now imposed on legislators and other "public officials" as defined in that chapter.

Subsection ( ) of this section gives the governor authority to determine whether a conflict of interest exists, presumably based on the disclosures required under AS 39.50. It is not clear, however, what action the governor would take if he determines such a conflict exists, or what authority the governor would have in the event a member, consultant or employee of the commission disagreed with the governor's determination that a particular holding would impair the person's ability to act in the "best interests of the people of Alaska".

AS 31.51 will need to be amended if it is desired to bring consultants under its provisions.

4. Sec. 31.05.026 RELATIONSHIP TO DEPARTMENT OF NATURAL RESOURCES. We are not clear as to your intent in adding subsection (d). If subsection (c) is to be superseded, then it probably should be deleted as well. It would appear that your intent in (d) is to vest all information gathering responsibility in the commission. This could create difficulties for the department if it attempts to require persons conducting geophysical exploration or drilling on state lands to provide it with information to assist the state in planning for and conducting the leasing of oil and gas lands. Furthermore, it is not clear what exemptions would be allowed to "the general rule" that is described in subsection (d).

With respect to subsection (e) we are not clear as to the intent or effect of the first sentence. The second sentence of this subsection appears to encourage interagency agreements, but by enumerating the areas to which such agreements may be

entered into, and by specifying that they may be only for "the sole purpose of efficiency" the sentence could be construed as limiting such agreements to the areas enumerated, and for the purpose specified. Subsection (f) seems to speak to the same material as contained in subsections (a) and (b). We cannot judge what its effect would be, either taken together with (a) and (b) or standing alone.

A prior scheduling commitment to another committee will prevent us from attending your markup hearing this afternoon, but we hope these comments may be helpful.

AMENDMENT

OFFERED IN THE HOUSE: BY: _____

TO: Sponsor Substitute for HOUSE BILL No. 830

SENATE BILL No. _____

PAGE: 4 LINE: Between lines 4 and 5

*Sec. 1 of SSHB 830 is amended by the addition of a new section to read as follows:

Sec. 31.05.026. RELATIONSHIP TO DEPARTMENT OF NATURAL RESOURCES.

(a) The department shall have standing before the commission to raise all issues relating to state owned land without regard to the type of proprietary interest held by the state in that land.

(b) With respect to federal land from which the state or any subdivision of the state is entitled under federal law to receive a share of the federal royalty interest, the department shall have the same standing before the commission as if it were the holder of the equivalent royalty interest.

(c) When both the department and the commission have the authority to require, and do require, the submission of substantially the same information from persons subject to this chapter, the commission, in order to alleviate the administrative burdens placed on those persons, may by regulation enter into an agreement with the department whereby either the commission or the department shall have the responsiblity to collect the information lawfully required by both.

AGENDA

8:00 a.m., Room 118, Capitol Building

Milton Lipton will address the Committee on:

SSHB 830 Alaska Oil and Gas Conservation Commission
HB 878 Oil and gas taxes; effective date

1:30 p.m., Court Room A, Court Building

HB 854 Leasing of State land for oil & gas development

Persons requesting to give testimony:

Robert LeResche, Commissioner, Department of Natural Resources
John Roderick, Chief of Special Projects, Dept. of Natural Resources
Ed Phillips, economist, Department of Natural Resources
Milton Lipton, consultant
(Mark Singletary, Arco, if time permits)

To be continued tomorrow at the same time and location.

(HB 878 - add to it)

CHAPTER VI - CONCLUSIONS AND RECOMMENDATIONS

Conclusions

1. The legislative histories of Congressional debates, appropriations, legislation, rules, and regulations pertaining to reindeer grazing and cooperative agreements between state and federal agencies indicate that in general the U.S. Government has supported the establishment, development, and perpetuation of reindeer grazing in Alaska. Change in this policy at this time, based on our research data, would not be supported by the reindeer herders, the Reindeer Herders Association, Village and Regional Corporations, nor, most importantly, by the people of the Seward Peninsula. Furthermore, change in this policy without providing alternatives would deprive the people of the region of an important food resource and would take away an enterprise that some individuals have spent many years of their lives developing.

One alternative suggestion has been to disallow reindeer herding on Seward Peninsula d(2) lands and to re-introduce caribou. We find this to probably be an unworkable plan for the following reasons. Caribou cannot be managed with the same degree of control as reindeer. If one is controlling caribou movements (which would be necessary to keep them off adjacent reindeer ranges) then a truly wild caribou herd does not

result. In addition, the practical problems of securing permission from the Alaska Department of Fish and Game to stock the area with caribou, moving them across adjacent reindeer ranges, and starting condemnation procedures for the current permit holders and their herd and facilities are so obvious that they do not even need to be discussed further. We would argue that this alternative should not be seriously considered. Furthermore, it is doubtful that a free-ranging caribou herd on d(2) lands could provide sufficient numbers of animals available for local harvest compared to well-managed reindeer herds.

2. Reindeer herding has been part of the social and economic environment on the Seward Peninsula for 85 years. This historical dimension cannot be erased without evoking bitterness and opposition on the part of the herders and the village residents. The contemporary reindeer herding situation is a product of previous historical and cultural forces and the current socio-economic milieu of the Seward Peninsula. Policy regarding reindeer herding must be formulated with a firm understanding of the biology and ecology of reindeer and of the social and economic aspects of Native village life. Reindeer herding management practices have changed as the social and economic conditions, of which herding is a part, have changed.

When reindeer herding was first introduced, it appears to have been attractive only to those men who were unable to make a living in the traditional way. As the herds increased during the 1920's, herding

became an acceptable lifestyle alternative. When the herds declined prior to World War II and other employment opportunities became available, interest in herding declined correspondingly. As the potential rewards from reindeer herding have increased since the 1950's, so too has interest and involvement in herding again increased. A legacy of inadequate government services to the herders does exist, including: incomplete feedback between baseline reindeer research and the herders; conflicting federal and state policies; bureaucratic specialization of areas of technical expertise, which has confused the exact role which the agencies and their personnel should play; and inadequate levels of funding for personnel, travel, research, and administration.

3. Reindeer provide a source of meat, by-products, income, and employment. Local markets for reindeer meat have been developed by the Native herders. There is currently no known alternative industry or activity that has been shown to be biologically compatible, economically feasible, or socially acceptable to replace or co-exist with reindeer herding. The presence of a reindeer herd or herds at a village means that there are employment opportunities which would probably otherwise not be available to the villagers. The herder serves to stimulate the village and regional economy with his herding operation by spending and investing his income in the village and region. The reindeer industry provides private sector employment in a region of the United States where little non-public sector employment is available.

The marketing and production practices of the reindeer herders are rational within the context of the social and economic systems of northwestern Alaska. Some herds have demonstrated stability in numbers of animals over the years. Regular slaughterings of the relatively same numbers of animals have taken place. The price received for the meat has increased, however, due to increasing income levels of the consumer population, a cultural preference for reindeer meat over other imported meat products, and increased prices of reindeer meat substitutes, coupled with rising production costs for labor, fuel, snow-machines, and food. Cooperative management agreements between the herders and the federal agencies would allow the herders to maintain stable herd sizes, as the agencies conduct range surveys to determine optimal carrying capacities, monitor range utilization, and protect range resources through a rotational grazing plan.

4. After 85 years on the Seward Peninsula, reindeer herding is a part of the contemporary Native lifestyle. Herding provides personal satisfaction and prestige for the herd owners/operators. The reindeer herders have integrated the prerequisites for successful herding into their social organization, value system, and seasonal round of activities. This does not mean that there are not occasional conflicts in scheduling and priorities. Instead, by making use of most of the available resources and opportunities, reindeer herding reflects one aspect of the total individual, household, and village adaptation to the arctic environment.

In general, economic specialization for Native peoples does not appear like a viable, long-term adaptive alternative in arctic conditions.

5. The reindeer industry provides a high-quality red meat protein source as an alternative to imported meat products and local wildlife species. During times of low caribou numbers in regions adjacent to Seward Peninsula, the reindeer industry may be a crucial source of inexpensive meat for people. If restrictions on the harvest of caribou from the Western Arctic Caribou Herd are continued in the future, the reindeer herds will continue to provide the most inexpensive, locally available, and culturally preferred meat alternative. While all herders and their families participate in other resource extraction and processing activities, and in the cash/wage economy to a greater or lesser degree, reindeer herding remains a primary source of income for them through the sale of meat, velvet antlers, and other by-products.

Conflicts between reindeer herding activities and other subsistence activities occur most often during the spring and summer. Fawning and the post-partum period are the most crucial times of year for the reindeer. Yet this is precisely the same time of year (mid-April to late May) when an intensification of subsistence activities traditionally takes place. Seal and beluga hunting, fishing, and bird hunting begin to occupy more and more of people's time, after a winter of relative inactivity. The conflict in the past was resolved by one of several means. The reindeer were brought near the coast where they could be watched on a rotational

basis as men hunted on the sea ice. A few designated people were placed in charge of the herd. As is sometimes the case now, the reindeer were simply left to fend for themselves during fawning season. Increased herding and guarding of the herd during fawning season and immediately afterward should be encouraged to improve fawning percentages survival and to protect the herd against predators.

6. Native foods, including reindeer meat, make up a significant portion of the Native diet on the Seward Peninsula. There is currently an increasing demand for reindeer meat. This is evidenced by the increases in price received by the herders for reindeer meat since 1969. If reindeer numbers continue to remain stable on the Seward Peninsula, the price received by herders, and therefore paid by the local consumers, may continue to increase in the near future.

7. Large reindeer herds can be operated successfully (in a business sense) on the Seward Peninsula. Herds of 4,000 reindeer, using part-time herding, have been successful in the past, and the preceding scenarios suggest that large herds, using full-time herding, can be successful in the future. There is room for improvement. The scenarios presented demonstrate that production can increase with the application of a few basic animal science practices. The decreased slaughter of productive females and increased fawn survival can help in the short run. In the long run, improved bull selection and better age-sex composition of the

herds could serve to increase production. Additional possibilities include the marketing of fawn meat and a sustained slaughter of between 20 and 25 percent of the herds yearly, once sufficient herd size and composition are developed. These changes in herd management practices, including year-round herding of large herds, could generate revenues from the herds greater than the costs of implementing the changes. The net result would be an increase in herder income, labor income, and the probability that reindeer meat would be available throughout the year. Increased production could lead to penetration of already identified markets, both within and beyond the state of Alaska. Local cultural preferences for steer meat and biases against fawn meat would have to be resolved.

8. Government policies, rules, and regulations which reduce herd sizes, reduce the incentive or potential for increased herd productivity, or limit marketing of reindeer products, would have undesirable impacts. There is a good possibility that reindeer meat availability would be reduced. The same could be true of income from herding and its contribution to the local economy and employment. The herders would face a loss in prestige and social standing in their village. Very closely tied to this is that most villagers do not appear to understand the basic thrust of the Alaska Native Claims Settlement Act. While ANCSA was intended to be a vehicle for "a fair and just settlement of all ... aboriginal land claims" (Section 2(a)), the Section 17d(2) provisions of

ANCSA are viewed often as interference with traditional activities on the public lands. For most village-oriented Native people, a change in land management practices is not understandable. Villagers ask why they cannot continue to do the things they have always done when all that appears to happen is that the land will be called a Reserve or Refuge. The personnel of all agencies concerned will have to establish close working ties with the affected villages in order to explain why public lands previously managed under multiple-use guidelines will in the future be managed within narrower NPS or USF&WS management mandates. Public meetings, informal socializing, brochures, radio and television broadcasts, or other media approaches can be employed to provide explanations. The opinions of the villagers should be considered in the course of the development of management plans for the area.

9. The production and marketing of velvet antler is likely to increase in importance to the herders in the next few years. Price received by the herders for this product has increased steadily since 1972. With the interest expressed by new buyers in entering this market, the trend of increasing price received will likely continue (because of competition for the product). Potential conflicts between Reserve or Refuge management and the herders are inherent in velvet antler harvesting practices. These currently involve the use of powerboats, airplanes, and a small helicopter for transporting labor and supplies and for shipping the velvet antler harvested to Nome for shipment out of state.

10. The acculturation process is an abstract, general notion which refers to the economic, social, and psychological accomodations made by the members of one culture to the technology, economics, and values of another culture. The acculturative process will continue on the Seward Peninsula in the near future and is currently giving rise to a class system among Natives, with an upwardly mobile Native elite. Accordingly, as the reindeer herders gain experience in dealing with the federal and state agencies which are concerned with reindeer, the Reindeer Herders Association may increase its operating efficiency. Although the federal agencies may believe that they are not contributing to culture change and the acculturation process, in fact they are. The very presence of National Park Service and/or U.S. Fish and Wildlife Service personnel and their activities cannot but affect the lives of the Natives peoples of northwestern Alaska. The acculturative trend is towards increasing extra-village and regional orientations to problem solving on the part of the people of northwestern Alaska.

11. Increased tourism or visitor use of the Reserve or Refuge due to reindeer herding is unlikely. Since summer is the peak (and virtually the only) tourist season, the only opportunities for herd visitation are when the animals are corralled, unless the visitor wishes to seek them out on the open range. Velvet antler harvesting, catrating, and slaughtering activities will likely be unappealling to most tourists. When the animals are on the open range in summer, they are difficult to locate

from the ground. The expense of locating them from the air is high relative to the reward that might be gained from seeing a herd on the tundra or shore. Aircraft operating restrictions may also preclude this activity. The mere presence of reindeer on the Seward Peninsula utilizing a Reserve or Refuge area may come as an unwanted surprise to many tourists on a group tour. The attraction of reindeer comes from their historical associations on the Seward Peninsula, the possibility of tasting reindeer meat at one of the hotels or restaurants in Nome and Kotzebue, and the thematic role of reindeer at Christmas time. Small parties might be welcomed at the corrallings, especially if they are interested in participating in the corralling activities. There are, however, potential conflicts between visitors, reindeer, and the reindeer herders.

Prominent among the expected conflicts is the annoyance or disturbance which back-country users may inflict on grazing reindeer. The use of visitor access points may also serve to disturb the animals when float planes, wheeled planes, or trucks utilize the access area. The presence of back-country users, their camps, and their food may attract the curious reindeer as well as predators, with resulting unpleasant and possibly serious encounters.

Recommendations

1. d(2) legislation for the Seward Peninsula and surrounding areas of ecological concern should allow the continuation of reindeer grazing on federally managed lands, subject to the terms and provisions of the Act of September 1, 1937 (50 Stat. 902; 48 U.S.C. 250k) and the regulations contained thereunder in 43 CFR 4132. We fully recognize the potential conflicts with other land uses and values which may arise from this recommendation, particularly with management plans for other wildlife such as caribou and migratory waterfowl. However, it would seem more important to allow local residents to remain as locally self-sufficient as possible in the production and procurement of their food.

2. d(2) legislation for the Cape Krusenstern national interest lands, the Noatak River basin national interest lands, and the Selawik River area national interest lands, and all the adjoining areas of ecological concern should not expressly prohibit the use of these lands for reindeer grazing. At some point in the future, it may become necessary and desirable to permit reindeer grazing on any or all of these lands. Advances in the management of reindeer herds, reindeer husbandry, or any disastrous decline in the availability of other wildlife food resources (particularly caribou) may make it locally desirable, and in the national interest, to permit the use of these lands for reindeer grazing, given the historical precedent for herding on these lands. The

local interest may be best served by allowing local residents to operate reindeer herds for their local consumption. The national interest may be best served by allowing local residents to use national interest lands for the production of their food, rather than resorting to the distribution of transfer payments (unearned income) to artificially support the human population.

3. The federal land managing agency(ies) on Seward Peninsula should develop strong working relations with the Reindeer Herders Association. The individual reindeer herder's activities should be allowed to the extent that they legally can be within the Congressional mandate. Range surveys and calculations of carrying capacities of the ranges should be conducted with all possible speed in order to develop efficient management plans for reindeer herding that are compatible with the goals of the local people, reindeer herders, and the agencies of the state and federal governments. Long range baseline research programs on reindeer physiology, biology, and ecology should be encouraged and supported by the state and federal government.

Assuming that reindeer herding is to continue on the Seward Peninsula d(2) lands, several management considerations arise. First it will be necessary for the federal land managing agency(ies) to conduct range surveys and to calculate the reindeer carrying capacity of the areas. Adequate biological information is virtually completely lacking from the Seward Peninsula to determine the role of reindeer in the ecosystem.

This report has indicated the extent and importance of reindeer in the economic and social system of the people on the Seward Peninsula. Without an adequate understanding of the role of reindeer in the tundra ecosystem, an adequate management plan for reindeer cannot be developed. Second, by utilizing the data from such range surveys, the federal agency(ies) will be able to determine, and if necessary regulate, herd sizes, movements, and seasonal range utilization to best protect the range. This is in the agency(ies) interest because it contributes to the preservation of the values which are found in the lands and associated resources on the Seward Peninsula. It might also indirectly benefit the herders because it will enable them to avoid under utiliation of the range, or over-utilization, with consequent range damage or depletion.

4. The federal land managing agency(ies) on the Seward Peninsula should develop management plans covering the operations of the individual reindeer herders on federal lands in consultation with the herders and other interested parties. The use of atv's, snow-machines, powerboats, airplanes, and helicopters should be permitted under legislative authority and regulation where the agency(ies) concerned can permit their use. As the herders are currently entitled to do, herd operators should be allowed to continue to construct, maintain, and utilize fences, buildings, corrals, reservoirs, wells, and other improvements by permit, as are found necessary for successful reindeer grazing and as are compatible with the goals of the land managing agency(ies) and the values for which

the Reserve or Refuge is established. Denying the use of mechanized transportation for reindeer production, particularly in connection with velvet antler harvesting, would probably force the reindeer herders to forego herding because alternative methods of harvesting antler are either uneconomical or impossible to implement. We recommend that agency personnel attend handlings to insure compliance with rules and regulations regarding mechanized vehicle use, camp fires, waste disposal, and other activities by the herders and antler purchasers.

5. In public relations and publicity materials concerning the Seward Peninsula national interest lands, the federal agency(ies) concerned should stress the local socio-economic importance of reindeer herding. This could be accomplished through the positive presentation of the history of reindeer herding, its current practice, products and their value, and monitoring of range conditions by the managing agency. Interpretive sites, brochures, pamphlets, and visitor guides can all be used as vehicles to explain reindeer herding to the visitor. The potential for unpleasant interactions between visitors, reindeer, wildlife, and the local residents should be carefully presented to avoid visitor-herder-reindeer conflicts. Since visitor-use-days are projected to be low during the first few years of Reserve or Refuge operation, this can give the agency concerned and the herders time to work out the nature of their relationship before visitor use has the opportunity to become a problem.

6. In attempting to minimize visitor and reindeer operation conflicts, agency management plans and orientations for visitors should emphasize the nature of reindeer, their probable and possible reactions to humans, and appropriate mitigating measures to avoid conflicts. These measures could include, but are not limited to: avoiding reindeer whenever they are encountered, not deliberately feeding reindeer (or any wildlife), camping at designated points away from reindeer summering areas (particularly along bodies of water and the coast), and caching food supplies away from tents. In addition, the careful handling of campfires to avoid starting tundra fires and destroying habitat, and the respecting of the private property of reindeer herders such as cabins, corrals, and fences are desirable. Since these improvements are often located on Native Allotment tracts, attention to the property rights of the owners should be given. An apparently abandoned cabin in summertime may in fact be a critical haven for shelter during a winter storm when people are travelling. Entry and the appropriation of any items contained therein is, of course, already prohibited by state statutes, as well as by courtesy.

NAKAK

January 30, 1978

Representative Alfred C. Nakak
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Representative Nakak:

The Reindeer Herders Association is interested in continueing the reindeer grazing survey in the Seward Peninsula, using the E.R.T. Satellite system.

The RHA board met with Soil Conservation January 17, 1978 at Anchorage with State, Federal and U of A agency personnel. The attendance of those present is enclosed.

I am enclosing documents pertinent to our interest in getting grazing survey done. If there is any possibility of getting a supplemental funding to assist, it would be greatly appreciated.

Bering in mind also of our contact with Mr. Stell Newman, National Park Service and Mr. Fran Mauer U.S.F.&W.S. both with offices at Anchorage in trying to involve their respective agencies to assist us with dollars, since they have D-2 withdrawels within Seward Peninsula. Both gentlemen are out at Washington D.C. involved in the make-up of D-2 legislation. I did call Mr. Newman of the RHA meeting with Soil Conservation of our intent. Mr. Newman said he would check with N.P.S. at D.C. if any assistance would be available.

The following is the cost of the survey of 4½ million acres.

cost per S.C.S.		150,000.00
S.C.S. commitment 1/3 -	50,000.00	
B.I.A. commitment	20,000.00	
funds available		70,000.00
	Short	80,000.00

In discussions with herders and various State/Federal agencies suggestions have been made that agencies involved in Agriculture within the Administration should seek means of funneling Federal dollars towards Reindeer Agricultural Program. Since reindeer is a renewable resource and has great potential with proper application of assistance can be relied upon to cut the cost of living in this area.

Sincerely,

Danny Karmun, Coordinator
Reindeer Contract

REINDEER HERDERS ASSOCIATION MEETING
ANCHORAGE, ALASKA
JANUARY 17, 1978

On January 17, 1978, at 10:00 a.m. the Executive Board Members of the Reindeer Herders Association met with representatives from State and Federal Agencies concerning range survey. Those in attendance were: Mr. Ted Freeman, Mr. Burt Clifford and Mr. Jim Preston from S.C.S.; Mr. Pete Scorup and Mr. Bob Mitchell from Agricultural Experimental Station; Mr. Edward Kern, Division of Agriculture; Mr. Earl Bracewell, U of A Extension Service; Mr. Bob Leedy, USFWS; Mr. H.P. Gazaway, USDI BIA; Mr. Dave Scott and Mr. Sal DeLeonardis, USDI BLM; and Dallas Cross from NANA. The meeting took place in the conference room of the S.C.S. building.

After welcoming everyone to the meeting, Mr. Karmun asked Mr. Preston to explain how the range survey was made. Mr. Preston stated that in 1976, 4½ million acres were surveyed. He explained in detail how the land sat imagery was used and how through this they try to figure out how much lichen is on the land and how much the reindeer eat per day. It was estimated that the reindeer eat 5-15 pounds per day, but they couldn't be sure of this figure because of trampling and they couldn't be sure that the deer were eating only the top 1/3 of the lichen. Mr. Preston mentioned that Professor Andreayof, Russian scientist determined regrowth takes 3 years for lichen based on a 6 month winter range use and breaking winter range use into 5 units.

Clifford Weyiouanna brought up the importance of studies like this because each herder knows how many deer their range can handle, but don't say exactly how many on their annual report because the present grazing permit states an estimated number of head on a given range. With the grazing survey each herd can be given an actual carrying capacity and work towards the maximum.

Mr. Sal DeLeonardis stated that something the Association should look at carefully is the type of operation going on now and what the advantages are to the cow/calf operation. He felt that it would be better for mass production. He also stressed the social and economic factor placed on the individual herders. He felt that the two should not be mixed.

Mr. Gazaway stated that the Bureau would like to see the survey continued and intensified. He stated that there are funds now available of $20,000.00. He also suggested that a letter be written with strong endorsement from Gary Longley BIA-Nome, for justification of receiving extra monies. Mr. Karmun stated that it is important and his feeling that this survey be conducted with established agencies that have expertise in this field.

Mr. Freeman stated he was sure that if some monies were alloted for range survey, S.C.S. would be able to come up with 1/3 of the monies to help out.

Mr. Sal DeLeonardis stated that if the herders were interested in expanding to maximum operation there were some questions that they would have to answer in order to make some headway.

1. What are the problems?
2. What is the solution?
3. What is the out come going to be, disaster?

The range survey needs to be justified. What is the urgency and need?

Mr. Karmun responded to questions put forth by Mr. DeLeonardis. In the RHA efforts to assist the Reindeer Industry the grazing survey is one of the vital steps to attain viability and steps once determined on carrying capacity to work towards increasing herds by proper husbandry methods. The Reindeer Industry at the present level are unable to meet the regions demands for meat. With the highest costs of living in the nation, our dependence in these renewable resource is heavily relied upon for a more reasonable meat source.

Once determined on actual carrying capactiy of each range, interest by herders is to maximise their herds. Once this is realized other methods of support would be towards creating facilities such as slaughter/freezer plants an outset at Nome for marketing. During my 2½ years with the Reindeer Industry there has been demand for practically every by-product of the reindeer, but we are hampered due to lack of proper facilities to meet the demand.

Those in attendance representing State and Federal agencies all agreed an interest in the grazing survey. Like any State or Federal agency pre-planning and budget requests need to be submitted year in advance. Availability of funds at this time is nil. The RHA representative will check with State and Federal within the Seward Peninsula withdrawel if they would support this venture. It was agreed by the principal agency S.C.S. that they would have to know by February 15th if $150,000.00 can be obtained for this current year. If we are unable to obtain this goal that concerted efforts be made for 1979.

Mr. Dave Scott BLM brought out some facts for the industry to consider. Pressure is mounting that environmental impact statements be accomplished. This applies to the reindeer grazing lands as well. The Reindeer Industry should approach the State to agree to dedicate 160' parallel line for the protection of reindeer and grazing from competing caribou on reindeer grazing lands. This office is interested in the survey and will submit proposal for 1979.

Mr. Gazaway, BIA posed a question to Mr. Freeman S.C.S. if they could do the survey for $75,000.00? Mr. Freeman responded with experience in the NANA survey it could not be done for less than $150,000.00 for 4½ million acres.

S.C.S. reiterated the importance of making use of the satellite

imagery done by U of A Fairbanks, both with Tom George and Dr. Kliens, both have had past experience in this field.

Both S.C.S. and RHA agreed to make contacts with agencies for possibile support in funds and report our findings.

November 11, 1976

Mr. Edward L. Nygard
Environmental Impact Analyst
Bureau of Indian Affairs
P.O. Box 3-8000
Juneau, Alaska 99802

Dear Ed:

This is a follow up to our telephone conversation regarding the seeking of additional funds towards the agriculture program. The Reindeer Herders Association interests is to continue the inventory and soil survey of reindeer grazing area leases held by the herders.

The NANA Corp. just completed a survey of the grazing areas of Kotzebue, Buckland and Deering. This was in joint efforts with B.I.A., University of Alaska, NANA, State of Alaska and Soil Conservation, funded by these agencies making use of the satellite.

Through this process, grazing area potentials are determined. A herder can also through this process determine the carrying capacity of reindear.

The Reindeer Herders Association feels this to be an important step in maintaining a level to benefit the herder.

The RHA efforts, if funding is made available, is to initiate a 5-year program. And start with the Goodhope and Weylouanna range in Espenberg and Shishmaref.

My records show Goodhope as having 1,157,120 acres and Weylouanna 832,663 acres for a total of 1,989,783 acres.

In checking with NANA, they estimate the cost coming to .03¢ an acre. Based on this figure the cost would be $59,693.49, plus adding

10% for unforeseen inflation.

The following will be the 5-year plan of survey and inventory:

1977	Goodhope/Weyiouanna Espenberg/Shishmaref	1,989,783 Acres
1978	Ongtowasruk/Olanna/Tocktoo Wales/Brevig/Brevig	2,007,394 Acres
1979	Kakarak/BIA/Davis Teller/Nome/Nome	1,885,406 Acres
1980	Johnson/Aukongak/Trigg Kougrok/Golovin/Death Valley	3,100,040 Acres
1981	Henry/Sagoonick/Stebbins Koyuk/Shaktoolik/Stebbins	2,117,960 Acres

I am sending a copy to Mr. Freeman of U.S. Soil Conservation since that department was involved with the NANA survey.

Any assistance in seeking funding is important. I am open to suggestions.

Thank you.

Sincerely,

Danny Kannan, Coordinator
Reindeer Contract

Mr. Danny Karmun
Coordinator, Reindeer Contract
Kawerak, Inc.
Bering Straits Native Association
P.O. Box 505
Nome, Alaska 99762

Dear Mr. Karmun:

In a letter to the Bureau of Indian Affairs some time ago, you requested that the range surveys begun on the Seward Peninsula be continued to cover all of the reindeer range land in your area. The BIA has since contacted the USDA Soil Conservation Service (SCS) to explore the possibility of carrying on further range work next summer.

As you know, SCS was the agency that conducted the range surveys on the reindeer grazing lands within the NANA Regional Corporation's boundaries. The maps and the plant information developed are now being used by the herders, BLM, and SCS in preparing individual range management plans.

If range surveys are to be carried out next summer, several arrangements need to be made as early as possible. We would suggest that Kawerak, Inc. or the Reindeer Herders Association call a meeting of agencies and individuals who have interests in the Seward Peninsula to determine the priority ranges and the support that could be provided. The NANA Corporation and agencies such as BLM, BIA, National Park Service, Fish and Wild Life Service, SCS, and the State Division of Lands may want to participate in such a meeting.

We would appreciate hearing if you are interested in requesting further range surveys and if you think a meeting should be called to discuss the proposal. A January meeting would probably be as early as we could expect to get people together.

Sincerely,

Ted Freeman

Dear Mr. Freeman:

In repla to your letter of December 2, 1977 regarding range survey on the Seward Peninsula, I have contacted all the principal agencies and the Reindeer Herders Association board officers.

This is to reconfirm our telephone conversation in which all agency personnal concurred to meet January 17, 1978 at your conferance room, 221 E. Northern Lights Blvd., Anchorage at 9:30 a.m.

The following association officers and myself will arrive in Anchorage on January 16, 1978: Clifford Weyiouanna, president; Alfred Karmun, vice-president; and Palmar Sagoonick, secretary.

I will send separate letters of invitations to Mr. Stell Newman, National Park Service; Mr. Fran Mauer, U.S. Fish & Wildlife Service; and Mr. Ted Smith, Chief State Land Resource.

If there is anything that you might require from us for information prior to the meeting please don't hesitate to call or write.

Sincerely,

Danny Karmun, Coordinator

HB 257

February 17, 1978

The Honorable Hugh Malone
Speaker of the House
Alaska State Legislature
Juneau, Alaska 99811

Dear Mr. Speaker:

Under authority of art. III, sec. 18 of the Alaska Constitution, and in accordance with AS 24.30.060(b) and the Uniform Rules of the Alaska State Legislature, I am transmitting a bill extensively amending and updating AS 38.05.180, Oil and Gas Leasing.

I am pleased to present for your consideration this major piece of legislation dealing with Alaska's energy future. Not since statehood has the legislature addressed itself to determining how best to lease our petroleum land. Conditions have changed dramatically since then, both for the petroleum industry and the state, and it is time to make such a reappraisal.

The proposed changes will update the leasing law to provide increased public control over exploration, development, and production from state land, obtain a fair return from our non-renewable resources, and, at the same time, provide land from which explorers may find new energy supplies.

How Alaska leases its oil and gas lands will in large part determine our continuing relationship with the oil industry. Many of the problems we now confront in determining the state's fair share of the Prudhoe field could certainly best have been resolved at the time the initial leases were offered by the state. This legislation would make that more likely in the future.

As you are aware, Congress is presently debating a new law covering federal oil and gas leasing on the

Outer Continental Shelf. As you are also aware, much of the attractive OCS land is directly adjacent to Alaska's three-mile offshore land. For this reason, my proposed legislation attempts to be as inclusive as the federal OCS legislation, but more workable, and thus, hopefully, more acceptable to the oil and gas industry.

This legislation is designed to accomplish a number of important state objectives. First, it requires state land to be offered competitively under any of several new leasing methods, including bidding by royalty, sliding royalty net profits and work commitment or a combination of any of these methods. Under certain circumstances, land may be offered on a noncompetitive basis.

Second, it reduces the length of the term of a lease from ten years to five years, to assure that exploration begins promptly once state land is leased. Under certain severe environmental conditions a lease may be for a longer period, but not to exceed ten years.

Third, the legislation increases rentals, including those on shut-in fields, to increase incentives to explore and produce oil and gas fields.

Fourth, the bill grants to the state the right to purchase up to 16 2/3 per cent of the oil and 100 per cent of the natural gas or gas products from the lease, thereby protecting sale commitment of royalty oil and gas in the event the state's royalty is reduced on marginal fields.

Fifth, it reduces the acreage limitation on state uplands so that more companies will have an opportunity to participate in exploring in Alaska and, for the same reason, it allows the state to restrict joint bidding by major or international oil companies.

Finally, the legislation provides that the executive branch will file two reports with the legislature each year. One will outline the state's leasing program for the forthcoming five years. The other will explain the leasing methods used or to be used. I have chosen this method of informing the legislature and the public because I believe there is a need to create as much certainty in leasing policies and procedures as possible. Requiring a five-year state

leasing program to be made public will, I believe, lend stability and predictability to the petroleum exploration business in Alaska and will also raise the level of consciousness of the citizens of Alaska about the workings of the oil business. I can think of no better way to the inform the legislature and the public than to report on a regular basis what land will be made available for oil and gas leasing and by which of several leasing methods the state proposes to offer that land.

The second report will note which leasing methods were used during the preceding year and which methods are proposed to be used in the coming year. Hopefully, enough explanation as to why one method was chosen over another will help educate us all. Although this places an increased burden on those chosen to make these day-to-day decisions, I think it appropriate to use this public accounting procedure for all subsequent state oil and gas lease sales.

Through your leadership, the legislature and my Department of Natural Resources have worked together in an effort to find a solution to Alaska's future leasing policy.

The legislature's action in commissioning Dr. Mason Gaffney's study last year and the subsequent work by the department has paid dividends in developing our understanding of the options available to the state. I wish to thank you for your foresight and cooperation in this most important matter.

Sincerely,

Jay S. Hammond
Governor

THE LEGISLATURE OF THE STATE OF ALASKA
TENTH LEGISLATURE

FISCAL NOTE

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)
Existing administrative staff are capable of evaluating and carrying out lease sales under any of the proposed leasing methods within the reporting period unless the number and volume of sales in significantly larger than expected. Should net profits or a post-discovery type leasing method be used by the State, prior to production some auditing and/or assessing functions will have to be increased. However, some of these services are now being performed by Department of Revenue personnel in reserves tax assessing, and by 1983, or thereabouts and beyond, when the impact of production is felt, may be interchangeable with Natural Resources personnel.

LETTER OF INTENT

CSHB 854 (RESOURCES)

The Honorable Hugh Malone
Speaker of the House
Alaska State Legislature

Dear Mr. Speaker:

The Resources Committee substitute for House Bill 854 makes numerous changes in the legislation as proposed by the Governor. Two of these changes involve the deletion of the following language:

1. Subsection (f) on page 6.

2. In subsection (j) the following sentence (at the top of page 8 in the original bill) - "The commissioner may provide by regulation and in the lease that the lessee may earn production rights only to the depth drilled at the beginning of production from the lease."

The record should show that the committee's intent in deleting these two items was not to limit the discretion of the Commissioner of Natural Resources in these areas, but simply the result of its determination that the authority in both of these areas is implied, and does not require special authorizing language in the bill.

Alvin Osterback

Alvin Osterback, Chairman
House Resources Committee

Date: 4/14/78

DESCRIPTION OF LEASING METHODS IN HB854

Currently, the State of Alaska's leasing system is a cash bonus bid with a minimum fixed royalty of 12.5 percent. The methods outlined below include the present system with different fixed royalties, sliding scale royalty with bonus bid, sliding scale royalty bid with fixed bonus, net profit share bid with fixed bonus, royalty bid with fixed bonus and exploration work commitment. The basic elements of these methods are summarized below.

(1) Bonus Bid With Fixed Royalty

Bonus bid with fixed royalty is the system currently used by the State of Alaska. In a lease sale, the winning bid for a tract is the one which makes the highest sealed or auctioned cash bonus bid. There is also a minimum royalty of 12.5 percent. An advantage of this system is that government receives revenue regardless if there are economical quantities of oil or gas found and/or produced. To avoid early termination of production, royalties need to be flexible during a field's declining years.

(2) Sliding Scale Royalty With Bonus Bid (or Sliding Scale Bid with Fixed Bonus)

Under this system, the government receives a cash bonus bid and a sliding scale royalty. We used 12.5 percent as a minimum figure and 62.5 percent as a ceiling wherein the rate in any period is dependent upon the production of that period.

The royalty rate is graduated in much the same manner as the federal personal income tax. Table I gives two examples of a sliding scale royalty schedule. The royalty is progressive, that is, the royalty on additional production increases. For example, in the South Central Area, the initial 500 barrels pay a royalty of 12.5 percent, the next 500 barrels pay 25 percent. The royalty rate increases by 12.5 percentage points per 500 barrels until 2000 barrels of output are achieved. All production beyond 2001 barrels pays a royalty of 62.5 percent. Thus, if production reaches 5000 barrels, the average royalty rate is 50 percent. In the limit, the average rate would converge towards 62.5 percent as daily production continues to increase.

As field productivity declines and well production falls, the producer backs down the schedule and royalties decline. In order to optimally exploit the field, the royalties should decline to zero near the end of field life. Actually, final rates of five or six percent would result in minimal early shut down.

TABLE I
TYPICAL SLIDING SCALE ROYALTY SCHEDULES

SOUTH CENTRAL AREA

Daily Average Prod. Rate (Bbls./day)	Incremental Royalty Rate (%)	Royalty For Specific Producing Rates: Producing Rate (Bbls./day)	Royalty Production (Bbls./day)	Average Royalty Rate (%)
-500	12.5	500	62.5	12.50
501-1000	25.0	1000	187.5	18.75
1001-1500	37.5	1500	375.0	25.00
1501-2000	50.0	2000	625.0	31.25
2001-2500	62.5	2500	937.5	37.50
		3500	1562.5	44.64
		4500	2187.5	48.61
		5000	2500.0	50.00

NORTH SLOPE AREA

Daily Average Prod. Rate (Bbls./day)	Incremental Royalty Rate (%)	Royalty For Specific Producing Rates: Producing Rate (Bbls./day)	Royalty Production (Bbls./day)	Average Royalty Rate (%)
-1000	12.5	1000	125	12.50
1001-2000	25.0	2000	375	18.75
2001-3000	37.5	3000	750	25.00
3001-4000	50.0	4000	1250	31.25
4001 and above	62.5	5000	1875	37.50
		7000	3125	44.64
		9000	4375	48.61
		10000	5000	50.00

Note: The Sliding Scale Royalty Schedule for the North Slope area is significantly higher than for the South Central area because the higher North Slope operating costs result in a much higher economic limit.

Hopefully, this illustration clarifies the relationship between production rates and royalty rates.

Greater flexibility in setting the initial rate is the major advantage of this system while not running the risk of an uneconomically (for Industry) high royalty rate. On the other hand, to achieve an overall lower royalty payment, a company might spread out production over a longer period of time. Usually, however, because of the time value of money and increased operating costs, oil companies generally try to accelerate production.

(3) Net Profit Share Bid With Fixed Bonus

A small fixed bonus is required as earnest money. The bonus is low enough to encourage producers to bid a high net profit share while permitting profitable development.

(4) Royalty Bid With Fixed Bonus

This system utilizes the same method to calculate fixed bonus as described for Net Profit Share. The bid parameter is a function of production instead of net profits. Since the bonus is fixed, interested parties bid on the royalty rate that the government is to receive. The advantage of royalty bidding is that little front end money is needed by Industry. However, this could encourage speculation causing an overbid. Royalty bidding should encourage more competition among bidders and may allow the smaller companies a better chance of winning the tract.

(5) Work Commitment With Fixed Bonus, Royalty or Net Profit Share

The government itemizes the performance criteria such as the rate and amount of work to be performed on each tract. The total bid specified in dollar terms and a portion of the bid used for exploration and development activities. This system gives the government some control over the rate and extent of resource development.

TWO VIEWS ON BIDDING STRATEGIES

WEALTH MAXIMIZING STRATEGIES FROM THE STATE'S VIEWPOINT

The choice of bidding method cannot be made on the basis of any single criteria but is the result of evaluating a number of factors including but not limited to the potential economic payoff and physical characteristics of the lease area. HB854 offers essentially four leasing schemes. (1) Bonus Bid - Fixed Royalty, (2) Royalty Bid - Fixed Bonus, (3) Net Profit Bidding with Fixed Bonus, (4) Work Commitment with Bonus Bidding. These options will be briefly evaluated.

Bonus Bid - Fixed Royalty

If the royalty is fixed at 12-½%, there is no reason to use this option. It is of historical value only. At higher fixed royalties, it has some merit, but the higher fixed royalty means a lower bonus bid which is supposedly the advantage of the system. Private discount rates are too high for bonus bidding to be advantageous to the State. For example, a brief examination of an annuity table suggests that increases in the discount rate rapidly diminish the present value of a future income stream. This income stream can be interpreted as the discounted net revenues resulting from the potential discovery and development of an oil field. Table II illustrates the discount rate effect.

Table II
Present Value of an Annuity of $1 Million
(Values in 10^6)

Number of Years	Discount Rates					
	6%	10%	14%	16%	18%	20%
20	$11.470	$ 8.514	$6.623	$5.929	$5.353	$4.879
30	13.765	9.427	7.003	6.177	5.517	4.979
N	16.67	10.00	7.14	6.25	5.56	5.00

From the State's viewpoint, a 6% discount rate may properly reflect the present value of the income generated by the potential oil discovery. The industry, on the other hand, is likely to discount the future net income stream at much higher rates, say 20%. Thus, the maximum bid under ideal circumstances would be $5 million for an income stream that would yield net revenues of on million per year in perpetuity. Perpetuity is longer than the life of Prudhoe Bay.

Royalty Bid - Fixed Bonus

Relatively easy to administer - reduces risk and front end filter to the private sector. With sliding scale, most early shut down problems are avoided. The fact

that the State receives a revenue stream over a 20^{+} year time horizon also is an attractive feature. The Beaufort Sale is an ideal candidate for a royalty bidding scheme.

Net Profit Bidding

This is very attractive from a risk sharing point of view. All risks (geologic, exploration, development, and production costs as well as product price) are shared with the industry. Would increase exploration and development in remote high risk areas. May be useful where there is low probability of bid find. Under ideal circumstances (political) is the best of all possible options but does have serious administrative problems.

Work Commitment

Cases where State wants information and is willing to specify type of information desired. Good for high risk areas in remote locations. May also be used where the State wants more information before putting structures up for competitive bidding scheme.

On balance, the royalty bidding schemes represent a substantial improvement over bonus bidding and are administratively tractable. Given the time to build the expertise, it may be advisable to shift to profit sharing or ad valorem schemes.

MULTIPURPOSE STRATEGIES

Bonus Bids

Bonus bidding should be applied in cases where the State has either:

(a) A very great amount of knowledge about the resource, or
(b) The prospect is of extremely high risk, the lessor has little knowledge of the resource and expected value revenues would be marginal.

The first case (a) where tracts might be offered for Bonus Bidding could be that of a drainage or near drainage situation where the State wished to maximize its near term discounted revenues. It would be advisable to not offer all of the tracts for bonus bidding, but to withhold a percent of acreage to be sold at a later date, (Report 2-77). Also, since royalty and other bidding methods have shown to offer higher expected value revenues for lower risk cases it could be advisable to mix royalty bidding with the bonus bidding, a practice followed by the Federal Government in the recent Cook Inlet OCS sale.

In the second case (b), that of extreme high risk, bonus bidding can be used as a filter to determine the value of marginal tracts. This is discussed under the section on (t) low potential, high risk and previously leased.

Report 2-77 indicates that for very high risk cases all bidding methods approach the same level of expected value income for the State. In cases of small and marginal potential reservoirs the bonus bid method with its ease of administration might afford optimum state revenues. Report 2-77 also indicates that in probability of success percentages of 1 percent or less bonus bids could afford higher revenues, but the State should ensure that leasing under such high risk cases only occurs when sufficient knowledge is gained to indicate that the land to be leased is of such a low potential. For example, a geologic structure as large as the Prudhoe Bay anticline may have had a high degree of risk before it was drilled but its potential to hold enormous reserves was there. Bonus bidding should not have been used in that instance.

In summary, bonus bidding can be used when:

(1) Very small potential reservoirs are expected;

(2) Extreme risk is expected and the gaining of sufficient knowledge to determine the presence of reservoirs is unwarrented because of marginal to low potential indications.

(3) A sliding royalty should be considered in all bonus bid cases;

(4) This method could be used in a mixture with other methods such as royalty bidding;

(5) Also, in general, this method should only be considered when leasing in the less desirable state areas, i.e. those below the top 10 rank.

Royalty Bidding - Fixed Bonus

Report 2-77 indicates that royalty bidding and profit sharing deliver the highest expected value revenues to the State of all bidding methods. It is particularly effective where the probability of occurrence is high (i.e. low risk) and especially when the expected reservoirs are large. A sliding scale should be added in the declining production years to eliminate the problem of premature shut down. Cases for royalty bidding would be when:

(1) The State has enough knowledge to assess the size of potential traps.

(2) Potential reservoirs are not extremely small or of extreme risk.

The Beaufort Sea sale is a good example of a case for using Royalty bidding on tracts. In general, this method should be considered when leasing in the top 10 leasing areas on the desirability scale.

Net Profit Bidding

Net profit bidding would be most advantageous when costs and oil prices are in a state of extreme fluctuations making economic predictions unreliable. In remote high risk areas, this method might attract stronger bids than the royalty

or the bonus bid method.

Of the 35 potential State leasing areas, this method might be used to advantage on those areas below the top 10 in desirability.

Work Commitment

(See section (t)).

This bidding method can be best used where the State has a large (i.e. 100,000+ acres) area of probable low potential where industry has shown a general lack of interest in exploration and leasing. By offering a large area for lease to one lease owner, the State provides an extra incentive to undertake exploration and the State ensures the exploration by making the bid variable.

This method would be used in remote low potential high risk areas. Some of the State's 3 mile limit lands such as Area IX might be applicable to this method.

Low Potential & High Risk and Previously Leased Section (t)

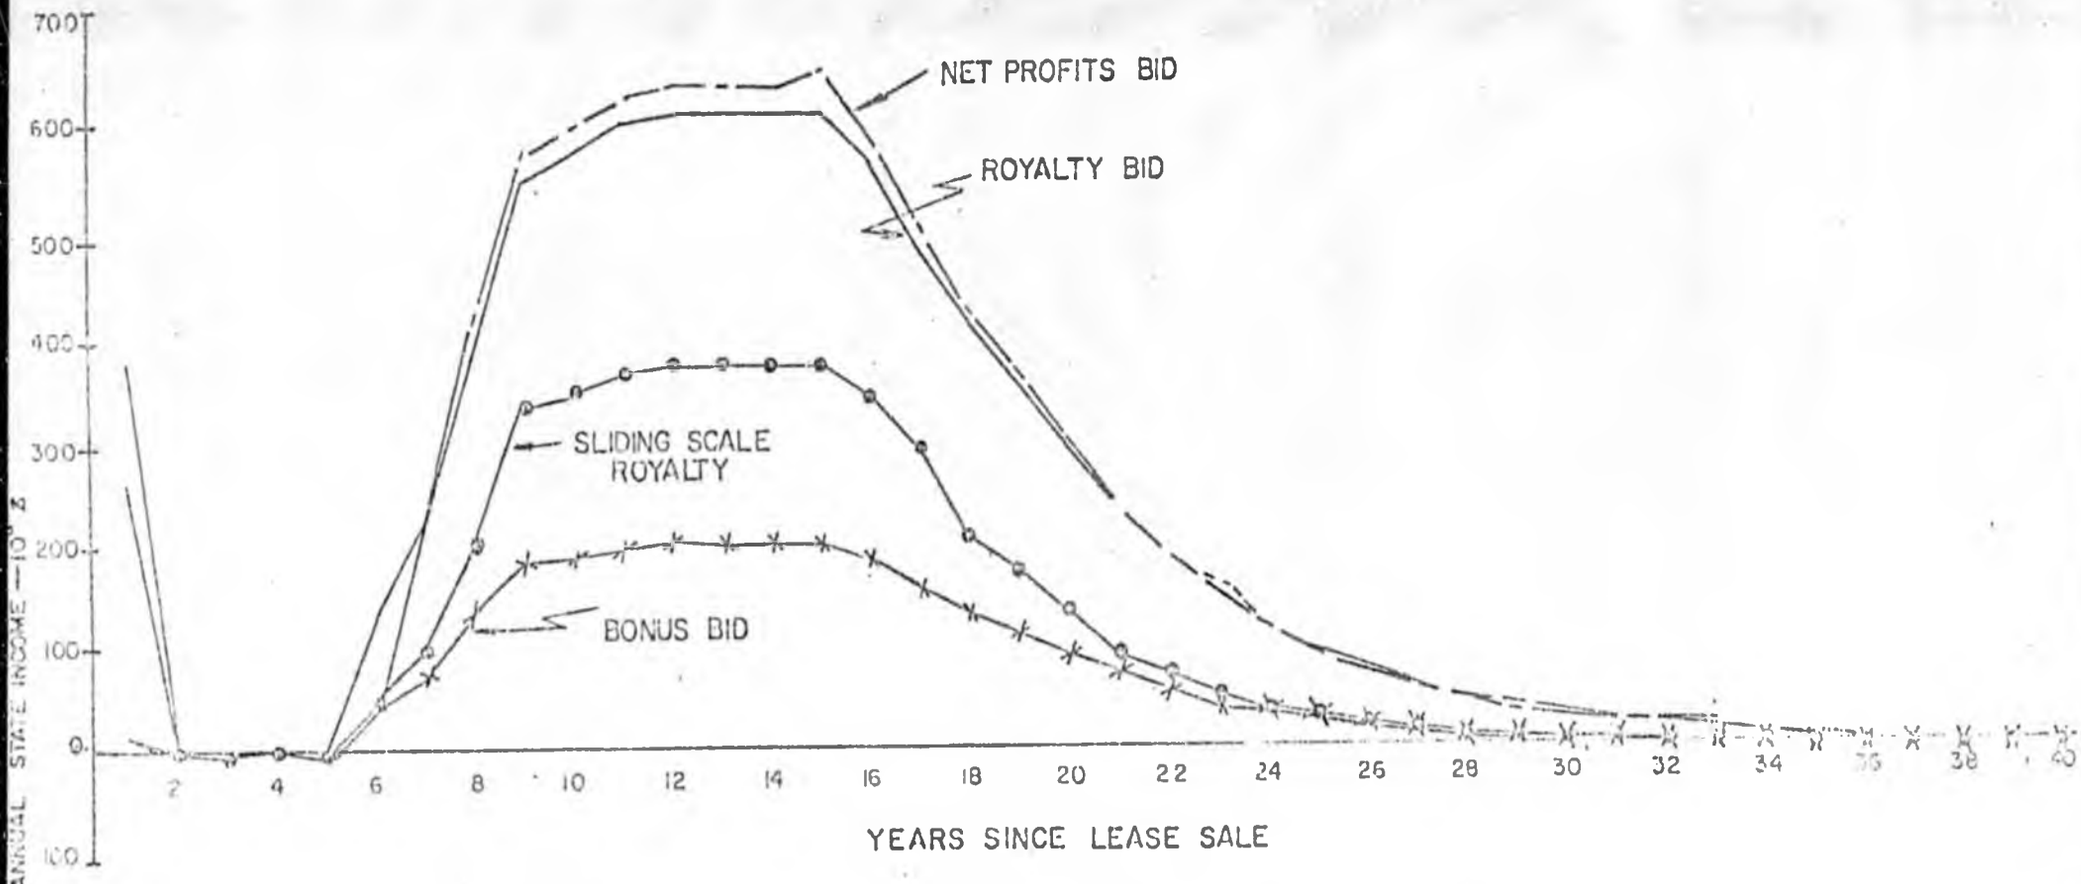
On the basis of exploration knowledge, lack of interest by industry and reasonable analysis, the department may determine that lands have very low potential for oil and gas.

As a means of encouraging the evaluation and possible development of these low potential lands, the department could:

(1) Offer the lands for competitive lease using a bonus bid with sliding royalty. A minimum bid equal to the first year's rentals could be used to filter the bids. This should give a check on the potential of the lands. The sliding royalty would act as a safeguard for very low value bonus bid tracts if a discovery is made later on the lands.

(2) On tracts that receive no acceptable bids, the commissioner could hold a non-competitive similtaneous drawing after proper notice (30 days). Tracts not receiving applications for the drawing could then be opened for over the counter applications. Tracts could be offered at fixed 50¢/year rentals, 5 year terms. A sliding scale royalty would be used in all cases to provide a revenue safeguard against future potential discoveries.

(3) In some cases, all tracts not receiving acceptable bids could be aggregated into large blocks (100,000 acres or more) and offered for work commitment bidding or development contracts.



COMPARISON OF STATE INCOME
FOR VARIOUS LEASING METHODS
AT 90% CHANCE SUCCESS

BEW 1-30-78

LEASING METHODS EXAMINED

BUT NOT INCLUDED IN HB 854

1. The so-called "dual leasing" system which would authorize the State to issue separate exploration and production leases. Senator Ted Steven's amendment to S-9 would permit the exploratory lessee to share with the government (Federal) the costs of the exploratory drilling program, which would be managed by the lessee, in exchange for a share of the revenues received by the government from a subsequently issued production lease.

   The Administration believes that the State can know before it offers its land for drilling what development and production activities it expects to take place.
