A: No, I ... I... In terms of a five-year term, there's not enough ... there's not enough time to get any benefit out of it.

Q: Well, he can't sell it. He can't buy it. He can endeavor to renegotiate his lease, if he's successful in doing so, but as you and I know it's a very difficult proposition.

A: It is difficult.

Q: Okay. Now, there has been some confusion in this hearing among some of us about the basic difference between a subordination and a so-called collateral assignment. And let's you and I see if we can straighten this up. Okay. In a subordination, what really happens is the lessor agrees that the lender may have the fee if the lessee defaults. Is that correct?

A: That's right.

Q: Okay. Now in an assignment, or a so-called "collateral" assignment, all that really happens is that the lessee assigns to his lender his ... gives the lender the right to cure

the default if there's a default?

A: That's true.

Q: And that is the basic difference?

A: Yeah. It's more dramatically. In one case on subordination the lender's getting the asset, and on an assignment he's really getting a liability, potentially.

Q: Right.

A: In other words, the potential liability is he'd have to cure the defaults, assume ... pay the rent on the ground lease.

Q: And any suggestion that the two things are equivalent just isn't, ah, legally correct?

A: No. No, they ... both in lending and law, they're about 180 degrees apart ... maybe not quite that.

BY MR. GISSBERG:

Q: Well, would you take one that had no subordination and no collateral assignment?

A: Well, you wouldn't ... I mean, you wouldn't be... Well, I'm sure the Controller of the Currency would be putting you in jail if you ever made a loan like that. I mean, you've gotta' have at least the assignment of the ground lease, unless you're a charitable institution, and banks, believe me, are not. I don't say that facetiously, they've gotta' make a profit. You don't... What you would be doing is saying, here, I'm gonna'

lend five million dollars. Build a building on this property. The state comes along and cancels the gound lease, gets the property. Even though they've got this permission that you can move the improvement in 30 days, but you're not gonna' remove a parking garage. You're not gonna' remove any kind of five million dollar building. So, in effect, the lender's made a charitable contribution, because he'll never get his building back, and he'll never get his security. He's gotta have at the minimal the collateral assignment, and much preferred is lease subordination. Much, much preferred.

Q: Could you have a subordination on the leasehold interest. That's the collateral assignment?

A: No, that's meaningless, because you'd still have the fee interest. I mean, that... You can have-there's another word for it that doesn't come to mind--a partial subordination thing, but it wouldn't be realistic, nor, I don't think, applicable in terms of what you're dealing with in state ground leases. In other words, the state either, y'know, the state probably is at this point not going to subordinate; and, if it's not going to subordinate, then it has to take care of these other problems.

Q: Is subordination always included in collateral assignments?

A: Ah, yeah, I've done one like that. "A" owns the fee. "A" leases to "B", a developer. Ah, developer "B" leases to "C". Well, you wouldn't have it in terms of the state ground

lease, but in that situation the developer will assign his tenant leases to the bank as security for the loan. Ah, the ground lessor may subordinate to the loan. Y'know, "A" will subordinate to the lender, and "B" will also be assigning his leases, but you wouldn't have it on the same lease, you'd have different leases in order to accomplish it.

MR. MIDDLETON:

Q: Okay, anything further? Thank you, Mr. Hoge.

A: Okay, thank you.

END OF TESTIMONY

(Edmonton) Alberta, Canada

GOVERNMENT INCENTIVES TO EXPLORATION

FIGURE 1

Alberta's oil and gas resources extend over most of the province and constitute a major source of energy. To expedite the location of such resources, the Government of Alberta on July 28, 1972, approved the Natural Resource Revenue Plan. A main feature of this plan was an increase in annual revenues to the Government of about 70 million dollars commencing in 1973. The Alberta government felt this to be a fair and reasonable additional return to the citizens of Alberta for their ownership of a depleting and non-renewable resource. This dollar figure has increased since the initiation of the program due to the escalating price of crude oil.

To offset this increase in revenues from industry and to stimulate increased exploratory activity in Alberta, the Government implemented the Exploratory Drilling Incentive System. The program has undergone several modifications since it was introduced, but essentially consists of a monetary credit for an exploratory well drilled for oil or gas. The credit may be applied against taxes payable under The Freehold Mineral Taxation Act,

.....2

royalties, rentals, fees and bonuses on petroleum and natural gas Crown minerals rights. A producing incentive exploratory well may also qualify for royalty or mineral taxation exemptions.

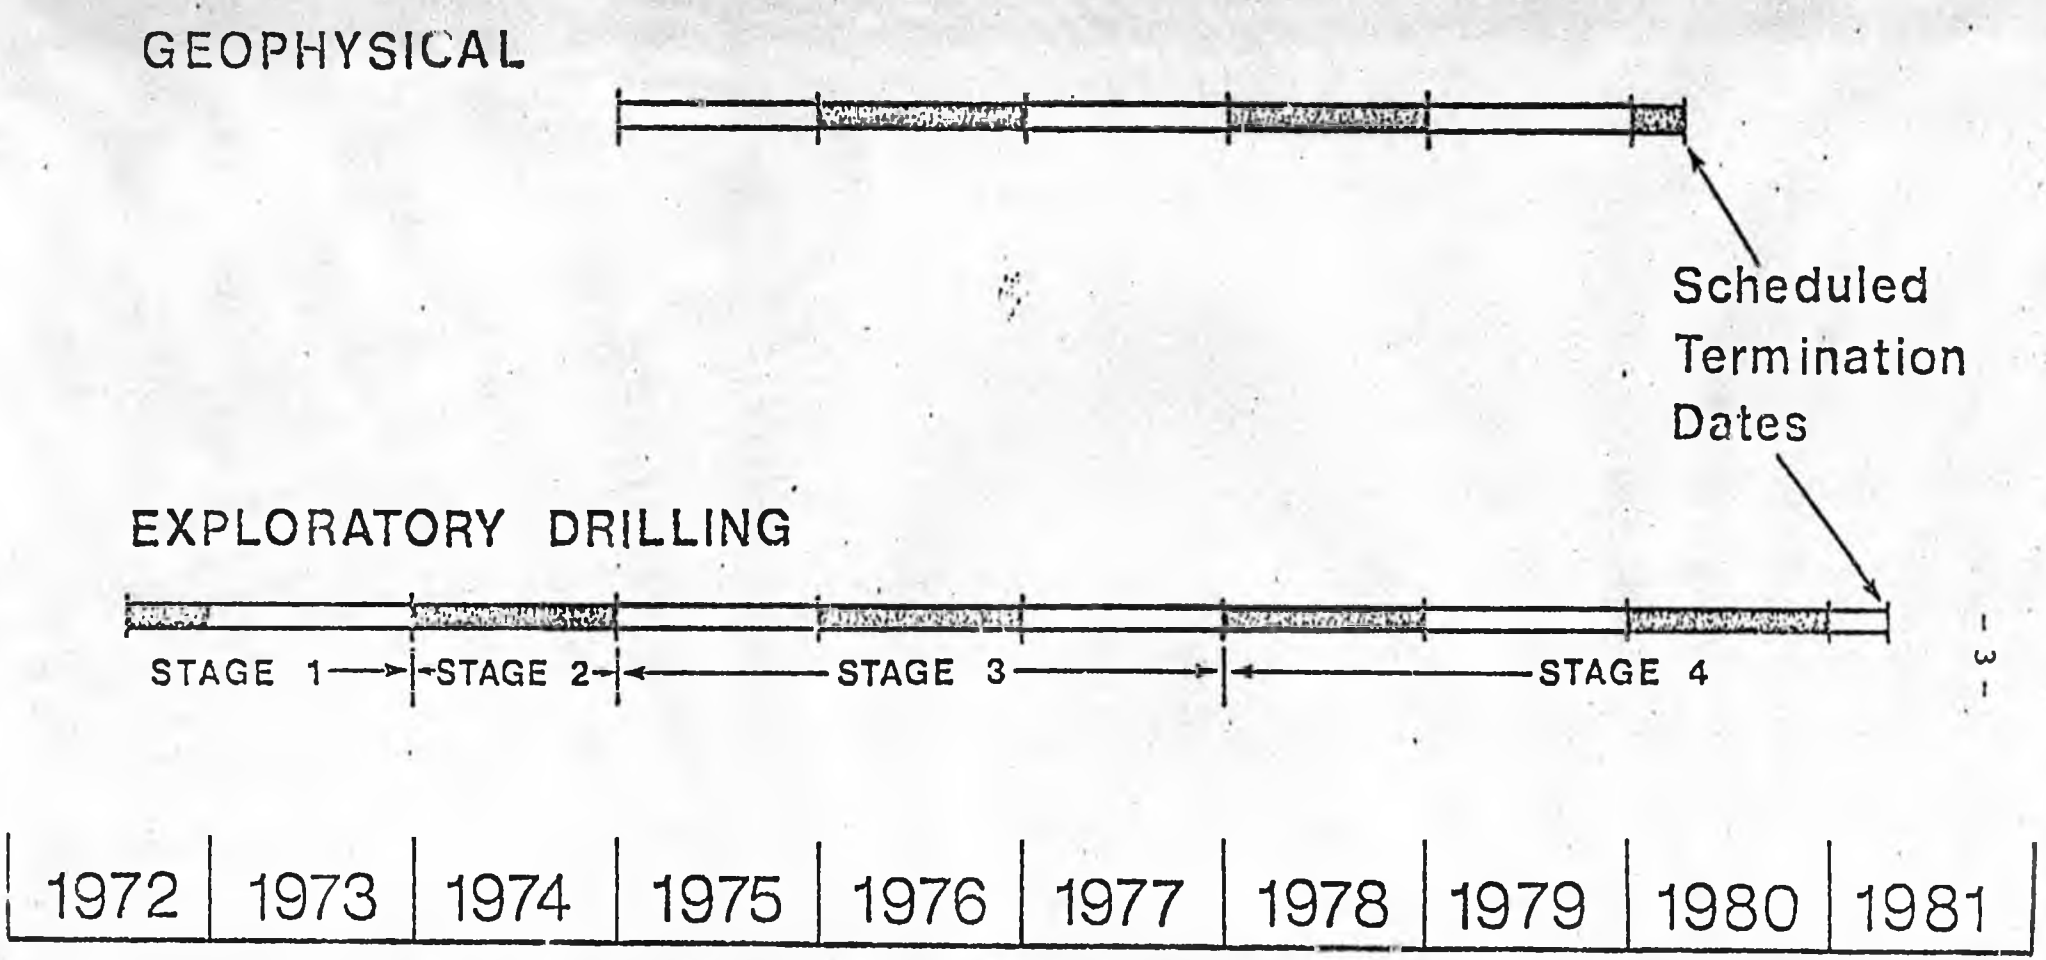
The Exploratory Drilling Incentive System is administered jointly by the Alberta Department of Energy and Natural Resources and the Alberta Energy Resources Conservation Board. Determination of qualifying footage upon completion or abandonment of the incentive exploratory well is made by the Board. Determination of the credit to be established is made by the Department.

Due to the close relationship between geophysical and drilling activity, it is found desirable to provide incentives for geophysical exploration. It is considered vital to maintain a high level of geophysical work to ensure the continuity of the search for new oil or gas reserves.

Therefore, the Alberta Government, in taking a second step toward maintaining the necessary level of petroleum activity in the province, implemented on January 1, 1975, the Geophysical Incentive Program.

The credit for a geophysical incentive program is determined from a

.....3



DURATION OF INCENTIVE PROGRAMS

Source: ERCB

FIGURE 2

formula based on the number of miles of subsurface coverage recorded and the geographical area in which the survey was conducted. The incentive credits maybe applied against revenues owing to the Crown, for bonuses on petroleum and natural gas, Crown mineral rights, fees, rentals, royalties and freehold mineral taxes.

FIGURE 2

The Exploratory Drilling Incentive System was implemented on August 1, 1972, and was scheduled to be in existence for a period of five years terminating on December 31, 1977.

After an extensive government task force study, an amendment was introduced extending the Exploratory Drilling Incentive System to March 31, 1981.

At the time the Drilling Incentive program was implemented, it was estimated that only 50% of ultimate oil and gas reserves in Alberta had been discovered. Exploratory activity had declined and many companies with substantial land holdings were apparently shifting their exploratory activity to the frontier areas. For this reason, the Government tried to "tie-in" the Natural Resource Revenue Plan with the Exploratory Drilling Incentive System to benefit those

.....4

operators who undertook exploration in Alberta.

Between 1964 and 1969, the number of new field wildcat wells drilled in Alberta maintained fairly high levels - about 500 wells per year. In 1971, this number dropped to about 300 wells per year.

A further indication of both the decline and shift in exploratory activity was indicated by seismic crew activity in Canada. Seismic activity dropped from a peak of 972 crew months in 1967 to a 1970 low of 724 crew months.

The shift of activity away from Alberta during 1970 and 1971 was of greater significance. From 1961 to 1967, close to 70% of Canada's geophysical activity occurred in Alberta. In 1968 and 1969, Alberta accounted for just over 60% of the total. In 1970, more Canadian seismic activity occurred outside Alberta than in Alberta.

There was a substantial drop in bonuses from the sale of Crown mineral rights. During the period 1965 to 1969, these revenues averaged $100 million per year. In 1970 and 1971, these revenues dropped to about $25 million per year.

J.R. Pow

INCENTIVE WILDCAT WELL

AUGUST 1, 1972 TO DECEMBER 31, 1973

FIGURE 3

The Exploratory Drilling Incentive System, within the Natural Resource Revenue Plan, was designed to stimulate the discovery of crude oil reserves and shift exploratory activity back to the province by providing substantial rewards to the wildcat entrepreneur.

The objective of the Exploratory Drilling Incentive System was to encourage high risk exploratory drilling and increase the drilling activity in remote locations at a time when this type of drilling was declining in the province. The tendency in Alberta was to explore in known and reasonably accessible regions rather than stepping out in the search for new fields.

The Exploratory Drilling Incentive System has had several amendments since its original inception.

FIGURE 3

From August 1, 1972 to December 31, 1973, the program related to wells that were classified by the Energy Resources Conservation Board as "New Field Wildcats" under the "Lahee" classification system. A formula was derived which enabled the establishment of a credit equalling approximately 30% of the cost

.....6

Fig 5

of the well. The total footage of a new field wildcat qualified for incentive credit. A five-year crude oil royalty "holiday" was granted.

During this 17 month period, $16 million in drilling credits were earned by industry.

FIGURE 4

From January 1, 1974 to December 31, 1974 the program was expanded to include, along with the new field wildcats, about one-quarter of the more remote new pool wildcats and deeper pool footage. Figure 4 shows the principles that were adopted on January 1, 1974. The footage shown in white is known as Class "A" footage and it earned as credits, approximately 40% of the total recognized cost of the well. The Class "B" footage is applicable where a dry hole is within one and one half miles of the well. Class "B" footage earned about 30% support.

FIGURE 5

During this period, drilling costs were increased and a cost distinction was made for wells located in the Foothills, Northern and Plains regions.

.....7

These areas, as modified on February 26, 1975, are shown on Figure 5. Added features included a two-year natural gas royalty "holiday" and authorization for credits to be used to defray bonus payments tendered for Crown oil and gas mineral rights. The credits could continue to be used to offset payments due for royalty, rental or freehold mineral tax.

On January 15, 1974, the Alberta Petroleum Marketing Commission was created. Prior to its creation incentive credits established could be used by the holder to satisfy oil Crown royalty payments. This was discontinued on January 15, 1974 by the Commission.

During this 12 month period, the credits amounted to roughly $20 million and involved almost 600 wells.

From January 1, 1975 to December 31, 1977, the Government increased the benefits of the Exploratory Drilling Incentive System by expanding recognized well costs and by increasing the credit support for Class "A" and "B" footage to approximately 50% and 37½% respectively.

.....8

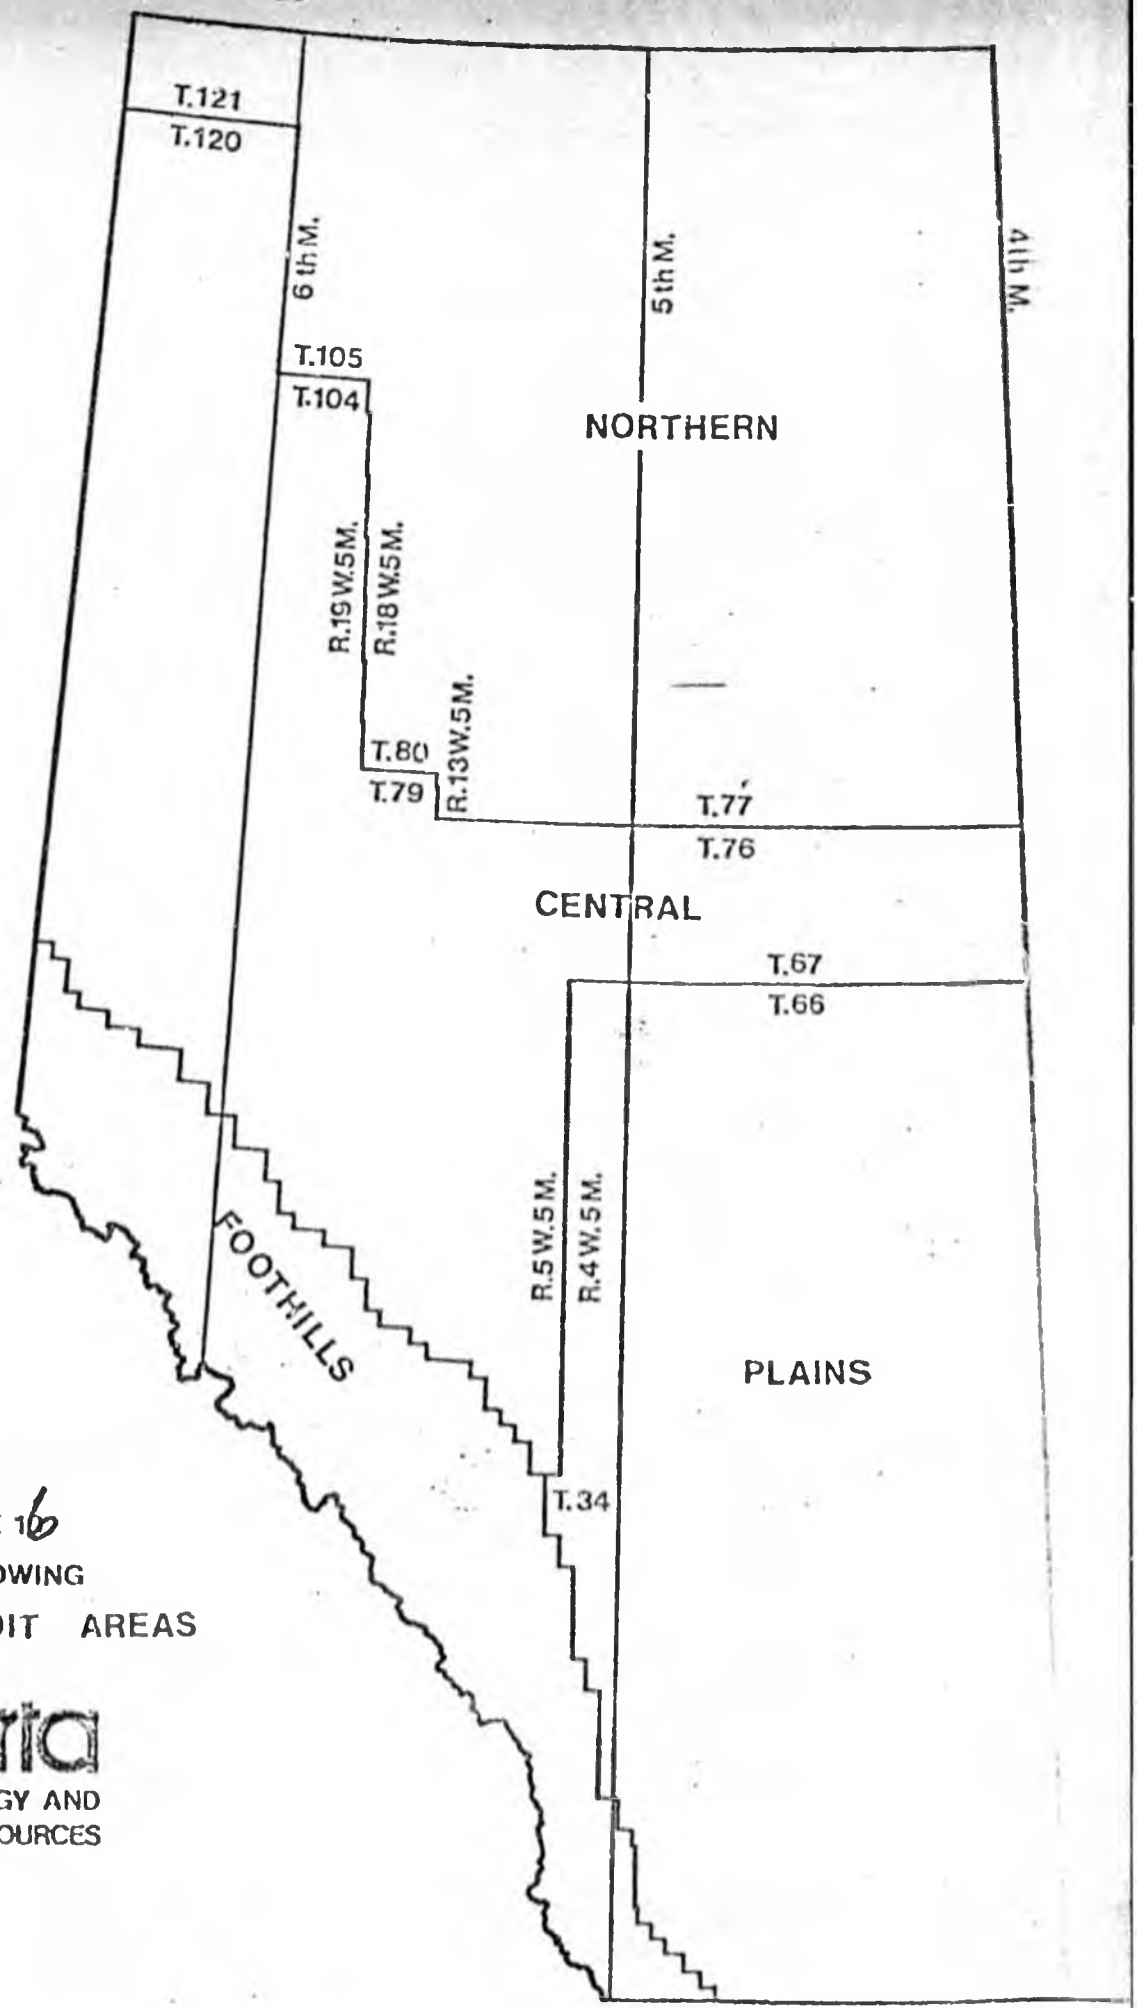

FIGURE 16

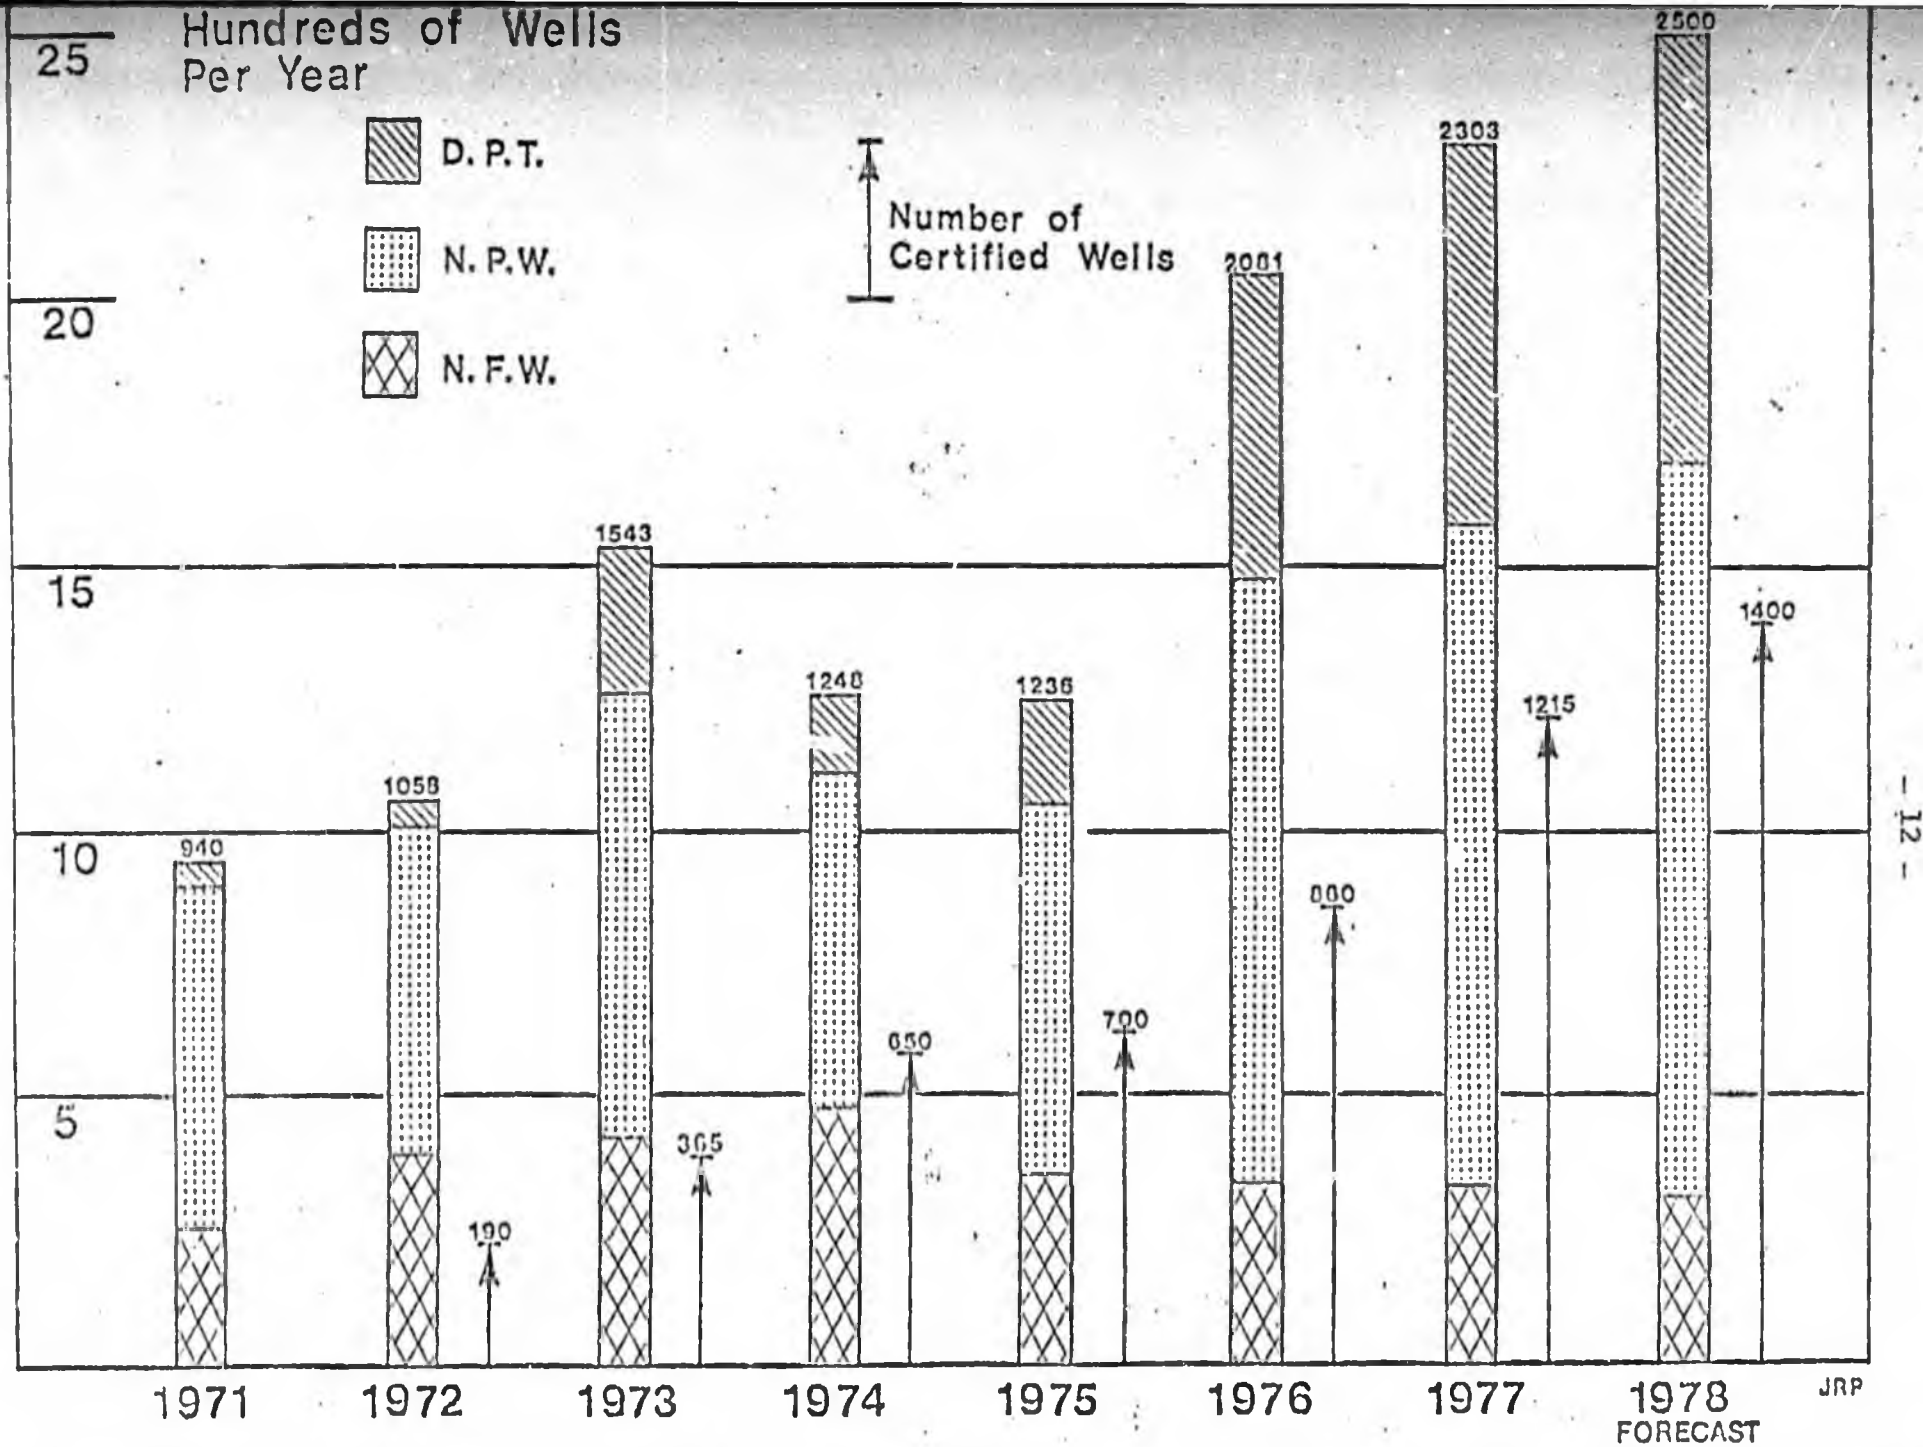
MAP SHOWING

DRILLING CREDIT AREAS

Alberta

ENERGY AND
NATURAL RESOURCES



EXPLORATORY AND CERTIFIED WELLS, ALBERTA

FIGURE 6

Commencing January 1, 1978 the drilling credit areas have been redefined. The Plains and Foothills Areas are unchanged, but the former Northern Area was divided into a Central and Northern Area. The boundary between the two new areas was defined on the bais on well costs, topographic and access considerations. The amendments also include the upper 2,000 feet of sediments from receiving any incentive credit and increase the credits for qualifying wells deeper than 3,500 feet.

For wells greater than 5,000 feet in depth, the incentive is increased by 25% to 45% depending on the location of the well.

FIGURE 7

There has been a considerable increase in the number of exploratory wells drilled in Alberta since inception of the incentive program in 1972. There were 1,058 exploratory wells drilled in 1972 compared with 2,303 drilled in 1977. The number of wells qualifying for incentive footage in 1972 was 190 compared to 1,215 in 1977. An increase is expected in 1978. The number of new pool

.....9

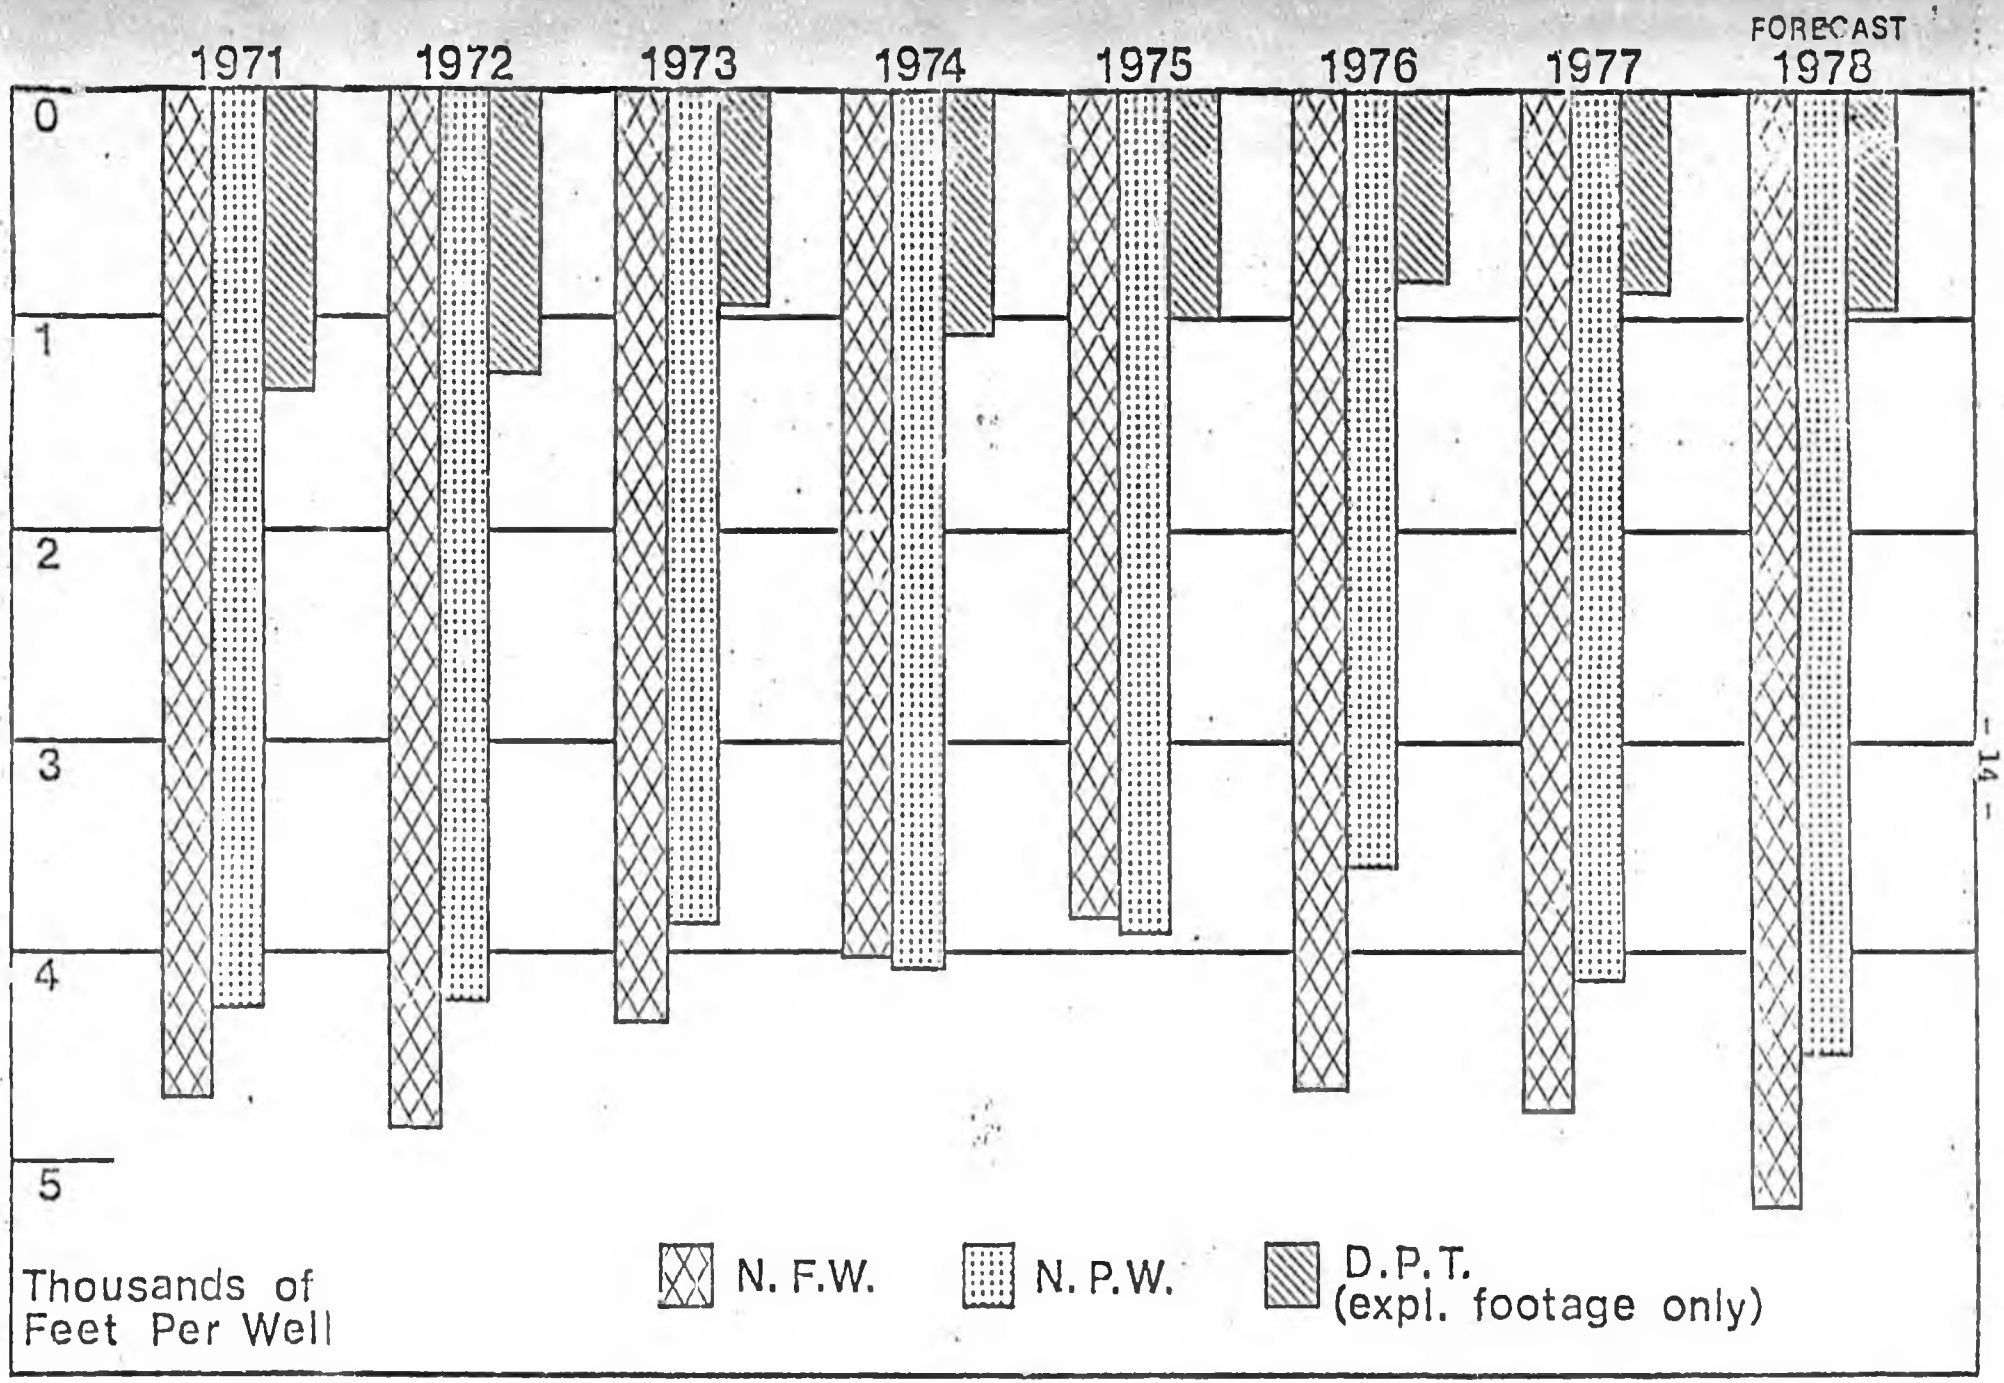
Source: E&NR, FUCD

FIGURE 7



JRP

AVERAGE WELL DEPTH

Source: ERCO

FIGURE 8

wildcats and deeper pool tests have increased since the program began, but the number of new field wildcats have declined.

FIGURE 8

The amount of exploratory footage drilled in 1977 exceeded all previous years. Footage for new field wildcats remained similar to 1976 at 1½ million feet, new pool wildcats increased to 5⅛ million from 4⅞ million feet in 1976, and deeper pool tests increased to 3/4 million feet from 1/2 million feet. The amount of footage certified under the program has increased since inception, equally divided between New Pool Wildcats and New Field Wildcats. In 1977 a total of 2½ million feet were certified to receive incentive footage. This figure shows an increase of 32% from the first full year the program was in operation.

Normally, 100% of the new field wildcat footage, 20% of the new pool wildcat footage, and 80% of the deeper pool test footage qualified for incentive benefits.

FIGURE 9

The average well depths per year has shown a gradual decrease from the period 1971 to 1976, but a slight upswing occurred in 1977. New field wildcats

.....10

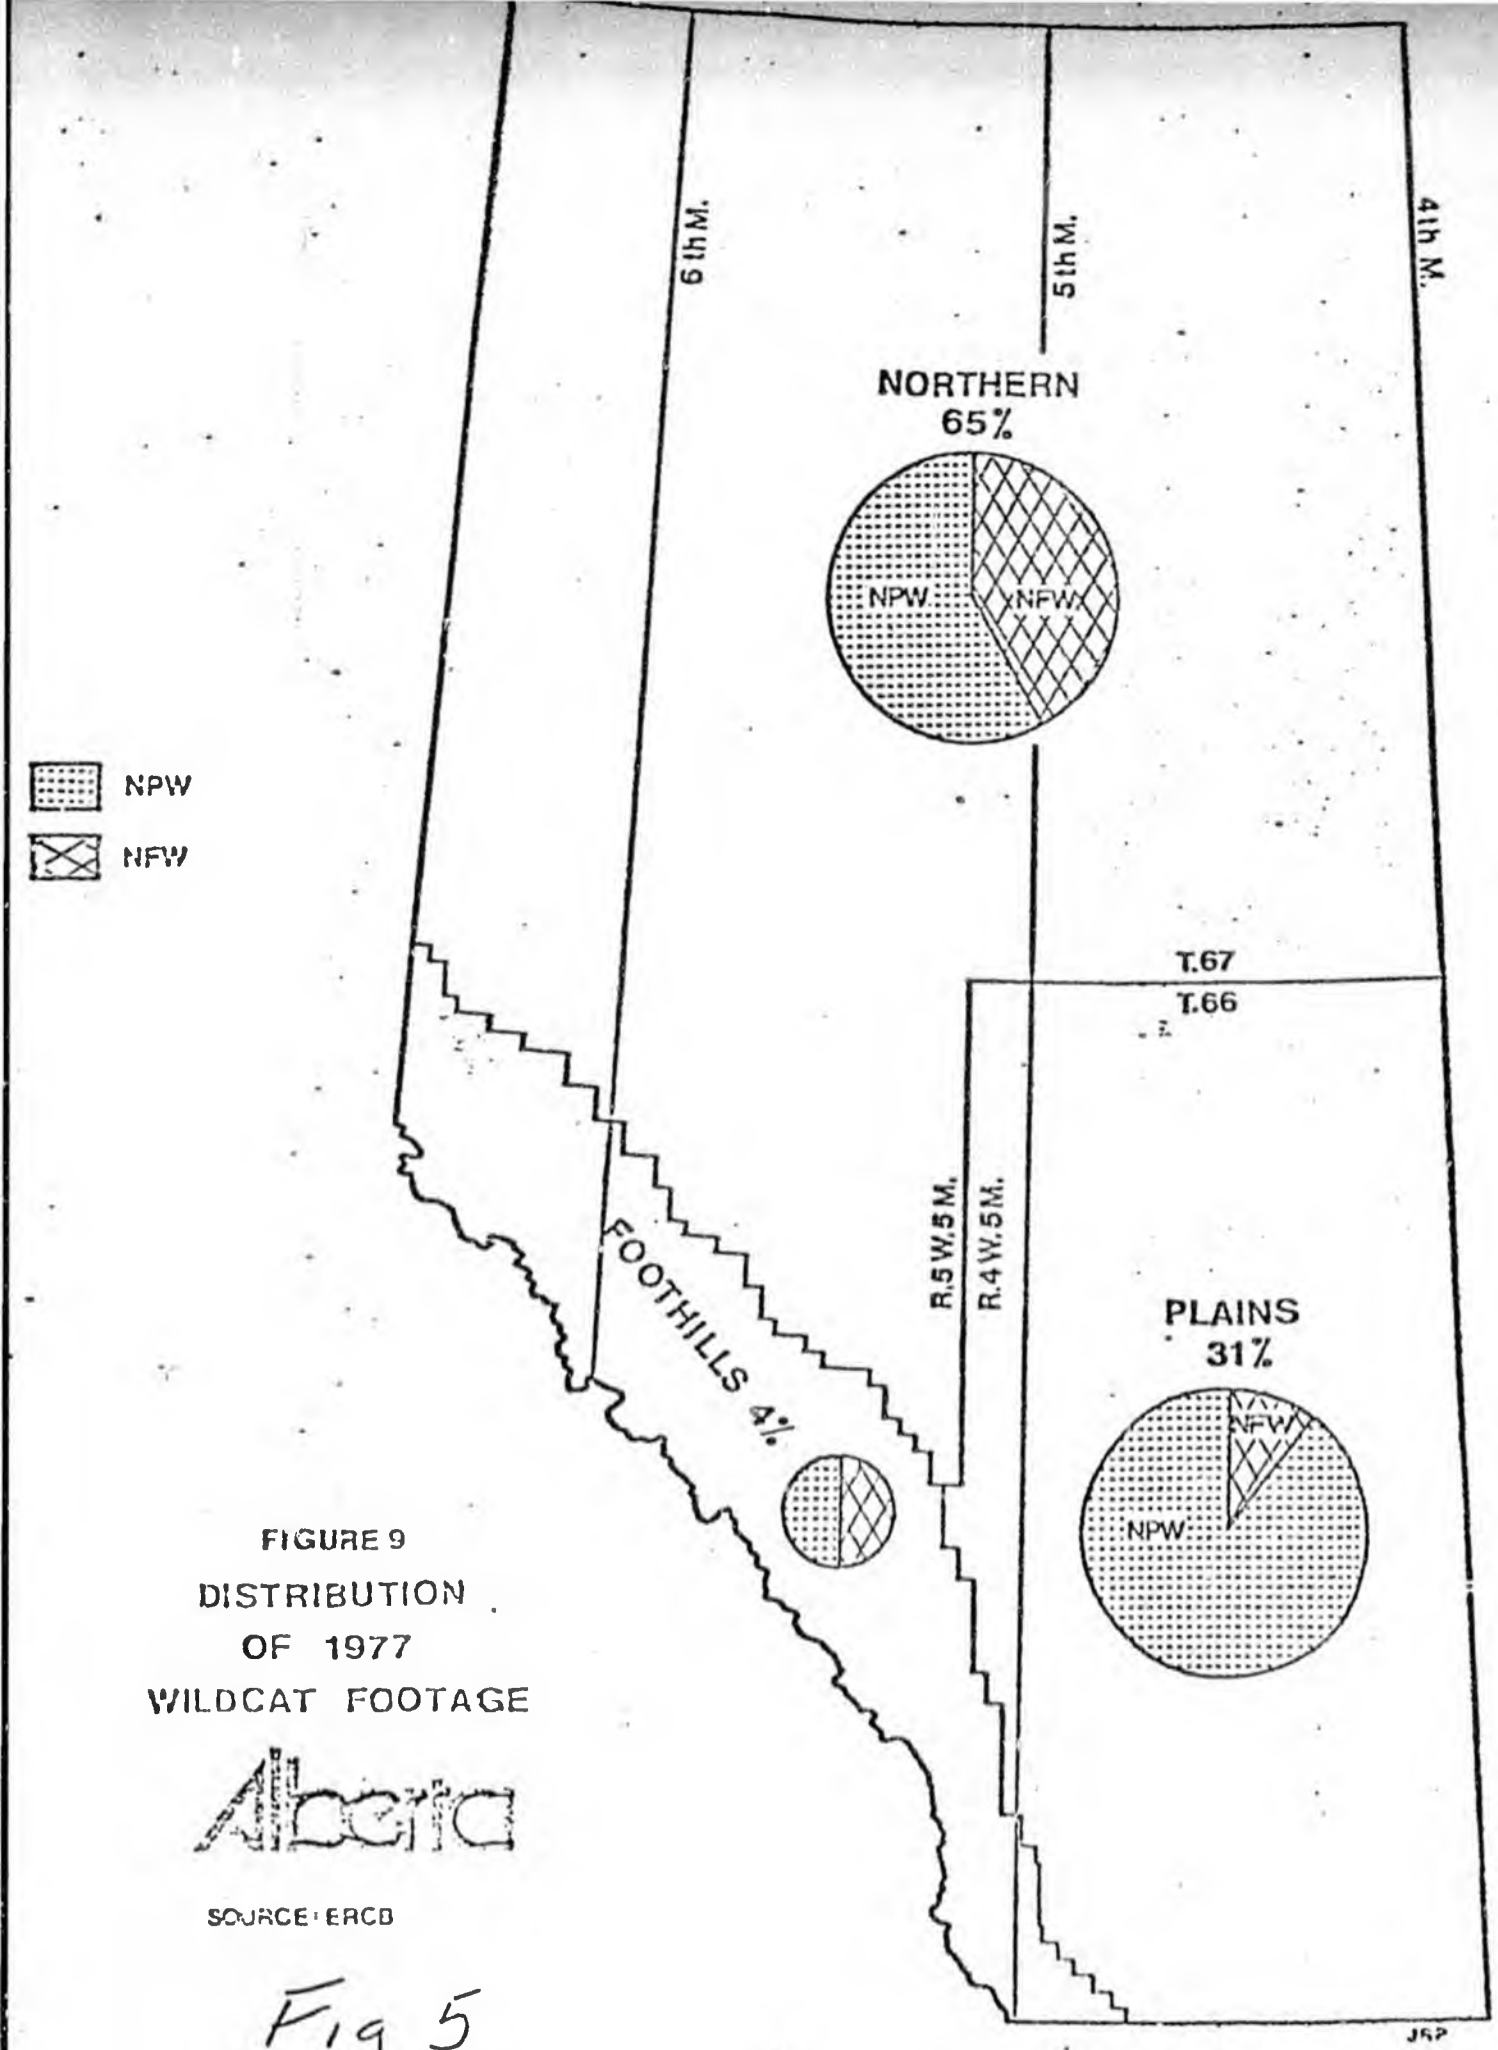


FIGURE 9

DISTRIBUTION OF 1977 WILDCAT FOOTAGE

Alberta

SOURCE: ERCB

Fig 5

averaged 4,800 feet in 1977, new pool wildcats averaged 4,100 feet, and deeper pool tests averaged 1,000 feet.

FIGURE 5

The majority of the exploratory footage drilled in 1977 was in the Northern Areas. The total footage drilled here was 65% of the total exploratory footage. Of this 65%, new pool wildcats constituted 65% and new field wildcats 36%.

Exploratory drilling in the Plains Area accounted for 31% of the total, with new pool wildcats forming 90% of the figure, and new field wildcats about 10%. Drilling footage in the Foothills Area constituted 4% of the total. Of this 4%, half were classed as new pool wildcats and half as new field wildcats. Deeper pool tests formed less than 10% of the total exploratory footage for the province in 1977.

These figures indicate a shift of emphasis since 1976 from the Plains Area to the more remote Northern Area. In both areas, the total footage of new field wildcats has taken a considerable drop from the 1976 figures. New field wildcat footage in the Foothills Area has increased.

.....11

Geophysical Incentive Program

On January 1, 1975, the Alberta Government implemented the Geophysical Incentive Program to stimulate the level of seismic exploratory activty in Alberta. The program was scheduled to terminate on March 31, 1978. This program has been extended to March 31, 1980 through a recent amendment to the Regulations. The Government recognizes the positive effects improved geophysical techniques have on drilling success rates and feels geophysical work must be encouraged to search for the less obvious hydrocarbon accumulations.

The Geophysical Incentive Program is administered by the Department of Energy and Natural Resources.

Geophysical activities, primarily in the form of reflection surveys, provide the initial technical basis on which many exploration "plays" for new oil and gas deposits are planned. Such surveys have performed a key role in finding many of the prolific reef accumulations of hydrocarbons in the Alberta plains. Geophysical data is essential to interpreting the complex rock structures of the foothills which are expected to contain major new deposits of hydrocarbons.

.....12

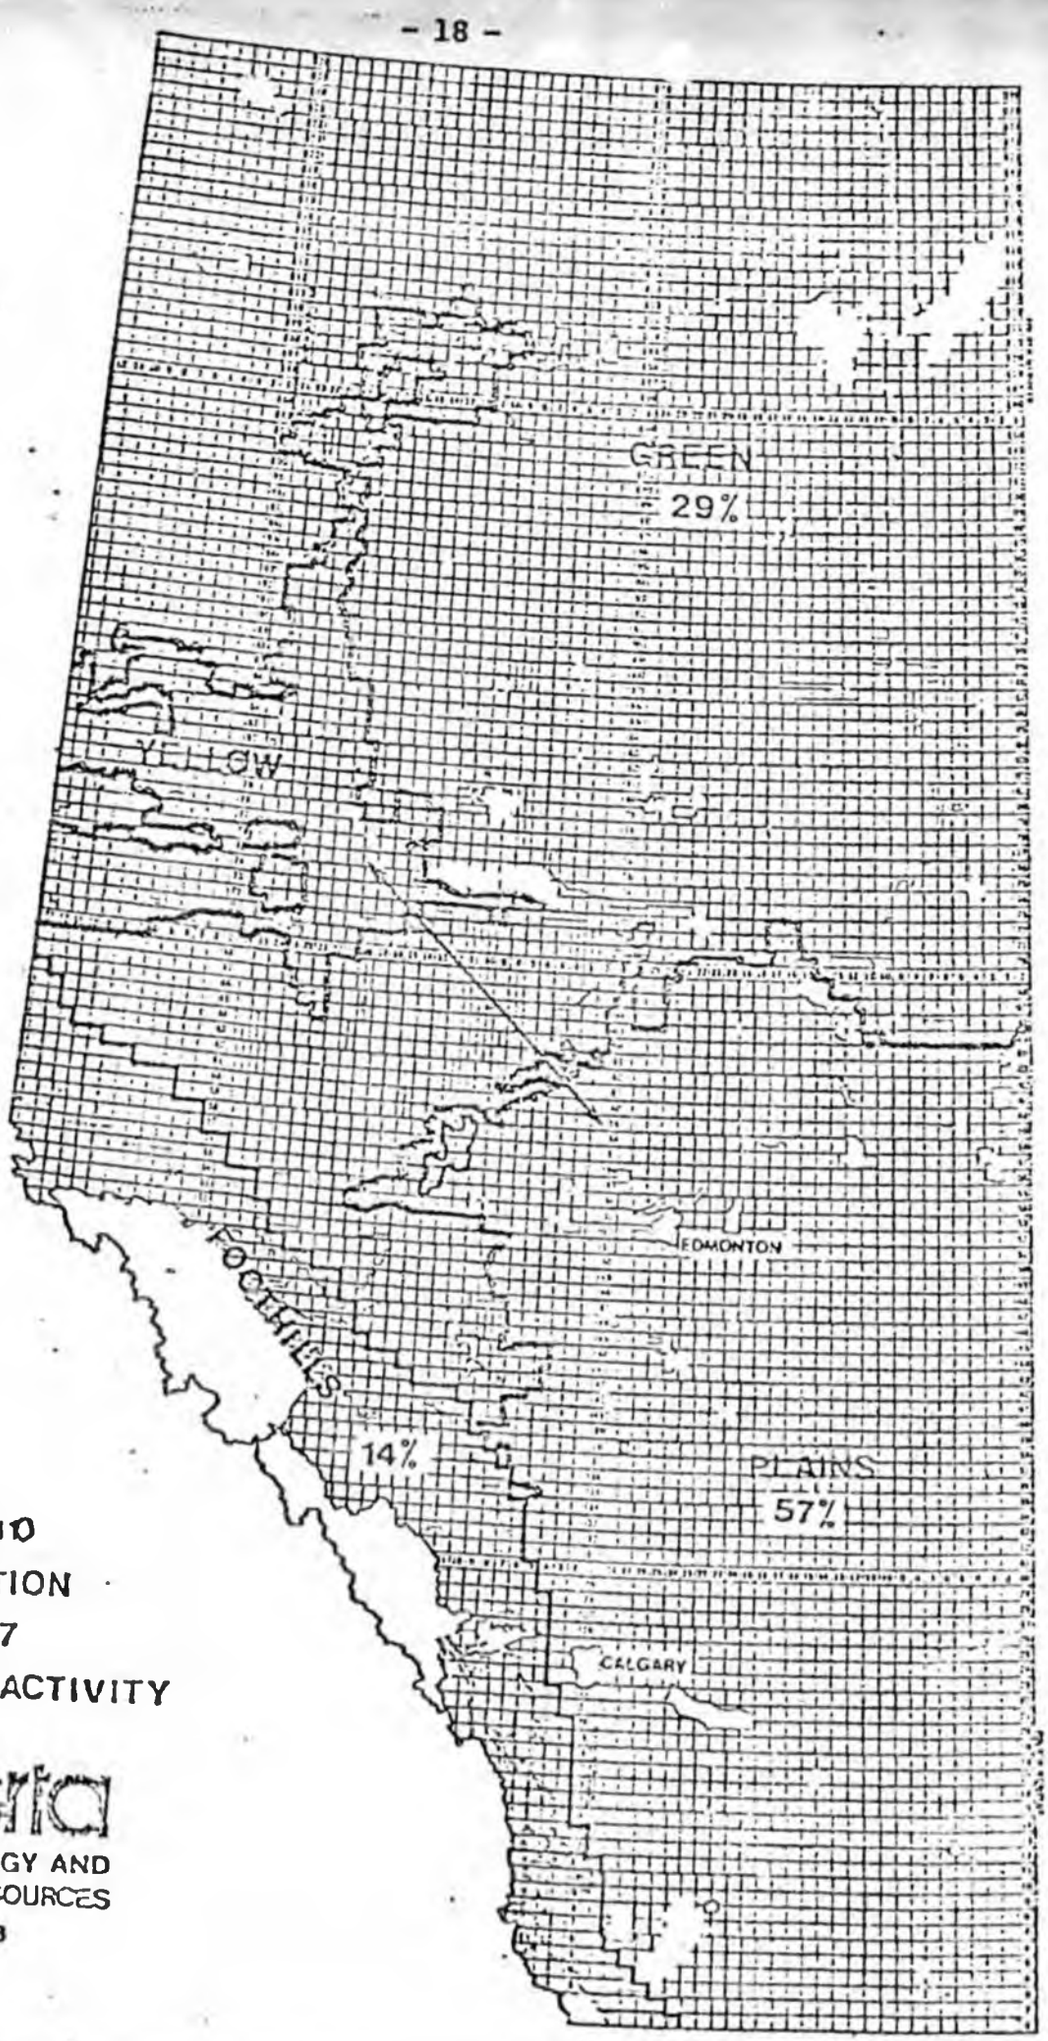

FIGURE 10
DISTRIBUTION
OF 1977
GEOPHYSICAL ACTIVITY

Alberta
ENERGY AND
NATURAL RESOURCES
JUNE, 1978

The main features of the Geophysical Incentive Program are:

(a) The incentive will apply to seismic surveys certified after January 1, 1975. Before 1980

(b) Incentive credits are established in the name of the licensee however, these credits may be allocated to partners sharing in the cost of the seismic program.

FIGURE 10

The incentive credits are determined from a formula based on the number of miles of subsurface coverage and the area in which the survey is conducted. Surveys carried out in difficult terrain in the Foothills and Green Areas receive a larger incentive credit than surveys carried out in the Plains region.

The determination of credit for a certified geophysical incentive program was calculated on the number of miles of minimum (400%) subsurface coverage by the following equation:

Credit (dollars) = 500 K M

Where K is the incentive factor for different geographic areas in Alberta where the program was conduted M is the number of miles of minimum subsurface

.....13

coverage.

The incentive credits may be applied in the same manner as the exploratory drilling incentive credits. A licensee may apply for the monetary equivalent of the credit where he is not the owner of a mineral agreement or a freehold mineral right.

Any geophysical information and data obtained pursuant to a geophysical incentive program must be made available by the licensee to any person for a period of not less than five years

(a) three years after the date the program was certified.

(b) at a cost to that person of 60% of the credit determined for each mile of minimum subsurface coverage.

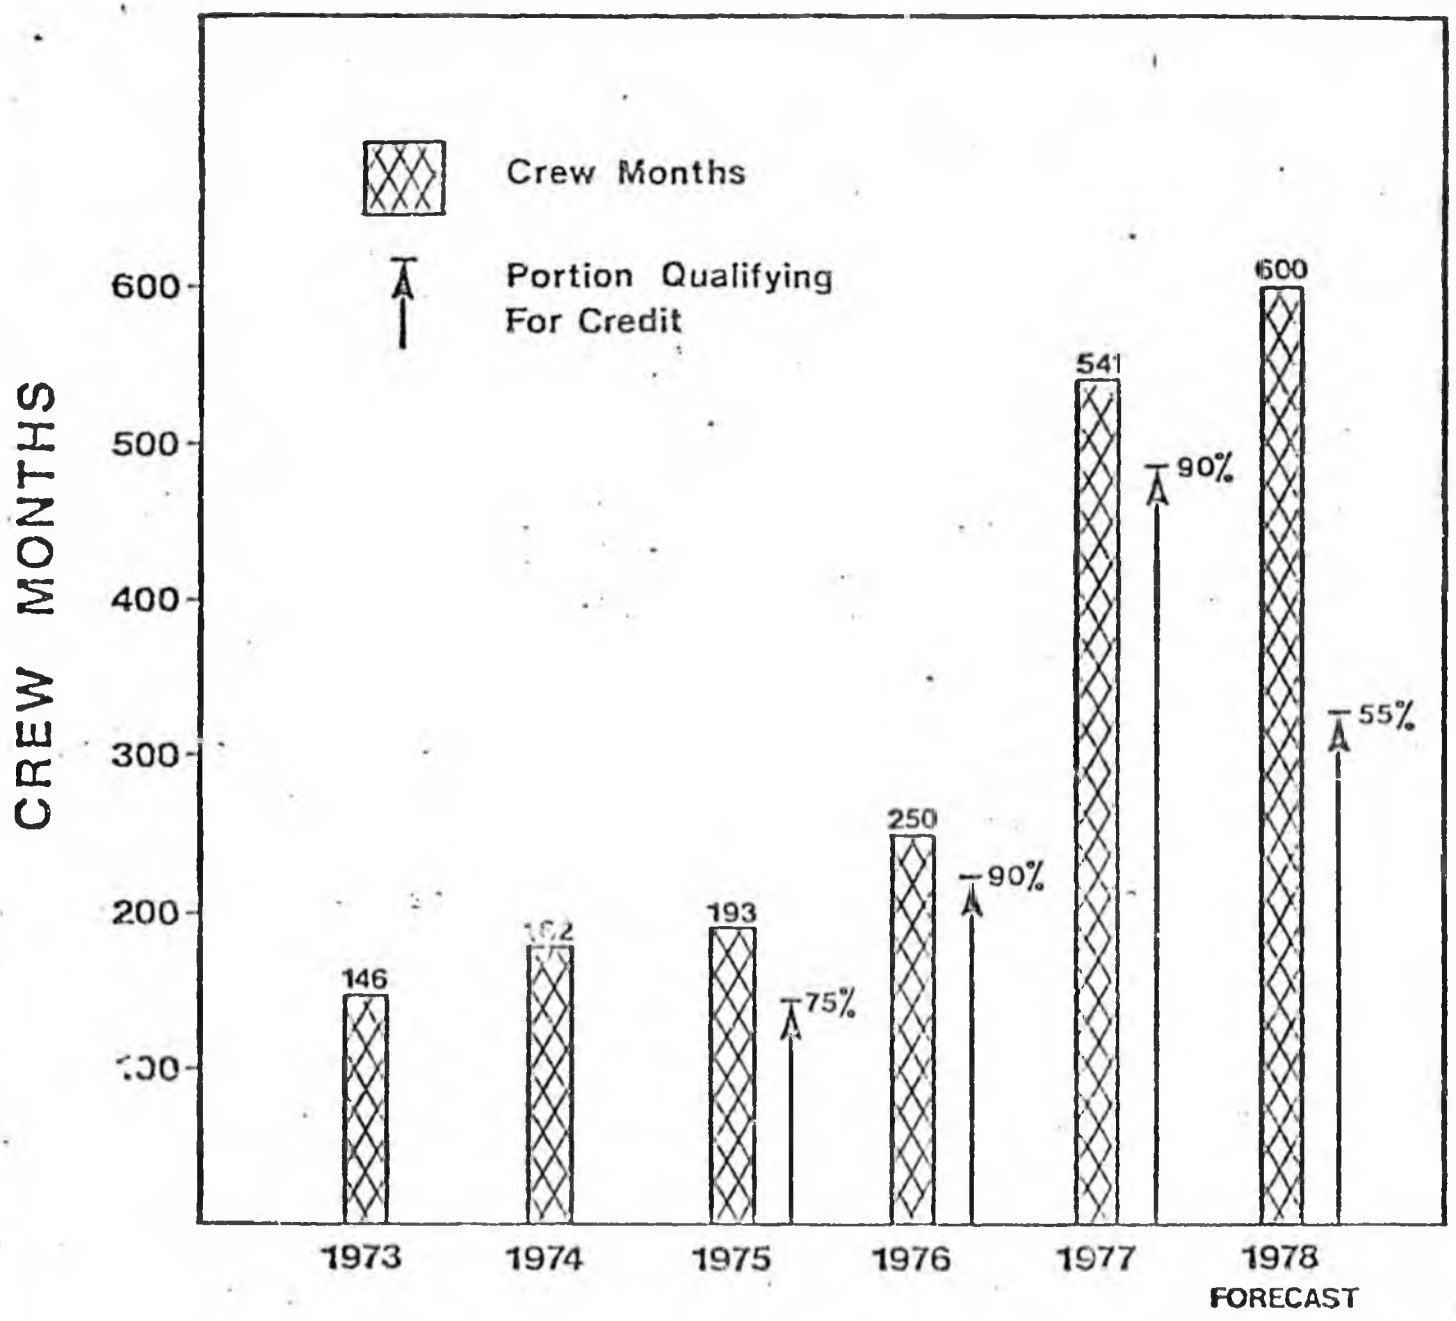
Amendments to the Geophysical Incentive Program effective April 1, 1978, reducing credit by 50% will result in a phase down of the program.

Credit (dollars) = 250 K M

The minimum subsurface requirements have been increased requiring 600% in the white and yellow area and 1200% in Foothills and Northern Areas.

The total number of miles of subsurface coverage in 1977 that qualified for incentive credit was 28,000 miles. This figure reflects an increase of

.....14



SEISMIC ACTIVITY & PORTION QUALIFYING FOR INCENTIVE CREDIT

FIGURE 12

ergy & N.
Resou , June

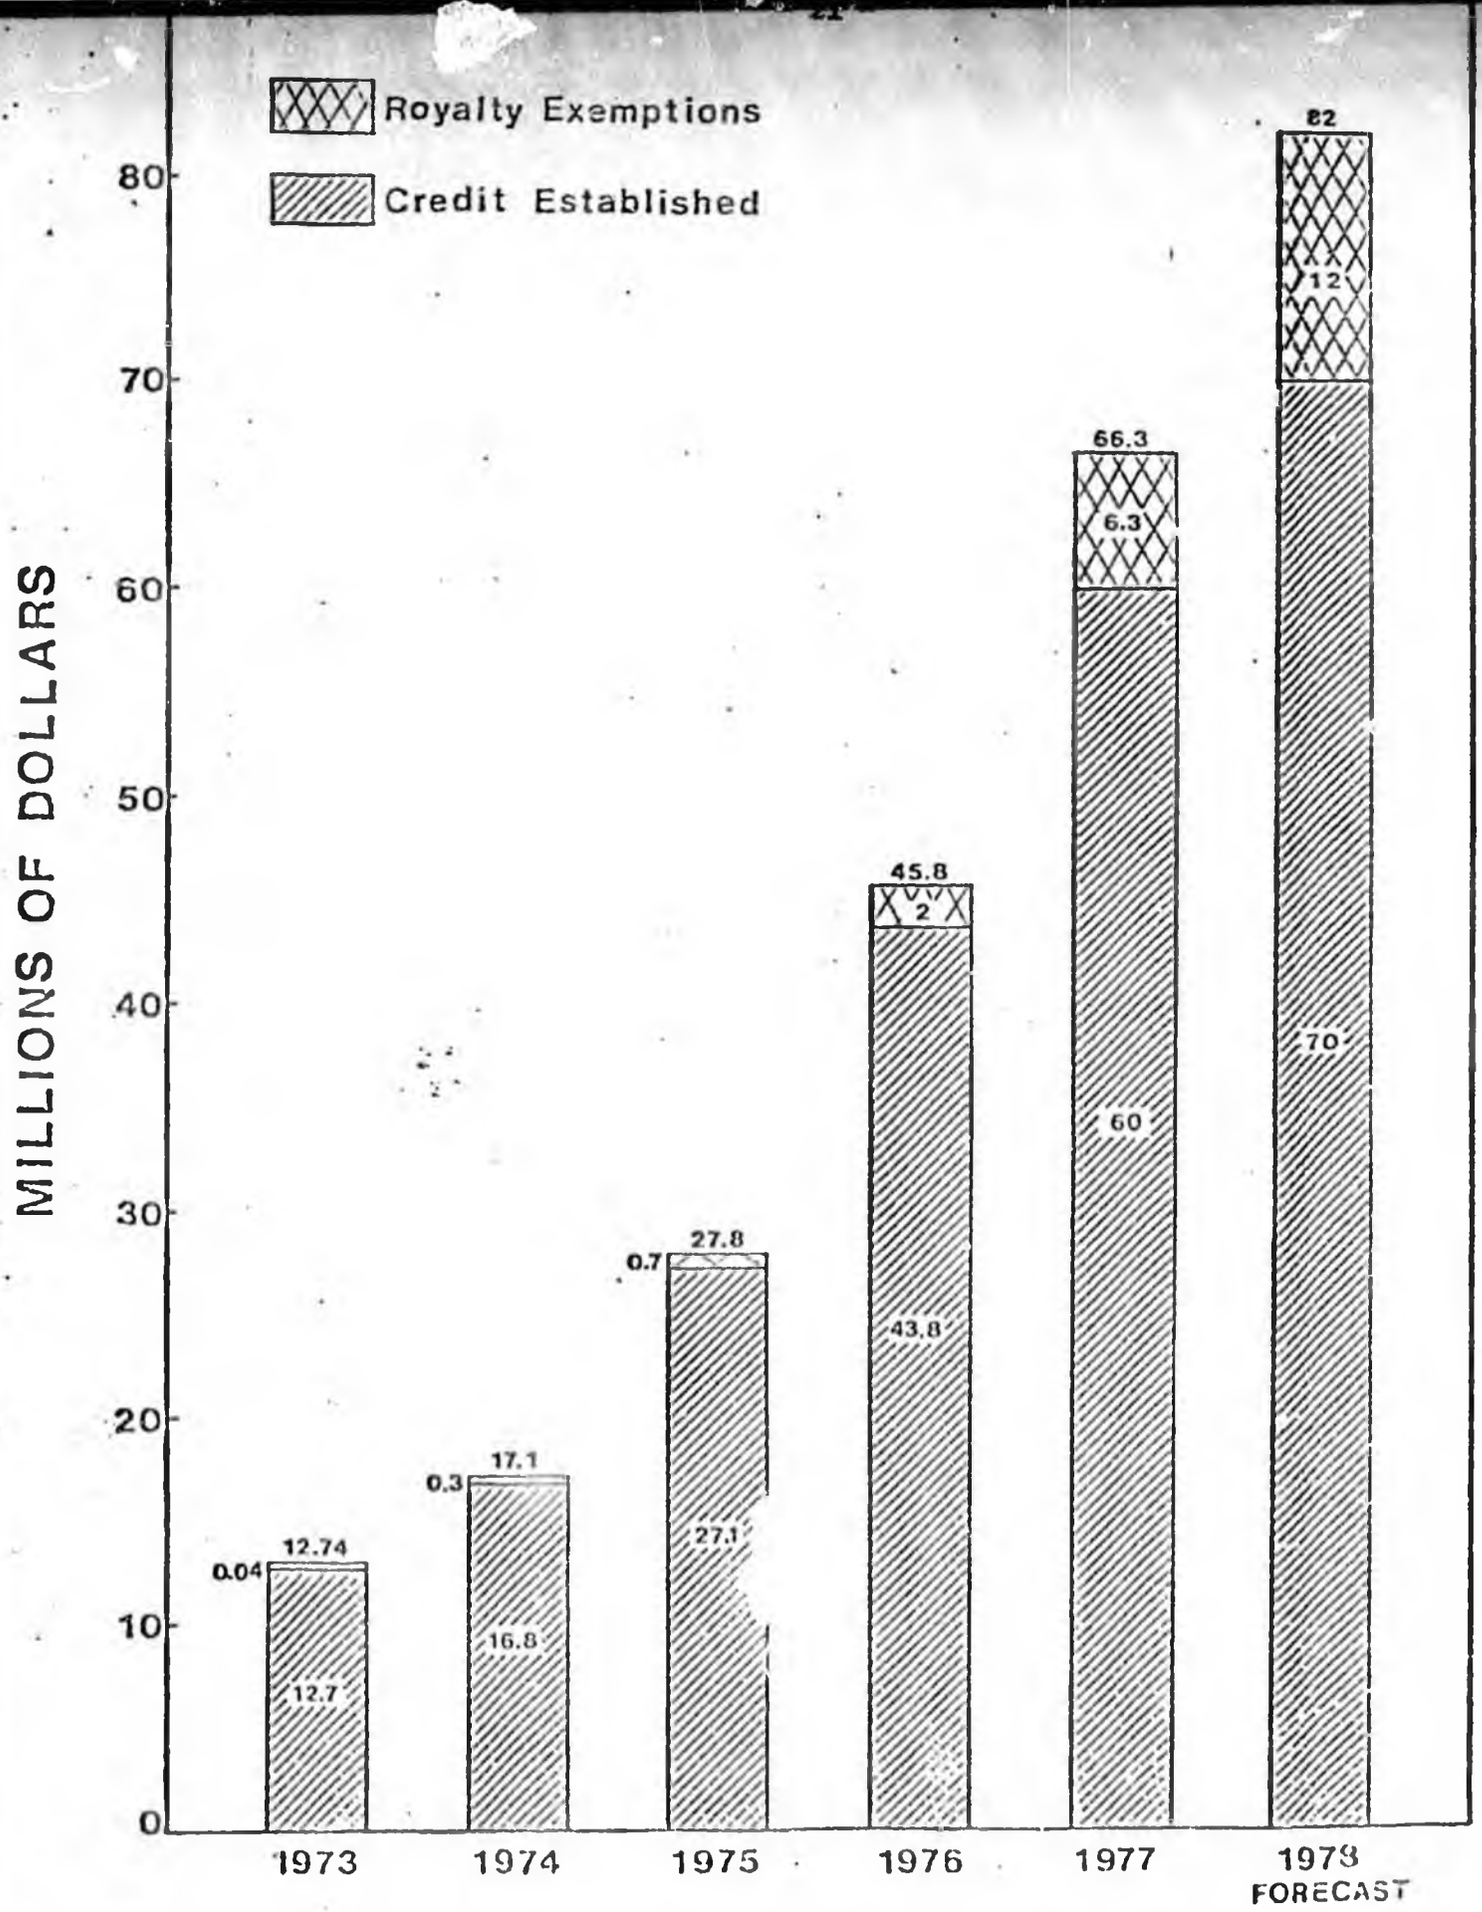
82% over the 1976 figure of 15,400 miles. Of this total, 16,105 miles was in the Yellow-Plains Area, 7,994 miles was in the Green Area and 3,921 miles was in the Foothills Area. These figures show an increase in activity in the Yellow-Plains Area, a decrease in the Foothills Area and unchanged activity in the Green Area.

FIGURE 12

This figure shows the crew activity from 1973 to 1978. In 1977 there were 541 crew months of activity, compared with 193 crew months in 1975 the first year the incentive program was in operation. The forecast is that the number of crew months will continue to increase.

In 1976 and 1977, 90% of the programs conducted in the province were certified under the Geophysical Incentive Program Regulations compared with 75% in 1975. The amendments effective April 1, 1978 are expected to reduce the number of programs submitted to the Department for credit. It is estimated that 55% of the programs shot in Alberta will receive incentive credits.

.....15



INCENTIVE COSTS ASSOCIATED WITH DRILLING ACTIVITY

FIGURE 13

Energy & Natura
Resources, June 197

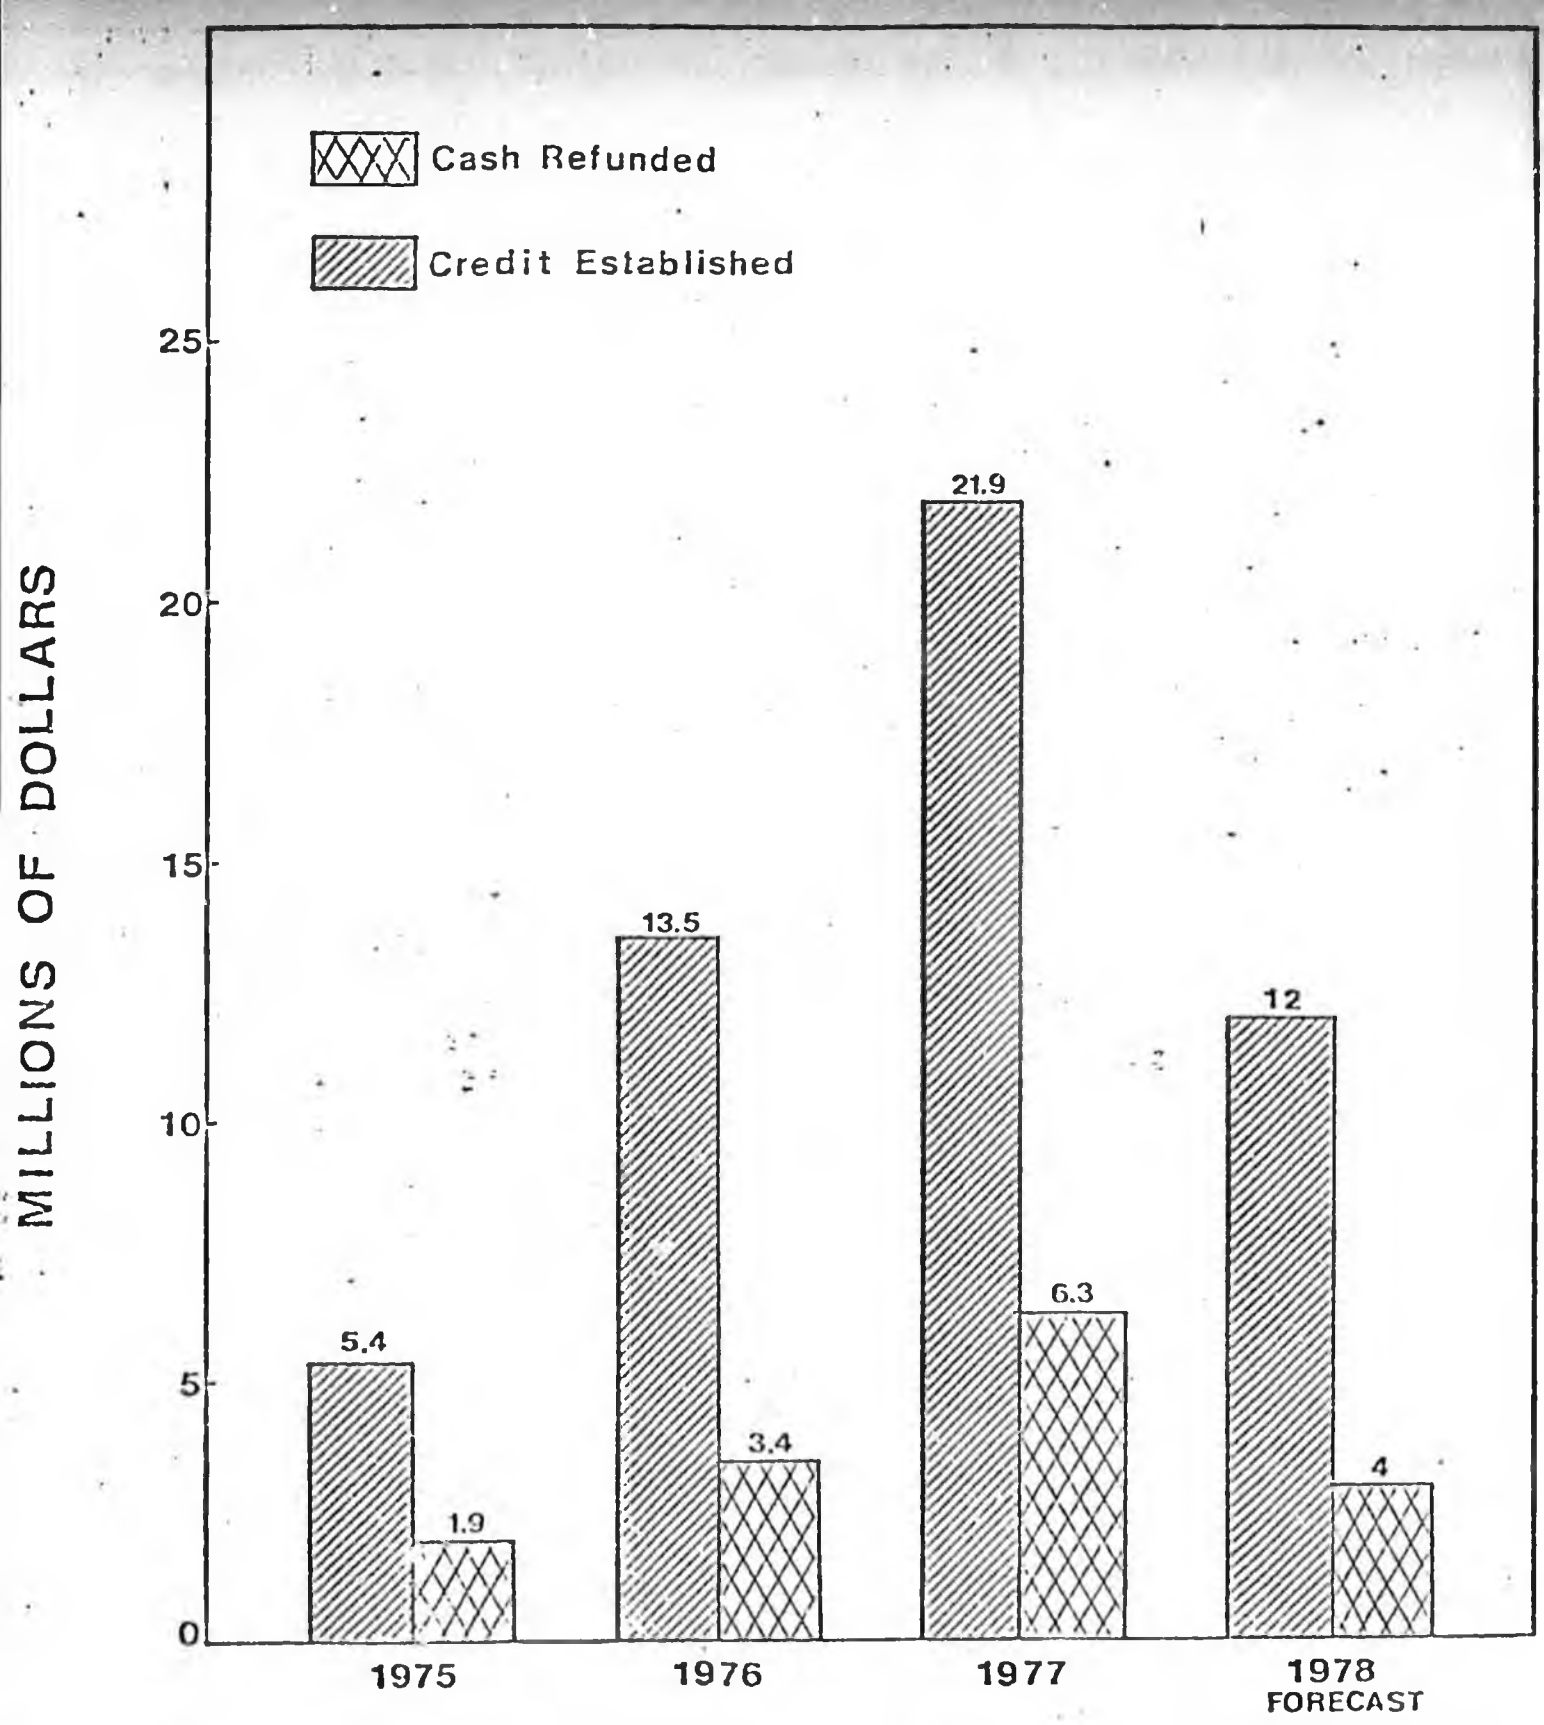
FIGURE 1

The Exploratory Drilling Incentive System and the Geophysical Incentive Program were initially devised to reduce the burden placed on industry when the Natural Resource Revenue Plan was initiated. The incentive programs were meant to reduce the increased royalties owed on Crown oil and gas mineral rights by financing a portion of the exploration costs. These incentive costs have escalated considerably in the years since the inception of the programs from a few million dollars to tens of millions of dollars per year.

The total costs to the Alberta Government for credit, royalty exemptions, cash refunds and administration of the programs amounted to over $90 million in 1977.

The cost for the Exploratory Drilling Incentive System in 1977 was 66.3 million dollars. This figure shows an increase over the 1973 costs of 12.7 million dollars. The credit established in 1978 is forecast to be $82 million. During the same period royalty exemptions have increased from $0.04 million to $6.3 million. It is forecast that royalty exemptions will reach $12 million in 1978.

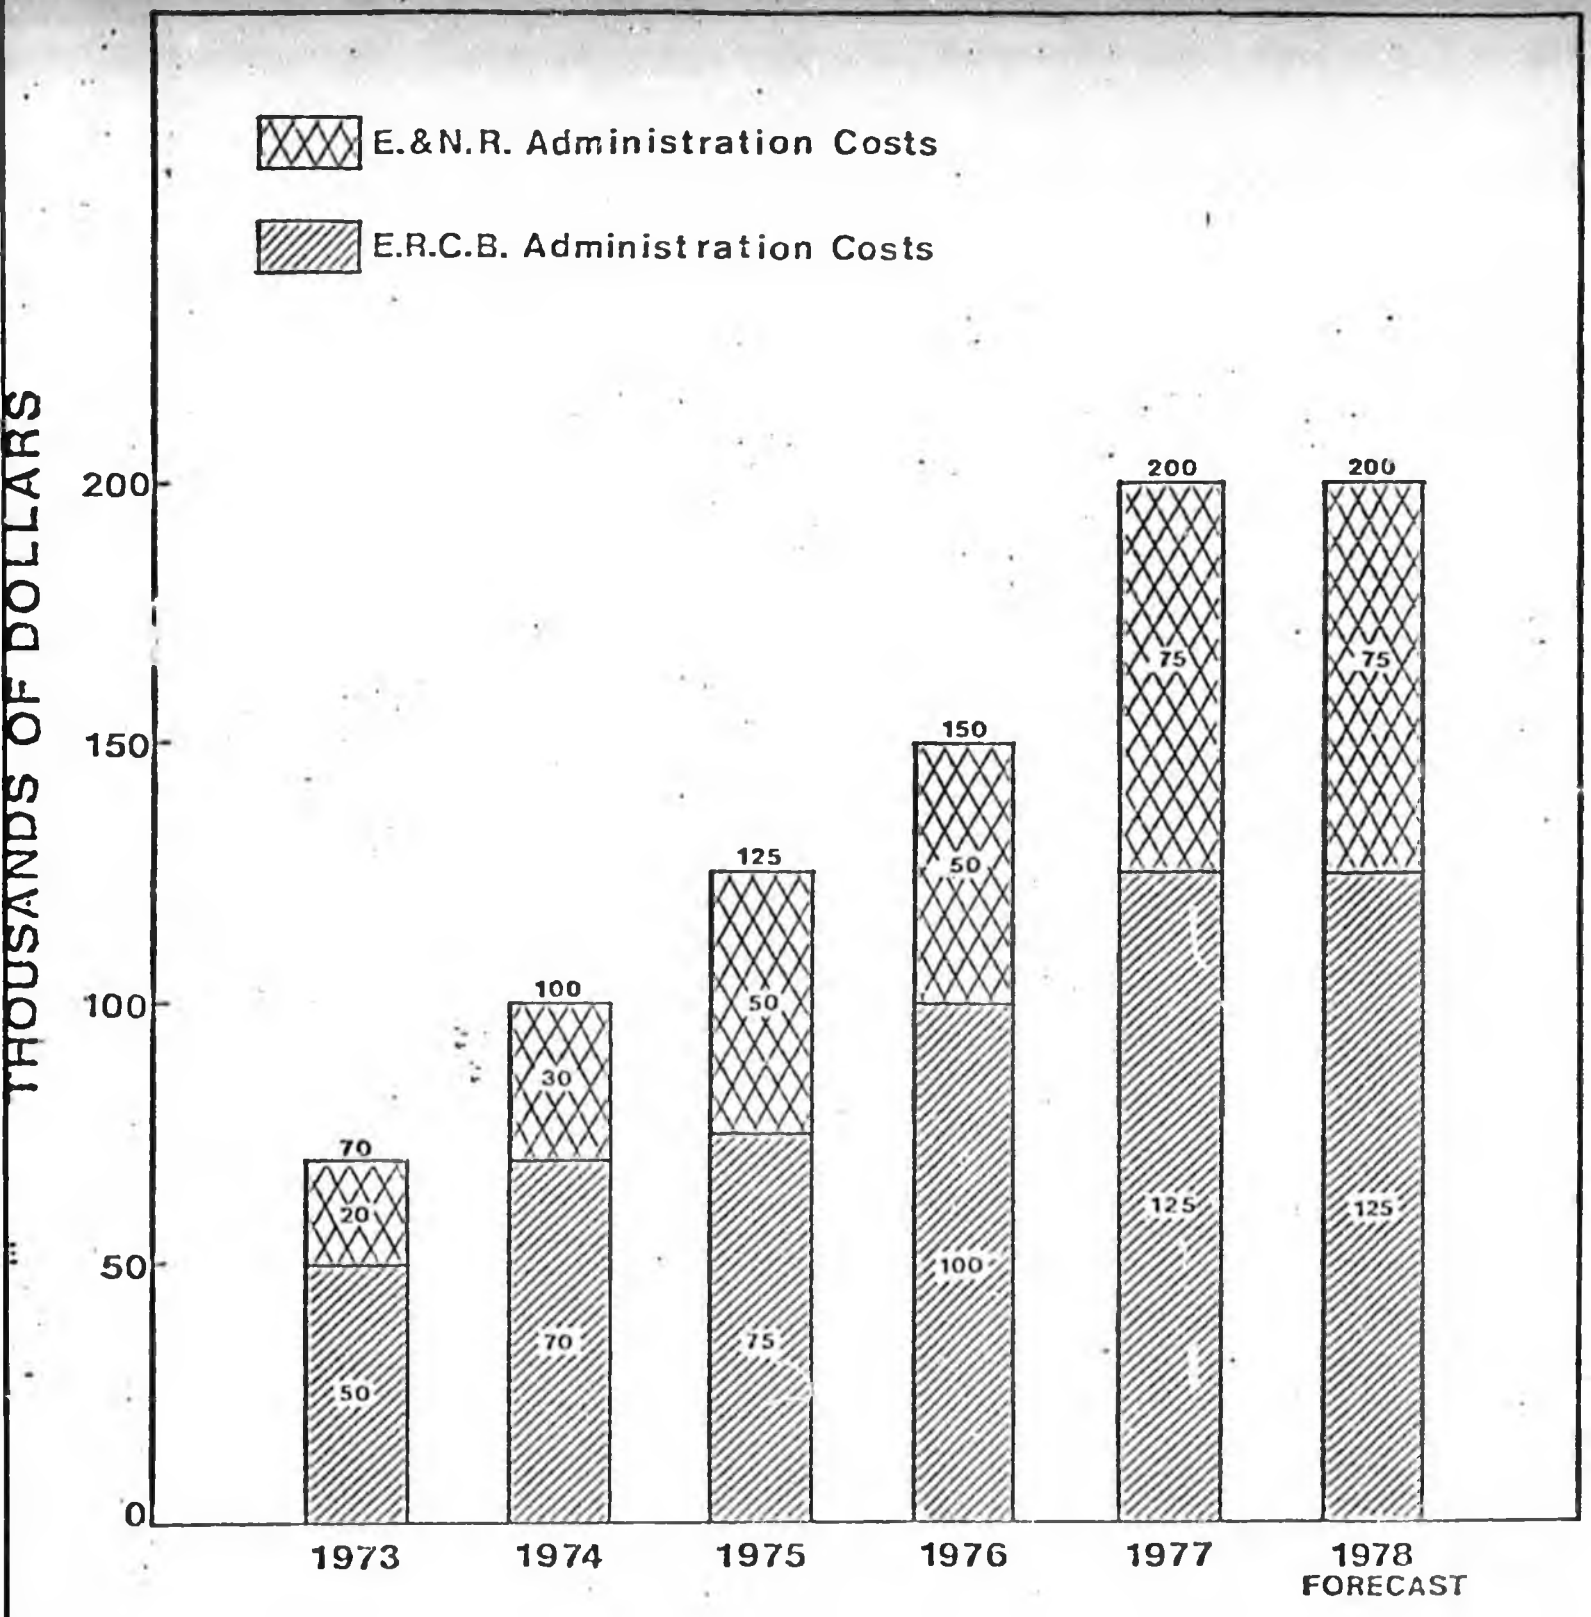
.....16



INCENTIVE COST ASSOCIATED WITH SEISMIC ACTIVITY AND CASH REFUNDED

FIGURE 14

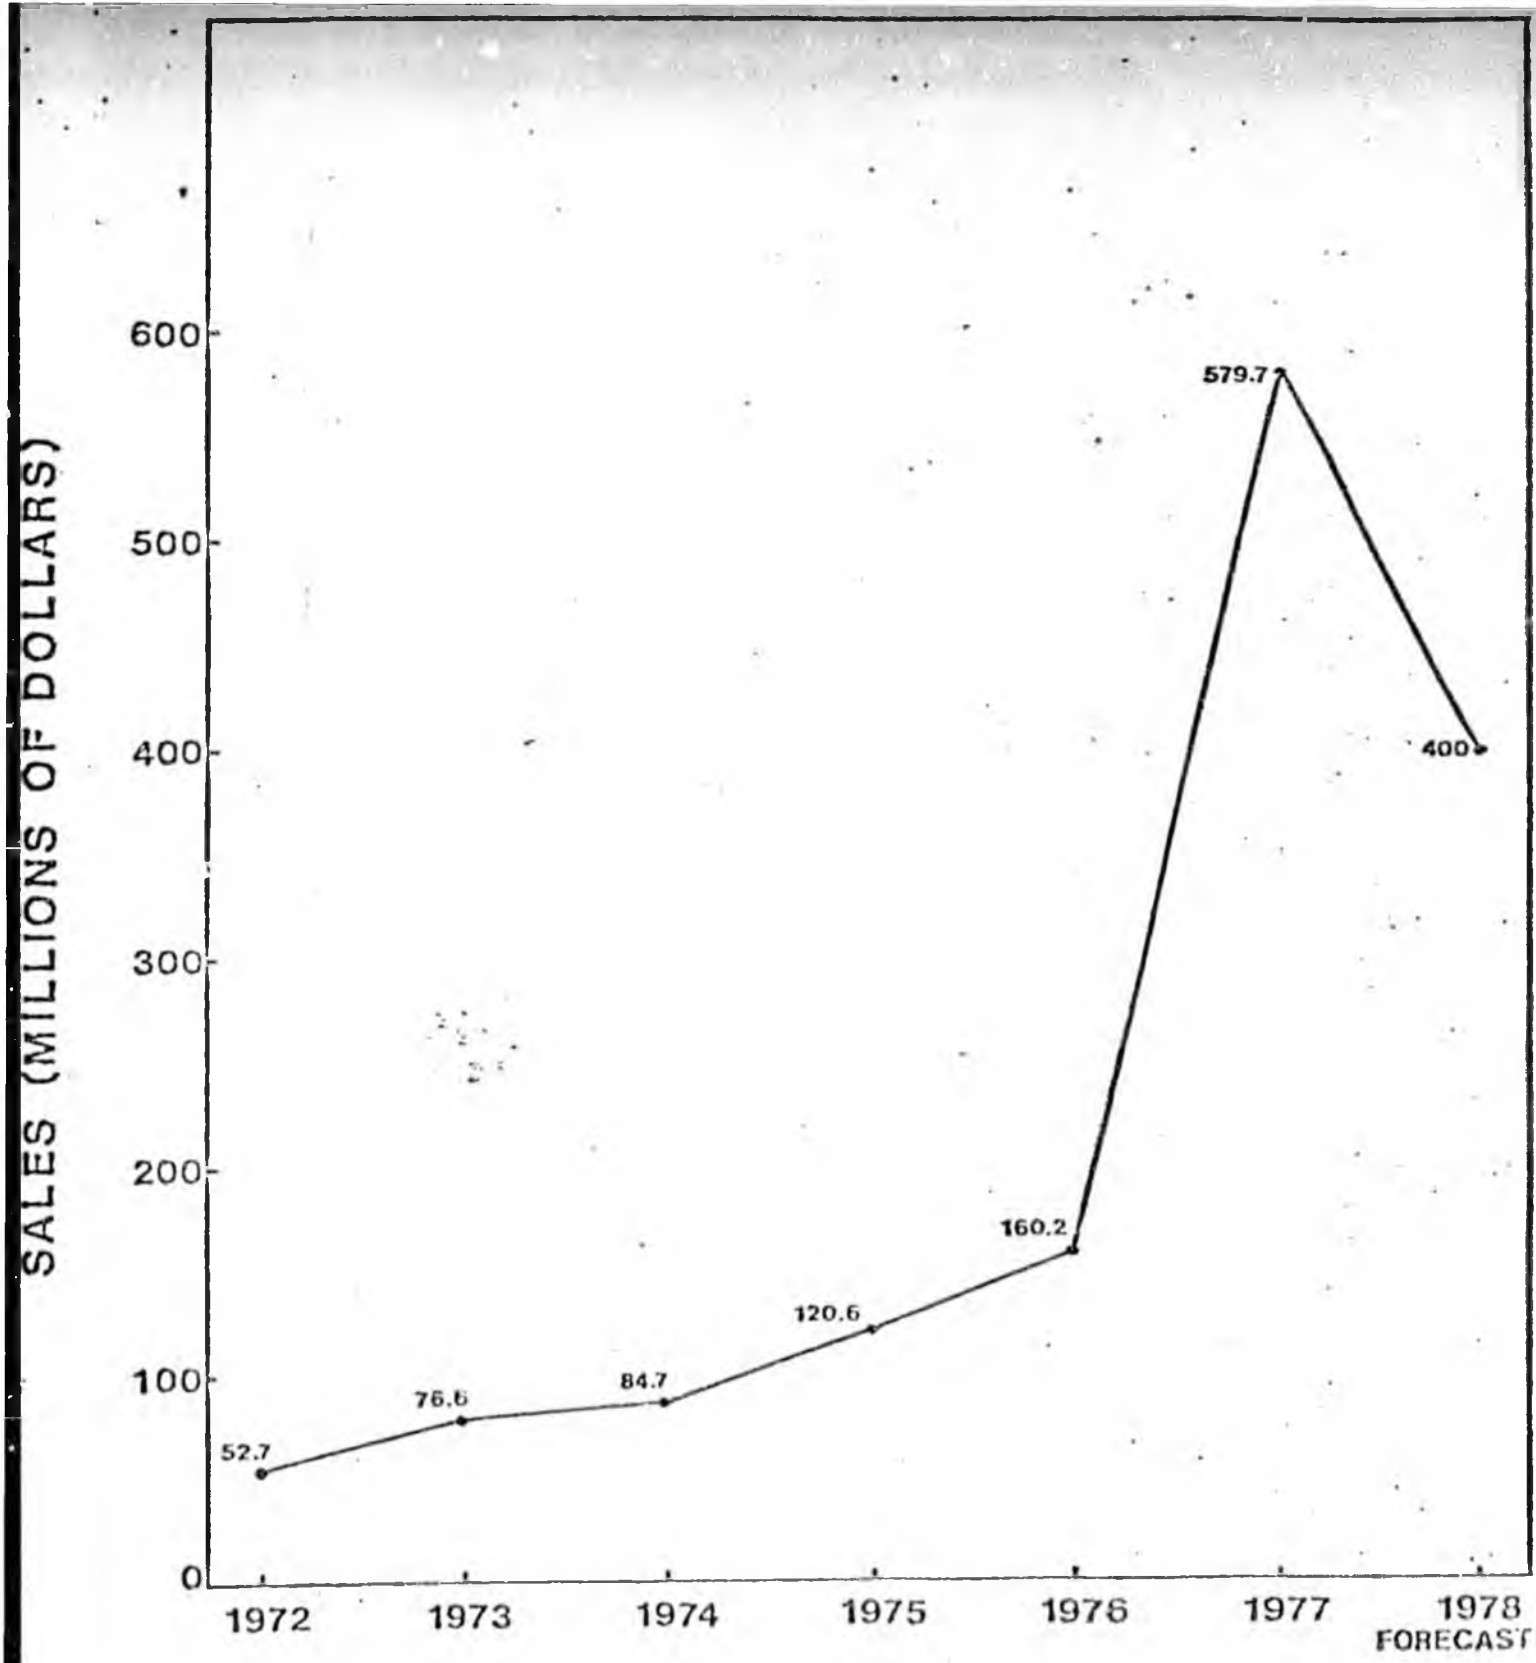
Energy & Natural Resources, June 1978



GOVERNMENT ADMINISTRATION COSTS ASSOCIATED WITH THE DRILLING AND GEOPHYSICAL INCENTIVE PROGRAMS

FIGURE 15

Energy & Natural Resources, June 1978



SALES OF CROWN OIL AND GAS MINERAL RIGHTS

FIGURE 16

Energy & Natural Resources, June 1978

FIGURE 14

$21.9 million was established as credit in 1977 for the Geophysical Incentive Program. This is an increase of more than 300% over the credit established in the first year the of the program. It is estimated that $12 million will be established as credit in 1978.

The cash refunded has increased from $1.9 million in 1975 to $6.3 million in 1977. We believed that in 1978 cash refunds will total $4 million.

FIGURE 15

In 1973, total administration costs were $70,000 roughly $50,000 for the ERCB and $20,000 for the Department. In 1977, these figures had risen to about $200,000 - $125,000 for the ERCB and $75,000 for the Department. It is expected that these figures will remain constant in 1978.

FIGURE 16

The revenue generated through sales of Crown oil and gas mineral rights has tripled from 1972 to 1976. During 1977 sales increased from $160 million to $579.7 million. The forecast for 1978 is 400 million.

.....17

We recognize three factors which may exist when exploration is supported by an incentive program.

(a) The activity may have occurred even if it had not been supported by an incentive program.

(b) The exploration activity was advanced to take advantage of the programs before their scheduled termination dates.

(c) The activity may not be performed in the forseeable future without incentive support.

The second and third considerations appear in the present situation to be applicable. The programs have been directly responsible for the discovery of large additional reserves and have encouraged high risk deep drilling in the foothills region.

Although the definite effects of the programs on exploration activity cannot be quantitatively assessed, the general trend has shown a considerable increase in exploration activity since inception of the programs.

THE PRECEDING PAGES WERE TREATED AS
A UNIT IN THE ORIGINAL FILE.

Wednesday, May 25, 1977, statement by Alaska Department of Fish and Game concerning:

Orca Inlet-Controller Bay
Critical Habitat Nomination
(Senate Bill No. 181)

The Alaska Department of Fish and Game strongly supports this bill. This area is probably the major shore bird/waterfowl migration/staging area in Alaska and possibly in North America. It encompasses tidelands and adjacent lowlands south and east of Cordova and of Hawkins Island, and also in the Copper River Delta and Controller Bay areas east and west of Katala.

Importance: During the spring migration period in excess of 20-million shore-birds (plovers, sandpipers, snipe, etc.) and an additional one-million waterfowl (ducks plus geese) utilize the food and water resources on these tidelands while waiting for the northern breeding grounds to open. This tremendous number of birds includes over 180 individual species. This resting period is extremely important to the migrating birds in permitting them to regain some of the fat reserves expended during the northward flight.

During the fall migration, depending on environmental factors, 10-20 million shore-birds, about one-million ducks and geese, and thousands of Sandhill cranes stop again at these tidelands, resting and feeding while preparing for the migration to their wintering grounds. These are located principally within the Pacific flyway, but also extend

throughout the United States, Mexico, South America, Australia, New Zealand, and the Hawaiian Islands.

In addition to this extensive use by migrating birds, some 50-100,000 shore-birds and waterfowl, hundreds of thousands of sea-birds, hundreds of bald eagles, and many other birds utilize the area throughout this spring-fall period. In total, 219 species have been recorded in the region: 72 occur in the tens of thousands, 10 in the millions.

National Significance: This habitat is one of the most important shore-bird migration/staging areas in North America. It also provides the nesting, molting, and feeding habitat for the largest known concentration of Trumpeter Swans in North America, nearly the entire world's population of Dusky Canada Geese, and large numbers of bald eagles.

Rationale for this Critical Habitat Designation: The preceding discussion outlines well the extensive use of this region as a breeding, resting, and staging area by countless numbers of various species of waterbirds and shorebirds. Many of these (e.g. the ducks and geese, et al.) provide exceptional recreational opportunity for both consumptive (hunters) and non-consumptive (bird watchers) users. More importantly, however, it is a key area for the migration of a major portion of Alaska's waterbird populations by providing a valuable rest stop for the "energy refueling" necessary to sustain long migrational flights. The major responsibility of the Alaska Department of Fish and Game is to manage and sustain Alaska's fish and wildlife resources for the enjoyment and use of all Alaskans, and in fact of all Americans. A "critical habitat" designation for this area will demonstrate the State's concern for such resources and will help control unrestrictive use that could be detrimental to these vast bird populations. The designation is not prohibitive of other uses, but does direct attention and consideration to all resources and does help provide for rational "development" planning by the State.

Public Support: The designation of this area as a "critical habitat" has received strong support from the Alaska Waterfowl Association, the Alaska Conservation Society, conservationists generally, and numerous members of the public at large, especially waterfowl hunters and bird watchers. A public hearing was held by the Alaska Department of Fish and Game in Cordova on February 26, 1976, and there was general strong support. Recommendations from that meeting resulted in the deletion of certain areas proposed and the addition of others.

Possible Problems: The Department of Natural Resources has indicated that there is low hydrocarbon potential in the Orca Inlet portion of the area, but better potential elsewhere in the area for both oil and gas. That kind of development could be detrimental, but need not if properly planned. There is nothing in the current statutes that prohibits mining or oil and gas development or other development from occurring within designated "critical habitats".

Permitting Requirements: As indicated on the following page, Alaska Statute 16.20.260 requires that any person or organization contemplating "use" or "construction work" on a "critical habitat" obtain the written approval of the Commissioner of the Alaska Department of Fish and Game.

Statute Authority: Pertinent language of the Alaska Statutes, Title 16, Article 5, are restated here for your information.

Article 5. Fish and Game Critical Habitat Areas

Sec. 16.20.220. Purpose. The purpose of §§ 220-270 of this chapter is to protect and preserve habitat areas especially crucial to the perpetuation of fish and wildlife, and to restrict all other uses not compatible with that primary purpose.

Sec. 16.20.240. Regulations. The board shall promulgate regulations it considers advisable for conservation and protection purposes governing the taking of fish and game in state fish and game critical habitat areas.

Sec. 16.20.250. Multiple land use. Before the use, lease or other disposal of land under private ownership or state jurisdiction and control, within state fish and game critical habitat areas created under this chapter, the period or responsible state department or agency shall notify the commissioner of fish and game. The commissioner shall acknowledge receipt of notice by return mail.

Sec. 16.20.260. Submission of plans and specifications. When the board so determines, it shall instruct the commissioner, in the letter of acknowledgement, to require the person or governmental agency to submit full plans for the anticipated use, full plans and specifications of proposed construction work, complete plans and specifications for the proper protection of fish and game, and the approximate date when the construction or work is to commence, and shall require the person or governmental agency to obtain the written approval of the commissioner as to the sufficiency of the plans or specifications before construction is commenced.

Sec. 16.20.270. Additional critical habitat areas. The commissioner shall submit a list of additional critical habitat areas to the legislature annually.

MEMORANDUM

TO: R.D. Stevenson
Special Assistant
Department of Revenue

DATE : March 9, 1977

FROM: R. H. Pilcher, Manager
Juneau Field Office
Department of Revenue

SUBJECT: SB 196 Regulation of Shellfish Pots

Passage of SB 196 will require positive identification of shellfish pots (and buoys) by means of individually numbered registration tags designating year of issuance which are to be issued with each license and permanently affixed to each pot.

It is believed the tag would have to be of a compostion that would withstand rough handling and exposure to the elements, including long periods of submersion in salt water. The information required on the tag, Indiviually numbered designating year of issuance, will necessitate a tag at least 3/4 inch by 2 1/2 inches in size, if not larger. A reliable manufacturer estimates that such a tag could be produced in .032 gauge stainless steel with stamped in eight digit numbers and with drilled holes at each end, for approximately $.20 ecnts each.

In 1976, 989 shellfish pot licenses were sold. Pot limits run from 40 to 900 pots that can be legally fished, but the average in 1976 was approximately 200 pots per license. Therefore, approximately 200,000 tags would have to be produced at a cost of approximately $40,000.00. Shipping, postage and other handling charges would amount to approximately $20,000.00. Therefore, it is believed that registration tags could be issued for a fee of $1.00 per tag.

SB 196 requires registration tags and buoys to conform to regulations, other specifications and requirements considered appropriate by the Board of Fisheries, and be issued under procedures considered appropriate by the Department of Revenue. If these regulations, specifications, requirements and procedures result in a tag different from that proposed above, the fee per tag may have to be adjusted.

There is no effective date on the bill. An effective date of January 1, 1978 is required to allow time to design, order, manufacture and ship the tags.

ANALYSIS OF MAJOR CHANGES BETWEEN SB 196 AND CSSB 196
BY JOHN FARLEIGH, ADMINISTRATIVE ASSISTANT, SENATE RESOURCES

SB 196	CSSB 196
(a) Requires tags for all shellfish pots.	(a) Requires tags only for king crab pots in areas with pot limits.
(b) Tags are issued by Dept. of Revenue with each shellfish pot license.	(b) Tags are issued by Dept. of Fish & Game at the time the fisherman notifies the Dept. of his intent to fish in an area with a pot limit. (He must notify the Dept. by August 1)
(c) Requires the tags to be attached directly to the pot (the pot would have to be pulled to be checked for the proper tag).	(c) Requires the tags to be attached to the pot and/or buoy at the Board of Fisheries' discretion.
(d) Allows the Dept. of Revenue to set the fees in an appropriate manner.	(d) Requires the Dept. of Fish & Game to charge the fisherman for the cost of the tags including reasonable administrative costs.
(e) Requires all shellfish pots to be connected to a "sea lion" buoy.	(e) Requires only king crab pots to be connected to a "sea lion" buoy (license revocation clause does not apply to this requirement).

In addition to these changes CSSB 196 also includes:

(f) A provision to make tags nontransferable unless the gear license is transferred under emergency provisions. (A.S. 16.05.670)

(g) A prohibition against unauthorized sale, reproduction, exchange, or use of tags.

(h) A definition of "registration tags" that allows the Board of Fisheries to require any device or method determined to be appropriate.

(i) A requirement that the court, in addition to any other penalty imposed by law, revoke the shellfish pot license of a person convicted of fraud or misuse of registration tags for a period of one to five years.

RE: HB 444 Confidentiality of Fishery Reports

TO: House Resources Committee Members

Please note the attached Committee Substitute. Perhaps this will clear up some of the problems that the Committee had with the bill.

DRAFT RESOLUTION

The Board recognizes the socio-economic advantages of pot limits in certain areas and urges the Protection Division to enforce it to the best of its abilities.

Furthermore, Mr. Harder's proposal may be applicable on some king crab fisheries of the state while in other major production areas new refinements may be necessary to implement it on a reasonable cost-benefit ~~ratio.~~ basis The Alaska Board of Fisheries urges the legislature to explore the possibilities of funding a comprehensive program that would incorporate a realistic and enforceable approach to this pot limit problem.

Here it is Red

Dee

Sec. 16.05.815. CONFIDENTIAL NATURE OF CERTAIN RECORDS.

(a) Reports required by regulations of the department concerning the landing of fish, shellfish, or fishery products, and annual statistical reports of buyers and processors required by regulations of the department, insofar as they are in the form of individual records, are confidential. They may be released to the Department of Revenue, the Division of Fish and Wildlife Protection, and the Commercial Fisheries Entry Commission to assist them in carrying out their statutory responsibilities. However, the commissioner may not release a report if he determins that to do so would abuse the intent of this section, and he may limit or condition any release to insure that proper confidentiality is maintained. Confidential reports held by the department, or received from the department by the agencies or organizations mentioned in this section, may not be communicated or distributed in the form of individual records to any other agency, organization, or individual unless required by a court order.

(b) Reports under section (a) may be released to the North Pacific Fisheries Management Council, the University of Alaska, and the Department of Commerce & Economic Development for valid statistical or other information-gathering purposes if

(1) any information which would identify the person to whom the record pertains is deleted; and

(2) disclosure is made in a manner which would not compromise or defeat the purposes of any statutory provision designed to maintain the confidentiality of certain information.

DRAFT RESOLUTION

The Board recognizes the socio-economic advantages of pot limits in certain areas and urges the Protection Division to enforce it to the best of its abilities.

Furthermore, Mr. Harder's proposal may be applicable on some king crab fisheries of the state while in other major production areas new refinements may be necessary to implement it on a reasonable cost-benefit ~~ratio.~~ basis. The Alaska Board of Fisheries urges the legislature to explore the possibilities of funding a comprehensive program that would incorporate a realistic and enforceable approach to this pot limit problem.

My name is Ole Harder, I'm a crab fisherman from Kodiak. I started fishing in Kodiak in 1948, and except for a few years I've fished there ever since. I'd like to express myself on the King Crab pot limit to the Resources Committee and the House and Senate. I'd like to start out with a little background on the pot limit. We started with 30 pots in Kodiak, then went to 60 pots, and then to 75. Kodiak fishermen signed a petition to bring it back to 60 a number of years ago, and everyone signed it with the exception of a few boats. Somehow the petition was lost at the Board meeting in Seward. Since that time we have had a 75 pot limit, and up until three or four years ago we hadn't had major problems. Somewhere, and somehow the chiseling has gotten worse. I would say that guys are fishing as high as 250 pots in Kodiak now, while fishermen who abide by the limit and fish 75 pots could be penalized for $100,000 or better in gross stock because he is living within the law. Now we have to find an answer to this problem. One of the things we can do is throw the pot limit out. If we do that let's see how that might affect Kodiak. We have a population of around ten or eleven thousand people that are totally dependent on fishing. Without fishing there would be nothing, except a little logging. I can predict what might happen without the pot limit. I understand we have a quota of around 12 or 13 million pounds of 7 inch crab this season. If a hundred boats fished with 200 pots, 50 with 150, and 50 with 75 pots. If my arithmetic is right, it would come to around 31,250 pots. If in three days we came up with a thousand pounds per pot (which, by the way, is a very reasonable catch at around 120 crab per pot in three days) we would then be talking around 31,000,000 pounds. While these figures are high, believe

you me, in not too many years you might see to throw the pot limit out. What this will do to the local economy I'm sure I don't have to tell you. Even if I cut my figures in half, or even in thirds, it would be disastrous. For instance if the Bering Sea and Dutch Harbor opens on September 15, and we open on September 1, we might be seeing the beginning of the end to the local fishermen and particularly the smaller boats. We also have to consider the resource. If fishing is better than the Department of Fish and Game anticipated, we could very well catch more than the allowable harvest which would, of course, be disastrous for the future. The pot limit is not any different in my opinion than the size of the seine or gill net in this state. If we get away with the size of the seines and gill nets and so forth, we will also see a drastic change in the gearing of the boats. Most everybody who wants to stay in business will have to buy a bigger boat in order to compete with the bigger seines and bigger gill nets and so on. Now I've heard the argument quite frequently as a matter of fact, that the National Marine Fisheries Service wants to do away with it. Well, I talked to Mr. Chingham who is on the Council and he reassured me that if the Council would implement whatever the State does and it will stick. And furthermore, I think that the new administration in Washington, D.C. is committed to put people to work, not take work away from them, which would be the case if the pot limit were thrown out. The Department of Fish and Game or the enforcement people so far have not been able to come up with a workable solution to the pot limit. My suggestion is that the State has a tape made up and put on every pot the fishermen fish. It can be a four

inch tape by the Fish and Game Department and they can be numbered from 1 to 75. They can even have reflector tape stuck on the tape that will work for radar. The reflector could also work for lights, and the tape could even be infra-red. All we have to do is apply it around the center of the buoy (I think a 60 inch buoy is the biggest size to my knowledge anyone uses) and every year we can change the color code. In other words, once you use the color one year that color is out - the next year you use a different color. I also suggest that you have ten extra tags. If a fisherman loses a pot, for instance pot number 16, you then put pot number 76 on after notifying the Department of Fish and Game. A total of ten extra pots should be sufficient to cover what might be lost in one year. There might be various questions about the enforcement of this policy. The fishermen I have talked to so far all seem to think that there is a workable solution, and they will in turn testify. I feel that if I am on the grounds and I see a pot without the State tag on the pot bouys, I will consider it a lost pot and treat it as such. I also suggest that we put a permanent plastic tag with the Fish and Game number on it fastened below the pivot buoy. Thank you very much.

My name is Kenneth Moore from Homer, Alaska. I have fished lower Cook Inlet area. I've fished for 11 years, the past 7 I've fished in the king crab area. In lower Cook Inlet and Kachemak Bay, we have a problem with people fishing too many pots. It's an unenforceable problem, as near as we can see there is very little attempt has been made to enforce it, however, it is a very difficult thing to enforce. The tape that Ole just brought up is probably the only possible means that I have heard that might work to enforce it. I feel very strongly that it would work, and I think it should be considered along with considering in

however, there is also enforcement would have to take place, and I think that if enforcement would look into it, they will probably find that it could be enforced in this manner. Thank you very much.

My name is Hank Gain, I am a commercial fishermen from Seldovia. I have been fishing Kachemak Bay since 1953. We feel that removing the pot limit at this time would be disaster to the communities boardering on Kachemak Bay. As it is we have a law on the books , and to my knowledge has never been even attempted to be enforced. We have asked the department previously while the protection agency was with the department to enforce this law and they said it was unenforceable. Since the State Police have taken over the protection, we hear the same thing. We think we do have a workable plan now that can be enforced, and with the enforcement of this law, it will stop a lot of the influx of the gear coming into the Bay, which is over the pot limit. Some of the boats fishing as high as 150 pots are causing an economic hardship on the fishermen and the residents of Seldovia. Therefore, we recommend that they adopt the proposal that was submitted previously on this tape to put, in effect, taping of the bouys which we highly endorse. This tape can be made or bought in its form now that cannot be peeled off the bouy that you will destruct, whereas other tapes can possibly be removed. But this tape can be applied to these bouys and cannot be used over again. We firmly and highly endorse this method of identifying pots and with this, we feel certain that the pot limit can be enforced and preserve the fishers of the small areas and preserve the economy of the towns surrounding Kachemak and Kamishak Bay.

Members of the House and Senate Committees, I'm Bill Bledso, a fishermen from Homer, and I fish king and tanner crab in the lower Cook Inlet. I think it's a real good idea to get some kind of enforcement going on this pot limit thing. The law has been on the books for quite a long time and the many comments we get when we bring it up to people who are supposed to be enforcing it, is that they don't have any way to do it, because at the present time they have to go out and pull every pot that a fisherman has to be sure that the pot itself is fishing king crab before they can even start to make a case. In addition, there are quite a number of pots in Cook Inlet that are fishing , and people are using them are completely unmarked with even Fish and Game numbers of the boats , there are a couple of bouys tied on. If we could set up some system where the pots could be accounted for, and this tape idea that Ole presented earlier might be a real good idea. Might make the whole system a lot more enforceable and help us out a lot and help out the resource as far as conserving the crab and making the season last a little bit longer and spreading it out so the processors could handle the crab. I think it would also be necessary to enact some kind of a rule or regulation or a law that stated that any pot that any pot that had this particular tape on it was a king crab pot, and that would not make it necessary for the enforcement people to have to pull the pot and determine that it was a king crab pot. There are going to have enough trouble locating all 75 pots or more of person's string anyway to be sure that they have more than 75 pots there. So I think it would be a real good idea, all in all, to somehow enforce this provision. I talked to a fisherman the other day and he said that he didn't know of anybody fishing in Cook Inlet who had only 75 pots. So that might give you some idea of the magnitude of this problem. So I would urge you to adopt this proposal and how to get us some help there on enforcing this regulation.

Thank you.

Ruel Homberg from Sand Point. I've fished here since 1954. My organization has a proposal to the Fish and Game to abolish the pot limit for our area. However, we've considered this a long time before we finally did put the proposal in. I wasn't one of the original members, that submitted that proposal this year, however, after talking to various people about the , someway to enforce the pot limit, I would feel that may be we should consider or take another look that the pot limit before we go to far. However, I don't know what the Board's action is going to be, but I would say if the Board did abolish the pot limit for our area now, possibly when they did come up with some way of enforceing the pot limit, I could see where this could really be a great help to us because as we are looking at some other things with the tanner crab, for instance, wanting a area registration or a an exclusive area registration were we could work a pot limit into that to be in effect and would probably eliminate need for area registration then. I have been trying to get ahold of some of the people from other organizations to find out what their feeling was on what we have talked about here but I haven't been able to , so what I'm saying here, I just have to speak for myself right now. I don't have much more to say other than that after talking with Ole here, I think maybe what he has is probably about the only way that there may be some way to enforce this. Thank you.

Alaska State Legislature

JUNEAU ALASKA

TO: ALL MEMBERS

FROM: SENATOR KAY POLAND MAY 10, 1977

HB 342 IS A COASTAL MANAGEMENT BILL AND LANDMARK LEGISLATION OF LONG-TERM EFFECT ON LAND PLANNING AND MANAGEMENT.

THE MEASURE IS THE PRODUCT OF A JOINT ADMINISTRATIVE AND LEGISLATIVE COMMITTEE STATUTORILY CREATED DURING THE 1976 SESSION. MEMBERS OF THE COMMITTEE WERE SENATOR POLAND, SENATOR TILLION, AND REPRESENTATIVES NELS ANDERSON AND SAM COTTON. ADMINISTRATION MEMBERS WERE COMMISSIONERS LEE MCANERNEY AND DON HARRIS, AND DPDP DIRECTOR BOB LERESCH. THE COMMITTEE WAS FORMED AFTER THE FIRM REJECTION OF AN ADMINISTRATION BILL INTRODUCED DURING THE 1975 SESSION, AND WHICH HAD BEEN BRANDED AS JUST ANOTHER ONEROUS LAYER OF GOVERNMENT.

THE PRESENT JOINT EFFORT BILL IS ONE THAT BEGINS THE PLANNING PROCESS AT THE CITIZEN LEVEL RATHER THAN AT THE CAPITAL LEVEL. THE BILL DOES NOT PERMIT THE PROMULGATION OF ANY ADDITIONAL REGULATIONS, BUT FOR THE COOPERATIVE FORMULATION OF A MANAGEMENT PLAN THAT MUST BE SUBMITTED FOR AFFIRMATIVE LEGISLATIVE APPROVAL BEFORE ANY PORTION CAN BE ADOPTED. ADDITIONALLY, THE MEASURE CALLS FOR THE CONFORMANCE OF ALL EXISTING DEPARTMENTAL REGULATION TO THE COASTAL MANAGEMENT ACT, AND FOR REVIEW FOR ANNULLMENT OF ANY REGULATION NOT NEEDED FOR THE IMPLEMENTATION OF THE MANAGEMENT PLAN.

Alaska Conservation Society

P.O. Box 80192 College Branch, Fairbanks, Alaska 99708

COASTAL ZONE MANAGEMENT - HB 342 & SB 220
Joint Senate/House ~~Resource~~ Committees
Mar. 30, 1977 C.R.&A.

The Alaska Conservation Society once again would like to reiterate its strong support for the concept of coastal management for Alaska. The Alaskan coastline stretches for some 34,000 miles. It encompasses more than a third of our nation's shores and includes an array of ecosystems from the arctic ice pack to ell-grass estuaries. It serves many peoples needs - fishing grounds, logging areas, oil and gas pipeline corridors, wildlife habitat, transportation and soon, energy production facilities. The place where the land meets the sea is an indispensible resource in the most literal sense of the word. But, it goes even beyond that in intangible values, those of renewal of the human spirit and ecological integrity. To mesh all these factors is a challenge we are far from meeting.

There are many dilemmas now facing Alaska's coastal areas. We are grappling with many of them, such as OCS oil and gas development, but few easy solutions can be expected. Coastal management is a concept of a process - a system that is often put forth as the states best bet, the most promising means for solution. Coastal management is not necessarily a protective device despite the fact that the national program was inspired by conservation concerns. It is naive to assume that coastal management will be a smooth process that will vacuum up all the problems on Alaska's shores and spew them back neatly solved.

Coastal management is merely a first step. It can be something of a prototype for land use planning and it may provide a handle on such

immediate issues as OCS development. But it is a program that will only serve us well if we put demands on it from the beginning. The program will only reflect the needs and concerns of Alaskans to the extent that those needs and concerns are heard. It will only stand up to the expectations of the environmental community to the degree that those expectations are forcefully voiced. Toward that end, we would recommend the following ideas be included in a coastal management act:

1. Maximum local participation in planning for Alaska's coastal zone balanced with the reality that the coastal plan is primarily a state responsibility. The bill recommends a Coastal Policy Council. Some form of a council is needed in order to focus thought and discussion on coastal planning. We suggest that the Council be widened to include more than local elected officials selected by the Governor and members of the Governor's cabinet. The Council should contain several at large voting citizen members (appointed by the Governor) for example, using the 4 judicial districts, for basis of selection. This would allow the state to have the benefit of interested, knowledgable people from areas such as private industry, the University of Alaska, Native groups and conservation groups. Also a technical change, Sec. 44.19.891 Alaska Coastal Policy Council (a)(2)(G) (pg. 4 line 8) change "commissioner of Dept. of Public Works" to "commissioner of Dept. of Transportation and Public Facilities". But the local participation should be under the comprehensive and guiding hand of the state who have the ultimate responsibility in coastal planning and management for Alaska.

2. There should be a requirement for public hearings for regions formulating district coastal management plans. These hearings should be recorded, transcribed and all questions raised at these hearings should be answered and opinions and proposals should be discussed and their validity ascertained. The hearing records and evaluation should accompany any plan submitted to the Council. In this way the Council and the

citizens of the future will have a record of both majority and minority opinions within the community and the hearing records can serve as a valuable source of information in the years ahead as the value of the program is assessed and modified. This provision should be in the Act as local ordinances often have no such requirements. All hearings of the Council should likewise be recorded, transcribed, evaluated and made available as appropriate.

3. The emphasis of this act should be on protection, enhancement and management of the coastal zone, not on development. This program should not be used as a development tool. The coastal zone is a fragile area and needs protection, not harassment. This brings up the question of what protection will the coastal zone receive while the coastal plans are being developed? There is up to 2½ years, maybe more, before plans are required to be completed. Who will hold the reins until then? Will existing statutes and regulations be continued in haphazard form? Should interim protection be addressed in this Act? This could be a serious problem.

4. In line with our view that coastal management is a land use issue, we feel it makes more sense to treat the coastal zone as a resource and therefore, that this Act should be under the Dept. of Natural Resources, not Community and Regional Affairs. DNR has all current land use/resource management for the state and it seem logical that they should assume management of the coastal zone. Possibly the program could go under the Div. of Land and Water Management or a new division of coastal zone management could be created. This will become even more important as the plans are completed and the program moves into management of coastal resources.

In summary, a coastal management program should not be viewed as a crisis-resolution mechanism. Careful thought and critical evaluation must be used to develop flexible yet strong managment plans. This type

of planning and management is one of those rare opportunities for streamlinging unconsolidated state regulatory and management activities, as so many existing laws remain inadequately implemented and so many agencies fail to exercise their mandates.

Over and above the financial benefits which can be expected to accrue to Alaska - over and above the valuable contribution coastal management could make toward cleaning up the state system of land and resource management - there is something else...what coastal management is all about. It is a protection of values, a balancing of the irretrievable, an acknowledgement of those qualities of life which make the coastline of Alaska worthy of our special attention.

Our state is in great need of a process which pulls the loose ends together and turns them to a common purpose. We see coastal management as one such tool.

SECTION-BY-SECTION ANALYSIS

SB 220 - HB 342

(An Act Relating to the Management of the Coastal Resources of the State)

In this analysis --

Council means the	Alaska Coastal Policy Council
Program means the	Alaska Coastal Management Program
District Program means the	District Coastal Management Program
Service Area means the	Coastal Resource Service Area

Area which Merits Special Attention	Defined in section 46.35.210(1)
Coastal Resource District	Defined in section 46.35.210(2)
Use of Direct and Significant Impact	Defined in section 46.35.210(5)
Uses of State Concern	Defined in section 46.35.210(6)

Major Economic Activity	Defined - 46.35.160(b)
Village	Defined - 46.35.180(d)

* Section. 1.

Sets out the legislative findings which show that

- The development of valuable resources which exist along Alaska's coast may outstrip the capabilities of coastal communities to deal with the impacts of accelerated development in the coastal areas; and that there is
- Great need for sound water and land use planning along the coast which would allow for development and use of the resources while at the same time protecting the natural and scenic values of the coast;

* Sec. 2

Sets out the legislative policy which provides that

- The coastal resources of the State should be preserved, protected, restored and enhanced as necessary, but also developed and used, for the benefit of this and future generations; that
- Coordinated planning and decision making among the various levels of governments and citizens of the State should be encouraged; that
- A management program, which would set out the State's policies, objectives and procedures regarding the coast should be developed; that
- Such a management program provide for the resolution of conflicts which may arise between public and private coastal resource activities as well as those which may have a direct and significant impact upon the coastal areas of the State; that

- Such a management program provide for participation by the public, local governments, and agencies of the State and Federal governments in the development and implementation of the program; that
- Such a management program utilize existing governmental structures and authorities; and finally that
- State agencies comply with the policies, and the guidelines and standards adopted by the Alaska Coastal Policy Council.

* Sec. 3

Adds new sections to Chapter 19 (Office of the Governor) of Title 44 (State Government) which would establish the Alaska Coastal Policy Council to carry out the State' policies.

Sec. 44.19.891

(a) Creates the Alaska Coastal Policy Council within the Governor's Office. The council would consist of 15 members; eight would be public members, appointed by the governor, and seven would be Administration members. The eight public members would nave to be mayors, or members of assemblies or councils of incorporated local governments from one of eight designated coastal regions. The seven Administration members would be the Director of DPDP, and the Commissioners of the Departments of Commerce and Economic Development, Community and Regional Affairs, Environmental Conservation, Fish and Game, Natural Resources, and Transportation and Public Facilities.

(b) The public members would serve two year terms and could be reappointed. Their terms would be staggered.

(c) The Council would select co-chairmen from among its membership, one from the public members and one from the Administration designees.

(d) Members of the Council would be allowed to select one person as a permanent alternate to represent them at Council meeting.

(e) Four public members and three designated members would constitute a quorum.

However, one or more members would be able to hold hearings.

Decisions of the Council would be by majority vote of those present and voting.

(f) Council members would be entitled to per diem and travel expenses, and

(g) A vacancy among the public members would be filled by appointment of the Governor for the unexpired portion of the term.

Sec. 44.19.892

Sets out the powers of the Council, which would include

- Applying for and accepting of grants, contributions, and appropriations, including Federal monies which would become available for coastal planning and management.
- Contracting for services.
- Consulting and cooperating with all parties concerned with or having jurisdiction over coastal planning and management.

Sec. 44.19.893

Sets out the duties of the Council, which would include

- Developing guidelines and standards for the preparation and approval of the Alaska Coastal Management Program.
- Establishing continuing coordination among the various State agencies to facilitate the development and implementation of the Alaska Coastal Management Program, as well as
- Initiating an interagency program of comprehensive coastal resource planning for each of the eight coastal regions represented on the Council.
- Providing, on a continuing basis, data and information to Coastal Resource Districts to carry out their planning and management functions under the Alaska Coastal Management Program.
- Submitting annually to the Legislature those portions of the Alaska Coastal Management Program approved or amended by the Council during the preceding year.

Sec. 44.19.894

Designates the staff of the Office of Coastal Management within DPDP to be the staff to the Council in carrying out its duties.

* Sec. 4

Adds a new chapter to Title 46 (Water, Air and Environmental Conservation) to develop the Alaska Coastal Management Program.

Sec. 46.35.010

((a) (Provides that the Council approves the Alaska Coastal Management Program.)

(b) Provides that portions of the Alaska Coastal Management Program could be approved by the Council as they are developed.

(c) The Council would review the Program, and when appropriate revise it to

- Add newly approved District Coastal Management Programs;
- Intergrate newly approved District Coastal Management Programs, and/or revisions and amendments of District Coastal Management Programs with existing programs, and/or with plans developed by State agencies.
- Add new or revised State statutes, policies, regulations or other appropriate material.
- Review the effectiveness of implementation of District Coastal Management Programs.
- Consider new information acquired by the State and by Coastal Resource Districts.

(d) All reviews and revisions by the Council would have to be in accordance with the guidelines and standards adopted by the Council.

Sec. 46.35.020

Lists the eight objectives of the Alaska Coastal Management Program. They include

- The use, management, restoration and enhancement of the overall quality of the coastal environment.
- The development of industrial or commercial enterprises consistent with the social, cultural, historic, economic and environmental interests of the people.

- The orderly, balanced utilization and protection of the resources of the coastal areas consistent with sound conservation and sustained yield principles.
- The management of coastal land and water uses in such a manner that those uses which are dependent on a coastal location (economically and/or physically) are given a higher priority than those uses which do not require a coastal location.
- The protection and management of signficant historic, cultural, natural and aesthetic values, and natural systems or processes within the coastal area.
- The prevention of damage to or degradation of land and water (reserved for their natural values) as a result of inconsistent land or water usages (adjacent to that land).
- The recognition of the need for a continuing supply of energy to meet the requirements of the State and the nation, and
- The full and fair evaluation of all demands on the land and water in coastal areas.

Sec. 46.35.030

Provides for the creation of Coastal Resource Districts to develop District Coastal Management Programs. The District Coastal Management Program would be based on a comprehensive resource use plan, or a comprehensive statement of needs, policies, objectives and standards which would govern the use of the various resources in the Coastal Resource District. Each District Program would have to be consistent with the guidelines and standards of the Alaska Coastal Management Program, and would include

- The delineation of the boundaries of the Coastal Resource District.
- A listing or definition of land and water uses and activities which would be subject to a District Coastal Management Program.
- The policies and regulations which would be applied to the land and water uses and activities which would be subject to a District Coastal Management Program.
- A description of the uses and activities which would be proper and those which would be improper within the boundaries of a Coastal Resource District.
- The policy which would be applied, and the procedures which would be used to determine which proposals for land or water uses or activities would be allowed.
- The designation of areas in a Coastal Resource District which merit special attention, and the criteria which would be applied for their use.

Sec. 46.35.040

Specifies the duties of the Alaska Coastal Policy Council. Among these would be

- The development, identification and definition of guidelines and standards for use by Coastal Resource Districts and State agencies within six months of the effective date of this Act. (These guidelines and standards, developed by the Council, would essentially cover the same items listed in the previous section (46.35.030).)

  In addition, the guidelines and standards which would be developed by the Council would be used to measure the progress

Coastal Resources Districts are making in developing and implementing their own District Programs.

- The development of an ongoing program which would provide technical and financial assistance to the Coastal Resource Districts in the development and implementation of their District Programs.
- The review and approval of District Programs.
- The initiation of a process for identifying and managing, uses of State, regional and/or district concerns within specific coastal areas.
- The development of procedures and/or guidelines for coordination and cooperation with Federal agencies which manage and use Federal lands in coastal areas.

Sec. 46.35.050

Provides that Coastal Resource Districts would be required to complete and submit to the Council for approval a District Program within 30 months of the effective date of this Act, or within 30 months of certification of the results of a Coastal Resource District's organization, whichever would occur later.

Sec. 46.35.060

(a) Provides that if certain portions of a District Program submitted to the Council for approval were not in compliance with the provisions of the Act, the Council could still approve those portions which were consistent.

(b) Those portions of a District Coastal Management Plan which would or could not be approved by the Council because of deficiencies would be mediated. Such mediations would include public hearings in the affected Coastal Resource District, and meetings between the Council and Coastal Resource District officials to resolve the differences and correct the deficiencies.

(c) If differences could not be resolved by mediation the Council would then call for a public hearing, and the differences would be resolved in accordance with the Administrative Procedure Act (44.62). The Council would be required to enter its findings, and then could require that

- The affected District Program be amended to be consistent with the Act, or that
- The Program be revised to accommodate a use of State concern.

(d) Designates the Superior Court as the court which would have jurisdiction to enforce orders of the Council.

Sec. 46.35.070

(a) Provides for the standards the Council would have to follow in approving or disapproving a District Program. The Council must approve a District Program if it is consistent with the Act and the guidelines and standards adopted by the Council.

(b) Even if a District Program were not consistent, the Council would have to approve it if it were determined that strict adherence to the guidelines and standards

- would result in violation of another law, or

- would cause substantial harm to another value in the Coastal Resource District, or that
- the inconsistency is of a technical nature and would not result in substantial harm.

(c) This section also provides that the Council would have to approve a restriction or exclusion (of a District Program) of a use of State concern, if it found that
- The Coastal Resource District had consulted with the appropriate State agencies; that
- The restriction or exclusion was based on the fact that no suitable alternative site was available; and that
- The restriction or exclusion was based on an analysis which showed that the proposed use would have been incompatible with the proposed site.

(d) Under this section a decision by the Council would have to be made within 90 days.

Sec. 46.35.080

Provides that the Alaska Coastal Management Program would take effect upon adoption of a concurrent resolution by a majority of each house, or by a vote of the majority of each house at a time the houses are convened in joint session to confirm executive appointments.

Sec. 46.35.090

(a) Provides that District Programs (approved by the Council for a Coastal Resources District) which do not have planning and zoning authority would be implemented by the appropriate State agencies.

(b) Those Coastal Resource Districts who exercise planning and zoning authority would implement their own Programs (once they had been approved by the Council).

Sec. 46.35.100

(a) Deals with compliance and enforcement of District Programs. It provides that muncipalities and State agencies would administer land and water use regulations in conformity with approved Programs.

(b) The sections states that if it were found that a District Program was not being enforced, implemented or complied with, the Council would convene a public hearing to consider the matter. After the hearing the Council could order the affected Coastal Resource District and/or State agency to take the necessary actions to enforce, implement or comply with an approved District Program.

(c) In determining whether an approved District Program is being enforced, implemented or complied with by a Coastal Resource District which exercises planning and zoning authority, the Council would find in favor of the respective Coastal Resource District if

- Zoning or other regulations had been adopted or were being enforced;
- Variances had been granted which complied with the elements of the District Program, or which had been approved by the Council; and

- Procedures and sta is of the Act had been followed and considered by the Coastal Resource District.

(d) In determining whether a State agency was enforcing, implementing, or complying with a District Program with respect to its exercise of regulations or control of the resources, the Council would find in favor of the State agency if the
- Use or activity for which the permit, license, or approval had been granted was consistent with the District Program, and if the
- Requirements imposed by State statute, regulation, or local ordinance applicable to the use or activity were consistent with the District Program.

((e) The Superior Court would have jurisdiction to enforce orders of the Council.)

Sec. 46.35.110

Would provide for the establishment of Coastal Resource Service Areas with powers granted to perform the duties required in this Act, in the unorganized borough.

Sec. 46.35.120

(a) Provides for the organization of Coastal Resource Service Areas in those Regional Education Attendance Areas which contain part of the coastline.

(b) The section further provides that the Commissioner of the Department of Community and Regional Affairs could, after public hearings, consolidate two or more REAAs into a single Coastal Resource Service Area if

- A substantial portion of the coastal area in question belonged to or was administered by the Federal Government; i.e., an area over which the State could not exercise control as to its use; or if
- There was the likelihood that an area in the unorganized borough which covered more than one REAA might be incorporated.

(c) The section also provides that a determination for a possible consolidation of two or more REAAs (for the above stated reasons) would have to be made prior to organizing a Service Area, but no later than six months after the effective date of the Act.

Sec. 46.35.130

(a) Provides for the three forms of organization of a Coastal Resource Service Area. It could be accomplished either by
- Submission of a petition to the Council by the number of voters equal to 15 percent of the number of votes cast in the last general election; or it could be accomplished by
- Submission of a resolution to the Council by a city council, or a traditional governing body of not less than 25 percent of the number of cities and villages located within the Service Area; or it could be done at the
- Direction of the Council whenever it appeared that a major economic development activity would occur in the Service Area. (Major economic activity is defined in Sec. 46.35.160(b)).

(b) The Lt. governor would conduct an election on the question of organization of a Service Area within 60 days (but no later than 90 days) after the receipt of a petition or resolution, or at the direction of the Council.

Sec. 46.35.140

(a) Provides that each Service Area would have an elected board which would have the same powers, duties and functions (to develop and implement a program) as those required of a Coastal Resource District.

(b) The Board would have seven members, which would be elected at large, except that

(c) The Commissioner of the Department of Community and Regional Affairs could (after consultation with residents of a Service Area) divide Service Areas into sections for the purpose of nominating and electing board members. (In accordance with AS 14.08.051(a)). Such division could also be requested in the petitions or resolutions submitted by Service Areas, or at the direction of the Council for organization of Service Areas as noted earlier. (Sec. 46.35.130(a))

Division into sections could also be proposed at any time by members of the respective Service Area boards. However, if such divisioning were to be proposed by a Service Area, it would have to be approved first by a majority of the qualified voters voting at the next regular election, or a special election called for that purpose.

If a division into sections for the purpose of nominating and electing board members were to be approved, it would take effect at the next regular election of Service Area board members.

(d) The term of office for Service Area board members would be three years. Board members could be reelected. Terms would be staggered.

(e) The Lt. governor would have to hold elections, with the first election to be held not less than 60 nor more than 90 days, after certification of the results of a Service Area organization election.

(f) Subsequent elections would be held annually on the same date as the election for board members of REAAs.

(g) Subsection (g) of this section provides for the appointment of a board member to fill a vacancy on a Service Area board. (According to AS 14.08.041(a))

(h) Recall of Service Area board members is subject to the same provisions as a recall for municipal officials. (Under AS 29.28.130 - 29.28.250).

(The Lt. governor would receive and review recall petitions, as well as conduct recall elections.)

Sec. 46.35.150

Provides that all elections in the Service Areas be administered by the Lt. governor as provided for in the Alaska Election Code. (In addition, it provides that the Lt. governor may adopt regulations as necessary, and that all election costs would be borne by the State.)

Sec. 46 35.160

(a) Provides for the organization of a Service Area at the direction of the Council whenever it appeared that a major economic development activity would occur in a Service Area, or in waters adjacent to a Service Area which had not been organized. The Council would have to hold at least one public hearing in the affected area before an election could be held by the Council.

((b) Defines "major economic development activity".)

Sec. 46.35.170

(a) Provides that if residents of a Service Area were to reject organization, and the Council found after public hearings that a major economic development activity was or would be occurring the Council could direct the Department of Community and Regional Affairs to prepare a District Program for submission to the Council and the Legislature.

(b) In addition, the Department of Community and Regional Affairs would complete a District Coastal Management Program for a Service Area which had been organized, but which had

- Failed to make substantial progress in preparing an approvable District Program within 18 months of organization, or which had
- Failed to submit for approval a District Program within 30 months of organization.

The preparation of a District Program by the Department of Community and Regional Affairs would be accomplished in consultation with the affected Service Area. The section further

provides that the District Program would reflect the expressed concerns of the residents of the Service Area to the maximum extent possible.

(c) However, subsection (c) provides that before the Department of Community and Regional Affairs could complete a District Program, the Council would be required to meet with members of the Service Area board to determine if they could complete a District Program on their own within the time frame established in subsection (b) of this section (i.e., 18 or 30 months).

Sec. 46.35.180

(a) Provides that a District Program would have to be submitted for review to each city or village within the Service Area before adoption by the board.

Within 60 days the council of a city, or the residents of a village could either approve, or enter their objections to the District Program.

(b) If a city or village failed to approve portions of the District Program, the governing body would have to advise the Service Area board (or the Department of C&RA) of its objections, as well as suggest alternatives.

The Service Area board would accept new material from a city or village (which would be consistent with the guidelines and standards adopted by the Council) and the District Program would be modified accordingly.

(c) Objections by a city council would be confined to elements of the District Program which would be within the corporate limits of the city. The objections of a village council would be confined to those elements of the District

Program which would be within the village and/or a two mile radius of the village.

((d) Defines "village".)

Sec. 46.35.190

(a) A city which is within the coastal area, but which is not part of a Service Area could include itself in that Service Area if its governing body consented to the inclusion.

(b) The initiation of mutual agreements and cooperative or joint administration of functions between a municipality and a Service Area is encouraged.

Sec. 46.35.200

Provides that upon adoption of the Alaska Coastal Management Program State departments, boards, and commissions would have to review their statutory authority, administrative regulations and applicable procedures to determine if any deficiences or inconsistencies existed which would prevent them from complying with the statewide Program. State agencies would be required to take whatever actions were necessary to insure that they would be in full compliance with the statewide Program. This would include the preparation and submission of recommendations to the Council for needed legislation within six months from the effective date of the Program.

Sec. 46.35.210

Contains the defintions' section (pp. 21, 22, 23, 24), which includes definitions of

(1) Area which merits special attention

(2) Coastal Resource District

(3) Use of direct and significant impact

(4) Uses of State concern

* Sec. 5

Adds a new section to Chapter 47 (Department of C&RA) of Title 44 (State Government).

The section provides for various kinds of assistance for the development, implementation and maintenance of District Coastal Management Programs by the Department of Community & Regional Affairs.

* Sec. 6

Provides that the Administrative Regulation Review Committee would have to review the administrative regulations adopted by the various executive departments dealing with the State's coastal areas. The Committee would have to make recommendations by January 20, 1979 for annulment of regulations which in the Committee's opinion would not meet the intent of the Alaska Coastal Management Program. These recommendations would have to be transmitted to the first session of the Eleventh Alaska Legislature.

* Sec. 7

Provides for an effective date clause.

Testimony on SB 220

Submitted to Senate Natural Resources Committee on March 29, 1977, at the request of Sen. Kay Poland, Chairwoman.

My name is Michael H. DeMan. I am the director of the Alaska Native Foundation's Village Management Assistance Program. I am by birth and choice a coastal Alaskan, and through my position at the Foundation, and previous work in state and local government, have traveled quite extensively in rural Alaska. The Foundation's involvement -- and mine -- with the coastal zone management, and its attendent OCS development issue, began last year. While ANF has limited resources to work with -- or perhaps because of that fact -- we try to stretch dollars as far as possible. And in dealing with coastal management and OCS -- we've seen our money go pretty far. We didn't look for the CZM/OCS issue -- rather it came to us, for two reasons:

1. As an organization working with villages, we received numerous questions about CZM and OCS from village leaders which we couldn't answer; so
2. ANF, together with the Alaska Native Human Resources project, set out to determine what CZM/OCS needs were not being met. Information and discussion seemed to be needed most strongly, so an OCS Awareness seminar was held in February. Funded in part by the State, the Kellogg Foundation and the BIA, more than 80 residents from coastal communities attended.

As a result of that Seminar and other work with the villages, ANF has come to the realization that CZM/OCS is only a portion of a much larger need for all of rural Alaska. The following

the alaska native foundation
515 "D" Street ■ Anchorage, Alaska 99501 ■ 274-5638

outline proposes a workable solution for government -- for all rural Alaskans.

1. There is a need for regional and sub-regional planning for rural Alaska (unorganized borough), which is not filled by an existing organizational structure.

2. This need could be met under the service area concept (Chapter 29-03-020) but it is unrealistic to expect existing small cities and villages to deal with major forces affecting their lives on an area wide basis. City annexation of lands in question is not the answer. The planning need is of a much broader nature.

3. The service area concept should be rewritten to allow cluster groups of communities to share planning and zoning administration and powers outside their respective cities. This would give service areas a structure to deal with such forces and concepts as: Coastal zone management, rural energy needs, economic development, large scale agriculture projects, inter-village transportation systems and communications, and other regional or sub-regional planning needs.

4. State and federal governments also need certain structures to interface with to make important decisions and determine policy directions. As the saying goes, what is everyone's responsibility, is no one's responsibility. So it is with the unorganized borough and planning.

the alaska native foundation
515 "D" Street ■ Anchorage, Alaska 99501 ■ 274-5638

5. The first step for rural Alaska is important. Too many times, the structure of present local governments has been super-imposed over an already totally mixed bag of organizations which evolved haphazardly to meet special situations. Although everyone agrees planning should come first, no one provides for it in a comprehensive non-burdensome way. We have that opportunity now.

6. Instead of forming planning structures and areas in reaction to government or private industry's ventures into rural life, which may overlap -- or which are designed for one purpose but used for another -- let's design planning structures and applications based on what is there now, in terms of inter-village relationships. All new projects emanating from without or within, then, would be able to deal with a planning organization which has defined goals, objectives, and responsibilities.

7. This service area should not be super-imposed, though outside guidance may be needed -- and welcomed. Rather, after careful development and pre-planning by the local people concerned, it should be voted upon by those people within the designated service area.

8. These service areas should then be allocated planning funds to cope with their priorities.

In order to accomplish the goal of development of a planning

the alaska native foundation
515 "D" Street ■ Anchorage, Alaska 99501 ■ 274-5638

structure for rural Alaska, the following must first take place:

1. Develop the boundaries of existing geographically-homogenous planning units, i.e., the cluster groups. An example would be the Nunivak-Nelson Island group of six villages.

2. Identify existing governmental, non-governmental, economic, and other applied boundaries presently in use in rural Alaska.

3. Define the rationale and purpose for each boundary.

4. Design a "Service Area Powers" concept, which allows a step-by-step approach to governmental responsibilities starting with overall planning. These service areas should not put additional strain on limited local expertise, which is already over-extended in many locations.

5. Re-examine the existing structure of the Department of community and Regional Affairs.

6. Identify money necessary to accomplish the above on a multi-year basis.

If these service areas are designed in a sound, effective way in close partnership with the people who will administer -- and in turn, be affected by such administration -- then sound decisions can be made in planning the physical, social and economic future of rural Alaskans.

the alaska native foundation
515 "D" Street ■ Anchorage, Alaska 99501 ■ 274-5638

I know this is a major proposal but coordination is vital for a rural people presently smothered by conflicting responsibilities, districts, jurisdictions, and general state overlap. Such coordination must come from you because you know the people best; you live there, and you make the laws.

SENATE BILL 220
ALASKA COASTAL MANAGEMENT
TESTIMONY BY JOHN BORBRIDGE, JR., PRESIDENT
SEALASKA CORPORATION
MARCH 30, 1977

MADAME CHAIRMAN AND MEMBERS OF THE SENATE RESOURCES COMMITTEE, FOR THE RECORD, MY NAME IS JOHN BORBRIDGE, JR. I AM THE PRESIDENT OF SEALASKA CORPORATION. I AM HERE TODAY TO OFFER OUR COMMENTS WITH RESPECT TO SENATE BILL 220, "AN ACT RELATING TO THE MANAGEMENT OF COASTAL RESOURCES OF THE STATE AND PROVIDING FOR AN EFFECTIVE DATE."

SEALASKA CORPORATION GENERALLY BELIEVES THAT A COASTAL MANAGEMENT ACT SIMILAR TO SENATE BILL 220 IS NOT ONLY INEVITABLE BUT DESIRABLE, IN ORDER TO PROVIDE FOR THE WISE DEVELOPMENT OF THE COASTAL AREAS OF THE STATE OF ALASKA. HOWEVER, IT IS UNFORTUNATE THAT THE MOVE TO IMPLEMENT COASTAL MANAGEMENT IN THE STATE OF ALASKA COMES AT THIS POINT IN TIME.

ON DECEMBER 18, 1971, PRESIDENT NIXON SIGNED THE ALASKA NATIVE CLAIMS SETTLEMENT ACT, WHICH PROVIDED AMONG OTHER THINGS FOR ALASKA NATIVES TO RETAIN OWNERSHIP OF 40 MILLION ACRES OF LANDS, WHICH THEY HAD OWNED SINCE TIME IMMEMORIAL. UNDER THE PROVISIONS OF THAT ACT, VILLAGE CORPORATION LAND SELECTION APPLICATIONS HAD TO BE FILED BY DECEMBER 18, 1974. TODAY IS MARCH 30, 1977 AND

TO DATE, ALTHOUGH THE VILLAGES IN SOUTHEASTERN ALASKA FILED THEIR APPLICATIONS IN A TIMELY MANNER, LESS THAN ONE ACRE OF LAND HAS IN FACT BEEN CONVEYED FROM THE FEDERAL GOVERNMENT TO THE NATIVE CORPORATIONS IN OUR REGION. ALTHOUGH MOST OF THE DELAY INVOLVED IN OBTAINING CONVEYANCE IS ATTRIBUTABLE TO THE DEPARTMENT OF INTERIOR, THE STATE OF ALASKA HAS CONTRIBUTED TO THESE DELAYS.

AS A CONSEQUENCE OF THESE GOVERNMENTAL DELAYS, THE NATIVE CORPORATIONS ARE IN GENERAL NOT RECEPTIVE TO ADDITIONAL CONTROLS AND ENCUMBRANCES BEING PLACED UPON LANDS TO WHICH THEY HAVE YET TO RECEIVE CONVEYANCE. CONSEQUENTLY, SEALASKA CORPORATION FROM A MATTER OF PRINCIPLE, MUST CONCUR WITH THE ALASKA FEDERATION OF NATIVES' POSITION THAT A COASTAL MANAGEMENT ACT SHOULD NOT BE IMPLEMENTED AT THIS TIME. RATHER, SUCH LEGISLATION SHOULD WAIT UNTIL THE NATIVE CORPORATIONS HAVE AT LEAST RECEIVED TITLE TO THE MAJORITY OF THEIR LANDS. THEN THESE CORPORATIONS WILL HAVE A BETTER IDEA OF THE SPECIFIC AFFECTS OF ANY STATE CONTROLS ON THE DEVELOPMENT OF THE LANDS. WE WILL BE ABLE TO PARTICIPATE IN THE COASTAL RESOURCE PLANNING PROCESS AS FULL-FLEDGED LANDOWNERS WITH THE ATTENDANT RESPONSIBILITY FOR ORDERLY AND RESPONSIBLE DEVELOPMENT. ADDITIONALLY, MANY NATIVE CORPORATIONS HAVE BUSINESSES AND SHAREHOLDERS WHO RELY HEAVILY ON THE COASTAL ECOSYSTEM. WE HAVE OR WILL, BE EMPLOYING PERSONNEL WHO ARE VERY KNOWLEDGEABLE IN THE USE AND PRESERVATION OF COASTAL RESOURCES. IT IS MOST DESIRABLE FROM OUR POINT

OF VIEW TO BE GIVEN A LITTLE MORE TIME TO CLARIFY OUR CONCERNS AND POSITIONS PRIOR TO ENACTMENT.

SEALASKA CORPORATION, HOWEVER, IS ALSO AWARE THAT CERTAIN FEDERAL FUNDS WHICH MAY BE BENEFICIAL TO COASTAL COMMUNITIES, PARTICULARLY WITH RESPECT TO THE PENDING OUTER CONTINENTAL SHELF DEVELOPMENT OF FEDERAL OIL RESERVES, MAY NOT BE AVAILABLE TO THESE COMMUNITIES IF A COASTAL PLAN IS NOT ADOPTED BY THE STATE. THEREFORE, OUR POSITION IS AS FOLLOWS:

1) TO THE EXTENT IMPLEMENTATION OF A COASTAL MANAGEMENT PROGRAM CAN BE DELAYED UNTIL TITLE IS RECEIVED TO THE NATIVE CORPORATION LANDS, THE STATE SHOULD DELAY SUCH IMPLEMENTATION;

2) TO THE EXTENT THAT SUCH A DELAY WOULD WORK ADVERSELY WITH RESPECT TO FEDERAL FUNDS TO OFFSET THE IMPACT OF OIL DEVELOPMENT ON THE OUTER CONTINENTAL SHELF, THE COASTAL MANAGEMENT PROGRAM SHOULD BE IMPLEMENTED.

INSOFAR AS SENATE BILL 220 IS CONCERNED, WE HAVE THE FOLLOWING COMMENTS:

OUR MAJOR OBJECTION TO SENATE BILL 220 AS IT PRESENTLY STANDS IS THAT THE UNORGANIZED BOROUGH LARGE PRIVATE OWNERS ARE EFFECTIVELY DISENFRANCHISED WITH RESPECT TO DEVELOPING THE

COASTAL DISTRICT PROGRAM FOR THEIR AREAS. SPECIFICALLY, DUE TO THE STIPULATIONS IN THE ALASKA NATIVE CLAIMS SETTLEMENT ACT AND SUBSEQUENT AMENDMENTS, SEALASKA CORPORATION IS FORCED TO SELECT ITS LAND FROM AREAS WHICH ARE IN THE UNORGANIZED BOROUGHS. A GOODLY PORTION OF THE LANDS SELECTED BY SEALASKA CORPORATION WILL BE ON PRINCE OF WALES ISLAND AND THE PROVISIONS OF SENATE BILL 220 DO NOT ALLOW ANY INPUT BY SEALASKA CORPORATION IN THE DECISIONMAKING BODY WHICH WILL ESTABLISH THE COASTAL PLAN FOR THE PRINCE OF WALES ISLAND. JUST AS A GOOD FOREST MANAGEMENT ACT MUST PROVIDE FOR DIRECT INPUT IN THE DECISION-MAKING PROCESS BY TIMBER LANDOWNERS, SO ALSO A GOOD COASTAL MANAGEMENT PROGRAM ACT MUST PROVIDE FOR DIRECT USER INPUT IN THE POLICY BODY WHICH ESTABLISHES THE COASTAL MANAGEMENT PROGRAM. SOME METHOD MUST BE FOUND FOR NOT ONLY SEALASKA, BUT THE OTHER MAJOR PRIVATE NDOWNERS IN THE STATE, TO HAVE A DIRECT INPUT INTO THE POLICYM KING BODY THAT FORMULATES THE COASTAL MANAGEMENT PROGRAM THAT EFFECTS THEIR LANDS.

ONE OTHER MAJOR FAILING WE SEE IN SENATE BILL 220 IS THE COMPOSITION OF THE ALASKA COASTAL POLICY COUNCIL (LINE 24 ON PAGE 2 OF THE PROPOSED BILL). AS OUTLINED, THE COUNCIL WOULD CONSIST OF EIGHT PUBLIC MEMBERS APPOINTED BY THE GOVERNOR, AND SEVEN DEPARTMENT HEADS ALSO APPOINTED BY THE GOVERNOR. IN ESSENCE THEN, THE 15 MEMBER COUNCIL WOULD BE ENTIRELY SELECTED BY THE GOVERNOR OF THE STATE AND WOULD QUITE OBVIOUSLY REFLECT HIS PARTICULAR POSITION WITH RESPECT TO COASTAL MANAGEMENT.

Furthermore, the structure of the Coastal Management program as outlined in Senate Bill 220 is "from the top down". The Alaska Coastal Policy Council dictates to the coastal resource districts the basic policies and programs which must be developed by the district.

In order to overcome these two serious drawbacks in Senate Bill 220, we would suggest that the membership on the Alaska Coastal Policy Council consist of one member from each of the Coastal Resource Districts, said member to be elected by a majority vote of the members serving on the coastal resource district board. This provision would allow those citizens in the unorganized boroughs an opportunity to be represented on the Council. In addition, the Alaska Coastal Policy Council could have members designated by the Governor, representing the various departments as presently outlined in Senate Bill 220. An Alaska Coastal Policy Council made up of one member from each coastal resource district, plus the various commissioners, would appear to be more consistent with local planning development and control, and still allow substantial input by the State through the commissioners of the various department. Policies and program guidelines developed by such a council would more adequately reflect the various differences in resource management throughout the State, and should minimize friction between the Policy Council coordinating the statewide effort, and the Resource District Boards charged with implementing the statewide policy.

In closing, Madame Chairman, again let me thank you for allowing Sealaska Corporation to testify on this proposed legislation. Any Coastal Management Program established will have a substantial impact upon the State of Alaska, Sealaska Corporation and the villages in Southeastern Alaska.

Testimony
SB 220/HB 342 "Coastal Resources"

Glenn Akins
Coordinator, Alaska Coastal Management Program
Division of Policy Development and Planning
Office of the Governor

I would like to address three things: 1) the role of the Administration in conducting a coastal management program; 2) the manner in which the coastal management bill will help us with the program; and 3) some suggested changes in wording which have been provided by state agency staff members.

The Coastal Management Program

The State of Alaska has been conducting a coastal management program for two and one-half years, without benefit of legislation. The goals of the Administration in conducting this program are to:

1. develop an understanding, an overview, within one program, of all the important uses and activities taking place along Alaska's 34,000 miles of coastline, filling gaps in the regulatory process where necessary, and simplifying it otherwise;

2. assist state agencies and local governments do a better job of managing coastal resources, through

   a. developing better information on resources and resource uses and impacts,
   b. funding local OCS siting programs and municipal coastal management programs,
   c. conducting special regional planning efforts, such as the Gulf of Alaska facility siting program, and
   d. preparing for the administration of the Coastal Energy Impact Fund;

3. providing for greater participation of citizens and local governments in coastal management decisions; and

4. establishing greater coordination among state and federal agencies which have responsibility for regulation of coastal resources.

The Bill

SB 220/HB 342 fits the Administration's goals for coastal management in the following ways:

1. The bill specifies the uses and areas which should be addressed within the coastal management program. It explains that coastal management is not regulation of everything that is happening along Alaska's shores and coasts. Many citizens and local government officials have had the impression that coastal management means regulation of any kind of use or activity, no matter how minor or local.

2. The bill establishes policies, or guidelines if you wish to call them that, in law which explain the State's interest in regulating the major uses and areas defined in the legislation.

3. The bill would establish the tie between state regulation and local planning and zoning. The guidelines for coastal areas and activities would become the basis for completing and reviewing local (municipal) coastal programs. Local governments would have a role in planning for uses and areas along the coast, in close cooperation with state agencies.

4. The bill provides a mechanism for resolving conflicts between the state and local governments.

5. The bill provides means for residents of the unorganized borough to participate in the coastal management program.

One question that could be raised here relates to federal approval of the State's coastal management program. That is, will this bill make the State's program approvable under the terms of the Coastal Zone Management Act of 1972?

The State can seek approval on the basis of state authorities alone, or on the basis of a partnership between the State and local governments. Every state which is actively involved in coastal management has chosen to involve local governments in a significant way. The bill would allow the State to use local planning and zoning authorities as an important part of the management program.

Suggested Changes

Administration Suggestions for Changes to SB 220/HB 342
"Relating to the Management of the Coastal Resources of the State"

1. Remove Legislative Oversight

The Legislature should have a proper oversight role in the coastal management process. This role, however, is already provided for in the budget review process, the ability to repeal or modify statutes, and the ability to review regulations. Furthermore, since the Legislature would create a Policy Council to oversee the program, it should abide by the Council's decision.

Recommendation: Revise Section 46.35.080 EFFECTIVE DATE OF THE ALASKA COASTAL MANAGEMENT PROGRAM. The Alaska coastal management program adopted by the Council, and any additions, revisions, or amendments of the program, take effect after approval by the Council.

2. The Unorganized Borough

The Administration requests close review of the Unorganized Borough provisions. The Administration does not wish to establish disincentives for the eventual formation of organized local governments. However, the Administration felt it necessary to respond to requests for participation by residents of the Unorganized Borough in the Coastal Management Program. It must be emphasized that the bill does not mandate districts in the Unorganized Borough, but allows their formation as a local option.

3. Existing Expertise

Revise Sections 44.19.892 and 44.18.894 to read
POWERS OF THE COUNCIL. The council may shall
(1) apply for and accept grants, contributions, and appropriations, including application for and acceptance of federal funds which may become available for coastal planning and management;
(2) utilize, to the maximum extent feasible, the expertise of and the information supplied by state agencies;
(3) contract for etc. as in existing bill.

COUNCIL STAFF. The council shall utilize the staff of the office of coastal management within the Division of Policy Development and Planning in discharging its powers and duties. The coordinator of the office, with the concurrence of the council, may contract with or employ

personnel or consultants he considers necessary to carry out the powers and duties of the council. The coordinator shall use the expertise of the state agencies to the maximum extent feasible, in carrying out his duties."

THE CITY AND BOROUGH OF JUNEAU
CAPITAL OF ALASKA
155 SOUTH SEWARD ST. JUNEAU, ALASKA 99801

DATE: March 30, 1977

FILE NO. SB 220/HB 342

SUBJECT: Senate Bill 220, Management of the Coastal Resources of the State

The Honorable Kay Poland, Chair
Senate Resources Committee
Pouch V
Juneau, Alaska 99811

Dear Senator Poland:

The Legislative Committee of the City and Borough of Juneau has reviewed and considered SB 220 and supports the general approach taken in the bill to management of our coastal resources. The committee supports maximum local participation in the policy making and enforcement aspects of coastal resource management and to that end requests that minor changes be considered which would help maximize local government input, participation and response under the bill.

The membership of the Alaska Coastal Policy Council is made up of seven state department or division heads who have been appointed to their position by the governor or one of his appointees. In addition, the governor appoints eight persons of his choosing from various regions who are elected local government officials. Thus, the governor appoints all fifteen of the council members. The appointment of the eight elected local government officials is made without the advice and consent of either the legislature or the local municipalities. In order to insure that the viewpoint of local government is represented by local government members who reflect the policies of the local governments involved, the appointing power as to the public members should be shifted to the local governments involved. It could be completely shifted to the local governments if the language between lines 28 and 29 on page 2 and lines 1 and 2 on page 3 is deleted and replaced by the following language:

> (1) eight public members, who shall be the mayor or member of the assembly or council of a municipality shall be appointed. One public member shall be appointed from each of the following general regions:

Following line 24 on page 3, add the following language which would be a continuation of (1):

> Initially, and upon a vacancy or upon or prior to the expiration of the term of an incumbent, public members shall be appointed for the term or unexpired term in the following manner:
>
> (A) Upon notification to municipalities in a general region by the governor or the council of a vacancy or a prospective vacancy in the seat representing the general region, the assembly or council of each municipality therein may, by motion or resolution, nominate its mayor or a member of its assembly or council to fill the vacancy. Upon making such a nomination, the municipality shall notify the governor and each of the other municipalities within the region of its nomination. If, subsequent to the making of such nominations, a majority of the municipalities within the general region adopt resolutions selecting one of the nominees as the region representative, such person shall be deemed appointed to the council.
>
> (B) The person appointed shall notify the governor, the council, and each municipality in the region of the appointment. The person selected shall include with such notice a copy of each of the resolutions selecting that person as the representative of the general region.
>
> (C) If the governor has not received notification of an appointment under (A) and (B) within 90 days of the last date upon which notice to a municipality was sent by the council or the governor, the governor shall appoint a public member for that general region from among the nominations supplied him under (A).

The procedure suggested above could be altered, however, the two elements which are essential to this procedure are:

1. That the representative for the general region should be appointed by the municipalities which will be the front line for enforcement of the coastal resources management program, and

2. That in the event the municipalities are not able to agree, the governor be limited in his appointments to the public member seats to persons who have been nominated by municipalities.

Other references to the appointment of public members by the governor which appear in the bill should be deleted or changed to conform to the change proposed above. Lines 1 and 2 of page 5 should be changed to read as follows:

> (a)(1) of this section, the alternate designated under (d) shall serve until a replacement who shall serve for the unexpired portion of the term has been appointed in accordance with the procedures set forth in (a)(1) of this section.

Municipalities are the key to the implementation of the Alaska coastal management program. By providing municipalities with an opportunity to select their representatives for the council, the state will be taking a step in the direction of creating greater credibility of the state program, encouraging the fullest possible local input to and cooperation with the council and providing an environment in which local enforcement of the district coastal management program can be expected to be the most vigorous. In addition, allowing municipalities to select their representative in each general region will probably help insure a better balance on the council between those who represent state interests and those who most accurately reflect local needs and interest.

While the municipality has not taken a position relative to the following points I believe they are points which might be appropriate for committee discussion.

1. There appears to be a conscious effort not to specify which agency or body has the responsibility for developing the Alaska coastal management program. While it is the council which initially approves the program, it does not clearly appear that the council has any responsibility for developing or assembling the program. It develops guidelines for the preparation of the program; it reviews the program, and it approves the program in part or in whole. Section 46.35.010 on page 6 clearly gives the council the power to review the program but merely provides that the program be revised when appropriate without noting what body or agency has the revisory power. Subsection (c)(1) of subject section provides that the council add newly approved district management coastal programs to the Alaska coastal management program.

2. Proposed sections 60 and 70 set forth the procedure for council approval of district coastal management programs. Proposed section 80 provides that the Alaska coastal management program adopted by the council takes effect upon its approval by the state legislature. Thus, it would appear that district coastal management programs would, by their incorporation in the Alaska coastal management program, be subject to legislative approval. Section 90, however, indicates that council approval is all that is needed for the district coastal management program of a district which exercises zoning or other resource control. Thus, while it is not really clear in the proposed legislation, it does appear that if the state is to be responsible for implementation of a district coastal management program, that program must be approved by both the council and the legislature while council approval is all that is necessary for a district which exercises zoning or other resource controls. If the foregoing reading is accurate as to legislative intent, then changes should be made to the language in section 10(c)(1) which appears to provide for the incorporation of approved district programs into the Alaska program which then receives legislative approval. In addition, the language at lines 12 and 13 on page 13 should be changed so that after the word "programs" in line 12 it would read "which have received final approval by the council or the legislature, as required, and are in effect." Language of this nature would help remove the ambiguity of whether or not both council and legislative approval are required for both state enforced and locally enforced programs. If, on the other hand, it is the intent of the legislature that district programs which are to be implemented through local zoning and other resource controls should be fixed in concrete through the mechanism of legislative approval, section 100 should be redrafted to remove the very strong implication that legislative approval is not needed except where state implementation is contemplated.

3. Returning to page 7, it does not appear in the list of objectives that the interests of the region or district are to be considered. If these are deemed appropriate for consideration, the addition of the phrase ", the region and the district" at the end of the sentence ending on line 18 on page 7 would incorporate such standards.

4. It would appear from reading section 30 starting on page 8, and in particular subsections (5) and (6), that implementation of the district coastal management program is contemplated through a mechanism which is

similar to conditional use procedures in conventional zoning programs. If it is contemplated that each use of land or water regulated under the district program is to be regulated as a conditional use, this aspect of the legislation could be subject to attack as many courts do not hesitate to overturn ordinances which purport to be zoning ordinances but under which all or almost all land uses are subject to the conditional use procedure. Such courts seem to balk at the idea that the legislative or regulatory body can decide on a case-by-case basis whether each or most uses under a general zoning will be allowed. Such an approach can be likened to spot zoning for each use. Of course, if there are sufficient standards that there is little discretion as to whether or not an application for a particular use is to be granted, such procedures are less vulnerable to attack.

5. At pages 10 and 11, the bill contemplates a mediation process which is to be utilized as to those district programs or parts thereof which are not approved by the council. The committee may want to consider whether it would be more appropriate to give the coastal resource district an opportunity to revise all or certain parts of its plan to bring it into compliance with council requirements before forcing the district into mediation. While the conventional concept of mediation involves a neutral third party who attempts to obtain agreement between the disputants, it appears that section 60(b) contemplates that the council itself acts as mediator. This appears to be something more akin to negotiation than mediation. However, it appears that in either event the coastal resource district is not in much of a position to resist changes requested by the council as the council has the ultimate authority to order the program amended. It must be admitted, however, that this is a commendable effort to provide a vehicle for the resolution of disputes between inferior and superior agencies prior to the superior agency invoking its power of a final and formal disapproval.

In closing, the municipality encourages the committee to increase or strengthen the authority and role of municipalities in the coastal resource management scheme.

Very truly yours,

Gerald L. Sharp

Juneau, Alaska 99811

Dear Senator Poland,

I am somewhat concerned that a message sent to you directly on March 26, 1977 did not come to your attention until mid-May. The reason for the letter in the first place was the very vital issue of coastal zone management. The letter was the result of a three day work session in the lower Yukon concerning the proposed legislation, and possibly was the only direct input your Committee received from rural Alaskan native villages concerning this legislation that will directly affect the lives of these coastal Alaskan citizens. Following the failure of your committee to keep any form of information coming on this issue: no reports sent, copies of bills, or questions about rural concerns; and the fact that the villages involved and threatened by Norton Sound OCS activities called the meeting to review the bill, it appears that decision making in Juneau for coastal Alaska is once again operating in the blind. To this date, I still have no information about the final form of this bill so that we may interpret the language into Yup'ik Eskimo to see if the concerns of the villages were met or were as unheeded as their correspondance.

I am sending a copy of your letter and this letter to each village in the region affected by the CZM legislation. I hope that the information flow to these villages from your Committee will soon begin.

in peace,
harold sparck, director

May 31, 1977

Dear Mr. Sparck:

I am enclosing a copy of the final coastal zone bill. There may have to be amendments to this act next year. In the meantime, you can contact Glenn Akins, Pouch A-D, Juneau, Alaska 99811. Mr. Akins is the Director of the Coastal Management Office.

The coastal zone bill went through three additional committees after it left our committee, and, apparently, the Governor's legislative office in Bethel was not used, for they could have given you all the action on this bill.

Three years of work and hearings went into the coastal zone bill to put the decision making at the local level, this was fought by the administration, and the measures taken to assure the unorganized borough of having a voice in their decisions was insisted upon by the coastal zone committee.

Mr. Akins tells me he will be holding w[illegible]kshops throughout the state and I would suggest that you contact him regarding a workshop for your area. He probably is planning a workshop for Bethel but rather than assume this, I would advise making a direct request.

Sincerely,

Kay Poland

Kay Poland
State Senator

ADMINISTRATION REPORT TO THE HCR 123 COMMITTEE FEB. 25, 1977

The Administration, acting through the Coastal Management Policy Committee created by the Governor, has examined the recently circulated draft of coastal management legislation, called "draft #3", and has the following comments to make:

1. Item (4) of sec. 44.19.893 (page 5) DUTIES OF THE COUNCIL, in the draft calls for legislative reaffirmation of the program every year. There are several checks on council activity already available and this provision seems unduly burdensome. This item should be changed back to the original version which called for annual reports to the legislature.

2. The draft does not provide a state role in coastal management apart from membership on the council. We feel that the regional coastal program concept is still valid and would like to offer the attached suggestion as a way of providing for regional programs.

3. Sec. 46.35.040 DUTIES OF THE ALASKA COASTAL POLICY COUNCIL has been changed in item (1) by removing the substantive areas over which the council can establish guidelines. It is important that both the district and state programs have meaningful guidance, so we would recommend that the five items dealing with land and water uses be restored to this section. If the regional coastal program concept is employed, the state agencies should have to operate by the same rules as local governments, and these rules should be substantive so that basic coastal policies are known in advance. Both local governments and state agencies are protected since the council can allow deviations from the guidelines, and the legislature has the power to disapprove any of the guidelines because of the administrative regulations review mechanism.

4. The state is committed to encouraging the formation of organized local governments in the unorganized borough, and while we believe that a meaningful method must be found for involvement of Unorganized Borough residents in coastal management, we believe that the formation of special purpose service areas would act as a disincentive to the creation of regular local governments. Therefore, we must renew our belief that Article 2 should be deleted. The regional coastal program concept will go a long way toward involving the residents in the Unorganized Borough. One way of assuring this involvement is to require numerous hearings in each region prior to the adoption of a regional coastal program, and as an added safeguard, a requirement that each comment and question about the progaram must be answered by the council. This would prevent the council form ignoring a concern and would make public the response or reaction of the council.

NEW SECTION

Sec. _____ REGIONAL COASTAL PROGRAMS BY STATE AGENCIES

(a) In order that the state interest may be fully understood, and to coordinate and facilitate the exercise of existing state authorities and programs, the state agencies shall prepare regional coastal management programs based on their present duties and functions.

(b) The state agencies' individual components shall be combined and coordinated into a single program for each region, which, after approval by the administration members of the council will be presented to the full council with a request for approval and adoption.

(c) The council shall assure that the substantive contents of the state regional coastal programs and the substantive contents of district coastal programs are mutually coordinated and consistent, and to this end may request or order changes in either district or state regional programs to assure such coordination and consistency.

(d) The subject areas that may be addressed in state regional coastal programs are the same as described in sec. 46.35.030 for district coastal programs. However, substantive land or water use regulations, standards, designations, and other restrictions and commitments in the state regional coastal programs shall be based wholly on authorities provided in existing state law and such new laws as may be enacted in the future.

(e) Nothing in this Act shall be construed to expand or broaden state agency authority over land and water uses; the only intent of this section is to facilitate and coordinate the exercise of existing state law in coastal areas, except insofar as new state law may be enacted which affects the coast.

(f) The guidelines to be used for the development of district coastal programs shall be used by the state agencies in the development of regional coastal programs.

(g) The state agencies, coordinated by the administration members of the council, acting as a subcommittee, shall prepare a preliminary designation of the regions for which programs shall be developed, and all other administrative arrangements shall be made and documented within six months of the effective date of this Act, and such materials shall be submitted to the full council for their adoption.

LEGISLATIVE AFFAIRS AGENCY

M E M O R A N D U M January 6, 1977

SUBJECT: Interim Activity by HCR 123 Committee on Coastal Management

TO: Members of the Legislative Council

FROM: Senator Kay Poland

This report supplements my November 8 report to you on the same subject.

The committee has had two meetings since that date. In early November, the subject of discussion was the review and revision of the working draft of a bill to establish a coastal management program for Alaska. After considering the draft at hand and the changes offered by all present, staff prepared a "clean" copy of the bill which was mailed, in late November, to local governments in the state's coastal areas, native corporations, and to representative groups and interested parties inviting review and comment. A few responses were received. Each suggested specific changes broadening the membership of the statewide coastal policy council established in the bill and otherwise offered comments on particular concerns.

Remarks generally supportive of the draft have been received from municipal officials, at least as regards the division of responsibilities between the state and its local governments, implying that objections to earlier legislation offered on this subject have been partially answered.

State departments also received copies of the working draft. Meeting during the first part of this week, agency officials expressed serious reservations about elements of the legislation and directed administration representatives most knowledgeable of the provisions of the legislation to prepare alternative sections responding to these concerns.

Accordingly, the meeting of the HCR 123 committee of yesterday did not further consider the bill. Rather, administration representatives in attendance requested an additional 10 - 14 days in which to draft amendments incorporating their concerns. The time requested has been granted and we would hope to meet again about January 19 to have the comments and work product.

I cannot, therefore, report that the HCR 123 committee has concluded its work. There is substantial agreement on major elements of the draft, material disagreement on other portions; comments received from officials and the general public should be considered. I believe I speak for a majority of the members of the committee in suggesting that substantial agreement concerning this very important subject is to be preferred and that reasonable delay in submission of legislation is warranted at this time. We are interested in having the administration's comments and alternative suggestions and I, personally, believe that we can, in due course, have a bill which will serve as the basis of formal consideration by standing legislative committees.

The coordinator of the Alaska Coastal Management Office, Glenn Akins, has provided a copy of the draft of the legislation to officials of the U.S. Office of Coastal Zone Management. Their response, with commentary as to specific provisions of the bill in light of federal requirements, is attached.

Speaking for the legislative members of the HCR 123 committee -- Representatives Anderson and Cotten and Senator Tillion -- I appreciate the support extended by the members of the Ninth Legislature and the Legislative Council in our efforts to prepare and offer for consideration a bill establishing the framework for a coastal management program which meets the needs and desires of the people of the state. I regret that our work is, at this date, unfinished.

SUBJECT: Interim Activity by HCR 123 Committee on Coastal Management

TO: Members of the Legislative Council

FROM: Senator Kay Poland

The members of the committee on coastal management* have met twice and are to meet again at 1:30 p.m. tomorrow afternoon to continue work looking toward completion of a legislative package addressing coastal management.

The resolution directing the establishment of an interim committee had two purposes. It asked, first, that the Legislative Affairs Agency, in cooperation with the Office of the Governor, "codify all laws and regulations pertaining to coastal zone management" for submission to the legislative session convening in January. The first meeting of the committee considered that mandate. We found that a significant amount of work had been completed, under contract between the Office of Coastal Management and a private consultant, and had culminated in the preparation of a two volume report summarizing and analyzing constitutional provisions, current state statutes, and regulations adopted and followed by the several state agencies which touched on the subject of management of the coastal resources of the state. The report, copies of which are available from the Office of Coastal Management, provides, in a convenient location, a working summary of the principal provisions of law which may be looked to as authority by which to implement and carry forward a comprehensive coastal program.

---

*The members of the committee are:

Senator Kay Poland
Representative Nels Anderson
Representative Sam Cotten
Senator Clem Tillion
Don Harris, Commissioner of Public Works
Guy Martin, Commissioner of Natural Resources
Lee McAnerney, Commissioner of Community and Regional Affairs
Bob LeResche, Director, Division of Policy Development and Planning

Rather than move forward on this single directive, the members of the council turned their attention to the second matter, the "review of ... public testimony ... on the subject of Alaska coastal zone management" and "the development of a sound coastal zone management program" for submission to the Legislature.

On this subject, the record of hearings held by the interim legislative committee during the summer and fall of 1975 was particularly useful. The final report of that committee noted particularly the expression of interest in coastal resource planning by residents of affected areas. The testimony received from many people indicated that a state coastal management program must provide for community expression and, where possible, direct community involvement and implementation. Noteworthy, also, was an expression from representatives of the business community that attention be given to provision for a coordinated system of permit issuance as an alternative to the current piecemeal system.

These suggestions were the starting point for the committee's deliberations. Through the first two meetings we have considered the question of how to provide for coastal management in a manner which recognizes a responsible role for local governments and residents of the coastal area while attempting to achieve a balance with the needs and interests of the state. We are generally agreed that the essence of the approach to be taken would be one which relies primarily on community and regional entities willing to develop and implement comprehensive coastal area plans that, in turn, would serve as the basis for the general state program. Approval of plans would rest with the state; moreover, at least as to "uses" of the coastal resources which were of direct interest to the state (or to the federal government), including development of state transportation facilities, siting of energy facilities, and the like, provision would be made for the state administration to supersede a decision by a local government where this local decision arbitrarily or unreasonably precluded such uses. Principal reliance would rest with development of coastal management programs by local governments which have and exercise planning and zoning authority. To assure that residents of areas outside incorporated municipalities were given opportunity to participate, we are considering the establishment of coastal service areas of the unorganized borough not unlike those which were established for operation of rural schools in 1975.

To assure that Alaska and its local governments would continue to obtain financial assistance in the preparation and implementation of a coastal management program from the federal government under the 1972 Coastal Zone Management Act as amended, the drafting process has paid particular attention

to the requirements which the federal act imposes. We find that these requirements are technical, albeit not insurmountable.

The committee contemplates no separate permitting system such as characterized earlier legislation on the subject. The numerous permit requirements now found in state law should, when reoriented to coastal management programs substantially developed by local governments, provide ample authority to enforce policies enunciated in the community and state programs.

Finally, the committee is expected to consider, possibly as a separate bill, a coordinated permitting system. We understand that a substantively similar recommendation was directed to the governor in the recently-completed Management and Efficiency Review, and have been advised that staff of the Office of Coastal Management and the Department of Environmental Conservation have the subject under consideration.

The working relationship between members of the legislature and persons designated by the governor to serve on the committee has been quite good, and discussion of alternatives and resolution of conflicting viewpoints has usually resulted in a working agreement or consensus. I am confident that comprehensive legislation on the subject of coastal management which is consistent with the interests of all concerned can be offered for consideration during the session convening in January, and am reasonably certain that the bill(s) offered would have the support of many interests.

JBC:hjd

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the management of the coastal resources of the state; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. LEGISLATIVE FINDINGS. The legislature finds that

(1) the coastal area of the state is a distinct and valuable natural resource of concern to all the people of the state;

(2) the demands upon the resources of the coastal area are significant, and will increase in the future;

(3) the protection of the natural and scenic resources and the fostering of wise development of the coastal area are of concern to present and future citizens of the state;

(4) the capacity of the coastal area to withstand the demands upon it is limited;

(5) the degree of planning and resource allocation which has occurred in the coastal area has often been motivated by short-term considerations, unrelated to sound planning principles; and

(6) in order to promote the public health and welfare, there is a critical need to engage in comprehensive land and water use planning in coastal areas and to establish the means by which a planning process and management program involving the several governments and areas of the unorganized borough having an interest in the coastal area may be effectively implemented.

* Sec. 2. LEGISLATIVE POLICY. It is the policy of the state to

(1) preserve, protect, develop, and, where possible, restore or enhance the coastal resources of the state for this and succeeding generations;

(2) encourage coordinated planning and decision making in the coastal area among levels of government and citizens engaging in or affected by activities involving the coastal resources of the state;

(3) develop a management program which sets out policies, objectives, standards and procedures to guide and resolve conflicts among public and private activities involving the use of resources which have a direct and significant impact upon the coastal waters of the state;

(4) assure the participation of the public, local governments, and agencies of the state and federal governments in the development and implementation of a coastal management program; and

(5) utilize existing governmental structures and authorities, to the maximum extent feasible, to achieve the policies and objectives set out in this chapter.

* Sec. 3. AS 44.19 is amended by adding new sections to read:

ARTICLE 11A. ALASKA COASTAL POLICY COUNCIL.

Sec. 44.19.891. ALASKA COASTAL POLICY COUNCIL. (a) There is created in the Office of the Governor the Alaska Coastal Policy Council. The council consists of the following:

(1) four public members appointed by the governor from among the following municipalities and communities located within the coastal area of the state:

(A) the mayor or member of a city council of a city having a population of more than 5,000;

(B) the mayor or member of a city council of a city having a population of less than 5,000;

(C) the mayor or member of the assembly of a borough

or unified municipality; and

(D) one representative who is a resident of a second class city or unincorporated community of the unorganized borough;

(2) each of the following ex officio:

(A) the director of the division of policy development and planning;

(B) the commissioner of the Department of Commerce and Economic Development;

(C) the commissioner of the Department of Community and Regional Affairs;

(D) the commissioner of the Department of Environmental Conservation;

(E) the commissioner of the Department of Fish and Game;

(F) the commissioner of the Department of Natural Resources; and

(G) the commissioner of the Department of Public Works.

(b) Each public member appointed by the governor under (a)(1) of this section serves a term of two years and until his successor is appointed and qualified, except that the term of office of a public member first appointed under (a)(1)(A) and (a)(1)(C) of this section shall be one year. A public member may be reappointed.

(c) The four public members appointed under (a)(1) of this section are voting members of the council. From those persons serving ex officio under (a)(2) of this section, the governor shall designate four members who shall be voting members.

(d) The governor shall designate a chairman from among the eight voting members of the council.

(e) Members appointed under (a) of this section may select one person to serve as an alternate at meetings of the council. If the

member appointed or designated is unable to attend, the alternate may act in his place.

(f) A majority of the voting members of the council constitutes a quorum, but one or more of the members designated by the council may hold hearings. All decisions of the council shall be by a majority vote of the voting members present and voting.

Sec. 44.19.892. POWERS OF THE COUNCIL. The council may

(1) apply for and accept grants, contributions, and appropriations, including application for and acceptance of federal funds which may become available for coastal planning and management;

(2) contract for necessary services;

(3) consult and cooperate with

(A) persons, organizations, and groups, public or private, interested in, affected by, or concerned with coastal area planning and management;

(B) agents and officials of the coastal resource districts of the state, and federal and state agencies concerned with or having jurisdiction over coastal area planning and management;

(4) take any reasonable action necessary to carry out the provisions of secs. 891 - 894 of this chapter.

Sec. 44.19.893. DUTIES OF THE COUNCIL. In conformity with the Coastal Zone Management Act of 1972, as amended (16 U.S.C. 1451 et seq.), the council shall

(1) develop guidelines and standards for the preparation of, and approve, in accordance with AS 46.35, the Alaska coastal management program;

(2) establish continuing coordination among state agencies to facilitate implementation of the Alaska coastal management program;

(3) assure continued provision of data and information to

coastal resource districts to carry out their planning and management functions under the program;

(4) report annually to the legislature on the status of the program.

Sec. 44.19.894. COUNCIL STAFF. The council may utilize the staff of the office of coastal management within the division of policy development and planning in discharging its powers and duties. The coordinator of the office, with the concurrence of the council, may contract with or employ personnel or consultants he considers necessary to carry out the powers and duties of the council.

* Sec. 4. AS 46 is amended by adding a new chapter to read:

CHAPTER 35. COASTAL MANAGEMENT PROGRAM.

ARTICLE 1. DEVELOPMENT OF ALASKA COASTAL MANAGEMENT PROGRAM.

Sec. 46.35.010. DEVELOPMENT OF ALASKA COASTAL MANAGEMENT PROGRAM. (a) The Alaska Coastal Policy Council established in AS 44.19.891 shall approve, in accordance with secs. 10 - 200 of this chapter, the Alaska coastal management program.

(b) The council may approve the Alaska coastal management program for a portion or portions of the coastal area before approving the complete program under (a) of this section. Portions of the program approved under this subsection shall be incorporated into the Alaska coastal management program adopted under (a) of this section.

(c) The Alaska coastal management program shall be reviewed and, when appropriate, revised annually to

(1) add newly approved district coastal management programs, or revisions and amendments to existing approved district coastal management programs;

(2) add new or revised state statutes, policies, regulations or other appropriate material;

(3) review the effectiveness of implementation of district coastal management programs; and

(4) consider new information acquired by the state and coastal resource districts.

(d) All reviews and revisions shall be in accordance with the guidelines and standards adopted by the council under sec. 40 of this chapter.

Sec. 46.35.020. OBJECTIVES. The Alaska coastal management program shall be consistent with the following objectives:

(1) the management, restoration and enhancement of the overal quality of the coastal environment;

(2) the development of industrial or commercial enterprises which are consistent with the social, cultural, historical, economic and environmental interests of the people of the state;

(3) the orderly, balanced utilization and preservation of the resources of the coastal area consistent with sound conservation and sustained yield principles;

(4) the management of coastal land and water uses in such a manner that, generally, those uses which are dependent on a coastal location are given higher priority when compared to uses which do not require a coastal location;

(5) the protection and enhancement of significant historic, cultural, natural and aesthetic values and natural systems or processes within the coastal area;

(6) the prevention of damage to or degradation of land and water reserved for their natural values as a result of inconsistent land or water usages adjacent to that land;

(7) the recognition of the need for a continuing supply of energy to meet the requirements of the state and the contribution of a

share of the state's resources in meeting national energy needs; and

(8) the full and fair evaluation of all demands on the land and water in the coastal area.

Sec. 46.35.030. DEVELOPMENT OF DISTRICT COASTAL MANAGEMENT PROGRAMS. Coastal resource districts shall develop and adopt district coastal management programs in accordance with the provisions of this chapter. The program adopted by a coastal resource district shall be based upon a comprehensive resource use plan or a comprehensive statement of needs, policies, objectives and standards governing the use of resources within the coastal area of the district. The program shall be consistent with the guidelines and standards adopted by the council under sec. 40 of this chapter and shall include:

(1) a delineation within the district of the boundaries of the coastal area subject to the district coastal management program;

(2) a statement, list, or definition of the land and water uses and activities subject to the district coastal management program;

(3) a statement of policies to be applied to the land and water uses subject to the district coastal management program;

(4) regulations, as appropriate, to be applied to the land and water uses subject to the district coastal management program;

(5) a description of the uses and activities which will be considered proper and the uses and activities which will be considered improper with respect to the land and water within the coastal area;

(6) a summary or statement of the policies which will be applied and the procedures which will be used to determine whether specific proposals for land or water uses or activities shall be allowed; and

(7) a designation of, and the policies which will be applied to the use of, areas within the coastal resource district which merit

special attention.

Sec. 46.35.040. DUTIES OF THE ALASKA COASTAL POLICY COUNCIL. The Alaska Coastal Policy Council shall

(1) by regulation adopted under the provisions of the Administrative Procedure Act (AS 44.62), identify and define, within six months of the effective date of this Act, for the use of and application by coastal resource districts for carrying out their responsibilities under this chapter, guidelines and standards for

(A) identifying the boundaries of the coastal area subject to the district coastal management program;

(B) determining the land and water uses and activities subject to the district coastal management program;

(C) developing policies applicable to the land and water uses subject to the district coastal management program;

(D) developing regulations applicable to land and water uses subject to the district coastal management program;

(E) describing the uses and activities which will be considered proper and those which will be considered improper with respect to those land and water uses;

(F) developing policies and procedures to determine whether specific proposals for the land and water uses or activities subject to the district coastal management program shall be allowed;

(G) designating and developing policies for the use of areas of the coast which merit special attention; and

(H) measuring the progress of a coastal resource district in meeting its responsibilities under this chapter;

(2) develop and maintain a program of technical and financial assistance to aid coastal resource districts in the development

and implementation of district coastal management programs;

(3) undertake review and approval of district coastal management programs in accordance with this chapter;

(4) initiate, as necessary, a process for identifying and managing uses of state concern within specific areas of the coast;

(5) develop procedures or guidelines for consultation and coordination with federal agencies managing land or conducting activities potentially affecting the coastal area of the state.

Sec. 46.35.050. ACTION AND SUBMISSION BY COASTAL RESOURCE DISTRICTS. Each coastal resource district shall make substantial progress, in the opinion of the council, toward completion of an approvable district coastal management program and shall complete and submit to the council for approval its program within 30 months of the effective date of this Act.

Sec. 46.35.060. REVIEW AND APPROVAL BY COUNCIL. (a) If, upon submission of a district coastal management program for approval, the council finds that the program is substantially consistent with the provisions of this chapter and the guidelines and standards adopted by the council and does not arbitrarily or unreasonably restrict or exclude uses of state concern, the council may grant summary approval of the district coastal management program, or may approve portions of the district program which are consistent. An approved district coastal management program shall take effect upon adoption by the coastal resource district and approval by the council, except that programs prepared by coastal resource service areas under sec. 110 of this chapter or by the Department of Community and Regional Affairs under sec. 160 of this chapter shall be submitted for review by the legislature and shall take effect 45 days after the convening of a regular legislative session unless disapproved by a concurrent resolution adopted by a

majority of the members of each house.

(b) If the council finds that a district coastal management program is not approvable or is approvable only in part under (a) of this section, it shall direct that deficiencies in the program submitted by the coastal resource district be mediated. In mediating the deficiencies, the council may call for one or more public hearings in the district. The council shall meet with officials of the coastal resource district in order to resolve differences.

(c) If, after mediation, the differences have not been resolved to the mutual agreement of the coastal resource district and the council, the council shall call for a public hearing and shall resolve the differences in accordance with the Administrative Procedure Act (AS 44.62). After a public hearing held under this subsection, the council shall enter findings and, by order, may require

(1) that the district coastal management program be amended to make it consistent with the provisions of this chapter or the guidelines and standards adopted by the council;

(2) that the district coastal management program be revised to accommodate a use of state concern; or

(3) any other action be taken by the coastal resource district as appropriate.

(d) The superior courts of the state have jurisdiction to enforce orders of the council entered under (c) of this section.

Sec. 46.35.070. STANDARDS FOR COUNCIL REVIEW AND APPROVAL. (a) The council shall approve a district coastal management program submitted for review and approval if the program is consistent with the provisions of this chapter and the guidelines and standards adopted by the council.

(b) Notwithstanding an inconsistency of a district coastal

management program submitted for review and approval with the guidelines and standards adopted, the council shall approve the program if it finds that

(1) strict adherence to the guidelines and standards adopted would result in a violation of another state law or policy;

(2) strict adherence to the guidelines and standards adopted would cause or probably cause substantial irreparable harm to another interest or value in the coastal area of the district; or

(3) the inconsistency is of a technical nature and no substantial harm would result to the policies and objectives of this chapter or the Alaska coastal management program.

(c) In determining whether a restriction or exclusion of a use of state concern is arbitrary or unreasonable, the council shall approve the restriction or exclusion if its finds that

(1) the coastal resource district has consulted with and considered the views of appropriate federal, state or regional agencies;

(2) the district has based its restriction or exclusion on the availability of reasonable alternative sites; and

(3) the district has based its restriction or exclusion on an analysis showing that the proposed use is incompatible with the proposed site.

(d) A decision by the council under this section shall be given within 90 days.

Sec. 46.35.080. IMPLEMENTATION OF DISTRICT COASTAL MANAGEMENT PROGRAMS. (a) A district coastal management program approved by the council for a coastal resource district which does not have and exercise zoning or other controls on the use of resources within the coastal area shall be implemented by appropriate state agencies. Implementation shall be in accordance with the comprehensive use plan or the

statement of needs, policies, objectives and standards adopted by the district.

(b) A municipality which has and exercises zoning or other controls on the use of resources within the coastal area shall implement its district coastal management program. Implementation shall be in accordance with the comprehensive use plan or the statement of needs, policies, objectives and standards adopted by the municipality.

Sec. 46.35.090. COMPLIANCE AND ENFORCEMENT. (a) Municipalities and state agencies shall administer land and water use regulations or controls in conformity with district coastal management programs approved by the council and in effect.

(b) On petition of a coastal resource district, a citizen of the district, or a state agency, showing that a district coastal management program is not being enforced or implemented, the council shall convene a public hearing to consider the matter. A hearing called under this subsection shall be held in accordance with the Administrative Procedure Act (AS 44.62). After hearing, the council may order that the coastal resource district or state agency take any action which the council considers necessary to enforce, implement or comply with the district coastal management program.

(c) In determining whether an approved district coastal management program is being implemented, enforced or complied with by a coastal resource district which exercises planning authority or controls on the use of resources within the coastal area, the council shall find in favor of the district if

(1) zoning or other regulations have been adopted and are being enforced;

(2) variances are being granted according to procedures and criteria which are elements of the district coastal management program,

or the variance is otherwise approved by the council; and

(3) procedures and standards adopted by the coastal resource district as required by this chapter or by the guidelines and standards adopted by the council have been followed and considered.

(d) In determining whether a state agency is complying with a district coastal management program with respect to its exercise of regulation or control of the resources within the coastal area, the council shall find in favor of the agency if

(1) the use or activity for which the permit, license or approval is granted is consistent with the district coastal management program and regulations adopted under it; and

(2) the use or activity for which the permit, license or approval is granted is consistent with requirements imposed by state statute, regulation, or local ordinance applicable to the use or activity.

(e) The superior courts of the state have jurisdiction to enforce lawful orders of the council.

ARTICLE 2. COASTAL MANAGEMENT PROGRAMS IN THE UNORGANIZED BOROUGH.

Sec. 46.35.100. AUTHORITY IN THE UNORGANIZED BOROUGH. Under AS 29.03.020 and secs. 100 - 170 of this chapter, the legislature authorizes organization of coastal resource service areas in the unorganized borough and grants authority to the service areas which may be organized to perform the duties required under this chapter.

Sec. 46.35.110. COASTAL RESOURCE SERVICE AREAS. (a) Except as provided in (b) of this section, each regional educational attendance area established under AS 14.08.031 containing a part of the coastal area may be organized as a coastal resource service area.

(b) The commissioner of the Department of Community and Regional

Affairs may, after public hearings held in the area affected, consolidate two or more regional educational attendance areas as a single coastal resource service area if

(1) a substantial portion of the coastal area contains land and water area owned by the federal government over which it exercises exclusive jurisdiction or land held in trust by the federal government for Alaska Natives over which the state would not exercise control as to use; or

(2) in the opinion of the commissioner, the functions to be performed could be undertaken more efficiently through combination of regional educational attendance areas as a single coastal resource service area.

(c) A determination under (b) of this section shall be made before organization of the coastal resource service area and no later than six months from the effective date of this Act.

Sec. 46.35.120. ORGANIZATION OF SERVICE AREA. (a) Organization of a coastal resource service area may be initiated by

(1) submission to the council of a petition signed by a number of registered voters equal to 15 per cent of the number of votes cast within the coastal resource service area at the last state general election;

(2) submission to the council of a resolution approved by the city council or traditional governing body of not less than 25 per cent of the number of cities and villages within the coastal resource service area; or

(3) at the direction of a majority of the members of the council in the manner set out in sec. 150 of this chapter.

(b) Acting at the request of the council, the lieutenant governor, not less than 60 nor more than 90 days after receipt of a proper

petition under (a)(1) of this section, a proper resolution under (a)(2) of this section, or at the direction of the council under (a)(3) of this section, shall conduct an election on the question of organization of a coastal resource service area.

Sec. 46.35.130. COASTAL AREA BOARDS. (a) Each coastal resource service area, upon organization, shall have an elected board representing the population of the service area. The board shall have the powers and duties and perform the functions prescribed for or required of coastal resource districts.

(b) A coastal area board shall contain seven members. Board members shall be elected at large by the qualified voters of the coastal resource service area.

(c) The commissioner of the Department of Community and Regional Affairs, after consultation with residents of a coastal resource service area, may divide a service area into sections only for the purpose of nominating and electing board members. Division of a service area into sections for the purpose of nomination and election shall be in accordance with the provisions of AS 14.08.051(a). Division may be proposed in the petition submitted under sec. 120(a)(1) of this chapter, in the resolution submitted under sec. 120(a)(2) of this chapter, at the direction of the council under sec. 120(a)(3) of this chapter, or may be proposed at any time by the members of the coastal area board. If proposed by the board, the division of the service area into sections is subject to approval of a majority of the qualified voters voting on the question in the coastal resource service area at the next regular election or at a special election called for that purpose and, if approved, takes effect at the next regular election of members of the coastal area board.

(d) The term of office of a member of a coastal area board is

three years, except that the terms of the members of the first board elected after organization of a coastal resource service area shall be determined by lot, with two members serving one-year terms, two members serving two-year terms, and three members serving three-year terms. Members serve until their successors are elected and have qualified. Nothing in this section prohibits the reelection of a board member.

(e) The lieutenant governor shall provide for the election of the members of coastal area boards. The first election of board members shall occur not less than 60 nor more than 90 days after certification of the results of an organization election under sec. 120(b) of this chapter in which a majority of votes cast favors organization of the service area.

(f) Except for the first election of members of coastal area boards, elections shall be held annually on the date of election of members of regional educational attendance area boards under AS 14.08.-071(b).

(g) A vacancy on a coastal area board shall be filled by appointment as provided in AS 14.08.041(a) for vacancies in the membership of regional educational attendance area boards.

(h) Members of coastal area boards are subject to recall on the same grounds and in the same manner as provided for recall of municipal officials in AS 29.28.130 - 29.28.250. The lieutenant governor functions in place of the assembly or council and municipal clerk for receipt and review of recall petitions and the conduct of recall elections.

Sec. 46.35.140. ELECTIONS IN SERVICE AREAS. Organization elections under sec. 120 of this chapter and other elections, including recall elections conducted under sec. 130 of this chapter, shall be administered by the lieutenant governor in the general manner provided in the Alaska Election Code (AS 15.05 - 15.60). In addition, the

lieutenant governor may adopt regulations necessary to the conduct of coastal area board elections. The state shall pay all election costs.

Sec. 46.35.150. ORGANIZATION AT THE DIRECTION OF THE COUNCIL. (a) Whenever it appears that major economic development activity will occur in a coastal resource service area or in waters adjacent to a coastal resource service area which has not been organized, the council may direct the lieutenant governor to submit to the voters of the service area the question of organization. The council may require an election on the question only after holding at least one public hearing within the area proposed for organization.

(b) For purposes of this section, "major economic development activity" includes a call for nomination by the secretary of the United States Department of the Interior for leasing of tracts within petroleum basins in waters of the outer continental shelf adjacent to the coastal resource service area or any other significant industrial or commercial activity which, in the opinion of the council, would commit the resources of the coastal area to a use of direct and significant impact upon the coastal waters of the state.

Sec. 46.35.160. PREPARATION OF DISTRICT COASTAL MANAGEMENT PROGRAM BY THE DEPARTMENT OF COMMUNITY AND REGIONAL AFFAIRS. (a) If residents of a coastal resource service area reject organization of the service area at an election called for the purpose and the council finds, after public hearing, that major economic development activity has occurred or will occur within the service area, the council may direct the Department of Community and Regional Affairs to prepare and recommend for consideration by the council a district coastal management program for the service area.

(b) At the request of the council, the Department of Community and Regional Affairs shall complete the district coastal management

program in accordance with this chapter and the guidelines and standards adopted by the council for a coastal resource service area which has been organized but which has failed to make substantial progress in the preparation of an approvable district coastal management program within 18 months of certification of the results of an organization election or which has not submitted for approval to the council a program within 30 months of certification of the results of its organization election. Preparation of the program shall be conducted in consultation with the coastal resource service area and shall, to the maximum extent consistent with this chapter, reflect the expressed concerns of the residents of the service area.

(c) Before requesting the department to complete the district coastal management program under (b) of this section, the council shall meet with the members of the coastal area board to determine whether the coastal area board is able to complete a district coastal management program within the time limitations established in this section.

Sec. 46.35.170. LIMITATIONS OF APPROVAL OF DISTRICT COASTAL MANAGEMENT PROGRAMS. (a) Unless specifically required by federal or state law, a coastal area board, or the Department of Community and Regional Affairs acting in the place of a coastal area board under sec. 160 of this chapter, may not adopt and recommend to the council for approval a district coastal management program involving coastal land and water within cities and villages of a coastal resource service area without first securing the consent of the following:

(1) for land and water within the corporate limits of a city of any class within the service area, the approval of the council of the city;

(2) for land and water within two miles of a village within the service area, the approval of an appropriate village entity such

as the traditional council, the majority of the residents of the village obtained at a public meeting held in the village and called for the purpose, or a village referendum.

(b) If a city or village within a coastal resource service area fails to approve a portion of the coastal district management program prepared and submitted for approval under (a) of this section, the governing body shall, within 60 days, advise the coastal area board or the department, as applicable, of its objections to the proposed program and suggest alternative elements or components for inclusion in the district coastal management program. New matter submitted by a city or village which is substantially consistent with the guidelines and criteria adopted by the council shall be accepted and the district coastal management program modified accordingly. If a city or village fails to provide objections and suggested alternatives within the time limits established in this section, the coastal area board or the department, as applicable, may adopt the district coastal management program as initially offered.

(c) For purposes of this section, "village" means an unincorporated community where at least 25 persons reside as a social unit as determined by the Department of Community and Regional Affairs.

ARTICLE 3. GENERAL PROVISIONS.

Sec. 46.35.180. COOPERATIVE ADMINISTRATION. (a) A city within the coastal area which is not part of an adjacent coastal resource service area may include itself for purposes of this chapter within an adjacent coastal resource service area if its governing body, by resolution adopted by a majority of its membership, consents to the inclusion of the city and a copy of the resolution is filed with the commissioner of the Department of Community and Regional Affairs.

(b) Nothing in this chapter restricts or prohibits cooperative

or joint administration of functions between a municipality and a coasta resource service area organized under the provisions of this chapter upon initiation of a mutual agreement for the purpose.

Sec. 46.35.190. STATE AGENCIES. Upon the adoption of the Alaska coastal management program, state departments, boards and commissions shall review their statutory authority, administrative regulations, and applicable procedures pertaining to land and water uses within the coastal area for the purpose of determining whether there are any deficiencies or inconsistencies which prohibit compliance with the program adopted. They shall, within six months of the effective date of the Alaska coastal management program, take whatever action is necessary, including preparation and submission of recommendations to the council for additional or amended legislation, in order to facilitate full compliance with and implementation of the program.

Sec. 46.35.200. DEFINITIONS. In this chapter, unless the context otherwise requires,

(1) "area which merits special attention" means a delineated geographic area within the coastal area which is sensitive to change or alteration and which, because of plans or commitments or because a claim on the resources within the area delineated would preclude subsequent use of the resources to a conflicting or incompatible use, warrants special management attention, or which, because of its value to the general public, should be identified for current or future planning, protection, or acquisition; these areas, subject to council definition of criteria for their identification, include:

(A) areas of unique, scarce, fragile or vulnerable natural habitat, cultural value, historical significance, or scenic importance;

(B) areas of high natural productivity or essential

habitat for living resources;

(C) areas of substantial recreational value or opportunity;

(D) areas where development of facilities is dependent upon the utilization of, or access to, coastal waters;

(E) areas of unique geologic or topographic significance which are susceptible to industrial or commercial development;

(F) areas of significant hazard due to storms, slides, floods, erosion or settlement; and

(G) areas needed to protect, maintain, or replenish coastal land or resources, including coastal flood plains, aquifer recharge areas, beaches and offshore sand deposits;

(2) "coastal resource district" means each of the following which contains a portion of the coastal area of the state:

(A) unified municipalities established under AS 29.68.-240 - 29.68.440;

(B) organized boroughs of any class which exercise planning and zoning authority;

(C) home rule and first class cities of the unorganized borough or within boroughs which do not exercise planning and zoning authority;

(D) second class cities of the unorganized borough, or within boroughs which do not exercise planning and zoning authority, which have established a planning commission, and which, in the opinion of the commissioner of the Department of Community and Regional Affairs, have the capability of preparing and implementing a comprehensive district coastal management program under sec. 30 of this chapter;

(E) coastal resource service areas established and

organized under AS 29.03.020 and secs. 100 - 170 of this chapter;

(3) "council" means the Alaska Coastal Policy Council;

(4) "department" means the Department of Community and Regional Affairs;

(5) "use of direct and significant impact" means a use, or an activity associated with the use, which proximately contributes to a material change or alteration in the natural or social characteristics of a part of the state's coastal area and in which

(A) the use, or activity associated with it, would have a net adverse effect on the quality of the resources of the coastal area;

(B) the use, or activity associated with it, would limit the range of alternative uses of the resources of the coastal area; or

(C) the use would, of itself, constitute a tolerable change or alteration of the resources within the coastal area but which, cumulatively, would have an adverse effect;

(6) "uses of state concern" means those land and water uses which would significantly affect the long-term public interest; these uses, subject to council definition of their extent, include:

(A) uses of national interest, including the use of resources for the siting of ports and major facilities which contribute to meeting national energy needs, construction and maintenance of navigational facilities and systems, resource development of federal land, and national defense and related security facilities that are dependent upon coastal locations;

(B) uses of more than local concern, including those land and water uses which confer significant environmental, social, cultural, or economic benefits or burdens beyond a single coastal

resource district;

(C) the siting of major energy facilities or large-scale industrial or commercial development activities which are dependent on a coastal location and which, because of their magnitude or the magnitude of their effect on the economy of the state or the surrounding area, are reasonably likely to present issues of more than local significance;

(D) facilities serving statewide or interregional transporation and communication needs; and

(E) uses in areas established as state parks or recreational areas under AS 41.20 or as state game refuges, game sanctuaries or critical habitat areas under AS 16.20.

* Sec. 5. AS 44.47 is amended by adding a new section to read:

Sec. 44.47.085. PLANNING ASSISTANCE FOR DEVELOPMENT AND MAINTENANCE DISTRICT COASTAL MANAGEMENT PROGRAMS. The department shall conduct a program of research, training, and technical assistance to coastal resource districts necessary for the development and implementation of district coastal management programs under AS 46.35. State agencies shall assist the department in carrying out the purposes of this section

* Sec. 6. This Act takes effect immediately in accordance with AS 01.10.-070(c).

#

CHANGES TO THE DRAFT:

(1) Page 2, after line 16, add the following:

(6) authorize and require state agencies to carry out their planning duties, powers and responsibilities and take actions authorized by law with respect to programs affecting the use of resources within the coastal area in accordance with the policies set forth in this Act and the guidelines and standards adopted by the Alaska Coastal Policy Council.

(2) Page 3, line 21; add the following:

A public member may be reappointed. Public members are subject to confirmation by a majority of the members of the legislature in joint session.

(3) Page 4, line 6 and following, add:

(g) Members of the council are entitled to per diem and travel expenses authorized by law for members of boards and commissions.

(h) If there is a vacancy among the public members appointed under (a)(1) of this section, the governor shall make an appointment to become immediately effective for the unexpired term.

(4) Page 8, line 7:

...application by coastal resource districts and state agencies carrying out their responsibilities...

(5) Page 9, line 9:

Sec. 46.35.050. ACTION AND SUBMISSION BY COASTAL RESOURCE DISTRICTS. Each coastal resource district shall make substantial progress, in the opinion of the council, toward completion of an approvable coastal management program and shall complete and submit to the council for approval its program within 30 months of the effective date of this Act or within 30 months of certification of the

results of its organization election, whichever is later.

(6) Page 18, line 17 and following:

Replace the language in (a) of the draft with the following:

Sec. 46.35.170. APPROVAL OF PROGRAMS IN COASTAL SERVICE AREAS. (a) Before adoption by a coastal area board, or by the department of community and regional affairs under sec. 160 of this chapter, a district coastal management program shall be submitted for review to each city or village within the coastal resource service area. The council of a city or residents of a village may approve the program submitted for review or may enter objection to any portion of the program. Objection by a city council is limited to objection to elements of the program affecting resources or the use of resources within the corporate limits of the city. Objection by a village is limited to objection to elements of the program affecting resources or the use of resources within the village or within two miles of the village.

Kay Poland, Senator
Pouch V
Juneau, Alaska 99811

Dear Commissioner Martin and
Senator Poland:

The following comments are a result of a review of the proposed legislation for Coastal Zone Management. The review was conducted jointly by representatives of the Kenai Peninsula Borough, City of Seward, City of Homer, City of Soldotna, Borough Planning Commission, OEDP and several members of the Kenai Peninsula Borough Assembly. We forward them to you in all sincerity and ask that they be given due consideration.

It was the consensus of opinion of the above representatives that the HCR 123 Committee had made a major effort to return to the legally constituted planning authorities the chief responsibility for implementing an Alaskan Coastal Zone Management Program. We wish to compliment the Committee for this effort for it removes much of the criticism of previous bills. We believe this action shows a definite shift away from state domination of planning to an equal partnership with local governments.

There are several areas of importance on which we wish to submit questions or comments. I will list them but not necessarily in priority.

1. The exact jurisdiction of this Act is in question. There should be a clearer definition of the coastal zone written into the language. It is difficult to determine, for instance, whether large, navigible rivers are included

under this Bill. This becomes important when the consideration of eligibility of communities for seats on the Policy Committee are considered. If this determination is to be left to the Coastal Resource Districts, the Act should stipulate this fact.

2. The local representation on the Policy Committee should be expanded to a nine member committee with six local community representatives and three state voting members. There should be a requirement for five votes to pass any resolution of this board instead of a majority of a quorum. These remarks are made for the following reasons:

a) There are only two cities of more than 5,000 in the coastal zone if Fairbanks and the unified municipalities are omitted. They are Kenai and Ketchikan.

b) In order to allow for a wide representative distribution from coastal communities, including boroughs and cities, 4 members is not sufficient to represent the numerous categories of communities. For instance, there are: 2 first class or home rule cities over 5,000; 3 unified municipalities; 25 first class or home rule cities under 5,000; 104 second class cities in the unorganized boroughs.

c) The wording in Sec. 44.19.891 (1) virtually eliminates first class or home rule cities in the unorganized boroughs, therefore leaving out Cordova, Valdez, Yakutat, Unalaska, Dillingham, Nome, etc.

We would like to propose the following changes:

a) Sec. 44.19.891 (1) (A) Amended to read: Mayor or member of council or assembly of a city or unified municipality having a population of more than 5,000.

b) Sec. 44.19.891 (1) (B) Amended to read: "Mayor or member of council of a first class or home rule city having a population of less than 5,000. Two (2) to be appointed."

c) Sec. 44.19.891 (1) (C) Amended to read: "Mayor or member of the assembly of a home rule, first class or second class borough."

d) Sec. 44.19.891 (1) (D) leave intact.

e) Sec. 44.19.891 (1) (E): Added to Sec. "Mayor, member of council, member of assembly or member of a planning commission to be appointed at large."

3. The definition of a coastal resource district needs to succinctly state that any city, borough, or unified municipality with planning and zoning authority will constitute a district. This suggestion is made because of the reference in Sec. 46.35.080 (b) and 46.35.090 to municipality and coastal resource district. As we read the intent of the Act, municipalities exercising planning and zoning authority and coastal resource districts are synonymous.

4. The enforcement of the Program should include a section that specifically states how the Policy Council will review a state agency program which has had a question raised regarding the agencies working within the framework of an accepted coastal district program. In other words, all state agencies should realize that they are to adhere to the adopted program.

In summary, we feel that the local communities must have a strong role in the implementation and enforcement of this program. The only way to insure this participation is to write into the initial legislation adequate requirements which will place local governments on an equal status with the state.

Yours for a Better Alaska,

Donald E. Gilman, Mayor
Kenai Peninsula Borough

Association of Village Council Presidents
Nunam Kitlutsisti
Box 267
Bethel, Alaska 99559
December 28, 1977

Senator Ray Poland
Pouch V
Juneau, Alaska 99811

Dear Senator Poland,

We have finally received a copy of the work draft copy of Bill proposed for coastal zone management for the 1978 legislature. Representative Anderson asked that our comments be made known to the committee prior to January 5. The Association of Village Council Presidents will not meet until January 19th in Bethel, and at that time, the AVCP will decide on its position concerningthe establishment of REAA zones as Coastal Resource Districts, and the mechanism proposed for election of district representatives.

However, we are able to address at this time several parts of the bill that have been discussed within the region. The proposed legislation is considerably better then the administration's original draft. The creation of policy making Coastal Resource Districts is appropriate with the Governor's themes of de-centralizing government where local areasare capable of self-management, and in line with rural Alaska's opposition to a single state-wide board managing the State's vast coastal zone. In that the unorganized borough will comprise the major portion of lands included in the coastal zone. we would recommend that the Alaska Coastal Policy Council be expanded to include 3 additional public members from the unincorporated communities or boroughs in the State. An expansion in rural representation is the best way to guarantee adaquate analysis of the coastal management plans submitted from districts or from DCRA by the Council. As currently proposed, there would be very little expertise among members of the Council to judge rural land practices or current or proposed uses.

A second major change would involve the specific language of subsistence utilization. Rural Alaskans were recently informed by the Commissioner of Economic Development that our way of life is an embarrassment for econometrics. The rural subsistence lifestyle is difficult to value in cash terms or in market terms, and has been just ignored. We do not believe that it is being ignored so that subsistence will go away, but that it is too difficult to manage from a state-wide mechanism of government. We therefore propose that in Sec. 46.35.020 and again in Sec. 46.35.200, that subsistence utilization be considered as a use of the coastal zone. Each alternate word employed by the drafters of the bill imply subsistence, but only by clearly stating the word, and by describing the activity can the subject be properly covered.

The third major change we would recommend concerns districts managing their own programs. In Sections 46.35.040(2) and 44.47.035, a state-wide technical advisory system is proposed, with staff members from the DCRA being assigned different districts. In line with the revisions that guarantee local policy making, provisions should be made for the Coastal Resource District to manage its own funds, and hire its own staff. The bill correctly defines a policy, and a mechnism to assure local input, but expects existing state bureaucracy to properly handle the input of both elder natives and the political desires of both the district and the unincorporated communities. We feel that the

Alaska Policy Coastal Council should have the authority to pass-through Federal appropriations to the Districts to develop their own technical and financial programs, and aid in the growth of local ability to develop policy and manpower.

The problem of timing the lease sales brings on the fourth major problem. Delays in leasing may take us well past the 30 month maximum proposed by the bill in regard to designation of Districts within the REAA mechanism. In our own region, the Navarin Basin is a future possibility for OCS leasing, yet in the establishment of Districts the State may not want to create a District and thereby spread both finances and manpower as a hedge against future development while trying to fit within the election and designation mechanism of the Act. In Sections 46.35.050, and again in 46.35.110(c) specific time tables are created that may be unrealistic. The formation of a Disrict within the Lower Kuskokwim REAA to handle proposed activ ites brought on by the future Navarin Basin lease sale should be based on the expectation of a committment to lease by the Secretary of the Interior.

In unrelated topics, it would be important to include the subject of timing of development:intensive, moderate, or slow; as a condition of Sec. 45.35.030 with interest given to the seasonal nature of activities, particularly the timing of activities to conform to local environmental and biological conditions. Section 46.35.170(b) speaks of time limits established in this section(page 19, line 14-15) yet there is no mention of a time limit in the section. Section 46.35.130(d) does not mention the duration of the Council. If the District is to stay in existence after approval of its plan by the Council, this should be explicitly stated, and our region approves of the continuation of the Districts. We would also like to request that some review mechanism be made available to the Districts once organized to review the Council's authority under Sec. 46.35.040.

We hope that a representative from our region will be in Juneau after AVCP meets in mid-January to inform you of our region's decision on the mechanism of designation and election.

Sincerely yours,

David Friday, Chairman

January 3, 1977

Senator Ray Poland
c/o Legislative Affairs Agency
State of Alaska
Juneau, AK 99802

Dear Senator Poland:

I have reviewed the Draft of the "Act Relating to the Management of the Coastal Resources of the State" that is to be presented to the tenth Legislature. This appears to be a fine Act and should do much to prevent the loss of public values and the degradation of coastal communities that has blighted so much of the coast "outside". I do have two suggestions:

1. The Council appears to be too narrow with only selected local officials or the Governor's cabinet permitted. I would suggest that the Council should contain three, at large, voting members appointed by the Governor so that the State can have the benefit of some of the vast knowledge of industry people, University people, coastal residents or others who might have expertize in coastal planning matters.

2. Public hearings should be required by any entity submitting District Coastal Management Plans. These hearings should be recorded, transcribed and all questions raised at these hearings should be answered and all opinions and proposals should be discussed and their validity ascertained. The hearing records and evaluation should accompany any Plan submitted to the Council. In this way the Council and the citizens of the future will have a record of both majority and minority opinions within the community and the hearing records can serve as a valuable source of information in the years ahead as the value of the program is assessed and modified. The provision should be in the Act as local ordinances often have no such requirements.

   All hearings of the Council should likewise be recorded, transcribed, evaluated and made available as appropriate.

Thank you very much for the consideration of these proposals.

Yours truly,

James G. King

UNITED STATES DEPARTMENT OF COMMERCE

Jack Elke

Mr. Robert LeResche
Director, Department of Policy
Development & Planning
State of Alaska
Pouch AD
Juneau, Alaska 99811

Dear Bob:

At the request of Glenn Akins, the Office of Coastal Zone Management has reviewed the draft bill on coastal management for Alaska, prepared by the Interim Committee established by HCR 123.

We have evaluated this bill in light of the standards established by the Coastal Zone Management Act of 1972, as amended, and of the experience provided by other existing state coastal management programs.

Our preliminary assessment of this bill is that it will establish the foundation for a coastal management program which is unique to Alaska. While the management program should meet many of the requirements of the Federal Coastal Zone Management Act, there are a number of areas outlined below where further provisions and clarifications appear to be needed. Our assessment assumes a demonstration in the completed management program that Alaska's existing land and water use controls will be adequate to carry out the state role envisioned by this bill, and that the standards, guidelines and procedures to be adopted pursuant to the final legislation will be sufficient to meet the minimum standards imposed by Congress in passing the Coastal Zone Management Act. We are anxious to work with your staff and the HCR 123 Committee as needed to insure that this very innovative approach to coastal management, which is sensitively designed to meet the needs of Alaska, can also fully meet the requirements of the Coastal Zone Management Act and implementing regulations.

As a first step in this process, which we hope will continue over the next few months while the bill is being further revised and considered, we offer the following comments and raise certain questions about the draft bill. First, there are three general issues which we would like to raise for your consideration, which could have a major effect on the timing and acceptability of the Alaska coastal management program in terms of the approval under Section 306 of the Federal Act.

1. What interim controls would the state use to implement the Alaska coastal management program prior to completion and approval of district coastal management programs? Prior to granting approval of a management program submitted by a coastal state, the Secretary of Commerce must find, among other things, that the state has the authority necessary to implement the program, including the authority required under Section 306(d).

If the state is to seek approval of its management program prior to completion of the district coastal management programs, the legislation should establish the authority and the mechanism for the state to carry out the management program, at the time the program is approved. This authority should insure that the objectives, policies and guidelines established in the management program will guide land and water use decisions by state agencies, local governments, and other Federal and regional agencies, while the district coastal programs are being prepared.

In other states with existing coastal management programs, the objectives and policies established in state legislation and rules and regulations are controlling at the time the program is approved. An appeals mechanism through an administrative body (such as the proposed Alaska Coastal Policy Council) and/or the courts can insure that land and water use decisions will be carried out in accordance with the management program.

2. What agency of the state will be designated to administer grants for implementing the program? The bill in its current form establishes responsibilities for several state agencies for approving and implementing a coastal management program. The Alaska Coastal Policy Council appears to have overall responsibility for carrying out the management program. This Council is representative of several state agencies and local officials. The staff Office of Coastal Zone Management within the Division of Policy Development and Planning may be utilized as staff to the Council. The Department of Community and Regional Affairs (CRA) has major responsibilities for assisting coastal resource districts, conducting a program of research and training and technical assistance, and for preparing coastal resource district management programs in certain situations. The bill does not make it clear which of these state entities would have the lead agency responsibility under Section 306(c)(5) of the Federal Act. This bill could clarify the fiscal and programmatic responsibilities of the lead agency for purposes outlined in the Coastal Zone Management Act and NOAA regulations.

3. What form will the standards and guidelines have, and what legal function will be served? Section 46.35.040 provides for the adoption by regulation of guidelines and standards covering major elements of the Alaska coastal management program. It is not clear from the language of this section whether these are procedural guidelines or standards for "identifying," "determining," "developing," "describing," and "designating," the policies of the management program, or whether these are to be substantive guidelines and standards of the program establishing the boundaries, uses, and other policies guiding land and water use decisions.

It is not clear whether state and local agencies in resource districts would be bound by substantive land and water use standards and guidelines at the time these regulations are adopted, or only whether a process of developing the substantive policies would be in place. Section 46.35.070 suggests that it is the intent of the bill for these guidelines and standards to provide the substantive basis for decisions. If the state is to seek 306 approval prior to completion of the district coastal management programs, these standards and guidelines should establish the substantive land and water use policies of the management program and should be enforceable at the time of approval. This might be accomplished by omission of the first words of subsection (A) through (G). These guidelines and standards should be specific enough for the lead agency to determine (1) the compliance of district coastal resource programs,

(2) the compliance of major development activities or projects in the interim, or those not covered by the approved programs, and (3) the consistency of Federal programs and policies affecting the state's coastal area.

The following comments are offered on the specific sections of the bill:

44.19.891(b):

Several other pieces of legislation similar to HCR 123 have expanded this section to include time constraints for actually making the appointments (i.e. "governor shall appoint within ___ months after enactment", or "by June __,1977"). It appears that there is no actual date which would officially start the Council's performance of their duties.

44.19.892:

It is not clear why (4) limits the powers of the Council to take any reasonable action to carry out the provisions of Sections 891-894 only, rather than the entire bill, especially Chapter 35.

44.19.893:

To be in conformity with the Federal Coastal Zone Management Act, as stated in this section, the Council should also have the duty for administrative review of compliance with the guidelines and standards and the objectives of the program by state and local agencies and districts, provided under subparagraph (1). This assumes that the Alaska coastal management program will rely, in large part, upon the techniques for control of land and water uses specified in Section 305(e)(1)(a) of the Federal Act.

The Council might also have the duty to establish continuing coordination among the local units of government or coastal resource districts to facilitate implementation of the Alaska coastal management program, as paragraph (2) provides among state agencies.

The way item (3) is worded can perhaps be misunderstood. It sounds like the state will do all the supplying of data and information to the locals. While this may be appropriate for some of the unorganized boroughs or villages, some of the larger cities may be capable of generating their own data on a scale appropriate to their needs. The current local program development grant preliminary guidelines require inventories and analyses work to be performed by the locals. This line might read, "to help them carry out their planning and management functions" or "to provide technical and financial assistance to coastal resource districts . . ."

44.19.894:

This section should be more specific regarding the duties and responsibilities of the staff to the Council. The administrative staff of the Council should have more than a coordination function as implied in the title, "Coordinator," and should be capable of handling the fiscal and programmatic responsibilities and executive functions as the lead staff agency. If the Council or DPOP is to be the lead agency designated by the Governor, perhaps a title of "Director" or

"Manager" would be more appropriate. The term "may utilize" implies that the Council is not bound to utilize the staff agency for its lead administrative support. As indicated earlier, the duties and responsibilities of the lead staff agency should be clarified.

46.35.010(c):

We suggest that the Council should maintain the flexibility to review and evaluate the Alaska coastal management program, whenever appropriate, rather than restricting this to an annual review and revision. We also suggest that the eligible purposes for review and revision established by section (c)1-4 be broadened to allow general purpose revisions at the discretion of the state, which at a minimum, would allow for revisions in response to Federal performance evaluations under Section 312 of the Federal Act and for revisions in response to amendments to the Federal Act and implementing regulations.

46.35.030(7):

The term "special attention" should probably be defined under Sec. 46.35.200 or in the guidelines and standards pursuant to Sec. 44.19.893(1).

46.35.040(1):

As stated above, the guidelines and standards developed in response to this section should be substantive as well as procedural. This would be assured by omitting the first words of (A) through (G). These standards and guidelines should also apply to state agencies in addition to the coastal resource districts, and should be adopted with the force of regulation by the time the state seeks approval of their program under Section 306 of the Federal Act. If the state wishes to seek Federal approval under Section 306 prior to the adoption of such regulations, the objectives of the program in Sec. 46.35.020 would need to be much more specific, and provide an adequate standard for interim land and water use controls before district coastal resource programs are approved.

46.35.040(2):

Subsection 5 should include as well reference to Federal funding assistance programs which also are subject to the Federal consistency regulations of Section 307. We would recommend revising the sentence so it reads, ". . . managing land, conducting activities, or providing Federal assistance . . ."

46.35.080:

This section provides for implementation of district coastal management programs for (a) a coastal resource district which does not exercise zoning, and for a municipality which has zoning and other controls. Are there units of local government with zoning or other controls other than municipalities which are not covered by either (a) or (b) of this section? Would subsection (b) more appropriately begin, "A coastal resource district which has and exercises zoning or other controls . . . ," if this is the case, to insure implementation of all district coastal resource programs?

46.35.060(b):

You may want to look at the use of the term "mediation of deficiencies." This implies that there may be a compromise of state guidelines and standards especially after the Council has found the program not approvable. Perhaps something like "the Council will advise and consult with the district on program inadequacies prior to going to the step outlined in (c)" would be another way of approaching it.

46.35.090:

This section seems to require compliance with the management program by coastal resource districts and state agencies only after completion and approval of district coastal resource programs. Unless this section also requires interim compliance by state agencies and coastal resource districts and other unorganized units of government, all of the district coastal resource programs would need to be completed prior to approval of the state program under Section 306 of the Federal Act.

If this section could be expanded to also provide for compliance and enforcement of the objectives of the chapter and the standards and guidelines promulgated under section 46.35.040, in place of coastal management programs until such programs are approved, the state could qualify for 306 funding much earlier. This enhanced funding could be used by coastal resource districts completing their programs.

Let me bring to your attention two statements made in the California Coastal Act of 1976 which deal with compliance and conflict resolution:

> "The legislature further finds and recognizes that conflicts may occur between one or more policies of the division. The legislature therefore declares that in carrying out the provisions of this division, such conflict be resolved in a manner which on balance is the most protective of significant coastal resources. In this context, the legislature declares that broader policies which, for example, serve to concentrate development in close proximity to urban and employment centers may be more protective, overall, than specific wildlife habitat and other similar resource policies."

This gives clear recognition that policies may be conflicting especially within a given resource area, but that in the event of conflict, the decision to be most protective of significant coastal resources should prevail. This, of course, is just one type of priority-setting that can be used as a means to resolve conflict. The second statement says that "all state agencies shall carry out their duties and responsibilities in conformity with this decision." This means that they must comply with the policies of the Act prior to local coastal program certification.

46.35.150:

This section and section 46.35.160 seem to limit the ability of the state to control land and water uses in unorganized districts to situations where major economic development activity has or will occur. This does not appear to be consistent with the Federal law and would seem to be contradictory to the objective of developing management programs in advance of such development activities occurring.

OCZM is concerned with the limitation on the definition of "major economic development activity" to OCS and other significant industrial and commercial development activities only. How would the coastal program developed as a result of this bill control other uses which might have direct and significant impacts on coastal waters of the state, such as residential and recreation development, or major public works such as highways, utilities and other civic and educational facilities? Could "major economic development activity" be changed to "major development activity" to include all uses with a direct and significant impact on coastal waters?

46.35.160(a):

The subsection states that the Council may direct the Department of Community and Regional Affairs to prepare a district coastal management program. The bill or the management program prepared for submission for Federal approval should describe the circumstances under which the Council might not direct CRA to prepare such a program, and what alternative courses of action might be taken by the Council to insure compliance with the management program.

46.35.170:

This section appears to provide a mechanism for local governments, village and citizen involvement in the development and approval of district coastal resource programs, while insuring compliance with the management program guidelines and criteria. However, this would require that the Coastal Policy Council have the final administrative authority to determine whether "new matters" submitted by a city or village under (b) are "substantially consistent" or not. This provision should allow the Council to disapprove the "new matter" or require modification as needed, after considering the views of the coastal area board.

If, however, a city or village is able to block approval of the district coastal resource program through this provision, this section could become a major obstacle to Federal approval of Alaska's coastal management program.

46.35.190:

We read this section to require state agencies to comply with the Alaska coastal management program within 6 months of approval, and assume it is not meant to give 6 months to establish a process to put the requirement for operation at some future date. The bill should also make clear its intent to expand the basis of decision-making under existing statutes to allow purposes, objectives, policies and standards of the Alaska coastal management program to be taken into account in decisions of other state agencies.

As it appears that the state agency enforcement of the Alaska coastal management program is an integral and major part of this bill, it would be difficult to obtain 306 approval of the program prior to completion of this 6 month compliance by state agencies. However, this period roughly corresponds to the period necessary for Federal review of the management program and environmental impact statement, so it might be possible to begin the review process prior to full state compliance.

What mechanism is provided for administrative review of the state's activities for enforcement of compliance with the state program? The key provision of coastal legislation in other states is an appeals mechanism and standing for affected parties, and units of government to appeal land and water use decisions to an administrative agency and/or the courts.

46.35.200:

The definition of the Alaska coastal management program would be desirable since several places in the bill refer to compliance or consistency with this program. The definitions of the uses of national interest is very important to meeting the concerns of Federal agencies and the Federal Act's requirements. We recommend that you take a close look at this since it may save you a lot of controversy. Our Section 305 regulations would suggest that there are other items that deserve mention (i.e. resource preservation of Federal lands such as parks and ther recreation facilities, historic sites, etc., and production of food and fiber such as fisheries, agricultural or forest lands). Therefore, you might want to expand the list or make it non-exclusive by saying "such as the use of resources . . ." and further refine it in the guidelines.

Finally, of some concern is the frequent use of the word "may" in connection with the exercise of authority by one or another entity and in relation to one or another subject matters. Thus, under Section 46.35.069(c), page 10, the Council "may require" certain actions in relation to a district coastal management program. Under Section 46.35.090(b), page 12, the Council "may" order certain actions. Under Section 46.35.110, page 13, a regional educational attendance area "may be organized into a coastal resource service area." When used in these sections and others elsewhere in the bill, is "may" also meant to imply "may not?" On the basis of its plain meaning, the word clearly implies discretion, ergo clearly also implies may not.

We hope these comments will help in your revision of the proposed coastal bill. If we can be of further assistance or if you have any questions in this regard, please call me at 202/634-4235.

Sincerely,

Richard B. Roberts (for)

STATE OF ALASKA

DEPT. OF ENVIRONMENTAL CONSERVATION

JAY S. HAMMOND, GOVERNOR

POUCH O—JUNEAU 99811

May 17, 1977

SB 227

The Honorable Kay Poland
Alaska State Senate
Capitol Building
Juneau, Alaska 99811

Dear Senator Poland:

We have been tracking the progress of SB 227, the bill whose goal is to expedite the State's permit process by providing the "one stop shopping" for permits and to provide a permit information system. As one of the bill's original sponsors, I know that you share my commitment to make certain that the bill is implemented successfully.

As you know, HCS CSSB 227 mandates the Department of Environmental Conservation to be the "lead" agency for coordination of applications for State permits. However, apparently due to an oversight the bill was not referred to the Finance Committee of either house, and as a result I am informed that the funding of the fiscal note needed to implement the bill may not be provided. If no funds are appropriated, this means that the Department will be unable to implement the bill within the time frame established in it. We would be required to delay implementation until fiscal year 1979, and then only if the budget process results in funding for that fiscal year.

As you can see, the Department faces a serious dilemma. To implement HCS CSSB 227 we will need funding from the Legislature. The Department complied fully with the Legislature's administrative procedures by supplying fiscal notes to the appropriate committees. Therefore, I hope that you will be able to obtain funding, perhaps by ensuring that the Conference Committee on the Budget appropriates moneys to implement this bill.

If you have any questions on this matter, please do not hesitate to contact me.

Sincerely,

Ernst W. Mueller
Commissioner

Enclosure: Fiscal Note

CSSB 227 "PERMITTING"

SB 227, the proposed "Environmental Coordination Procedures Act" (ECPA) is designed largely around a bill passed by the Washington State Legislature in 1973. The bill is designed to facilitate communications between the public, including applicants for permits, and state agencies which have jurisdiction over various permits. The bill establishes a procedure, optional with the applicant, by which all permits necessary for a particular project may be applied for, and processed, as a single unit. A single, joint public hearing on all permits is provided for, as well as a single public notice procedure.

As envisioned, the bill has the following objectives:

1. To provide a regularly, accessible local office where information on the requirements for federal, State, and local permits may be acquired. These, the so-called "Permit Requirements Information Centers," are to be established in the Office of the Commissioner of Environmental Conservation, and each regional office of the Department of Environmental Conservation.

2. To provide a single master application form, which is submitted to the Department, and circulated by it directly to other State agencies. The other agencies must declare, within 15 days, whether they require permits of the applicant and, if so, which permits. Agencies which do not so declare may not subsequently require a permit of the applicant for that project.

3. To provide for an expedited process by which all permit applications, as identified by State agencies, are transmitted by the Department to the applicant, are returned by him to the Department, which subsequently coordinates the permit processes of other agencies. Thus, the contacts between an individual and a potentially large number of State agencies can be limited to a single contact with one agency. In the event of problems with a particular project, communications between all agencies and the applicant are facilitated, but if no such problems arise, the applicant contacts only the Department of Environmental Conservation.

4. ECPA would help coordinate the decision-making process for all State agencies, through a mandated information flow, but it would not remove or alter an individual agency's decision-making authority.

5. If a public hearing is found to be required after polling all affected agencies, ECPA would require a single public hearing at which all the various views of the agencies, the applicant, and the public can be heard.

6. The ECPA process would eliminate guesswork and undue delays in permit processing; a firm time sequence is established by law, this sequence can be extended only for overriding considerations.

7. The Department of Environmental Conservation would be the administrator of the program, coordinating the efforts of the various State agencies. ECPA would not give DEC any new jurisdiction or new power over other State agencies. ECPA specifically retains the existing authorities of State agencies.

8. ECPA would provide for proof of conformance with local government requirements before State permits are issued. In a real sense, local governments would then have a "veto" or certification power over a project through denial of certification.

9. The committee substitute allows for the withholding of the final permit until ownership of the land is established, but requires the application process to continue concurrently with acquisition. As a practical matter, any state land involved is usually a part of the application process.

It should be understood that the ECPA process does not, necessarily, expedite the permit process. An applicant can choose to handle each required permit on an individual basis, although this could potentially be more time consuming. Most permits for small projects are handled routinely by State agencies, many simple ones in a matter of days or hours. The ECPA process, in that it has a minimum time requirement of 150 or so days between master application filing and permit issuance, would not be chosen by a project sponsor which had only a few, simple permits needed.

More complex projects, such as oil refineries, power plants, ~~pipelines~~, etc., would be required to have a much larger number of permits, some of which, because of legal requirements or built-in delay factors, may take 180 days or more for processing. For example, the discharge permit issued by the Environmental Protection Agency under the National Pollutant Discharge Elimination System requires that permits be applied for 180 days prior to discharge. State requirements vary; many have mandatory 30- or 60-day waiting periods, although extensions for cause are allowed. Many State permit processes do not mandate time schedules, and potentially the applicant could suffer undue delays without recourse. By mandating a maximum time schedule by which all permits must be processed and issued, ECPA would assure the applicant of an answer within a time certain.

The ECPA permit process is by no means without cost to the public. Costs previously borne by the applicant, and his consultants, if any, would be partly borne by the State in copying permit applications, distribution, and coordination costs. Many State permit and approval programs are conducted at no cost to the applicant, and those that do not always relate actual costs of permit processing to the fee. In addition, the establishment of the Permit Requirements Information Center would entail costs, both in manpower and material.

Insert 1

Existing fee schedules are retained, and nothing in the Act prohibits amending the fee schedules, if necessary, to meet any added costs.

3/14/77 Ron Skoog
Com. Mueller

Re: SB 227

An Act regulating the procedure on applications for permits for the use of the state's air, land, or water resources. (construction projects)

Summary:

Establishes a simplified procedure and a degree of certainty for the processing of permit applications.

1. Master application is made to Department of Environmental Conservation. 46.30.030.

2. D.E.C. circularizes all other state agencies which must respond within 15 days or lose their option to participate further. 46.30.030 (b) (c)

3. D.E.C. gathers all agency requirements and submits to applicant for completion. 46.30.030 (e)

4. D.E.C. returns completed forms to agencies and within 30 days makes notice of public hearing, unless none of the agencies have requested a hearing. If no public hearing is requested, public shall have 30 days to submit views in writing. 46.30.030 (f) and 46.30.050 (a) (b)

5. If hearing is required it shall be held not less than 20 days, nor more than 30 days following last publication of notice of hearing. 46.30.050

6. Final decisions from the state agencies must be forwarded to D.E.C. within 60 days following hearing. 46.30.070 (a)

7. If any agency denies the permit it must state its reasons and also present an alternate means for completion of the project. If the agency believes no alternate means is feasible, it must provide written reasons for that conclusion. 46.30.070 (c)

8. Any person denied a permit by a state agency may appeal to the Superior Court. 46.30.090

9. The Bill is also a repealer, in effect, because the procedures described are in lieu of any regulations enacted before or after the legislation. 46.30.110 (a)

10. All local and federal laws must be complied with before final permit is issued. 46.30.130

11. Establishes public information centers in all regions. 46.30.160

12. Excludes ATC and APUC. 46.30.200 (4)

13. Does not include applications to lease, purchase, or otherwise acquire state land. However, if the permit application is for construction on land to be acquired from the state, the Bill requires that the state agency or municipality promptly abjudicate the application for the land or water filed by the applicant. 46.30.040

14. Maintains fee schedules. 46.30.120

15. See all definitions. 46.30.200 (1) - (8)

16. Passage of Bill would be a public service.

Unwelcome Mat

SOMETHING HAPPENED in California recently that deserves the attention of thoughtful Alaskans. The Dow Chemical Co., after spending more than two years and millions of dollars attempting to get clearance for construction of a petrochemical complex on the Sacramento River, folded its tent and pulled up stakes. The $500 million it had set aside for investment in California now will be allocated to projects in other states.

Those who don't like corporate growth will cheer. The environmentalists who scattered thorns in Dow's path can hail their victory. But there is much more to this than such a simple reaction.

In a report in the Seattle Times on Feb. 17, staff reporter Paul Andrews, who is on leave attending Stanford University, wrote:

"In many ways, the Dow project was just another industry-vs.-environment imbroglio. But there was one difference: Dow didn't fidget or bellyache or mutter idle threats, it just up and quit. And it refused to reconsider its decision."

IT WAS a decision of some magnitude in California, and one which has shocked many people in the state.

"During its short-lived existence," wrote Mr. Andrews, "the Dow proposal was heralded as a major shot in the arm to California's job-hungry (9.1 per cent unemployment) economy. The complex, promoted as the first of its kind on the West Coast, was to cost $500 million, create 1,000 construction jobs over a five-to-eight-year period and provide more than 1,000 permanent jobs with an annual payroll exceeding $15 million."

What happened? According to the Seattle Times report, Dow Chemical spent $6 million to obtain 2,700 acres of land on the north bank of the Sacramento River, 40 miles southwest of the state capital, for a project designed to cover 800 acres of industrially zoned property. It then proceeded to spend 2½ years and $4.5 million trying to get clearance to proceed.

The trouble was that 65 permits from 12 local, state and federal governmental agencies were required. After 30 months and $4½ million, Dow had managed to obtain only four of the 65 permits.

At that point it threw in the towel.

THE DAY BEFORE the company announced it was pulling out, Gov. Jerry Brown was in New York trying to convince financial and business leaders that there was no truth to a industrial plant-siting report which listed California as having one of the nation's worst business climates.

Now California officials are frantically trying to see if there isn't some way to reduce the impossible hurdle of existing permit requirements. And the governor is proposing the expenditure of $52 million in tax money to create about 5,000 state jobs.

It's worth noting that a team of high-ranking Dow Chemical officials visited Alaska a year or so ago and got the cold shoulder from members of the administration of Gov. Jay Hammond. The company was looking to Alaska at the time as a possible site for petrochemcial facilities using natural gas from the North Slope.

THE CHILLY REACTION in Juneau surprised the Dow officials. They told a meeting of Anchorage businessmen about it the next day. And they said then that there were other places for them to invest their company's money, without wasting time and effort in a state where they were not welcome.

Now California has been given the same message, in a much more dramatic way. The company's interest in Alaska was merely preliminary and exploratory. In California, the company did invest time and money in the apparent belief its project would be a welcome addition to the economy.

When it turned out otherwise, after a costly lesson, the company went elsewhere. What has happened to the huge sum of money originally slated for capital development in the California project?

The Seattle Times reporter told it simply:

"The $500 million has been reallocated to projects in the Midwest and Canada."

FISCAL ANALYSIS SB 227

The difficulty in preparing a fiscal analysis for this bill stems from it's optional nature. We are not sure how often this procedure will be utilized by the public. Washington State established a similar optional system in 1973. By [illegible] of the 119 applications received, 10 were active, 25 permits had been issued and 84 were withdrawn. Basically their system is used in determining the various agency positions on a permit prior to withdrawal. Assuming similar usage in Alaska, say for the purposes of this analysis, 30 permits per year for major projects; the tasks required by this bill and their associated costs are:

1. Develop master application format, print and distribute.

Object Code	Item	Cost
300	development, printing and distribution	$2,000.00

2. Local government certification of project proposals

   Fiscal impact on local governments only

3. Receive screen and process master applications

   Costs can be absorbed in Field Office and Permit Information Centers.

4. Establish a tracking mechanism. Once established, log and process master applications to other agencies.

Object Code	Item	Cost
100	Clerk IV	$15,270

5. Process agency responses to master applications

   Costs included in #4 above.

6. Mail necessary applications to applicant. Send complete applications to other agencies.

   Costs included in #4 above.

7. Verify land and water ownership

   Costs may increase for applicant but can probably be absorbed by the Department. The applicant would be required to submit the proof of ownership.

8. The Department must cause an advertisement to be placed at the applicants expense in the local papers, once a week for three weeks.

   To avoid costs here the applicant would be required to show proof of publication. Therefore State costs can be absorbed into the position established under item #4 above.

9. Public hearings must be held on controversial permits. Assuming half of the 30 permits per year require hearings at a cost of $1,500.00 per hearing costs become $22,500.00

Object Code	Item	Cost
200	travel	$15,000.00
300	hearing and transcription	$7,500.00

10. Hearing information must be summarized and distributed.

Because this activityis already done to some extent, the cost to summarize the additional hearings can probably be absorbed by existing and new positions and associated costs discussed above.

11. Final decisions by other agencies must be received and processed through to the applicant as a final permit.

Costs included in #4, above.

12. Information Centers are required at each regional office and in the Commissioners Office in Juneau. Assuming a contractual arrangement with a municipality where Regional Offices exist to be just as expensive as establishing these centers "inhouse", the costs become.

Object Code	Item	Cost
100	Ad. Assistant I - Anchorage	$18,465.00
100	Ad. Assistant I - Valdez	$21,885.00
100	Ad. Assistant I - Fairbanks	$21,105.00
100	*Ad Assistant I - Juneau	-0-
	Total	$41,455.00

* Costs for Juneau position can be absorbed in #4 above.

13. Contracts for Local Permit Information Centers may be initiated with outlying communities. Assuming no additional personnel would be hired, the costs should be minimal. Estimate 1,000/year support costs for perhaps a dozen centers

Object Code	Item	Cost
300	12 Local Information Centers	$12,000.00

14. Miscellaneous support costs for each center and new position

Object Code	Item	Cost
400	Commodities	$1,200.00
500	Equipment for new positions	$4,000.00

Re: SB 227

An Act regulating the procedure on applications for permits for the use of the state's air, land, or water resources. (construction projects)

Summary:

Establishes a simplified procedure and a degree of certainty for the processing of permit applications.

1. Master application is made to Department of Environmental Conservation. 46.30.030.

2. D.E.C. circularizes all other state agencies which must respond within 15 days or lose their option to participate further. 46.30.030 (b) (c)

3. D.E.C. gathers all agency requirements and submits to applicant for completion. 46.30.030 (e)

4. D.E.C. returns completed forms to agencies and within 30 days makes notice of public hearing, unless none of the agencies have requested a hearing. If no public hearing is requested, public shall have 30 days to submit views in writing. 46.30.030 (f) and 46.30.050 (a) (b)

5. If hearing is required it shall be held not less than 20 days, nor more than 30 days following last publication of notice of hearing. 46.30.050

6. Final decisions from the state agencies must be forwarded to D.E.C. within 60 days following hearing. 46.30.070 (a)

7. If any agency denies the permit it must state its reasons and also present an alternate means for completion of the project. If the agency believes no alternate means is feasible, it must provide written reasons for that conclusion. 46.30.070 (c)

8. Any person denied a permit by a state agency may appeal to the Superior Court. 46.30.090

9. The Bill is also a repealer, in effect, because the procedures described are in lieu of any regulations enacted before or after the legislation. 46.30.110 (a)

10. All local and federal laws must be complied with before final permit is issued. 46.30.130

11. Establishes public information centers in all regions. 46.30.160

12. Excludes ATC and APUC. 46.30.200 (4)

13. Does not include applications to lease, purchase, or otherwise acquire state land. However, if the permit application is for construction on land to be acquired from the state, the Bill requires that the state agency or municipality promptly abjudicate the application for the land or water filed by the applicant. 46.30.040

14. Maintains fee schedules. 46.30.120

15. See all definitions. 46.30.200 (1) - (8)

16. Passage of Bill would be a public service.

re: Oppn. to application for permit

Unwelcome Mat

SOMETHING HAPPENED in California recently that deserves the attention of thoughtful Alaskans. The Dow Chemical Co., after spending more than two years and millions of dollars attempting to get clearance for construction of a petrochemical complex on the Sacramento River, folded its tent and pulled up stakes. The $500 million it had set aside for investment in California now will be allocated to projects in other states.

Those who don't like corporate growth will cheer. The environmentalists who scattered thorns in Dow's path can hail their victory. But there is much more to this than such a simple reaction.

In a report in the Seattle Times on Feb. 17, staff reporter Paul Andrews, who is on leave attending Stanford University, wrote:

"In many ways, the Dow project was just another industry-vs.-environment imbroglio. But there was one difference: Dow didn't fidget or bellyache or mutter idle threats, it just up and quit. And it refused to reconsider its decision."

IT WAS a decision of some magnitude in California, and one which has shocked many people in the state.

"During its short-lived existence," wrote Mr. Andrews, "the Dow proposal was heralded as a major shot in the arm to California's job-hungry (9.1 per cent unemployment) economy. The complex, promoted as the first of its kind on the West Coast, was to cost $500 million, create 1,000 construction jobs over a five-to-eight-year period and provide more than 1,000 permanent jobs with an annual payroll exceeding $15 million."

What happened? According to the Seattle Times report, Dow Chemical spent $6 million to obtain 2,700 acres of land on the north bank of the Sacramento River, 40 miles southwest of the state capital, for a project designed to cover 800 acres of industrially zoned property. It then proceeded to spend 2½ years and $4.5 million trying to get clearance to proceed.

The trouble was that 65 permits from 12 local, state and federal governmental agencies were required. After 30 months and $4½ million, Dow had managed to obtain only four of the 65 permits.

At that point it threw in the towel.

THE DAY BEFORE the company announced it was pulling out, Gov. Jerry Brown was in New York trying to convince financial and business leaders that there was no truth to a industrial plant-siting report which listed California as having one of the nation's worst business climates.

Now California officials are frantically trying to see if there isn't some way to reduce the impossible hurdle of existing permit requirements. And the governor is proposing the expenditure of $52 million in tax money to create about 5,000 state jobs.

It's worth noting that a team of high-ranking Dow Chemical officials visited Alaska a year or so ago and got the cold shoulder from members of the administration of Gov. Jay Hammond. The company was looking to Alaska at the time as a possible site for petrochemcial facilities using natural gas from the North Slope.

THE CHILLY REACTION in Juneau surprised the Dow officials. They told a meeting of Anchorage businessmen about it the next day. And they said then that there were other places for them to invest their company's money, without wasting time and effort in a state where they were not welcome.

Now California has been given the same message, in a much more dramatic way. The company's interest in Alaska was merely preliminary and exploratory. In California, the company did invest time and money in the apparent belief its project would be a welcome addition to the economy.

When it turned out otherwise, after a costly lesson, the company went elsewhere. What has happened to the huge sum of money originally slated for capital development in the California project?

The Seattle Times reporter told it simply:

"The $500 million has been reallocated to projects in the Midwest and Canada."

SB 103 - OIL & GAS PROPERTIES PRODUCTION TAX

SB 238 - OIL & GAS PROPERTIES PRODUCTION TAX

SB 306 - CABINS WITHIN STATE PARKS & GAME REFUGES

HB 195 - DRILLING OF DEEP WELLS

HJR 15 - OFFSHORE AREAS, GEOLOGICAL & GEOGRAPHICAL DATA

AGO 547859 +

THE FOLLOWING PAGES WERE TREATED AS
A UNIT IN THE ORIGINAL FILE.

RICHARD KILGORE - Okay, I would then like to turn to the severance tax. As I said in my general remarks, if you're interested in raising the severance tax, both of these bills that we're going to consider seem to in general follow our guidelines, and has to do with more the specifics of how each one of them works. We'll start with HB 144, SB 103. This bill does several things. One is it moves to lease averaging rather than wells in the calculation, and we think that makes an awful lot of sense from the administrative standpoint, and probably should be done even if you don't raise the severance tax, probably even amending your present severance tax would do that, and would make sense. Page 1, Line 11 of the bill m ves the point of tax from the wellhead to a new point of production which is later defined.

SENATOR HUBER - How is this defined?

RICHARD KILGORE - It's defined back on Page 4, line 9, gross value at the point of production means for oil, the value of the oil at the point where it is metered or measured in a condition of pipeline quality on the premises of the lease or property from which it is recovered. So in come cases it would change the point of taxation from the wellhead to somewhere beyond up to a point where it was meter measured and made put in pipeline conditions, so it clearly, and this is pointed out by someone else, moves the point of taxation

and in a sense in certain situations it would tend to tax the transportation and upgrading of the crude oil. That's clearly the case.

SENATOR HUBER - I think it had another reason for being in there. I think it was on account of that Kenai deal to where if they transferred our royalty share portion that went into resale that they were subject to the APUC, and doing it this way, while they pushed their royalty share through our line, they were not subject to our APUC. There was quite a problem on that in Kenai, it happens to be in gas, but we're talking jointly here and I think this was done for the company's benefit.

RICHARD KILGORE - Well, I think also in Cook Inlet, as I understand it, there have been continuing disputes about questions of wellhead and where one taxes, and I think this is all intended to straighten this matter out by legislation. This is where it is, and we don't have to argue about backing out transportation or whatever, this is what they're talking about. This makes administration of it easier, clearly, I think that some of the testimony yesterday it was complained that there would be a cost to the companies in a sense that they wouldn't be taxed on transporting and upgrading. I think that if it's administratively easier and there is a cost, perhaps what you should do here is get a better idea of what you're really talking about in terms of cost and dollars and

cents. What is really the extra costs that companies would bear by doing this, or some idea. I think that's how you would have to assess that. Now lets look at the tax rates in this bill. I think you are all familiar with the fact that it adds higher well brackets and puts in these higher brackets at higher tax rates than exist in the present legislation, and it also lowers the tax rates, both the cents per barrel tax and the percentage tax for lower productivity wells. Now, just to give you a rough idea of what this does, and I'd like to just give you some numbers on how it would seem to us to effect, say, Prudhoe Bay, and then look at the Cook Inlet situation under this bill. All the numbers I'm going to use are ease of comperability for 27 gravity crude oil. Now, in Prudhoe Bay, and I'm assuming for purposes of this calculation that the wellhead value on Prudhoe Bay is say $7.50 per barrel just as illustriative. Under the present tax for a 5,000 barrel a day well in Prudhoe Bay, and these figures are cents per barrel of gross production not of taxable production, but you still get an idea of the relative increase in the tax. The present tax for 5,000 barrel a day well at $7.50 is 49 and 1/2 cents per barrel of gross production. This tax for the same well, a 5,000 barrel a day well would raise the tax to 68.9 cents. That's about a 37% increase in taxation of a 5,000 barrel a day well in Prudhoe Bay. If you went to a 10,000 barrel a day well, the percentage increase and the tax is greater. As against

about 51 cents at the present time, this tax would raise it to about 80 cents, so on a very productive 10,000 barrel a day well at Prudhoe Bay, the increase there would be about 58%, increased through this tax over what you have today. The effective rate on gross barrels produced would go from about 7.8% on a 10,000 barrel a day well to about 12.2% under the new tax, so this is what it does to Prudhoe Bay, very significant increases. And the percentage as I gave you were really the effective rate on taxable barrels going from 7.8 to 12.2. So you are ending up on the very productive well, you end up with an average effective rate or taxable barrels of just under 12 and 1/2 percent in Louisiana. I think that's what was intended. So that's the impact it has on Cook Inlet, I mean on Prudhoe Bay. Now, lets look at Cook Inlet, and particularly the old oil because we've always been worried about effective taxation of old oil. Now, this bill does retain the cents per barrel feature that exists in the present bill, and it retains the cents per barrel feature with basically the same floor price as you have today. It works out for 27 gravity crude to about $6.10 today. So it retains that, but what it does at the same time is that it does lower the rates of taxation both percentage and the cents per barrel taxes in the lower well brackets, so despite the cents per barrel feature still being in there, it does lower taxes on low productivity wells below what they are today. I'll again give you some examples, and they'll

again be on the same basis as before. 27 gravity crude, and these are figures on a gross barrel basis. At the present time a 100 barrel a day well in Cook Inlet would be on the cents per barrel tax and it would pay 26.6 cents per barrel. This bill on a 100 barrel a day well would eliminate the tax. It would go to zero, and a very substantial gain for a 100 barrel per day well. For a 300 barrel a day well, would also pay under the present tax, 26.6 cents. Under this bill, under our calculations, it would drop that 26.6 to 14.2 cents per barrel. So you have about a 12 and 1/2 cent reduction for a 300 barrel a day well, and if you move up to a 500 barrel a day well, you still get a reduction. Under the present tax it would be 28.7 cents. Under SB 103 it would be 21.2. So even for a 500 barrel per day well, you're going down by about 7 and 1/2 cents per barrel, and in fact this new tax as compared with the present lowers the tax up to somewhere wells in the range of 1,000 to 2,000 barrels a day. Somewhere in that range, the new tax gets higher than the old tax, so it does provide very significant relief for low productivity wells.

SENATOR HUBER - Madam Chairman - the figures which we have in the committee they are open to him now, I think, I just wonder when he finishes there. If you have any dispute with those, I think that they confirmed his testimony.

RICHARD KILGORE - Yes Senator, we did do our own homework on this obviously, and we have had a chance to look at what legislative affairs has, and they coincide with what I'm testifying here.

SENATOR HUBER - I was wondering. It would help us a lot to know that they do or don't or if there are differences.

RICHARD KILGORE - No they don't they calculate the same way we do.

Now, so this bill does, I think, meet our objections really to the present taxation of old oil at Cook Inlet which has the high effective rates because of the cents per barrel feature. At least its present operation would reduce the tax substantially for low productivity wells, and we think that's a good feature of this bill. I should point out though, this bill does retain cents per barrel and it does retain escalation of that cents per barrel, so it is possible that under this bill we would again be back in the same problem that we have today. If the escalation manages to raise the cents per barrel tax high enough, we could be back in this problem again of taxing old oil in Cook Inlet at high prices, it's possible. The potential is still in this bill.

SENATOR HUBER - This evades it from present time, and we might have to look at it again in future years if we don't do something with cents per barrel.

RICHARD KILGORE - Yes, it may be back again.

SENATOR HUBER - Well, I'd sure look at it again, Madam Chairman, than I would to have Tom Fink for Governor.

RICHARD KILGORE - I think I was on record the first time I testified as saying that if you do retain a cents per barrel that perhaps what you do is at least consider no further escalation in cents per barrel, and perhaps that could be in this bill too. I don't know. I want to only point out that it could happen again. So that's basically what this tax does. It raises fairly significantly, the tax in Prudhoe Bay, but it does lower the tax considerably on low productivity old oil priced wells in Cook Inlet. It also has a severance tax for gas that is flaired, and a very substantial one, five times the rate. I think before you do this kind of thing and add such a tax, you ought to look very carefully at where gas is being flaired and why. There has been testimony yesterday about safety flairs and so on. I think you ought to look very carefully at what it is that you would be taxing and why the flairing is going on at the present time. Now, if what you're really trying to do is tell companies to find a use for this flaired

gas and find markets for it, I think that at the very least if there is gas being flaired now which you think you could find markets for, therefore you're going to try to compel people through this tax, somebody used the word incentive the other day, but you're compelling them through this tax that at least you ought to provide somebody with a grace period before they would pay this tax. That is, you wo[illegible]'t start right away. You would make it clear to them that they had certain time within which to find markets for this. You wouldn't penalize them in the meantime, but if you don't find gas for which it's logical to find markets, that you would say at some point in the future you're going to start paying a tax on this, so you had better get busy and look for markets. I don't think I.....

SENATOR HUBER - I think, Madam Chairman, that we should make sure in there. I think we should find out the required safety flair of no more than a certain amount except during an emergency blowout or something like that. The idea was, as long as it's economically unfeasible to take small amounts of gas and reinject them, the State loses its royalty share on it, and the nation loses the energy strictly because at a given space in time, using if you will excuse me, a cash discounting flow and everything else, that we determine its value and we say it's nothing, and what's nothing is moving down the pike another twenty or thirty years may be all we have, and Prudhoe Bay, in spite of an absolute no

flair restriction has been allowed to flair and everybody knows it. Somehow or other, it does have to be stopped, and if you make it so it isn't economically feasible to flair, then it becomes economically feasible to build a small compressor system for saving.

GEORGE SILIDES - Madam Chairman, I know that the flairing _____ as Huber pointed out, _____ that the flairing of course, and the word allowed is important, they get permission from the State, and we have to do something about the bill, that we don't have competition between the taxing department and the Department of Oil and Gas Conservation. They are the ones that give the permission, and you have to apply and you have to point out that it's being done with safety and so on. I don't think that the bill intended to penalize somebody for entering into a safety feature, and so am I correct Mr. Kilgore?

RICHARD KILGORE - I would assume that that's the intent. You'r not really interested in taxing gas.....

SENATOR HUBER - But that board still has the power and makes the exemptions and has been constantly making the exemptions, and it's a matter of record, both at Prudhoe Bay and elsewhere, they make the exemptions, they're legally made, but the product is gone, the resource is gone, it is flaired, and so at least putting in a fairly stiff recovery there, does at

least give us something off of our severance tax that went up in flair too.

GEORGE SILIDES - Madam Chairman, I might make another comment. I think that in view of the comments being made, we're going to have to look into the legality of being able to tax a safety feature.

SENATOR HUBER - No, we don't tax the safety feature. Let's not get crossways on that. We should put an exemption in here for the safety flair only, and somewhere we need to come up with a figure of what is the amount that may be flaired to date per well or per safety flair. We definitely shouldn't tax them on what is a safety requirement. But there isn't a provision. The gas that's being burned in significant, is not being burned in so called legal actual safety flairs. It's being flaired otherwise by legal permits by the board.

CHAIRMAN POLAND - I think we have to check with the Board as to why they are giving the tax.

SENATOR HUBER - That's why the Governor's bills has it in it. That's why committee's bills has had this for two years, and we should certainly, like Dick says, make sure that we don't tax the necessary safety flairs. I asked yesterday what

was, and they said a million cubic feet. That's a thousand MCF's a day. I'm not sure that that isn't considerably over what's needed to burn there in case, I need a good definition of a safety flair.

RICHARD KILGORE - I think also you might consider if you really feel the gas is being flaired that you don't want to be flaired other than as safety purposes or whatever, that's something you might consider as an alternative just tightening up your regulatory bill and your regulations rather than do it through a taxing approach.

SENATOR HUBER - We've done everything but tar and feather the board.

REPRESENTATIVE OSTERBACK - Madam Chairman, could anybody tell us how much gas they will be flairing at Prudhoe Bay? Anything that burns is energy. We're talking about we're running short of energy. Somebody talked about the railroad. If they took it in there, they could take out about a hundred tanks of gas a day, and they didn't think it would be enough to pack that out with flairing, and that would be an awful lot of energy, but most of us don't really know what this gas is with the flairing, but I know anything that burns is energy, and we're talking we're running out of energy. So I think there should be something done about it. Anything

that you can save as energy, you can sell. There's no problem in that.

RICHARD KILGORE - Well, I agree with you, if what we're really talking about is waste, then I think we should eliminate that. It is energy, and you're absolutely right, and I think you should look very carefully at what's going to happen at Prudhoe Bay, and how your regulatory people will handle it.

SENATOR HUBER - Might we, Madam Chairman, Al brought it up and it's very important. I think that it's understood that they have stopped flairing or are to stop flairing. It was only for that refinery that they flaired at Prudhoe Bay, and they didn't pump it back down the gas well even though they were drawing gas out to run the refinery because it would have cost more money than the gas was worth, so naturally the gas was worth nothing, so it wouldn't cost money to pump it back down into the ground. If it had a value of 20 cents an MCF, it would have been a lot cheaper to pump it back down into the ground, but just so that the record is straight, we aren't really looking for flairing at Prudhoe Bay, but if you will take a look at the Valdez terminal, you will find that we don't flair no more, but we've got three huge oxidizers there, and there's going to be a tremendous amount of energy unless the LPG's that are in that gas and the vapors that are in the gas at Valdez,

unless there's a plant built to recover those and use them which is not in the plan, it is going to effectively flair trillions of BTU's before Valdez is over with. That's because the plant and the tanks will not stand the pressure in the storage.

GEORGE SILIDES - Madam Chairman, I think the point is well made that something's got to be done about defining what is meant by safety gas, what is being wasted, and I think also that the bill had intended to address the bottom of the possible wasting of carbon dioxide. There was a considerable amount in this particular natural gas, and I suppose what we're getting to is that we have to do something about those things, either by definition or by amending the bill. I think this is a point that we're going to have to look into. I don't think we're going to get it solved right here.

SENATOR HUBER - I think they're willing, George, not to flair the carbon dioxide, but I'm not sure if they will get rid of it.

GEORGE SILIDES - It doesn't burn anyway, Senator.

CHAIRMAN POLAND - We'll be checking on this flairing part.

SENATOR HUBER - Well, it's important on both ends. I think that the bill needs to not penalize them, but by all means

should be retained in the bill, and we may of course have to put it in in some other places. I don't think this is going to effect it when it comes to the flairs in Valdez.

RICHARD KILGORE - I'd like to move on the the second severance tax bill, and that's HB 321, SB 238. Now, basically this tax changes the tax rate to 10%, but it also has a cents per barrel feature of 75 cents per barrel, so it has an effective floor price of $7.50, and it also has what _____ for an economic limit factor built into it, and I think Mr. Wilson yesterday did quite a good job explaining how the mechanics of this worked, and he also provided an example for you that I think was probably quite useful. Basically what the bill does is give you the first hundred barrels a day as an allowance for operating costs is what it amounts to, and wells producing more than 100 barrels a day, they pay then an increasing fraction of the 10% for the 75 cent tax is the way it works, and it's a continually increasing thing as well productivity moves above average well productivity moves above loo barrels a day. Very roughly, a 100 barrel a day well would pay no tax under this bill. A 200 barrel a day well would pay about 43% of the tax. It isn't 50% because as you might think by taking 100 to 200 because it's taxable barrels only that count. That is the 200 barrel a day doesn't produce 200 barrels that are entirely income to the company. Twelve and a half percent of those go to the State.

GEORGE SILIDES - Mr. Kilgore, it's 43%.

RICHARD KILGORE - It's 43%, 200 is 43% of either 10% of value or 75 cents a barrel depending on which it is.

GEORGE SILIDES - That's what I wanted you to say.

RICHARD KILGORE - For a 300 barrel a day well it would be 62% of these basic rates and on a 4,000 barrel a day well, it would be up to 89% of this. This is the way it works, and it amounts to a continuous function as against the step schedule that you have in your present legislation. As I said, it amounts to a continuous function and in principal we find it as kind of an appealing concept as against the step schedule. Now the other feature of it is that one can't apply for an economic limit factor greater than 100 barrels per day well average if you can prove it, and what you basically have to prove is that your operating costs that you require, out of pocket operating costs are greater than what you would get with 100 barrels of production per well. You would need more than this to recover your operating costs. Now, there appear to us to be a couple problems with how this actually works. First of all on Page 3 Line.....

SENATOR HUBER - Madam Chairman, I would note that we've got John Messenger here, too. This is the same problem that came

up yesterday in talking with the industries. We might want John to answer some of these.

RICHARD KILGORE - It has to do first of all with how costs are defined, and that starts on Page 3, Line 16, subsection C here, and as was pointed out in testimony yesterday, it is not clear that the cost category specifically allowed here really provide for all the kind of out of pocket expenses that a producer might have, and basically that's the concept that you're trying to get at, whatever is out of pocket expenses, and it's not clear to us that that is the case and some questions were raised yesterday and I think you ought to consider those too, but what I think is more important is that after calculating the costs here, you then have to determine how many barrels are necessary to recover, that is if more than the hundred that you are allowed anyway. Now the problem with it is that the way that the bill was written, you don't take your costs and divide through by the price of oil that you as a producer receive. That is your actual price, if you're an old oil producer and getting $5.00 per barrel, you don't divide through by $5.00 to see how many barrels you need to recover your costs, but you use another deemed price to do this, and the deemed price is acquisition, this is Page 3, Line 29, its acquisition costs CIF at westcoast refineries for imported oil of like quality and then you net this back to Alaska, so you're not doing it on the price you actually

receive, you're doing it on a deemed price that you may not be receiving, and it seems to us this causes problems.

SENATOR HUBER - Could we at this point if it's convenient, I wonder, Sterling isn't here, but John is and this was the question yesterday, I understood from the testimony by the State that as of starting in December or sometime like that that these wells that were in economic trouble shall we say, that these figures that you have put in here talking about _____ price are actually what's happened. They are now being allowed, these higher prices on the producer's share, but not upon the State's royalty share. The argument yesterday, and I think we're right into it again today, is whether we're just talking about a possible deemed price working it back from San Francisco or whether we're truly talking about what they're going to get, and the industry said no this was unfair that wasn't what they were going to get, so we're right at the nitty gritty, and I think you can help us John.

RICHARD KILGORE - Perhaps, Senator, I'm going to give an example, maybe I ought to do this and then we can talk about it.

SENATOR HUBER - Okay, just so that John, he wasn't here yesterday, so he's alerted. My stand was or what I saw was that you fellows put this in here because that's actually

what the oil companies are getting, and so you were getting right to the nitty gritty, and they said no this is what they might give them, but I understood Sterling to say that this had actually started in December, and I don't think this was in testimony, I believe this was talking in the afterwards that it actually had started in December and the State had been denied that increase, but the producer's share had been allowed, so if that predicates it and as he goes on if you can straighten this out, it will help me a lot.

RICHARD KILGORE - I'd like to just give a little example of what we're talking about here. If we had an operating cost for a well or wells whatever the unit or something, and say $2,800 a day, and these were direct operating expenses defined properly however, and if you didn't get these revenue enough to do this, you would shut down. Now, if one looked at the foreign price and then netted back to Alaska, let's say you came up with $14 just to make the arithmetic easy, you came up with $14. Now in calculating your economic limit factor here, you would divide through by that, and that would give you $2,800 divided by $14 is 200 barrels a day. You're economic limit you could then justify is 200, rather than the 100 which you had presumed. That means you're getting more, but let's say that the producer only gets $5 a barrel for oil because he's receiving the old oil price in Cook Inlet. He doesn't bet $14, he gets $5. Well for him to actually recover the

$2,800 his total expenses at $5 he's actually receiving for his oil, his real economic limit factor is $2,800 divided by $5 or 560 barrels, so that in fact, his limit factor, that is the number of barrels he needs before he's got to shut down, because he doesn't make it out of pocket cost of 560 under this bill it appears to me, he would only get 200. I don't think it really gives you the results that you intend. The result that you intend is to provide relief for marginal wells. It doesn't appear to really serve the intended purpose.

SENATOR HUBER - That's at $5.61?

RICHARD KILGORE - That's at $5.00 even.

SENATOR HUBER - But doesn't this other deal work to raise that?

RICHARD KILGORE - Well, the other thing we're talking about is price relief under FEA regulations. I think that's really something different here. I'm addressing.....

SENATOR HUBER - That's not five dollar oil. You know, if we're talking about his economical limit on the well then we assume it to be $5 00 oil, but he is actually receiving $10.95 for it because it's below a certain economic limit

already established, then we're dealing with something that doesn't exist, and that's what I'm trying to get into this, and I thought that that was why the State had drafted it.

RICHARD KILGORE - Because it assumes that the Federal government will always bail out people, is what you're saying, other than royalty owners.

SENATOR HUBER - My information was, it didn't only assume, it was based on what was happening. Can you clarify that John?

JOHN MESSENGER - Let me just make a couple comments. I guess it's true that one position that we've taken on this bill that our taxes should not be based on the artificial price set by the Federal government, and the Federal government set a price of $5.00. Our position is that we shouldn't be content with the tax based on that artificial price, and that's why, one, we've set the cents per barrel floor, likewise when you're figuring the economic limit factor, again, we say the true economic limit is not how many barrel are produced at the artificial price, but the amount of barrels they would produce using the true value of that oil, pre-market oil. We should insure ourselves that so many cents to so many percent of that pre-market oil because that is our resource and we should get at least that percent out of it. Secondly, is that producers are

reaching their break even point which they will stop producing. There is a procedure by which they can make application to the FEA and get price relief and with that higher price they can produce longer, but the FEA has said that they will give price relief only to the producers, and not to royalty owners, so if a company is reaching its economic limit in Cook Inlet, and they go in for price relief, they are given that price relief. They will raise their price, but they will not raise that price in the terms of the amount of royalties which _____. So, it's two things, one is the tax rate and the economic limit factor should be based upon the true value of the oil, and secondly that producers are protected through FEA regulations, but the State is not.

SENATOR HUBER - Then I guess what he's saying is that if someone's going to shut down the production there, by it being below economic limit on $5.00 oil, the State is advocating that we put the monkey on the fed's back and say you did it, you set an artificial price, we're going to set our tax based on free market price, and if you want to save that resource, save that company, you can turn around and do likewise what's reasonable. I'd say it's what I call putting the monkey on the Fed's back. They caused the problem. I happen to be strongly in agreement with the State's stand on that, and compliment them for it because why should we throw away our royalty share and our

taxing ability because somebody forced an artificial price down our throut, and is forcing that same artificial price down the throat of the oil companies.

RICHARD KILGORE - Look, I'm going to address myself to the question of the artificial price, that's part of what I'm doing here, and I think the Commissioner took issue with earlier testimony I made when I said I thought this was a flaw in the thing, and it certainly was, I thought, a flaw in terms of its purpose of providing relief, and now I do understand why they do this which is another objective, than what appeared to be the intent of the bill and I'm going to come back to the whole question of the artificial price. It's very clear they did this by design. I'd like to again, as you asked, talk about just very roughly what it does to Prudhoe Bay and then to Cook Inlet, and then discuss the consequences of that. Again, for Prudhoe Bay, looking at 5,000 and 10,000 barrel a day wells at Prudhoe Bay, this bill also raises taxes significantly on those wells as does the other bill, as does HB 321 that we looked at before, excuse me HB 144, that we looked at before, but it does not raise them as sharply as the other tax. If we take a 5,000 barrel a day well, I said that, and I'm not going to run through all the numbers here, I think but that the other tax for a 5,000 barrel a day well raised the tax about 39% on a 5,000 barrel a day well. This tax would raise it about 29% it appears to us using the presumed hundred

barrel figure. The discrepancy between the two gets larger at very productive wells because of the steep rates near the end of the schedule in the other bill, and for a 10,000 barrel a day well, HB 144 raised it 58%, this would raise it about 27% on the very productive wells, so if it both increased taxes on Prudhoe Bay, clearly the one, HB 144 would increase them significantly.

SENATOR HUBER - That would be effective of what of 5 and 10.

RICHARD KILGORE - Okay, the effective rate would be very close to, on taxable barrels it would be very close to 10%. On 5,000, it would be 9.8% and 9.9% on the 10,000. It approaches 10%.

SENATOR HUBER - Just slightly under ten percent for a total maximum. Or fully 2 and 1/2 percent, a little over 2 and 1/2 percent below Louisiana. Using the Administration's bill.

RICHARD KILGORE - That's correct.

SENATOR HUBER - And it would be right at Louisiana with the other bill.

RICHARD KILGORE - Close to it. That's correct.

Now, let's look at what happens to the Cook Inlet old oil price here. This bill as the other one for a 100 barrel a day well eliminates the tax altogether. It does exactly the same thing, but what we find troublesome is that is you go to 300 barrel a day wells, these are the wells that we're concerned with because of their productivity and the old oil price they have to bare, they get the tax there doesn't go down, but it increases. It goes up from 26.6 cents on gross barrels to 40.6 cents. It goes up by 14 cents a barrel. This tax raises it that much. On a 500 barrel a day well, it raises it by about 13 and 1/2 cents, and on a 1,000 barrel a day well. I'm sorry 14 cents increase on a 300 barrel a day well, 22 cents on a five hundred barrel a day well, and 28 cents on a 1,000 barrel a day well. What I think are particularly disturbing are the increases on the lower productivity wells. A well as low as 300 barrels a day which we already have some concern for because of the effective rate on the old oil thing has actually a fairly substantial increase in its tax burden. As Commissioner Gallagher stated correctly, you get this result because of raising the floor price essentially. You are raising the floor price from $6.10 to $7.50 and you have higher tax rates at the same time, and it's deliberately designed to do this. Now, we really feel that this kind of goes against what we feel are good principals of severance taxation. What you're saying is the producer in Cook Inlet he received a relatively low old oil price established by

the Federal government. This in turn restricts his own profitability, but then the State adds to his burden by taxing him as if he received $7.50, and it seems to us that rather than help his producing situation, this only makes the situation worse. One of the reasons given for doing this is that the Federal government is following an unwise, or I think it was described as a foolish price policy. Now, this may or may not be the case. I'm not willing to pass a judgement on that, but they're, you should know that the Federal government does have reasons for doing this. It's not capricious, they do have reasons. They have concern over the effect. What they're concerned with is this, we've had a fantastic increase in the oil prices outside the United States by the OPEC nations and if one frees the oil, the old oil price, it will go up very, very sharply. It will, perhaps in some cases, close to triple in price, and the people are concerned about the consequences of this. Rightly or wrongly, they are concerned about the inflationary impact on consumers. They're concerned about when _____ producers, because these are on old oil wells, wells production which is established at old costs and so on and therefore you have to question whether you want to give them huge increases in the price and windfalls. There is concern over that. So there are reasons, and you can argue one way or another, but there are reasons for this.

SENATOR HUBER - Would it be fair to say that those reasons are exactly on a par with the same reasons for having controlled gas prices as would be in inter-state commerce as well as setting a free-market price. It's the same principal in both cases.

RICHARD KILGORE - As deregulation of natural gas prices. Yes.

SENATOR HUBER - Deregulation of natural gas. Deregulation of petroleum would do the same thing, it would increase the price at the burner or the price at the gas tank as it comes in out of the nozel, but all of the other factors of pro and con are the same.

RICHARD KILGORE - Yes, that's right, and the concern is that if you let it go up to, and I really object to the word free-market price because we're not talking about free-market price, what we're talking about is it goes to a price administered by OPEC. That's what we're talking about going from price administered by the Federal government to a price administered by OPEC. This is by no means a free-market price. It's a market price, but one set by OPEC, and set by political reasons as much as for economic reasons.

SENATOR HUBER - Some of us are referring to free-market price though as to this free-market price that exists that we talk

about what the price would be if OPEC were not controling it. Some of us are talking about a true free-market price

---

RICHARD KILGORE - Senator, I don't know what the price would be if OPEC were not controling it.

SENATOR HUBER - We don't know. We have projections just like we do on what Prudhoe Bay is going to cost.

RICHARD KILGORE - One the one hand, if OPEC did not exist one would certainly expect over time that the price would rise at some point in time to the level of alternative energy sources which are quite high in the $20 - $25 range. On the other hand, in the short run, you do have an overhang of surplus productive capacity in the world, and if there were no OPEC, and it were perfectly free market, there's no reason why the price couldn't drop to less than $1.00 per barrel, because that's what costs are in their surplus capacity. If there were truly competitive free market, one would have $1.00 a barrel oil or less because that's what the costs are in the middle east, less than that so but as time went on, and this surplus which overhangs the market now, and which would push it down, gets eaten up and it will, one would then have prices moving off in the other direction. I don't know what the price would be. But anyway, we're talking about not letting the price, the U.S.

government as a matter of policy, not letting it go to a price set outside its own borders by an orgnaization of petroleum exporting companies, and that's what we're talking about. It's the intent apparently of the Congress not to do this because basically the idea is concerned with price impacts, concerned with windfalls, and also that there's no way of assuring that the price that would be set by OPEC is an appropriate price for our internal markets for our own costs and so forth. There's no way of knowing whether they will set a price appropriate to our cost circumstances in the United States or a price that may be very much higher than people think it is now or maybe even a price lower. Not good enough for development of our domestic resources. So this is a matter of national policy and people can quarrel.

SENATOR HUBER - Feable minded or otherwise.....

RICHARD KILGORE - Well, I don't want to characterize it. I'm trying to give you a few of the reasons for doing this, and this is a matter of federal policy. Now, but even if it is a foolish policy, or at least if Alaska views it as one, or the people who did this legislation think it is, I think that you have to ask, if that is the case, still, why do you want to then punish producers for this price policy basically. They already suffer enough from it in terms of the revenues they receive, why do you want to go an

added step and raise their taxes because of this. I don't think it's reasonable to assume that if you do this you will force national policy to change by what you do in the way of taxation here in Alaska. That seems to be reasonable.

GEORGE SILIDES - Madam Chairman, may I ask a question?

In addition to your comment of being unable to force national policy, would you think that this kind of tax is counter-productive?

RICHARD KILGORE - I suppose it's possible, I don't really know the answer to that, but I suppose there are reasons that might want to lead one to that result, and if the FEA has procedures for relief of these kinds of situations , then it sees the State of Alaska in fact imposing higher and higher taxes on such low productivity wells. I don't know. It's not inconceivable that it would enter into their thinking in this matter. Rather than providing relief, it seems that the State of Alaska goes in the other direction in this situation.

SENATOR HUBER - George brought something up here. Isn't this the fact that it effects these 300 barrel wells just because of the total tax maximum that we pay and then how we apply the mechanics of the formula. They could for instance, modify, and the mathematics of it I would have

to find out from somebody else how, so that that point would hit, maybe, more on a five or six hundred barrel a day well and maybe give as much as 10.3% or 10.4% out of Prudhoe Bay instead of an even 10%, and the formula diddled with enough to change that point to where it would be correct. Couldn't that be done?

RICHARD KILGORE - Yes it could be. If you like the basic approach of the continuous formula .....

SENATOR HUBER - Apparently you do, and I do too, and we might consider, and George's question pointed up that we might consider something from being John Messender is here, that they might give us an alternative is that reasonable Madam Chairman?

CHAIRMAN POLAND - Well yes, except today we have Mr. Kilgore with us. He's leaving on a plane and we want to take advantage of this. We can bring this up.

SENATOR HUBER - I have considered this, Madam Chairman, to be a work session with him, and it's more valuable to me, the way we've been conducting it here today, than anything that we've had.

CHAIRMAN POLAND - Well fine. Let's give him a chance to get with it.

RICHARD KILGORE - Okay, we really are concerned with how this aspect works. There are two parts where Alaska is attempting to impose its own view of what the proper price policy should be, that is if they want the OPEC price. It comes on the floor, and it also comes as I said before in this calculation of the economic limit factor again. It enters in two places, and we have serious questions about this and what you really want to do. If the basic intent of the legislation is to provide relief that you don't go off in the other direction simply because you're unhappy with the prices because this throws all the burden on the producer, and then you're going exactly against what you really want to do, and you could have economic consequences to this.

I understand your concern with the prices that you get for your oil, and you'd rather get higher prices than lower prices, and that's fine, but the question is if the price is not set at a level that you think is appropriate then what do you do about it, and I guess, it's just bothersome to us that what you do about it is throw a burden back on a producer here. That's what you're doing about it, and that then goes against what we feel is an appropriate kind of severance tax because then you run into all the kind of economic problems with this gross tax and that's our concern, and we appreciate why you think in terms of floors and why you want to get an adequate value for your oil, and so forth,

and we understand why you do it, it's the consequences.

This tax also raises the tax on natural gas. If you'll recall our testimony before, we were always pointing out to you that if you did this you would have an impact on Alaskan consumers, that would flow through to Alaskan consumers. I noticed that there is another bill which is HB 329, SB 239 which is a residential fuel credit, and I presume that the intent of this is to mitigate to some extent the impact that raising the gas tax would have on Alaska. Consumers - we're not really in a position to know how adequately it does this because this has to do with what fuel bills really are in Anchorage and so on. We really don't have the information to calculate how adequately that does that, but obviously, you are concerned with that aspect to it, and the balance of the increase of course would be assessed against exports. I think that the other thing I should point out is that here you have in this not only an increase in the tax rate from 4% to 10%, but also introduce a floor price here, that is a minimum 6.4% per MCF, which is an effective floor price of 64 cents per MCF, and I think we have the same reservations here about this as you do on the oil side. If you have oil flowing, producers getting less than 64 cents, someone mentioned 42 cents the other day, but less than 64 cents, then you start to raise the effective rate of it, and I think we have the same problems with it here as we would anywhere else, and this

also has a gas flaired feature taxation, but it's only double, not five times, and all my comments on that go for this too.

SENATOR HUBER - That is in the equalization deal?

RICHARD KILGORE - No, it's in the severance tax, itself. There's a provision.

In the end, I'd like to talk a little bit about this whole question of the overall tax burden and how you assess it, the kind of questions that Senator Rader has been talking about, but I would first just like to make a few comments on the property tax bill, unless there are some other questions here on the severance tax.

CHAIRMAN POLAND - No. I was going to suggest that when you are finished on the bill, and before you kind of wrap up, that we take a five minute break.

RICHARD KILGORE - Okay, shall I just say a few things about the property tax. I have relatively limited comments here. HB 323, SB 237, now, this extends the property tax to some other areas as you know to refineries, gas plants, and also to marine transportation, and L & G liquifaction facilities, and so forth. So it extends the kinds of things that you would tax with your property tax. Now, the only real comments

that we have here are that for each of these areas that you're thinking of proposing a property tax on, you think carefully about where that tax will actually be borne. You're talking about taxing properties for crude oil production that largely obviously is borne by producers. They realize prices in the lower '48 that are set for them, and the tax you impose is a tax which they have to bare in terms of their own profitability, but that's not necessarily the case with each of these other areas that you are extending, and what I think you ought to think about what you are doing, because if you're looking at property taxes on refining in Alaska, we would expect that most of the refining capacity in Alaska for some time to come would be basically capacity oriented to supplying low markets so that the tax that you impose on those refineries presumably would over the long run be borne by Alaskan consumers. You're assessing a tax which goes to the treasury, but eventually that tax would have to be borne by consumers if the refineries are to operate properly. So you have to worry about the incidence of the tax. If you're looking at L & G facilities you have to worry again about the consequences of this and what will happen, and who will actually bare this. Will it be a cost that will simply be passed along because the facilities under an FPC jurisdiction will be passed along as probably may be the case. It's not clear that if it's L & G or export to foreign countries whether this would be the case. Who would bare it, it's not entirely clear.

GEORGE SILIDES - Would it not also have an effect on a decision as to whether to locate in Alaska.

RICHARD KILGORE - Yes, it could under certain circumstances. If it's a cost which basically the person thinking of putting in the facility has to bare himself because he hasn't got an automatic pass along or he can't pass along to Alaskan consumers, or he can't through his regulatory process, pass it along, then surely, it would be one of those tax entering into his decision as to whether to locate in Alaska. Noone can say whether this is the thing that would swing it in the balance, but obviously, it's part of the package of doing business, if it's a higher cost, it could have some effect, yes.

The last one is marine transportation, and there, well there's a question of legality, I guess, but we can't address ourselves to those, but it seems to me you might have some concern about this one too, because you already face a problem where you are concerned with the fact that your oil may have to move to quite distant markets, for example the U. S. gulf and the eastcoast, and you're very much rightly concerned about that long haul and those high transportation costs and what it may do to your wellhead value, and if you go this route of taxing marine transportation, you obviously add to the cost of transportation, I don't know how much would be thrown up by this tax, but you are in principal anyway

adding to the cost of transporting your oil which certainly works in the direction of lowering the value of your oil, so I think that you ought to consider this as well, as I say, in each case consider the consequences, but here you're putting an added cost on transportation and it may be small, but it certainly works in the direction of lowering your wellhead value. Basically that concludes my remarks on the specifics of the bill.

I would like to conclude with a few remarks about this old question of the total tax burden in Alaska. What fair share is, and at what point do you destroy incentives, undermine profitability and the like, and of course Senator Rader has been pressing a number of people for answers to this, but as he himself in asking the question admits, there obviously is no easy answer to this question. If there were, somebody would have given it, and I can't give you an easy answer. A number of things have been suggested, all of which make a certain amount of sense. What kind of activity is there in the State has been suggested. A number of people have suggested looking at the total tax burden in Alaska, relative to other states. I have a few comments on that aspect too. It clearly is important what the total tax burden is on the oil and gas industry, there's just no doubt about that and how it compares with other states. It certainly is not just the absolute amount of dollars being paid or dollars per

IN THE SENATE BY THE RESOURCES COMMITTEE

CS FOR SENATE BILL NO. 174

IN THE LEGISLATURE OF THE STATE OF ALASKA

NINTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to the taking of oil and gas royalty-in-kind; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 38.05.182 is amended to read:

Sec. 38.05.182. ROYALTY ON NATURAL RESOURCES. Any royalty provided for in secs. 135 - 181 of this chapter shall [MAY] be taken in kind rather than in money unless [IF] the commissioner, with the consent of the board, determines that the taking in money [KIND] would be in the best interest of the state. The consent of the board is required only with respect to oil and gas royalty-in-kind under sec. 183 of this chapter. The action of the commissioner and the board with respect to oil and gas royalty-in-kind under sec. 183 of this chapter is subject to the prior approval of the legislature in accordance with AS 38.06.055, except for nonrenewable contracts not exceeding one year in duration which may be entered into to relieve a shortage of storage capacity.

* Sec. 2. This Act takes effect immediately in accordance with AS 01.10.-070(c).

Resource Dept. wants flexibility

State seeks pledge on its royalty oil

JUNEAU (AP)—State officials are seeking an unusual written pledge from Prudhoe Bay producers to guarantee Alaska's right to switch from taking its North Slope royalty oil in-value to in-kind, the Royalty Oil and Gas Advisory Board was told Tuesday.

In a memo to the board, outgoing Natural Resources Commissioner Guy Martin said he has written to all North Slope leaseholders, asking them to sign an agreement by March 15 to give the state advance written permission to take back its royalty oil with one month's notice.

The action was prompted by the recent revelation that Federal Energy Administration regulations prevent any producer from terminating contracts for the sale of their oil without the consent of the purchasers.

Since taking its oil in value through cash royalty payments is interpreted by the FEA as a contract sale, the state would not be able to later take its oil in-kind unless the purchasers concur.

Alaska's congressional delegation also dispatched letters to the board, urging that the state take all of its royalty oil in-kind as soon as production begins.

Sen. Mike Gravel said he has analyzed the federal energy law and has "concluded that state control of its royalty oil may be lost if the state at any time elect to take its royalty oil in value, rather than in-kind."

Sen. Ted Stevens said that his reading of the federal Mandatory Petroleum Allocation Act indicates "a great threat to Alaska's future welfare exists."

Rep. Don Young joined Stevens and Gravel in urging the board to make a quick decision on what to do with the state's royalty oil.

"Our best hope," Stevens said, "resides in taking our oil in-kind from the initial drop pumped" and selling it to bidders who will give the state "maximum assurances that we can withdraw our oil without opposition from them or the Federal Energy Administration."

Oil production from Prudhoe Bay is scheduled to begin upon completion of the trans-Alaska pipeline in July.

And since the state is required under its oil leases to give the leaseholders six months notice prior to taking its royalty oil or gas in-kind, the opportunity to take oil in-kind from initial North Slope production already has been lost unless the producers agree to sign the pledge proposed by Martin.

In a related issue, the board received a revised proposal for a $400 million petroleum refinery in Alaska based on a commitment for the sale of Alaska's royalty oil, the second such offer the board has received in as many weeks.

The proposal by Alaska Petroleum Co. was submitted in competition with a similar deal offered by Alaska Consolidated Shipping, Inc., a Native corporation-backed firm.

Officials of Alaska Consolidated also appeared before the board to modify their deal, and representatives for both firms exchanged verbal blows over the relative merits of the competing proposals.

The Alaska Petroleum proposal would call for the purchase of 150,000 barrels a day of the state's royalty share of Prudhoe Bay crude to use in a "world-scale refinery," which would take five years to plan and develop, company officials said.

Alaska Petroleum is a Houston-based subsidiary of the Coastal States Gas Corp., which owns three refineries with production capacity of nearly 300,000 barrels of oil a day.

A key to the Alaska Petroleum proposal is a provision to purchase all of the state's royalty oil for the first month or two that it flows, countering worries about the adverse FEA regulations.

George H. Shipley, a director and consultant for Alaska Petroleum, declined to say where the proposed refinery might be located, but added that his company has examined "six to eight" sites, including Valdez, Point MacKenzie near Anchorage and Tyonek on Cook Inlet.

Shipley attacked the refinery proposal offered last month by Alaska Consolidated, saying the company had underestimated its costs and overestimated its benefits.

But Alaska Consolidated Vice President Jim Stupp disputed Shipley's claims and said he would present a point-by-point rebuttal to the board later.

In its revised proposal, Stupp said he was "75 to 80 per cent certain" his company's plans for a $225 million refinery would prove economically feasible.

The Alaska Consolidated proposal calls for a refinery which would use 150,000 barrels of state royalty oil per day. It also calls for the state to sell the firm 100,000 barrels of royalty oil a day during the three to five-year period before the refinery would be operational.

January 10, 1978

The Honorable John L. Rader
President of the Senate
Alaska State Legislature
Juneau, Alaska 99811

Dear Mr. President:

Under the authority of art. III, sec. 18 of the Alaska Constitution, and in accordance with AS 24.30.060(b) and the Uniform Rules of the Alaska State Legislature, I am transmitting a bill to provide the Department of Environmental Conservation with sufficient statutory authority to assume responsibility for implementing the National Pollutant Discharge Elimination System ("NPDES") within Alaska.

The NPDES is established under sec. 402 of the Federal Water Pollution Control Act (33 U.S.C. § 1251 et seq.). It requires that any person discharging a pollutant into water obtain a permit from the United States Environmental Protection Agency ("EPA"). The section also provides, however, that state environmental departments with sufficient authority may implement the NPDES program within their jurisdictions. So far, twenty-seven states and the Virgin Islands have assumed the program.

In 1976, the legislature urged me to direct the Department of Environmental Conservation to assume the NPDES program "as quickly as possible." HCR 122, 9th Leg., 2nd Sess. I share the legislature's belief that water pollution control is a state responsibility, and that our citizens should be able to deal with their own state officials, rather than distant federal bureaucrats, in obtaining water pollution control permits. The primary constraint, until now, has been a lack of funding to properly administer the program. However, under amendments to the federal Act now in Congressional Conference Committee, it is likely that sufficient

federal funds will be available to remove this fiscal stumbling block. Given the probable availability of sufficient federal program grants, the time is ripe for equipping the department with the statutory tools necessary to obtain EPA approval.

The bill will not take effect until EPA has actually delegated the NPDES program to the state, and the department will petition for delegation only when sufficient program funds are secured. By meeting statutory deficiencies in advance, I am confident that the department will be able to assume the program at a far earlier date than if legislation were deferred pending sufficient funding.

The transmitted bill borrows heavily from the model state NPDES bill prepared by the Council of State Governments in 1973. The bill confers upon the department the authority to establish discharge standards according to the criteria established in the federal Act, and provides for permit procedures, and the imposition of permit terms consistent with federal requirements. The bill was also drafted to provide for delegation to the department of the federal dredge and fill permit program contained in sec. 404 of the federal Act. Under pending amendments to the federal Act, this program, as well as the NPDES program, can be delegated to the states, and, certainly, the same considerations warranting a delegation of the NPDES program apply to delegation of the dredge and fill program as well. The bill also allows the department to issue general permits for minor discharges, obviating the need for small operations to become enmeshed in regulatory details when their activities pose no real environmental consequences.

Passage of this legislation will not bring with it a weakening of water pollution control efforts. Under the federal Act, standards established by the department must be as stringent as federal requirements. The bill will, however, make the drafting and monitoring of permits a state function, and will provide for state establishment of standards for those operations for which no federal standard has been adopted.

The bill does pose a legal uncertainty. To gain EPA approval, state programs must provide that permittees consent to inspections of the discharging facilities. 40 C.F.R. § 124.45(c). In Woods and Rhode, Inc. v. Department of Labor (No. 1433, June 2, 1977), the Alaska Supreme Court ruled that the

Occupational Safety and Health Administration could not constitutionally conduct routine warrantless searches of regulated premises. The same reasoning may or may not limit the breadth of inspection authority in the water pollution control field. The bill meets the current federal requirement. If it is subsequently determined that the department cannot impose such an inspection requirement in permits, I am confident that EPA will not revoke its delegation simply on the basis of unavoidable constitutional constraints.

Sincerely,

S/ JSH

Jay S. Hammond
Governor

FISCAL ANALYSIS

ASSUMPTION OF NPDES PERMITS

The subject bill modifies existing statutes to allow the State's adoption of the Federal National Pollution Discharge Elimination System (NPDES) Permit Program. There are about 800 Federal NPDES permits issued in Alaska. The U. S. Environmental Protection Agency (EPA) currently has about four employees assigned to operate this program in Alaska.

The difficulty in preparing a fiscal analysis of this bill stems from the unspecified level of service which this program requires and the amount of man hours that EPA devotes to its operation which aren't charged directly to the NPDES Program. Currently, the Federal government appears to be devoting a minimum amount of effort to this program with uncertain benefit to the environment of the State.

This Fiscal Note assumes a level of service above that currently maintained by the Federal government but much less than maximum/optimum effort. It is anticipated that a short term contract will be developed in the near future to better define costs involved. This contract and eventual funding to support this program is to come from the Federal government. Without full Federal funding, Alaska should probably not adopt the program.

1. AS 46.03.095 permits the department to adopt by regulation effluent limitations previously promulgated by EPA, modify effluent limitations and/or adopt new limitations. This may require up to one year of effort to develop a complete set of Alaskan modifications. However, the initial preliminary adoption could be achieved almost immediately.

   One Environmental Engineer First Year only:

Object Code	Cost
100	32.0
200	4.0
300	3.0
400	.5
500	.5
TOTAL	40.0

2. AS 46.03.100 adopts Federal permits as State permits, specifies Federal violations as State violations, establishes application schedules and allows general permits. No specific costs are incurred by this section.

3. AS 46.03.105 establishes guidelines by which to issue or deny permits. No costs are incurred through the provisions of this section.

4. AS 46.03.110 permits the Department to adopt permit regulations. Because the Department is already adopting similar regulations, no additional costs are incurred by its provisions.

5. AS 46.03.120 provides guidelines for permit termination, specifies permit conditions and additionally requires a departmental response to permit applications within 60 days. Other than the staffing level necessary to attain this level of service (addressed later) no specific costs are incurred by the provisions of this section.

6. AS 46.03.107 defines monitoring and inspection requirements. This section may be construed to generate a cost to the permitee. However, in that the Federal government requires self monitoring now, no additional cost to the permitee is forseen.

7. AS 46.03.715 discusses Solid Waste permits. However because the substance of this section has already been adopted into law, this section has no effect.

   AS 46.03.865 discusses confidentiality of industrial processes and generates no costs to the State.

   AS 46.03.900 establishes definitions.

8. Should the Department adopt the NPDES program. We would be required to service between 800 to 1,000 permits. Most of the permits expire every five years. Additionally, general permits may be issued. For the major permitees (50) annual inspections are required. For the remaindar, inspections would probably be scheduled every three to five years. Additionally, general permits may be issued. For the major permittees (50) annual inspections are required. For the remainder, inspections would probably be scheduled every three to five years. Work load which this entails includes:

   a. Receive and route about 200-250 permit applications per year through the permit function in Program Coordination.

      One Administrative Assistant:

Object Code	Cost
100	22.2
200	1.0
300	4.0

SUMMARY - CS FOR SENATE BILL 399

"AN ACT MAKING A SUPPLEMENTAL APPROPRIATION TO THE DEPARTMENT OF FISH AND GAME, (d)(2) TRAVEL, AND SALMON TRANSPORTATION."

SECTION (1) OF THE BILL APPROPRIATES $41,800 FROM THE GENERAL FUND TO THE DEPARTMENT OF FISH AND GAME TO COVER EXPENSES RELATING TO (d)(2) PROPOSALS WHICH WERE NOT INCLUDED IN THE FY 78 BUDGET.

THE FUNDS HAVE BEEN AND WILL BE USED FOR:

(1) PRESENTING THE STATE'S (d)(2) POSITION

(2) PREPARING MAPS, BOOKLETS, OVERLAYS, ETC.

(3) ASSISTING THE CONGRESSIONAL DELEGATION

(4) ANALYZING (d)(2) LEGISLATION

(5) PUBLIC INFORMATION

(6) TRAVEL

SECTION (2) APPROPRIATES $68,700 TO THE DEPARTMENT OF FISH AND GAME FOR EXPENSES INCURRED IN AN EMERGENCY FISH LIFT ON THE RUSSIAN RIVER LAST SUMMER. THE LIFT WAS NECESSARY BECAUSE OF UNUSUALLY HIGH RAINFALL WHICH PREVENTED SOCKEYE SALMON FROM PASSING THE FALLS TO THEIR SPAWNING GROUNDS. LIFTS OCCURRED DURING THE PERIOD OF JULY 7-19 & AUGUST 13-18. THE RUSSIAN RIVER SYSTEM ANNUALLY CONTRIBUTES AN ESTIMATED 30 PERCENT OF THE COMMERCIAL SOCKEYE HARVEST IN COOK INLET, AND CONTRIBUTES 8,000-12,000 FISH EACH YEAR TO THE SPORT FISHERY.

OF THE TOTAL APPROPRIATION, $41,600 IS FROM THE GENERAL FUND WITH THE REMAINDER FROM OTHER FISH AND GAME FUNDS.

02-0018

STATE
of ALASKA

MEMORANDUM

SB 399

TO: Ron Lind, Director
Division of Budget and Management
Office of the Governor

DATE: January 27, 1978

FROM: Ronald O. Skoog
Commissioner
Department of Fish and Game

SUBJECT: FY'78 Supplemental, (d)(2)
Support Activities

The Department of Fish and Game, Division of Game, requests a supplemental in the amount of $47,800. This supplemental covers projected expenses and expenses incurred to date in the Department's support of the State's (d)(2) position in Congress. This supplemental includes the $11,000 already approved by the Governor on page 4 of the Executive budget document.

At the time that the Department's representative on (d)(2), Mr. Ron Somerville, was detailed to assist the Governor's Office in its efforts in Congress, it was agreed that the Department would assume most costs until June 30, 1977. After that date, the Department would pay only Mr. Somerville's salary and the additional support costs would be provided either by the Department of Natural Resources or the Office of the Governor. In FY 78, the Department has incurred total costs (excluding Mr. Somerville's salary) of $36,845 through December 31, 1977. A detail sheet is attached. These costs have been charged to the headquarters investigations component (codes 11-41-2-403 and 410). All the costs were made under the assumption that they would be reimbursed. Unless this reimbursement takes place, the activities planned for FY 78 in the headquarters investigations component will need to be reduced drastically.

Mr. Somerville has been working closely with Commissioner LeResche in his support of the State's (d)(2) position. By copy hereof, Commissioner LeResche is requested to support this supplemental request.

MEMORANDUM State of Alaska

RECEIVED
DEC 5 1977
BUDGET & MANAGEMENT

TO: Ron Lind
Director
Office of Budget & Management
Department of Administration

DATE: December 5, 1977

FILE NO:

TELEPHONE NO:

SUBJECT: Supplemental - (d)(2)

FROM: Ronald J. Somerville
Alaska Department of
Fish and Game
Anchorage

Because of the time crunch expressed by Mr. Chuck Taylor, I am corresponding directly.

I believe my September 8, 1977 memo to Commissioner LeResche was routed to your office. At that point, I projected (d)(2) expenditures in my area of responsibility at:

F.Y. 1978 - $94,593 and F.Y. 1979 - $47,790

This excluded my salary which was apparently being picked up by my Department.

As I'm sure you are aware, my present position was established solely for the purpose of assisting in preparing, presenting and selling the State's (d)(2) position. Although I'm located in the Commissioner of Fish and Game's office, I am assigned to assist Commissioner LeResche in many aspects of the (d)(2) issue.

Initially, it was agreed that all expenses associated with my assignment would be carried by either the Department of Natural Resources or the Governor's office. From July 1, 1977 to November 30, 1977, my Department has paid and is still holding the following (d)(2) expenses:

Line Item	
100 - Temporaries	$15,703.64
200 - Travel and per diem	6,358.13
300 - Contractual services (photo processing, mapping, printing, etc.)	10,453.11
400 - Commodities	4,708.15
Total	$37,223.03

Most of the above expenses were for:

1. Designing and printing of maps, summary booklets, overlays and visual support material.

2. Preparation of statewide resource maps for use at Congressional hearings and workshops.

3. Travel and per diem in-state and out-of-state primarily to provide technical staff support.

4. Detailed staff analysis of legislative impacts.

5. Distribution of material to organizations and individuals.

If even the minimal effort we are putting forth on (d)(2) is to continue, we must be willing to finance it. I still believe my estimates of $94,000 for F.Y. 1978 and $48,000 for F.Y. 1979 are accurate. In analyzing my priorities and expenditures, however, I would alter some items.

In addition to the $37,223.03 which should be AV'd to the Department of Fish and Game, we should obligate a minimum of the following amounts:

Line Item	F.Y. 1978 Dec. 1 - June 30	F.Y. 1979
100 - Temporaries	$23,000	$25,000
200 - Travel & per diem	12,000	10,000
300 - Contractual services (Dropping request for office space)	12,000	10,000
400 - Commodities	7,000	3,000
Totals	$54,000	$48,000

These funds will be used for the following:

1. Presenting State's (d)(2) position.

2. Assisting Congressional delegations with logistic and staff support.

3. Preparing maps, booklets, overlays and other material.

4. Maintaining liaison with and providing material for supportive organizations.

5. Legislative analysis (primarily in analysis of resource use impacts and proposal comparisons).

6. Assisting in Congressional workshops.

7. Preparation of alternatives with supporting information.

8. Coordinating Departmental input.

9. Keeping the public informed on progress of (d)(2) legislation.

10. Soliciting support for State's position.

11. Illustrating and justifyi. overnor's Cooperative Management concept.

I hope the above material is satisfactory. If you need additional justification, please let me know.

STATE
of ALASKA

MEMORANDUM

TO: Ron Lind, Director
Division of Budget and Management
Office of the Governor

DATE: December 6, 1977

FILE NO:

TELEPHONE NO:

FROM: for Ronald O. Skoog
Commissioner
Department of Fish and Game

SUBJECT: FY'78 Supplemental Request,
Russian River Fish Lift

The Department of Fish and Game is requesting a total supplemental appropriation of $68,700 to pay for unexpected expenses incurred with the transportation of spawning red salmon up the Russian River. Since both sport fishermen and commercial fishermen will benefit from the action taken, the supplemental request would provide funding for both the Divisions of Sport Fish and Commercial Fish. The Division of Commercial Fish projected deficit without the supplemental is $41,600 in General Funds. The Division of Sport Fish projected deficit without the supplemental is $27,100 in Fish and Game Funds.

The Russian River fish lift was necessitated by the inability of the spawning red salmon to negotiate the Russian River falls. Heavy rains and run-off in the Russian River watershed this summer resulted in very high water runoff over the Russian River falls. The volume and velocity of water at the falls was such that the migrating red salmon were unable to negotiate the falls as they are able to do during a normal year. Since the spawning and rearing area for most of the red salmon in the Russian River system is above the falls, the Department felt that it was mandatory to provide whatever assistance was necessary to enable the fish to negotiate the falls successfully. This particular situation occured twice this year as the Russian River system has both an early and a late Sockeye run.

The Russian River system annually contributes an estimated 30 percent of the commercial Sockeye harvest in Cook Inlet and 8000 to 12,000 fish to the sport fishery. This fish lift during the early run occured from July 7 through July 19 and resulted in the helicopter transportation of 8,477 fish from below to above the falls. The second run of Russian River fish occured about one month after the first run. From the period of August 13 through August 18, the Department lifted 7,436 fish above the Russian River. For purposes of administrative convenience the Division of Sport Fish was charged with the expenses of the first fish lift and the Division of Commercial Fish was charged with the expenses of the second fish lift. All of the activity undertaken in the fish lift was necessary in order to preserve the biological and economic viability of the Russian River Sockeye Salmon.

Failure to approve the supplemental request will seriously impact both the Division of Commercial Fish and Sport Fish. It will be necessary to make program reductions in the amount of the supplementals in both these Divisions. In Sport Fish the program reductions will eliminate all of

the restoration efforts planned by the Division of Sport Fish during FY'78. Even though actual expenditures in the Sport Fish restoration component were relatively minimal during FY'76 and FY'77 as a result of the draw down on the Fish and Game Fund and a general shortage of toxicant, the plans for FY'78 included the following:

1) purchase of toxicant for use in lake rehabilitation work on five selected waters.

2) implementation of the postponed recreational fishery lake management programs requiring needed maintenance on five lake water control structures, lake rehabilitation and supplemental studies to provide the required evaluation.

3) the implementation of toxicant rehabilitation on five lakes.

4) expansion and development of additional egg take sites.

These plans will need to be terminated if the supplemental is not approved.

In the Commercial Fisheries Division the Cook Inlet Management Budget will be forced to reduce considerable effort in gathering and assessing the information for proper management of the fisheries in this area. The significant cutbacks will greatly decrease the information base upon which to make management decisions. As the risk of management error increases an economic impact could occur if the management decisions result in underharvest of any particular fishery resource in Cook Inlet. Similarly, an overharvest undetected by the Cook Inlet fishery managers until after the fact would decrease the number of fish required for reproduction. To supplement the funds needed in Cook Inlet from other areas of the existing Commercial Fisheries Division budget would only serve to shift the risk of management error to another priority fishery.

Attached is a copy of a report to the Board of Fisheries on the Russian River helicopter fish lift. In addition, a summary of expenditures of the Russian River fish lifts is also attached. Your favorable consideration of this supplemental request will be most appreciated.

DETAIL OF FISH AND GAME (d)(2) EXPENSES

7/1/77 - 12/31/77

	11-41-2-403	11-41-2-410
Personal Services	-0-	$17,037
Travel & Per Diem	$2,574	$ 4,332
Contractual Services (Photo processing, mapping, printing, etc.)	-0-	$ 8,147
Commodities	-0-	$ 4,755
TOTAL	$2,574	$34,271
GRAND TOTAL	$36,845	

All Charges in code 11-41-2-403 will be AV'd to code 410. Specific items prepared in support of the State's (d)(2) position include 1) summary booklet on (d)(2) lands and S.1787 (Senator Steven's bill); 2) printing of 8½ X 11 color maps depicting the effect of S.1787; 3) photocopying expenses for numerous copies of HR39 and other back-up material; 4) 3 sets of 6 maps each (Series E) with approximately 200 mylar overlays for each set depicting resources on Alaskan lands (One set each for Somerville, Stevens, and Young). Most of the temporary time (estimated 80%) and commodities expenses were spent in the preparation of item 4. The remainder of the temporary time was spent on clerical and other miscellaneous duties. Travel expenses were primarily for the Department's representative, Mr. Somerville, to provide technical support in Washington, D. C. A few other trips were made in-state for the same purpose.

1/1/78 - 6/30/79

An estimated $11,000 in travel expenses will be needed from the present through FY'79. This travel will be for Mr. Somerville to continue to provide his technical support to the Congressional delegation in Washington, D. C. .

DEPARTMENT OF FISH AND GAME
JAN 12 1978

Dr. Ronald Skoog, Commissioner
Alaska State Dept of Fish and Game
Subport Building
Juneau, Alaska 99801

Dear Dr. Skoog:

I have been informed by Jim Frates, Refuge Manager of the Kenai National Moose Range, that ADF&G is proceeding with drawings and bid specifications for the Russian River fish bypass with the intent to issue bid invitations by January 17.

Jim advised members of your engineering staff in Anchorage that the EIA has not been completed. In addition we have not had the opportunity to develop a complete set of construction stipulations that should be a part of the information available to potential bidders.

We do consider it ill advised to solicit bids prior to the completion of the EIA and the issuance of a special use permit or the development of a cooperative agreement as may be appropriate.

We certainly appreciate the concern of ADF&G in trying to get this project into the construction stage, and we would hope that you can appreciate our position on this matter. We will certainly work with your staff to expedite the process, but this is just one of several matters, all of which seem to demand immediate attention. I bring this to your attention in an attempt to avoid any misunderstanding as to our responsibilities and our actions on this issue.

Sincerely yours,

Gordon W. Watson

COMMERCIAL FISHERIES ENTRY COMMISSION

POUCH KB – JUNEAU 99801

February 3, 1978

The Honorable Kay Poland
Chairman, Senate Resources Committee
Alaska State Senate Pouch V
Juneau, Alaska 99811

Dear Senator Poland:

Re: SB 428

Regarding Senator Tillion's question regarding the term "willfully" as it appears in Sec. 3 of SB 428 at page 3 line 13 and page 4 line 2, we have contacted Dan Hickey at the Department of Law. Mr. Hickey indicated that the term "willfully" appearing at page 3 line 13 should be omitted. The term "willfully" as used at page 4 lines 2 and 6 should be deleted and the word "knowingly" substituted in its place. A letter from Ann Carpinetti of Mr. Hickey's office confirming the above-mentioned amendments should be received by your committee shortly, if it has not been received already.

The propriety of the term "other unavoidable hardship" appearing at page 1 line 12 has been addressed by Pete Froehlich, the Commission's Assistant Attorney General. His statements regarding this wording should have been received by you by now. If not, his letter will be forthcoming shortly.

The Commission will be happy to send a representative to the Monday, February 6, Committee meeting to answer any questions. The Commission has also requested that Pete Froehlich attend the meeting to answer any legal questions the Committee may wish to advance.

If there are any further questions or other service you may require, please feel free to contact me at the Commission. Your assistance in this matter is greatly appreciated. The Commissioners are presently out of town holding previously scheduled public hearings or I'm sure one of them would have

responded personally to the Committee's inquiries.

Respectfully,

David V. George
Legal Advisor

Re: SB 428

Dear Senator Poland:

It is my understanding, after discussing Senate Bill 428 with a representative from the Commercial Entries Fisheries Commission, that your committee desired some comment from the Criminal Division of the Department of Law regarding the level of culpability under proposed amendments which would be required to be proven for conviction of certain prohibited acts under AS 16.43, which regulates entry into Alaska commercial fisheries.

Section 3 of Senate Bill 428 amends AS 16.43.360(a) in part by adding the requirement that a person be proved to have acted wilfully before he may be convicted of a statutory or regulatory violation of the chapter. (p.3, line 13). Presently no proof of the violator's state of mind is necessary under the language of the statute to establish a violation under AS 16.43.360(a). I would recommend deleting this portion of the amendment from the bill. It is difficult to establish a wilfull state of mind in prosecuting violations of regulatory provisions, and generally no conscious state of mind is constitutionally required for regulatory violations. Unless there is some other purpose for the amendment, I see no reason to make enforcement of AS 16.43 more difficult for the state.

Section 4 of the bill amends AS 16.43.360(b), which prohibits making a false statement of fact in an application

for renewal of an interim use or entry permit. The proposed amendment in part adds the requirement that a person be proved to have acted wilfully (p. 4, lines 2 and 6) before he may be convicted of violating the subsection. Apparently the purpose of this amendment is to avoid the prosecution under the sub-section of persons who mistakenly mistate facts on an application or renewal form. I would recommend substituting "knowingly" for "wilfully" on page 11, lines 2 and 6. While both terms are similar and indicate a state of mind where the offender is aware that he or she is making a false statement, the use of "knowingly" is suggested because it is more precise and additionally, complies with the efforts by the Criminal Code Revision Subcommission to clarify and limit the terms used to define culpable mental states for criminal offenses. The proposed criminal code employs four mental states: intentional, knowing, reckless, and criminal negligence. If criminal prohibitions in other titles of the Alaska Statutes also use these states of mind, our statute will be easier for people to understand and for the courts to interpret.

Thank you for the opportunity to comment on Senate Bill 428.

Very truly yours,

SUMMARY SB 428

"An Act relating to commercial fishing interim-use permits, entry permits, and vessel licenses."

SB 428 as amended by the Resources Committee, would liberalize the conditions under which limited entry permits may be transferred on an emergency basis, authorizing the Commercial Fisheries Entry Commission to revoke permits for falsification of information, and strengthening the penalty provisions of the Limited Entry Act.

Section I of the bill would liberalize the conditions under which the Commission may authorize temporary emergency transfers of permits. Also, interim-use permits issued pending final action on an application could be transferred to alleviate hardships pending final action. Special attention was given to the definition of "hardships" to prevent abuse of permit transfer.

Section 2 of the bill would authorize the Commission to revoke a permit when the holder had falsified information to the Commission. The revocation would be only after a hearing, at which the holder would have the opportunity to present evidence to refute the Commission's proposed action. The Resources Committee debated at considerable length, the judicial recourse of the permit holder.

Sections 3 and 4 of the bill would strengthen the penalties for violation of the Limited Entry Act, and would enable courts to order forfeiture of permits upon conviction of first or second offenses. Currently forfeiture is only possible on third convictions. The bill also allows for possible imposition of a fine not to exceed $5,000 for making a false statement(s) in a permit application or renewal. The Committee has offered minor amendments to Sections 3 & 4 upon the advice of the Commissions legal counsel and the Attorney General's office.

Re: SB 428, relating to commercial fishing permits

Dear Senator Poland:

It has come to my attention that a question arose at the January 31, 1978 hearing on this bill before your committee concerning the words "other unavoidable hardship" as used on page 1, line 12 of the bill. I am writing to share with you and the committee my thoughts on this language.

In my opinion, it is possible for the Commercial Fisheries Entry Commission to administer this criteria for temporary emergency transfer of permits both fairly and restrictively. The entire sentence containing the language at issue reads:

> The commission shall adopt regulations providing for the temporary emergency transfer of entry permits and interim use permits when illness, disability, death, or other unavoidable hardship prevents the permit holder from participating in the fisher." (Emphasis added).

In accordance with the well-established principle of statutory construction of ejusdem generis, where general words follow a listing of specific words, the general words are construed to embrace only circumstances similar in nature to those emumerated by the previous specific words. (See 2A Sands, Sutherland Statutory Construction, § 47.17, 4th Ed. 1973). Thus, "other unavoidable hardship" includes only circumstances similar in nature and gravity to illness, disability and death.

The phrase "unavoidable circumstances" is used in the Commission's regulations at 20 AAC 05.630(a)(5). In that context, the Commission has interpreted the phrase to mean circumstances (1) beyond one's control which prevent his participation in a fishery, (2) in frustration of his specific definite intent to do so, (3) despite all reasonably possible efforts. Applying the same meaning to "unavoidable hardship," along with the principle of ejusdem generis, results in the interpretation that only serious hardship beyond one's control which frustrates his specific and definite intent to participate in a fishery despite all reasonably possible efforts would be included within the scope of those words.

This seems to be a sufficiently narrow criteria for emergency transfers, while at the same time allowing for the myriad of possible types of unavoidable hardship which may properly justify such a transfer.

I hope this letter is of some help in your further consideration of this bill. Please contact me if any questions on this matter remain.

Sincerely,

AVRUM M. GROSS
ATTORNEY GENERAL

MEMORANDUM

February 10, 1978

SUBJECT: Senate Bill 428 am

TO: Senator John Huber

FROM: Billy G. Berrier
Director
Division of Legal Services

As I told you verbally, the hearing procedures in this bill differ from the hearing procedures in the Administrative Procedure Act. The reference to the Administrative Procedure Act in subsection (h) on Page 3, lines 10 and 11, incorporate the appeal procedures of the Administrative Adjudicative Act only. You, therefore, asked for an amendment which would allow a de nova appeal as of right and which would require that false information used as a basis for revoking an entry permit be material. Amendments to that effect are attached.

STATE of ALASKA

MEMORANDUM

S. Resources

TO: The Honorable Kay Poland
Chairman, Senate Resources Committee
Alaska State Senate

DATE : February 3, 1978

FROM: David V. George
Commission Legal Advisor
Commercial Fisheries Entry Commission

SUBJECT: Letter of Explanation of SB 428 re cost of proceeding under proposed section relating to administrative revocation of permit

Senator Huber has raised the question of whether judicial review under the Administrative Procedure Act (APA) as provided in Section 2 of SB 428, would act as a defacto financial prohibition to the permit holder's judicial review of the administrative agency's action. The sections of the APA brought into issue are AS 44.62.560 and 570. Copies of these sections are appended to this reply.

SB 428 Section 2 of the Administrative Level:

Due process requires that the proposed revocation of a permit be preceded by notice of the proposed action, and that the permit holder be afforded an opportunity to be heard prior to a resolution of the issues.

SB 428 Section 2 proposes a mechanism for administrative revocation of a permit by the Commercial Fisheries Entry Commission. This power does not presently exist. SB 428 could have stopped there and left the Commission with the obligation to adopt regulations regarding the procedure to be employed which were consistent with due process. However, because of the gravity of the potential consequences of permit revocation, the Commission felt it was appropriate for the Legislature to provide for an administrative revocation procedure which ensured the respect of the permit holder's due process rights. This legislative statement in effect says: "If you cheat you'll be punished, but we are going to make sure that the State plays by the rules so that it doesn't cheat you."

Before any administrative hearing then, the State must give notice of the proposed action. The permit holder is given the opportunity to appear at the hearing, with or without counsel, and give his side of the story. The responsibility of the permit holder at the hearing is no greater than that required at any administrative hearing--he may, if he wishes, show up and contest the proposed action.

Section 2(b)(2) imposes a greater burden on the State, however. Section 2(b)(2) requires that before the Commission acts it must have received an affidavit setting forth facts warranting permit revocation. The notice requirements of Section 2(b)(2-6) were drafted requiring specificity on everything reasonably necessary to apprise the permit holder of the potential loss involved and the basis of the proposed action. This specificity will help guarantee a meaningful hearing.

Under SB 428, the State is also required, when holding the hearing, to provide a hearing officer who will act as the presiding officer of the hearing. The hearing officer is at the expense of the State, but will employ his legal background to aid both the permit holder and the Commission in the presentation of necessary facts. It is believed that use of a hearing officer will help insure greater impartiality as well as a more concise record.

In review, the formal hearing procedures required by SB 428 at the administrative level impose additional burdens only upon the State and not upon the party against whom the action is proposed.

SB 428 Section 2 and the Judicial Level:

Senator Huber has expressed concern that affording judicial review of the Commission's decision pursuant to AS 44.62.560-570 might be financially unfeasible for the permit holder to pursue. It was apparently Senator Huber's concern that a "de novo" judicial review might lower the cost of this review were a less formal administrative hearing held at the outset.

Due process requires the right of judicial review of the Commission's decision, whether the administrative hearing is formal or informal. The nature of the review would ultimately dictate the amount of expense to the permit holder. The proper forum for review is the Superior Court. [AS 22.10.020, 22.15.050, 44.62.560]

Were the Superior Court to hold a "trial de novo", cost to the litigant would be greatly increased. Evidence submitted at the administrative hearing, whether it was formal or informal, would have to be reintroduced at a "trial de novo" subject to all appropriate objections and cross-examination rights of the State. Witnesses would have to appear, perhaps for the second time, and the litigant himself would be making a second appearance thus increasing travel expenses.

Pre-trial discovery may be in order requiring additional costs. Since a trial of three or four days is much more difficult to schedule on the court calendar than a half-day argument (as would be the case were there not a "trial de novo"), greater delay could be anticipated than if the case were one of simple appellate review. All told, an informal administrative hearing followed by a trial "de novo" at the judicial level would substantially increase, rather than decrease, the direct cost to the permit holder.

Review under AS 44.62.560 generally amounts to a review of the record of the administrative hearing to determine the propriety of the administrative action taken. An appellant is required to transmit the record of the administrative agency hearing to the Superior Court at his own cost and provide a cost bond on appeal. In the Commission's experience, for cases involving permit decisions, this is usually no more than $350.00. The Superior Court may, in its discretion, order additional evidence or require a hearing "de novo." [570(d)] Therefore, Sections 560 and 570 of AS 44.62 do provide for the possibility of a "de novo" hearing where justice requires.

Conclusion

Section 2 of SB 428 as proposed will increase the responsiveness of State government at the administrative level, while imposing no greater burden upon the permit holder than would a less formal administrative hearing procedure.

Judicial review of an administrative determination under AS 44.62.560 and 570 provides a much less costly avenue of review than would a mandatory trial "de novo." Notwithstanding, Sections 560 and 570 do allow sufficient discretion whereby the Superior Court may order a trial "de novo" where justice dictates.

It would therefore appear that SB 428 provides a fair method of civil revocation of an entry permit, which is also the least costly alternative available.

DVG:eb

requires the agency to make findings of fact regarding conditions which have changed since the imposition of the penalty at least one year previous. 1963 Ops. Att'y Gen., No. 10.

Sec. 44.62.560. Judicial review. (a) Judicial review by the superior court of a final administrative order may be had by filing a notice of appeal in accordance with the applicable rules of court governing appeals in civil matters. Except as otherwise provided in this section, the notice of appeal shall be filed within 30 days after the last day on which reconsideration can be ordered, and served on each party to the proceeding. The right to appeal is not affected by the failure to seek reconsideration before the agency.

(b) The complete record of the proceedings, or the parts of it which the appellant designates, shall be prepared by the agency. A copy shall be delivered to all parties participating in the appeal. The original shall be filed in the superior court within 30 days after the appellant pays the estimated cost of preparing the complete or designated record or files a corporate surety bond equal to the estimated cost.

(c) The complete record includes (1) the pleadings, (2) all notices and orders issued by the agency, (3) the proposed decision by a hearing officer, (4) the final decision, (5) a transcript of all testimony and proceedings, (6) the exhibits admitted or rejected, (7) the written evidence, and (8) all other documents in the case.

(d) Upon order of the superior court, appeals may be taken on the original record or parts of it. The record may be typewritten or duplicated by any standard process. Analogous rules of court governing appeals in civil matters shall be followed where this chapter is silent, and when not in conflict with this chapter.

(e) The superior court may enjoin agency action in excess of constitutional or statutory authority at any stage of an agency proceeding. If agency action is unlawfully withheld or unreasonably withheld, the superior court may compel the agency to initiate action. (§ 24 (ch 2) ch 143 SLA 1959)

Cross reference. — See note to AS 44.62.570.

This section and AS 44.62.570 prescribe the manner and scope of judicial review. Mobil Oil Corp. v. Local Boundary Comm'n, Sup. Ct. Op. No. 989 (File No. 1947), 518 P.2d 92 (1974).

But they do not address the form of an agency's determinations. Mobil Oil Corp. v. Local Boundary Comm'n, Sup. Ct. Op. No. 989 (File No. 1947), 518 P.2d 92 (1974).

When review is proper. — Review is proper where postponement of appellate review until a final judgment is entered by the superior court may result in injustice because of impairment of a legal right and where the order sought to be reviewed is of such substance and importance as to justify deviation from the normal appellate procedure by way of appeal and to require the immediate attention of this court. Mukluk Freight Lines v. Nabors Alas. Drilling, Inc., Sup. Ct. Op. No. 967 (File No. 1870), 510 P.2d 408 (1973).

When order is final. — An order by the trial court as a general rule is said to be final if it completely and finally disposes of the contested claims on their merits. Mukluk Freight Lines v. Nabors Alas. Drilling, Inc., Sup. Ct. Op. No. 967 (File No. 1870), 516 P.2d 408 (1973).

The term "finality" is subject to several definitions. Mukluk Freight Lines v. Nabors Alas. Drilling, Inc., Sup. Ct. Op. No. 967 (File No. 1870), 516 P.2d 408 (1973).

the superior court to assert jurisdiction and grant preliminary relief in a case where an agency has established a permanent rate. A.J. Industries, Inc. v. Alaska Pub. Serv. Comm'n, Sup. Ct. Op. No. 622 (File No. 1173), 470 P.2d 537 (1970), rev'd on other grounds on rehearing, 483 P.2d 198 (1971).

Appeal to court to obtain review and return to court to continue litigation are separate processes. — Appealing to a court for the purpose of obtaining review of an inferior tribunal's order and returning to a court with retained jurisdiction for the purpose of continuing litigation are separate and distinct legal processes. Greater Anchorage Area Borough v. City of Anchorage, Sup. Ct. Op. No. 856 (File No. 1569), 504 P.2d 1027 (1972).

Court apprising parties of right to seek review did not retain jurisdiction. — A lower court which merely apprised the parties of their rights to seek judicial review of an administrative adjudication under this chapter did not retain jurisdiction. Greater Anchorage Area Borough v. City of Anchorage, Sup. Ct. Op. No. 856 (File No. 1569), 504 P.2d 1027 (1972).

Applied in Wilson v. Employment Security Comm'n, 6 Alaska L.J. No. 3, p. 93 (March, 1968); Jager v. State, Sup. Ct. Op. No. 1161 (File No. 2057), 537 P.2d 1100 (1975); Moore v. State, Sup. Ct. Op. No. 1284 (File Nos. 2551, 2587), 553 P.2d 8 (1976).

Op. No. 917 (File No. 1613), 512 P.2d 887 (1973); Alaska Pub. Util. Comm'n v. Greater Anchorage Area Borough, Sup. Ct. Op. No. 1139 (File No. 2314), 534 P.2d 549 (1975).

Am. Jur. reference. — 42 Am. Jur., Public Administrative Law, § 185.

Sec. 44.62.570. Scope of review. (a) An appeal shall be heard by the superior court sitting without a jury.

(b) Inquiry in an appeal extends to the following questions: (1) whether the agency has proceeded without, or in excess of jurisdiction; (2) whether there was a fair hearing; and (3) whether there was a prejudicial abuse of discretion. Abuse of discretion is established if the agency has not proceeded in the manner required by law, the order or decision is not supported by the findings, or the findings are not supported by the evidence.

(c) The court may exercise its independent judgment on the evidence. If it is claimed that the findings are not supported by the evidence, abuse of discretion is established if the court determines that the findings are not supported by (1) the weight of the evidence, or (2) substantial evidence in the light of the whole record.

(d) The court may augment the agency record in whole or in part, or hold a hearing de novo. If the court finds that there is relevant evidence which, in the exercise of reasonable diligence, could not have been produced or which was improperly excluded at the hearing, the court may (1) enter judgment as provided in (e) of this section and remand the case to be reconsidered in the light of that evidence; or (2) admit the evidence at the appellate hearing without remanding the case.

(e) The court shall enter judgment setting aside, modifying, remanding, or affirming the order or decision, without limiting or controlling in any way the discretion legally vested in the agency.

(f) The court in which proceedings under this section are started may stay the operation of the administrative order or decision until (1) the

court enters judgment, (2) a notice of further appeal from the judgment is filed, or (3) the time for filing the notice of appeal expires.

(g) No stay may be imposed or continued if the court is satisfied that it is against the public interest.

(h) If further appeal is taken, the supreme court may, in its discretion, stay the superior court judgment or agency order.

(i) If a final administrative order or decision is the subject of a proceeding under this section, and the appeal is filed while the penalty imposed is in effect, finishing or complying with the penalty imposed by the administrative agency during the pendency of the proceeding does not make the determination moot. (§ 25 (ch 2) ch 143 SLA 1959)

This section and AS 44.62.560 prescribe the manner and scope of judicial review. Mobil Oil Corp. v. Local Boundary Comm'n, Sup. Ct. Op. No. 989 (File No. 1947), 518 P.2d 92 (1974).

But they do not address the form of an agency's determinations. Mobil Oil Corp. v. Local Boundary Comm'n, Sup. Ct. Op. No. 989 (File No. 1947), 518 P.2d 92 (1974).

Questions for review. — One type of administrative decision on questions of law involves questions in which the particularized experience and knowledge of the administrative personnel goes into the determination. When this type of question is presented to the court for review, deference should be given to the administrative interpretation, since the expertise of the agency would be of material assistance to the court. The other kind of case presents questions of law in which knowledge and experience in the industry affords little guidance toward a proper consideration of the legal issues. These cases usually concern statutory interpretation or other analysis of legal relationships about which courts have specialized knowledge and experience. Consequently, courts are at least as capable of deciding this kind of question as an administrative agency. Swindel v. Kelly, Sup. Ct. Op. No. 812 (File Nos. 1416, 1418), 499 P.2d 291 (1972).

Leasing decisions of the division of lands and Department of Natural Resources are subject to judicial review. Such judicial review would be governed by the relevant provisions of the Administrative Procedure Act (AS 44.62). Swindel v. Kelly, Sup. Ct. Op. No. 812 (File Nos. 1416, 1418), 499 P.2d 291 (1972).

Four principal standards of review. — In interpreting this section the supreme court has recognized at least four principal standards of review of administrative decisions. These are the "substantial evidence test" for questions of fact; the "reasonable basis test" for questions of law involving agency expertise; the "substitution of judgment test" for questions of law where no expertise is involved; and the "reasonable and not arbitrary test" for review of administrative regulations. Jager v. State, Sup. Ct. Op. No. 1161 (File No. 2057), 537 P.2d 1100 (1975).

The reasonable basis approach should be used for the most part in cases concerning administrative expertise as to either complex subject matter or fundamental policy formulations. Swindel v. Kelly, Sup. Ct. Op. No. 812 (File Nos. 1416, 1418), 499 P.2d 291 (1972).

Application of the reasonable basis test is extremely useful where the administrative action under review resembles executive as opposed to legislative or judicial activity, where the decision under review clearly has nothing to do with the agency's rule making function. Swindel v. Kelly, Sup. Ct. Op. No. 812 (File Nos. 1416, 1418), 499 P.2d 291 (1972).

This section is made applicable to review of final orders of the Public Utilities Commission by AS 42.05.551. Jager v. State, Sup. Ct. Op. No. 1161 (File No. 2057), 537 P.2d 1100 (1975).

Whether proposed utility rates were designed to and could meet competition, shift sales of gas from winter to summer, and achieve interruptibility, are all questions of fact of the type traditionally reviewed under a substantial evidence standard. Jager v. State, Sup. Ct. Op. No. 1161 (File No. 2057), 537 P.2d 1100 (1975).

Public Utilities Commission's decision whether to conduct a rate investigation is similar to the type of decision involving agency expertise in a mixed law and fact setting subject to the "reasonable basis" standard of review. Jager v. State, Sup. Ct. Op. No. 1161 (File No. 2057), 537 P.2d 1100 (1975).

March 6, 1978

The Honorable Alvin Osterback
Chairman, House Resources Committee
Alaska State House of Representatives
Capitol Bldg. - Room 118
Juneau, Alaska 99801

Dear Representative Osterback:

You have requested the comments of the Commercial Fisheries Entry Commission SB 428 am, which is currently before the House Resources Committee.

Upon second reading in the Senate, SB 428 was amended by several floor motions, about which we would submit the following for your committee's consideration:

The first amendment offered appears at page 2, line 5, beginning with the words "The hearing place..." (Senate Journal page 241). The purpose of this amendment is to provide that the revocation hearing take place at or near the place of residence of the permit holder. The Commission anticipates few revocation hearings and therefore it does not feel that these provisions are unduly oppressive. However, it may well be that the permit holder would desire to have a hearing at a place other than the Judicial District in which he resides. Inasmuch as the referenced section of SB 428 mandates a hearing within the permit holder's Judicial District, the Commission would suggest that the language of that section be amended to allow the permit holder to waive the mandatory requirements appearing on page 2, line 5-7. In this regard, the following language is offered:

> "Unless waived in writing, the hearing place shall be held within the Judicial District in which the permit holder resides for those residing in the State of Alaska. The hearing place shall be at the discretion of the Commission for those permit holders residing outside the State of Alaska;"

While this amendment will undoubtedly have some impact on the Commission's budget because of the added requirement for Commission and staff travel, possible transportation of records, etc., the exact magnitude cannot be determined at this time. The Commission would expect revocation hearings to be rare, and if that is the case attendant costs could probably be absorbed without a specific budgetary increase. Consequently, we recommend no change in the fiscal note accompanying this bill.

The second amendment offered is of two parts (Senate Journal pp. 241-2). Part I appears at page 1, line 21 of SB 428. That amendment added the word "materially" after the word "correct" appearing at line 21. The Senate Resource Committee version of SB 428 did not contain the word "materially." Inasmuch as the word "knowingly" appears in the language of section 16.43.355(a), it is felt by the Commission, that if a person intentionally submitted false information knowing of the falsehood, the use of the modifier "materially" served a superfluous purpose. In effect, what Part I of the amendment accomplishes is to attach culpability to big lies while protecting those lies which are small. A problem also exists in defining the term "materially" as it is necessarily vague. The Commission feels that where proscribed action can result in the revocation of a person's entry permit, the statute should be drawn without words of vagueness. In light of the gravity of permit revocation, it is only fair that a person be specifically apprised of the prohibited conduct.

The second portion of this floor amendment appears at page 3, line 14-16 of SB 428. SB 428 as passed by the Senate Resources Committee provided for an appeal of a Commission permit revocation decision pursuant to the Administrative Procedure Act. A discussion of the scope of that appeal process appears in the House Resource Committee file on SB 428. The floor amendment offered provides that all appeals of a Commission decision to revoke a permit shall be in the scope of a trial de novo. In reference to section (h) appearing at page 3, lines 14-16, Peter Froehlich of the Department of Law will attend the Tuesday committee meeting and offer testimony on those provisions.

While this amendment does not directly affect the Commission's function, it does place what may be excessive burdens upon the permit holder. A full trial over matters previously presented at an administrative hearing will result in added and repetitive costs to the permit holder due to the formal and extended nature of court trials. A

full trial, as opposed to oral arguments, would be more difficult to accommodate on the court calendar due to the amount of time a trial requires. This could result in delays of the resolution of the permit holder's case. It should also be noted that the appeal is from the "Commission's" decision rather than the "board's" decision.

In light of the foregoing, it is respectfully submitted that the interest of the fisherman would be furthered by reinstatement of the language originally appearing in the bill as passed out by the Senate Resource Committee:

> "Judicial review of a commission determination under this section may be had in accordance with AS 44.62.560-44.62.570." (SB 428 as passed by the Senate Resources Committee page 3, lines 10-12.)

This would provide the fisherman with the option of an appeal to the courts at a lower cost and consuming less time than a full scale trial de novo, with or without a jury.

A third floor amendment was offered as section 5 of SB 428 and relates to the transfer of a permit after court ordered suspension of use privileges thereunder (Senate Journal pp. 242-3). The Commission supports this amendment.

The Commission concurs with the remainder of SB 428 am in the form in which it is now before you.

Thank you for the opportunity to comment on this bill. A member of the Commercial Fisheries Commission will be present when SB 428 am comes before the House Resources Committee, Tuesday March 7, 1978 at 1:30 p.m. to answer any questions.

Sincerely,

Allan Adasiak
Chairman

AA:DG:eb

March 9, 1978

The Honorable Alvin Osterback
House Resource Committee Chairman
Alaska State House of Representatives
Capitol Building - Room 118
Juneau, Alaska 99811

Dear Representative Osterback:

Re: Questions raised at Committee Hearing of SB 428 am held on March 8, 1978

In response to questions raised regarding Section 2 (h) appearing at page 3 lines 14 through 16, the following language is offered:

> "Judicial review of commission determinations under this section shall be in accordance with AS 44.62.560-44.62.570 provided that a hearing de novo granted under AS 44.62.570(d) may in the discretion of the court be had with a jury sitting if application therefore is filed with the court no later than 10 days after service of the notice of appeal."

This language provides for a hearing by jury at the discretion of the superior court.

A question was also raised regarding the imposition of culpability on one who assists in the violation of a provision of chapter 43 or regulations promulgated thereunder (SB 428 am, Section 3). It should first be noted that including those who assist in the stated violations under Section 3, does not increase the potential penalties to permit holders, but only extends culpability to persons not previously covered by that section. While most violations would come within the proscribed acts of Section 4 of SB 428 am, there are events of possible concern not covered by that section. For example, a misstatement of monies collected by agents of the Department of Revenue (20 AAC 05.980 eff. 1/1/78) would only be covered by Section 3 of SB 428, and the act proscribed may be accomplished by two or more persons requiring prosecution

under the "assisting" provision of Section 3. So might the situation exist for the improper release of confidential information in violation of 20 AAC 05.930 or the fraudulent representation of one improperly asserting himself as an authorized agent of a permit holder (see 20 AAC 05.960). From the above examples, it appears that reliance solely on Section 4 is insufficient to adequately guard against all situations of improper conduct. Therefore, it is respectfully submitted that Section 3 of SB 428 am be retained.

Sincerely,

Allan Adasiak
Chairman

IN THE SENATE BY THE RESOURCES COMMITTEE

SENATE BILL NO. 428

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - SECOND SESSION

A BILL

For an Act entitled: "An Act relating to commercial fishing interim-use permits, entry permits, and vessel licenses."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 16.43.180(a) is repealed and re-enacted to read:

( ) The commission shall adopt regulations providing for the temporary emergency transfer of entry permits and interim-use permits when illness, disability, death, or other unavoidable hardship prevents the permit holder from participating in the fishery. To alleviate hardship pending a final determination of the permit holder's eligibility for an entry permit, the commission shall adopt regulations providing for the temporary emergency transfer of an interim-use permit under sec. 210(b) of this chapter.

* Sec. 2. AS 16.43 is amended by adding a new section to read:

Sec. 16.43.355. COMMISSION REVOCATION OF ENTRY PERMITS. (a) The commission may revoke an entry permit if a person knowingly supplies, assists in supplying, or fails to correct false information provided to the commission for the purpose of

(1) permit application; or

(2) permit transfer.

(b) Before revocation, the commission shall serve the permit holder personally or by certified or registered mail with a notice to show cause why the proposed action should not take place. The notice to show cause must

(1) be supported by an affidavit which may be made on infor-

mation or belief setting out the facts which are the basis of the proposed action;

(2) provide for at least 30 days notice of the place, date, and time of the hearing where the permit holder may present evidence in opposition to the proposed action;

(3) specify the statutes or regulations violated;

(4) state with particularity the action proposed to be taken;

(5) indicate to the permit holder that his ability to permanently transfer the permit which is the subject of the revocation proceedings has been suspended as of the date of the notice and will continue to be suspended until the exhaustion of all administrative and judicial remedies; and

(6) other information the commission considers proper.

(c) A permit subject to revocation proceedings under this section may not be permanently transferred after the date of the notice in (b) of this section pending exhaustion of all administrative and judicial remedies arising from action taken under this section.

(d) The revocation hearing shall be conducted before a quorum of commissioners and shall be presided over by a properly appointed hearing officer who shall rule on the presentation of evidence and other procedural matters. Within a reasonable time after the conclusion of the hearing, the hearing officer shall submit to the attending commissioners a proposed decision based on the record of the hearing and containing findings of fact, conclusions of law, and recommended action. The attending commissioners shall then review the hearing officer's proposed decision and adopt or amend or reject the contents of the proposed decision in the written decision of the commission. A copy of the commission decision shall be mailed to each party or his attorney by certified or registered mail.

(e) The failure of a permit holder properly served under (b) of this section to appear at the hearing is not grounds for setting aside any commission action taken. However, the commission may in its discretion order a continuance or second hearing.

(f) The effective date of the commission decision under this section is the date of the notice to show cause first served upon the permit holder.

(g) The provisions of this section do not apply to the permit of a person who is a bona fide purchaser.

(h) Judicial review of a commission determination under this section may be had in accordance with AS 44.62.560 - 44.62.570.

* Sec. 3. AS 16.43.360(a) is amended to read:

(a) A person who ~~wilfully~~ violates or assists in the violation of a provision of this chapter or a regulation promulgated under this chapter is, upon conviction, [IS] guilty of a misdemeanor and is punishable by a fine of not more than $5,000 for a first conviction, and [;] a fine of not more than $10,000 for a second or third conviction [; AND, FOR A THIRD CONVICTION, A FINE OF NOT MORE THAN $10,000 AS WELL AS FORFEITURE OF ALL INTERIM-USE PERMITS AND ENTRY PERMITS HELD BY HIM AND PERMANENT LOSS OF ELIGIBILITY FOR INTERIM-USE PERMITS OR FOR ENTRY PERMITS]. Upon a third conviction, the person shall forfeit all interim-use and entry permits held by him and loses eligibility for future issuance or transfer of interim-use or entry permits. Upon a first or second conviction under this section, the court may in its discretion order a forfeiture of interim-use or entry permits held by him as well as a loss of eligibility for future issuance or transfer of interim-use or entry permits or order a suspension of fishing rights under interim-use or entry permits held or to be held by him for a period of not more than three years.

* Sec. 4. AS 16.43.360(b) is amended to read:

(b) A person who ~~wilfully~~ knowingly makes a false statement of [A MATERIAL] fact in the application for or renewal of an interim-use permit or an entry permit or vessel license application or renewal or in the application for a transfer under secs. 170 - 180 of this chapter, or a person who assists another by ~~wilfully~~ knowingly making a false statement of [A MATERIAL] fact in support of the other person's application for issuance or renewal of an interim-use permit or an entry permit or vessel license [TRANSFER OF AN ENTRY PERMIT, UPON CONVICTION,] is guilty of a misdemeanor and shall forfeit all interim-use permits and entry permits held by him and shall lose eligibility for interim-use permits and for entry permits for a period of five years and is punishable by a fine of not more than $5,000.

Change July 1, 1978 to March 1, 1978

law not ten file

January 30, 1978

Honorable Bill Sumner
Senator
State of Alaska
Pouch V
Juneau, Alaska 99811

SUBJECT: SB #440 by Ferguson

Dear Bill:

The subject bill proposes a special appropriation of State funds to the Department of Fish and Game so that the Department can transfer these funds to a specific organization regardless of the ability of that organization to perform. If indeed studies are needed to "ensure whale stock viability", then those studies should be performed by the best qualified persons available. The Department should be allowed to manage the funds, not be directed to spend them where the legislature dictates.

Highest Personal Regards,

Herbert W. Lehfeldt

Honorable Bill Sumner
Senator
State of Alaska
Pouch V
Juneau, Alaska 99811

SUBJECT: House Joint Resolution #48 by Rules Committee

Dear Bill:

This Resolution advocating the legal hunting of migratory birds in the Spring is not worthy of your support.

The Spring time is the mating and rearing season for all birds. If you kill off the parents, the eggs won't hatch and the young won't survive. The perpetuation of the species is in danger.

Ridged controls of seasons in the principal cause for the comeback experienced by our migratory birds following the disasters of the early thirty's.

I urge you to vote against this Resolution.

Highest Personal Regards,

Herbert W. Lehfeldt

January 30, 1978

Honorable Bill Sumner
Senator
State of Alaska
Pouch V
Juneau, Alaska 99811

SUBJECT: House Bill 674 By Rules Committee

Dear Bill:

This bill proposed to regionalize the Board of Fisheries and the Board of Game. This bill is the most distructive thing that can happen to our Game Management Programs in the State. The fish and wildlife belong to all citizens of the State and should be controlled on a uniform basis throughout the State.

With the free flow of people across the State for hunting and fishing purposes, the regulations should be promogated from one central source.

I urge you to vote against this bill when it is up.

Highest Personal Regards,

Herbert W. Lehfeldt

January 30, 1978

Honorable Bill Sumner
Senator
State of Alaska
Pouch V
Juneau, Alaska 99811

SUBJECT: HB #673 by Rules Committee

Dear Bill:

The subject bill creating a division of subsistence hunting and fishing is probably going to be one of the most significant bills you will be asked to vote on this year. I feel the question of subsistence has long been neglected and abused.

I urge your support of this bill.

Highest Personal Regards,

Herbert W. Lehfeldt

January 30, 1978

Honorable Bill Sumner
Senator
State of Alaska
Pouch V
Juneau, Alaska 99811

SUBJECT: House Concurrent Resolution #93
by Rules Committee

Dear Bill:

The subject Concurrent Resolution advocating a subsistence committee concerns probably one of the most sensitive areas of game management. Alaska is the only State that I know of where wildlife and fish are allowed to be taken for subsistence purposes. We need better and complete control of this segment of our wildlife management.

I urge you to support this resolution.

Highest Personal Regards,

Herbert W. Lehfeldt

January 30, 1978

Honorable Bill Sumner
Senator
State of Alaska
Pouch V
Juneau, Alaska 99811

SUBJECT: Senate Bill #439 by Ferguson

Dear Bill:

I urge you to oppose this bill. If the State funds are to be used to "ensure whale stock viability" as advocated by the bill, they should be used to enhance our State Department of Fish and Game [illegible]at adequate staff can perform the proposed studies, etal. Any pro[illegible]n of this kind should be coordinated by State staff, not private groups grinding their own axes. The State Dpeartment has legislative authority to contract for specialist services when needed. This should be adequate.

I urge you to vote against S.B. 439.

Highest Personal Regards,

Herbert W. Lehfeldt

January 30, 1978

Honorable Bill Sumner
Senator
State of Alaska
Pouch V
Juneau, Alaska 99811

SUBJECT: HB #687 by Buchholdt, etal.

Dear Bill:

I urge you to vote against this bill. To direct the Department of Fish and Game to employee a specific group, without any evaluation of that group's ability to perform is improper. If the legislature wants to give money to this group, do it direct. Don't handcuff our fishery's people by dictating this type of action.

If a study is needed, the best qualified persons should be hired.

Highest Personal Regards,

Herbert W. Lehfeldt

January 30, 1978

Honorable Bill Sumner
Senator
State of Alaska
Pouch V
Juneau, Alaska 99811

SUBJECT: HB #686 by Buchholdt, etal.

Dear Bill:

This bill authorizes grants to private organizations engaged in efforts to ensure whale stock viability. If such "efforts" are to serve a legitimate State purpose, these grants should be made to the State Department of Fish and Game. This is the only way to assure that the interest of all citizens are protected.

I urge your opposition to the subject bill.

Highest Personal Regards,

Herbert W. Lehfeldt

S 60 (rev. 6/77)

POSITION PAPER/Department of Health and Social Service

POSITION PAPER

SENATE BILL NO. 477

"An Act relating to licensing of sport fishing and hunting."

This legislation would place responsibility with the Department of Health and Social Services for administration of the $24.75 hunting and fishing license fee credit for persons who are living a subsistence lifestyle, or who are receiving welfare.

The effect would be to establish a new program in the Division of Public Assistance, similar to current welfare programs which would require the following:

(1) staff to determine applicants' eligibility for the program based on financial need;

(2) administrative support in the form of promulgation of income regulations; administrative code entries; policy development; budgeting; accounting; implementation of appropriate procedures; and training of staff; and

(3) allocation of funds which would allow for payment of the license subsidies to the Department of Revenue.

Available information relating to this program consists of the following:

(1) Over the past 10 years, an average of 5,556 such credits have been provided annually (through sales of $25 licenses by the Department of Revenue for 25¢).

(2) It is estimated that a trained, qualified person could process 40 such applications and licenses per day;

(3) 6,000 such licenses could reasonably be expected to be issued in FY 79 based upon the activity over the past three years;

(4) This workload would require 139 work days to complete; or 9 days per month per region;

(5) Applications would be evenly distributed among the five regional offices of the Division of Public Assistance and;

(6) This would result in the need for one part-time eligibility worker in each of the five regions. The Division of Public Assistance normally budgets staff based on a legislative formula which applies caseloads to positions required. Under that formula, the Division is understaffed by 7 workers at this time, so this new program could not be absorbed by current staff.

In developing a position and budget related to this bill, the following assumptions were made:

(1) that the legislature intends for this program to be treated as a state welfare program by the Department;

(2) that a turnaround time of two weeks is acceptable for applications processed through the mail;

(3) that Department fee agents would be used to provide applications and forward them to regional offices of the Division of Public Assistance for processing;

(4) That Division of Public Assistance eligibility workers would become license agents for Department of Revenue in order to facilitate processing of such licenses.

Under the above conditions, the cost of establishing and administering this program would be $263,489 for FY 79, of which $148,500 would be for the subsidies (or welfare grants) themselves.

This results in administrative overhead of 77%.

The impact of this legislation would be to eliminate the immediate access to such licenses which is now provided by the licensing agents of the Department of Revenue.

The benefit accruing to the program would be to eliminate participation by persons who falsely claim eligibility based on receipt of welfare assistance. It is not known whether or not a significant number of persons are so involved, however, the number of persons who are sportsmen and who are also welfare clients would be small.

It is the position of this department that the bill would not be beneficial based on the reduction in service levels and the high cost to benefit ratio therefore the following alternative is presented for consideration:

Amend the signature block on the current application form to authorize release to the Department of Revenue of welfare information on all applicants who claim eligibility based on receipt of welfare.

As the number of persons desiring the 25¢ hunting and fishing license would include very few welfare recipients, no additional costs would be incurred by this agency in verifying this for those applicants who indicate they are or have been on welfare within six months of the date of application (this is the current time frame in the Department of Revenue procedure).

POSITION PAPER/Department of Health and Social Service

As it is not feasible to verify income for families or individuals over a period of a calendar year, it would appear that the limited advantages of having this agency determine eligibility could be served at no additional cost by the above action, without disruption of current systems.

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPARTMENT OF REVENUE

OFFICE OF THE COMMISSIONER / POUCH S – JUNEAU 99811

February 10, 1978

The Honorable Kay Poland
Chairman
Senate Resources Committee
Alaska State Legislature
State Capitol Building
Juneau, Alaska

Dear Senator Poland:

For the information of the Senate Resources Committee, I am enclosing seven copies of statements prepared by the Fish and Game Licensing Section of the Department of Revenue concerning sport fishing and hunting license fees and commercial fishing gear and license fees as follows:

1. Sport fish and game receipts for the calendar year 1977 by type and number of licenses and tags.

2. Commercial fish license receipts for the calendar year 1977 by type and number of licenses and gear.

3. Gross commercial fishing gear and license receipts for the calendar years 1968 through 1977 by type of gear and license.

Very truly yours,

R. D. Stevenson

ALASKA POWER AUTHORITY

333 WEST4th - SUITE 31 - ANCHORAGE ALASKA 99501

March 30, 1978

The Honorable Kay Poland
Alaska State Senate
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Senator Poland:

Attached per your request is our legal review of S.B. 511 which would eliminate the Alaska Power Authority and assimilate its functions into the Division of Energy and Power Development.

As I indicated at your committee meeting on March 22, 1978, I am somewhat reluctant to make my views known in that testimony from an agency which is being considered for abolishment might be considered biased. However, since your committee appears interested in my opinions, I am most happy to provide you with my thoughts.

First, as S.B. 511 is written, there is doubt about the ability of the Division of Energy and Power Development to actually fulfill the functions of the Power Authority. This is a technical matter, however, which can certainly be resolved by any scribe. In short, the Division of Energy and Power Development, here-in-after called the Division, could neither provide for long term project financing nor for front end community loans for feasibility studies. Without these abilities, the Division would be quite ineffectual in providing for energy development. Moral support would certainly not get the job done. Realizing, however, that these technical matters can be overcome, the real issue entails the selection of the optimum administrative means of providing for lower cost power development.

Under the present division of responsibility, the Division provides for conservation, research, alternative energy inventories, and regional planning. The Power Authority is responsible for project development by financing or a combination of financing, developing, owning and operating power projects. Division of these responsibilities provides a healthy checks and balances. Since the Power Authority is a facilitating agency, moreover, one with a singular purpose, it is best suited to "getting the job done". With its financial and legal advisors and its present efforts to develop a professional staff consisting of engineers and economists, it is gaining the nucleus needed for its statutory mandate. Absorption into the Division could only dilute the Authority's ability to function effectively.

The Power Authority has been established to operate as a Corpo-

ration (public) of the State of Alaska. Its status as such has made it quite palatable to the vaious utilities and communities that need assistance in power development. The power generation industry in Alaska is actually looking to the Authority as an entity that can provide coordination and development needed to preclude the energy problems which loom ahead. I would question the ability of an energy agency conglomerate, hamstrung by its bureaucratic shroud, to fulfill the same function. Since its corporate nature will require the Power Authority to remain fiscally solvent (or default in the face of the financial market) it will be forced into the role of prudent planning and development. Its state counterpart, with its access to the general fund, may not be similarly inclined.

There is also a philosophical question to be resolved. Should the State actually assume the posture of providing electricity for its citizens? Or should this best remain in the hands of the local entities and a State Corporation. State government is already growing at an alarming rate. If Susitna and other large power projects such as a Southeastern intertie or an AVEC intertie are developed, the agency that owns, operates and markets the energy from these projects will obviously require a sizable staff. Maintenance of such a staff under State government could only serve to further bloat our public sector and its attendant tax requirement and lobbying power.

Finally, one should compare the relative merits by which policy would be established under the two philosophies of power development administration. On the one hand, the Division policy would be established solely by the Director, with final concurrance from the Executive and Legislature. Under the Authority concept, policy matters are established by a Board of Directors which must be viewed as a non-partisan decision making entity from throughout the State. The perspective to be gained from such a diversification is invaluable. The present Board of the Power Authority consists of a Native Corporation Director, a banker, a business executive, a previous federal energy administrator, and a State Commissioner.

Given the opportunity to operate as envisioned in its enacting legislation, the Alaska Power Authority, in concert with the policies of the Division of Energy and Power Development and the Legislative and Executive branches, will provide a significant contribution to the social well being of the people of Alaska. While certainly well intended, S.B. 511 would not appear capable of providing the same level of service.

Sincerely,

Eric P. Yould
Executive Director

EPY/mgf
Attach:

MEMORANDUM

TO: Mr. Eric Yould
Executive Director
ALASKA POWER AUTHORITY

FROM: Wohlforth & Flint

DATE: March 6, 1978

RE: Senate Bill 511 "An Act Creating The Division of Energy and Power Development; and Providing For an Effective Date" and S.B. 429 both introduced by the Senate Special Committee on the Alaska Permanent Fund.

As you know, Senate Bill 429 introduced on January 19, 1978, wipes out or curtails the activities of the Alaska Housing Finance Corporation, the Alaska Municipal Bond Bank Authority and the Alaska Industrial Development Authority. The bill does not deal with the Alaska Power Authority although it provides in Section 250(8) for loans to investor owner utilities for hydroelectric projects and in Section 300 for loans to municipalities by authorizing bidding on their revenue bonds. S.B. 429 does not provide, however, for loans to the Division of Energy and Power Development- or to the Alaska Power Authority by name for that matter.

Apart from the policy question of repealing the statutory authority for the Alaska Power Authority which S.B. 511 does totally, the bill does not transfer to the Division of Energy and Power Development the powers to borrow money or to own or operate power projects. The nearest the subject bill comes to accomplishing this is in Section .035(a)(2) which authorizes contracts with others for the construction, acquisition, operation and maintenance of power projects. In addition, subsection (a) of .035 re-states the statutory purpose of the Alaska Power Authority (AS 44.56.070) as a power of the division. However, none of the typical borrowing powers are given to the division and the division would not be able to issue revenue bonds for power projects or otherwise borrow money on public markets to construct or acquire power projects. In this connection, existing AS 44.33.040 should

be examined. The duties of the division as specified in this section do not include the power to borrow money or to own projects or to buy or sell power.

In summary, S.B. 511 does not integrate the Division of Energy and Power Development into the Alaska Loan Programs Fund as is being attempted with other agencies dealt with in S.B. 429. At the same time the bill fails to permit borrowing independently by the Division for power purposes. It should also be noted that S.B. 511 in repealing the Alaska Power Authority Act repeals the Power Project Revolving Fund while, at the same time, S.B. 429 repeals the Water Resources Revolving Loan Fund.

STATE
of ALASKA

MEMORANDUM

ALASKA POWER AUTHORITY

TO: H. Phillip Hubbard
Commissioner
Department of Commerce &
Economic Development

DATE: 7 March, 1978

FROM: Eric P. Yould
Executive Director
Alaska Power Authority

SUBJECT: S.B. 511

On the surface, Senate Bill 511 appears to be aimed at abolishing the Alaska Power Authority and assimilating its statutory function into the Division of Energy and Power Development under the Department of Commerce and Economic Development. The desirability of such an action can only be determined by the Administration and the Legislature, however, there are some points which should be considered in evaluating the institutional manner in which the State chooses to solve its energy problems.

First, as S.B. 511 is written, there is doubt about the ability of the Division of Energy and Power Development to actually fulfill the functions of the Power Authority. This is a technical matter, however, which can certainly be resolved by any scribe. The salient remissions and ambiguities of S.B. 511 add their effect are briefly pointed out in the attached letter from Wohlforth & Flint, bond counsel for the Power Authority. In short, the Division of Energy and Power Development, here-inafter called the Division, could neither provide for long term project financing nor for front end community loans for feasibility studies. Without these abilities, the Division would be quite ineffectual in providing for energy development. Moral support would certainly not get the job done. Realizing, however, that these technical matters can be overcome the real issue entails the selection of the optimum administrative means of providing for lower cost power development.

Under the present division of responsibility, the Division provides for conservation, research, alternative energy inventories, and regional planning. The Power Authority is responsible for project development by financing or a combination of financing, developing , owning and operating power projects. Division of these responsibilities provides a healthy checks and balances. Since the Power Authority is a facilitating agency, moreover, one with a singular purpose, it is best suited to "getting the job done". With its financial and legal advisors and its pres efforts to develop a professional staff consisting of engineers and economists, it is gaining the nucleus needed for its statutory mandate. Absorption into the Division could only dilute the Authority's ability to function efficiently.

STATE
of ALASKA

MEMORANDUM

ALASKA POWER AUTHORITY

TO: H. Phillip Hubbard
Commissioner
Department of Commerce &
Economic Development

DATE : 7 March, 1978

FROM: Eric P. Yould
Executive Director
Alaska Power Authority

SUBJECT: S.B. 511 (continued)

The Power Authority has been established to operate as a public Corporation of the State of Alaska. Its status as such has made it quite palatable to the various utilities and communities that need assistance in power development. The power generation industry in Alaska is actually looking to the Authority as an entity that can provide coordination and development neededtoo preclude the energy problems which loom ahead. I would question the ability of an energy agency conglomerate, hamstrung by its bureaucratic shroud, to fulfill the same function. Since its corporate nature will require the Power Authority to remain fiscally solvent (or default in the face of the financial market) it will be forced into the role of prudent planning and development. Its State agency counterpart, with its access to the general fund, may not be similarly inclined.

There is also a philosophical question to be resolved. Should the State actually assume the posture of providing electricity for its citizens? Or should this best remain in the hands of the local entities and a State corporation? State government is already growing at an alarming rate. If Susitna and other large power projects such as a Southeastern intertie or an A.V.E.C. intertie are developed, the agency that owns, operates and markets the energy from these projects will obviously require a sizable staff. Maintenance of such a staff under State government could only serve to further bloat our public sector and its attendant tax requirement and lobbying power.

Finally, one should compare the relative merits by which policy would be established under the two philosophies of power development administration. On the one hand, the Division policy would be established solely by the Director, with final concurrance from the Executive and Legislature. Under the Authority concept, policy matters are established by a board of directors which must be viewed as a non-partisan decision making entity from throughout the State. The perspective to be gained from such a diversification is invaluable. The present Board of the Power Authority consists of a Native Corporation Director, a banker, a business executive, a previous federal energy administrator, and a State Commissioner.

Given the opportunity to operate as envisioned in its enacting legislation, the Alaska Power Authority, in concert with the policies of the Division of Energy and Power Development and the Legislative and Executive branches, will provide a significant contribution to the social well being of the people of Alaska. While certainly well intended, S.B. 511 would not appear capable of providing the same level of service.

PHONE 272-0527

Original: Legislative Finance
cc: Budget and Management
Prime Sponsor (First Legislator Named)

33 001 (Rev. 10/76)

A. Assumptions

1. Beginning in FY 79, it will be necessary for the division to thoroughly evaluate all aspects of the proposed Upper Susitna Dam Project, as well as address the question of potential funding, construction and operation of smaller proposed power projects.

2. These activities would be part of ongoing multi-year programs, which will extend many years into the future.

B. Program Summary

1. Positions

	Title	Range	Monthly Salary	Yearly Salary
a.	Administrator of Power Projects	24	$3,085.00	$37,020.00
b.	Deputy - Engineering & Construction	23	$2,867.00	$37,020.00
c.	Deputy - Finance & Marketing	23	$2,867.00	$34,404.00
d.	Civil Engineer	22	$2,661.00	$31,932.00
e.	Secretary I	12	$1,293.00	$15,516.00
f.	Clerk Typist III	08	$1,005.00	$12,060.00
				$165,336.00
			Cost of Living Increase (6%	9,920.00
				$175,256.00
			Benefits (25.5%)	44,690.00
				$219,946.00

2. Other Expenditures

a. Travel - $25,000.00

Extensive travel will be required by division staff, both within the State and to Lower 48 financial centers.

b. Contractual - $295,000.00

Approximately $250,000 will be earmarked for contractual services for feasibility studies of proposed projects, and to begin a thorough analysis of all aspects of the Upper Susitna Project over and above the present work being conducted by the Corps of Engineers.

c. Equipment - $4,500.00 and Commodities - $3,500.00

This will primarily cover additional office equipment and supplies required to accommodate the additional staff.

ALASKA POWER AUTHORITY

033 WEST4th - SUITE 31 - ANCHORAGE ALASKA 99501

March 30, 1978

The Honorable Kay Poland
Alaska State Senate
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Senator Poland:

Attached per your request is our legal review of S.B. 511 which would eliminate the Alaska Power Authority and assimilate its functions into the Division of Energy and Power Development.

As I indicated at your committee meeting on March 22, 1978, I am somewhat reluctant to make my views known in that testimony from an agency which is being considered for abolishment might be considered biased. However, since your committee appears interested in my opinions, I am most happy to provide you with my thoughts.

First, as S.B. 511 is written, there is doubt about the ability of the Division of Energy and Power Development to actually fulfill the functions of the Power Authority. This is a technical matter, however, which can certainly be resolved by any scribe. In short, the Division of Energy and Power Development, here-in-after called the Division, could neither provide for long term project financing nor for front end community loans for feasibility studies. Without these abilities, the Division would be quite ineffectual in providing for energy development. Moral support would certainly not get the job done. Realizing, however, that these technical matters can be overcome, the real issue entails the selection of the optimum administrative means of providing for lower cost power development.

Under the present division of responsibility, the Division provides for conservation, research, alternative energy inventories, and regional planning. The Power Authority is responsible for project development by financing or a combination of financing, developing, owning and operating power projects. Division of these responsibilities provides a healthy checks and balances. Since the Power Authority is a facilitating agency, moreover, one with a singular purpose, it is best suited to "getting the job done". With its financial and legal advisors and its present efforts to develop a professional staff consisting of engineers and economists, it is gaining the nucleus needed for its statutory mandate. Absorption into the Division could only dilute the Authority's ability to function effectively.

The Power Authority has been established to operate as a Corpo-

ration (public) of the State of Alaska. Its status as such has made it quite palatable to the vaious utilities and communities that need assistance in power development. The power generation industry in Alaska is actually looking to the Authority as an entity that can provide coordination and development needed to preclude the energy problems which loom ahead. I would question the ability of an energy agency conglomerate, hamstrung by its bureaucratic shroud, to fulfill the same function. Since its corporate nature will require the Power Authority to remain fiscally solvent (or default in the face of the financial market) it will be forced into the role of prudent planning and development. Its state counterpart, with its access to the general fund, may not be similarly inclined.

There is also a philosophical question to be resolved. Should the State actually assume the posture of providing electricity for its citizens? Or should this best remain in the hands of the local entities and a State Corporation. State government is already growing at an alarming rate. If Susitna and other large power projects such as a Southeastern intertie or an AVEC intertie are developed, the agency that owns, operates and markets the energy from these projects will obviously require a sizable staff. Maintenance of such a staff under State government could only serve to further bloat our public sector and its attendant tax requirement and lobbying power.

Finally, one should compare the relative merits by which policy would be established under the two philosophies of power development administration. On the one hand, the Division policy would be established solely by the Director, with final concurrance from the Executive and Legislature. Under the Authority concept, policy matters are established by a Board of Directors which must be viewed as a non-partisan decision making entity from throughout the State. The perspective to be gained from such a diversification is invaluable. The present Board of the Power Authority consists of a Native Corporation Director, a banker, a business executive, a previous federal energy administrator, and a State Commissioner.

Given the opportunity to operate as envisioned in its enacting legislation, the Alaska Power Authority, in concert with the policies of the Division of Energy and Power Development and the Legislative and Executive branches, will provide a significant contribution to the social well being of the people of Alaska. While certainly well intended, S.B. 511 would not appear capable of providing the same level of service.

Sincerely,

Eric P. Yould
Executive Director

ANALYSIS OF CHANGES IN CS FOR SB 527
BY
JOHN FARLEIGH, ADMINISTRATIVE ASSISTANT
SENATE RESOURCES COMMITTEE

SECTION 3: This change is in section 3, paragraph (13), line 25, after "reduce" remove the words "predation or". This is to prevent the commissioner to initiate a wolf control program without board approval but to still allow him to conduct stickleback control, for example, without board consent.

SECTION 4: This section is redrafted to actually tighten up the emergency order powers of the commissioner. The amended language on page 2, lines 8 and 9, defines the circumstances required and since an emergency order is not subject to the Administrative Procedure Act, lines 17 through 27, would establish a due process for the department to go through to implement an emergency order.

SECTION 10: This section was rewritten so as not to appear to put the department above regulation by the boards, but to allow them to perform their duties without special exemptions from board regulations.

SECTION 21: Paragraph (C) was eliminated from this section which would have given the commissioner the power to promulgate regulations without a delegation by the board in the event that he could not contact a quorum of board members.

SECTION 35: (In the original bill) This section was removed in it's entirety, mainly due to the strong objections of the United Fishermen of Alaska.

SECTION 38: This change is self-explanatory. Under the present language, the appropriate board must address each and every case at a board meeting, but under the proposed language, the board may address the issue once and set the policy accordingly.

SECTION 39: In this repealer section a typographical error (16.35.080 is changed to 16.35.180) is corrected and 16.05.210 is eliminated so that it remains unlawful for a department employee or a hunter employed by the department to receive a bounty.

SB 321

Farleigh

The Honorable Chancy Croft
President of the Senate
Alaska State Legislature
Juneau, Alaska 99811

Dear Mr. President:

In accordance with AS 24.30.060(b) and the Uniform Rules of the Alaska State Legislature, I am transmitting a bill relating to the efficient administration of Title 16 of the Alaska Statutes and the responsibilities regarding conservation and management of fish and game. Some of the changes proposed are purely technical and non-substantive in nature; others are more than that, so this is somewhat more than just a "housekeeping" bill. On the other hand, the substantive changes which do appear are not intended to implement anything resembling major changes in policy; rather, they are aimed at maximizing the efficiency of State government in managing fish and game resources so that the citizens of Alaska may obtain the greatest return for programs and activities funded by their taxes.

Since this bill concerns itself with the administration of fish and game generally, it necessarily pertains to the operations of the Boards of Fisheries and Game as well as to the Department. Therefore, it was considered highly important to obtain the views of the respective boards on this proposed legislation before its submission to the legislature. At their first joint session, in December, 1975, the boards spent nearly four hours reviewing and discussing its provisions with the assistance of the Departments of Law and Fish and Game. They then voted 13-0 to endorse these proposals.

This bill is necessary because: Considering the frequency with which AS 16 is amended and the interrelationship of provisions throughout that title, it is inevitable that some inconsistencies, oversights, and ambiguities will accumulate. Periodic revision of the fish and game laws to rectify these problems is desirable to facilitate administration by the executive branch, to avoid litigations over interpretation matters, and to reduce the likelihood of confusion with regard to future amendments by the legislature. Ambiguities, anachronisms, or inconsistencies in AS 16 may serve as the basis for lawsuits which otherwise would never be

filed. They may lead to board meetings which need not have been called, or meetings and lengthy deliberations by fish and game officials which would otherwise be unnecessary. In all of these cases, the State must spend a great deal of money for matters leading to no benefit for fish and game management. We would estimate that, based on the experience of the past year and the various lawsuits, meetings, and procedures which have taken place because of problems in Title 16, the State would save the taxpayers up to $100,000 per year if this bill were enacted.

Members of the executive branch who administer the laws daily and must interpret legislative directives in the context of particular situations become intimately familiar with the actual language employed. Consequently, they are in an excellent position to recommend changes which either improve the manner in which a legislative concept is to be implemented, or more accurately carry out the original legislative intent.

Problems of this nature in a complicated set of resource management laws are unavoidable. However, we believe that the necessary amendments must be implemented as soon as possible, and we offer the following to aid in your deliberations:

Section-By-Section Analysis of the Bill

Section 1. This updates existing language to reflect reorganizations of federal agencies and departments.

Section 2. This is the first of a number of instances in the bill where the word "chapter" is changed to "title" to allow applicability of a provision to the entire title. This is done only where it is evident that the particular section should so apply because of its general nature. In this case, the power of the Commissioner to collect and disseminate information should be present with respect to any duty vested in him since it is a necessary general function of a resource management agency.

Section 3. Adds to the powers and duties of the Commissioner the ability to perform research. This is already understood and has been implied from other powers, but it is so basic that it should be specifically mentioned.

This section also adds to the powers and duties of the Commissioner regarding fish and game diseases. This power already exists with regard to private nonprofit salmon hatcheries. The respective boards have this power under AS 16.05.251 and 255, but since this is an administrative ?

rather than a rulemaking function, it is properly housed in the Department.

Section 3 also pertains to powers of the Commissioner regarding cooperative agreements. The Commissioner already has these capabilities in a number of specific instances in Title 16, but the public interest of the State dictates that this power should be general since it is a routine administrative function. Inclusion of this section also permits a redraft of AS 16.05.251 and 255 (powers of the boards) separating administrative and rulemaking functions regarding cooperative agreements, the latter function being retained by the boards.

Finally, Section 3 adds the equivalent of a necessary and proper clause to the powers of the Commissioner regarding the general responsibilities vested in AS 16.05.020.

Section 4. This section would accomplish several changes in the emergency powers of the Commissioner. Only one of these, however, is a substantive addition to his authority.

Pressures from competing users of fish and game resources in Alaska is steadily increasing, leading to the need for more refined management techniques which respond as quickly as possible to changes in conditions. This necessarily reduces the margin of error available to fish and game managers. It is virtually impossible for the boards to assess with complete accuracy anticipated resource availability at board meetings, which are usually far in advance of season openings. The ability of the Commissioner to be able to open or close seasons or weekly periods on fish or game by emergency order is an important administrative tool, and it is often used to implement board policy or intent where unexpected changes in conditions require changes to regulations. In many cases, however, season closure may be an unnecessarily harsh measure to protect a resource; necessary safeguards may involve only a reduction of harvest levels of bag limits. Concurrently, while greater than anticipated resource numbers may not justify a season opening if this is the only avenue available, opening of a season might be satisfactory if bag limits or quotas could be reduced at the same time. Therefore, it would seem to be of benefit to the public if the power to change quotas, bag limits, or harvest levels were added to the emergency powers of the Commissioner.

From a strictly legal standpoint, there is some question as to the validity of sec. 60 in the context of due process because of the absence of (1) standards for when emergency orders may be issued and (2) the procedure to be followed in

promulgating the orders. Several additions are made to insure that adequate notice is given to interested persons so that any due process questions are eliminated. This process is also made applicable to Commissioner's announcements.

Finally, the boards frequently include in the text of their regulations that a particular season or weekly period will open or close by emergency order. As a legal safeguard, a sentence is added to sec. 60 specifically authorizing this procedure.

Section 5. AS 16.05.065 permits the Department to extend registration or licensing deadlines for particular individuals upon a showing of "excusable neglect". Since Departmental policy and decisions of courts have resulted in the evolution of a customary definition of this rather ambiguous term, it is advisable to incorporate this definition into the statutes.

Section 6. This section has been redrafted to more accurately reflect the types of actions which should be admitted as evidence of rulemaking activities in courts of law.

Section 7. This section is self-explanatory. It would permit disbursements to be made without the delay normally caused by seasonal fluctuations in receipts accruing to the Fish and Game Fund.

Section 8. "Chapter" is changed to "title" so that uniform enforcement procedures may apply to all of Title 16. In addition, the requirement that offenders be brought before a magistrate immediately is dropped, removing an unnecessary burden on protection officers.

Section 9. "Chapter" is changed to "title" for the same reason expressed regarding section 8.

Section 10. Some confusion has developed as to exactly what the respective powers and relationships are between the boards and the Department. In section 241, the legislature has recognized that the boards are entities of rulemaking and that the Departmental responsibilities are administrative. The relationship is therefore very similar to the distinctions between a legislative and executive branch. It is important to note that section 241 specifies that the boards "do not have administrative, budgeting or fiscal powers". (Emphasis added.) Since the legislature has organized the boards and the Department with this division in mind, it is highly important that this division be preserved in all of the statutes within Title 16; otherwise, it becomes very difficult to determine who is supposed to make the rules and who is supposed to carry them out.

That this distinction is not always clear became evident in a case litigated in 1975 entitled Cordano v. Brooks, in which a Departmental wolf control program in Game Management Subunit 20A was challenged. Imprecise language in the statutes (which was carried over into the split-board law) relating to the powers of the Board of Fish and Game caused the court to determine that the board had to adopt a regulation allowing department employees to engage in predator control. This result was not in keeping with the board/department relationship established by the legislature, since it declared that not only must the Department carry out regulations of the board, but it must also observe those regulations as though they were private persons even when performing official duties. This directive, if applied universally, would prohibit the Department from engaging in any research involving harvesting of resources unless the season were open and appropriate methods and means, bag limits, size restrictions, closed waters, gear restrictions, and quotas, etc., were observed by Departmental employees which is obviously contrary to legislative intent. Therefore, section 241 is amended to indicate that regulations of the boards apply to the public, and not to Departmental employees engaged in activities already authorized by statute.

In succeeding sections of this bill, various sections of Title 16 are rewritten to insure that board functions are limited to rulemaking and Departmental functions are restricted to administration.

Section 11. No specific authorizations exist for harvest levels, sex, and size limitations, even though regulations of this nature are and have been promulgated. Although authority can be implied from other board powers, it should be made express as a legal safeguard.

Section 12. The board does not engage in biological research, which is an administrative function. Consequently, this paragraph is rewritten to more accurately reflect the nature of board regulations in this area. In addition, a reference to the economy or general welfare as justification for regulations is added to expressly support regulations which constitute allocations among users and are not strictly for conservation (e.g., subsistence regulations, regulations pertaining to types of gear or particular methods and means). Note that this language parallels that under the powers of the Commissioner in AS 16.05.020(2).

Section 13. The board does not adopt regulations regarding investigation of predators, which is an administrative

function. It does, however, establish methods and means and harvest levels for the taking of predators through regulation. This paragraph is redrafted to reflect this fact.

Section 14. Entering into cooperative agreements does not necessitate the promulgation of regulations by the board. However, if such a cooperative agreement necessitates assent to the applicability of federal regulations, this is tantamount to a regulation-making function, since it governs the terms under which fish or game will be taken by the public. Therefore, this aspect of cooperative agreements should involve action by the board.

Section 15. Three additions are made to the powers of the board.

Paragraph (13) would authorize the board to adopt regulations limiting utilization and disposition of fish where necessary for protection of the resource. For example, the board could prohibit the use of salmon for bait if this were causing undesirable harvesting pressures on salmon and it was decided that bait utilization was not a high-value use.

Paragraph (14) would allow limiting routes of access or modes of transportation into an area to facilitate conservation and management. The primary purpose of this amendment is to assist the Board of Game with regard to hunting practices in particular areas (e.g., subsistence areas). However, it was felt that an identical section should be added under powers of the Board of Fisheries so that the powers of the respective boards would remain as identical as possible. Both (13) and (14) can probably be implied from existing board authorizations, but specific mention is desirable as a legal safeguard.

Paragraph (15) would formalize a procedure whereby the board decides it to be in the public interest for a regulatory action to be taken by the Commissioner. Usually this occurs where the board does not have sufficient information at its meeting to adopt a specific date for season opening or closure, and provides that it shall be done by emergency order. Again, this is primarily to insure that there is express legal authority for what is already a customary practice.

Section 16. Same justification as for Section 11.

Section 17. Same justification as for Section 13.

Section 18. Same justification as for Section 12.

Section 19. Same justification as for Section 14.

Section 20. Same justification as for Section 15.

Section 21. The Board of Fish and Game customarily met only twice a year. If the Boards of Fisheries and Game follow past practice, the former will meet twice and the latter once per year. During the interim periods, the boards are not in session and their members are scattered throughout the State, often out of contact with each other. Consequently, when a need suddenly arises for regulatory action in order to protect the fish or game resources of Alaska, delegations of the authority of the boards to the Commissioner become a highly important statutory capability. Consequently, Section 21 would make several amendments to AS 16.05.270 in order to clarify procedures for delegations and facilitate the delegation process where a board wishes to transmit its authority to the Commissioner.

Although AS 16.05.251 and 255 recite the basic powers of the Boards of Fisheries and Game, there are a number of other sections in Title 16 where regulatory powers are assigned to a board without specific authorization for delegation. From the standpoint of governmental efficiency, the boards should have the option to delegate their authority for any of their responsibilities if they so desire, especially since convening boards is expensive and may involve only a routine matter out of proportion to the expense. Therefore, subsection (a) would permit them to do so rather than limiting delegations to the powers included in secs. 251 and 255.

In addition, there is a significant legal question as to whether a board must meet in one geographical location in order to accomplish a delegation. It is presumed that the intent of the legislature was otherwise; if the board is able to so meet, there is no purpose in making a delegation, since the board may act on its own. Therefore, subsection (a) would also formalize the procedure often utilized in the past whereby a delegation may be accomplished through a mail or telephone poll of the members by the Commissioner. This is particularly important where there is not time to convene a board meeting (which usually requires at least 30 days advance notice) before action must be taken.

During the course of a year, members of the Department invariably run across ambiguities or inconsistencies in the fish and game regulations which were not discovered at board meetings. Often, they arise where criminal prosecutions are dismissed because a court considers a regulation to be defective. Subsection (b) would establish a standing delegation of the authority from the boards to the Commissioner to make minor technical corrections to regulations. Since such changes do not alter the substance of a regulation, there would not seem to be any need to go to the expense of contacting all of the members of a board for what is necessarily a routine action. The requirement that the intent of the board be retained precludes abuse.

Many members of the boards hold occupations (e.g., fishermen, guides, etc.) which require them to be in remote areas of the State and out of contact for lengthy periods of time. If a situation arises where regulatory action is necessary and a quorum of board members cannot be contacted, the State is essentially out of the regulatory business for that period of time. This could be highly damaging to the welfare of Alaska's fish and game resources if, for example, an entire set of regulations were invalidated by a court for constitutional or procedural defects. Therefore, subsection (c) would allow the Commissioner to take necessary regulatory action under these conditions if, and only if, he is unable to contact a quorum of board members within the time available to act. Moreover, the Commissioner would not be permitted to change the policy of the board as represented by its regulations unless to do otherwise would be patently impossible.

Subsection (d) is self-explanatory.

It is very important to note that this section would not increase the powers of the Commissioner relative to those of the boards. Rather, it would insure that the regulatory policies of the boards could be carried out in response to changing conditions even when the boards were not formally in session by allowing the Commissioner to act as the agent of the boards. As in the case of Hjelle v. Brooks, where a 1974 challenge by nonresident shellfish fishermen to State regulations succeeded in invalidating the board's management system and necessitating their redrafting when the board was not in session, a delegation of authority may result in the savings of tens of thousands of dollars and the continued full protection of the welfare and interests of the citizens of Alaska.

Section 22. This section makes a minor change in AS 16.-05.290 to allow board members to receive expenses and per diem for attending functions which are not strictly meetings or conferences, such as inspections of facilities.

Section 23. This section constitutes a grammatical improvement for AS 16.05.330(b).

Section 24. Section 24 would require the Department to issue identification cards to persons who are exempt from license requirements, and require them to have the cards in their possession while hunting, fishing, or trapping. Otherwise, there is little, if any, deterrent to falsifying applications for exemptions and enforcement is impossible.

Section 25. An oversight in Title 16 results in there being no requirement that vessel licenses must be in the possession of the licensee, which is required for other licenses. Seciton 25 would require actual possession.

Section 26. AS 16.05.680 does not prohibit employing a fisherman or purchasing fish from a fisherman who does not possess the proper licenses except for commercial licenses. This addition would prohibit purchases from fishermen who do not possess all licenses required by Title 16.

Section 27. This section reflects changes in commercial shellfish regulations. The Bering Sea and Western Aleutians are now expressly designated as registration areas.

Section 28. A misunderstanding arose during this past season regarding the burden of proof statute. Under the existing law, the burden of proof is on the holder of the fish and game only after ten days beyond a season closure (three days for crab). However, while this section does allocate the burden of proof, it does not make possession legal even when the burden of proof is on the State (during the first ten days following closure (three days for crab)). Subsection (b) would clarify this point.

Section 29. The existing law regarding confidential reports on fish products does not permit release to the Department of Public Safety. Considering that Department's enforcement responsibilities, such release should be permitted.

A serious defect in the present law concerns the fact that, while the Department of Fish and Game may not release confidential reports to the public without a court order, there is no restriction on such release by the Department of

Revenue and the Commercial Fisheries Entry Commission, which may receive the records from ADF&G. Therefore, this section has been redrafted so that the reports may be exchanged among the four named agencies, but may not be released elsewhere without a court order.

Section 30. This section updates existing law to reflect reorganizations of federal agencies.

Section 31. During the last legislature, a law was adopted prohibiting the waste of salmon. During the deliberations on the bill, however, what was apparently an innocent editorial change resulted in the introduction of an ambiguity in the law which may well nullify its effectiveness. Section 31 would utilize the language employed in the original bill but clear up the ambiguity.

Section 32. The basic prohibition contained in Title 16 is that it is unlawful to possess fish and game unless permitted by statute or a regulation of the boards. This prohibition is contained in AS 16.05.920(a). However, an apparent oversight has limited this prohibition to Chapter 05 only. Therefore, the word "chapter" is changed to "title".

Section 33. AS 16.05.940 is intended to be the basic definitions section for Title 16. However, these definitions apply technically only to Chapter 05, as a result of an apparent oversight. Therefore, Section 33 would change "chapter" to "title".

Section 33 would also change the definition of "resident". There have been many questions by persons who were unsure as to whether or not they were entitled to resident status. In addition, there are considerable loopholes present which allow persons who leave the State or never become bona fide residents to obtain resident licenses.

First, the words "the preceding" are added before "12 consecutive months". Without this, any person who has at any time resided in the State for 12 consecutive months meets the qualification contained in this phrase.

Second, under the new language residents would be required to maintain "their permanent and principal place of abode" in the State to qualify for residency. This would eliminate as a resident the type of person who brings a few belongings to Alaska and shares an apartment in order to avoid non-resident tax fees, but in actuality lives elsewhere. The new language would permit an Alaska resident to have an

additional house in another state (such as a winter home) provided the principal residence and abode was still in Alaska. However, a person who took all his belongings and left the State for eight months out of the year would not be entitled to resident status, even if he owned a home in Alaska. Many cases would have to be judged on their circumstances, but a determination would be possible which reflects the actual situation.

Third, the reference to voting residency is eliminated. It is not an accurate indicator of residence, and such a requirement may be unconstitutional because it requires persons to register in order to enjoy residency privileges, and it disqualifies from residency any person under 18 years of age.

Similar changes are made regarding military personnel and aliens.

Paragraph (6) of the definitions is amended to specify that "fish" includes parts of the fish. This would have applicability, for example, to fish for which the parts are sold individually, such as salmon roe.

Section 34. During the Bristol Bay price dispute last year, the department's role in setting up mediation was hampered by the need to actually certify that 1/3 of the registered fishermen were involved in a price dispute. Given the information available, this is not always possible. Consequently, this section is amended to make the burden on the Department a practical one.

Section 35. This section would make two changes in the private nonprofit salmon hatchery law. First, there should be some limit on the expenditures made from surplus hatchery funds, since "other fisheries activities" includes anything remotely related to fish. Therefore, such expenditures would have to be approved by the Department.

Second, the directive of the last sentence in sec. 450 is not always possible, since salmon sold by hatcheries may not be in a condition comparable to salmon sold commercially through normal channels. Therefore, this requirement would apply only to the extent possible to insure practicality and still prevent abuse.

Section 36-38. Although the legislature has established game refuges, sanctuaries, and critical habitats, required notification for developmental activities, and provided for restrictions in the form of board regulations, there do not

exist any penalties for violating these directives. Therefore, these sections would establish violations as misdemeanors and provide for penalties.

Section 39. Presently, this section requires consent in writing from the board for deployment of poisons. Written consent is an administrative rather than regulation-making function, and belongs with the Department. The amendment would so provide. Additional changes are made so that the restrictions more accurately reflect the objectives of a prohibition of this nature.

Section 40. This section would repeal several existing sections.

AS 16.05.280 provides that members of a board may be removed by the Governor for cause. However, AS 39.05.060 states that members of the boards serve at the pleasure of the Governor. This conflict was not resolved by the legislature in the split board act. However, AS 39.05.060 was amended by that law and the language stipulating that members serve at the Governor's pleasure was not changed, which would seem to indicate the legislature's preference for that approach. Therefore, AS 16.05.280 would be repealed to remove the inconsistency.

AS 16.05.450(c) was intended in the first place to apply to salmon net gear only, although it does not say so. With the advent of limited entry, there does not appear to be any purpose in retaining it, since it is an inconvenience to fishermen.

AS 16.15 is an anachronism, since the laboratory in question no longer exists.

AS 16.35.010-080 pertain in part to bounties which are no longer paid. The bounties on seals are in conflict with the Marine Mammal Protection Act of 1972. Moreover, AS 16.-05.255 provides that the Board of Game may establish bounties through the promulgation of regulations. Therefore, these sections should be repealed. Also within these sections are provisions regarding employment of trappers and hunters for predator control which are archaic and should be repealed.

Repeal of the sections pertaining to bounties should also result in repeal of AS 16.05.210, which makes a reference to special hunters of the Department.

Sincerely,

Jay S. Hammond
Governor

SB

1. Addition of the "fourth factor".

Sec. 46.03.758 - Civil Penalties for Discharges of Oil.

Subsection (d) should be amended to read, in part:

> "(d) The schedule shall vary according to the toxicity, degradability and dispersal characteristics of the oil. In order to provide a meaningful incentive for the safe handling of oil, as referred to in paragraph (a) (2), the schedule shall also vary according to the past operating records of the persons liable for the discharge, as far as such operating records reflect the frequency and severity of previous spills for which such persons were liable. The schedule shall also..."

not adopted

March 30, 1978

ALASKA LEGISLATION - 1978
S.B. 557
CIL SPILL PENALTIES

This bill, which amends H.B. 137, Chapter 129 of the 1977 Session, should be further amended as follows:

1. Section 46.03.758(a)(2) is amended to read:

> "~~the exact nature and extent of oil pollution can be neither documented with certainty nor precisely quantified on a spill-by-spill basis; however,~~ in light of the magnitude of harm which may be caused by oil discharges, and the vital importance of commercial, sport and subsistence fishing, tourism, and Alaska's natural abundance and beauty to the economic future of the state, and its quality of life, it is the judgment of the legislature that substantial civil penalties should be imposed for the discharge of oil, in order to provide a meaningful incentive for the safe handling of oil and to insure that the public does not bear substantial losses from oil pollution for which, ~~because of its subtle, long-term or unquantifiable nature,~~ compensation would not otherwise be received; ~~and~~ however, it is not the intent of this section to impose a civil penalty for discharge of oil where there is no demonstrable damage to the environment; and"

This amendment is the most important of the four. It deletes the reference to unquantifiable damage, a thoroughly illogical concept which no one has ever been able to explain, and it adds language to require a demonstration that environmental damage has occurred before penalties under this law can be imposed.

The existing law, which does not require evidence of environmental damage before imposing penalties, must be considered punitive. Yet, subsection (a)(3) states this should not be the case.* Thus, this amendment would render the penalty remedial rather than punitive.

2. Section 46.03.758(b)(1) is amended to read:

> "Subject to subsection (a)(2) and to ~~(3)~~ (2) of this subsection, the penalties for the following categories of receiving environments may not exceed"

Making the penalties subject to subsection (a)(2) is a precaution to ensure that penalties will not be imposed unless it is demonstrated that environmental damage occurred.

*46.03.758 (a)(3) "in order to provide an incentive which is effective, but not punitive."

The change from (3) to (2) is a technical change. There is no (3) in subsection (b).

3. Section 46.03.758(d) is amended to read:

> "The schedule shall vary according to the toxicity, degradability and dispersal characteristics of the oil. The schedule shall also vary according to the sensitivity and productivity of the receiving environment. And, the schedule shall take into account seasonal changes. Variations under this subsection may be by subcategories of receiving environments, specific receiving environments, or both. The maximum penalties established in (b) of this section shall apply to discharges in the most sensitive and productive of receiving environments within each category of receiving environment, and the penalty shall decrease for less productive or less sensitive receiving environments."

This is consistent with past arguments that seasonality is an important factor in determining potential enviromental damage. Also, it reinforces our first amendment. "Less" is added before "sensitive" in the interest of good construction.

4. Section 46.03.758(g) is amended to read:

> "Except as provided in (f) and (j) of this section, the entire penalty specified in the regulations shall be imposed, except that a person who discharges oil into a receiving environment may demonstrate, by a preponderance of evidence, that mitigating circumstances relating to the effects of the discharge would make imposition of the full penalty inappropriate. ~~In determining whether mitigating circumstances exist, the court shall recognize that scientific knowledge pertaining to oil spills is very limited and if there is insufficient knowledge either to predict a base case or to show mitigating circumstances varying from that base case, the administratively established schedule of penalties shall apply.~~ Only when no such mitigating circumstances exist shall the schedule of full penalties apply."

The language deleted describes the body of scientific knowledge pertaining to oil spills as "very limited." This is simply not true. The scientific community, academicians, government, and industry have produced volumes of data on the fate and effects of oil spills (an abbreviated bibliography is attached), and their work is continuing. Therefore, the deleted sentence cannot be justified.

TESTIMONY
CONCERNING
CIVIL PENALTIES FOR DISCHARGE OF OIL

FOR THE RECORD, I AM BEN BENEDIKTSSON, MANAGING DIRECTOR OF THE ALASKA TRUCKING ASSOCIATION. MY ASSOCIATION IS MADE UP OF SOME 600 MEMBER FIRMS WHO EMPLOY 17,000 EMPLOYEES DELIVERING VIRTURALLY ALL OF YOUR FOOD, HOUSEHOLD NECESSITIES, AND FUEL.

WE ARE VERY CONCERNED WITH THE ENTIRE SUBJECT OF OIL SPILLS. VERY FEW OF MY MEMBERS ARE PURE CARRIERS IN THE SENSE THAT A YELLOW FREIGHT OR CONSOLIDATED FREIGHTWAY EXISTS IN THE LOWER 48. ALMOST ALL OF MY MEMBER CARRIERS ARE INVOLVED IN A VARIETY OF TYPES OF AUTHORITIES. FOR EXAMPLE, MY TYPICAL MEMBER WILL HAVE AUTHORITY TO MOVE GENERAL COMMODITIES, HOUSEHOLD GOODS, AND FUEL. A LARGER NUMBER OF RELATIVELY SMALL CARRIERS ARE INVOLVED IN FUEL DELIVERIES THAN IS THE CASE IN THE TYPICAL LOWER 48 AREA.

THE HANDLING OF FUEL BY TRUCK IS AN ABSOLUTE NECESSITY TO THE SURVIVAL OF MOST OF THE COMMUNITIES AND CITIES IN ALASKA. WITHOUT THE REQUISITE TANK TRUCKER DELIVERING YOUR HOME HEATING OIL, MANY OF MY MEMBERS AND YOUR CONSTITUENTS COULD NOT SURVIVE.

THE SUBJECT OF THIS HEARING IS SB 557, CONCERNING MANDATORY OIL SPILL PENALTIES. IN THE LAST HALF SESSION, THE LEGISLATURE PASSED HB 137 WHICH, WHILE APPARENTLY BASED ON GOOD INTENTION, WAS BAD

LAW. THE APPARENT INTENT WAS TWO FOLD - (1) TO PROVIDE AN INCENTIVE TO ENSURE SAFER HANDLING OF LARGE QUANTITIES OF OIL AND (2) TO PLACE DOLLARS INTO THE GENERAL FUND TO OFFSET ENVIRONMENTAL REPAIR COSTS, FOR DAMAGE RESULTING FROM LARGE SCALE OIL SPILLS. UNFORTUNATELY, WHAT HAS HAPPENED AS A RESULT OF THE PASSAGE OF AS 46.03.758 IS THAT THE SMALL OIL CARRIER IS PLACED IN A POSITION IN WHICH HE CAN BE SERVED WITH AN ARBITRARY FINE FOR AN OIL SPILL, REGARDLESS OF ACTUAL ENVIRONMENTAL DAMAGE. THAT FINE CAN BE VERY SIGNIFICANT AND, IN FACT, PROBABLY WOULD PUT A LARGE MAJORITY OF MY MEMBERS OUT OF BUSINESS IF THE FULL PENALTIES WERE TO BE ENFORCED IN A RELATIVELY SMALL SPILL.

ATTACHED ARE WORK SHEETS FOR POTENTIAL OIL SPILLS IN TWO TYPICAL CASES OF TRUCK ACCIDENTS.

SB 557 WAS PROPOSED TO ELIMINATE THE SMALL OIL SPILL FROM PENALTIES AGAINST WHICH THE OPERATOR CANNOT EVEN BE INSURED. THERE IS A COMPANION BILL (HB 912) PRESENTLY BEING PROCESSED THROUGH THE HOUSE WHICH PROPOSES ESSENTIALLY THE SAME SOLUTION TO THE CIVIL PENALTY PROBLEM AS SB 557. IT IS OUR RECOMMENDATION THAT THE TWO BILLS BE COMBINED. WE THINK THAT THE RATIONALE AND THE GALLONAGE FIGURE SUPPLIED BY HB 912 WOULD PROVIDE THE PROTECTION NECESSARY TO CARRY OUT THE INTENT OF THE ORIGINAL LEGISLATION. OUR TANK TRUCKER NOW RUNNING THE HIGHWAYS CARRY A MAXIMUM LOAD OF ABOUT 11,500 GALLONS

OF PETROLEUM PRODUCTS. SINCE THE TREND HAS BEEN TOWARD LARGER EQUIPMENT WE SUGGESTED THAT A FACTOR OF 12,500 GALLONS BE USED TO EFFECT THE LOWER LIMIT OF CIVIL PENALTIES. THIS WOULD PROVIDE PROTECTION NECESSARY FOR THE NEXT SEVERAL YEARS. IN EARLIER HEARINGS OF HB 912 THE 12,500 GALLON FIGURE WAS REDUCED TO 12,000. THAT IS FINE BY US. IT HAS ESSENTIALLY THE SAME AFFECT AS THE 12,500 FIGURE.

THE ATA SUGGESTS AS AN AMENDMENT THAT THE TEXT OF HB 912 BE ADOPTED AS SB 557. THIS WILL HAVE THE AFFECT OF ESTABLISHING THE LIMITATION NECESSARY TO PROTECT THE SMALL FUEL CARRIER AND ALSO PROVIDING A MUCH BETTER STATEMENT OF LEGISLATIVE INTENT THAN IS IN SB 557. IT WILL ALSO HAVE THE AFFECT OF MAKING PASSAGE OF THIS LEGISLATION MUCH EASIER.

ON BEHALF OF MY ASSOCIATION, I WOULD LIKE TO THANK YOU FOR THE OPPORTUNITY TO BE HEARD.

LAND POLICY BILL

Suggested Amendments

A. Page 6, line 6, suggested substitution for section .040.

AVAILABILITY OF MENTAL HEALTH LAND, SCHOOL LAND, AND UNIVERSITY LAND. Under the purposes of this chapter, mental health land, school land, and university land may be made available for private use in accordance with statutes governing such lands. In their capacity as trustee for such lands, the Mental Health Board, the Board of Education, and the Board of Regants of the University of Alaska shall, within 120 days from the date of this act, define goals and objectives for the management and disposition of lands under their trusteeship. In accordance with these goals and objectives and in consultation with the municipalities in which such lands are located, the director shall prepare an annual program for sale or lease offerings of selected mental health lands, school lands, and university lands. This program shall accompany the annual land availability programs submitted to the Legislature in accordance with section .020 of this chapter.

B. Page 7, line 11, substitute for last sentence.

The requirements of this section do not apply to land made available through a cabin permit system, material sales, or short-term leases; provided, however, that for short-term leases a municipality may require compliance with local subdivision ordinances.

C. Page 9, line 27, added sentence to paragraph (e).

The classification process must include notice and review requirements of existing statutes.

D. Page 10, line 5, added sentence to paragraph (g).

Where a local zoning ordinance or other land use regulation is in effect, the provisions of AS 35.30.020 and AS 35.30.030 shall apply.

SECTION BY SECTION ANALYSIS
LAND POLICY BILL
HOUSE BILL NO. 904/SENATE BILL NO. 562

Sec. .005. This section sets forth basic intent and purpose regarding state-owned lands. Paragraphs (a) through (e) are purposely worded in the form of general policy directives rather than in the form of specific binding legal requirements. The last sentence in (b), lines 13-16, page 2, needs some explanation. Such a statement is necessary if lands classified for open space purposes are to qualify as the matching share for federal funds under the Land and Water Conservation Program.

Sec. .010. Under this statement, the basic orientation of State land disposal is towards the needs of individuals and other parties who will actually use the land. The Commission recommended this policy after finding that state land sales in the late 1960's and 1970's had primarily benefited land companies and wealthy individuals who could afford large tract purchases, rather than individuals who were looking for cabin or house sites. To change this orientation, land should be made available in individually sized parcels.

This section also includes a directive that state land availability programs concentrate in areas where public services already exist or can be extended, or where a viable economic base could be developed. This policy would not prohibit remote land disposal but, rather, direct that in such areas disposal would be mainly for recreation cabin sites with seasonal road or water access. Another method of fulfilling this directive might be through a rural cabin permit system, meeting the needs of people who want real isolation with several miles of separation between sites.

Sec. .015. This section lists the various reasons for retaining some state lands in public ownership, and is generally self-explanatory.

Sec. .020. This paragraph is identical to the first paragraph of the Governor's land credit proposal. An annual determination of acreage to be available for private use gives the legislature the flexibility to respond to changes in circumstances over the years. An annual determination is consistent with the basic thrust of the policy bill which is to make lands available where they are most needed and with consideration of local supply and demand factors. We would note that, in terms of meeting people's needs, it is not the gross acreage of land that is important but, rather, location, access, and tract size.

Sec. .025. This section is simply additional direction to base the land availability programs on an assessment of the differing needs for land of different types in various parts of the state, and to tailor state land programs accordingly.

Sec. .030. This section summarizes the variety of land availability programs within existing statutes and regulations and adds, in lines 25, 26, and 27, authority for a cabin permit system to be used in isolated locations on state-owned lands. To enable private use of remote isolated lands, the state must have a program which does not require land survey. In isolated locations a survey can cost as much as $4,000, often exceeding the market value of the land. A permit system which, unlike a conveyance program, would not entail land survey.

Sec. .035. The fair market value criterion set forth in (1) is self-explanatory. Besides the reasons included in the paragraph, the Commission recommends this approach because grant programs tend to invite public abuse, and are very difficult to administer in a fair and evenhanded manner. It should be noted that most of the participants at the Alaska Public Forum favored a market value approach to state land disposal. However, item (1) allows the use of less than fair market value programs as authorized by statute or administrative regulation and thus would enable the continuation of the homesite, homestead, and open-to-entry programs.

Paragraph (2) is self-explanatory.

Paragraph (3) spells out specific and detailed criteria for the choice of areas where lease programs would be used. This is an important addition to the state's body of land law. In the past lease programs have ofte.. been used where sale programs would have been more suitable.

Paragraph (4) gives direction for the use of cabin permitting in isolated, remote areas.

Paragraph (5) refers to the director's existing statutory authority to grant conditional title in special situations such as agricultural areas where the state wishes to ensure agricultural development, or in areas where the state may wish to preserve scenic easements, while making the land available for private uses compatible with this purpose.

Sec. .040. This section is self-explanatory. As a result of our discussion with the Community and Regional Affairs Committee, we are proposing a substitute paragraph (A in the list of suggested amendments) that would establish a more aggressive program for trust land availability.

Sec. .045. Under this section, the state would set survey control markers so that individual private surveys, tied to these markers, would mesh and not overlap. In the western states where areas were surveyed separately by private citizens, without an overlying set of control points, there were serious problems with overlapping and contradictory surveys. As a result, citizens were saddled with title problems, unusable property, etc. Through this section, we hope to avoid or minimize such problems in Alaska.

Sec. .050. This section requires the state to provide adequate access to private use areas. Lines 18 through 20 gives direction for the integration of state road development programs with land availability programs in appropriate locations. If state land is actually to be made available for individual use, it is important to strengthen the state's role in development of local access roads associated with state land use programs.

Sec. .055. Self-explanatory.

Sec. .060. A regular, updated inventory of the land suitability should be the foundation of the state's land management program. The state already has a good start in this direction through the land selection inventory.

Paragraph (b) of this section directs the division to reassess holdings of other state agencies, such as the Division of Aviation, to see if the land amount is excessive or inadequate in relation to current needs and alternative uses of the property. Such a program is especially important in small communities where excessive agency holdings occasionally preempt lands that are vitally needed for other community uses.

Sec. .065. Paragraphs (a) and (b) provide guidelines and standards for the development of land use plans for state lands.

Paragraph (c) directs the commissioner to prepare regional land use plans for all of the state-owned land. These would be of simple "first-cut" plans separating areas of settlement and settlement impact from areas of public use and ownership.

Paragraph (d) provides a formal method of identifying the official plan so that the public and the administration knows which document to rely on, and makes the important requirement that land classification be based on the official plan.

Paragraph (e) is self-explanatory.

Paragraph (f) establishes a needed tie between transportation planning and general land planning.

Paragraph (g) requires state planning to be consistent with local governmental planning.

Sec. .070. This section adds a state multiple use management system to the existing state park and trail systems. Lands may be designated to this new system, the "State Public Reserve System" by proclamation of the governor. The legislature retains its existing power to approve any designation of land to a system closed to multiple purpose use for an area of over 640 acres.

Paragraph (4) gives the state the option of designating rivers or portions of rivers to be managed by the state under the guidelines of the National Wild and Scenic Rivers System. Such authority may be desirable in some areas where segments of a river are owned by the federal and state governments. If a whole river-trip area can be managed under one set of guidelines, overall recreation benefits may be increased.

Sec. 900. This section includes a requirement that the director adopt, within 120 days, a comprehensive revision of the regulations affecting planning, classification, management, and disposal of state land surface. The administration has long recognized the need for this overall rewrite, and work on a revision is in process.

*Sec. 3. The repealed section 38.05.300 deals with classification and with the authority of the legislature to approve single-use designation for more than 640 acres. This bill spells out the classification and planning process more completely, and section 38.05.300 should be deleted to avoid confusion. The legislature's control over single-use designation of more than 640 acres is included in section .070(c) of this bill (page 8, lines 8-10).

TESTIMONY

REGARDING LAND POLICY BILL

PRESENTED BY

JOINT FEDERAL-STATE LAND USE PLANNING COMMISSION FOR ALASKA

APRIL, 1978

The Commission wants to speak in support of Senate Bill 562 establishing an Alaskan land policy. We have been studying State land policy for several years and participated with the Administration in preparing this bill. As we reviewed the existing statutes governing the State's public domain and studied the State's land programs as they have operated over the past 15 years, we found that Alaska has very little statutory guidance to govern the Administration's decisions about disposal or retention of State lands. The existing constitutional and statutory requirement that State lands be managed for "maximum use and benefit consistent with the public interest" gives us an excellent basic goal, but is not specific enough to guide the administrator who is deciding where and how much State lands to make available for private use. As evidence of this statutory lack, we have seen the State's land program shift from large tract disposal practices in the late 1960's and early 1970's to the minimal disposal of recent years.

Members of the Legislature have recognized this problem, and, last year, Senator Poland requested the Commission to study the subject and prepare recommendations to this Legislature. We presented initial recommendations to members of the Senate and House Resources Committees this

January. The land policy bill represents a refinement of those sections of the Commission's recommendations dealing with policy matters.

The land policy bill before you accomplishes these purposes through three articles:

(1) Article 1 covers policy for public and private use. Essentially, this section makes it clear that the State's overall land policy is to provide lands for both private and public use purposes and to allocate suitable lands for each purpose. Special emphasis is placed on maintaining a balance of public and private lands near communities so that natural areas are easily reached by all people, and not just those who can afford to travel long distances. Two parallel subsections set forth the public purpose in making lands available for private use and the public purpose in retaining State lands in public ownership for recreation, mining, resource development, and other purposes. The policy statement recognizes the essential role of local governments in the process of arriving at decisions about State lands.

(2) Article 2 provides guidelines to the Administration for making land available for private use. The first section on timing and amount is identical to the first section of the land credit bill which Governor Hammond introduced. This section mandates that the Administration make a quantity of State

lands available on an annual basis for private use purposes. A minimum of 50,000 acres is set for the first year, no more than 10% of which may be leased land. Thereafter, the amount is set annually by the Legislature. The basic orientation of this section is towards making land available for direct, individual use in locations and in parcel sizes that best meet differing needs in different areas as determined through an inventory process.

The bill sets forth a State policy for making land available at fair market value, particularly in close-in locations with high real estate values; but the criteria provide room for use of homesiting and open-to-entry in appropriate locations. To prevent misuse of leasing, as has occurred in past years, the bill lists the types of special circumstances where leasing would be an appropriate method of making land available. Provision is also made for recreation cabin permitting in isolated locations on State lands. A section on availability of trust lands is included, and standards for surveying and subdivision as well as for adequate access are set forth. On page 7 there is a strong provision requiring State subdivisions to conform with local platting authority.

(3) Article 3 covers inventory planning and classification. This section draws from existing scattered and partial statutory direction for land inventory, planning and classification to

establish in one statute a clear, simple and unified program for analyzing the value and use potential of State lands. All lands must be inventoried and their appropriate use designated. As part of this process, the advise of local governments must be obtained.

The section establishes a new State management system for multiple use lands, called the "State Public Reserve System." There is also a new section on wild and scenic rivers giving the State the option of designated selected rivers in State ownership as part of the National Wild and Scenic Rivers System to be managed by the State in accordance with national guidelines. The Legislature retains its existing authority to approve any designation of more than 640 acres which would close the land to multiple use.

In summary, much of what is included in the land policy bill are generally accepted principles of good land management. The bill acknowledges the public desire to acquire State land for private use and mandates an active program in this direction. However, it does so in a responsible manner without sacrificing the many other valid uses of State land. We feel that adoption of this bill will clarify the State's position as a land manager, and will help in establishing this fact at a national level.

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

Detailed analysis and breakdown not yet completed. Will be completed and submitted on April 3, 1978. (See attached sheet for general breakdown)

N.B.

This fiscal note must be read in conjunction with the fiscal note for HB 905 (Land Disposal Act) since $4,579,631 in costs are identical in both bills (i.e. each bill mandates disposal of the same 50,000 acres). The additional cost of this bill, if HB 905 passes, is only $426,233.

Present municipal subdivision laws generally require actual construction of road access before sale of parcels under 40 acres in size. Unless the State is released from such requirements, the additional fiscal impact could be quite severe.

Preliminary

Estimated State Implementation Costs

Alaska Land Policy Act -- HB904, S8562

This preliminary statement analyzes the costs of implementing (1) the 50,000 acre minimum per year disposal directive and (2) the administration of the land inventory, assessment, coordination, etc. efforts. This is basically a first year cost analysis because Section 38.04.020 of the bill provides for an annual program as part of the administration's budget (at the 50,000 acre minimum level an estimated 5 percent inflationary factor could be added for each succeeding year).

1. 50,000 acre disposal TOTAL COST = $4,579,631/TOTAL PERSONNEL = 59 full time

The following acreages from the state's three principal disposal programs are assumed to comprise the first year's offerings (costs do not include provision of roads or services at sites):

Program	No. Sites	Acres/Site	Total Acres
Homesite	1,000	5	5,000
Open-to-entry	1,000	5	5,000
Agriculture and	500	20	10,000
general sales	250	40	10,000
	50	160	8,000
	25	320	8,000
	7	640	4,480
TOTALS	2,830 sites		50,480 acres

The following activities are assumed for any disposal program: (1) site identification and evaluation, (2) public information and community coordination, (3) subdivision and layout, (4) survey and records, (5) appraisal, (6) disposal and accounting, (7) administration, and (8) follow-up monitoring.

A. Estimated costs for (1) site identification and evaluation, (2) public information and community coordination, and (3) subdivision layout: $361,618/ 9 full time.

Municipality of Anchorage

POUCH 6-650
ANCHORAGE, ALASKA 99502
(907) 274-2525

GEORGE M. SULLIVAN, MAYOR

OFFICE OF THE MAYOR

April 17, 1978

The Honorable Kay Polland
Alaska State Senator
Pouch V
Juneau, Alaska 99811

Dear Senator Polland:

Senate Bill No. 562 will come before the Natural Resource Committee on Monday, April 17, 1978. There are three sections of this Bill which may adversely affect the Municipality of Anchorage. We would like to share our concerns with you regarding these sections before the Bill is heard by your committee.

Proposed section 38.04.045 (b) deals with the survey and subdivision of State land to be conveyed to private ownership. This section mandates compliance with local planning and platting ordinances. However, this section exempts from these ordinances land made available through mineral sales or a cabin permit system.

We object to the exemption provision for two reasons. First, it would be detrimental to the Municipality's planning program because under it large segments of land within the Municipality would not be subject to our planning and platting ordinances. If certain segments of land are not subject to the Municipality's planning and platting ordinances, then the ordinances become ineffective because they are designed to regulate all the land within the Municipality.

Second, the exemption provision conflicts with the policy contained in A.S. 09.55.275 which requires that any agency of the State must comply with local platting regulations in the same manner as private land owners when the State seeks to acquire property. This policy logically applies to the converse, i.e. when the State seeks to dispose of property. Providing for a partial exemption when the State seeks to dispose of property appears to serve no purpose. For the foregoing reasons, we suggest that the exemption provision be deleted.

Proposed section 38.04.065 deals with State Land Use Planning and Classification. Subsection (g) requires that State land use plans be consistent with local plans only to the extent that the Commissioner determines the local plan to be consistent with State interests.

We object to this subsection because it seems to conflict with A.S. 35.10.020 entitled "Consultation with Municipal Planning and Zoning Commissions". This section requires the State to comply with all local planning and zoning ordinances in the same manner as private land owners unless a State agency can "clearly demonstrate an overriding State interest". When a State agency makes such a showing, a specific waiver must be granted by the Governor.

We suggest that subsection (g) be made consistent with the language in A.S. 35.10.020 by amending the latter to require State land use plans to be consistent with Municipal plans unless a gubernatorial waiver is granted upon a "clear showing of an overriding State interest".

Proposed Section 38.04.065 would involve the State in regional land use planning in areas which now have local planning. The Municipality of Anchorage has actively engaged in a land use planning program and intends to maintain this effort. Until the degree of State involvement in local land use management is clarified, we cannot support this proposed section.

Sincerely,

George M. Sullivan
Mayor

MEMO

TO: Senator Poland

FROM: Senator Colletta DATE: March 3

I would like to request that SCR 25 relating to Alaska'a royalty oil and its in-state refining, receive priority treatment in committee. It is my expressed opinion that this method will best maintain Alaska's control of its royalty oil. The opinion is based on several legal decisions of the Federal Energy Administration concerning the Mandatory Petroleum Allocation Regulations as it relates to state government. The statement has been made that Alaska's taking of its royalty oil in value would preclude its taking the oil in kind at a future date because the state would become party to supplier/ purchaser relationships as controlled by Mandatory Petroleum Allocation Regulation 10 C.F.R. part 21. In order to not lose control of our royalty oil and its profits, I suggest that we take royalty oil in kind and negotiate for its in-state refining.

Thanks for your consideration.

MEMORANDUM April 27, 1977

SUBJECT: Policy Considerations in North Cook Inlet Royalty Gas Sale (W.O. #4105, Supplemental)

TO: The Honorable John Rader

FROM: Gregg K. Erickson
Director of Research

Summary

As you requested, we have provided you, in the form of Ms. Kallab's memorandum of April 26, a review of the history and issues raised by the proposed North Cook Inlet royalty gas sale. After review of Ms. Kallab's findings (in which we concur), we believe that approval of this contract will tend to create far-reaching precedents with respect to the terms and conditions under which the state may make royalty gas available for in-state use, both elsewhere in the Cook Inlet field and in the northern part of the state. In addition, we believe that a brief technical analysis of the charges established by Phillips for transportation of the state's royalty gas is in order.

Precedents That Would Be Established By The Proposed Sale

As a matter of public policy, there will be no regulatory review of the transportation costs charged against royalty gas. In general, it makes no economic or technical sense to have a multiplicity of oil or gas pipelines running from point A to point B. Because of the fact that the efficiency of pipeline transportation increases very rapidly as one goes from smaller to larger pipelines, it minimizes the real economic costs of transportation to have a single line of the largest possible diameter. The owner of such a line has a monopoly, but it is a "natural monopoly" in the same sense that an electrical distribution or telephone system is a natural monopoly, i.e., to have more than one system would simply raise costs to the consumer. In the absence of regulatory restraint, however, the natural monopolist will have every incentive to charge "what the market will bear". Ratification of the current proposal may establish an important precedent with respect to the means by which

charges are assessed against gas taken in kind for in-state use elsewhere in Alaska. We may reasonably expect to see many other situations in the future where industrial facilities are served by private carrier lines similar to the Phillips line in Cook Inlet. Use of these lines may be the only reasonable way for the state to bring its royalty gas to local markets. Ratification of the current contract would tend to establish the precedent that the owners of these lines should be permitted to charge for the transportation of the state's royalty gas on the basis of what the market will bear rather than on the basis of the cost to them of providing the transportation service.

Whenever the state takes its royalty gas (or oil) it will be obligated to bear the cost of increasing production by the amount necessary to maintain the original flow level. In the instant case, these costs are the 10¢ per Mcf which would be charged by Phillips to cover their costs of additional compression facilities.

The legislature (and the Alaska Public Utilities Commission) will acquiesce in an arrangement which proposes the construction of a $4 million gas transmission facility which is, by any standard of technical and economic efficiency, totally unnecessary. Because of the lack of regulatory jurisdiction or the unwillingness of Alaska Pipeline Company (APC) and the Alaska Public Utilities Commission (APUC) to pursue regulatory solutions which may be available under existing law, APC has not been able to negotiate an exchange agreement with Union-Marathon (U-M) which would, as Ms. Kallab's memorandum points out, make the $4 million "royalty gas line" unnecessary. Although the negotiation of such an agreement would not appear to increase costs to U-M by one iota (they may even reduce them) there are commercial advantages to U-M in refusing to negotiate, since blocking such an agreement limits the alternative supply options of Alaska Pipeline Company and thus enhances the value of U-M's gas reserves in the Kenai field. Of course, Phillips has its own reasons for not wishing to enter into such an agreement; i.e., to retain the royalty gas share.

By ratifying this agreement the legislature (and the APUC) encourage the cross subsidization of one group of rate payers by another group. The commission has, as noted in Ms. Kallab's memorandum, stated that the higher costs of royalty gas shall be allocated proportionately among all rate payers served by Alaska Pipeline Company. Until and unless the proposed royalty gas line is built (or an exchange agreement is developed) this will result in those rate payers located in the North Kenai Road Service Area (who consume the relatively high cost gas) being subsidized by the rate payers elsewhere in APC's system. If, as expected, the wellhead price of gas in Cook Inlet rises, it will almost certainly result in the Bernice Lake power plant paying less for its gas than Alaska Pipeline Company is paying for it. Apart from the questions of

fairness involved, this is certainly an invitation to a rate-payer action in which it would be asserted that the rates charged by APC are noncompensatory and thus not "just and reasonable" as required under existing law.

Technical Considerations With Respect to the Proposed Rates

As Ms. Kallab has pointed out, Phillips has asserted that the 5.5¢/Mcf deduction used in calculating the wellhead value of natural gas for royalty and severance tax purposes is "not appropriate" for the calculation of transportation charges against royalty gas taken in kind. We are not aware of any rationalization of this statement. It seems fairly clear, however, that the difference between this figure and the 20¢/Mcf (escalating at 6%) which they propose to charge is greater than can be justified by any rationale we can conceive. It is possible that neither figure represents a fair and reasonable transportation cost, but it is impossible that both can simultaneously be "fair and reasonable" in the context of the purposes for which they are being used.

We do not assert that we can establish or even estimate what would be a "fair and reasonable" charge for transporting the royalty gas ashore, but we do concur with the sentiments expressed by Dr. Dave Knudson, petroleum economist with the Department of Revenue, who (writing as a private citizen) states that he can find "no justification that a pipeline costing $10 to $12 million perhaps nine years ago (which is most probably highly depreciated) should have a cost of service of 10¢ per Mcf". Mr. Knudson's letter, dated April 6, 1977, is a part of the royalty board's official file on this matter, and a copy of it is attached for your convenience. Although we believe fair and reasonable charges in this instance can only be determined by an appropriate regulatory proceeding, we do categorically assert that the calculations contained in "Table I" do not conform to any of the possible rate-making methodologies that are used by regulatory commissions in the United States.

Mr. Donald Wold, Executive Director
Oil and Gas Royalty Advisory Board
Department of Natural Resources
State of Alaska
Juneau, AK 99801

April 6, 1977

subject: the proposed contract between State of Alaska and Phillips Petroleum Company for North Cook Inlet royalty gas

Dear Don:

After reading the draft contract attached to this letter, I am required to inform you that I believe this contract to be severely prejudicial to the natural gas consumers served by Alaskan Pipeline Company.

Specifically, I am troubled by Article 9.1, Article 9.2, and Article 11.1. These articles establish a basic cost of service, an escalation factor to be applied to this basic cost of service, a provision for higher costs of service due to compressor costs, and an exemption of this natural gas transmission system from Alaska Public Service Commission control.

I have seen no justification that a pipeline costing 10 to 12 million dollars perhaps 9 years ago (which is most probably highly depreciated) should have a cost of service of 10¢ per Mcf. Regarding the rate of escalation to be applied to the basic rate (i.e., 6 per cent per annum), I would like to point out that in all cost of service projections which I have made show declining transportation charges through time even given a general inflation rate of 6 per cent. I am unaware that future compression costs for State of Alaska royalty gas separate from net working interest gas will require payment on the basis of 10¢ per Mcf and inflated each year thereafter at 6 per cent. In short, the underlying economics of the above mentioned contract should be worked out prior to signing the contract. This is especially so given the fact that contract Article 11.1 frees Phillips from Alaska Public Service Commission supervision.

The delay required by this staff work should not be lengthy.

April 26, 1977

SUBJECT: North Cook Inlet Royalty Gas Sale (W.O. 4105)

TO: The Honorable John Rader

FROM: Elke Kallab
Research Analyst

This is in response to your request to look into matters relating to the proposed sale of state royalty gas from the North Cook Inlet gas field to Alaska Pipeline Company. You were particularly concerned with the gathering and compression charges Phillips Petroleum Company, the operator of the North Cook Inlet gas field, is planning to assess Alaska Pipeline Company for producing and transporting the royalty gas to Alaska Pipeline Company, and the question of whether Phillips Petroleum Company would come under the jurisdiction of the Alaska Public Utilities Commission or the Alaska Pipeline Commission as a result of transporting gas for Alaska Pipeline Company.

Summary

It would appear from the available records and all the information we have obtained that the added gathering and compression charges, negotiated between Phillips Petroleum Company and Alaska Pipeline Company will be allowed to be flowed through by virtue of Order No. 3, Docket U-75-68 issued by the Alaska Public Utilities Commission December 17, 1975, unless the APUC can be convinced to reopen the case in order to determine if the added charges are "reasonable and just". Furthermore, th Attorney General's office has issued legal opinions which exempt Phillips Petroleum Company from Alaska Public Utilities Commission or Alaska Pipeline Commission jurisdiction, since contracts, which have been submitted to the Legislature for approval, propose that Phillips Petroleum Company transport the royalty gas from the platform to a delivery point onshore for the State with Alaska Pipeline Company taking delivery onshore from the State and reimbursing the State for any costs incurred.

However, we believe sufficient grounds exist to question some of the propositions or assumptions which have been put forward to advance the argument that the royalty gas sale as presently proposed is in the best interests of the State and the public.

AGO 7856 93

We submit the following information to provide you with an abbreviated history of what has transpired to date regarding the sale of royalty gas from the North Cook Inlet gas field to Alaska Pipeline Company, as well as to discuss in some detail the various issues which are involved in this matter.

After you have had an opportunity to read this memorandum, we would appreciate receiving your comments and instructions as to how you wish us to proceed. We would be happy to expand on any point or matter, or answer any questions you may have.

ATTACHMENT TO MEMORANDUM OF APRIL 26, 1977
CONCERNING NORTH COOK INLET ROYALTY GAS SALE

Background

In August of 1975 Alaska Pipeline Company (APC) first approached the State to purchase the State's royalty gas from the North Cook Inlet gas field. APC needs additional supplies of gas to assure continued service for its North Kenai Road customers, which includes the Bernice Lake power plant as the main customer, and some 285 other small customers. These customers are presently being supplied by gas APC has contracted for with Union-Marathon (U-M) from the Kenai gas field.* The original contract was for ten years, expiring April 30, 1977, for a total of 10 Bcf of gas. Due to unexpected heavy usage, APC used up its committed supply in August 1976. The contract has been extended by U-M using "Anchorage" reserves from a second contract APC has with Union-Marathon for gas from the Kenai field.

In addition to the immediate need to replace the exhausted gas supply on the North Kenai Road, APC also needs to build up its diminishing dedicated gas reserves, particularly in the Anchorage area. (The need for added dedicated reserves was apparently the major consideration for allowing flow through of higher priced royalty gas in APUC's Order No. 3, according to former Commissioner Richard D. Edwards, who heard the case.)

---

* *A map showing location of the gas fields, pipelines and other pertinent information relating to this memorandum is enclosed for ready reference.*

The North Cook Inlet royalty gas for which APC made an offer is now being used by Phillips Petroleum Company, the producer/operator of the North Cook Inlet gas field, to meet 70 percent of its contractual requirements with Tokyo Gas and Tokyo Electric.

APC offered to pay the State the same price as the State is receiving from Phillips for royalty gas taken in value by the State from the North Cook Inlet field. At the time APC assumed this price to be 45¢/Mcf at the wellhead and 5.55¢/Mcf for transportation from the platform to Phillips' Kenai LNG plant. However, as discussions continued, it became quite clear that Phillips did not accept the 5.55¢/Mcf figure as an appropriate transportation cost. They indicated that the 5.55¢/Mcf charge was ". . . worked out and used as a deduction for computing wellhead value of the gas for purposes of paying royalty and taxes . . ." and that it was not the appropriate place differential for the kind of arrangement APC was contemplating.[1] As a result APC and Phillips entered into negotiations to arrive at a mutually agreeable charge for gathering and added compression costs. By negotiation the charges were agreed to be 10¢/Mcf for dehydration and delivery of the royalty gas to shore, and a 10¢/Mcf charge for added compression facilities required to deliver the State's royalty gas in-kind, to be increased by mutual agreement as further compression facilities were needed to maintain production. Table I and II, enclosed, were supplied by Phillips Petroleum Company at the request of the Alaska Royalty Oil and Gas

---

1 *Letter from Phillips Petroleum Company to Alaska Gas and Service Company, dated January 9, 1976.*

Development Advisory Board to "justify" the added gathering and compression charges.

The royalty gas which APC hopes to buy from the State is more expensive than gas APC receives and has under contract from other sources. APC expected that the Alaska Public Utilities Commission (APUC) would allow them to flow through the added costs entailed in purchasing the royalty gas, which then were thought to be 50.45¢/Mcf at the Kenai LNG plant gate, and also that the APUC would allow APC to "commingle" the higher priced royalty gas with lower priced gas APC purchases from other suppliers. (Apparently "commingling" is used by the parties involved to mean what is usually referred to as "rolled in" or average cost pricing).

The APUC did in fact permit the commingling of the higher priced royalty gas with lower priced gas available to APC in their Order No. 3, Docket U-75-68 issued December 17, 1975. The order provides that the differing costs would be averaged on a monthly basis to insure a "proper" price to consumers, since the North Cook Inlet royalty gas is available only as produced by Phillips in meeting their own needs, and thus a predictable and fixed daily volume cannot be assured. The APUC estimated that the commingling of royalty gas with lower priced gas would increase the costs to customers between 2¢-5¢/Mcf per month.

In addition, the APUC allowed APC to flow through the costs of royalty gas purchases from the North Cook Inlet gas field. In doing so they did

not mention any cost figures on which the flow through provision was allowed.

(The royalty clause in the commission's December 1975 order states that it was imperative for APC to build up its reserves. However, it also provided that if the royalty clause was not used to reflect an average cost of gas on or before August 1, 1976, the APUC would commence an investigation to determine the reasons for the non-use and to determine whether the royalty clause should be deleted from APC's tariff. APC did provide the APUC with information why they could not take delivery of the North Cook Inlet royalty gas. There is no indication that the APUC took any action as a result of this.)[2]

APC also proposed to build a "royalty" pipeline from the onshore delivery point to its Anchorage line, a distance of approximately 30 miles and at a cost of approximately $4,000,000, to absorb the excess gas over and above that required to meet the North Kenai Road demands, thereby hoping to reduce the rate at which the reserves dedicated to Anchorage in the Kenai field would decline. However, APC stressed that an "exchange" of gas using Union-Marathon's transmission line from the Kenai gas field to the North Kenai Road would be preferable to a literal transfer of excess North Cook Inlet royalty gas since such an "exchange" would reduce the need to construct the "royalty" line. Such an "exchange" agreement has not been worked out between the parties which would be affected.

---

2 *Letter from Alaska Gas and Service Company to Alaska Public Utilities Commission, dated September 29, 1976.*

Around December of 1975, Homer Electric Association (HEA) too made application for the North Cook Inlet royalty gas to provide electricity on the Kenai Peninsula. Much of the available royalty gas from the North Cook Inlet gas field would be used to supply the Bernice Lake power plant on the North Kenai Road, which HEA hopes to acquire from Chugach Electric Association, and which is now being supplied by APC with gas from the Kenai gas field. Additional generating facilities HEA is planning to construct would use up the remaining available royalty gas from the North Cook Inlet gas field. On March 30, 1976 HEA withdrew its application for the North Cook Inlet royalty gas since it had found another reliable supply source for its new generating facilities, and APC had assured HEA that they would supply the Bernice Lake power plant with gas.

Contract 76-1, selling the State's royalty gas from the North Cook Inlet gas field to APC, was executed June 4, 1976 and approved by the Legislature May 20, 1976. The records show that the House passed SCR 106 on voice vote, and the resolution passed the Senate 17-2. The major provisions of this contract were--

Quantity:	All royalty gas available from the North Cook Inlet gas field.
Delivery Point:	The wellhead. Phillips' platform.
Price:	55.5¢/Mcf to July 1, 1977 with subsequent annual price escalations based on the highest of three pricing alternatives.
Expiration Date:	July 1, 1984, the same time Phillips' contract with Tokyo Gas and Tokyo Electric expires.

Appendix "A", enclosed, sets out the key provisions of this contract together with those currently before the Legislature.

APC discovered that they could not take delivery of the gas under Contract 76-1 for a number of reasons, the most significant of which was that APC would have to take delivery of the gas at the platform, which would subject Phillips to regulatory jurisdiction of the APUC or Alaska Pipeline Commission as a utility. Phillips refuses to be subject to any regulatory jurisdiction. Their refusal to be regulated dates back to the very beginning of the negotiations when the State was first approached by APC to take its royalty gas in-kind rather than value, and has always presented a potential risk to the successful completion of negotiations. An attempt to exempt Phillips from regulatory jurisdiction by the APUC or Alaska Pipeline Commission by way of a waiver proved impossible since to do so Phillips would have had first to submit to the jursidiction of the APUC or the Alaska Pipeline Commission to be granted the waiver, a condition unacceptable to Phillips.

Another difficulty arose as the result of APC not being able to take all of the royalty gas available as provided for in Contract 76-1. The average daily royalty gas production from the North Cook Inlet field amounts to between 15-17 MMcf based on previous years' production. APC's estimated average daily needs to service their North Kenai Road customers is approximately 8 MMcf. Since APC has not constructed a

"royalty" pipeline from the delivery point on the North Kenai Road to their "Anchorage" line, and since they have not been able to work out an "exchange" agreement with Union-Marathon, APC is unable to utilize the excess amount of gas. The contract does not allow APC to resell the excess royalty gas to Phillips (although Phillips was agreeable to such an arrangement) since this would violate the contract provision which required that all of the royalty gas sold to APC be used within the State. Since Phillips exports its gas to Japan, selling any excess royalty gas back to Phillips would be in violation of Contract 76-1.

In conjunction with the excess volume which would have been used if a "royalty" pipeline had been in existence, APC told the APUC in September of 1976 that the short life of the contract (July 1, 1984) was one of the reasons for them not constructing a connecting line. Such a line would have allowed for APC to slow the decline of reserves dedicated to Anchorage, the main reason the APUC allowed the flow through tariff for royalty gas. In addition, such a line would also assure a stand-by gas supply for North Kenai Road customers in case production or supply from the North Cook Inlet field were to be interrupted for any reason.

By the end of January, 1977 APC petitioned the State to "re-draft" Contract 76-1 in order to make the contract operational.

To accomplish this it was suggested that the State have the royalty gas transported to shore thus avoiding APUC jurisdiction over Phillips' pipeline, since the State is not a utility. APC would take delivery at

or near the Kenai LNG plant and reimburse the State for any costs incurred. A legal opinion from the Attorney General's office was secured, at the insistence of Phillips, which holds that Phillips is not a utility subject to APUC jursidiction. Another legal opinion was issued exempting Phillips' pipeline from Alaska Pipeline Commission jursidiction on the basis th[illegible]he pipeline is not used as a common carrier by Phillips, and that it is not subject to the common carrier provision of the current law, since the pipeline was constructed prior to the enactment of that law. (Exemption of Phillips' pipeline from APUC jursidiction had been supported by the Alaska Royalty Oil and Gas Development Advisory Board as early as December 1975 to facilitate the sale of royalty gas to APC.)

It was further suggested that APC would be required to take only such amounts of royalty gas as they had need for. Any gas APC was unable to take delivery of as it became available was to be sold to Phillips as if the State had continued to take its royalty gas in value.

These changes and other provisions were incorporated into agreements between Phillips and the State, and APC and the State. The contract between APC and the State is now awaiting legislative approval, with the agreement between Phillips and the State having been submitted to the Legislature as an exhibit to the APC contract. The key provisions of the two agreements are listed in Appendix "A", which is enclosed.

Issues

Gathering, Compression and other Charges or Costs

The amount charged APC by Phillips for dehydration and transportation is 10¢/Mcf. The amount charged APC by Phillips to add a compression unit to maintain capacity in the gathering system is set at 10¢/Mcf. (The agreement between Phillips and the State, and the contract between APC and the State provide that APC will make all payments for the State's account directly to Phillips.) Both of these charges increase at a compounded rate of 6 percent per year. As further compression facilities are installed in the future, additional charges are to be mutually agreed upon by the parties involved. In addition, APC must pay Phillips in proportion to its deliveries for any new or increased taxes and charges which are levied against Phillips with respect to the gathering of royalty gas.

Phillips has supplied data on the gathering and compression charges negotiated between themselves and APC for delivering the State's royalty gas. (See Table I and Table II enclosed.) These figures have not been scrutinized as to whether they are just and reasonable by the Alaska Royalty Oil and Gas Development Advisory Board or the APUC. However, it has been suggested that they are on the high side.

Perhaps one way to get a better handle on these charges would be to request the APUC to review the royalty gas clause of its December 1975 order as it applies to allowing flow through charges. At the time the

AGO 785703

flow through provision was granted the transportation cost figures were thought to be considerably less than those proposed now. It is questionable whether the APUC would have allowed the currently proposed flow through charges, considering their comment in the order that the flow through provisions proposed by Alaska Gas and Service Company (AGAS), the distribution affiliate of APC, were ". . . so broad that nearly all increases in any . . . cost of purchased gas could be flowed through."[3] This tends to raise some doubts concerning APC's assertion that the APUC had intended to allow any and all flow through costs. The APUC order also states that the cost of royalty gas will be "somewhat higher" than the price of gas from other gas supplies now committeed to APC. Other supplies are priced at 41.5¢/Mcf for gas from the Kenai gas field, compared to 84.65¢/Mcf for royalty gas from the North Cook Inlet field, i.e., 104% higher.

It is of particular interest to note that one of the reasons the APUC allowed the added costs was to provide APC with the opportunity to obtain additional gas to supplement their dwindling reserves, particularly in the Anchorage area. Since the "royalty" line to move North Cook Inlet gas to Anchorage has not been built, and APC is not required under the contract to deliver gas to Anchorage, the question arises as to whether the added flow through charges should be allowed by the APUC. It is difficult to ascertain from the written material we have reviewed how hard APC negotiated with Phillips for less than the agreed to

---

[3] *Alaska Public Utilities Commission Docket U-75-68, Order No. 3. dated December 17, 1975, page 7.*

charges of 10¢/Mcf for transportation and 10¢/Mcf for compression. Records show that APC discouraged the APUC from developing " . . . 'a complete record' of the negotiations (between APC and Phillips) for the Commission's files . . ."[4]. The question arises as to what incentives, if any, existed for APC to negotiate for lower charges if APC assumes that any added costs can be passed on automatically to the consumer under U-75-68(3)?

The argument that the royalty gas from the North Cook Inlet gas field is cheaper, even with the added 20¢/Mcf cost for transportation and compression charged by Phillips, than any "new" gas available to APC in the Cook Inlet is debatable. APC cites a $1.45 price for similar gas in Cook Inlet being offered by Pacific Alaska LNG to support its contention. (We understand the above to be a "spot sale".) However, since the contract with APC provides that the State will receive the highest of three pricing options on the annual anniversary of the contract, one of which is the highest price paid within a 100 km radius from the Phillips platform, and since we have been advised that the gas for which Pacific Alaska LNG is making an offer is within the 100 km radius, it is unlikely that APC can escape paying the $1.45 (or even a higher) price within the next year. Therefore, the assertion that regardless of the added transportation and compression costs the royalty gas is still a bargain is not quite accurate, and APC is not entirely candid when using this argument to attempt to convince the Alaska Oil and Gas Development

---

[4] *Letter from Alaska Gas and Service Company to Alaska Public Utilities Commission, dated September 29, 1976.*

Advisory Board, the APUC or the Legislature " . . . that it appears royalty gas will always be available . . . at less cost than any other likely 'new' gas."[5]

At the same time APC told us that the above situation could not happen since no comparable sale to that provided for in the current contract would occur, and they, therefore, would never be subject to the pricing provision which calls for the highest price to be paid

> ". . . by any purchaser in the upper Cook Inlet area for gas of similar conditions of delivery; with due regard to appropriate factors including, but not limited to, differences of BTU content, delivery pressure, terms of the contract and connection charges." (Current Gas Purchase Contract, page 10, lines 3-8)

Royalty Line

One of the reasons APC cannot make Contract 76-1 of last year operational is that the contract provides that APC take all of the royalty gas available from the North Cook Inlet gas field. To have use for all royalty gas APC needs to ship approximately 50 percent to its Anchorage consumers, since only approximately 8 MMcf/day can be utilized on the North Kenai Road.

APC has been "flirting" with the idea of building a connecting "royalty" line from the North Kenai Road area to its "Anchorage" line, which delivers gas to Anchorage from the Kenai gas field from the beginning of the negotiations. However, they also have indicated that they would

---

[5] *Letter from Alaska Pipeline Company to Alaska Oil and Gas Development Advisory Board, dated April 15, 1977.*

AGO 785706

prefer to enter into an "exchange" agreement with U-M and Phillips to exchange royalty gas from North Cook Inlet with U-M gas from the Kenai gas field. This would be technically feasible, and cost far less than the proposed royalty line, since U-M runs a transmission line from the Kenai gas field to the North Kenai Road area, with APC running a line from the Kenai gas field to Anchorage. An exchange agreement would thus avoid a literal transfer of gas and eliminating construction of a "royalty" line. (See enclosed map.)

When APC found it impossible to work out an "exchange", they decided to build their own line to connect with the Anchorage line. However, this decision brought with it the request for all of the State's royalty gas from the North Cook Inlet field for the life of production rather than for a limited term through June of 1984. This request was not accepted by the State and Contract 76-1 provides for a termination date of July 1, 1984.

The question as to whether APC would build a royalty line continued and as late as February 2, 1977 APC informed the Alaska Oil and Gas Development Advisory Board that they would take such quantities of royalty gas as they could readily resell to their North Kenai Road customers, and not be committed to installing a pipeline connecting to their existing pipeline to Anchorage, although they could do so at their option.[6] The

---

[6] *Letter from Alaska Pipeline Company to Alaska Oil and Gas Development Advisory Board, dated February 2, 1977.*

most recent indications are that APC is inclined to build the connecting line upon approval of the contract by the Legislature, since " . . . it appears that there is sufficient benefit from the royalty line to justify the investment by APC."[7]

The physical absence of the royalty line not only prevents APC from providing Anchorage with much needed dedicated reserves, which was the APUC's reason for the royalty clause which allowed flow through of costs and commingling of lower priced Kenai field gas with North Cook Inlet royalty gas, but it also prevents APC from providing North Kenai Road customers with stand-by gas should the royalty gas ever be insufficient to meet demand.

APC has indicated that a royalty line would not be feasible if the present contract were not approved this year, because the contract only extends to June 1, 1984. We do not find this argument very persuasive. APC fully expects to get the royalty gas from the North Cook Inlet gas field for the life of production once the contract has been signed. Furthermore, it should be noted that the new contract provides that the contract can be extended prior to its termination, a provision absent from Contract 76-1.

The Legislature may wish to consider extracting a firm commitment from APC that they will build a royalty line immediately, making it a con-

---

[7] *Letter from Alaska Pipeline Company to Alaska Oil and Gas Development Advisory Board, dated April 15, 1977.*

dition of contract approval. If this can be accomplished, then APC should be required to take all of the royalty gas which becomes available after completion of the line, and the 3 Bcf "best reasonable effort" provision should be deleted from and/or revised in the APC contract as well as the agreement between the State and Phillips to avoid delays in deliveries once the line is operational.

Jurisdiction

Present indications are that there is no possibility for APUC or APC jurisdiction over Phillips' pipeline, in as much as Phillips operates and maintains the line for its own purposes. Phillips has not violated any laws, and both agreements provide that should Phillips come under either FPC, APUC or Alaska Pipeline Commission jurisdiction, the agreements terminate. Short of revoking their right-of-way permit and substituting a right-of-way lease, which may be possible but almost certainly would entail litigation, there appears to be no way to make them submit to regulatory jurisdiction.

To avoid future problems, the Legislature may provide that

1. All pipelines not currently covered by our common carrier statute agree to common carrier status retroactively to retain their pipeline right-of-way permits (Right-of-Way Leasing Act-38.35.120).

2. Sec. 43.06.630(9) of the Alaska Pipeline Commission Act be amended so that gas processing plants are covered in the definition of what constitutes a pipeline or pipeline facility, and deleting the reference to transportation as a common carrier.

3. The possibility should be explored if producers/operators of oil and gas fields located in remote or inaccessible locations, such as a platform, should be required to enter into mandatory exchange agreements with more favorably located fields or transmission lines, which are regulated by the APUC, to avoid jurisdiction, while at the same time protecting the public interest.

These suggestions have not been thoroughly investigated nor checked with the Division of Legal Services, but are offered as a beginning to remedy the current jurisdictional problems with which the State is faced as it affects Phillips' pipeline.

Phillips agreed with Alaska Pipeline Company's request to a compressor charge of 10¢/Mcf on a space-available basis and no minimum annual charge.

APPENDIX "A"

KEY PROVISIONS

	CONTRACT 76-1	PROPOSED REVISED CONTRACT CONTRACT BETWEEN STATE AND PHILLIPS (with APC being a signatory)	CONTRACT BETWEEN STATE AND APC
Quantity:	ARTICLE II All royalty gas available, when and as available.	ARTICLE IV 1. Phillips shall use its "best reasonable efforts" to deliver not less than 3 Bcf of royalty gas annually (without requiring installation or operation of added pipeline and compression facilities), and subject to a. availability of capacity in Phillips' facilities to handle volumes in excess of Phillips' own requirements; b. availability of royalty gas at the platform; c. APC's requirements; and d. APC's ability to take the requirements. 2. Over or under deliveries of royalty gas shall be carried in an over and short account. In the event the takes by the State (APC) shall ever be 60 MMcf less than the amount of royalty gas available, Phillips shall purchase the excess undelivered quantities of royalty gas over 60 MMcf from the State, and pay the State a price equal to that amount which Phillips would have otherwise paid the State had the State taken its royalty gas in value.	ARTICLE III 1. Up to all royalty gas available, subject to a. APC's ability to take the entire amount of royalty gas available on any given day; b. APC's need and available delivery facilities. APC shall use its "best reasonable efforts" to take not less than 3 Bcf of royalty gas annually. 2. Over or under deliveries of royalty gas shall be carried in an over and short account. In the event the takes by APC shall ever be 60 MMcf less than the amount of royalty gas available APC is not permitted to make up for any such underdelivery and the State may sell the undelivered quantity of royalty gas to Phillips.
Delivery Point:	ARTICLE III Delivery point shall be the same for APC as it has been for State, which is Phillips' platform.	ARTICLE III & V Delivery point shall be at or near the existing pipeline tap being presently used to deliver gas from Phillips' pipeline to the Tesoro refinery, which is located in the general vicinity of Phillips' Kenai LNG plant on the North Kenai Road.	ARTICLE V APC's connection into Phillips' pipeline system at or near Phillips' pipeline tap serving the Tesoro refinery. It shall be the same delivery point as that of the State and Phillips.
Price:	ARTICLE V 1. To July 1, 1977 55.5¢/Mcf 2. July 1, 1977-July 1, 1978 the higher of a. 60.36¢/Mcf or b. price State would have received had it continued to take its royalty gas in value or c. the highest price paid by any purchaser in the Upper Cook Inlet area (within a 100 km radius of Phillips' platform) for similar quality gas and similar conditions of delivery. 3. July 1, 1978 and each succeeding 12 month period the higher of a. the previous year's price plus 2¢/Mcf or b. price State would have received had it continued to take its royalty gas in value or c. the highest price paid by any purchaser in the Upper Cook Inlet area (within a 100 km radius of Phillips' platform) for similar quality gas and similar conditions of delivery.		ARTICLE VI 1. To July 1, 1978 64.65¢/Mcf 2. July 1, 1978-July 1, 1979 the higher of a. 66.65¢/Mcf or b. price State would have received had it continued to take its royalty gas in value or c. the highest price paid by any purchaser in the Upper Cook Inlet area (within a 100 km radius of Phillips' platform) for similar quality gas and similar conditions of delivery. 3. July 1, 1979 and each succeeding 12 month period the higher of a. the previous year's price plus 2¢/Mcf or b. price State would have received had it continued to take its royalty gas in value or c. the highest price paid by any purchaser in the Upper Cook Inlet area (within a 100 km radius of Phillips' platform) for similar quality gas and similar conditions of delivery.

AGO 785714

	CONTRACT 76-1	CONTRACT BETWEEN STATE AND PHILLIPS	CONTRACT BETWEEN STATE AND APC
Gathering and Compression Charges and Taxes; Other Charges		ARTICLE IX 1. 10¢/Mcf for gathering costs to delivery point to increase 6 percent per year compounded annually on the anniversary date of the contract. 2. 10¢/Mcf for added compression costs to delivery point to increase 6 percent per year compounded annually on the anniversary date when the facilities were first used. 3. Additional compression charges to be mutually agreed upon between the parties, which includes APC since they are signatories of this contract (see also 12.3). If no agreement is reached within 90 days after Phillips serves notice about such added costs, then this contract is terminated. 4. Additionally, the State must pay Phillips any new or increased fee, imposts, duty, charge, excise or tax in proportion to the amount of royalty gas delivered to the State as it relates to gathering and compression.	ARTICLE VI & VII 1. 10¢/Mcf for gathering costs to delivery point to increase 6 percent per year compounded annually on the anniversary date of the contract. 2. 10¢/Mcf for added compression costs to delivery point to increase 6 percent per year compounded annually on the anniversary date when such compression facilities are ready for use. (This is different from State/Phillips agreement.) This does not obligate Phillips to install any compression facilities or to operate any compression facilities already installed. 3. Additional compression charges to be mutually agreed upon between the State and APC. If no agreement is reached within 90 days after the State serves notice about such added costs, then this contract is terminated (7.5). 4. APC must pay the State any amount for which the State is obligated to reimburse Phillips for a proportion of new or increased fees, imposts, duties, charges or taxes. (This leaves out excise.) (The language is somewhat different from State/Phillips contract, but the effect would seem to be the same.) 5. APC must pay the State any additional costs not covered in the contract and incurred by State in transporting the gas to shore.
Term:	ARTICLE VI Effective: Upon approval by the Legislature 5/20/76 Expiration: July 1, 1984	ARTICLE XIV Effective: Upon approval by the Legislature of the contract between the State and APC. Expiration: June 1, 1984 unless terminated or extended prior to that date.	ARTICLE VII Effective: Upon approval by the Legislature. Expiration: June 1, 1984 unless terminated or extended prior to that date.
Termination Clause:	ARTICLE VII Allows APC to terminate the contract within 30 days of written notice to State if APC is unable to make satisfactory arrangements to take delivery of the royalty gas. APC may not exercise this right after January 31, 1978.	ARTICLE IX, XI & XIV 1. Will be terminated immediately if deliveries to State (APC) have not commenced by June 30, 1978. 2. If subjected to regulation as a utility (11.2). 3. If added compression cost cannot be agreed upon within 90 days (9.3). 4. If contract between State and APC is terminated. 5. If terminated the State's election to receive its royalty gas in-kind is revoked, and royalty gas available shall be sold to Phillips in value. 6.	ARTICLE VII 1. Contract shall terminate immediately if deliveries to APC have not commenced by June 30, 1978. 2. Either State or APC may terminate this contract by giving 30 days notice to the other if Phillips comes under regulation as a utility. 3. Contract may be terminated if added compression cost cannot be agreed upon within 90 days. 4. Contract may be terminated if contract between State and Phillips is terminated. 5. 6. State may terminate upon 30 days notice to APC if the State cannot arrange for satisfactory transportation of royalty gas to shore.

AGO 785715

	CONTRACT 76-1	CONTRACT BETWEEN STATE AND PHILLIPS	CONTRACT BETWEEN STATE AND APC
Representation and Condition Precedent:		ARTICLE XI Phillips, by entering into this contract, shall not be subject to regulation by the FPC, APUC or APC. Should they become subject to regulation as a utility this contract may be terminated by either party upon 30 days' notice.	ARTICLE VIII Neither this contract nor APC's use or disposition of the royalty gas will subject Phillips to FPC, APUC or APC regulation.
Payments:		ARTICLE XII APC to make all payments for State's account directly to Phillips.	
Miscellaneous			ARTICLE IX 1. Assignments of interest by APC may be made "...to conform with...(APC's) various financing documents or as may be desirable to...(APC) as to...(APC's) commonly owned affiliate or subsidiary." 2. If APC does not receive or purchase all royalty gas available, then State can dispose of that portion not taken, provided no gathering and compression charges are incurred by APC as a result.

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPT. OF ENVIRONMENTAL CONSERVATION

POUCH O – JUNEAU 99811

March 17, 1978

The Honorable Kay Poland
Chairman, Senate Resources Committee
Alaska State Senate
Pouch V
Juneau, Alaska 99811

Dear Chairman Poland:

On March 8, Senate Concurrent Resolution No. 87, "Annulling a regulation of the Department of Environmental Conservation relating to drinking water," was introduced in the Alaska Legislature. The regulation in question, 18 AAC 80.040(b), became effective December 31, 1977, and reads as follows:

> "No person who owns or operates a Class A or B public water system with surface water as a source may allow the use of water from that system without continuous disinfection."

This regulation applies to public water systems which serve, in the normal order of events, 25 persons per day for at least 60 days out of the year.

Although there are several acceptable means of disinfecting public water supplies, chlorination is the most common. Chlorination was first introduced in 1908. Immediately thereafter, instances of typhoid fever in those communities distributing disinfected water decreased dramatically. The worldwide reputation of United States water supplies as being safe to drink largely results from the almost nationwide disinfection of drinking water. This long-standing treatment technique is recognized today as the single most effective and inexpensive means of reducing waterborne diseases.

Although reported outbreaks of waterborne disease in the United States decreased dramatically from the 1930s to the 1950s, they have increased steadily since the 1950s, and quite dramatically since 1970. The cause for this increase is not completely understood, although it is most probably a combination of better reporting, and the growing contamination of water sources by domestic sewage.

The proposed resolution implies that Alaska's surface waters, in contrast to the national trend, are pure and safe to drink. This is manifestly untrue, as is demonstrated by a number of

serious outbreaks of illness in Alaska that are directly caused by inadequately protected water supplies. It must be understood that only a fraction of the total number of waterborne illnesses are actually reported. The best information available is derived from comprehensive epidemiological and engineering studies of sizable outbreaks. For your information, the following table presents some of the major outbreaks of waterborne diseases in Alaska in recent years. More historical data are available upon request.

Date	Location	Source	Disease	Cases	Comments
1954	Ketchikan	Lake	Salmonellosis	--	Seagulls contaminating lake
1949	Unalaska	Lake	Dysentery (probably shigellosis)	More than 20; 2 deaths	No disinfection
1971	Tok	--	Gastro-enteritis	112	--
1971	Anchorage	Well	Shigellosis	89	No disinfection
1967 (or 68?)	Kodiak	Island Lake	Dysentery	2 infant deaths; 4-5 families ill	No disinfection
1972	Cordova	Eyak Lake	Dysentery	400	Chlorinator not operating
1974	Juneau, Switzer Creek	Surface reservoir	Salmonellosis	28	Inadequate disinfection
1976	Russian Mission	Yukon River	Shigellosis	20-30	River water disinfected
1977	Craig	Surface	Dysentery	300	Chlorinator out of service

(--) indicates information not available

While the above table does not, by any means, include all the entire incidences of waterborne disease in Alaska, nor does it illustrate the degree of protection provided by the many water systems in the State which do provide disinfection, the fact that so many cases result from failure of systems to provide continuous disinfection indicates that the regulation will provide for a substantial increase in public health protection.

The incidence of diseases which may be waterborne is also of value in understanding the rationale for disinfection. While hepatitis A, shigellosis and salmonellosis can be transmitted by

a variety of means, they also are commonly waterborne. Alaska's incidence of hepatitis A was nearly 14 times that of the State of Washington in 1976. The incidence of salmonellosis and shigellosis were 1.6 and 2.3 times that of Washington, respectively. As might be expected from the severity of the disease, hepatitis A statistics are probably more accurate than the others.

Although disinfection is not 100 percent effective in destroying viruses, such as is the causative agent in hepatitis A, it still is the single most effective technique for virus control.

Disinfection of public water supplies is, then, a first line of defense against waterborne infections. Yet this powerful, time honored, tool to ensure that the water we and our children drink is free from bacterial contamination need not be prohibitively expensive. Consider a water system serving 30 families of four. If water consumption is 250 gallons per capita per day, total supply would be 30,000 gallons per day. The capital cost for a chemical feed pump for a system of this size, delivered in Anchorage, is $320. The chemicals used to provide disinfection would cost $1.18 per pound. While the amount of chemical actually used is dependent upon the quality of the water being disinfected, a good estimate of chemical used would be about 14 pounds per month. This would result in a one-time shared cost of $10.57 per family for the chemical feed pump, and about 55 cents per month for chemicals. Naturally, there would be additional costs such as installation and electricity. These costs, however, vary widely depending on the system, the source, and the availability of utilities and we give no estimate for them here.

I hope that this information adequately explains the need for disinfection of public water supply systems as set out in 18 AAC 80.040(b). One cannot escape the conclusion that choosing to not disinfect public water supplies served by surface waters will result in disease outbreaks that need not occur.

If you have any questions, or if additional information would be of value, please contact me.

Sincerely,

Ernst W. Mueller

improperly in requesting information from the law firms. At Monday's assembly meeting Fader said he was gathering input and facts on all of the alternatives to get perspective.

As an advocate of consolidation, Fader considers the resignation of the city attorney a perfect time to put the legal departments of both governments into one office. When the city started looking into outside legal service, Fader said he sought the same information.

Fader said Holst was "overreacting to the situation."

Teague defended Fader's action and said "it is premature to be concerned with job security. The importance of legal service makes it necessary to look at the alternatives."

Meanwhile, Wednesday's meeting was attended by representatives of four local law firms, including Ellis, Sund & Whittaker, A. Fred Miller, Esq., Ziegler, Cloudy, Smith, King and Brown, and Dennis McArty.

Most of the questioning by the private firms was directed to Stahla about the city's legal situation.

No formal proposals have been received by either the city or borough.

According to Teague, the next step of providing legal services for the city is up to the council. It has the option of hiring a new attorney, contracting with the borough to do the work, or contracting it out to a private firm.

Although the final decision is up to the council, Teague said he preferred to have the borough's legal services handled by a city attorney. The city has much more legal work, Teague said.

Teague didn't think he would have any problem working under any arrangement. He said contracting out the legal work was a practical solution, although it may not turn out to be the most viable.

If no action has been taken by the time the city attorney leaves, Teague said the assistant to the attorney, Tony Sholty, could act in a temporary capacity.

Right now the total budget for the city legal department is about $92,000. The borough legal department budget runs about $60,000.

A report prepared for the borough assembly by Holst estimated that a combined city-borough legal department could be budgeted at about $131,000, plus some initial office set up costs.

guardian and the complaint referred to youth and adult authority. He is alleged to have taken a bottle of vodka from the Totem Liquor Store.

Two children were reported out after curfew last night.

Today, for the second day in a row, a girl asked police to patrol a school bus stop in case her former boy friend tried to in-

report information of offending vehicles to the troopers, a trooper spokeswoman said.

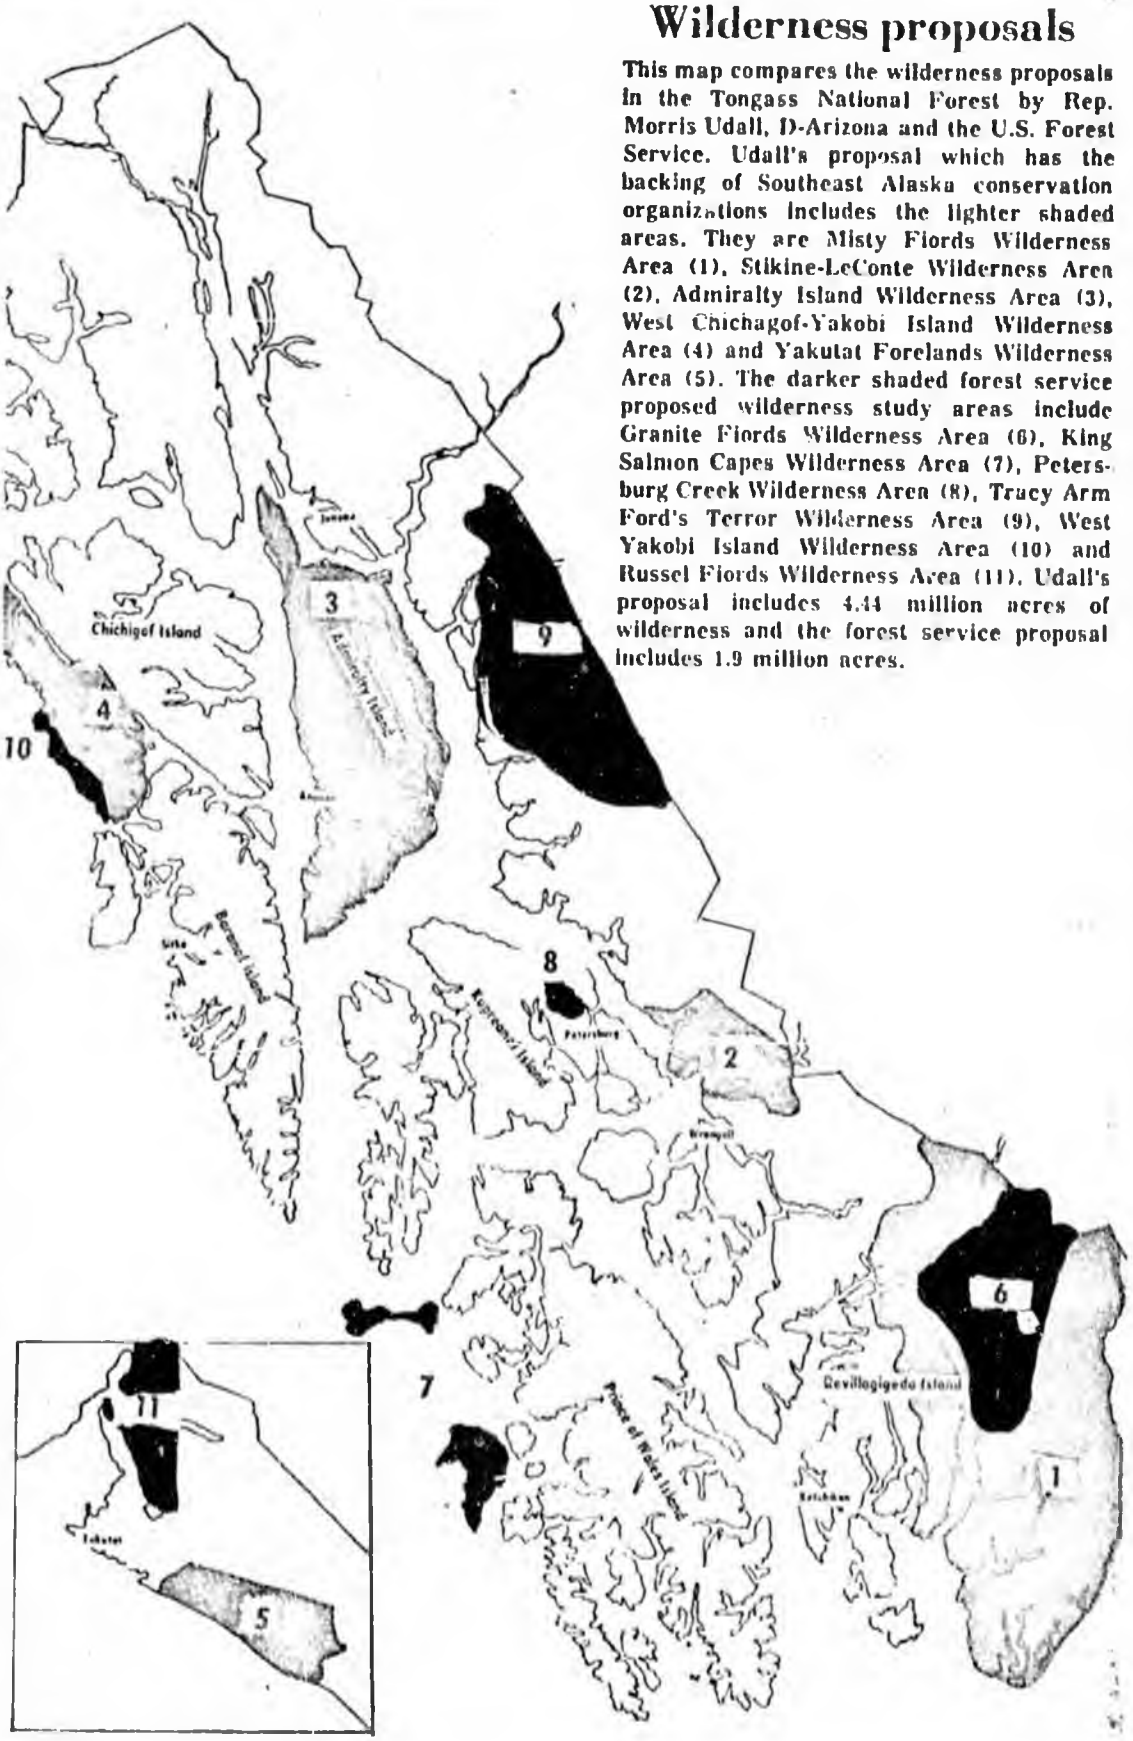
Offenders will be cited into court, she said. Conviction of this offense carries a six-point penalty against a driver's record, which is half the point accumulation allowed before a person's driving privilege is suspended.

Hospital notes:

Admitted to Ketchikan General Hospital Wednesday were Karen Woolery, Harry Reeve, Jill Russell and June Durgan.

Discharged were Dale Strong, Kathleen Lea and Hope Brown and baby girl.

Wilderness proposals



This map compares the wilderness proposals in the Tongass National Forest by Rep. Morris Udall, D-Arizona and the U.S. Forest Service. Udall's proposal which has the backing of Southeast Alaska conservation organizations includes the lighter shaded areas. They are Misty Fiords Wilderness Area (1), Stikine-LeConte Wilderness Area (2), Admiralty Island Wilderness Area (3), West Chichagof-Yakobi Island Wilderness Area (4) and Yakutat Forelands Wilderness Area (5). The darker shaded forest service proposed wilderness study areas include Granite Fiords Wilderness Area (6), King Salmon Capes Wilderness Area (7), Petersburg Creek Wilderness Area (8), Tracy Arm Ford's Terror Wilderness Area (9), West Yakobi Island Wilderness Area (10) and Russel Fiords Wilderness Area (11). Udall's proposal includes 4.44 million acres of wilderness and the forest service proposal includes 1.9 million acres.

Alaska National Interest Land Conservation Act
H.R. 39

Sec. 1 - Describes Titles within the Act - purposes of the Act and where maps of proposal are on file.

Title I - Describes National Park System Proposals

- 64.1 million acres of National Parks, Monuments and Preserves to be managed by the NPS.
- Kenai Fjords may include a portion of the Chugach NF.
- Glacier Bay National Monument addition (.8 mm acres) may include portion of Tongass NF.
- Sec. 103 provides for hunting under provisions of Sec. 702 of this Act.

Title II - Describes National Wildlife Refuge System

- 46.4 million acres of Wildlife Refuges and Ranges to be managed by the Fish and Wildlife Service.
- A portion of the Copper River Delta Refuge proposal would be Chugach NF.

Title III - Describes National Wild and Scenic River Proposals

- 23 Wild and Scenic Rivers proposed containing approximately 4 million acres.
- Rivers are outside and in addition to proposed Parks and Refuges.

- All Rivers would be managed by National Park Service.
- Situk (20 m acres) and Stikine (50 m acres) are now part of Tongass NF
- River boundaries will average 2 miles on each side and will be established within three years after date of enactment (Sec. 302).

Title IV - Describes National Forest System Proposals

- After consultation with both Secretaries of Agriculture and the Interior, the President is authorized within one year of enactment of this Act to add lands to the Tongass and Chugach NF's so as to include entire units of local topography, not to exceed 1.6 million acres, generally depicted on a map entitled "Potential NFS additions in Alaska, Dated _____."
- This 1.6 million acres is rock and ice.

Title V - Deals with National Petroleum Reserve (23 mm acres)

- Land review dedications pursuant to Sec. 105(c) of P.L. 94-258 replaces BLM management responsibilities with the Fish and Wildlife Service to protect surface values.

Title VI - Designation of Wilderness Areas

- Sec. 601 - Lands added to the Park, Refuge and Wild and Scenic Rivers System by this Act are hereby designated as wilderness. (Approximately 115 million acres.)

- Sec. 602 and Sec. 603 - Creates wilderness in existing Parks and Refuges in Alaska. (7.3 mm acres Parks, 19.7 mm acres Refuges) which is virtually all of existing Preserves.
- Sec. 604 - Adds certain lands in Tongass to wilderness

1,030,000 acres - Admiraltly Isla (excludes Native Village)
300,000 acres - Yakutat Forelands (Tongass)
2,400,000 acres - Misty Fjords (Tongass, Mainland East of Ketchikan)
305,000 acres - Stikine--LeConte (Tongass - East of Petersberg)
405,000 acres - West Chichigof-Yakobi (Tongass - North of Sikta)
600,000 acres - Nellie Juan (Chugach, Prince William Sound)

Total 5,040,000 acres Wilderness

(Total wilderness proposed in this bill - 147 million acres)

- Sec. 605 - Wilderness designated by this Act shall be managed in accordance with the Wilderness Act except that any reference in such provisions to the effective date of the Wilderness Act shall be deemed to be a reference to the effective date of this Act and any reference to the Secretary of Agriculture shall be deemed to be a reference to the Secretary of the Interior.

Title VII - General Administrative Provisions

Sec. 701 - Provides for subsistence use in Parks, Refuges, Wild and Scenic Rivers and National Forests (Titles I, II, III, and IV).

- Secretary may designate "Subsistence Mgt. Zones" and "Regulatory Subsistence Boards."

- Secretary retains responsibility and may overrule Subsistence Board decisions.
- Provides for periodic review of advisability to continue subsistence use.

Sec. 702 - May permit hunting in National Preserves (part of Park System) on three areas totaling 12.6 million acres.

Sec. 703 - Withdraws Parks, Monuments, Preserves, Wildlife Refuges and Ranges, and Wild and Scenic Rivers from all forms of appropriation under the mining laws and mineral leasing laws.

Sec. 704(a) - Native lands not selected within National Forests, Parks, Refuges and Rivers will be added to the respective area. (This could add several million more acres to Parks and Refuges and Rivers.)

Sec. 704(b) - State selections within Parks, Forests, Refuges or Rivers established by this Act are hereby revoked provided that the Secretary will make available equal acreage from other public lands but not from Forests, Parks, Refuges, or Rivers.

Sec. 705 - Provides for land acquisition.

Sec. 706 - Provides for the establishment of Administrative Sites outside established areas.

Sec. 707 - Provides Native Corporations opportunity to provide visitor facilities for areas.

Sec. 708 - Authorizes Secretary to establish areas of ecological concern adjacent to established units.

- Provides for cooperative planning.

Proposal Summary

	Millions of Acres
National Park System	64.1*
National Wildlife Refuge System	46.4*
National Wild and Scenic Rivers System (23 Rivers)	4.0*
National Forest System	1.6
Total D-2 proposal	116.1

* Designated by this Act as wilderness - 114.5 mm acres

Existing Park and Refuge Lands Designated Wilderness	27.0 million acres
Existing Forest Lands Designated Wilderness	5.0 million acres
Total Wilderness Proposed	146.5 million acres

This Act also designates the 23 mm acre Petroleum Reserve for Fish and Wildlife Service Management.

Territorial Sportsmen, Inc.

P. O. Box 761

Juneau, Alaska 99801

January 17, 1977

ALASKA'S NATIONAL INTEREST LAND CONSERVATION ACT - H.R. 39

The Territorial Sportsmen, Inc. of Juneau, a non-profit sportsmen oriented conservation organization dedicated to the principles of multiple use and proper management of our natural resources, have recently received a copy of H.R. 39 introduced by Congressman Udall. The Territorial Sportsmen have had a long, continuing interest in the matters relating to land management and allocations in Alaska. There are numerous sections of H.R. 39 which in our opinion are not in the best interests of the State or the Nation. While we have only had access to a copy for three days, after careful review, we are deeply concerned with the language contained in H.R. 39. The purpose of this release is to provide members of our organization and other interested members of the community and the State with some of the facts.

The proposal would designate 147 million acres of wilderness which would be in addition to existing withdrawals for various purposes including military withdrawals. The 147 million acres, plus the previous dedications and withdrawals, would place 46½ percent (approximately) of Alaska's entire land area of 362,516,000 acres in the wilderness classification. The designation in total of millions in acres of wilderness is greater than the combined areas of the States of California and Washington.

In addition to designation of National Park and National Wildlife areas as wilderness, all wild and scenic rivers would be managed as wilderness by the National Park Service. This would include 23 wild and scenic rivers. These rivers are outside and in addition to proposed parks and refuges. The boundaries of these designated rivers will average two miles on each side. Managed as wilderness by the National Park Service, these 23 proposed wild and scenic rivers will not be available for recreation, development, agriculture, current hunting practices, hydroelectric power site developments, timber harvesting or mining.

Under management by the National Park Service or as National Wildlife refuges, the State of Alaska (Alaska Department of Fish and Game) loses the primary responsibility for management of fish and wildlife species on these areas. The Secretary of the Interior is authorized to publish regulations, prescribe conditions and enforce such regulations and conditions for restrictions of hunting and fishing to subsistence use.

Although the Forest Service, Department of Agriculature, has currently designated approximately 2.5 million acres in seven wilderness study areas in the Chugach and Tongass National Forests and is currently managing them to protect the wilderness values, while the U.S. Geological Survey is completing the required study of mineral values, these designations are ignored by the proposed legislation or supplanted with instant designations of wilderness classification includes:

Admiralty Island.

1,030,000 acres excluding only the Angoon Native Village and related selected lands. The Goldbelt and Shee Atika, Inc. Native rights and selections on Admiralty Island are ignored.

Misty Fjords.

2,400,000 acres instant wilderness classification includes the 590,000-acre Granite Fjords wilderness study area managed by the Forest Service. Although the U.S. Geological Survey minerals survey findings are nearly ready for evaluation, instant wilderness designation precludes consideration of this information. The expanded area of 2,400,000 acres also includes the U.S.Borax Company's Quartz Mountain molybdenum project and would essentially block the development of this project.

The West Chichagof-Yakobi wilderness area proposal of 405,000 acres encompasses the Forest Service Unit Management plan for this area. A 5-year study including a formal environmental impact statement. The final impact statement based on extensive public involvement included designation of a 40,000-acre wilderness study area and management of most of the area as backcountry. The designation of the entire area as wilderness ignores the 5-year study and environmental impact statement, would block the development of Inspiration Mining Company's copper-nickel deposit on Yakobi Island. Several year-long residences and other existing recreation facilities would also be adversely affected by such classification.

The Yakutat Forelands, 300,000 acres and Stikine-LeConte 305,000 acres are also areas on the Tongass National Forest currently

under study in the Forest Service's land management planning process. Although the areas have not been studied for mineral values, instant wilderness classification would be made. Native claims, opportunities for agriculture and other forms of development are also ignored.

The Nellie Juan area on the Chugach National Forest is also designated as instant wilderness. Although this corresponds to the Forest Service's designated wilderness study area, the mineral surveys by the U.S. Geological Survey are not completed and Native claims are ignored.

Management of these National Forest wilderness area designations would be taken over by the National Park Service, eliminating the State of Alaska's responsibility for management of fish and wildlife species and restricting hunting and other opportunities for multiple use management.

The proposed legislation would also modify existing land classifications in southeast Alaska.

Copper River Delta Area.

Elimination of the Forest Service's Copper River Delta Game Management Area, where the Forest Service has a cooperative agreement with the State of Alaska Department of Fish and Game, seriously undermines the Forest Service's Multiple Use Management program. The Forest Service also has cooperative efforts underway in this area with the U.S. Fish and Wildlife Service, University of Alaska, and University of Minnesota. The Forest Service should be encouraged to continue such efforts rather than blocking such work.

H.R, 39 Fails to Recognize the Agricultural Potential in Alaska.

The agricultural potential in Alaska is not considered in the provisions of this proposed legislation. In fact, existing and potential agricultural lands are included in proposals for National Parks, National Wildlife Refuges, and Wild and Scenic Rivers preventing the use of these agricultural lands.

The Subcommittee on Agricultural Production, Marketing and Stabilization of Prices of the Committee on Agriculture and Forestry, U.S. Senate, held hearing in Palmer, Alaska on August 16, 1976, and in Fairbanks on August 17, 1976, on the agricultural potential in Alaska. The record of these hearings has been printed and clearly show the importance of these agricultural lands. The Alaska State Legislature and Governor Hammond have also recognized this important agricultural resource and additional agricultural lands have been identified.

It is essential that all of these agricultural lands be recognized and be available for use either as farmlands or as grazing lands. H.R. 39 should be referred to the Senate and House Committees on Agriculture and Forestry to assure these agricultural values are considered and will be available for use.

The Alaska National Interest Land Conservation Act - H.R. 39 also proposes to greatly modify existing land classifications in southeast Alaska and Price William Sound, severely retarding the conservation (wise use) of resources on the Tongass National Forest, Chugach National Forest, and Glacier Bay National Monument.

The Glacier Bay National Monument is enlarged to a total of 2,800,000 acres and is all designated wilderness. These lands

include highly significant and economically available minerals critical to the Nation's needs. Opportunities for developed recreation facilities, hunting, aquaculture, and timber harvesting would also be foreclosed by these designations.

Retention of and classification of additional areas as National Forest which will permit multiple use management of these various resources should be made.

In conclusion, we would again urge that everyone become familiar with this proposal. Hearings no doubt will be held. Copies of the entire Act should be available in Alaska in the near future. I suggest you contact the various offices of our State delegation to secure copies or write directly to your Congressman or Senators. We would like to point out, also, that in our opinion this proposal does not recognize the economic factors involved. Certainly the proposals for southeast Alaska would, in our opinion, put southeast Alaska in a very precarious position so far as economics are concerned. I am sure this should be of interest to all Alaskans. We will be commenting further on this legislation. We are advised that other legislation will also be introduced in the very near future. We certainly should have some options.

Mr. Phil Holdsworth, P.E.
Consulting Engineer
326 Fourth Street, No. 1009
Juneau, Alaska 99801

Dear Phil:

I understand Tom Dvorak of my staff discussed your letter inquiry of December 24, 1976 with you over the telephone and provided the information you were seeking concerning the refuge system in Alaska as to their status under the mining laws.

Let me again reiterate the mining law situation as it applies to the refuge system in Alaska. The only Alaska refuges now open to location and entry under the mining laws are the Clarence Rhode National Wildlife Range and Cape Newenham National Wildlife Refuge except those lands withdrawn under Section 11 of the Alaska Native Claims Settlement Act. The Secretary's proposal to Congress for refuge D-2 lands has included Clarence Rhode and Cape Newenham as part of the Yukon Delta and Togiak NWR proposals. Upon their establishment under the above proposals, they would then be closed to location and entry under the mining laws.

If I can be of further assistance, please do not hesitate to call on me.

Sincerely yours,

Gordon

THE PRESERVATIONISTS' BLACKOUT

STATE OF ALASKA
One Inch = 190 Miles

ALASKA TASK FORCE

Sierra Club, 530 Bush Street,
San Francisco, CA 94108
(415)981-8634

Dear

We are looking for Sierra Club members who will participate in our campaign over the next two years to bring about permanent legislative protection for Alaska's grandest lands. You are one of those who has gone on a recent outing to that incredible country, and we hope that you have special enthusiasm for it and will want to join our Alaska Task Force and take part in its Alaska Legislative Program (ALP).

The enclosed Alaska Report outlines the situation with respect to Alaska legislation and the reprint "Great Stakes in the Great Land" describes the various areas that environmentalists seek to include in our national conservation systems. You will also find a sheet describing ALP in some detail.

We would like you to take on the responsibilities of Coordinator of legislative contact for your Congressional District or your local zone. Due to the inevitable unknowns of campaigns such as this one, we cannot precisely detail the extent of those responsibilities at this time. Basically though, as Congressional District Coordinator (CDC), they entail the recruiting of 15 or so Zone Organizers (ZO) in various towns or areas of your district. As ZO, your task also will be to recruit 15 or so people who will promise to write their Senators and Congressmen at crucial times during the campaign.

In addition to recruiting others, we will ask you to notify them very rapidly at those crucial times when letters are needed. That will be the extent of the basic job. There is much more that you could undertake if you so desire, but the vital job of generating constituent communication to their Representatives is the one that is absolutely mandatory if we are to succeed with the enactment of strong Alaska legislation.

We estimate the recruitment phase will require up to 20 hours of your time over the next two months. Perhaps another 20 hours notifying your team when you are alerted, over the next two years. Between postage and phone calls, you probably will have out-of-pocket costs of $10-20 which we cannot reimburse.

We are initiating this program in order to ensure heavy constituent contact with Senators and Representatives, without which we cannot win. District and Zone Organizers are essential to its success --- to Alaska's future.

Please undertake this job if you possibly can. It will cost you a little time and money. But it should be interesting and challenging. And very rewarding. We would appreciate hearing from you soon. In order to expedite the organization of ALP, please reply to Jo Belsey at the Alaska Task Force address. We will need both your home and business telephone numbers. Many thanks.

Cordially,

Edgar Wayburn

Edgar Wayburn, M.D.
Chairman
Alaska Task Force

P.S. Would you also let us know the name and address of good backpack equipment stores in your area that you feel would be inclined to participate in ALP? Also the name of the proprietors of those stores if you can easily obtain them.

A REVIEW OF ACTION ON ALASKA'S PUBLIC LANDS DURING THE 1970's

This issue of the Alaska Report will review and update the situation with r spect to the disposition of Alaska's public lands -- its "unreserved public domain " which until recently amounted to more than three-quarters of the st In 1972, the Secretary of the Interior, under Congressional authority, desig ted 79 million acres as "National Interest Lands" and withdrew them from pub entry until the end of 1978. Congress must enact further legislation by tha time to place Alaska's most treasured lands in national conservation systems order to permanently protect them. Various bills were submitted in both the 93rd and 94th Congresses calling for widely differing degrees of protection. The Senate Interior Committee conducted hearings in late 1975, but no other a tion has been taken. It is now up to the 95th Congress convening in 1977 to termine the future of Alaska National Interest Lands.

STATEHOOD

Claims to Alaska's 365 million acres and threats to their fragile ecology were minimal until the territory became our 49th State in 1959 ,with a population nearly 230,000. But the Statehood Act, which Congress had passed the previou year, generously granted the infant state some 103 million acres of land ,plus another 40 million acres of tidelands. This whopping land grant (more than a been parcelled out to the seventeen western states combined) was intended to vide a base which would enable Alaska's tiny population to overcome its enor economic problems. It exceeded by some 40 million acres the amount of Alaska lands which should now be placed in trust for the benefit of all Americans.

As the State set about identifying the lands it wanted, it ran into opposition from Native Eskimos, Aleuts and Athabascan Indians ,who rejected the State's claim to their ancestral lands. By 1966 the dispute had become intense enough for then Secretary of the Interior Stewart Udall to put a "freeze" on all dev opment of, or transfer of title to, public land in Alaska. Then oil was disc vered at Prudhoe Bay in 1968, and the oil companies were denied permission to build a pipeline across Alaska's public land to carry it to markets in the lo 48. From these two separate situations developed a strange coalition of oil industry and Alaska Native lobbyists which besieged Congress, demanding settl ment of the Native claims and the thawing of the land freeze.

public domain and a cash payment of almost $1 billion, to be distributed thro 12 regional and numerous village corporations. (The regions, and the villag recognized by the Department of the Interior, were incorporated after the pa of ANCSA on December 18, 1971; as of December, 1975, most had filed their lan selections with Interior and received their first cash payments.)

In the course of the ANCSA debate, it became clear to conservationists that t state, the Natives and private industry were each to be granted a chunk of Al but no provision was being made to manage what was left in the unreserved pub domain in the best interest of the owners -- the American people. Senators J Jackson and Metcalf sponsored an amendment which became Section 17 of the Act with some important provisions:

17(a) - established a joint Federal-State Land Use Planning Commission to sure comprehensive planning for Alaska's future;

17(b)&(c) - set up a planning procedure for locating public easements and portation and utility corridors;

17(d)(1) - continued the land freeze for 90 days, during which time the Se tary of the Interior determined which of the "public lands" would be withd (i.e., temporarily reserved under federal management) in the public intere These "d-1 lands" are "multipurpose" lands and are open to metalliferous m ing unless or until Congress indicates otherwise; and

17(d)(2) - allowed the Secretary to select up to 80 million acres which he deemed suitable for inclusion in the National Park, Forest, Wildlife Refu and Wild and Scenic Rivers Systems in Alaska. Congress must decide which o "National Interest Lands" to include in the four national conservation sy by the end of 1978.

FIRST STEPS

Following the ANCSA timetable, in March of 1972 Secretary of the Interior Roy C.B. Morton recommended that 79 million acres be set aside as "d-2" lands. H also withdrew 47 million acres as "d-1" lands for further study of their pote

The State of Alaska immediately sued the Interior Department for recommending d-2 some lands the state (pursuant to the Statehood Act) had preempted in a s prise move the previous January. In an out-of-court settlement in Septembe the state relinquished approximately 35 million acres of the 79 million selec in January; Interior gave up some of its March d-2 recommendations to allow selection, and some others were changed to d-1 status.

BILLS IN CONGRESS 1973

In December, 1973 Secretary Morton officially submitted to Congress his propo for 28 d-2 areas of Alaska totalling 83.5 million acres. By special request, Senator Henry M. Jackson introduced Interior's proposal as S.2917. Also by r quest, he introduced S.2918, a proposal which conservationists felt better e ed the intent of Section 17(d)(2) of ANCSA by setting aside 106.5 million acr as d-2 lands, or "National Interest Lands".

At the same time, comparable house bills were introduced by Congressmen Udall daley. Throughout the remainder of the 93rd Congress, they languished. In t spring of 1975 Senator Jackson reintroduced his original d-2 legislation as S (Interior's) and S.1688 (conservationist - backed), while Representative Udal introduced his bill (identical to S.1688) as H.R.2963.

ANALYSIS

Conservationists back S.1688 as an alternative to Interior's proposal for a n ber of reasons, but primarily because the increased acreage allows the preser tion of complete ecosystems. As a result of the 1972 out-of-court settlement some of the d-2 proposals in S.1687 have huge gaps. Although S.1687 places of the land changed to d-1 in the settlement with the state within the perim of its d-2 proposals (the state threatened to reopen its suit), as d-1 lands could be mined and/or selected by the state before Congress has voted on and

Interior's proposals for four National Parks: Wrangel Mountains, Gates of the Arctic, Mt. McKinley (Southern Extension) and Yukon-Charley Rivers. In other proposals, crucial parts of the ecosystem are simply omitted. For example, excluded from Interior's proposal for Selawik National Wildlife Range (in S.1687) are several hundred thousand acres to the west which the draft Environmental Impact Statement called "of comparable or greater value to fish and wildlife than the proposed refuge itself". (NPS DEIS)

The Interior bill also ignores several exciting opportunities for cooperative and innovative management, such as that proposed for the Chukchi-Imuruk National Wildlands. Secretary Morton originally proposed this as an area for joint National Park Service (NPS)/Fish and Wildlife Service (F&WS) management, but S.1687 recalls for a National Reserve under sole NPS management. In the Wrangel Mountains conservationists foresee the establishment of an international park with land of equal grandeur and recreational potential in Canada. In S.1687, however, the Wrangels proposal is split between U.S. Forest Service and NPS jurisdiction, the latter getting 88% "barren rock and ice" (NPS DEIS).

S.1687 would place almost 19 million additional acres (there are already 21 million acres) under the Forest Service, whose operating code allows mining as well as clearcut logging. Only four National Wild and Scenic Rivers are proposed.

Conservationist-backed S.1688 seeks to retain cohesive units of Alaska's wilderness, thereby preventing damage to watersheds and animal habitat within the proposed. For this purpose, for instance, the bill supports an extension of existing Arctic National Wildlife Range in northeastern Alaska to incorporate migratory routes of the Porcupine caribou herd which uses the Range. It would enlarge Mt. McKinley National Park on three sides, bringing a large part of the massif and surrounding wolf, moose, caribou and grizzly habitat into the Park established in 1917.

Individual proposals in S.1688 allow a comprehensive regional approach to conservation of land and wildlife resources. For example, an Aleutian Peninsula extension of, and National Park status for, Katmai National Monument, and establishment of Aniakchak Caldera National Monument and an Alaskan Peninsula Area Brown Bear Range would protect spectacular reminders of volcanic activity, wilderness rivers and hiking country, as well as the considerable forage needed by the endangered Alaskan brown bear, one of the world's largest carnivores. In northeast Alaska, expanding the Arctic National Wildlife Range to the south, designating Yukon Flats National Wildlife Range, a Yukon-Charley Rivers National Park and Birch Creek National Wild River would join an intact unit of the Arctic ecosystem with the Subarctic. Fauna endangered elsewhere in the Arctic by oil development and exploration would be protected, as would the summer breeding grounds of millions of wildfowl which migrate annually to the wetlands of the Yukon Flats. S.1688 proposes 13 of the nation's most beautiful and exciting rivers as Part Wild and Scenic Rivers.

HOLDING PATTERN

On December 20, 1973 Senator Jackson wrote Secretary Morton asking him not to convey title to any lands which might qualify for designation by Congress as described without notifying the Interior Committees of both Houses of Congress at least 6 months in advance. The request was repeated in May and December of 1974. Meanwhile, during the summer of 1974, the state of Alaska asked for patent to the 42 million acres of its January 1972 land selection which were not relinquished in the settlement with Interior. In September, 1974 Edgar Wayburn, Chairman of the Sierra Club Alaska Task Force, protested to Senator Jackson that the apparent willingness of the Interior Department to comply with the state's request would remove 65 million acres from possible inclusion in the four conservation systems.

First Class Mail

alaska report

On December 10, 1974 a Senate Interior Committee hearing chaired by Floyd K. H heard Royston C. Hughes, Assistant Secretary of the Interior, on the state d-2 conflict. Senator Haskell and Senator Lee Metcalf, also present, agreed to fa speedy transfer of title to the state in undisputed areas; they also agreed re for compromise in some other areas, but Haskell warned: "I think the Departmen be ill-advised to go ahead where there are conflicting legislative proposals. not be your d-2, but it might be our d-2."

THE WATCH

Others concerned about the national interest in Alaska have been active in thi ing period. Conservationists protested vigorously in nationwide hearings agai October 1974 Bureau of Land Management document, "Multimodal Transportation an Corridor Systems in Alaska: A Preliminary, Conceptual Analysis". Of the 40 co carved across Alaska in this concept, only three were tentatively approved by t Secretary of the Interior.

To further study the d-2 situation, the Alaska Coalition, a group of 12 conserv groups met in Fairbanks in February, 1975 to discuss potential management and dary changes in legislation before the new 94th Congress.

94th CONGRESS 1975

And the holding pattern continued. Conservationists repeatedly urged Congress gin hearings on the complex landmark legislation, stressing the 1978 deadlin completion Congress had given itself in ANCSA. Furthermore, the situation was ing more complex -- Congressman Young of the Alaska delegation submitted a d-2 posal to the 94th Congress.

On September 3, 1975, Congressman Udall introduced H.R.9346, a bill containing the parks, monuments and wild and scenic rivers d-2 proposals of H.R.2063. Thi falls directly under the jurisdiction of the National Parks and Recreation Sub of the House Interior Committee. During the August recess, Congressmen Joan Se and Goodloe Byron and staff of the subcommittee had visited Alaska, and their will help Chairman Roy Taylor's subcommittee.

Action in the Senate began with oversight hearings on November 21 and December in the Senate Interior Committee. Edgar Wayburn, on behalf of the Alaska Coal advocated passage of S.1688 and reiterated the increasing pressures for develop of Alaska's public lands which make immediate Congressional action imperative. Committee also heard from the Interior Department, the Alaska delegation and a proposal from the state of Alaska, before issuing a white paper to be used as for future substantive hearings.

Congressmen looked at Alaska in December, 1975 from another angle in considera H.R.6644, a bill urged by Alaska Natives to amend ANCSA. Certain federal, sta Native land selections were changed which will affect the d-2 issue, particula central and southwestern Alaska. Hopefully Congress will move on to examine t posed additions to the four national conservation systems in these regions.

Below is a chart summarizing the proposals Congress must consider in the process of deciding which lands in Alaska should be added to the national conservation systems:

	S. 1688 (Conserv)	S.1687 (Interior)	HR 6848[1] (Young)	State of Alaska[2]	Fed/State LUPC
*					
National Conservation systems:					
" Park System	52.1	32.3	10.7	16.7	18.3
" Wildlife Refuge System	50.8	31.6	-	15.3	14.8
" Wild & Scenic Rivers System	1.6	.8	.5	-less than 1 mi	
" Forest System	1.6	18.8	28.3	4.6	6.0
"Alaska National Land Reserves"					58.9
Wilderness study areas					9.0
"Alaska Resource Lands"				61.9	
"Alaska Scenic Reserve System"	----	----	24.3	----	----
TOTAL:	106.1	83.5	63.8	98.5	107.0

*in millions of acres

Notes:

(1) HR 6848 was introduced by Congressman Young in the 94th Congress. The 24 million acres in the so-called Alaska Scenic Reserve System would be administered by a Federal-State Commission for multiple use -- i.e., resource extraction would be permitted as it is in the National Forests. Only 11 million acres would be added to the National Park and National Wild and Scenic Rivers Systems, where recreation, open space and wildlife preservation are the major land use values. HR 6848 would also establish 8 new transportation and utility corridors in the state.

(2) Governor Jay Hammond announced the state's proposal on October 25, 1975. It is not yet final, but in general proposes 40 million acres for the four national conservation systems, while placing 62 million acres in a new category called "Alaska Resource Lands" under Bureau of Land Management administration according to recommendations of a powerful Federal-State Alaska Land Commission. It also vaguely outlines an idea for COMANS or "cooperatively managed areas" in which all owners would somehow work together to carry out the Commission's recommendation as to the best use of the land.

(3) The Joint Federal-State Land Use Planning Commission's proposal was released the same day as the state's and is similar to it. The "Alaska National Land Reserves" would be managed the same way as the state's "Alaska Resource Lands". Both proposals invest great responsibility in a Federal-State Commission which, if the state legislature so decides, could take over planning functions for state as well as federal lands, including decisions like the location and number of transportation and utility corridors in Alaska.

ALASKA LEGISLATIVE PROGRAM

The purpose of the Alaska Legislative Program (ALP) is to ensure that conservationists and all wilderness and wildlife enthusiasts throughout the country are aware of upcoming Congressional legislation dealing with the preservation of more than 100 million acres of Alaskan lands in our national conservation systems. ALP will keep them informed of the bill's progress toward enactment and will generate expressions of their active support to their elected representatives.

ALP is intended to supplement the dissemination of information on Alaska lands through books, Bulletin and newsletter articles ,film, filmstrips and slideshow. It will do so by reaching out primarily to people who are predisposed toward wilderness values, including customers of backpack equipment and readers of publications dealing with wilderness activities.

In addition to informing millions of interested people, ALP will make a major effort to encourage them to let their Congressmen and Senators know they want Alaska protected. A chain of communication is being established in all Congressional Districts, that will allow upwards of 200 volunteer letter-writers in each district to be notified quickly at times when contacting their Representatives is crucial.

Here's the way it will work. A Sierra Club Alaska Task Force member will serve as a Congressional District Coordinator (CDC). The CDC will recruit 15 friends of Alaska to serve as Zone Organizers (ZO) throughout the District; each of them will put together a team of 15 or more volunteer letter-writers in their vicinity who will agree to communicate to their legislator when the time is right. Each CDC and ZO should find an assistant both to aid with recruitment and to serve as a back-up in case of the organizer's absence at a time when letters are needed.

The ALP approach is based on personal involvement. It replaces computers with people! But it will require a commitment, some real work and some out-of-pocket expenses over a two year period by some 7000 volunteers. And reliable follow through by just two-thirds of the letter-writers will ensure very strong constituent contact with all Senators and Representatives when it is most needed.

People who undertake assignment as either CDC or ZO will have two sources to aid their recruitment efforts. The first is the membership list maintained by each Sierra Club Chapter and Group. The second is the retail backpack stores in their area. (One element of ALP is a petition campaign in such stores on behalf of Alaskan lands protection,

Those names will be available to Coordinators and Organizers. And most stores participating in the petition campaign would likely be willing to give Coordinaotrs the names and addresses of charge or local catalogue customers.) Backpacking outfitters are, almost without exception, personally committed (as well as financially motivated) to wilderness protection. Most of their customers are too. Those retail locations will play an important part in ALP's success.

The timing of "letter alerts" will be determined by the legislative situation. Sierra Club legislative representatives in Washington, D.C., Task Force members at the San Francisco Headquarters, or Chapter Leaders will quickly notify all 435 CDC's by phone or mail. They in turn would make every effort to alert all their ZO's within 24 hours, by phone if within toll-free or reasonable cost area; otherwise by letter/postcard. ZO's would quickly follow the same procedure with their letter writing team. Most often, general letters of support for maximum protection of Alaskan lands, in the writers own words and expressing his own philosophy or reasons, will be sufficient. But in some cases, specific points will need to be addressed; backing or opposing specific amendments referring to specific areas, urging prompt action on the Alaska National Interest Lands legislation, etc.

Coordinators can expect 5 or 6 alerts and writers will likely be asked for about 8 letters during the two year span of the 95th Congress. The key to the success of Alaska legislation will be getting it started through the laborious legislative maze. There will be enormous pressure by exploitive interests and the Alaska delegation to nit on the bill. Early constituent influence on all House members is important in order to generate maximum support from Committee members.

All volunteers in this program are requested to write both Senators and their Congressman before mid-January, 1977 (or when they become involved after that date), urging prompt action by House and Senate Interior Committees on legislation calling for protection of over a million acres in Alaska.

For further information, contact the Alaska Task Force at the above address.

P.S. Please share with us any other ideas you have on this.

February 7, 1978

Honorable Kay Poland
Alaska State Legislature
Juneau, AK 99801

Dear Senator Poland:

In response to the request by the Senate Resources Committee in their final day of hearings on Senate Bills 439 and 440, and Senate Joint Resolution 37, the following information is submitted:

The average yearly take of bowhead whales by all Alaskan Eskimo villages for the past ten years is 24.4 whales. The take in 1976 was 48 whales.

The average yearly take of bowhead whales in Barr ; for the past ten years is 13 whales. The take in 1976 was 23 whales.

The average yearly take of bowhead whales by Soviet natives for the past five years is 2 whales. They took no bowhead whales in 1976.

A call this morning to Dr. George Harry, Director of the Marine Mammal Division of National Marine Fisheries Service in Seattle, confirms that there has been no take of bowhead whales by Canadian Eskimos in recent years.

Bowhead whale catch statistic tables have been attached for your information. Please do not hesitate to call on us if we can be of any further assistance.

Sincerely,

Harry L. Rietze

September 16, 1977

Senate Resources

Mr. Robert Schoening, Director
National Marine Fisheries Service
US Department of Commerce, NOAA
Washington, DC 20235

Dear Bob:

This letter is written on behalf of the Alaska Conservation Society, to urge the United States government to file a qualified objection to the International Whaling Commission's moratorium on bowhead whale hunting by Alaska Natives.

This has not been an easy decision to make. The Society has tried to inform itself fully about the situation. We know the uncertainties about the present status of bowhead whales, the fluid and confused cultural context of the harvest, and the potential international ramifications of a U.S. objection. Having weighed the risks from every angle, we firmly believe that our Nation must support continued bowhead harvests, albeit under a much different level of control, cooperation, and study than previously.

In one sense our decision is based on the knowledge that the prime responsibility for the historic decline of bowhead whales lies not with Alaska Natives but with non-Native commercial whalers. Further, the federal government has been negligent in the extreme since 1972 and 1973 in not mounting an adequate effort to find out the status of bowheads or the effect of subsistence hunting on bowhead numbers; in failing to establish cooperative relations with hunters; and in failing to heed the repeated warnings of the International Whaling Commission. In short, both the longterm reduction in bowhead numbers and the present crisis atmosphere are largely our national responsibility. Now we need to proceed with a decision that balances careful conservation with sensitivity to human needs, and we think it would be grossly unfair to ask Native hunters and their families to bear the entire costs of that decision.

There is no doubt that Native hunters must share some of the responsibility as well. The ranks of longtime hunters have been swelled by the addition of young Eskimoes who, now wealthy enough to outfit a whaling crew, compete for the prestige of killing a whale. The overall harvest has gone up since 1974; worse, the struck-and-lost rate has increased sharply. When too many whales were beached at once, waste has occurred.

The Alaska Conservation Society offers recommendations dealing with hunting, research, and cooperation between government and citizen. We base these recommendations on two premises: 1) That the United States will have to show the world community and IWS in particular, a substantive response to the need for bowhead conservation; and 2) That Native people recognize the gravity of the situation and will not only regulate their own actions more closely but will cooperate in all phases of a bowhead conservation program.

Hunting

The Society recommends adoption of a quota and permit system for limiting the overall kill in 1978 and subsequent hunts as may be authorized. Recognizing that any number will be more or less arbitrary, we recommend a quota of twenty five whales yearly beginning in 1978, subject to change as soon as new and convincing population data indicate that a change is needed or permissible. A permit will be considered filled if a whaling crew kills and beaches a whale, or strikes and loses a whale. This should provide a strong incentive to harpoon or shoot at only those whales where chances of loss are small. The number of whales harvested (beached) under this system probably would be 10 to 15, close to the longterm average for years prior to 1975.

Each traditional whaling community would receive a block of permits in numbers proportional to the historic take in that community. The community itself, or a recognized association of whalers such as the newly formed Alaska Eskimo Whalers Commission, would then allocate the permits to specific whaling captians or cooperatives. The hunt would be monitored by both local and federal officials. If substantial abuses occurred, the US should immediately withdraw its objection to the IWC moratorium.

Hunting technology is an important aspect of the situation. Fewer whales are lost when harpoons (with attached lines and floats) are struck into the whale first, with or without later use of explosive-

shell shoulder guns. However, use of harpoons increases the risk to the whalers. A decision must be made either to require the use of harpoons or to develop much more lethal explosive projectiles; the present reliance on individual choice of a mix of weapons has contributed to the current conservation problem.

Research

A big share of the bowhead problem is that no one has convincing information on the number or composition of arctic bowhead stocks. Such information is urgently needed. Funding this research is the responsibility of the federal government.

Bowhead research should start immediately, in October 1977. The studies should consist of at least the following:

a) Re-examination of existing data. There is reason to believe that presently available data could support a firmer population estimate than given by NMFS in its Environmental Impact Statement.

b) Aerial surveys for visual observation of migrating whales.

c) Surface counts using the best available equipment for echo sounding and vocal signal reception. Equipment could be tested in the field this fall for major census in the spring of 1978.

d) Radio tagging of whales as feasible. Marking-resighting census techniques are will within the state-of-the-art and should be used whether or not radio tagging is possible.

e) Use of an icebreaker in April and May each spring for three years beginning in 1978 as a mobile base for surface research and helicopter operations.

We urge most strongly that the help of Alaska Natives be sought and used to the utmost in this research program. Such an action would pay off in better research results as well as in overall cooperative relationships.

Cooperation

Tensions are high among the various groups involved in the bowhead problem. The main reasons are that the federal government has had no

continuing cooperative presence in arctic Alaska, acting as though one could understand the whole world from Washington, DC; and, on the other hand, that some Native spokesmen have been extremely defensive and "militant". It is absolutely essential that these tensions be resolved. Day to day and face to face contacts need to be established in arctic Alaska among people with clear responsibilities for various aspects of the bowhead program. Involvement of local people in research, as I just mentioned, is important.

We understand the discomfort U.S. representatives may feel when they file an objection this fall to the IWC moratorium. Indeed, some countries may gleefully seize on this as evidence of hypocrisy in our position on whales. I am convinced, however, that the world at large will respect us if we admit to some mismanagement of bowheads but, at the same time, put our reputation on the line behind a sound program responsive to biological conservation and human needs.

Please enter this letter in the record of hearings on the bowhead whale question.

Sincerely yours,

ALASKA CONSERVATION SOCIETY

Bob

TESTIMONY IN SUPPORT OF SJR 37; SB 439; AND SB 440 BEFORE THE SENATE RESOURCES COMMITTEE BY JACOB ADAMS, CHAIRMAN, ALASKA ESKIMO WHALING COMMISSION

MR. CHAIRMAN, MY NAME IS JACOB ADAMS, AND I AM CHAIRMAN OF THE ALASKA ESKIMO WHALING COMMISSION. I AM HERE WITH MR. ARNOLD BROWER, PRESIDENT OF THE BARROW WHALING CAPTAINS ASSOCIATION. OUR BARROW WHALING COMMUNITY IS THE LARGEST OF EIGHT WHALING VILLAGES IN ALASKA. THE OTHERS ARE KAKTOVIK (BARTER ISLAND), WAINWRIGHT, PT. HOPE, KIVALINA, SAVOONGA AND GAMBEL. THE ALASKA ESKIMO WHALING COMMISSION WAS ORGANIZED WHEN THE BARROW WHALING CAPTAINS ASSOCIATION JOINED WITH THE NORTH SLOPE BOROUGH TO HOLD THE FIRST STATE-WIDE WHALING CAPTAINS CONFERENCE IN BARROW LAST AUGUST. THIS WAS AN HISTORIC GATHERING OF OUR WHALING CAPTAINS, IMPORTANT TO THE HISTORY OF THE ENTIRE ARCTIC, AND IMPORTANT TO THE DEVELOPMENT OF EFFECTIVE MANAGEMENT OF ALASKA'S SUBSISTENCE RESOURCES, PARTICULARLY OUR MIGRATORY SPECIES. THE MEETING WAS CALLED TO DEAL WITH THE INTERNATIONAL WHALING COMMISSION'S DECISION TO REGULATE NATIVE SUBSISTENCE WHALING, AND TO PLACE A "ZERO" SUBSISTENCE QUOTA ON THE BOWHEAD.

THE IWC IMPOSED ITS BAN LAST JUNE, AND BY AUGUST WE HAD LEARNED THAT THE NATIONAL OCEANOGRAPHIC AND ATMOSPHERIC ADMINISTRATION, WORKING WITH A FEW WASHINGTON, D.C. WHALE CONSERVATIONIST LOBBYISTS, HAD BEEN TRYING SINCE 1970 TO USE THE INTERNATIONAL WHALING COMMISSION TO BRING ALASKA'S

BOWHEAD SUBSISTENCE HUNT UNDER REGULATION. UNTIL WE WERE CONTACTED EARLY IN 1977, WE HAD RECEIVED NO WORD OF THE IWC'S CONCERN ABOUT ALASKA'S SUBSISTENCE BOWHEAD WHALING. HAD WE BEEN ASKED EARLY ON TO ORGANIZE TO HELP THE U.S. RESPOND TO IWC CONCERNS, THERE WOULD HAVE BEEN NO BOWHEAD WHALE CONTROVERSY TODAY AND MUCH OF THE POLITICAL REACTION THAT RESULTED IN THE 1978 QUOTA OF JUST 12 BOWHEAD WHALES FOR ALASKA COULD HAVE BEEN AVOIDED.

SINCE ITS ORGANIZATION, THE ALASKA ESKIMO WHALING COMMISSION, CONSTITUTED OF WHALING CAPTAINS FROM EACH OF ALASKA'S 9 WHALING COMMUNITIES, HAS MET IN BARROW TO ADOPT ITS OWN BOWHEAD WHALING REGULATIONS, COPIES OF WHICH HAVE BEEN PROVIDED YOU. THE BASIC PROVISIONS OF THE AEWC MANAGEMENT PLAN IS TO PROVIDE FOR THE MANNER IN WHICH THE BOWHEAD WHALE HARVEST WILL TAKE PLACE, REPORTING REQUIREMENTS BY WHALING CAPTAINS, METHOD OF DETERMINING THE LEVEL OF HARVEST, ATTEMPTS TO HARVEST BY EACH VILLAGE AND PROVIDING FOR PENALTIES.

LAST WEEK, THE ALASKA ESKIMO WHALING COMMISSION MET TO RESPOND TO THE NEW IWC QUOTA. A CONCENSUS WAS REACHED BY THE COMMISSION TO ABIDE BY THE QUOTA FOR THE 1978 SEASON IF SEVERAL CONDITIONS WERE MET. THE CONDITIONS SET WERE REGULATIONS BY THE AEWC IN COOPERATION WITH THE FEDERAL GOVERNMENT, IMMEDIATE RESEARCH ON WEAPONS IMPROVEMENT, COMMITMENT BY THE GOVERNMENT TO PROVIDE FOR ALTERNATIVE SUBSISTENCE RESOURCES, FULL PARTICIPATION IN FUTURE IWC DECISIONS AND A COMMITMENT BY THE U.S. GOVERNMENT TO WORK

FOR RESTORATION OF A FULL SUBSISTENCE HUNT. BECAUSE WE BELIEVE IN COOPERATIVE MANAGMENT OF SUBSISTENCE RESOURCES, THE COMMISSION DECIDED TO TRY TO COOPERATE WITH THE IWC QUOTA AND THE U.S. GOVERNMENT. OUR PROPOSAL IS NOW IN THE FEDERAL GOVERNMENT HANDS, WE WOULD ASK THE ALASKA STATE LEGISLATURE AND THE ADMINISTRATION TO REQUEST THAT THE U.S. GOVERNMENT COOPERATE WITH THE AEWC TO ACHIEVE THE BEST POSSIBLE MANAGEMENT OF THE BOWHEAD WHALE.

THE COMMISSION ALSO ENDORSED THE GOVERNMENTS RESEARCH PROGRAM WITH THE EMPHASIS THAT THE RESEARCH BE DONE IN A EXPEDITIOUS MANNER AND TO PROVIDE FOR PARTICIPATION BY THE WHALING CAPTAINS.

MR. CHAIRMAN, THE NATIONAL MARINE FISHERIES SERVICE WILL SPEND ABOUT $700,000 ON BOWHEAD RESEARCH THIS YEAR. THIS WILL ENABLE THE EMPLOYMENT OF SCIENTISTS AND WHALERS TO COOPERATE IN AIR AND SURFACE SURVEILLANCE OF THE SPRING BOWHEAD MIGRATION. MOST OF US WHALERS BELIEVE THAT THERE ARE MANY MORE WHALES THAN THE 1300 ESTIMATED BY THE GOVERNMENT. WE FEEL THAT A MORE ACCURATE COUNT WILL JUSTIFY THE RESTORATION OF OUR SUBSISTENCE EXEMPTION FROM REGULATION BY THE IWC, AND THUS THE REMOVAL OF OUR SUBSISTENCE WHALING FROM THE INTERNATIONAL POLITICS OF COMMERICAL WHALING.

WE WERE PLEASED TO HEAR THAT THE LEGISLATION BEFORE YOU HAD BEEN INTRODUCED. THIS LEGISLATION WILL PROVIDE THE STATE DEPARTMENT OF FISH AND GAME WITH THE AUTHORITY TO ACTIVELY PARTICIPATE AS WE ESTABLISH THE FIRST COOPERATE MANAGEMENT SYSTEM FOR AN IMPORTANT MIGRATORY SUBSISTENCE SPECIES. THIS WEEK, WE LEARNED THAT THE HOUSE VERSION OF THE D-2 BILL WILL

PROBABLY PROVIDE FOR STATE JURISDICTION OVER NATIVE SUBSISTENCE HUNTING IN ALASKA. THIS CONCESSION WILL NOT BE POPULAR IN RURAL ALASKA. I WOULD LIKE TO SUGGEST THAT THIS LEGISLATION WILL ENABLE THE STATE TO JOIN WITH SUBSISTENCE HUNTERS AND THE FEDERAL GOVERNMENT TO DESIGN A PROTOTYPE COOPERATIVE MANAGEMENT SYSTEM ABLE TO DEAL WITH A SINGLE MIGRATORY SPECIES THROUGHOUT ITS RANGE. THE WORK AND EXPERIENCE OF THE ALASKA ESKIMO WHALING COMMISSION WILL HAVE SIGNIFICANT IMPACT UPON THE EARLY DEVELOPMENT OF COOPERATIVE SUBSISTENCE RESOURCE MANAGEMENT REGIMES CAPABLE OF HONORING AND UPHOLDING NATIVE SUBSISTENCE HUNTING RIGHTS. ONCE SUCH A REGIME IS IN PLACE FOR THE BOWHEAD, ITS PRINCIPLES CAN BE APPLIED TO OTHER MARINE MAMMALS, AND TO THE CARIBOU. THERE HAS BEEN TALK OF TRANSFERRING JURISDICTION OVER THE SUBSISTENCE HUNTING OF OTHER MARINE MAMMALS FROM THE FEDERAL GOVERNMENT TO THE STATE. AND THERE IS THE PROBLEM OF THE MANAGEMENT OF THE U.S./CANADIAN ARCTIC CARIBOU HERDS. ALL OF THESE ARE SUBSISTENCE SPECIES MANAGEMENT PROBLEMS THE SOLUTIONS FOR WHICH COULD BE BASED UPON THE EXPERIENCE OF THE ALASKA ESKIMO WHALING COMMISSION. SUCCESSFUL STATE EXPERIENCE HERE COULD HELP REDUCE NATIVE OPPOSITION TO STATE REGULATION OF SUBSISTENCE HUNTING.

THE EXPENSES OF THE ALASKA ESKIMO WHALING COMMISSION HAVE BEEN PAID FROM A $100,000 APPROPRIATION BY THE NORTH SLOPE BOROUGH ASSEMBLY THAT WAS MADE SHORTLY AFTER THE COMMISSION WAS FORMED. HOWEVER, WE WOULD LIKE TO SEE THE COMMISSION BECOME INDEPENDENT OF THE NORTH SLOPE BOROUGH,

AND THE MONEY AUTHORIZED AND APPROPRIATED BY THE LEGISLATION BEFORE YOU WOULD MAKE THIS POSSIBLE. THE COMMISSION WOULD USE THE MONEY TO EMPLOY A SMALL STAFF TO WORK CLOSELY WITH STATE AND FEDERAL AGENCIES INVOLVED IN WHALE RESEARCH AND WHALING SURVEILLANCE; TO ORGANIZE AND DIRECT ON-GOING WHALING WEAPONS IMPROVEMENT PROGRAMS; AND IN THE PRACTICAL PROBLEMS OF ENFORCEMENT OF THE AEWC'S OWN REGULATIONS. ALL OF THIS WILL REQUIRE A SERIOUS WHALING VILLAGE EDUCATION PROGRAM AIMED AT LOCAL UNDERSTANDING OF THE NEED FOR QUOTA COMPLIANCE AND AEWC REGULATION OF OUR PREVIOUSLY UNREGULATED HUNT OF THE BOWHEAD WHALE. EARLY STATE SUPPORT OF THE AEWC WOULD STRENGTHEN OUR STATUS AND NEGOTIATIONS WITH THE NATIONAL MARINE FISHERIES SERVICE.

MR. CHAIRMAN, THE LEGISLATION BEFORE YOU WAS NOT REQUESTED BY THE ALASKA ESKIMO WHALING COMMISSION, BUT IT REFLECTS THE GOOD WILL THAT WE HAVE ENJOYED FROM ALL OF ALASKA AS WE HAVE BATTLED IN WASHINGTON, D.C. AND TOKYO TO DEFEND OUR SUBSISTENCE WHALING. THANKS TO A SENSITIVE LEGISLATURE, WE DIDN'T HAVE TO ASK FOR THE LEGISLATION, BUT WE APPRECIATE ITS INTRODUCTION AND YOUR EXPEDITIOUS HEARINGS.

THANK YOU VERY MUCH.

AEWC MANAGEMENT PLAN

Subpart A - Introduction

§100.1 Purpose of regulations

It is the purpose of the regulations contained herein to: (a) insure an efficient subsistence harvest of bowhead whales; and (b) provide a means within the Alaskan Eskimo customs and institution of limiting the bowhead whale harvest in order to prevent the extinction of such species.

§100.2 Scope of regulations

The regulations contained herein apply to the subsistence hunting of bowhead whales by Eskimos located in the State of Alaska.

Subpart B - Alaska Eskimo Whaling Commission

§100.11 Powers

(a) The Alaska Eskimo Whaling Commission (hereinafter AEWC) is empowered to administer the regulations contained herein to insure that the purposes stated in §100.1 of these regulations are attained.

(b) The AEWC is empowered to enforce these regulations by:

(1) denying any person who violates these regulations the right to participate in hunting the bowhead whale.

(2) acting as an enforcement agent for any governmental entity authorized to enforce these regulations.

(c) The AEWC is empowered to promulgate interim regulations that are in addition to, but not in lieu of, regulations contained herein.

§100.12 Duties

(a) The AEWC shall administer and enforce the regulations contained herein (including any interim regulations.)

(b) The AEWC shall conduct village educational programs to facilitate compliance with these regulations, including training programs for whaling capatains and crews.

(c) The AEWC shall initiate research for improvement of the accuracy and reliability of weapons.

Subpart C - Regulations

§100.21 Definitions

(a) "bowhead whale" means a whale whose scientific name is Baleana mysticetus and which migrates past whaling villages in Alaska.

(b) "captain" means the person in charge of a whaling crew.

(c) "harvest" means to kill and bring to shore or butchering area.

(d) "non-traditional weapons" means any instrument that could be used to harvest a bowhead whale that is not a traditional weapon.

(e) "Scientific Committee" means the committee established pursuant to §100.26 of these regulations.

(f) "traditional weapon" means a harpoon with line attached, darting gun, shoulder gun, lance or any other weapon approved by the AEWC with the concurrence of the Scientific Committee, as such a weapon in order to improve the efficiency of the bowhead whale harvest.

(i) "harpoon with line attached" means a harpoon with a rotating head which is attached to a line and float and which has no explosive charge. (See Figures 7 and 8 of Appendix E of the FEIS on the International Whaling Commission's Deletion of Native Exemption for the Subsistence Harvest of Bowhead Whales (October, 1977) (hereafter FEIS).

(ii) "darting gun harpoon" means a harpoon with an explosive charge and with a line and float attached. (See Appendix E of the FEIS in Figure 4.)

(iii) "shoulder gun" means a whaling gun, adapted from the era of commercial whaling in the 19th Century, which has an explosive charge and which has no attached line and float. (See Appendix E of the FEIS in Figure 5.)

(iv) "lance" means a non-explosive sharply pointed weapon without a harpoon head.

(g) "whaling crew" means those persons who participate directly in the harvest or attempted harvest of the bowhead whale and are under the supervision of a captain.

(h) "whaling village" means the Alaska Eskimo village in which resides a whaling captain and crew which participates in the harvest or attempted harvest of bowhead whales.

(i) "whaling season" means customary period of time during which the bowhead whale is harvested, either in the Spring or Fall.

§100.22 Registration

(a) Each captain shall register with the AEWC on forms provided by the AEWC for that purpose which discloses his name, address, age, qualifications as captain, names of crew members, and his willingness to abide by the regulations of the AEWC and to require his crew to abide by those regulations.

(b) The AEWC shall take into account any reading or language difficulties in developing procedures and forms for registration.

§100.23 Reports

(a) Each whaling captain shall be responsible for keeping a written record of the number of whales --

(1) attempted to be harvested by using traditional weapons but not harvested,

(2) harvested by the captain or his crew, and

(3) sighted by the captain or his crew.

(b) Each whaling captain shall report the date, place, and time of any striking not resulting in harvesting and shall describe --

(1) the size of the bowhead whale,

(2) any known later attempted harvest or actual harvest of said whale, and

(3) the reason for the captain or crew not harvesting the whale -- e.g. environmental factors, the failure of traditional weapons, or other reason.

(c) Each whaling captain shall make such other reports as the AEWC requires in order to accomplish the purposes of the regulations herein or in order to advance the scientific knowledge of the bowhead whale.

§100.24 Permissible harvesting methods

(a) No whaling captain or crew shall harvest or attempt to harvest the bowhead whale in any manner other than the traditional harvesting manner.

(b) "Traditional harvesting manner" means:

(1) only traditional weapons shall be used, as defined in §100.21(f).

(2) the bowhead whale may be struck with a harpoon or darting gun with line and float attached or simultaneously with harpoon and shoulder gun or darting gun.

(3) the shoulder gun may be used

(i) when accompanied by harpoon with or without a darting gun.

(ii) after a line has been secured to the bowhead whale, or

(iii) when pursuing a wounded bowhead whale with a float attached to it.

(4) the lance may be used after a line has been secured to the bowhead whale.

§100.25 Traditional proprietary claim

The bowhead whale shall belong to the captain and crew which first strikes the bowhead whale in the manner described in §100.24.

§100.26 Level of harvest

(a) The AEWC shall establish the levels of harvest and attempted harvest for each whaling village during each season. Such levels may be set by methods including, but not limited to, the following:

(i) Specification of number of whaling crews permitted to harvest or attempt to harvest bowhead whales during specified periods;

(ii) Specification of the size or age of whales which may be taken during specified periods, after consultation with the Scientific Committee.

(iii) Specification of the number of whales that may be taken by each crew.

(iv) Specification of the number of bowhead whales which may be harvested or attempted to be harvested by each village.

(b) The level of harvest supported by scientific data shall be no greater than that necessary to meet the cultural and nutritional needs of the Eskimo inhabitants of the State of Alaska.

(c) In establishing the levels of harvest and attempted harvest, the AEWC shall not establish levels of harvest or attempted harvest greater than the carrying capacity of the bowhead whale stock, supported by scientific data.

(d) The carrying capacity of the bowhead whale stock shall be determined by a Scientific Committee appointed by the Polar Research Board of the National Academy of Sciences. The Scientific Committee shall consist of nine members who are qualified by reason of their education and experience to make objective determination concerning the carrying capacity of the bowhead whale stock. Three of the nine members shall be members of the Eskimo community. The AEWC shall make recommendations to the Polar Research Board for the choice of Eskimo members.

(e) In determining the carrying capacity of the bowhead whale stock the Scientific Committee shall not consider any prospective threats to the species resulting from oil and gas development within the habitat of such species. Provided, however, that this section may be further implemented by the Scientific Committee and the AEWC at a later date in the event of actual risks.

(f) The mortality rate for attempted harvest shall be determined by the Scientific Committee.

Subpart D - Penalties

§100.31 Denial of participation in harvest:

(a) Any person who the AEWC determines has violated the regulations contained herein shall, after opportunity for a hearing before the AEWC, be prohibited from harvesting or attempting to harvest the bowhead whale for a period of not less than one whaling season nor more than five whaling seasons.

(b) Any person who willfully violates the regulations contained herein shall be subject to a fine of not more than $1,000 assessed by the AEWC. No person shall harvest or attempt to harvest the bowhead whale until such fine has been paid.

SJR 47 - RELATING TO LOANS GUARANTEED BY THE FEDERAL GOVERNMENT FOR THE PURCHASE OF VESSELS CAPABLE OF HARVESTING ALASKAN BOTTOMFISH."

THIS RESOLTUION URGES OUR CONGRESSIONAL DELEGATION TO SUPPORT SENATE RESOLUTION 974 WHICH WOULD INCREASE FEDERAL GUARANTEES FROM 75% TO 87.5% ON LOANS FOR FISHING VESSELS.

THE LOANS ARE ONLY AVAILABLE TO VESSELS ENGAGED IN FISHERIES WHICH HAVE NOT YET ACHIEVED MAXIMUM ENTRY. IN ALASKA, SALMON AND KING CRAB ARE CLASSIFIED AS SUCH ("CONDITIONAL FISHERIES"). VESSELS MAY BE CONVERTED FROM SALMON OR CRAB TO OTHER FISHERIES SUCH AS BOTTOMFISH; BUT NOT THE CONVERSE.

PRINCE WILLIAM SOUND
AQUACULTURE CORPORATION

A regional non profit organization for the enhancement of fisheries

P.O. Box 1110
Cordova, Alaska 99574
(907) 424-5111

APR 3 1978

DIVISION OF F.R.E.D.

March 31, 1978

The Honorable Mike Gravel
United States Senate
3121 Dirksen Senate Office Building
Washington D.C. 20510

Dear Senator Gravel:

I recently received from your office a copy of your aquaculture bill, S-2762, and I am enclosing my comments for your consideration.

We in the Prince William Sound Aquaculture Corporation are very appreciative of your efforts in regard to this subject which is of such great importance to Alaska. We have enjoyed working with your aid, Mr. Tom Roach and we commend his work on this bill.

I have restricted the majority of my comments to the subject of the National Aquaculture Development Plan and the development programs that it calls for. My primary concern in this regard is the role of the states in relation to the role of the federal government in the plan and development program formulation. I am very concerned that the present wording of the bill will result in a federal domination of these activities because too much responsibility and authority is given to the Secretary of Commerce. My recommendations to correct this situation are as follows:

1. Assign to the regional subcommittees the responsibility for identification of priority species and for the formulation of their development programs.

2. Limit the Secretary's role in regard to the development program to one of reviewing, approving and implementing.

3. Require the Secretary to consult with the appropriate regional subcommittee prior to revising or cancelling any program.

4. Provide funding for the regional subcommittees to carry out their planning activities.

I am very pleased to see the attention that you have given to the rehabilitation and enhancement of publicly owned fish and shellfish resources. Your bill corrects the deficiencies of similiar bills in this regard by identifying this subject as one of vital concern to all states with publicly owned fishery resources. Do you think that this concern might be given more funding attention in the bill? A matching federal, state and local grant program would stimulate greater efforts in these areas, and would most certainly benefit Alaska.

I have not addressed myself to the sections of the bill that deal with Contracts and Grants (section 7), Guarantees of Obligations Issued for Aquaculture Facilities (section 8), Disaster Loans (section 9), or Insurance Against Certain Losses Incurred in Aquaculture Facility Operations (section 10), because of the limitations of my expertise in these areas.

In closing, I would like to emphasize the position of my organization that Mr. Leggett's bill, H.R. 9370, as presently written is not good for Alaska. Your bill S-2762, is a great improvement on that bill and, with the additions of our recommended amendments in regards to the role and responsibilities of the regional subcommittees, will be good not only for Alaska, but for the other 49 states as well.

Sincerely yours,

PRINCE WILLIAM SOUND

6 April 1978

The Honorable Mike Gravel
United States Senate
3121 Dirksen Senate Office Bldg.
Washington, D.C. 20510

Dear Senator Gravel:

After reviewing the "National Aquaculture Organic Act of 1978", S-2762 received from your office, I have the following comments for your consideration.

Your aide, Mr. Tom Roach, contacted me last fall at which time we briefly discussed national aquaculture legislation and the possibility of your action. Since that time, Mr. Roach has kept me informed, and I have followed the progress of the legislation with interest. Your efforts to improve the legislation which passed the House are greatly appreciated. Your bill will be much better for Alaska and our fishermen than the House bill.

I have discussed the bill with Mr. Bill Hall of the Prince William Sound Aquaculture Corporation, and I have read his comments and recommendations. I am supportive of Mr. Hall's comments and recommendations for amending the bill.

Additionally, I would like to add some comments.

(1) I am especially supportive of the regional subcommittee concept in your bill and believe funding and any other support to maximize its effectiveness should be promoted. By developing the plan close to the people, the end product will reflect their interests, experience and expertise. I know that in Southeast Alaska the Forest Service and the National Marine Fisheries Service have personnel very knowledgeable about the potential for aquaculture development. Hopefully, these people, state biologists and local fishermen will be able to either serve on a regional subcommittee or provide input directly to the subcommittee.

(2) The NSFAA Board of Directors has taken a strong position in favor of rehabilitation of natural salmon

stocks. The preferred emphasis is on cost-effective projects which complement and enhance rather than conflict with or replace natural production. A matching federal, state or local grant program to stimulate the efforts of fishermen and other groups to this area would greatly benefit Alaska.

(3) I am requesting, in a separate letter, that your Juneau office send copies of your comments in the Congressional Record prefacing introduction of S-2762 to each NSRAA Board member to keep them informed of developments on the national legislation. You may receive some additional comments from them.

Enclosed are copies of our latest informational brochures which were sent to fishermen explaining our program. These materials may give you some ideas on how to coordinate our plans with the national aquaculture plan and possibilities for our Association to work in partnership with the federal and state governments through a combination of grants, loans and insurance to enhance our fisheries.

Finally, I would like to restate my support for your bill S-2762, and the proposed changes recommended by Mr. Bill Hall. S-2762, especially with the suggested changes, will benefit Alaska more than Mr. Leggett's bill HR 9370.

Thank you for keeping us informed.

Sincerely,

Derek Poon, Ph.D.

TESTIMONY OF

DR. RONALD O. SKOOG

COMMISSIONER DEPARTMENT OF FISH AND GAME

STATE OF ALASKA

BEFORE SUB COMMITTEE ON:

NATIONAL AQUACULTURE ORGANIC ACT OF 1973

APRIL 18, 1978

POTENTIAL FOR AQUACULTURE IN ALASKA

ALASKA, OF ALL THE STATES, IS UNIQUE BECAUSE OF ITS TREMENDOUS SIZE, NOT ONLY IN LAND MASS, BUT IN COAST LINE. SHE IS ADJACENT TO EXTREMELY PRODUCTIVE ESTUARINE AND MARINE ENVIRONMENTS SUCH AS THE GULF OF ALASKA,, THE BERING SEA, AND THE ARCTIC OCEAN. MILLIONS OF METRIC TONS OF A VARIETY OF SPECIES ARE HARVESTED ANNUALLY IN THOSE WATERS BY UNITED STATES FISHERMEN AS WELL AS FOREIGN FLEETS. WITH THE 200 MILE EXTENSION A NEW DIMENSION HAS BEEN CREATED THAT WILL HAVE A MAJOR IMPACT ON THE FISHERMEN OF ALASKA AS WELL AS OTHER STATES.

ALASKA IS ALSO UNIQUE BECAUSE SHE POSSESSES VAST FRESH-WATER RESOURCES THAT IN SOME INSTANCES ARE HIGHLY PRODUCTIVE, SUCH AS THE MAJOR CYCLICAL RED SALMON PRODUCING LAKES ADJACENT TO BRISTOL BAY, BUT IN OTHER INSTANCES SOME OF HER FRESH-WATER ENVIRONMENTS ARE RELATIVELY NONPRODUCTIVE. LOW LEVELS OF PRODUCTIVITY IN THE FRESH-WATER ENVIRONMENTS MAY BE ATTRIBUTABLE TO MANY CAUSES, SUCH AS THE LACK OF BASIC NUTRIENTS, THE INFLUENCE OF RAPIDLY DISCHARGING GLACIERS, EXTREME FLUCTUATIONS IN TEMPERATURES, DISSOLVED OXYGEN AND WATER FLOWS, AND ABSENCE OF ESTABLISHED FISH POPULATIONS, FROM

BARTER ISLAND IN THE NORTHEAST ARCTIC WESTWARD AND SOUTHWARD TO THE NORTH SIDE OF THE ALASKA PENINSULA, WITH BUT FEW EXCEPTIONS, ALASKA'S COASTLINE IS EXPOSED DIRECTLY TO HIGH WINDS AND SEAS AND LOW WINTER TEMPERATURES. ESTABLISHMENT OF ESTUARINE AND MARINE AQUACULUTURE FACILITIES IN THIS REGION COULD BE COSTLY. HOWEVER, MAJOR PRODUCTIVE BUT UNUTILIZED FRESH-WATER RESOURCES ARE AVAILABLE FOR INCREASING THE PRODUCTION OF SALMON, TROUT, CHAR, WHITEFISH, GRAYLING, AND SHEEFISH. THOSE SPECIES HAVE EVOLVED AND ARE ADAPTED TO HARSH ARCTIC AND SUB-ARCTIC ENVIRONMENTS. THEREFORE, EFFECTIVE AQUACULTURE DEVELOPMENT IN THAT REGION OF THE STATE MUST BE TAILORED TOWARDS UTILIZING THESE FRESH-WATER ENVIRONMENTS IN CONJUNCTION WITH SPECIES NATURALLY ASSOCIATED WITH THOSE ENVIRONMENTS.

WITHIN AN ARC BEGINNING ON THE SOUTH SIDE OF THE ALASKA PENINSULA, CURVING NORTHWARD TO COOK INLET, AND THEN SOUTHERLY TO THE BORDERS OF BRITISH COLUMBIA ARE MANY FJORDS PROTECTED FROM WIND AND WAVE THAT ARE SUITABLE FOR THE ESTABLISHMENT OF ESTUARINE AND MARINE AQUACULTURE FACILITIES. FURTHERMORE, A MYRIAD OF RIVERS AND STREAMS DISCHARGE INTO THOSE FJORDS THUS PROVIDING THE OPPORTUNITY FOR THE DEVELOPMENT OF MULTIPLE SPECIES AS WELL AS MULTIPLE ENVIRONMENT FACILTIES. UNFORTUNATELY, WITH THE EXCEPTION OF SALMON AND TROUT, LITTLE RESEARCH EFFORT BY EITHER THE STATE OR FEDERAL GOVERNMENT HAS BEEN DIRECTED TOWARDS THE DEVELOPMENT OF AQUACULTURE TECHNOLOGY REQUIRED FOR OTHER INDIGENOUS SPECIES, AND ESPECIALLY FOR

THE INVERTEBRATES SUCH AS CLAMS, SCALLOPS, ABALONE AND SEA CUCUMBERS. UNDOUBTEDLY, LACK OF THAT TYPE OF BASIC RESEARCH HAS BEEN A FUNCTION OF MARKET DEMANDS, FUNDS, AND PRIORITIES.

WITH THAT BRIEF BROAD BACKGROUND OF THE POTENTIAL FOR AQUACULTURE IN ALASKA I WILL DIRECT MY TESTIMONY BRIEFLY TO THE PRESENT STATUS OF AQUACULTURE IN ALASKA.

STATUS OF AQUACULTURE

WITH PASSAGE OF THE STATEHOOD ACT THE PEOPLE OF ALASKA ASSUMED MANAGEMENT CONTROL OVER COMPLEX FRESH WATER, ESTUARINE AND MARINE ECOSYSTEMS IN WHICH A VARIETY OF VALUABLE COMMERCIAL, SPORT, AND SUBSISTENCE SPECIES DWELT. IN SOME INSTANCES, SPECIFIC STOCKS OF CRAB, SHRIMP, TROUT, CHAR, WHITEFISH, STEELHEAD, GRAYLING, SHEEFISH, AND SALMON HAD NOT BEEN OVER UTILIZED.

IN OTHER INSTANCES, PARTICULARLY IN THE CASE OF SALMON, MANY STOCKS HAD BEEN DECIMATED BY OVER-UTILIZATION. CONSEQUENTLY, FOLLOWING STATEHOOD, AND CONTINUING SINCE, EXTREMELY RESTRICTIVE REGULATIONS HAVE BEEN PASSED, WHEN DEEMED NECESSARY, IN AN EFFORT TO REBUILD OR REHABILITATE DECIMATED NATURAL SALMON STOCKS. UNFORTUNATELY MANY NATURAL STOCKS COULD NOT RECOVER IN A TIMELY MANNER THROUGH THE MECHANICS OF EITHER RESTRICTED HARVEST OR THE TOTAL ABSENCE OF HARVEST.

RECOGNIZING THAT PROBLEM, COUPLED WITH THE KNOWLEDGE THAT ALASKA ALSO POSSESSED A TREMENDOUS POTENTIAL FOR ENHANCEMENT OF THE SALMON RESOURCE AND ALSO WAS FACED WITH RAPID ACCELERATION OF TROUT AND SALMON SPORT EFFORT, THE 1971 LEGISLATURE, WITH CONCURRENCE OF THE GOVERNOR, CREATED A SPECIAL DIVISION--THE DIVISION OF FISHERIES REHABILITATION, ENHANCEMENT, AND DEVELOPMENT--WITHIN THE DEPARTMENT OF FISH AND GAME TO TACKLE AQUACULTURE PROBLEMS. THE DIVISION WAS REMOVED FROM THE REGULATION ASPECTS OF HARVEST (A MAJOR DEPARTMENTAL EFFORT) SO THAT THE DIVISION COULD CONCENTRATE ON DEVELOPING AND APPLYING REHABILITATION AND ENHANCEMENT TECHNOLOGY. SPECIFIC STATUTORY OBLIGATIONS WERE ENACTED AND ARE AS FOLLOWS:

SEC. 16.05.090. ORGANIZATION OF THE DEPARTMENT.

(A) THE COMMISSIONER MAY, WITH THE APPROVAL OF THE GOVERNOR, ESTABLISH A DEPARTMENTAL DIVISION OF COMMERCIAL FISHERIES, A DEPARTMENTAL DIVISION OF SPORT FISHERIES, A DEPARTMENTAL DIVISION OF GAME, AND OTHER DEPARTMENTAL DIVISIONS AS ARE NECESSARY.

(B) THE COMMISSIONER SHALL ESTABLISH A DEPARTMENTAL DIVISION OF FISHERIES REHABILITATION, ENHANCEMENT AND DEVELOPMENT (15 ART I CH 94 SLA 1959; AM 1 CH 113 SLA 1971).

SEC. 16.05. 092. DUTIES OF DIVISION OF FISHERIES REHABILITATION, ENHANCEMENT AND DEVELOPMENT. THE DIVISION OF FISHERIES REHABILITATION, ENHANCEMENT AND DEVELOPMENT SHALL:

(1) DEVELOP AND CONTINUALLY MAINTAIN A COMPREHENSIVE COORDINATED STATE PLAN FOR THE ORDERLY PRESENT AND LONG-RANGE REHABILITATION, ENHANCEMENT AND DEVELOPMENT OF ALL ASPECTS OF THE STATE'S FISHERIES FOR THE PERPETUAL USE, BENEFIT AND ENJOYMENT OF ALL CITIZENS AND REVISE AND UPDATE THIS PLAN ANNUALLY;

(2) ENCOURAGE INVESTMENT BY PRIVATE ENTERPRISE IN THE TECHNOLOGICAL DEVELOPMENT AND ECONOMIC UTILIZATION OF THE FISHERIES RESOURCES;

(3) THROUGH REHABILITATION, ENHANCEMENT AND DEVELOPMENT PROGRAMS DO ALL THINGS NECESSARY TO INSURE PERPETUAL AND INCREASING PRODUCTION AND USE OF THE FOOD RESOURCES OF ALASKA WATERS AND CONTINENTAL SHELF AREAS;

(4) MAKE A COMPREHENSIVE ANNUAL REPORT TO THE LEGISLATURE, CONTAINING DETAILED INFORMATION REGARDING ITS ACCOMPLISHMENTS UNDER THIS SECTION AND PROPOSALS OF PLANS AND ACTIVITIES FOR THE NEXT FISCAL YEAR, NOT LATER THAN 20 DAYS AFTER THE CONVENING OF EACH REGULAR SESSION. (2 CH 113 SLA 1971).

IN 1974, RECOGNIZING THAT THE FISHERMEN SHOULD BECOME DIRECTLY INVOLVED IN THE REHABILITATION AND ENHANCEMENT EFFORT, THE LEGISLATURE PASSED THE PRIVATE NON-PROFIT HATCHERY LOAN ACT. BY AMENDMENT IN 1977 OF THE 1974 ACT, REGIONAL PLANNING TEAMS COULD BE ESTABLISHED THROUGHOUT THE STATE. REGIONAL PLANNING TEAMS ARE COMPRISED OF DEPARTMENT PERSONNEL AND MEMBERS OF REGIONAL FISHERMEN'S ASSOCIATIONS. REGIONAL FISHERIES ASSOCIATIONS CONSIST OF A CROSS SECTION OF USER GROUPS INCLUDING COMMERCIAL, SPORT, AND OTHER INTERESTED USERS.

REGIONAL PLANNING TEAMS ARE CHARGED WITH DEVELOPING AND RECOMMENDING TO THE COMMISSIONER OF FISH AND GAME A COMPREHENSIVE REGIONAL PLAN FOR THE REHABILITATION AND ENHANCEMENT OF THE SALMON RESOURCE. FOUR REGIONAL PLANNING TEAMS PRESENTLY ARE FUNCTIONING IN THE STATE: TWO IN SOUTHEASTERN ALASKA, ONE IN PRINCE WILLIAM SOUND, AND ONE IN COOK INLET. (I HAVE FOUR COPIES OF A RECENTLY DRAFTED PROCEDURES MANUAL THAT I WILL LEAVE FOR YOUR REVIEW.)

CONCURRENT TO THOSE DEVELOPMENTS, THE CAPABILITIES OF THE DIVISION OF FISHERIES REHABILITATION, ENHANCEMENT AND DEVELOPMENT (FRED) WERE EXPANDED TO INCLUDE PATHOLOGY, GENETICS, AND ENGINEERING AS WELL AS FISH CULTURE AND BIOLOGY. A MODERN FISH PATHOLOGY LABORATORY HAS BEEN CONSTRUCTED IN ANCHORAGE WITH FULL DIAGNOSTIC CAPABILITIES. A REGIONAL PATHOLOGY

LABORATORY WAS OPENED RECENTLY IN JUNEAU. THE JUNEAU PATHOLOGY LABORATORY ALSO SERVES AS THE GENETICS LABORATORY FOR STATEWIDE WORK.

STATE REGULATIONS AND POLICIES HAVE BEEN ESTABLISHED THAT PROHIBIT MOVEMENT OF ALL LIFE HISTORY STAGES OF FISH AND WILDLIFE INTO, WITHIN, OR OUT OF THE STATE UNLESS APPROVED BY THE COMMISSIONER. INSPECTION FOR DISEASE IS MANDATORY PRIOR TO ANY TRANSPORT.

SINCE 1971, OVER 50 MILLION DOLLARS HAVE BEEN APPROPRIATED TO THE FRED DIVISION FOR THE CONSTRUCTION OF MULTI-SPECIES HATCHERIES AND FISH PASSES, HABITAT IMPROVEMENT, RESEARCH, AND DISEASE PREVENTION RESEARCH AND CONTROL.

THE STATE OF ALASKA'S LONG RANGE SALMON PLAN CALLS FOR ACHIEVING AN AVERAGE ANNUAL HARVEST OF A HUNDRED MILLION SALMON. IT IS DOUBTFUL THAT THAT LEVEL OF HARVEST MAY BE ACHIEVED WITHOUT ASSISTANCE FROM THE FEDERAL GOVERNMENT. BENEFITS FROM THE STATE'S PROGRAM ARE SHARED WITH NON-RESIDENTS. IN ADDITION, THE PRIVATE-NON PROFIT HATCHERY LOAN ACT ESTABLISHED A 200 MILLION DOLLAR REVOLVING LOAN FUND. SALMON PRODUCED BY THAT LOAN FUND WILL YIELD BENEFITS TO RESIDENTS AND NON-RESIDENTS.

THUS, MR. CHAIRMAN, SINCE 1971, THE STATE OF ALASKA HAS ACTUALLY ESTABLISHED THROUGH ITS MAJOR COMMITMENT TO THE

SALMON RESOURCES THE FRAMEWORK FOR A RATIONAL APPROACH TO ALL AQUACULTURE WITHIN THE STATE THAT COULD EASILY DOVETAIL WITH SENATE BILL 2762.

I CAN MAKE THAT STATEMENT BECAUSE:

PLANNING TEAMS ARE ALREADY BEING ESTABLISHED CONSISTING OF USERS AND RESOURCE MANAGERS. FINANCIAL ASSISTANCE EXPANSION TO SPECIES OTHER THAN SALMON IS A MINOR TRANSITION.

MATCHING MONIES WILL BE OR ARE AVAILABLE IN THE PUBLIC AS WELL AS THE PRIVATE-NON PROFIT SECTOR AS EVIDENCED BY THE LOAN PROGRAM AND CATCH ASSESSMENT PROGRAM.

EXISTING ALASKA STATUES PERMIT THE DEVELOPMENT OF AQUACULTURE.

A SPECIAL FISHERIES DIVISION HAS ALREADY BEEN CREATED TO CARRYOUT SUCH A PROGRAM AND IS STAFFED BY ALL PREREQUISITE DISCIPLINES.

PROBLEMS ASSOCIATED WITH AQUACULTURE DEVELOPMENT IN ALASKA

FIRST, THE STATE DOES POSSESS MANY VALUABLE NATURAL STOCKS OF A VARIETY OF SPECIES. THUS AQUACULTURE SHOULD BE INTEGRATED INTO THE EXISTING ECOSYSTEMS WITHOUT DAMAGE TO VALUABLE NATURAL STOCKS. AS LONG AS THE STATE MAINTAINS CONTROL OVER THE MANAGEMENT OF HER NATURAL FISH POPULATIONS AND IS ABLE TO INTEGRATE THE DEVELOPMENT AND APPLICATION OF AQUACULTURE TECHNOLOGY INTO THE NATURAL PRODUCING ECOSYSTEMS REGARDLESS OF LAND OWNERSHIP, WE ARE CONFIDENT THAT NATURAL STOCKS WILL BE ADEQUATELY PROTECTED. IF OTHER LAND OWNERS ASSUME CONTROL FOR MANAGEMENT OF AQUATIC RESOURCES WITHIN THEIR BOUNDARIES, WE CANNOT GUARANTEE PROTECTION OF WILD STOCKS THAT MAY PASS THROUGH NON-STATE CONTROLLED ECOSYSTEMS.

WITH THE DIVERSE FEDERAL AND PRIVATE LAND AND WATER OWNERSHIP PATTERNS EVOLVING IN THE STATE AS A RESULT OF ACTIONS UNDER THE ALASKA NATIVE CLAIMS SETTLEMENT ACT, SUCH AS THE PROPOSAL "D-2" LEGISLATION, IT IS DIFFICULT TO ENVISION A RATIONAL APPROACH TO AQUACULTURE IN ALASKA UNLESS ONE AGENCY IS RESPONSIBLE FOR THE DEVELOPMENT AND FINAL ADMINISTRATION OF A PLAN. THE STATE OF ALASKA, IN PARTNERSHIP WITH THE FEDERAL GOVERNMENT, IS IN THE BEST POSITION TO DEVELOP THAT PLAN AS WELL AS CONTROL ITS APPLICATION. THAT PARTNERSHIP SHOULD NOT ABROGATE THE STATE'S RIGHT TO MANAGE HER FISHERIES

RESOURCES BUT SHOULD REFLECT THE FEDERAL GOVERNMENT'S RESPONSIBILITY TO ASSIST THE STATE WHEN IT IS IN THE BEST INTERESTS OF THE PEOPLE OF THE UNITED STATES. SINCE MANY NONRESIDENT COMMERCIAL AND SPORT FISHERMEN FISH THE WATERS OF THE STATE, THE FEDERAL GOVERNMENT HAS AN OBLICATION TO SUPPLEMENT STATE EFFORTS, NOT CONTROL.

ALASKA IS THE LAST STATE IN THE UNION TO POSSESS VAST ACREAGES OF PUBLIC-OWNED, UNEXPOITED TERRESTRIAL AND AQUATIC ECOSYSTEMS. MANY OF THOSE PUBLIC-OWNED AQUATIC ECOSYSTEMS ARE HIGHLY PRODUCTIVE, OTHERS ARE NOT. MANY POTENTIAL AQUACULTURE SITES LIE WITHIN FEDERAL LANDS, WHETHER IT BE HATCHERY OR FISH-LADDER SITES OR UNDERUTILIZED LAKE SYSTEMS. WE HAVE ATTEMPTED TO IDENTIFY MANY OF THOSE POTENTIALS IN OUR TESTIMONY REGARDING PROPOSED "D-2" LEGISLATION. MANY POTENTIAL ESTUARINE AND MARINE AQUACULTURE SITES MAY LIE WITHIN BOUNDARIES NOW BEING ESTABLISHED BY CONGRESS. WITHOUT SPECIFIC KNOWLEDGE THESE SITES ARE DIFFICULT TO IDENTIFY, BUT THE BOUNDARIES ARE BEING DRAWN ANYWAY. WE BELIEVE AQUACULTURE IS A VERY REAL PART OF MULTIPLE USE. IT IS IMPERATIVE THAT THOSE WILDERNESS, REFUGE, AND PARK AREAS NOW UNDER CONSIDERATION BY CONGRESS WILL NOT PRECLUDE A RATIONAL APPROACH TO AQUACULURE IN THE FUTURE.

ONE OF THE MAJOR PROBLEMS THAT WE FACE IS LACK OF KNOWLEDGE REGARDING POTENTIAL AQUACULTURE SITES, WHETHER IT BE FRESHWATER, ESTUARINE, OR MARINE. FURTHERMORE, MUCH BASELINE DATA MUST BE COLLECTED IF AQUACULTURE IS TO BE INTEGRATED WITH

NATURAL STOCK MANAGEMENT. DEVELOPMENT OF AQUACULTURE AT THE EXPENSE OF NATURAL STOCKS IS IRRESPONSIBLE, BOTH ECONOMICALLY AND ECOLOGICALLY.

ANOTHER MAJOR PROBLEM THAT WE HAVE AS RESOURCE MANAGERS IN ALASKA RESULTS FROM COLD WATER TEMPERATURES AND HIGHLY SEASONAL FOOD AVAILABILITY. MANY OF OUR VALUABLE NON-ANADRAMOUS SPORT SPECIES ARE VERY SLOW GROWING AND EXHIBIT OLDER MATURITY SCHEDULES THAN OBSERVED IN THE LOWER-48. THUS, IF EFFORT INCREASES SUBSTANTIALLY IN THE STATE BECAUSE OF AN INFLUX OF SPORT ANGLERS, MANY TROPHY NATIVE STOCKS COULD BE HARVESTED QUICKLY AND IMPACTED ADVERSELY. WE HAVE OBSERVED THIS PROBLEM ADJACENT TO MAJOR POPULATION CENTERS IN ALASKA. THUS, THE CREATION AND ADVERTISING OF REFUGES, PARKS, AND WILDERNESS AREAS, WITH THE ATTENDANT INCREASED INTEREST IN ALASKA ANGLING, COULD HAVE A SIGNIFICANT DETRIMENTAL IMPACT ON PRESENTLY UNEXPLOITED FISH POPULATIONS.

SOUND PLANNING BASED UPON CAREFULLY DEVELOPED HARVEST STRATEGIES DERIVED FROM RELIABLE INVESTIGATIONS IS ESSENTIAL, OR OLD-AGED TROPHY FISH AREAS COULD DISAPPEAR RAPIDLY. WITHOUT CAREFUL PLANNING AND PREREQUISITE DATA, PUT-AND-TAKE FISHERIES WILL BE DEMANDED. OBVIOUSLY, AQUACULTURE PLANNING MUST CONSIDER THE NEEDS OF TROPHY ANGLERS AS WELL AS THE LESS ESTHETICALLY INCLINED ANGLERS. TROPHY AREAS SHOULD NOT BE OPENED UP TO HIGH RATES OF EXPLOITATION OR ALTERED BY SUPERIMPOSITION OF HIGH PRODUCTION AQUACULTURE SYSTEMS.

SPECIFIC COMMENTS ON AQUACULTURE BILLS NOW BEFORE THE SUBCOMMITTEE

MR. CHAIRMAN, WE HAVE REVIEWED CAREFULLY AQUACULTURE BILLS HR 9370, S 1043, S 2582, AND S 2762. THERE ARE BASIC SIMILARITIES IN ALL THOSE BILLS, BUT WE FEEL S 2762 MOST NEARLY COINCIDES WITH OUR VIEWS OF DEVELOPMENT OF AQUACULTURE IN ALASKA BECAUSE OF:

(1) THE TREMENDOUS RANGE OF ENVIRONMENTAL CONDITIONS IN ALASKA;

(2) OUR KNOWLEDGE OF THE DIVERSITY OF USER GROUPS' NEEDS, RESIDENT AND NONRESIDENT ALIKE;

(3) THE STATE'S MANAGERIAL AUTHORITY AND RESPONSIBILITY FOR MAINTAINING AND DEVELOPING THE AQUATIC RESOURCES;

(4) THE KNOWLEDGE THAT RESIDENTS AND STATE AGENCIES POSSESS REGARDING THE STATE'S WIDE-RANGING ENVIRONMENTAL CONDITIONS AND COMPLEX HARVEST PROBLEMS;

(5) THE INITIAL ESTABLISHMENT OF A COORDINATED PUBLIC-RESOURCE MANAGER PLANNING SYSTEM;

(6) THE DIVERSE STATE-FEDERAL-PRIVATE LAND OWNERSHIP WHICH ENCOMPASSES POTENTIAL AQUACULTURE SITES; AND

(7) RECOGNITION BY THE STATE OF NATIONAL INTERESTS.

THEREFORE, MY TESTIMONY AS COMMISSIONER OF THE ALASKA DEPARTMENT OF FISH AND GAME IS DIRECTED TOWARDS SPECIFIC CHANGES IN S.2762 THAT WILL YIELD THE BEST AQUACULTURE PLAN FOR ALASKAN ECOSYSTEMS. THAT PLAN MUST BE DERIVED INITIALLY FROM DATA SOURCES AND FROM PUBLIC AND PRIVATE NEEDS AS CLOSE TO THE RESOURCE AS POSSIBLE. THUS THE STATE AND HER PEOPLE SHOULD TAKE THE LEAD IN ESTABLISHING PRIORITY SPECIES, DATA-BASE NEEDS, POLICY GUIDELINES, AND REGULATIONS THAT WILL PRODUCE AND IMPLEMENT AN ACCEPTABLE PLAN.

MR. CHAIRMAN, AS POINTED OUT EARLIER, MY DEPARTMENT IS DEVELOPING A VERY CLOSE WORKING RELATIONSHIP WITH ALASKAN AQUACULTURE ASSOCIATIONS. WE HAVE CAREFULLY REVIEWED COMMENT ON S.2762 TRANSMITTED IN A LETTER OF MARCH 31 TO SENATOR GRAVEL FROM MR. A.W. HALL, BUSINESS MANAGER OF THE PRINCE WILLIAM SOUND AQUACULTURE CORPORATION. WE ENDORSED THOSE COMMENTS. WE ALSO HAVE REVIEWED A LETTER OF APRIL 6, 1978, TRANSMITTED TO SENATOR GRAVEL FROM DR. DEREK POON, GENERAL MANAGER OF THE NORTHERN SOUTHEAST REGIONAL AQUACULTURE ASSOCIATION, AND WE ENDORSE THOSE COMMENTS ON S.2762 ALSO. I WILL LEAVE A COPY OF THESE TWO LETTERS FOR THE COMMITTEE'S PERUSAL AND FOR THE RECORD.

IN ADDITION TO THOSE DEPARTMENTALLY ENDORSED COMMENTS, I OFFER THE FOLLOWING FOR YOUR CONSIDERATION:

UNDER "SEC. 4. NATIONAL AQUACULTURE DEVELOPMENT PLAN (A)(2)(C) MEMBERSHIP OF REGIONAL ADVISORY SUBCOMMITTEES...." WE SUGGEST THE ADDITION OF FISH PROCESSORS TO THE LIST OF REPRESENTATIVES.

UNDER "SEC. 5. FUNCTIONS AND POWERS (A)(3)" WE DO NOT BELIEVE, MR. CHAIRMAN, THAT IT IS IN THE BEST INTERESTS OF THE RESOURCES OF ALASKA FOR THE SECRETARY TO PRODUCE AND SELL SEED STOCK WITHOUT STATE CONTROL. THE STATE NEEDS CONTROL OVER THE SALE AND MOVEMENT OF SEED STOCK INTO, WITHIN, OR OUT OF THE STATE IN ORDER TO CARRY OUT ITS MANAGEMENT RESPONSIBILITIES FOR PROTECTING NATURAL STOCKS AND FOR MAINTAINING DISEASE AND GENETIC CONTROL. WE CONSIDER THIS AUTHORITY AS BEING ABSOLUTELY NECESSARY BECAUSE OF THE PRESENT LACK OF FEDERAL CONTROLS IN THIS AREA OF CONCERN.

UNDER "SEC. 5.(A)(4)" BECAUSE ALASKA HAS SUCH A COMPLEX LAND OWNERSHIP PROBLEM, AND BECAUSE ANADROMOUS STOCKS OF SALMON, TROUT, SHEEFISH, AND CHAR MAY PASS THROUGH SEVERAL LAND OWNERS, WE BELIEVE IT IS TO THE BEST INTERESTS

OF THE RESOURCES OF ALASKA THAT FEDERAL ENCOURAGEMENT FOR THE IMPLEMENTATION OF REHABILITATION AND ENHANCEMENT TECHNOLOGY BE GIVEN ONLY AFTER APPROVAL BY STATE REGULATORY AGENCIES. WITHOUT ADDITION OF THAT LANGUAGE IT WOULD BE POSSIBLE FOR A FEDERAL AGENCY TO ENCOURAGE THE CONSTRUCTION OF A HATCHERY OR OTHER FACILITIES THAT MAY HAVE A NEGATIVE IMPACT ON SIGNIFICANT NATURAL STOCKS PASSING THROUGH THE SAME WATERS.

UNDER "SEC. 5.(A)(5)" WE SUGGEST THE ELIMINATION OF THE WORDS "IN AREAS WHERE MULTIPLE LAND AND WATER USES EXIST" AND THE SUBSTITUTION OF THE WORDS "ON ALL FEDERAL AREAS, NOTWITHSTANDING PRESENT LAWS TO THE CONTRARY, AQUACULTURE..." ALASKA'S FISHERIES ARE OF SUCH TREMENDOUS VALUE TO THE STATE AND TO THE NATION AS A WHOLE THAT WE CANNOT AFFORD TO PRECLUDE FISHERY ENHANCEMENT WORK ON ALL OF THE RELATIVELY FEW ACCEPTABLE SITES IN ALASKA SIMPLY BECAUSE OF PRESENT CLASSIFICATIONS, E.G. "WILDERNESS" OR "WILDLIFE REFUGE".

UNDER "SEC. 5. (B)(1)(A)" WE BELIEVE IT IS TO THE BEST INTERESTS OF THE STATE'S FISHERY MANAGEMENT PROGRAM THAT RESEARCH AND DEVELOPMENT FACILITIES BE PERMITTED ONLY AFTER CONSULTATION AND APPROVAL BY THE STATE'S REGULATORY AGENCIES. ADDITION OF THAT LANGUAGE, MR. CHAIRMAN, WILL HELP TO PREVENT NEEDLESS DUPLICATION OF EFFORTS AND AGENCIES WORKING AT CROSS PURPOSES.

THANK YOU FOR THE OPPORTUNITY TO PRESENT THIS DEPARTMENT'S VIEWS. MY STAFF AND I WILL BE AVAILABLE FOR CONSULTATION AS MIGHT BE NECESSARY DURING THE COMMITTEE'S DELIBERATIONS. PLEASE LET ME KNOW IF YOU WISH OUR HELP AT ANY TIME.

The Honorable Mike Gravel
United States Senate
3121 Dirksen Senate Office Bldg.
Washington, D.C. 20510

Dear Senator Gravel:

After reviewing the "National Aquaculture Organic Act of 1978", S-2762 received from your office, I have the following comments for your consideration.

Your aide, Mr. Tom Roach, contacted me last fall at which time we briefly discussed national aquaculture legislation and the possibility of your action. Since that time, Mr. Roach has kept me informed, and I have followed the progress of the legislation with interest. Your efforts to improve the legislation which passed the House are greatly appreciated. Your bill will be much better for Alaska and our fishermen than the House bill.

I have discussed the bill with Mr. Bill Hall of the Prince William Sound Aquaculture Corporation, and I have read his comments and recommendations. I am supportive of Mr. Hall's comments and recommendations for amending the bill.

Additionally, I would like to add some comments.

(1) I am especially supportive of the regional subcommittee concept in your bill and believe funding and any other support to maximize its effectiveness should be promoted. By developing the plan close to the people, the end product will reflect their interests, experience and expertise. I know that in Southeast Alaska the Forest Service and the National Marine Fisheries Service have personnel very knowledgeable about the potential for aquaculture development. Hopefully, these people, state biologists and local fishermen will be able to either serve on a regional subcommittee or provide input directly to the subcommittee.

(2) The NSRAA Board of Directors has taken a strong position in favor of rehabilitation of natural salmon

stocks. The preferred emphasis is on cost-effective projects which complement and enhance rather than conflict with or replace natural production. A matching federal, state or local grant program to stimulate the efforts of fishermen and other groups to this area would greatly benefit Alaska.

(3) I am requesting, in a separate letter, that your Juneau office send copies of your comments in the Congressional Record prefacing introduction of S-2762 to each NSRAA Board member to keep them informed of developments on the national legislation. You may receive some additional comments from them.

Enclosed are copies of our latest informational brochures which were sent to fishermen explaining our program. These materials may give you some ideas on how to coordinate our plans with the national aquaculture plan and possibilities for our Association to work in partnership with the federal and state governments through a combination of grants, loans and insurance to enhance our fisheries.

Finally, I would like to restate my support for your bill S-2762, and the proposed changes recommended by Mr. Bill Hall. S-2762, especially with the suggested changes, will benefit Alaska more than Mr. Leggett's bill HR 9370.

Thank you for keeping us informed.

Sincerely,

Derek Poon, Ph.D.

Juneau, Alaska 99811

Dear Jay:

Last week I sent to you a copy of my recently introduced Aquaculture bill, S 2762.

The accompaning letter stated that hearings on this bill will be held on April 18, 1978. That is a mistake. The hearings are scheduled for April 17, 197o in the Senate Commerce Committee hearing room. I apologize if this may have caused you any inconvenience.

With best regards,

Sincerely,

Mike Gravel

WASHINGTON, D.C. 20510

April 19, 1978

Honorable Jay Kerttula
Alaska State Senate
Pouch V
Juneau, Alaska 99811

Dear Jay:

Activity on the several Aquaculture bills has picked up considerably this past week in the Senate. Hearings were held on Monday and Wednesday of this week before Senate Magnuson of the Senate Commerce Committee. Hearings were also held on Tuesday and Thursday before Senator Stone of the Senate Agriculture Committee.

The Commerce Committee considered the Leggett bill (HR 9370), the Weiker Bill (S 2582) and my bill, S 2762. The Agriculture Committee focused on the Stone bill (S2218), the Bentsen bill (S 1043), which I co-sponsored last year, and my bill, too.

I have enclosed a copy of my testimony here for your interest. It seems that the two Committees are receptive to the three proposals I have initiated. General acceptance is growing for the necessity to include (1) regional input in the National Plan, (2) rehabilitation and enhancement measures, and (3) aquaculture as a coastal activity deserving of consideration along with all other competing activities.

The next step will probably be a single bill written by the staffs of both the Commerce Committee and the Agriculture Committee working together. Hopefully this cooperative Committee print will include our proposals.

This should bring you in the State up to date on where the legislation stands down here. I'll keep you informed of further developments.

Sincerely,

Mike Gravel

STATEMENT OF SENATOR MIKE GRAVEL
BEFORE THE
COMMERCE, SCIENCE, AND TRANSPORTATION
COMMITTEE
UNITED STATES SENATE
APRIL 17, 1978

MR. CHAIRMAN, MEMBERS OF THE COMMITTEE, I THANK YOU FOR THE OPPORTUNITY TO APPEAR BEFORE YOU TODAY TO COMMENT ON THE SEVERAL PIECES OF AQUACULTURE LEGISLATION WHICH ARE PRESENTLY UNDER CONSIDERATION BY THE SENATE COMMERCE COMMITTEE. AQUACULTURE IS PRACTICED IN VARYING DEGREES OF INTENSITY THROUGHOUT THE WORLD AND I BELIEVE THE TIME IS NOW RIGHT TO PROVIDE LEGISLATIVE ENCOURAGEMENT FOR AQUACULTURE ACTIVITY IN THE UNITED STATES.

AQUACULTURE - AN OVERVIEW

THE WORLD ACTIVITY IN AQUACULTURE IS WIDE AND VARIED. CHINA HAS BEEN CULTIVATING FISH FOR OVER 2000 YEARS. JAPAN NOW PRODUCES MORE THAN TEN PER CENT OF ITS SEAFOOD NEEDS THROUGH AQUACULTURE. AND RUSSIA HAS BEEN GIVING AQUACULTURE INCREASED ATTENTION.

THE UNITED STATES HAS BEEN DABBLING IN VARIOUS FORMS OF AQUACULTURE FOR A CONSIDERABLE PERIOD OF TIME, BUT A LIBRARY OF CONGRESS REPORT INDICATES THAT AQUACULTURE IN THE U.S. HAS GROWN INSIGNIFICANTLY COMPARED TO SUCH ACTIVITIES IN OTHER PARTS OF THE WORLD.

MY HOME STATE OF ALASKA HAS BEEN INVOLVED IN THE CULTIVATION OF FIN FISH SINCE THE LATE 1800s. WITH MORE THAN 50% OF THE ENTIRE U.S. COASTLINE LOCATED WITHIN THE STATE OF ALASKA, ONE CAN UNDERSTAND WHY MY INTEREST IN AQUACULTURE IS GREAT. THE POTENTIAL FOR MARINE AQUACULTURE DEVELOPMENT WITHIN ALASKA IS TRULY INCREDIBLE, NOT TO MENTION THE VAST POSSIBILITIES FOR FUTURE FRESH-WATER CULTIVATION.

AQUACULTURE - MARKET POTENTIAL

WORLD FISHERY RESOURCES WERE ONCE THOUGHT TO BE PRACTICALLY UNLIMITED. THIS HAS BEEN CLEARLY SHOWN NOT TO BE THE CASE. THE WORLD FISHERY RESOURCES ARE NOW ESTIMATED BY SOME EXPERTS TO BE

CAPABLE OF YIELDING A MAXIMUM GLOBAL HARVEST OF 100 TO 150 MILLION METRIC TONS PER YEAR. MORE CONSERVATIVE ESTIMATES RARELY EXCEED 100 MILLION METRIC TONS, INCLUDING THAT OF THE NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION, WHICH ESTIMATES THAT THE 100 MILLION METRIC TON FIGURE WILL BE MET BY 1980. THIS SUGGESTS THAT A WORLD SHORTAGE OF FISH PRODUCTS IS POSSIBLE IN THE FORESEEABLE FUTURE.

WORLD PER CAPITA FISH CONSUMPTION HAS INCREASED OVER THE PAST SEVERAL YEARS AND IN THE U.S. ALONE HAS RISEN TO A PRESENT LEVEL OF 12.9 POUNDS PER PERSON PER YEAR. RELIABLE ESTIMATES PROJECT AMERICAN CONSUMPTION TO INCREASE TO 15.2 POUNDS BY THE YEAR 2000. A LIBRARY OF CONGRESS STUDY HAS PREDICTED THAT IN THE SAME PERIOD OF TIME OVERALL DEMAND FOR SEAFOOD PRODUCTS IN THE U.S., BOTH EDIBLE AND INDUSTRIAL, IS EXPECTED TO INCREASE BY A FULL 80%.

ALL THESE INDICATORS SUGGEST THAT THE DEMAND FOR FISH

PRODUCTS WILL ONLY CONTINUE TO INCREASE IN THE YEARS TO COME. WITH WILD FISH STOCK EXPLOITATION REACHING MAXIMUM LEVELS, PER CAPITA CONSUMPTION OF FISH PRODUCTS ON THE RISE AND THE WORLD POPULATION EXPECTED TO INCREASE FROM A LEVEL OF 4 BILLION TODAY TO 6 BILLION BY THE TURN OF THE CENTURY, AQUACULTURE MUST BE VIEWED AS A PROMISING POSSIBILITY IN HELPING TO MEET THESE FOOD DEMANDS.

AQUACULTURE - ECONOMIC POTENTIAL

FOR A NATION PRACTICALLY SURROUNDED BY WATER AND REPLETE WITH POSSIBLE SITES FOR RAISING INLAND FISH SPECIES, FISHERY IMPORTS INTO THE U.S. ARE SURPRISINGLY HIGH. IN 1976 THE U.S. IMPORTED 6.2 BILLION POUNDS OF FISHERY PRODUCTS VALUED AT $2.2 BILLION. THE U.S. FISHERY EXPORTS IN 1976 AMOUNTED TO 241 MILLION POUNDS, VALUED AT ONLY $330 MILLION.

THIS LEAVES A NET ANNUAL TRADE DEFICIT OF PRACTICALLY $2 BILLION FOR FOREIGN FISH PRODUCTS WHERE CLOSE TO 65% OF FISH

CONSUMED IN THE U.S. IS IMPORTED FROM FOREIGN COUNTRIES.

THE STUDIOUS APPLICATION OF AQUACULTURE TECHNIQUES COULD HELP TO REVERSE THIS UNFAVORABLE BALANCE OF TRADE SITUATION. A PROMOTION OF AQUACULTURE WILL RESULT IN THE CREATION OF MANY NEW JOBS, FISHERY EMPLOYMENT ON A YEAR-ROUND RATHER THAN A SEASONAL BASIS, AND AN OVERALL STABILITY TO THE HISTORICAL BOOM OR BUST FISHERY ECONOMY.

NATIONAL AQUACULTURE ORGANIC ACT - INTENT

MR. CHAIRMAN, THE NATIONAL AQUACULTURE ORGANIC ACT OF 1978 WILL PROVIDE LONG OVERDUE IMPETUS TO THE PROMOTION OF AQUACULTURE IN THE UNITED STATES. MY DESIRE IS TO ENCOURAGE THE DEVELOPMENT OF AQUACULTURE OF ALL TYPES IN ALL PARTS OF THE U.S. THIS WOULD INCLUDE ENCOURAGING AQUACULTURE FOR MARINE, AS WELL AS FRESH WATER, SPECIES: FOR AQUATIC PLANTS, AS WELL AS AQUATIC ANIMALS: FOR PRESENTLY CULTURED SPECIES, AS WELL AS SPECIES AS YET UNTESTED BY THE TECHNIQUES OF AQUACULTURE: AND FOR THE

REHABILITATION AND ENHANCEMENT OF PUBLIC FISHERIES, AS WELL AS THE PROMOTION OF OCMMERCIAL ENTERPRISES.

TO ACCOMPLISH THESE GOALS, MY LEGISLATION DESIGNATES THE DEPARTMENT OF COMMERCE AS THE AGENCY WITH ULTIMATE RESPONSIBILITY. THE COMMERCE DEPARTMENT WILL, HOWEVER, OPERATE IN CLOSE CONJUNCTION WITH THE DEPARTMENTS OF AGRICULTURE AND INTERIOR, AS BOTH THOSE DEPARTMENTS HAVE PROVEN THEMSELVES EXPERT IN MANY IMPORTANT ASPECTS OF AQUACULTURE. THERE ARE MANY FACETS TO AQUACULTURE, AND I BELIEVE NO SINGLE AGENCY CAN OR SHOULD BE NAMED THE EXCLUSIVE AUTHORITY. THE BETTER APPROACH IS TO TAP THE EXISTING EXPERTISE OF THE SEVERAL DEPARTMENTS AND COORDINATE ALL AQUACULTURE EFFORTS THROUGH THE DEPARTMENT OF COMMERCE.

AN INTERAGENCY COMMITTEE ON AQUACULTURE WILL BE FORMED TO FACILITATE AND COORDINATE INFORMATION AND ACTIVITIES AMONG THE THREE DEPARTMENTS, AS WELL AS ALL OTHER AGENCIES AND PARTIES INVOLVED.

MY LEGISLATION ALSO PROVIDES FOR THE FORMULATION OF A NATIONAL AQUACULTURE DEVELOPMENT PLAN. THIS PLAN, TO BE DRAWN UP IN THE YEAR FOLLOWING ENACTMENT, WILL EMBODY CONCRETE SUGGESTIONS ON SPECIFIC DIRECTIONS AND PRIORITIES TO PURSUE IN THE DEVELOPMENT OF AQUACULTURE IN THE U.S.

A GRANT PROGRAM WILL ENCOURAGE PARTICIPATION IN WHAT IS GENERALLY CONSIDERED A RATHER EXPENSIVE ENTERPRISE. THESE GRANTS WILL ALLOW THE PRIVATE ENTREPRENEUR TO GET INVOLVED IN A VENTURE THAT WOULD OTHERWISE, BY VIRTUE OF PROHIBITIVE START-UP COSTS, BE RESERVED FOR LARGE CORPORATIONS OR THE INDIVIDUAL OF GREAT WEALTH.

A FEDERAL AQUACULTURE ASSISTANCE FUND IS CREATED FOR THREE PURPOSES: (A) TO FACILITATE AQUACULTURE FINANCING BY GUARANTEEING LOANS MADE TO AQUACULTURE OPERATIONS SINCE SUCH LOANS HAVE HISTORICALLY BEEN UNREASONABLY DIFFICULT TO OBTAIN: (B) TO MAKE DISASTER LOANS FOR AQUACULTURE STOCKS WHICH ARE DESTROYED BY

UNAVOIDABLE DISEASES: AND (C) TO PROVIDE INSURANCE COVERAGE TO AQUACULTURE OPERATIONS IN THOSE INSTANCES WHERE INSURANCE IS NOT OTHERWISE AVAILABLE.

NATIONAL AQUACULTURE ORGANIC ACT - COMPARISON TO OTHER AQUACULTURE LEGISLATION

MR. CHAIRMAN, MY AQUACULTURE BILL, S.2762 IS IN MANY RESPECTS SIMILAR TO THE OTHER TWO PIECES OF AQUACULTURE LEGISLATION UNDER CONSIDERATION BY YOUR COMMITTEE TODAY. H.R.9370, THE HOUSE AQUACULTURE BILL, AND S.2582, THE WEICKER AQUACULTURE BILL, BOTH CONTAIN NUMEROUS POINTS WHICH COINCIDE WITH THE PROPOSALS I MAKE IN S.2762.

THERE ARE, HOWEVER, THREE IMPORTANT NEW AREAS WHICH MY BILL EMPHASIZES, AND I SHOULD LIKE BRIEFLY TO EXPLAIN THEM:

FIRST, UNLIKE THE OTHER AQUACULTURE LEGISLATION, I WOULD REQUIRE THAT THE NATIONAL AQUACULTURE DEVELOPMENT PLAN BE FORMULATED ONLY AFTER INFORMATION IS SYSTEMATICALLY GATHERED FROM ALL PARTS OF THE UNITED STATES. TO ENSURE ADEQUATE INPUT FROM INTERESTS AS DIVERSE AS

SHRIMP FARMERS IN FLORIDA, SALMON RANCHERS IN ALASKA, OYSTER RAISERS IN MAINE AND CATFISH FARMERS IN THE MID-WEST, INFORMATION MUST BE GATHERED ON A REGIONAL BASIS. ONLY AFTER THESE SUGGESTIONS ARE RECEIVED FROM ALL PARTS OF THE COUNTRY SHOULD A NATIONAL PLAN BE DRAWN UP. THIS WILL GUARANTEE THAT THE PLAN WILL BE TAILORED TO THE VARIED INTERESTS AND NEEDS OF AQUACULTURISTS THROUGHOUT ALL 50 STATES.

SECOND, I ADD THE ENHANCEMENT AND REHABILITATION OF TRADITIONAL PUBLICLY OWNED FISH STOCKS AS A MAJOR GOAL TO BE ADDRESSED BY THIS LEGISLATION. IT SEEMS OBVIOUS THAT IN ADDITION TO ENCOURAGING DEVELOPMENT OF COMMERCIAL AQUACULTURE FOR THE PRIVATE SECTOR, WE SHOULD NOT OVERLOOK THE DESIRABILITY OF REHABILITATING THE NUMEROUS DEPLETED FISH STOCKS WHICH ARE OF VITAL IMPORTANCE TO THE PUBLIC SECTOR.

THE THIRD AND FINAL ISSUE OF IMPORTANCE MY BILL ADDRESSES IS THE PROBLEM OF LAND AND WATER ACCESS FOR AQUACULTURE FACILITIES.

I BELIEVE THE CONTRIBUTIONS WHICH AQUACULTURE CAN MAKE IN HELPING TO MEET NUTRITIONAL NEEDS, STIMULATING COMMERCIAL ACTIVITY, AND ENHANCING EXISTING FISHERIES WARRANT ITS BEING GIVEN DUE CONSIDERATION IN LAND AND WATER USE MANAGEMENT DELIBERATIONS.

CONCLUSION

MR. CHAIRMAN, AQUACULTURE IS CERTAINLY AN ACTIVITY THAT HAS BEEN NEGLECTED IN THIS COUNTRY FOR TOO LONG. THE NUMEROUS BENEFITS TO BE GAINED -- COMMERCIAL, NUTRITIONAL AND CONSERVATIONAL, TO NAME BUT THREE, -- HAVE NOT YET BEEN FULLY APPRECIATED. PASSAGE OF THIS LEGISLATION WILL BE A POSITIVE STEP TOWARDS TRANSLATING THESE NUMEROUS POTENTIAL BENEFITS INTO TANGIBLE REALITIES.

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - SECOND SESSION

Relating to the Alaska Power Authority, the Phase I environmental, economic, social and engineering studies of the Susitna Hydroelectric Project and the incurring of indebtedness for Phase I.

BE IT RESOLVED BY THE LEGISLATURE OF THE STATE OF ALASKA:

WHEREAS, the Alaska Power Authority pursuant to AS 44.36.180 has submitted to the Legislature and to the Commissioner of Commerce and Economic Development a statement outlining the status of the Susitna Hydroelectric Project and the Plan of Study outlining the necessary feasibility studies of the project which is planned to be designed, and may be acquired or constructed by the United States under an agreement providing for ownership of the Project by the Authority; and

WHEREAS, the Congress of the United States on October 22, 1976, enacted P.L. 94-587, the Alaska Hydroelectric Power Development Act, which Act authorized the Secretary of the Army and the U. S. Army Corps of Engineers to participate in the Susitna Hydroelectric Project; and

WHEREAS, there is now pending before the Congress a proposal which would amend P.L. 94-587 so as to authorize an agreement between the United States and the Alaska Power Authority which will provide that the United States will reimburse the Authority for any of the Authority funds expended in the Phase I stage of the Susitna Hydroelectric Project should the Phase I report not be favorable or should the Authority within three years of the completion of the report be unable to borrow money to pay the construction costs of the project, including the costs of the Phase I studies, based on the security of the project or its revenues; and

WHEREAS, the Phase I activities outlined delineate the environmental, economic, social and engineering studies requisite to informed decision making; and

WHEREAS, the cost to be incurred during Phase I is now estimated to be $25,000,000 but may exceed that amount; and

WHEREAS, it is deemed to be in the best interests of the State of Alaska to proceed with Phase I of the project through the use of Alaska Power Authority sponsored financing.

WHEREAS, Phase I studies shall provide for substantive public involvement throughout the study process; and

WHEREAS, Legislative approval of project construction is required should project feasibility and desirability result from the study process conducted under Phase I activities.

BE IT RESOLVED that the Legislature of the State of Alaska urges the passage by the Congress of the United States of the proposed amendments to P.L. 94-587 so that the Alaska Power Authority may go forward with a program of financing and may enter into any necessary agreements pursuant to the proposed amendments; and be it

FURTHER RESOLVED that, based on the plan outlined in the statement of the Alaska Power Authority to the Legislature and to the Commissioner of Commerce and Economic Development, the Legislature agrees to the incurring of indebtedness by the Alaska Power Authority contingent upon passage of amendments to P.L. 94-587 in an amount necessary to finance the cost of the Phase I feasibility studies of the Susitna Hydroelectric Project, including interest.

Attachment A

Outline of the Present Status of the Susitna Hydroelectric Project and Action to be Taken by the Alaska Power Authority for Financing of the Phase I Advanced Engineering and Design of the Project

Historical Background: The tremendous energy potential of the Susitna River has been known for many years. The Bureau of Reclamation and the Corps of Engineers, along with private institutions have conducted numerous studies of Susitna's potential. Both of the Federal agencies conducted reconnaissance level studies in the late 1940's and each published their findings in the early 1950's. The more specific and detailed early studies were performed by the Bureau of Reclamation. In fact, in a 1960 feasibility report, the Bureau of Reclamation outlined a plan of development in the Upper Susitna River Basin consisting of four high-head dams with a combined firm annual energy capability of roughly 6.3 billion kilowatt hours. The Bureau studies were backed up by limited foundation exploration for three of the four damsites (Devil Canyon, Vee and Denali were drilled, Watana was not drilled). However, with the discovery of Cook Inlet natural gas, the economic attractiveness of the Susitna project plummeted. With the formation of the international oil cartel and the dramatic rise in fuel costs during the 1970's, Congress requested that the Corps of Engineers re-evalua[illegible] the Bureau of Reclamation proposal for developing the Upper Susitna River and to report its recommendations and findings to Congress. Because of questionable foundation conditions at the upper two damsites (Vee and Denali), and the attendant environmental impact associated with those two projects, the Corps modified the proposed development by raising the height of the second upstream dam, Watana, and deleting the Vee and Denali dams. The two-dam Devil Canyon-Watana scheme of development would provide 6.1 billion kilowatt hours firm annual energy but at a lesser cost and environmental impact than the four dam scheme. The Corps evaluated a number of energy alternatives and concluded that coal fired generation and Susitna hydroelectric are the most feasible long range options for the railbelt energy demand. Of the two options, the economic attractivness of the Susitna project appears to be significantly greater than coal fired steam generation. In October 1977 dollars, the estimated construction cost of the two dam scheme and attendant transmission facilities is $2.1 billion. The average annual energy cost from Susitna is estimated to be at least 30 percent less than that of its coal counterpart.

Project Description: The Upper Susitna River Basin is a 5810 square mile area bordered on the North and West by the Alaskan Mountain range, and on the South by the Talkeetna Mountains.

Primary wildlife within the basin consists of moose, bear, dall sheep, caribou, wolf, raptors, and resident fish. Anadromous fish do not migrate into the Upper Susitna, but they do spawn in the streams and sloughs downstream from the basin outlet. The river is glacially fed and averages 7.1 million acre feet of runoff annually. The plan of development includes an 810 foot high earthfill dam at the Watana site, a 635 foot high thin-arch dam at Devil Canyon and 365 miles of transmission line. The Watana project would inundate 43,000 acres of land and 54 miles of natural river. Devil Canyon would flood 7500 acres of land and 28 miles of river. In tandum, the projects would produce a total of 6.1 billion kilowatt hours of firm annual energy and an average of 0.8 billion kilowatt hours of annual secondary energy. It is estimated that Watana could be on line by 1990 and as demand dictates, presumably five years later, Devil Canyon would be brought on line. Based on the preliminary design, the two projects would be capable of withstanding the effects of an 8.5 magnitude earthquake with an epicenter of 40 miles from the projects.

Present Status: The Corps of Engineers submitted their Susitna feasibility report to Congress in 1976. Pending the Chief of Engineers final report to Congress, the project was given conditional authorization to proceed to Phase I Advanced Engineering and Design as a federal project. (Section 160, Water Resources Development Act of 1976, P.L. 94-587). Contained in the same bill is Section 203 known as the Alaska Hydropower Development Fund. This section provides for a joint venture in developing hydropower projects in Alaska in which, for previously authorized hydropower projects, the Corps of Engineers would design and construct the project using state financing and the state would own and operate the project. Bradley Lake and Snettisham are the only authorized projects in the state which qualify for development under this program. Because the Office of Management and Budget (OMB) felt that there was insufficient field exploration to substantiate the project cost estimate contained in the Corps 1976 feasibility report, the Chief of Engineers did not make his final report to Congress. Thus, Susitna remains an unauthorized project, disqualifying it for participation under Section 203. However, in order to provide the necessary explorations the Corps has made $3.0 million available for a twelve month foundation exploration program which should lead to final authorization of the project. That twelve month effort began on January 1, 1978, and the Corps is presently conducting its explorations at the Watana damsite.

1978 Water Resources Development Act: Since Section 203, as it presently reads, makes it difficult for the state to provide

the necessary financing for Phase I studies, the Act will be amended under the 1978 Water Resources Development Act. State and federal personnel, along with their bond counsel and financial and legal advisors have agreed upon the proper language which should be contained in Section 203. Also included in the pending bill will be direct authorization of the Susitna Project thus making it eligible for Section 203 participation exclusive of the OMB desire for the $3.0 million twelve month exploration program. The bill should reach the Senate Water Resources Subcommittee in latter April. The House version of the bill will probably not contain the amending language for Section 203 nor direct authorization for Susitna. Thus, these items will have to be added in conference committee. Considering the other national issues, it is estimated that the bill will not be authorized before July, 1978. Thus the Phase I Studies could begin by the latter part of the 1978 field season.

Alaska Power Authority Action: It is the intention of the Alaska Power Authority to participate under Section 203 for the Phase I studies. Financing for the studies would come from the sale of tax exempt municipal bonds; thus, the debt would not become a general obligation of the state. Should the $25,000,000 plus Phase I studies indicate that the project is not feasible, the Federal Government would repay the cost and interest of the bonds. At the conclusion of the Phase I studies, the State would have the option to proceed into construction with the Corps of Engineers or to use the services of a private engineering firm. Many of the studies to be conducted under Phase I would be managed by the Power Authority rather than the Corps of Engineers.

Plan of Study: The Alaska Power Authority made $100,000 available to the Alaska District Corps of Engineers in July, 1977 for the purpose of developing the Phase I Study program. The Corps submitted their first draft to the State in September, 1977. Based on the State's review comments, the Corps is now finalizing the Susitna Plan of Study.

Land Status: The Susitna project would flood roughly 50,000 acres of land of which roughly 24,000 acres have been classified as power withdrawal lands. This land, along with most of the remainder needed for the two proposed dams and reservoirs, has been claimed by the Cook Inlet Native Corporation and four native villages. Until the land can be transferred to the Natives, the Bureau of Land Management retains custody for the Federal Government. Prior to entry for Phase I studies, access permission would be necessary from either BLM or the Native Associations depending on the owners at that time. The Cook Inlet Region is presently

negotiating with the four villages to trade them out of the Susitna land. Presumably, the region would then negotiate the Susitna land for possible excess military land on Fort Richardson. The State could then claim the Susitna land under the terms of the Statehood Act, if it so desired.

D-2 Classification: Although the Susitna River was included as one of twenty rivers that should be studied by the BLM for possible classification as a Wild and Scenic River in 1972, Susitna was dropped from the list during the early screening. It was suggested in the study, however, that Susitna should be studied further. The House Interior Committee has drafted their version of the D-2 Land Classification Bill and has excluded Susitna from any D-2 classification. If the project is classified as a river to be studied for Wild and Scenic River classification, without special exemption, the Phase I studies would not be permitted until the completion of the study.

Funding: $5.45 million has been included in the federal appropriation for input to the Alaska Hydroelectric Power Development Fund. This is the estimated cost of financing the first year of the four year Phase I study. However, since the total estimated cost including interest is in excess of $25.0 million, it would be desirable that the entire amount be placed in the Fund. As a show of good faith, upon enactment of the 1978 Water Resources Development Act, the Power Authority, through the sale of revenue bonds, would make available the full study cost amount. This would be held in escrow and could only be used to finance the Phase I studies to the extent that matching funds are made available from federal funds. This show of good faith should provide the leverage for the Federal Government to put up the remainder of matching funds needed for Phase I.

Agreement: A mutual agreement between the Alaska Power Authority and the Corps of Engineers for the Phase I studies would be developed and signed pursuant to passage of the 1978 Water Resources Omnibus Bill.

Dam project closer to realization, Gravel says

By the Associated Press

U.S. Senate approval Wednesday of two amendments to the Waterway Users Bill brings Alaska's proposed Susitna hydroelectric project closer to realization, according to the office of Senator Mike Gravel.

The Alaska Democrat wrote both amendments, which were accepted without a vote. They change the Alaska Hydroelectric Power Development Act of 1976, also written by Gravel. That act originally authorized the Alaska dams.

The project would involve construction of two dams on the Susitna River between Anchorage and Fairbanks. It would have a capacity of 1,500 megawatts and would provide about 60 percent of electricity needs in Alaka's railbelt cities. The project could be completed as early as 1990, Gravel's office reports.

One of Gravel's amendments would allow the Army Corps of Engineers to go ahead with phase one planning work. Under the 1976 act, the Office of Management and Budget was to approve the corps' feasibility studies before phase one work began. But Gravel contends favorable studies of the Alaska project and three others in the lower 48 have been held up by the OMB.

Senate Kills Gravel's Push Of New Canal

By BETTY MILLS
Times Washington Bureau

WASHINGTON — The Senate today defeated, 49-43, an amendment offered by Sen. Mike Gravel, D-Alaska, authorizing a study of the feasibility of a new sea-level Panama Canal.

Gravel offered the amendment to the waterway users bill now being considered by the Senate.

The Alaska Democrat, the leading champion in the Senate of the sea-level canal concept, pointed out that the present canal is obsolete, saying "we're wasting money."

"To not move forward to acquire knowledge is not very foresighted," he added. The amendment would authorize $8 million for the study.

Sen. Pete Domenici, R-N.M., spoke against the amendment, saying the Panama Canal treaties ratified by the Senate provide for a study on the possibility of a new canal.

Alaska Republican Ted Stevens voted against Gravel's amendment.

The amendment was subject only to brief debate, with Gravel, the floor manager of the waterways bill in his capacity as chairman of the water resources subcommittee, telling the Senate that the issue had been discussed extensively during the canal treaties debate.

Gravel brought the amendment up late Tuesday and said, "I know of no objection to but put the issue over for a vote today "because of the recent controversy involved over the treaty."

In other action on the waterways bill, the senate accepted two Gravel amendments which moved the Susitna hydroelectric project closer to realization. One amendment allows the Corps of Engineers to proceed with phase one work on the project, which involves the construction of twin dams on the Susitna River.

When completed, the project would provide some 60 percent of the electricity needs in Alaska's railbelt region.

Also adopted were improvements in the technical language dealing

(See Page 2, Col. 1)

Senate Rejects Bid For New Canal Study

(Continued from Page One)

with financing of the project.

Both amendments were adopted unanimously by voice vote Monday.

The 1976 law authorizing the Susitna project, which was sponsored by Gravel, provided for a preliminary feasibility study by the Corps of Engineers, assessing the project. After a review of the feasibility study by the White House Office of Management and Budget, the corps would proceed to phase one work — design, cost/benefit analysis and final environmental impact statements.

Gravel sponsored the new amendment since the budget office has held up the favorable feasibility study on the Susitna project.

The 1976 law also provided for state bonding to pay for the project, with federal guarantees for phase one work. The state would own the dams, with the corps constructing them as contractors for the state.

The second amendment improved problems in the language of the 1976 law dealing with state bonding and the federal guarantees. They included time limitations on the corps work; necessary congressional appropriations, congressional approval of a corps-state contract; and state bonding.

Gravel believes that state bonding to pay for major water projects will overcome objections to the projects.

"If we're successful in bringing this about in Alaska, it will probably be the way all future hydro projects will be funded," Gravel said.

Also adopted unanimously by the Senate was an amendment offered by Stevens to provide for a Corps of Engineers study of an erosion control project in Bethel. The amendment sparked a brief discourse between Alaska's two senators.

Stevens said the project "is desperately needed to protect the property and lives of the people who live in this growing community in Alaska."

Gravel said the Public Works Committee authorized a similar study last September.

"Let us put it in, and the senator can drop it in conference if it is not needed," Stevens told Gravel.

Gravel responded: "I think my colleague will recognize that I would not want the impression left in Bethel that I was not Johnny-on-the-spot in taking care of their interests."

"We are both Johnnies-on-the-spot. We just want to make sure the corps tells us the same thing," Stevens said.

Gravel replied: "The Public Works Committee has already done this, but if it takes redundancy to get the attention of the corps, I do not mind it."

The Honorable Ted Stevens
United States Senate
411 Russell Senate Office Building
Washington, D.C. 20510

Dear Ted:

Enclosed is a copy of my comments on the BLM's draft Wilderness Review Procedures. Am sure you are familiar with Sec. 1307 of H.R. 39 as it moved between House Committees. I believe every effort should be made to see that a similar provision remains in the final bill as it passes the Congress.

As you may know, WGM has been denied a permit to construct an airstrip to serve two very promising deposits north of Kotzebue; one held by General Crude and Houston Oil & Minerals, and the other by Cominco. These deposits are near enough to each other to be served by a common airstrip. They are on 17(d)(1) lands. This action is, in effect, denying the right of reasonable access to develop valid existing mining claims which is guaranteed under the mining laws.

In another case, a supply train with tracked vehicles and sleds moving fuel and other supplies over the snow early this spring, and on an existing mine road along the upper Tok River southeast of Fairbanks, was stopped by BLM in the field. The destination was valid claims staked on state selected lands. In both cases the movement of needed materials by helicopter would be economically prohibitive, considering the advanced stage of development and the distances involved.

It is because of these incidents, and the policies of BLM as applied in the field, even before finalization of their Wilderness Review Procedures and the application of Sec. 603 of FLMPA, that serious consideration should be given to amending FLMPA. The provisions of Sec. 603 should not apply to the remainder of Alaska public lands following the final identification of the National Interest Lands.

Your comments on the above suggestion, and critique of the enclosed statement, would be appreciated.

Sincerely,

Phil R. Holdsworth

Dear Ms. Klein:

Thank you very much for providing me the position of the League of Women Voters, Land Use Resource Committee, regarding various legislative proposals on homesteading.

Your suggestion regarding very clear language to ascertain actual land use has great merit, and I am confident your letter to the Legislature will be very seriously considered.

Sincerely,

John L. Rader, President
Alaska State Senate

April 2, 1977

Senator John Rader
Pouch V
Juneau, Alaska 99811

Dear Senator Rader,

Once again the State Legislature has raised the subject of homesteading in Alaska with House Joint Resolution No. 10 addressing the availability of public land for homesteading and other residential uses. In 1974, many Alaskans regretfully saw the remaing unreserved public lands closed to homesteading with the enactment of Public Land Order 5418. Those people awaiting patents to their lands were granted them, the last being issued in 1976.

Land was brought into residential use with the aid of the Homestead Act. Wilderness areas were settled, as were areas within close proximity to towns. During the past few years, for various reasons, many homesteaders have developed their tracts of land, providing acreage and subdivision areas for the growing state population.

There now exists more than one reason for opening lands as happened under the Homestead Act. The original idea of settling lands and providing families with income and shelter has taken second place to the more prevalent idea of gaining large tracts of land at relatively little cost in order to sell the land at a profit. Individuals seeking homesteading land with such development ideas bend the intent of the law.

When land is again classified and made available for settlement, whether by state or federal agencies, it seems appropriate to take a truthful look at the use of the word "homesteading."

For many, "homesteading" still brings to mind obtaining 160 acres with 20 acres under cultivation, a chance to be self-sufficient and to build a life away from the crowding cities. For others, it still means a tract of land - but with a different slant on the "proving up" of the land. To these, the land is to be held just long enough to subdivide and sell to a willing public at a profitable price.

Since these differing ideas exist, the League of Women Voters of Alaska suggests that terms be used that more accurately reflect

Kay--

This is a follow up to our brief conversation yesterday in which I indicated that there was a fiscal impact which should be considered in conjunction with House Bill 54.

The fiscal impact represents a net revenue gain. When the bill passes, it will be necessary to hire three full-time and one part-time employee at a cost of $130,000. Please note however, thai the stumpage sales would generate $300,000 in direct revenue to the state plus $600,000 worth of improvements (mostly in new road construction).

III. ANALYSIS (See Fiscal Note Preparation Instructions, Section III)

It is anticipated that 2d CS, HB 54 will directly affect the timber sales program for the Haines-Skagway area.

Currently the Haines forestry program is understaffed which has made it impossible for the State to achieve its allowable cut objectives as well as adequately prepare and administer timber sales to minimize adverse economic and environmental impacts. Due to inadequate staff, past timber harvests were conducted with a minimum of road and sale layout preparation, resulting in environmental degradation and poorly planned and designed road systems and harvest units.

Sale access is considered among the most difficult in Southeast Alaska, necessitating a greater effort to locate and design transportation routes to optimize transportation benefits to the State and reduce adverse environmental affects. Remote, unroaded sale locations of future harvests as well as (continued)

the necessity of harvesting in small scattered cuts to minimize environmental impacts, requires a large team effort to design and locate numerous miles of new access road as well as numerous individual cutting units, to achieve the allowable cut and environmental objectives.

Currently there are two permanent forester positions and one seasonal forestry technician position in Haines. This fiscal note adds three permanent forester positions and 1 temporary forestry technician position. These positions will permit preparation and sale of an estimated 15 million board feet of timber annually which will result in an estimated $600,000 of improvements (mostly new road construction) and $300,000 of direct revenue to the State, as opposed to a total estimated expenditure of $230,000 ($100,000 presently). In addition, there are economic benefits to the Haines community through direct employment and trade in the woods products industry as well as the indirect economic benefits of support services.

Chairman

S 60 (rev. 6/77)

from being taken away from its owners by the force of its invasion.[36] This being the case, property acquired by the exercise of eminent domain power and strictly devoted to the authorized purpose for which it was condemned can be taken away from the first taker by another who has been adequately armed by the legislature with eminent domain power to do so,[37] and, likewise, it is possible to take property received through grant or franchise from the government and used in fulfillment of its public purpose obligations,[38] and property voluntarily devoted to public use or purpose.[39] All must submit to acquisition through the exercise of the power of eminent domain, upon the principle of the prerogative power of sovereignty. If this were not so, it has been said by a learned judge, "great public improvements rendered necessary by the increasing wants of society in the development of civilization and the progress of the arts might be prevented".[40]

However, the "due process" clause of the federal and state constitutions enunciates another principle in behalf of the individual property owner, and, when it has come in conflict with the principle of the prerogative of sovereign eminent domain, the latter sometimes has had to give way. It has been held that eminent domain power cannot be employed to take property by the kind of undue process of law whose description has found expression in the classical example of "taking the property from *A* to convey it to *B*".[41] The fact that the taking has behind it the prestige and power of eminent domain, and that the property is to be paid for by ample compensation, has not been allowed to impair the integrity and applicability of this ancient example. In an early case before the Supreme Court of the United States, Mr. Justice Story said:

[36] See the list of cases in 20 C. J. 599, n. 77 (1920).

[37] New York, etc., R. R. v. Boston, etc., R. R., *supra* note 35.

[38] COOLEY, CONSTITUTIONAL LIMITATIONS (6th ed. 1890) 337.

[39] Starr Burying Ground Ass'n v. North Lane Cem. Ass'n, 77 Conn. 83, 58 Atl. 467 (1904). This does not include certain dedicated property devoted to public use under trust conditions previously referred to in this article.

[40] Bigelow, J., in Central Bridge Corporation v. Lowell, *supra* note 8, at 482.

[41] West River Bridge Co. v. Dix, *supra* note 35, at 537.

> "Although the sovereign power in free government may appropriate all the property, public as well as private, for public use, making compensation therefor, yet it has never been understood, at least never in our Republic, that the sovereign power can take the private property of A and give it to B by the right of eminent domain."[42]

Mr. Justice Story's statement, made in 1837, very well expresses what should be the correct rule today.[43] The word "private" refers to ownership and not to use, so that if *A*, as an individual or corporation, is devoting his or its property to a public use, it would still be "private property" under the relations which we are discussing.[44] Under the above rule it could not be taken away from *A* merely in order to give it to *B*, and it has been held that this could not be done even though *B* was attempting to acquire it by eminent domain power for a recognized public use or purpose, which was the same use or purpose to which *A* had been devoting the property.[45] This would amount to nothing more than the compulsory change of hands in the property and would result in eminent domain power's taking it from *A* merely in order to give it to *B*.[46] Property in public use cannot be taken to be used for the same purpose and in the same manner.[47] This being a constitutional prohibition, under the due process clause, it is not only a prohibition on the one to whom the power of eminent domain has been delegated by the legislature, but it is a restriction upon the legislature itself, and any law authorizing generally or specifically such a taking is unconstitutional and should so be held.[48]

Re: CSHB 133 (Finance)am
Our File 101-28

Dear Kay:

Enclosed is a copy of the amendments and additions to CSHB 133 (Finance)am, which were approved by a working group which met last week, pursuant to your suggestion.

Present at the meeting, in addition to myself, were:

Jim Nordale, representing the Fairbanks North Star Borough

Donald Thomas, representing the Kenai Peninsula Borough

Donald Gilman, Mayor of the Kenai Peninsula Borough

Kim A. Hutchinson, representing the North Slope Borough

Lee Sharp, representing the City and Borough of Juneau

George E. Gee, representing the Ketchikan Borough

Wesley Howe, representing the Mat-Su Borough

Ted Berns, representing the Municipality of Anchorage

Dale P. Tubbs, representing the Kodiak Island Borough

In addition, Ted Berns, Dale Tubbs and I met pursuant to the direction of the group to draft the necessary language to accommodate the unique problems of Kodiak and Anchorage. Essentially, the group sought to use the draft of the bill as it passed from the House Finance Committee with the exception of certain amendments which were added on the House floor.

Also enclosed is a copy of the letter sent to all of the individuals who were in attendance at the working group meeting. A copy of this letter has also been provided to Mike Smith, Director, Division of Lands.

It is my understanding that Dale Tubbs and I will be meeting informally with you on Tuesday, April 18th, and I plan to present testimony on this bill during the hearing on the 19th.

We have not retyped the entire bill, as it is our understanding that the Legislative Affairs Agency discourages this practice and that it is already on mag cards.

I look forward to discussing these changes with you next week.

Yours truly,

COLE, HARTIG, RHODES,

Re: Municipal Land Selection Regulations

Dear Senator Poland:

As you know, despite agreement last year by the State and almost all municipalities concerning the municipal land selection question, manifested originally in CSHB 133, that legislation has had a very checkered and sporadic history. Because settlement of this issue is of critical importance to both the State and the municipalities with respect to future land and resource management, particularly land disposals, both the State and the municipalities are concerned that the issue be settled in the very near future. While we would still prefer that appropriate legislation be enacted, the State is looking at the alternative of individual settlements with each municipality under existing law to address this matter if legislation presently before the Senate Resources Committee is not adopted this session.

Attached is a copy of draft regulations, as sent to each municipality, which would serve as the basis for any such settlements. These regulations will be needed whether or not the present legislation is enacted and, as discussed in the attached cover letter to each municipality, we are requesting a review of these regulations at this time to ensure that they meet with municipal approval and can serve as the basis for individual settlements should pending legislation not be enacted.

If you have any questions concerning these regulations, please do not hesitate to ask.

Sincerely,

Michael C. T. Smith

Mr. Robert L. Hartig
Cole, Hartig, Rhodes, Norman and Mahoney
Suite 201
717 "K" Street
Anchorage, Alaska 99501

Dear Bob:

I enjoyed the opportunity last week to discuss with you the problems and conflicts of land ownership within the Kodiak Island Borough. Following that conversation I thought it appropriate to reiterate the Department of Natural Resources's view of its role with respect to those conflicts.

We are very much aware of the problems resulting from conflicts between the existing municipal land selection statute and implementation of the Alaska Native Claims Settlement Act. On several occasions we have discussed these problems at length with members of the Borough Administration, the Assembly, and various Native and non-Native members of the public. Kodiak's land problems are among the most difficult in Alaska with respect to the implementation of ANCSA.

As you know, Section 11(a)(2) of the Act permits a Native village corporation to select up to three townships of state-selected or tentatively-approved lands. With respect to such Native 11(a)(2) Selections, lands selected by, approved to, or patented to the Kodiak Borough by the State will continue to be defended by the State as we believe these interests supercede ANCSA. Specifically, lands to which the State of Alaska holds tentative approval or patent from the federal government, and which have been approved to or patented to the Borough, will be defended by the State as valid existing rights in any attempted transfer by the United States to a Native corporation under ANCSA. The State has not yet appealed a BLM decision to convey lands which have only been selected by the State.

As you know, one of the major obstacles faced by most municipalities with respect to the implementation of the Claims Act is a final determination of exactly what each municipality's land selection entitlement is under the existing municipal selection law (AS 29.18.190). As we

discussed, the Administration made a very determined effort last year, in close coordination with five of the major boroughs, including Kodiak, to secure legislation which would establish those final entitlements statewide. However, it did not pass the Legislature. We intend to push equally hard this session for similar legislation. With your [illegible] representing the Borough I am sure their interests will [illegible] taken into consideration as they were last year. Concerning the legislation, I believe it would be appropriate for yourself and/or others in the Borough Administration or with the Assembly to work closely with Senator Kay Poland on this matter. As chairman of the Senate Resources Committee, Senator Poland is in an excellent position to insure that the legislation is acted upon this session, and to represent Kodiak's unique needs.

Regarding your question concerning land exchanges, the State is very willing to consider exchanges which will simplify the land ownership problems within the Borough. If the Borough and/or Native corporations are considering a specific exchange, we would be very happy to participate at an early time. One of the problems with land exchanges at this time is that ownership to a considerable amount of land within the Borough is still not settled, therefore, exchanges may be very difficult until clear ownership is established. One of the biggest unknowns affecting this question will be settled when the Washington, D. C. circuit court rules on the "Eleven-Village Eligibility Case." At that time, the issue of the eligibility of several Kodiak villages will be substantially clarified. That decision could come at any time.

I look forward to working with you during the coming session on the municipal land exchange legislation and hope that its passage will substantially alleviate many of the problems faced by the Borough today.

Anchorage, Alaska 99501

Dear Mr. Hartig:

Thank you for your letter of July 19 outlining the Kodiak Borough's desire to protect its land interests while minimizing conflict with Native selections under ANCSA. I am aware of the problems and conflicts you cited and am pleased to hear of the Borough's interest in expediting conveyances under the claims act.

The State, as in the past, is very willing to do anything it can to assist in solving these knotty problems. As you know, in response to requests from the Kodiak Borough, and Koniag, Inc., the Division of Lands spent considerable time this winter preparing detailed land status maps of Kodiak Island. Representatives from the Division of Lands, as well as the Department of Community and Regional Affairs and the Department of Fish and Game also attended the excellent workshop discussions sponsored by the Kodiak Borough Assembly in March.

I have asked Assistant Commissioner of Natural Resources Mike Smith to contact you directly concerning the meeting you request, and for any other followup which may be appropriate. If you feel that representation from other state departments would facilitate in solving the problems you mentioned, please feel free to contact them directly.

Sincerely,

Jay S. Hammond

The Honorable Wayne Kotula
Mayor, Kodiak Island Borough
P. O. Box 1246
Kodiak, AK 99615

Re: Conflicts in Land Selections
Kodiak Island Borough
Our Reference 101-30

Dear Mayor Kotula:

The purpose of this letter is to provide you and the Borough Assembly members a status report of the problems surrounding the land selections made by the borough and the native corporations, in preparation for the forthcoming meetings by the assembly persons with our congressional leaders and state officials.

Pursuant to Alaska Statute 29.18.190, which permits the boroughs the right to select ten per cent of the vacant, unappropriated, unreserved state land located within their boundaries, the Kodiak Island Borough has selected some 36,000 acres of land. Of that 36,000 acres of land, approximately 2,000 acres have been patented to the borough, some 7,000 acres have been approved for selection by the borough*, and approximately 27,000 acres have not received any adjudication by the state. It should be noted, however, that the individual native corporations, pursuant to the Alaska Native Claims Settlement Act, have also selected a majority of the same land, and have voiced their opposition to some of the patent grants to the borough made by the state. It should also be noted that, according to the maps prepared by the Division of Lands for the state, there exist approximately 150,000 acres of state land* within the Kodiak Island Borough which, under present state law, would permit the borough to select, at the present time, approximately 45,000 acres of land.

*probably means have been approved for patent by the state
* "vacant, unappropriated, unreserved" land

As implementation of the Alaska Native Claims Settlement Act proceeds, conflicts between the borough and the native corporations have developed in regard to land selections. Specifically, as a result of the ability of the native groups to select tentatively approved state lands, the amount of state land which would be available for selection by the borough is drastically reduced, and the ten per cent entitlement is lessened. As an example, under present circumstances with state ownership of some 450,000 acres of land, the Kodiak Island Borough would be permitted to select an additional 9,000 acres of land; however, under the freeze imposed by the Alaska Native Claims Settlement Act, it is questionable whether this 9,000 acres of land could be selected. In addition, as adjudication proceeds with regard to the native corporations and the Bureau of Land Management proceeds to "vacate" tentatively approved state lands, the 450,000 acres of state land continues to be reduced, thus reducing the ten per cent entitlement.

NOT IF THE 10% ATTACHES AT THE POINT OF "WITHDRAWAL" MAX. LAND ALLOWED IN THE ADMIN. BILL.

Also, the borough cannot take comfort in the fact that their land selections were made prior to the passage of the Settlement Act. In that regard, and, while borough selections for the Monashka watershed were made in October of 1967, and both the borough and city governments have expended considerable time and money in the planned development of that watershed, the Bureau of Land Management, in its proposed order dated May 6, 1977, stated that those lands would be conveyed to the village of Ouzinkie in the near future. It can thus be expected that there will be continued confrontation with the native groups with regard to the selected lands.

Recent oversight hearings were held in Washington, D.C., by Congressman Sieberling in an effort to determine the causes for delay in transferring land entitlements to the natives under the Alaska Native Claims Settlement Act. On behalf of the Kodiak Island Borough, I filed a statement before that committee, outlining the predicament that we face with regard to possible delays; i.e., that, in order to protect its interests, the borough is required to file appeals in most of the land selection decisions and would be required to file subsequent actions in the courts, appealing those decisions which it felt did not conform to the law. As a result, it could be expected that land entitlements would be delayed for several years.

Following the meeting of the borough assembly this past month, and their direction to me to attempt a meeting of our congressional leaders and the governor, I contacted their respective offices in Anchorage and mailed a letter to them, outlining the problems.

In your discussion with these leaders, it might be helpful to review the possibility of obtaining additional federal lands for native or borough selections and to inquire of the state whether or not they would support legislation such as was considered in the first session of the Tenth State Legislature (CSSB 241) which sought to compensate municipal governments for the lands which were selected but not granted, or for lands which were not available for selection as a result of the claims act. As you are aware, that particular legislation did not receive favorable action during the first session, but, hopefully, will be again considered in the second session of the legislature.

YES WE SUPPORT THE BILL.

If you have any questions concerning these matters, please do not hesitate to call or write.

Yours truly,

COLE, HARTIG, RHODES,
NORMAN & MAHONEY

Re: Conflicts in Land Selections Kodiak Island Borough
Our Reference 101-30

Dear Governor Hammond:

As implementation of the Alaska Native Claims Settlement Act progresses, numerous conflicts regarding land selections by the native corporations and the Borough of Kodiak have developed. As a result, the borough, in an effort to protect its interests, has been forced to file protests with regard to certain village land selections which cover the same lands previously selected by the borough. In addition, as the Bureau of Land Management makes its findings for the village corporations with regard to these selections, the borough is forced to file administrative appeals and to further consider legal action in the event the appeals are not successful.

Several meetings of the borough assembly and the city council have been held in an effort to resolve the land conflicts problem and in an effort to prevent direct confrontation between the native groups and the local governments. A resolution passed by the Kodiak Island Borough this past week, in addition to recommending other actions, has requested that an early meeting be established between a representative of the borough, the Alaska congressional leaders, the Governor of Alaska and representatives of the individual native corporations, in order to review the land selection conflicts towards a view to attempting to resolve them in an amicable manner. In the past, the borough and city have attempted to work with the native corporations, in an effort to assist, at an early date, the transfer of lands

to them under the settlement act. But as a result of the need to protect their own interests, they have been placed into a position which has resulted, and may continue to result, in delays in the transfer of the lands to which they are entitled.

On behalf of the Borough and City of Kodiak, I would appreciate it if you would review the matter of the land conflicts within the Kodiak Island Borough and be willing to meet with the other representative groups at an early date to attempt resolution of these problems.

CITY OF SKAGWAY

GATEWAY TO THE GOLD RUSH OF "98"

P. O. BOX 415 SKAGWAY, ALASKA 99840

April 4, 1978

Senator Kay Poland, Chairman
Senate Resource Committee
Pouch V Mail Stop 3100
Juneau, Alaska 99811

Dear Senator Poland:

The subjects here are proposed legislation concerning selection and transfer of State land to municipalities - S.B. No. 241 and C.S. for H.B. No. 133 - and H.B. No. 886 - State Aid for Municipal Capitol Improvements. The Common Council of the City of Skagway submits for consideration the following comments and recommendations on these pieces of legislation:

S.B. No. 241, Sec. 29.18.202 states "---For purposes of determination of entitlement, the boundaries of each municipality are those which existed on the initial date of eligibility under former Secs. 190 - 220."

The boundaries of the City of Skagway on the "initial date of eligibility" were established early in the century and do not encompass any significant amount of vacant, unappropriated, unreserved general grant land, 10% of which might be transferred to the City. Although the City has recently extended its boundaries through annexation, the new municipal limits include very little land that is suitable for development by the City. Even if transfer were permitted, there is a dearth of developable land in the Skagway area. There are some State and Federal lands, tentatively allocated for State selection, adjacent to the City which, subject to future annexation, could be selected by and transferred to the City and, subsequently, developed by the City or sold or leased to private enterprise. It is the City's view that this course of action offers the most practicable means of resolving the land shortage problem yet it appears that S.B. 241 will preclude this approach.

The C.S. for H.B. 133 contains much of the same material and, more specifically, limits the land entitlements or payments in lieu thereof to several boroughs and the Municipality of Anchorage. Is the omission of consideration of the land needs of other municipalities, such as Skagway for example, an oversight or is it the intent of the legislation?

H.B. No. 886: The City Council supports this legislation.

It is suggested that, as presently drafted, S.B. 211 and C.S. for H.B. 133 do not fulfill their Statements of Purpose and it is recommended that these two pieces of legislation be reviewed and revised so as to include equitable consideration of the needs for land or in lieu payments for all of the municipalities in Alaska.

Sincerely,

G.D. Acker

DEPARTMENT OF ADMINISTRATION

March 29, 1978

The Honorable Kay Poland, Chairman
Senate Resources Committee
Pouch V
Juneau, Alaska 99811

Dear Senator Poland:

Subject: CSHB 133--Municipal Land Selections

This Borough favors the enactment of the subject bill, but, with the restoration of subsection (g) which was deleted by the House. This section sets forth criteria to be used by the State in determining whether municipal selections are primarily of State concern. These provisions and other provisions of that section protect municipalities from arbitrary denial of selections by the State.

We also favor restoration of that section because it appears that the bill would not have much chance of passage without it, since without the section the bill will logically be opposed by the State administration.

We urge that section (g) be restored to the bill and that it be reported favorably by the Senate Resources Committee.

Very truly yours,

Wesley M. Howe

Honorable Clem Tillion
Alaska Senate
Pouch "V"
Juneau, Alaska 99811

Dear Senator Tillion:

This letter is in response to your request for information about the number of acres of land the State of Alaska owns within the municipality of Anchorage which could be made available to fulfill Anchorage's municipal land entitlement of 20,865 acres.

The figures below, for lands to which the State presently has either patent or tentative approval, are for lands which are not in Chugach State Park and are not affected by Eklutna Native Village land selections under ANCSA. The acreages listed as selected are for lands which the State has already selected and has a high probability of receiving from the federal government within the next few years. They also are not included within Chugach State Park and will not be affected by Native selections.

The lands listed as coming to the State under the Cook Inlet Land Exchange will definitely come to the State, and are generally of a nature more suitable for municipal management than State management.

Types of Land	Acres	
I. General Selection		
A. Patent and Tentative Approval	6,728	
B. Selected	240,280	
		247,008
II. Trust		
A. Patent or Tentative Approval	28,475	
B. Selected	6,998	
		35,473

	Types of Land	Acres	
III.	Cook Inlet Land Exchange		
	A. Goose Lake	20	
	B. Point Woronzoff	325	
	C. Campbell Tract	4,892	
	D. Point Campbell	1,282	
			6,519
IV.	Totals		
	A. Presently Available for Early Transfer	6,720	
	B. Available After Exchange for Trust Lands*	28,475	
	C. Available Upon Receipt via Cook Inlet Land Exchange	6,519	
			41,714
	D. Selected Lands Available When Transfered From Federal Government	247,278	
V.	Anchorage's Existing Situation		
	A. Entitlement	20,865	
	B. Patented or Approved to Anchorage	6,728	
	C. Remaining Entitlement	14,137	
	D. Remaining Entitlement After Conveyance of Existing Lands Available for Early Transfer	7,417	

It should also point out that in the future the State will certainly receive substantial land from the Elmendorf and Fort Richardson military bases within the municipality. In most cases, these lands will be more suitable for municipal than State ownership. As an example, as part of their land exchange entitlement Cook Inlet Region, Inc., is currently working with the Departments of Interior and Defense, as well as the State, to have a parcel of about 5,700 acres removed from Fort Richardson. Since portions of that parcel are not suitable for private ownership, the State will seek to receive title to those areas (e.g., green belts, aquifer recharge, etc.).

*Approx. 3,000 acres are prime lands within the Anchorage Bowl.

Because of their location and local importance, these lands would be best conveyed to the Anchorage municipality for management. The acreage would probably be a minimum of 500 to 800 acres.

I hope this information answers your requests. Please let me know if you have any questions.

Sincerely,

Michael C. T. Smith
Assistant Commissioner

Kodiak Island Borough

29.18.201(9) should be amended to delete the portion in brackets and add the underlined portion, as follows:

Kodiak Island Borough -- [45,200] 56,500 ~~62,400~~ acres;

29.18.202(e): Add wording which is underlined:

The requirements of (c) and (d) of this section shall be waived by the director as to a home rule or unified municipality which so requests and as to any other municipality which manifestly demonstrates that a commitment of acreage to residential or commercial purposes required by this section as a condition of election of an entitlement

29.18.205(d): Delete portion in brackets:

On the effective date of this Act and for five years thereafter, no classification of a parcel of general grant land in excess of 3,200 acres under AS 38.05.300 shall be effective, unless otherwise required by law, if the municipality in which the parcel is located, within 30 days after receipt of notice of the proposed classification, advises the director in writing that it does not consent to the classification and indicates the reasons for its nonconsent. [This subsection applies only to land to which the state has received patent from the federal government prior to the effective date of this Act.]

29.18.205(e): Add wording which is underlined:

Each eligible municipality and the director shall jointly consider which vacant, unappropriated, unreserved land, including federal land of interest to a municipality which may be selected by the state as general grant land, located within the boundaries of the municipality, is appropriate for municipal selection and approval by the director to fulfill any remaining municipal general grant lard entitlement. <u>The joint consideration made by the parties shall include a cooperative land planning process which will, in addition to the normal objectives of such a process, seek to identify both local and state interests in tracts of vacant, unappropriated and unreserved land remaining within the municipality</u>. Adjacent tracts shall be considered simultaneously except when such simultaneous consideration would cause significant delay or expense. Once a tract has been jointly considered, it may be selected by a municipality.

29.18.205(f) should be amended to read as follows, adding the portion which is underlined:

Each selection must be approved or disapproved for patent by the director under (g) of this section within nine months of its selection by a municipality, and a patent shall be issued to the municipality within three months after approval by the director of a plat of survey.

29.18.205(g) should be amended in toto, deleting the section in brackets and adding the underlined section:

[A municipality may appeal an adverse decision by the director to the superior court under AS 44.62.560 - 44.62.570.]

In reviewing a municipal selection, the director shall consider the state's responsibilities for developing and protecting values which are of greater than local concern, including development which will have statewide impact, and critical environmental concerns. Specific state responsibilities to be considered, if such responsibilities have not been authorized or delegated by the state to a municipality, include air quality; water; minerals and

energy; timber; agriculture; fish and wildlife and their habitat; public recreation, natural, historical, and archaeological areas of greater than local concern; access to public land and water; transportation; communications; and public safety. Specific municipal responsibilities to be considered include residential, commercial and industrial needs; support of municipal services; education; local transportation; private recreation; public recreation, natural, historical and archaeological areas of local concern; and other responsibilities authorized or delegated by the state to a municipality. A selection by a municipality of land which is primarily of local concern shall be approved. When the interests of the state may be protected through the conveyance of title that is less than a fee title, the municipality, at its option, may accept the title in acre-for-acre fulfillment of its entitlement.

29.18.205(h): A new paragraph should be added, to read as follows:

Every decision of approval or disapproval of a municipal selection by the director under (f) of this section shall include a written explanation of the decision based upon the criteria of (g) of this section. Before issuing any decision to disapprove a selection, the director

shall notify the affected municipality in writing, by certified mail, of his reasons for the proposed decision. The municipality shall have 30 days from receipt of the proposed decision to respond to the director in writing enumerating the reasons for which the municipality believes the proposed decision to be in error. After receipt of the municipality's statement of reasons, or after expiration of the period in which the municipality may respond to the proposed decision, the director shall, within 30 days, affirm, modify or reverse his proposed decision in writing and give written notice of his decision to the municipality. The decision of the director constitutes final administrative action in the matter.

29.18.206(d): Delete portion in brackets:

No selection of school, university or mental health land may be approved [by the director] under this section without the concurrence of

29.18.206(e) should be amended to read as follows, deleting the portion in brackets and adding the underlined portion:

[Within three years after the approval under (d) of this section of a municipal selection of school, university or mental health land, the director, with the concurrence of the respective board, shall designate appropriate state general grant land of approximately equal value as school, university or mental health replacement land.] Within six months after request by a municipality for selection of school, university or mental health land, the director shall identify state general grant land of approximately equal value to the land requested by the municipality, and shall propose such replacement land for the concurrence of the appropriate board under (d) of this section. If a proposal by the director is rejected by the board, the director shall meet with the board as often as necessary to determine the type and amount of equal value replacement land that would be required to obtain the board's concurrence under (d) of this section, and shall propose such land for consideration by the board. The replacement land shall thereafter be managed for the purposes for which the land selected by the municipality was acquired

by the Territory and the State of Alaska. Nothing in this subsection shall preclude the appropriate board from approving a municipality's selection of school, university or mental health land prior to the identification of specific replacement land.

29.18.208(c) should be amended as follows, adding the underlined portion:

A municipality eligible for payment under this section may, by October 1 of each fiscal year of eligibility, notify the director of its election to accept payment in lieu of land from the account. A municipality may accept payment for not more than 15 per cent of its entitlement under secs. 201 - 203 of this chapter, to a maximum of 10,000 acres, in each fiscal year. A municipality which chooses to accept payment in lieu of land shall be entitled to an amount based on the cumulative total number of acres of remaining entitlement which it relinquishes or which were selected and to which title vested in another entity under (g) of this section. Payment shall be made according to the following schedule:

29.18.208(e) should be amended as follows, adding the underlined portion:

If the total appropriation is not sufficient to meet the amount due to all municipalities which have elected to accept payment in lieu of land under (c) of this section, the governor shall apportion the appropriation among the municipalities in proportion to the payment calculated for each municipality for that year. When a distribution of payments is made under this subsection, the remaining entitlement of a municipality to which payment is made shall be reduced in an amount equal to the number of acres for which payment was received. An apportionment may correspondingly increase the acreage for which a municipality may request payment in a succeeding year, but this increase in acreage does not authorize a municipality to request payment in lieu of land of more than 10,000 acres in any one year. <u>All such appropriations shall be in addition to other grants and entitlements authorized for a municipality</u>.

29.18.208(f) should be amended as follows, adding the underlined portion and deleting the portion in brackets:

The total payment to a municipality under this section, except as provided in (g), may not exceed [$100] $250 per capita for each person resident in the municipality on the July 1 preceding the effective date of this Act, as determined by the Department of Community and Regional Affairs.

29.18.208(g): A new paragraph should be added, to read as follows:

If a municipality has selected state lands on or before December 18, 1971, to which the state has received tentative approval or patent and such lands are also selected by a Native corporation under the Alaska Native Claims Settlement Act (Pub. L. No. 92-203) and title to that land is ultimately vested in that Native corporation, the municipality shall be entitled to payment under subparagraph (c) of this section. Acceptance of payment pursuant to this subparagraph shall constitute a relinquishment of any other right, title or claim to such land by the municipality.

29.18.211(a) should be amended, to add the underlined wording, as follows:

Except as to those lands to which section 208(g) of this chapter applies, a municipality which on the effective date of this Act is engaged in litigation, or which becomes engaged in litigation, regarding a claim to state land under former secs. 190 - 200 of this chapter shall elect either to obtain the benefits provided in secs. 201 - 215 of this chapter or to pursue the litigation and thereby waive any claim to entitlement under secs. 201 - 215 of this chapter. An election shall be made by filing a motion for dismissal with prejudice in the court in which the litigation is pending. If the claim involves a municipality identified in secs. 201(a) or 202(a) of this chapter, the municipality shall file its motion for dismissal within 60 days of the effective date of this Act. If the claim involves a municipality not listed in secs. 201(a) or 202(a) of this chapter, the municipality shall file its motion for dismissal within 60 days after receiving the certificate of entitlement provided by the director under sec. 203(b) of this chapter. Failure of the municipality to file a motion for dismissal during the time period provided in this subsection shall be considered a waiver of entitlement under secs. 201 - 215 of this chapter.

29.18.213(11)(C): Amend by adding the underlined portion:

is unclassified or, if classified under AS 38.05.300, is classified for agricultural, grazing, commercial, industrial, private recreational, residential, utility or open-to-entry purposes, or where classified pursuant to state and municipality management agreements.

38.05.321: Delete portion in brackets:

RESTRICTION ON SALE, LEASE OR OTHER DISPOSAL OF AGRICULTURAL [AND GRAZING] LAND. (a) The sale, lease or other disposal of state land classified as agricultural [or grazing] land transfers only rights for agricultural [and grazing] purposes, and all other interests in the land remain with the state unless otherwise required by law.

(b) State land classified as agricultural [or grazing] land which has been selected by a municipality under AS 29.18.190 - 29.18.200 or 29.18.205(e) may be approved by the director for patent under AS 29.18.205(f); however, only rights in the land for agricultural [or grazing] purposes may be transferred and all other interests in the land will remain with the state. Agricultural [or grazing] land approved for patent to a municipality under

AS 29.18.205(f) shall be credited, acre for acre, toward fulfillment of that municipality's entitlement under AS 29.18.201 - 29.18.203. If the director later determines it to be in the best interests of the state to transfer some or all of the additional rights in that approved or patented agricultural [or grazing] land, those rights shall pass without consideration to the municipality in which the land is located.

(c) The provisions of this section do not apply to state land classified as agricultural [or grazing] land which has been selected by a municipality under the provisions of AS 29.18.190 - 29.18.200 if the selection is an approved selection before the date of enactment of this Act and is otherwise valid under AS 29.18.205(b).

Sec. 4 should be amended as follows, adding the underlined portion:

It is the intention of the legislature that future municipalities shall have the benefit of * Sec. 2. of this Act. Within 90 days of passage of this Act, the Department of Natural Resources shall adopt regulations which shall, as closely as is practicable, apply the provisions of * Sec. 2. of this Act to future municipalities. After adoption of

such regulations, the department shall transfer all lands to which a municipality is entitled under this section to such municipality within three years of the date upon which the municipality assumes a legal existence. Consistent with the best interests of the state, in the selection of general grant land it is the policy of the state to make available the maximum land area from which municipalities may fulfill land entitlements under AS 29.18.201 - 29.18.215.

MANAGEMENT AGREEMENT

This agreement made and entered into this 17 day of June, 1965 between the State of Alaska, Department of Natural Resources, Division of Lands, hereinafter referred to as the State and the Kodiak Island Borough, organized and existing pursuant to the laws of the State of Alaska, hereinafter referred to as the Borough.

WITNESSETH:

WHEREAS, Title 7 - Article 2 - Sec. 07.10.150, Alaska Statutes vests the Borough with the authority to select certain of those state-owned lands which lie within the Borough boundaries, and,

WHEREAS, the aforementioned statute further provides that the Borough is vested with the authority to manage, lease or sell the lands so selected, and,

WHEREAS, the Borough does not at this time have the financial ability nor the manpower to initiate and maintain an efficient land management program, and,

WHEREAS, the State, through the Division of Lands, does maintain the staff capability and is willing to enter into an agreement for the management of Borough selected lands, NOW THEREFORE,

The Borough does by these presents delegate to the State the authority to manage Borough selected lands and the State, through the Division of Lands, agrees to accept management authority over said lands upon the following terms and conditions to wit:

1. All lands disposed of by the State, pursuant to this agreement, shall first be subjected to a land use plan and such plan shall, prior to becoming final, be reviewed jointly and agreed upon by the Borough and the State.

2. Prior to disposal by the State of any lands selected pursuant to Section 6(b) Public Law 85-508, General Grant lands, the Borough shall first be afforded the opportunity to select the same for its use or disposal in accordance with the terms of this agreement.

3. Upon selection of eligible lands by the Borough, the State shall, without delay, note the same on the records to be maintained by the Division of Lands, and the State shall periodically thereafter make an accounting to the Borough revealing acreage entitlement, acreage selected, acreage disposed of and such other information as shall be deemed necessary for the purpose of keeping the Borough properly informed.

4. All leases, sales or other disposals which are made by the State on behalf of the Borough pursuant to this agreement shall be made only with consent of the Borough and shall be conducted in accordance with the Alaska Land Act (Title 38, A.S.) and the regulations promulgated by the State pursuant thereto. All lands which have been selected by the Borough, as herein provided, and which the Borough may wish to sell, lease or otherwise dispose of shall be sold, leased or disposed of in accordance with the provisions of this agreement for so long as the agreement shall remain in full force and affect.

5. All monies received by the State from the sale, lease or other disposal of Borough lands shall be deposited with the Department of Revenue, State of Alaska. Upon request of Borough Assembly and certification by the Director that payment is in order, the monies so deposited shall be transferred to the Borough. The State shall, during the month of January of each year that this agreement is in effect, render an accounting of all monies received from disposals conducted during the course of the year. Concurrent with the final accounting the State shall withhold survey, appraisal and other appropriate direct management costs, exclusive of overhead costs, from the total receipts.

6. To preserve the principle and integrity of sustained yield forest management and protection, those forest and grazing lands selected by the Borough shall remain under the direct management of the Division of Lands with all revenues from such forest and grazing lands or forest products being transferred to the Borough at the same time and in the same manner as stipulated in Item #5 of this agreement.

Nothing in this agreement shall prevent, through mutual agreement, the reclassification of any lands subject to this contract as provided in the Classification regulations of the Division of Lands, State of Alaska.

This agreement shall remain in full force and effect until such time as it may be cancelled or modified by mutual agreement between the parties. This agreement may also be cancelled by one party provided it gives the other party one (1) year notice of such cancellation.

ADDENDUM TO
LAND MANAGEMENT AGREEMENT

WHEREAS, the Kodiak Island Borough and the State of Alaska Department of Natural Resources Division of Lands entered into a Land Management Agreement dated June 17, 1965, and

WHEREAS, the parties hereto desire to amend said Agreement by adding thereto a new paragraph to be entitled Paragraph 7.

NOW, THEREFORE, it is hereby agreed by and between the parties hereto that the Land Management Agreement be and the same is hereby amended by adding thereto Paragraph 7 to read as follows:

"7. In the event that specific parcels of Borough selected lands, adjudicated by the Alaska Division of Lands to be eligible for patent to the Borough, are desired by the Borough for exclusive Borough use and/or management, the same, upon proper notice to the Division shall be patented to the Borough and the management thereof, including subsequent disposal, shall no longer be subject to this Agreement.

When lands have been patented to the Borough as provided in this Section, the Borough agrees that, prior to any disposal of such borough lands, where the same lie adjacent to or are interspersed with State-owned lands, the proposed program of disposal will be subject to joint review between the Borough and the Division, and likewise, State-owned land disposals will be subject to such joint review."

In all other respects the original agreement will remain the same.

* Maximum Net Vacant Per Column

Note: The figures shown in Column "A" are:
Those lands that are actually selected up to the maximum allowed by the affected Native Corporations. This figure is shown as a minimum which could go as high as 350,000 acres.

CS HB 133am (Finance)

GUIDE TO SENATE RESOURCES MARK-UP
Based on testimony through April 7
Prepared by Reed Stoops, Asst.

PAGE	SECTION	SUGGESTED CHANGE
(1)	29.18.201	(9) KODIAK - request 62,400 acres instead of 45,200 acres RATIONALE - The higher figure is 10% of all tentatively approved state land selected within the borough (re. Hartig letter) COMMENTS - DNR feels this ignores the language in the existing statute - 10% of vacant, unappropriated, unreserved state lands (re. Smith letter)
(2)	29.18.202	(2) 30% requirement for disposal to private ownership be eliminated. RATIONALE - Should be a local option, not a requirement (re. Rolle testimony - Alaska Municipal League) COMMENTS - Expressed fear that municipalities will not dispose of lands at a significant rate in order to protect high land values. - Administration takes "no final position".
(5)	29.18.205 (b)	Delete the following: line 9 from the word (SHALL) to line 12 to the word (SELECTION) RATIONALE - Eliminates possibility of director reclassifying land already selected into a non-selectable category (re. Hartig letter) COMMENTS - "that specific language was agreed upon by eight municipalities, including Kodiak, because a very limited number of approvals were given for lands with a classification under which the state could not legally approve selections" (re. Smith letter).

CS HB 133am Finance
Guide Mark-up

PAGE	SECTION	SUGGESTED CHANGE
(5)	29.18.205(b)	Delete the following: line 18 from the word (ANY) to line 23 to the word (AS 38.05.321). RATIONALE - Would allow the the director to make present decisions for past acts of the Division of Lands; also full title to agricultural lands (re. Hartig letter). COMMENTS - Eliminating reference to AS 38.05.321 would give full title - not just agricultural rights - to the boroughs. Conflict with existing state law and policy.
(6)	29.18.205(d)	Delete entire subsection RATIONALE - Subsection is in conflict with AS 38.05.305 as .305 requires the state to go back to the boroughs on all classifications. COMMENTS - Agreed to last year by all parties including Kodiak. Administration would not oppose deletion (re. Smith letter).
(6)	29.18.205(e)	Insert additional language which would require review of classified land evey 2 years for possible reclassification. RATIONALE - New conditions might warrant future change in classification (re. Hartig letter) COMMENTS - Should be handled through regulation (re. Smith letter).
(6)	29.18.205 (e-f-g-h)	Reinsert language deleted on House floor from CS HB 133 Finance version. RATIONALE - This language was "agreed to by all parties because it was felt that the criteria adequately protected both the state and municipal interests in deciding which lands should be made available for municipal selection and which should remain in state ownership." Removes tremendous discretion by DNR in approving selections (re. Smith letter).

PAGE	SECTION	SUGGESTED CHANGE
(6)	29.18.205 (e-f-g-h)	Continued COMMENTS - This argument also concurred with by Holdsworth, Gilman (possibly others).
(7)	29.18.206(c)	Delete director's authority to approve selection of trust lands. RATIONALE - Should be a local decision (Sharp testimony - Bern testimony). COMMENTS - Reference to prior language made by Mr. Smith which ties this to former section (g). Should be reinserted whether or not the director has authority to approve selections of trust lands (re. Smith letter).
(7)	29.18.206(d)	Set a time limit in which trustees must act on selections. RATIONALE - Trustees should not be able to delay action for an unreasonable length of time (Bern testimony).
(8)	29.18.207(a)	Delete the following: line 10 from the word (TAKING) to line 12 to the word (USES). RATIONALE - Would further reduce the borough's right to select land (re. Hartig letter).
(9)	29.18.207(b)	Substitute 150% for 110% RATIONALE - Higher figure necessary because the federal government hasn't defined navigability of waters within selections. COMMENTS - 110% is ample. Additional 40% over-selection would severly impact state's ability to manage land (re. Smith letter).

CS HB 113am Finance
Guide for Mark-up

PAGE	SECTION	SUGGESTED CHANGE
(10)	29.18.208 (f)	Change $100 per capita limit to $250 per capita RATIONALE - Is inequitable for Anchorage as it would only receive $20,000,000 instead of $43,102,050 because of the limit (re. Bern letter). COMMENTS - Opposed by Administration due to fiscal impact (re. Smith letter).
(10)	29.18.208	Add new paragraph to include payment in lieu of land to municipalities with ANCSA claims top filed over state selections (i.e Kodiak) RATIONALE - State breached its trust with municipalities by "entering into a compact" with Congress allowing ANCSA claims to have precedence (re Hartig) COMMENTS - Provision should also be made to exempt Kodiak from 208 (f). Opposed by Administration due to fiscal impact, also because there is sufficient state land for Kodiak to select from.

CS HB 133am Finance
Guide for Mark-up

PAGE	SECTION	SUGGESTED CHANGE
(11)	29.18.211	Delete entire section. RATIONALE - Kodiak wants option to litigate if they do not receive payment in lieu of land option (Hartig letter) COMMENT - Kodiak is free to litigate if they are not satisfied. But they should then have to accept the verdict of the judicial system. The purpose of the bill is to make a settlement (Smith letter)
(15)	29.18.213(11)(c)	Amend to read: "Is unclassified or, if classified under AS 38.05.300, is classified for agricultural, commercial, industrial, private recreational, residential, utility, or open to entry purposes, or where classified pursuant to state and municipality management agreements." RATIONALE - Kodiak wants option to select grazing lands or lands classified at the request of the borough. COMMENT - Administration not opposed to this amendment.
(15)	38.05.321	Remove all reference to grazing. RATIONALE - Kodiak finds it should have full title to grazing lands if they are selected-not simply grazing rights (re. Hartig letter) COMMENT - Administration takes no position (re. Smith letter)

CS HB 133 am Finance
Guide for Mark-up

PAGE	SECTION	SUGGESTED CHANGE
(16)	Sec. 4	Change 90 days to 180 days RATIONALE - 90 days insufficient time to adopt regulations (re Smith letter) COMMENT - None
(16)	Sec. 4	Delete final sentence; begin with (after) on line 8 - end with (existence) line 11. RATIONALE - Forces beyond the state control may make it impossible to transfer land to future municipalities within a three year period (re Smith letter)

Federal-State
Land Use Planning Commission
For Alaska

April 12, 1978

Honorable Kay Poland
Senate Resources Committee
Alaska State Senate
Pouch V
Juneau, Alaska 99811

Dear Kay:

Pursuant to the request made by you and other members of the Senate Resources Committee, we are enclosing several copies of our recent correspondence to Senator Jackson concerning the need to develop an alternative vehicle for marking up D-2 legislation in the Senate. If you have any questions or comments relative to this enclosure, please let us know.

On behalf of the Commission, we want to thank you for the opportunity to talk with the Resources Committee about the pending D-2 legislation and the other issues which were considered during last week's briefing.

Sincerely,

Walter B. Parker

Walter Parker
State Co-Chairman

Enclosure (1)
1. Letter to Senator Jackson

733 W. FOURTH AVENUE, SUITE 400
ANCHORAGE, ALASKA 99501

Federal-State
Land Use Planning Commission
For Alaska

March 17, 1978

Honorable Henry M. Jackson
Chairman
Committee on Energy and Natural Resources
3106 Dirksen Senate Office Building
Washington, D.C. 20510

Dear Senator Jackson:

Over the past five years, the Commission has identified the major policy issues associated with the (d)(2) lands in particular and statewide land use and management in Alaska in general. We have made recommendations on these major policy issues to Federal and State decision makers. In so doing, the Commission placed the use and management of (d)(2) lands within the statewide context of other Federal, State, and private lands in Alaska, as well as within the context of the management systems which apply on Federal lands nationwide.

As one of the architects of the three major pieces of legislation which will set the future of Alaska, you are very conscious of the interrelationship between the rights of Alaska Native corporations and Alaska Native individuals to lands under the Alaska Native Claims Settlement Act and the rights of the State of Alaska to lands under the terms of the Alaska Statehood Act. Underlying both of these acts was the considered Congressional policy to bring Alaska into the Union fully and completely.

We do not intend this letter to be a substitute for our testimony before your committee. But, aware of the amendments made in the House Interior Committee, we wish to express our concern that H.R. 39, as amended, may be the markup document selected by your committee.

We feel that the attempts in the House Committee to accommodate and resolve the many conflicts that were generated by the original H.R. 39 have resulted in such modifications of the National Wilderness System, the National Wild and Scenic Rivers System, the National Park System, and the National Wildlife Refuge System that we feel that it would be impossible by amendment to rectify these major defects of the bill.

733 W. FOURTH AVENUE, SUITE 400
ANCHORAGE, ALASKA 99501

Of even greater importance, we feel that in attempting to resolve conflicts between developers and conservationists, Natives and sport hunters, Federal energy policy and wilderness, and State and Native land selections, several sections of H.R. 39 instead institutionalize conflict over the next half century in Alaska by trying to perpetuate what are essentially the perceived conflicts of today. These conflicts can only be resolved or mitigated over time by strong cooperation between the Federal and State governments. The management policies of both governments must retain sufficient flexibility to deal with the future and not carry the burden of today's ills into that future in the form of statutory language.

We know of your concern to treat Alaska totally as a full member of the United States; we know of your concern that the settlement of Alaska Native claims be implemented promptly and with certainty; and we know of your concern to protect those nationally significant natural values which exist in Alaska. We are also aware of your interest in meeting the nation's energy needs, and your interest in seeing that Alaska's land ownership and land-use patterns be achieved in a rational and planned manner. Because we share these concerns, we recommend that a new bill be drafted.

In that connection, we would like to compliment you and the members of the Committee staff for your reasoned, systematic, and scientific approach toward accumulating resource information from persons knowledgeable in Alaska resources. From your staff workshop, your committee, in our opinion, will have compiled one of the best records with respect to the resources involved in resolving the (d)(2) question.

There is a great deal to build on in the drafting of such a new bill. Such a bill could certainly incorporate a good deal that has been learned in the public hearing process with H.R. 39 and could benefit from the substantial discussions that have already occurred between the Federal executive, the State of Alaska, and the Federal-State Land Use Planning Commission. Such a bill could also incorporate the best legislative approaches to the issues of transportation access, Federal-State relationships on fish and game management including the need to meet subsistence needs, and cooperative institutions to plan and manage Alaska lands. There is language available in S. 2465, H.R. 10888, as well as parts of H.R. 39 which could better respond to these policy needs.

We would like again to emphasize our belief that drafting of a new bill in the Senate is essential in order to secure the best possible final outcome of this legislation.

Thank you for your consideration of this correspondence.

Sincerely,

Walter B. Parker

Re: Municipal Land Selection Bill
CSHB 133 (Finance) am

Dear Senator Poland:

To assist your committee in its mark up of the Municipal Land Selection Bill I felt it appropriate to submit to you the Administration's comments both on the amended Finance Committee version of the bill before your committee, as well as selected responses to testimony presented to your committee on March 29th and March 31st. The comments below are in the order that one would read the legislation. Many of the comments respond specifically to the testimony of Mr. Robert Hartig, Counsel for the Kodiak Island Borough. This has been done because Mr. Hartig was the only one to testify who, to my knowledge, submitted his testimony in writing (by letter of March 23, 1978), and also because some of his comments were echoed by others in their testimony.

With respect to the general grant land entitlements listed in Section 201, our only comment concerns Mr. Hartig's assertion of a 62,400 acre entitlement for Kodiak. The disagreement between the Kodiak Borough and the Department of Natural Resources on this matter is somewhat complicated and a detailed explanation would not be appropriate here. I believe it is appropriate, however, to point out that the 62,400 acre figure for Kodiak is exactly 10 percent of the total amount of tentatively approved land which the State has ever received within the Kodiak Borough. Simply stated, Mr. Hartig is contending that since January 1, 1964, when the existing legislation went into effect, not one acre of state land within the Kodiak Island Borough has ever been appropriated or reserved. In other words, unlike every other community in the state, Mr. Hartig would give no credence to the Legislature's inclusion of the words "vacant, unappropriated, unreserved lands in the statute." As an

example, Mr. Hartig would have to argue that the creation of the Fort Abercrombie Historical Park was not a reservation of those lands, but rather they remained vacant, unappropriated, and unreserved even after the legislative action, open to borough selection or otherwise available under the State's disposal laws.

In Section 202, with respect to the requirement for municipalities to dispose of not less than 30 percent of the difference in entitlements between Sections 201 and 202, the Administration takes no formal position. However, we are very sympathetic to the legitimate concerns of the municipalities which wish to dispose of those lands within time frames appropriate to each municipality's specific situation.

In Section 205(b), Mr. Hartig suggested that certain language be deleted which would require the Director to review past approvals of borough land selections. He indicated that the reason for this was that the Division of Lands would like to reconsider many of those selections, and reclassify the land in a non-selectable category and thus preclude the borough from selections. This is not the case. That specific language was agreed upon last year by eight municipalities, including Kodiak, because a very limited number of approvals were given for lands with a classification under which the State could not legally approve selections. In addition to the State's concerns with this situation, some municipalities were worried that such a transfer would put a cloud on the title.

In this same subsection, Mr. Hartig also suggested that the language, which indicates that transfers of land to municipalities under this chapter are subject to AS 38.05.321, should be deleted. Such a deletion would mean that agricultural lands transferred to municipalities would include the transfer all title, not just agricultural rights, and would be in contravention of existing state law and policy. The Legislature can, of course, change this existing requirement. However, it would put the Department in a very untenable position in that we might simultaneously be required to transfer several tens-of-thousands of agricultural lands to municipalities, while at the same time trying to meet the very difficult requirement of AS 38.05.362 which requires the Department to classify an additional 650,000 acres of land for agricultural purposes within the next 18 months.

With respect to Section 205(d), I would point out again that this was language agreed to by all parties last year, including the Kodiak Borough. However, we would not oppose this deletion as suggested by Mr. Hartig.

With respect to Mr. Hartig's comment regarding Section 205(e), I concur that most of this section, as well as most of this proposed legislation, could be handled through regulations. However, it was agreed to by all municipalities last year that since there was general agreement with the "settlement," it would be best to have legislative sanction. The Administration, and I believe a majority of the municipalities, would support the settlement of this matter through adoption of appropriate regulations closely parallelling the original legislation.

At this point it is appropriate to bring up the matter of Subsections (g) and (h), which were deleted on the floor of the House. These subsections are found at page 6, line 28, and page 7, line 19, respectively, of the CSHB 133 (Finance) version. As I stressed in my testimony, and as was echoed by the large majority of municipalities which testified, the reinsertion of these two subsections is most important to permit the municipal land selection settlement to work properly. That specific language was agreed to by all parties because it was felt that the criteria adequately protected both state and municipal interests in deciding which lands should be made available for municipal selection and which land should remain in state ownership. The criteria are based upon the general concept found in similar legislation, for example Alaska's Coastal Zone Management Act, which defines matters of local concern versus matters of greater than local concern. The adoption of these criteria removes the tremendous discretion which now exists within the Department of Natural Resources to decide which municipal selections should be approved and which should not. As was pointed out by Representative Jim Duncan on the House floor, not a single municipality had raised one word of protest that these criteria did not protect both municipal as well as state concerns. If these two subsections are reinserted in the bill, certain other references to these subsections found in the House Finance Committee version of the bill must also be added to make sense. These deletions were made in Sections 205(e) (page 6, lines 16-20) and (f) (page 6, lines 24-25), and Section 206(c) (page 8, lines 22-24), all from CSHB 133 (Finance).

In Section 206(c), as mentioned in the last paragraph, the Administration supports the inclusion of the reference to the criteria omitted in Section 205(g). Without these criteria, the Director and the respective trust board will have no criteria with which to approve or disapprove of selections. Even if the ultimate approval decision rests completely with the trust board, without criteria they may

well be faced with many situations where they must decide, without criteria, whether a municipality's reasons for selection are superior to the Director's argument that the land should remain in state ownership to protect some state interest. Whether or not the Director has the authority to approve also, he will certainly have the responsibility to point out the state interest in retaining those lands. Inclusion of the reference to the state and municipal interest criteria would solve this problem.

Section 206(e) permits the director three years, after the approval by the appropriate trust board, to locate and propose replacement lands of approximately equal value to be conveyed to the particular trust. The purpose of this time period was to allow quick approvals of municipal selections without having to wait for an understaffed division to locate suitable replacement lands. If the municipalities would like to see the time period deleted and require that replacement lands be identified at the time of approval by the board, we certainly will not oppose this. However, I believe this may significantly lengthen the process of conveyance of trust lands to municipalities.

Mr. Hartig's testimony suggested that Section 207(b) of the House Finance Committee version should be changed to reflect an overselection of 150 percent rather than 110 percent of remaining entitlement. The purpose of this section, deleted on the House floor, was to stop the problem of overselections which presently exist under the Alaska Native Claims Settlement Act, a problem which is already impacting Kodiak more severely than any other municipality in the State. The 10 percent overselection factor originally proposed is ample, particularly in Kodiak's situation, to handle any navigability determinations. An additional 40 percent overselection, as suggested, would severely impact all state land management in that several hundred thousand overselected acres of state lands would remain in limbo, not available for conveyance to municipalities since their entitlements would be considerably lower, yet not available for state management since some of the land might ultimately go to municipalities. For precisely this reason, we are unable to do anything with respect to managing almost one million acres of state land because of such unnecessary overselection by Native corporations under ANCSA. The 110 percent figure amply protects a municipality from navigability or third party interest adjudications.

With respect to payments in lieu of land, Section 208, the Administration's position has been from the beginning that the municipal land selection legislation was to be a land settlement, not a monetary settlement. With all communities

except Anchorage, there remains ample lands from which each municipality may fulfill its entitlement. Because of Anchorage's somewhat unique situation, a revenue provision was incorporated. It is obvious to everyone, particularly Anchorage, that the original agreement was not, and was never intended to be, a full monetary reimbursement for unavailable land. Rather, it was to be a payment in lieu of land which could provide some basis for land acquisition for public purposes under Anchorage's existing land trust ordinance. Originally, this section would have provided Anchorage with approximately $12 million. As a result of House Finance Committe action, this total was lifted to approximately $20 million. The Administration's position is that this total has reached the upper limits of what the State can responsibly be expected to pay in what is a settlement of outstanding land legislation. Therefore, the Administration opposes the lifting of the $100 per capita limit found in Section 208(f). Certainly, the request by Mr. Hartig that the Kodiak Island Borough be permitted to receive revenue in lieu of land payments for approximately 26,000 acres, a value of approximately $24.6 million if the $100 per capita limit is lifted, is unreasonable at best. This concern becomes even more valid when it is recognized that there is more than ample acreage within the Kodiak Island Borough from which the Borough may fulfill its entitlement. If the $100 per capita limit is raised to $250, as requested by Anchorage, this would mean a total for Anchorage of approximately $42.8 million and for Kodiak approximately $2 million, or a total of approximately $45 million. If there is no dollar limit per capita, as requested by Mr. Hartig, the combined Anchorage and Kodiak totals would be in excess of $67 million.

With respect to Section 211, election of benefits, this section need not be deleted to protect Kodiak's interest in being able to seek a judicial solution if it feels it has not received equity through this legislation. Section 211 requires a municipality to either accept the tenets of this legislation, or to rely instead upon the existing municipal land selection statute. It merely does not permit a municipality to participate both ways. If Kodiak, or any other municipality, is satisfied with the present legislation, it will have no need to litigate. If, however, it is not satisfied with the present legislation, it will obviously indicate that it is unsatisfied and that it does not wish to obtain benefits under the present legislation by entering into litigation within 60 days of the effective date of the act. It is, therefore, perfectly free to litigate on the basis of the existing Municipal Land Selection Law.

In Section 213(11)(C), which is part of the definition of the term "vacant, unappropriated, unreserved land," Mr. Hartig has recommended the deletion of the word "grazing." As discussed later, this is a legislative decision. The

Administration would not oppose its deletion here. In addition, Mr. Hartig would add the phrase "or where classified pursuant to state and municipal management agreements" at the end of Subsection (C). As I stated to Mr. Hartig in a letter dated February 14, 1978, the State is sympathetic to the Borough's position that lands classified pursuant to state and municipal management agreements should not be deducted from the acreage base figure from which the ten percent entitlement is determined, nor otherwise made unavailable strictly because such classifications placed those lands outside the category of "vacant, unappropriated, unreserved land." Therefore, we do not oppose the inclusion of this language as suggested by Mr. Hartig.

In Section 3 of the bill before you, on page 15, Mr. Hartig recommends that all reference to "grazing" be removed from the proposed reenactment of Section 38.05.321. As mentioned earlier, this is a legislative decisicn as to whether the State wishes to retain the relatively small grazing resource base which exists in Alaska.

Finally, Section 4 of the bill before you, on page 16, line 4, directs the Department of Natural Resources to adopt regulations which would permit future municipalities to receive a general grant land entitlement. The Administration supports this section, but feels two technical changes need to be made to the existing language. First, existing statutory requirements for public notice and hearings, in addition to necessary legal review by the Department of Law and the Lieutenant Governor's Office, make it virtually impossible to adopt regulations within only a 90-day period. Therefore, we recommend that the 90-day time period found at line 5 on page 16 be extended to 180 days.

The second problem concerns the last sentence of Section 4 beginning on line 8. This directs the Department to transfer all lands to which a future municipality is entitled to such municipality within 3 years of the date upon which the municipality assumes a legal existence. This directive would place an onus upon the Department which is not found any where else in this legislation, even for existing municipalities. In many if not all cases it will not be possible to adhere to such a directive because of forces totally beyond the State's control. For instance, while vesting of an entitlement will occur as soon as a new municipality is created, if the municipality decides not make land selections the State cannot of course transfer the lands to the municipality. In addition, existing law as well as Section 207(b) of this legislation requires the municipality to bear the cost of survey before land is transferred. Immediately after creation of any new municipality, municipal revenues will unlikely be insufficient to permit survey of its entitlement within a three-year period. Alternatively, this sentence would direct that the State assume the full cost of survey in order to meet the

transfer deadline. Since any new municipalities would be treated in virutally an identical manner as existing municipalities under this bill, we see no reason why the well-thought out procedures and time limits in the existing legislation need be changed for future municipalities. Their interests will be protected through the directives which require specific time deadlines after municipalities make their selections and after they present a plat of survey. Therefore, we recommend that this sentence be deleted.

I would like to thank you for this opportunity to comment on this legislation, and if the Department of Natural Resources may be of any further assistance, please do not hesitate to ask.

Sincerely,

Michael C. T. Smith
Assistant Commissioner

29.18.201(9) should be amended to delete the portion in brackets and add the underlined portion, as follows:

Kodiak Island Borough -- [45,200] 62,400 acres;

29.18.202(e): Add wording which is underlined:

The requirements of (c) and (d) of this section shall be waived by the director as to a home rule or unified municipality which so requests and as to any other municipality which manifestly demonstrates that a commitment of acreage to residential or commercial purposes required by this section as a condition of election of an entitlement

29.18.205(d): Delete portion in brackets:

On the effective date of this Act and for five years thereafter, no classification of a parcel of general grant land in excess of 3,200 acres under AS 38.05.300 shall be effective, unless otherwise required by law, if the municipality in which the parcel is located, within 30 days after receipt of notice of the proposed classification, advises the director in writing that it does not consent to the classification and indicates the reasons for its nonconsent. [This subsection applies only to land to which the state has received patent from the federal government prior to the effective date of this Act.]

29.18.205(e): Add wording which is underlined:

Each eligible municipality and the director shall jointly consider which vacant, unappropriated, unreserved land, including federal land of interest to a municipality which may be selected by the state as general grant land, located within the boundaries of the municipality, is appropriate for municipal selection and approval by the director to fulfill any remaining municipal general grant land entitlement. <u>The joint consideration made by the parties shall include a cooperative land planning process which will, in addition to the normal objectives of such a process, seek to identify both local and state interests in tracts of vacant, unappropriated and unreserved land remaining within the municipality</u>. Adjacent tracts shall be considered simultaneously except when such simultaneous consideration would cause significant delay or expense. Once a tract has been jointly considered, it may be selected by a municipality.

29.18.205(f) should be amended to read as follows, adding the portion which is underlined:

Each selection must be approved or disapproved for patent by the director under (g) of this section within nine months of its selection by a municipality, and a patent shall be issued to the municipality within three months after approval by the director of a plat of survey.

29.18.205(g) should be amended in toto, deleting the section in brackets and adding the underlined section:

[A municipality may appeal an adverse decision by the director to the superior court under AS 44.62.560 - 44.62.570.]

In reviewing a municipal selection, the director shall consider the state's responsibilities for developing and protecting values which are of greater than local concern, including development which will have statewide impact, and critical environmental concerns. Specific state responsibilities to be considered, if such responsibilities have not been authorized or delegated by the state to a municipality, include air quality; water; minerals and

energy; timber; agriculture; fish and wildlife and their habitat; public recreation, natural, historical, and archaeological areas of greater than local concern; access to public land and water; transportation; communications; and public safety. Specific municipal responsibilities to be considered include residential, commercial and industrial needs; support of municipal services; education; local transportation; private recreation; public recreation, natural, historical and archaeological areas of local concern; and other responsibilities authorized or delegated by the state to a municipality. A selection by a municipality of land which is primarily of local concern shall be approved. When the interests of the state may be protected through the conveyance of title that is less than a fee title, the municipality, at its option, may accept the title in acre-for-acre fulfillment of its entitlement.

29.18.205(h): A new paragraph should be added, to read as follows:

Every decision of approval or disapproval of a municipal selection by the director under (f) of this section shall include a written explanation of the decision based upon the criteria of (g) of this section. Before issuing any decision to disapprove a selection, the director

shall notify the affected municipality in writing, by certified mail, of his reasons for the proposed decision. The municipality shall have 30 days from receipt of the proposed decision to respond to the director in writing enumerating the reasons for which the municipality believes the proposed decision to be in error. After receipt of the municipality's statement of reasons, or after expiration of the period in which the municipality may respond to the proposed decision, the director shall, within 30 days, affirm, modify or reverse his proposed decision in writing and give written notice of his decision to the municipality. The decision of the director constitutes final administrative action in the matter.

29.18.206(d): Delete portion in brackets:

No selection of school, university or mental health land may be approved [by the director] under this section without the concurrence of

29.18.206(e) should be amended to read as follows, deleting the portion in brackets and adding the underlined portion:

[Within three years after the approval under (d) of this section of a municipal selection of school, university or mental health land, the director, with the concurrence of the respective board, shall designate appropriate state general grant land of approximately equal value as school, university or mental health replacement land.] Within six months after a request by a municipality for selection of school, university or mental health land, the director shall identify state general grant land of approximately equal value to the land requested by the municipality, and shall propose such replacement land for the concurrence of the appropriate board under (d) of this section. If a proposal by the director is rejected by the board, the director shall meet with the board as often as necessary to determine the type and amount of equal value replacement land that would be required to obtain the board's concurrence under (d) of this section, and shall propose such replacement land for consideration by the board. The replacement land shall thereafter be managed for the purposes for which the land selected by the municipality was acquired

by the Territory and the State of Alaska. Nothing in this subsection shall preclude the appropriate board from approving a municipality's selection of school, university or mental health land prior to the identification or approval of specific replacement land.

29.18.208(c) should be amended as follows, adding the underlined portion:

A municipality eligible for payment under this section may, by October 1 of each fiscal year of eligibility, notify the director of its election to accept payment in lieu of land from the account. A municipality may accept payment for not more than 15 per cent of its entitlement under secs. 201 - 203 of this chapter, to a maximum of 10,000 acres, in each fiscal year. A municipality which chooses to accept payment in lieu of land shall be entitled to an amount based on the cumulative total number of acres of remaining entitlement which it relinquishes, or on the number of acres which were selected and to which title vested in another entity under (g) of this section. Payment shall be made according to the following schedule:

29.18.208(e) should be amended as follows, adding the underlined portion:

If the total appropriation is not sufficient to meet the amount due to all municipalities which have elected to accept payment in lieu of land under (c) of this section, the governor shall apportion the appropriation among the municipalities in proportion to the payment calculated for each municipality for that year. When a distribution of payments is made under this subsection, the remaining entitlement of a municipality to which payment is made shall be reduced in an amount equal to the number of acres for which payment was received. An apportionment may correspondingly increase the acreage for which a municipality may request payment in a succeeding year, but this increase in acreage does not authorize a municipality to request payment in lieu of land of more than 10,000 acres in any one year. <u>All such appropriations shall be in addition to other grants and entitlements authorized for a municipality.</u>

29.18.208(f) should be amended as follows, adding the underlined portion and deleting the portion in brackets:

29.18.211(a) should be amended, to add the underlined wording, as follows:

Except as to those lands to which section 208(g) of this chapter applies, a municipality which on the effective date of this Act is engaged in tigation, or which becomes engaged in litigation, regarding a claim to state land under former secs. 190 - 200 of this chapter shall elect either to obtain the benefits provided in secs. 201 - 215 of this chapter or to pursue the litigation and thereby waive any claim to entitlement under secs. 201 - 215 of this chapter. An election shall be made by filing a motion for dismissal with prejudice in the court in which the litigation is pending. If the claim involves a municipality identified in secs. 201(a) or 202(a) of this chapter, the municipality shall file its motion for dismissal within 60 days of the effective date of this Act. If the claim involves a municipality not listed in secs. 201(a) or 202(a) of this chapter, the municipality shall file its motion for dismissal within 60 days after receiving the certificate of entitlement provided by the director under sec. 203(b) of this chapter. Failure of the municipality to file a motion for dismissal during the time period provided in this subsection shall be considered a waiver of entitlement under secs. 201 - 215 of this chapter.

The total payment to a municipality under this section, except as provided in (g), may not exceed [$100] $250 per capita for each person resident in the municipality on the July 1 preceding the effective date of this Act, as determined by the Department of Community and Regional Affairs.

29.18.208(g): A new paragraph should be added, to read as follows:

vacant, unappropriated, unreserved general grant

If a municipality ~~has~~ selected ~~state~~ lands on or before December 18, 1971, to which the state has received tentative approval or patent, and such lands ~~are~~ were also selected by a Native corporation under the Alaska Native Claims Settlement Act (~~Pub~~. L. No. 92-203) and title to ~~that~~ such lands is ultimately vested in that Native corporation, the municipality shall be entitled to payment under ~~subparagraph~~ (c) of this section. Acceptance of payment pursuant to this ~~subparagraph~~ subsection shall constitute a relinquishment of any other right, title or claim to such land by the municipality.

29.18.213(11)(C): Amend by adding the underlined portion:

is unclassified or, if classified under AS 38.05.300, is classified for agricultural, grazing, commercial, industrial, private recreational, residential, utility or open-to-entry purposes, or where classified pursuant to state and municipality management agreements.

38.05.321: Delete portion in brackets:

RESTRICTION ON SALE, LEASE OR OTHER DISPOSAL OF AGRICULTURAL [AND GRAZING] LAND. (a) The sale, lease or other disposal of state land classified as agricultural [or grazing] land transfers only rights for agricultural [and grazing] purposes, and all other interests in the land remain with the state unless otherwise required by law.

(b) State land classified as agricultural [or grazing] land which has been selected by a municipality under AS 29.18.190 - 29.18.200 or 29.18.205(e) may be approved by the director for patent under AS 29.18.205(f); however, only rights in the land for agricultural [or grazing] purposes may be transferred and all other interests in the land will remain with the state. Agricultural [or grazing] land approved for patent to a municipality under

AS 29.18.205(f) shall be credited, acre for acre, toward fulfillment of that municipality's entitlement under AS 29.18.201 - 29.18.203. If the director later determines it to be in the best interests of the state to transfer some or all of the additional rights in that approved or patented agricultural [or grazing] land, those rights shall pass without consideration to the municipality in which the land is located.

(c) The provisions of this section do not apply to state land classified as agricultural [or grazing] land which has been selected by a municipality under the provisions of AS 29.18.190 - 29.18.200 if the selection is an approved selection before the date of enactment of this Act and is otherwise valid under AS 29.18.205(b).

Sec. 4 should be amended as follows, adding the underlined portion:

It is the intention of the legislature that future municipalities shall have the benefit of * Sec. 2. of this Act. Within ~~90~~ 180 days of passage of this Act, the Department of Natural Resources shall adopt regulations which shall, as closely as is practicable, apply the provisions of * Sec. 2. of this Act to future municipalities. [After adoption of

such regulations, the department shall transfer all lands to which a municipality is entitled under this section to such municipality within three years of the date upon which the municipality assumes a legal existence.] Consistent with the best interests of the state, in the selection of general grant land it is the policy of the state to make available the maximum land area from which municipalities may fulfill land entitlements under AS 29.18.201 - 29.18.215.

Field studies show oil production and environment remain compatible

EDWARD W. MERTENS
Chevron Research Co.
Richmond, Calif.

EXTENSIVE field studies on the effects of chronic low-level exposure of marine life to oil show:

- Low-level chronic exposure to crude oil has, at most, negligible effect on marine life.
- Platforms provide a structure whereby a thriving, highly complex community of marine life can develop.

Supporting data have been obtained from field studies conducted at Santa Barbara, Calif.; Lake Maracaibo, Venezuela; Bermuda; and Timbalier Bay, La., in the Gulf of Mexico.

No measurable effects have been observed on such indicators of the health of the local marine communities as population levels of various organisms, species diversity, and size, growth rate, or reproducibility of various organisms.

Moreover, there is no evidence of adverse effects such as abnormal growths and biomagnification of petroleum fractions in the food chain.

Available information. Surprisingly, the volume of literature concerning the effects of oil on marine life is extensive. Several comprehensive summaries of the literature have been published.[1,2,3,4] Whether one reviews the literature directly or the summaries that are available, it is apparent that most of the published work concerns laboratory work. Only a few field studies have been conducted.

Laboratory work has proven generally unsatisfactory because its results correlate poorly with field observations. Fortunately, in recent years, some work has been directed toward investigating the effects of chronic exposure of oil on marine life under field conditions. Results of field studies are summarized in Table 1.

Table 1

Conclusions of field studies of oil's impact on marine life

NATURAL OIL SEEPS, SANTA BARBARA:

All organisms are present that would be expected to be in that environment if oil seepage were not there.

Exposure to the natural oil seepage has no effect on either the growth rate or reproductivity of the resident organisms.

No abnormal growths in organisms were observable either by external examination or by dissection.

There is no evidence of bioaccumulation (increase in concentration) of hydrocarbons by transfer up the food chain.

TAR BALLS, BERMUDA:[5]

There is no measurable effect of tar influx on the number of organisms of any species at any locality.

All species identified as native to Bermuda shores prior to the tar-ball influx still remain.

Exposure to the tar influx has no effect upon the reproductivity of the organisms.

Size of organisms is not affected by the exposure to tar influx.

LAKE MARACAIBO, VENEZUELA:

Despite significant discharges of oil into Lake Maracaibo from production of oil and from natural seeps, both laboratory and field data show that the presence of oil has caused no discernible damage to the local ecosystem.

Although low concentrations of oil exist in the lake water, there is no evidence of a buildup of hydrocarbons in selected commercial species of fish or shrimp.

Although fisheries data are limited, no evidence exists that suggests this important renewable resource has yet been diminished.

However, discharge of nonpetroleum wastes, both domestic and industrial, are approaching such levels as to impair water quality. The biological resources of the lake may decline in future years.

TIMBALIER BAY, GULF OF MEXICO:[12,13,14]

Seasonal changes, especially in temperature and salinity, have a far more significant effect on species diversity of marine life and on the population of a given species than does the presence of low-level concentrations of oil.

Even the effects of other less-important natural phenomena, such as floods, upwellings, and turbidity, affect the ecosystem markedly. Their influences completely obliterate whatever effect, if any, results from exposure to oil.

No known biological hazard could be related to any compound or material used in drilling and production.

Timbalier Bay has not undergone significant ecological change. Every indication of good ecological health is present.

Evidently, the platforms have increased the total quantity of marine life. These structures provide surfaces where planktonic larvae of organisms such as barnacles, mussels, sea anemones, and others forms of sessile marine life may settle and flourish to become highly productive, complex communities.

OFFSHORE PLATFORMS, SANTA BARBARA CHANNEL:[14]

A highly complex community has developed under each platform. Communities on either the soft or hard bottom control areas are far less complex and far less abundant.

The pelagic fish population inhabiting the area under the platforms is estimated to be 20,000-30,000 per platform.

Positively identified are at least 50 species of fish, 110 species of invertebrates living on or near the structures, and 77 species of worms inhabiting the nearby sediments.

All sea life appears to be extremely healthy. Mussels 8-10 in. in length are numerous; larger ones have been observed.

Every available underwater surface of the platforms is heavily encrusted with mussels, barnacles, aggregate anemones, or other types of sessile sea life.

Drill cuttings were deposited at the base of the platform. Being sterile, they did not support marine life for 2 to 3 years after the platforms were constructed. Today this pile is covered by a depth of 37 in. of shells and now supports a teeming community of seastars, anemones, nudibranches, and other benthic organisms.

Santa Barbara seeps. D. Straughan and her associates at the University of Southern California recently concluded a 3-year study concerning the sublethal effects of natural chronic exposure of oil to marine life. Her laboratory was the marine waters at Coal Oil Point near Santa Barbara where natural oil seeps have been known to exist for centuries. The natural seepage there is 50-100 b/d.[5]

Extensive control data were obtained from studies conducted at Pismo Beach (north of Santa Barbara), Gull Island (near Santa Barbara), and Santa Catalina Island

Paper presented at Symposium "Sources, Effects & Sinks of Hydrocarbons in the Marine Environment," American Univ., Washington, D.C., August 1976.

(near Los Angeles).

Tar balls, Bermuda. A relatively recent phenomenon is the influx of tar balls washing ashore along the Bermuda coastline.[7,8] The Bermuda Biological Station for Research has just concluded a 2-year study to determine whether the influx of tar balls was having any effect upon the local intertidal life.

Control data were obtained by studying beaches that were slightly impacted. Also used were the extensive base-line data developed by annual studies extending back to the 1890's.

These results provide an insight into the potential threat of offshore spills washing ashore to intertidal life. This is especially valid for spills, if they should occur, from platforms in areas 50 or more miles offshore in outer-continental shelf waters.

Such potential production areas exist along the Atlantic Coast. The weathered oil that would wash ashore would be similar in composition and properties to the tar balls appearing on the Bermuda beaches.

Lake Maracaibo. A 3-year study was completed in 1974 by Battelle-Northwest Laboratories (Richland, Wash.) on the impact of offshore production in Lake Maracaibo, Venezuela. Approximately 6,500 wells have been drilled in this lake over a period spanning 4 decades.

Sites in those sections of the lake where oil production does not occur were also studied to obtain control data.

Timballer Bay. The Gulf Universities Research Consortium (GURC) studied the impact of offshore drilling and production of oil on the estuarine and marine environment in the coastal waters of Louisiana, specifically, in Timballer Bay.

The study involved 23 principal scientists from the 20 Gulf Coast universities that comprise GURC. Conducted over a period of 2 years, 1972-74, and at a cost of $1.5 million, this study is undoubtedly the most comprehensive study concerning the effects of chronic exposure of oil to marine life ever attempted.

Timballer Bay contains about 400 oil and gas wells. The first well was drilled in 1937. Several stations within this area were studied. Stations were also studied in adjoining areas, where there never had been oil drilling or production, to obtain control data.

Santa Barbara Channel. Platforms Hilda and Hazel were constructed in the Santa Barbara Channel in 1959 and 1960. During their construction, a survey revealed that the surfaces of these structures quickly became encrusted and a complex marine community including sessile, benthic, and pelagic forms developed.[15]

A year's survey was initiated early in 1975 to assess the extent and complexity of the marine community under the two platforms. This study was conducted by the Southern California Coastal Water Research Project under the direction of the Scripps Institution of Oceanography near San Diego.

The major observations resulting from this survey are also included in Table 1.

Urethane doughnuts used to protect offshore platform

TWO HUNDRED huge bright-orange doughnut-shaped protectors, made of impact-absorbent urethane are being used to absorb shocks from open-sea docking of tugs, barges and workboats on a new offshore platform.

They are made for Oreco Inc., Lafayette, La., by Goodyear. The 142-lb toroids form a tough 6-in.-thick layer around the steel-platform pilings. Goodyear says that urethane is ideal for fendering material as it converts impact energy into heat which gradually dissipates.

Urethane is also unaffected by saltwater corrosion and can be molded with integral color for high visibility.

The devices, called Bargegard protectors, are installed on the recently placed Pennzoil platform which stands in 180 ft of water, 125 miles southeast of Galveston, Tex. The toroidal protectors measure 9 in. high and have a 31-in. diameter. Twenty of them are slipped over each of the platform's 10 fender pilings. The pilings are mounted so they can deflect and rotate in the horizontal plane for added shock absorbency.

The platform was assembled in two large pieces in the J. Ray McDermott fabrication facilities at Morgan City, La., then towed to the drilling site in the High Island area. The 1,200-ton platform jacket stands on the sea bottom with only 12 ft showing above water. A 1,120-ton work deck is mounted atop the jacket. END

IN THE HOUSE

BY THE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

HOUSE BILL NO. 137

IN THE LEGISLATURE OF THE STATE OF ALASKA

TENTH LEGISLATURE - FIRST SESSION

A BILL

For an Act entitled: "An Act relating to civil penalties for discharges of oil."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* Section 1. AS 46.03 is amended by adding a new section to read:

Sec. 46.03.758. CIVIL PENALTIES FOR DISCHARGES OF OIL. (a) The legislature finds that the discharge of oil causes significant harm to the economy and environment of the state which is often difficult to detect and incapable of quantification, and that, in order to protect the public welfare and insure adequate recourse for the discharge of oil, and to provide an incentive for the safe production, handling and transporting of oil, it is necessary to establish a regulatory mechanism which recognizes and meets the realities of oil pollution.

(b) No later than January 1, 1978, the department shall adopt, and may periodically revise, regulations establishing a schedule of fixed penalties for discharges of oil of ~~not less than $5 nor~~ more than $50 per gallon of oil discharged. The schedule shall vary according to the toxicity, degradability and dispersal characteristics of the oil. The schedule shall vary according to the sensitivity of the receiving environment. Variations under this subsection may be by category of receiving environments, specific receiving environments, or both.

(c) Upon the effective date of regulations adopted under (b) of this section, if a discharge of oil not permitted under applicable state and federal law occurs within the territorial jurisdiction of

the state, or into or upon the adjacent outer continental shelf of the state, the following persons, in addition to the person causing or permitting the discharge, are jointly and severally liable to the state, in a civil action, for the full amount of penalties established in the regulations:

(1) if the discharge occurs from any commercial or industrial facility other than a vessel or offshore platform, the owner, lessee (or permittee), and operator of the facility;

(2) if the discharge occurs from a vessel:

(A) the owner and the operator of the vessel; and

(B) the bailor of the oil discharged, if the bailment occurred within the territorial jurisdiction of the state; and

(3) if the discharge occurs from an offshore platform, the lessee (or permittee) of the tract or acreage upon which the platform is situated, and the operator of the platform.

(d) The entire penalty specified in the regulations shall be imposed, and no portion of the penalty for which a person is liable under this section may be suspended or deferred.

(e) A person otherwise liable for penalties under (c) of this section is not liable if he demonstrates, by a preponderance of the evidence, that the discharge occurred solely as a result of:

(1) an act of God;

(2) an act of a third person with intent to cause a discharge of oil, unless the third person is a person with whom the person charged is made jointly and severally liable under (e)(1) - (3) of this section;

(3) a negligent or intentional act of the State of Alaska or the United States; or

(4) an act of war.

50 - 100,000

(f) Notwithstanding sec. 875 of this chapter, a person liable under this section is not also liable for the discharge of oil under sec. 760(a) of this chapter.

(g) If the application of this section to discharges of oil solely into and upon the adjacent outer continental shelf of the state is held invalid, the application of this section to discharges of oil into and upon the water or land within the territorial jurisdiction of the state is not affected by that holding. This severability provision is intended to clarify, and not limit the severability provision of AS 01.10.030.

(h) As used in this section:

(1) "adjacent outer continental shelf" means that portion of the outer continental shelf which would be within the territorial jurisdiction of the state if its boundaries were extended seaward to the outer margin of the outer continental shelf;

(2) "discharge of oil" means the entry of oil into or upon the water or land of the state, regardless of causation;

(3) "offshore platform" means an offshore structure, whether floating or temporarily or permanently secured to the floor of the ocean or other water body, which is used primarily for the exploration for or production of oil or natural gas;

(4) "oil" means petroleum, crude oil, and any substance refined from petroleum or crude oil;

(5) "operator" means the person who, through contract, lease, sublease or otherwise, exerts general supervision and control of activities at the facility; the term includes, by way of example and not limitation, prime or general contractors, the master of a vessel (and his employer), or any other person who, through himself, his agents, or contractors, undertakes the general functioning of the

facility; and

(6) "vessel" means any form or manner of watercraft, whether or not capable of self-propulsion, except offshore platforms.

* Sec 2. AS 46.03.900 is amended by adding a new subsection to read:

(23) "facility" means any offshore or onshore structure, improvement, vessel, vehicle, land, enterprise, or endeavor.

EFFECTS OF OIL ON MARINE ECOSYSTEMS: A REVIEW FOR ADMINISTRATORS AND POLICY MAKERS

DALE R. EVANS[1] AND STANLEY D. RICE[2]

ABSTRACT

A broad selection of recent literature on the effects of oil on marine ecosystems is reviewed. The focus is on studies on crude oil, and the results are discussed with the purpose of providing a summary of findings that will be a useful reference for administrators and policy makers involved in decisions concerning petroleum developments and related activities. The characteristics of crude oil and factors modifying its impact on the marine environment are discussed. Most research on the toxicity of oil has dealt with acute effects and data on long-term impacts at the community level are inconclusive. It is concluded that chronic low-level pollution is potentially more damaging to ecosystems than isolated catastrophic spills. Decision makers are forced to rely on interpretative judgments rather than conclusive data.

Much of the material in this report was gathered as background material for use in preparing the marine section of the final environmental impact statement on the proposed trans-Alaska pipeline system (U.S. Department of the Interior, 1972). Some of the statements are essentially unchanged from the way they were presented in the appendix to volume IV of the impact statement. The impact statement made it clear that not enough data are available to analyze conclusively all of the potential environmental impacts of operation of the pipeline marine terminal facilities at Port Valdez, Alaska, and the transshipment of crude oil by tankers to west coast ports. A conclusion that can be drawn, however, and a message of the impact statement, is that oil poses a significant hazard to marine ecosystems, and a good deal of intensive research is necessary if these hazards are to be quantified and fully understood.

Research on oil pollution published since the impact statement on the pipeline was issued reveals that scant progress has been made, particularly with regard to the effects of chronic low-level oil pollution. Current and projected demands for energy in the United States are prompting accelerated development of offshore petroleum reserves, expanded oil tanker traffic, and proposals for construction of deepwater port facilities to handle the increasing number of supertankers. These developments will not wait for conclusive answers to questions on oil pollution. Recognizing this, we feel it is important that public administrators and policy makers be made aware of the inferences and trends evident in the research findings to date. These findings present a persuasive case that decisions regarding the handling of crude oil and petroleum products should be conservative and in favor of protecting the natural environment. While this report is by no means a complete review of the literature, it is sufficient to illustrate the potential danger of oil pollution to marine ecosystems and provide some guidance for policy decisions.

History is replete with examples of man's scientific and technological advances carrying him into situations he did not fully comprehend and with consequences he could not evaluate. Bella (1970) noted that "our ability to change this world is going to increase faster than our ability to predict what that change is going to be." He concludes that our management procedures must recognize the degree of ignorance we have about this world in which we live.

Pollution of the ocean by oil is a worldwide problem of growing concern to many nations. Spills like the *Torrey Canyon*, the *Arrow*, the Santa Barbara Channel blowout, and other spectacular incidents have helped stimulate international organizations of governments and industry to react to the problem. Viewed pragmatically, international response has been at least as adequate as domestic programs. Predicting the impact of an oil spill on the environment requires an understanding of the complex interactions involved. What

appears to be universally lacking is the difficult research leading to an understanding of chronic and sublethal effects of oil at the biological community level. The following discussion outlines these complexities and points out how they make most generalizations invalid and the extrapolation of most data dangerous.

DESCRIPTION OF OIL

Crude oil is a complex mixture of many different specific hydrocarbons and a variety of compounds containing sulfur, oxygen, nitrogen, and some trace metals. Hydrocarbons make up the bulk of crude oil and can roughly be placed into one of three classes: paraffinic, naphthenic, and aromatic. From one area to another, crude oils vary in their composition and in density, volatility, and solubility. Their relative toxicity will vary (Ottway, 1971) but is roughly proportional to their aromatic content.

Paraffinic (or aliphatic) hydrocarbons are straight or branched carbon chains and are saturated (thus no carbon-carbon double bonds) with hydrogen or other groups. These hydrocarbons are the least toxic, although they may have an anesthetic or narcotic effect if concentrations are great enough.

Naphthenic compounds (cycloparaffins) contain at least one ring structure that is saturated. With this base, more rings or chains may be attached to form a variety of complex molecules.

Aromatic hydrocarbons also contain a ringed structure, but the ring is unsaturated with hydrogen and contains carbon-carbon double bonds (benzene ring). The simplest aromatic is benzene, which is very toxic and relatively water soluble in comparison to most hydrocarbons found in crude oil. Benzene and other low-boiling aromatics are the most toxic petroleum fractions. High-boiling aromatics act as slower poisons than low-boiling aromatics, but they are equally severe in their effect. In addition, some are known to induce cancer; 3,4-benzpyrene, 1,2-benzanthracene, and some alkylbenzanthracenes have been isolated from crude oil, and their carcinogenic effects on animals and man have been demonstrated (Blumer, 1970).[3]

Olefinic hydrocarbons (paraffinlike but unsaturated and containing reactive carbon-carbon double bonds) are not generally found in crude oils but are plentiful in certain gasolines and other refined products. The fate of olefins in the marine environment is poorly understood, but this class of compounds may be quite reactive under certain conditions and may combine readily with hydrogen, oxygen, chlorine, sulfur, and other elements to produce toxic substances. Once incorporated into organisms, olefins may remain intact for surprisingly long times (Blumer, 1967). The full range of olefinic hydrocarbons probably interferes with the reception of chemical messengers, or odors, in the sea by certain marine organisms (Blumer, 1970, see footnote 3).

When crude oil is processed ("cracked"), olefins and other compounds for gasoline and fuel oils may be formed or separated. Fuel oils, commonly involved in spills, are rated from 1 to 6. Those rated 1 are the lightest, most volatile, and most toxic and have the greatest aromatic concentrations; those rated 6 are the least volatile, least soluble, and least toxic and are asphaltic (tarlike).

Hydrocarbons are not foreign to the marine environment; normal paraffins are synthesized by most, if not all, living organisms. Blumer, Guillard, and Chase (1971) characterized the natural hydrocarbon content of 22 species of phytoplankton and cited literature for zooplankton. There are certain characteristic differences, however, between hydrocarbons native to organisms and the hydrocarbons in petroleum, particularly in the relative distribution of the various hydrocarbons. Crude oils and certain petroleum products are complex mixtures that contain molecules of different sizes in ratios not found in any one species of organism. Certain specific paraffins, and some naphthenic and aromatic compounds, are rarely found in organisms not exposed to oil pollution. These characteristic differences have been the basis for several scientific papers (Blumer, Souza, and Sass, 1970; Ehrhardt, 1972; Clark and Finley, 1973; and others).

FACTORS INFLUENCING THE IMPACT OF OIL

The impact of oil on the marine environment is governed by several factors—physical, chemical, and biological—in addition to the inherent complexity of crude oil and refined products. The behavior, effects, and fate of an oil spill involve all of

[3]Blumer, M. 1970. Scientific aspects of the oil spill problem. Presented at NATO Conference, Brussels, 6 Nov. 1970, 21 p., Woods Hole Oceanogr. Inst., Woods Hole, Mass.

these factors; and because they are interdependent, the reliability of our predictions concerning the impact of a spill is limited by our knowledge of the least understood variable.

Straughan (1972) noted our general inability to predict the environmental impact of a spill because of the complexity of the matter, and identified several factors that govern biological damage caused by a spill: 1) type of oil spilled, 2) dose of oil, 3) physiography of the area of the spill, 4) weather conditions at the time of the spill, 5) biota of the area, 6) season of the spill, 7) previous exposure of the area to oil, 8) exposure to other pollutants, and 9) treatment of the spill. Several of these factors are touched upon below.

Natural Physical Processes Affecting Oil in the Water Column

Once oil is spilled, it is dissipated by evaporation, dissolution, and mixing or dilution in the water column. The natural processes are speeded by wind action and by waves and currents that increase spreading and vertical mixing. Various fractions respond differently to these processes, and the weathered residue behaves differently than the material originally spilled. A contaminated bay may be flushed by freshets, tidal action, or longshore currents. Some oil sinks directly to the bottom, especially in fresh water, where some oil fractions have densities approaching that of fresh water, and in water with high sediment loads. Certain fractions may undergo autoxidation.

Conover (1971) reported that sedimentation of fecal-bound oil that had been ingested by zooplankton may have accounted for up to 20% of the spilled oil entering the water column at Chedabucto Bay, Nova Scotia. Oil can also be removed from the water column by absorption within organisms and accumulation within the food chain. Suspended sediments carried by runoff from a major flood entered the Santa Barbara Channel area immediately before and after the well blowout (Kolpack, 1971). Kolpack noted that adsorption of oil on the flocculated suspended particles followed by decomposition was a major factor in carrying much of the oil to the sea floor. Kinney et al. (1970) reported, however, that in Cook Inlet, Alaska, glacial silt from the inlet had no apparent effect on the emulsion properties or the sinking of the type of crude oil found in that area.

Forrester (1971) noted the extensive distribution of oil particles stirred into the water by wave action after a bunker C oil spill in Chedabucto Bay. Oil particles were found to a depth of 80 m inside the bay and to depths of 45 m at a distance of 65 km outside the bay. Near-surface distribution of particles extended 250 km southwest along Nova Scotia in a band extending up to 25 km offshore. Berridge, Thew, and Loriston-Clark (1969) indicated that the stabilization of emulsions like those observed at Chedabucto Bay and elsewhere was caused by complex chemical components in the nonvolatile residues and not by bacterial activity, marine organisms, or suspended solid matter.

Environmental Differences

The fate and effects of oil spilled in the marine environment are difficult to generalize because several types of environments may be involved. Some extreme comparisons are tropics versus arctic, open ocean versus estuaries, and the differences between the intertidal and subtidal zones.

Within these environments are several diverse physical conditions such as temperature, salinity, oxygen, and nutrient concentrations, as well as biological differences such as species composition, diversity and density, and community metabolic rate. The prediction or assessment of pollution effects on the basis of observations extrapolated from one environment to another is seldom supported by adequate data. Unfortunately, however, few data on pollution effects exist for most areas and species, which has led to the use of information from areas that may be dissimilar in critical respects.

There are arguments as to which environment is the most stable and capable of withstanding attacks by additional pollution stresses. Copeland (1970), discussing the response of ecological systems to stress, suggested the principle that "...those systems already subjected to energy-requiring stresses are more likely to resist the changes than those (such as tropical systems) adapted to relatively constant environments." He concluded that estuarine ecosystems composed of organisms capable of wide adaptations and generalizations, such as north temperate systems, would be relatively unaffected by the same magnitude of disturbance that would drastically alter

a tropical system. Odum (1970) noted, however, that many estuarine species are living near the limit of their tolerance range and that any alteration in the environment, such as additional stresses caused by low levels of pollution, could exclude these animals permanently from the estuary.

All healthy balanced ecosystems are generally functioning at or near some critical tolerance limit. In an ecosystem with a variable environment, such as a north temperate estuary, responses to additional stress might not always be the same. For example, even though factors surrounding an oil pollution incident might be outwardly similar in respects to another spill in a comparable area, the biological impacts may differ. The ability of the local community to absorb the additional stress will be influenced by the coincidence of seasonal variability of natural stresses, the differences in vulnerability of stages in an organism's life cycle, and many other dynamic features of the ecosystem.

Biological Differences

The effects of oil pollution on many different organisms in various habitats may vary from no effect to responses of avoidance and decreased activity, to nonadaptive responses of panic and physiological stress. What kills one species may have little or no effect on another. Affected organisms vary from single cells, to sedentary clams, to highly mobile predators, each of which has different behavioral and physiological interactions with the environment.

Just as different species are affected differently, so may individuals within a species be affected differently. In particular, different life stages such as eggs, hatched larvae, and newly molted individuals may have different sensitivity to the same level of pollution. Mironov (1968), for example, reported that prelarval stages of barnacle, *Balanus* sp., were 100 times more sensitive to oil pollution than the adult form. This contrasts with the relative lack of sensitivity to crude oil by pink salmon eggs and sac fry, which were 10 times more tolerant than older fry (Stanley D. Rice and Adam Moles, Auke Bay Fisheries Laboratory, National Marine Fisheries Service (NMFS), NOAA, Auke Bay, AK 99821, pers. commun.).

Renzoni (1973) conducted a series of experiments on the toxicity of several crude oils and petroleum products to the sperm, eggs, and larvae of the oysters *Crassostrea angulata* and *C. gigas* and the mussel *Mytilus galloprovincialis*. He found a relatively high degree of tolerance by eggs and larvae but reported that the fertilizing capacity of sperm was markedly affected by similar exposures.

Biodegradation

Quantitative data describing the biodegradation of various components of crude oil, especially in arctic and subarctic areas, are limited.

ZoBell (1973a) briefly reviewed the current understanding of microbial degradation of oil, including interactions, limiting factors, problems, and perspectives. Ahearn (1973) stated that research on microbial utilization of hydrocarbons for treatment of oily pollutants in the environment, though more intensive in recent times, is still in an early stage of development. It is known that microorganisms can degrade much of a crude oil, particularly the less toxic paraffinic compounds. No single species can degrade all the compounds, but many different species together can metabolize a large number of the compounds, if not all. The rate of microbial degradation, which is principally aerobic, decreases with a decrease in temperature. Large quantities of oxygen are needed. It has been estimated, for instance, that complete oxidation of 1 gallon of crude oil would require all of the dissolved oxygen in 320,000 gallons of water. This comparison may be unrealistic because most oil is at the surface of water in contact with air and only the outer surfaces of oil can be attacked at any one time. It is reasonable to assume, however, that an oxygen-deficient environment may well occur under some oil slicks and in oil-contaminated sediments.

Glaeser and Vance (1971) studied the behavior of Prudhoe Bay crude oil in controlled spills in the Chukchi Sea but were not able to isolate any microorganisms which could degrade hydrocarbons at the ambient temperatures of the Arctic, although some emulsification of the crude oil was observed. However, ZoBell and Agosti (1972) collected oil-oxidizing bacteria near natural oil seeps from the Alaska North Slope and observed oxidation rates of mineral oil at −1°C and above. They noted that the solid surfaces of the ice crystals appeared to facilitate bacterial growth, because the rate at −1°C was substantial and near the 4°C rate.

The apparent contradiction between the studies is probably best explained by ZoBell's (1973b) continued observations with North Slope bacteria. He

found that the nine different crude oils were not degraded as rapidly as purified mineral oil. Glaeser and Vance's studies were with microorganisms from the surface water of the Chukchi where small numbers of bacteria may have been present. Furthermore, the observations of Straughan (1971), who noted the apparent lack of biological damage by the Santa Barbara blowout, may apply here. She discussed the possibility that the fauna had an unusually high tolerance for oil, probably because of adaptation from chronic low-level oil exposures from local natural seepages. The observations of ZoBell and Agosti (1972) on the oxidation rates of oil at −1°C may be an example of similar adaptive response by the North Slope bacteria collected near natural seeps. These oxidation rates and other adaptive responses might not occur from organisms that have not been preacclimated to chronic low-level exposures of oil and may explain why Glaeser and Vance obtained reports of negligible oxidation rates at 0°C from microorganisms from surface water of the Chukchi Sea. Robertson et al. (1973) estimated hydrocarbon-oxidizing bacteria populations were in the order of 1/ml in Cook Inlet and Port Valdez, but less in the Arctic Ocean. Numbers decreased with salinity in Cook Inlet and with depth in Port Valdez.

ZoBell (1963) reported that oil is readily adsorbed by clay and silt and suggests that although adsorption of oil by solids renders the oil more susceptible to autobial and microbial oxidation, almost no bacterial decomposition occurs after burial in the bottom sediments, probably because the environment is anaerobic. Blumer and Sass (1972) found that some paraffinic hydrocarbons remained in bottom sediments 2 yr after the West Falmouth oil spill and aromatic hydrocarbons were prominent, which suggests that these more toxic compounds are utilized by bacteria to a minimum degree.

Oil in Sediments

The effect of oil in sediments is poorly understood, although several authors have quantitated oil concentrations and noted its persistence. Scarratt and Zitko (1972) observed little diminution of bunker C oil concentration from soft sediments 26 mo after the wreck of the tanker *Arrow*. The oil reached maximum concentrations in coarse sediments 1 yr after the spill, but the concentrations reduced thereafter. Chemical degradation can occur but is normally restricted to the surface layer of the bottom penetrated by ultraviolet light. Blumer and Sass (1972) noted that "The preservation of hydrocarbons in marine sediments for geologically long time spans is one of the accepted key facts in current thought on petroleum formation." However, in spite of the stability of hydrocarbons in marine sediments, there are characteristic differences between the hydrocarbons in polluted and unpolluted areas. Tissier and Oudin (1973) found that hydrocarbons in polluted sediments differed from those of unpolluted sediments by having lower percentages of heavy components, by not having an odd carbon dominance in the n-alkanes, and by having polycyclic aromatic hydrocarbons with alkyl chains.

Oil residues were observed on sandy beaches by ZoBell (1963) and in marshes and in sediments of the deepest area (15.3 m) near the West Falmouth spill by Blumer, Sass, Souza, Sanders, Grassle, and Hampson (1970).[4] About 2 wk after fuel oil was spilled at Resolute Bay, Northwest Territory, in August 1970, casual sampling revealed that oil penetrated into beach material to a depth of about 3 inches (7.6 cm) (Barber, 1971). Oil may be buried and stay intact for a considerable time, even at the higher temperature of the California coast (ZoBell, 1963). During laboratory experiments, Johnston (1970) determined oil decay rates in sand columns contaminated with various concentrations of oil. Ten percent of the oil was oxidized over a period of several months; the remaining 90% decayed much slower.

The West Falmouth spill provided a unique opportunity for a study of the immediate and long-term effects of an oil spill on an area where the previously existing environmental base was well known (Blumer, Sanders, Grassle, and Hampson, 1971). One effect of the oil was to reduce the cohesion of bottom sediments of tidal marshes and the estuary by killing the benthic plants and animals (Blumer, Sass, Souza, Sanders, Grassle, and Hampson, 1970, see footnote 4). The resulting erosion spread hydrocarbons to new areas, where the process was repeated. Because of the stability and persistence of the hydrocarbons in marine bottom sediments, Blumer, Souza, and Sass (1970) noted that hydrocarbons may be returned to the biosphere by organisms living and feeding in the sediments. This redistribution of hydrocarbons can be

[4]Blumer, M., J. Sass, G. Souza, H. Sanders, F. Grassle, and G. Hampson. 1970. The West Falmouth oil spill. Unpubl. manuscr. Woods Hole Oceanogr. Inst., Ref. No. 70-44, 32 p.

the source of a chronic pollution problem near that spill.

It is quite possible that normal functions of sediments will be disrupted when contaminated by oil. Changes in the sediments that are subtle and difficult to detect, such as decreased nutrient recycling and community metabolism, could result in the loss of significant contributions to the productivity and stability of an area. Although oil in sediments has been monitored and measured after several spills, other aspects of the oil–sediment relation have yet to be studied.

BIOLOGICAL EFFECTS OF OIL POLLUTION

Blumer (1970, see footnote 3) summarizes the potential damage to organisms from pollution by crude oil and oil fractions as follows:

1. Direct kill of organisms through coating and asphyxiation.
2. Direct kill through contact poisoning of organisms.
3. Direct kill through exposure to the water-soluble toxic components of oil at some distance in space and time from the accident.
4. Destruction of the generally more sensitive juvenile forms of organisms.
5. Destruction of the food sources of higher species.
6. Incorporation of sublethal amounts of oil and oil products into organisms (resulting in reduced resistance to infection and other stresses—the principal cause of death in birds surviving immediate exposure to oil).
7. Incorporation of carcinogenic and potentially mutagenic chemicals into marine organisms.
8. Low-level effects that may interrupt any of numerous events (such as prey location, predator avoidance, mate location or other sexual stimuli, and homing behavior) necessary for the propagation of marine species and for the survival of those species higher in the marine food web.

Some of the potential effects described by Blumer may be obvious, such as the direct deaths from acute exposures. Less obvious indirect deaths may occur from effects at either the individual or population level. Individual organisms subjected to sublethal exposures may undergo an "ecological death" if they are less capable of adjusting to and responding to natural changes (stresses) in their physical and biological environments. For example, postmolt Tanner (snow) crab, *Chionoecetes bairdi*, lost legs during short exposures to crude oil (Karinen and Rice, in press). Even though the crabs lived through the exposure, they probably could not have survived in the natural environment because some of them lost as many as seven legs, including both chelae. Moreover, crabs or other adversely but sublethally affected organisms would be more likely to be eliminated by natural selection.

Effects from chronic exposure may be adverse to a population over a period of time if exposed but normal-appearing adults have their ability to reproduce seriously impaired. This loss may be due to physiological changes such as reduced fecundity and delayed ovary development or to impaired behavioral mechanisms which could prevent mate location and identification or homing and timing of spawning. Although the effects at this level might not result in death of the adult, they could induce a trend of decreasing numbers that might eventually eliminate the population or race.

Hydrocarbons in the Marine Food Web

Blumer (1967, 1969) and Blumer, Guillard, and Chase (1971) studied the fate of organic compounds in the marine food web. They found that certain hydrocarbons, even highly unsaturated ones, are stable once they are incorporated into a particular marine organism and that they may pass through many members of the marine food web without alteration and may actually be concentrated in tissue. Most hydrocarbons are lipid soluble and thus may accumulate in food webs to the point where toxic levels are reached. This pathway is illustrated by the well-documented chlorinated hydrocarbon group of pesticides.

The entrance of oil-derived hydrocarbons into marine food webs has been observed several times at several trophic levels. Conover (1971) reported that 10% of the bunker C oil in the water column after the Chedabucto Bay spill was combined with zooplankton and that their feces contained up to 7% oil. Mironov (1968) also noted the ability of some zooplankters to accumulate hydrocarbons. The incorporation of hydrocarbons into the food web at these primary levels assures exposure at all higher trophic levels.

Blumer, Souza, and Sass (1970) and Ehrhardt (1972) reported pollution-derived hydrocarbons in shellfish. Uptake and retention of labeled hydrocarbons of several classes by a marine mussel,

Mytilus edulis, was noted by Lee, Sauerheber, and Benson (1972). Smith (1968) reported the presence of oil and benzene-ring compounds in the feces of limpets browsing on an oily deposit, and in top shells, *Monodonta*, and limpets, *Patella*, living on oiled rocks. He reported that analysis of the gut indicated "the proportion of oil in material ingested by these animals was estimated as about 20-30 percent in *Patella* and 5-50 percent in *Monodonta*."

Organisms at the highest trophic levels may be affected directly by the oil itself or indirectly by hydrocarbons that have reached them through the food web. Horn, Teal, and Backus (1970) found large amounts of tar in the stomachs of three saury, *Scomberesox saurus*, from a sample of ten in the Mediterranean Sea near Gibraltar. Although saury are generally considered to be carnivorous, the occurrence of tar and also of "vegetable debris" in one of the stomachs examined by Horn et al. (1970) suggests that the species is not a very discriminate feeder. Although all ingested oil was obviously not incorporated into the tissues (some oil was found in feces), such feeding behavior does describe a pathway for hydrocarbons to be directly taken up into the tissues of the organism. Thus, oil ingested, absorbed, and even adsorbed may enter the food chain when contaminated organisms are eaten.

Carcinogenicity

Some doubt may remain as to the direct carcinogenicity to man of crude oil and crude oil residues in marine organisms (Blumer, 1969), but evidence pointing toward this is accumulating (Blumer, 1970, see footnote 3; 1972). A literature search and evaluation conducted for the U.S. Coast Guard by Battelle Memorial Institute (1967) noted that shellfish, although alive, may have been unfit for consumption because of the carcinogenic hydrocarbon 3,4-benzpyrene in their bodies. Oysters that were heavily polluted and contaminated with ship fuel oil were reported to contain 3,4-benzpyrene. The Battelle review also reported that barnacles attached to creosoted poles contained the same carcinogenic hydrocarbon (3,4-benzpyrene). Sarcomas were elicited when extracts from the barnacles were injected into mice. The endemic occurrence of papillary tumors around the rectal opening of soft-shell clam, *Mya arenaria*, was reported, but the author (Battelle Memorial Institute, 1967) did not feel these were due to oil pollution, even though the clams were taken from waters adjacent to areas highly polluted by ship fuel oil. Hyperplasia in reproductive cells of a bryozoan in response to coal tar derivatives was observed by Powell, Sayce, and Tufts (1970). They noted that similar abnormalities may also have occurred in coastal faunas exposed to spills such as the *Torrey Canyon* and the Santa Barbara blowout. However, most observations on these spills were concerned with gross mortality and may not have detected the sublethal effects.

ZoBell (1971) reported the natural synthesis and metabolism of carcinogenic hydrocarbons by several marine organisms. Thus, oil pollution is certainly not the only source for carcinogenic hydrocarbon introduction into marine food webs. Suess (1972) recognized that carcinogens were in seafoods but concluded that they would probably not be dangerous unless the foods contained an excess amount of polynuclear aromatic hydrocarbon carcinogens. Carcinogenesis from oil-contaminated marine organisms has not been proved, but Ehrhardt (1972) expressed a need for carcinogenic testing of hydrocarbon fractions extracted from marine organisms contaminated by exposure to oil.

Observed Toxic Effects

A study of the available information on potential toxic effects of oil pollution reveals more unknowns than proven conclusions. Only a decade ago, ZoBell (1963) reviewed the literature on the effects of oil on bacteria and higher organisms and concluded that oil pollution had no great adverse impact on fishery resources in general. He did point out, however, a few reports of toxic effects, tainting of flesh, and damage to vessels and fishing gear.

The quantity of literature on effects of oil spills has increased since the *Torrey Canyon* incident of 1967. Most of the recent work has depended on onsite visual surveys after occurrence of an oil spill rather than on experiments and detailed study. The surveys have been limited mostly to the effects of oil and of cleaning or dispersing agents on primarily adult intertidal organisms and populations. These observations on a restricted segment of the affected ecosystem include only a few of the factors that influence the total impact of oil. Wilson, Cowell, and Beynon (1973) noted that the absence of results from studies at the com-mu-

nity level make the interpretation, extrapolation, and use of many observations very difficult. Further, the differences between various crude oils and between the hundreds of petroleum products in their physical and biological effects must always be kept in mind. Comparative data generally are far too few to permit attaching any relative significance to production area or product formulation in this review.

Field Investigations

The utility of many "after-the-fact" studies is limited because of the lack of knowledge of prespill conditions. Data are often collected without proper controls for comparison, and knowledge of natural local fluctuations and species composition of animal populations is usually quite limited. For these reasons conclusions about the impact of a particular spill may vary.

Ehrsam (1972) reported substantial immediate kills of marine life from a fuel oil spill at Anacortes, Wash., and concluded that if larval and juvenile forms of certain organisms were killed, the full impact of the spill may not be known for some time. Katz (1972) observed intertidal transects of the same affected area and concluded that the effects were minor and long-term effects would be unlikely. Webber (1972) pointed out, however, that these after-the-fact studies observed only a small wedge of the total biota. Knowledge of subtidal and benthic organisms as well as larvae and juveniles was lacking.

Other large spills have been studied in greater detail and have contributed significantly to our understanding of the gross effects of oil. Yet, they have been unable to answer many important questions on the effect of pollutant hydrocarbons in the marine environment, and generalizations learned from one spill may not apply to another because each is different.

Field observations of behavior and effects of oil in Arctic ice environments are few. The U.S. Coast Guard investigations in the Arctic have primarily been directed toward gaining knowledge to improve cleanup methods (Glaeser and Vance, 1971; McMinn and Golden, 1973). Campbell and Martin (1973) discussed possible large-scale movements and persistence of oil spilled in the Beaufort Sea. They suggested that the surface waters of the Arctic Ocean and the winter waters of Chedabucto Bay, Nova Scotia, might be comparable, particularly with regard to the physical behavior of oil. Chedabucto Bay is the site of the grounding of the tanker *Arrow* in February 1970 with 2.8 million gallons of bunker C oil aboard. Campbell and Martin (1973) found that highly stable oil-water emulsions formed to a depth of 50 m throughout Chedabucto Bay. They described conditions by which oil reaching the edge of the pack ice could be distributed under the ice.

Thomas (1973) also suggested that results of the studies at Chedabucto Bay might in some respects be applicable to spills in the Arctic. He observed remobilization of oil from beneath the weathered surface of deposits during the summers following the *Arrow* spill and the subsequent re-oiling of some intertidal areas, adding a chronic pollution aspect to the spill. Extensive mortalities of soft-shell clams and salt marsh cord grass, *Spartina alterniflora*, resulted where this occurred. In other areas, clams were visibly contaminated with oil and clam fishing was closed, at least through the summer of 1972 (Thomas, 1973).

When the *Torrey Canyon* broke up near the southwest coast of England in 1967, 15 million gallons of Kuwait crude oil with a high aromatic content were released. Efforts to cope with this first super disaster depended principally upon 2 million gallons of toxic dispersant, which probably caused more damage than the oil, most of which had weathered at sea for a week or more before reaching the shores. Many techniques for oil containment and control on the seas were attempted during the time oil leaked from the tanker; the fact that they all failed reveals the inadequacies of our technology and preparedness for such emergencies.

Extensive investigations of the West Falmouth spill by Blumer and his associates at Woods Hole provide one of the best documentaries of an oil spill. A total of 185,000 gallons of no. 2 fuel oil (41% aromatic content) were spilled in 1969 from a ruptured barge. Intertidal and subtidal benthic organisms of all phyla were killed during the first few days (Blumer and Sass, 1972). Blumer, Souza, and Sass (1970) showed that the uptake of fuel oil hydrocarbons by shellfish left them unfit for human consumption later. Blumer and Sass (1972) reported the continued persistence of fuel oil hydrocarbons in the sediments after 2 yr. Although there had been some degradation, the boiling range and composition of the hydrocarbon mixture was basically unchanged.

The 1969 Santa Barbara blowout released an estimated 5,000 barrels of crude oil per day ini-

tially (Foster, Charters, and Neushul, 1971), yet biological damage was not reported widespread and the area has started to recover. Foster, Neushul, and Zingmark (1971) observed that much of the damage to intertidal areas corresponded to sand movement, probably from storm damage. Cimberg, Mann, and Straughan (1973) concluded that the blowout had less effect on intertidal marine organisms than did sand movement and substrate stability. Straughan (1971), reporting on investigations at Santa Barbara, noted factors unique to that accident: 1) the long history of natural oil seepage in the Santa Barbara Channel and 2) the unusually heavy winter runoff at the time of the spill, which reduced salinities, increased sedimentation, and possibly increased pesticides in the channel. R. L. Kolpack (pers. commun. cited by Kanter, Straughan, and Jessee (1971)) noted that Santa Barbara crude oil is relatively insoluble in seawater and contains a very low percentage of the toxic aromatic compounds. Thus, information gathered on the effect of the Santa Barbara spill or any other is of limited utility in predicting the ecological effects of crude oil spills or of other oils in other areas.

Several studies have provided encouraging reports of varying degrees of recovery after some of the recent larger spills. Investigations about 1½ yr after the *Torrey Canyon* spill revealed that at least the affected shoreline areas were recolonizing and recovering, although recovery was not yet complete at that time (Spooner, 1969). The areas affected by the 1969 Santa Barbara blowout were recently reported to be recovering (Cimberg et al., 1973), as was a reef affected by bunker C oil spilled from a tanker collision in San Francisco Bay in January 1971 (Chan, 1973).

Too few of the controlled field investigations have been designed to bridge the gap between field surveys after spills and simulative laboratory experiments. Perkins (1970) exposed periwinkles and other intertidal organisms to the oil dispersant BP1002 in the laboratory and then released marked individuals in the natural environment. After recapture of the individuals exposed, he found that survival from doses as low as one three-thousandth of the 24 h LC_{50}[5] was lower than among the recaptured controls. Crapp (1971a) conducted field experiments by applying crude oil and oil emulsifiers to the intertidal zone. Physical damage by the oil was observed, but toxicity damage was not great because the oil had previously been exposed to air; in contrast, the oil-emulsifier mixtures were toxic. Baker (1970) applied a crude oil to salt-marsh plots at different times of the year and monitored the effects on plants. Summer applications of oil severely affected annuals but not perennials.

[5]24 h LC_{50} equals that dose of toxicant that resulted in 50% survival after 24 h exposure.

Laboratory Studies

Experiments in the laboratory also do not provide all the answers about how an oil spill will affect a marine organism or its environment. Laboratory research has demonstrated the toxicity of various crude oils and petroleum products on several forms of marine life. Much of this research has focused on the planktonic life history stages of pelagic and benthic animals. Many of these planktonic larvae are phototactic at their earliest stages and concentrate in the surface layer of the sea. This community of the surface 5 cm, the neuston, is the first affected by most oil entering the water. Thus, many organisms are most sensitive to oil pollution at the time of their greatest likelihood of exposure.

Studies by Mironov (1968) on the development of fertilized eggs of the plaice, *Rhombus macoticus*, showed extreme sensitivity of the eggs to the influence of the oil products in seawater. He noted that injury to the eggs occurred at concentrations of 10^{-4} to 10^{-5} ml/liter (0.1 to 0.01 ppm). In these concentrations of oil products, 40 to 100% of the hatched prelarvae showed some signs of degeneration during development and perished. Mironov (1969a) also demonstrated that 0.001 ml of crude oil per liter was toxic to the eggs of anchovy, scorpionfish, and sea parrots from the Black Sea.

Newly set spat of *Elinius modestus*, an Australian barnacle introduced to Europe, were tolerant of 100 ppm crude oil but showed reduced cirral activity and retarded shell growth (Corner, Southward, and Southward, 1968). Adults of this species also showed reduced activity at 100 ppm (Corner et al., 1968).

Mironov (1969b) tested crude oil on several copepods and a cladoceran, and found that 0.001 ml/liter accelerated death in all forms and that 0.1 ml/liter caused death in less than 1 day. *Acartia* and *Calanus* died at 0.01 ml/liter oil in seawater in 72 to 96 h (Mironov, 1968). Larvae of crab and shrimp died at 1 ppm (Mironov, 1969c).

Little is known of the mechanisms of various

toxic effects. Damage to cell membranes and the cellular contents of planktonic larvae may occur. Goldacre (1968) demonstrated such cytological damage and death to the freshwater protozoan, *Amoeba proteus*, exposed to crude oil fractions. Brocksen and Bailey (1973) measured increased respiratory response of striped bass and chinook salmon to sublethal concentrations of benzene. The fish recovered to normal activity when they returned to noncontaminated water for several days. Rice and Short were unable to demonstrate changes in the enzyme activity of cholinesterase or Na-K stimulated ATPase in juvenile pink salmon, *Oncorhynchus gorbuscha*, after in vivo and in vitro exposures to Prudhoe Bay crude oil (Stanley D. Rice and Jeffrey Short, Auke Bay Fisheries Laboratory, NMFS, NOAA, Auke Bay, AK 99821, pers. commun.). This is somewhat surprising because various hydrocarbon pesticides have been shown to affect both enzymes.

Cellular membranes of phytoplankton are also damaged by the penetration of hydrocarbon molecules. The cellular contents are extruded, and oil penetrates into the cell. Detergents administered in a concentrated solution also penetrate the plant cells and cause the dissolution of cellular membranes and the extrusion of cellular fluid (Ruivo, 1972). The effects of oils on plant respiration are variable, but an increase of respiration is frequently observed, probably because of an alteration of the mitochondria. This could result in an uncoupling of the oxidative phosphorylation enzymes from the electron transport enyzmes, and the energy release would be lost as heat.

All marine animals ultimately depend on the photosynthetic activity of phytoplankton and algae for the production of biomass. Baker (1971), reviewing the literature, noted that weathered *Torrey Canyon* oil had no apparent effect on the photosynthetic activity of green algae. He did find, however, that green algae treated with fresh crude oil died and that photosynthesis in kelp, *Macrocystis* sp., was reduced when the kelp was exposed to various petroleum products. Kauss et al. (1973) determined the effects of crude oil on several species of freshwater algae in both field and laboratory experiments. In their field studies, response of the algae to a spill varied from suppression of growth to its stimulation. In their laboratory studies, they noted depressed photosynthetic rates in one algal species after it had been exposed to aqueous crude oil and other selected aromatics.

Growth of phytoplankton from axenic cultures and mixed cultures of natural populations was inhibited by water-soluble extracts from no. 2 fuel oil in a laboratory study by Nuzzi (1973). Mironov and Lauskaya (1968) demonstrated that marine phytoplankton vary several orders of magnitude in sensitivity to crude oils and kerosene in oil concentrations ranging from 0.1 to 1,090 ppm. Of the 20 species tested, a diatom, *Ditylum brightwellii*, was the most sensitive. The wide variation in susceptibility may account for the statements in other reviews of low toxicity of crude oils to phytoplankton (Føyn, 1965; Nelson-Smith, 1970) and supports the premise that biological response will differ among species.

Sublethal and Chronic Effects of Oil Pollution

While data are scarce in some of the areas previously discussed, information on the ecological effects of chronic sublethal oil pollution is essentially nonexistent. Observing these effects is difficult because they are not dramatic and may pass unnoticed by the casual observer. A full description would require observations extending over a long period of time.

Lewis (1972), commenting on approaches to the study of chronic pollution, contends "... that without a massive expansion of ecological and reproductive data by simultaneous multidisciplinary studies not only will we be unable to detect the significant long-term changes, but we will even remain unaware of the most suitable or important species and methods to build into a monitoring program."

A few studies concerning sublethal effects on organisms have appeared in the literature. Wells (1972) reported deaths of lobster larvae to exposures of 0.1 ml of Venezuelan crude oil per liter, while larvae exposed to 0.01 ml/liter had poor survival rates and were unable to molt to the fourth stage. Decreased limb (cirral) activity of marine larvae exposed to oil has been reported (Smith, 1968). Kuhnhold (1972), while observing toxic effects of crude oils to eggs of cod and to larvae of cod, plaice, and herring noted that the larvae exposed to oil-contaminated water were unable to avoid well-defined milky clouds of toxic oil dispersions. Blanton and Robinson (1973) observed damage to the gills of specimens of seven species of fish that had apparently been exposed to an oil spill off the Louisiana coast.

Crapp (1971b) observed that fucoid algae replaced barnacle and limpet populations near an outfall where the effluent contained about 20-25 ppm oil from treated ballast water of tankers unloading at Milford Haven. Although the relative oil content was low, the cumulative volume discharged was large (20,000 gallons of oil per year), a situation similar to that which may occur at Port Valdez, Alaska, when the trans-Alaska pipeline is completed.

Blumer (1972) discussed how low-level chronic effects of oil may damage marine organisms because of their dependence on natural organic chemical clues for a variety of functions. Salmon and other fishes utilize organic chemical clues in migrations; predators are attracted to prey by organic compounds at the parts-per-billion level (Whittle and Blumer, 1970); and other organisms may use chemical clues for predator avoidance, selection of habitat, and sex attraction. Blumer (1972) discussed the fears that oil pollution may interfere with these fundamental biological processes by masking or blocking, or by mimicking natural stimuli (resulting in false responses). He cited literature discussing the attraction of lobsters to kerosene and to purified hydrocarbon fractions derived from kerosene and noted that many dead lobsters were washed ashore after the West Falmouth spill. Blumer's fears about interference with chemoreception are further substantiated by the observations of Takahashi and Kittredge (1973) on crab behavior. Crabs, *Pachygrapsus crassipes*, exposed to water-soluble extracts of crude oil failed to exhibit feeding behavior or mating behavior responses when given appropriate chemical stimuli. Inhibition of chemoreception of some motile marine bacteria by a crude oil and several other hydrocarbons has been demonstrated by Walsh and Mitchell (1973).

Rice (1973) performed laboratory tests of avoidance of pink salmon fry to Prudhoe Bay crude oil and observed avoidance of oil at concentrations as low as 1.6 mg/liter. He concluded that salmon fry had the capability of detecting sublethal concentrations of oil and that they might avoid areas contaminated with sublethal levels of oil, which would result in confused and nonadaptive migratory behavior. The effect of chronic low-level pollution in areas such as Port Valdez, the terminus of the trans-Alaska oil pipeline, could be as severe as the total loss of all salmon runs in the local area because of altered behavioral responses to sublethal oil pollution.

CONCLUSIONS

Although crude oil generally should be considered toxic to marine organisms and harmful to their environment, most ecosystems can tolerate some pollution because oil can be dissipated or removed by processes like evaporation, autoxidation, dilution, and biodegradation. However, each organism and environment has a limit to how much oil can be absorbed and metabolized. Catastrophic spills are obviously pollution at a level that ecosystems cannot tolerate without damage. However, if the spills are not continued, the oil will slowly be removed and recovery of the area, at least to some degree, will likely occur. There is some evidence for recovery of some affected individuals.

Assessments of the impact of oil pollution cannot depend solely on evaluation of immediate kills of organisms from acute exposures. Chronic low-level oil pollution can cause subtle changes in organisms and is potentially more dangerous to the ecosystem than dramatic catastrophic spills. For this reason, the effects of chronic pollution warrant intensive study so that they will not be underestimated. The cumulative impact of "ecological death" of individuals which have impaired functions may be quite significant, yet difficult to assess because the death is not tied directly to an acute oil exposure. Equally as dangerous is the potential impact on populations where reproductive processes, adversely affected through physiological or behavioral mechanisms, result in fewer progeny. Chronic pollution may eliminate a species from an area entirely, and once eliminated that species may remain suppressed and may not repopulate the area because of continuing pollution or because its niche has been filled by a more tolerant, possibly less desirable, species.

The adverse effects of oil on animal populations has been of wide concern when stocks of special interest, such as those providing the basis of a sport or commercial fishery, have been involved. It should be remembered that changes in populations of lesser apparent significance will also cause changes in the community because each species population interacts with and is dependent on the rest of the community.

The foregoing review of information does little to simplify or ease the problems of policy makers concerned with marine production and transportation of oil and petroleum products. The weight of

the evidence leaves little doubt that oil poses a serious hazard to living marine resources, that spills and chronic pollution have happened and will continue to occur, and that the interests of the marine environment are best preserved if marine transportation of oil and petroleum products is minimized. The continuing need for new sources and increased amounts of energy, however, limits many of the conservative and prudent alternatives to these hazards. Until research has provided conclusive data, policy makers must continue to rely on these interpretative judgments for much of their guidance in making decisions that can profoundly affect the well being of marine ecosystems.

ACKNOWLEDGMENTS

We received much counsel in the preparation of the report from Jack E. Bailey, Theodore R. Merrell, Jr., Richard T. Myren, and Bruce L. Wing, biologists of the Auke Bay Fisheries Laboratory, NMFS, NOAA; and Robert C. Clark, Jr., of the Northwest Fisheries Center, NMFS, NOAA, Seattle, Wash.

HB 137 Alvin

Sponsor Analysis of HB 137

1. Need for the legislation

Oil pollution can and does cause a wide range of harm to renewable resources, and the environment in general. Many types of harm, which can have devastating long-term effects on important marine resources, cannot be quantified. Included within this category are mortality to fish and shellfish larvae, food chain contamination, carcinogenic effects, and chronic toxicity. (See "Effects of Oil on Marine Ecosystems: A Review for Administrators and Policy Makers," Evans and Rice (1974), copy of which is attached to this analysis.)

Much of the damage caused by oil pollution can at least partially be seen -- oil-smothered beaches and intertidal areas, dead birds, marine mammals and the like. Yet even here, under existing state and federal law, the public, and the industries which depend upon the productivity of the sea, must bear these damages without compensation. As impressive as oil spill liability statutes may seem on their face, the fact of the matter is that traditional concepts of burden of proof will normally pose an insurmountable barrier to effective redress for the great bulk of harm caused by oil pollution.

In Alaska, the primary remedy for recoving damages for oil pollution is AS 46.03.822, which provides a strict liability remedy for those damaged by oil discharges. Yet it must be remembered that, to receive any compensation under the statute, the plaintiff must prove actual loss, the precise economic value of the loss, and causation. It is naive to believe that in any but the most basic cases can that burden be met. For example, let us suppose that, two years after a major oil spill, the salmon run in the area declines by 30%. Is that decline attributable to the oil spill? Natural fluctuation? Hard winters? Overfishing? A little of each? An even greater problem, of course, arises with regard to the subsistence user, who must prove not only causation, but must also meet his burden of establishing an exact dollar figure for lost subsistence opportunities. As the Court of Appeals for the Ninth Circuit warned in Union Oil Co. v. Oppen, 501 F. 2nd 559 (1974), after holding that commercial fishermen could sue for lost profits due to oil pollution:

> "To [recover any damages] it must be shown [by the fishermen] that the oil spill did in fact diminish aquatic life, and that this diminution reduced the profits the plaintiffs would have realized from their commercial fishing in the absence of the spill. The reduction of profits must be established with certainty and must not be remote, speculative or conjectural. . . . These are not small burdens, nor can they be eased by our abhorrence of massive oil spills. All that we do here is to permit plaintiffs to attempt to prove their case. . ." Id at 570.

The problem, of course, reaches unmanageable proportions when the state, on behalf of the public, seeks redress for harm caused to its natural resources. Here we deal not with lost profits, but with the diminution of the quality of the state -- lost recreational opportunities, decreased tourism, loss of heritage and the like.

The State of Maine considered it a major victory when a federal district court ruled in Maine v. M/V Tamano, 357 F. Supp. 1097 (D.Me. 1973) that the state could sue for these kinds of damages. The diffi ulty, of course, came afterwards -- in translating the harm from the spill into a dollar figure. Maine was fortunate in this instance. The primary visible harm was the direct coating of commercially valuable clams. The state actually conducted an on-site survey, and counted the dead clams. Yet even here, the inability of the state to put a dollar figure on the value of "in place" clams forced an out-of-court settlement of $750,000.

In most cases, however, the burden on the state will be far more formidable. While dead clams can be more or less effectively surveyed, most species cannot. And what of the indirect damages to commercial species -- such as food chain contamination? And the problem of valuation of non-commercial species? What is the "in place" value of a trumpeter swan, or a whale?

Alaska's answer to this problem has been the modest civil assessment provision of AS 46.03.760, which provides for an assessment of not less than $500, nor more than $100,000 for oil spills, based on the toxicity of the substance discharged, and the receiving environment. The statute is intended to provide "liquidated damages" for harm caused by oil pollution.

The most glaring problem with the statute is the $100,000 upper limit. In light of the fact that in many situations, the only recovery the state will make will be under sec. 760, the $100,000 figure seems ludicrous when applied to a Torrey Canyon or Santa Barbara.

The $100,000 figure is unreasonably low for another reason. Any civil penalty scheme should be regulatory as well as remedial. The penalties should be sufficiently high to constitute a meaningful stimulus to comply with the laws which they enforce. A potential maximum exposure of $100,000 no doubt fails to even register in the cost-benefit analysis of oil handling operations. An illustrative anecdote might be provided here. Last summer, Exxon Corporation willingly paid the U. S. Environmental Protection Agency $100,000 in civil penalties for a 200-400 gallon discharge of oil into the Beaufort Sea, to protect a "tight hole" from potential exposure in litigation. With regard to oil spills, sec. 760 fails its regulatory, as well as its compensatory role.

Sec. 760 is primarily addressed to continuing acts of pollution -- by depriving the discharger of the economic incentive of continuing to violate state law. It is not an appropriate enforcement mechanism for single-act oil spills. Even with the presence of the toxicity and receiving environment criteria, it is still exceptionally difficult to apply to any given oil spill. A person simply has no means of assessing his potential liability under the law. A trial to set the amount of the assessment remains largely potluck, and, as a result, there have been none. Cases under the law languish for years, while the private and public bar argue across the negotiating table as to whether the spill in question is a $500, or $50,000 discharge. There are more efficient, as well as more effective ways of protecting the public interest.

2. Major issues regarding HB 137

A. What is a civil penalty?

Although called a "penalty," the primary purpose of a civil penalty is to compensate for public harm, and to effectively encourage the regulated industry to comply with the laws which it enforces. See U.S. v. Mar.-Tee Contractors. _____F. Supp. _____, 8 ERC 1925 (D.N.J. 1976). In both intent and operation, HB 137 is remedial and regulatory, rather than punitive in nature.

B. Why dollars per gallon?

Civil penalty schemes are usually open-ended -- like current sec. 760 -- with a broad range between the lower and upper limits. This inevitably leads to the problems the state has faced with sec. 760.

The consequences of oil pollution should be definitively and unequivocally established from the outset. The dollars per gallon approach objectively grades the penalty according to the legree of public harm caused. The approach also furthers the regulatory purposes of the bill, by increasing the incentives for safe operation according to the amount of oil handled.

C. Why should an administrative agency establish the dollars per gallon schedule?

In the bill, the legislature establishes both the amount of the penalty, and the criteria for its application. What remains is a ranking of the relative sensitivity of receiving environments, and the relative toxicity of various types of oil. That is a technical effort which is properly vested in an administrative agency.

It might be argued that the establishment of a particular dollars per gallon figure should be established on a spill-by-spill basis by the courts. That, of course, would lead to precisely the same problem faced in utilizing current sec. 760. Moreover, courts are simply not equipped to make these kinds of relative judgments.

D. Why $5 to $50 per gallon?

We believe that $5-$50 per gallon is reasonably related to the gravity of the harm caused by oil pollution. In arriving at the figure, we of course recognize that it is impossible to quantify the environmental harm caused by oil pollution. But this bill is not an attempt to rigidly pre-establish damages. It is a penalty scheme in lieu of damages for which the public will never recover. It is also, of course, intended to serve as a meaningful incentive for safe operations.

On this point, it should be noted that a significantly lower range would result in unreasonably low assessments at the low end of the scale. For example, at a maximum range of $1 per gallon, the discharge of 100 gallons of oil to a salmon stream would result in a penalty of $100 -- a sum hardly commensurate with the gravity of that kind of incident.

E. Shouldn't there be an upper limit on liability?

Under HB 137, an upper limit does exist -- $50.00 per gallon. The total limit of liability thus depends upon the total amount of oil spilled.

To place a dollar limit on the total amount that may be assessed would represent a policy judgment that, at a given point, the harm caused by oil pollution should be

borne by the public, rather than the discharger. The administration is not prepared to make that judgment. In this regard, it should be noted that Alaska currently imposes unlimited strict liability for actual damages -- as do Maine and Florida. See AS 46.03.822.

Admittedly, the recoveries which might be had under HB 137 are conceptually very high. So, it should be added, is the level of impact which an oil spill catastrophe can cause, as well as the figures which enter into industry's calculations in determining what level of safety is economically justifiable.

F. Why is it necessary to establish vicarious liability?

HB 137 does extend liability for the penalty to certain persons who are in a position to control the integrity of operations from which the discharge occurred. For example, oil terminals are made vicariously liable for spills caused by vessels which load at their facilities. Similarly, the lessee of an offshore platform is made vicariously liable for discharges caused from his platform, even though the actual cause of the discharge may be due to the acts of an independent contractor.

Focusing on the question of vicarious liability for terminals, it should be stressed that the owners of the transported oil are the ones who choose the carriers which

handle their products. Because of the terminal's ability to insure that only the safest vessels, and most experienced crews enter Alaska waters, it simply makes sense, as a matter of equity, to hold the terminal responsible for the vessels' actions, while they are in state waters.

It is this philosophy which motivated §204 of the Trans-Alaska Pipeline Authorization Act (43 USC §1653(c)) which makes the owners of the TAPS oil, through the Trans-Alaska Pipeline Liability Fund, vicariously liable for damages (above $14 million) caused by oil spills from vessels which service the terminal. It is this same philosophy which led the State of Maine, in its Oil Discharge Prevention and Pollution Control Act of 1970, to make oil terminals vicariously liable for oil spills caused by "vessels destined for the licensee's facilities." 38 M.R.S.A. §552. This vicarious liability provision was upheld by the Maine Supreme Court in Portland Pipe Line Corporation vs. Environmental Improvement Commission, 307 A 2nd 1 (1973).

There are very real practical reasons for creating vicarious liability, aside from the amount of control which the terminal exercises over the quality of the vessel and its crew. First, the "independent contractor" defense -- which may be available if vicarious liability were not created -- has generally caused severe problems in oil spill

enforcement. For example, the dogged insistence of Alyeska Pipeline Service Company that it is not responsible for oil spills caused by independent contractors engaged in Trans-Alaska Pipeline work has frustrated state enforcement efforts in that regard.

Litigation against the owner of the vessel will often be fruitless. The vessel's owner or charterer will often be protected under the federal Limited Liability Act (46 USC §183, 186), which provides that the liability for damages of the vessel's owner or bareboat charterer as a result of a maritime incident will often be limited to the value of the vessel and freight on board after the incident. After a tanker grounding, of course, that value will be rather small. Of course, since HB 137 imposes liability for penalties, and not damages, it will be the state's position that the Limited Liability Act is inapplicable. It is, however, far from certain how the federal courts will treat this hybrid regulatory approach vis-a-vis that act.

The Torrey Canyon disaster provides a tragi-comic example of precisely this problem. On March 18, 1967, the Italian master of this Liberian registered flagship ran aground off the coast of England, spilling, over a period of days, most of her 119,000 tons of crude oil. On March 28, the vessel was sunk by RAF bombers.

The Torrey Canyon was owned by Barracuda Tanker Corp., a subsidiary of Union Oil Co. of California. Barracuda owned the boat pursuant to a sale-lease back arrangement with Union.

Barracuda immediately sued to limit its liability. The federal court obliged, limiting Barracuda's liability to $50 -- the value of one lifeboat which survived the bombing. See In Re Barracuda Tanker Corp., 281 F. Supp. 228, 232 (S.D.N.Y. 1968).

The frustrated British and French governments finally resorted to a remedy unavailable to Alaska -- they seized the Torrey Canyon's sister ships in Singapore and Rotterdam and, in a very real sense, held them for ransom. Barracuda's insurers then paid the governments 3 million pounds sterling -- about one-sixth of the clean-up costs incurred as a result of the spill.

Vicarious liability is nothing new to hazardous undertakings -- particularly the handling of oil. Both as a matter of equity, and practical necessity, we believe it is imperative that those who induce, and profit from oil handling activities, and who in fact have the ability to control the integrity of those activities if they so desire, be impressed with a non-delegable duty to see that those operations are conducted in as safe as possible a manner.

Finally, it should be stressed that those upon whom vicarious liability is imposed are not without recourse if the penalty is assessed against them. As the Maine Supreme Court stressed in Portland Pipe Line Corp., supra, we are dealing here with a "mutually beneficial relationship [i.e. between terminal and vessels, and owners and operators where] there is, in the relationship, adequate opportunity to locate, among the business associates, the primary liability."

G. Will federal admiralty law let us do this?

The short answer is yes. Following the United States Supreme Court decision in Askew v. American Waterways Operators, 411 US 325 (1973), which upheld Florida's strict liability oil spill statute, it was argued by some that certain implications in that opinion might limit the state's ability to impose strict liability for sanctions or damages beyond the limits established in the Federal Water Pollution Control Act -- i.e. $14 million dollars for vessels. In upholding Maine's unlimited strict liability oil spill law, the Maine Supreme Court, in Portland Pipe Line Cement, supra, specifically rejected that argument, and Congress has since made it clear that the Maine Supreme Court correctly interpreted its intent with regards to the state's power to enter the domain of admiralty, to seek redress for oil pollution. For example, in establishing the Trans-Alaska Pipeline Liability Fund, Congress stated with regard to vessels:

> "This subsection shall not be interpreted to preempt the field of strict liability or preclude any state from imposing additional requirements." 43 USC § 1653(c)(9).

To the same effect is the following provision in the federal law creating the Deep Water Port Liability fund:

> "This section shall not be interpreted to preempt the field of liability or to preclude any state for imposing additional requirements or liability for discharges of oil from a deep water port or a vessel within a safety zone." P.L. 93-697, § 18(k)(1).

Similar provisions are contained in comprehensive oil spill liability legislation now pending before Congress. It is clear that states have a "wide scope" in enacting laws pertaining to admiralty matters, as long as the law does not concern a matter requiring uniformity, or impair the harmony of the admiralty system. See Romero v. International Terminal Operating Co., 358 U. S. 354; Askew, supra. Both the courts and Congress have made it clear that the states' power to legislate in admiralty with regard to oil pollution is particularly broad.

H. Where does the money go?

The administration made a conscious decision, in submitting HB 137, not to specify how the penalties received should be allocated. If the bill is left untouched in this

regard, penalties collected would, pursuant to AS 30.25-.220(b), be deposited in the coastal protection fund. We believe it would serve no purpose to over-load the coastal protection fund with the substantial penalties which may be collected under this bill.

We would submit, for the legislature's consideration, that it would be more appropriate to return the penalties to the general fund, providing at the same time that the legislature may annually appropriate an amount equal to the penalties collected for the previous year for the purpose of financing renewable resource enhancement efforts in areas affected by oil pollution. These efforts, of course, could specifically include fish hatcheries. It is our belief that, in light of the extreme unlikelihood of effective recovery by fishermen for the full amount of damages actually caused to them as the result of oil pollution, that this mechanism would come as close as possible to, in fact, making the fishing industry whole after a catastrophe occurs. The department of law will be glad to assist the legislature in drafting a new subsection in this regard if that is the legislature's desire.

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPARTMENT OF LAW

OFFICE OF THE ATTORNEY GENERAL

POUCH K — STATE CAPITOL
JUNEAU 99811

May 5, 1977

The Honorable Kay Poland
Senator
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Re: HB 137

Dear Senator Poland:

The above-entitled bill is presently pending in the Senate Resources Committee. It is a measure which establishes civil penalties for oil pollution. I am writing to you in the hope that you and other members of the Senate will act favorably on this bill before adjournment, since if you do not there will be no meaningful tool available to deal with a major oil spill in Alaska.

Right now, if we had a tanker accident and millions of gallons entered Alaskan waters, we would have three options:

1. We could proceed criminally and obtain a fine of up to $25,000.

2. We could seek a civil fine for liquidated damages of up to $100,000.

3. Finally, if we could prove actual damages to the environment, we could recover for those damages.

On the surface, the final option seems to provide a means for dealing with massive spills. But the problem is that in all the years of statehood this statute has been only used once, and that was for damage to nets as the result of a spill. No one has ever been able to show damages to the environment for the simple reason that our level of scientific knowledge has not reached the point where such damages can be shown to the satisfaction of a

court. If, for instance, we had a major oil spill in a productive salmon area, there is no way for us to tell how many salmon fry or eggs were destroyed, what other marine life was affected, such as marine life which would form an essential link in the food chain for salmon, and no way to prove with certainty, even were runs to drastically decrease years later, that the proximate cause of that decrease was the oil spill. I think nearly every marine biologist would agree that major oil spills cause substantial damage, but they would also all agree that there is no way we could quantify that damage under present judicially established rules of evidence.

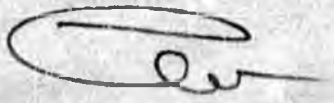
In the end, it boils down to the fact that we have no meaningful deterrent for those who would cause a massive oil spill in state waters. Legislation adopted last year set stringent standards for tankers which will go a long way toward helping us prevent spills, but there is still the factor of human error which, in spite of the most rigid safety devices, may still lead to massive damage. Once that spill occurs, the state should have some means of proceeding against the company that caused the spill. HB 137 provides that means. The bill is extremely important from the administration's standpoint, since this year will see the commencement of major tanker traffic through Alaskan waters, and if we do have a major accident the state should have the power to take significant steps against those who caused the pollution.

The bill as it passed the House has been substantially changed from the bill which was originally introduced by the administration. The House eliminated from the provisions of the bill all spills of under 10,000 gallons, so as to make the bill applicable to major tanker type spills rather than those from fishing boats. A maximum limit of $100 million has been placed on the fine, which may seem large until you consider the magnitude of profit involved in a single tanker voyage. The house bill also bases the civil fine on the amount of oil spilled less the amount of oil cleaned up, providing a major incentive for cleanup activities.

The basic theory of the house bill is for the Commissioner of Environmental Conservation to establish a sliding scale of penalties for oil spills up to a maximum set by the Legislature, dependent upon the type of oil spill (crude, jet fuel, etc.), and the sensitivity of the receiving environment (open ocean, confined salt water system, etc.). The schedule would be subject to legislative review after it is established. The theory is that penalties for oil pollution should depend on how serious that pollution is and, while we cannot fix damages with the certainty required by law, we can predict with certainty that certain types of oil in certain types of environments cause more serious damage than other types of oil in different environments.

I am enclosing with this letter a section-by-section analysis of the bill so that you will have a basic understanding of the structure of the bill that passed the House. Again I reiterate that we have no effective tool to deal with major oil spills now, and as the administration officer with the responsibility to enforce pollution laws, I want very much to have that kind of a tool before, rather than after, a major spill occurs in state waters. I therefore ask you to please consider this bill seriously in the closing days of this session. Members of my office and all other members of the administration stand available to provide information and to help you in any way in your deliberations on the subject.

Yours very truly,



Avrum M. Gross
Attorney General

AMG:as
Enclosure

SECTION-BY-SECTION ANALYSIS OF CSHB 137 (Judiciary) am

1. Introduction

HB 137 would create a schedule of civil penalties for the discharge of oil on a per gallon basis. It is patterned in large measure on Section 311(b)(2)(B)(iv) of the Federal Water Pollution Control Act. Although the mechanics of the bill are new, its concepts and purposes are consistent with Alaska's existing strict liability civil penalty law.

Under the bill, the Department of Environmental Conservation is to establish, under detailed legislative guidance, a schedule of penalties based, essentially, on the type of oil spilled, and the sensitivity of the receiving environment. Maximum per gallon assessments for various classes of receiving environments are set out in the bill.

Dischargers are strictly liable for the penalties, as they now are under AS 46.03.760 and AS 46.03.822 and the state is required to prove its case at trial both as to liability and the size of the spill. Moreover, penalties will only be assessed on that amount of oil not cleaned up.

2. Subsection (a)

This subsection articulates the purposes of the bill. Paragraphs (1) and (2) stress that, because of the long-term, subtle and unquantifiable nature of oil pollution impact, traditional liability and damage concepts are ineffective in compensating for oil spills.

Paragraph (3) highlights the important incentive aspects of the bill. It recongizes that the per gallon assessment for small oil handlers does not need to be as high as for large handlers in order to induce safe operations.

3. Subsections (b), (c) and (d)

The standards for the establishment of the penalty schedule are set out in these subsections. First, maximum assessments, ranging from $10 per gallon in freshwater to $1 per gallon in salt water, are established. We stress that these figures are maximums -- penalties for unproductive freshwater environments, for example, would be substantially lower than $10 per gallon.

There is nothing magical about the figures used. These are civil penalties, not rigidly pre-established actual damages. In setting penalties, a judgment must be made as to whether the amount chosen bears a reasonable relationship to the purposes of the legislation. We believe the amounts chosen meet that standard.

The base penalties themselves are modest. For example, a 10,000 gallon spill into Kachemak Bay would result in liability of, at the most, $25,000 -- as opposed to potential $100,000 exposure under existing law (AS 46.03-.760). The base penalties, however, increase with the size of the spill, according to a multiplier factor spelled out in subsection (b)(2). The factor is 1 for spills of 10,000 gallons, and reaches 5 for spills of 100,000 gallons or more according to a formula. Thus, our same hypothetical spill in Kachemak Bay, if increased to 100,000 gallons, would result in liability of $1.25 million. In an unproductive environment, this figures would be substantially lower. This formula approach implements the findings of subsection (a)(3) -- that the level of incentive should increase according to the size of the oil handling operation.

Subsection (e)

This subsection establishes liability for the penalties. At the outset, a liability ceiling of $100 million is established. This provision was inserted in the House Judiciary Committee, in response to concerns over the otherwise unlimited nature of liability. The subsection also exempts entirely spills less than 10,000 gallons from the bill's coverage. This admendment was inserted on the House floor.

The subsection also alleviates the problem of the "independent contractor" defense. Usually, an oil company will conduct operations through a contractor. If a mishap occurs, the oil company may disclaim responsibility. Subsection (e) imposes a duty on industry to choose its contractors and carriers well, and to maintain strict quality control, by making, for example, the owner of the oil liable for spills from the vessel carrying its oil, and the offshore lessee liable for the activities of its contractors on the drilling rig.

Liability is extended to spills in the Alaska Outer Continental Shelf. Our state supreme court has strongly indicated that, because of the state's strong interest in the productivity of the OCS, this exercise of authority may be permissible. As a safeguard, however, a specific severability provision with regard to this aspect of the bill has been provided in section 2.

Subsection (f)

This subsection provides that only that amount of oil not cleaned up will be utilized in computing the penalties. It also provides that the court may estimate the amount of oil removed. This latter provision was inserted at the behest of industry, which correctly pointed out that the amount of oil removed cannot be proven with precision.

Subsections (h) and (j)

These subsections set out the available defenses to liability. They include the "normal" strict liability defenses -- act of war, governmental negligence and act of God. The act of God defense will only be available if the act of nature was unavoidable, unpredicatable, and unique to the area in which it occurred.

Acts of sabotage and other intentional acts by a third party constitute a complete defense under the bill. However, if a spill is occasioned by third-party negligence, the penalty may only be reduced by half. This is more generous than most strict liability statutes, where third-party negligence is not a defense at all.

Subsection (k)

This subsection provides that penalties received under the bill will be credited to a special account. The legislature may appropriate funds from this account to finance renewable resource enhancement projects in areas affected by oil pollution.

SECTION V: SUMMARY	32

INTRODUCTION

The following survey, conducted primarily by several members of the Sociology Department at the University of Alaska, Anchorage with the assistance of a small grant from the Alaska Humanities Forum, was performed to provide an accurate assessment of attitudes toward growth and development in the Homer, Kachemak Bay area. Its primary and sole purpose was to attain a scientific assessment of public opinion on a diverse variety of local issues and concerns over which the community can take action. It is hoped, however, that this information can be used both by community leaders in the development of local decisions and policies for the future enhancement of the community, and by individual residents as they evaluate and influence the changes occurring about them. This report provides an overview of some of the major findings of this survey; it is not intended to be complete in that approximately 300 individual questions were asked of each person on the survey, and few readers would want to subject themselves to a full review of these. For individuals or groups who desire more specific information or detailed questions, we hope that they will contact us directly at the University of Alaska, Anchorage.

PART I: METHODOLOGY OF THE STUDY

The survey of Homer area residents was a coordinated effort undertaken by the City of Homer, several teachers and students at the Homer High School, and several staff at the University of Alaska, Anchorage. With the assistance of the city manager and members of the Planning and Zoning Commission, a questionnaire was written based on policy issues relevant to the Homer community. Members of Bill Johnson's class at the Homer High School designed a map of the city for the purpose of locating all residences, and students in his and Frank Libal's classes performed the vast majority of interviews with residents within the city limits. University staff with backgrounds in social research gave these students training in interviewing and supervised their work. They also conducted a minority of the interviews within the city, all the interviews outside the city limits, and were totally responsible for the tabulation and writing of results.

The region encompassed by the survey included that area of the southern Kenai Peninsula south of Ninilchik, including that community, Seldovia, Port Graham and English Bay. The results contained in this report include just those of the immediate Homer area, namely the City of Homer, residences outside the city limits, Anchor Point (south of Starisky Tower), Nikolaevsk and residents living at the head or across Kachemak Bay. All interviewing in this area was conducted in the spring and summer of 1976. All people interviewed were permanent residents of the area; sum-

mer time residents and/or those living in the area for less than a month were intentionally excluded. All interviews were conducted with the male or female head of household, and a total of 55% males and 45% females were interviewed.

All households were selected for interviewing on a purely random basis, in order to avoid any possibility of bias and to ensure representativeness for the entire community. Inside the city limits 173 interviews were conducted which represented a 50% sample, or the equivalent of every other household. Outside the city limits but in the immediate Homer area and extending beyond the end of East End Road, 61 interviews were conducted from a 25% sample of one household in every four. In the Anchor Point area one household in every eight was interviewed and in Nikolaevsk the equivalent of one in four; whereas in all other areas interviews were performed individually with a separate household head, in Nikolaevsk the interviewing was conducted in a single group meeting of men in one of the elder's homes. Finally interviews were mailed to 23 residents whose residences were inaccessible by road or trail, predominantly at Fox River, Bear Cove and Halibut Cove. Eleven of these were returned, which constituted an approximate 50% sample. The results contained in this report are consequently drawn from a total of 286 interviews, exclusive of those from Ninilchik, Seldovia, English Bay and Port Graham. In addition 13 potential respondents declined to be interviewed, and their cases are obviously excluded from the results. Because

people interviewed were selected on a strictly random basis, the results from the sample can be generalized to the entire community within 4-5 percentage points of accuracy. When we say, for example, that 78% of the 286 interviewed would like to see commercial fish and fish processing receive priority in terms of land use on the Spit, we are 95% sure that between 74% and 82% would have answered this way if every household in the total area had been questioned.

In writing this preliminary report we have attempted to minimize our analysis or interpretation of the results. Instead we have preferred to maintain a format of stating the questions (in summary form) and the percent response to each question. Under each question we have in most cases broken down the responses into three distinct categories: responses from those residents living within the city limits of Homer, responses from all those living outside the city limits, and the total responses from the combined areas. Because different proportions of people were sampled and interviewed outside the city, responses in the last two categories have been weighted to ensure equal representation. This is done by multiplying the responses to the Homer City interviews (a 50% sample) by 2, the Homer environs responses (a 25% sample) by 4, etc.

For purposes of organization we have divided this report into the five sections which follow. In the first we describe the general characteristics of the people interviewed: their ages, edu-

PART II: SURVEY RESULTS

SECTION I: CHARACTERISTICS OF THOSE INTERVIEWED AND THE HOMER COMMUNITY

In terms of general background characteristics, the household heads whom we interviewed in the Homer area were overwhelmingly white (93%), had a median age of 35 years, an average education of one year of college, had resided in the Homer area for five years or longer (53%), and were most predominantly from the Pacific Coast or Rocky Mountain states (47%). More specifically, and by area, they had the following characteristics:

	Homer City	Outside City	Total Homer Area
1. RACE:			
WHITE	97.7%	97.7%	97.7%
ESKIMO	1.7	0.0	0.7
ALEUT	0.6	1.6	1.1
INDIAN	0.0	0.7	0.5
2. AGE:			
18-29 Years	24.1%	28.1%	26.2%
30-45 Years	41.0	38.6	39.5
46-64 Years	26.3	26.5	26.4
65 & Older	9.6	6.8	7.9
3. EDUCATIONAL LEVELS:			
4-11 Grades	17.5%	11.1%	13.6%
12th Grade	31.2	47.6	41.2
1-3 Years of College	24.7	19.9	21.8
Completed College	15.2	13.5	14.1
Post-Graduate	11.4	7.9	9.3
4. LENGTH OF RESIDENCE IN HOMER AREA:			
Up to One Year	15.2%	14.8%	15.0%
1-2 Years	13.5	15.2	14.5
3-4 Years	22.8	13.8	17.2
5-8 Years	15.2	19.6	17.9
9-20 Years	22.2	18.1	19.7
More than 20	11.0	18.5	15.7

5. PLACE OF ORIGIN:

	Homer City	Outside City	Total Homer Area
Kenai Peninsula	1.2%	0.7%	0.9%
Elsewhere in Alaska	19.0	8.8	12.6
Pacific Coast States	26.2	35.1	31.8
Rocky Mt. States	11.9	17.0	15.1
Central & North Plains States	11.3	12.4	11.9
South & Southern Atlantic States, Texas & Okla.	10.2	5.8	7.4
New England & North Atlantic	9.0	7.2	7.9
Midwest States	8.3	9.4	9.0
Foreign Countries	3.0	3.6	3.4

In spite of the fact that only 14% of the residents were originally from Alaska, half had lived elsewhere in Alaska prior to moving to Homer. Of these, almost one-half had moved to Homer from the Anchorage area while a third had moved from elsewhere on the Peninsula or other rural areas of the state.

In terms of jobs and employers, the male heads of the households held the following characteristics:

6. PRIMARY OCCUPATION (MALE):

Professionals, (doctors, teachers, etc)	17.2%	4.7%	9.3%
Managers & Owners (inc. public & private business)	8.3	5.9	6.7
Technical & Protective Service (ie, police)	13.7	7.1	9.4
Clerical & Sales	2.8	3.9	3.5
Craftsmen	11.0	18.4	15.8
Operators, Truckdrivers	7.6	9.0	8.5
Laborers	4.9	8.2	6.9
Service Workers (ie, cleaning, food service)	4.8	3.1	3.7
Fishing Boat Owner/Operator	9.0	12.8	11.5
Cannery Worker/Fishery Crew	8.3	4.7	6.1
Homesteader, Farmer	0.0	8.6	5.4
No Occupation	1.4	0.0	0.5
Retired	11.0	13.6	12.7

In addition to their primary jobs, one-third of the male heads held secondary or other seasonal jobs; of these 23% were as laborers and 18% involved fishing or fish processing.

7. PRIMARY EMPLOYERS (MALE):

	Homer City	Outside City	Total Homer Area
Self Employed	32.6%	42.8%	39.1%
Federal Gov. & Agencies	10.6	1.6	4.9
State Gov. & Agencies	2.8	4.8	4.1
City & Borough Gov., incl. Schools & Hospitals	14.2	4.8	8.2
Local Commercial Business	13.5	5.6	8.4
Construction Companies	5.0	15.2	11.5
Oil Companies	5.0	3.2	3.8
Canneries	3.6	6.8	5.7
Social Groups (ie.Churches)	1.4	0.8	1.0
Retired	10.6	10.8	10.7
Unemployed	0.7	3.6	2.6

Among women and female heads of households, exactly 50% worked; among those who held jobs the major occupational categories were service workers (26%), clerical work (18%), and professionals (17%). The median annual reported family income for the total area was $13,400; reported family income was considerably higher, however, for residents living within the city ($17,100) than for those families outside the city ($11,300):

8. REPORTED ANNUAL FAMILY INCOME:

Less than $5,000	7.7%	18.9%	14.6%
$5,000 to 11,999	19.3	28.7	25.0
$12,000 to 19,999	23.9	21.8	22.6
$20,000 to 34,999	34.6	23.3	27.6
$35,000 to 49,999	10.8	4.4	6.9
Over $50,000	3.8	2.9	3.3

As possible compensation for this difference in income, residents outside the city placed a greater reliance or subsistence activities for obtaining fish and meat. Of probably greater significance is the fact that both groups derived

significant benefits from subsistence activities. Although fishing may be done largely for sport, over 80% of the people in the total area fished in Kachemak Bay. Only in shrimping (47%) and crabbing (45%) were less than a majority active.*

9. PROPORTION OF FAMILY FISH AND MEAT SUPPLY COMING FROM SUBSISTENCE:

	Homer City	Outside City	Total Homer Area
None	25.8%	9.4%	15.6%
Little	35.9	25.3	29.2
Around Half	19.3	27.4	24.3
Most	15.9	28.2	23.4
All	3.0	9.7	7.1

Various other factors might be used to describe characteristics of the population and area.** One which appears particularly relevant is the close tie existent between the rural residents and city of Homer. Among men, 34% were in town on a regular daily basis, the majority working; only 36% went into Homer on less than a two or three times per week basis. Women approximated the same statistics; 20% going to town on a daily basis and only 44% less than three times per week. Shopping, in addition to work, was primary justification for this. Those rural residents living close to Homer differ very little from city residents in many local activities, such as voter registration and percent voting, use of the small boat harbor, attendance at hearings and School Board meetings, and even attendence at City Council meetings.*** A strong degree of identification and involvement

---

*In commercial fishing, 15% of the families in the area had members active in crabbing; 14% in halibut, 13% in shrimping, and 11% in salmon.

**Many of these were collected in the interviews, such as type of housing, size and type of family, organizational membership, activities, etc., but are not reported here for sake of brevity.

***16% of the rural families had attended at least several Council meetings, during the previous year, as compared to 19% of the residents in the city.

with the Homer community is obvious and by necessity justifies their inclusion in this survey, in spite of their equally strong desires to maintain autonomy from the city in terms of incorporation and utility districts, etc.

Finally, basic values of the community are seen by examining reasons given for moving to the Homer area and factors they like best about living in the community. In summary form these include:

10. REASONS GIVEN FOR MOVING TO HOMER AREA:

Please Read,

	Homer City	Outside City	Total Homer Area
Small Town Qualities/Lifestyle	31.0%	52.2%	44.4%
Employment & Job Reasons	36.1	13.9	22.0
Aesthetic Values	17.7	24.1	21.8
Homesteading, Farming	3.2	28.1	19.0
Family & Friendship Reasons	11.4	14.6	13.4
Climate	6.3	3.7	4.6
Retirement	4.4	1.1	2.3
Commercial Fishing	2.5	1.5	1.9
Initiating Business	2.5	1.1	1.6
Other	7.0	5.1	5.8

Please Read,

11. WHAT PEOPLE VALUE MOST ABOUT LIVING IN THE HOMER AREA:

Small Town Qualities/Lifestyle	65.8%	69.2%	68.2%
Aesthetic Values	55.7	48.1	51.2
Farming, Homesteading	0.0	15.4	9.7
Climate	4.4	9.0	7.3
Family & Friendship	3.8	6.8	5.7
Work Reasons, inc. Business & Fishing	2.6	5.4	4.2
Money, Salary Reasons	1.3	3.8	2.8
Other	2.5	6.4	5.0
Nothing Valued	1.3	1.5	1.4

From the above it is obvious how important the small town environment and natural beauty of the region are to residents. These same values are expressed in a variety of other questions. For example, a majority of residents all considered as very important living in a quiet community, having multi-age friends, participating in subsistence activities, and being able to make or fix many of

the things needed by a family, while holding a high paying job was rated as only somewhat important, or unimportant. The importance of these values is indicated by the fact that less than 10% of the area residents planned on moving away from Homer within the next seven years, and majorities in both city and rural areas plan to remain permanently. Another 10% stated that they would remain permanently unless the community underwent significant growth and changes.

Read.

Section II: ATTITUDES TOWARD COMMUNITY SIZE, GROWTH AND DEVELOPMENT ACTIVITIES

A variety of questions were asked to determine residents' attitudes toward growth in the Homer area. These ranged from fairly general questions, such as the size in numbers that they would like to see Homer achieve and the types of new people they would like to see living in the community, to more specific questions on different types of economic activities which they would like the city to encourage or discourage. On an even more specific level questions were asked on development preferences and land use priorities for a specific location where land is limited and choices critical, namely the Spit. The range of answers to these questions, both by city and outside city residents are given below.

1. IDEAL COMMUNITY SIZE: Considering that the City now has a population of about 1500, how big a community would you like Homer to be in 10-15 years?

Read

	Homer City	Outside City	Total Homer Area
1500 People or less	36.6%	57.1%	43.9%
1501 to 2,000	12.4	4.1	7.4
2,001 to 3,000	16.1	9.5	12.2
3,001 to 5,000	19.3	13.2	15.6
5,001 to 10,000	2.5	3.7	3.2
10,001 to 20,000	2.5	1.7	2.0
20,001 Or More	2.5	0.8	1.5
Doesn't Matter - Undecided:	8.1	9.9	9.2

2. PREFERRED TYPES OF NEW RESIDENTS: Considering new jobs and growth will bring more people to live in Homer, which type of new resident would you like to see living here?

	Homer City	Outside City	Total Homer Area
a. Permanent population composed of just the present residents:			
Favor:	48.2%	65.5%	59.0%
Opposed:	44.5	29.1	34.9
Undecided:	7.3	5.5	6.1
b. A growing population of new permanent residents:			
Favor:	72.8%	55.6%	62.1%
Opposed:	20.7	40.1	32.7
Undecided:	6.5	4.3	5.1
c. A growing population of seasonal residents (ie, tourists) who would make Homer their summer home:			
Favor:	33.3%	22.5%	26.9%
Opposed:	59.5	68.7	65.0
Undecided:	7.1	8.8	8.1
d. A growing population of new residents (ie, oil or construction related) who would probably not make Homer their permanent home:			
Favor:	18.3%	12.0%	14.5%
Opposed:	72.0	77.7	75.4
Undecided:	9.7	10.3	10.1

3. PREFERRED TYPES OF JOB EXPANSION:

a. A large proportion of seasonal employment (as at present) or more permanent forms of year-round employment:			
Favor Seasonal Jobs:	20.1%	43.3%	34.5%
Favor More Permanent Jobs:	76.3	48.7	59.2
Undecided:	3.6	8.0	6.3

	Homer City	Outside City	Total Homer Area
b. That job opportunities should be expanded rapidly, slowly, or few new jobs opened:			
Favor Rapid Job Expansion:	13.8%	19.9%	17.6%
Favor Slow Job Expansion:	72.5	63.2	66.7
Favor Few or No Job Expansion:	12.0	15.2	14.0
Undecided:	1.7	1.8	1.8
c. That new jobs to be added should be permanent jobs, short term construction jobs, or both:			
Favor Permanent Jobs:	45.2%	35.6%	39.5%
Favor Short-Term Jobs:	3.2	8.0	6.1
Favor Both:	48.4	52.0	50.5
Undecided:	3.2	4.4	3.9

4. TYPES OF ECONOMIC AND DEVELOPMENT ACTIVITIES: Choices for development in most communities are limited: most often they are either thrust upon them by outside interests or restricted by a narrow variety of local resources or potential developments. Homer would appear to be an exception to this case in that a considerable range of resources are available on which growth might be based. Because the kind of economic base will obviously affect the type of community which Homer is to become, people were given a full list of economic activities and asked "which (of those) do you think should be encouraged or discouraged for the future of Homer?" Although the potential for developing policies that would enhance certain of these activities are limited, it is important that decisions be made that are consistent with basic values of people residing in the town. The range of attitudes towards each activity are as follows, with the list ordered from most to least desirable:

	Homer City	Outside City	Total Homer Area
a. Agriculture:			
Should Encourage:	*	92.3%	*
Should Discourage:	*	4.4	*
Undecided:	*	3.3	*

*Agriculture was not listed on questionnaires given within city limits; totals are consequently excluded for both within the city and total area groups.

Fishing is on Top. Oil No

	Homer City	Outside City	Total Homer Area
b. Commercial fishing & fish processing:			
Should Encourage:	91.8%	86.2%	88.3%
Should Discourage:	4.1	8.0	6.5
Undecided:	4.1	5.9	5.1
c. Light manufacturing, involving small & locally based industries:			
Should Encourage:	77.1%	87.8%	83.7%
Should Discourage:	18.2	10.0	13.2
Undecided:	4.7	2.2	3.1
d. Education & research facilities:			
Should Encourage:	87.7%	80.2%	83.3%
Should Discourage:	5.8	15.0	11.3
Undecided:	6.5	4.8	5.4
e. Transportation & storage facilities:			
Should Encourage:	70.8%	55.3%	61.5%
Should Discourage:	21.1	36.1	30.0
Undecided:	8.1	8.6	8.4
f. Tourism:			
Should Encourage:	61.6%	57.6%	59.2%
Should Discourage:	26.7	33.9	31.0
Undecided:	11.7	8.6	9.8
g. On-shore oil facilities:			
Should Encourage:	36.6%	26.7%	30.7%
Should Discourage:	54.7	68.5	62.9
Undecided:	8.7	4.8	6.4
h. Heavy industry, such as pulp mills, lumber products:			
Should Encourage:	24.4%	26.7%	25.8%
Should Discourage:	70.3	67.8	68.9
Undecided:	5.3	5.5	5.4
i. Petrochemical industries, such as refineries:			
Should Encourage:	23.8%	23.1%	23.4%
Should Discourage:	68.5	68.2	68.3
Undecided:	7.7	8.7	8.3

In addition to rating each activity separately, people were asked which types of developments they would most (and least) like to see occur in Homer. The attitudes are virtually identical to the ordering shown above: an expansion in

fishing and fish processing, followed by light manufacturing and educational and research facilities (and agriculture for those outside the city) were mentioned in that order as the most desirable. Rated as least desirable were petrochemical industries, followed by on-shore oil facilities and heavy industry.

5. ON-SHORE OIL DEVELOPMENT: Because of the importance of decisions related to oil development, more detailed questions were asked concerning the use of Homer as an on-shore facility. Four particular questions were asked: 1) Assuming that oil development does occur in the Lower Cook Inlet, would you like to see Homer used as a supply port for this; 2) which type of facilities (fishing and fish processing, tourism or industrial) would you like to see receive priority in terms of land use on the Homer Spit; 3) would you favor or oppose oil storage and tanking facilities on the Spit; and 4) would you favor or oppose the warehousing and storage of equipment on the Spit for off-shore oil exploration. As seen below, public opinion is opposed to on-shore development in all cases. The single exception is city residents who narrowly favor use of Homer as a general supply port if Lower Cook Inlet development actually occurs; however even they are opposed to utilization which would entail the specific storage of oil or equipment on the Spit:

	Homer City	Outside City	Total Homer Area
a. Use of Homer as supply port if Cook Inlet oil development occurs:			
Favor Supply Port:	53.2%	28.3%	38.0%
Oppose Supply Port:	42.7	63.6	55.5
Undecided:	4.1	8.1	6.5
b. Preferences for facilities on the Homer Spit:			
Fish & Fish Processing:	73.6%	77.6%	76.3%
Tourism:	13.0	9.1	10.8
Industrial:	9.5	8.3	8.8
Undecided:	3.9	5.0	4.1

	Homer City	Outside City	Total Homer Area
c. Location of oil storage and tanking facilities on the Spit:			
Favor Oil Storage:	23.8%	13.8%	17.7%
Oppose Oil Storage:	70.9	82.5	78.1
Undecided:	5.2	3.6	4.3
d. Location of warehouse and equipment storage facilities for oil exploration on Spit:			
Favor Warehousing:	29.7%	18.2%	22.6%
Oppose Warehousing:	64.0	73.1	69.6
Undecided:	6.3	8.7	7.8

In summary, opinions of residents are opposed to on-shore oil development both in situations where they are given an open range of economic activities from which to choose and where it is already assumed that oil development will occur in the area. On-shore facilities that would tend to conflict with other land usages are more strongly opposed. From the above figures it is also obvious that residents living outside the city are consistently more opposed to oil development than those within the city. Other reasons frequently advanced to account for these differences in attitudes toward oil are the ages of individuals, their particular jobs and length of residence in the area. These figures for those groups are given below in terms of whether they feel the city should encourage or discourage on-shore oil facilities.

e. Age of the Population: (Total Area)

	Encourage On-shore Development	Discourage On-shore Development	Undecided	Total
18-29 Years Old:	12.3%	81.1%	6.6%	100.0%
30-44 Years:	21.9	73.1	5.0	100.0
45-64 Years:	49.5	44.9	5.6	100.0
65 or Older:	57.7	26.9	15.4	100.0

f. Length of Residence in Homer: (Total Area)

Two Years or Less:	16.9%	76.1%	7.0%	100.0
Three-Four Years:	24.7	72.7	2.6	100.0
Five-Eight Years:	25.0	65.8	9.2	100.0
Nine Years-Longer	48.9	44.6	6.5	100.0

g. Occupation of Household Head (Male, Total Area):

	Encourage On-Shore Development	Discourage On-Shore Development	Undecided	Total
Professional:	10.8%	83.8%	5.4%	100.0
Managers, Owners:	60.0	36.0	4.0	100.0
Technical	38.5	57.7	3.8	100.0
Craftsmen & Laborers:	24.6	69.4	6.0	100.0
Fishermen:	5.0	92.5	2.5	100.0
Cannery Workers & Fishing Crew:	6.3	87.5	6.2	100.0
Farmers, Homesteaders:	36.4	63.6	0.0	100.0
Retired, Unemployed:	56.3	27.1	16.6	100.0

Significant relationships are found in each case, with the older people of longer residence, and particularly those who are retired or with jobs as managers or business owners, most supportive of on-shore facilities. The younger and newer resident, including those with jobs in fishing and professional work, are most consistent in their opposition to local oil development. It should be noted, however, that these latter attitudes of discouraging on-shore facilities are shared by a majority of the "average" Homer residents, namely those adults with a median age of 35 and five years of residence in the area. Finally, certain unanticipated results are seen in the relationship of jobs to attitudes when one considers the potential impacts that would occur from oil development: among those who would discourage oil are the craftsmen and laborers who might anticipate the most direct economic benefits, whereas the favorably inclined retired people are most likely to experience the negative effects from an inflationary local economy. Some changes in the attitudes of these groups might be anticipated if the actual effects of on-shore development were to begin to be realized.

SUMMARY: A majority of residents would like to see Homer undergo minimal or limited growth of a slow and gradual nature, with the addition of permanent jobs as a base for a permanent resident population. That Homer residents would favor an

absolute "no growth" economy is erroneous, in that a majority of development activities are favored by most residents. Those activities which they would most like to see encouraged, however, are either those traditional to the local economy (fishing, farming and to a lesser degree tourism) or those based on the concept of permanent employment (light manufacturing, education and research). Rapid growth and heavy industry, a transient population and oil development in general, are opposed. Although these attitudes are most prevalent amid the younger, more recent and rural residents, they are also held by the average resident of Homer.

SECTION III: ATTITUDES TOWARD CITY SERVICES

Four types of questions were asked about services provided in the city. Included was a ranking or evaluation of the adequacy of individual services, preferences for the expansion of individual services in comparison to other services, the public assessment of needs within particular services, and priorities for local funding of service expansion. The format of presenting the information here is to first provide tabulations on evaluations and service priorities; a very brief description is then provided of each service in terms of publicly expressed needs. Since most of the services pertain only to city residents, calculations are based on the sample from within the city limits. All exceptions to this are specifically noted in the tabulations.

1. EVALUATION RATINGS: (How would you rate the following services in Homer - City residents only)

	Less Than Adequate	Adequate	More Than Adequate	Undecided
Police Protection:	16.2%	53.6%	23.7%	6.5%
Elementary Schools:*	7.1	17.6	36.5	38.8
Hospital-Health Svcs:	24.3	61.8	9.8	4.1
Fire Protection:	26.0	60.1	2.3	11.6
Water Service:	31.4	59.3	2.3	7.0
Sewer Service:	30.8	56.4	1.7	11.1
High School:*	25.0	23.2	17.3	34.5
Recreation Facilities:	55.5	34.1	3.5	6.9
Streets:	68.8	29.5	1.7	0.0

(*Obviously not services for which the city is responsible.)

2. SERVICES EXPANSION: Are you in favor of having the city expand the level of services it now provides, maintain these at their present level, or cut back on the services which it now provides:

Cut Back on Services:	3.0%
Maintain At Current Level:	44.0
Expand Level of Services:	47.6
Undecided:	5.4

In contrast to residents in the city, a strong majority of the rural residents (70%) preferred a maintenance of services at their present level; half as many wanted to cut back on the level of services as actually increase them.

3. PREFERENCES FOR TYPES OF SERVICES: Both city and rural residents were asked to list those three city services which they would most like to see expanded, and also those which they would least like to see expanded. Among those which people would most like to see expanded, listed in order of preference by city residents, were:

	Order of Most Preferred:		Order of Least Preferred:
(high)	1. Road & Street Improvements**	(low)	13. Fire Protection
	2. Harbor & Port Facilities		12. Ambulance Service
	3. Recreation Facilities		11. Roads & Streets
	4. Sewer System		10. Health Facilities
	5. Tourist & Camper Facilities		9. Sewer System
	6. Water System		8. Harbor & Port Facilities
	7. Cultural Facilties		7. Water System
	8. Fire Protection		6. Recreation Facilities
	9. Local Government Facilities		5. Cultural Facilities
	10. Police Department		4. Police Department
	11. Health Facilities		3. Local Government Facilities
	12. Ambulance Services		2. Garbage Disposal
(low)	13. Garbage Disposal	(high)	1. Tourist & Camper Facilities

**Survey was taken prior to completion of paving of Main Street.

b. Rural Residents (Outside City):

	Order of Most Preferred:		Order of Least Preferred:
(high)	1. Harbor & Port Facilities	(low)	13. Health Facilities
	2. Cultural Facilities		12. Fire Protection
	3. Fire Protection		11. Cultural Facilities
	4. Roads & Streets		10. Roads & Streets
	5. Health Facilities		9. Ambulance Service
	6. Recreation Facilities		8. Harbor and Port Facilities
	7. Tourist & Camper Facilities		7. Recreational Facilities
	8. Police Department		6. Garbage Disposal
	9. Ambulance Service		5. Sewer System
	10. Sewer System		4. Water System
	11. Water System		3. Police Department
	12. Garbage Disposal		2. Local Government Facilities
(low)	13. Local Government Facilities	(high)	1. Tourist Facilities

Among conclusions that could be drawn from the above lists are: 1) the high preference given to road and street improvements, particularly within the city where over one-half listed this as among their top three choices; 2) the high priority given to improved port and harbor facilities by residents both within and outside the city; 3) the relatively high priority given to recreational and cultural facilities by both groups; 4) the low priority given to local government facilities (city hall) and expansion in the police department by both groups; 5) the low priority for water and sewage systems expansion outside the city; and finally 6) disagreement over expansion of tourist and camper facilities. Whereas some residents both within and outside the city consider this a relatively high priority, others consider it the least preferred of all services for potential expansion.

4. INDIVIDUAL CITY SERVICES:

a. Roads and Streets: Over one-half the city residents stated the need for improvement in city streets and roads, a priority rating that was close to double that given any other single service. This priority is consistent with the low evaluative rating given to streets, where 69% of the residents felt them to be less

than adequate. On separate questions, over 85% expressed the opinion that more streets should be paved and gravelled, and over 70% expressed favor for the building of storm drains and sidewalks for walking and bicycling. When residents both within and outside the city were asked to state their top two priorities in terms of street improvements, the following responses were recorded:

Type of Street Improvements:

	Homer City	Outside City
Paving Streets:	49.2%	21.8%
Gravelling Streets:	48.6	29.6
Sidewalks and Bikepaths:	41.7	25.7
Storm Drains:	25.5	9.3
Improved Snow Removal:	9.8	14.0
Street Parking:	9.1	38.9
Street Lights:	8.1	3.1
Other:	6.4	7.8

Finally, by a three-to-one ratio, city residents favored the maintenance of off-street parking, as compared to on-street. Although strong preferences were shown for the paving of Pioneer Avenue and the downtown area, priorities were also stated for West Hill Road and other residential streets in the downtown area.

b. Recreational Facilities: The recreational facilities provided by the city were also assessed by the majority of residents as less than adequate, and in need of improvement. Among the recreational and cultural facilities used by most city families were the museum (75% of all families), the school swimming pool (73%), library (60%), High School gym (54%), small boat harbor (52%, excluding commercial use), and the Fairgrounds (47%). Although usage by families living outside the city was lower, it was still significant and indicates the strong ties to the community by these residents: library (52%), swimming pool (50%), museum (46%), small boat harbor (36%, only recreational), gym (33%) and Fairgrounds (13%). New recreational facilities which residents stated they would most like to see are, in order

of priority: outdoor general use parks, a community center, tennis courts, teen center, indoor sports facilities such as a covered hocky rink, and an auditorium. Finally, 82% of the total area residents were in favor of reopening the wharf for public fishing and shrimping, and 73% to the maintenance of the Pier I Theater.

c. Sewer and Water Systems: Sixty-five percent of the city residents were using the city water system and 53% stated that they were on the city sewer system. For city residents not on these systems, wells and septic tanks were used by a large majority. Among all city residents, general attitudes were favorable toward expansion of both water and sewer systems (59%); however, only minorities were in favor of either increased taxes to pay for expansion (43%) or increased development to reduce the unit costs of expansion (37%). Surprisingly, the attitudes of residents within the city who are not on water or sewer systems differ little from those who have these services. Although majorities would like to have water and sewer systems expanded (58% and 60%), they are less favorable toward the assessment of taxes as payment for these (47% and 49% respectively), and even less favorable to an increase in local development for the purpose of reducing unit costs (25% and 24%).

Residents outside the city, even excluding those in Anchor Point, Nikolaevsk and across the Bay, were strongly opposed to the expansion of water or sewer systems to incorporate their areas (77% and 82% respectively); even larger proportions opposed both taxation and increased development to offset costs of these potential utility expansions.

d. Fire Protection: Probably due to its high "adequate" rating, no major endorsements were given for changes in fire protection. Two-thirds of the city residents preferred to see the fire department maintained on a volunteer basis

rather than with professional staff. However, 46%, with another 29% undecided, favored the addition of more equipment to the fire department, with the largest proportion of these citing the need for a new or additional truck. Opinions were evenly divided pro and con on the addition of more staff or equipment to the ambulance service, although there was also a large proportion of no opinion answers. Almost two-thirds of the residents in the immediate area outside the city limits considered themselves outside of a fire protection service area, and slightly over half of these would like to be affiliated to such a service area.

e. Hospital and Health Services: No strong concerns were voiced regarding changes in health care, although 32% of those expressing opinions stated the need for additional doctors. The addition of specialists to the hospital staff, more emergency equipment and a community health program were also cited as needs by over 15% of those who responded. A wide variety of responses were generated concerning what should be done with the old hospital. Included among these were: utilizing it for office space for the city and borough (19%); a community health center (16%); nursing home (16%); free clinic (15%); and community center (10%).

f. Police Protection: Probably due to its high adequacy rating, the police department was also ranked low in terms of priorities for expansion. Among city residents, for example, only 16% felt that the number of police on the city force should be increased. In spite of this, a plurality of city residents felt that more police time should be spent on crime prevention and patrolling, particularly in terms of security on the Spit, and over one-third that they should increase time on criminal investigations and the enforcement of civil regulations such as trespassing and drinking by minors. There were no activities, including traffic control, where significant numbers felt that police attention should be reduced.

Felony offenses, particularly theft, and drug related crimes constituted those types of crimes of greatest concern to the city public. In contrast, over 60% of the rural residents would like to see more police serving areas outside the city limits, although there was overwhelming agreement that this should be performed by the state police (90%). In these areas, theft and vandalism were the crimes of greatest concern.

g. Port and Harbor Facilities: Along with roads, harbor and port facilities were those given the highest overall ranking for expansion, particularly by rural residents. Widespread use of the harbor facilities obviously accounts for this: 59% of the city residents use the small boat harbor (27% on a commercial basis), but it is also used by 52% of the rural residents (32% commercially). In addition, a full 70% of the total area residents stated that they anticipated using the harbor within the next five years.

As stated in Section II, strong preferences exist for giving fish and fish processing priority for development on the Spit, followed by tourism and finally non-fishing industry. These attitudes are held even more strongly by actual users of the small boat harbor. In general, development facilities were encouraged as long as they did not compete with this primary utilization of the limited land and port facilities. As such, wharf fishing and the Pier I Theater are strongly favored by harbor users; potentially competitive usages are not, such as private campgrounds (51%), an amusement park (18%), storage facilities for off-shore oil exploration (18%), general shopping mall (16%), oil storage and tanking facilities (16%), and large commercial hotels (13%). Facilities that will contribute to the commercial use and conservation of the small boat harbor are strongly endorsed by users, such as dry dock and boat repair facilities (34%), additional fish proces-

sing facilities (92%), installation of storage and treatment tanks for bilge slops (85%), dry boat storage facilities (83%), stronger enforcement on oil and sewage discharge (79%, also favored by 82% of the commercial users), and warehouse facilities for commercial port usage(60%).

Residents using the habor on a commercial basis favor these latter items to a slightly stronger degree, while the attitudes of residents who do not use the small boat harbor tend to be generally less supportive, and somewhat more favorable to general industrial and petroleum use. This is particularly true of the development of a new deep water off-shore harbor, favored by 63% of the general public but by only 54% of both the commercial and recreational harbor users. Minimal differences exist in attitudes between city and rural users of the harbor, outside of the fact that 59% (with an additional 20% undecided) of the non-city commercial users favor greater representation from the rural area on the present Port Commission.

h. Education: Although education is not a function provided by the city, its local importance merits inclusion. However, no conclusive changes in policy were noted from the survey, other than a strong desire for more vocational training at the high school level (74% of the city residents expressing an opinon; as compared to "less" or "current" levels of vocational training). Smaller majorities of those responding favored the retention of present class sizes (54%) and an expansion in cultural programs and activities (51%). Only a small minority favored the present level of student planning and choice in curriculum, however present policy apparently represents a good compromise in that equal numbers endorsed less, and more, choice in student planning of their own curriculum. On all questions attitudes of rural residents in the Homer attendance area very closely paralleled

those within the city, although they showed less conclusive support for the construction of new school buildings than city residents (42% and 54% respectively, although with a large proportion of undecided residents). Both groups had also been equally active in the community school program, in which over one-third of the residents had been involved. The only potential area of disagreement was the attitude of 60% of the rural residents that their representation on the Advisory School Board should be increased.

4. TAXES AND FUNDING OF SERVICES: Although residents stated a desire to maintain the current level of many services, definite preferences were expressed for the expansion of certain ones, and the costs of these generally are bound to increase. To assess attitudes toward mechanisms for raising additional revenues, residents were simply asked which method of taxation they most and least preferred. The attitudes, which show a preference for sales taxes and service rate charges, and opposition to increases in personal property taxes, are shown below:

a. Most Preferred Method of Raising Additional City Revenues:

	Homer City	Outside City	Total Homer Area
Real & Personal Property Tax:	6.4%	11.7%	9.5%
Sales Tax:	50.0	38.5	43.3
Service Rate Charges:	26.4	32.5	29.9
Other:	7.4	6.1	6.6
Undecided:	9.8	11.2	10.7

b. Least Preferred Method of Raising Additional Revenues:

Real & Personal Property Tax:	60.4%	63.4%	62.3%
Sales Tax:	13.0	24.6	19.6
Service Rate Charges:	17.1	10.2	13.1
Undecided:	9.5	1.8	5.0

In addition, residents felt strongly that the city should charge for services, particularly to outsiders. For example, although 76% of the total area supported

the maintenance of public camp grounds by the city where a fee is paid, only 19% supported the maintenance of such areas without fees.

SECTION IV: ZONING AND LAND PLANNING

Questions related to land use on the Spit have already been presented and will not be repeated here. However, a variety of other land use policies are important to the community and questions were asked on a number of these. As areas they included: 1) the maintenance of natural park lands in the Homer - Kachemak Bay area; 2) industrial and residential zoning within the city; 3) the location of potential on-shore oil facilities; and 4) several final comments on tourism.

1. PARKLANDS: The natural beauty of the open lands surrounding Homer is obviously great, and 87% of the combined city and rural residents stated that this was very important to them. An identical proportion, equal for both city and rural, felt that state parks or other means should be maintained to protect these lands in their undeveloped state. Attitudes of area residents toward logging and mining on these lands are given below:

a. Attitudes Toward Park Land Use:

	Favor	Oppose	Undecided
Should Be Open to Logging:	33.5%	59.8%	6.7%
Should Permit Clearcutting:	10.6	82.0	7.4
Should be Open To Mining:	42.0*	51.7	8.3

*(Many of the favorable answers were stated conditionally, favoring prospecting and placer mines, and opposing open or strip mining.)

As seen below, a majority felt that these lands should be managed and controlled by the state, although there was considerable support for joint management or input from the city and Kenai Borough levels, in addition to opposition for the autonomy of federal management:

b. Control and Managment of Park Lands: Who should perform this?

	Opposed	Favor	Undecided
City (Homer):	68.1%	24.2%	7.7%
Kenai Borough:	69.1	23.3	7.7
State of Alaska:	30.2	62.1	7.7
Federal:	82.5	9.8	7.7

2. ZONING WITHIN THE CITY: As seen below, overall attitudes toward city zoning appear to be favorable, with a majority stating preference for a moderate zoning policy and only a very small number for an absence of zoning:

a. Type of City Zoning Preferred:

	Homer City	Outside City	Total Homer Area
No Zoning:	6.0%	11.9%	9.4%
Very Weak or Limited Zoning:	9.5	9.3	9.4
Moderate Zoning:	54.8	60.2	57.9
Strong Zoning:	26.2	12.7	18.3
Undecided:	3.6	5.9	5.0

These attitudes, however, tend to be specific, favoring zoning for an industrial site and for multiple unit dwellings, but without placing locational controls on businesses and individual residences:

b. Establishment of Industrial Site Area for All New Industry:

	Homer City	Outside City	Total Homer Area
Favor Industrial Site:	79.4%	71.2%	67.3%
Oppose Industrial Site:	14.7	19.5	15.8
Undecided:	5.9	9.3	7.1

c. Residential Zoning for Multiple Unit Dwellings:

Favor Multiple Unit Zoning:	71.2%	71.8%	71.5%
Oppose Multiple Unit Zoning:	24.1	23.9	24.0
Undecided:	4.7	4.3	4.5

d. Zoning to Encourage All New Businesses to Locate Downtown:

Favor Business Centralization:	44.0%	39.5%	41.3%
Permit Businesses to Decide:	48.8	51.3	50.2
Undecided:	7.2	9.2	8.4

e. Encouragement of Locating New Residential Areas in Downtown Area:

	Homer City	Outside City	Total Homer Area
Encourage Downtown Development:	14.3%	20.7%	18.0%
Permit Residences Where People Choose:	80.4	73.3	76.3
Undecided:	5.4	6.0	5.8

f. City Encouragement of Subdivision Development:

Encourage Subdivisions:	56.0%	31.8%	42.2%
Discourage Subdivisions:	31.9	58.2	46.9
Undecided:	12.0	9.9	10.9

Even though the attitudes of rural residents are favorable toward some aspects of zoning within the city, their attitudes are quite different in regard to zoning in rural areas. Here 43% of the rural residents favor no overall zoning restrictions on the part of the Borough, and only 37% favor moderate or strong zoning policies. This should not, however, be interpreted as opposition on the part of rural residents to all forms of Borough regulations, since the question did not address itself to specific areas of industrial zoning.

3. POTENTIAL ON-SHORE OIL FACILITIES: Although local public attitudes are opposed to oil facilities in Homer in general, and on the Spit in particular, zoning questions were asked, should on-shore development take place. Responses for both city and rural residents showed preferences for having the oil facilities themselves located outside or away from town, and on land leased to the oil companies by the city or Borough; on the other hand preferences were also stated for oil company workers to actually live in Homer.

a. Preferences for Facility Locations, Should Oil Development Occur Locally:

	Homer City	Outside City	Total Area
Located In City Limits:	24.4%	27.7%	26.4%
Located Outside City:	57.6	41.9	48.1
Won't Consider Option:*	11.0	13.8	12.7
Undecided:	7.0	16.5	12.7

b. Preferences for Oil Facility Leases on Private or Public Land:

	Homer City	Outside City	Total Area
Private Land, Owned or Leased to Companies:	19.5%	17.3%	18.1%
Publicly Leased Land (City or (Borough):	57.9	61.0	59.8
Won't Consider Option:*	6.5	12.8	10.2
Undecided:	16.4	8.8	11.9

c. Preferences for Oil Workers Living in City or Away From City:

Living In Homer:	43.8%	43.5%	43.6%
Living Away from Homer:	22.5	25.2	24.1
Won't Consider Option:*	15.9	20.8	18.8
Undecided:	17.8	10.6	13.5

(* This category composed primarily of individuals strongly opposed to oil development who are against facilities being built either in or outside the city.)

Finally two questions were asked of slightly different samples. The first recognizes the use of Homer as the major service center for the southern Kenai Peninsula and consequently the importance of attitudes of residents outside of the area encompassed by the city and survey-defined rural area. Exclusive of Seldovia, where the question was not asked, the combined residents of Ninilchik, English Bay and Port Graham opposed the location of on-shore facilities in Homer in the following proportions:

d. Preferences for Location of On-Shore Oil Facilities in Homer by Residents of Ninilchik, English Bay and Port Graham:

City Should Encourage Oil Facilities in Homer:	31.8%
City Should Discourage Oil Facilities in Homer:	54.6
Undecided or No Opinion:	13.6

In addition a question was added to the questionnaire following completion of the Homer City interviews, asking all rural residents their preference for the centralization of all Lower Cook Inlet on-shore facilities in a single community such as Kenai, or the dispersal of these facilities into various communities

of the southern peninsula in accordance with individual community choice. The results showed a fairly strong preference for the centralization in Kenai among rural Homer area residents, and also a weaker preference for this among the combined residents of Ninilchik, Seldovia, English Bay and Port Graham. It should be cautioned, however, that these tabulations do not include the city residents of Homer, who if consistent with other attitudes would have been less favorable than the rural residents to on-shore centralization in Kenai:

e. Preference for Location/Centralization of Lower Cook Inlet On-Shore Oil Facilities:

	Homer Rural Area	Non-Homer Rural Area
Centralization in Kenai:	67.9%	53.2%
Dispersal to Various Communities in Accordance With Choice:	28.1	39.9
Undecided:	4.0	6.9

Taken together, the answers to all oil facility questions indicate that public opinion was consistently opposed to on-shore facilities at the time the survey was taken.* This does not of course mean that attitudes cannot change. Changes in the technology or policies of oil companies could conceivably change the perceptions which some residents hold. However one factor appears to be crucially important at present. This is that opposition to oil represents a divisive force within the community and that any immediate action taken to initiate facilities would probably only serve to increase this level of antagonism. Two options appear possible, assuming Lower Cook Inlet exploration and development actually occurs. The first would be to follow majority opinion and oppose the establishment of on-shore facilities in Homer, while encouraging the location of these in a community such as Kenai. The second would be to achieve a greater

*It should be noted that interviewing in Homer was completed just prior to the initial unsuccessful effort to remove the Ferris.

consensus in support of those facilities that might be located in the local area. Essential to this would be public discussion and the elaboration of local regulations that would control the oil industry and thereby provide safeguards to guarantee maintenance of the present quality of life. A fairly strong concensus appears to exist that if oil development should occur in Homer, that it must be closely controlled and regulated. Answers to various questions indicate that the city should play a very active role in determining the specific conditions and locations under which on-shore facilities might be developed.

4. TOURISM: Although tourism ranked relatively low in terms of economic activities that residents felt should be encouraged, a majority of residents favored its development, albeit city residents more so than rural. Attitudes on developments related to tourism, particularly on the Spit, have already been mentioned and need not be repeated. What does appear relevant are the generally favorable attitudes toward land use and facilities that would cater rather specifically to the tourist (such as private and public campgrounds, as long as payment was received for the latter) and their overlapping with other local activities strongly favored by the Homer resident. The mutual participation in outdoor recreational activities are one example of this. Another not mentioned previously is the strong local preference stated for the small owner-operated business over the larger corporate stores, which would also be consistent with tourist use. However, many other issues exist, such as strong local participation and/or preference for outdoor parks, the Pier I Theater, dry boat storage facilities, the Museum and library, public wharf fishing, and sidewalks and bike trails. Sponsorship of these type facilities would not only meet needs expressed by the local public but provide attractions for the visiting and summer tourist, and they might well be given consideration for additional attention and development by the city. On the

other hand, opposition would be expected to the development of a large scale tourist industry that lacked consistency with local recreational life styles and which competed for limited land use.

SECTION V: SUMMARY

In brief form this concludes the information provided by the survey. As stated in the introduction, it is not our intention to pursue an analysis of this and it would be overly precocious for us to make policy recommendations on the basis of it. Our intention has been merely to provide a systematic assessment of attitudes which we hope many will be able to utilize and from which we believe specific policies can be generated. To a very limited degree, this may already have occurred, in that high school students who did much of the interviewing emerged with greater knowledge about their town. It is neither assumed nor anticipated that the attitudes described here will remain constant. It is hoped, however, that they will help promote both knowledge about the community and the discussion or thought that is essential for creative planning to occur. Only in this way can change be self-promoted and meet the common human needs of the community.

The population of Homer is a relatively new and young population with a strong tenacity for individual life styles deeply influenced by the traditional resource base. It would be very erroneous to imply that many of the attitudes expressed in the survey are totally negative, particularly those associated with on-shore oil, or that they merely reflect an idealistic desire to preserve traditional life styles alone. A small minority of individuals may hold these, and they would probably be paired with as many others who would oppose them vehemently on every issue. A more representative element of the public, however, appears

to be one positively oriented toward changes that will selectively enhance those elements of the community that are consistent with basic values. From the survey, many of these values are closely tied to aesthetic appreciation of the land and Bay, its fishing economy and recreational - subsistence use, and close affinity for qualities of small town life. If residents in Homer are to maintain control over the future of their town, potential developments that are endorsed must be consistent with these resources and values.

Testimony given before the Senate Resources Committee in consideration of Senate Version of House Bill 192 and Senate Bill 199 regarding the repurchase of oil leases in Kachemak Bay on the Kenai Peninsula.

Prepared by: Michael Baring-Gould, Ph.D.

University of Alaska, Anchorage

April 1, 1977

We have prepared the following testimony at the request of Senator Chancy Croft. The information which we are presenting is derived from a survey of attitudes toward growth and development in communities of the Lower Kenai Peninsula.

The survey was conducted during the summer of 1976 under a grant from the Alaska Humanities Forum and administered through the Institute for Social and Economic Research. It was coordinated through the Kenai Peninsula Borough and through local community or city administrations and Planning and Zoning Commissions. Respondents were selected through scientific random sampling methods and were all interviewed in person by university-trained interviewers. In total 395 individual household heads were interviewed from the communities of Ninilchik, Anchor Point, Nikolaevsk, Homer, Seldovia, Pt. Graham, English Bay and various outlying homesteads of the Kachemak Bay area. Although the survey dealt specifically with attitudes toward growth and development, including on-shore facilities from OCS development in the Lower Cook Inlet, and not the Kachemak Bay leases themselves, we feel that responses to questions can be used to reflect local attitudes toward repurchase of the leases. For your information we have included copies of two reports written from this survey pertinent to the communities of Homer and Seldovia.

The results of the survey indicated an overwhelming preference for the preservation and development of fishing resources in Kachemak Bay. Over 95% of the residents interviewed favored local community encouragement of fishing and fish processing, and when asked to prioritize development alternatives (such as tourism, light manufacturing, transport and oil development, etc.), the top priority was again overwhelmingly given to fishing. In contrast, a majority of 61% (with 8% undecided) of the area residents opposed the encouragement of on-

shore supply facilities in the Kachemak Bay area for off-shore oil development; even larger proportions opposed more extensive on-shore facilities such as liquification or refining plants. Similarly, on-shore oil developments were consistently cited by a majority of local residents as the least desireable type of local economic activity. Although the questions were asked in reference to Lower Cook Inlet oil development on potential federal off-shore leases, the results would have in all probability been stronger in relation to state leases in the Bay; various residents who favored on-shore oil development from the off-shore leases stated as asides that they had been opposed to exploration and drilling within Kachemak Bay.

Answers to various other questions on the survey validate those already mentioned. In the Homer area, for example, 76% of the residents stated that preferences should be given on the Homer Spit for fishing and fish processing facilities, as compared to 9% who favored industrial usage such as that related to oil development. Similarly 78% opposed the location of oil storage and tanking facilities on the Spit, and 70% opposed warehousing and equipment storage facilities on the Spit for oil exploration.

We feel confident in saying therefore that a strong majority are opposed to oil development in the Kachemak Bay area. In addition, the results were found to be suprisingly uniform across the various community, population and occupational groups in the area. Naturally, fishermen are strongest in their opposition, but these attitudes were also shared by a majority of natives, professionals, technicians, and even laborers. The only groups showing relatively consistent preference for on-shore development were the older and longer-term residents of the area, and those whose occupations are managers or owners of businesses in the area. Among these particular groups significant support

does exist for off-shore oil development and local on-shore facilities, and in all probability similar attitudes would prevail toward oil development within Kachemak Bay. However, these positive attitudes toward oil development appear to be specific to quite particular groups and are definitely not reflective of the overall public opinion of maintaining the local economy on its present resource base. As a final comment it should be added that whereas the study showed that a minority within the Kachemak Bay area are opposed to any type of economic growth, the vast majority expressed attitudes in support of growth as long as the economic activities were consistent with maintenance of the present resource base.

On the basis of the attitudes determined through the survey, we would obviously conclude that a strong majority of local residents favor maintenance of Kachemak Bay in its present state, and consequently repurchase of the state leases. We hope that the opinions obtained from this research are useful to you and the Senate in the making of decisions concerning Kachemak Bay.

Oral Statement
Nicholas J. Gangl
Senate Resources Committee
Juneau, Alaska
April 1, 1977

MADAME CHAIRMAN, MEMBERS OF THE COMMITTEE:

MY NAME IS NICHOLAS GANGL. I came to Alaska in 1962 from Wyoming. I worked on the White Alice Communications System as a technician. In 1962 I was assigned to the site at Kotzebue where, along with several of my co-workers, we operated a set net site for salmon. During the summers of that time we sold the fish for 12¢ each. Now these same fish are selling for 65¢ a pound.

In 1965, I had the opportunity to transfer to Homer. The company also had openings for me in Anchorage and Madrid, Spain which I declined because I wanted to make Homer my home. I have subsequently acquired and developed real estate property in the area, including cemetery lots for myself and my wife. I expect to be here for some time.

I am a member of the Homer Advisory Planning Commission, a member of the Kenai Peninsula Borough Planning Commission, and a member of the Parks and Recreation Council, Kachemak.

I am sincerely concerned with the economic welfare and the best interests of the whole community, and the highest and best uses of our land and resources for the benefit of all.

The repurchase of the Kachemak Bay Leases would be a tremendous loss due to the following:

1. Loss of the moneys to buy back the leases which come from the General Fund, thus depriving the citizens of the State of Alaska the benefits that could otherwise be derived from that amount of money, such as additional roads and road improvements, harbor and port facilities, fishery improvements, etc. which are so badly needed.

2. If the Kachemak Bay Leases produced the oil and gas that is estimated to be there, it would benefit the local community immeasurably, due to the availability of these energies to generate electricity. It would double the useful efficiency of the fishing industry, providing the economical energy for drying the fish wastes. Thus the wastes could be processed and ground into commercially useable fertilizers. These wastes now present a disposal problem and add to the pollution of our environment and could be a boon to the local agricultural community for the development of heated green houses for year around commercial produce production, which has been demonstrated as being feasible by way of experiments in Soldotna.

3. Loss of royalty income to the State, which would be generated from these leases.

4. Loss of the tax revenue which would accrue to the borough by way of assessed taxes on this oil field equipment.

5. If the buy-back funding is approved the federal land adjacent to the Kachemak Bay Leases are going to be leased anyway. The oil in the state land will be drawn off through production on these federal lands and the state will receive nothing from it. Not to mention, the potential losses of economic benefits to the community as a result.

If HB 192 is approved, there are still some 16 other leases to other companies and individuals that have not been settled.

The oil industry does have the technological ability to properly protect the critical habitat area and drill safely without damaging the environment. The state does have the enforcement capabilities to see to it that it is properly done.

It is unfortunate that the accident of the Ferris and the excessive over exageration of the small amount of oil lost or spilled from the Ferris has resulted in the buy-back action. However the unrecovered

oil lost from the Ferris was less than 200 gallons. It is interesting to note that the amount of two-cycle outboard oil distributed by Standard Oil in Homer for one season is 1300 gallons, which is less than one-fifth of that sold, or used in this area. Some 5,000 gallons of outboard oil is spewed out into the bay each year from the Homer area. This is 25 times more than that lost from the Ferris alone. Not to mention that the fishing boats are now buying large quantities of detergents to flush and clean their bilges, and mix with their waste oils. This holds the waste oil in suspension and is not seen or detected as a sheen when pumped out.

I believe it would be irresponsible to buy back these leases, and a misuse of state funds to do so.

In the best interests of the community, the state, and the nation, I sincerely urge you to reject funding for HB 192.

Thank You,

R Andy Johnson

April 1, 1977

Senator Kay Polland, Chairman
Senate Resources Committee

TESTIMONY ON A.B. 192, SENATE BILL 199

I am against the present policy on regulating and preserving the natural resources in Kachemak Bay for two reasons:

1. The limited entry law was passed, using half truths and false advertising. In no way does this law limit or preserve the fish resources in the Bay. It only limits the number of fishermen.

   The only way to preserve the fishery is to see that an adequate number of each specie gets to spawn. After that, it should be up for grabs as to who catches each fish. If the State is going to limit the number of commercial fishermen, it should also limit the number of sport fishermen. In either case, I do not feel the State has the right to tell me I cannot fish, but you can.

2. The oil lease buy-back is justified by innuendo and supposition, not fact. There is no place on the surface of this world where the development of an oil industry, offshore, has depleted a fishery. The North Sea is a much larger and diverse fishery than Kachemak Bay, and yet none of the people who are against the Kachemak Bay development have been able to show where oil development has hurt that fishery. The same is true about the Gulf of Mexico. In fact, the shellfish production is more since the oil platforms have moved in.

   A big hullabaloo was made when the Ferris was to be moved out of the Bay. Under the worst possible circumstances, the barge sinking, the legs of the rig having to be blasted off, and oil having to be transferred and hauled ashore, the control was so good that there is more oil spilled by the fishermen in the small boat harbor each day than was lost on the Ferris.

   The only leases that the State can stop are those within the area the State controls; hence, the Inlet is going to be developed in spite of the State. It is always more reasonable to encourage and control development than to have someone else control it and shove it down your throat. There is no way Alaska can stop potential oil development in this energy-hungry world.

Last, the worst accident that could happen, as far as Kachemak Bay is concerned, is for a super-tanker to be wrecked in the Lower Inlet. With controlled development in the Inlet, there will be containment equipment available to take care of a spill, and limit the contamination. With no development, this equipment will not be here.

If such a spill did take place, and 75% of all the shrimp, crab and clam fishery in the Inlet was destroyed, with modern hatchery methods and shutting down the season for three or four years would build it back to normal.

It would be far more economical if such a catastrophe did happen to charge the perpetrator for the loss of income than for the State to pick up the tab before anything happens, betting that it will, and charging us taxpayers for the cost.

Thank you for listening.

R. Andy Johnson

SENATE RESOURCES COMMITTEE
TESTIMONY REGARDING REACUISITION OF LEASES IN KATCHEMAK BAY
SHARRON LOBAUGH

ALASKA CONSERVATION SOCIETY
APRIL 1, 1977

LAST YEAR, I SAT IN ON ALL HEARINGS ON THIS SISUE WHICH CONSUMED ABOUT A FULL TWO WEEKS OF LEGISLATIVE TIME. I DID NOT TESTIFY PRIMARILY BECAUSE THERE WERE COUNTELSS WITNESSES ON BOTH SIDES AND THE CONSERVATION POSITION WAS WELL KNOWN BY MANY PIECES OF CORRESPONDENCE.

I AM HOPING TODAY, TO TAKE A FEW MINUTES OF YOUR TIME TO RESTATE SOME OF THE TESTIMONY OF LAST YEAR PRIMARILY BECAUSE THE SENATE DID NOT HAVE THE FULL BENEFIT OF THE RATIONAL AS MOST OF THE HEARINGS WERE HELD IN THE HOUSE RESOURCES COMMITTEE.

THE MOST IMPORTANT THING NOW SEEMS TO BE THAT THE LEGISLATURE DED ENACT ENABLING LEGISLATION FOR THE REACQUISITION OF THE LEASES AND THE STAT AND STANDARD OIL THE MAJOR LEASE HOLDER, HAVE NEGOTIATED IN GOOD ON AN AGREEMENT THAT SHOULD BE HONORED. THE ACTU L COST OF THIS AGREEMENT TO THE STATE IS 12 M. AND THE RE AINING 92 M. WILL BE USED FOR TAX CREDITS.

BRIEFLY, THE HISTORY IS ONE OF FLAGRENT ABUSE OF GOVERNMENTAL POWER. THE PEOPLE OF KATCHEMAK BAY HEARD RUMORS IN THE FALL OF 73 THAT THERE WAS A PROPOSED LEASE SALE IN COOK INLET. GOVERNOR EGAN TOLD THE MAYOR AT THAT TIME PAUL JONES THAT THE LEASE SALE WAS NOT GOING TO INCLUDE KATCHEMAK BAY AT THIS TIME. HOWEVER, ONLY 10DAYS BEFORE THE LEASES WERE SOLD ON DEC. 13 THE RESIDENTS LEARNED THE BIDS HAD BEEN SOLICITED WITHOUT A PUBLIC HEARING. 300 PERSONS PETITIONED FOR A HEARING IMMEDIATELY.

THEIR PETITION WAS IGNORED.

THE ASSEMBLY OF HOMER NOR THE PLANNING COMMISSION HAD EVER BEEN CONTACTED REGARDING THE PLANNED IMPACE.
FISH AND GAME WAS ONLY GIVEN 3 DAYS TO RESPOND TO THE PLANNED SALE **OBVIOUSLY THEIR COMMENTS WOULD BE IGNORED.

AFTER THE SALE THE LEGISLATURE HELD HEARINGS AND WAS TOLD BY THE GOVERNORS OFFICE THAT THERE WAS A "CLOUD OF DOUBT" ABOUT THE APPROPRIATENESS OF THE SALE BUT THE GOVERNOR JUST COULDN'T FIND THE MONEY TO REPURCHASE THE LEASES. WHEN ASKED WHY THE PETIONERS WERE DENIED A HEARING THE GOVERNORS OFFICE REPLIED: "THEY MADE NO SPECIFIC COMPLAINT IN THE TELEGRAM."

COMMISSIONER HERBERT WHEN ASKED WHE HE WOULD JEPRODIZE THE FRAGILE BLUFF POINT HABITAT REPLIED THAT HE WAS NOT AWARE OF THE VALUE OF THE FISHERIES OF THE AREA.

THE LEGISLATURE ENACTED CRITICAL HABITAT LEGISLATION ØOR KATCHEMAK BAY .

WHILE MOST OF YOU ARE KEENLY AWARE OF THIS HISTORY, MANY OF YOU MAY NOT BE AWARE OF WHAT HAPPENED LAST YEAR WHICH CHANGED THE CIRCUMSTANCES. AS ONE HOUSE MEMBER ASKED "WHAT DO WE KNOW NOW THAT THEY DIDN'T KNOW IN 1973?"

ALOT MORE INFORMATION IS KNOWN TO VERIFY THE CRITICAL HABITAT STATUS OF KATCHEMAK BAY, ALOT MORE IS KNOWN ABOUT THE PRODUCTIVITY ADD ALOT MORE IS NNOWN ABOUT THE VALUE TO THE ECONOMY.

COMMERCIAL FISHERMEN ROSILEE MOORE MADE THESE ASSESMENTS:

IN WHOLESALE VALUE 3.2 MILLION POUNDS OF FISH PRODUCCTS WERE CAUGHT LAST YEAR. $7.3 MILLION DOLLARS OF WHOLESALE VALUE BRINGS $3.5 MILLION IN REVENUE TO THE STATE FOR THE FISH TAX.

THE CATCH INCLUDED:

70,000 # dungeness (56 vessels)
160,000 # king crab (80 vessels)
1,100,000 # tanner (53 vessels)
7,100,00 # shrimp (40 vessels)
900,000 # salmon (60 vessels)
halibut (13 vessels)
48,000 # shrimp (L1 vessels)

5-10,000 persons are directly employed by the fishing industry.

LIMITED ENTRY PERMITS INCLUDE:

511 gillnetters
251 seiners
100 crabs
800 kelp
100 herring

HER SUMMARY STATEMENT WAS THAT ~~WE ARE~~ Fishing is JUST AS VALUABLE AN INDUSTRY TO THE STATE IN THE LONG RUN.

THE PRODUCTIVITY OF THE BAY WAS ATTESTED TO BY THE DEPARTMENT OF FISH AND GAME BIOLOGIST LOREN FLAGG. THESE ARE SOME OF HIS COMMENTS:

500 Million shrimp LIE OFF THE BLUFF POINT AREA. BIOASSESSMENT STUDIES OF PLANKTON IN APRIL AND MAY SHOW 507 BILLION LARVA ARE ANNUALLY RELEASED IN THIS AREA WHICH MIGRATE OUT INTO THE BAY. BECAUSE LARVAL FORMS ARE NOW SPECIFICALLY IDENTIFIABLE, WE HAVE DETERMINED THAT POST LARVAL NUMBERS AVERAGE 35 MILLION PER SQUARE MILE IN THE BAY. WE HAVE REASON TO BELEIVE THAT THIS PARTICULAR BODY OF WATER MAY BE ONE OF THE MOST PRODUCTIVE ~~IF NOT THE MOST PRODUCTIVE~~ FOR SHELLFISH IN THE WORLD.

NOT ONLY IS THIS AREA SIGNIFICANT FOR THE REAARING GROUNDS FOR 3 SPECIES OF CRAB,&SHRIMP BUT IT ALSO SUPPORTS REARING AREAS FOR 5 SALMON SPECIES AS WELL AS HALIBUT AND HERRING. TAGGING HAS ALLOWED US TO SHOW THAT SOME OF THESE FISH ARE CAUGHT OFF BANNER POINT ISLANDS.

HOWEVER, BEDAUSE OF A PARTICULAR TIDAL SITUATION WHICH EXISTS
I

DUE TO THE SWIFTNESS OF THE COOK INLET EXCHANGE, THE WATER IS ESSENTIALLY THE SAME WITHIN THE BAY AT ALL TIMES. IN OTHER WORDS IT DOES NOT MIX WITH THE COOK INLET WATERS BUT WILL RE*-CIRCULATE WITHIN THE WATER COLUMN OF KATCHEMAK BAY.

2.6% OF THE WATER OF COOK INLET THEREFOR PRODUCES OVER 60% of the FISH.

MANY TIMES WE HAVE HERRD THAT OIL IS COMPATABLE WITH the ENVIRONMENTAL ~~CONCERNS~~ AND SOME HAVE EVEN CLAIM THAT THE BIODEGRADABILITY OF CRUDE OIL ACTUALY ENHANCES THE PRODUCTIVITY.

WE BELIEVE THERE IS SUBSTANTIAL EVIDENCE TO THE CONTRARY. THE MOST CURRENT RESEARCH WITH THE NORTHERN ENVRIONMENTAL CONDIDTIONS IS THE WORK DONE BY RICE OF NATIONAL MARINE FISHERIES THROUGH A GRANT FROM STANDARD, MARATHON, PHILLIPS AND TEXACO AND RELEASED ON APRIL 5 OF LAST YEAR.

DR. RICE TESTIFIED THAT THE VOLUME OF OIL IS NOT AS IMPORTANT A MARIABLE AS THE MIX OF TOXINS IN THE WATER COLUMN. THE RESEARCH INDICATES THAT AMOUNTS OF LESS THAN .1 ppm KILLS LARVAL FORMS OF SHELLFISH. WHILE THERE IS NOT ENOUGH INFORMATION

AT THIS TIME AS TO HOW MUCH OIL CAN BE EXPECTED TO PRODUCE THIS RESPONSE IN THAT PARTICULAR BAY, IT CAN BE ASSUMED FROM THIS STUDY THAT A VERY ~~VERY~~ MINUTE AMOUNT IS HIGHLY TOXIC TO LARVAL FORMS. MANY VARIABLES SUCH AS SEASON OF THE YEAR, TIDE, TEMPERATURE OF THE WATER , WIND, WEATHER ETC WILL AFFECT THE DISPURSEMENT OF OIL.

OF THE 260 REPORTED SPILLS IN COOK INLET WHICH HAVE BEEN RECORDED BY EPA, 142 WERE CAUSED BY INDUSTRAIL CARELESSNESS. THE 10,000 GAL TRADING BAY SPILL DEMONSTRATED THE DIFFICULTIES OF CLEANUP ACTIVITIES BECAUSE OF ICE, WAVES AND WIND. PARTICULAR RISKS TO ESTRUARIAN AREAS ARE EVIDENT AS MOST OIL WINDS UP ON THE BEACH WITHIN 15 MINUTES. THE TORREY CANYON SPILL IN 1967 KILLED A CONSERVATIVE ESTIMATE OF 10,000 BIRDS. HATCHING OF EGGS HAS BEEN SERIOUSLY AFEECTED SINCE THIS DISASTER. FOLLOW UP STUDIES OF THE MARINE LIFE WHOW THAT THE FLESH of fish, shellfish, turtles, ABSORBS THE OIL FLAVORS. HOWEVER A VITAL GAP IN KNOWLEDGE EXISTS AS TO ITS LONG RANGE AFFECT ON PHYTOPLANKTON. KELP FOR EXAMPLE IS DESTROYED BECAUSE PHOTOSYNTHESIS IS REDUCED. OIL AT VERY LOW CONCENTRATIONS MAY NOT AFFECT THE ADULT SPECIES BUT GREATLY AFFECT WHOLE ECOSYSTEMS**SENSITIVE SPECIES MAY EVENTUALLY DECLINE WHILE RESISTENT ONES FLOURISH[1]

THE SPILL OF THE METULA ON AUG. 9 1974 PROVIDED A SUPERTANKER SPILL WHICH CAN BE USED FOR COMPARISON TO ALASKAS SITUATION BECAUSE IT OCCURRED IN A SPARCLY POPULATED S.AMERICAN BAY WHOSE WATERS RECIRCULATE MUCH THE SAME AS THOSE IN KATCHEMAK BAY. 53,550 TONS OF OIL WERE SPILLED. OIL COMPANY BIOLOGISTS INDICATED THAT THE OIL WAS CARRIED BY CURRENTS OUT TO SEA BUT ~~OTHER~~ EPA BIOLOGISTS CONFIRMED THAT MOST OF THE OIL WENT DIRECTLY SHORE AND HAS REMAINED THERE. "THIS OIL WILL CONTINUE TO ERODE, LEACH INTO THE WATER OR BE FLUSHED FROM THE ESTURARIES AS A CHRONIC SOURCE OF POLLUTION FOR A LONG TIME TO COME." (Hann) The METULLA SPILL WAS NEVER CLEANED UP * IT WOULD TAKE 12,000 DUMP TRUCKS TO MOVE THAT MUCH OIL UP OFF THE BEACH. PRESENT BIOLOGICAL WORK DONE BY AMERICAN SCIENTISTS A YEAR LATER FOUND CONTINUAL BIRD KILS, NO CRUSTACEANS, MUSSELS, LIMPETS were found ~~EPA ESTIMATES 40,000 DIED~~ Birds.

1 Audubon Magazine page 27, May 1975

A DOW CHEMICAL STUDY OF AN CIL SPILL WHICH OCCURRED IN MAINE IN 1963 ('870,000 gallons) THAT 200 ppm RESIDED IN CLAMS 10 years LATER.

DR. BLOOMER OF WOODS HOLE SHOWED THAT IN 1973 THE OIL SPILL ELIMINATED BOTTOM DEELLERS FOLLOWING THE DISASTER IN SANTA BARBARA WITH SATURATION OF 1FT BEPTH. MARGINAL RETURNS HAVE BEEN RECORDED.

BY NOW MOST OF YOU ARE CRYING "ENOUGH" "ENOUGH" AND SOME ARE PROBABLY STILL THINKING THAT THISGS WILL BE DIFFERENT BECAUSE WE HAVE HE BEST TECHNOLOGY FOR ALASKAS OIL DEVELOPMENT, WE HAVE COMPLETET ASSURENCE BECAUSE WE HAVE LAWS THAT PROTECT THIS TYPE OF OCCURRANCE, OUR OEL: COMPANIES ARE "COOPERATEOG" AND WILL DO THEIR UTMOST.

THIS THEN BRINGS THE ISSUE CLOSER TO THE FORE? HAVE WE REALLY AD THE BEST AVAILABE TECHNOLOGY? DO THEY REALLY PLAN TO DO THINGS DIFFERENTLY HERE?

THE GEORGE FERRIS STANDS TODAY AS A MONUMENT TO DISBLEAVEERS. ON ITS INNITIEAL VOYAGE INTO THE HARBOR, KEN DOORE REPORTED THIS: "I COULDN'T BELIEVE IT, I WAS FISHING LATE TOWARDS EVENTNG AND I LOOKED DOWN THE CHANNEL AND THERE WAS THIS HUGE PLATFORM HEADING STRIGHT FOR MY CRAB POTS, I SPED TO THESCENE BUT TO NO AVAIL, THE FERRIS CAM INEO THE BAY UNLIGHTED UNANNOUNCED AND DESTROYED 85 CRAB POTS." HE FURTHER TRIED TO OBTAIN REIMBURSEMENT SINCE EACH POT IS WORTH $2,000 BUT ~~WHEN DENIED~~ THE COMPANIES WOULD NOT SUBSIDIZE THE LOSS OF EVEN 1 1 DAYS CRAB FISHING BECAUSE IT WOULD ESTABLISH PRECIDENT. "I LOST 7 POTS AND OVER A WEEKS FISHING. EACH YEAR ABOUT 20 POTS ARE LOST OF A TOTAL OF 80. MOST OF THESE ARE DUE TO BIG VESSELS. THE FERRIS DRAWS 35' AND THE POSS ARE IN THE MIDDLE OF THE BAY WHICH IS NATURALLY WHERE THE BIG SHIPS WANT TO GO. 3000 POTS WERE FISHED IN THIS BAY LAST YEAR. L MOST

fishermen
LOOSE $30,900 A YEAR JUST TO CRAB POT LOSSES AND SOME NEVER RECOVER THIS LOSS. A FULL STRING OF GEAR RUNS ABOUT $40,000. THIS: DOES NOT INCLUDE LOSS OF CATCH. THE SEASON IS FROM AUG TO JAN AND THEN BETWEEN JAN AND MARCH FISHERMEN FISH FOR DIFFERENT SPECIES * DUNGENESS FROM JULY TO DEC.

FINALLY, WHEN THE FERRIS, became stuck SPILLED OVER LAST MAY AND DEMONSTRATED THAT IT DID NOT EVEN HAVE ACCESS TO OIL POLLUTION EQUIPMENT SINCE ITS HYDROLIC RELEASE WAS SUBMERGED, IT FULLY DEMONSTRATED THE OVERDONFIDENCE SOME PERSONS PLACE ON TECHNOLOGY. NOTHING FURTHER NEEDS TO BE SAID REGARDING THE POINT.

IN SUMMARY, THE LEGISLATURE WAS VERY BRAVE TO, FOR HE FIRST TIME IN HISTORY, REVERSE A VERY OBVIOUS MISTAKE IN BEHALF OF THE ENVIRONMENT. YOU AS OUR LEADERS HAVE AS MUCH RESPONSIBLLITY TO PROTECT THIS GREAT LAND FOR THE FUTURE AS YOU DO TO PROVIDE JOBS FOR THE PRESENT. WE URGE YOU TO AGAIN REAFFIRM YOUR EARLER ACTION AND PASS HB 192.

Sharon Fosbrough

ORAL STATEMENT OF

BARBARA C. MANLEY
Homer, Alaska

on

SUPPORT OF SB 199 TO REPEAL HCS CSSB 720, 1976

and

OPPOSE HB 192, AN APPROPRIATION OF $12,000,000.00 FOR PAYMENT TO CHEVRON, U.S.A. FOR KACHEMAK BAY LEASES

presented at

HEARING

before the

SENATE RESOURCE COMMITTEE
STATE OF ALASKA
JUNEAU, ALASKA
APRIL 1, 1977

I am Barbara Manley. I have lived in Homer for eleven years, and Alaska has been my state of residency for fourteen years. My husband is retired from the Air Force. In our thirty-two years of marriage, Homer was our first opportunity to choose for ourselves where "home" would be.

As an Air Force wife, I accumulated 2800 hours of volunteer service with the Air Force Dependents Assistance and Family Service Program and 3600 volunteer hours with the American Red Cross. I have been a girl scout leader and cub scout den mother; had years of PTA and serving as "room mother". I have not been a career business woman, but perhaps a career volunteer.

Since I have been in Homer, I have served on the Advisory School Committee and the City Planning Commission. I am currently vice-chairman of the City Board of Health and Safety and Secretary of the Board of Directors of the South Central Health Planning and Development, Inc., Central Alaska Health Systems Agency.

As a volunteer I believe a person has an opportunity to see and recognize many of the social disparities that are created by the selfishness of a few.

I believe the 1976 legislators passing HCS CSSB 720 is a prime example of a selfish few plying emotions with exaggerations of impending disasters and half-truths to achieve their own personal goals. If this bill is not repealed, the expenditures of these millions of dollars, not only for Chevron, but all of the millions of dollars for the remaining leases, will certainly create great inequities for many, many Alaskans, far more than the number who will reap benefits from the buy-back of the Kachemak Bay leases.

There are those who perpetuate the cry: We must preserve our "Quality of Life." and "We must preserve our Life Style." But WHOSE quality of life? WHOSE life style? Quality is a degree of excellence. Life is animate existence, time between birth and death. Style is a manner of doing.

My husband and I have our health, a long, lasting marriage, our children, grandchildren, our home and the necessities of life. I believe that I have a good "Quality of Life".

As for life style, I have seen people who were testifying at public hearings who lived in make-shift visquine tents anchored to driftwood along the beach of the Homer Spit. They performed body functions along the side of a public highway, and if and when they had a desire for a bath they could patronize the local public showers. All of their worldly possessions they carried in their backpacks. They are entitled to their life style. However, for myself, I prefer a permanent structure with a roof over my head; a closet for my clothes and a bathroom in the privacy of my own home. I believe that I too am entitled to my life style.

I also believe that all of the people in the Kachemak Bay communities are equally entitled to the right to earn their livings.

In the Homer Small Boat Harbor, there are 26 crab boats, 72 crab and shrimp boats, 45 seine and drift boats, and 65 halibut boats, a total 208 commercial fishing vessels who have reserved boat stalls. There are 117 daily transit boats (who pay rental fees on a daily basis), 51 6-months transit boats (who pay rental fees only six months) and 64 12-months transit boats (who pay

rental fees the full year). I might explain that the transit rentals are paid for use of any stall that happens to be empty as permanent stalls are not available. (There are 465 boat owners on the waiting list for stalls) Since the 232 transit boats are "commercial vessels", it is assumed that they are fishing boats.

For an hypothesis, assume that each of the 440 commercial fishing boats has three people engaged in fishing. This represents 1320 people. It is reported that the Homer Conservation Society has a membership of 25. (I am using these two groups because it is the North Pacific Fisheries Association, representing the fishermen, and the Homer Conservation Society who are plaintiffs in the lawsuit against the Department of Interior in opposing the Lower Cook Inlet lease sale. It is the same segement of people in our community who opposed the Kachemak Bay leases.)

This represents a total of 1345 people. By far, not all of the fishermen nor Conservation Society members are opposed to development of the Bay leases. Also, the total number of fishing boats includes the fishermen from Anchor Point and many others who do not fish the Cook Inlet Region.

The population of only the Homer area is approximately 4200 people. The other 2855 citizens need homes, food and clothing and some means whereby they can earn them. They can't be fishermen. There are not enough fish to support them all, nor does the limited entry law allow them to try.

I submit that Senate Bill 199 should be passed to repeal HCS CSSB 720 for these reasons:

1. There should not have been <u>any</u> legislation dealing with

Kachemak Bay leases. The case of these leases was before the Alaska Supreme Court. The legislature should have waited for the Court's decision, and thereafter, abided by that decision.

2. The majority opinion of the Supreme Court remanded this case to Superior Court for determination on the legal area in question. There should be an expedient hearing in Superior Court, and the judgement of that Court should prevail.

3. From the onset of the Kachemak Bay issue, the invalidation of the leases has been promulgated by a select few.

4. Volumes of evidence was presented to the ninth legislature from the residence of Kachemak Bay communities. The preponderence of this was against the invalidation of the leases by any action other than the court's decision declaring the December 13, 1973 28th Competitive Oil and Gas Lease Sale illegal.

5. To establish the precedent of one administration to resending the decision of the prior administration, without judicial justification, can lead to a vacillating government totally without continuity or stability.

I further submit that House Bill 192 shoud be defeated for these reasons:

1. The money to be used is tax dollars. It matters not whether it is cash payment or tax credit toward future liabilities, it is money from the state treasury. This deficit will have to be made up with dollars from every taxpayer in the entire State of Alaska, not just one segement of the people nor one area of the state.

2. The people of Alaska have been misinformed by the admin-

istration and many legislators in their statements that the buy back of Kachemak Bay lease is "merely a refund" of the money paid to the state for the leases in 1973. The price to be paid to re-acquire leases from Chevron, U.S.A. is $21.1 million and the contract to purchase Texaco's leases is $3.5 million. This is $24.6 million and subtracted from the approximately $25 million the state received from the TOTAL sale, including the leases near Beluga, leaves $400 thousand to buy back the remaining leases owned by four other major oil companies and a number of individuals. This is ridiculous! I highly suspect that IF negotiations should occur with the remaining oil companies, the cost will be equal to, if not more than, the combined amounts negotiated with Chevron and Texaco. This is not a "refund"; it's a rip-off of the taxpayers! Not only is the buy back of the leases a needless expenditure of money, it also deprives the state of future revenues in royalties and future taxes.

3. In view of the close proximity of the Kachemak leases to federal waters, it seems ironic than the state will deny itself the revenue and closer control over explorating and development to have the same body of water exposed to virtually the same hazards but without jurisdiction to implement any control.

4. The money proposed to be spent to reaquire these leases should be spent to benefit the majority of the taxpayers. There are many medically underprivileged areas throughout the state. (The City of Anchorage applied for federal funds as a medically underprivileged area in February this year.) The entire state needs roads and road improvements. With projects that have

federal matching funds, how many projects this money, as the state's share, could accomplish! For example, with a project qualifying for 90% federal funds on highways, how many miles could be built with $211 million? Or, on dock projects that may qualify for only 50%, how much dock improvement or construction could be done with $42.2 million? You are as aware as I of the medical needs, the lack of dock facilities, airstrips, court facilities, schools and many things in the Interior, on the Chain, in Central Alaska and in Southeastern , throughout the state, where these millions of dollars are badly needed, and should be spent.

I ask each of you to please pass Senate Bill 199, and to defeat House Bill 192. Truly help to make Alaska a better place for all Alaskans.

Thank you.

HOMER S. THOMPSON

IN TESTIMONY BEFORE THE

SENATE RESOURCES COMMITTEE

OF THE

ALASKA STATE LEGISLATURE

APRIL 1, 1977

30, March 1977
Box 116
Homer, Alaska 99603

Senator Kay Poland, Chairman
and members of the
Senate Resources Committee
Alaska State Legislature
Juneau, Alaska

Dear Senator Poland and members of the Senate Resources Committee:

I wish to testify as a resident of Homer, Alaska, in opposition to the House Bill No. 192, for the funding and the purchase of the oil leases in the Kachemak Bay area.

My name is Homer S. Thompson, I am 57 year of age, married over 35 years, and my wife and I have resided in Alaska since 1946 and at Homer, Alaska since 1953. We have four children all of whom have reached majority but only one, resides temporarily in Alaska.

After almost 12 years of military service, I resigned to move to Alaska and landed in Homer, Alaska, upon the advice of a former banker in Anchorage, Bob Baker. I am pleased that I heeded his advice to go to Homer and see whether I liked it or not. Upon arrival I liked what I saw and have been in Homer ever since, primarily, because I felt that Homer, Alaska had a great future, that was reachable within my lifetime.

I was unable to find any kind of employment for six months and then was fortunate to be employed as manager for the then local government, the Kenai Peninsula Public Utility District. In such position, I was also the tax assessor, tax collector, and a whole raft of other titles including disposer of dead animals. I was able to work successfully for a few things for the community, i.e. the funding for the Homer Small Boat Harbor, improvements to the Homer Airport, paving of the Sterling Highway, port improvements, and for the authorization of the Bradley Lake hydro-electric project, 23 miles northeast of Homer. I wrote the first resolution for this project, passed by the Alaska State Legislature, which has been repeated several times to obtain appropriations by the Congress of the United States.

Subsequent to employment as PUD manager, I have been employed

as a real estate broker, and continue in this field, along with operating a small business, a second hand store.

In the 23-plus years we have lived in Homer, it has been my observance that fishing has been the mainstay of the economy, backed up by government employment and a few months of tourists each year. I have also observed that the fishermen obtain a very small return from their investment in boats and gear, with few exceptions.

Recently, I was informed by our city manager that the current unemployment rate is between 19 and 20% of the employable force, not counting those who aren't looking for work. Over the years this has been singularly true, and Homer has so been classified by various government agencies, as an area of High unemployment and underemployment.

In recent years the population growth in Homer has come from the younger age group with entirely different ideas about life styles and programs than the age group I am a part of. There is this big kick about conserving everything in sight. I strongly suspect that if the radical proponents of environmental controls would have their way, there would be a crew of them employed installing refrigeration equipment in the nearby Harding ice field or perhaps the Malaspina and Taku Glaciers ... So that future generations might have the opportunity to view a glacier before they all melted away.....

I believe in conservation and in preservation too. In fact I was the leading proponent for setting aside the Yukon Island landmark property, when the Bureau of Land Management wished to let it all be homesteaded. While the preservation of this site may not mean much to most people sitting here today, it is recognized by leading anthropologists as one of the oldest continuing sources of artifacts of native people dating back some 3000 years, in Alaska, according to Frederica de Laguna, who wrote the Anthropology of Cook Inlet.

The concept that oil and fish can't live together is one without a factual basis, as evidenced throughout the world. That both must be disciplined is now well recognized. So... why all the hysteria? Someone once said, "Man is moved by the noblest of all human emotions .... greed."

The oil and gas companies drill to obtain oil to sell to show a profit, and the fisherman fishes to obtain the fish to sell for a profit. Why can't we have both??? at the same time??? in the same area??? We need both, though we do have alternative sources of food, there are few alternatives for oil that are currently available. Seventeen years have passed since the Bradley Lake Hydro project was authorized by Congress, yet no appropriations have been forthcoming, and as you all know the good Lord hasn't changed the rates for rain in a thousand years!

It is my fervent belief that the United States of America needs the oil that can be produced in Alaska, if America is to continue our various life styles as we know and experience them now.... America also needs other resources that Alaska holds in the ground and under the water.

The legislators of the State of Alaska made a precedent setting mistake last session, I believe, when they provided the enabling legislation for buying back the leases purchased by various oil companies. The loss in revenues to the State must be tremendous by whatever calculation. The revenue loss to the Kenai Peninsula Borough and the community of Homer corresponds and the non-availability of the oil and gas will be reckoned with in the future.

Maybe some of you are stamp collectors? And perhaps some remember the dark blue Statehood stamp that received its first day of issue right here in Juneau? I was the one who proposed this inovation, since there had never been a United States stamp ever issued when a Territory became a State. Like the coupling of Alaska and Hawaii to obtain Statehood, the same pattern followed and Hawaii

was the second State to be honored with a stamp in the name of Statehood. This one-day event brought $40,000 to Juneau. I like to think that I am part of a group that causes things to happen, rather than with the larger groups who don't know what's happening or worse, don't care.

Most of us who live in Homer, Alaska, believe we have one of the most beautiful locations in the world. There is also an old saying in Homer that I heard when I arrived, and experienced, "The scenery is beautiful, but you can't eat the view."

According to the most recent survey of communities on the Kenai Peninsula, Homer, Alaska has the lowest standard of living, primarily due to lack of employment.

An examination of the pictures of the graduating classes of the local high school reveals the fact that our young people have to go elsewhere to find work, because as one examines the pictures you find the majority of those former students are no longer resident in our community. By failing to mine the oil in our area, we are in effect failing to utilize a resource that will provide employment for our youth. By this failing we are wasting the talents and local experience of our young people and their leadership in the future.

Please deliberate to deny the funds for buying back the Kachemak Bay leases, and reaffirm the leases to companies who paid their money in good faith. The need for employment is great! The time is now!

Sincerely,

Homer S. Thompson

April 1, 1977

Senator Kay Poland, Chairman
and members of the
Senate Resources Committee
Alaska State Legislature
Juenau, Alaska

I landed in Anchorage in May of 1942 as an employee of the Army Engineers. Was signed up for a one-year hitch but decided I liked the country and stayed.

I was hired as an electrician, but spent most of my time operating tug boats in and around the Port of Anchorage. Later I ran MST tug boats in all Alaskan waters, mostly the Aleutian Chain.

The years of '48 to '50, I operated a truck freight line from Anchorage to all points in the Alaska Highway System and over the Alcan Highway. I also pulled several cat trains through the interior.

The year 1950 through 1951, I operated a pumice stone mine on Augustine Island. Since that time (with the exception of a short time when I drove a bus for Anchorage City Transit and Matunuska Valley Lines) I have sailed boats over all Alaskan waters, hauling freight, contractors equipment and supplies, and tendering oil rigs,etc.

I have been very closely associated with oil exploration and production in Cook Inlet, Bristol Bay and the Bering Sea.

In the early part of 1951, I moved to Cordova in the employ of Captain Bob Logans, Kodiak Aleutian Salvage Co. Worked for this company as a salvage boat operator and port engineer until the company went out of business in 1957, after which I opened my own marine repair shop until 1961.

I then went to work for Ira (Rocky) Rothwell, owner of Rothwell Tug and Barge. Mr. Rothwell moved me to Homer in January of 1963 to take care of and operate his vessels which were operating in Cook Inlet, servicing oil rigs and doing exploratory work. My offical title was "Port Engineer"... But I spent most of my time at sea as an operator and mechanic. After Mr. Rothwell passed away and his company was sold peicemeal, I went to work for the Krystal Corporation in much the same capacity and doing the same work.

I terminated with the Krystal Corporation in January of 1976 and purchased the Inlet Taxi Company of Homer. In September, 1976 my wife and I took over the Inlet Hotel in Homer. Last month, we purchased a restaurant and set it up at the hotel to stimulate business.

To do all of this we have had to use all our savings and beg, borrow and steal. We did not worry until it began to look as tho the expected impact from the Kachemak and Lower Cook Inlet oil activity was not going to come about because of the closing of Kachemak Bay and the oil leases were to be broken.

We are definitely against the buy-back of these leases, especially with our money. No matter what is said, this money will come out of the taxpayers pocket. These leases were let by the State in as legal manner as any lease that was ever written and were paid for in good faith by the oil companies. Therefore, it would behoove the State to stand by the agreement and let the oil companies perform.

It has been my observation that oil activity increases (if anything) the fish activity.

As in the year, 1963 when the fishermen were not doing much in the trade of their choice, we would have a small section of web astern while tied to a drill rig and catch more fish in 30 minutes than we could handle.

We have a million more arguments in favor of the oil companies, but rather than to use up the time, I will use the space to answer some very insiped letters received from some of our so called intellignet Senators in reply to the telegrams sent by us a few weeks ago.

Mr. Croft states that he has concern over the inconsistent and unfortunate way the Hammond administration has handled the entire situation, but he thinks that to defeat the funding would continue and magnify the confusion.

Let me say this, the only way to combat such high-handed and dictatorial tactics is to vote them down. There should be no problem, make the state stand on the original lease agreement and let the oil companies go to work.

Mr. Tillion states something about the liability of the George Ferris. I have no idea what this could be, a party of four of us flew over the George Ferris and most of Kachemak Bay taking pictures of the whole operation during the days of their leg problem and could not see an oil slick in the area. However, there was a large slick coming from the Seldovia Boat Harbor, but it was not the Ferris.

As to the pay-back to Standard Oil, I don't consider 21.1 million dollars a small fee, especially when the taxpayer is the one who will suffer for it. Also I would like to see a popular vote on the issue of whether or not to drill in Kachemak Bay. So let's just knock-off House Bill 192.

Mr. Rodey seems to be on the fence (I don't know why), as there is only one answer and that is to let the oil companies go ahead. I have yet to see where a drill rig has done as much harm to the fishing industry as the fisherman himself.

Chairman Poland, if you should have the opportunity or had the opportunity to look in any of the Alaska's boat harbors, you will find more oil on the water there than around any drill rig. The slick in the harbors is from the bilges of the fishing boats.

I know that the George Ferris alone contributed more than eight million dollars to the Homer economy in one year and did not do five thousand dollars in damages to our environment or the local fishermen. I do not know what the fish industry contributes, but from what I can gather it will average less than half.

I could go on forever on this subject, but I know you are terribly busy and I will not take any more of your time, except that I have one more point that I would like to make and that is, who is going to give us and a lot of other people in this town the money back that we have invested in preparation and anticipation of the oil activity.

Thank you for your patience and time.

Oral Statement
Gus Weber
Senate Resource Committee
Juneau, Alaska
April 1, 1977

MADAME CHAIRMAN, MEMBERS OF THE COMMITTEE:

MY NAME IS GUS WEbER. I came to Homer with my wife and two little girls on June 6, 1959 from Switzerland. That was my first trip on a big airplane and my first trip to the United states.

I had been a civil engineer for 24 years in Switzerland and decided it was time for a change. I had a position as manager with a firm in Canada when I decided to leave Switzerland, but at the last minute the company changed their policy about paying the transportation of families and their household goods. I decided to heck with it, if I had to pay for my own expenses, I would just move to the United States. I had seen some movies made by another Swiss who had homesteaded in Homer, so I decided that's where I would come.

For the first 10 months we were here, we lived in a small cabin that I built on the property of my Swiss acquaintance. He did not charge me rent, and he agreed to pay me $80.00 a month for working on his homestead for him. I built a basement under his house, took care of his horses and cows, pitched hay, picked coal on the beach, worked his garden and any other chores or flunky jobs he had for me. I never did get paid all of the money, in fact, not much of it, that he was supposed to pay me. I had been lucky to have savings from my homeland that I used to buy the material to build the house for my family and to support them while I was learning about some of the people I could not trust to keep their word.

In 1960 I went fishing. I fished four years with three different old-time commercial fishermen. They had all fished in the Cook Inlet Region for over 30 years. We drift-fished for salmon and fished king crab.

I made $800.00 that year. The next year I made $1200.00. I made a living for my family the same way that all of the fishermen survived. I worked as a longshoreman, did some construction work and any odd jobs that I could get between fishing seasons.

One thing we looked forward to was the seismic boats working in the Cook Inlet. The company would charter four or five fishing boats to carry the Fish and Game employees. This paid the boat owner $350.00 a day and we were happy to be guaranteed work for a month or two while they were blasting. In those days the siesmic crews dropped charges into the water with a balloon floating on top. After the blast, the balloon would sink and our boat would follow the path of the blast wake and the Fish and Game man would count the number of dead fish floating on top of the water. Sometimes there would not be any fish and most of the fish we found were little herring and one or two inch cod. If the balloon did not sink it meant the charge did not go off. We would shoot the balloon with a .22 rifle and sink it, then the siesmic boat would circle around and come back to set another charge.

Nowadays, the seismic boats do not use any blasting. They do all of their exploration with electronics by laying out a line of cable and the information is recorded on seismic tape in the boat. This is an example of the improvement in exploration technology to protect the environment. And the oil companies have improved their technology as much, and probably more, in drilling to protect the environment.

Homer was not a City in those days, it was the old PUD. We had the Alaskan Steam ships that brought in everybody's supplies. Everybody was glad to have the dock work. Standard Oil Company sure helped when they started coming in with the drilling pipe and equipment for the

oil development in the Cook Inlet. In those days the dock supported the community; now the community has to support the dock.

In 1965 I decided I could not make a living in the fishing business so I quit and became self-employed. I contracted building houses and specialized in cement work. I am an artist, and I taught art classes one year for more income. I also began working with the other volunteers in the community to build the Homer Ski Tow just below Ohlson Mountain. In Switzerland I had taught mountain climbing and was a ski instructor, so I volunteered to work with the school ski program. I am very proud of two of my ski students who graduated from the Homer High School and received four-year scholarships on their skiing ability. One, Larry Martin, is a member of the U.S. Olympic Ski Team.

In the almost 18 years I have lived in Homer I have been able to support my family by doing every kind of job there was in Homer. Since 1973 I have been a licensed Masonry Contractor, the only one in Homer. But people have to have jobs to make money to build. I still take any job I can get to make a living, but there are a lot more people in Homer now and there are not so many jobs, and more people keep moving to Homer. Even in the summertime, there is not construction like after the earthquake. The only fishermen who can make a living at just fishing are the ones who can get a cannery to finance their boats and gear so they can do all kinds of fishing the year 'round, or the ones who can get state or federal loans to fishermen to do the same thing. Most of the fishermen are still competing for the odd jobs between fishing seasons.

Some people keep talking about the oil companies damaging the fishing industry. I think the fishemen do more damage to their own industy than the oil companies would. When we fish crab, the pots are dropped into

the water of different depths, but the lines on them are always long enough for the deepest water. When they are dropped in shallow water, the pots are going to drag over the sea floor when the pots are winched into the boat. I know we had crab pots with mud, rocks and all kinds of shells in them when we pulled in pots. I don't know how many little fish and larva are killed from pulling in just one pot. Fish and Game keeps talking about just the least bit of oil that could be spilled from a drilling platform would kill all of the shrimp and crab. When I was fishing in the Cook Inlet we would fish around the oil platforms. Sometimes we could see a little oil slick around the platform, but we would look behind the fishing fleet and there was an oil slick behind almost every boat. All of the fishermen would change the oil in their engines and dump the old oil in the water. If just a tiny bit of oil was going to kill all of the fish, there wouldn't be any fish left now.

All of the talk about how many king crab are caught in Kachemak Bay; they don't all come just from Kachemak Bay. Boats bring in their crab from Kamashak Bay, even as far as Cape Douglas and off the southern tip of South Kodiak Island. Big crab tender boats bring in crab from the Bering Sea area to sell in Homer. It looks like a lot, but it really isn't.

I think the legislature should take another look at the buy-back of the oil and gas leases in Kachemak Bay. In the first place, there are not enough fish for everybody to make a living at even year 'round fishing. Not everybody can fish because the state has a limited entry law. The rest of us have to live too, and there is even more of us trying to find a job than there are fishermen. I think it is the American system that the government is supposed to represent the majority of the people, not only a few. It is not good for the people to have just a little bit of seasonal work and be able to pay off bills, then have to start going in

debt again and worry about earning enough money the next season, whether it is fishing or construction, to get out of debt again.

Homer and the surrounding area needs some kind of regular work for all of the people. I think the law from last year should be repealed and the money you want to spend to pay for the leases should be spent to build some roads and schools, some docks and airports that all of us need. We need these things and building them would give some people work too. Let the oil companies drill in Kachemak Bay. Those leases would have been drilled a long time ago if it had not been for the fight between the state and federal government over who owned Lower Cook Inlet. Ten years ago nobody worried about having drilling in Kachemak Bay. There is not as much danger to the Bay now as there was then. We just have a lot more newcomers who moved to Homer and want to cause trouble now.

I ask you to repeal the law from last year and let the court decide if the whole sale was legal or not. If it was legal, then let the oil compaines go to work. Save our money for some useful things we need in Alaska.

Thank you.

The Honorable Kay Poland
Chairman
Senate Resource Committee
Pouch V
Juneau, Alaska 99801

Kachemak Bay

Dear Senator Poland:

In our telephone conversation Thursday you asked if there will be anyone from this area to attend the hearing on House Bill 192 when it comes before your committee.

We will have representation at the hearing. We will appreciate your letting us know the date of the hearing so that we can make arrangements for the flight and hotel reservations.

Also, since the buy-back of all of the Kachemak Bay leases will involve a great many millions of tax dollars, over and above the original bonus money, and Anchorage is the largest tax base and most populated, is it possible that a public hearing might be held in Anchorage?

There has been so little public information on HB192. Most people are unaware of what is going on. (This may be advantageous for the proponents of the buy-back, i.e., Clem Tillion!)

Again, thank you for your cooperation and your concern for our communities.

Sincerely,

Barbara C. Manley

February 28, 1977

The Honorable John Rader
President
Alaska State Senate
Pouch V
Juneau, Alaska 99801

Dear Senator Rader:

We would like to compliment you on your wise decision to appoint a committee to fight the high rate of unemployment in our state. Senator Sumners and his committee, Senators Sackett, Ziegler, Poland and Ferguson, have a hard road ahead, but it is a great step forward. We hope there will be many beneficial and positive results.

We, as well as others, are deeply concerned over the extremely high rate of unemployment in the Homer area. More people are coming to Homer looking for employment adding to the number of unemployed, long-time residents. The unemployment lines and food stamp lines are out in the street, and there is no immediate hope in sight for employment.

The fish processing plants are shut down for lack of raw products, or closed seasons. One plant is buying some Tanner crab, which has helped a few boats. The area has been so overfished that few fishermen can make a full-time living from fishing. The Limited Entry Law precludes newcomers from entering the salmon fishing business, and it is only a matter of time before all fish come under the Limited Entry program, thus restricting any other people from working in the fishing industry.

Except for a few government, power company, fish processing, and school teaching jobs there is no other sizeable pay roll. In essence the employment situation in this area is "sick".

We own and operate a transportation company that handles 90% of all freight coming in or going out of Homer. The amount of cargo processed through our terminal has been the lowest in years. If you catch fish or have a job, you have money to buy things from lumber to groceries. The cargo movement at this time indicates a horribly depressed economic condition. This cargo index is an excellent indicator at this time. Our company has more unpaid accounts receivable and we have received more bad checks than ever before. We are also holding more undeliverable freight collect and C.O.D. shipments than in the past.

A day doesn't pass that people come to our office seeking employment. Our work force is down 50%. This is the first time since we started in business that we have had to lay off employees.

Last year was a good employment year, based mainly on work generated by the drilling barge Ferris, which spent over $14,000,000 on employment and purchasing of supplies in Alaska. Everyone benefited from this activity. Many of those employed were fishermen who fortunately made enough to help carry them through part of this bad winter.

Your passage of SB 720 to reacquire the Kachemak Bay Leases, killed one big employment possibility for this town. As you certainly must recall, this bill was pushed through based on half truths and emotionalism; plus inaccurate press releases: "The Ferris Has Sunk in Kachemak Bay" and "Worst Oil Spill in Alaska's History". The fact being that the Coast Guard environmental protection office issued a final official statement that less than 300 gallons of fuel were spilled overboard. Most of this was actually grease and oil from the equipment.

The best way for your committee to increase employment in Homer is to oppose HB 192. Save this 21.1 million dollars and use it for public projects. Homer alone needs docks, sewers, water lines, roads, and school buildings. Certainly this same situation exists throughout Alaska. This money, the 21.1 million dollars plus all of the additional buy-back millions, should be used for the benefit of all of the people of Alaska, not just a few local commercial fishermen and conservationists.

It has never been proven by the state that oil development in the area would hurt the fishing industry. The same few individuals and organizations that sued the state over the Kachemak Bay Leases have now sued the Federal Government over the Lower Cook Inlet Lease Sale. However, now the Alaska Conservation Society has openly become a plaintiff in the suit where previously they, and the Sierra Club, had donated funds to the Kachemak Bay Defense Fund.

You must keep in mind, HB 192 to buy back Chevron's leases is only the first, piece-meal step by the administration. Then comes Texaco, for about four million, then the others if they can be forced to sell. Think what you could do with 40 or 50 million dollars worth of public projects which would benefit all of us, not just a select few.

We are sure you have received many wires and letters opposing HB 192. You also must recognize that many of us in Homer are going to fight the administration's attempt to put us on a food stamp economy. We want to work for a living and maintain our dignity, which can only be done by increasing the local employment and giving people jobs.

In addition to opposing HB 192, the best thing you and your committee can do is to submit a Senate Bill to repeal CSESSB 220 in it's entirety. This is the most unjust legislation ever forced upon a segment of the Alaskan Society--the working man.

We would like to recommend that you take time to call any, or all of the following cross section of individuals from Homer to find out first hand the factors about the economic conditions in Homer and their opposition to HB 192:

Mr. Dave Derry, President of Homer Chamber of Commerce, member of Hillas Real Estate Appraisal Company, and former Manager of National Bank of Alaska, Homer Branch 235-8545

Mr. W. C. Rhodes, Manager of Homer Electric Association 235-8552

Mr. Chuck Hendrix, Manager of Seward Fisheries Homer Processing Plant 235-8527 or 235-8578

Mr. Jim Saling, Fisherman, tender boat and barge owner 235-8775

Mr. Larry Farnen, City Manager 235-8767

Mr. John Pate, City Councilman 235-8575

We appreciate the opportunity to present this information and sincerely hope that you oppose HB 192 and give favorable consideration to submitting a bill to repeal CSCSSB 220.

Respectfully,

MANLEY TERMINALS, INC.

February 28, 1977

The Honorable Kay Poland
Alaska State Senate
Pouch V
Juneau, Alaska 99801

Dear Senator Poland:

Reference HB 192

I respectfully ask that you will vote to oppose the appropriation of 12 million dollars, the cash portion of the total 21.1 million dollars to be paid to buy back the Chevron, USA oil leases in Kachemak Bay, for these reasons:

1. The legislative authority for the buy-back of these leases, HOUSE CS FOR CS FOR SENATE BILL NO 720, was passed under emotional duress. No legislation based on emotionalism (i.e. misinformation and half-truths reported on the GEORGE F. FERRIS, drilling rig, incident in Kachemak Bay May-June, 1976) can be good legislation; nor can it be in the best interest of the state nor the people whom you represent.

2. The close proximity of the Kachemak Bay leases to federal lease jurisdiction. The Kachemak Bay area will be exposed to virtually the same calculated risks from federal lease exploration, but without producing revenue to the State of Alaska.

3. The 1973 sale was slightly under 25 million dollars in lease bonus for 64 tracts, 32 of which are located in Kachemak Bay. The purchase price to buy back the Chevron, USA leases (15 tracts) is 21.1 million dollars. Presumably, Texaco will agree to the sale price of 3.5 million dollars. This is 24.6 million dollars to buy back leases from two companies.

Shell Oil Company paid 5.3 million dollars for their tracts. They will have this amount due them, plus unknown millions of dollars in interest, exploration expense and a drilling rig contract. Also, leases are owned by Union Oil Company, Texas International Petroleum, Simasko Production Company and a number of private individuals.

These millions of dollars are not "refunds" from the original approximately 25 million dollars bonus money as the administration and many legislators would have the taxpayers be dupes enough to believe.

These are millions of tax dollars to be taken from the general fund; they are dollars that will become a deficit for the taxpayers to pay. These are tax dollars to be spent for the benefit of a few privileged elitists and selfish, special interest groups. It is money that should be spent to benefit Alaskans of all classes and all interests.

4. It is millions of tax dollars that could:
   (a) Provide docks and airports on the Alaska Peninsula,

the Aleutian Islands, to handle fish products, the groceries and general supplies needed for sheer survival for the residents in those outlying communities.

(b) Provide judicial facilities in our remote areas.

(c) Provide facilities to offer a little comfort for our senior citizens; permit them a little pride and dignity in their few remaining years.

(d) Provide means for a better quality education for our children.

(e) Provide means to meet health needs of many of our Alaskan residents.

(f) Provide means to help re-new our renewable resources, especially the salmon fisheries.

(g) Deny spending these tax dollars and help provide a divers viable economy in the Kachemak Bay communities so that many can be employed. Help them to maintain pride and self reliance.

Thank you for your consideration. Please oppose HB 192 and use these millions of dollars to truly make Alaska a better place to live for many Alaskans.

Sincerely,

Barbara Manley

BARBARA C. MANLEY

P.S. It has been recommended by many people in this area that HCS CSSB 720 should be repealed.

JAY S. HAMMOND

STATE OF ALASKA
OFFICE OF THE GOVERNOR
JUNEAU

March 1, 1977

The Honorable Kay Poland
Chairman
Senate Resources Committee
Alaska State Legislature
Juneau, Alaska 99811

Re: HB 192
Supplemental Appropriation
for Kachemak Bay

Dear Senator Poland:

On February 8, 1977, I transmitted a bill to the House of Representatives for an appropriation of $12,000,000 to fulfill obligations of the State of Alaska under a contract to repurchase leases held by Chevron, U.S.A. in Kachemak Bay. The agreement was negotiated, and executed by the Commissioner of Natural Resources and myself, pursuant to ch. 113 SLA 1976. The bill passed the House and is presently before the Senate Resources Committee.

On February 25, 1977, I executed a second agreement with Texaco, Inc., and respectfully request the Senate Resources Committee to amend HB 192 to include an additional sum of $2,500,000 to cover the Texaco agreement. This would make the total appropriation under this bill $14,500,000. A copy of the Texaco agreement is enclosed, together with an attachment showing the breakdown of items which are included in the total purchase price. That purchase price is in the approximate amount of $3,400,000, nearly all of which is composed of money previously paid by Texaco to the State, together with interest on those amounts.

Ch. 113 SLA 1976 specifically authorized the Commissioner of Natural Resources to utilize credits for taxes and royalties owed by Texaco to the State as part of the purchase price and the agreement of repurchase includes such a provision. During the next two years, we anticipate that approximately $900,000 will be credited from payments due the State, leaving a balance of $2,500,000, the amount of the requested additional appropriation.

The agreements with Texaco and Chevron together represent roughly 85 per cent of the Kachemak Bay leases issued on the basis of percentage of the original bonuses paid. We recently sent out letters to the remaining lessees in an effort to conclude agreements with them as well.

Sincerely,

Jay S. Hammond
Governor

Enclosures

SHELL OIL COMPANY
601 W. 5TH AVENUE, SUITE 810
ANCHORAGE, ALASKA 99501

March 1, 1977

Dear Senator:

You will soon be considering House Bill 192, which, if approved, will appropriate $12 million for the re-purchase by the State of Chevron's oil and gas leases in Kachemak Bay, Lower Cook Inlet. The total acquisition cost will actually be about $21 million. Further, we assume that you will soon be asked to appropriate another $3.5 million to re-acquire the leases of Texaco.

We have been asked to inform you of Shell Oil Company's position concerning our leases in Kachemak Bay which we acquired for $5.4 million in the 1973 sale.

We are not seeking negotiations with the State at this time in hopes that the State will not see fit to complete the execution of its option to re-acquire the leases.

Our hopes in this respect are derived from the language in the Act which imposed the moratorium. The Act provides that the Commissioner of Natural Resources "may" enter into negotiations to reacquire the leases. Also, in reference to possible condemnation action after the moratorium expires, the word "may" is again used.

We interpret the language to mean that there is a reasonable chance that the State will not find it necessary or appropriate to reacquire the leases, and that drilling could proceed if and when the validity of the leases is established by the pending court proceedings. In fact, the 1976 Act establishing the drilling moratorium states that one purpose of the moratorium is to "permit the Department of Fish and Game a reasonable time to develop plans to insure protection for the living resources of the bay from possible pollution incidental to drilling activities." Perhaps this has now been done.

Our prime objective remains to drill under our Kachemak Bay leases. These leases were purchased in good faith after expending considerable sums in preparation for the lease sale. Thereafter, additional sizeable expenditures were invested in preparing to drill and in assisting in the defense of the court attack on the leases.

We are convinced that we can operate in Kacherak Bay without significant harmful effects on the environment and without detriment to the fishing industry. We further believe that the development of the hydrocarbon resources under the Bay will inure to the benefit of all of the citizens of Alaska, as well as the nation.

Yours very truly,

T. S. Cate

Janet V. O'Meara
P. O. Box 1125
Homer, Alaska 99603

March 17, 1977

Hon. Kay Poland
Alaska State Senate
Pouch V
Juneau, Alaska 99811

Dear Senator Poland:

I would like to ask for your earnest consideration of SB 192, and any future buy-back bills for Kachemak Bay oil leases.

Last year the legislature, in its wisdom, officially recognized the extreme value of the Bay in terms of marine and other biologic, scenic, and aesthetic resources, when it voted to repeal the leases so inadvisedly sold by the Egan administration. I am aware that you opposed that action, but I hope that you are not too proud to consider reversing that stand.

The Bay is of critical importance to residents of this area. In a recent public survey conducted by members of the University of Alaska, Anchorage (known unofficially as the Baring-Gould study), it was revealed that some 98% of Homer area residents favor encouragement of the local fishing industry, and that at least 75% were opposed to petrochemical development of any kind in this area. We need the Bay. It provides our physical and spiritual livelihood.

If you have read the Dept. of Interior's Environmental Impact Statement regarding social and environmental impact upon local residents should the federal government proceed with OCS development of lower Cook Inlet, you know what a black picture is presented. The picture is at least as bleak should oil development occur within the Bay itself: massive destruction of Bay environs and of a way of life for area residents.

If you have not read that Statement, I request that you at least review Section III.E.5 (Impact on Community Social Structure) and Section V (Adverse Environmental Effects Which Cannot be Avoided). Once you have seen the alternative proposed, I am sure you will, in good conscience, be able to lend your full support to this and later similar buy-back bills.

Thank you for your consideration in this matter.

Sincerely,

Janet V. O'Meara

JANET V. O'MEARA

Barbara C. Manley
P.O. Box 955
Homer, Alaska 99603
March 18, 1977

The Honorable Mike Colletta
Senator
Alaska State Legislature
Pouch V.
Juneau, Alaska 99801

Dear Senator Colletta:

Your letter of March 2, 1977 in which you state: "The Supreme Court has declared the Kachemak Bay leases invalid.", reflects your lack of discernible judgmatic ability in making your decision concerning the Kachemak Bay leases. Your statement is totally erroneous as per the Supreme Court Opinion 1284, July 9, 1976.

In the event that your time has not permitted you to give attention to the copy of the Supreme Court Opinion 1284 sent to you on March 14, 1977 from the office of Chief Justice Robert Boochever, extracts from that Opinion are attached.

Although I am not a constituent from your district, you are one of the twenty senators who will vote on enacting a bill that will affect me, my family, my livelihood, my community, my state and my nation.

It distrubs me that you state you have made your decision on House Bill 192, based on a false statement. I cannot believe that you are generally uninformed on issues requiring your decision to, or not to, enact laws which will affect the lives of all Alaska residents. Rather, I suspect that in this instance, you have relied upon information that the Administration, and for personal reasons, some legislators, have promulgated.

In view of the TRUE fact of the Supreme Court Opinion, I implore you to please reconsider your position on paying the oil companies twice the original amount paid to the state for the leases. Please consider:

a. The majority of Kachemak Bay residents were opposed to HCS CSSB 720. It was passed only after the legislators' emotions were plied with the prejudiced news media and half truths, assisted by the special interest groups, over the George F. Ferris incident in Kachemak Bay, May 1976.

b. The purchase price for only Chevron leases, 21.1 million dollars, combined with Federal matching funds..a total 211 million dollars, could do a lot for Alaskans. How many of the badly needed roads, docks, airports, would this amount construct?

c. I am sure that the over seven thousand residents on the Chain would appreciate a few small airstrips, docks, so that they could load their fish, get their supplies and air-evac their sick and injuried. The 12 million dollars cash requested for Chevron could provide medical personnel to that same area where they now have none, not even a public health nurse. This could save paying $2400.00 or so, after boating for

hours to the nearest airfield, for a charter flight into Anchorage. It could also save a life.

d. There are many other bush areas, the interior and rural areas that could be benefitted by these millions of tax dollars that are to be paid to buy back the leases. Yet none of the people who are being deprieved of these benefits are being consulted for their opinions.

e. The Kenai Peninsula desperately needs energy. It costs 1¢ p/KW electricity generated by natural gas; 5¢ p/KW electricity generated by oil. Is it right that all Kenai Penisula residents be further penalized economically?

Again, I ask that you will give consideration to the justice for ALL Alaskans. Please abide by the opinion of the Supreme Court: "We have no desire in this area, to upset settled transactions which were entered into in good faith."

Please support the repeal of HCS CSSB 720. Let the Superior Court make its decision; let our Judicial Branch perform its distinct assigned function in our democratic government. Thank you for your consideration.

Sincerely,

Barbara C Manley

Cross-Appellees.

File No. 2587

O P I N I O N

[No. 1284 - July 9, 1976]

Appeal from the Superior Court of the State of Alaska, Third Judicial District, Anchorage, Thomas L. Schulz, Judge.

that the trial court erred in granting summary judgment on laches, we now turn to the other arguments presented to the trial court on the cross-motions for summary judgment to see if grounds exist for upholding its judgment. The issues we must consider include the claims advanced by plaintiffs below, comprising the merits of their case.

III.

The first such question we will consider is whether the Division of Lands complied with legal requirements concerning the publication of notice. Plaintiffs asserted below that the sale was invalid on the ground that the publication of notice of the sale in the Anchorage Times and the Kenai Cheechako News failed to satisfy the relevant constitutional and statutory mandates. As noted above the trial court did not rule on the issue.

Article VIII, § 10, of the Alaska Constitution provides:

> "No disposals or leases of state lands, or interests therein, shall be made without prior notice and other safeguards of the public interest as may be prescribed by law."

Pursuant to this constitutional provision, the legislature enacted the Alaska Land Act, the provisions of which are now found in AS 38.05.005-.370. AS 38.05.345 provides in pertinent part:

> "(a) Public notice of a sale, lease or disposal of land or interest in it, except grants under § 330 of this chapter and preference right grazing leases under §§ 75 and 80 of this chapter, when required, shall be substantially as follows.
>
> (b) Notice shall be published once a week for three consecutive weeks preceding the time of sale stated in the

At the time the notice was published, the population of the Homer area was approximately 3,500. The circulation of the Anchorage Times in the area was approximately 130. The number of readers, albeit small,[21] was not so insignificant that the newspaper would fail to reach a diverse group of people in the community. Therefore, it must be said that the Anchorage Times was a newspaper of "general circulation" in the Homer area.

The foregoing determination precludes plaintiffs from successfully arguing that the Division of Lands failed to give adequate notice of the 28th Competitive Oil and Gas Sale as required by AS 38.05.345.

IV.

Plaintiffs' second claim on the merits was that the sale was unlawful because it was not preceded by a reasoned finding made by the Director of the Division of Lands that the sale would best serve the interests of the state.

21/ The plaintiffs contend that this small percentage of readership mandates a finding that the Anchorage Times does not comply with the statutory requirements. However, Times Printing Co. v. Star Publishing Co., 99 P. 1040, 1041-43 (Wash. 1909), is distinguishable. Indeed, a statistical analysis for the issue at hand would be most inappropriate because size of readership is only one factor which must be considered in determining whether a particular newspaper is one of general circulation.

AS 38.05.035(a)(14) provides:

"The director shall . . .

(14) when he finds that the interests of the state will be best served, he may, with the consent of the commissioner, approve contracts for the sale, lease, or other disposal of available lands, resources, property or interest in them . . . ."

A majority of this court believes that no formal, written finding is necessary under this statutory language. However, a majority of the court also believes that the determination of the director should be judicially reviewable.[22] Accordingly, this case must be remanded to the superior court for appropriate further proceedings on this question.[23]

22/ This subject is treated in the separate opinion filed herein by Justice Rabinowitz.

23/ I must dissent from the court's remand of this case.

I find nothing in this statute requiring a public hearing or formal written finding in order to determine that state lands shall be leased. I am not unmindful of the dangers in assuming that a general award or finding implies a finding of all the specific facts needed to support it. However,

> "Implying ultimate findings from the action taken is quite different. If a statute provides that the agency shall grant the certificate if it finds that the grant is in the public interest, and if the agency grants the certificate without saying anything about the public interest, good sense requires that the reviewing court should imply the ultimate finding of public interest. The courts usually so hold." 2 K. Davis, Administrative Law Treatise § 16.07, at 456 (1958).

Here, the statute makes no mention of a formal, written "finding." It merely says that when the director "finds" it to be in the best interests of the state, he may issue leases. The statute could, to the same effect, have read "when the director believes" or "when the director is of the opinion" that the state's interest is best served, he may lease the lands.

First, to be applied prospectively, the decision "must establish a new principle of law, either by overruling clear past precedent on which litigants may have relied, or by deciding an issue of first impression whose resolution was not clearly foreshadowed."[44/] Second, we must evaluate the merits of retroactive or prospective application of the rule in light of its prior history, purpose and effect. Third, we must weigh the hardship and injustice of applying the rule to the litigants in the instant case.

In applying these standards to the case at bar, we are persuaded that our holding should be applied solely prospectively. The issue before us represents a question of first impression in an area of statutory law which was admittedly not as clear as it might have been.[45/] A primary purpose underlying the statute is to give members of the public who will be affected by a particular disposal of state lands a voice in the disposition of those lands. However, once the disposition has occurred, the new owners or lessors also have a paramount interest in maintaining their rights to the land. We have no desire in this area, to upset settled transactions which were entered into in good faith. The title conflicts which would be engendered if every mineral lease or sale

---

44/ Schreiner v. Fruit, 519 P.2d at 466, quoting Chevron Oil Co. v. Huson, 404 U.S. at 106.

45/ See State v. Aleut Corp., 541 P.2d at 740 n.25.

which was executed in the past became vulnerable to attack under the rule we have announced today would be enormous. If allowed, this would create insurmountable problems for the state and numerous individuals. Finally, we believe the oil company defendants in this case were entitled to rely on the Division of Lands' long-standing interpretation of § 305. Unlike our dissenting colleagues, we do not believe that the state's interpretation of the statute was implausible. Ultimately the question of prospectivity must be decided upon a broad basis. In this regard the United States Supreme Court per Cardozo, J., observed:

> "The choice for any state may be determined by the juristic philosophy of the judges of her courts, their conceptions of law, its origin and nature." Great N. Ry. v. Sunburst Oil & Refining Co., supra, at 365.

In order to avoid any injustice, the rule we state in this case shall apply only to actions arising out of occurrences after the date of this opinion.[46/]

Honorable Kay Poland
Chairman, Senate Resources Committee
Alaska State Senate
Pouch V, State Capitol Bldg.
Juneau, Alaska 99811

Dear Kay:

We enclosed an informational copy of a recent Chamber of Commerce news release regarding positions adopted by the Chamber on several pending legislative issues.

We would particularly like to draw your attention to our position on HB 192 relating to the repurchase by the State of certain Kachemak Bay leases. As you will note, we recommend opposition to any appropriation of State funds to repurchase leases, not because we object to proper reimbursement of the oil companies involved but because we oppose any State action designed to cancel the leases at all. Our position was developed in the hope that the leaseholders will eventually be able to produce; this in view of the existing serious energy shortages in the nation.

Sincerely,

Dean Ehrich
Manager

Press Release: Chamber of Commerce States Positions on Several Legislative Issues 3-21-77

During it's regular meeting on March 18, The Anchorage Chamber of Commerce Board of Directors adopted positions on several issues now pending before The Alaska State Legislature, according to Chamber President Bob Hartig.

One of the most controversial of these was a proposal which, as now amended, would provide that the State Government pay 90% of the principal and interest on bonds or other indebtedness incurred by organized local governments to pay costs of school construction. Under present law, organized local governments pay 50% of their costs while unorganized areas receive 100% funding from the state.

After a great deal of study and deliberation, The Chamber Board voted to adopt a position in opposition to increased state funding of school construction. During discussion prior to this action, it was stated that, while such state aid for local school construction appears attractive at first glance, it was doubtful as to whether Anchorage taxpayers would benefit in the long run. It is likely that State taxes might very well increase eventually and local governments could lose much of the control over their school construction programs. Opponents of increased state funding also pointed out the possibility that unnecessary construction might be encouraged.

The Chamber Board also adopted a general position opposing any appropriation of state funds to repurchase Kachemak Bay Oil Leases; and instead, recommended that the Legislature take action to eliminate the eminent domain clause contained in the 1976 action originally cancelling the leases. A spokesman for the Chamber emphasized the Board's action was because of the Chamber's opposition to the State's attempt to cancel the leases and not because it opposes reimbursement for the oil companies involved in Kachemak Bay. It is hoped by the Chamber that exploration and production will eventually be allowed to proceed on the leases in question.

NEWS/MEDIA RELEASE

Greater Anchorage
CHAMBER of COMMERCE

Crossroads of the Air World

In other action, The Chamber expressed it's support of a measure (HB 302) which would prohibit attorneys from representing parties in civil actions before the small claims courts. The Chamber supports the concept that small claims court was originally designed to settle uncomplicated civil disputes between private citizens in an atmosphere of informality and at the least possible expense to the parties involved. More complicated matters may be heard in regular District Court or in Superior Court where formal rules of evidence would apply.

The present small claims dollar limit is $1,000. The Chamber is already on record in support of a measure (SB 137) which would raise that limit to $2,000. That bill recently passed the State Senate by a vote of 20-0.

The positions taken by the Chamber on these and other legislative matters were developed after research and study by The Chamber's State Legislative Affairs Committee. Presenting recommendations to the Board on behalf of the Committee was Committee Vice Chairman Walt Bonnett.

907 586-2820

April 1, 1977

The Honorable Kay Poland, Chairman
Senate Resources Committee
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Senator Poland:

Due to unforeseen circumstances Philip Daniel, Executive Secretary of the United Fishermen of Alaska, is unable to testify before the Senate Resources Committee on House Bill 192. For this reason I am writing to express the views of the UFA.

The United Fishermen of Alaska strongly support the passage of House Bill 192. As there are areas in which the possibility of damage and head-on conflict are low, there are areas where they are high. We feel that Kachemak Bay is one of the latter.

We expect that had the State investigated as provided by law, assessed the fishery of the Bay and taken into account the biological importance of the fishery, the leases would never have been let. Kachemak Bay is one of the cases where mere amount of surface area and location of the fisheries point to head-on conflict.

In short, by asking for passage of this bill, we are also asking that a precedent be set, that fisheries and other renewable resources be given careful study and consideration before decisions are made to lease.

Sincerely,

Kenneth Moore

Re: HB 192 - Supplemental Appropriation for Kachemak Bay

Dear Senator Poland:

In a previous letter to you dated March 1, 1977, the administration outlined the status of negotiations for repurchase of the outstanding oil and gas leases in Kachemak Bay. Briefly, the letter said we had concluded agreements with Chevron, U.S.A and with Texaco, Inc. for roughly 85% of the leases in the Bay. The total cost to the state for these leases would be about $24.6 million; however, using tax credit procedures authorized by ch. 113 SLA 1976, as outlined in the letter, the actual appropriation would be only $14.5 million.

Yesterday, we concluded a third repurchase agreement with Lorna Call, Brian Burglin and Nina Burglin for their six tracts in Kachemak Bay. These lessees owned six of the less expensive tracts close to shore. The total purchase price for these tracts would be approximately $36,500 to be paid in cash. The agreement, concluded a day ago, has not yet been reduced to writing, but I am attaching to this letter a breakdown of the price. I respectfully request that the Senate Resource Committee amend HB 192 to include additional sums to cover the agreements with Texaco and with Lorna Call and her associates. I have attached to this letter a proposed Committee Substitute which would accomplish that end.

Sincerely,

Avrum M. Gross
Attorney General

Baring-Gould study out

The final report on a attitudinal and demographic survey of Homer has been released to the public. The report, "Homer Area Survey: Attitudes Toward Growth and Deveopment" was officially presented to the Homer City Council at their February 14 meeting by one of the surve 's authors, Dr. Michael Baring-Gould of the University of Alaska.

Parts of the study have appeared in another recently released survey of the five first class cities on the Kenai Peninsula, Homer, Kenai, Soldotna, Seward and Seldovia. The study supervised by Dr. Baring-Gould, and conducted with the help of Homer high school students, concerned itself only with Homer and the immediate surrounding area.

The survey questioned about 40% of the households in and about 25% of the households in the Homer area outside the city limits. According to the report the results are accurate within 5 percentage points, plus or minus.

The study gives a profile of the persons it interviewed as being 98% white, with an average age of 35 years and an average education of one year of college. More than half had resided in Homer five years or longer. The average family income for the total area was $13,400 which broke down to averages of $17,100 Homer and $11,300 outside the city.

Residents conpensated their income through relying on sub sistence to varying degrees, more so outside the city than within it. Those who obtained at least half their meat and fish supply through subsistence fishing and hunting amounted to 38% of Homer residents and 65% of those outside Homer, for a combined Homer area average of 54%.

In further profiling the respodents to the survey, the report shows that the attraction of living in Homer is predominately the lifestyle found here. More than twice as many people chose that option than chose employment or job reasons, and as many people came for the aesthetic qualities of the area as came for job opportunities. When asked what they like best about Homer, lifestyle and aesthetic values were the overwhelmi g choice.

The study says, "These same values are expressed in a variety of other questions. For a majority of residents all considered very important living in a quiet community, having aged friends, participating in subsistence activities, and being able to make or fix many of the things needed by a family, while holding a high paying job was rated as only somewhat important. The importance of these values is indicated by the fact that less than 10% of the area residents planned on moving away from Homer within the next seven years, and majorities in both city and rural areas plan to remain permanently. Another 10% stated that they would remain permanently unless the community underwent significant growth and change."

The survey also questioned people on their attitudes toward Homer's size, growth, and development activities.

When asked what size they would like to see Homer in the next 10-15 years, nearly half of those asked picked the town's present size. Those within the city limits favored more growth than those outside. Still, 65% of city residents wanted to see a

New grou

Homer's a

A new community based alcoholism and drug abuse program has begun in Homer which will serve the lower Kenai Peninsula area. The program, called Lifeline, is run by local volunteers, and will provide counseling, referal, and information on drug and alcohol related problems, as well as crisis-intervention.

The establishment of the center in Homer, which in the past has had to rely on services from the Kenai branch of the Cook Inlet Council on Alcoholism, reflects a growing awareness here, and in the state, of the magnitude of the alcoholism problem in Alaska. In 1976 the Governor's Advisory Board on Alcoholism said alcoholism was the number one health problem in Alaska.

Last week Governor Hammond asked the legislature to make major reforms in state liquor laws, aimed at reducing per capita consumption of alcohol. The proposals would forbid certain kinds of liquor advertising, strengthen anti-bootlegging laws, give communities under 12,000 people the right to outlaw all but community operated retail liquor stores, and establish limits on the amount of alcohol a person

Flushing hydrants will bring. . .

Muddy water here

For the next week or two Homer residents may start their days with an unappetizing morning sight. Muddy tap water. Beginning next Monday or Tuesday the city will begin flushing fire hydrants in order to clear sediment out of the city's water mains.

The flushing will be done in the late evening hours, beginning around 11:00 p.m. and continuing for several hours. Most of the work will be down in the central area of town covered by the original town water system.

Charles Mortimer, Director of Public Works, explained that the flushing at night will probably cause the muddy morning water, although they will try to flush hydrants until the water becomes clear.

The original water source for the water system was wells, which had a high organic iron content. The only treatment this water received was chlorination. The non-treated residue in the pipes percipitate out to settle along the bottoms of water pipes. Mr. Mortimer said there have been some complaints this winter of muddy water, and that flushing the mains should clear the water eventually.

The water tank by the hospital will also be emptied and cleaned, but that should not affect the quality of city water.

Flushing the mains causes muddy water because the hydrants draw much more water faster through the pipes than does residential use, and stirs up the sediment in the pipes. The idea is to get that water full of dirt out through the hydrants, but it's not always possible to be 100 per cent effective.

Study Out

Continued from page 1

size of less than 3,000, or double the city's present popluation.

When asked what types of industrial development was most desirable to them, more than 75% of city residents chose commercial fishing and fish processing, light manufacturing, and education and research, between 75% and 50% chose transportation and storage facilities and tourism, 37% chose on shore oil facilities, and less than 25% chose heavy industry or petrochemical industries.

The study also asked four questions about onshore oil development assuming development does occur in Lower Cook Inlet. (see accompanying chart). The study also found that the older the respondent was, and the longer his or her residency in Homer was, the more favorably that person viewed on shore oil facilities. Groups that tended to favor onshore oil development were managers/owners and retired and unemployed people. Those who wan wanted to discourage onshore oil development were professionals, techinical workers, craftsmen and laborers, fishermen, cannery workers, and farmers and homesteaders.

The study also noted, with surprise, that, "among those who would discourage oil are the craftsmen and laborers who might anticipate the most direct economic benefits, whereas the favorably inclined retired people are most likely to experience the negative effects from an inflationary local economy."

In a telephone interview, Dr. Baring-Gould cautioned against looking only at the question of oil development in Homer.

"People shouldn't look at the study exlusively from an oil standpoint," he said. "That's one of my fears. There are a lot of areas in the study not dealing with oil."

"Homer can use the study to help establish priorities and plan the types of projects to be developed in the city. I hope

and street improvements, harbor and port facilities, recreation facilities, sewer system, and tourist and camper facilities. Residents favor first a sales tax, then service charges for financing any expansion in city services.

Finally the survey asked several questions related to zoning and land use. It found that 87% of the people in the Homer area felt the beauty of the surrounding open lands was very important to them and wanted state parks, or some other mean to protect these lands in their undeveloped states.

Those surveyed expressed their feelings about zoning within the city limits. About half of the city's residents favored moderate zoning, and a quarter ed strong zoning. Respondents were strongly in favor of zoning industrial and multiple unit dwellings, evenly divided on commercial zoning, and strongly opposed to residential zoning.

Residents also wanted to see oil facilities be developed outside the city limits on publicly leased land, if development occurs.

On the question of oil facilities questions indicate that

Study out

Continued from proceeding page

public opinion was consistently opposed to on-shore facilities at the time the survey was taken. This does not of course mean that attitudes cannot change. Changes in the technology or policies of oil companies could conceivably change the perceptions which some residents hold. However, one factor appears to be crucially important at present This is that opposition to oil represents a divisive force within the community and that any immediate action taken to initiate facilities would probably only serve to increase this level of antagonism."

Dr. Baring-Gould commented further, "Sure, attitudes do change," he said. "But in Homer, where these topics have been discussed for some time, these attitudes are fairly concrete."

One thing strikes me. Where questions were asked about on shore oil development that assumed competition with existing uses of area, people became opposed to it. Not just oil, but tourism also. When tourism questions did not assume competitive uses, they were viewed favorably."

Dr. Baring-Gould continued, "Overall the study does constitute a referendum.

"You believe in a survey when you ask four or five questions and get a consistant result You can see this in that people value a quiet community more than they value a high paying job, or by looking at the reasons people came to Homer and what they value most about it.

"There's another area that indexes that kind of thing. People wanted to enhance and safeguard the aesthetic qualities and lifestyle that Homer is, even though that might not be in their own self-interests.

"For example, fishermen favored stricter control of oil discharge in the small harbor and stricter environmental controls in the harbor and Kachemak Bay, even though this might cost them money."

In response to a question about how the city government might use the study, Dr. Baring-Gould replied, "It seems to me the city council has two One is deciding not to go for oil. A majority of the people, now, would like them to say that.

"Or two, they could specify the conditions under which oil companies can come in, and then get feedback from the public on those conditions before the development occurs."

The report is only a partial summary of the data the survey gathered. Dr. Baring-Gould pointed out that those desiring information about specific areas, or questions on the survey not covered in the report, could obtain the information from him.

"It is neither assumed nor anticipated that the attitudes described here will remain constant. It is hoped, however, that they will help promote both knowledge about the community and the discussion or thought that is essential for creative planning to occur. Only in this way can change be self-promoted and meet the common human needs of the community.

The population of Homer is a relatively new and young population with a strong tenacity for individual life styles deeply influenced by the traditional resource base. It would be very erroneous to imply that many of the attitudes expressed in the survey are totally negative, particularly those associated with on-shore oil, or that they merely reflect an idealistic desire to preserve traditional life styles alone. A small minority of individuals may hold these, and they would probably be paired with as many others who would oppose them vehemently on every issue. A more representative element of the public, however, appears to be one positively oriented toward changes that will selectively enhance those elements of the community that are consistent with basic values. From the survey, many of these values are closely tied to aesthetic appreciation of the land and Bay, its fishing economy and recreational-subsistence use, and close affinity for qualities of small town life. If residents in Homer are to maintain control over the future of their town, potential developments that are endorsed must be consistent with these resources and values."

April 1, 1977

The Honorable Kay Poland, Chairman
Senate Resources Committee
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Senator Poland:

Due to unforeseen circumstances Philip Daniel, Executive Secretary of the United Fishermen of Alaska, is unable to testify before the Senate Resources Committee on House Bill 192. For this reason I am writing to express the views of the UFA.

The United Fishermen of Alaska strongly support the passage of House Bill 192. As there are areas in which the possibility of damage and head-on conflict are low, there are areas where they are high. We feel that Kachemak Bay is one of the latter.

We expect that had the State investigated as provided by law, assessed the fishery of the Bay and taken into account the biological importance of the fishery, the leases would never have been let. Kachemak Bay is one of the cases where mere amount of surface area and location of the fisheries point to head-on conflict.

In short, by asking for passage of this bill, we are also asking that a precedent be set, that fisheries and other renewable resources be given careful study and consideration before decisions are made to lease.

Sincerely,

Kenneth Moore

Hon. Kay Poland
Alaska State Senate
Pouch V
Juneau, Alaska 99811

Dear Senator Poland:

I would like to ask for your earnest consideration of SB 192, and any future buy-back bills for Kachemak Bay oil leases.

Last year the legislature, in its wisdom, officially recognized the extreme value of the Bay in terms of marine and other biologic, scenic, and aesthetic resources, when it voted to repeal the leases so inadvisedly sold by the Egan administration. I am aware that you opposed that action, but I hope that you are not too proud to consider reversing that stand.

The Bay is of critical importance to residents of this area. In a recent public survey conducted by members of the University of Alaska, Anchorage (known unofficially as the Baring-Gould study), it was revealed that some 98% of Homer area residents favor encouragement of the local fishing industry, and that at least 75% were opposed to petrochemical development of any kind in this area. We need the Bay. It provides our physical and spiritual livelihood.

If you have read the Dept. of Interior's Environmental Impact Statement regarding social and environmental impact upon local residents should the federal government proceed with OCS development of lower Cook Inlet, you know what a black picture is presented. The picture is at least as bleak should oil development occur within the Bay itself: massive destruction of Bay environs and of a way of life for area residents.

If you have not read that Statement, I request that you at least review Section III.E.5 (Impact on Community Social Structure) and Section V (Adverse Environmental Effects Which Cannot be Avoided). Once you have seen the alternative proposed, I am sure you will, in good conscience, be able to lend your full support to this and later similar buy-back bills.

Thank you for your consideration in this matter.

Sincerely,

Janet V. O'Meara

SHELL OIL COMPANY
601 W. 5TH AVENUE, SUITE 810
ANCHORAGE, ALASKA 99501

March 1, 1977

Dear Senator:

You will soon be considering House Bill 192, which, if approved, will appropriate $12 million for the re-purchase by the State of Chevron's oil and gas leases in Kachemak Bay, Lower Cook Inlet. The total acquisition cost will actually be about $21 million. Further, we assume that you will soon be asked to appropriate another $3.5 million to re-acquire the leases of Texaco.

We have been asked to inform you of Shell Oil Company's position concerning our leases in Kachemak Bay which we acquired for $5.4 million in the 1973 sale.

We are not seeking negotiations with the State at this time in hopes that the State will not see fit to complete the execution of its option to re-acquire the leases.

Our hopes in this respect are derived from the language in the Act which imposed the moratorium. The Act provides that the Commissioner of Natural Resources "may" enter into negotiations to reacquire the leases. Also, in reference to possible condemnation action after the moratorium expires, the word "may" is again used.

We interpret the language to mean that there is a reasonable chance that the State will not find it necessary or appropriate to reacquire the leases, and that drilling could proceed if and when the validity of the leases is established by the pending court proceedings. In fact, the 1976 Act establishing the drilling moratorium states that one purpose of the moratorium is to "permit the Department of Fish and Game a reasonable time to develop plans to insure protection for the living resources of the bay from possible pollution incidental to drilling activities." Perhaps this has now been done.

Our prime objective remains to drill under our Kachemak Bay leases. These leases were purchased in good faith after expending considerable sums in preparation for the lease sale. Thereafter, additional sizeable expenditures were invested in preparing to drill and in assisting in the defense of the court attack on the leases.

We are convinced that we can operate in Kachemak Bay without significant harmful effects on the environment and without detriment to the fishing industry. We further believe that the development of the hydrocarbon resources under the Bay will inure to the benefit of all of the citizens of Alaska, as well as the nation.

Yours very truly,

T. S. Cate
Land Representative

Dear Kay:

We enclosed an informational copy of a recent Chamber of Commerce news release regarding positions adopted by the Chamber on several pending legislative issues.

We would particularly like to draw your attention to our position on HB 192 relating to the repurchase by the State of certain Kachemak Bay leases. As you will note, we recommend opposition to any appropriation of State funds to repurchase leases, not because we object to proper reimbursement of the oil companies involved but because we oppose any State action designed to cancel the leases at all. Our position was developed in the hope that the leaseholders will eventually be able to produce; this in view of the existing serious energy shortages in the nation.

CHAMBER of COMMERCE

Crossroads of the Air World

Press Release: Chamber of Commerce States Positions on Several Legislative Issues 3-21-77

During it's regular meeting on March 18, The Anchorage Chamber of Commerce Board of Directors adopted positions on several issues now pending before The Alaska State Legislature, according to Chamber President Bob Hartig.

One of the most controversial of these was a proposal which, as now amended, would provide that the State Government pay 90% of the principal and interest on bonds or other indebtedness incurred by organized local governments to pay costs of school construction. Under present law, organized local governments pay 50% of their costs while unorganized areas receive 100% funding from the state.

After a great deal of study and deliberation, The Chamber Board voted to adopt a position in opposition to increased state funding of school construction. During discussion prior to this action, it was stated that, while such state aid for local school construction appears attractive at first glance, it was doubtful as to whether Anchorage taxpayers would benefit in the long run. It is likely that State taxes might very well increase eventually and local governments could lose much of the control over their school construction programs. Opponents of increased state funding also pointed out the possibility that unnecessary construction might be encouraged.

The Chamber Board also adopted a general position opposing any appropriation of state funds to repurchase Kachemak Bay Oil Leases; and instead, recommended that the Legislature take action to eliminate the eminent domain clause contained in the 1976 action originally cancelling the leases. A spokesman for the Chamber emphasized the Board's action was because of the Chamber's opposition to the State's attempt to cancel the leases and not because it opposes reimbursement for the oil companies involved in Kachemak Bay. It is hoped by the Chamber that exploration and production will eventually be allowed to proceed on the leases in question.

NEWS/MEDIA

RELEASE

Greater Anchorage

CHAMBER of COMMERCE

Crossroads of the Air World

In other action, The Chamber expressed it's support of a measure (HB 302) which would prohibit attorneys from representing parties in civil actions before the small claims courts. The Chamber supports the concept that small claims court was originally designed to settle uncomplicated civil disputes between private citizens in an atmosphere of informality and at the least possible expense to the parties involved. More complicated matters may be heard in regular District Court or in Superior Court where formal rules of evidence would apply.

The present small claims dollar limit is $1,000. The Chamber is already on record in support of a measure (SB 137) which would raise that limit to $2,000. That bill recently passed the State Senate by a vote of 20-0.

The positions taken by the Chamber on these and other legislative matters were developed after research and study by The Chamber's State Legislative Affairs Committee. Presenting recommendations to the Board on behalf of the Committee was Committee Vice Chairman Walt Bonnett.

February 28, 1977

The Honorable Kay Poland
Alaska State Senate
Pouch V
Juneau, Alaska 99801

Dear Senator Poland:

Reference HB 192

I respectfully ask that you will vote to oppose the appropriation of 12 million dollars, the cash portion of the total 21.1 million dollars to be paid to buy back the Chevron, USA oil leases in Kachemak Bay, for these reasons:

1. The legislative authority for the buy-back of these leases, HOUSE CS FOR CS FOR SENATE BILL NO 720, was passed under emotional duress. No legislation based on emotionalism (i.e. misinformation and half-truths reported on the GEORGE F. FERRIS, drilling rig, incident in Kachemak Bay May-June, 1976) can be good legislation; nor can it be in the best interest of the state nor the people whom you represent.

2. The close proximity of the Kachemak Bay leases to federal lease jurisdiction. The Kachemak Bay area will be exposed to virtually the same calculated risks from federal lease exploration, but without producing revenue to the State of Alaska.

3. The 1973 sale was slightly under 25 million dollars in lease bonus for 64 tracts, 32 of which are located in Kachemak Bay. The purchase price to buy back the Chevron, USA leases (15 tracts) is 21.1 million dollars. Presumably, Texaco will agree to the sale price of 3.5 million dollars. This is 24.6 million dollars to buy back leases from two companies.

Shell Oil Company paid 5.3 million dollars for their tracts. They will have this amount due them, plus unknown millions of dollars in interest, exploration expense and a drilling rig contract. Also, leases are owned by Union Oil Company, Texas International Petroleum, Simasko Production Company and a number of private individuals.

These millions of dollars are not "refunds" from the original approximately 25 million dollars bonus money as the administration and many legislators would have the taxpayers be dupes enough to believe.

These are millions of tax dollars to be taken from the general fund; they are dollars that will become a deficit for the taxpayers to pay. These are tax dollars to be spent for the benefit of a few privileged elitists and selfish, special interest groups. It is money that should be spent to benefit Alaskans of all classes and all interests.

4. It is millions of tax dollars that could:
   (a) Provide docks and airports on the Alaska Peninsula,

the Aleutian Islands, to handle fish products, the groceries and general supplies needed for sheer survival for the residents in those outlying communities.

(b) Provide judicial facilities in our remote areas.

(c) Provide facilities to offer a little comfort for our senior citizens; permit them a little pride and dignity in their few remaining years.

(d) Provide means for a better quality education for our children.

(e) Provide means to meet health needs of many of our Alaskan residents.

(f) Provide means to help re-new our renewable resources, especially the salmon fisheries.

(g) Deny spending these tax dollars and help provide a divers viable economy in the Kachemak Bay communities so that many can be employed. Help them to maintain pride and self reliance.

Thank you for your consideration. Please oppose HB 192 and use these millions of dollars to truly make Alaska a better place to live for many Alaskans.

Sincerely,

Barbara Manley

BARBARA C. MANLEY

P.S. It has been recommended by many people in this area that HCS CSSB 720 should be repealed.

Barbara C. Manley
P.O. Box 955
Homer, Alaska 99603
March 18, 1977

The Honorable Mike Colletta
Senator
Alaska State Legislature
Pouch V.
Juneau, Alaska 99801

Dear Senator Colletta:

Your letter of March 2, 1977 in which you state: "The Supreme Court has declared the Kachemak Bay leases invalid.", reflects your lack of discernible judgmatic ability in making your decision concerning the Kachemak Bay leases. Your statement is totally erroneous as per the Supreme Court Opinion 1284, July 9, 1976.

In the event that your time has not permitted you to give attention to the copy of the Supreme Court Opinion 1284 sent to you on March 14, 1977 from the office of Chief Justice Robert Boochever, extracts from that Opinion are attached.

Although I am not a constituent from your district, you are one of the twenty senators who will vote on enacting a bill that will affect me, my family, my livelihood, my community, my state and my nation.

It distrubs me that you state you have made your decision on House Bill 192, based on a false statement. I cannot believe that you are generally uninformed on issues requiring your decision to, or not to, enact laws which will affect the lives of all Alaska residents. Rather, I suspect that in this instance, you have relied upon information that the Administration, and for personal reasons, some legislators, have promulgated.

In view of the TRUE fact of the Supreme Court Opinion, I implore you to please reconsider your position on paying the oil companies twice the original amount paid to the state for the leases. Please consider:

a. The majority of Kachemak Bay residents were opposed to HCS CSSB 720. It was passed only after the legislators' emotions were plied with the prejudiced news media and half truths, assisted by the special interest groups, over the George F. Ferris incident in Kachemak Bay, May 1976.

b. The purchase price for only Chevron leases, 21.1 million dollars, combined with Federal matching funds..a total 211 million dollars, could do a lot for Alaskans. How many of the badly needed roads, docks, airports, would this amount construct?

c. I am sure that the over seven thousand residents on the Chain would appreciate a few small airstrips, docks, so that they could load their fish, get their supplies and air-evac their sick and injuried. The 12 million dollars cash requested for Chevron could provide medical personnel to that same area where they now have none, not even a public health nurse. This could save paying $2400.00 or so, after boating for

hours to the nearest airfield, for a charter flight into Anchorage. It could also save a life.

d. There are many other bush areas, the interior and rural areas that could be benefitted by these millions of tax dollars that are to be paid to buy back the leases. Yet none of the people who are being deprieved of these benefits are being consulted for their opinions.

e. The Kenai Peninsula desperately needs energy. It costs 1¢ p/KW electricity generated by natural gas; 5¢ p/KW electricity generated by oil. Is it right that all Kenai Penisula residents be further penalized economically?

Again, I ask that you will give corsideration to the justice for ALL Alaskans. Please abide by the opinion of the Supreme Court: "We have no desire in this area, to upset settled transactions which were entered into in good faith."

Please support the repeal of HCS CSSB 720. Let the Superior Court make its decision; let our Judicial Branch perform its distinct assigned function in our democratic government. Thank you for your consideration.

Sincerely,

Barbara C Manley

IN THE SUPREME COURT FOR THE STATE OF ALASKA

KENNETH D. MOORE, BILL A. BLEDSOE, PAUL E. JONES, LARRY J. HOLLINSHEAD, KENNETH A. SWICK, JAMES WICKERSHAM, and MICHAEL P. McBRIDE, Appellants, v. STATE OF ALASKA, LORNA CALL, SIMASKO PRODUCTION CO., PHILLIP RAHOI, TEXAS INTERNATIONAL PETROLEUM CORPORATION, STANDARD OIL COMPANY OF CALIFORNIA, SHELL OIL COMPANY, TEXACO, INC., AND UNION OIL COMPANY OF CALIFORNIA, Appellees.	File No. 2551
STANDARD OIL COMPANY OF CALIFORNIA, Cross-Appellant, v. KENNETH D. MOORE, BILL A. BLEDSOE, PAUL E. JONES, LARRY J. HOLLINSHEAD, KENNETH A. SEICK, JAMES WICKERSHAM, and MICHAEL P. McBRIDE, Cross-Appellees.	File No. 2587 OPINION [No. 1284 - July 9, 1976]

Appeal from the Superior Court of the State of Alaska, Third Judicial District, Anchorage, Thomas B. Schulz, Judge.

that the trial court erred in granting summary judgment on laches, we now turn to the other arguments presented to the trial court on the cross-motions for summary judgment to see if grounds exist for upholding its judgment. The issues we must consider include the claims advanced by plaintiffs below, comprising the merits of their case.

III.

The first such question we will consider is whether the Division of Lands complied with legal requirements concerning the publication of notice. Plaintiffs asserted below that the sale was invalid on the ground that the publication of notice of the sale in the Anchorage Times and the Kenai Cheechako News failed to satisfy the relevant constitutional and statutory mandates. As noted above the trial court did not rule on the issue.

Article VIII, § 10, of the Alaska Constitution provides:

> "No disposals or leases of state lands, or interests therein, shall be made without prior notice and other safeguards of the public interest as may be prescribed by law."

Pursuant to this constitutional provision, the legislature enacted the Alaska Land Act, the provisions of which are now found in AS 38.05.005-.370. AS 38.05.345 provides in pertinent part:

> "(a) Public notice of a sale, lease or disposal of land or interest in it, except grants under § 330 of this chapter and preference right grazing leases under §§ 75 and 80 of this chapter, when required, shall be substantially as follows.
>
> (b) Notice shall be published once a week for three consecutive weeks preceding the time of sale stated in the

At the time the notice was published, the population of the Homer area was approximately 3,500. The circulation of the Anchorage Times in the area was approximately 130. The number of readers, albeit small,[21] was not so insignificant that the newspaper would fail to reach a diverse group of people in the community. Therefore, it must be said that the Anchorage Times was a newspaper of "general circulation" in the Homer area.

The foregoing determination precludes plaintiffs from successfully arguing that the Division of Lands failed to give adequate notice of the 28th Competitive Oil and Gas Sale as required by AS 38.05.345.

IV.

Plaintiffs' second claim on the merits was that the sale was unlawful because it was not preceded by a reasoned finding made by the Director of the Division of Lands that the sale would best serve the interests of the state.

21/ The plaintiffs contend that this small percentage of readership mandates a finding that the Anchorage Times does not comply with the statutory requirements. However, Times Printing Co. v. Star Publishing Co., 99 P. 1040, 1041-43 (Wash. 1909), is distinguishable. Indeed, a statistical analysis for the issue at hand would be most inappropriate because size of readership is only one factor which must be considered in determining whether a particular newspaper is one of general circulation.

AS 38.05.035(a)(14) provides:

"The director shall . . .

(14) when he finds that the interests of the state will be best served, he may, with the consent of the commissioner, approve contracts for the sale, lease, or other disposal of available lands, resources, property or interest in them . . . ."

A majority of this court believes that no formal, written finding is necessary under this statutory language. However, a majority of the court also believes that the determination of the director should be judicially reviewable.[22] Accordingly, this case must be remanded to the superior court for appropriate further proceedings on this question.[23]

22/ This subject is treated in the separate opinion filed herein by Justice Rabinowitz.

23/ I must dissent from the court's remand of this case.

I find nothing in this statute requiring a public hearing or formal written finding in order to determine that state lands shall be leased. I am not unmindful of the dangers in assuming that a general award or finding implies a finding of all the specific facts needed to support it. However,

> "Implying ultimate findings from the action taken is quite different. If a statute provides that the agency shall grant the certificate if it finds that the grant is in the public interest, and if the agency grants the certificate without saying anything about the public interest, good sense requires that the reviewing court should imply the ultimate finding of public interest. The courts usually so hold." 2 K. Davis, Administrative Law Treatise § 16.07, at 456 (1958).

Here, the statute makes no mention of a formal, written "finding." It merely says that when the director "finds" it to be in the best interests of the state, he may issue leases. The statute could, to the same effect, have read "when the director believes" or "when the director is of the opinion" that the state's interest is best served, he may lease the lands.

First, to be applied prospectively, the decision "must establish a new principle of law, either by overruling clear past precedent on which litigants may have relied, or by deciding an issue of first impression whose resolution was not clearly foreshadowed."[44/] Second, we must evaluate the merits of retroactive or prospective application of the rule in light of its prior history, purpose and effect. Third, we must weigh the hardship and injustice of applying the rule to the litigants in the instant case.

In applying these standards to the case at bar, we are persuaded that our holding should be applied solely prospectively. The issue before us represents a question of first impression in an area of statutory law which was admittedly not as clear as it might have been.[45/] A primary purpose underlying the statute is to give members of the public who will be affected by a particular disposal of state lands a voice in the disposition of those lands. However, once the disposition has occurred, the new owners or lessors also have a paramount interest in maintaining their rights to the land. We have no desire in this area, to upset settled transactions which were entered into in good faith. The title conflicts which would be engendered if every mineral lease or sale

---

44/ Schreiner v. Fruit, 519 P.2d at 466, quoting Chevron Oil Co. v. Huson, 404 U.S. at 106.

45/ See State v. Aleut Corp., 541 P.2d at 740 n.25.

which was executed in the past became vulnerable to attack under the rule we have announced today would be enormous. If allowed, this would create insurmountable problems for the state and numerous individuals. Finally, we believe the oil company defendants in this case were entitled to rely on the Division of Lands' long-standing interpretation of § 305. Unlike our dissenting colleagues, we do not believe that the state's interpretation of the statute was implausible. Ultimately the question of prospectivity must be decided upon a broad basis. In this regard the United States Supreme Court per Cardozo, J., observed:

> "The choice for any state may be determined by the juristic philosophy of the judges of her courts, their conceptions of law, its origin and nature." Great N. Ry. v. Sunburst Oil & Refining Co., supra, at 365.

In order to avoid any injustice, the rule we state in this case shall apply only to actions arising out of occurrences after the date of this opinion.[46/]

The Honorable John Rader
President
Alaska State Senate
Pouch V
Juneau, Alaska 99801

Dear Senator Rader:

We would like to compliment you on your wise decision to appoint a committee to fight the high rate of unemployment in our state. Senator Summers and his committee, Senators Sackett, Ziegler, Poland and Ferguson, have a hard road ahead, but it is a great step forward. We hope there will be many beneficial and positive results.

We, as well as others, are deeply concerned over the extremely high rate of unemployment in the Homer area. More people are coming to Homer looking for employment adding to the number of unemployed, long-time residents. The unemployment lines and food stamp lines are out in the street, and there is no immediate hope in sight for employment.

The fish processing plants are shut down for lack of raw products, or closed seasons. One plant is buying some Tanner crab, which has helped a few boats. The area has been so overfished that few fishermen can make a full-time living from fishing. The Limited Entry Law precludes newcomers from entering the salmon fishing business, and it is only a matter of time before all fish come under the Limited Entry program, thus restricting any other people from working in the fishing industry.

Except for a few government, power company, fish processing, and school teaching jobs there is no other sizeable pay roll. In essence the employment situation in this area is "sick".

We own and operate a transportation company that handles 90% of all freight coming in or going out of Homer. The amount of cargo processed through our terminal has been the lowest in years. If you catch fish or have a job, you have money to buy things from lumber to groceries. The cargo movement at this time indicates a horribly depressed economic condition. This cargo index is an excellent indicator at this time. Our company has more unpaid accounts receivable and we have received more bad checks than ever before. We are also holding more undeliverable freight collect and C.O.D. shipments than in the past.

A day doesn't pass that people come to our office seeking employment. Our work force is down 50%. This is the first time since we started in business that we have had to lay off employees.

Last year was a good employment year, based mainly on work generated by the drilling barge Ferris, which spent over $14,000,000 on employment and purchasing of supplies in Alaska. Everyone benefited from this activity. Many of those employed were fishermen who fortunately made enough to help carry them through part of this bad winter.

Your passage of SB 720 to reacquire the Kachemak Bay Leases, killed one big employment possibility for this town. As you certainly must recall, this bill was pushed through based on half truths and emotionalism; plus inaccurate press releases: "The Ferris Has Sunk in Kachemak Bay" and "Worst Oil Spill in Alaska's History". The fact being that the Coast Guard environmental protection office issued a final official statement that less than 300 gallons of fuel were spilled overboard. Most of this was actually grease and oil from the equipment.

The best way for your committee to increase employment in Homer is to oppose HB 192. Save this 21.1 million dollars and use it for public projects. Homer alone needs docks, sewers, water lines, roads, and school buildings. Certainly this same situation exists throughout Alaska. This money, the 21.1 million dollars plus all of the additional buy-back millions, should be used for the benefit of all of the people of Alaska, not just a few local commercial fishermen and conservationists.

It has never been proven by the state that oil development in the area would hurt the fishing industry. The same few individuals and organizations that sued the state over the Kachemak Bay Leases have now sued the Federal Government over the Lower Cook Inlet Lease Sale. However, now the Alaska Conservation Society has openly become a plaintiff in the suit where previously they, and the Sierra Club, had donated funds to the Kachemak Bay Defense Fund.

You must keep in mind, HB 192 to buy back Chevron's leases is only the first, piece-meal step by the administration. Then comes Texaco, for about four million, then the others if they can be forced to sell. Think what you could do with 40 or 50 million dollars worth of public projects which would benefit all of us, not just a select few.

We are sure you have received many wires and letters opposing HB 192. You also must recognize that many of us in Homer are going to fight the administration's attempt to put us on a food stamp economy. We want to work for a living and maintain our dignity, which can only be done by increasing the local employment and giving people jobs.

In addition to opposing HB 192, the best thing you and your committee can do is to submit a Senate Bill to repeal CSESSB 220 in it's entirety. This is the most unjust legislation ever forced upon a segment of the Alaskan Society—the working man.

We would like to recommend that you take time to call any, or all of the following cross section of individuals from Homer to find out first hand the factors about the economic conditions in Homer and their opposition to HB 192:

Mr. Dave Derry, President of Homer Chamber of Commerce, member of Hillas Real Estate Appraisal Company, and former Manager of National Bank of Alaska, Homer Branch 235-8545

Mr. W. C. Rhodes, Manager of Homer Electric Association 235-8552

Mr. Chuck Hendrix, Manager of Seward Fisheries Homer Processing Plant 235-8527 or 235-8578

Mr. Jim Saling, Fisherman, tender boat and barge owner 235-8775

Mr. Larry Farnen, City Manager 235-8767

Mr. John Pate, City Councilman 235-8575

We appreciate the opportunity to present this information and sincerely hope that you oppose HB 192 and give favorable consideration to submitting a bill to repeal CSCSSB 220.

Respectfully,

MANLEY TERMINALS, INC.

SECTION V: SUMMARY	32

INTRODUCTION

The following survey, conducted primarily by several members of the Sociology Department at the University of Alaska, Anchorage with the assistance of a small grant from the Alaska Humanities Forum, was performed to provide an accurate assessment of attitudes toward growth and development in the Homer, Kachemak Bay area. Its primary and sole purpose was to attain a scientific assessment of public opinion on a diverse variety of local issues and concerns over which the community can take action. It is hoped, however, that this information can be used both by community leaders in the development of local decisions and policies for the future enhancement of the community, and by individual residents as they evaluate and influence the changes occurring about them. This report provides an overview of some of the major findings of this survey; it is not intended to be complete in that approximately 300 individual questions were asked of each person on the survey, and few readers would want to subject themselves to a full review of these. For individuals or groups who desire more specific information or detailed questions, we hope that they will contact us directly at the University of Alaska, Anchorage.

PART I: METHODOLOGY OF THE STUDY

The survey of Homer area residents was a coordinated effort undertaken by the City of Homer, several teachers and students at the Homer High School, and several staff at the University of Alaska, Anchorage. With the assistance of the city manager and members of the Planning and Zoning Commission, a questionnaire was written based on policy issues relevant to the Homer community. Members of Bill Johnson's class at the Homer High School designed a map of the city for the purpose of locating all residences, and students in his and Frank Libal's classes performed the vast majority of interviews with residents within the city limits. University staff with backgrounds in social research gave these students training in interviewing and supervised their work. They also conducted a minority of the interviews within the city, all the interviews outside the city limits, and were totally responsible for the tabulation and writing of results.

The region encompassed by the survey included that area of the southern Kenai Peninsula south of Ninilchik, including that community, Seldovia, Port Graham and English Bay. The results contained in this report include just those of the immediate Homer area, namely the City of Homer, residences outside the city limits, Anchor Point (south of Starisky Tower), Nikolaevsk and residents living at the head or across Kachemak Bay. All interviewing in this area was conducted in the spring and summer of 1976. All people interviewed were permanent residents of the area; sum-

mer time residents and/or those living in the area for less than a month were intentionally excluded. All interviews were conducted with the male or female head of household, and a total of 55% males and 45% females were interviewed.

All households were selected for interviewing on a purely random basis, in order to avoid any possibility of bias and to ensure representativeness for the entire community. Inside the city limits 173 interviews were conducted which represented a 50% sample, or the equivalent of every other household. Outside the city limits but in the immediate Homer area and extending beyond the end of East End Road, 61 interviews were conducted from a 25% sample of one household in every four. In the Anchor Point area one household in every eight was interviewed and in Nikolaevsk the equivalent of one in four; whereas in all other areas interviews were performed individually with a separate household head, in Nikolaevsk the interviewing was conducted in a single group meeting of men in one of the elder's homes. Finally interviews were mailed to 23 residents whose residences were inaccessible by road or trail, predominantly at Fox River, Bear Cove and Halibut Cove. Eleven of these were returned, which constituted an approximate 50% sample. The results contained in this report are consequently drawn from a total of 286 interviews, exclusive of those from Ninilchik, Seldovia, English Bay and Port Graham. In addition 13 potential respondents declined to be interviewed, and their cases are obviously excluded from the results. Because

people interviewed were selected on a strictly random basis, the results from the sample can be generalized to the entire community within 4-5 percentage points of accuracy. When we say, for example, that 78% of the 286 interviewed would like to see commercial fish and fish processing receive priority in terms of land use on the Spit, we are 95% sure that between 74% and 82% would have answered this way if every household in the total area had been questioned.

In writing this preliminary report we have attempted to minimize our analysis or interpretation of the results. Instead we have preferred to maintain a format of stating the questions (in summary form) and the percent response to each question. Under each question we have in most cases broken down the responses into three distinct categories: responses from those residents living within the city limits of Homer, responses from all those living outside the city limits, and the total responses from the combined areas. Because different proportions of people were sampled and interviewed outside the city, responses in the last two categories have been weighted to ensure equal representation. This is done by multiplying the responses to the Homer City interviews (a 50% sample) by 2, the Homer environs responses (a 25% sample) by 4, etc.

For purposes of organization we have divided this report into the five sections which follow. In the first we describe the general characteristics of the people interviewed: their ages, edu-

PART II: SURVEY RESULTS

SECTION I: CHARACTERISTICS OF THOSE INTERVIEWED AND THE HOMER COMMUNITY

In terms of general background characteristics, the household heads whom we interviewed in the Homer area were overwhelmingly white (93%), had a median age of 35 years, an average education of one year of college, had resided in the Homer area for five years or longer (53%), and were most predominantly from the Pacific Coast or Rocky Mountain states (47%). More specifically, and by area, they had the following characteristics:

	Homer City	Outside City	Total Homer Area
1. RACE:			
WHITE	97.7%	97.7%	97.7%
ESKIMO	1.7	0.0	0.7
ALEUT	0.6	1.6	1.1
INDIAN	0.0	0.7	0.5
2. AGE:			
18-29 Years	23.1%	28.1%	26.2%
30-45 Years	41.0	38.6	39.5
46-64 Years	26.3	26.5	26.4
65 & Older	9.6	6.8	7.9
3. EDUCATIONAL LEVELS:			
4-11 Grades	17.5%	11.1%	13.6%
12th Grade	31.2	47.6	41.2
1-3 Years of College	24.7	19.9	21.8
Completed College	15.2	13.5	14.1
Post-Graduate	11.4	7.9	9.3
4. LENGTH OF RESIDENCE IN HOMER AREA:			
Up to One Year	15.2%	14.8%	15.0%
1-2 Years	13.5	15.2	14.5
3-4 Years	22.8	13.8	17.2
5-8 Years	15.2	19.6	17.9
9-20 Years	22.2	18.1	19.7
More than 20	11.0	18.5	15.7

5. PLACE OF ORIGIN:

	Homer City	Outside City	Total Homer Area
Kenai Peninsula	1.2%	0.7%	0.9%
Elsewhere in Alaska	19.0	8.8	12.6
Pacific Coast States	26.2	35.1	31.8
Rocky Mt. States	11.9	17.0	15.1
Central & North Plains States	11.3	12.4	11.9
South & Southern Atlantic States, Texas & Okla.	10.2	5.8	7.4
New England & North Atlantic	9.0	7.2	7.9
Midwest States	8.3	9.4	9.0
Foreign Countries	3.0	3.6	3.4

In spite of the fact that only 14% of the residents were originally from Alaska, half had lived elsewhere in Alaska prior to moving to Homer. Of these, almost one-half had moved to Homer from the Anchorage area while a third had moved from elsewhere on the Peninsula or other rural areas of the state.

In terms of jobs and employers, the male heads of the households held the following characteristics:

6. PRIMARY OCCUPATION (MALE):

Professionals, (doctors, teachers, etc)	17.2%	4.7%	9.3%
Managers & Owners (inc. public & private business)	8.3	5.9	6.7
Technical & Protective Service (ie, police)	13.7	7.1	9.4
Clerical & Sales	2.8	3.9	3.5
Craftsmen	11.0	18.4	15.8
Operators, Truckdrivers	7.6	9.0	8.5
Laborers	4.9	8.2	6.9
Service Workers (ie, cleaning, food service)	4.8	3.1	3.7
Fishing Boat Owner/Operator	9.0	12.8	11.5
Cannery Worker/Fishery Crew	8.3	4.7	6.1
Homesteader, Farmer	0.0	8.6	5.4
No Occupation	1.4	0.0	0.5
Retired	11.0	13.6	12.7

In addition to their primary jobs, one-third of the male heads held secondary or other seasonal jobs; of these 23% were as laborers and 18% involved fishing or fish processing.

7. PRIMARY EMPLOYERS (MALE):

	Homer City	Outside City	Total Homer Area
Self Employed	32.6%	42.8%	39.1%
Federal Gov. & Agencies	10.6	1.6	4.9
State Gov. & Agencies	2.8	4.8	4.1
City & Borough Gov., incl. Schools & Hospitals	14.2	4.8	8.2
Local Commercial Business	13.5	5.6	8.4
Construction Companies	5.0	15.2	11.5
Oil Companies	5.0	3.2	3.8
Canneries	3.6	6.8	5.7
Social Groups (ie.Churches)	1.4	0.8	1.0
Retired	10.6	10.8	10.7
Unemployed	0.7	3.6	2.6

Among women and female heads of households, exactly 50% worked; among those who held jobs the major occupational categories were service workers (26%), clerical work (18%), and professionals (17%). The median annual reported family income for the total area was $13,400; reported family income was considerably higher, however, for residents living within the city ($17,100) than for those families outside the city ($11,300):

8. REPORTED ANNUAL FAMILY INCOME:

Less than $5,000	7.7%	18.9%	14.6%
$5,000 to 11,999	19.3	28.7	25.0
$12,000 to 19,999	23.9	21.8	22.6
$20,000 to 34,999	34.6	23.3	27.6
$35,000 to 49,999	10.8	4.4	6.9
Over $50,000	3.8	2.9	3.3

As possible compensation for this difference in income, residents outside the city placed a greater reliance on subsistence activities for obtaining fish and meat. Of probably greater significance is the fact that both groups derived

significant benefits from subsistence activities. Although fishing may be done largely for sport, over 80% of the people in the total area fished in Kachemak Bay. Only in shrimping (47%) and crabbing (45%) were less than a majority active.*

9. PROPORTION OF FAMILY FISH AND MEAT SUPPLY COMING FROM SUBSISTENCE:

	Homer City	Outside City	Total Homer Area
None	25.8%	9.4%	15.6%
Little	35.9	25.3	29.2
Around Half	19.3	27.4	24.3
Most	15.9	28.2	23.4
All	3.0	9.7	7.1

Various other factors might be used to describe characteristics of the population and area.** One which appears particularly relevant is the close tie existent between the rural residents and city of Homer. Among men, 34% were in town on a regular daily basis, the majority working; only 36% went into Homer on less than a two or three times per week basis. Women approximated the same statistics; 20% going to town on a daily basis and only 44% less than three times per week. Shopping, in addition to work, was primary justification for this. Those rural residents living close to Homer differ very little from city residents in many local activities, such as voter registration and percent voting, use of the small boat harbor, attendance at hearings and School Board meetings, and even attendence at City Council meetings.*** A strong degree of identification and involvement

---

*In commercial fishing, 15% of the families in the area had members active in crabbing; 14% in halibut, 13% in shrimping, and 11% in salmon.

**Many of these were collected in the interviews, such as type of housing, size and type of family, organizational membership, activities, etc., but are not reported here for sake of brevity.

***16% of the rural families had attended at least several Council meetings, during the previous year, as compared to 19% of the residents in the city.

with the Homer community is obvious and by necessity justifies their inclusion in this survey, in spite of their equally strong desires to maintain autonomy from the city in terms of incorporation and utility districts, etc.

Finally, basic values of the community are seen by examining reasons given for moving to the Homer area and factors they like best about living in the community. In summary form these include:

10. REASONS GIVEN FOR MOVING TO HOMER AREA:

Please Read (

	Homer City	Outside City	Total Homer Area
Small Town Qualities/Lifestyle	31.0%	52.2%	44.4%
Employment & Job Reasons	36.1	13.9	22.0
Aesthetic Values	17.7	24.1	21.8
Homesteading, Farming	3.2	28.1	19.0
Family & Friendship Reasons	11.4	14.6	13.4
Climate	6.3	3.7	4.6
Retirement	4.4	1.1	2.3
Commercial Fishing	2.5	1.5	1.9
Initiating Business	2.5	1.1	1.6
Other	7.0	5.1	5.8

Please Read,

11. WHAT PEOPLE VALUE MOST ABOUT LIVING IN THE HOMER AREA:

Small Town Qualities/Lifestyle	65.8%	69.2%	68.2%
Aesthetic Values	55.7	48.1	51.2
Farming, Homesteading	0.0	15.4	9.7
Climate	4.4	9.0	7.3
Family & Friendship	3.8	6.8	5.7
Work Reasons, inc. Business & Fishing	2.6	5.4	4.2
Money, Salary Reasons	1.3	3.8	2.8
Other	2.5	6.4	5.0
Nothing Valued	1.3	1.5	1.4

From the above it is obvious how important the small town environment and natural beauty of the region are to residents. These same values are expressed in a variety of other questions. For example, a majority of residents all considered as very important living in a quiet community, having multi-age friends, participating in subsistence activities, and being able to make or fix many of

the things needed by a family, while holding a high paying job was rated as only somewhat important, or unimportant. The importance of these values is indicated by the fact that less than 10% of the area residents planned on moving away from Homer within the next seven years, and majorities in both city and rural areas plan to remain permanently. Another 10% stated that they would remain permanently unless the community underwent significant growth and changes.

Read

Section II: ATTITUDES TOWARD COMMUNITY SIZE, GROWTH AND DEVELOPMENT ACTIVITIES

A variety of questions were asked to determine residents' attitudes toward growth in the Homer area. These ranged from fairly general questions, such as the size in numbers that they would like to see Homer achieve and the types of new people they would like to see living in the community, to more specific questions on different types of economic activities which they would like the city to encourage or discourage. On an even more specific level questions were asked on development preferences and land use priorities for a specific location where land is limited and choices critical, namely the Spit. The range of answers to these questions, both by city and outside city residents are given below.

1. IDEAL COMMUNITY SIZE: Considering that the City now has a population of about 1500, how big a community would you like Homer to be in 10-15 years?

Read

	Homer City	Outside City	Total Homer Area
1500 People or Less	36.6%	57.1%	48.9%
1501 to 2,000	12.4	4.1	7.4
2,001 to 3,000	16.1	9.5	12.2
3,001 to 5,000	19.3	13.2	15.6
5,001 to 10,000	2.5	3.7	3.2
10,001 to 20,000	2.5	1.7	2.0
20,001 Or More	2.5	0.8	1.5
Doesn't Matter - Undecided:	8.1	9.9	9.2

2. PREFERRED TYPES OF NEW RESIDENTS: Considering new jobs and growth will bring more people to live in Homer, which type of new resident would you like to see living here?

	Homer City	Outside City	Total Homer Area
a. Permanent population composed of just the present residents:			
Favor:	48.2%	65.5%	59.0%
Opposed:	44.5	29.1	34.9
Undecided:	7.3	5.5	6.1
b. A growing population of new permanent residents:			
Favor:	72.8%	55.6%	62.1%
Opposed:	20.7	40.1	32.7
Undecided:	6.5	4.3	5.1
c. A growing population of seasonal residents (ie, tourists) who would make Homer their summer home:			
Favor:	33.3%	22.5%	26.9%
Opposed:	59.5	68.7	65.0
Undecided:	7.1	8.8	8.1
d. A growing population of new residents (ie, oil or construction related) who would probably not make Homer their permanent home:			
Favor:	18.3%	12.0%	14.5%
Opposed:	72.0	77.7	75.4
Undecided:	9.7	10.3	10.1

3. PREFERRED TYPES OF JOB EXPANSION:

a. A large proportion of seasonal employment (as at present) or more permanent forms of year-round employment:			
Favor Seasonal Jobs:	20.1%	43.3%	34.5%
Favor More Permanent Jobs:	76.3	48.7	59.2
Undecided:	3.6	8.0	6.3

	Homer City	Outside City	Total Homer Area
b. That job opportunities should be expanded rapidly, slowly, or few new jobs opened:			
Favor Rapid Job Expansion:	13.8%	19.9%	17.6%
Favor Slow Job Expansion:	72.5	63.2	66.7
Favor Few or No Job Expansion:	12.0	15.2	14.0
Undecided:	1.7	1.8	1.8
c. That new jobs to be added should be permanent jobs, short term construction jobs, or both:			
Favor Permanent Jobs:	45.2%	35.6%	39.5%
Favor Short-Term Jobs:	3.2	8.0	6.1
Favor Both:	48.4	52.0	50.5
Undecided:	3.2	4.4	3.9

4. TYPES OF ECONOMIC AND DEVELOPMENT ACTIVITIES: Choices for development in most communities are limited: most often they are either thrust upon them by outside interests or restricted by a narrow variety of local resources or potential developments. Homer would appear to be an exception to this case in that a considerable range of resources are available on which growth might be based. Because the kind of economic base will obviously affect the type of community which Homer is to become, people were given a full list of economic activities and asked "which (of those) do you think should be encouraged or discouraged for the future of Homer?" Although the potential for developing policies that would enhance certain of these activities are limited, it is important that decisions be made that are consistent with basic values of people residing in the town. The range of attitudes towards each activity are as follows, with the list ordered from most to least desirable:

	Homer City	Outside City	Total Homer Area
a. Agriculture:			
Should Encourage:	*	92.3%	*
Should Discourage:	*	4.4	*
Undecided:	*	3.3	*

*Agriculture was not listed on questionnaires given within city limits; totals are consequently excluded for both within the city and total area groups.

Fishing is on Top - 13 - Oil No

	Homer City	Outside City	Total Homer Area
b. Commercial fishing & fish processing:			
Should Encourage:	91.8%	86.2%	88.3%
Should Discourage:	4.1	8.0	6.5
Undecided:	4.1	5.9	5.1
c. Light manufacturing, in ing small & locally based in ries:			
Should Encourage:	77.1%	87.8%	83.7%
Should Discourage:	18.2	10.6	13.2
Undecided:	4.7	2.2	3.1
d. Education & research facilities:			
Should Encourage:	87.7%	80.2%	83.3%
Should Discourage:	5.8	15.0	11.3
Undecided:	6.5	4.8	5.4
e. Transportation & storage facilities:			
Should Encourage:	70.8%	55.3%	61.5%
Should Discourage:	21.1	36.1	30.0
Undecided:	8.1	8.6	8.4
f. Tourism:			
Should Encourage:	61.6%	57.6%	59.2%
Should Discourage:	26.7	33.9	31.0
Undecided:	11.7	8.6	9.8
g. On-shore oil facilities:			
Should Encourage:	36.6%	26.7%	30.7%
Should Discourage:	54.7	68.5	62.9
Undecided:	8.7	4.8	6.4
h. Heavy industry, such as pulp mills, lumber products:			
Should Encourage:	24.4%	26.7%	25.8%
Should Discourage:	70.3	67.8	68.9
Undecided:	5.3	5.5	5.4
i. Petrochemical industries, such as refineries:			
Should Encourage:	23.8%	23.1%	23.4%
Should Discourage:	68.5	68.2	68.3
Undecided:	7.7	8.7	8.3

In addition to rating each activity separately, people were asked which types of developments they would most (and least) like to see occur in Homer. The attitudes are virtually identical to the ordering shown above: an expansion in

fishing and fish processing, followed by light manufacturing and educational and research facilities (and agriculture for those outside the city) were mentioned in that order as the most desirable. Rated as least desirable were petrochemical industries, followed by on-shore oil facilities and heavy industry.

5. ON-SHORE OIL DEVELOPMENT: Because of the importance of decisions related to oil development, more detailed questions were asked concerning the use of Homer as an on-shore facility. Four particular questions were asked: 1) Assuming that oil development does occur in the Lower Cook Inlet, would you like to see Homer used as a supply port for this; 2) which type of facilities (fishing and fish processing, tourism or industrial) would you like to see receive priority in terms of land use on the Homer Spit; 3) would you favor or oppose oil storage and tanking facilities on the Spit; and 4) would you favor or oppose the warehousing and storage of equipment on the Spit for off-shore oil exploration. As seen below, public opinion is opposed to on-shore development in all cases. The single exception is city residents who narrowly favor use of Homer as a general supply port if Lower Cook Inlet development actually occurs; however even they are opposed to utilization which would entail the specific storage of oil or equipment on the Spit:

	Homer City	Outside City	Total Homer Area
a. Use of Homer as supply port if Cook Inlet oil development occurs:			
Favor Supply Port:	53.2%	28.3%	38.0%
Oppose Supply Port:	42.7	63.6	55.5
Undecided:	4.1	8.1	6.5
b. Preferences for facilities on the Homer Spit:			
Fish & Fish Processing:	73.6%	77.6%	76.3%
Tourism:	13.0	9.1	10.8
Industrial:	9.5	8.3	8.8
Undecided:	3.9	5.0	4.1

	Homer City	Outside City	Total Homer Area
c. Location of oil storage and tanking facilities on the Spit:			
Favor Oil Storage:	23.8%	13.8%	17.7%
Oppose Oil Storage:	70.9	82.5	78.1
Undecided:	5.2	3.6	4.3
d. Location of warehouse and equipment storage facilities for oil exploration on Spit:			
Favor Warehousing:	29.7%	18.2%	22.6%
Oppose Warehousing:	64.0	73.1	69.6
Undecided:	6.3	8.7	7.8

In summary, opinions of residents are opposed to on-shore oil development both in situations where they are given an open range of economic activities from which to choose and where it is already assumed that oil development will occur in the area. On-shore facilities that would tend to conflict with other land usages are more strongly opposed. From the above figures it is also obvious that residents living outside the city are consistently more opposed to oil development than those within the city. Other reasons frequently advanced to account for these differences in attitudes toward oil are the ages of individuals, their particular jobs and length of residence in the area. These figures for those groups are given below in terms of whether they feel the city should encourage or discourage on-shore oil facilities.

e. Age of the Population: (Total Area)	Encourage On-shore Development	Discourage On-shore Development	Undecided	Total
18-29 Years Old:	12.3%	81.1%	6.6%	100.0%
30-44 Years:	21.9	73.1	5.0	100.0
45-64 Years:	49.5	44.9	5.6	100.0
65 or Older:	57.7	26.9	15.4	100.0
f. Length of Residence in Homer: (Total Area)				
Two Years or Less:	16.9%	76.1%	7.0%	100.0
Three-Four Years:	24.7	72.7	2.6	100.0
Five-Eight Years:	25.0	65.8	9.2	100.0
Nine Years-Longer	48.9	44.6	6.5	100.0

g. Occupation of Household Head (Male, Total Area):

	Encourage On-Shore Development	Discourage On-Shore Development	Undecided	Total
Professional:	10.8%	83.8%	5.4%	100.0
Managers, Owners:	60.0	36.0	4.0	100.0
Technical	38.5	57.7	3.8	100.0
Craftsmen & Laborers:	24.6	69.4	6.0	100.0
Fishermen:	5.0	92.5	2.5	100.0
Cannery Workers & Fishing Crew:	6.3	87.5	6.2	100.0
Farmers, Homesteaders:	36.4	63.6	0.0	100.0
Retired, Unemployed:	56.3	27.1	16.6	100.0

Significant relationships are found in each case, with the older people of longer residence, and particularly those who are retired or with jobs as managers or business owners, most supportive of on-shore facilities. The younger and newer resident, including those with jobs in fishing and professional work, are most consistent in their opposition to local oil development. It should be noted, however, that these latter attitudes of discouraging on-shore facilities are shared by a majority of the "average" Homer residents, namely those adults with a median age of 35 and five years of residence in the area. Finally, certain unanticipated results are seen in the relationship of jobs to attitudes when one considers the potential impacts that would occur from oil development: among those who would discourage oil are the craftsmen and laborers who might anticipate the most direct economic benefits, whereas the favorably inclined retired people are most likely to experience the negative effects from an inflationary local economy. Some changes in the attitudes of these groups might be anticipated if the actual effects of on-shore development were to begin to be realized.

SUMMARY: A majority of residents would like to see Homer undergo minimal or limited growth of a slow and gradual nature, with the addition of permanent jobs as a base for a permanent resident population. That Homer residents would favor an

absolute "no growth" economy is erroneous, in that a majority of development activities are favored by most residents. Those activities which they would most like to see encouraged, however, are either those traditional to the local economy (fishing, farming and to a lesser degree tourism) or those based on the concept of permanent employment (light manufacturing, education and research). Rapid growth and heavy industry, a transient population and oil development in general, are opposed. Although these attitudes are most prevalent amid the younger, more recent and rural residents, they are also held by the average resident of Homer.

SECTION III: ATTITUDES TOWARD CITY SERVICES

Four types of questions were asked about services provided in the city. Included was a ranking or evaluation of the adequacy of individual services, preferences for the expansion of individual services in comparison to other services, the public assessment of needs within particular services, and priorities for local funding of service expansion. The format of presenting the information here is to first provide tabulations on evaluations and service priorities; a very brief description is then provided of each service in terms of publicly expressed needs. Since most of the services pertain only to city residents, calculations are based on the sample from within the city limits. All exceptions to this are specifically noted in the tabulations.

1. EVALUATION RATINGS: (How would you rate the following services in Homer - City residents only)

	Less Than Adequate	Adequate	More Than Adequate	Undecided
Police Protection:	16.2%	53.6%	23.7%	6.5%
Elementary Schools:*	7.1	17.6	36.5	38.8
Hospital-Health Svcs:	24.3	61.8	9.8	4.1
Fire Protection:	26.0	60.1	2.3	11.6
Water Service:	31.4	59.3	2.3	7.0
Sewer Service:	30.8	56.4	1.7	11.1
High School:*	25.0	23.2	17.3	34.5
Recreation Facilities:	55.5	34.1	3.5	6.9
Streets:	68.8	29.5	1.7	0.0

(*Obviously not services for which the city is responsible.)

2. SERVICES EXPANSION: Are you in favor of having the city expand the level of services it now provides, maintain these at their present level, or cut back on the services which it now provides:

Cut Back on Services:	3.0%
Maintain At Current Level:	44.0
Expand Level of Services:	47.6
Undecided:	5.4

In contrast to residents in the city, a strong majority of the rural residents (70%) preferred a maintenance of services at their present level; half as many wanted to cut back on the level of services as actually increase them.

3. PREFERENCES FOR TYPES OF SERVICES: Both city and rural residents were asked to list those three city services which they would most like to see expanded, and also those which they would least like to see expanded. Among those which people would most like to see expanded, listed in order of preference by city residents, were:

	Order of Most Preferred:		Order of Least Preferred:
(high)	1. Road & Street Improvements**	(low)	13. Fire Protection
	2. Harbor & Port Facilities		12. Ambulance Service
	3. Recreation Facilities		11. Roads & Streets
	4. Sewer System		10. Health Facilities
	5. Tourist & Camper Facilities		9. Sewer System
	6. Water System		8. Harbor & Port Facilities
	7. Cultural Facilties		7. Water System
	8. Fire Protection		6. Recreation Facilities
	9. Local Government Facilities		5. Cultural Facilities
	10. Police Department		4. Police Department
	11. Health Facilities		3. Local Government Facilities
	12. Ambulance Services		2. Garbage Disposal
(low)	13. Garbage Disposal	(high)	1. Tourist & Camper Facilities

**Survey was taken prior to completion of paving of Main Street.

b. Rural Residents (Outside City):

	Order of Most Preferred:		Order of Least Preferred:
(high)	1. Harbor & Port Facilities	(low)	13. Health Facilities
	2. Cultural Facilities		12. Fire Protection
	3. Fire Protection		11. Cultural Facilities
	4. Roads & Streets		10. Roads & Streets
	5. Health Facilities		9. Ambulance Service
	6. Recreation Facilities		8. Harbor and Port Facilities
	7. Tourist & Camper Facilities		7. Recreational Facilities
	8. Police Department		6. Garbage Disposal
	9. Ambulance Service		5. Sewer System
	10. Sewer System		4. Water System
	11. Water System		3. Police Department
	12. Garbage Disposal		2. Local Government Facilities
(low)	13. Local Government Facilities	(high)	1. Tourist Facilities

Among conclusions that could be drawn from the above lists are: 1) the high preference given to road and street improvements, particularly within the city where over one-half listed this as among their top three choices; 2) the high priority given to improved port and harbor facilities by residents both within and outside the city; 3) the relatively high priority given to recreational and cultural facilities by both groups; 4) the low priority given to local government facilities (city hall) and expansion in the police department by both groups; 5) the low priority for water and sewage systems expansion outside the city; and finally 6) disagreement over expansion of tourist and camper facilities. Whereas some residents both within and outside the city consider this a relatively high priority, others consider it the least preferred of all services for potential expansion.

4. INDIVIDUAL CITY SERVICES:

a. Roads and Streets: Over one-half the city residents stated the need for improvement in city streets and roads, a priority rating that was close to double that given any other single service. This priority is consistent with the low evaluative rating given to streets, where 69% of the residents felt them to be less

than adequate. On separate questions, over 85% expressed the opinion that more streets should be paved and gravelled, and over 70% expressed favor for the building of storm drains and sidewalks for walking and bicycling. When residents both within and outside the city were asked to state their top two priorities in terms of street improvements, the following responses were recorded:

Type of Street Improvements:

	Homer City	Outside City
Paving Streets:	49.2%	21.8%
Gravelling Streets:	48.6	29.6
Sidewalks and Bikepaths:	41.7	25.7
Storm Drains:	25.5	9.3
Improved Snow Removal:	9.8	14.0
Street Parking:	9.1	38.9
Street Lights:	8.1	3.1
Other:	6.4	7.8

Finally, by a three-to-one ratio, city residents favored the maintenance of off-street parking, as compared to on-street. Although strong preferences were shown for the paving of Pioneer Avenue and the downtown area, priorities were also stated for West Hill Road and other residential streets in the downtown area.

b. Recreational Facilities: The recreational facilities provided by the city were also assessed by the majority of residents as less than adequate, and in need of improvement. Among the recreational and cultural facilities used by most city families were the museum (75% of all families), the school swimming pool (73%), library (60%), High School gym (54%), small boat harbor (52%, excluding commercial use), and the Fairgrounds (47%). Although usage by families living outside the city was lower, it was still significant and indicates the strong ties to the community by these residents: library (52%), swimming pool (50%), museum (46%), small boat harbor (36%, only recreational), gym (33%) and Fairgrounds (18%). New recreational facilities which residents stated they would most like to see are, in order

of priority: outdoor general use parks, a community center, tennis courts, teen center, indoor sports facilities such as a covered hocky rink, and an auditorium. Finally, 82% of the total area residents were in favor of reopening the wharf for public fishing and shrimping, and 73% to the maintenance of the Pier I Theater.

c. Sewer and Water System: Sixty-five percent of the city residents were using the city water system and 53% stated that they were on the city sewer system. For city residents not on these systems, wells and septic tanks were used by a large majority. Among all city residents, general attitudes were favorable toward expansion of both water and sewer systems (59%); however, only minorities were in favor of either increased taxes to pay for expansion (43%) or increased development to reduce the unit costs of expansion (37%). Surprisingly, the attitudes of residents within the city who are not on water or sewer systems differ little from those who have these services. Although majorities would like to have water and sewer systems expanded (58% and 60%), they are less favorable toward the assessment of taxes as payment for these (47% and 49% respectively), and even less favorable to an increase in local development for the purpose of reducing unit costs (25% and 24%).

Residents outside the city, even excluding those in Anchor Point, Nickolaevsk and across the Bay, were strongly opposed to the expansion of water or sewer systems to incorporate their areas (77% and 82% respectively); even larger proportions opposed both taxation and increased development to offset costs of these potential utility expansions.

d. Fire Protection: Probably due to its high "adequate" rating, no major endorsements were given for changes in fire protection. Two-thirds of the city residents preferred to see the fire department maintained on a volunteer basis

rather than with professional staff. However, 46%, with another 29% undecided, favored the addition of more equipment to the fire department, with the largest proportion of these citing the need for a new or additional truck. Opinions were evenly divided pro and con on the addition of more staff or equipment to the ambulance service, although there was also a large proportion of no opinion answers. Almost two-thirds of the residents in the immediate area outside the city limits considered themselves outside of a fire protection service area, and slightly over half of these would like to be affiliated to such a service area.

e. Hospital and Health Services: No strong concerns were voiced regarding changes in health care, although 32% of those expressing opinions stated the need for additional doctors. The addition of specialists to the hospital staff, more emergency equipment and a community health program were also cited as needs by over 15% of those who responded. A wide variety of responses were generated concerning what should be done with the old hospital. Included among these were: utilizing it for office space for the city and borough (19%); a community health center (16%); nursing home (16%); free clinic (15%); and community center (10%).

f. Police Protection: Probably due to its high adequacy rating, the police department was also ranked low in terms of priorities for expansion. Among city residents, for example, only 16% felt that the number of police on the city force should be increased. In spite of this, a plurality of city residents felt that more police time should be spent on crime prevention and patrolling, particularly in terms of security on the Spit, and over one-third that they should increase time on criminal investigations and the enforcement of civil regulations such as trespassing and drinking by minors. There were no activities, including traffic control, where significant numbers felt that police attention should be reduced.

Felony offenses, particularly theft, and drug related crimes constituted those types of crimes of greatest concern to the city public. In contrast, over 60% of the rural residents would like to see more police serving areas outside the city limits, although there was overwhelming agreement that this should be performed by the state police (90%). In these areas, theft and vandalism were the crimes of greatest concern.

g. Port and Harbor Facilities: Along with roads, harbor and port facilities were those given the highest overall ranking for expansion, particularly by rural residents. Widespread use of the harbor facilities obviously accounts for this: 59% of the city residents use the small boat harbor (27% on a commercial basis), but it is also used by 52% of the rural residents (32% commercially). In addition, a full 70% of the total area residents stated that they anticipated using the harbor within the next five years.

As stated in Section II, strong preferences exist for giving fish and fish processing priority for development on the Spit, followed by tourism and finally non-fishing industry. These attitudes are held even more strongly by actual users of the small boat harbor. In general, development facilities were encouraged as long as they did not compete with this primary utilization of the limited land and port facilities. As such, wharf fishing and the Pier I Theater are strongly favored by harbor users; potentially competitive usages are not, such as private campgrounds (51%), an amusement park (18%), storage facilities for off-shore oil exploration (18%), general shopping mall (16%), oil storage and tanking facilities (16%), and large commercial hotels (13%). Facilities that will contribute to the commercial use and conservation of the small boat harbor are strongly endorsed by users, such as dry dock and boat repair facilities (94%), additional fish proces-

sing facilities (92%), installation of storage and treatment tanks for bilge slops (85%), dry boat storage facilities (83%), stronger enforcement on oil and sewage discharge (79%, also favored by 82% of the commercial users), and warehouse facilities for commercial port usage(60%).

Residents using the habor on a commercial basis favor these latter items to a slightly stronger degree, while the attitudes of residents who do not use the small boat harbor tend to be generally less supportive, and somewhat more favorable to general industrial and petroleum use. This is particularly true of the development of a new deep water off-shore harbor, favored by 63% of the general public but by only 54% of both the commercial and recreational harbor users. Minimal differences exist in attitudes between city and rural users of the harbor, outside of the fact that 59% (with an additional 20% undecided) of the non-city commercial users favor greater representation from the rural area on the present Port Commission.

h. Education: Although education is not a function provided by the city, its local importance merits inclusion. However, no conclusive changes in policy were noted from the survey, other than a strong desire for more vocational training at the high school level (74% of the city residents expressing an opinon; as compared to "less" or "current" levels of vocational training). Smaller majorities of those responding favored the retention of present class sizes (54%) and an expansion in cultural programs and activities (51%). Only a small minority favored the present level of student planning and choice in curriculum; however present policy apparently represents a good compromise in that equal numbers endorsed less, and more, choice in student planning of their own curriculum. On all questions attitudes of rural residents in the Homer attendance area very closely paralleled

those within the city, although they showed less conclusive support for the construction of new school buildings than city residents (42% and 54% respectively, although with a large proportion of undecided residents). Both groups had also been equally active in the community school program, in which over one-third of the residents had been involved. The only potential area of disagreement was the attitude of 60% of the rural residents that their representation on the Advisory School Board should be increased.

4. TAXES AND FUNDING OF SERVICES: Although residents stated a desire to maintain the current level of many services, definite preferences were expressed for the expansion of certain ones, and the costs of these generally are bound to increase. To assess attitudes toward mechanisms for raising additional revenues, residents were simply asked which method of taxation they most and least preferred. The attitudes, which show a preference for sales taxes and service rate charges, and opposition to increases in personal property taxes, are shown below:

a. Most Preferred Method of Raising Additional City Revenues:

	Homer City	Outside City	Total Homer Area
Real & Personal Property Tax:	6.4%	11.7%	9.5%
Sales Tax:	50.0	38.5	43.3
Service Rate Charges:	26.4	32.5	29.9
Other:	7.4	6.1	6.6
Undecided:	9.8	11.2	10.7

b. Least Preferred Method of Raising Additional Revenues:

Real & Personal Property Tax:	60.4%	63.4%	62.3%
Sales Tax:	13.0	24.6	19.6
Service Rate Charges:	17.1	10.2	13.1
Undecided:	9.5	1.8	5.0

In addition, residents felt strongly that the city should charge for services, particularly to outsiders. For example, although 76% of the total area supported

the maintenance of public camp grounds by the city where a fee is paid, only 19% supported the maintenance of such areas without fees.

SECTION IV: ZONING AND LAND PLANNING

Questions related to land use on the Spit have already been presented and will not be repeated here. However, a variety of other land use policies are important to the community and questions were asked on a number of these. As areas they included: 1) the maintenance of natural park lands in the Homer - Kachemak Bay area; 2) industrial and residential zoning within the city; 3) the location of potential on-shore oil facilities; and 4) several final comments on tourism.

1. PARKLANDS: The natural beauty of the open lands surrounding Homer is obviously great, and 87% of the combined city and rural residents stated that this was very important to them. An identical proportion, equal for both city and rural, felt that state parks or other means should be maintained to protect these lands in their undeveloped state. Attitudes of area residents toward logging and mining on these lands are given below:

a. Attitudes Toward Park Land Use:

	Favor	Oppose	Undecided
Should Be Open to Logging:	33.5%	59.8%	6.7%
Should Permit Clearcutting:	10.6	82.0	7.4
Should be Open To Mining:	42.0*	51.7	8.3

*(Many of the favorable answers were stated conditionally, favoring prospecting and placer mines, and opposing open or strip mining.)

As seen below, a majority felt that these lands should be managed and controlled by the state, although there was considerable support for joint management or input from the city and Kenai Borough levels, in addition to opposition for the autonomy of federal management:

b. Control and Managment of Park Lands: Who should perform this?

	Opposed	Favor	Undecided
City (Homer):	68.1%	24.2%	7.7%
Kenai Borough:	69.1	23.3	7.7
State of Alaska:	30.2	62.1	7.7
Federal:	82.5	9.8	7.7

2. ZONING WITHIN THE CITY: As seen below, overall attitudes toward city zoning appear to be favorable, with a majority stating preference for a moderate zoning policy and only a very small number for an absence of zoning:

a. Type of City Zoning Preferred:

	Homer City	Outside City	Total Homer Area
No Zoning:	5.0%	11.9%	9.4%
Very Weak or Limited Zoning:	9.5	9.3	9.4
Moderate Zoning:	54.8	60.2	57.9
Strong Zoning:	26.2	12.7	18.3
Undecided:	3.6	5.9	5.0

These attitudes, however, tend to be specific, favoring zoning for an industrial site and for multiple unit dwellings, but without placing locational controls on businesses and individual residences:

b. Establishment of Industrial Site Area for All New Industry:

	Homer City	Outside City	Total Homer Area
Favor Industrial Site:	79.4%	71.2%	67.3%
Oppose Industrial Site:	14.7	19.5	15.8
Undecided:	5.9	9.3	7.1

c. Residential Zoning for Multiple Unit Dwellings:

Favor Multiple Unit Zoning:	71.2%	71.8%	71.5%
Oppose Multiple Unit Zoning:	24.1	23.9	24.0
Undecided:	4.7	4.3	4.5

d. Zoning to Encourage All New Businesses to Locate Downtown:

Favor Business Centralization:	44.0%	39.5%	41.3%
Permit Businesses to Decide:	48.8	51.3	50.2
Undecided:	7.2	9.2	8.4

e. Encouragement of Locating New Residential Areas in Downtown Area:

	Homer City	Outside City	Total Homer Area
Encourage Downtown Development:	14.3%	20.7%	18.0%
Permit Residences Where People Choose:	80.4	73.3	76.3
Undecided:	5.4	6.0	5.8

f. City Encouragement of Subdivision Development:

Encourage Subdivisions:	56.0%	31.8%	42.2%
Discourage Subdivisions:	31.9	58.2	46.9
Undecided:	12.0	9.9	10.9

Even though the attitudes of rural residents are favorable toward some aspects of zoning within the city, their attitudes are quite different in regard to zoning in rural areas. Here 43% of the rural residents favor no overall zoning restrictions on the part of the Borough, and only 37% favor moderate or strong zoning policies. This should not, however, be interpreted as opposition on the part of rural residents to all forms of Borough regulations, since the question did not address itself to specific areas of industrial zoning.

3. POTENTIAL ON-SHORE OIL FACILITIES: Although local public attitudes are opposed to oil facilities in Homer in general, and on the Spit in particular, zoning questions were asked, should on-shore development take place. Responses for both city and rural residents showed preferences for having the oil facilities themselves located outside or away from town, and on land leased to the oil companies by the city or Borough; on the other hand preferences were also stated for oil company workers to actually live in Homer.

a. Preferences for Facility Locations, Should Oil Development Occur Locally:

	Homer City	Outside City	Total Area
Located In City Limits:	24.4%	27.7%	26.4%
Located Outside City:	57.6	41.9	48.1
Won't Consider Option:*	11.0	13.8	12.7
Undecided:	7.0	16.5	12.7

b. Preferences for Oil Facility Leases on Private or Public Land:

	Homer City	Outside City	Total Area
Private Land, Owned or Leased to Companies:	19.5%	17.3%	18.1%
Publicly Leased Land (City or (Borough):	57.9	61.0	59.8
Won't Consider Option:*	6.5	12.8	10.2
Undecided:	16.4	8.8	11.9

c. Preferences for Oil Workers Living in City or Away From City:

Living In Homer:	43.8%	43.5%	43.6%
Living Away from Homer:	22.5	25.2	24.1
Won't Consider Option:*	15.9	20.8	18.8
Undecided:	17.8	10.6	13.5

(* This category composed primarily of individuals strongly opposed to oil development who are against facilities being built either in or outside the city.)

Finally two questions were asked of slightly different samples. The first recognizes the use of Homer as the major service center for the southern Kenai Peninsula and consequently the importance of attitudes of residents outside of the area encompassed by the city and survey-defined rural area. Exclusive of Seldovia, where the question was not asked, the combined residents of Ninilchik, English Bay and Port Graham opposed the location of on-shore facilities in Homer in the following proportions:

d. Preferences for Location of On-Shore Oil Facilities in Homer by Residents of Ninilchik, English Bay and Port Graham:

City Should Encourage Oil Facilities in Homer:	31.8%
City Should Discourage Oil Facilities in Homer:	54.6
Undecided or No Opinion:	13.6

In addition a question was added to the questionnaire following completion of the Homer City interviews, asking all rural residents their preference for the centralization of all Lower Cook Inlet on-shore facilities in a single community such as Kenai, or the dispersal of these facilities into various communities

of the southern peninsula in accordance with individual community choice. The results showed a fairly strong preference for the centralization in Kenai among rural Homer area residents, and also a weaker preference for this among the combined residents of Ninilchik, Seldovia, English Bay and Port Graham. It should be cautioned, however, that these tabulations do not include the city residents of Homer, who if consistent with other attitudes would have been less favorable than the rural residents to on-shore centralization in Kenai:

e. Preference for Location/Centralization of Lower Cook Inlet On-Shore Oil Facilities:

	Homer Rural Area	Non-Homer Rural Area
Centralization in Kenai:	67.9%	53.2%
Dispersal to Various Communities in Accordance With Choice:	28.1	39.9
Undecided:	4.0	6.9

Taken together, the answers to all oil facility questions indicate that public opinion was consistently opposed to on-shore facilities at the time the survey was taken.* This does not of course mean that attitudes cannot change. Changes in the technology or policies of oil companies could conceivably change the perceptions which some residents hold. However one factor appears to be crucially important at present. This is that opposition to oil represents a divisive force within the community and that any immediate action taken to initiate facilities would probably only serve to increase this level of antagonism. Two options appear possible, assuming Lower Cook Inlet exploration and development actually occurs. The first would be to follow majority opinion and oppose the establishment of on-shore facilities in Homer, while encouraging the location of these in a community such as Kenai. The second would be to achieve a greater

---

*It should be noted that interviewing in Homer was completed just prior to the initial unsuccessful effort to remove the Ferris.

consensus in support of those facilities that might be located in the local area. Essential to this would be public discussion and the elaboration of local regulations that would control the oil industry and thereby provide safeguards to guarantee maintenance of the present quality of life. A fairly strong concensus appears to exist that if oil development should occur in Homer, that it must be closely controlled and regulated. Answers to various questions indicate that the city should play a very active role in determining the specific conditions and locations under which on-shore facilities might be developed.

4. TOURISM: Although tourism ranked relatively low in terms of economic activities that residents felt should be encouraged, a majority of residents favored its development, albeit city residents more so than rural. Attitudes on developments related to tourism, particularly on the Spit, have already been mentioned and need not be repeated. What does appear relevant are the generally favorable attitudes toward land use and facilities that would cater rather specifically to the tourist (such as private and public campgrounds, as long as payment was received for the latter) and their overlapping with other local activities strongly favored by the Homer resident. The mutual participation in outdoor recreational activities are one example of this. Another not mentioned previously is the strong local preference stated for the small owner-operated business over the larger corporate stores, which would also be consistent with tourist use. However, many other issues exist, such as strong local participation and/or preference for outdoor parks, the Pier I Theater, dry boat storage facilities, the Museum and library, public wharf fishing, and sidewalks and bike trails. Sponsorship of these type facilities would not only meet needs expressed by the local public but provide attractions for the visiting and summer tourist, and they might well be given consideration for additional attention and development by the city. On the

other hand, opposition would be expected to the development of a large scale tourist industry that lacked consistency with local recreational life styles and which competed for limited land use.

SECTION V: SUMMARY

In brief form this concludes the information provided by the survey. As stated in the introduction, it is not our intention to pursue an analysis of this and it would be overly precocious for us to make policy recommendations on the basis of it. Our intention has been merely to provide a systematic assessment of attitudes which we hope many will be able to utilize and from which we believe specific policies can be generated. To a very limited degree, this may already have occurred, in that high school students who did much of the interviewing emerged with greater knowledge about their town. It is neither assumed nor anticipated that the attitudes described here will remain constant. It is hoped, however, that they will help promote both knowledge about the community and the discussion or thought that is essential for creative planning to occur. Only in this way can change be self-promoted and meet the common human needs of the community.

The population of Homer is a relatively new and young population with a strong tenacity for individual life styles deeply influenced by the traditional resource base. It would be very erroneous to imply that many of the attitudes expressed in the survey are totally negative, particularly those associated with on-shore oil, or that they merely reflect an idealistic desire to preserve traditional life styles alone. A small minority of individuals may hold these, and they would probably be paired with as many others who would oppose them vehemently on every issue. A more representative element of the public, however, appears

to be one positively oriented toward changes that will selectively enhance those elements of the community that are consistent with basic values. From the survey, many of these values are closely tied to aesthetic appreciation of the land and Bay, its fishing economy and recreational - subsistence use, and close affinity for qualities of small town life. If residents in Homer are to maintain control over the future of their town, potential developments that are endorsed must be consistent with these resources and values.

Senate Resources Commitee,

I am writing to show my support of H.B,192 to buy back the leases from the oil companies. It seems to me that Kachemak is not one of the places in Alaska for oil developement. Fishing is important in this beautiful area. Maybe in the future when the earth is out of oil and the oil companies are more responsible and experienced, and through public hearings you find local support, will be the time for this kind of developement in Kachemak Bay.

Sincerely,

David R. Miles

March 29, 1977

Senate Resources Committee
Kay Poland, Chairman
Alaska State Legislature

Dear Senators;

As you know, Katchemak bay bioassey studies conducted at the Auke Bay Lab indicate that very low levels of crude oil: .1 to 1 part per million is toxic to larval stages of shellfish.

Larval studies by the National Marine Fisheries Assoc. indicate that upwards to 507 billion larva are released in this bay annually and settle on the North Shore of Katchemak bay. (Bluff Point). This is 35 million per square mile of the bay.

The legislature, in its wisdom, passed last year, the necessary act to reacquire these leases and the State and Standard Oil have negotiated in good faith to arrive at a satisfactory settlement.

We strongly urge you to support this appropriation for reacquisition in HB 192.

E.P.A. records show that out of 260 recorded spills in Cook Inlet, 143 were caused by industrial carelessness. There is too great a risk to allow this fishery to be destroyed.

Sincerely,

Mary Ellen Culbreathson

Miss Mary Ellen Culbreathson
Box 2778
Juneau, Alaska

Box 697
Homer, Alaska 99603

The Honorable Kay Poland
Chairman, Senate Resources Committee
Pouch V
Juneau, Alaska 998II

Dear Senator,

In the near future your committee will be holding hearings on the Kachemak Bay buy back bill. This issue is of extreme importance to the fishermen of Kachemak Bay. The majority of these fishermen are either heading for the herring grounds or involved in other fisheries and will not be able to attend the hearing. Those opposed to the buy back have chartered a plane and will be giving testimony. We hope that our absence is not taken as a lack of concern since we have all worked very hard to insure that Kachemak Bay will not be risked to oil development and we strongly favor the buy back program.

We ask that the following be considered in your decision concerning the buy back program;

(I) Kachemak Bay is well documented as having the richest marine environment in the world.

(2) The first wholesale value of fishery resources harvested in I976 was $IO,772,000.00.

(3) Kachemak Bay is a spawning and rearing area for much of the fishery resources of Cook Inlet, and as such, is a critical habitat area.

(4) The final Cook Inlet E.I.S. section 3D fully illustrates and defines the effects of oil development on the fishery resources and shows clearly the need to protect Kachemak Bay.

(5) The Federal leasing has been withdrawn to establish a I3 mile buffer zone adjacent to Kachemak Bay.

(6) There is not adequate facilities to utilize oil from the pipeline and the problem of what to do with the excess oil has not been solved. Any oil development that poses a high risk to renewable resources should be delayed until the oil can be used to satisfy the energy needs of the U.S. and not for export. The U.S. needs to develope an energy plan that will insure wise use of all our energy resources.

(7) There is not available anywhere adequate clean up equipment that could be used successfully to clean up an oil spill where wind and tide are present. This fact was very evident from the recent experience on the East coast of the U.S..

(8) Should there be oil on the leases involved in the buy back it's value will increase and the risk imposed by it's extraction will be decreased by the development of better technology. This approach to energy resource development is now being undertaken by the people responsible and is being endorsed by the majority of Americans.

to share this hardship by paying an assessment on fish products harvested in Kachemak Bay. We also know that we will be the most affected by oil development because of our dependency on the fishery resources. Therefore we ask that you carefully consider what we have stated and support the buy back program.

Sincerely,

Paul E. Jones

Paul E. Jones; Vice President, North Pacific Fisheries Association

P.S. I am a 38 year resident and a registered voter of the Fritz Creek Precinct. I'm also the Mayor of Kachemak City.

We also wish to express our strong desire, not only to stop any oil development in Kachemak Bay, but also to severely control oil development in any other coastal region of Alaska, especially where fisheries are threatened.

Sincerely,

Roman J. Motyka

Virginia M. Ferrell

27 March 77

Senator Kay Poland
Chairperson
Senate Resounces Committee

Hello,

I am a four year resident of Alaska and a commercial fisherman for three years. I fish in the waters of Kachemak and Kamishak Bay, both adjacent to the oil lease areas of Lower Cook Inlet. I am against any hydrocarbon exploitation in those areas, not because I derive a portion of my income from fishing, but because of the richness of life in those areas. Hugh salmon runs, crab (king, tanner, and dungeness), shrimp, halibut,cod, and a variety of sea mammals make their home in these waters. The outer Kachemak Bay area is an important breeding ground for king crab and shrimp. Kachemak Bay has been called the richest food producing area in the world. The State has wisely bought back the oil leases in that area.

Oil operations are not fail-safe. And, despite the scantily progressive spill clean-up technology, this area would be in special danger due to the second highest tides in the world. Oil dispursment would be rapid.(this tidal cleansing action is one reason why the waters are so rich). Also, The Lower Cook Inlet is subject to intense seismic and volcanic activity. In January, 1976 Mt. St. Augustine erupted sending ash over a hugh area. From a Feb. 2 UPI print-out, "Professor Juergen Kienle of the University Of Alaska says the volcanic explosion that shook Mount St. Augustine last month gave off a strange heat wave similar to that of an atomic explosion. He says trees on a nearby island were burned on the side facing the mountain, but remained green on the opposite side." This mountain is a stone's throw from the oil lease area in question.

Who would pay for a disaster? We all would. Can we risk any possible depletion in an important food resource? Is it worth a few months supply of oil? I say NO!

In a 1976 poll taken by the U. of A. 70% of Kachimak Bay residents said NO to oil development in Lower Cook Inlet. 10,000 other Alaskans, in the same poll, spoke out in opposition.

President Carter has recently expressed similar concerns for certain Alaskan waters, Cook Inlet Among them. I hope, in the upcoming hearings that Lower Cook Inlet be nominated a marine sanctuary and oil exploitation be banned.

Sincerely,

Henry E. Bendl

Dear Sen. Poland:

Please pass the Kachemak Buy Back Bill (HB192) out of the Resources Committee and support it when it comes to a floor vote.

Kachemak Bay should be protected for biological reasons and for the long term economic benefits fishing will bring the area.

Thank you.

Sincerely,

Liz Holloway

Senate Resources Comm.
Alaska State Legislature
Pouch 5
Juneau, Alaska 99811

Dear Sirs,

The only way our fisheries will be assured their future is if our waters can support fish. There is a bill (H.B. 192) which favors the buy back of Kachemak Bay from the oil companies. There is no alternative. This must be done. We are jeopardising the future of our own fisheries if we leave them in the hands of the oil concerns.

I urge you to support the Kachemak Bay buy back.

Sincerely,

Zin Kittredge

Honorable Kay Poland
Chairman Senate Resources
Juneau Alaska

Dear Senators

We support HB 192 because we believe the fisheries resource of Ketchemak Bay far exceeds the potential for the long term benefit for Alaskans and should not be jiprodized by the hazards of oil pollution.

Mr & Mrs. Keith Hart

March 30, 1977

Senator Kay Poland
Senate Resources Committee
Juneau, Alaska

Dear Senator Poland;

The Kenai Peninsula Chapter, Alaska Conservation Society, would like to urge your committee to approve the Senate version of the Kachemak Bay "buy-back" bill, H.B. 192.

While we obviously do not know the "politics" behand the procrastination in funding, the concept of "buy-back" had already been approved by both Senate and House.

We continue to maintain what has already been repeated many times; the Bay has both rare scenic beauty and important marine habitat value, which should not be disrupted by oil development.

Sincerely,

Bill Schrier

Re: HB 192 - Kachemak Boy Back
In Support of.

Mar 2. 77

Dear Senator Poland,

I am writing in support of HB 192. I feel Kachemak Bay is important to Alaska for its rich & abundant sea life, and any possibility of harming this should be avoided at any cost. The money should be appropriated to buy back the leases as planned.

Sincerely,

James Muller

Senator John Sackett
Chairman, Senate Finance Committee
Pouch V
Juneau, AK 99801

Dear Senator Sackett:

As fisherpersons and concerned year-around residents of 30 and 19 years respectively, we are vitally interested in passage of HB 192 Kachemak Bay Buy Back Bill.

It seems as though there are enough other areas of the State in which to explore and/or develop oil without disturbing a critical habitat area.

We urge your support of passage for HB 192.

Very truly yours,

Alvin and Elizabeth Taeschner

REMARKS:

FROM: Senator Tillion DATE: 3-14

CALVIN M. FAIR, D.D.S.
P.O. BOX 369
SOLDATNA, ALASKA 99669

Senator Clem Tillion
Ponch V
Juneau, Alaska

3-3-77

Dear Clem,

I find that I just do not have the time right now to write personal letters to all the members of Senate so if you wish you may pass my comments on this matter on to them.

I have lived in Alaska with my family for a good many years now, nearly all of which have been in Soldotna. During this time we have enjoyed the many wonderful recreational opportunities available to us in this general area. A fair portion of this recreational enjoyment (and subsistence use) has come from utilizing Kachemak Bay and its surroundings.

We have utilized the Bay for fishing, shrimping, crabbing, Boating and just plain sight-seeing. We would certainly oppose any activity that might in any way damage any of these resources. Unfortunately oil development has proven to be one of the most detrimental uses in our age.

In addition to the personal enjoyment of the Bays resources I feel a vested economic interest in preserving its marine life. I have in my practice many active fishermen who make all or most of their living from harvesting these same resources. These people are a valuable asset to my practice as well as a personally satisfying asset through their friendships.

What I am really trying to say, in a long way, is that I strongly support the Kachemak Bay Buy-Back Bill now before the legislature. This would remove the potentially destructive oil development from the Bay area. I believe in this case that the marine resources are saved.

Warm Regards,

Calvin Tani

Dear Kay Polland,

As a lifetime resident of the Kenai Penninsula, and a fisherman of 8 years, I urge you to buy back the Kachemak Bay leases. (HB 192) Then, when the rigs spread from here to Kodiak, the crabs may find a refuge ... and ourselves a mountain scene unhampered by oil flares.

Sincerely,
Eileen Mullen

precinct Tustumena 00630160

Box 602
Soldotna, Alaska 99669
10 March 1977

Dear Senator Poland:

I urge you to work for the immediate passage of the Kachemak Bay buy back bill. PLEASE don't sit on that bill until it gets lost in the shuffle!! We, the residents of the Kenai Peninsula (I've been one for 25 yrs.) need the passage of that bill to protect our renewable resources. It is <u>not</u> an anti-oil bill - the oil companies are getting a fair deal on this one. It is a bill that insures that our children's children will have a resource with which to work, produce, and eat... long after you and I will have died.

Since you are from the strong fishing community of Kodiak, I find it absolutely amazing that you aren't backing this bill 100%. I don't care if you hate Hammond and love Egan - push your ego aside and let your foresight have the power.

Most respectfully,
Mary Mullen

LA21 2776 16.14 JA01 0025 16.20 03/30/77

TO: CINDY OR MERLE, JNU.
FROM: SUSAN, FBX.

THESE THREE MESSAGES ALL ARE TO: ALL FAIRBANKS AREA LEGISLATORS AND THE SENATE RESOURCES COMMITTEE:

1. FROM: SANDY LAGRONE/ 607 BENTLEY DRIVE, WEST/ FAIRBANKS, AK. 99701/ PHONE: 452-5584:
I WANT YOU TO LEAVE KACHEMAK BAY AS IT IS. DON'T NEED ANY OIL. THE OIL IS GOING TO COST MORE THAN THE FISHING IS BRINGING IN DOWN THERE.

2. FROM: PATTY LANE/ SR BOX 10612/ FAIRBANKS, ALASKA 99701/ PHONE: 479-2698 :
I AM A FAIRBANKS CITIZEN WHO IS IN FAVOR OF THE KACHEMAK BAY "BUY BACK" BILL, HB 192.

3. FROM JEFF WELTZIN/ 320 MOORE HALL/ U. OF A./ FAIRBANSK, ALASKA 99701:
I URGE SUPPORT OF HB 192, THE KACHEMAK BAY "BUY BACK" BILL.

THAT'S ALL THIS TIME.
IS THIS A MORE EASY-TO-HANDLE FORMAT FOR YOU IN JUNEAU?

ALSO, I GUESS APRIL IS NOT AS SICK AS I THOUGHT; SHE HAS BEEN AT WORK TODAY (AS YOU KNOW) ...SO, UNTIL LATER.../S/ EOM

TO: CINDY, JNU
FROM: APRIL, FBX

PLEASE DELIVER THE FOLLOWING MESSAGES:

TO: SENATE RESOURCES
FROM: KEVIN HARUM, BOX 73332, FBX, 99707, PH 452-2477
I STRONGLY SUPPORT THE REPURCHASE OF LEASES IN KACHEMAK BAY.
THANK YOU FOR YOUR CONSIDERATION. EOM.

TO: SENATE RESOURCES
FROM: RON JOHNSON, #4 STUART HALL, U OF A, FBX, 99701, PH 479-7777
I URGE YOU TO PASS HB 192. EOM.

TO: FBX DELEGATION & SENATE RESOURCES
FROM: LARRY SCHMUSER, BOX 1267, FBX, PH 452-4761
I AM IN FAVOR OF HB 192 FOR ENVIRONMENTAL AND ECONOMIC REASONS
TO THE STATE OF ALASKA. I THINK THE ALASKA FISHERMAN HAS HIS
RIGHTS TO. ONE INDUSTRY OR RESOURCE IS ENOUGH AT A TIME. EOM.

TO: FBX DELEGATION AND SENATE RESOURCES
FROM: JOAN FORSHAUG, BOX 81847, COLLEGE, AK, 99708, PH: 479-7285
I WOULD LIKE TO SEE HB 192 PASSED. EOM.

TO: FBX DELEGATION & HOUSE AND SENATE RESOURCES
FROM: JUDY & KERMIT JOHNSON, 1042 PEDRO ST., FBX, 99701, PH: 456-5773
WE URGE YOU NOT TO RECONFIRM THE APPOINTMENTS OF NICK SZABO AND
DANNIE GARROUTTE TO THE BOARD OF FISHERIES. TO MAINTAIN A DEMOCRACY,
WE MUST HAVE REPRESENTATIVES OF SPORT FISHING INTERESTS. START BY
DENYING THESE MEN THEIR POSITIONS ON THE BOARD. EOM.

MORE TO FOLLOW, CINDY. /A/ EOM

FROM: SUSAN, FBX.

A COUPLE MORE MESSAGES WHICH I'LL SEND THIS AFTERNOON AND YOU'LL RECEIVE IN THE A.M.

BOTH ARE TO: ALL FAIRBANKS AREA LEGISLATORS, TO SENATOR KAY POLAND, AND OTHER MEMBERS OF SENATE RESOURCES COMMITTEE:

1. I URGE YOU TO SUPPORT THE KACHEMAK BAY "BUY BACK" BILL, HB 192. SIGNED CHRISTOPHER PEARSON/ C/O GEOPHYSICAL INSTITUTE/ U. OF A./ FAIRBANKS, AK. 99701.

2. WE ARE AGAINST SB 199 AND FAVOR BUYING BACK THE KACHEMAK BAY OIL AND GAS LEASES. SIGNED: ANNE & WILL HARRISON/ C/O GEOPHYSICAL INSTITUTE/ U.OF A./ FAIRBANKS, AK. 99701 (PH: 479-3594).

THAT'S ALL FOR NOW; THO THERE WILL PROBABLY BE MORE, LATER.

I THINK THAT A WHOLE BUNCH OF NEW PEOPLE MUST HAVE JUST DISCOVERED US, HERE, AND ARE MAKING GOOD USE OF THEIR FIND!!! THANKS MUCH FOR ALL YOUR TIME AND TROUBLE. /S/ EOM

LA21 3310 18.14 03/30/77 JA01 0002 07.42 03/31/77

TO: CINDY OR MERLE, JNU.
FROM: SUSAN, FBX.

1.TO SENATOR KAY POLAND AND OTHER MEMBERS OF THE SENATE RESOURCES COMMITTEE:
I STRONGLY SUPPORT THE BUYING BACK OF THE KACHEMAK BAY OIL AND GAS LEASES, AS IS STIPULATED IN HB 192.
SIGNED: LAWRENCE KATKIN/ S.R.BOX 10612/ FAIRBANKS, AK. 99701.
PHONE)

FAIRBANKS, ALASKA 99701.

2. TO SENATOR JOHN HUBER, AND TO: SENATOR KAY POLAND AND OTHER MEMBERS OF THE SENATE RESOURCES COMMITTEE, AND TO ALL FAIRBANKS AREA LEGISLATORS:

Sen Poland

I STRONGLY OPPOSE SB 199. ALL ALASKA WILL BENEFIT GREATLY IF WE BUY BACK THE OIL AND GAS LEASEHOLD INTERESTS IN KACHEMACK BAY. SIGNED: JANET LOKKEN/ S.R. BOX 20661/ FAIRBANKS, ALASKA 99701.

3. TO: SENATOR JOHN HUBER, SENATOR KAY POLAND, AND ALL OTHER MEMBERS OF SENATE RESOURCES COMMITTEE, AND TO ALL FAIRBANKS AREA LEGISATORS:

I STRONGLY URGE THAT YOU VOTE DOWN SB 199. THE PEOPLE OF ALASKA NEED THE FISHING AND RECREATIONAL BENEFITS OF KACHEMAK BAY. WE SHOULD BUY BACK THE OIL AND GAS LEASES. SIGNED JUDY SMITH/BOX 81071/ COLLEGE , ALASKA 99708.

THANKS. /S/ EOM

Date April 1977

#B 192

The Honorable Members of the Senate
Alaska State Legislature
Juneau, Alaska

Dear Senators:

We, the undersigned voters and taxpayers of Alaska, oppose the state spending the millions of tax dollars proposed by the Administration to buy back the oil and gas leases in Kachemak Bay.

The Kachemak Bay leases are valid and should be honored by the State of Alaska. This is the opinion issued by the Supreme Court and should not be violated by the Administration nor the Legislature.

These millions of dollars are needed in many more areas to provide funding for projects for the ALASKAN PEOPLE in the entire state. We do not want our taxes spent to satisfy a few who are mostly "johnny come lately" and transient residents.

We strongly urge the repeal of the moratorium and condemnation bill that was passed in poor judgement by the legislators in 1976.

NAME	ADDRESS
Gerard G Brown	8618 9th Everett Wa 98204
Robert W. Reule	4119 Vista Court Anchorage 99504

Copy to all senators

March 28, 1977
Homer, Ak.

Senator Kay Poland
Chairman Resources Committee
Pouch Y
Juneau, Alaska 99811

Dear Senator Poland:

Thank you for your letter of March 24 regarding repurchase of Kachemak Bay leases.

You are aware we are strongly opposed to repurchase and have been from the beginning.

We appreciate your scheduling a hearing on April 1. Barbara Fenley will head a delegation, which we support, at that time to make an opposition report.

Thank you for your efforts.

R. J. Gillas
SRA, Box 44
Homer, Ak

The Honorable Kay Poland
Chairman
The Honorable Members
Senate Resource Committee
Pouch V
Juneau, Alaska 99801

Dear Senator Poland and Resource Committee Members:

As a resident and taxpayer of Alaska I am not in favor of Governor Hammond's program to buy back all of the oil leases in Kachemak Bay.

This bill now to pay off Standard Oil and the next one to pay off Texaco is almost all of the 25 million dollars that everybody keeps saying is just a "refund" to the oil companies for what they paid. What about those other companies? Where will the millions of dollars come from to pay them? Out of the taxpayers pocket, that's where.

All of this money could maintain the haul road they say will cost so much to let people use. It could build a lot of other roads we need in Alaska and make some we already have a lot better and a lot safer. It could build some of the schools, jails, court houses and docks they keep putting on bond issues asking the voters to approve.

I ask all of you to do what you can to defeat HB 192. And I think you ought to do everything possible to help pass the bill, SB 199, to repeal the first law that allowed the Governor to buy back these leases in the first place. Let the courts decide what is right on them. That's where it started and that's were the decision should be made, not laws from the Governor and the Legislature.

Again I don't want my tax dollars spent to pay off the oil companies. Let them find out what they bought. Some people think there is more natural gas than oil in Kachemak Bay anyway. They need gas on the Kenai Peninsula. Let the people have a chance to work and let them have the energy they need for a little progress.

Sincerely,

John E Anderson

It could build some of the schools, jails, court houses and docks they keep putting on bond issues asking the voters to approve.

I ask all of you to do what you can to defeat HB 192. And I think you ought to do everything possible to help pass the bill, SB 199, to repeal the first law that allowed the Governor to buy back these leases in the first place. Let the courts decide what is right on them. That's where it started and that's were the decision should be made, not laws from the Governor and the Legislature.

Again I don't want my tax dollars spent to pay off the oil companies. Let them find out what they bought. Some people think there is more natural gas than oil in Kachemak Bay anyway. They need gas on the Kenai Peninsula. Let the people have a chance to work and let them have the energy they need for a little progress.

Sincerely,

Donald Lee

Dear Kay Poland.

I am writting to you in Hopes that you will support John Huber's Senate House Bill #99 "An Act repealing the Authorization to reaquire oil & Gas leaseholds interests in Kachemak Bay.

We want the oil Company here and we think oil & fishermen can get along.

Homer needs the oil for economic reasons there is Nothing to support this town as it is.

Thank you,
Barbara & Ralph Hoskin

Dear Senator Poland and Resource Committee Members:

As a resident and taxpayer of Alaska I am not in favor of Governor Hammond's program to buy back all of the oil leases in Kachemak Bay.

This bill now to pay off Standard Oil and the next one to pay off Texaco is almost all of the 25 million dollars that everybody keeps saying is just a "refund" to the oil companies for what they paid. What about those other companies? Where will the millions of dollars come from to pay them? Out of the taxpayers pocket, that's where.

All of this money could maintain the haul road they say will cost so much to let people use. It could build a lot of other roads we need in Alaska and make some we already have a lot better and a lot safer. It could build some of the schools, jails, court houses and docks they keep putting on bond issues asking the voters to approve.

I ask all of you to do what you can to defeat HB 192. And I think you ought to do everything possible to help pass the bill, SB 199, to repeal the first law that allowed the Governor to buy back these leases in the first place. Let the courts decide what is right on them. That's where it started and that's were the decision should be made, not laws from the Governor and the Legislature.

COMMITTEE REPORT

SENATE

4/14/77

4/22/77 Date

Mr. President:

The Committee on ~~XXXXXX~~ Resources has had CSHB 243 (Fin)
Alaska Pipeline Commission
under consideration. A majority of the members of the Committee

☐ recommends it do pass

☐ recommends it do not pass

☐ recommends it do pass with attached amendment(s)

☒ recommends it be replaced with CS for CSHB 243 and that CS for CSHB 243 do pass

☐ (and) recommends it be referred to the _____ committee

☐ reports it back without recommendation

☐ AND attaches a report of its intent

☐ (other) _____

MEMBERS SIGNING THE MAJORITY REPORT:

Chris Kennick — Do Pass

Tom Melaven — No Rec

Kay Poland — DO PASS

Victor D. — Do Pass

MEMBERS NOT CONCURRING IN THE MAJORITY REPORT:

_____ recommends: _____

_____ recommends: _____

_____ recommends: _____

R. Poland
Chairman

S 60

SCS CSHB 248 (FINANCE)

The Senate Resources Committee substitute resolves the differences between the Pipeline Commission, the Attorney General's office, and the Alyeska Pipeline Company.

The Senate Committee substitute more clearly defines the regulatory and tariff setting authority of the Pipeline Commission. At the same time it removes the non-pipeline connected activities of affiliated interests from regulation and provides a certainty of at least a partial cash flow to the pipeline carrier during suspension of the filed tariff and the operation of a temporary tariff.

* * * * *

SUMMARY OF BILL ANALYSIS

1. Brings the pipeline connected activities and property of affiliated interests under commission regulations. Non-pipeline connected activities of the affiliated interests are exempt.

2. Brings connections and interconnections under the commission's permit requirements.

3. Allows the commission to suspend the filed tariff for 18 months instead of only 6 months.

4. Clearly establishes the commission's authority to set a temporary tariff thus eliminating the contention that shipment of oil could not be accepted until a tariff was set.

5. Allows the collection of the filed tariff but stipulates that the difference between the filed tariff and the temporary tariff must be placed in escrow, or acceptably bonded in lieu thereof, until the tariff question is resolved. This provision protects the state's shipments and those of the other shippers while not forcing the pipeline carrier to operate without at least partial revenue.

6. Reiterates the requirement that records be kept at a place convenient to the commission.

7. Allows the commission the latitude of having a limited number of persons present during an investigatory hearing.

8. Gives the pipeline carrier ten calendar days to appeal a commission decision before the commission can appeal for judicial enforcement.

9. Makes the Act retroactive to July 1, 1976. This was acknowledged as proper by all parties.

HB
264

COMMITTEE REPORT

**Finance

SENATE

4/21/77

_____ Date

Mr. President:

The Committee on RESOURCES has had CSHB 264 (Fin) fisheries enhancement under consideration. A majority of the members of the Committee

- [ ] recommends it do pass
- [ ] recommends it do not pass
- [ ] recommends it do pass with attached amendment(s)
- [X] recommends it be replaced with CS for CSHB 264 (Resources) and that CS for CSHB 264 (Resources) do pass
- [ ] (and) recommends it be referred to the _____ committee
- [X] reports it back without recommendation
- [ ] AND attaches a report of its intent
- [ ] (other) _____

MEMBERS SIGNING THE MAJORITY REPORT:

MEMBERS NOT CONCURRING IN THE MAJORITY REPORT:

_____ recommends: _____

_____ recommends: _____

_____ recommends: _____

_____
Chairman

April 25, 1977

Memo

To: Senate Rescurces Committee

From: Rep. Terry Gardiner

Re: Sectional Analysis of SCS for House CSHB 264 (referred to as HB 264). "An Act Relating to Fisheries Enhancement; and providing for an effective date;"

Section 1.

Section 1 repeals AS16.10.375 and re-enacts it with new language. The present section 375 requires the Commissioner of Fish & Game to:

1.0 Designate regions of the State for purposes of enhancing salmon production.

2.0 Develop and amend if necessary a comprehensive salmon enhancement plan for each region for both public and private non-profit hatchery systems.

3.0 Develop a comprehensive salmon enhancement plan in cooperation with appropriate qualified regional associations formed under section 380.

Hb 264 rewords section 375 and requires the following activity:

1.0 The Commissioner of Fish & Game shall designate regions of the State for purposes of salmon production.

2.0 Develop and amend as necessary a comprehensive salmon plan for each region for both public and private non-profit hatchery systems.

3.0 Require that the comprehensive salmon plan be developed by regional planning teams.

4.0 The regional planning teams shall consist of; Dept. of Fish & Game personnel, and representatives of the appropriate qualified regional associations formed under section 380 of this chapter.

The basic change in the present section 375 by HB 264 is the requirement for the creation of regional planning teams. In the past year its proved that there was some ambiguity regarding how the comprehensive enhancement plans were to be developed. The experience in Prince William Sound Aquaculture Association in dealing with the Dept. of Fish & Game at the regional planning team concept was finally evolved and put in place and is working.

This amendment to the legislation adds some clarity and direction to the Dept. of Fish & Game regarding how these regional salmon plans are to be developed.

Section 2.

Section 2 amends AS16.10.400 (a). The amendments to section (a) and section (e) are obvious from the draft of the bill. The amendment to section (a) tightens up the discretion given to the Commissioner of Fish & Game under the existing law. Under HB 264, "the Commissioner or his designee may issue a permit subject to the restrictions imposed by statute or regulations." The discretionary phrase "he considers desirable" is removed. The reason is to give the permit holders some certaint regarding their actions.

The second change to subsection (a) adds the language t require tha a permit application be reviewed by the regional planning team prior to its being issued. The reason is to make sure that the permit application is reviewed by the regional planning team which is drawing up the comprehensive salmon plan prior to the issuance.

The original HB 264 transferred the term renewable into subsection (a) while at the same time deleting (d). The Senate State Affairs Committee Substitute removed the phrase 'or renew' from (a).

The result of removing the section allowing for renewability of permits from this bill leaves the situation that once a permit is issued by the Commissioner of the Dept. of Fish & Game, it remains in the permit holder it may not be transferred and may only be altered, suspended or revoked subject to AS16.10.430 which deals with failure to comply with conditions or terms of the permit. This amendment again is an attempt to give some certainty to the permit holder that the terms under which he is going to operate a permit will either be in law or regulation and not subject to discretionary decisions by the Dept. of Fish & Game.

Subsection (e) is an attempt to clarify an ambiguous situation under the present law. Under the present law, there are provisions for three different types of non-profit hatchery corporations to exist; those established by a qualified regional association; those established by a seperate non-profit corporation which are approved by a qualified regional association; and those established by a seperate non-profit corporation which are not approved by qualified regional association. This language clarifies the ambiguity that existed of whether a qualified regional association had to go out and establish a seperate non-profit corporation for each of the hatcheries it was going to build. Under the amending language, a qualified regional association can construct as many hatcherie as it wishes without establishing seperate corporate identities for each of those hatcheries.

Section 3

Section 3 amends AS16.10.430 (a). The amendment of the additional language to the present section 430 requires that a decision to revoke a permit may only be made "after the regional planning team for the area in which the hatchery is located is notified and granted an opportunity to comment on the proposed suspension of revocation." This is an attempt to clarify the situation in which the Dept. of Fish & Game, due to its organizational structure, may act in an arbitrary manner of revoking a hatchery permit without consulting with the regional planning team which is developing and administering the comprehensive salmon plan for each region.

Section 4.

Section 4 amends AS16.10.450. There is a little bit of possible confusion in reading the proposed amendments and deletions in this section. On examination of the bill it should be noted that the phrase deleted on page 2 line 21 "fisheries research, salmon rehabilitation projects, or" is merely moved up into line 18. Its just a rearrangement of the phrases.

The substantive amendment to AS16.10.450 is the phrase on line 19 and 20, "costs of operating the qualified regional association for the area in which the hatchery is located." the addition of that language allows the use of funds obtained from the sale of surplus salmon or salmon eggs which return to the hatchery to help defray the costs of operating the qualified regional association for the area in which the hathcery is located. The reason for the addition of that language is the realization after starting to work with the law allowing the establishment of regional associations, that there are no provisions made for the funding of such regional associations. Although it is realized that there will be no surplus salmon until there are some returns to the hatcheries which may be 4 to 6 to 8 years down the line, and even then the monies received from the sale of surplus salmon will probably be primarily dedicated to the retirement of debt and operating costs. This additional language will provide for the possibility of funding the qualified regional associations.

The second amendment to section 450 on page 2 line 22 and 23 is a rewording of the present law to clear up any ambiguities of fish which return to hatcheries and are sold for human consumption, whether they return to a State hatchery or a private non-profit hatchery, shall be of comparible quality to fish harvested in the commercial area and sold at prices commensurate with the current market.

Section 5

Section 5 repeals and re-enacts AS16.10.470 regarding the annual reporting. The present law regarding annual reporting requires the submission of an annual report to the Dept. of Fish & Game including but

not limited to:

1.0 A Complete description of all significant hatchery operations;

2.0 Statistics on the numbers of eggs and fish handled by the hatchery whether for production or sale;

3.0 Further recommendations for modification of the hatchery program;

4.0 Any other relevant data required by the Department.

The amended amendment in HB 264 requires an annual report to "include but not be limited to statistics on the number of eggs and fish handled by the hatchery, whether for production or sale." The other three items listed in the present section 470 are deleted. The reason for the deletion is that the other three items are very ambiguous and could if required become quite costly to the hatchery owner. It is felt by the non-profit hatchery owners and potential owners that the overhead cost for operating hatcheries should be held at a minimum and that any reporting features should be only those which are required by necessity and not those of convenience.

Subsection (b) of AS16.10.470 was added by the Senate State Affairs Committee. The essence of the section would require the submission of an annual financial report for the Dept. of Commerce and Economic Development on a form to be provided by the Dept. of Commerce & Economic Development. The primary purpose of this amendment is to make sure that the financial statements and essential operating criteria will be kept by all non-profit hatcheries in the state in the same basic format so there will be an ability to compare cost and efficiencies throughout the State.

Section 6.

Section 6 amends AS16.10.500. Sections 500 through 560 deal with the Fisheries Enhancement Loan Program.

Section 500 amends the declaration of policy to allow for the making of grants for organizational and planning purposes to regional associations which have qualified under section 380 and by means of long term low interest loans for hatchery planning construction and operations.

The grant provisions are in section 10 of the bill and the loan provisions are dealt with in sections 11 and 12.

The reason for the making of grants for organizational and planning purpose has been as a result of the realization of the realities that Prince William Sound Aqualculture Assoc. and the Southern Southeast Re-

gional Aqualculture Assoc. have gone through in organizing the regions which are required by this Act.

The grants under this provision are only available to regional associations which have been qualified under section 380 which means that they have been recognized by the Commissioner of Fish & Game and he has determined that:

1.0 Their Board of Directors is representative of the requirements of the law under this act; and

2.0 that he has designated that region of which the corporation will operate under.

Because of the size of the regions and the necessity for large regions to operate under a regional type concept, the cost of organizing and planning the region is substantial. Also, until the region is organized and has an opportunity to vote on an assessment proceedure there is no revenue. It is a question of the cart before the horse. These grants are intended to provide that initial monies to organize and to get an assessment mechanism in place for the ongoing revenues to the regional and hatchery corporations.

The second provision of the amendment to section 500 adds the additional language on page 3 line 15 so that the long term low interest loans may be used for operational costs. Again, this is a result of the realization after a year of operation under this Act that once hathceries are constructed and the fry released, it may be two to four years before there are any returns to the hatchery from which a surplus of fish may be sold to provide revenues. During that time period there is a necessity for money for operating costs to run the hatcheries and this provision will allow the loans to be made for those operating costs.

Section 7

Section 7 amends the law by adding a new section AS16.10.505. This section was originally in the HB 252 introduced by Rep. Specking. In the House Finance Committee, HB 252 was adopted as an amendment to HB 264 and incorporated in as section 7 of the bill.

The Fisheries Enhancement Revolving Loan Fund was created to assist in the transfer of funds within the State Government. Under this Act the Dept. of Commerce & Economic Development is authorized to make the loans for the hatchery projects but the Dept. itself is not funded. This provision will allow them to receive funds, which were also appropriated under HB 253 to this revolving loan fund while their paper is being transferred over to the Dept. of Revenue at which time the fund would again be filled. The Dept. of Commerce requested the Fisheries Enhancement Revolving Loan Fund provision be implemented into the bill.

Rep. Specking's companion bill HB 253 which also passed the House appropriates 2 million dollars to the Fisheries Enhancement Revolving Loan Fund.

Section 8.

Section 8 amends AS16.10.510 (1) and (2). Subsection (1) adds the language to allow the loans to be made for operations of hatcheries facilities. Subsection 2 clarifies the ambiguous tri-level structure of non-profit hatchery corporations as explained in section 2 of HB 264 and also deletes the phrase "provided the hatchery has received preliminary project approval from the Commissioner of Fish & Game". That phrase was deleted on request of Commissioner Brooks of that department in the original HB 264. The phrase "preliminary project approval" was very ambiguous to both the Dept. and the non-profit hatchery groups and was causing quite a problem in determining when an applicant was qualified for a loan.

Section 9

Section 9 repeals and re-enacts AS16.10.510 (8). The present subsection (8) reads as follows: "upon written approval, defer interest and principle payments up to 6 years." The reason for such a provision was based upon the fact that the hatcheries once built and in operation would take four to six years before generating enough dollars from the sale of surplus fish to handle the debt service and retire the loan in addition to providing operating costs. The Dept. of Commerce & Economic Development found some ambiguity in the present way subsection (8) is written and interpret it to mean that even though they were to defer interest and principle payments up to 6 years, the interest itself would continue to accrue during the 6 year period.

The provision in section (9) of the bill clarifies the issue and states that no interest on the principle shall accrue during the period up to 6 years before the loan is repaid. The second sentence in subsection 9 "this provision applies to loans made under this chapter before the effective date of this Act." was added by the Senate State Affairs Committee in their Committee Substitute. At the present time there is only one loan under the provisions of this Act by the Dept. of Commerce & Economic Development. The Aqualculture group in Prince William Sound has received a loan and constructed a hatchery. The loan has not been repaid nor has a 6 year period elapsed at this time. The effect of the second sentence of subsection (8) is to clarify the issue that this amendment is to apply to that loan.

Section 10.

Section 10 adds an additional paragraph, AS16.10.510. Subsection (9) outlines the provisions for making grants for organizational and planning purposes to the qualified regional associations. There is a two-step approach in making the grants under this section:

1.0 A grant may be made to a qualified regional association in an amount not to exceed $100,000.00 per region. That grant is the applicant to qualify pursuant to section .380 as the regional association for that area. That determination includes a determination by the Commissioner of Fish & Game that the Board of Directors of the corporation meets the requirements of the law and that the regional boundaries have been defined according to his discretion.

2.0 An additional $100,000.00 on a 50-50 cash matching basis may be made to those regional associations which have an authorized assessment under either section .530 or .540 of this chapter.

Subsection (9) also provides that the state portion of the matching share shall be made available when a final vote for assessments is made under Section .530 or .540 of this chapter. The money would be made available through the collection of the assessments throughout the season and at the end of the fishing season. To the degree that the State Dept. of Commerce & Economic Development feels they can rely upon the collection of the necessary amount of money to match the second $100,000.00, this sentence allows them to make the state portion of the matching share available.

The last sentence of subsection (9) was added by the Senate State Affairs Committee. It is intended to clarify any ambiguities which may exist in the Dept. of Commerce & Economic Development on who is eligible.

Section 11.

Section 11 amends AS16.10.520 (a). The amendment to this section again is clarifying the tri-level structure of local private non-profit corporations which is discussed in section 2 of this analysis.

Section 12.

Section 12 amends AS16.10.520 (b). The present subsection (b) reads as follows: "no loan may exceed 75% of the total project cost as determined by the Commissioner."

The Prince William Sound Aqualculture group and the various other experts which have analyzed the situation in the past year, have found that the 75% loan limitations have made the feasibility of non-profit hatcheries in the private industry very unlikely. The private industry is depleted and is unable to put up the necessary amound of money to equal 25% of the total project cost. The only source of the revenues as can be determined at this time will come from the assessments on the fishermen

which even then will take one to two years to build up a 25% portion of the total project costs of a hatchery.

The present section 12 was added by the Senate State Affairs Committee. In the original HB 264, subsection (b) was deleted in its entirety.

The Senate State Affairs Committee Substitute provision for subsection (b) provides for two different types of loan restrictions. The provision for a loan not to exceed 75% of the total project cost is included in the CS. Additionlly, subsection (b) would allow a loan to be made for the total project cost provided the fishermen of a region have voted to assess themselves under either section .530 or .540 of this chapter. Also that the Commissioner of Commerce must determine that the assessment is of sufficient size so that a qualified regional corporation could establish a 10% equity position over a six year period. The section also defines that total project costs includes planning, construction and operation in line with the policy statement in section .500.

To adopt the concept of establishing an equity position of 10% of the total project costs over a period of time, there must be authority for the Commissioner to loan the total project costs initially. The contractor for the project must be paid off initially and not over a period of time. This method allows the construction and operation of hatcheries to go forward in the immediate future, yet guarantees the applicant will establish a 10% equity position in the project.

Section 13.

Section 13 repeals and re-enacts AS16.10.530 (a). Section .530 is referred to as the mandatory assessment section. The present law provides that a mandatory assessment may be levied by the Commissioner of Commerce & Economic Development "for the purposes of securing repayment of a loan or loans made to qualified regional associations which have formed a non-profit corporation or to a local non-profit corporation established or approved by a qualified regional association." That section does two things; one, it provides that the assessment, as interpreted by the Commissioner of Commerce may only be levied for the purposes of securing a repayment of a loan. That has been interpreted as meaning only when the loan is in jeopardy or the security is in jeopardy. The second portion of that provision states that the assessment is inherently dependent upon the application and granting of a loan.

The version presented in the bill rewrites the section to accomplish two basic purposes:

1.0 The assessment shall be levied by the Commissioner of Commerce & Econ. Development on request of the regional qualified association after compliance with subsection (e);

2.0 The revenues derived from the assessment shall be for the purpose of providing revenue for the qualified regional associations in which the assessment is made.

Those provisions accomplish two things:

1.0 It unhooks the requirement of a mandatory assessment from the application for a loan or the default on loan repayments.

2.0 Provides that the assessment mechanism is initiated by the qualified regional association and not by the Commissioner of Commerce.

Subsection (a) of the bill also states that the "Commissioner shall determine whether the procedural requirements under (e) of this section were followed and whether the proposed assessment is reasonable." The reason for that section is to leave the final determination of whehter the assessment shall be imposed up to the governmental body through the Commissioner's office both with the procedural safeguards and the substantive question of whether the assessment is reasonable enough in its scope to accomplish the job proposed. That is an important feature when connected with the amendments made in AS16.10.520 above which require the Commissioner to determine whether the assessment under either section .530 or .540 is of a sufficient amount to insure the establishment of an equity position of 10% of the loan over a six year period.

For the Committee's information it should also note that AS16.10.530 (b) is repealed in the repealer section of the bill in section 18 on page 16. The reason for the repeal of (b) is that it is no longer relevant with the amendments made to subsection (a).

Section 14.

Section 14 of the bill amends AS16.10.530 (c) and (d). The subsection (c) deletes the provision that the assessment is connected with the application for a loan. That amendment makes the provision consistent with the amendments made in section 13 above.

Subsection (d) states that "the assessment once instituted shall terminate upon a request of the qualified regional corporation but only after all financial obligations relating to the assessments have been met." This provision is necessary in light of the amendments made in AS16.10.530 (a) in section 13 of the bill. With the amendment in subsection (a) the assessment is no longer automatically connected to the loan. This language in AS16.10.530 (d) guarantees that if the assessment is used as collateral to any loan whether from the state or any other source, the qualified regional corporation has no authority and no power to revoke that assessment or stop that assessment until all of the financial obligations relating to the assessment have been met.

Section 15.

Section 15 of the bill amends AS16.10.530 by adding a new subsection (e). This subsection lays out in detail the procedural requirements for a qualified regional corporation to follow before a request can be made of the Commissioner of Commerce to impose a mandatory assessment in the area of the regional corporation. The terms may seem detailed and cumbersome, the intent is to provide ample opportunity for all of the people who would be required to pay an assessment to voice their concerns at public meetings and to vote on the assessment. It requires at least two public meetings and that the ballots be made available to all of those who will be made a part of the assessment, twice. It does state that no person may vote more than once but requires that the ballots be made available by mail to all the people within the region who sell fish commercially.

Subsection (f) is also an addition to the present law and states that the qualified regional corporation shall establish standard registration proceedures for voting on an assessment under this section.

Section 16.

Section 16 of the bill adds the necessary language to create a regional salmon enhancement authority.

I would note that section 16 is identicle to the original SB 39 of Senator Kerttula's which the Senate Resource Committee passed out earlier this session. Sb 39 is presently in the Senate Finance Committee but it was amended substantially by the Senate State Affairs Committee by in fact adding the first 6 pages of what is now SCS CSHB 264.

The purpose of creating the regional salmon enhancement authorities is to provide a financial vehicle for the availability of federal dollars.

The present public works bill of President Carter's which is being worked on in Free Conference Committee in Congress, provides for money to be administered through the Economic Development Agency but limits the recipients to only federal agencies, states, municipalities, townships, or political subdivisions of those. The Senate Resources Committee heard testimony on SB 39 from the Prince William Sound Aqua culture Assoc. that they were found to be ineligible for an EDA Grant because they were not a political subdivision.

This language is the near identicle language of the Regional Electrification Assoc. which are presently in the statutes, AS18.57.

Section 17.

On Page 16 of the bill, section 17 states as follows: "Notification, public meeting and voting proceedures instituted before the effective date of this act that are substantially in compliance with AS16.10.530 (e), shall be considered a constitute compliance with this Act, and are radified upon the effective date of this Act."

The qualified regional corporations in Southern Southeast Regional Aqualculture Assoc. and the Cook Inlet Regional Aquaculture Assoc. have proceeded through somewhat similar notification of public meeting and voting proceedures regarding the mandatory assessment provisions at this time. The Southern Southeast Regional Aqualculture Assoc. is at the present time undergoing a large notification public meeting and balloting on the mandatory assessment. That region encompasses all of lower Southeastern Alaska including Petersburg, Wrangell, Ketchikan, Craig, Klawock, Hydaburg and all fishermen who commercially sold fish within fishing districts 1 through 8. A large portion of those fishermen reside in Oak Harbor, Seattle, Bellingham, Mr. Vernon and other coastal towns in Washington, They are all being provided with a ballot to vote on the mandatory assessment proceedures.

There is a fiscal note attached to this bill from the House Finance Committee pertaining to the grant provisions of AS16.10.510 (9) found in section 10 of the bill. It anticipates the creation of 6 regions including Ketchikan, Sitka, Bristol Bay, Cook Inlet, Kuskokwim and Prince William Sound. The note anticipates the granting of the entire initial $100,000.plus the additional $50,000 matching monies to each region for a total of $900,000.

COMMITTEE REPORT

SCS CSHB 264 (RESOURCES)
AN ACT RELATING TO FISHERIES ENHANCEMENT
AND PROVIDING FOR AN EFFECTIVE DATE

Section 1.

Section 1 repeals AS 16.10.375 and re-enacts it with new language. The present section 375 requires the Commissioner of Fish and Game to:

(1) Designate regions of the State for purposes of enhancing salmon production.

(2) Develop and amend if necessary a comprehensive salmon enhancement plan for each region for both public and private non-profit hatchery systems.

(3) Develop a comprehensive salmon enhancement plan in cooperation with appropriate qualified regional associations formed under section 380.

HB 264 rewords section 375 and requires the following activity:

(1) The Commissioner of Fish and Game shall designate regions of the State for purposes of salmon production.

(2) Develop and amend as necessary a comprehensive salmon plan for each region for both public and private non-profit hatchery systems.

(3) Require that the comprehensive salmon plan be developed by regional planning teams.

(4) The regional planning teams shall consist of; the Department of Fish and Game personnel, and representatives the appropriate qualified regional associations formed under section 380 of this chapter.

The basic change in the present section 375 by this bill is the requirement for the creation of regional planning teams. In the past year it's proved that there was some ambiguity regarding how the comprehensive enhancement plans were to be developed. The experience in Prince William Sound Aquaculture Association in dealing with the Department of Fish and Game at the regional planning team concept was finally evolved and put in place and is working.

It is the intent of this section that the Department of Fish and Game involve the public in the development of comprehensive slamon plans by the creation of regional planning teams which shall consist of representatives of appropriate qualified regional associations, local department personnel, regional department personnel and other personnel as determined appropriate by the Commissioner.

These teams will provide the means by which the second half of the original legislative intent can be accomplished. This intent states that ". .the program shall be operated without adversely affecting natural stocks of fish in the state and under a policy of management which allows reasonable segregation of returning hatcher-reared salmon from naturally occurring stocks." The planning team approach to this concern will bring the greatest amount of talent to bear on this problem and will allow for a flexible approach that can tailor a program to suit the unique conditions of a specific region while allowing for the adaptability necessary to accomodate chance. It constitutes an approach that integrates the many human concerns and biological variables into a comprehensive problem solving effort. It is recognized by the legislature that planning is a continuous process that should be cooperatively conducted on a local level, by persons familiar with the area in question.

It is also intended that the Division of Fisheries, Rehabilitation and Enhancement be the lead agency in coordinating this planning which should be an inter divisional effort on the part of the Department. This intent is expressed as an extension of the statutory responsibility of the division to " 1)Develop and continually maintain a comprehensive, coordinated State plan for the orderly present and long-range rehabilitation,

enhancement and development of all aspects of the State's fisheries for the perpetual use, benefit and enjoyment of all citizens and revise and update this plan annually." In regard to salmon, it is clear that any planning effort must incorporate full consideration of all departmental functions, including management, rehabilitation and enhancement.

This amendment to the legislation adds some clarity and direction to the Department of Fish and Game regarding how these regional salmon plans are to be developed.

Section 2.

Section 2 amends AS 16.10.400 (a). The amendments to section (a) and section (e) are obvious from the draft of the bill. The amendment to section (a) tightens up the discretion given to the Commissioner of Fish and Game under the existing law. Under HB 264, "the Commissioner or his designee may issue a permit subject to the restrictions imposed by statute or regulations." The discretionary phrase "he considers desirable" is removed. The reason is to give the permit holders some certainty regarding their actions.

The second change to subsection (a) adds the language to require that a permit application be reviewed by the regional planning team prior to its being issued. The reason is to

make sure that the permit application is reviewed by the regional planning team drawing up the comprehensive salmon plan prior to the issuance of any permits.

The repeal of AS 16.10.400 (d), the section allowing for renewal of permits, leaves the situation that once a permit is issued by the Commissioner of Fish and Game, it remains in the permit holder it may not be transferred and may only be altered, suspended or revoked subject to AS 16.10.430 which deals with failure to comply with conditions or terms of the permit. This amendment again is an attempt to give some certainty to the permit holder that the terms under which he is going to operate a permit will either be in law or regulation and not subject to discretionary decisions by the Department of Fish and Game.

Subsection (e) is an attempt to clarify an ambiguous situation under the present law. Underthe present law, there are provisions for three different types of non-profit hatchery corporations to exist; those established by a qualified regional association; those established by a separate non-profit corporation which are not approved by qualified regional association. This language clarifies the ambiguity that existed of whether a qualified regional association had to go out and establish a separate non-profit corporation for each of the hatcheries it

was going to build. Under the amending language, a qualified regional association can construct as many hatcheries as it wishes without establishing separate corporate identities for each of those hatcheries.

Section 3.

Section 3 amends AS 16.10.430 (a). The amendment of the additional language to the present section 430 requires that a decision to revoke a permit may only be made "after the regional planning team for the area in which the hatchery is located is notified and granted an opportunity to comment on the proposed suspension or revocation." This will assure the regional planning team which is developing and administering the comprehensive salmon plan for each region will be involved in the decision making process.

Section 4.

Section 4 amends AS 16.10.450. There is a little bit of possible confusion in reading the proposed amendments and deletions in this section. On examination of the bill it should be noted that the phrase deleted on page 2 line 21 "fisheries research, salmon rehabilitation projects, or" is merely moved up into line 18. It's just a rearrangement of the phrases.

The substantive amendment to AS 16.10.450 is the phrase "costs of operating the qualified regional association for the area in which the hatchery is located." The addition of that language allows the use of funds obtained from the sale of surplus salmon or salmon eggs which return to the hatchery to help defray the costs of operating the qualified regional association for the area in which thehatchery is located. The reason for the addition of that language is the realization after starting to work with the law allowing the establishment of regional associations, that there are no provisions made for the funding of such regional associations. Although it is realized that there will be no surplus salmon until there are some returns to the hatcheries which may be 4 to 6 to 8 years down the line, and even then the monies received from the sale of surplus salmon will probably be primarily dedicated to the retirement of debt and operating costs. This additional language will provide for the possibility of funding the qualified regional associations.

The second amendment to section 450 is a rewording of the present law to clear up any ambiguities of fish which return to hatcheries and are sold for human consumption, whether they return to a State hatchery or a private non-profit hatchery, shall be a comparable quality to fish harvested in the commercial area and sold at prices commensurate with the current market.

Section 5

Section 5 repeals and re-enacts AS 16.10.470 regarding the annual reporting. The present law regarding annual reporting requires the submission of an annual report to the Department of Fish and Game including but not limited to:

(1) A Complete description of all significant hatchery operations;

(2) Statistics on the numbers of eggs and fish handled by the hatchery whether for production or sale;

(3) Further recommendations for modification of the hatchery program;

(4) Any other relevant data required by the Department.

The amended amendment requires an annual report to "include but not limited to information pertaining to species; brood stock source; number, age, weight, and length of spawners; number of eggs taken, and fry fingerling produced; and the number, age, weight, and length of adult returns attributable to hatchery releases, on a form to be provided by the Department of Fish and Game. The other three items listed in the present section 470 are deleted. The reason for the deletion is that

the other three items are very ambiguous and could if required become quite costly to the hatchery owner. It is felt by the non-profit hatchery owners and potential owners that the overhead cost for operating hatcheries should be held at a minimum and that any reporting features should be only those which are required by necessity and not those of convenience.

Subsection (b) of AS 16.10.470 requires the submission of an annual financial report for the Department of Commerce and Economic Developemtn on a form to be provided by the Department of Commerce and Economic Development. The primary purpose of this amendment is to make sure that the financial statements and essential operating criteria will be kept by all non-profit hatcheries in the state in the same basic format so there will be an ability to compare cost and efficiencies throughout the State.

Section 6.

Section 6 amends AS.16.10.500, the declaration of policy, to allow for the making of grants for organizational and planning purposes to regional associations which have qualified under section .380 and by means of long term low interest loans for hatchery planning construction and operations.

The reason for the making of grants for organizational and planning purpose has been as a result of the realization of

the realities that Prince William Sound Aquaculture Association and the Southern Southeast Regional Aquaculture Association have gone through in organizing the regions which are required by this Act.

The grants under this provision are only available to regional associations which have been qualified under section .380 which means that they have been recognized by the Commissioner of Fish and Game and he has determined that:

1.0 Their Board of Directors is representative of the requirements of the law under this act; and

2.0 that he has designated that region of which the corporation will operate under.

Because of the size of the regions and the necessity for large regions to operate under a regional type concept, the cost of organizing and planning the region is substantial. Also, until the region is organized and has an opportunity to vote on an assessment procedure there is no revenue. These grants are intended to provide that initial monies to organize and to get an assessment mechanism in place for the ongoing revenues to the regional hatchery corporations.

The second provision of the amendment to section 500 adds the additional language so that the long term low interest loans may be used for operational costs. Again, this is a result of the realization after a year of operation under this Act that once hatcheries are constructed and the fry released, it may be four to six years before there are any returns to the hatchery from which a surplus of fish may be sold to provide revenues. During that time period there is a necessity for money for operating costs to run the hatcheries and this provision will allow the loans to be made for those operating costs.

Section 7.

Section 7 amends the law by adding a new section AS 16.10.505. The Fisheries Enhancement Revolving Loan Fund was created to assist in the transfer of funds within the State Government. Under this Act the Department of Commerce and Economic Development is authorized to make the loans for the hatchery projects but the Department itself is not funded. This provision will allow them to receive funds, which were also appropriated under HB 253 to this revolving loan fund while their paper is being transferred over to the Department of Revebue at which time the fund would again be filled. The Department of Commerce requested the Fisheries Enhancement Revolving Loan Fund provision to implemented into the bill.

Section 8.

Section 8 amends AS 16.10.510 (1) and (2). Subsection (1) adds the language to allow the loans to be made for operations of hatcheries facilities. Subsection 2 clarifies the ambiguous tri-level structure of non-profit hatchery corporations as explained in section 2 of HB 264 and also deletes the phrase "provided the hatchery has received preliminary project approval from the Commissioner of Fish and Game." That phrase was deleted on request of Commissioner Brooks of that department in the original HB 264. The phrase "preliminary project approval" was very ambiguous to both the Department and the non-profit hatchery groups and was causing quite a problem in determining when an applicant was qualified for a loan.

Section 9.

Section 9 repeals and re-enacts AS 16.10.510 (8). The present subsection (8) reads as follows: "upon written approcal, defer interest and principle payments up to 6 years." The reason for such a provision was based upon the fact that the hatcheries once built and in operation would take four to six years before generating enough dollars from the sale of surplus fish to handle the debt service and retire the loan in addition to providing operating costs. The Department of Commerce and Economic Development found some ambiguity in the present way subsection (8) is written and interpret it to mean that even though they were to defer interest and principle payments up to

6 years." The reason for such a provision was based upon the fact that the hatcheries once built and in operation would take four to six years before generating enough dollars from the sale of surplus fish to handle the debt service and retire the loan in addition to providing operating costs. The Department of Commerce and Economic Development found some ambiguity in the present way subsection (8) is written and interpret it to mean that even though they were to defer interest and principle payments up to 6 years, the interest itself would continue to accrue during the 6 year period.

The provision in section (9) of the bill clarifies the issue and states that no interest on the principle shall accrue during the period up to 6 years before the loan is repaid. The second sentence in subsection 9 "this provision applies to loans made under this chapter before the effective date of this Act." was added by the Senate State Affairs Committee in their Committee Substitute. At the present time there is only one loan under the provisions of this Act by the Department of Commerce and Economic Development. The Aquaculture group in Prince William Sound has received a loan and constructed a hatchery. The loan has not been repaid nor has a 6 year period elapsed at this time. The effect of the second sentence of subsection (8) is to clarify the issue that this amendment is to apply to that loan.

Section 10.

Section 10 adds an additional paragraph AS 16.10.510. Subsection (9) outlines the provisions for making grants for organizational and planning purposes to the qualified regional associations. There is a two-step approach in making the grants under this section:

1.0 A grant may be made to a qualified regional association in an amount not to exceed $100,000.00 per region. That grant is available only after the Commissioner of Fish and Game has found the applicant to qaulify pursuant to section .380 as the regional association for that area. That determination includes a determination by the Commissioner of Fish and Game that the Board of Directors of the corporation meets the requirements of the law and that the regional boundaries have been defined according to his discretion.

2.0 An additional $100,000.00 on a 50-50 cash matching basis may be made to those regional associations which have an authorized assessment under either section .530 or .540 of this chapter.

Subsection (9) also provides that the state portion of the matching share shall be made available when a final vote for assessmen-s is made under Section .530 or .540 of this chapter.

The private money would be made available through the collection of the assessments throughout the season and at the end of the fishing season. To the degree that the Department of C ommerce and Economic Development feels they can rely upon the collection of the necessary amount of money to match the second $100,000.00, this sentence allows them to make the state portion of the matching share available.

The last sentence of subsection (9) was added by the Senate State Affairs Committee. It is intended to clarify any ambiguities which may exist in the Department of Commerce and Economic Development on who is eligible.

Section 11.

Section 11 amends AS 16.10.520 (a). The amendment to this section again is clarifying the tri-level structure of local private non-profit corporations which is discussed in section 2.

Section 12.

Section 12 amends AS 16.10.520 (b). The present subsection (b) reads as follows: "no loan may exceed 75% of the total project cost as determined by the Commissioner."

The Prince William Sound Aquaculture group and the various other experts which have analyzed the situation in the past year, have

found that the 75% loan limitations have made the feasibility of non-profit hatcheries in the private industry very unlikely. The private industry is depleted and is unable to put up the necessary amount of money to equal 25% of the total project cost. The only source of the revenues as can be determined at this time will come from the assessments on the fishermen which even then will take one to two years to build up a 25% portion of the total project costs of a hatchery.

The amendment to AS 16.10.520 (b) makes a substantive change in the present law. The amended section allows loans to be made for the total project costs which are defined as planning and construction costs and the costs for operations for not more than the first six years. The Commissioner of Commerce and Economic Development must determine that the applicant has sufficient financial resources to insure the establishment of an equity position in the project equal to 10% of the loan within six years or less either through an assessment under section .530 or .540 or by other means approved by the Commissioner.

This amendment follows theconcept adopted throughout this bill to proceed with the establishment of non-profit hatcheries at a pace as fast as possible and insure that the beneficiaries of the increase in fisheries production are contributing their

share of the funds. This loan provision provides for monies to be loaned for three different types of activities; planning, construction, and operations. The planning and construction portions of the loan provision are intended to provide monies for a broad range of activities related to the selection and development of a site for a hatchery which would include but not be limited to site selection, water source, and quality evaluation, brood stock, sources and selection, transportation of brood stocks to the site, in addition to site preparation and architectural drawings for the facility. The construction costs are intended to meet all of those costs normally related to the construction of a hatchery facility. The provision for loans for costs for up to the first six years of operations is made in recognition of the fact that there may be no returns of fish to the hatchery for a period of 4 to 6 years to provide cash flow for repayment of the debt, debt services and costs of operations.

The last sentence of the amendment providing that the costs for operations shall be loaned on an annual basis, is to insure that that portion of the loan attributable to the operational costs will be available for that purpose and will not be used to cover possible cost overruns in the planning and construction phases of the operations. If there are cost overruns in the planning and construction phases, the borrower must face that

problem at that time and not be dependent upon using money from that portion of the loan attributable to the operational functions of the hatchery.

The amended language adopts the concept of establishing an equity position of 10% of the total project costs over a period of time. The contractor for the project must be paid off initially and not over a period of time. This method allows the construction and operation of hatcheries to go forward in the immediate future, yet guarantees the applicant will establish a 10% equity position in the project.

Section 13.

Section 13 repeals and re-enacts AS 16.10.530 (a). Section .530 is referred to as the mandatory assessment section. The present law provides that a mandatory assessment may be levied by the Commissioner of Commerce and Economic Development "for the purpsoes of securing repayment of a loan or loans made to qualified regional associations which have formed a non-profit corporation or to a local non-profit corporation established or approved by a qualified regional association." That section does two things; one, it provides that the assessment, as interpreted by the Commissioner of Commerce may only be levied for the purposes of securing a repayment of a loan. That has been interpreted as meaning only when the loan security is in

jeopardy. The second portion provides that the assessment is inherently dependent upon the application and granting of a loan.

The amendment in the bill rewrites the section to accomplish two basic purposes:

1.0 The assessment shall be levied by the Commissioner of Commerce and Economic Development on request of the regional qualified association after compliance with subsection (e) and that the Commissioner determines that the assessment is reasonable.

2.0 The revenues derived from the assessment shall be for the purpose of providing revenue for the qualified regional associations in which the assessment is made.

Those provisions accomplish two things:

1.0 It unhooks the requirement of a mandatory assessment from the application for a loan or the default on loan repayments.

2.0 Provides that the assessment mechanism is initiated by the qualified regional association but subject to final determination by the Commissioner of Commerce.

Subsection (a) of the bill also states that the "Commissioner shall determine whether the procedural requirements under (e) of this section were followed and whether the proposed assessment is reasonable." The reason for that section is to leave the final determination of whether the assessment shall be imposed up to the governmental body through the Commissioner's office both with the procedural safeguards and the substantive question of whether the assessment is reasonable enough in its scope to accomplish the job proposed. That is an important feature when connected with the amendments made in AS 16.10.520 above which require the Commissioner to determine whether the assessment under either section .530 or .540 is of a sufficient amount to insure the establishment of an equity position of 10% of the loan over a six year period.

Subsection (a) clarifies that the assessment will be levied on the basis of where the fish is caught and not where it is sold. "....an assessment shall be levied on the sale of one or more species of salmon caught by persons licensed under AS 16.05.540 - 16.05.600 in the area in which the assessment is to be levied. AS 16.10.530 (b) is repealed. The reason for the repeal of (b) is that it is no longer relevant with the amendments made to subsection (a).

Section 14.

Section 14 of the bill amends AS 16.10.530(c) and (d). The subsection (c) deletes the provision that the assessment is connected with the application for a loan. That amendment makes the provision consistent with the amendements made in section 13 above.

Subsection (d) states that "the assessment once instituted shall terminate upon a request of the qualified regional corporation but only after all financial obligations relating to the assessments have been met." This provision is necessary in light of the amendments made in AS 16.10.530(a) in section 13 of the bill. With the amendment in subsection (a) the assessment is no longer automatically connected to the loan. This language in AS 16.10.530(d) guarantees that if the assessment is used as collateral to any loan whether from the state or any other source, the qualified regional corporation has no authority and no power to revoke that assessment or stop that assessment until all of the financial obligations relating to the assessment have been met.

Section 15.

Section 15 of the bill amends AS 16.10.530 by adding a new subsection (e). This subsection lays out in detail the procedural requirements for a qualified regional corporation to follow before

a request can be made of the Commissioner of Commerce and Economic Development to impose a mandatory assessment in the area of the regional corporation. The terms may seem detailed and cumbersome, the intent is to provide ample opportunity for all of the people who would be required to pay an assessment to voice their concerns at public meetings and to vote on the assessment. It requires at least two public meetings and that the ballots be made available to all of those who will be mad a part of the assessment, twice. It does state that no perso may vote more than once but requires that the ballots be made available by mail to all the people within the region who sell fish commercially.

Subsection (f) is also an addition to the present law and states that the qualified regional corporation shall establish standard registration procedures for voting on an assessment under this section.

Section 16.

Section 16 of the bill adds the necessary language to create a regional salmon enhancement authority.

The purpose of creating the regional salmon enhancement authorities is to provide a financial vehicle for the availability of federal dollars.

This language is the near identical language of the Regional Electrification Association which are presently in the statutes, AS 18.57. provided the qualified regional association complies with the requirements of the bill, the state will recognize the creation of a regional salmon enhancement authority as a public body corporate and politic as a political subdivision of the State.

Section 17.

Section 17 states as follows: "Notification, public meeting and meeting and voting procedures instituted before the effective date of this act that are substantially in compliance with AS 16.10.530(e), shall be considered to constitute compliance with this Act, and are radified upon the effective date of this Act."

The qualified regional corporations in Southern Southeast Regional Aquaculture Association and the Cook Inlet Regional Aquaculture Association have proceeded through somewhat similar notification of public meeting and voting procedures regarding the mandatory assessment provisions at this time. The Southern Southeast Regional Aquaculture Association is at the prbsent time undergoing a large notification public meeting and balloting on the mandatory assessment. That region encompasses all of lower Southeastern Alaska including Petersburg, Wrangell, Ketchikan, Craig, Klawock, Hydaburg and all fishermen who

commercially sold fish within fishing districts 1 through 8. A large portion of those fishermen reside in Oak Harbor, Seattle, Bellingham, Mt. Vernon and other coastal towns in Washington. They are all being provided with a ballot to vote on the mandatory assessment procedures. This section provides that those efforts will be recognized as compliance with the requirements of this bill provided they are in substantial compliance. Other provisions of the law necessarily require the determinations of substantial compliance to be made by the Commissioner of Commerce and Economic Development.

There is a fiscal note attached to this bill from the House Finance Committee pertaining to the grant provisions of AS 16.10.510(' found in section 10 of the bill. It anticipates the creation of 6 regions including Ketchikan, Sitka, Bristol Bay, Cook Inlet, Kuskokwim and Prince William Sound. The note anticipates the granting of the entire initial $100,000 plus the additional $50,000 matching monies to each region for a total of $900,000.

EFFECTS OF PROPOSED CHANGES IN ALASKA'S CORPORATE INCOME TAX LAW

Summaries of Three Studies Conducted
by Multistate Tax Authorities
for the Alaska Oil & Gas Association

This report summarizes three studies conducted for the Alaska Oil & Gas Association by recognized authorities on taxation of multistate corporations. The studies were commissioned to obtain expert opinion concerning the fairness and effectiveness of the current Alaska corporate income tax law as applied to the oil and gas industry. Limited copies of the complete studies are available from the Alaska Oil & Gas Association, Suite 219, 505 West Northern Lights Blvd., Anchorage, Alaska 99503.

KUST STUDY

SUMMARY

INCOME TAXATION OF MULTISTATE CORPORATIONS ENGAGED IN OIL AND GAS PRODUCTION AND TRANSPORTATION IN ALASKA

By Leonard E. Kust,
Senior Tax Partner
Cadwalader, Wickersham & Taft
New York, New York

AGO 547989

I. PRINCIPLES OF TAX JURISPRUDENCE

Where the activities of a business extend over two or more states, all of the income from such business cannot reasonably be taxed by each of the states. The whole development of the law regarding state taxation of multistate business income rests on this manifest and undisputed principle. Similarly, international tax jurisprudence and tax treaties are grounded on this basic principle with respect to national taxation of multinational business income.

Under the Constitution and with our federal system, this principle has been implemented by Supreme Court decisions under the commerce and due process clauses and through the voluntary and mutually compatible actions of state legislatures and tax administrators.

The effort has been to avoid multiple taxation of the income of a multistate business through the taxing by each state in which the business has activities of only a portion of the income, determined by some reasonable method of apportionment. The system which has developed has two basic elements: (i) a tax base measured by a company's worldwide income determined by Federal taxable income and (ii) a method of dividing this base through use of an apportionment formula.

The Massachusetts, or three-factor, formula apportions the income of a multistate business to the taxing state on the basis of the average of three fractions: (1) property within the state over total property, (2) payroll within the state over total payroll, and (3) sales within the state over total sales.

It was recognized at the outset that multiple taxation of multistate business income arises not merely from failure to apportion reasonably but from disparity in methods of apportionment as well, even though each method by itself and applied universally might be reasonable. The National Tax Association began advocating uniformity in the method of apportionment as early as 1919. Ultimately, these and other efforts culminated in the Uniform Division of Income for Tax Purposes Act (UDITPA) adopted by the National Commissioners on Uniform State Laws in 1957. UDITPA incorporated the three-factor formula and, most notably, defined the numerator of the sales fraction, with respect to which the greatest divergence from uniformity had developed, as being sales having their destination, that is, delivered to customers, in the state.

The Multistate Tax Compact, inaugurated in 1966 to promote uniformity and thereby avert Federal legislation then under consideration to impose uniformity on the states, incorporates UDITPA.

AGD 547991

Out of a total of 44 states and the District of Columbia which impose a corporate net income tax, 40 provide for the three-factor formula, 25 by adoption of UDITPA or the Multistate Tax Compact and 15 by incorporation in their own tax statutes, four of the latter giving greater weight to the sales factor than to the property and payroll factors. Differences in the economies of the states as to whether primarily industrial, or commercial, or agricultural or extractive have not affected the general acceptance of the three-factor formula as essentially fair and reasonable.

II. ALASKA INCOME TAX--PRESENT STRUCTURE AND APPLICATION TO THE OIL AND GAS PRODUCTION AND TRANSPORTATION INDUSTRIES

Alaska has adopted both UDITPA and the Multistate Tax Compact and determines taxable income by reference to the Federal tax base. No distinction is made between the oil and gas industry and other industries engaged in the production and sale of tangible personal property. Since this is essentially the same treatment which is accorded to the oil and gas industry by all of the states imposing a corporate income tax, Alaska suffers no disadvantage in comparison with other states. Accordingly, there does not appear to be justification for change and departure from uniformity. The burden of proof should rest on those who advocate departure.

III. THE ZEIFMAN-AINSWORTH REPORT

The Zeifman-Ainsworth Report contends that Alaska's tax base has been eroded through Federal tax subsidies and incentives which are unrelated to the definition of net income but which are provided solely to accomplish certain economic and social goals, and that the UDITPA apportionment formula reduces the amount of taxable income attributable to Alaska by corporations which export non-renewable petroleum resources from the state.

Zeifman and Ainsworth's recommendations which have been endorsed by the Department of Revenue and incorporated in H.B. 322 are:

1. Adoption of a tax base measured by the greater of book income or Federal taxable income.
2. Replacement of the destination-oriented sales factor with an "extraction factor" — the ratio of oil and gas energy units produced in Alaska to total oil and gas energy units produced everywhere.

These changes would apply only to corporations with ordinary gross receipts in excess of $250,000,000 more than 50% of which is derived from production, transportation,

AGO 547993

refining, manufacturing, processing, distribution or retail sale of oil or gas or products derived from oil and gas.

The "tax subsidies" cited by Zeifman and Ainsworth are for the most part available to all corporations. It is unfair and perhaps unconstitutional to single out the oil industry.

Furthermore, with respect to the one Federal "tax subsidy" allowed to the oil and gas industries, a current deduction for intangible drilling costs, Alaska does not, as Zeifman and Ainsworth claim, provide an incentive to drill wells outside Alaska. Federal taxable income reflects not only deductions for the cost of wells drilled throughout the world but also the income from such wells. It is not a one-way street. Alaska is no more providing an incentive for drilling outside Alaska than other states are providing an incentive for drilling in Alaska. Denial of this current deduction in Alaska, however, could reduce the incentive to drill wells in Alaska.

Congressman Vanik's computations of "effective taxable income" do not support the view that the adoption of the Federal tax base by Alaska automatically causes Alaska's "effective tax rate" to be less than 9.4%, by something comparable to the difference between the statutory 48% rate and the Vanik "effective U.S. tax rate on

worldwide income." Congressman Vanik's approach of measuring Federal income tax due as a percentage of worldwide income is patently incorrect because the United States, recognizing the principles of international tax jurisprudence, provides a credit against its tax on worldwide income for taxes paid to other countries. Alaska does not provide a credit but imposes its tax rate of 9.4% on a corporation's worldwide income apportioned to Alaska. Obviously after apportionment (or after the foreign tax credit at the Federal level) the amount of Alaskan tax as a percentage of worldwide income will be less than 9.4% (or the Federal tax will be less than 48%).

Book income is an inappropriate tax base. It will greatly increase the administrative and audit costs and burdens of both the oil companies and the Department of Revenue. Furthermore, book income not only reflects taxable income before tax subsidies but also many timing differences unrelated to Congressional tax policies. Use of the higher of Federal taxable income or book income as a tax base would tax income twice to the extent of such timing differences.

The UDITPA apportionment formula provides for fair and equitable division of income of oil and gas corporations between Alaska and the rest of the world and fairly reflects the extent of their activity in Alaska as compared to the rest of the world. The destination sales factor properly

gives recognition to the contribution of the market states to the creation of income. Without the demand and purchasing power of the market states, the value of Alaska's oil and gas would be less and the income tax base of oil and gas companies would be smaller. The extraction factor ignores the contribution of the market state and creates multiple taxation, since nearly every other state uses a destination oriented sales factor.

The extraction factor has been proposed not to make Alaska's apportionment formula "fairer" in terms of reasonable sharing of the income tax base with other states, but to generate more tax revenue. Apportionment formulas are not intended to be vehicles to generate tax revenue but to divide income among the states fairly and uniformly so as to avoid multiple taxation.

IV. SEPARATE ACCOUNTING--S.B. 105

The declared purpose of the "net proceeds" tax is to tax production and pipeline transportation income in Alaska by means of a statutory separate accounting, while retaining formula apportionment (as modified) to apportion all other income.

Conceptually, separate accounting constructs an income or loss statement for the activities of the business in the state as if they constituted an independent business

dealing at arm's-length with the remainder of the business and the outside world. In practice separate accounting is impossible to administer and determine. Separate accounting requires that hypothetical prices be established for goods and services between affiliated companies. Separate accounting must effectively cope with efforts of companies to shift income among divisions, affiliates and states and must devise some reasonable way to attribute overhead expenses to the various business locations and activities of the taxpayer, no doubt by means of an apportionment formula, thereby abandoning to that extent its initial purpose of avoiding the apportionment formula. Furthermore, separate accounting requires maintenance of records needed in the effort to determine geographic income--records which serve no other business function.

S.B. 105 handles the problem of allocating overhead expenses by simply denying a deduction for such costs. Pricing difficulties are "solved" by using as gross income the value of oil and gas produced as determined for purposes of the production tax.

Thus, the proposed net proceeds tax would not by definition apply separate accounting even though it purports to do so.

The proposed net proceeds tax has major infirmities. It purports to be an application of separate accounting but it is not. It represents a sharp deviation

from uniformity and as such would constitute a major disruption of the common consensus underlying the system of state taxation of interstate business income. Separate accounting applied by one state to a whole industry in order to increase its share of the total income over that resulting from the three-factor formula necessarily results in multiple taxation because income which is fully taxed by one state is also apportioned by formula to other states.

V. THE MULTISTATE TAX COMPACT

Alaska's continuing membership in the Multistate Tax Compact and the administrative benefits derived from such membership may not be tenable if either the Zeifman-Ainsworth proposals or S.B. 105 were adopted. The courts may find such proposals to be in conflict with the Compact and as a result may further hold that Alaska has in effect withdrawn from the Compact or that the Compact remains in effect but enactment of the proposals is ineffective to prevent taxpayers from applying the UDITPA formula under the provisions of the Compact.

VI. UNIFORMITY, COMITY AND ENLIGHTENED SELF-INTEREST

Great progress has been made in recent years in adopting uniform allocation methods. Part of the drive for voluntary uniformity has obviously been the desire of both

states and taxpayers to avoid Federal intervention. As long as states strive toward uniformity as a goal of fair taxation, Congress will be hesitant to act. If the drive for uniformity falters through independent action by states asserting their currently perceived self-interest without restraint, Congress will be constrained to exercise its constitutional responsibility to protect interstate commerce by prescribing a Federal standard of uniformity.

Alaska has been in the forefront of the drive for uniformity. By the collective judgment reflected in the development and general acceptance of the three-factor formula, Alaska's net income tax fairly and effectively reaches its proportionate share of the income of multinational oil and gas corporations doing business within the state. The proposed changes would be destructive of community and comity among the states in dealing reasonably with state taxation of multistate business and are parochially designed to increase tax revenues without regard to the general principles of tax jurisprudence for division of interstate business income adhered to by other states.

EXECUTIVE SUMMARY OF POSITION PAPER ON ALASKA OIL AND GAS TAXATION

By John S. Warren

Alaska's existing corporation income tax meets all of the generally recognized criteria of a modern and efficient state corporation income tax. It is simple and inexpensive to comply with and enforce, it provides equality among taxpayers, and it contains rules for the allocation of income that provide the best possible assurance against overtaxation or undertaxation of multi-state businesses. The several bills which the Legislature has had under consideration (H.B. 145 and 322, S.B. 105 and 202) are all changes for the worse as far as meeting these criteria is concerned.

If the Alaska tax base for oil companies were to become the greater of book income or federal taxable income (H.B. 322), the Department of Revenue auditors could no longer rely on federal audits. Rather, they would have to verify two sets of figures for each company. Because the financial accounting rules for determination of book income allow some leeway, the Department would have to adopt regulations to prevent manipulation of book income for tax avoidance purposes and to assure equality

among taxpayers. Furthermore, because income or expenses are often reportable in different years under federal income tax rules than they are under financial accounting rules, intricate adjustments would be necessary to avoid including the same item in the tax base for two years.

The changing o' the formula for apportionment of income by substituting an origin sales factor ("extraction factor") for the destination sales factor used by most states (H.B. 322) will force Alaska to withdraw from the Multistate Tax Compact and will deprive the state of the benefits of the joint audit program of the Multistate Tax Commission. More importantly, the use of the extraction factor cannot be justified under the generally accepted principles for apportionment of the income of a unitary business.

Determining Alaska tax liabilities on the basis of separate accounting (H.B. 145, S.B. 105, and H.B. 322 as amended in the Senate) is an even more drastic departure from generally accepted principles of proper state tax policy. It would force Alaska out of the Multistate Tax Compact, would create horrendous audit problems for the Department of Revenue, and might even result in a net revenue loss to the state.

The analytical approaches of the Department of Revenue and the several consultants who have been advising the Legislature leave much to be desired. They have created the impression that Alaska does not get as much tax revenue from the oil companies as it should because the present tax structure does not attribute to Alaska the net income actually earned in Alaska. They then attempt to persuade the state to turn its back on all of the principles of state taxation and multistate business that have been hammered out over the last century - principles that have been widely endorsed by the courts, by tax administrators of other states, and by tax scholars - and to adopt instead one of several new proposals. They have no difficulty in showing that these proposals would increase Alaska's tax collections, but they fail completely to show that they will come any closer to the ideal of taxing the "net income actually earned in Alaska," no more and no less. Alaska would be ill advised to warp its tax structure away from the tried and true principles simply to collect more taxes from one type of business.

SUMMARY

THE EFFECTS OF HOUSE BILL 322 and SENATE COMMITTEE SUBSTITUTE FOR HOUSE BILL 322 ON UNIFORMITY AND EQUITY

By Gary I. Boren
Professor of Law
Washington University
St. Louis, Missouri

AGO 548010

I.

The removal from Alaska of its oil and gas is compensated for through payments by oil and gas producers of the Oil and Gas Properties Production Tax. That tax has recently been reviewed and amended by the Legislature to ensure that a proper price is being paid for the removal of these resources. Consideration of the treatment of taxpayers under the corporate income tax therefore should be considered independently of concern about proper compensation to the state for the withdrawal of its natural resources.

II.

Alaska, as most states, uses the federal definition of taxable income under the corporate and personal income taxes. Concern has been expressed that erosion of federal taxable income has resulted in an inappropriately small tax base for oil and gas producers under the Alaska corporate income tax. Examination of the items considered as eroding the federal base indicates that oil and gas producers do not receive a disproportionate benefit. To single out oil and gas producers for the withdrawal of all deductions deemed erosions (whether or not peculiar to the oil and gas industry) means that the oil and gas industry in Alaska will bear an excess burden, shifted to them from other taxpayers who continue to be able to receive those deductions.

A study by Congressman Vanik investigating the tax burden of major corporations under the federal income tax has been

AGO 548011

advanced as demonstrating that oil and gas producers are paying a disproportionately low effective rate on their income to Alaska in comparison to the rates paid by local taxpayers. The Vanik study, however, demonstrates primarily that the foreign tax credit has been used to reduce the amount of taxes paid the U.S. Alaska does not permit the foreign tax credit, nor does it grant a deduction for taxes paid on income to any government. The result therefore is that oil and gas producers, and other multinationals, would be paying a higher proportionate effective rate to Alaska than to the federal government. The Vanik study therefore is an argument against the very proposal that it has been used to advance.

Reform of the Corporate Income Tax by the Alaska legislature to be fair must be reform for all taxpayers.

III.

A state may tax only the portion of the income of a corporation to which it has a sufficient connection. The manner of determining how much a state may tax used by almost all states is formulary apportionment. Taxable income for state purposes is determined by multiplying taxable income by a formula of three fractions, called factors. The factors represent the proportions respectively of property, payroll and sales occurring in the taxing state to the total amount of property, payroll and sales occurring everywhere. The three fractions are then divided by

three to obtain an average proportion of activities occurring within the taxing state to activities everywhere. The largest number of states, including Alaska, have adopted a model law called the Uniform Division of Income for Tax Purposes Act to determine the income they may tax.

If states do not apply the same or similar methods for division of income it is possible, even likely, that taxpayers will be subjected to tax on more or less than their total income. Nonuniformity also causes taxpayers difficulties in complying with the laws of numerous states. Federal legislation has been proposed to require a uniform formula by Act of Congress. Progress toward uniformity by the states has been at least one reason why no federal solution has as yet been imposed.

No special uniform apportionment formulas have evolved for oil and gas producers. The normal manner of division of income has been considered appropriate to them. The use of a special formula by one state to increase the income taxable by that State must therefore necessarily result in overtaxation.

IV.

House Bill 322, which has been passed by the House of Representatives would impose a special formula on oil and gas producers in Alaska. The standard sales factor would be eliminated and an extraction factor substituted for it. The sales factor is justified because sales are requisites to income and because a state

may exact a tax for maintaining an orderly market and protecting the sales activities of a taxpayer and the customers who purchase goods from the taxpayer. The states have resisted elimination of the sales factor in a federally proposed formula. Alaska, a market state, benefits usually from the existence of the sales factor. Elimination of sales for oil and gas producers is supported by no plausable justification.

The proposed extraction factor has no comparison in the apportionment formulas of other states applied to oil and gas producers. Had the extraction factor been substituted for sales in the year 1975 the result would have been subjecting $53,000,000 of the income of a limited number of oil and gas producers to double taxation.

The proposed extraction factor has a diminishing connection with activities of taxpayers not involving the processing and sales of petroleum products. Questions of constitutionality are raised for all, and for diversified taxpayers two formulas would seem clearly required. This creates the problems of separate accounting, discussed elsewhere in the paper. The extraction factor would also require maintenance of extensive records not used for business purposes. They would be expensive to maintain and difficult to audit.

House Bill 322 also attempts to include in the numerators of the apportionment formula (which increase the amount of income

taxable by Alaska) items connected to the Outer Continental Shelf. Congress has declared that state tax laws should not apply to the Outer Continental Shelf. California which has considered the action contemplated by House Bill 322 has determined that it is not permissible.

V.

A method of dividing income known as "separate accounting" has from time to time been forwarded for use by Alaska. The doctrine is an attempt to identify income with geographic areas. It is the theoretical opposite of the use of a formula. Formulary apportionment has as its basis the inability to segregate items geographically and the belief that total income of a corporation is to be divided among the states. Taxpayers have attempted to avoid formulary apportionment and to use separate accounting by such pleas as disproportionately high costs in a taxing jurisdiction, or by operating through multiple corporations. It has, however, been demonstrated that higher cost in one state may yet produce additional income for the business, and some of that income therefore is attributable to that state. Nor does the use of multiple corporations mean that application of a formula to total group income is improper: the formula determines how much of the total income is attributable to activities of corporations that are connected with the taxing state. Formulary apportionment permits the taxation of worldwide income, separate accounting does not.

Separate accounting is expensive for the taxpayer and the state and requires the constructing of hypothetical transactions, permitting the possibility of taxpayer avoidance. The main flaw of the doctrine is that it ignores the interdependence of different portions of a unitary business, and the values created by that integration of operations. Separate accounting has been rejected by the overwhelming majority of studies and scholars that considered the question in modern times.

Senate CS for CSHB 322 which would impose a "net proceeds tax" bears some resemblance to separate accounting in its use of hypothetical values and treatment of taxpayers as though they were engaged in two separate businesses. It has attempted to avoid the possibility of taxpayer manipulation but in doing so has arbitrarily eliminated deductions connected to the production of income. In separating oil and gas production and pipeline transportation income in Alaska from worldwide operations and denying the deductions mentioned it increases revenue taxed by Alaska on this portion of a taxpayer operation and apportions the balance of income from worldwide operations by a special formula designed also to maximize Alaska revenue. The result must be double taxation, and for oil and gas production in Alaska approaches the taxation of gross receipts at income tax rates.

VI.

Taxes tailored to increased revenues from producers operating in interstate commerce raise serious constitutional questions. The U.S. Supreme Court has recently stated the necessity to examine such tailored taxes closely. Moreover, specialized tax treatment by individual states reduces uniformity and increases the possibility of federal action. Discrimination against oil and gas producers makes it unlikely that those taxpayers would attempt to expand their Alaska operations. The ultimate question for the legislature, however, is whether the bills would result in a tax structure for Alaska that is fair to the taxpayer and the state. The attempt to increase revenue from the one class of taxpayers under the circumstances investigated in this paper indicates that on this basis also the taxes should not be enacted.

SUBJECT: Corporate Income Tax Legislation - SCSCSHB 322

TO: The Honorable Kay Poland

FROM: Gregg K. Erickson
Director of Research

Enclosed is a memorandum received from the Alaska Public Utilities Commission responding to a much earlier request of mine concerning the fiscal impact on the Commission of the above cited legislation. They indicate that the total cost of carrying out their responsibilities under the bill in FY 79 would be about $33,000.

Under the draft committee substitute proposed by Senator Croft and the Administration, the fiscal impact on the Commission would presumably be zero, since all the auditing and determination responsibilities would be vested in the Department of Revenue. The Department is preparing a fiscal note on the Croft/Administration bill.

Commissioner
Alaska Public Utilities Commission

SUBJECT: Comments on SCSCSHB 322

Enclosed please find our comments on SCSCSHB 322. We were requested by Gregg Erickson to examine this committee substitute to see if it would change the fiscal impact on the Commission.

As you can tell from the research that Susan Knowles did, it will not change the fiscal impact on this Commission and, therefore, the original fiscal note should remain.

I understand that John Messenger of Revenue is coordinating comments in regard to the committee substitutes. Will you see that he gets a copy of our comments as well as transmitting, as quickly as possible, our comments to Gregg Erickson, noting please that we are responding to his request of over a month ago.

Thanks a lot.

CSG:lin
Enclosure

AGO 547864

The certification procedure prescribed under SCS CSHB 322, like its predecessor HB 145, involves a significant extension of the Commission's responsibilities.

Section 43.20.068(b) defines taxable income primarily in terms of amounts presented on FPC* report forms and requires the APUC to certify that the calculation was made in accordance with FPC "principles" and regulations. Firms which do not normally prepare FPC report forms in the manner envisioned by the proposed legislation would be required to do so for certification purposes. Section 42.05.502 directs the Commission to review the accounts of the carrier and to certify that net pipeline income submitted under proposed AS 43.20.069** is in accordance with APUC regulations. In addition, the net income so defined was intended to coincide as nearly as possible with the definition of income used in establishing rates. Under both sections the Commission is responsible for identifying deficiencies and, if possible, providing a report of the true and correct income.

Having summarized those components of the proposed legislation which it believes have the greatest probable impact, the Commission offers the following comments. First, there is a potential for two different definitions of taxable income arising under the aforementioned sections of the statutes, one based on FPC report forms and one based on APUC regulations. A similar dichotomy may exist between net income for tax purposes and that for rate-making purposes. The Commission believes that it would be in the public interest for the legislature to make the definition uniform in all sections. Second, the thorough knowledge of FPC principles and regulations discussed in the legislation will involve a greater commitment to monitoring the FPC than is currently required. Third, it is apparent that the legislature's intent is for the APUC to more than simply rubber stamp figures provided by gas pipeline companies. In this light, the certification procedure appears to be akin to issuing an independent audit opinion and will require comparable standards of review and expertise. Additionally, the Commission is constrained to issue a certificate of compliance or deficiency within 45 days from receipt of a request of a pipeline carrier.

Given the Commission's workload, satisfactory performance of the certification responsibility will necessitate hiring a staff person with specialized knowledge of tax accounting. The alternative of developing in-house expertise and diverting limited staff resources to certification would dilute effective performance of existing regulatory responsibilities. Therefore, the fiscal note attached to HB 145 applies to SCSCSHB 322.

* It is presumed that the legislature will modify all references to the FPC to the Federal Energy Regulatory Commission (FERC).

** The Commission believes that this is a drafting error and should be AS 43.20.068. The latter will be assumed in further comments.

POUCH Y - STATE CAPITOL
JUNEAU, ALASKA 99811
907-465-3800

MEMORANDUM January 26, 1978

SUBJECT: Membership in the Multistate Tax Compact - (Work Order No. 4448)

TO: Gregg K. Erickson
Director
Division of Research Services

FROM: Randolph Berry
Legislative Counsel

The question presented is whether Alaska will be able to retain its membership in the Multistate Tax Compact should CS HB 322 (Oil and Gas Corporate Franchise Tax) or SCS CSHB 322 (Separate Accounting) or a "4th-factor" approach to multistate oil company taxation be adopted.

The stated purposes of the Multistate Tax Compact, contained in Article I of the compact, are as follows:

1. Facilitate proper determination of state and local tax liability of multistate taxpayers, including the equitable apportionment of tax bases and settlement of apportionment disputes.

2. Promote uniformity or compatibility in significant components of tax systems.

3. Facilitate taxpayer convenience and compliance in the filing of tax returns and in other phases of tax administration.

4. Avoid duplicative taxation.

The primary mechanism by which the compact is designed to achieve a uniform manner of apportionment and allocation of tax liability of multistate business taxpayers between states is through the use of the three-factor formula based on property payroll and sales set out in the Uniform Division of Income for Tax Purposes Act (UDITPA), which is incorporated as Article IV of the compact.

AGO 547868

However, the ability of a taxpayer to utilize apportionment and allocation under the formula of the UDITPA and the compact is not without provision for exception. Section 18 of Article IV of the compact reads as follows:

> 18. If the allocation and apportionment provisions of this Article do not fairly represent the extent of the taxpayer's business activity in this state, the taxpayer may petition for or the tax administrator may require, in respect to all or any part of the taxpayer's business activity, if reasonable:
>
> (a) separate accounting;
>
> (b) the exclusion of any or more of the factors;
>
> (c) the inclusion of one or more additional factors which will fairly represent the taxpayer's business activity in this state; or
>
> (d) the employment of any other method to effectuate an equitable allocation and apportionment of the taxpayer's income. (Emphasis Supplied)

Thus, where the state tax administrator determines that the allocation and apportionment formula of the compact does not fairly represent a taxpayer's business in Alaska, he may employ a different method of allocating the taxpayer's income, rather than allowing the taxpayer to use the compact formula.

In both CSHB 322 and SCS CSHB 322, there is a stated legislative finding to the effect that the three-factor formula contained in the UDITPA does not fully reflect business activity or corporate income-producing activity in the state of multistate corporations engaged in the extraction, transportation and refining of oil and gas.

Although in this situation the determination that the allocation and apportionment provisions of the compact "do not fairly represent the extent of the taxpayer's business in the state" is being made legislatively, and the legislative process is being used as the "state tax administrator" rather than the case-by-case judgment of the Commissioner of Revenue, this should not logically affect the outcome of the question involved.

If the UDIPTA allocation and apportionment formula is determined to not fairly reflect business activity in the state by multistate oil and gas corporations, then the compact by its own terms provides a list of alternate methods of allocating and apportioning income for such taxpayers which would include the three proposed methods as permissible alternatives.

To date, there have not been any Alaskan cases interpreting or defining the scope and limits of Article IV, section 18 of the compact, so it is necessary to look to other jurisdictions for assistance in interpreting the state's authority under the compact to utilize alternate methods of allocating and apportioning income of multistate businesses.

The majority of cases of note in recent years dealing with the question of separate accounting versus statutory allocation under UDITPA have hinged on the issue of whether the business in question was unitary or non-unitary, with the outcome of this issue being presumed to be determinative of the question of whether separate accounting was permissible or required.

The concept of "unitary business" activity is a judicially developed concept utilized by the courts in determining whether, and the extent to which, a business has income which is subject to formula apportionment under the compact, UDITPA, or other state statutes requiring or allowing apportionment of income from multistate business activity. Whereas the language and application of the UDITPA and UDITPA type three-factor formulas has been comparatively uniform once it is determined that a business has multistate business income subject to formulary apportionment, the definitions and tests of what constitutes a "unitary business" subject to formulary apportionment vary substantially from one jurisdiction to the next, producing what appear to be inconsistent results in the applicability of UDITPA. (An extensive discussion of the concept of "unitary business" is not necessary for purposes of this memorandum, but will be covered in a separate memorandum. For purposes of this memorandum, it is sufficient to say that if a particular multistate business activity is not "unitary," then the UDITPA formula is not applicable and we would not reach the question presented in this memorandum.)

In Superior Oil Company v. Franchise Tax Board, 386 P.2d 33 (Cal. 1963) and the companion case Honolulu Oil Corp. v. Franchise Tax Board, 386 P.2d 40 (Cal. 1963) the California Franchise Tax Board was seeking to impose separate accounting on multistate oil companies, arguing in both cases that the companies were not true "integrated" oil companies, and that the comparatively profitable California operations should not be subject to allocation under the statutory formula. In both cases, the California Supreme Court overruled the Board's contention that the companies' operations were not unitary in nature, and concluded that the companies were authorized to use formulary allocation. However, no contention was argued in either case that even if the companies were determined to be unitary, the allocation formula nonetheless did not fairly reflect business activity in the state.

It should be noted in the Superior case that Superior operated in eight other states, showed losses from its operations in six of the eight states and utilized separate accounting in seven of these states, including the six in which it showed losses. Use of formulary apportionment by Superior allowed it to allocate a portion of these losses to income arising from its operations in California.

In contrast, in Webb Resources, Inc. v. McCoy (401 P.2d 879, Kansas 1965) the Kansas Supreme Court determined that Webb's multistate oil business was not subject to statutory apportionment, but rather its Kansas oil production was subject to separate accounting. But this case, like Superior, was decided on the basis of whether the business activity was unitary in nature.

There is, however, a recent Utah case under the UDITPA involving the same language as section 18, and a business activity roughly analogous to oil production, in which the contention was argued and the decision made on the basis of whether the standard three-factor formula fairly represented the taxpayer's business in the state. (Kennecott Copper Corp. v. State Tax Comm., 493 P.2d 632, 1972) Kennecott Copper Corporation and subsidiary corporations owned and operated mining properties in Utah, with virtually the entire production of the mining properties being sold and delivered to purchasers out of state. Under the UDITPA formula, for the tax years 1967 and 1968, Kennecott had property factors of 42.46 and 35.65 per cent and payroll factors of 42.88 and 33.36 per cent, respectively. But the sales factor for 1967 showed sales in the state of $3.3 million on total sales everywhere of $397 million and resulted in an apportionment fraction of 0.83 percent. The 1968 sales apportionment fraction was 0.568 percent. Yet for purposes of computing its depletion allowance for 1967, Kennecott reported gross receipts for sales from its Utah division of $158 million. The Utah tax commission concluded under the same language as contained in Article IV, section 18 of the compact that the UDITPA allocation and apportionment formula did not fairly represent the extent of Kennecott's business activity in Utah, and made its own determination and allocation of income attributable to business activity in the state. In Kennecott Copper Corp. v. State Tax Commission, 493 P.2d 632 (1972) the Utah Supreme Court upheld the tax commission, stating that the commission was authorized under the UDITPA to depart from the formula and adopt another method to make its own allocation if the apportionment provisions of the Uniform Act do not fairly represent the taxpayer's business activity in the state.

Additionally, of note is the case of Texas Co. v. Cooper (07 So 2d 687, La. 1959) which squarely presented the question of whether the statutory three-factor formula fairly allocated to Louisiana income from oil

produced in the state but sold out of state. Although not decided under UDITPA, the formula used by Louisiana contained the same factors, and the issues were the same as would have arisen under UDITPA. The Louisiana statutes place the burden of showing "manifest unfairness" of the statutory three-factor formula on the party seeking to use separate accounting, and in this case the court, after extensive discussion, held that the tax commissioner had met the burden of showing that the sales-oriented three-factor formula did not fairly reflect the extent of income attributable to oil production in Louisiana.

In view of the above discussion, the answer to the question at hand of whether the adoption by Alaska of either CSHB 322 or SCS CSHB 322 or a "4th-factor" approach would jeopardize Alaska's membership in the Multistate Tax Compact appears to be "no". If, as stated in the legislative findings incorporated in each bill, the UDITPA three-factor formula does not fairly reflect the extent of business activity conducted in the state by multistate oil corporations, which is the foundation upon which both of the above bills are predicated, then the adoption of either bill or of a "4th-factor" approach would be entirely consistent of the compact, and could not be viewed as a breach by the state of its agreements under the compact.

RB:jpd

TAX BURDEN COMPARISON

I. Taking the Arthur Anderson Approach, but using a sensitivity analysis to determine the extent to which the relative tax burden ranking is influenced by various assumptions employed such as market price and transportation charges.

II. Expand the scope of the Arthur Anderson approach to include all fields and activities in the state such as Cook Inlet and gas along with potential development of marginal fields such as Kuparik and Lisburne.

III. Develop figures from each state showing gross oil and gas production, wellhead values, total tax payments. Then compute tax payments as a percentage of total wellhead value and as a percentage of per barrel production. Also, if data is available take tax payments as a percentage of net profit per barrel in each state.

MEMORANDUM

April 1, 1978

SUBJECT: SCS CSHB 322 and the Multistate Compact

TO: The Honorable Kay Poland

FROM: Gregg K. Erickson
Director of Research

Several weeks ago, Mr. John Warren testified before your committee and suggested that adoption of the Senate committee substitute for HB 322 would jeopardize Alaska's membership in the Multistate Tax Compact. As you requested at that time, an analysis of these assertions has been prepared and is enclosed herewith (memorandum of March 31 from Mr. Berry to me). A January 26 memorandum on the same subject is also enclosed. An even earlier memorandum is available in our files.

All these memoranda indicate fairly clearly that adoption of either the proposed or existing Senate committee substitutes for HB 322 would not jeopardize the state's membership in the multistate compact. The last paragraph of each memorandum contains a fairly concise summary of its findings.

Please let us know if you wish to have these memoranda circulated to other members, or if you believe additional work is needed in this area.

SUBJECT: Membership in the Multistate Tax Compact (Work Order No. 4448 - Part II)

TO: Gregg K. Erickson
Director
Division of Research Services

FROM: Randolph Berry RSB
Legislative Counsel

The question continues to be raised as to the effect on Alaska's membership in the multistate compact of the enactment by Alaska of a statute mandating specific accounting and allocation of income methods for corporations engaged in the production of oil and gas in the state.

As this question has been raised and discussed by various legislative and industry consultants with inconsistent or conflicting answers, it is felt that it would be worthwhile to continue and elaborate on my memorandum on that subject, dated April 28, 1976, to Gregg Erickson, with an attempt to clarify the current state of the law and the practice of allocation of income from oil production in other oil producing states.

There are presently nineteen states which have adopted or joined the Multistate Tax Compact (referred to hereinafter simply as the "compact").1/ Of the twelve major oil producing states, 2/ six in addition to Alaska have joined the compact 3/ and five have not.4/ Of these same twelve oil producing states, ten have income taxes on corporate income; 5/ and of these ten, six are members of the compact. 6/ Of the six oil producing states, in only three has there been litigation on the issue of allocation of income from extractive industry under the compact or UDITPA formula versus separate accounting or other modification of the statutory formula. The litigation in two of these states 7/ involved section 18 of Article IV (the "relief provision"), in the third, the litigation turned on the issue of whether or not the business was unitary in nature, 8/ and the "relief provision" was not raised by either side.

Of the four significant oil producing states which do not belong to the compact but do impose an income tax on corporations with statutory allocation formulas, 9/ one now has a statute which specifically provides that "the income from oil production shall be allocated according to the location of the producing property." 10/ In a second, the court has upheld the requirement of separate accounting for oil production on the ground that the statutory three-factor formula is manifestly unfair to the state. 11/ In the other two, no cases involving departure from the statutory formula was found. Thus it can be seen that there is currently a wide disparity of allocation provision and practice even in the twelve states with the most significant oil production.

In considering whether separate accounting is permitted to be used or may be imposed by a compact state on a business taxpayer involved in business activity in more than one state, it should be borne in mind that the determination may occur in two stages; and either stage may result in a decision that separate accounting is permissible (or conversely that the party requesting separate accounting has not made the necessary showing).

The first stage turns on the question of whether the business activity in the particular state is separate in nature from the taxpayer's business activity in other states, or whether it is part of a "unitary" business. The definition of what is a "unitary" business varies from state to state, which has lead to inconsistencies between member states in the application of the mulitstate compact. However, for a rough working definition, one might say that a unitary business is one in which the business activities of the taxpayer in several states are so interrelated that each part is dependent on the parts occurring in other states.

If the business activity is unitary, then the compact provisions would be applicable to that business activity, and allocation would occur under the three-factor formula, unless relieved under the second stage of the determination. If, on the other hand, the taxpayer's business activity in the particular state is essentially separate and distinct from his activity in other states, then separate accounting would be appropriate, and the compact formula would not be applicable.

If the business activity falls within the definition of "unitary" as in effect in the particular state, separate accounting may still be permissible for, or required of, that business taxpayer if it is determined, under the "relief provision," that the three-factor compact formula "does not fairly represent the extent of the taxpayer's business activity" in the state.

Whereas the first stage determination of whether a multi-state business activity is "unitary" might be viewed as a decision at the front door of whether the taxpayer enters into the compact's coverage, the determination made at the second stage (under the "relief" provision) is one of whether a taxpayer, already determined to be covered by the compact, leaves its coverage out the side door.

Of the cases discussed in the memo of January 26, 1978, the two California cases - Superior Oil Co. v. Franchise Tax Board, 386 P.2d 33 (Col. 1963) and Honolulu Oil Corp. v. Franchise Tax Board, 386 P.2d 40 (1963), and the Kansas case Webb Resources, Inc. v. McCoy, 401 P.2d 879 (1965), [decided prior to Kansas' entry into the compact], all involved the threshold question of whether or not the business activity involved was unitary in nature, and the question of fairness of the statutory formula was not raised. In both the Utah case Kennecott Copper Corp. v. State Tax Commission, 493 P.2d 632 (1972) and the Louisiana case - Texas Co. v. Cooper, 107 So 2d 687 (1959) [although Louisiana is not a member of the compact, its statutory formula parallels that of the compact] the question was decided on the basis of whether the statutory formula fairly represented the taxpayer's business activity in the state, and in both instances it was determined that it did not.

Since the decision of the Webb case in Kansas, which upheld separate accounting of oil production in the state, Kansas has joined the compact (1967), and the question of separate accounting has again been litigated in Amoco Production Co. v. Armold, 518 P.2d 453 (1974), this time on the question of whether the compact's three-factor formula fairly represented Amoco's oil production business in Kansas. Although John S. Warren, in a position paper, relies on the Amoco case for the proposition that oil companies are not excludable from the compact (p. 4), the case did not in fact contain any such holding. The court did say that although the legislature had chosen to specifically exclude certain businesses from

the Uniform Division of Income for Tax Purposes Act, it had not chosen to exempt oil companies. However, the holding of the case was based on the fact that the tax administrator had misinterpreted the Act; and the case was remanded for further proceeding by the tax administrator on the question of whether the UDITPA formula fairly represented the extent of the taxpayer's business activity in Kansas. The court, (contrary to the impression given by Mr. Warren), recognized that if the tax administrator found that the formula did not fairly represent the extent of Amoco's business activity in Kansas, then departure from the formula was appropriate; and the use of separate accounting was one of the authorized alternatives.

From the above discussion, it should be evident that there is no clear authority for the statement that Alaska's enactment of HB 322 in any of its versions would jeopardize Alaska's membership in the Multistate Tax Compact. Absolute uniformity is not required by the compact; its own provisions recognize the need for some flexibility on the part of state tax administration. The court in the Kennecott case recognized that the compact formula might be inappropriate to certain industries unless modified, and the Kansas court in Amoco impliedly recognized the legislature's authority to exclude specific businesses or industries as is proposed in HB 322.

MEMORANDUM

SUBJECT: Impact of Proposed Changes in Corporate Income Tax Treatment of Oil and Gas Operations on Alaska Membership in the Multistate Tax Compact (H. O. 4448)

TO: The Honorable John Rader

FROM: Gregg K. Erickson
Director
Division of Research Services

The attached memorandum responds to your questions proposed in the above Work Order. The brief answer to your question is that neither the "franchise tax", "direct accounting", or "4th-factor" approaches are likely to be construed as a breach of the multistate tax compact.

In accordance with your instructions we are forwarding a copy of this memorandum to the Department of Revenue for comment.

STATE OF ALASKA

JAY S. HAMMOND, GOVERNOR

DEPARTMENT OF REVENUE

OFFICE OF THE COMMISSIONER / POUCH S – JUNEAU 99811

May 8, 1978

The Honorable Kay Poland
Chairman
Senate Resources Committee
Alaska State Legislature
Juneau, AK 99801

Dear Senator Poland:

In his testimony on April 28, 1978, Milton Lipton noted three points of a technical nature which he felt should be addressed by the committee. I have talked to Gregg Erickson about these three items and believe that there is either an explanation of the specific language in the draft or a suggestion of specific language to the draft, to clear up the points raised by Mr. Lipton. I will discuss each point in order that it was mentioned.

1. Page 3, line 3

On this point, Mr. Lipton raised the concern that a tariff properly on file with a regulatory agency might be ultimately overturned by that agency or the courts with appropriate refunds ordered. In this situation, he felt that we should assure ourselves that the income tax for any prior periods would be recomputed based upon the new tariff. That was our intent and we believe that the matter can be clarified with the addition of the following additional language at line 6 on page 3 of the proposed committee substitute:

<u>If a tariff properly on file with a regulatory agency is subsequently amended, changed, or overturned retroactively, the reasonable costs of transportation shall be recomputed for that period using the newly determined tariff</u>.

2. Page 3, line 8, (c)(1)

On this point, Mr. Lipton felt that this deduction for royalty paid was too narrow since it included only royalties paid to the state or the United States. We agree. Our intent was to insure that a company would

only be taxed upon its interest in the oil and gas. Accordingly we would propose the following amendment at line 8 on page 8 of the proposed committee substitute:

(1) royalties paid in kind or in value. [TO THE STATE OR THE UNITED STATES.]

3. Page 3, line 13, (c)(4)

On this technical point, Mr. Lipton raised the concern that this particular deduction for operating expenses should fit with the definition of gross value so as to assure that there is not a double deduction of these particular expenses of producing, gathering, preparing the oil or gas for pipeline transportation. We have rechecked the interrelationship of the definition of gross value and this deduction and believe that they do fit together without overlap to assure no double deduction.

We have tied our definition of gross value to the definition of "gross value at the point of production" in the production tax statute. That definition contained in AS 43.55.140(12) provides essentially that the value at the point of production is the value at the point where the oil or gas is metered or measured in a condition of pipeline quality. This means that the oil or gas is valued without deduction for the costs of production including the costs of gathering, conditioning and treating prior to pipeline transportation. For example, for Prudhoe Bay oil production the oil is valued under this definition at the point where it is metered into the Trans Alaska Pipeline (Pump Sation No. 1) and no deductions upstream from that point are allowed. In (c)(4) the companies are then allowed to take their direct upstream operating costs as deductions from the gross value in arriving at net income. Since gross value is determined without deducting these operating expenses under the definition in the production tax statute, there is no double deduction of these items. Therefore we believe the definition of gross value and deduction for operating expenses fit together.

Also, I might note in response to a question from you regarding the proposed Sec. 43.21.050 ASSESSMENT OF INCOME AND TAX, Mr. Lipton did not specify any objection but noted that this was, as far as he knew, a standard provision in other taxes. I agree, but I would like to emphasize the importance of this provision in the separate accounting approach. This provision would help to assure that the tax

avoidance problems which we have pointed out in last year's CS HB 322 are eliminated, since the department itself would be directly assessing the income and tax. This would be similar to the way the property tax is now administered and in our view is essential to administer a separate accounting approach to income taxation.

Mr. Lipton also raised certain policy considerations for the committee on the proposed committee substitute for HB 322. Those items included (1) the use of "book income" instead of "federal taxable income" as a definition of net income from activities other than oil and gas production and pipeline transportation, and (2) the use of the OCS apportionment factors for apportioning income from activities other than oil and gas production and pipeline transportation. As you know, these are items which were contained in our original franchise tax approach, and we believe that they would enhance a new corporate income tax for the oil and gas industry.

Sincerely,

John R. Messenger
Deputy Commissioner

cc: Gregg Erickson

TO: ALASKA OIL AND GAS ASSOCIATION

FROM: JOHN S. WARREN

DATE: APRIL 24, 1978

RE: INCOMPATIBILITY OF PENDING TAX LEGISLATION WITH MULTISTATE TAX COMPACT

In my "Position Pager on Alaska Oil and Gas Taxation," I stated that enactment of the pending legislation on income taxation of oil companies might very well be a breach of the Multistate Tax Compact which would require Alaska to give up its membership in the Compact and the benefits inuring therefrom, such as participation in the joint audit program. I made this statement with respect to both HB 322 and SB 105 (which has become SCS CSHB 322). Crawford Thomas also spoke on this point in his testimony before the Senate Resources Committee on February 24, 1978.

The Legislative Affairs Agency disputes my contention and has advised the Senate Committee that adoption of the proposed legislation would not jeopardize the states membership in the Compact. You have asked for my further comments. There is no present authority squarely on the question of how far a party State may depart from the apportionment prescribed in the Compact without forfeiting its membership; therefore no one

can say dogmatically that enactment of SCS CSHB 322 will or will not forfeit Alaska's membership. Any opinion of what the outcome would be must necessarily be somewhat speculative, but I still believe that an examination of the relevant authorities that do exist will show that jeopardy would surely be created and the end result would probably be termination of Alaska's membership.

The Relevant Provisions of the Compact and MTC Regulations

Article I. "The purposes of this compact are to ... (2) Promote uniformity or compatibility in significant components of tax systems."

Article II. "As used in this compact: ... 4. 'Income tax' means a tax imposed on or measured by net income including any tax imposed on or measured by an amount arrived at by deducting expenses from gross income, one or more forms of which expenses are not specifically and directly related to particular transactions."

Article III. "1. Any taxpayer subject to an income tax whose income is subject to apportionment and allocation for tax purposes pursuant to the laws of a party State or pursuant to the laws of subdivisions in two or more party States may elect to apportion and allocate his income in the manner provided by the laws of such State or by the

laws of such States and subdivisions without reference to this compact, or may elect to apportion and allocate in accordance with Article IV."

Article IV. (the UDITPA provisions) "... 2. Any taxpayer having income from business activity which is taxable both within and without this State, other than activity as a financial organization or public utility or the rendering of purely personal services by an individual, shall allocate and apportion his net income as provided in this Article. ..."

"18. If the allocation and apportionment provisions of this Article do not fairly represent the extent of the taxpayer's business activity in this State, the taxpayer may petition for or the tax administrator may require, in respect to all or any part of the taxpayer's business activity, if reasonable:

"(a) separate accounting;

"(b) the exclusion of any one or more of the factors;

"(c) the inclusion of one or more additional factors which will fairly represent the taxpayer's business activity in this State; or

"(d) the employment of any other method to effectuate an equitable allocation and apportionment

of the taxpayer's income."

Regulation IV-18. "Article IV, Sec. 18 permits a departure from the allocation and apportionment provisions of Article IV only in limited and specific cases where unusual fact situations (which ordinarily will be unique and non-recurring) produce incongruous results under the apportionment provisions contained in Article IV."

It is clear that the tax to be imposed on oil companies by SCS CSHB 322 would be an "income tax." Therefore, the oil companies must be allowed the option to continue using the standard formula method. There is nothing in the compact that excludes oil companies from the standard treatment; only financial corporations and public utilities are excluded. It follows, therefore, that Alaska's only hope of defending its proposed special treatment of oil companies is to show that it is authorized by § 18 of Article IV.

It would seem impossible to bring Alaska's proposed action within the restrictive language of Regulation IV-18. The situation with respect to the oil companies is neither unusual, unique, or nonrecurring. Moreover, the determination under § 18 is supposed to be made by the tax administrator, not by the state legislature.

AGO 547887

How Would the Multistate Tax Commission React to the Issue?

If Alaska enacts SCS CSHB 322, the Multistate Tax Commission will be faced with a difficult problem. On the one hand, they want very much to maintain and increase the membership in the Compact. On the other hand, they are sure to realize that the Compact's only hope of success is for all party States to remain true to the principle of uniformity. This is why they have committed themselves to a very strict construction of § 18 in their own regulations. Surely they will know that any laxity in enforcing this strict construction would be a serious setback to their efforts to convice the business community, state governments, and particularly the U.S. Congress that the Compact is the best answer to the uniformity problem.

A recent incident involving Florida may be illuminating. After that state had joined the Compact, its legislature passed a law providing for double weighting of the sales factor (a maneuver which increased Florida's tax-take as primarily a market state and which also gave it a selling point in attracting business to establish factories in the state). Reliable sources have told me that there were considerable expressions of displeasure over this at Multistate Tax

Commission meetings. A confrontation was avoided, however, when Florida voluntarily withdrew from the Compact. Alaska can be expected to incur this same kind of pressure to resign if it enacts SCS CSHB 322.

The recent approval of the Compact by the U.S. Supreme Court in the U.S. Steel case has brightened the future of the Compact. The party States look upon it as their best chance to convince Congress that the states can achieve and maintain uniformity on their own and that federal internention is neither necessary or desirable. They are not likely to risk spoiling this opportunity by allowing the legislature of one Party State to take a whole class of taxpayers completely out of the ambit of the Compact. Such lack of self-restraint by one Party State, if left unchallenged by the other Party States, could destroy the credibility of the Compact. It would stand as evidence that any Party State can depart from the standard apportionment formula whenever it thinks it is not getting enough revenue from a particular industry. As such, it would provide wonderful ammunition for the advocates of federal intervention.

Of course, Alaska could try to persuade the other party States to amend the Compact to make the proposed

Alaska method the standard method for taxing oil companies. The chances of Alaska being successful, however, are nil. The market states would never agree to it. They would never consent to the downgrading of the place of marketing as compared to the place of production. They would insist that tax revenue from the oil industry be shared between production states and market states in the same way that it is for all other businesses.

In summary, Alaska is sure to become a pariah among party States to the Compact if SCS CSHB 322 is enacted into law. If Alaska is unwilling to share the tax revenue of the oil industry with other states in the conventional way, it has no future in the Compact.

How Would the Courts React to the Issue?

As improbable as it may be, let us assume that the Multistate Tax Commission takes no action to expel Alaska from the Compact. Any oil company would then be able to force the issue into court by a declaratory relief action, by refusing to submit to a joint audit in which Alaska is participating, or by contesting an Alaska deficiency assessment based on denial of the UDITPA option. This raises the question of how the courts will interpret § 18.

The following cases have been cited by the Legislative Affairs Agency or by me, or both, as having a possible bearing on the question:

Texas Co. v. Cooper, (La. 1959) 107 So. 2d 676.

Superior Oil Co. v. Franchise Tax Board, (Cal. 1963) 386 P. 2d 33.

Honolulu Oil Corp. v. Franchise Tax Board, (Cal. 1963) 386 P. 2d 40.

Webb Resources, Inc. v. McCoy, (Kan. 1965) 401 P. 2d 879.

Kennecott Copper Corp. v. State Tax Commission, (Utah 1972) 493 P. 2d 632.

Donald M. Drake Co. v. Dept. of Revenue, (Ore. 1972) 500 P 2d 1041.

Amoco Production Co. v. Armhold, (Kan. 1974) 518 P.2d 453.

None of these cases involves the Compact. The last three are interpretations of § 18 of UDITPA. The first four involve the question of separate accounting versus formula apportionment for oil companies prior to UDITPA.

The Texas and Webb cases held that the oil companies in question were not engaged in a unitary business and therefore separate accounting was favored over formula apportionment. The Superior and Honolulu cases held that the oil companies in question were unitary businesses, and therefore separate accounting was rejected and formula

apportionment was required.

In the Alaska situation, no one can dispute that the oil companies under consideration are unitary businesses. The Department of Revenue has so treated them in the past, and under the pending bill they would still be treated as unitary businesses, with formula apportionment being applied to all of their income except their Alaska production income. Therefore, Alaska's proposed use of separate accounting could not be defended on the ground that the oil companies are not unitary businesses, and the Texas and Webb cases would be of no help to Alaska.

If it is found to be a fact that an oil company is a unitary business, then the Superior and Honolulu cases are the persuasive authority. They were decided under a statute giving much broader discretion than does UDITPA, and still they held that separate accounting could not be used for oil companies that were found to be unitary businesses.

The more helpful cases, of course, are those decided under UDITPA. The first of these was Kennecott. That corporation was one of the largest taxpayers in Utah, but the Tax Commission felt it was not collecting enough revenue from Kennecott because the sales factor in

the apportionment formula was working to the state's disadvantage, i.e., almost all of the copper was sold outside the state. (Note the parallel to the Zeifman and Ainsworth complaint against the formula as applied to oil companies in Alaska). So the Tax Commission invoked § 18 and required Kennecott to use separate accounting. The court upheld the Tax Commission. The decision, however, would be a very weak reed for Alaska to lean upon. In the first place, it was a 3-to-2 decision, with Chief Justice Callister writing a scathing dissent. It is quite possible that other courts will find the dissent more persuasive than the majority opinion. Secondly, it has been criticized by commentators. See, e.g., Peters, "State Income Tax Problems of Interstate Business," 33 N.Y.U. Tax Inst. 899, 952. Finally, the courts of two other states have indicated their disdain for it. In Chase Brass & Copper Co. v. Franchise Tax Board, (Cal. 1977) 138 Cal. Rptr. 901, it was ruled that Chase and its parent, the very same Kennecott, were engaged in a unitary business and that formula apportionment was proper. In Amoco, infra, the Director of Taxation relied heavily on Kennecott to support his claim to broad authority under § 18, but he still lost his case.

The next court to interpret § 18 was the Oregon court in Drake. There the tax administrator sought to compel a construction contractor to use separate accounting, citing § 18 as authority. The court held that, in keeping with the purpose of UDITPA, the use of any method other than apportionment should be exceptional, and the party - the taxpayer or the tax administrator - who seeks to invoke § 18 has the burden of proof.

Amoco is another case where both the majority opinion and the dissenting opinions should be read. The majority opinion is favorable to my position, and the dissents are even more favorable. The Director of Taxation thought he could continue to require oil companies to use separate accounting after Kansas adopted UDITPA, just as he had been doing before, and as had been upheld by the court in Webb. The court rebuffed him, saying that separate accounting and formula apportionment were no longer two methods of equal stature and that UDITPA made formula apportionment the preferred method, even for oil companies, since they were not among those businesses expressly excluded from the act.

The Director also contended that his action was authorized by § 18. The majority opinion endorsed

Drake as a correct interpretation of UDITPA and found Kennecott to be unpersuasive because of the 3-to-2 split in the Utah court. But the majority thought the Director should have another chance to meet his burden of proof because he had applied the wrong test. His evidence consisted solely of a wide discrepancy in the percentage of the taxpayer's income attributed to Kansas by separate accounting and the percentage arrived at by formula apportionment. The majority pointed out that the test is not whether the standard method clearly reflects net income but whether it fairly represents the extent of the taxpayer's business activities in the state. They remanded the case so that the Director could make a new finding under § 18 using the business activities test.

The two dissenters felt that the Director had failed to meet his burden of proof and so the litigation should end with a judgment for the taxpayer. Chief Justice Falzer wrote: "Tax liability is to be computed on the basis of business activity, and a comparison between formula allocation and separate accounting to ascertain the higher tax, is not within the scheme of the Uniform Act" (518 P 2d 469).

Both the majority and the dissenters agreed

that a showing that separate accounting will allocate more income to the state is not sufficient to support the imposition of separate accounting under § 18. They disagreed only as to whether the administrator should be given another bite at the apple.

There is a clear lesson to be learned by Alaska from the Amoco case. The only evidence that the proponents of SCS CSHB 322 have offered to show that a variance under § 18 is justified is evidence that separate accounting will allocate more income of oil companies to the state than does formula apportionment. In the views of both the majority and the dissenters in Amoco, this evidence is incompentent to meet the burden of proof under § 18.

It is to be noted that in all four of these cases interpreting § 18 of UDITPA were cases where the tax administrator determined that a variance should be made. The incipient Alaska case will present the question of the propriety of the legislature making the determination. Again, Alaska will not be within the express language of § 18. The court is quite likely to find significance in the fact that the language of § 18 contemplates action by the tax administrator rather than

the state legislature, for this would indicate an intention that the section is to be used only sparingly and in very specific cases. It is one thing for the tax administrator, upon review of the facts of a particular case, to find that the standard method does not fairly represent the extent of the taxpayer's business activity in the state and to devise another method that works better in that particular case. It is quite another thing for a state legislature to pre-empt the question and declare that a whole class of taxpayers shall receive non-standard treatment. The framers of UDITPA and the Compact intended the former as a limited continuation of traditional administrative discretion in this field, but they certainly did not intend to include the latter within the meaning of § 18. Such action by a state legislature would probably be viewed by the courts as nothing but an attempt to unilaterally amend the Compact itself.

Conclusion

If SCS CSHB 322 is enacted, Alaska will come under considerable pressure from other party States to quit the Compact. If the issue is not forced at that level, Alaska will have to defend itself in court and will have great difficulty in meeting the burden of proving that its action is compatible with the Compact.

SOHIOBPA A AHG

SOHIO 2 CLV
TELEX PD CLEVELAND , OHIO APRIL 24, 1978 960599

BP ALASKA
ANCHORAGE ALASKA
ATTN JOHN SAINT

FOR IMMEDIATE RELEASE

CLEVELAND, OHIO, APRIL 24--THE STANDARD OIL CO. (OHIO) REPORTED TODAY THAT NET EARNINGS PER SHARE FOR THE FIRST QUARTER OF 1978 WERE $.75, UP 56 PER CENT, ON A GREATER NUMBER OF SHARES OUTSTANDING, FROM $.48 CENTS FOR THE SAME PERIOD OF 1977. PER SHARE COMPUTATIONS WERE BASED ON 46 MILLION AVERAGE SHARES OUTSTANDING FOR THE FIRST PERIOD THIS YEAR, AND 38.6 MILLION SHARES FOR THE FIRST QUARTER OF 1977.

THE INCREASE IN SHARES REFLECTS ADDITIONAL COMMON SHARE EQUIVALENTS EARNED BY THE SPECIAL STOCK OWNED BY THE BRITISH PETROLEUM COMPANY LIMITED AS SOHIO'S ALASKAN CRUDE OIL PRODUCTION INCREASED.

"NET INCOME ROSE TO $36.3 MILLION FOR THE FIRST QUARTER OF 1978 COMPARED TO $18.7 MILLION IN 1977. THIS INCREASE WAS DUE TO ALASKAN CRUDE OIL OPERATIONS THAT OFFSET SUBSTANTIALLY INCREASED INTEREST EXPENSE, LOSSES FROM THE LENGTHY NATIONWIDE COAL STRIKE, AND LOWER INCOME FROM ROYALTIES," SOHIO CHAIRMAN ALTON W. WHITEHOUSE REPORTED.

RETURN ON ALL-TIME RECORD SALES FOR ANY QUARTER OF $1.03 BILLION WAS UP TO 3.5 CENTS ON EACH SALES DOLLAR FROM 2.3 CENTS FOR THE FIRST QUARTER LAST YEAR DESPITE THE FACT THERE WAS A LOSS FROM THE COAL BUSINESS.

THE COMPANY'S RETURN ON TOTAL CAPITAL EMPLOYED IN THE BUSINESS FOR THE TWELVE MONTHS ENDED MARCH 31, 1978, ROSE TO 5.6 PER CENT FROM 3.2 PER CENT FOR THE TWELVE MONTHS ENDED MARCH 31, 1977.

"SOHIO'S SHARE OF NET CRUDE OIL PRODUCTION FROM THE PRUDHOE BAY FIELD AVERAGE 382,600 BARRELS PER DAY DURING THE FIRST QUARTER OF 1978, WITH NO OIL PRODUCTION FROM THIS SOURCE IN THE FIRST QUARTER OF 1977," WHITEHOUSE SAID. IN EARLY APRIL, NET SUSTAINED PRODUCTION PASSED 400,000 BARRELS PER DAY, WHICH RAISES BP'S STOCK INTEREST TO 45.5 PER CENT.

REPAIRS TO PUMP STATION EIGHT, WHICH WAS DAMAGED BY FIRE DURING STARTUP OPERATIONS OF THE TRANS-ALASKA PIPELINE, WERE COMPLETED EARLY IN MARCH AND AN OPERATING LEVEL OF MORE THAN 1.1 MILLION BARRELS PER DAY IS EXPECTED TO BE SUSTAINED DURING THE SECOND QUARTER THIS YEAR. FOR THE FIRST HALF OF APRIL, OPERATIONS AVERAGED ABOUT 1,130,000 BARRELS PER DAY. AT THIS RATE, SOHIO'S NET SHARE OF PRUDHOE BAY PRODUCTION WAS ABOUT 525,000 BARRELS PER DAY.

INCOME FROM OPERATIONS BEFORE INTEREST AND INCOME TAXES WAS $164.7 MILLION, UP FROM $43.8 MILLION IN 1977. PETROLEUM OPERATIONS IMPROVED TO $173.2 MILLION FROM $25.2 MILLION IN 1977, ALTHOUGH THE IMPROVEMENT WAS RESTRAINED BY LOWER THAN EXPECTED REFINERY RUNS DUE TO SEVERAL MECHANICAL PROBLEMS DURING THE QUARTER. COAL OPERATIONS LOST $10.7 MILLION, COMPARED TO AN $8.7 MILLION INCOME IN 1977. CHEMICALS AND PLASTICS DECLINED TO $2.1 MILLION FROM $3.1 MILLION. ROYALTIES WERE DOWN $7.7 MILLION IN THE FIRST QUARTER OF 1978, WHEN A FIXED SUM LICENSE WAS SOLD TO A TURKISH FIRM.

FIRST QUARTER SALES AND OPERATING REVENUE REACHED $1.03 BILLION, UP 25 PER CENT OVER $823.5 MILLION FOR THE SAME PERIOD LAST YEAR, DUE PRIMARILY TO ALASKAN CRUDE OIL SALES.

COSTS AND EXPENSES, OTHER THAN INTEREST AND INCOME TAXES, ROSE 11 PER CENT TO $865 MILLION FROM $761.9 MILLION IN THE FIRST QUARTER OF 1977. THERE WAS A SUBSTANTIAL INCREASE IN DEPRECIATION AND DEPLETION BECAUSE OF ALASKAN OIL OPERATIONS.

"NET INTEREST EXPENSE INCREASED TO $114.9 MILLION FROM $17 MILLION IN THE FIRST QUARTER OF 1977, REFLECTING THE DISCONTINUANCE OF CAPITALIZING OR DEFERRING INTEREST DURING CONSTRUCTION, TESTING, AND FILLING OF THE TRANS- ALASKA PIPELINE. INCOME TAX EXPENSE INCREASED DUE TO HIGHER PRE-TAX INCOME.," WHITEHOUSE CONCLUDED.

March 22, 1978

Mr. W. Monte Taylor

The alleged Croft-Hammond Compromise substitute bill adopts Croft's separate accounting approach for the determination of corporate income tax liability for oil and gas production and pipeline transportation income. The compromise bill adopts Hammond's apportionment of book income approach for the determination of income other than oil and gas production and pipeline transportation income.

Croft's Senate CS 322, currently in the Senate Resources Committee, and the compromise proposal would adopt variations of wellhead value to directly determine gross income from Alaska oil and gas production with the compromise bill allowing the Department of Revenue flexibility to determine that value by regulation. Definitions of gross income from Alaska production and specific deductions therefrom to arrive at taxable net income are compared below. The major difference between the two bills in allowable deductions is the allowance of some overhead and administration expense by the compromise bill.

Income from oil and gas pipeline transportation would be the same as reported to certain regulatory agencies under both the compromise and Croft's Senate CS 322.

With respect to income from activities other than oil and gas production and pipeline transportation, the compromise proposal differs from Croft's bill, but is similar to Hammond's bill that passed the House, in that it adopts certified consolidated net income as apportionable income. Croft's bill would use a two-factor property and payroll formula whereas the compromise proposal would use a three-factor property, payroll and sales formula requiring the inclusion of Alaska OCS property and payroll in the formula.

Determination of Gross Oil and Gas Production Income:

Croft's Senate CS 322:	Croft-Hammond Compromise:
Gross value as established for purposes of production tax.	Gross income at the Point of Production. Dept. of Revenue by regulation may

Croft's Senate CS 322:	Croft-Hammond Compromise:
	use (1) actual prices or values received, (2) posted price, same field or (3) prevailing prices or values, same field.

Deductions from Gross Income to Determine Net Taxable Income:

Croft's Senate CS 322:	Croft-Hammond Compromise:
Royalties actually paid	Royalties actually paid
Severance tax actually paid	Severance and conservation tax actually paid
Property taxes actually paid on property directly associated with production after date of initial production	Property taxes actually paid on property used directly in production after date of commercial production
Direct costs incurred by corporation in operating field	Direct costs incurred by or for corporation in operating lease or property
Depreciation on investments associated with production including depreciation on capitalized interest and amortization of lease payments and property taxes paid before initial production	Depreciation on property used directly in production including amortization of capitalized interest, lease payments and property taxes paid before commercial production
Interest expense not capitalized according to the percentage that property associated with production in Alaska bears to corporate fixed assets everywhere	Interest expense not capitalized according to the percentage that property used directly in production in Alaska bears to real and tangible personal property everywhere
Expenses after 12/31/76 of unsuccessful exploration efforts in Alaska	Expenses after 12/31/77 of unsuccessful exploration efforts in Alaska
	General overhead and administration expenses according to

Croft's Senate CS 322:	Croft-Hammond Compromise:
	the percentage that property used directly in production in Alaska bears to tangible personal and real property everywhere or .12 cents/bbl or .02 cents for each MCF gas

Determination of Income from Oil and Gas Pipeline Transportation:

Croft's Senate CS 322:	Croft-Hammond Compromise:
Oil - "Net balance transferred from income" reported to ICC. Certified by Alaska P/L Comm.	Oil - "Net balance transferred from income", determined by Dept. of Revenue, reported to Fed. Energy Regulatory Comm.
Gas - "Balance transferred from income" reported to FPC. Certified by Alaska Public Utilities Commission	Gas - "Balance transferred from income", determined by Dept. of Revenue, reported to Fed. Energy Regulatory Comm.

Determination of Income from Activities Other Than Oil and Gas Production and Pipeline Transportation:

Croft's Senate CS 322:	Croft-Hammond Compromise:
Subtract oil and gas production and P/L transportation income from combined corporate income and apportions balance using two-factor payroll and property formula	Subtract oil and gas production and P/L transportation income from consolidated net income certified by CPA for purposes of reporting to stockholders (book income) and apportion by three-factor property, payroll and sales formula, including property and payroll from Alaska OCS in factors

MEMORANDUM

SUBJECT: Milton Lipton's Comments on Draft No. 5 of Proposed CS of CS for HB 322

TO: The Honorable Kay Poland

FROM: Gregg K. Erickson
Director of Research

Briefly, Milton Lipton's comments to me over the telephone were as follows:

1. He suggested that the definition of gross income was too broad. Mr. Messenger and I have not discussed specific language by which it might be narrowed, but I believe such language could be developed in a matter that satisfies the administration.

2. He suggests that we should not necessarily assume that transportation costs set by a tarrif on file with the pipeline commission are necessarily resonable (page 3, line 3-5). He suggests language to take care of the situation where a filed tarrif may be later found to be unreasonable by a court. I am sure that the administration would have no problem with this change.

3. On page 3, line 8, Lipton suggests that we make it clear that royalties paid to individuals or corporations are also deductable As the bill stands now these are taken account of in the determination of gross value, but there should be no problem (no change in the effect of the bill) by putting this deduction here.

4. Milton questions the usefulness of the concept of book income in the allocation of "other income" (page 6, line 25).

5. On page 7, line 18, he questions the "semmetry" of the attempt to use payroll and property located on the Alaska OCS in the allocation formula for "other income".

I am not sure that the administration would accept these last two changes, although their revenue impact seems almost negligable to us.

MEMORANDUM

April 1, 1978

SUBJECT: SCS CSHB 322 and the Multistate Compact

TO: The Honorable Kay Poland

FROM: Gregg K. Erickson
Director of Research

Several weeks ago, Mr. John Warren testified before your committee and suggested that adoption of the Senate committee substitute for HB 322 would jeopardize Alaska's membership in the Multistate Tax Compact. As you requested at that time, an analysis of these assertions has been prepared and is enclosed herewith (memorandum of March 31 from Mr. Berry to me). A January 26 memorandum on the same subject is also enclosed. An even earlier memorandum is available in our files.

All these memoranda indicate fairly clearly that adoption of either the proposed or existing Senate committee substitutes for HB 322 would not jeopardize the state's membership in the multistate compact. The last paragraph of each memorandum contains a fairly concise summary of its findings.

Please let us know if you wish to have these memoranda circulated to other members, or if you believe additional work is needed in this area.

March 31, 1978

SUBJECT: Membership in the Multistate Tax Compact (Work Order No. 4448 - Part II)

TO: Gregg K. Erickson
Director
Division of Research Services

FROM: Randolph Berry RHB
Legislative Counsel

The question continues to be raised as to the effect on Alaska's membership in the multistate compact of the enactment by Alaska of a statute mandating specific accounting and allocation of income methods for corporations engaged in the production of oil and gas in the state.

As this question has been raised and discussed by various legislative and industry consultants with inconsistent or conflicting answers, it is felt that it would be worthwhile to continue and elaborate on my memorandum on that subject, dated April 28, 1976, to Gregg Erickson, with an attempt to clarify the current state of the law and the practice of allocation of income from oil production in other oil producing states.

There are presently nineteen states which have adopted or joined the Multistate Tax Compact (referred to hereinafter simply as the "compact").1/ Of the twelve major oil producing states, 2/ six in addition to Alaska have joined the compact 3/ and five have not.4/ Of these same twelve oil producing states, ten have income taxes on corporate income; 5/ and of these ten, six are members of the compact. 6/ Of the six oil producing states, in only three has there been litigation on the issue of allocation of income from extractive industry under the compact or UDITPA formula versus separate accounting or other modification of the statutory formula. The litigation in two of these states 7/ involved section 18 of Article IV (the "relief provision"), in the third, the litigation turned on the issue of whether or not the business was unitary in nature, 8/ and the "relief provision" was not raised by either side.

AGO 547913

Of the four significant oil producing states which do not belong to the compact but do impose an income tax on corporations with statutory allocation formulas, 9/ one now has a statute which specifically provides that "the income from oil production shall be allocated according to the location of the producing property." 10/ In a second, the court has upheld the requirement of separate accounting for oil production on the ground that the statutory three-factor formula is manifestly unfair to the state. 11/ In the other two, no cases involving departure from the statutory formula was found. Thus it can be seen that there is currently a wide disparity of allocation provision and practice even in the twelve states with the most significant oil production.

In considering whether separate accounting is permitted to be used or may be imposed by a compact state on a business taxpayer involved in business activity in more than one state, it should be borne in mind that the determination may occur in two stages; and either stage may result in a decision that separate accounting is permissible (or conversely that the party requesting separate accounting has not made the necessary showing).

The first stage turns on the question of whether the business activity in the particular state is separate in nature from the taxpayer's business activity in other states, or whether it is part of a "unitary" business. The definition of what is a "unitary" business varies from state to state, which has lead to inconsistencies between member states in the application of the mulitstate compact. However, for a rough working definition, one might say that a unitary business is one in which the business activities of the taxpayer in several states are so interrelated that each part is dependent on the parts occurring in other states.

If the business activity is unitary, then the compact provisions would be applicable to that business activity, and allocation would occur under the three-factor formula, unless relieved under the second stage of the determination. If, on the other hand, the taxpayer's business activity in the particular state is essentially separate and distinct from his activity in other states, then separate accounting would be appropriate, and the compact formula would not be applicable.

If the business activity falls within the definition of "unitary" as in effect in the particular state, separate accounting may still be permissible for, or required of, that business taxpayer if it is determined, under the "relief provision," that the three-factor compact formula "does not fairly represent the extent of the taxpayer's business activity" in the state.

Whereas the first stage determination of whether a multi-state business activity is "unitary" might be viewed as a decision at the front door of whether the taxpayer enters into the compact's coverage, the determination made at the second stage (under the "relief" provision) is one of whether a taxpayer, already determined to be covered by the compact, leaves its coverage out the side door.

Of the cases discussed in the memo of January 26, 1978, the two California cases - Superior Oil Co. v. Franchise Tax Board, 386 P.2d 33 (Col. 1963) and Honolulu Oil Corp. v. Franchise Tax Board, 386 P.2d 40 (1963), and the Kansas case Webb Resources, Inc. v. McCoy, 401 P.2d 879 (1965), [decided prior to Kansas' entry into the compact], all involved the threshold question of whether or not the business activity involved was unitary in nature, and the question of fairness of the statutory formula was not raised. In both the Utah case Kennecott Copper Corp. v. State Tax Commission, 493 P.2d 632 (1972) and the Louisiana case - Texas Co. v. Cooper, 107 So 2d 687 (1959) [although Louisiana is not a member of the compact, its statutory formula parallels that of the compact] the question was decided on the basis of whether the statutory formula fairly represented the taxpayer's business activity in the state, and in both instances it was determined that it did not.

Since the decision of the Webb case in Kansas, which upheld separate accounting of oil production in the state, Kansas has joined the compact (1967), and the question of separate accounting has again been litigated in Amoco Production Co. v. Armold, 518 P.2d 453 (1974), this time on the question of whether the compact's three-factor formula fairly represented Amoco's oil production business in Kansas. Although John S. Warren, in a position paper, relies on the Amoco case for the proposition that oil companies are not excludable from the compact (p. 4), the case did not in fact contain any such holding. The court did say that although the legislature had chosen to specifically exclude certain businesses from

the Uniform Division of Income for Tax Purposes Act, it had not chosen to exempt oil companies. However, the holding of the case was based on the fact that the tax administrator had misinterpreted the Act; and the case was remanded for further proceeding by the tax administrator on the question of whether the UDITPA formula fairly represented the extent of the taxpayer's business activity in Kansas. The court, (contrary to the impression given by Mr. Warren), recognized that if the tax administrator found that the formula did not fairly represent the extent of Amoco's business activity in Kansas, then departure from the formula was appropriate; and the use of separate accounting was one of the authorized alternatives.

From the above discussion, it should be evident that there is no clear authority for the statement that Alaska's enactment of HB 322 in any of its versions would jeopardize Alaska's membership in the Multistate Tax Compact. Absolute uniformity is not required by the compact; its own provisions recognize the need for some flexibility on the part of state tax administration. The court in the Kennecott case recognized that the compact formula might be inappropriate to certain industries unless modified, and the Kansas court in Amoco impliedly recognized the legislature's authority to exclude specific businesses or industries as is proposed in HB 322.

MEMORANDUM

SUBJECT: Impact of Proposed Changes in Corporate Income Tax Treatment of Oil and Gas Operations on Alaska Membership in the Multistate Tax Compact (W. O. 4448)

TO: The Honorable John Rader

FROM: Gregg K. Erickson
Director
Division of Research Services

The attached memorandum responds to your questions proposed in the above Work Order. The brief answer to your question is that neither the "franchise tax", "direct accounting", or "4th-factor" approaches are likely to be construed as a breach of the multistate tax compact.

In accordance with your instructions we are forwarding a copy of this memorandum to the Department of Revenue for comment.

Deputy Commissioner of Revenue

Alaska
STATE CHAMBER of COMMERCE
310 Second St.
Juneau, Alaska 99801
Phone 586-2323

February 14, 1978

The Honorable Kay Poland
Chairman
Senate Resources Committee
Alaska State Senate
Pouch V, State Capitol Building
Juneau, Alaska 99811

Dear Senator ~~Poland~~ Kay:

Because of the long list of technical witnesses who have appeared and testified on the oil and gas corporate franchise tax (SCS/CS HB 322), I have decided to conserve your Committee's time by putting our views on this proposal in writing.

As you know, I have attended almost all the hearings on this important subject. However, I have yet to hear anyone justify the need for this legislation which Robert Moore of Arthur Anderson's Accounting Firm testified would skyrocket Alaska's tax load to 61% higher than the national average and increase by $1.9 billion the cost to the oil industry over the 25 year life of Prudhoe Bay. Certainly it would be difficult for the State to argue we need the added income to operate government in view of pending legislation dealing with the "Permanent Fund." In the Administration's bill on the fund, HB 298, they proposed setting aside 50% of all royalties, and 100% from bonuses to operate the Permanent Fund. The House version, HB 596, calls for depositing 30% in the fund of royalties, and 100%of bonus monies, while the Senate version calls for a split of 25% royalties and 25% bonuses.

My point is, if the Administration and the legislators feel we can set aside these substantial funds, in a so called "people's savings account", then certainly additional taxes are not needed or justified.

AGO 547919

The Alaska State Chamber of Commerce firmly believes that every industry should pay their fair share of supporting needed state government services. With the oil industry presently providing over 60% of the State's operating income, certainly it would appear that they are paying their share, and then some.

Our statewide membership is representative of all of Alaska's basic industries: fishing, timber, minerals, as well as oil and gas. My concern is that if this oil tax legislation were to pass, and it resulted in putting, to any degree, a damper on future exploration for energy resources, other industries would quickly be called upon to pick up the slack and carry a heavier burden of taxation.

With the many problems presently facing all of Alaska's basic industries, the need now is for encouragement, not additional obstacles in their path to expansion.

The Alaska State Chamber requests you reject this costly, unneeded legislation proposed in SCS/CS HB 322.

Thank you for this opportunity to state our position for te record.

Sincerely,

Don

Don Dickey
President

MEMORANDUM

January 31, 1978

SUBJECT: Arthur Andersen & Company Oil Tax Study (W.O. #4812, partial)

TO: The Honorable Russ Meekins

FROM: Richard G. Haggart
Research Analyst

This memorandum is in response to your request that we analyze the Arthur Andersen & Co. report of January, 1978 ("Prudhoe Bay Field and Trans-Alaska Pipeline System Comparative State Tax Burden Study"), and the issues raised therein. Generally, you requested that we examine the following points:

1. The general accuracy of the Andersen report.

2. The applicability of its findings to Alaska.

3. Whether or not the Andersen study is an accurate representation of Alaska's tax burden on the oil industry generally (as opposed to an isolated consideration of Prudhoe Bay).

4. What other factors, if any, might modify or affect the conclusions reached in the Andersen study.

The Andersen Report

The Arthur Andersen report compares the relative tax burden on the Prudhoe Bay field and the trans-Alaska pipeline, of Alaska and seven other oil producing states -- California, Kansas, Louisiana, New Mexico, Oklahoma, Texas, and Wyoming. To make this comparison, Andersen developed a *pro forma* income and expense model for the Prudhoe Bay field and the pipeline for the period 1977-2001, based generally on publicly available data. The tax regimes of the seven other oil producing states were then transplanted to Alaska and applied to the Prudhoe Bay oil field and the Alyeska pipeline over the 25 year period. The results were then tabulated, and compared to the taxes which Andersen estimated would be paid under Alaska's current tax laws.

The study indicates that, given Andersen's assumptions, Alaska's tax system would generate the greatest amount of revenue from the Prudhoe Bay field and the pipeline of the eight states considered. *In general, we believe the Andersen study represents an accurate appraisal of the relative impact of Alaska's tax system on one oil field and its associated pipeline system. It is not, however, an accurate representation of the relative position of Alaska's oil tax system generally.* This last comment should not be considered a critique of the Andersen report *per se*, since the company performed only that analysis which was requested by its clients. As was noted above, we believe the Andersen report is an accurate response to the precise questions that were raised -- however narrow and incomplete such questions might be, in terms of determining the tax "burden" imposed by Alaska, and the effects of this "burden" on corporate incentives to find and produce oil in the state.

Outlined below are some of the major issues, which, in our judgment, must be considered in determining Alaska's relative position in terms of state taxation of oil and natural gas. Because of time and resource limitations, the material set forth below *cannot be considered definitive.* Instead, we believe it should serve as a starting point in considering the issues raised by the Andersen report and recent associated industry statements regarding Alaska's tax structure. We intend to pursue this analysis and will report further within the next two weeks.

Alaska's Taxes Outside Prudhoe Bay

By limiting the Andersen study to Prudhoe Bay and the trans-Alaska pipeline, an important aspect of Alaska's tax policy was omitted. Specifically, the state of Alaska imposes a *progressive* severance tax, designed to impose higher tax rates on profitable fields and production and much lower rates (or none at all) on less profitable production. By focusing on Prudhoe Bay, with very high per-well productivity, Alaska's severance taxes emerge at very high levels. According to the Andersen study, the effective rate of severance taxation imposed by Alaska on Prudhoe Bay is 11.2% over the life of the field.*

Alaska's relative position in terms of severance taxation, as calculated by Andersen & Co., is shown in Table I.

*We currently have underway an analysis of the extent to which this assumption departs from current expectations.

Table I
Relative Severance Tax Burden on Prudhoe Bay Oil 1977-2001

State	Aggregate Severance Tax Collections	% Gross Value
Louisiana	$5.7 billion	12.5%
New Mexico	$5.4 billion	11.4%
Alaska	$5.1 billion	11.2%
Oklahoma	$3.2 billion	6.97%
Texas	$2.2 billion	4.6%
Wyoming	$1.9 billion	4.0%

Source: Arthur Andersen & Co. report "Prudhoe Bay Field and Trans-Alaska Pipeline System Comparative State Tax Burden Study", January, 1978.

In contrast, however, a similar analysis of Alaska's tax burden on Cook Inlet (calculated for the years 1978-1980 utilizing the Legislative Affairs Agency's Severance Tax Model) results in an average tax rate of only 4.6% -- due to the much lower profitability and productivity of the Cook Inlet fields. In contrast, Louisiana's tax rate on Cook Inlet would remain at 12.5%, New Mexico's would *increase* somewhat to 12%, and Wyoming's rate would remain at 4%. The comparative severance tax burden of the six states which impose severance taxes is shown in terms of Cook Inlet in Table II.

Table II

Comparative Severance Tax Burden
Cook Inlet Oil Production 1978-1980

State	(MM/bbl) Cook Inlet Prod.	$ Value	Severance Taxes Due	% Effective Rate
Louisiana	150.5	$876.4	$109.6	12.5%
New Mexico	150.5	$876.4	$104.9[1]	11.97%
Oklahoma	150.5	$876.4	$ 61.4	7.0%
Alaska	150.5	$876.4	$ 40.6	4.63%
Texas	150.5	$876.4	$ 40.3	4.6%
Wyoming	150.5	$876.4	$ 35.1	4.0%

[1] Sum of New Mexico's percentage of value tax and cents per barrel charge.

Source: Arthur Andersen & Co. report "Prudhoe Bay Field and Trans-Alaska Pipeline System Comparative State Tax Burden Study", January, 1978; Alaska Effective Tax Rate from Legislative Affairs Agency, Research Division, Severance Tax Model.

In our judgment tables I and II are significant indicators of one of the important aspects of Alaska's current tax structure: namely, that Alaska imposes much lower tax rates on marginal or expensive production than do most other states. This relative flexibility of Alaska's severance tax statute, and its ability to operate without harming the essential profitability of high-cost or marginal producers, is not adequately addressed by the Andersen study which limits its consideration to the Prudhoe Bay field.

Another important consideration, and one that does not appear in Table II, is that Alaska's tax rate on such marginal fields *continues to decline* as the field's production goes down. Hence, while Alaska's *average* rate for the 1978-1980 period covered in Table II is 4.63%, it is declining each year. Thus, in 1978 the rate is 4.96%, in 1979 it is 4.59%, and in 1980 is down to 4.26%. In contrast, the rates of the other states in the Andersen study will not change appreciably as the rate of production in Cook Inlet declines -- and consequently, would pose ever increasing tax burdens on the producers in that field.

Suitability of Alaska's Tax Structure

Another consideration not addressed in the Andersen report, is the degree to which Alaska's tax system has been uniquely tailored to Alaska's oil situation. Like , it is at least plausible to assume that other state's have acted simila..y in designing their own tax systems. Consequently, it is useful to delineate the differences between various producing states that have lead to such different tax structures, and to consider how such different circumstances might make state-to-state comparisons difficult or misleading.

Table III outlines one key distinction between Alaska and several other representative producing states -- average per well productivity.

TABLE III

Well Productivity Calendar 1975

State	Average Daily Production
Alaska	947 bbl/d/well
Louisiana	64 bbl/d/well
California	21.7 bbl/d/well
Texas	20.0 bbl/d/well

While certainly not the sole determinant, well productivity is a very significant factor in determining profitability of a well. It is useful to note that in 1975, prior to any production at Prudhoe Bay, Alaskan oil fields produced at the highest average rate in the United States. The only other state in the U. S. with an average well productivity over 100 barrels per day was Florida. In comparison, recent productivity estimates of Prudhoe Bay wells indicate an average daily production of about 5000 barrels per day -- and the Department of Revenue anticipates that in peak production, the average will be in excess of 7000 barrels per day per well.

Yet another comparative measure between the various states is the success rate of exploratory ventures. Table IV outlines expenditures for drilling in calendar year 1975 for three states, along with reserves discovered.

TABLE IV

Cost of New Reserves & Field Extensions Calendar 1975
Compared with Prudhoe Bay

State	Drilling Exp. ($ Million)	Oil Found (MM/bbl)	Cost/bbl ($/bbl)	Finding Cost as % of Wellhead Value[1]
California[2]	$ 231.7	18.1	$12.80	100%
Texas[2]	$1507.6	329.9	$ 4.57	35.7%
Louisiana[2]	$2138.6	311.3	$ 6.87	53.7%
***				
Alaska[3] (Prudhoe Bay)	$3,000-$8,000	7,600	$0.395-$1.130	7% - 20.1%

[1] Wellhead values for these three states were assumed to be $12.80 per barrel for newly discovered oil. This figure utilizes the $13.30 per barrel market value for Alaskan crude used in the Andersen study, adjusted for a $0.50 per barrel marketing and transportation charge. It is used for general purposes of comparison only and is not meant to be a definitive valuation of new crude oil discovered in these states.

[2] Data for these three states was calculated from the Joint Association Survey and the Basic Petroleum Data Book, both published by the American Petroleum Institute.

[3] Values for Alaska were taken from the Arthur Andersen & Co. report, January, 1978.

Tables III & IV are not meant to provide a conclusive demonstration of some aggregate level of profitability of Prudhoe Bay oil. They are, however, illustrative of several comparative measures by which relative levels of state taxation could be compared. On the basis of the data in the Tables, Prudhoe Bay and Alaska generally, clearly emerge as an unusually productive oil province. For example, in 1975, even without Prudhoe Bay, Alaska's per well productivity was 43 times greater than that of California. If current Prudhoe Bay production is included, the ratio expands to over 240 to 1 -- meaning that the average California well produces only about 4/10 of one per cent as much oil per day as does an Alaskan well. Despite this vast disparity, Alaska's tax level on Prudhoe Bay is only about 8% greater than that which would be imposed under California's system of taxation. Again, based on return on investment (as measured by development costs versus wellhead prices) Alaska's oil emerges as highly profitable production, relative to recent experiences in other states. Thus, utilizing the Andersen data, the *full* finding and development over the entire life of the field costs of Alaska oil in Prudhoe Bay total only about 20% of wellhead value on a per barrel basis. This can be compared with the weighted average drilling cost (which does *not* include full field development expenditures as does the Alaska figure) for the three states in Table IV, which is 46% of the wellhead value. It should be noted here that investment in the trans-Alaska pipeline should not be included in these sorts of calculations, since for comparative purposes, the carriers are earning *no less* a rate of return on the pipeline than they would in any other taxing jurisdiction. And, even if the pipeline were included in the calculation, total investment in the line and the field would still only total 41% of the wellhead value of the Prudhoe Bay reserves 5% less than the weighted average of the states in Table IV.

Conclusions

The Andersen study compares the Alaska tax system with seven other taxing jurisdictions and concludes that in terms of Prudhoe Bay, Alaska's tax burden is the highest. For the reasons discussed above, we believe the Andersen study is of very limited value in determining whether or not Alaska's tax structure is "fair" or whether it is excessive compared with other states.

The key element in Alaska's tax structure which is not reflected in the Andersen report is the essentially progressive nature of the state's severance tax. *It is absolutely clear that if Alaska's severance tax system were transferred, without modification, to the other five states that impose severance taxes (as outlined in the Andersen report) the severance tax collections would be virtually nil in those states.* This is simply because Alaska's current law imposes no severance tax on wells producing less than 300 barrels per day, while the average daily production in *all* states, save Florida, is less than 100 bbls/d. As a consequence, we believe that Alaska's tax system would generally rank relatively low

if it were transferred "as is" to other states. What does this prove about Alaska's "tax burden"? In our judgment, it proves little, save that indiscriminate transfers of state tax systems among otherwise dissimilar jurisdictions can produce somewhat unusual -- and misleading -- results.

The Honorable Kay Poland
The State Senate
Pouch V
Juneau, AK 99811

Dear Senator Poland:

I subscribe to both the morning and evening newspapers here in Anchorage. From what I read I reach the conclusion that the oil industry pays more than its fair share of taxes in the State of Alaska. These newspapers and the TV news media state that Alaska taxes the oil industry the highest of any state in the Union. There might be some argument that by some standards that Alaska does not tax the highest but there seems to not be any argument by any standards that Alaska is at least second highest in assessing taxes upon the oil industry of any state in the Union.

These same sources of news point out that the current Legislature wants to raise these taxes significantly higher so that, among other things, there will be no question in anyone's mind as to which state treats the oil industry worst in providing an encouraging environment for the discovery and development of additional reserves of oil. The industry drilled only ten exploratory wells in 1977 in Alaska, a state twice the size of Texas which drilled over 3,000 exploratory wells. The only conclusion I can reach is that the Alaskan Legislature does not want the oil industry's presence in Alaska except on a subsistence level to where no risk capital can be generated for a meaningful amount of exploratory drilling.

I work in the oil industry and have done so for well over 30 years. I have lived in Alaska six years. My family and I enjoy Alaska. I wish to finish my career in the oil industry working here in Alaska.

I want you to know that if I hear that further oil industry taxation is passed by the legislative session or future legislative sessions, I will express my disgust in the voting booth and encourage my family to do the same. I furthermore will encourage my friends, neighbors and business associates including storekeepers, barbershops and all to express themselves similarly in the voting booth. I will exhort my family to encourage their friends, neighbors, business associates, storekeepers, etc. to do the same thing. Please make it possible for me not to have to carry out such a threat.

Sincerely,

L. V. Gefvert

AGO 547929

February 10, 1978

Senator Kay Poland, Chairwoman
Resources Committee
Alaska State Legislature
Pouch V
Juneau, Alaska 99811

Dear Senator Poland:

The reason for my writing is to let you know my thoughts on the on-going debate relating to increasing, stabilizing or decreasing taxes being sought on oil, minerals and the like.

First: I am in the middle income group, work in a non resource oriented field - health care, don't know too much about oil taxation, am a moderate politically, and feel that non-renewable resource development - although perhaps destructive at times to the enivornment - is a fact of life to our country until another reasonable energy source can be developed that is affordable to the general population. If we have the resource - it should be developed, and in developing we should encourage the industry - not make them pay through the nose at the expense of all the consumers who end up paying for it (because of high taxes).

Alaska, to me, is a land of many special interests to special interest groups. There are very few people here who don't have a special interest. Some of these special interest groups can contribute significantly to our tax base - monies which will and are used to pay for the many services required by non-income producing special interest groups. As there are only a few groups that can make this contribution via taxes, then it looks to me that 1. we either have to stop spending - if taxes are to stay the same 2. Increase their taxes over and over and over -- or tax the public higher and higher or 3. Bite the tax bullet for a while to stabilize taxes - so other companies might look to Alaska as a good place to come and invest. New companies could then help to pick up the slack in tax revenues that we have been taking from a few and revenues would be increased because of larger numbers contributing a moderate amount - rather than a few paying all the freight.

Lastly, I seriously wonder if all the money we are asking for is all that necessary. I realize that we have to look to the future (a la permanent fund savings), but that is only if we are going to continually rely on non-renewable resources for our revenues. I would rather be more optimistic about Alaska and say that our growth potential in other industries which don't have to totally rely on these resources can be as great in revenue producing efforts.

Lets stabilize our tax base so investors won't be looking over their shoulders each year - thinking that the legislature is going to change taxes and structures every year. No company can feel comfortable with that spectre facing them.

Don't increase taxes to oil and gas. I would hate to see those golden eggs turn to lead -- while at the same time turn potential nuggets of potential in another direction to line someone elses pocket.

AGO 547930

The point here is not whether ARCO, Exxon, Mobile, BP and others are making alot of money here or anywhere else. The point is that Alaska must continue to provide from a stable base, and that means encouraging other industries in addition to our good working relationship with the non-renewable people in resources.

Our people (me included) and the existing companies are now paying some of the highest taxes in the nation. Frankly I think our state is overspending in some areas and that there is some waste. The fishing,commercial and sport industries, timber development, and soft ware and service industries are taking a back seat in being encouraged. As long as we continue to change and increase taxes, the situation is going to become worse.

As just a regular tax power, who lacks the sophistication of totally understanding this whole complex structure, I hope that you will consider my points.

Thank you for your consideration.

Sincerely,

Chris Beardsley

TABLE I

Net Income Tax Liability in Prudhoe Bay Under Present Tax Laws and Under Proposed CS for CS for HB 322 (Resources)
($ Thousands)

	Pre-Tax Net	State Income Tax	Federal Income Tax	Total Income Taxes
Current State Income Tax[1]	$37,294.000	$1,539,000	$17,162,000	$18,701,000
Effective Rate on Pre-Tax	NA	4.1%	46%	50.1%
Income Tax Under Proposed Substitute[2]	$37,294,000	$3,506,000	$16,218,000	$19,724,000
Effective Rate on Pre-Tax	NA	9.4%	43.5%	52.9%
Net Change in Liability[3]	NA	+$1,967,000	($944,000)	+$1,023,000
Net Change in Rate	NA	+5.3%	(2.5%)	+1.8%

1 Pre-tax net income and estimated state income taxes from Prudhoe Bay and the trans-Alaska Pipeline system are taken from the Arthur Andersen & Co. report of January, 1978. Federal tax liability is assumed to be 48% of pre-tax after deduction of state income taxes. Total taxes are the sum of state and federal taxes.

2 Pre-tax net income is taken from the Arthur Andersen & Co. report of January, 1978. State income taxes were calculated as 9.4% of pre-tax net. Federal income taxes were assumed to be 48% of pre-tax after deduction of state income taxes. Total taxes are the sum of state and federal income taxes.

3 Net changes in tax liability represent the increase (or decrease) in tax liability for state, federal and total income taxes under the proposed substitute.

TABLE I

Impact of Proposed CS for CS HB 322 (Resources)
On Relative Prudhoe Bay Net Revenue Shares
($ Millions)

	Existing Statute		Proposed Substitute		Net Change	
	Net Revenues	Per Cent Share	Net Revenues	Per Cent Share	Change in Revenues	Per Cent Change in Revenues
Companies	$18,593	35.2%	$17,570	33.2%	($1,023)	(5.5%)
State	$17,086	32.3%	$19,053	36.1%	+$1,967	+11.5%
Federal Government	$17,162	32.5%	$16,218	30.7%	($944)	(5.5%)

Note: Based on Arthur Andersen & Co. report of January, 1978. State revenues include all royalties and taxes. Federal revenues are assumed to be 48% of pre-tax income after deduction of state income taxes. Net revenues to the companies is assumed to be pre-tax income less state and federal income taxes.

Figures in Table I are for the three largest oil producers in Prudhoe Bay (representing 93.7% of production) and for the four largest owners of the trans-Alaska pipeline system (representing about 90.18% of ownership).

AGO 547936

Prepared by:

Legislative Affairs Agency
Research Division
24 March 1978

STATE OF ALASKA
DEPARTMENT OF REVENUE
OFFICE OF THE COMMISSIONER
JAY S. HAMMOND, GOVERNOR
POUCH S — JUNEAU 99811

Summary of the Proposed Committee Substitute for House Bill 322

This proposal contains provisions of both the original House Bill 322 as introduced by the Governor and the Senate Committee Substitute for House Bill 322. It represents a compromise between the two versions which retains in large part the concept of separate accounting approach to assessing oil and gas production and pipeline transportation income, but works to avoid the problems of corporate manipulations and profit shifting by providing the state greater control in the determination of that income. It also contains elements of the original House Bill 322 for purposes of determining that portion of the income earned by oil and gas corporations from activities other than production and pipeline transportation.

DETERMINATION OF INCOME

1. Oil and Gas Production

Production income is determined under a separate accounting method. That is, instead of taking world-wide income and apportioning that income to the state based upon a formula, the income in the state is determined directly by looking only at the income and expenses of the production activity in the state. This is done as is in the bill adopted by the Senate Resources Committee by taking the well head value of total production as gross income and deducting a specified list of expenses to arrive at net income. The same list of deductions is retained except an allowance for general administrative expense or overhead is made.

The major change to the approach however is that the state plays a major role in the determination of the income by assessing the net income and tax due. This direct role by the state in assessing income will hopefully avoid the possibilities for profit shifting and other income manipulations.

AGO 547937

2. Pipeline Transportation

Income from pipeline transportation is also determined on a separate accounting basis. As in the Senate Resources Committee substitute, the income is determined according to amounts reported to the Federal Energy Regulatory Commission.

This income is also assessed by the department.

3. Income from Activities other than Pipeline Transportation and Production

Income from activities other than production and pipeline transportation is determined under a formula approach after subtracting out production and pipeline transportation income.

First the world wide book income of the corporation is determined. From this amount is subtracted the income determined separately for production and pipeline transportation activities. The remaining net income is then apportioned using the present uniform formula of property, payroll and sales. Since production and pipeline transportation income are determined separately that portion of property, payroll and sales attributable to these activities in Alaska are subtracted from the numerators and denominators of the apportionment formula. What remains in the formula is just the elements of property, payroll and sales attributable to other activities.

In addition the proposal would adjust the apportionment formula to take account of OCS activity.

PUBLIC REPORTING AND LEGISLATIVE OVERSIGHT

As in the Senate Resources Committee Substitute, annual reporting of aggregate income and expense statistics is provided for. In addition, the proposed substitute provides for an annual review of the department's assessment actions by the legislative auditor with an annual report to the legislature.

ASSESSMENT

This proposal differs from the Senate Resources Committee Substitute in that the department is provided more control in the determination of income. This is done to help avoid profit shifting and other manipulations of income. Thus the authority is given to the department to assess directly the income taxable under the proposed statute. The resulting income that would be assessed is then taxed at the standard corporate income tax rate of 9.4 percent.

Rental

BEFORE THE SENATE RESOURCES COMMITTEE

TESTIMONY OF

CRAWFORD H. THOMAS

SCS for CS for HB 322

February 24, 1978

Madame Chairman and Members of the Senate Resources Committee:

My name is Crawford Thomas. I live in Sacramento, California. I have had a long association with state income taxation. I am now retired. Until my retirement in early 1974, I was Chief Counsel of the California Franchise Tax Board for eight and one-half years. The Franchise Tax Board administers the income tax in California.

I commenced working for the Board as an attorney in 1940. My entire time while I was associated with the Board was devoted to legal and administrative problems of state income taxation.

I estimate that about one-half of my time was spent on matters involving the taxation of the income of multistate businesses and the apportionment of such income.

I started my career in taxation at the time when the unitary concept, which you have heard discussed at some length, was first being seriously applied, although the concept had been recognized for some time. I participated in the extension of the unitary concept from its application to a single corporation to its

application to parent and subsidiaries, to foreign subsidiaries and, finally, to the so-called world-wide combinations. I understand that your state now uses essentially the system as is in effect in California.

I was heavily involved for several years in opposition to federal intervention in state income taxation, through the Willis bill and its successor bills.

I was involved with the Uniform Division of Income for Tax Purposes Act, from the time it was first being seriously considered by the states. I supervised the drafting of regulations under this act, which later became the basis of the regulations adopted by the Multistate Tax Commission. Alaska was one of the first states to adopt the Uniform Law for dividing income.

I was involved with the Multistate Tax Compact from the very birth of the Compact idea.

Some substantial portion of my time was spent reviewing and analyzing proposed tax legislation in the California legislature. A prime reason for this review was to spot problems in proposed bills. I have reviewed the bill before you and I have found what I believe to be some major problems. I would like to discuss these problems.

Under your present Alaska law and your administrative practice, an integrated oil business is treated as a unitary business and its Alaska income is determined to be that percentage of its total income, as determined by use of the standard apportionment formula of property, payroll and sales.

This method of apportionment is set forth in the Multistate Tax Compact which Alaska has adopted as its law.

This Compact has a higher status than an ordinary state law. It is a solemn covenant entered into by Alaska and some 18 other states, guaranteeing that taxpayers will be taxed in accordance with the terms of this Compact.

This bill does not amend the Multistate Tax Compact contained in your present law.

I doubt that having adopted the Compact, a state could unilaterally amend it, without violating the Compact and eliminating Alaska as a Compact state.

This bill starts out by saying that, notwithstanding the present law which provides that income shall be apportioned as provided in the Compact, the income of oil and gas production or transportation companies derived from Alaska shall be determined by separate accounting under the provisions of Sec. 18 of Article IV of the Compact.

I shall return to this Section 18 in a moment and at some length.

This bill thus segregates unitary oil and gas producing or transporting companies from other unitary companies and says oil and gas companies, alone, must use a separate accounting procedure. It thus treats these companies as conducting businesses in Alaska entirely separate and distinct from the rest of their world-wide completely integrated businesses.

Now, having totally discarded the unitary concept and use of the uniform formula for computing Alaska production or transporation income, the bill completely reverses itself and considers the out of state income, less the Alaska income, to be unitary income and apportions this by use of a two factor formula which uses only the property and payroll factors.

This treatment of a business as non-unitary for one purpose and unitary for another is completely inconsistent.

We now come to a very major problem, one that I believe has not been sufficiently called to your attention.

If my analysis is correct, then enactment of this bill will not change the present method of apportionment of oil companies. The reason is that in enacting the Compact you also enacted Article III, Section 1 of the Compact. This section provides

that a taxpayer may elect to apportion its income either under the state law, or under Article IV of the Compact which is the uniform apportionment law. By enacting and entering into the Compact, Alaska guarantees this option to its taxpayers to use the formula of property, payroll and sales.

If this bill is enacted as law, an oil company would have a very strong legal argument that it could exercise its option not to report under this law, but to report under the Compact and use the uniform apportionment formula rather than the method used in this bill.

I can find nothing in anything presented to you denying that this would be so.

This bill apparently seeks to eliminate the taxpayer's option by attempting to use Article IV, Section 18, of the Compact to force oil companies to apportion their income by separate accounting.

You will recall that Section 18 states that if the uniform formula does not fairly represent the extent of the taxpayer's business activity in the state, the tax administrator may require the use of separate accounting or a change in the formula.

Leaving aside for the moment the fact that under this bill the legislature and not the tax administrator is making the deter-

mination, I think we should look at this Section 18 in some depth.

Two years before Alaska adopted the Uniform Act for division of income now contained in the Compact, Professor Pierce of the University of Michigan, the drafter of the Uniform Act, published his article (35 Taxes 747 (1957)) stating that Section 18 should be employed sparingly and only to avoid situations which were unusual and where use of the uniform formula would create constitutional problems.

In other words, it was to take care of unforeseen situations unknown at the time the Act was drafted.

My personal knowledge, gained at meetings with state representatives to discuss the Uniform Act, is that the states were very wary of this section. It was felt that unless Section 18 was strictly interpreted, the Uniform Act could not achieve uniformity and could be rendered meaningless.

This strict interpretation has also been the interpretation of the states, including Alaska, forming the Multistate Tax Commission and entering into the Compact.

This strict interpretation is set forth in Regulation IV-18 of the regulations issued by the Multistate Tax Commission.

AGO 547944

The first paragraph of the regulation merely restates the text of Section 18. The second paragraph is very important. I do not believe it has been brought to your attention.

That paragraph states:

> "Article IV, Sec. 18 permits a departure from the allocation and apportionment provisions of Article IV only in limited and specific cases."

Here, the attempt in the bill before you is not to apply it to limited and specific cases, but to an entire industry.

The paragraph of the regulation continues to read:

> "Article IV, Sec. 18 may be invoked only in specific cases where unusual fact situations (which ordinarily will be unique and nonrecurring) produce incongruous results under the apportionment provisions contained in Article IV."

There is nothing unusual about the fact situation concerning oil companies. Oil companies are not unusual. They have been around for years. For the same reason, it is not a "unique" situation as referred to in the regulation.

It is not nonrecurring, it is a permanent situation.

The results are not incongruous, that is, unfit or inappropriate. To the contrary, they are fit and appropriate for a unitary business. About 95% of the other states, including Alaska, so hold, as does the great weight of legal authority in this country.

Getting back to Section 18, it specifically says that the tax administrator shall make the determination to use a different method of apportionment. It does not give this authority to a legislature.

As the section is to be used only in specific and unusual cases, this is not only a sound requirement but a vital one.

Only the tax administrator is in a position to investigate specific cases, and only he can make a determination that the case falls within the intent of the section and the regulations.

The Oregon Supreme Court has twice decided that the burden of proof is on the party seeking to invoke Section 18, whether the party be the taxpayer or the State. (Donald M. Drake Co. v. Dept. of Revenue, 236 Ore. 26,500 P2d 1041; Coca-Cola Co. v. Dept. of Revenue, ___ Ore. __,___ P2d ____).

This major problem, as I see it, is that under the present facts, the administrator would have a very difficult time

meeting the burden of proof. The legislature could not. It would not only not be a party to the proceeding, but a mere legislative declaration that the formula does not fairly represent the extent of the business activities in the state is not proof.

The next major problem is that even if the proper party invoked Section 18, or if Alaska withdrew from the Compact and enacted a law requiring oil companies to allocate income by separate accounting, your revenue department, in either instance, would encounter extreme legal difficulties in putting the law into effect and enforcing it.

As others have testified at great length, the great weight of legal authority in this country is that integrated multistate companies such as these are unitary businesses.

I am not aware that you have been given any testimony or information that such companies are not unitary.

As others have also testified, if a business is unitary, the use of the formula is required to determine the income to be apportioned to the state.

I am not aware that you have been given any testimony or information that this is not so. Your revenue department has

consistently taken the position that this concept is correct. The department's position is a matter of public record.

The only support I have seen for the use of the separate accounting method comes from your consultant, Milton Lipton. Mr. Lipton has simply stated a conclusion that there is a deficiency in the present income tax structure and that separate accounting is the way to cure the deficiency, as it will produce more revenue from the oil companies. Mr. Lipton has avoided the vital question of whether the separate accounting method may, in fact, be used.

In the face of the problems I have just outlined, plus those matters addressed by such undisputed experts in their fields as Mr. Kust, Mr. Warren, and Professor Boren in their papers and testimony, it would seem to me that this committee should need more than the mere unsupported conclusion of Mr. Lipton that use of separate accounting rests on a firm legal foundation.

I am aware of Alaska's situation, that the oil is being extracted and revenues from this source will decline unless new fields are developed.

I am also aware that oil is a wasting asset and that Alaska may not have a highly diversified tax base.

AGO 547948

If litigation should result from enactment of this bill, I think that a court would have no choice but to simply focus only on the question of whether the method used to determine income attributes to Alaska her share of the unitary income. I do not believe other matters should or would be considered by the court.

From the available material I have reviewed, it appears to me that Alaska's tax burden on oil companies is as high as that imposed by other states.

I am convinced that these companies are paying an effective rate of tax of 9.4%. They are paying a tax of 9.4% upon that portion of their income properly apportioned to Alaska.

For example, if the ABC Oil Company's total net income is $10 million and 10%, or $1 million, is apportioned to Alaska by the formula, then the ABC Company pays a tax of $94,000, or exactly 9.4% of its Alaska income.

To say, for example, that the effective rate of tax is only 4.7%, requires the assumption that $2 million rather than $1 million is the amount of income derived from Alaska sources.

Those that so argue rest their assumption upon the conclusion that Alaska income must be determined by a separate accounting method.

All the testimony you have received shows that such conclusion has no foundation and nothing has been offered in its support.

In going over these matters, I have several times noted the comment that Alaska is not taxing the value of the oil extracted. Such statements misconceive the purpose and function of an income tax. An income tax is not intended to tax the value of oil produced within a state or anything else produced therein.

It is intended to tax that portion of the income of the entire taxpayer entity properly apportioned to the state.

Using an income tax to tax the value of oil produced is simply using the wrong vehicle on the wrong road.

Age:	67
Education:	University of California University of California Hastings College of Law, LL.B. 1937
Experience:	Admitted to Califrnia Bar 1937
1937-1940	Associate attorney, Shelton, Gray & McWilliams, San Francisco. Corporation, probate and tax law practice.
1940-1942	Junior and Assistant Tax Counsel, Office of Franchise Tax Commissioner, Sacramento. Legal work in connection with administration of Franchise Tax Act, Corporation Income Tax Act and Personal Income Tax Act.
1942-1946	Military service, including ordnance procurement, contract renegotiation and price redetermination, St. Louis Ordnance District. Legal Officer, Military Government, Japan.
1947-1965	Associate Tax Counsel, Franchise Tax Board. Experience in this position is outlined below.
1965-1973	Chief Counsel, Franchise Tax Board. Experience in this position is also outlined below.

Thirty years of my entire legal career has consisted in working with state franchise or income taxation. I commenced work with the Franchise Tax Commissioner in the year of the landmark decision in Butler Bros. v. McColgan, and have, so to speak, grown up with the unitary concept. I participated in the extension of this concept to parent and subsidiary corporations and use of the combined return, world wide combinations, and through all of the developments of the doctrine to its present form and use.

I have handled protested cases and hundreds of appeals involving every facet of this question, participated in all the California legislation, and assisted the attorney general in the preparation in all of the California court cases affirming or extending this doctrine. I estimate that close to a major portion of my time was spent on matters involving the unitary business.

In the eight and one half year period in which I was Chief Counsel of the Franchise Tax Board, I supervised all protests, appeals, litigation and legislation involving the unitary business. I participated in many studies and conferences with industry groups, including the oil industry. I was heavily involved in studies of, and opposition to, attempts by Congress to have federal intervention in the state tax field via the Willis bill and its successor bills. I participated in or supervised California's involvement in the affairs of the Multistate Tax Compact and Commission.

I have made many appearances before legislative committees, the Willis Committee, conferences of state tax administrators and tax executives, chambers of commerce and other groups concerned with state taxation.

My experience has given me an in depth knowledge of the problems faced by the state tax administrator and his legal counsel in the interpretation and enforcement of the unitary concept.

TO: CHAIRMAN, HOUSE RESOURCES COMMITTEE
AND ALL COMMITTEE MEMBERS

FROM: SUB-COMMITTEE ON OIL & GAS

During the week of march 21 - 26 the Joint Senate and House Resources Committees met to hear testimony relating to the various oil and gas taxation bills currently before us. Some of the bills under discussion, have not been refered to this committee.

Of the ones that have been, the Sub-committee on Oil and Gas recommends that H.B. 321, H.B. 322, C.S.H.B. 323, H.B. 328, and S.B. 274 be brought to the full committee's attention for consideration and that they be acted upon and passed out of committee no later than April 7.

Each of these bills have a further referal to House Finance and the Finance Committee has scheduled hearings and work sessions on these bills beginning early next week. Representatives from the oil companies and several nationally recognized economists will be present. We urge all members, who are able, to attend.

RECOMMENDED BILLS

H.B. 321 - SEVERENCE TAX

This tax, in our opinion, rates highest in priorities. It's timeliness is dependant upon the actions undertaken by the Federal Energy Administration in setting a recommended "well head" price by April 15, 1977, and further by actions later taken by the I.C.C. in recommending the transportation cost of North Slope crude. For other features of the bill, we refer the committee's attention to the Governor's transmittal letter for H.B. 321, included with this report.

H.B. 322 - ALASKA NET INCOME TAX OR FRANCHISE TAX

This tax bill, in our opinion, has several advantages over our present income tax collection system. It is easy to administer, is based upon the amount earned within the state, including OCS development, and would provide the State and the industry with a stable taxation policy for years to come. For other features, we refer you to the Governor's transmittal letter for H.B. 322, included in this report.

AGO 547953

H.B. 323 - PROPERTIES AD VALOREM TAX

This tax bill, in our opinion, is premature. It would increase the scope of taxable property to include refining, liquefaction, and marine transportation. We believe that it would act as a "disincentive", at this time, for future development within our state, and of all the tax bills before us, meet with the most resistence. Accordingly, we have asked the Department of Revenue to place before this committee, a committee substitute for H.B. 323 which would reduce the bill to a "house-keeping" measure. This has been done and is before the committee for consideration.

H.B. 328 - RESERVE TAX

This tax bill amends the reserves tax bill to allow a credit reduction of tax levied 12 [20] if the oil flow through the Trans-Alaska Pipeline by October 1, 1977 has reached at least 600,000 barrels of oil on a daily average. Otherwise, the bill extends the reserve tax beyond the December 31, 1977 effective date of the original act. We urge its passage.

S.B. 274 - THE TAKING OF OIL AND GAS ROYALITY IN KIND

This bill requires that royality oil and gas be taken "in kind" rather than in money unless deemed otherwise by the commissioner, the Alaska Royality Oil and Gas Development Advisory Board, and the the Legislature. As an encouragement for future development within our state, we urge the passage of this bill.

KLP ?
Will you taking up that last Amendment that's supposedly Student part of?

AGL 547954

CONCLUSION:

The Sub-committee bleieves that the passage of these tax proposals, taken in conjunction with the desire to have the Alaskan Permanent Fund replace the eventual and inevitable passage of our nonrenewable resources, will produce a desired benefit for the State of Alaska. We further believe that they <u>will not</u> act as a disincentive for the oil industry and that their passage will ensure Alaska's "fair share" in the wealth of our state. Regarding this aspect, we urge committee members to read the Tanzer Report, "IMPACT OF INCREASED TAXATION ON OIL EXPLORATION AND DEVELOPMENT IN ALASKA", submitted to all members of the Alaskan State Legislature on March 25, 1977.

We have asked that Mr. John Messenger from the Department of Revenue be present to assist committee members in answering their questions and would, as this time, like to highly commend the staff of Senate and House Resources for providing the back-up material needed for the committee's deliberations.

Rep. Merle G. Snider
Rep. Hugh Malone
Rep. William Akers.

HOUSE BILL NO. 321 by the Rules Committee by request of the Governor, entitled: HB 321

"An Act relating to the oil and gas properties production tax; and providing for an effective date."

was introduced, read the first time and referred to the Committees on Resources and Finance.

The Governor's transmittal letters appear following the bill to which it pertains; fiscal notes appear in House Supplemant No. 31 to today's journal.

"March 8, 1977

HB 321

The Honorable Hugh Malone
Speaker of the House
Alaska State Legislature
Juneau, Alaska 99811

Dear Mr. Speaker:

Under the authority of art. III, sec. 18 of the Alaska Constitution, and in accordance with AS 24.30.060(b) and the Uniform Rules of the Alaska State Legislature, I am transmitting a bill relating to the oil and gas properties production tax.

As a result of a recent study of Alaska's oil and gas tax structure, the Department of Revenue has recommended several changes in the state's production or "severance" tax. This bill incorporates those specific recommendations.

Currently the state's oil production tax is calculated according to "stair stepped" rates depending upon the level of production for the lease or property. As currently structured the tax may have an adverse impact upon a particular property as it reaches its economic limit. The "stair step" approach may not alleviate this adverse effect since the economic limit may vary substantially from one part of the state to another. This is because it may be more costly to produce and transport the oil in the more remote areas of the state. Accordingly, the bill contains an economic limit mechanism which automatically scales the tax rate down as the production nears its economic limit. This will insure that the tax will not unduly inhibit oil production as it reaches its economic limit.

One of the immediate dangers which face the state's revenue picture is the potential for artificially depressed pricing of the state's North Slope oil. This could result from federal pricing decisions or excessive tariff costs from the wellhead to the refinery. To insulate the state's petroleum revenues from these forces, the bill provides for a mechanism which would raise the cents-per-barrel floor to correspond to a mid-range market value for North Slope oil and tie that floor to an index which will let the floor keep pace with inflation.

One of the Department of Revenue's recommendations -- the oil and gas surtax -- which was designed to offset revenue losses due to depressed pricing of North Slope oil and which was to be imposed only on holders of state-owned leaseholds was deleted on the advice of this department because of the substantial legal problems involved.

The bill places the tax on gas at a parity with the tax on oil. Currently gas is taxed at only 4 percent while oil is taxed from 5 to 8 percent. The bill would tax both oil and gas at 10 percent. In addition, the bill sets a cents-per-Mcf floor for the gas tax similar to the cents-per-barrel floor for oil. This new floor for gas corresponds to the highest market price in the state, and it too is tied to an index to keep pace with inflation.

Sincerely,

Jay S. Hammond
Governor "

AGO 547956

HOUSE BILL NO. 322 by the Rules Committee by request of the Governor, entitled: HB 322

"An Act establishing an oil and gas corporate franchise tax; and providing for an effective date."

was introduced, read the first time and referred to the Committees on Resources and Finance.

"March 8, 1977

The Honorable Hugh Malone
Speaker of the House
Alaska State Legislature
Juneau, Alaska 99811

Dear Mr. Speaker:

Under the authority of art. III, sec. 19 of the Alaska Constitution, and in accordance with AS 24.50.060(b) and the Uniform Rules of the Alaska State Legislature, I am transmitting a bill establishing an oil and gas corporate franchise tax.

The Department of Revenue, in its oil and gas tax study, found two basic deficiencies with the corporate income tax as it relates to oil and gas corporations. This bill would correct those deficiencies.

The first problem is the eroded federal tax base. The department found that the federal corporate tax base HB 322 which Alaska has adopted has been substantially eroded by special exemptions, deductions, credits and other accounting devices. The result has been that oil and gas corporations pay an effective tax rate much smaller than the statutory 48 percent. Accordingly, the bill would enact a separate franchise tax on a corporation's "book income." "Book income" is the net income which the corporation reports to its stockholders. This would eliminate all the special Congressional tax provisions.

In addition, the departm found that the present apportionment formula does not fully represent the oil and gas corporate activity in the state. The present formula of property, payroll, and sales generally measures corporate business activity in the state. For natural resource companies, however, it does not. No reflection in the present formula is made for the scarcity value of the oil and gas produced. Accordingly, the bill will substitute for the present sales factor an extraction factor which will give weight specifically to oil and gas production activity.

One of the advantages of this franchise tax is that it will take into account elements of property, payroll, and extraction located on the Outer Continental Shelf which causes a resulting impact on the adjoining state. Thus property, payroll, and extraction not located in any state but which are located off the shores of an adjoining state which is impacted by the oil and gas production activity will be allocated to that state suffering the impact. Although this latter provision may raise some constitutional law questions, we believe that the proposal comes within the limits of the state's taxing powers given the impact on the coastal communities of our state of these OCS activities.

Sincerely,

Jay S. Hammond
Governor"

AGO 547957

HOUSE BILL NO. 328 by the Rules Committee by request of the Governor, entitled:

HB 328

"An Act amending the oil and gas reserves ad valorem tax; and providing for an effective date."

was introduced, read the first time and referred to the Committees on Resources and Finance.

" March 9, 1977

The Honorable Hugh Malone
Speaker of the House
Alaska State Legislature
Juneau, Alaska 99811

Dear Mr. Speaker:

Under the authority of art. III, sec. 18 of the Alaska Constitution, and in accordance with AS 24.50.060(b) and the Uniform Rules of the Alaska State Legislature, I am transmitting a bill amending the oil and gas reserves ad valorem tax.

Section 1 of this bill proposes that the reserve tax levy be reduced from 20 mills to 12 mills this year with the condition that an additional levy will be made if there is a delay in the start-up of the Trans-Alaska Pipeline.

This amendment is proposed because the state has a budget surplus for FY 1977. This surplus is somewhat illusory, however, since the reserve tax payments may be recouped by oil and gas producers by credits against future severance tax. Accordingly, the adoption of this measure would reduce the surplus for 1977 and also reduce the amount "borrowed" from future revenues.

Section 2 provides for a contingent 1978 assessment at a rate to be determined by that year's legislature.

Sincerely,

Jay S. Hammond
Governor"

AGO 547958

HOUSE BILL NO. 323 by the Rules Committee by request of the Governor, entitled:

"An Act relating to the oil and gas exploration, production, and pipeline and marine transportation property tax; and providing for an effective date."

Introduced, read the first time and referred to the Committees on Resources and Finance.

"March 8, 1977

The Honorable Hugh Malone
Speaker of the House
Alaska State Legislature
Juneau, Alaska 99811

Dear Mr. Speaker:

Under the authority of art. III, sec. 18 of the Alaska Constitution, and in accordance with AS 24.30.050(b) and the Uniform Rules of the Alaska State Legislature, I am transmitting a bill relating to the oil and gas exploration, production, and pipeline and marine transportation property tax.

The Department of Revenue has recently completed its study of Alaska's oil and gas tax structure and has made several recommendations. One set of recommendations dealt with the state's 20-mill property tax imposed by AS 43.56. This bill would implement that set of recommendations.

The bill corrects four problem areas in the current property tax: the omission of certain important kinds of oil-and-gas-related properties from the definition of taxable property; present uncertainty about how pipelines should be valued; the static nature of the $1500 per-capita limitation on municipal taxation, and the extent to which municipal property tax payments should be allowed as credits against the state tax. The bill's features are described below:

Section 1 of the bill makes clear that taxes paid to municipalities which exceed the statutory limitations in AS 29.53.045 and 29.53.050 are not creditable against the state tax.

Section 3 of the bill removes the current uncertainty on pipeline valuation by ensuring that pipelines will be valued on the basis of their full and true value with due regard to their economic value. This will eliminate the possibility of pipelines being valued under the depressed valuation method of actual cost depreciated.

Section 4 of the bill defines full and true value of property used in refining or liquefying of gas or oil as replacement cost less depreciation. It also defines the value of taxable marine transportation property.

Section 7 adds new categories of taxable property including oil refineries, gas processing plants and liquefied natural gas facilities. This will mean greater revenues to the state from these important oil and gas properties.

Section 8 and 9 of the bill tie the $1500 per capita municipal limitation to the Anchorage cost-of-living index in order that the limitation would increase over time as inflation raises the cost to municipalities of providing services to its residents.

HB 323 In addition, Sections 2, 4, 5, 6, and 7 are aimed at amending the relevant provisions of AS 43.56 to provide for the taxation of marine transportation property (i.e. tankers) on an apportioned basis determined by the number of days spent on ports loading and unloading gas and unrefined oil divided by the total number of days-spent-in-ports everywhere. Although these provisions raise close and difficult questions of constitutional law regarding the ability of the state and municipalities to impose an ad valorem property tax on such vessels in light of the traditional application of the "home port" doctrine, it is the view of the Department of Law that these vessels have sufficent nexus with the state to bring them within the constitutional parameters of the state's taxing power.

Sincerely,

Jay S. Hammond
Governor"

TESTIMONY BEFORE THE
SENATE RESOURCES COMMITTEE
OF THE
ALASKA STATE LEGISLATURE

By

LEONARD E. KUST

February 10, 1978

Madame Chairman and members of the Committee:

I am LEONARD KUST, partner in the New York City law firm of Cadwalader, Wickersham & Taft. I have been retained by the Alaska Oil and Gas Association (AOGA) to study the present Alaska corporate income tax and the various proposals to change that tax pending before the Alaska Legislature. On December 9, 1977 I presented a 45 page paper to AOGA setting forth my views on these issues. This paper has, I understand, been made available to you and I offer a copy for inclusion in the record of these hearings.

Before I proceed further I think you are entitled to ask whether I have the credentials to presume to give you views which it is worth your time to listen to and consider. I have for this purpose prepared a resume of my past involvement in issues of state taxation of the income of multistate and multinational business. I would like to offer this

resume for the record and hand copies to members of the committee for their perusal, if they wish.

I understand that your major concern and the concern which the various bills under consideration are intended to address is that the current Alaska income tax fails to reach and effectively tax income derived from oil and gas production and transportation activity in Alaska and your concern that oil and gas corporations operating in Alaska are paying to Alaska significantly less than the statutory 9.4% tax rate on their income.

Let me remind you at the outset of what I am sure you are all aware. Under the United States Constitution Alaska cannot impose its tax of 9.4% on the entire income of corporations engaged in business in Alaska and elsewhere. Such a tax would insure multiple taxation by the states in which the corporation does business and be an unconstitutional burden on interstate commerce.

This constitutional limitation conforms with internationally recognized fundamental principles of tax jurisprudence. Where the activities of a business extend over two or more countries or states, all of the income from such business cannot be taxed by each of the countries or states.

Accordingly Alaska can impose a tax only on Alaska source income of corporations which operate in Alaska and elsewhere. Any tax which applies to income earned outside Alaska will not only result in multiple taxation but will also violate both the United States Constitution and the generally accepted principles of tax jurisprudence.

The problem, of course, is in determining the source of income. This is not a new problem. It is a problem which scholars, legislators, and tax administrators have struggled with over the years. In this modern era as corporations have expanded their interests throughout the country and in many cases the world the problem has become more acute. The states from the outset upon enacting corporation net income taxes beginning in 1911 strove to avoid imposing an unconstitutional burden on interstate commerce by taxing only a portion of the income of the interstate business. The development over the years has been in devising and refining the method by which to determine the portion of the total income of a multistate business which should be taxed by each state and the attainment of uniformity in the methods used by different states so as to subject to tax all, but not more than all, of the total income of multistate business.

The system which has developed has two elements:

(i) a tax base measured by a company's worldwide income determined by reference to Federal taxable income and (ii) a method of dividing this base through use of an apportionment formula.

Why a formula approach? Well, the states initially sought to determine the source of income by means of "separate accounting", that is, by constructing an income or loss statement for the activities of the business in the state as if it constituted an independent business dealing at arm's-length with the remainder of the business and the outside world. It was soon evident, however, that separate accounting was not reasonably feasible within the limits of administrative practicability. As a consequence, the so-called "Massachusetts formula" gained early and general acceptance, commencing in the 1920's, among tax administrators and business taxpayers as a reasonable alternative to separate accounting for determining the portion of the total income of multistate business which is taxable in each of the states in which it has activities. The Massachusett's three-factor formula apportions the income of a business to the taxing state on the basis of the average of three fractions:

(1) property within the state over total property,

(2) payroll within the state over total payroll,

and

(3) sales within the state over total sales.

It was recognized at the outset that multiple taxation of multistate business income arises not merely from failure to apportion reasonably but from disparity in methods of apportionment as well, even though each method by itself and applied universally might be reasonable. The National Tax Association began advocating uniformity in the method of apportionment as early as 1919. Ultimately, these and other efforts culminated in the Uniform Division of Income for Tax Purposes Act (UDITPA) adopted by the National Commissioners on Uniform State Laws in 1957. UDITPA incorporated the three-factor formula and, most notably, defined the numerator of the sales fraction, with respect to which the greatest divergence from uniformity had developed, as being sales having their destination, that is, delivered to customers, in the state.

The Multistate Tax Compact, of which Alaska is a member, inaugurated in 1966 to promote uniformity and thereby avert Federal legislation then under consideration to impose uniformity on the states, incorporates UDITPA.

The UDITPA formula is not without its flaws; clearly it is not perfect. Whether, in theory, a better formula can

be developed, I do not know. This particular formula rests on common sense which has survived years of practical application. Most importantly, this formula has been accepted by both taxpayers and state tax administrators.

I want to emphasize the general acceptance of the three factor UDITPA formula. Out of my experience serving as co-chairman in 1969-71 of a committee of state administrators and business representatives seeking to formalize a country-wide uniform system for division of income of multistate and multinational business by a combination of the Multistate Tax Compact and Federal legislation, I can report that there was at no time any disagreement among the state tax administrators and business representatives as to the validity of the three factor formula. It was accepted by all as the bedrock on which any system of uniform division of income must rest.

Out of a total of 44 states and the District of Columbia which impose a corporate net income tax, 40 provide for the three-factor formula 25 by adoption of UDITPA or the Multistate Tax Compact and 15 by incorporation in their own tax statutes, four of the latter giving greater weight to the sales factor than to the property and payroll factors. Differences in the economies of the states as to whether primarily industrial, or commercial, or agricultural or extractive have not affected the general acceptance of the three-

AGO 547965

factor formula as essentially fair and reasonable.

The major concern raised by the proposals under consideration by this Committee , and I will discuss the proposals more specifically in a few moments, is that they would seriously disrupt the uniformity which over the years the states and business have labored to achieve, and which, I believe, is essential to fair and effective taxation by the states of the income of multistate businesses. A few other states have begun to tinker with the formula for their own parochial interests. I deplore such action. If you really believe that the UDITPA formula is not reasonable with respect to the oil and gas industry as a whole, the solution is to proceed under Section 18 of UDITPA on a case by case basis or to approach other states and seek a new uniform method for division of the income of the industry. Unilateral action by Alaska or by any other state would generate multiple taxation and would threaten the framework that has developed for division of income among the states.

But beyond the question of uniformity, I believe that both HB 322 and SCS CSHB 322 and the impetus behind them are based on a fundamental fallacy. They are based on the assumption--and I stress assumption--that the "fair" share of income to be taxed by Alaska is

AGO 547966

to be determined by changing the apportionment formula or by statutory "separate accounting" so as to approximate the income based on barrels of production in Alaska times the well-head price less costs and expenses incurred solely in Alaska. This is demonstrably not the "fair" share of income attributable to Alaska. Income is not merely the result of production. The creation of income requires both production and consumption. It is the demand created by the economies of the consumption states that converts the production into income. The consumption states have an undeniably legitimate claim to tax part of the income which is based on this price created by their demand. Would Alaska agree that only the states in which the goods are produced which are sold by Sears in Alaska can tax the income and Alaska cannot? Of course not. As the consumer state in this case it was [illegible] and is entitled to and it does tax a portion of the income from production outside Alaska.

Thus, having read some of the prior testimony, I would take sharp issue with the confident assertion that Alaska's fair share of the income of the oil and gas industry is the well-head price less costs and expenses incurred in Alaska.

I would like to challenge Mr. Lipton and Professor Zeifman to present their arguments to the Multistate Tax Commission or to a meeting of the National Association of Tax Administrators in support of their proposals as appropriate uniform methods to be accepted by all states for division of the income of the oil and gas industry. I think it is reasonable to predict that neither of the proposals would be judged to be a fair and reasonable basis for uniform division of income among the states.

AGO 547967

This committee and the Alaska legislature will ultimately decide what course to follow. It is your responsibility and your prerogative but I would like to suggest that your decision should be made against the broader framework which I have presented rather than the narrow perspective urged upon you in support of the proposals under consideration.

THE ZEIFMAN-AINSWORTH PROPOSALS

The proposals of Professors Zeifman and Ainsworth which are incorporated in H.B. 322 are based on these two premises: (i) that Alaska's tax base has been eroded through Federal tax subsidies and incentives which are unrelated to the definition of net income, and (ii) that the UDITPA apportionment formula unfairly reduces the amount of taxable income attributable to Alaska by corporations which export non-renewable petroleum resources from the state. Zeifman and Ainsworth recommend:

1. Adoption of a tax base measured by the greater of book income or Federal taxable income, and
2. Replacement of the destination-oriented sales factor with an "extraction factor".

Furthermore, they propose that these changes apply only to corporations with ordinary gross receipts in excess of $250,000,000, more than 50% of which is derived from production, transportation, refining, manufacturing, processing, distribution or retail sale of oil or gas or products derived from oil and gas.

AGO 547968

I believe that Professors Zeifman and Ainsworth are mistaken both as to their premises and their recommended solutions.

The current Alaska income tax base is a corporation's Federal taxable income. That base includes the world-wide income of the corporation - not just United States source income. In determining Federal taxable income, Congress has allowed certain deductions which are not taken into account in determining the corporation's book income. These "tax subsidies", however, are for the most part available to all corporations, including corporations engaged in business solely in Alaska and multinational corporations engaged in various business activities in Alaska. It is unfair to single out the oil industry. If "tax subsidies" are to be eliminated they should be eliminated for all corporations.

Furthermore, with respect to the one Federal "tax subsidy" available solely to the oil and gas industry, a current deduction for intangible drilling costs, it is erroneous to charge that because drilling costs reduce Federal taxable income Alaska in using such income provides an incentive to drilling wells outside Alaska. Federal taxable income reflects not only deductions for the cost of wells drilled outside Alaska but also the income from such wells. It is not a one-way street. Alaska is no more providing an incentive for drilling outside Alaska than other states are providing an incentive for drilling in Alaska.

The Department of Revenue has cited Congressional studies by Congressmen Vanik of Ohio to support the Department's claim that adoption of the Federal tax base by Alaska results in an effective tax rate significantly less than 9.4%. Vanik's study measures Federal income tax due as a percentage of worldwide income. Obviously this comparison will result in an effective U.S. tax rate of less than 48% for companies engaged in foreign operations because the United States provides a credit against its tax on worldwide income for taxes paid to other countries. This is the necessary alternative to taxing only the income earned in the United States. Similarly, measuring taxes due to Alaska as a percentage of a corporation's total worldwide income will result in an effective tax rate of less than 9.4%. Both comparisons are meaningless, since neither the United States nor the State of Alaska intends or reasonably can impose its tax on the worldwide income of taxpayers without a foreign tax credit or without apportionment. It is primarily because of the division of income (by means of a foreign tax credit at the Federal level and formula apportionment at the state level), not determination of the tax base, that the effective rate on worldwide income is significantly less than the statutory rate. If 25% of the worldwide income of a company is earned in Alaska, obviously the effective rate of Alaska tax on worldwide income will be 2.35%.

The suggestion of Professors Zeifman and Ainsworth, which is incorporated in H.B. 322, that book income be used as

a tax base is unique. I am aware of no state with a tax base measured by book income, even as an alternative basis. Book income is an inappropriate tax base. Adoption of such a tax base would in effect delegate determination of income to the company's management and the accounting profession. If Alaska is not prepared to accept management's and their accountants' determination, it will have to develop an audit staff sufficient in size and skill to conduct its own audits. It will not be able to rely on the audit skills and extensive examinations of the Federal government or the Multistate Tax Compact.

Furthermore, book income not only reflects taxable income before tax subsidies but also many accounting and timing differences unrelated to Congressional tax policies, many of which reduce book income in comparision to taxable income. As an example, corporations are often entitled and even required for financial accounting purposes to set up reserves for certain estimated expenses or losses which are not deductible in determining Federal taxable income.

Finally, use of the higher of Federal taxable income or pre-tax book net income as a tax base, as is proposed in H.B. 322, will tax income without reduction for those expenses which are deducted in different years in determining book net income and Federal taxable income. For example, if book income

exceeds Federal taxable income because of current deduction for intangible drilling costs which are deferred for book purposes, and then Federal taxable income in a succeeding year exceeds book income because the deferred intangible drilling costs are then expensed for book purposes, the tax base will be determined without deduction for such costs at any time.

As to substitution of the extraction factor for the sales factor in the apportionment formula, it is my view that the UDITPA formula provides for fair and equitable division of income of oil and gas corporations between Alaska and the rest of the world and fairly reflects the extent of their activity in Alaska as compared to the rest of the world.

The destination sales factor cannot be regarded as allocating Alaska's share of income to other states but more properly as assuring to the market states a fair share of the taxable income base. Without the purchasing power and demand provided by the market states, there would be little if any income of oil and gas companies for Alaska to tax. The sales factor quite properly gives recognition to the contribution by the market states to the creation of the income tax base. Substitution of the extraction factor for the sales factor would ignore the contribution of the market state to the creation of income, just as would an origin-oriented sales factor

which was used for years by heavy manufacturing states for their parochial interest. Use of this factor was so short sighted that it drove business out of these states. States such as New York and Massachusetts have had to retreat so far that they have adopted double-weighted destination sales factors to attempt to convince businesses to stay or to return to their states.

Alaska may dismiss this experience as irrelevant since the oil is in Alaska and the oil business cannot go elsewhere. Only within limits is this so, but in any event Alaska cannot ignore applicable principles of fairness and of cooperative action among the states to avoid multiple taxation. Use of an extraction factor in Alaska when other states use a destination sales factor would obviously result in multiple taxation. Is it proper for Alaska to take deviant action and expect all the other states to conform their apportionment formulas to Alaska's in order to avoid multiple taxation? Is it appropriate for Alaska unilaterally to disrupt the progress the states have cooperatively been making toward uniformity in their apportionment formulas?

Professors Zeifman's and Ainsworth's proposal to replace the destination sales factor of the UDITPA formula with an origin-oriented extraction factor is based primarily on

the ground that the extraction factor would generate more tax revenues than the sales factor. Apportionment formulas are not intended to be vehicles to generate tax revenues but are designed to divide income among the states fairly and uniformly so as tc avoid multiple taxation.

Finally as to the proposed new tax base and apportionment formula in H.B. 322, the singling out of the oil and gas industry and of companies within the industry having receipts of more than $250,000,000 may well be unconstitutional.

SEPARATE ACCOUNTING -- SENATE CS FOR CS FOR HOUSE BILL 322

I understand that the other major proposal before this Committee is adoption of a tax based upon principles of separate accounting. The declared purpose of this bill is to tax oil and gas production and pipeline transportation income in Alaska by means of a statutory separate accounting, while retaining formula apportionment (as modified) to apportion all other income.

Conceptually, separate accounting constructs an income or loss statement for the activities of a corporation in the state as if it conducted an independent oil and gas production or transportation business solely within Alaska and assumes that all dealings by the business with other

AGO 547974

aspects of its business and with the outside world are at arm's-length. I am sure it is an attractive concept to try to isolate the Alaskan income by what purports to be a rational procedure rather than the fixed formula. But let me suggest, as your Department of Revenue has strongly argued, that this approach is doomed to failure. Perhaps with small localized businesses the concept is workable. But to apply this concept to large integrated multinational oil and gas corporations ignores the unitary nature of their operations. Each element of a corporation contributes to the overall net profit of the business. You simply cannot ignore the contribution of out-of-state activity to the creation of income in Alaska and how will separate accounting deal with this?

Separate accounting, in practice, is impossible to administer and determine. I fail to see how a concept which proved to be unworkable in the 1920's, when business was relatively simple, can be expected to work in today's era of complex multistate and multinational business of which the oil companies are a preeminent example. The apportionment formula was resorted to because separate accounting could not be administered.

The current proposal attempts to avoid some of the inherent problems of separate accounting by arbitrarily defining net income. Allocation of overhead expenses is "solved"

by simply denying a deduction for such costs. Pricing differences are "solved" by using as gross income the value of the oil and gas produced as determined for purposes of the production tax. And inadvertently, I assume, the proposal results in a double allocation of production income to Alaska, first by allocating production income in Alaska under the statutory separate accounting formula and then allocating to Alaska a portion of the production income outside Alaska under the two-factor apportionment formula. This is clearly a duplication.

Such duplication can be eliminated only by determining production income by separate accounting both in Alaska and outside Alaska and eliminating both, not just Alaskan production income, from the base subjected to the two-factor apportionment formula.

Accordingly, the current proposal does not by definition even approach theoretical separate accounting, and is at least as arbitrary, if not more so, than formula apportionment. It is, indeed another kind of statutory formula.

The proposal has major infirmities. It purports to be an application of separate accounting but it is not and it incorporates a "double dip" allocation of production income to Alaska. It represents a sharp deviation from uniformity and as such would constitute a major disruption of the common consensus underlying the system of state taxation of interstate business income. Separate accounting defined by legislative fiat and applied by one state to a whole industry in order to increase the state's share of the total income

over that resulting from the three-factor formula necessarily results in multiple taxation because income which is fully taxed by the one state is also apportioned by formula to other states. Such deviant action, particularly when it is directed at one industry, may well be unconstitutional.

Moreover, Alaska must ask itself again whether it is appropriate for it to take unilateral action which will disrupt the progress toward uniformity in the division of income among the states which is essential to avoidance of multiple taxation.

THE MULTISTATE TAX COMPACT

Alaska's continuing membership in the Multistate Tax Compact and the administrative benefits derived from such membership may not be tenable if either of the proposals under consideration are adopted. The courts may find such proposals to be in conflict with the Compact and as a result may hold that Alaska has in effect withdrawn from the Compact or that the Compact remains in effect but enactment of the proposals is ineffective to prevent taxpayers from applying the UDITPA formula under the provisions of the Compact. It will take years of litigation to clarify these issues which will cast doubt on what the applicable law is for taxing the income of the oil and gas industry.

CONCLUSION

The United States Supreme Court presently is considering the constitutionality of Iowa's single-factor sales formula. I cannot predict the Court's decision, nor can I

predict to what extent a state may tamper with the uniform formula without violating constitutional principles. Perhaps the Court is ill suited to act as final arbiter as to whether one method of apportionment is fairer or more reasonable than another. But I suspect that with the nearly nationwide acceptance of UDITPA, the Court will show less tolerance of deviant formulas which result in multiple taxation. In any event years of litigation as to the constitutional validity of either of the proposals if enacted as well as their compatibility with the Multistate Tax Compact must be anticipated.

Great progress has been made in recent years in adopting uniform apportionment methods. Part of the drive for voluntary uniformity has obviously been the desire of both states and taxpayers to avoid Federal intervention. As long as states strive toward uniformity as a goal of fair taxation, Congress will be hesitant to act. If the drive for uniformity falters through unilateral action by states asserting their currently perceived self-interest without restraint and the Supreme Court declines to prescribe a uniform formula, Congress will be constrained to exercise its constitutional responsibility to protect interstate commerce by prescribing a Federal standard of uniformity in the division of multistate business income.

Alaska has been in the forefront of the drive for uniformity. By the collective judgment reflected in the

AGO 547978

development and general acceptance of the three-factor formula, Alaska's net income tax fairly and effectively reaches its proportionate share of the income of multinational oil and gas corporations doing business within the state. The proposed changes are designed to produce higher revenue, not a fairer division of multistate income, and they would be destructive of the cooperative effort among the states in developing a uniform approach to the division of multistate business income among them.

Madame Chairman and members of the Committee, I want to reemphasize in conclusion that changing the present formula for determining the portion of the worldwide income of oil and gas companies which is taxable in Alaska is not an appropriate way to increase revenues. If Alaska is to act responsibly it cannot ignore the interests of its sister states and in the long run its own interests in maintaining uniformity in the division of multistate business income among the states. If Alaska believes that the apportionment formula is not fair and reasonable as it applies to oil companies, the proper action to take is under Article 18 of UDITPA or through the Multistate Tax Compact or other cooperative state machinery to persuade other states of a different uniform approach, not unilateral legislation which is destructive of uniformity.

March 17, 1977

Mr. Bill Bishop
Bristol Bay Native Corp.
445 East 5th Avenue
Anchorage, AK 99501

Dear Bill:

Mr. Ranspot and I want to thank you and the Bristol Bay Native Corporation staff for the courtesies extended during our meeting last week. We found our review of the Bear Creek Mining Data to be most interesting and, in fact, these data exceeded our expectations. Bear Creek Mining has done an excellent job in its investigation of porphyry type targets.

As I mentioned on the phone, we have had to decline entering into an exploration agreement with Bristol Bay Native Corporation for a number of reasons in spite of the excellent mineral potential indicated by the data reviewed.

Certainly one important reason for being very hesitant to engage in new minerals exploration programs has been the Hammond administration's attitude toward mining taxes. Not only are attempts being made to adversely change the present mining license tax but several comments by the administration have indicated that an additional severance tax bill is going to be introduced in the next session of the legislature. One needs only to look at what has happened to taxes on oil and gas production in the last ten years to believe that the same thing will happen to the mining industry. With the high capital costs and the high infrastructure costs in mine development in Alaska a high tax burden will simply eliminate any chance for development of a mining industry.

The attractiveness of possible mining operations on native corporation land is being outweighed by the ever more burdensome tax policies generated in Juneau.

Sincerely,

Donald L. Stevens

STATEMENT OF LARRY DINNEEN
ARCTIC SLOPE REGIONAL CORPORATION
BEFORE THE
SENATE RESOURCES COMMITTEE
STATE OF ALASKA
FEBRUARY 22, 1978

I am not here today to play the numbers game related to the corporate income tax legislation before your Committee. But I have a few points to make, based on my years of experience in developing business ventures in several states and working for the Arctic Slope Regional Corporation (ASRC) in Alaska.

The "bottom line" of my statement is this: the enactment of the separate accounting bill or the franchise bill -- or anything in between -- would be bad for Alaskans. Although the intent of both bills my be simply to extract more dollars out of the major oil corporations in Alaska, the effect will be damaging to ASRC, to some 70,000 Native Alaskans and to the future viability of the economy of the State of Alaska. First, I would like to call your attention to some of the specifics in the proposed legislation.

JUST THE OIL COMPANIES?

It is evident from some of the language in both bills that the intent is to exempt the Native Regional Corporations from the provisions of the bills. I believe that in either case, litigation could prove that Native Regional Corporations would not be exempt. This is especially true with regard to the separate accounting bill as the actual amending language in Section 2 relates directly to "income of any corporation derived in Alaska." Additionally, it appears

deductible costs would not include the costs of the consultants that we have had to hire in Seattle, Washington, D.C. and elsewhere to deal with the myriad of government problems that are facing us . and to ensure that we are getting the most expert advice on our business matters. Since the Committee is addressing the separate accounting bill in particular, we felt that it was important to bring out these two points.

But the major point is that we do not feel that it is in Alaska's interest --and particularly with respect to ASRC and other Native Regional Corporations -- to change the corporate income tax laws affecting the major oil companies or anyone else, particularly at this time in Alaska's history. Even if we were exempted ultimately from the language of the corporate income tax legislation, the effects of raising taxes on the oil industry in Alaska would be directly damaging to ASRC and thousands of other Alaskans. Although I will develop this point further in my testimony, I want to mention now that ASRC and other corporations are engaged in a great deal of contract work for the major oil companies. And, while no one expects the Prudhoe Bay companies to leave the State altogether, there is no doubt but that the amount of exploratory work going on in Alaska could and should be much higher. And with exploratory and development work comes jobs for Native Alaskans in the form of contract work. Yet this is only one important aspect of the tax issue that I would like to call to your attention.

THE BILLION BARREL OIL FIELDS PROBLEM

Last year, Revenue Commissioner Sterling Gallagher spoke about our problem to the Federal Energy Administration officials dealing with North Slope oil pricing in discussing the Lisburne and Kuparuk oil pools:

> "The Lisburne and Kuparuk pools are illustrative of the case for most-likely discoveries on Alaska Native lands selected under the Alaskan Native Claims Settlement Act. It is far more probable that any discoveries on Native lands will be in the 1 to 2 billion-barrel range like Lisburne-Kuparuk, than in the 8 to 10 billion-barrel range like the main Prudhoe pool." 1/

The problem for ASRC is that we need to raise capital in order to find these fields and we need oil company expertise both to find and develop them. But the future is not PRUDHOE-BAY SIZED FIELDS.

Costs in Alaska are extremely high, and there are many other places still left in the world -- including the North Sea -- where drilling operations are more profitable than they have been and especially will be in Alaska. The wellhead value, after subtracting transportation, etc, is only about $3 these days, and with smaller sized fields as the likely prospect for future discoveries, we can not afford to continue raising taxes on the oil industry without directly reducing the likelihood of finding and developing marginal fields. Needless to say, this is of some concern to ASRC in particular, but all 70,000 Natives are also directly affected...

1/ Statement of Commissioner Sterling Gallagher, Department of Revenue, State of Alaska to the Federal Energy Administraion Regarding Alaska North Slope Crude Oil Price and Entitlements Issues, Washington, D.C., March 21, 1977, p. 3.

ALASKA NATIVES: THE LOWERING OF EXPECTATIONS

With the enactment of the Alaska Native Claims Settlement Act, it was hoped that the Alaskan Native might at last be able to have more of what some have called The American Dream. More choices in terms of employment and lifestyle. And a strong economic base from which to build for their children and grandchildren.

But problems with the Federal Government have multiplied, causing long delays in land transfer and incredible costs. The importance of the D2 issue cannot be overstated. The threat to village lifestyles and subsistence living is very great. Yet few seem to realize that the State government is another direct threat.

If either of the corporate income tax bills were to pass, there would be an immediate effect, not only on the oil companies but also on every Native in Alaska. There would be an immediate reduction in the value of Native land to the Natives who have made their selections in large measure for resource value. All Natives are affected because of Section 7(i) of the Act which provides that 70% of the revenues received by an Native Corporation for hard rock minerals or oil and gas discovered on the Corporation's land will be shared with the other Corporations.

Thus, if ASRC cannot get a billion barrel field developed or more fields found, every other Native Corporation and its stockholders will also be adversely affected. Not to mention the adverse affect on the State of Alaska itself over the long term.

THE THIRD ALTERNATIVE

In conclusion, I would like to highlight a number of important points that Milton Lipton made in addressing this Committee on January 25th. First, despite any perceived "deficiency" in Alaska's corporate oil income tax laws, Lipton endorsed the Arthur Andersen study and stated that the figures are "revealing." Lipton also pointed out that the Legislature should note that "the deficiency in your corporate income tax receipts from the oil and gas producing industry is at least and probably more than made up by higher severance and ad valorem taxation which the Legislature has already imposed upon the industry."

Additionally, Lipton took a good bit of time expressing the importance of perceptions. He stated that the impression which the State of Alaska presents "may be even more important in discouraging investment than the fact of the tax burden per se." He spoke also about the dangers of giving the impression of having an "ad hoc taxing policy" which increases taxes year to year "dedicated to the budgetary needs, revenue deficiences, or whatever the case may be." As a businessman, not an economist, I have noted that the perception of Alaska as a good place to invest is already poor.

And Lipton seriously presented what he called the Third Alternative: not to amend the income tax statute. It seems to me that the two corporate income tax bills may make more dollars and cents for the State in the near term but that it makes much more sense for Alaska at this point to stop changing the oil and gas tax laws.

Prudhoe Bay production will begin to decline in about eight years. Once a new field is discovered in Alaska, it takes about eight years to get it into production. We need much more exploration now and many more discoveries in the future to replace the income from Prudhoe Bay. A tax hike now could mean the loss of far greater revenues in the future for the State from the development of the remaining smaller fields. And we must face the fact that there probably will not be any more Prudhoe Bays in Alaska.

The Native interest in this matter is clearly the value of our land, revenue and jobs. But the importance of the perception of Alaska is important to all Alaskans. With billions of dollars of surplus revenues projected by the State for the future, we do have time. The passage of these bills would not just reduce oil companies' profitability. Either one would be damaging to the economic aspirations of all Alaskans and particularly Alaskan Natives.

May 17, 1977

The Honorable Jalmar Kerttula
State of Alaska
Pouch V, State Capital
Juneau, AK 99811

Dear Senator Kerttula:

The following notes pertain to Commissioner LeResche's Delta Agricultural Action Plan of April 21, 1977 and Senate CS for HB 353.

1. Commissioner LeResche's action plan closes with the significant statement that state land will not be released for the expansion of agriculture near Delta unless, after completion of all reports called for in the plan, there is ". . . a finding that the project is acceptable and has a significant probability of success. . . " In reality, LeResche's "agressive" plan most accurately relects his statement in the March 30, 1977 Daily News-Miner that ". . . the proposed Delta farming project needed more study and planning."

   The LeResche plan is actually self-defeating. It provides no provision for planning, developing or financing a processing and marketing system for barley, the major crop considered for production near Delta. Thus, the farmer will have no means of processing and marketing his crop, a situation guaranteed to inhibit the successful development of commercial agriculture.

2. According to the March 30, 1977 News-Miner, "LeResche said current studies indicate that quick, massive agriculture development could lead to spectacular failure." Specific, technical reasons for establishing a relatively large acreage for barley production as rapidly as possible were well documented in the report of the ad hoc Agricultural Group entitled "Potential Barley Production in the Delta-Clearwater Area of Alaska" as well as in the report on Alaska's agricultural economists E. Faris and J. Hildreth.

   Slow agricultural development in the Delta area to date has not resulted in sufficient production to permit the necessary processing and marketing required for a stable, commercial agriculture. Continued slow development will lead to the same failure that would occure in the commercial fishing industry if harvests of fish were insufficient to permit commercial canneries to initiate processing and marketing. In contrast to the self-defeating LeResche plan, SCS for CS for HB 353 provides a mechanism for the development and financing of essential processing and marketing systems for agricultural commodities.

3. In view of existing legislation related to land use for "agricultural purposes," it is difficult to understand why LeResche considers the definition of "agricultural purposes" or "agricultural rights" as a "big question." SCS CSHB 414, an Act relating to land sales or leases for agricultural purposes, and CCSB 14, an Act relating to agricultural land, were passed in 1976. These Acts require the Division of Lands to classify land for "agricultural purposes" and permit state lands to be leased for "agricultural purposes." "Agricultural rights" can't be too big a question because, according to the April 13, 1977

News-Miner, the Division of Lands has initiated plans to sell land in the Tanana Loop near Delta for "agricultural use only." Of course, SCS for CS for HB 353 provides a specific definition of "agricultural purposes."

4. LeResche identified a conflict between HCS for HB 353 developed from the report of the ad hoc Agricultural Group and a recommendation of the "Delta Land Use Planning Study" in that the planning study recommended disposal of agricultural land in parcels of 300 acres or less. A major constraint imposed on the ad hoc Agricultural Group by state government as it worked to assess potential barley production in the Delta area was that any proposed agricultural development must have a bottom line written in black ink. It must pay its own way. A significant result of the resulting assessment was that small grain farms in the Delta area would have to be at least 3000 acres in size to be economically feasible.

It was surprising, therefore, that LeResche indicated in his testimony on May 4, 1977 that the Department of Natural Resources has already initiated action to dispose of agricultural rights for small farms with much more concern for people's lifestyles than for agricultural economics. Equally surprising was a statement by Dave Hanson, a planning director for the Dept. of Natural Resources, in the April 13, 1977 News-Miner. In reviewing proposed sales of state land, Hanson outlined:

> "An agricultural rights sale in January, 1978, for 5000 acres in small-farm lots of about 20-320 acres in the Tanana Loop area near Delta. This is some of the richest farm land, Hanson said, and farms of that size would be economically feasible."

In the absence of expensive processing and marketing systems for high-value commodities produced on 20-320 acre farms, the economic feasibility of these farms is highly questionable. Of course, if the farms are planned to be economically unsound, it should not be surprising if large subsidies are needed to maintain the farming operations. Yet in the April 6 News-Miner, LeResche said:

> "The quickest way to give agriculture a really bad name is to blow a few million bucks on something that doesn't fly."

The ambiquity of these statements is interesting to say the least.

5. LeResche criticized CS for HB 353 on the grounds that it includes a whole new concept for land disposal, land classification, and other land management within the Dept. of Natural Resources. It is clearly evident, however, that land classification and disposal in recent years have not met the needs of Alaska's agriculture. Agriculture in Alaska has declined substantially, in part, because of decreasing amounts of land available for farmers to farm.

In the April 13, 1977 News-Miner, land disposal policies of the Dept. of Natural Resources were reviewed by Chuck Albrecht, information

officer for the Department, as follows:

> "The Department did dispose of land in 1976 but only as a continuation of existing programs.
> "In 1975 we stopped and looked at where the state was (in land disposals). It was a kind of logical stopping point and they know where they have to go now. "In the 1960's about eight new land disposals a year were made, slowing to about four a year in 1971 through 1975, and none in 1976."

In view of the discontinued disposal of state lands for agriculture, it would seem that a whole new concept for land classification and disposal is desparately needed if Alaskan agriculture is to survive. SCS for CS for HB 353 provides a viable concept of land disposal to revitalize agriculture in Alaska.

LeResche's memo does not provide funding for agricultural research to crop production and soil conservation in the Delta area. Research of this nature is essential if technical problems encountered during the course of agricultural development on new lands are to be solved. In the absence of continuing research programs during the course of agricultural development are substantially reduced.

In contrast, SB 279, an Act making a special appropriation to the University of Alaska to develop environmentally sound management practices for the production and marketing of small grains in the Delta-Clearwater area of Alaska, would provide for this essential research. SB 279 would allow the Agricultural Experiment Station to establish a 10 acre research field near Delta Junction to permit research on conservation tillage practices, crop response to irrigation, crop rotations, and variety combinations and cultural practices for small grains. This research has been planned with the assistance of subsistance farmers, part-time farmers and commercial farmers in the Delta area, and is designed to answer practical questions on crop production, agricultural economics and soil conservation.

7. It is interesting to note that the LeResche plan proposes to aggressively address agricultural development. Yet, LeResche's testimony of May 4, 1977 includes many of the same objections to agricultural development that were presented in a position paper prepared by the Fairbanks Environmental Center to oppose the plan for agriculture in the Delta area that was prepared by the ad hoc Agricultural Group. According to the December 16, 1976 News-Miner, the environmental said its opposition to the agricultural development project is based on political, economic and environmental considerations. Objections by the center include:

> "Management of agriculture lands by a new agency rather than the Division of Lands.
> "Failure to include all costs in a cost-benefit analysis, and determining the agricultural value of the land in the beginning as zero.
> "Committing a large acreage figure to what the center claims is essentially a pilot project."

The center proposed a substantial array of additional studies that would take years to complete and that are similar to many of the studies called for in the LeResche memo. Completion of all of these studies would require substantial time and would provide no guarantee that the Department of Natural Resources would actually initiate agricultural development on a scale that would be lik to ensure success. Never-the-less, the LeResche memo is ostensi designed to pursue aggressively the "exciting prospect" of agricultural development in the Delta area.

Sincerely,

James V. Drew

each person to choose the subject of his or her particular interest and spend an hour or better with that speaker in a small group situation.

At noon, the Subdistrict sponsored a potluck dinner (spearheaded by Mrs. Mildred "Tiny" Buzby with help from several others and food contributed by many), and held its first annual meeting for all cooperators.

This Farm Forum-Annual Meeting was judged a success and we hope to outdo ourselves next year. Plan to come.

Ag Development Legislation Workshop

"Red" Swanson, (D) Nenana, Representative from District 19, held a special work session at the Delta School Saturday, March 26. His purpose was to get public input on an agricultural development bill he has introduced and is cosponsoring with several District 20 legislators and others.

A good turnout of local people with considerable background in the development of this legislation and a high interest in its success provided Swanson with a good deal of valuable input for revisions to the final version of the proposal.

Swanson indicated that he was optimistic about passage this session, but emphasized the need for voter support to individual legislators.

Soil Surveys Can Save You Money

It's that time of year again. People are heading north to the future in Alaska. Part of this future for many people includes buying a home in the great land.

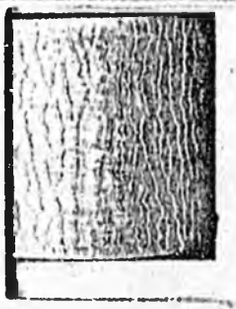
Practically everyone in the lower 48 is unaware of the unique problems associated with building on some Alaskan soil. Normally frozen soil can thaw and settle after construction, rendering an expensive new house unliveable.

Using the soil survey information available at no cost, potential buyers can avoid areas unsuitable for building.

For further information, contact the SCS - SCSD office at 1760 Westwood Way in Fairbanks (phone: 479-6767), or a local SCSD supervisor.

Snow Survey -- The SCS Snow Job

Snow, whether looked upon as a resource or a hindrance, and its subsequent melt water runoff provide



Delta plan costs disputed

By ERIN VAN BRONKHORST
News-Miner Bureau

JUNEAU—There are some serious questions about the true public costs of the proposed Delta agriculture of the money and other uses that would bring higher interest rates.

Also included is $1.8 million for land preparation costs such as surveying, breaking and clearing, and transfer administration, according to Dona Lehr of the policy division. The $1.8 million is the portion that would not be repaid to the state.

But the largest part of the state's cost given in this report is $19.2 million, the value of the agricultural rights of the land to be given away. Lehr said she had based this figure on the estimates of Dr. James Drew, a University of Alaska scientist and agriculture booster, who said private corporate interests would be willing to buy the land at a certain price.

Like all estimates on proposed projects, the numbers are open to different interpretations. An earlier report on the Delta barley project, written by a group of UA people and two staff members at the state departments of Commerce and Natural Resources, gave a much lower figure for state costs.

That report was based on the assumption that the land would be development project, according to the new commissioner of natural resources, Robert LeResche.

"If the government can put in about $30 million for 34 full-time jobs, that doesn't sound like a bargain to me," LeResche told the News-Miner Tuesday.

LeResche, who was appointed by Gov. Jay Hammond last week, emphasized that he favors farming in general and that there are many favorable aspects to the Delta plan. It would involve clearing about 64,000 acres of land south of Delta for barley production, with state financing and support.

"The quickest way to give agriculture a really bad name is to blow a few million dollars on something that doesn't fly," he said.

The $30 million figure comes from a report on the Delta project to be released next week by the governor's Division of Policy Development and Planning, which LeResche headed until recently.

The estimated costs to the state include $8.8 million in revenue the state would lose if it lent money to the project at six per cent interest. The figure is the difference in interest between that use made available at zero value for agricultural rights. This report estimated the capital required for farm financing, market financing, and public service costs at $18 million.

The policy division's report, however, has another section giving the public service costs for items such as highways, police, and more students in the schools. This totals an additional $6.2 million per year.

The jobs section of the report shows 44 more persons would be employed during the clearing process, and after that 34 full-time jobs would be provided on a permanent basis.

LeResche said the project is not going to generate a lot of jobs and he pointed out that the proposed farms would be fairly large. The earlier report gives 3,000-acre farms as the most economically feasible.

"This is an agribusiness proposal, not a family farm proposal," he said. LeResche said he is not sure that it "would be anything but a pretty good deal for a few large businessmen."

However, LeResche also said he favors going ahead with an experiment of clearing a section of land, possibly this summer, which would help determine some of the unknowns.

The policy division report's conclusions are that the project will not be economically self sufficient, even given state support. It also said that commercial agriculture will have "a very rough time" getting established in Alaska. The report said the expected government revenue generated by the project will not cover the increased government expenditure.

The report recommends that the land in the area be opened to private ownership for agricultural use only, and sold as there is a demand for it. It would be sold at the fair market value for agricultural rights, LeResche said.

He hasn't officially approved the recommendations yet, but he noted that he had already okayed them as part of his earlier job. So it is clear that he favors this approach.

"What I don't want is for the state to get left holding the bag," he said. "We may encourage it (agriculture), we may even subsidize it, but we don't want to take all the risks."

Several proposals for moving ahead with the Delta project are being considered in the legislature. The plan sponsored by Rep. Red Swanson, D-Nenana, sets up a mechanism for large-scale agricultural development projects and declares the Delta project eligible. The plan (HB 353) involves the state selling the agricultural rights to the land for only the cost of surveys, preparation, and land transfer costs. The Department of Natural Resources would run the program, and provisions for state financing are included.

A somewhat different approach is presented in another bill (SB 291), which would set up a separate Alaska agriculture authority as a state corporation that could issue bonds. The authority would issue five-year leases for agricultural rights to the land, with the agricultural value assumed to be zero at the time of lease.

State to hold onto Delta land

By SUE LEWIS
Staff Writer

The state of Alaska has no intention of giving away land in the Delta Junction area as part of a proposed agricultural project there, according to a member of an ad hoc committee that developed the Delta barley project proposal.

Speaking at this morning's no-host no-sponsor breakfast meeting, Roger Rayburn of the Soil Conservation Service said the project includes provisions for lease-purchase arrangements of agricultural rights, but not for outright give-aways.

Rayburn referred to an article in Wednesday's News-Miner quoting newly nominated Commissioner of Natural Resources Robert LeResche. LeResche said there are serious questions about the true public costs of the project. In computing costs to the state, the Division of Policy Development and Planning, formerly headed by the new commissioner, reportedly included $19.2 million for the value of the agricultural rights to the land.

That figure should not be included, according to Rayburn. "The state has no intention of ever giving any farming land to anyone," he said. Under the Delta project proposal, the state would finance clearing and breaking of the land, but then would recoup the costs by leasing the land to farmers for a five-year period, with a purchase option for the agricultural rights at the end of five years.

At this morning's meeting other cost estimates included in the estimate were also disputed. Dr. William Wood, executive director of the Fairbanks Industrial Development Corp., noted that the estimate of $30 million includes $8.8 million in revenue the state would lose if it loaned money to the project at six per cent.

Wood said that was "curious reasoning," and said he wondered if that cost would have been looked at so closely if the land had been proposed as a state park.

Rayburn also discussed agriculture in Alaska in more general terms at this morning's meeting. He said the Soil Conservation Service has identified some 20 million acres suitable for agriculture.

"Alaska has the dubious distinction of having the largest agricultural area in the United States," he said. Only 17,000 acres of land are under production in the state, compared to the nationwide total of 400 million acres. Undeveloped agricultural land in the Lower 48 totals only 80 million acres, he said. "I really think, that as our population increases, the Lower 48 will look to Alaska for agricultural production," he said.

Rayburn said the cold soils of Alaska usually require two years after clearing and breaking to warm sufficiently for farmers to achieve full production.

Project participants would be selected by the director of the division of agriculture based on their qualifications to farm the land. The director also would administer a state loan fund to guarantee loans for development of the farm projects.

Both bills, which normally would have been referred to the Resources Committee, intead went directly to Finance and then to the floor. Minority Leader Rick Urion of Anchorage criticized the House leadership for what he termed a violation of the rules.

While there was no opposition to the bill on the floor, Pat Conheady, legislative liaison for the Department of Natural Resources, said after the vote that the Hammond administration has serious objections to the bill. Conheady said he never was given a chance to testify on the legislation.

He said the bill would "create another bureaucracy" in state goverment. He said his department "is in the process of doing the same thing without the bill," and that the bill would result in both the division of lands and agriculture disposing of land.

Conheady also disputed the price tag attached to the farm program. Swanson's bill originally carried a fiscal note over $1 million, but when the bill was reported out of the House Finance Committee the price tag had been slashed to $65,000.

Finance Chairman Steve Cowper, D-Fairbanks and a co-sponsor of the bill, defended his committee's action and said the original estimate was misleading because the money spent on surveying and clearing the land would be returned when it was sold.

Farm Project Okayed

By The Associated Press

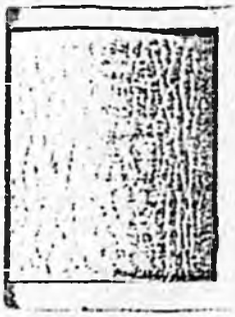
Legislation to set-up a large-scale farming development project and designate 60,000 acres in Alaska's Interior won unanimous approval from the state House Thursday.

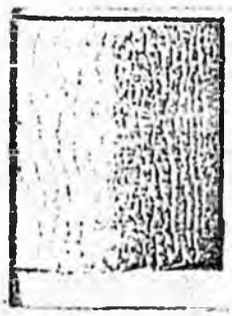
House members also approved a bill authorizing fiveacre agricultural homesites for Alaskans who claim at least five years residency in the state and meet certain other criteria.

Both bills were sponsored by Nenana Democrat Leslie "Red" Swanson and now head for an uncertain future in the Senate, where opposition is expected to be stronger. Another homesite bill passed on to the Senate several weeks ago has yet to receive a hearing.

Under Swanson's farming bill, the director of the Division of Agriculture would have authority to designate large areas of land as agriculture development projects. His designations would be subject to legislative approval.

The land would be sold for agricultural use only at a price equal to the state's cost to survey, clear the land and administer the sale. The parcels would be large enough to "assure the creation of an economic farm unit," the bill states, and probably would be a few thousand acres each.





Daily News-Miner, Fairbanks, Alaska, Friday, April 22, 1977

Delta farm bill takes a big step

By ERIN VAN BRONKHORST

News-Miner Bureau

JUNEAU—The House Thursday passed legislation setting up large-scale farming development projects and designating 60,000 acres in the Delta area as the first such plan.

The measure now goes to the Senate where it probably will face more substantial opposition. The House vote was unanimous.

Also approved was a bill authorizing five-acre agricultural homesites. However, all homesite legislation is being held in the Senate so far this session and looks unlikely to pass.

Rep. Red Swanson, Nenana Democrat who sponsored both bills, told legislators the development bill had been drafted with the help of people both in Fairbanks and Delta, and amended to make the project "strictly agriculture."

"There is no promotion; there are no schemes in it, it is totally an agriculture project," he said. Swanson added that the plan will pay for itself.

Under the bill, the director of the Division of Agriculture is given authority to designate large areas of land as agriculture development projects, after consulting with local groups and after receiving legislative approval.

The land in those areas would be sold for agricultural use only. The price would be equal to the state's total cost to survey, clear and break the land and administer the sale. The parcels would be large enough so that the farm unit would be economical.

The director also would have authority to guarantee loans for development of farms on the project.

The impetus for the bill was long-studied plans for development of a barley farming project south of Delta. Proponents of the plan say it would be economically feasible for farms of about 3,000 acres to produce for sale within Alaska and possibly to Japan.

The project would require substantial amounts of state support, and estimates of the total cost range up to $30 million, depending on whose figures are accepted.

The bill passed Thursday included a fiscal impact note of just $65,300. Swanson said the total includes $35,000 for an experimental land clearing project involving only a small area of land, and $30,000 for one staff person plus related expenses.

The Department of Natural Resources had estimated the cost of the bill earlier at over $1 million. However, Rep. Steve Cowper, D-Fairbanks, told House members that the department could spend only the $65,300 authorized in the bill this year.

"All the money spent on surveying and clearing will be returned to the state anyway when the land is sold," he said.

The $30 million estimate was made in a report by the administration's Division of Policy Development and Planning released recently, and covers all possible costs over the life of the project. Some of the numbers have been disputed by proponents, particularly a figure of $19.2 million given as the value of agricultural right to be given away.

Staff members of the Department of Natural Resources had estimated the cost of the bill earlier at over $1 million. However, Rep. Steve Cowper, D-Fairbanks, told House members that the department could spend only the $65,300 authorized in the bill this year.

"All the money spent on surveying and clearing will be returned to the state anyway when the land is sold," he said.

The $30 million estimate was made in a report by the administration's Division of Policy Development and Planning released recently, and covers all possible costs over the life of the project. Some of the numbers have been disputed by proponents, particularly a figure of $19.2 million given as the value of agricultural rights to be given away.

Staff members of the Department of Natural Resources said Thursday the size of the appropriation dictates that only a pilot project will be started this year.

Pat Conheady of the DNR staff said the Hammond administration has serious objections to the bill but representatives were not given a chance to testify. The bill splits responsibility for disposing of land between the Division of Lands and the Division of Agriculture, he said. He added that the department is moving ahead on agriculture now anyway.

However, Swanson has said he deliberately placed the authority with the agriculture division because he believes the land people are too anti-growth and won't move fast enough.

Farm Proposal Passes House Unanimously

JUNEAU (AP) — Legislation to set up a large-scale farming development project and designate 60,000 acres in Alaska's Interior won unanimous approval from the state House yesterday.

House members also approved a bill authorizing five-acre agricultural homesites for Alaskans who claim at least five years residency in the state and meet certain other criteria.

Both bills were sponsored by Nenana Democrat Leslie "Red" Swanson and now head for an uncertain future in the Senate, where opposition is expected to be stronger. Another homesite bill that went on to the Senate several weeks ago has yet to receive a hearing.

Under Swanson's farming bill, the director of the division of agriculture would have authority to designate large areas of land as agriculture development projects. His designations would be subject to legislative approval.

The land would be sold for agricultural use only at a price equal to the state's cost to survey, clear the land and administer the sale. The parcels would be large enough to "assure the creation of an economic farm unit," the bill states, and probably would be a few thousand acres each.

Project participants would be selected by the director of the division of agriculture based on their qualifications to farm the land. The director also would administer a state loan fund to guarantee loans for development of the farm projects.

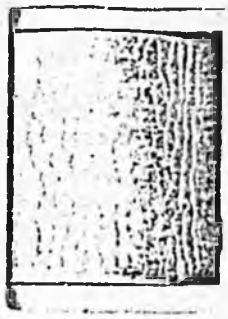
Both bills, which normally would have been referred to the Resources Committee, instead went directly to Finance and then to the floor. Minority Leader Rick Urion of Anchorage criticized the House leadership for what he termed a violation of the rules.

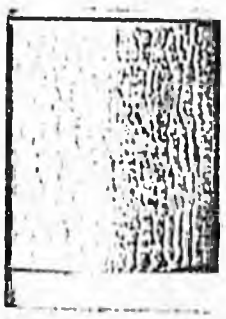
While there was no opposition to the bill on the floor, Pat Conheady, legislative liaison for the Department of Natural Resources, said after the vote that the Hammond administration has serious objections to the bill. Conheady said he never was given a chance to testify on the legislation.

He said the bill would "create another bureaucracy" in state government. He said his department "is in the process of doing the same thing without the bill," and that the bill would result in both the division of lands and agriculture disposing of land.

Conheady also disputed the price tag attached to the farm program. Swanson's bill originally carried a fiscal note for over $1 million, but when the bill was reported out of the House Finance Committee the price tag had been slashed to $65,000.

Finance Chairman Steve Cowper, D-Fairbanks and a co-sponsor of the bill, defended his committee's action and said the original estimate was misleading because the money spent on surveying and clearing the land would be returned when it was sold.





Daily News-Miner, Fairbanks, Alaska, Tuesday, March 29, 1977

Delta farm bill draws its support

News-Miner Bureau

JUNEAU—A group of 50 farmers and farming promoters who met at Delta Saturday enthusiastically supported the agriculture projects bill with only a few amendments, Rep. Red Swanson, D-Nenana, said Monday..

"We took HB 353 and went over it totally, paragraph by paragraph, line by line," he said. At the end everyone supported the bill, he said.

Besides farmers from the Delta area, the group included representatives of the University of Alaska and the Fairbanks business community, he said..

The bill generally would give the Division of Agriculture in the State Department of Natural Resources authority to start and finance farming development projects, and would declare the Delta-Clearwater-Tanana Loop Project automatically eligible. A companion measure (HB 352) would allow five-acre agricultural homesites.

Among amendments approved at the Delta meeting was one requiring the division director to consult with local community groups before approving land to be designated an agriculture project.

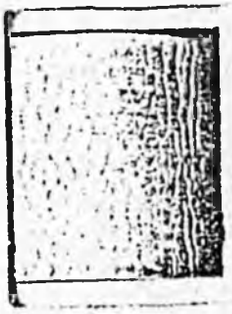
Some of the group also wanted to take out parts of the bill which required confidentiality of the names of people applying for land, and geological, geophysical and engineering data about the land and its natural resources, Swanson said. The amendment thus would make this information public rather than confidential.

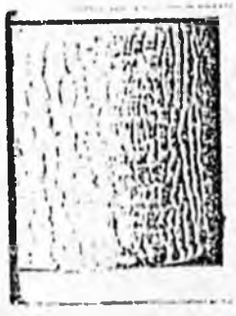
Financial information submitted by applicants still would be confidential, however, Swanson said.

The bill now is in the House Finance Committee and Swanson said he will push for the requested amendments there.

It does not include an appropriation to carry out the project, although Swanson said the capital budget approved by the House Finance Committee included $30,000 for a pilot project to find out the cost of clearing a section of land.

Swanson said the agricultural development project could be run by people already working for the state and he does not plan to ask for additional funds. He will ask for more money next year.





Daily News-Miner, Fairbanks, Alaska, Thursday, March 17, 1977—A-3

New farming bill proposed

By ERIN VAN BRONKHORST
News-Miner Bureau

JUNEAU—An ambitious agriculture bill proposed this week would set up a new state division, start and finance farming development projects, and declare the Delta Project as eligible without any further public testimony.

The measure (HB 353) is sponsored by Rep. Red Swanson, D-Nenana, and co-sponsored by eight other legislators, including Fairbanks Reps. Don Bennett, Republican, and Steve Cowper and Charlie Parr, Democrats.

Swanson said the bill would obtain land and financing for the Delta-Clearwater-Tanana Loop project, which has been studied for several years. But the government mechanism could be used in other parts of the state as well.

He will visit Delta soon to hold a workshop with farmers there, and some amendments to the bill may be made in committee, Swanson said Wednesday.

"I want the farmers to tell me what they want," he said.

The bill was drafted by Swanson and Jim Baldwin, a staff attorney for the legislature. Baldwin said he had met with a group in Fairbanks over the bill, including attorney Ed Merdes, real estate broker Frank Geiger, agriculture booster Dr. James Drew, Dr. William Wood of the Fairbanks Industrial Development Corp., and Bruce Boyd of the Fairbanks Chamber of Commerce.

The plan would set up a division of agriculture within the state Department of Natural Resources. Its director would identify available land suitable for large-scale agricultural development, subject to confirmation by the legislature.

The director would have the power to sell the land for farming by direct negotiation with a qualified individual. The price would not be greater than the cost of surveying and clearing the land and administering the sale.

The land would be sold in pieces large enough to "assure the creation of an economical farm unit." Baldwin said this provision indicates the parcels should be large enough so that the farmers could make a profit.

Any resale would be limited to a price equal to the agriculture-use value of the land, a provision meant to discourage speculation, according to Baldwin.

Swanson said the leasing and sale provisions were made "strong enough to keep it all agriculture."

The division director could guarantee 90 per cent of the amounts of loans made by private institutions for developing and operating the farms. The bill also sets up a revolving fund that could be used to award contracts for clearing the land.

In another section, the bill gives the director the power to loan up to $100,000 from an already-existing agriculture loan fund without the approval of the funds board.

The Delta Project is designated automatically as eligible under the plan. The bill waives the requirements for public notice and obtaining public testimony, unless some governing body or corporation in the Delta area enacts a resolution objecting to the project within 30 days after the law takes effect.

Agriculture potential

The exciting scenario for agricultural development in Interior Alaska laid out last week promises independence from a complete reliance on our renewable resources. It offers the state an opportunity for a clean industry. But it also demands careful attention to a long list of prerequisites before that dream will be realized.

So far the legislature has passed a resolution establishing an official policy on agriculture. Gov. Jay Hammond has joined the crusade, too.

Yet to be dealt with are a number of difficult and sensitive problems that will be addressed by a task force composed of individuals picked by the legislature and the governor. They include the establishment of new state land policies to free tillable lands for farming, the need for low-cost energy in large quantities, a tax break for people with capital tied up in farming, marketing systems, and the all-time Alaska bugaboo: transportation.

The concept was smoothly presented last week by farm boosters Ed Merdes and Dr. William R. Wood. Mr. Merdes' Delta farming efforts are as legendary as Dr. Wood's provincial enthusiasm. Their grand scheme seems to be as practical as it is compelling.

As Vice President of the Fairbanks Industrial Development Corp., Dr. Wood promises to keep up the barrage of facts, figures and crop forecasts. He and Mr. Merdes were given an able assist at last week's kickoff of the scheme by the University of Alaska's Agricultural Experiment Station Director, Dr. James Drew. Others on the UA agricutural team further bolstered the proposition of an agricultural industry worth hundreds of millions of dollars.

It is possible, but a long list of maneuvers and contortions need to be executed before it's ever close. A public commitment from Alyeska Pipeline Service Co. to consider dedicating pipeline pump station waste heat to the proposal would be a logical beginning point. A new state lands policy would be an excellent second step. The Alaska Railroad should get involved, too.

The legislature and Gov. Hammond should move expeditiously to support the agriculture resolution's policies, and appoint members to the task force as soon as is practicable.

With a maximum of coordinated effort, Alaska could pull it off. But it's a long way down the road, and a good deal of leg work needs to be done before an Alaskan agricultural industry is even probable.

The permanent fund

What could be more exciting than the prospect of true economic stability for Alaska?

What Alaskan wouldn't like to see the boom-and-bust economic cycle that has plagued the state and the territory since the turn of the century be transformed into a relatively smooth line on the economic chart?

The leading possibility for this kind of economic stability for Alaska is the creation of a permanent fund which would be used to sock away a percentage of the state's oil receipts much like a savings account. The interest derived from the investment of the fund would be used to sustain certain state programs that would benefit all Alaskans.

There are two versions of how the fund would be established. One would take a fourth of all revenues from oil, including bonuses, oil taxes and royalties. The other would ignore oil taxes, but would increase to 50 per cent the portion of bonus and royalty funds that go to the permanent fund.

The legislature passed a bill creating a permanent fund last year, but Gov. Jay Hammond vetoed it, contending that the issue can be decided only by a constitutional amendment.

Only after oil receipts are invested will Alaskans be assured that their money won't be as quickly dispersed as it was following the $900 million North Slope oil lease sale in 1969.

If the state saves 25 per cent of its oil receipts for 10 years, the account will total $3 billion after the first decade. The three billion dollars could produce $100 million per year for injecting into other economic enterprises in the state.

What sort of enterprises? The fund could help put a viable state agricultural industry on its feet. It could provide loans to Alaskans who want to build their own homes, but can't obtain conventional financing. It could also be utilized in revitalizing the state's depleted fishing industry by helping individual fishermen finance and construct new boats. And it could simultaneously encourage the development of aquaculture corportations to rebuild the fish stocks.

Another exciting aspect of the permanent fund would be its effect on state spending. By mandating that a portion of the state's wealth being derived from non-reneweable resources be sunk into the permanent fund, Alaskans would avoid careless spending of those revenues, at least. Chances are excellent the constraints of putting regular deposits into a state savings account would have a sobering influence on other state programs as well.

The permanent fund offers Alaska an opportunity to invest in itself, preserving forever the bonanza of our non-renewable resources in a way that will allow permanent improvements in the condition of our renewable resources.

A responsible precedent

–Daily News-Miner, Fairbanks, Alaska, Friday, April 22, 1977

Hammond offers his own version of Delta bill

News-Miner Bureau

JUNEAU—Gov. Jay Hammond has introduced his version of plans for moving ahead with the Delta barley project—an appropriation o $400,000 for preparing 2,000 acres of land.

The bill (SB 337) would direct the Department of Natural Resources to survey, clear and break the land. It's south of Delta. A spokesman for the department said the acreage would be an experimental project run by the University of Alaska.

The governor's plan also includes a study of the changes that occur on the land, including effects on animals, plants and water supply.

In a letter with the bill, Hammond said his staff has studied the proposal for a year and has concluded, "Such production may indeed be feasible and is deserving of further attention."

The House already has passed an agriculture development bill setting up about 60,000 acres in the same area as a farming project. But the $65,300 appropriation accompanying it is expected to cover only one staff person and the breaking of a small area.

Department spokesmen said Hammond's bill is intended to replace the House measure. The governor's version has been referred to three Senate committees, which means it isn't likely to be approved this session.

Dr. Dogson

Ladies and Gentlemen:

Man has lived with agriculture for so many generations, it has become a complete part of him. It is so much a part of him that he takes it very much for granted . Everyone is his own agriculturist.

Modern man, however, is also a product of the industrial age and the scientific age.

These influences in the U.S. have created a very sophisticated population capable of reasoning from small bits of information and misinformation and thus, not being in direct touch with the land and the basic biology of agriculture, have created images of food production that are often outside the realm of reality. For instance, everyone knows the farther north you go, the colder it is, and most people in the lower 48 are perfectly willing to accept the term, "The Frozen North". This image is so strong that National Geographic can show a movie of Siberia in which"Reindeer run across a land of eternal snow", and few people question how the trees they are running through ever grew where there was eternal snow.

One step closer to reality are those who understand that agriculture may be possible in the north, but relating to their own experience in the lower 48 ask, "How long is your growing season?" When you get above 55° latitude where the day length stretches rapidly, you have to start thinking in terms of degree-hours of sunlight. The only real answer to the question is, "Long enough to mature crops".

Agriculture is the process of putting together certain renewable and non-renewable resources to produce specific products, and you work with what you have.

What Alaska has is about 17.5 million acres of tillable lands (1 1/2 times the agricultural lands in California). In addition, we have another 10 million acres of land suitable for conventional livestock grazing. Now these are lands that have been identified so far by the Soil Conservation Service, and I know they are quite conservative because I am aware of other lands suitable for limited grazing that are not included in these estimates. Tillable lands have been

identified only if they occur in blocks as large as a township. We do not even know what the final acreage figure will be but it may well approach the early estimates of C. D. Georgeson, who said Alaska had 40 million acres of agricultural lands.

Other resources include water, something of which the drylands of the West do not have enough, especially if they start using their water resources to develop and transport coal. Alaska has 30 percent of the runoff water in the United States and 50 percent of the surface water.

We also have nitrogen fertilizer and anticipate having a great deal more. The Kenai plant is one of the largest urea and anhydrous ammonia plants on the West Coast, and they are expanding. The availability of Prudhoe gas may provide even more fertilizer production in the Interior. We already export large quantities of nitrogen fertilizer to the west coast, and could provide it to the mid-west in time if we had the transportation.

Given these resources, what can we produce. First of all, I'd like to say that the majority of extensive agricultural lands is in the central plains area of the State, along the Tanana, Yukon, and Kuskokwim river valleys. And I might add that Fairbanks which is roughly in the center of this area has a June 22nd. daylength of about 22 hours. The temperature in this central area reaches 90 to 100 degrees in the summer.

One area that is beginning development is the Delta Junction region. Because of its 1100 ft. elevation, I have always thought of it as more of a forage production area than a grain area.

On the other hand, I asked Dr. Wooding, our Agronomist at Fairbanks for some figures on grain production at Delta, and here is what he gave me.

Delta

These are average figures for three years, 1973 - 1975. These grains were planted on summer fallow land and 300 lbs. of 20-10-10 were added.

Barley:	Galt	76.4 bu. per acre
	Weal	67.3
	Lidal	61.6
	Edda	67.6
	Olli	60.7
	Finaska	76.6
	Otra	80.1
Oats:	Cayuse	118.9 bu. per acre
	Nip	118.0
	Toral	143.7
	Pendek	135.9
	Cal	88.9
	Rodney	94.5
	Glen	110.0
	Frazer	105.2

Wheat:	Delta	Fairbanks
Chena	49.5	62.0
Gasser	42.0	47.4
Thatcher	38.5	54.3
Saunders	33.4	47.4
Park	39.0	49.4
Kenthatch	33.3	53.9
Pictic	62	100.0

It is quite likely that the figures for Fairbanks would more nearly resemble those for the Totchatket area just west of Nenana which will probably be our next area for agricultural development.

I don't want to leave you with the impression that all we are going to produce is grain. I use grain to give you an index of our productivity. The chances are good that most of our grain as well as forage will be used to produce animal products in time. One of the interesting and important things about our grain in the Interior is that it runs 40 to 50 percent higher in protein than feed grains from the Pacific Northwest. This means lower rates of supplemental feeding. And for supplements especially our ruminants, cattle and sheep we can use urea and fish meal, both Alaskan products. With our high-protein grain, supplementation would be minimal.

One of the advantages of forage production, especially in the Delta area, is that the pipeline operation will provide massive quantities of waste heat which can be put to use in forage drying and pelleting.

The dry, cold Interior, with its millions of acres of summer grazing lands and millions of acres of tillable lands for winter feed-base production, would seem to make the Interior ideal for sheep production. The swing away from petro chemical based synthetic fibers back to natural fibers, a trend which can easily be projected to continue, will make wool a valuable product.

Although some lamb is consumed in the U. S., mutton is not readily marketable there. But Japan is a consumer of mutton, and in fact, they have enquired about the possibility of very large quantities of lean mutton from Alaska. Perhaps in the future we will see wool and lamb moving in one direction and mutton in the other.

If we consider the Interior river valleys of the Yukon, Kuskokwim and Tanana, there are 12.5 million tillable acres. Based on 3000 lbs/acre grain production or 2 ton dry matter brome grass per acre, 3.2 acres would sustain an animal unit (cow plus calf to slaughter weight) or 3,900,000 animal units.

If we translate this to sheep at roughly 3.5 sheep per acre, this would be a ridiculous figure of over 43 million sheep.

Naturally, the land will not all go for one thing. The point is that if you want a million sheep and 500 thousand head of cattle and 20 thousand dairy cows, a million hogs, and a quarter of a million chickens, a few thousand acres of potatoes and vegetables, and a few hundred acres berries and small fruits; there's plenty of room left over for wild life, specialty crops and export quantities of grain and hay.

I would like to remind you that agriculture, as opposed to other kinds of industry is a very long-term affair. It is not something you can turn on and off at will. Unlike mining, you cannot go out and drill and compute tonnages of product.

Unlike forestry, you cannot look at a standing crop and expect it to be there when you get arount to harvest.

We can give you numbers of acres and production per acre possibilities, but until a well-developed agriculture exists, there is no way to estimate how much in the way of products will move.

Agriculture competes with other land uses, and is therefore subject to the whims of political action and to changing views of social reality.

Agriculture requires more than just land. It requires a total infrastructure of which transportation is a vital component. You cannot build a railroad on the possibility of agricultural development but farmers wont grow crops unless they can get their crops to market. The State is reluctant to release land for agricultural use without proof that agriculture is an economically viable activity, and the farmers wont produce without assurance of access to land.

Everything in agriculture is, therefore, related to everything else. Agriculture is more social than it is economic. Large areas of new agricultural lands in America have always been opened for social reasons rather than economic. The settlement of the West occasioned by construction of the transcontinental railroads was serendipitous fallout to the broader issue of linking the West Coast to the Mid-west for territorial defense. The proposed railroad building in Western Canada is not for the purpose of developing agriculture, but to develop employment opportunities for residents who may otherwise be by-passed by the 20th Century. Agricultural development may result from this activity.

Railroads will not be built into and within Alaska on the basis of potential agriculture, but agriculture will result and in time, may become the mainstay of the transportation industry.

Alaska's Agricultural Potential
A Summary

Alaska has large acreages of land suitable for potential agricultural production (cropland, rangeland and forests). In fact, when only the physical food or fiber production requirements are considered, the area in Alaska which would lend itself to farming is truly vast.

However, looking at the soil and climatic limitations, the potential agricultural acreage diminishes somewhat. There are four major areas, approximately 15,516,000 acres, which have suitable climate and soils for cropland. They are the Anchorage, Kenai, Matanuska-Susitna Valley area; the Dillingham, Tikchick Lake area; the Tanana, Kantishna and Salcha Basin area in the Interior; and the Yukon flats area of the Upper Yukon. Three minor areas, the Yukon Valley below Holy Cross to Ruby, including the Koyukuk Basin; the Kuskokwim Valley from just below Aniak to Lake Minchumina and the Copper Valley-Chitina Basin.

Alaska also possesses many square miles of potential rangeland. Reindeer forage on the northwest tundra. Cattle graze on the southern coastal grasslands while the easternmost Aleutian Islands are grazed by cattle and sheep. With current information, it is difficult, if not impossible, to define this vast area in acres or square miles. These immense areas cover roughly the entire western part of the State. Expansion of the red meat industry into these rangelands will be limited by social, economic, governmental and ownership restrictions; not by the physical availability of suitable rangeland.

The third major part of Alaskan agricultural production lies in forests. As land ownership questions are resolved, the potential for increased use of interior and peripheral forest will increase, particularly in view of present world market conditions. A separate summary on Forest Resources is available.

Recently developed controlled environment housing techniques for dairy animals, hogs and beef will almost certainly be used as the demand to concentrate animal production continues. In the beef cattle and reindeer area, Alaska may be an exception--a place where red meat production can still be done on open ranges. However, Alaskan red meat production will depend almost entirely on the development of a supporting feed base. Even in those areas where cattle could survive outside, supplemental feeding is needed for growth or finishing. Thus the size of Alaska's cattle industry depends upon the amount of cropland devoted to producing forage--or upon a crop which can be processed to yield feed.

As to crop farming, many plants are well-adapted to Alaska's climates! The lengthy list of suitable crops covers everything but large fruits. Long summer days contribute to larger, tastier and more tender vegetables. Grains are higher in protein content. And, in some cases, yields are very impressive. Serious insect problems have not occurred.

Physically, the agriculture potential is tremendous. Why, then, so little development?

Alaska's agricultural development began for one purpose--to help feed Alaskans by offsetting dependency on outside foods. Initially, this purpose may have been enough. Now, Alaska's agricultural industry is stagnated! Percentagewise, only a fraction of what Alaskans consume is produced in the State. And, yearly this percentage becomes less! Alaska's population doesn't allow for the development of a comprehensive agricultural framework.

Agriculturally speaking, Alaska's in a unique position. Worldwide urban pressures, increased food consumption, increased population and better diets, make Alaska one of the few places where vast acreages of virgin potential agricultural land still exists. Alaska must look to world markets for selling its agricultural products, and it must react to the worldwide demand for agricultural products. Economically, it may not be feasible to produce certain products in parts of Alaska now. In a very few years, however, the question is not going to be "is it economical to produce food," but "whether we <u>can</u> produce food here". Increasing demand will probably make it economically feasible.

Agriculturally, Alaska is nearing a crossroads which may determine the industry's future. As the land ownership problems are resolved under the Statehood Act and the Alaska Native Claims Settlement Act, these large parcels of land will undoubtedly be split among four or more land owners. Steps must be taken to set aside agricultural development land. Unless this is done, the land will be divided into many different areas for many different uses. Then, a comprehensive agricultural development plan will be impossible when, eventually, it becomes desirable and profitable to do so. This occurred on the Kenai Peninsula, in the Matanuska Valley, and is occurring in the Susitna and Tanana Valleys. In those areas it is impossible for a new farmer to obtain enough concentrated, tillable land to build a viable commercial operation. For this reason agriculture's future (when defined as large-scale production for export) in those areas is dim.

However, there are superb agricultural areas with potential, where this is not yet the case. Some of these areas are equal to the best agricultural cropland in the State. Specifically, the upper Susitna Valley, the Kantishna Block, west of Nenana, the Yukon flats area, the upper Kuskokwim River Valley, and to a lesser degree the Delta Clearwater area. These relatively unsettled areas would be ideal for large-scale agricultural developments.

Similarly, immense grazing acreages exist with the physical potential for substantial expansion of red meat and fiber (reindeer, beef cattle, musk ox, sheep) industry.

One of the first steps which must be taken toward preserving these areas is the establishment of strong national and state policies aimed at eventual agricultural development. Without firm positive policy, it is not

possible to pass and adopt required laws and regulations, or to retain the support of government officials for the effort.

There will be many desirable side effects of a commercial agriculture producing for export. First, we will have to product enough fertilizer to be self-sufficient, at least for phosphates and ammonium nitrate. Second, agricultural industry is "clean". Third, as a percentage of production, it requires less utilities, service industries and other expenditures of tax funds than any other industry. Fourth, the agricultural dollar stays in the community longer and to a greater extent than other industry dollars, especially if basic agricultural products such as seed, fertilizer and feed can be purchased within the state. Fifth, the cost of the Alaska food basket, compared to statewide costs, will decrease as larger scale operations allow lower production costs.

As food demands, increase, particularly in the Pacific Rim Nations, Alaska may be in a unique position of having the land available just when the pressure develops to use every available agricultural acre.

--Abridgement of summary, from
Alaska's Agricultural Potenaial
Alaska R. D. C. Publication #1

COST VERSUS MARKET PRICES

PERHAPS THE MOST SIGNIFICAN FINDING ("POTENTIAL BARLEY PRODUCTION DELTA-CLEARWATER AREA OF ALASKA") IS THE FOLLOWING: ON A 3,000 ACRE FARM UNIT, USING A ONE-HALF FALLOW PRODUCTION CYCLE, IT IS ESTIMATED THAT THE FARM OPERATOR CAN BREAK EVEN ON ALL COSTS AT A PER-BUSHEL PRICE AT DELTA JUNCTI OF SOMEWHERE BETWEEN $1.90 AND $2.30 PER BUSHEL.

FOR COMPARISION, THE PORTLAND CASH MARKET PRICE FOR No. 2 WESTERN BARLEY AS OF THE END OF JANUARY, 1977, WAS $110 PER TON, APPROXIMATELY $2.64 PER BUSHEL. DURING THE TWO-YEAR PERIOD 75-76 THE PORTLAND PRICE HAD VARIED FROM A LOW OF $94 TO A HIGH OF $143 (Jan. 75) BUT WAS GENERALLY UNDER $115.

The author is Associate Economist with Rainier National Bank. The opinions expressed are his own and do not necessarily reflect those of the bank.

3000 ACRE FARM UNIT

3000 at 60 bushels to an acre	180,000 bushels
180,000 at $2.00 per bushel	$ 360,000
$360,000 over a 25 year period	$9,000,000

TOTAL PROJECT

60,000 acres at 60 bushels	3,600,000
3,600,000 bushels at $2.00	$ 7,200,000
$7,200,000 over 25 years	$180,000,000

Clearing & Breaking	60,000 acres at $200 per acre	$ 18,000,000
Administrative Costs	60,000 acres at $ 25 per acre	$ 1,500,000
	TOTAL	$ 19,500,000

DELTA FARMING PLANS —Former State Sen. Bob Palmer, the governor's chief agricultural adviser and chairman of an ad hoc committee on farm development in Delta, describes the administration's plans in the first presentation of a weekly seminar program at the University of Alaska (Staff Photo by Marc Olson)

Delta agricultural project may be postponed a year

Plans to clear and break ground near Delta Junction this spring as part of a state-backed agriculture project may be delayed a year, according to Bob Palmer, chairman of an ad hoc committee investigating the economic feasibility of the project.

Palmer was in Fairbanks Thursday to speak at a seminar in land resources at the University of Alaska.

"The most reasonable scenario I see," he said, "would start clearing and breaking this spring on just a couple of quarter sections, introduce legislation if the governor approves it; then expect action late in the session, or maybe even next session if the Legislature appoints an interim committee to study it. Then plan to start next season."

Gov. Jay Hammond established the ad hoc committee and charged it with determining whether a state-backed agricultural project could succeed. The committee's proposal calls for the state to clear 60,000 acres in the Delta Junction area, then lease and later sell agricultural rights to farms ranging from 900 to 3,000 acres. The state would also assist in setting up grain storage, drying and processing facilities.

Palmer said project backers had hoped to begin this spring because the time is "highly opportune" to use heavy equipment that now stands idle after the oil pipeline construction and is waiting for construction of a gas pipeline. Costs might be as low as one-third of the costs in other times, he said.

But he said the governor has asked the Division of Policy Planning and Development to review the project

(See DELTA, page A-3)

before he determines whether to back it.

However, Palmer said interest among legislators appears to be high, and added that several have told him they would sponsor legislation to get the project underway if the governor does not.

He said the University is interested in conducting additional studies in the Delta area, and those could begin this spring before any legislative action is taken.

"I think there's a great deal to be gained by proceeding with cautious haste," he said.

SCR. 11.

STATE
of ALASKA

MEMORANDUM

DEPARTMENT OF NATURAL RESOURCES
OFFICE OF THE COMMISSIONER

TO: Those Listed Below

DATE : April 21, 1977

FROM: Robert E. LeResche
Commissioner

SUBJECT: Delta Agricultural Action Plan

The feasibility report by the Ad Hoc Delta Barley Group has been completed and reviewed by the Division of Policy Development and Planning. In addition, the Delta Land Management Planning Study is essentially completed. All three of these studies have been very well done, and fit together well as a guide to future action. The purpose of this memorandum is to establish an action plan for aggressive accomplishment of the recommendations in these three studies.

I am assigning Dave Hanson of the Planning and Research Section to coordinate this effort. Work schedules and reports should be coordinated through Dave. I am also requesting those indicated below to move with all practical speed to accomplish the tasks outlined.

GENERAL ADMINISTRATIVE TASKS:

1. Definition of "agricultural rights." The Planning and Research Section and Division of Lands should immediately get together with the Department of Law and draw up an acceptable definition of agricultural rights to be included in any sale or lease of these rights. The Division of Agriculture should be consulted during this process. This definition might well contain identification of permitted uses and the covenants/easements to sale, as well as provisions for recreational access and liability against crop depredation. The Department of Fish and Game should be consulted concerning the latter.

The Director of Land and Water Management should report progress to me on this item on June 1.

2. Appraisal policy for "agricultural rights." The Division of Lands, the Department of Law, and Division of Agriculture should get together once a working definition of agricultural rights is established, to consider principles whereby these rights will be appraised precedent to sale or lease. These agencies should consider whether potential economic viability of a specifically stated farming venture on the land should be an overriding factor in appraisal. The Director of Land and Water Management should report to me on this on July 1, with a draft of proposed appraisal instructions.

3. Analysis of needs for additional regulations or statute changes. This analysis should include acreage limitations. The Division of Land and Water Management and the Department of Law should work together to complete this analysis. The Director of Land and Water Management should provide me with a report by July 1.

4. Determination of appropriate method of disposal of agricultural rights. The Planning Section, Division of Lands and Division of Agriculture should derive a set of principles from which decisions can be made in individual cases whether to offer agricultural rights for purchase, lease, or lease-purchase. In addition, they should establish the principles under which future decisions should be made regarding whether leases or purchases should be by bidding, lottery, or negotiation. Any additional statute or regulatory changes required to carry out recommended policies should also be investigated. The Director of Land and Water Management should make recommendations to me in this regard by October 1.

5. Classification of agricultural and other lands in the Delta Land Management and Study area. By May 31, the classifications should be ready for Public Notice under the provisions of AS 38.05.305. The Division of Lands should complete classification of lands designated cultural by the Delta Land Management Plan by September 1.

6. The Division of Lands should hold a public meeting in the Delta area to gather input and reaction to the actions proposed for the Delta area. Since these actions are to a large extent planned in reponse to the Delta Land Management Plan recommendations, the Delta Land Management Citizen Council as well as the general public should participate and offer comment during this meeting. The public meeting should be held as soon as possible, but not later than June 15. This meeting should be in addition to the required hearing on classification action which will be held during July. I expect a full briefing on this meeting.

TANANA LOOP AREA: In accordance with the Delta Land Management Planning Study, the Division of Lands should proceed to lay out, plat, and make available for sale around 5,000 acres of land for small farmsteads. This acreage should be divided into parcels ranging from 20 to 320 acres. Disposal of the parcels should be by an agricultural rights sale to qualified applicants who submit an agricultural development plan. The Division of Lands should work closely with the Division of Agriculture and the University of Alaska to lay out this land disposal, and to derive the procedure by which it shall occur. Hopefully, disposal can begin by January, 1978.

"DELTA BARLEY PROJECT" :

1. Lay out of project. The Planning Section, Division of Lands and the Division of Agriculture should prepare a final project lay-out plan, using the recommendations of the Ad Hoc barley project group, the Delta Land Management planning Study, and the Division of Policy Development and Planning report. This final layout should be reviewed by all concerned parties, including especially those who had active involvement with the three above studies. I hope that the project layout can be finalized and accepted by all parties by November 1. The Director of Lands should report progress in this regard to me on August 1.

2. Platting. The Division of Lands should then proceed rapidly with platting the area pursuant to the approved layout plan. On December 1, the Director of Lands should give me a schedule under which platting will occur.

3. The Division of Parks should initiate an archae logical and historical survey, pursuant to AS 41.35.070, as soon as the final development plan for both the barley project area and the Tanana Loop area is available. The Director of Parks should let me know as soon as possible a reasonable time schedule for completing this survey.

4. Test plot clearing. The Division of Agriculture, with cooperation from the Division of Lands should arrange for clearing 2,000 acres of University land as a test plot in the Delta area. A trade of general grant land for University land may be necessary to insure use of the appropriate land for this project. The University should expeditiously identify appropriate land for the clearing project and any additional land the University may need in the Delta area for research or model farm purposes. The Division of Lands should seek to "trade out" University lands presently classified as parks, refuges or critical habitat areas which will not be productive for University purposes.

The purpose of this test plot clearing will be to test clearing methods, to test moisture retention and blowoff tendancies, and to test barley production. The Division of Agriculture should ensure that representatives of the Department of Fish and Game, Department of Environmental Conservation, the Ad Hoc Group and the University all have ample opportunity to help design the test procedures, and to be present and participate in the actual clearing and manipulation of the test plot as well as any subsequent measurements they may wish to undertake. The Director of Agriculture should give me an action plan and schedule for this test clearing, as well as for all test procedures to be undertaken during fiscal year 1978, by June 30.

5. Design of environmental studies. The Division of Lands should immediately contact the Departments of Fish and Game and Environmental Conservation, as well as interested members of the Ad Hoc Committee, the Planning Section and the Division of Agriculture and request that they design by June 30 specific environmental studies that will be necessary in order to evaluate clearing methods, prepare the final project layout plan, and assist in development of the conservation plan. These studies should be designed in detail and costed out so that we may proceed to implement them without delaying the project unnecessarily.

6. Soil conservation plan. The Division of Agriculture, Division of Lands, Department of Environmental Conservation and the Soil Conservation Service, should begin preparation of a soil conservation plan for the entire Delta Clearwater area. This plan should at least cover soil conservation and erosion control, pesticide use, herbicide and fertilizer use, and water quality. In addition, the plan may consider such things as energy conservation, suggestions for clearing and farm management practices. The Director of Agriculture should give me, by June 1, a schedule for completion of necessary data gathering activities and the soil conservation plan.

7. Funding alternatives. The Division of Agriculture and the Department of Commerce and Economic Development should assist Mr. Palmer as much as possible in his quest for non-State funds that may be available to finance the Delta Barley project. Hopefully, some specific avenues of approach should be available to us by July.

In addition, Bob Palmer with the Department of Natural Resources' assistance is presently preparing a supplemental budget for accomplishing the other directives included in this memorandum.

8. Timber sales. The Division of Land and Water Management should as soon as the experimental clearing area is designated, offer personal use permits for timber within that area. Other areas designated for clearing within the approved layout region should be offered for sale in March of 1978.

9. Local government and farmers cooperative. The Division of Agriculture, Department of Community and Regional Affairs and Department of Commerce and Economic Development should develop an active program of contact with the City of Delta Junction and local farmers, designed to clarify the long-term role of local government and any potential farmers cooperative organizations in future agricultural development in the Delta area. I would suggest it would be very beneficial for the State to provide a similar level of aid to Delta farmers, including both those involved in the Tanana Loop "small" acreage

farms and in the Delta Barley project, as we are currently providing to fishermen interested in private, nonprofit aquaculture projects. I would suggest that the Department of Commerce and Economic Development review the contract that the Division of Policy Development and Planning has with the Southeast aquaculture organization and consider creating a similar relationship between the State and Delta farmers.

10. The Division of Agriculture, Division of Lands, the Planning Section, and the Department of Commerce and Economic Development should together prepare a draft of qualifications for those who will qualify to purchase or lease large tracts of agricultural rights in the Delta barley area. These criteria should follow those discussed by the Ad Hoc Group and the Division of Policy Development and Planning, and should include experience factors, financial qualifications, and other factors. I would suggest that these criteria be derived solely on the basis of maximizing the probability of success of the Delta farming venture, and not on the basis of insuring that enough qualified farmers will be immediately available. Necessary regulations to carry out this policy should be prepared. Following adequate consideration, the Director of Agriculture should give me a draft list of criteria by July 15, Draft regulations should be completed by November 1.

I feel if we can accomplish the above, we will have made a very positive step toward achieving a new and viable renewable resource industry in Alaska. Upon our completion of the above tasks, including a finding that the project is acceptable and has a significant probability of success, and upon qualification of the requisite number of potential private participants (i.e., upon sufficient showing of private demand by qualified individuals), I would intend to make approximately 50,000 acres of land available for barley production in the Delta area as outlined by previous plans.

I sincerely hope we all can work together compatibly in pursuing this exciting prospect.

cc: Governor Jay S. Hammond

RE: SSCSHB353, Ag Development

Dear Senators:

The Delta Chamber of Commerce has consistently favored legislation that would assist the development of Alaskan agriculture, particularly in the Delta Junction area.

We have been apprised of the latest efforts to incorporate the positive aspects of various development proposals into coherent and acceptable legislation. This effort, SSCSHB353, received the endorsement of the Chamber membership at their meeting of Thursday, May 19, 1977.

As president of the Chamber, I ask for the membership in urging the passage of this legislation.

Sincerely,

Robert D. Morton

Dear Senators:

RE: SSCSHB353 - Ag Development

Our latest information is that further revision of HB353 has incorporated the Agricultural Authority of SB291 and some aspects of the Feed Grain Project SB337. We still favor the Small Grain Research concept of SB279 ($281,500) over what we consider the duplication and excess expense ($400,000, 2000A) of SB337. However, it should be clearly understood and apparently our previous letters have been ambiguous - that the Supervisors consider further research essential on such topics as water quality [illegible] in which DEC should participate financially), windbreak relocation and spacing, and shearing and burning techniques (a new topic). We do feel that SB337 as originally conceived is a wasteful approach, and it is our understanding that use of the funding (under SSCSHB353) would be discretionary by the Authority, and consequently such research as is essential could be conducted as an integral part of development rather than as a separate research project.

These alterations, as we have outlined and understand them, are acceptable to us and we would urge passage of such legislation.

Sincerely,

C. G. Forck

PROPOSED AMENDMENTS

WATER RESOURCES REVOLVING LOAN FUND ACT

Sec. 45.86.010. There is established a separate fund, The Water Resources Revolving Loan Fund. Loans from this fund are to be used to develop and conserve in the public interest the water resources of Alaska, using State revenues from the Alaska Permanent Fund (mineral development).

Sec. 45.86.040 (b) is repealed and re-enacted to read:

Sec. 45.86.040 (b) The department shall forward all loan applications it recommends for approval to the Water Resources Revolving Loan Fund Committee established with the department and made up of the commissioner or his deputy, the director of division of energy and power development, and the director of division of business loans.

Sec. 45.86.060 shall be added as follows:

Sec. 45.86.060. CONDITIONS APPLICABLE TO PROJECT LOANS. (a) The term of the loan shall not exceed 50 years and the interest rate shall be not less than three, or more than five, percent a year on the unpaid balance. The repayment schedule shall be computed in a manner so that annual payments of principal and interest, termed debt service, are approximately equal over a period not to exceed 40 years. Repayment of the loan, principal and interest, will commence at the date of commercial operation of the project or ten years from the date the loan is made, whichever is sooner.

(b) Loans shall be utilized for feasibility studies, pre-construction engineering including the securing of permits and licenses necessary for construction and operation, design and construction of capital improvement projects.

(c) If, in the opinion of the Water Resources Revolving Loan Fund Committee, feasibility studies or preconstruction engineering establish that the project is not feasible from either a technical, economic or financial viewpoint, the department may not require repayment of loans made for this purpose, provided that repayment of all loans shall be required if design or construction of the project proceeds.

This Act takes effect immediately in accordance with _____.

JUSTIFICATION FOR AMENDMENTS

WATER RESOURCES REVOLVING LOAN FUND ACT

I. The change in Sec. 45.86.010 is to correctly indicate the proper fund from which the revolving fund would secure revenue for making the loans. When the Water Resources Revolving Loan Fund was first drafted, one of the sources of loan funds was tied to Alaska mineral lease bonus funds. This was passed by the Legislature, but vetoed by the Governor as being unconstitutional. Since then, voter approval of the permanent fund has made possible this vehicle for funding these projects.

Sec. 45.86.040 - the Loan Committee composition as now specified in the Statutes, was a high level group deemed necessary to consider loans for large projects such as the Susitna and Yukon Taiya projects. Projects of this nature would now come under the State Power Authority which, together with Federal support, would finance the large installations.

The formation of a committee within the Department of Commerce would be more appropriate to consider the financing of small hydro and water projects. These would be administered similar to the other business loans the Department handles.

Sec. 45.86.060 - The first draft of HB171 (copy attached) spelled out the conditions of loans consistent with long term low interest. However, it was determined that this type of condition could best be handled by regulatory provisions. As a result, the conditions now being applied to the loans are not in accord with the intent of the Legislation. Loans are for a term of seven years rather than long term of forty to fifty years and interest rates of 6% are hardly low. Interest is due and payable yearly and prior to the project generating revenues or the ability to meet debt service. This burden on small utilities preclude their involvement in the revolving fund.

Subsection (b) spells out the type of activities in the development of the property which would be eligible for loans under the revolving fund. Subsection (c) is an "advance planning fund" provision similar to H.U.D. 701. If the studies indicate the project is not feasible, the repayment of the loans for the studies may not be required. Here again is the intent to alleviate the financial burden for the small communities for those projects which turn out to be a "dry hole" and for which revenues cannot be realized.

II. Basis for the proposed appropriation bill FY 1978 for the Resources Revolving Loan. The proposed appropriations for FY 1978 are based on estimated community requirements for the specified projects over and above the funds made available in the 1977 appropriations. The attached list of funding requirements total $3,730,000, however, it appears that the applications for FY 1977 will leave a balance of $230,000 which can reduce the proposed appropriations to $3,500,000.

February 11, 1977

Representative Oral Freeman
State Capitol
Pouch V
Juneau, Alaska 99811

Subject: Development of Hydroelectric Generating Plants in Southeast Alaska

Dear Oral:

Mr. N. L. Teague, City-Utilities Manager has requested that I submit to you some pertinent information regarding the advantages to Ketchikan, and Southeast Alaska as a whole, which would be gained by the installation of hydroelectric generating plants. I will use Ketchikan as an example.

We have three (3) small hydroelectric plants. To 1969 we were hydro oriented. Our first base load type diesel was placed in operation in 1970. We now have three (3) such units. I believe that a comparison of cost, hydro versus diesel generation in our system, is pertinent.

In 1976, the average operation and maintenance cost of producing one (1) kilowatt hour at the bus bar by hydroelectric generation was $ .0055 or 5.5 mils.

The average cost of operation and maintenance per kilowatt hour of generation by diesel was $ .0638.

A recap in the same vein, from 1970 to date, clearly points up that hydroelectric power is the greatest hedge against inflation since the Republicans.

TIME PERIOD - January 1, thru December 31, 1970:

Diesel = $ .01249/KWHR

Hydro = $ .00272/KWHR

Differential in cost/KWHR - Diesel greater by $ .00977

Differential in dollars - 2,718,600 KWHR x $ .00977 = $26,560.72

TIME PERIOD - January 1, thru December 31, 1971:

Diesel = $ .01689/KWHR

Hydro = $ .00336/KWHR

Differential in cost/KWHR - Diesel greater by $ .01353

Differential cost in dollars = $174,228.52

TIME PERIOD - January 1, thru December 31, 1972:

Diesel = $ .01476/KWHR

Hydro = $ .00365/KWHR

Differential in cost/KWHR - Diesel greater by $ .01111

Differential cost in dollars = $143,065.69

TIME PERIOD - January 1, thru December 31, 1973:

Diesel = $ .02144/KWHR

Hydro = $ .00388/KWHR

Differential in cost/KWHR - Diesel greater by $ .01756

Differential cost in dollars = $226,123.63

TIME PERIOD - January 1, thru December 31, 1974:

Diesel = $ .04125/KWHR

Hydro = ¢ .00534/KWHR

Differential in cost/KWHR - Diesel greater by $ .03591

Differential cost in dollars = $462,420.25

TIME PERIOD - January 1, thru December 31, 1975:

Diesel = $ .0430/KWHR

Hydro = $ .0051/KWHR

Differential in cost/KWHR - Diesel greater by $ .0379/KWHR

Differential cost in dollars = $491,763.87

TIME PERIOD - January 1, thru December 31, 1976:

Diesel = $ .0638/KWHR

Hydro = $ .0055/KWHR

Differential in cost/KWHR - Diesel greater by $ .0583/KWHR

Differential cost in dollars = $470,883.27

Note that 1976 differential cost in dollars is slightly less than 1975. This is due to a small hydro-electric plant (Silvis) being returned to service in 1976. The Silvis Plant had been destroyed by a landslide in 1969.

The Silvis hydro plant generated approximately 13% of our electrical system output in 1976. Without the Silvis Plant in operation, our differential cost in dollars would have been approximately $532,098.00 for 1976.

Look at what is happening in the major item needed for diesel generation. That "NON-RENEWABLE RESOURCE", diesel fuel oil.

Costs for fuel delivered by barge to our S. W. Bailey diesel plant located ashore on Tongass Narrows, for example, are as follows:

Date	Cost per gallon	Cost of fuel oil/KWHR generated
1972	$ .1375	$ .0095
1973	$ .1930	$ .0133
1974	$ .3260	$ .0225
1975	$ .3610	$ .0249
1976	$ .3930	$ .0271
1977 (Feb.)	$ .4190	$ .0289

In a time span of just over four years and two months, our diesel fuel costs have increased 205 percent.

The industrial growth of the lower 48 States and most specifically the Pacific Northwest was made possible by the construction by the U. S. Government of large hydroelectric projects. In addition, it permitted a better living standard for the people at low energy cost.

The technology of transmission line construction permitted transmission line "grids" to be built from the large government projects to all points of the land or load centers.

Southeastern Alaska does not lend itself to the aforementioned methodology. We are situated in an archipelago that would strain the technology of transmission line construction and be vastly more expensive. It is one thing to serve load centers connected by land, another to serve load centers connected only by water.

It is therefore most logical to construct (large for us) hydroelectric projects as close to the load centers as possible, e.g. our Swan or Grace Lake projects. Short, interconnecting transmission lines could be installed between neighboring islands, e.g. Revillagigedo Island (Ketchikan) and Annette Island (Metlakatla).

Oral, it is safe to say that every power utility in Southeastern Alaska is municipally owned with the exception of Juneau, Alaska. It seems odd to us that Juneau is the only community that has a Federal hydroelectric project "on line" in our part of the State.

Government seems to speak with forked tongue. They advocate conservation of depletable natural resources and energy, and yet seem to balk at providing the help necessary to alleviate the situation in our portion of Alaska.

Also, Oral, any added expense to the Utilities or cities created by the construction of the hydroelectric projects should be deferred until the projects are "on line". I do not believe any of us can individually carry the burden of cost of generation by our existing means, plus pay any interest or principal payments in case of loans or bonds. Payment deferral is of utmost importance.

I have made this letter far longer than I had intended, Oral, and apologize for taking up so much of your valuable time.

I am attaching certain data that we hope you will find of interest.

Very truly yours,

Donald D. Bowey

Mr. James Eide
City Manager
P. O. Box 531
Wrangell, Alaska 99929

Subject: Hearing before the Commerce Committee,
Representative Joe McKinnon, Chairman,
Re: House Bills No. 356 and No. 357

Dear Jim:

The hearing meeting was held at 8:00 A.M. in the new court building in Juneau, Room 628, on Monday, April 4, 1977.

Representative Ernie Haugen was kind enough to meet Jack Ballard of Wrangell and myself at the Baranof Hotel for coffee and then escorted us to the hearing.

Ernie testified first and pretty well recapped the history of the Water Resources Loan Fund and the intent of the legislative bodies. I believe that Ernie brought out that the Southeastern Conference group has been most active in promulgating the concept of long term, low interest loans for hydroelectric oriented projects and potable water projects from which all Alaskans will benefit.

Next to testify was Representative Terry Gardiner. Terry affirmed the preceding testimony and very ably placed his beliefs and thoughts before the committee.

Dick Ballard, chairman of the Thomas Bay Power Authority did an excellent job of testifying as regards Petersburg-Wrangell power. Dick was knowledgable and had a good delivery. I am sure he clarified conditions prevailing in your area.

This writer testified next. I had just completed an analysis of the Ketchikan Public Utilities 1976 generation for another report. Much of the data in the analysis was germain to the hearing in that it clearly pointed out cost of operation of hydroelectric in comparison to an alternate means which in our case is diesel. My analysis was in hand written (rough) form. Terry had copies made and presented them to the committee members.

Last to testify was Farrell Campbell, Business Agent for the

Operating Engineers Union. Farrell pointed out that labor supported the concept as set forth of long term, low interest loans, and the use of a "RENEWABLE RESOURCE" to power the prime movers that turn the generators which produce electric energy.

Chairman McKinnon and the Representatives of his Commerce Committee are to be complimented, and thanked for their courtesy and consideration shown the persons to be heard. The committee was knowledgable on the subject and questions were direct and honest.

Action taken while I was present consisted of the following:

1. Motion for amendment of H.B. No. 356.
   Page 1, line 13, after the word "ALASKA", insert period and delete, "using State revenues from nonrenewable resource [mineral] development". MOTION APPROVED.

2. Motion made to amend.
   Page 1, line 18, by deleting mention of five percent (5%). Supporter of the amendment felt the intent of the original act was to provide low interest loans and recommended the three percent (3%) figure. MOTION FAILED TO PASS.

House Bills No. 356 and No. 357 will be moved out of the Commerce Committee and, I believe, on to Finance.

Sorry you could not be present at Juneau, Jim, but hope this letter and accompanying data helps keep you informed.

Best Regards,

Donald D Bowey

March 31, 1977

MEMORANDUM TO FILE

FROM : Donald D. Bowey, Assistant Utilities Manager

SUBJECT: COST DIFFERENTIAL, HYDRO VS. DIESEL

Cost of generation per KWHR by prime mover type and Plant. Maintenance and operating costs only used. Labor, fuel, oils, parts, repair, etcetera.

DIESEL - YEAR 1976:

ACCT. NOS.	KETCHIKAN	TOTEM BIGHT	BAILEY	TOTAL
546	$ -0-	$ 2,484.98	$ 4,259.75	$ 6,744.73
547	2,202.00	21,404.85	181,942.23	205,549.08
548	2,089.19	11,404.85	71,995.64	85,088.07
549	87.55	517.16	3,789.01	4,393.72
551	-0-	-0-	1,445.90	1,445.90
552	-0-	-0-	15,408.49	15,408.49
553	7,429.11	7,232.17	185,038.96	199,700.24
554	-0-	3,378.11	5,078.78	8,456.89
	$11,807.85	$46,020.51	$468,958.76	$526,787.12

HYDRO - YEAR 1976:

ACCT. NOS.	KETCHIKAN	BEAVER FALLS	SILVIS	TOTAL
535	$11,736.34	$ 4,550.10	$ 3,373.16	$ 19,659.60
536	-0-	-0-	-0-	-0-
537	11,040.88	6,295.40	4,282.81	21,619.09
538	167,897.24	64,310.82	12,878.83	245,086.89
539	10,077.48	4,168.18	9,534.15	23,779.81
541	293.89	1,961.09	528.14	2,783.12
542	7,248.64	3,137.13	725.64	11,111.41
543	4,589.61	5,936.72	2,449.79	12,976.12
544	5,328.12	8,861.16	13,881.94	28,071.22
545	94.63	-0-	-0-	94.63
	$218,306.83	$99,220.60	$ 47,654.46	$365,181.89

YEAR 1976:

HYDRO:

POWERHOUSE	GENERATION KWHR	M & O COSTS DOLLARS	COST/KWHR CENTS
Ketchikan Plant	17,693,700	$218,306.83	$ .01234
Beaver Falls	40,669,000	99,220.60	.00244
Silvis	10,172,000	47,654.46	.00468
TOTALS	68,534,700	$365,181.89	$ .00533

AVERAGE COST PER KWHR generated by HYDRO = 5.3 MILL

DIESEL:

Ketchikan Plant	55,900	$ 11,807.85	$ .21123
Totem Bight	781,000	46,020.51	.05893
S. W. Bailey	7,240,000	468,958.76	.06477
TOTALS	8,076,900	$526,787.12	$ .06522

AVERAGE COST PER KWHR generated by DIESEL = 65.2 MILL

Average Cost Per Kilowatthour of Total Generation By Diesel and Hydro. (Conglomerate):

- Total generated 76,611,600 kwhr = $ .01164 cents/kwhr
  or
- Total M & O Costs = $891,969.01 11.6 MILL/KWHR
- Cost per KWHR "SOLD" (Gen. less Station Use & Losses), = $.0131 cents or 13.1 Mill
- Hydro generated = 89.46% of total generation
- Diesel generated = 10.54% of total generation
- WATER YEAR was exceptional.
- Diesel cost per KWHR generated = $ .06522 cents, or 65.2 MILL
- Hydro cost per KWHR generated = $ .00533 cents, or 5.3 MILL
- Diesel generation per KWHR exceeded Hydro generation per KWHR by ..... $ .05989 cents, or 59.9 MILL

HYPOTHESIS:

HYDRO..... $\frac{68,534,700 \text{ KWHR}}{14.5 \text{ kwhr/gal.}}$ = 4,726,531 gallons of fuel

4,726,531 gal. x $ .41 = $1,937,878

Added to labor, etc. of HYDRO would = $2,303,058

Added to actual diesel generation cost of generation 8,076,900 kwhr or, $2,303,058 PLUS $526,787..... = $2,829,845

$\frac{\$2,829,845 \text{ M\&O Costs}}{76,611,600 \text{ kwhr}}$ = .03694 cents/kwhr

or,

36.9 mill

The above hypothesis of all diesel operation in 1976 would have meant, $\frac{36.9 \text{ mill}}{11.6 \text{ mill}} = 3.181$

OR, generation costs, maintenance and operation only would have been 218% greater than it actually was by combination, or conglomerate, of hydro & diesel.

The above is very conservative as it does not consider additional staffing which would have been necessary, plus other factors, if all generation had been by diesel.

Time and staffing prevents a more in-depth analysis at this time.

OFFICE OF THE GOVERNOR

The Honorable Bill Sumner
Chairman
Senate Resources Committee
Alaska State Senate

April 2, 1979

Letter of Intent for
House Bill 359 Amended

Bob Palmer
Special Projects Coordinator
Office of the Governor

The following is a suggested text for a letter of intent for HB 359 am, which will be signed by you.

"The intention of the Legislature in enacting AS 16.10.375-620 was to encourage the construction and operation of salmon hatcheries by the private sector and to do so with no more restriction and bureaucratic red tape than is reasonably required.

"AS 16.10.400 specifies that the Commissioner of the Alaska Department of Fish and Game or his designee may issue a permit for the construction and operation of a private, non-profit hatchery. The Department has established a very thorough permit application and evaluation process involving both preliminary and final permit application forms, comments on both by all relevant divisions of the Department, public hearings on the final application and review by the Regional Planning Team to ensure compatibility with the Regional Comprehensive Plan.

"The changes in AS 16.10.440(a) and (b) in this bill are to clarify the role of the Board of Fisheries.

"The language added to AS 16.10.440(a) clarifies that the Board of Fisheries may adopt regulations relating to the harvest of the fish by hatchery operators at the specifically designated locations.

"The repeal of AS 16.10.440(b) in this bill limits the function of the Board of Fisheries to that specified in AS 16.10.440(a), eliminates any possibility of conflict between the Board of Fisheries and the Department of Commerce in section .470(b) and leaves the permitting authority completely to the Commissioner of the Alaska Department of Fish and Game."

Honorable Bill Sumner
Chairman, Senate Resources
Committee
Alaska State Senate
Juneau, Alaska 99811

Re: House Bill 359 am, an Act Relating to Salmon Enhancement

Dear Senator Sumner:

The Speaker has requested that I contact you regarding the above referenced bill. I am currently representing Southern Southeast Regional Aquaculture Association, Inc., in a lawsuit wherein the statutory structure authorizing the regional associations and providing for their financing mechanism is under challenge on constitutional grounds. Specifically, the focal issue of the lawsuit is whether A.S. 16.10.530 is an unconstitutional delegation of the taxing power to an entity other than an organized borough or city in violation of Art. 10, § 2 of the Alaska Constitution. House Bill 359 am was drafted in order to eliminate all but the focal issues in the case, and is also designed to preserve the economic viability of the private associations. The purpose of this letter is to comment on proposed changes in the law necessary to maintain the present system.

Enclosed with this letter is a copy of SSRAA's brief in Superior Court. The brief is long, and I do not suggest that you read it for the purposes of understanding this letter. It does, however, discuss a number of constitutional issues with regard to the State's natural resources that you may be interested in reviewing on another date. Also enclosed is a copy of the House Journal for March 15, 1979. On pages 598-603 of that day's journal is the House Resources' letter of intent with regard to this bill.

Presently, there are five regional associations in existence: two in Southeast Alaska, one in Prince William Sound,

one in Cook Inlet, and one in Dillingham. The two Southeast Alaska associations and the Cook Inlet Regional Aquaculture Association have held assessment elections pursuant to A.S. 16.10.530 and have instituted the assessment in their regions. Southern Southeast Regional Aquaculture Association broke ground on a hatchery a year and a half after it was organized. All of the associations have been set up jurisdictionally along fish and game management units boundaries, and this is one of the problems that lead to the above referenced lawsuit. Art. 10, § 2 of the Alaska Constitution directs that the taxing power shall not be delegated to entities other than organized boroughs and cities. It is true that in a geographic sense the boundaries do occasionally overlap.

Sections Five and Six of Article 10 provide that the legislature may establish services areas in the unorganized borough and authorize the levying of taxes, charges or assessments to finance the special services. We have taken the position in the lawsuit that the assessment is not a tax, that there is not a delegation, and that in any event the private associations fit the meaning of a service area within the unorganized borough.

The Bill.

Section 1 of the bill, findings and purpose, are designed to make the legislature policy clear. In the House the FRED division objected to the emphasis on efficient aquaculture development in subparagraphs 5, 6, 7, and in paragraph B of the findings and purpose clause. The emphasis is on efficient in the findings and purpose because of the obvious efficiency in private organizations over the FRED division, and the emphasis on efficient aquaculture development in Art 8, § 15 of the Alaska Constitution.

Section 2 of the Bill is not directly related to the lawsuit. It clarifies the original intention of the Legislature that the Board of Fisheries jurisdiction over the regional associations is limited to the harvest of fish by the hatchery operators at specific locations. That section can best be explained by the Speaker or his assistant John Sund.

In Sections 3, 4 and 5 the word "royalty" is inserted before assessment. That is the only change in those sections and the change is designed to diminish any possibility that the assessment may be construed as a tax.

Section 6, p. 3, on lines 21 to 22, the language "licensed" and "A.S. 16.05.540 - 16.05.600" is deleted and the language "holding entry permits" and "A.S. 16.43.010-16.43.080" is inserted in its place. The assessment is levied on salmon harvested by commercial fisherman. The deleted language refers to persons holding gear licenses. Those sections were repealed last year and this chore would normally be reserved for the revisor of statutes but it was thought to be smoother to tag it to persons holding permits rather than persons holding gear licenses.

Section 6 also sets the lid on the assessment of 3% of the fair market value of the fish. Rather than explain it here, I will explain it later in this letter since I have a proposed language change for it.

Section 6 creates additional means by which the assessment may be terminated. New paragraph G of section .530 is designed to give more control to the Commissioner of Commerce and Economic Development over the continuance of the assessment and to strengthen the argument that the taxing power is not delegated unconstitutionally. New paragraphs (d)(2) and (h) of section .530 are the result of a floor amendment. It has political implications for the associations themselves but does not appear to have any affect upon the issues in the lawsuit.

Section 7 makes it clear that the finding by the Commissioner of Commerce and Economic Development that the assessment is reasonable is subject to the Administrative Procedure Act. Section 8, the repealer, must be reviewed in conjunct with section 2 discussed above.

PROPOSED LANGUAGE CHANGES

P. 2, lines 1-3 Change Subparagraph (9) of the findings to read

> "(9) the most equitable and nondiscriminatory method for providing revenue for regional salmon enhancement is to authorize regional associations to assess percentage royalty shares against those persons commercially harvesting the resource within the region."

This proposed change states the necessary finding with regard to the regional association more clearly.

P. 4, lines 4-6 Delete the following proposed language

> "the royalty assessment may not exceed 3% of the fair market value of the fish"

and insert in its place the following:

> "The royalty assessment rate requested may be equal to either 2% or 3% of the fair market value of the fish. In no event shall it exceed 3%."

The purpose of this amendment is to make it clear that the Legislature is setting the rate of the assessment. A certain degree of flexibility has to be provided for, however, because some associations are choosing to proceed with central incubation facilities (hatcheries) which necessarily require a significant start up capital, whereas others are choosing enhancement methods of stream clearances or small hatcheries. The design of the amendment is to further dilute the suggestion that the law unconstitutionally delegates a taxing power. I believe the most significant argument that can be made that the current Section .530 is indeed an unconstitutional delegation lies in the fact that no specific assessment figures are established.

P. 3, line 19 After "game" and before the comma insert

> "and reaching any necessary agreements with local government".

This proposed change goes to the heart of the lawsuit. One of the problems that has concerned me when realistically reviewing plaintiffs' claims in the lawsuit is that the geographic boundaries do overlap. Art. 10, § 13 of the Alaska Constitution provides that agreements may be made between local government and the state for "cooperative or joint administration of any function or power". In conjunction with similar language already in the municipal government section, I believe this proposed language change makes it clear that in the areas where sound fisheries biology requires an overlapping of geographic jurisdictions, that the State, the qualified regional associations and the local government entities possibly affected can enter into a cooperative agreement regarding the assessment. This agreement can take the form of local government merely stating that they have no objection to the levying of the assessment within their geographic boundaries, or in the instance of a local government which is actually levying a tax on the sale of fish (which is occurring in Naknek) that the assessment may not be levied within the jurisdiction wherein the tax is being levied.

The case in court is a close call, frankly, and I believe that House Bill 359 am with the proposed language changes and additions will cure any constitutional defect. I am

available to meet with you and the Speaker, and upon your request I will be available to make comments to the Committee. I do not wish to have the appearance of urging policy changes on any members of the Legislature, since I feel that that would be in conflict with my present status as a contractor to members of both the House and the Senate. I will be in Juneau April 6th through 10th and will be available to speak with either of you during that time period.

Sincerely,

Douglas Pope

DP/emm
cc: Honorable Terry Gardiner
Speaker, Alaska State House
Of Representatives

Letter of Intent for House Bill 359 am

The intention of the Legislature in enacting AS 16.10.375-620 was to encourage the construction and operation of salmon hatcheries by the private sector and to do so with no more restriction and bureaucratic red tape than is reasonably required.

AS 16.10.400 specifies that the Commissioner of the Alaska Department of Fish and Game or his designee may issue a permit for the construction and operation of a private, non-profit hatchery. The Department has estavlished a very thorough permit application and evaluation process involving both preliminary and final permit application forms, comments on both by all relevant divisions of the Department, public hearings on the final application and review by the Regional Planning Team to ensure compatibility with the Regional Comprehensive Plan.

The changes in AS 16.10.440(a) and (b) in this bill are to clarify the role of the Board of Fisheries.

The language added to AS 16.10.440(a) clarifies that the Board of Fisheries may adopt regulations relating to the harvest of the fish by hatchery operators at the specifically designated locations.

The repeal of AS 16.10.440(b) in this bill limits the function of the Board of Fisheries to that specified in AS 16.10.440(a), eliminates any possibility of conflict between the Board of Fisheries and the Department of Commerce in section .470(b) and leaves the permitting authority completely to the Commissioner of the Alaska Department of Fish and Game.

Headquarters: Box 939, Cordova, Alaska

March 23, 1979

359

Senator Bill Sumner
Chairman, Senate Resource Committee
Pouch V
Juneau, Alaska 99811

Dear Senator Sumner:

We understand that HB 359 passed out of the House and into the Senate on March 22nd. It is somewhat disheartening to be constantly exposed to bills being passed back and forth with only cursory review, and then getting hit between the eyes by laws that have far reaching and dramatic effects.

HB 359 appeared relatively innocent at first reading until we took time for a second review with a pessimistic approach. We are very much concerned with the controversy and problems that could and probably will be created with a portion of Section 1 - Findings and Purpose, and with the exemption of the Alaska Board of Fisheries involvement in the process.

We have reviewed the bill with the ADF&G-FRED Division and the Commercial Fish Division and support the amendments the department has proposed to relieve our fears.

The proposed amendments are as follows: Increase involvement of Board than Private

Section 1 Findings and Purpose (a)(5) Regional user involvement in salmon enhancement planning and production will promote maximum benefit to the users.

(8) Regional Associations comprised of user groups will effectively promote aquaculture development in the State.

Amend Page 2 - Lines 14 and 15 to read as follows:

by hatchery operator. (b) The Board of Fisheries may adopt regulations necessary to implement 400 to 460 (drop 70) of this chapter, in accordance with the Administrative Procedures Act (AS44.62), relating to etc.

On Page 6 - Line 4 - Delete the whole line that states:
(Sec. 8 AS 16.10.440 (b) is repealed)

We sincerely hope that the Senate will adequately review this bill before it acts on it and amends it to conform with the recommended changes.

Sincerely,

Bob Blake
Chairman

INTRODUCTION

It is the position of defendant, Southern Southeast Regional Aquaculture Association that a regionally initiated assessment of a royalty share of the fishery harvest, from the exclusive class of commercial fishermen for the express purpose of fisheries enhancement by a quasi private organization, subject to plan approval by the State, is constitutionally permissible. Plaintiffs would have this court look to the assessment in isolation for the purpose of determining whether the acquaculture programs stand upon firm ground. Such a simplistic approach to a question requiring detailed analysis of constitutional, executive and legislative policy does not do justice to the growth and interaction of these policies. With that in mind defendant has constructed the memorandum in support of this motion for summary judgment in such a manner that this court will have a full opportunity to review the interacting policies dealing with the natural resource bounty of our State, local governments and revenues. There is a clearly emerging doctrine of flexibility with regard to the raising and use of revenues from clear identifiable exclusive classes within the private sector for purposes which will most directly and demonstrably benefit the exclusive class. The unique role of the legislative and executive branches in Alaska delegated by the constitution for the purpose of developing and enhancing common property resources of the State adds dimension to this emerging doctrine of flexibility. To fully understand the added dimensions to this doctrine of flexibility the court must grasp the state of evolution of fundamental constitutional doctrines at this point in history in American and Alaskan society.

It is also defendant's position that plaintiffs have totally ignored many fundamental procedural requirements basic to the judicial process while seeking judicial intervention into a domaine primarily involving executive

and legislative policy functions. The failure to address those threshold requirements by the plaintiffs is developed in a different section of this memorandum. Most of these procedural issues require detailed factual analysis. The court should note that discovery is still proceeding on these detailed questions, but should be completed prior to argument in this case. Should the court find that there are genuine material issues of fact regarding the procedural issues that must be further explored it is not necessary to do so if defendants are entitled to summary judgment as a matter of law on the substantive issues discussed herewith.

No fundamental issues in this lawsuit initiated by plaintiffs have yet been resolved. As frequently happens when a party moves for summary judgment in its entirety upon the pleadings alleged as supported by depositions, affidavits and appendages, it is necessary for the moving party to discuss in detail each and every one of the issues raised by the plaintiffs regardless of varying weights of comment those issues raised actually deserve. For example, plaintiffs have alleged equal protection violations but have primarily focused on what they perceive to be a delegation of a taxing power. Even though they raise an equal protection issue without further alleging that the legislature is powerless to enter the field through the means they have chosen, it is still necessary for the defendants to dispose of that allegation. Defendant believes however, that discussion of such issues as equal protection, in a meaningful manner, will result in providing the court with a better background for the purpose of ruling on the issues that plaintiffs have focused upon so far. For this reason equal protection is discussed first in this memorandum, after the background material is developed.

STATEMENT OF THE CASE

On March 15, 1978, plaintiffs filed this lawsuit. On behalf of themselves and on behalf of a putative class of persons "consisting of all fishermen who have fished, wish to fish in Southeast Alaska" plaintiffs request that the enabling legislation providing for regional aquaculture associations pursuant to A.S. 16.10 be declared unconstitutional, that mandatory assessments of shares from the common property fisheries reduced to capture by commercial fishermen of the State pursuant to A.S. 16.10.530 be declared unconstitutional, and that all such shares paid by plaintiffs and the putative class they purport to represent be returned. On May 11, 1978, plaintiffs requested production of material relating to: (1) the implementation of A.S. 16.10 in the Northern and Southern region of Southeast Alaska; (2) the promulgation of any regulations emergency or otherwise promulgated thereunder; (3) the recognition of the Southern Southeast Regional Aquaculture Association and the Northern Southeast Regional Aquiculture Association by the Department of Fish and Game; (4) the elections held by said associations; and (5) the assessment and levy of assessments conducted pursuant to A.S. 16.10. On May 25, 1978, after answers by all parties, plaintiffs moved for partial judgment on the pleadings regarding the issues of (1) whether the class is so numerous that joinder of all members is unpracticable; and (2) whether there were questions of law common to the class. Defendants Southern Southeast Regional Aquaculture Association then moved for a protective order regarding some of the matters requested in plaintiffs' request for production. Earlier, defendant Southern Southeast Regional Aquaculture Association had moved to void the return of service of summons or to dismiss the action against the Southern Region. On June 16, 1978, this court granted that motion to void the

return of service and summons, and finished that order by stating "other issues raised by these defendants will be held in abeyance pending these defendant's production and plaintiffs' response." Plaintiffs have never responded to defendant's motion for protective order.

In the meantime, the Northern Region held elections pursuant to A.S. 16.10.530, and as of May 17, 1978, regulations implementing A.S. 16.10 for the Northern Region were effected. On December 11, 1978, plaintiffs moved to maintain and certify class action. On December 21, 1978, plaintiffs moved to amend the complaint to include the election and assessment provided for by the Commissioner of Commerce and Economic Development by regulation for the Northern Region. On December 15, 1978, plaintiffs moved to enjoin expenditures by the Northern Region from any funds derived from "payments made by defendant processors pursuant to A.S. 16.10.530."

On January 3, 1979, a motion to intervene as parties-defendants was filed by a fisherman, on behalf of himself and a class of persons similarly situated. Various oppositions to these motions have been filed, and on January 17, 1979, the date set for this motion for summary judgment was agreed to.

I. FACTUAL BACKGROUND

Southern Southeast Regional Aquaculture Association, Inc. (SSRAA) organized in early 1976. The principle purpose for which the corporation was formed was to "engage in aquaculture." (See Articles of Incorporation, Appendix). The Corporation is a nonprofit corporation, and is constrained by the law of Alaska relevant to nonprofit corporations. However, the articles specifically provide that all corporate "powers are to be construed in limitation of the powers which the corporation may have under the present or future laws of the . . . . State of Alaska." The corporation has been recognized by the Internal Revenue Service as a tax exempt nonprofit organization, commonly known as a 501(c)(3) corporation. Pursuant to the by-laws, fishermen elect 55% of the board. Members of other user groups, including subsistence fishermen and processors, are appointed by the full board of fishermen. Also included on the board is at least one representative of local government.

SSRAA has shown a history of being aggressive in pursuit of responsible and efficient aquaculture development with a maximum of user and other local input, and a board which is actively involved in the management corporation. The board is currently composed of five standing committees, and every member of the board is assigned to a committee. Those committees are the Executive Committee, Ways and Means Committee, Personnel Committee, the Regional Planning Team and the Nomination and Board Development Committee. Each Committee is staffed with professional advisors pursuant to budget approval of the full board. The board - committee system setup in the Southern Region provides an opportunity for all members of the association to participate actively.

On November 2, 1976, the Alaska Department of Fish and Game recognized SSRAA as a qualified regional association pursuant to Chapter 161 of the 1976 Session Laws. The

region covers the same geographic boundaries as Fish and Game Regulatory district 1 through 8 in Southeastern Alaska. The Corporation had earlier hired a highly qualified chief executive officer and by the end of 1976 had devoted substantial energy and revenues for preliminary hatchery site selection and preliminary applications for a private nonprofit hatchery, as well as an intensified campaign to educate fishermen and other users about the promises of user controlled regionally oriented salmon enhancement.

In early 1977, the corporation became aware of pending legislation, then House Bill 264. The pending legislation provided for an assessment election for qualified regional associations, and also provided that "notification, public meeting and voting procedures instituted before the effective date of this Act ... in substantial compliance with A.S. 16.10.530(e) shall be considered to constitute compliance with this Act, and are ratified upon the effective date of the Act." SLA Chapter 154(1977) §18. The board resolved to proceed with a mandatory assessment election in order to meet compliance with the pending legislation. An elections committee was appointed, and the calendar of events was established to conform with the election procedures in the proposed law. The elections committee drew up procedural rules of voting, and made substantial preparations for full and adequate notice of the proposed election to all limited permits holders in Southeast Alaska. The corporation made a tremendous effort to ensure the largest turnout for the elections, and otherwise precisely followed the law prior to and during the election. The mandatory assessment passed in the Southern Region with over 56% of the qualified fishermen casting ballots voting for the assessment. A month later, on June 30, 1977, the Commissioner of the Department of Commerce and Economic Development approved the assessment, effective July 24, after finding that the procedural voting requirement had been followed, and that the assessment was

reasonable. The procedure for the Commissioner in making his findings and approving the assessment were further explicated in the regulations adopted on July 15. See 3AAC 88.010-030. It is undisputed that the major plaintiffs in this lawsuit made no attempt to provide input into the approval and regulation adoption or to request the Commissioner not to approve the assessment. (See depositions.) Although the Commissioner gave notice to the processors and other fish buyers, pursuant to A.S. 16.10, that they were to begin collecting the assessment, the processors collected but declined to transmit the assessment to the regional association. Cf. State of Alaska and Southern Southeast Regional Aquaculture Association, Inc. v. Annette Island Packing Co. et al., Civil Action No. 77-10006, Juneau. However, some fish buyers did collect and forward the assessment and by November 11, 1977, SSRAA had received some $49,000 in assessments.

Meanwhile, the corporation was actively proceeding with plans for hatchery sites and a hatchery facility at Whitman Lake on Ravilla Island near Ketchikan. On December 15, 1977, the final request for the last $100,000 matching grant, pursuant to A.S. 16.10.510, was sent to the Director of Business Loans, Department of Commerce and Economic Development.

In early 1978, after processors had agreed to release the impounded assessment, the corporation let an engineering and design contract for the Whitman Lake Hatchery facility. The design of the facility and its specifications were supervised by Milo Bell, Professor Emeritous of Fisheries, University of Washington, SSRAA's senior technical advisor. Subsequently, interim financing was secured through the Spokane Bank for Cooperatives, and construction began at the Herring Cove-Whitman Lake hatchery site in June. A temporary hatchery was built at Beaver Falls, near Ketchikan, primarily

for the purpose of preventing a years delay in production of salmon. The Beaver Falls Hatchery is presently incubating 800,000 Coho eggs.

Also during 1978, the corporation had become heavily involved in the regional planning process. This process is dictated by A.S. 16.10.375. Corporation expenses in 1978 exceeded $112,000 in conjunction with this process.

Currently there exist five recognized regional aquaculture associations in the state. They are Southern Southeast Regional Aquaculture Assocation, Northern Southeastern Regional Aquaculture Association, Prince William Sound Regional Aquaculture Association, Cook Inlet Regional Aquaculture Association and Imarpik Regional Aquaculture Association in Dillingham. Three have implemented assessments pursuant to A.S. 16.10.530: The Southern and Northern Regions of Southeast Alaska, and Cook Inlet Regional Aquaculture Association. Specific rehabilitation and enhancement programs are currently underway, partially funded or guaranteed by the mandatory assessment.

II. HISTORIC BACKGROUND

Historically, salmon were important as a food source in Alaska; while Eskimos, Aleuts and Indians were heavily dependent on salmon, they used the fishery in a manner unlikely to cause damage to it. In the early days of the commercial fishery in Alaska, the resource was considered inexhaustible by those most concerned with its exploitation. The fishing levels during the first years skyrocketed; the number of fish traps increased from 60 to 600 in a period from 1906 to 1920. During the same period the number of gillnet boats rose from 1,000 to 5,000, and the number of seiners increased from 200 to 800. There was a rapid increase in consumer demand for canned salmon from the inception of commercial fishing in the 1880's until the end of World War I. Fishing levels and industry expansion in Alaska reflected this demand. In the twenty year period from 1899-1918 the Alaska salmon pack rose from approximately 1,000,000 cases to over 6,500,000 cases. This growth occurred in the absence of any effective governmental regulation and, had it not been for the sharp drop in demand after the First World War, might have very rapidly destroyed the fishery. Production continued to increase and reached a peak in the late 1930's despite that drop in demand. Then the commercial catch began to decline significantly until in the mid-1960's it reached a level less than half the maximum yields of the late 1930's. Several factors must be considered in evaluating the reasons for that serious continuing decline in production. The first factor was the increase in the number of fishermen.

In the first years of the Alaska commercial salmon fishery a relatively small number of fishermen harvested large numbers of fish. The years thereafter were marked by an enormous increase in the number of commercial fishermen. In the peak fishery period from 1934 to 1939 an average of 8,383 fishermen caught an average of 593,719,000 pounds of

salmon annually, whereas for the period from 1963 to 1967 an average of 16,764 fishermen harvested an average of only 254,771,000 pounds annually. By the mid-1930's the average catch had peaked and had started its precipitous decline. The average catch per fisherman dropped from a high of 89,236 pounds in 1934 to 18,763 pounds by 1966. As a result of these developments, the almost 18,000 fishermen employed in 1966 caught twenty-five percent fewer fish than did 7,408 fishermen in 1930.

The declining size of the average catch of each fisherman and the increased number of fishermen in the fishery were related phenomena. It could be possible for both of those conditions to exist in an economically viable industry if the average catch and the number of fishermen leveled off, but until recently this is not the case in the Alaska fishery. The fisherman in the boom period of the mid-1960's earned less gross real income than his counterpart fishing in the depression period of the mid-1930's, notwithstanding an increase of over 300 percent in the real value price of fish. This situation was caused partially by the fact that, for a given output, the cost of catching each fish increased as the average catch per fisherman decreased. The concerns caused by the declining catch and the increasing cost of catching fish led to the limitation of entry into the fisheries and a plan for efficient aquaculture development. 1/

1/ Cf. R. Cooley, Politics and Conservation: The Decline of the Alaska Salmon (1963); J. Crutchfield & G. Pontecorvo The Pacific Salmon Fishery: A Study In Irrational Conservation (1969).

III. DEVELOPMENT OF AQUACULTURE POLICY IN ALASKA.

A. CONSTITUTIONAL RECOGNITION.

Prior to 1972, Art. VIII, Sec. 15 of the Alaska Constitution provided that "[N]o exclusive right or special privilege of fishery shall be created or authorized in the natural waters of the state." That section was derived from section 1 of the White Act, 48 U.S.C., §221, under which Alaska fisheries were managed prior to statehood. Cf. 1963 Opinion, Attorney General, No. 3. The White Act had been consistently construed to forbid exclusivity in the common property fishery not only to any single group or corporation but also to any special group or number of people. Cf. Hynes v. Grimes Packing Co., 337 U.S. 86 (1949).

In 1972 sec. 15 was amended with the additional clause:

> This section does not restrict the power of the state to limit entry into any fishery for purposes of resource conservation, to prevent economic distress among fishermen and those dependent upon them for a livelihood and to promote the efficient development of aquaculture in the State.

When the resolution calling for the proposed amendment was under consideration by the legislature several significant changes were made. These changes were referred to in a House Resources Committee report:

> As received by the committee, the amendment specifies three grounds for restricting entry to a fishery, one of which is "for purposes of conservation of the resource." In our proposed substitute we have altered this to read "for purposes of resource conservation," thereby broadening it to include conservation not only of the fisheries themselves, but of the capital and labor resources which are expended in harvesting them. This is a particularly important point since limited entry finds its primary significance more in the context of economics than biology. We have added the adjective "efficient" before "development of aquaculture" for similar reasons.

1971 House Journal, p. 761. The House Resources Committee substitute was the version eventually adopted by the voters.

The significance of those changes should be emphasized. The conservation of capital and labor resources embodies

economic concepts far beyond biological rehabilition of the fisheries. Efficiency of the means chosen to achieve biological enhancement became a constitutionally fathered public purpose. As shall be seen, the legislative scheme to promote aquaculture development effectively recognized capital and labor conservation as a primary goal.

B. LEGISLATIVE DEVELOPMENTS.

1. In 1974 the legislature passed into law, with the Governor's signature, a bill authorizing the ownership of salmon hatcheries by qualified nonprofit corporations for the purpose of contributing to the rehabilitation of the depleted salmon stocks. 2/ The bill empowered the Commissioner of Fish and Game to issue permits to nonprofit corporations organized under A.S. 16.10.20 for the construction and operation of a salmon hatchery, "subject to the restrictions he considers desirable or that are imposed by statute or regulation under Secs. 400-470 of this Chapter." 3/ (Underlining supplied.)

2/ SLA Chapter 111. Section 1 of that Chapter laid out the legislative intent of the Act:

> "It is the intent of this Act to authorize the private ownership of salmon hatcheries by qualified nonprofit corporations for the purpose of contributing, by artificial means, to the rehabilitation of the state's depleted and depressed salmon fishery. The program shall be operated without adversely affecting natural stocks of fish in the state and under a policy of management which allows reasonable segregation of returning hatcher-reared salmon from naturally occurring stocks."

3/ SLA Chapter 111, Sec. 2, adding Sec. 16.10.400(a) by amendment. The underlined language was later deleted from law by amendment in SLA Chapter 154 (1977), Section 3. See discussion infra.

The Act also listed conditions which must be included in any permit:

> Sec. 16.10.240. CONDITIONS OF A PERMIT. The department shall require, in a permit issued to a hatchery operator, that,
>
> (1) salmon eggs procured by the hatchery must be from the department or a source approved by the department;

(footnote 3/ con't)

(footnote 3/ con't)

(2) no salmon eggs or resulting fry be placed in waters of the state other than those specifically designated in the permit;

(3) no salmon eggs or resulting fry, sold to a permit holder by the state or by another party approved by the department, may be resold or otherwise transferred to another person;

(4) no salmon be released by the hatchery before department approval, and, for purposes of pathological examination and approval, the department shall be notified of the proposed release of salmon at least 15 days before the date of their proposed release by the hatchery;

(5) diseased salmon be destroyed in a specific manner and place designated by the department;

(6) adult salmon be harvested by hatchery operators only at specific locations as designated by the department;

(7) surplus eggs from salmon returning to the hatchery be made available for sale first to the department and then, after inspection and approval by the department, to operators of other hatcheries authorized by permit to operate under secs. 400-470 of this chapter;

(8) if surplus salmon eggs are sold by a permit holder to another permit holder, a copy of the sales transaction be provided to the department;

(9) the cost of inspections or examinations conducted by the department under this section before the release of salmon, or when eggs are procured from sources other than the department, or to determine the existence of disease, be borne by the hatchery owner for which the inspection or examination is conducted;

(10) a hatchery be located in an area where a reasonable segregation from natural stocks occurs, but, when feasible, in an area where returning hatchery fish will pass through traditional salmon fisheries.

The conditions listed in SLA Chapter 111 (1974), Sec. 16.10.420 have not been enumerated upon nor amended.

The Act provided that fish released into the natural waters of the state by a non-profit hatchery "are available to the people for common use and are subject to regulation under applicable law in the same way as fish occurring in their natural state until they return to the specific location designated by the department for harvest by the hatchery operator." 4/

Funds raised by the sale of harvested salmon or eggs by the hatchery operator 5/ were to be utilized for hatchery operating costs, debt service, capital improvements and expansion, with the remaining funds expended on "fisheries research, salmon rehabilitation projects, or other fisheries activities." SLA Chapter 111, Sec. 16.10.450. Other aspects of the bill included provisions for altering, suspending or revoking permits, 6/ public hearings on permit issuances, 7/

4/ The decision to specifically mandate that the hatchery salmon would be available for common use and subject to regulation "in the same way as fish occurring in their natural state" must have been discussed within the framework of Article VIII, Sec. 36 of the Alaska Constitution, which states:

> "Section 3. COMMON USE. Whenever occurring in their natural state, fish, wildlife, and waters are reserved to the people for common use."

See discussion, Alaska Constitutional Convention Proceedings, pp. 2458-2466.

5/ "Fish sold by hatcheries for human consumption shall be of comparable quality to fish harvested by commercial fisheries in the area, and shall be sold at priced commensurate with the current market." A.S. 16.10.450.

6/ A.S. 16.10.430, Subsection (b) provides:

> "(b) If the commissioner finds that the operation of the hatchery is not in the best interests of the public, he may alter the conditions of the permit to mitigate the adverse effects of the operation, or, if the adverse effects are irreversible and cannot be mitigated sufficiently, initiate a termination of the operation under the permit over a reasonable period of time under the circumstances, not to exceed four years. During the period of time that the operation is being terminated, the permit holder may harvest salmon under the terms of the permit but may not release additional fish."

7/ A.S. 16.10.410.

approval of egg takes, 8/ inspection of the hatchery by the department, 9/ and an annual report to the department. 10/

2. (a). In 1976, the legislature passed two more bills that pertained to aquaculture. 11/ SLA Chapter 161 (1976) provided for the formation of "qualified regional associations for the purpose of enhancing salmon production." A.S. 16.10.380(g). The associations would be deemed qualified if the Commissioner of Fish and Game found that:

A.S. 16.10.380(a):

> "(1) it is comprised of associations representative of commercial fishermen in the region;
>
> (2) it includes representatives of other user groups interested in fisheries within the region who wish to belong; and

---

8/ A.S. 16.10.445:

> "EGG SOURCES. (a) The department shall approve the source and number of salmon eggs taken under secs. 400-470 of this chapter.
>
> (b) Where feasible, salmon eggs utilized by a hatchery operator shall first be taken from stocks native to the area in which the hatchery is located, and then, upon department approval, from other areas, as necessary."

9/ A.S. 16.10.460.

10/ A.S. 16.10.470, The report to the Department of Fish and Game included:

> (1) a complete description of all significant hatchery operations;
>
> (2) statistics on the numbers of eggs and fish handled by the hatchery, whether for production or sale;
>
> (3) future recommendations for modification of the hatchery program;
>
> (4) any other relevant date required by the department.

11/ Both bills were requested by the Governor and signed by the Governor. SLA Chapter 161 (1976), which provided for Regional Associations, passed both houses by a unanimous vote of the members present. Senate Bill History, 9th Legislature, pp. 340-341.

SLA Chapter 190 (1976) passed the Senate 19-1 and passed the House 36-0-4 before it was signed by the Governor. Senate Bill History, 9th Legislature, p. 341.

(3) it possesses a board of directors which includes no less than one representative of each user group that belongs to the association."

The Act directed that the Commissioner shall "designate regions of the state for the purpose of enhancing salmon production and shall develop and amend as necessary a comprehensive salmon enhancement plan for each region for both public and private non-profit hatchery systems." SLA Chapter 161 (1976), Section 2. 12/

If a qualified association "has become a non-profit corporation under A.S. 10.20" and "if its proposed hatchery is provided for in the comprehensive plan for that region" then the Act granted the association "a preference right to a permit." Supra, Section 3. 13/

(b). The second bill relating to aquaculture to be passed in 1976 was SLA Chapter 190. This Act created the Fisheries Enhancement Loan Program and declared the following:

"Sec. 16.10.500. DECLARATION OF POLICY. It is the policy of the state, under secs. 500-550 of this chapter, to promote the enhancement of the state's fisheries by means of long-term, low interest loans for hatchery planning and construction."

In order that this policy could be implemented, the Legislature provided for means of securing the loans. 14/ Two means

---

12/ Section 1 of the Act clearly stated its purpose:

"Section 1. INTENT. It is the intent of this Act to produce salmon for the common property fisheries of the state."

13/ Permits are not to be issued unless "the stream has been classified as suitable for enhancement purposes by the Commissioner." A.S. 16.10.400(f). Until the development of the regional comprehensive plan, no permit for a hatchery may issue "unless the Commissioner determines that such an action would result in substantial public benefits and would not jeopardize natural stocks." A.S. 16.10.400(g).

14/ "All loans must be secured by collateral s factory to the commissioner, including but not limi to a first deed of trust, assignment of lease and leasehold improvements, sale of surplus fish from the hatchery, or assessments from fishermen levied under secs. 530-540 of this chapter." A.S. 16.10.520(c).

provided for were mandatory and volutary assessments on the sale of salmon. 15/

15/ The mandatory assessment:

"Sec. 16.10.530. ASSESSMENT ON SALE OF SALMON. (a) The commissioner of commerce and economic development, with the advice and approval of the commissioner of fish and game, may establish areas in which an assessment shall be levied on the sale of one or more species of salmon by persons licensed under A.S. 16.05.540-16.05.600. An assessment levied under this section shall be for the purpose of securing repayment of a loan or loans made to a qualified regional association which has formed a nonprofit corporation, or to a local nonprofit corporation established or approved by a qualified regional association, which has obtained a permit under secs. 400-470 of this chapter. The rate and conditions of assessments shall be negotiated between the commissioner and the appropriate qualified regional association in conjunction with the issuance of the loan, and the agreement on the rate and conditions of assessment reached between them shall be incorporated into the provisions of the loan contract.

(b) If conditions warrant alteration of the rate or conditions of assessment, and the alteration would be inconsistent with the agreement negotiated under (a) of this section, the commissioner shall obtain the consent of the appropriate qualified regional association before altering the rate of assessment.

(c) The commissioner and the appropriate qualified regional association must agree on a means of collection of the assessment before a loan is made, and the commissioner may, by regulation, require its collection by buyers of the salmon upon the sale of which an assessment is levied.

(d) The assessment shall terminate when the principal and interest on the loan is paid."

Subsection (a) of this section was substantially amended in 1977 by SLA Chapter 154. Subsection (b) was repealed, Subsections (c) and (d) were amended and new subsections were added. See discussion infra.

The voluntary assessment:

Sec. 16.10.540. VOLUNTARY ASSESSMENT ON SALE OF SALMON.

(a) In place of or in addition to an assessment levied under sec. 530 of this chapter, an association of persons licensed under A.S. 16.05.540 -16.05.600, which consists of at least 51 percent of the persons so licensed and actively participating in a fishery to be benefitted by a hatchery program, may levy and collect an assessment from among its members for the purpose of securing and repaying a loan made under sec. 510 of this chapter.

(footnote con't)

(footnote 15/ con't)

(b) Upon satisfactory demonstration to the commissioner that an assessment levied under this section may reasonably be relied upon to secure and repay a loan to be made under sec. 510 of this chapter, the commissioner may make the loan without requiring an assessment under sec. 530 of this chapter.

(c) If an assessment made under this section fails to satisfy the payments required on the principal and interest due on the loan the commissioner may negotiate with the regional association to levy an assessment under sec. 530 of this chapter.

This section has not been amended.

3. In 1977 the legislature enacted SLA Chapter 154, "An Act Relating to Fisheries Enhancement." 16/

16/ This bill passed the House 36-0-4 and the Senate on reconsideration 18-1-1. The Governor signed the bill with an accompanying message:

"June 23, 1977

The Honorable Hugh Malone
Speaker of the House
Alaska State Legislature
Juneau, Alaska 99811

Dear Mr. Speaker:

I have signed the following bill and am transmitting the enrolled and engrossed copies to the Lieutenant Governor's Office for permanent filing:

SENATE COMMITTEE SUBSTITUTE FOR
COMMITTEE SUBSTUTITE FOR
HOUSE BILL NO. 264
Resources, amended Senate
(Relating to fisheries enhancement)
Chapter 154, SLA 1977

While this legislation does have a number of technical difficulties that merit consideration during the next legislative session, it nevertheless represents a good example of the administration and the legislature working together to achieve a common goal.

Enactment of this legislation will provide very substantial assistance to the regional associations of user groups who desire to work with the Alaska Department of Fish and Game to develop comprehensive plans for rebuilding the salmon resources of their region.

It is my hope and expectation, that with this additional support for the regional associations, the private, nonprofit program of salmon restoration can go forward at a very positive and effective pace.

Sincerely,

/s/ JAY S. HAMMOND
Governor"

House Journal, 1977, pp. 1701-1702.

The policy was restated to read:

§16.10.500 DECLARATION OF POLICY

> It is the policy of this state, under Sections 500 to 550 of this chapter, to promote the enhancement of the state's fisheries by means of grants for organizational and planning purposes to regional associations which have qualified under Section 380 of this chapter, and by means of long term, low interest loans for hatchery planning, construction, and operation.

The Act substantially amended A.S. 16.10. For the purposes of this lawsuit, the relevant amendments, and their effect, are listed below:

(a). Regional Salmon Plan

A.S. 16.10.375 originally directed the Commissioner of Fish and Game to designate regions of the State for the purpose of enhancing salmon production and required that he should develop a comprehensive salmon enhancement plan for each region for both public and private non-profit hatchery systems. 17/

The 1977 Act amended this section to direct that the plans "for public and private non-profit hatchery systems" should be developed by "regional planning teams consisting of department personnel and representatives of the appropriate qualified regional associations," subject to plan approval by the Commissioner. 18/ SLA Chapter 154 (1977), Sec. 2. (Hereafter 1977 Act.)

17/ See SLA Chapter 161 (1976), Section 2 and discussion, supra.

18/ Other sections of A.S. 16.10 were amended to accommodate the regional planning team concept, but always with an eye toward the ultimate authority of the Commissioner:

> (a) permits for the hatchery may be issued to a non-profit corporation "after the permit application has been reviewed by the regional planning team." 1977 Act, Sec. 3.
>
> (b) permits may be revoked or suspended "after the regional planning team for the area in which the hatchery is located is notified and granted an opportunity to comment." 1977 Act, Sec. 4.

(b). Preference Rights to a Permit

SLA Chapter 161 (1976) had granted a preference right to a hatchery permit if a qualified regional association had become a non-profit corporation and its proposed hatchery was provided for in the comprehensive plan.

The 1977 Act placed an additional requirement that the fresh water source for the proposed hatchery "exceed one cubic foot per second minimum flow." 1977 Act, Sec. 3.

(c). Revenues From Sale of Salmon and Salmon Eggs

Previously A.S. 16.10.450 had restricted the use of revenues from the sale of salmon and salmon eggs by a non-profit hatchery operator to hatchery operating costs, debt service, captial improvements and expansion, and fisheries research, salmon rehabilitation projects, or other fisheries activities.

The 1977 Act amended that section to also include acceptable expenditures from these revenues as operating costs of the "qualified regional association for the area in which the hatchery is located" and directed that remaining funds shall be expended "on other fisheries activities of the qualified regional association." 1977 Act, Sec. 5.

(d). Annual Reports

SLA Chapter III (1974) required hatchery operators to submit an annual report to the Department of Fish and Game. (See discussion, supra.) That section required only that the operator submit a complete description of all significant hatchery operations, statistics on the number of eggs and fish handled, and any other relevant data required by the Department.

The 1977 Act specified in detail that which was to be included in the report to the Department "and to the

qualified regional association." 19/ Supra, Sec. 6. In addition, the Act required that permit holders must submit "an annual financial report to the Department of Commerce and Economic Development." 20/ Supra.

(e). Grants For Organizational and Planning Purposes.

The 1977 Act declared it to be the policy of the State to promote the enhancement of the State's fisheries by means of "grants for organizational and planning purposes" to qualified regional associations. 21/ Pursuant to this declaration of policy, the Act provided for grants "in amounts not exceeding $100,000 per region and up to an additional $100,000 on a 50/50 cash matching basis." 22/

19/ "Sec. 16.10.470. ANNUAL REPORT. (a) A person who holds a permit for the operation of a salmon hatchery under secs. 400-470 of this chapter shall submit an annual report no later than December 15 to the department and to the qualified regional association for the area in which the hatchery is located, to include but not be limited to information pertaining to species, brood stock source, number, age, weight, and length of spawners; number of eggs taken and fry fingerling produced; and the number, age, weight, and length of adult returns attributable to hatchery releases, on a form to be provided by the Department of Fish and Game." (Emphasis supplied.)

20/ "Sec. 16.10.410. (b) A person who holds a permit for the operation of a salmon hatchery under secs. 400-470 of this chapter shall submit an annual financial report to the Department of Commerce and Economic Development on a form to be provided by the Department of Commerce and Economic Development." (Emphasis supplied)

Note that the financial statement is required of all permit holders, not just those seeking financial assistance.

21/ A.S. 16.10.500. This "means" was added to that of long-term, low interest loans for hatchery planning and construction.

22/ A.S. 16.10.510(9). Grants were, in fact, made to the regions. The breakdown may be gleaned from the following committee report:

"HOUSE FINANCE COMMITTEE REPORT
ON
CSHB 264 (FINANCE)

The revised fiscal note for CSHB 264 (Finance) provides funding as follows:

FY 77: $900,000 in grant funds for the following regions: Ketchikan, Sitka, Bristol Bay, Cook Inlet, Yukon-Kuskokwim and Prince William

Sound. The grant amount provides $100.000 to each region attempting to organize and to Prince William sound (Already organized). A matching assessment grant of $100,000 will be made to organized regional associations. It is estimated that three regional associations will qualify for this second grant.

FY 78: $900,000 in grant funds to provide for six additional regions attempting to organize and three of which might qualify for the matching grant.

Respectfully submitted,

/s/ STEVE COWPER, Chairman
House Finance Committee"

House Journal, 1977, p. 788.

(f). Mandatory Assessment.

(1). Assessment Trigger

Previously A.S. 16.10.530(a) had authorized the levying of the assessment by the Commissioner of Commerce and Economic Development, with the advice and consent of the Commissioner of Fish and Game, at the time of and in conjunction with the issuance of a loan or loans to a qualified regional association.

The Act amended that subsection to direct that the Commissioner levy the assessment "on request of the qualified regional association" after the Commissioner determined that procedural requirements set by statute were met. 23/

(2). Assessment Rate

Originally it was provided that the rate of the assessment "shall be negotiated between the Commissioner and the qualified regional association in conjunction with the issuance of the loan." 24/ That was changed to provide that "[T]he rate . . . shall be stated by the appropriate qualified regional association in conjunction with the request" for the assessment levy. 1977 Art. Sec. 14.

23/ These procedural requirements are discussed infra. The Act also replaced the requirement of advice and consent by the Commissioner of Fish and Game with a requirement to consult with that Commissioner.

24/ A.S. 16.10.530(a). Note A.S. 16.10.530(d) which directs that the Commissioner and the association must agree on a "means of collection of the assessment" and provides that the Commissioner "may, by regulation, require its collection by buyers of salmon upon the sale of which an assessment is levied."

(3). Approved use of assessment revenues

The Act provided that the "assessment . . .shall be for the purpose of providing revenue for the qualified regional association for the area in which the assessment is made." Supra. The original authorized use was "for the purpose of securing repayment of a loan or loans." SLA Chapter 190 (1976), Sec. 1.

(4). Procedural safeguards required by law

Originally, when the Commissioner was empowered to levy the assessment in his discretion for the purpose of securing repayment of a loan, there were no procedural safeguards mandated by law. When the 1977 Act changed the assessment trigger to a request from the qualified association and authorized a broader use of the assessments, the following procedural safeguards were adopted:

> "(e) Before an assessment is made under this section, the qualified regional association for the area in which the assessment is to be levied shall hold an initial public meeting to explain and discuss the necessity for the assessment and to explain the registration procedure established under (f) of this section. Reasonable public notice of the meeting shall be sent to all limited entry permit holders actively participating in a fishery in the area, posted in at least three centrally located public places in the area, and published in at least one newspaper of general circulation at least one time a week for three consecutive weeks in the area, if one exists. The notice shall briefly state the amount of the assessment and a short general description of the purposes for which the assessment money will be used. A ballot shall be mailed to all limited entry permit holders actively participating in a fishery in the area at least 20 days before the initial public meeting and contain a copy of the notice and ask the question whether an assessment shall be imposed. At the public meeting the returned ballots shall be counted by a special committee appointed by the regional association for that purpose, and a vote by written ballot shall be taken on the question from among the limited entry permit holders present at the initial public meeting. After the vote is taken at the initial meeting a second public meeting shall be held, upon the limited notice of publication in a newspaper of general circulation, each day for five consecutive days and the mailing of personal notice to all limited entry permit holders who actively participate in a fishery in the area at least 14 days before the second public

meeting, to give those who did not vote by written ballot at the initial public meeting an opportunity to vote. A majority vote for the assessment is required from the combined total of the returned ballots and the votes by ballot cast at both public meetings, before an assessment may be imposed. No person may vote twice.

(f) The qualified regional association shall establish standard registration procedures for voting on assessments under this section."

5. Termination of the assessment

SLA Chapter 190 (1976) required that the assessment "terminate when the principal and interest on the loan is paid." The 1977 Act amended this to require termination "upon request of the qualified regional association when all financial obligations relating to the assessment have been met." Supra, Sec. 15.

C. REGULATIONS ADOPTED BY THE EXECUTIVE.

Emergency and permanent regulations relating to the assessment on the sale of salmon have been adopted by the Commissioner. Those regulations, emergency and permanent, are enclosed in their entirety in the appendix for reference. However, it can be said in general that the regulations require additional specificity regarding requests or institution of the assessment, review and approval of initial requests, collection of the assessment, and submission of initial and final reports.

IV. THE DEVELOPMENT OF NATURAL RESOURCE POLICY IN THE STATE OF ALASKA

Beginning with the opening keynote address to the Alaska Constitutional Convention by E. L. Bartlett, 25/ Alaska's public policy development has struggled with the promises from and the challenges created by our natural resource wealth. The Convention focused frequently on Alaska's mineral wealth, but heeded the call of Bartlett to forge an agressive policy toward the fisheries:

> "The question of resources policy is not to be confined, of course, solely to the issue of mineral policy. Upon statehood, Alaska becomes the master of her own destiny on controlling the fisheries resources within her waters. Slavish adherence to old concepts, concepts which have brought only depletion and portents of ruin, will result only in the complete destruction of a once mighty industry. While the major future wealth of Alaska may be underground, the fisheries and marine resources of this area are matters of the highest importance and deserve the most careful consideration by this Convention and by future state legislatures."
>
> Alaska Constitutional Convention Proceedings, Appendix II, p. 6. 26/

25/ Bartlett was Alaska's Territorial delegate in Congress.

26/ Bartlett challenged the delegates to be bold in this area while drafting the natural resources article:

> "In the drafting of resources policy the Convention should not fear to consider and adopt a bold course of action. No other state entering the Federal Union has ever been so dependent upon its water and mineral resources. Never was the issue of resources policy been to vital. Devising basic policy suitable to the demand of this and future times may well require that older conceptions of resources policy be drastically revised or even discarded.
>
> We write on a clean slate in the field of resources policy. Only a minute fraction of the land area is owned by private persons or corporations. Never before in the history of the United States has there been so great an opportunity to establish resources policy geared to the growth of a magnificent economy and the welfare of a people." Supra, p. 7.

At the time of the Convention "almost absolute control over the salmon resources had been concentrated in the hands of a few large nonresident canning concerns, and the fishery was managed strictly for their benefit." 27/ The delegates struggled with many issues regarding the fisheries and natural resources in general, and finally produced a well-balanced article mandating aggressive functions for the State in providing for the utilization, development and conservation of Alaska's natural resources while, at the same time, obligating the State with protecting those resources. The approach taken is familiar to jurists and scholars as the public trust concept.

A. THE PUBLIC TRUST CONCEPT

The Public Trust concept of managing resources is not new. Its roots are in Roman jurisprudence, developed in a society with heavy commerce, with important urban concentrations, and with a legal heritage from the sea-dependent Greeks. It was considered basic natural law that the air, water, and living resources of the rivers and the sea were held in trust for common use. 28/ One of the main thrusts of the Magna Carta was the assertion of public rights in land and resources previously held by the King as private and alienable. 29/

27/ Fischer, Alaska's Constitutional Convention, University of Alaska Press, 1975, p. 132. See also, Ernest Gruening, The State of Alaska, New York: Random House, 1954, and George W. Rogers, The Future of Alaska, Baltimore: The Johns Hopkins Press, 1962.

28/ Cf. Note, The Public Trust in Tidal Areas: A Sometimes Submerged Traditional Doctrine, 79 Yale Law Journal 762, 763 (1970). Sax, The Public Trust Doctrine in Natural Resource Law: Effective Judicial Intervention, 1970 Michigan Law Review 471.

29/ Cohen, The Constitution, The Public Trust Doctrine, and the Environment, 1970 Utah Law Review 388, 389. Indeed, serfdom embodied the concept of the feudal lords "owning" the land and resources. Magna Carta, part of the great struggle to break the shackles of serfdom, tried to reassert the principle that the resources were held by the crown in its sovereign capacity as a trustee, and not as a private landlord.

In this country, attempts have occasionally been made to discredit the concept. Recently, in Hicklin v. Orbeck, ____ U.S. ____, 57 L.Ed. 2d 397 (1978) and Baldwin v. Fish and Game Commission of Montana, ____ U.S. _____, 56 L.Ed. 2d 354 (1978), appellants attacked application of state law, based in part on the public trust doctrine, as having no remaining vitality. In Baldwin, supra, Justice Blackmun answered this attack:

> "Many of the early cases embrace the concept that the States had complete ownership over wildlife within their boundaries, and, as well, the power to preserve this bounty for their citizens alone. It was enough to say 'that in regulating the use of the common property of the citizens of [a] state, the legislature is [not] bound to extend to the citizens of all the other states the same advantages as are secured to their own citizens.' Corfield v. Coryell, 6 F.Cas. 546, 552 (No. 3230) (CCEDPa. 1825). It appears to have been generally accepted that although the States were obligated to treat all those within their territory equally in most respects, they were not obliged to share those things they held in trust for their own people. In Corfield, a case the Court has described as 'the first, and long the leading, explication of the [Privileges and Immunities] Clause,' see Austin v. New Hampshire, 420 U.S., at 661, Mr. Justice Washington, sitting as Circuit Justice, although recognizing that the States may not interfere with the 'right of a citizen of one state to pass through, or to reside in any other state, for purposes of trade, agriculture, professional pursuits, or otherwise; to claim the benefit of the writ of habeas corpus; to institute and maintain actions of any kind in the courts of the state; to take, hold and dispose of property, either real or personal,' 6 F. Cas., at 552, nonetheless concluded that access to oyster beds determined to be owned by New Jersey could be limited to New Jersey residents. This holding, and the conception of state sovereignty upon which it relied, formed the basis for similar decisions during later years of the 19th century. E.G., McCready v. Virginia, 94 U.S. 391 (1876); Geer v. Connecticut, 161 U.S. 519 (1896). See Rosenfeld v. Jakways 67 Mont. 558, 216 P.776 (1923). In Geer, a case dealing with Connecticut's authority to limit the disposition of game birds taken within its boundaries, the Court roundly rejected the contention 'that a State cannot allow its own people the enjoyment of the benefits of the property belonging to them in common, without at the same time permitting the citizens of other States to participate in that which they do not own.' 161 U.S., at 530.
>
> "In more recent years, however, the Court has recognized that the States' interest in regulating and controlling those things they claim to 'own,' including wildlife, is by no means absolute. States may not compel the confinement of the

benefits of their resources, even their wildlife, to their own people whenever such hoarding and confinement impedes interstate commerce. Foster-Fountain Packing Co. v. Haydel, 278 U.S. 1 (1928); Pennsylvania v. West Virginia, 262 U.S. 553 (1923); Oklahoma v. Kansas Natural Gas Co., 221 U.S. 229 (1911). Nor does a State's control over its resources preclude the proper exercise of federal power. Douglas v. Seacoast Products, Inc. 431 U.S. 265 (1977); Kleppe v. New Mexico, 426 U.S. 529 (1976); Missouri v. Holland, 252 U.S. 416 (1920). And a State's interest in its wildlife and other resources must yield when, without reason, it interferes with a nonresident's right to pursue a livelihood in a State other than his own, a right that is protected by the Privileges and Immunities Clause. Toomer v. Witsell, 334 U.S. 385 (1948). See Takahashi v. Fish & Game Comm'n, 334 U.S. 410 (1948).

Appellants contend that the doctrine on which Corfield, McCready, and Geer all relied has no remaining vitality. We do not agree. Only last Term, in referring to the 'ownership' or title language of those cases and characterizing it 'as no more than a 19th-century legal fiction,' the Court pointed out that that language nevertheless expressed '"the importance to its people that a State have power to preserve and regulate the exploitation of an important resource."' Douglas v. Seacoast Products, Inc., 431 U.S., at 284, citing Toomer v. Witsell, 334 U.S., at 402. The fact that the State's control over wildlife is not exclusive and absolute in the face of federal regulations and certain federally protected interests does not compel the conclusion that it is meaningless in their absence." Baldwin, supra, 56 L.Ed. 2d pp. 360-361.

The focus of the Public Trust Doctrine in the past has primarly involved the protection of and access to the trust resources. 30/ This focus can be explained to a great extent by history: protecting the rights of the citizens from imperial use and grants of public resources.

The Public Trust concept in Alaska has not been so narrowly focused. The protections have been promised by specific constitutional obligations, as well as lodging in the legislative branch the power and obligations to apply the concept as our society evolves. (See discussions infra.) The concept has evolved in the executive, judicial and legislative branches with a similarly broad focus.

30/ For example, in Illinois Central R.R. Co. v. State of Illinois, 146 U.S. 387 (1892), the Illinois legislature made extensive grants of submerged land, in fee simple, to the Illinois Central Railroad. Four years later, a new legislature repealed the grant. The Supreme Court held that the express conveyance of trust lands was beyond the power of the state legislature. Supra, p. 452.

1. In the Alaska Constitution

At the time of the Convention the delegates were aware of several policy considerations which were not always in concert. Wise use and development of all natural resources was considered necessary and healthy, but the delegates were also well aware of the problems addressed by Bartlett. 31/

Consequently, the Committee on Resources submitted several drafts of a pr osed article to the Convention. It is important to revie ne evolution of those proposals in detail.

Article VIII of the Alaska Constitution provides in relevant sections:

> Sec. 1 Statement of Policy. It is the policy of the State to encourage the settlement of its land and the development of its resources by making them available for maximum use consistent with the public interest.
>
> Sec. 2 General Authority. The legislature shall provid for the utilization, development, and conservation of all natural resources belonging to the State, including land and waters, for the maximum benefit of its people.

31/ The natural resource article was the subject of much attention from the staff:

> "Recognizing that the issue of Alaska's land and resources was the most important issue facing the convention delegates, Public Administration Service made a special effort to provide a working base in its staff paper on 'The Alaskan Constitution and the State Patrimony.' After detailing land grants, resources, and responsibilities that would pass on to Alaska with statehood, the PAS paper attempted to set out a basis for delegate discussions by departing from its own established policy and developing a suggested land and resources article. In these suggestions, accompanied by explanatory discussions, PAS tried to compensate for lack of useful precedents and to provide a starting point for delegates. However, since the consultant proposals did not coincide with committee members' ideas, there was little resemblance between the PAS draft and the resources article as finally adopted." Fischer, supra, fn. p. 132.

> Sec. 3 Common Use. Whenever occurring in their natural state, fish, wildlife and waters are reserved to the people for common use.
>
> Sec. 4 Sustained Yield. Fish, forests, wildlife, grasslands, and all other replenishable resources belonging to the State shall be utilized, developed, and maintained on the sustained yield principle, subject to preferences among beneficial uses.
>
> Sec. 6. State Public Domain. Lands and interests therein, including submerged and tidal lands, possessed or acquired by the State, and not used or intended exclusively for governmental purposes, constitute the state public domain. The legislature shall provide for the selection of lands granted to the State by the United States, and for the administration of the state public domain.
>
> Sec. 10. Public Notice. No disposals of state lands, or interests therein, shall be made without prior public notice and other safeguards of the public interest as may be prescribed by law.
>
> Sec. 17 Uniform Application. Laws and regulations governing the use or disposal of natural resources shall apply equally to all persons similarly situated with reference to the subject matter and purpose to be served by the law or regulation. (Emphasis supplied).

Committee Proposal No. 8, Sec. 7, entitled State Public Domain, was the first committee proposal and was far more specific than the adopted section:

> "Lands and interest therein possessed or acquired by the state, including submerged and tidal lands, and not used or intended exclusively for governmental purposes or for reserved sites and areas constitute the state public domain. Such lands and interests therein are to be held in trust for the people of the state. These lands and interests may be disposed of only in accordance with provisions of applicable acts of Congress, including the Act admitting Alaska to the Union, this constitution and the laws of the state.
>
> The legislature shall make provision for the selection, classificatin and administration of lands in the state public domain, and the several uses thereof, in such a manner as will give maximum use and public benefit." The Alaska Constitutional Convention Record, Vol. 6, pp. 77-78. (Emphasis supplied.)

The quoted language from the first proposal is similar to constitutional language in several western states placing all or part of the domain of lands granted from the Federal

Government in trust. 32/

By the final adoption of Article VIII, the emphasized language from Sec. 7 of the first proposal had been deleted. There is no specific explanation for the deletion. Yet, prior to the exclusion of the emphasized language from Section 7, the section on Uniform Application did not contain any language that laws and regulations governing the disposal of natural resources should apply equally. Supra, Vol. 6, p. 77. That language was added at the same time the specific reference to a public trust was deleted. Supra, Vol. 6, pp. 92-97. The amendment to the section on Uniform Application broadened the scope of protection to include the public interest in disposal of the resources as well as their utilization, thereby obligating that disposal of trust resources must bear equally upon all persons similarly situated.

In the first proposal which contained the public trust language, in then Sec. 7, then Sec. 1 provided:

> "The State of Alaska has the power to provide for the utilization, conservation and balanced development of all the natural resources, including aesthetic features, of the land and waters belonging to the state for the maximum benefit of its people." Alaska Constitutional Convention, Vol. 6, p. 76. (Emphasis supplied.)

When the specific reference to the public trust was deleted, the above section had been amended to command that "[T]he State of Alaska shall provide for the utilization, conservation and development of all the natural resources." Supra, p. 92. (Emphasis supplied.) Subsequent amendments specifically obligated the legislature to provide for "the utilization,

---

32/ See Washington Const., Article 16, Sec. 1; Utah Const., Article 20, Sec, 1; New Mexico Const., Art. 13, Sec. 1. Some states implemented this language through a recognition that the resources should be held in trust, in others the statehood enabling acts contained directives to that result. See Ervien v. U.S., 251 U.S. 41 (1919).

development, and conservation of all natural resources . . . for the maximum benefit of its people." Article VIII, Sec. 2. 33/

It is clear that the delegates, rather than generally obligate the State to utilize, develop and conserve land and mineral resources pursuant to trust obligations, chose to direct future legislatures to carefully pick and choose the management and protection process. 34/

33/ The committee realized

> "that policies which promoted maximum use and development could be inconsistent with maximum benefit to the people or with the general public interest, as defined by Bartlett and others concerned about exploitation and destruction of resources and the environment." Fischer, supra, fn. 26, p. 133.
>
> Again, this understanding had been forcefully urged by Bartlett:
>
> "Many states have included in their constitutions statements that the natural resources of the state should be 'developed for the benefit of the people' of the state. Such pious generalities, without further conrete policy statements, have proved wholly inadequate as effective barriers against dissipation of resources, fraud, and corruption. Alaskans will not want, and above all else do not need, a resources policy which will prevent orderly development of the great treasures which will be theirs. But they will want, and demand, effective safeguards against the exploitation of the heritage by persons and corporations whose only aim is to skim the gravy and get out, leaving nothing that is permanent to the new state except, perhaps, a few scars in the earth which can never be healed. . . a failure to write into fundamental law basic barriers to minimize fraud, corruption, nondevelopment, and exploitation may well be viewed fifty years from now as this Convention's greatest omission." Alaska Constitutional Convention Proceedings, Appendix II, p. 7.

34/ The delegates were well aware of numerous cases struggling with this policy concept in regard to the public domain and resources contained therein. Cf. The Alaska Constitution and the State Patrimony: The Constitution and Natural Resources, Public Administration Service, 1955.

> Submerged lands within the territorial sea of Alaska are held in trust for certain purposes. See Brief of Amicus Curiae, Moore v. State, file no. 2551, Alaska Supreme Court.
>
> The legislature has chosen to place fiduciary obligations on the management of school lands; to dedicate certain royalties to a mental health trust; to present a permanent trust fund amendment to the voters. See Section 2, infra.

A necessary fundamental distinction between lands and resources held by a state in trust and all other lands and resources held by a state is that in holding the former the state acts "not as proprietors, but in their sovereign capacity as the representatives and for the benefit of all their people in common." Organized Village of Kake v. Egan, 174 F.Supp. 500, 504 (D.C. Alaska, 1959). The necessity for such a distinction was recognized in Winston Bros. Co. v. State Tax Commission, 62 P.2d 7 (Or. 1936). In language distinguishing those lands to which the state had title in a proprietary capacity from trust lands beneath navigable waters, the court made clear:

> "Until disposed of by the state, the state held title to these lands in its proprietary capacity and, after they had been disposed of by the state, their grantees took them free from any right therein (citations). As to the other class, . . . although the title passed to the state by virtue of its sovereignty, its rights were merely those of a trustee for the public. In its ownership thereof, the state represents the people, and the ownership is that of the people in their united sovereignty . . . Being subject to this trust, they are public juris, in other words they are held for the use of the people at large . . .[t]herefore, the state can make no sale or disposal of the soil underlying its navigable waters so as to prevent the use by the public of such waters for the purposes of navigation and fishing, but must hold them in trust for the public." Winston Bros., supra, p. 9.

By retreating from the specific trust language in Sec. 7, while adding additional safeguards, the framers surely left the task of defining any trust obligations regarding land and mineral resources with the legislature. However, with regard to fish, wildlife and waters, the delegates held fast to their original decision to reserve these resources for common use. 35/ Cf. Alaska Public Easement Defense Fund v. Andrus, 435 F. Supp. 664, 677 (D.C. Alaska, 1977).

35/ In Geer v. Connecticut, 161 U.S. 519 (1896), while struggling with the question of the sovereignty over the wildlife resources of the State of Connecticut, Justice White concluded:

"The power lodged in the state, resulting from the common ownership, is to be exercised like all other powers of the state, as a trust for the benefit of the people and not as a prerogative for the advantage of the government as distingquished from the public good." Supra, p. 529.

The Geer court cited a view that had been recognized earlier by the Supreme Court in Minnesota:

> "We take it to be correct doctrine in this country that the ownership of wild animals, so far as they are capable of ownership, is in the state, not as proprietor, but in its sovereign capacity, as the representative and for the benefit of all its people in common." State v. Rodman, 59 N.W. 1098, 1099 (Minn. 1894). (Emphasis supplied.)

Such a view has been maintained throughout the land to this day. Organized Village of Kake v. Egan, 174 F. Supp. 500 (D.C. Alaska 1959).

In summary, the constitutional framers carved out an agressive role for the legislature with regard to all natural resources of Alaska. At the same time, the air, water, fish and game resources were reserved to the people. This balance creates a necessary process of activist leadership for the benefit of the full complement of Alaskan society with our living resources. It is a role for a legislative body which is unique in democratic governments. It is a role contemplated by the framers to compliment and interact with other aspects of Alaskan government structure -- most notably local government and state and local finance. 36/

2. In the Three Branches of State Government

a. Judicial.

During the time of the Alaska Constitutional Convention, public opposition to fish traps had built tremendously. 37/ It had become obvious that the fishery resource was being depleted. Indeed, this public opposition had generated a lot of sentiment for Statehood. Part of the work product of the Convention was an ordinance providing for the abolition of the traps. 38/

36/ See Delegate Proposals Nos. 5 (Delegate Robertson); 7 (Delegate Johnson); 18 (Delegate Hellenthal); 26 (Delegate Marston); 30 (Delegate Hurley). It is defendant's position that the framers did not intend the separation between state and local functions to preclude the state from fulfilling it's trust to develop and protect the common property resources.

37/ Fish traps were unquestionably the most productive method of catching salmon ever used.

38/ Ordinance No. 3:

"As a matter of immediate public necessity, to relieve economic distress among individual fishermen and those dependent upon them for a livelihood, to conserve the rapidly dwindling supply of salmon in Alaska, to insure fair competition among those engaged in commercial fishing, and to make manifest the will of the people of Alaska, the use of fish traps for the taking of salmon for commercial purposes is hereby prohibited in all the coastal waters of the State."

The effect of that ordinance on the Metlakatlan Indians was challenged in Metlakatla Indian Community, Annette Island Reserve v. Egan, 362 P.2d 901 (Alaska 1961). The confrontation of policies was between that of the new State's obligation to protect and preserve the natural resource and the rights of the Indians to fish with traps on the reserve granted them by the federal authority. The court recognized the role of the executive and legislative branches in the State with regard to the resource:

> "These migrating schools of fish, while in inland waters, are the property of the state, held in trust for the benefit of all the people of the state, and the obligation and authority to equitably and wisely regulate the harvest is that of the state." Metlakatla Indian Community, supra, p. 915. (Emphasis supplied.) 39/

The reflection by the court that the State was not only empowered, but entrusted to protect the fishery is noteworthy. It appropriately identifies the nature of the relationship between the citizens, the State, and the resources held in trust.

b. Legislative.

In 1976, the legislature dealt with a number of resource management pieces of legislation. Concerned about the increasing pressures on Alaska's mineral and living resources, legislative proposals took several forms. For example, a lawsuit was then pending before the Alaska Supreme Court regarding a statutory and constitutional challenge to an executive decision in late 1973 to lease submerged lands in Kachemak Bay for competitive oil and gas development. Moore v. State, 553 P.2d 8 (1976). The Legislature responded with SLA Chapter 113, (1976), "An Act Relating to the Reacquisition of Oil and Gas Leasehold Interests in Kachemak Bay."

1976 saw a proposed constitutional amendment by members of the House providing for an individual constitutional right to a heathful environment. The resolution

---

39/ See also, Kake v. Egan, 174 F. Supp. 500 (D.C. Alaska 1959); Aleut Community of St. Paul v. U.S., 117 F. Supp. 427 (Ct. Claims 1954).

passed the House but failed to pass the Senate. The House Rules Committee Report and Commentary on Rules Committee Substitute for House Joint Resolution No. 10, Amending the Inherent Rights Section of the Constitution of the State of Alaska, is instructive:

> The primary purpose of the amendment is constitutional recognition of the economic and noneconomic values in managing our unique Alaskan environment. This recognition, which is essential to human wellbeing also includes a necessity of maintaining a viable economy as part of a healthy human habitat. Accordingly, the degree of environmental protection which the state should afford as trustee of Alaska's air, water, lands, and natural resources is one which will reduce environmental incursions or degrogations to a minimum without eliminating the basis for a viable economy. The proposed constitutional amendment shall allow a balancing of environment, social, and economic concerns.

1976 House Journal, p. 469.

Later, in that same session, the Legislature specifically recognized that certain State lands were to be managed in a fiduciary capacity. SLA Chapter 267 (1976), "An Act Relating to the Rental and Leasing of State Land," amended several sections of Title 38 relating to the sale, lease, or other disposal of lands. Section 2 of that law states in relevant part:

> No sale, lease, exchange or other disposal of school lands may be made without the approval of the state Board of Education. The state Board of Education shall act as trustee of school lands. The board may retain private counsel or other professional assistance when necessary to carry out its duty as a trustee.

In order to make absolutely clear the intent of the law, the Senate Resources Committee adopted the following letter of intent:

> The purpose of designating school lands as a trust is to insure that their management for the purposes of supporting public education be treated as a fiduciary responsibility. The board of education is made trustee and is authorized to retain professional assistence as needed to assist it in meeting its responsibility.
>
> In singling out school lands in this manner, there is no intent whatsoever to limit the application of trust concepts and trust law to other

> lands of the State, or to transactions involving other lands of the State, when application of trust concepts and trust law would, in the opinion of the courts, be proper.

1976 Senate Journal, p. 1461.

The amendments to Title 38 and the letter of intent clearly reflect that the legislature was defining specific trust obligations with regard to certain state lands in the manner and within the scope that the constitutional framers intended.

The 1976 aquaculture Act amending A.S. 16.10 adding new sections relating to regional plans for salmon enhancement and the establishment and qualification of regional aquaculture associations, clearly stated that "It is the intent of this Act to produce salmon for the common property fisheries of the state." SLA Chapter 161 (1976), § 1. The 1977 Act amending A.S. 16.10.530 to provide for mandatory assessment elections stated that "It is the policy of the state, under §§ 500-550 of this Chapter, to promote the enhancement of the State's fisheries by means of grants for organizational and planning purposes to regional associations . . . and by means of long term, low interest loans for hatchery planning, construction, and operation." SLA Chapter 154 (1977), §7. The stated intent of these two laws providing the basic framework for the evolution of SSRAA, clearly suggests that the purpose of §530 and of the regional associations is not to raise revenue but rather to fulfill the legislatures constitutuional obligation to rehabilitate and develop the fisheries, and to exercise the broad police powers available in order to fulfill the constitutional trust. Dictating the trust obligation with regard to school lands became a matter of placing fiduciary responsibilities on the Board of Education. Fulfilling the trust obligation with regard to fisheries resources necessitated a role of action as well as protection.

In 1978, the legislature passed SLA Chapter 179, "An Act Relating to the Renewable Resources Fund." The Act

created a public corporation for the purpose of facilitating the rehabilitation, enhancement and development of the State's renewable resources. The House Finance Committee's letter of intent, in relevant parts, reflects the understanding of the legislature's constitutional role:

> "An integral part of the bill is the concept of achieving an appropriate use of the resources. As trustees of our renewable resources the state is constitutionally directed to seek the most beneficial uses. ARRC investment decisions should consider both expected financial returns and the effects of resource development on both the target resource and on other resources. Achieving appropriate resource use at the inception of economic activity will greatly benefit the state and its residents by avoiding longer-run regulatory and rehabilitation burdens resulting in more stable ecomonic activity based on all of the state's renewable resources." House Journal, April 11, 1978, p. 830.

More specific purposes of Chapter 179 direct a public corporation to "sponser research and development of technologies and innovations for the rehabilitation and enhancement of the state's renewable resources to achieve an appropriate use of the resources." A.S. 37.12.040(2). A board of trustees is established as the governing body of the corporation. A.S. 37.12.060. Here the Legislature is clearly adding another dimension to the state's role as trustee. The law creates a public corporation which is essentially a venture capital fund with broad flexibility and investment powers. However, it cannot be said that the purpose of the law is to raise revenues or even to make money, like the aquaculture laws its purpose is to generate a healthy enconomy in renewable resource areas and is balanced against the constitutional obligations not to impair the productivity of the resource. 40/

40/ A further dimension can be found in A.S. 37.14.010, et sec., establishing a mental health trust fund. See A.S. 37.14.050, dedicating 1 1/2% of the total revenue derived from management of state land, including amounts paid to the state in proceeds of sale or annual rent of surface rights, mineral lease rentals, royalties, royalty sale proceeds, federal mineral revenue sharing payments or bonuses to the fund.

c. Executive.

Aspects of the constitutional role have also been recognized by the executive. For example, in a 1978 transmittal letter to the legislature accompanying sponsor substitute for Senate Bill No. 59, (SLA Chapter 108 (1978)), "An Act Relating to Forest Resources and Practices," Governor Hammond referred to a section on regulatory and administrative standards which directed that "there shall be no significant impairment of the productivity of the land and water with respect to renewable resources." A.S. 41.17.060(b)(5). Governor Hammond commented that:

> Paragraph (5) recognizes the fundamental public trust obligation of the state to ensure that the capability of the land to produce renewable resources is not impaired. While a particular species of tree or wildlife may have little relative value now, the future may find it suddenly in great demand. If the land is incapable of producing it to the demand level, an important land management option is lost, to the detriment of the public welfare. 1978 Senate Journal, p. 663.

The role discussed above by the other branches of State government was equally alive with the formulation of aquaculture policy in Alaska. Originally focused on rehabilitation of the State's depleted and depressed salmon fishery, and producing salmon for the common property fisheries of the State, the later intent was not only to rehabilitate, but also to enhance. To enhance salmon production by artificial means from general revenues would benefit a select class of citizens, commercial fishermen, at the expense of the entire class of tax-paying citizens. 41/ At this point of demarcation that the legislature chose to provide for the class directly benefitting from the policy to contribute to their benefit by the assessment. This course was set consistent with the constitutional roles discussed above.

41/ Direct appropriations by the legislature or bond issues for creation of hatcheries to enhance salmon production effectively subsidize an industry without conferring equal benefits on all citizens. Although no challenge has yet been made to the recent bond issues (1976 and 1978, totaling over $50,000,000, there is an apparent violation of Article VIII, Section 17.

V. LOCAL GOVERNMENT POLICY IN ALASKA.

A. The constitutional policy for local government in Alaska has been discussed best by Victor Fischer 42/ in his book, Alaska's Constitutional Convention, University of Alaska Press, 1975. Rather than recreate a similar discussion or cite the court to the publication, relevant portions for the purposes of this case are enclosed here:

> "In providing for the legislative, executive, and judicial branches of government, delegates dealt with subject matter with which they were familiar and on which they had definite opinions. On the other hand, local government was a subject for which there was little Alaska experience to provide a useful point of departure and which provided few useful models. The local government committee, therefore, determined early that innovation was the key to structuring a local government system for Alaska.
>
> Under territorial status, local institutions had undergone only limited development; there was little self-determination at the territorial and even less at the local level. Federal law prescribed the powers of the territorial legislature, severely limiting the scope and types of local government and restricting the powers that could be exercised by cities. For example, counties could not be established, bonding criteria were strictly delimited, and home rule could not be extended to cities.
>
> * * *
>
> Since there were no direct precedents, the committee decided that the local government article should consist of general statements and policy, rather than detailed prescriptions and criteria. The first draft article presented to the convention stated the general purpose was to provide a maximum of self-government to people in all parts of Alaska. To meet this goal, two basic local government units were established--boroughs and cities. This framework was designed to accomodate today's needs and tomorrow's growth and development. The committee then set forth the principles underlying the proposed local government system:

42/ Fischer, delegate to the convention, former legislator and Director of the Institute of Social Economic and Government Research, University of Alaska, is a recognized expert in the field of local government.

1. Self-Government. The proposed article bridges the gap now existing in many parts of Alaska. It opens the way to democratic self-government for people now ruled directly from the capital of the territory or even Washington, D.C. The proposed article allows some degree of self-determination in local affairs whether in urban or sparsely populated areas. The highest form of self-government is exercised under home rule chapters which cities and first class boroughs could secure.

2. One basic local government system. The proposed article vests all local government authority in boroughs and cities. It prevents creation of numerous types of local units which can become not only complicated but unworkable.

3. Prevention of overlapping taxing authorites. The proposed article grants local taxing power exclusively to boroughs and cities. This will allow consideration of all local needs in the levying of taxes and the allocation of funds. It will lead to balanced taxation. Single interest agencies with taxing authority often do not realize needs other than their own.

4. Flexibility. The proposed article provides a local government framework adaptable to different areas of the state as well as changes that occur with the passage of time. It allows classification of units on the basis of ability to provide and finance local services. It allows optional administrative forms, adoption of home rule charters, boundary changes, etc.

5. State interest. The proposed articles recognizes that the state has a very definite interest in and concern with local affairs. For example, the credit of the state is indirectly involved in local financial matters, and local units are the agencies through which many state functions are performed. The proposal therefore gives the state power to establish and classify boroughs, to alter boundaries of local units, to prescribed powers of noncharter governments, to withhold authority from home rule boroughs and cities, and to exercise advisory and review functions.

The Borough Concept

As the committee was evolving chese principles, its members agreed that some type of unit larger than the city and smaller than the state was required to provide both for a measure of local self-government and for performance of state functions on a regionalized basis. They also agreed that any form of local government for Alaska that would be similar to counties would need a broader scope, should have authority to perform all services and should provide a maximum amount of local self-government. The result was the borough concept--an areawide unit that while different from the traditional form of the county,

was in effect a modernized county adapted to Alaska's needs. As seen by delegates, the inadequacies of conventional counties were limited functional jurisdiction, frozen boundaries, an overabundance of constitutionally established elective offices, inadequacy of fiscal powers, and lack of specifically local (as against state) government authority. They noted also that numerous special districts were being created to fill service gaps left by counties and municipalities, resulting in a multiplicity of overlapping tax jurisdictions.

To overcome such deficiencies, the initial principles set forth by the committee for consideration in the formation of the new areawide government units included these guidelines:

> Provisions should be made for subdividing all Alaska into local units (boroughs) based on economic, geographic, social, and political factors; initially, not all need be organized.
>
> Units should be large enough to prevent too many subdivisions in Alaska; they should be so designed as to allow the provision of all local services within the boundaries of a single unit, thus avoiding multiplicity of taxing jurisdiction and overlapping, independent districts.
>
> The state should have power to create, consolidate, subdivide, abolish, and otherwise change local units.
>
> Creation of units should be compulsory, with provision for local initiative.
>
> Boundaries should be established at the state level to reflect statewide considerations as well as regional criteria and local interests, and must remain flexiable in order to permit future adjustment to growth and changing requirements for the performance of regional functions.
>
> Units should cover large geographic areas with common economic, social, and political interests.
>
> Local units should have the maximum amount of self-government and have authority to draft and adopt charters; organized units should have the authority to perform any function, to adopt any administrative organization, and to generally undertake any action that is not specifically denied by the legislature.

* * *

Unlike the organized borough, legally a municipal corporation, unorganized boroughs were to be instrumentalities of the state. The legislature was to have the same authority within these boroughs as the governing bodies (assemblies) of

organized boroughs. By permitting the legislature to act as the borough assembly, the general prohibition against local legislation was overcome, and laws could be enacted for differential performance of functions in accordance with the needs of different regions.

Service areas were authorized to be established by organized boroughs (and by the legislature in unorganized boroughs) as another method of meeting requirements for different services. Initially, service areas were conceived as a means of providing services within a limited part of the borough in which taxes, assessments, and charges could be levied to cover the cost of such services. The approach was subsequently expanded to include areawide services that might be administered by special instrumentalities such as health or school districts. In all cases, however, service areas were to be creatures of boroughs and function under borough fiscal control.

* * *

State-Local Relations

In general, the constitutional convention saw the role of the state as critical in making the local governmental system work. Several factors strongly argued for a continuing state responsibility for local affairs, such as:

> The lack of any general government beyond the city.
>
> A tradition of territorial government responsibility for services beyond incorporated communities.
>
> The varying levels of local government capability and of the requirements for local services throughout Alaska.
>
> The realization that further detailed study and planning was necessary to establish a new governmental system.

Therefore, in addition to dealing with local government organization, Article X includes the following provisions for state authority and responsibility:

> Responsibility is vested in the legislature for establishing procedures and standards under which boroughs will be created and classified.
>
> The legislature is established as the governing body for unorganized boroughs and has reponsibility for provisions of services in such boroughs.
>
> A state-level local boundary commission is given responsibility for changes in local government boundaries, subject to disapproval by the legislature.

> An executive agency is established in state government to deal with local affairs.
>
> Authorization is granted for joint exercise of powers by local governments and the state.

Supra, pp. 116-124, footnotes omitted.

B. Providing for the utilization, development, and conservation of the fisheries resources is clearly a state as opposed to a local government function. This principle was not challenged from the outset of the Constitutional convention. See Volume 8, Constitution and Local Government, Public Administration Service Staff Paper, p. 54:

> Local units, on the other hand, pave city streets, put out fires, operate water and sewer systems, collect garbage and refuge, put in sidewalks, enact and enforce zoning systems, and exercise a number of regulatory functions with respect to local business activity, traffic, transporation facilities and other matters. Supra, p. 55.

The necessary jurisdictional boundaries of the regional aquaculture associations in southeast Alaska, surrounding in water a multiplicity of local governments but primarily the unorganized borough, are not in concert with any local government boundaries. It is impracticable for the framework of local governments in southeast Alaska to be the vehicle for efficient aquaculture development. Though not stated explicity, this finding is clearly implicit in the legislative policy. The legislature has implicitly carved out an area or areas that are out of bounds of the municiple governments. Such areas "implicitly carved out" are a prohibition within the scope of the word "prohibit" as used in Article 10, §11, Alaska Constitution. In Chugach Electric Association v. City of Anchorage, 476 P.2d 115 (Alaska 1970), the Court chose the language "implicitly carved out" rather than implied preemption, but for the purposes of our analysis here the result is the same. With A.S. 16.10 et seq. the legislature has clearly established that standards for choosing the boundaries of the region are to be based upon user groups within the region and the resources they harvest, rather than a functionally and

constitutionally inequipped melange of municipal governments.

Article 9, §9, Alaska Constitution prohibits local debts other than capitol improvements. Such a limitation on regionally oriented salmon enhancement would functionally prevent financing mechancisms such as the Spokane Bank for Cooperatives from providing interim or long-term financing. In effect, the legislature chose the most efficient and best equipped mechanism to meet the desired purposes of aquaculture development. The mandate of local government representation on the board of directors of the regional associations provides opportunity for policy interplay with local governments.

The legislature cannot delegate any power of control over the enhancement or rehabilitation of a common property resource. See. Libcrati v. Bristol Bay Borough, ___ P.2d ___, Opinion No. 1735, Justice Rabinowitz, Dissenting; Illinois Central R. R. Co. v. State of Illinois, supra, fn. 30. The legislature has effectively created the only scheme which allows regional involvement while retaining the obligatory role of ensuring the productivity of the resource through executive oversight. The regional aquaculture associations in no sense imperissibly conflict with local governments.

VI. DUE PROCESS AND EQUAL PROTECTION OF THE LAWS

A. Defendant SSRAA believes that plaintiffs' major complaint is that the legislature has entered the field of fisheries managment with a statutory scheme for fisheries enhancement that identifies commercial fisherman as a class which must bear a major portion of the financial burden. In brief, the plaintiffs major complaint is an equal protection issue. In order to analyze the issue it is necessary to discuss the modified rational basis test applied in Alaska.

1. Purpose

In applying this modified rational basis test, we must first look at the purpose of the challenged legislation. Isakson v. Rickey, 500 P.2d 359, 363 (Alaska 1976). There the Court looked to "the statement of purpose of the [entire Act] itself upon the assumption that the provision [in question] was enacted to further that expressed purpose." Supra. Where such a preamble of purpose does not exist, or is inadequate, resort may be had to "the legislative history." Supra. Legislative history has been defined to include reports of conference committees, Alaska Public Employees Association v. State, 525 P.2d 12, 15 (Alaska 1973) statements by "a bill's sponsor in the course of legislative deliberations;" Alaska Public Employees Association v. State, supra, at 16; and hearings held by the legislative body, Weinberger v. Wiesenfeld, 95 S.Ct. 1225, 1234 (1975). The purpose may, of course, be determined from the "Act viewed as a whole." Isakson v. Rickey, supra at 364. 43/ Whatever aids are used, the purpose determined by the Court

---

43/ The Alaska Supreme Court has also recently recognized the value of letters of intent. See Hafling, et al. v. Inland Boatman's Union of the Pacific, ___ P.2d ___, Opinion 1743, (Alaska 1978). See also, North Slope Borough v. Sohio Petroleum Corporation, et al., ___ P.2d ___, Opinion No. 1750 (Alaska 1978).

must be the actual purpose.

> This Court need not in equal protection cases accept at face value assertions of legislative purpose, when an examination of the legislative scheme and its history could not have been a goal of the legislation.

Weinberger v. Wiesenfeld, supra, 1233, n. 16. In discussing the proffered purpose of an Oklahoma law struck down on equal protection grounds, the Supreme Court accepted the purpose or "objective" of the legislation as enhancement of traffic safety but noted: 44/

> That this was the true purpose is not at all self-evident. The purpose is not apparent from the face of the statute and the Oklahoma Legislature does not preserve statutory history materials capable of clarifying the objectives served by its legislative enactments. The District Court acknowledged the non-existence of materials necessary 'to reveal what the actual prupose of the legislature was,' but concluded that 'we feel it apparent that a major purpose of the legislature was to promote the safety of the young persons affected and the public generally.' Similarly, the attorney for Oklahoma, while proposing traffic safety as a legitimate rationale for the 3.2% beer law, candidly acknowledged at oral argument that he is unable to assert that traffic safety is 'indeed the reason' for the gender line contained in §245. For this appeal we find adequate the appellee's representation of legislative purpose, leaving for another day consideration of whether the statement of the State's Assistant Attorney General should suffice to inform this Court of the legislature's objectives, or whether the Court must determine if the litigant simply is selecting a convenient, but false, post-hoc rationalization. (Citations omitted).

Craig v. Boren, ____ U.S. ____, 45 U.S.L.W. 4057, 4060, n. 7 (1976). Thus, as stated in Gunther, "Forward: In Search of Evolving Doctrine on a Changing Court: A Model for Newer Equal Protection," 36 Harv. L. Rev. 1, 20 (1972), and quoted in Isakson v. Rickey, supra, at 362,

> Judicial deference to a broad range of conceivable legislative purposes and to imaginable facts that might justify classifications is strikingly diminished.

44/ Although the legislation identifies the burdened class as all commercial fishermen actually harvesting the resource it is defendant's position that the vested interest of numerous members of the class in the continuing increased benefits from aquaculture production prevents plaintiffs from representing a putative class that broad in scope.

Nowhere is the ascertainment of the purpose of legislation more accurately depicted than in Isakson, where the sole issue separating the majority from the dissent was the purpose of the legislation. Compare, Isakson, supra, at 364, and id, Connor dissenting, at 366.

2. The Legitimacy of the Legislation

a. In General.

Whether the legislature can act at all in a given field becomes a function of the equal protection analysis. As the Alaska Supreme Court recented stated:

> Since the distinction made by Alaska Hire between residents and non-residents bears a close correlation to the state's interest in providing economic benefit to residents, the subject of dispute is whether this interest is a permissible one for the state to promote.

Hicklin et al. v. Orbeck et al., 565 P.2d 159, 167, (Alaska 1977). In that case the legitimacy of the legislation was questioned as infringing on Article IV, §2 of the United States Constitution, the privileges and immunities clause. In Lynden Transport, Inc. v. State, 532 P.2d 700 (Alaska 1975), the Alaska Supreme Court invalidated an act discriminating between in-state and non-resident corporations. Since the privileges and immunities clause does not apply to corporations, the Court found that:

> While any of these reasons may have, to the extent that we can tell from the scanty evidence available, motivated the legislature to enact the subject amendments, none of them explain, let alone justify, discrimination against non-residents.

Lynden Transport, Inc. v. State, supra, at 708.

Similarly, in Ravin v. State, 537 P.2d 494, 509 (Alaska 1975) the Alaska Supreme Court, in finding that the proscription of marihuana was sufficiently protected by privacy when used by adults in the home, noted:

> . . . the general proposition that the authority of the state to exert control over the individual extends only to activities of the individual which affect others of the public at large as it relates to matters of public health or safety, or to provide for the general welfare. We believe this tenet to be basic to a free society. The state

> cannot impose its own notions of morality, propriety, or fashion on individuals when the public has no legitimate interest in the affairs of those individuals. The right is not absolute, of course: it can be made to yield when it begins to infringe on the rights and welfare of others.

Ravin found no close and substantial relation between the legitimate proscription of marihuana because it affected drivers and the general proscription of marihuana as it affected adults using the substance in their home. Supra, at 511. The Court, thus used privacy as a means of showing the legislation in question, as applied, was illegitimate. Similarly, in Breese v. Smith, 501 P.2d 159 (Alaska 1972), privacy was used to show no legitimate governmental interest in regulating hairstyles since hairstyles are a highly personal matter in which the individual is traditionally automonous. See, also, Eisenstadt v. Baird, 405 U.S. 438, 92 S.Ct. 1029 (1972).

Traditional limits on the police power of the State, the power to legitimately enter a field, have been defined:

> Thus has this Court from the early days affirmed that the power to promote the general welfare is inherent in government. Touching the matters committed to it by the Constitution, the United States possesses the power, as do the states in their sovereign capacity touching all subjects jurisdiction of which is not surrendered to the federal government, as shown by the quotations above given. These correlative rights, that of the citizen to exercise exclusive dominion over property and freely to contract about his affairs, and that of the state to regulate the use of property and the conduct of business, are always in collision. No exercise of the legislative prerogative to regulate the conduct of the citizen which will not to some extent abridge his liberty or affect his property. But subject only to constitutional restraint the private right must yield to the public need.
>
> The Fifth Amendment, in the field of federal activity, and the Fourteenth, as respects state action, do not prohibit governmental regulation for the public welfare. They merely condition the exertion of the admitted power, by securing that the end shall be accomplished by methods consistent with due process, and the guaranty of due process, as has often been held, demands only that the law shall not be unreasonable, arbitrary or capricious, and that the means selected shall have a real and substantial relation to the object sought to be attained. It results that a regulation valid for one sort of business, or in given circumstances, may be invalid for another sort, or

> for the same business under other circumstances, because the reasonableness of each regulation depends upon the relevant facts.

Nebbia v. New York, 291 U.S. 502, 524-525 (1934). From this it is clear then that the potential of the legislature to act under its police powers is circumscribed by precisely the same test as that used in Isakson v. Rickey, supra. Indeed, it has been noted that the same test applies in Alaska for local and special legislation attacks on the ability of the legislature to act. Boucher v. Engstrom, 528 P.2d 456, 463, n. 25 (Alaska 1974); State v. Lewis, 559 P.2d 630, 643 (Alaska 1977).

Finally it must be noted that the Fourteenth Amendment to the United States Constitution in relevant part reads:

> . . . nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.

In testing legislation for the equal protection of the laws, the legitimacy of the legislature to act at all in the field is a necessary function because the two clauses, equal protection and due process, necessarily overlap, just as they appear together in the Fourteenth Amendment.

> The [equal protection] clause is associated in the amendment with the due process clause and it is customary to consider them together. It may be that they overlap, that a violation of one many involve at times the violation of the other, but the spheres of the protection they offer are not coterminous. The due process clause . . . of course, tends to secure equality of law in the sense that it makes a required minimum of protection for everyone's right of life, liberty, and property, which the Congress or the Legislature may not withhold. Our whole system of law is predicated on the general fundamental principle of equality of application of the law. 'All men are equal before the law;' 'this is a government of laws and not of men;' 'No man is above the law;' are all maxims showing the spirit in which legislature, executives and courts are expected to make, execute and apply laws. But the framers and adopters of this amendment were not content to depend upon the spirit of equality which might be insisted on by local public opinion, they therefore embodied that spirit in a specific guaranty.

Taft, C.J. in Truax v. Corrigan, 257 U.S. 312, 331, 66 L.Ed. 254 (1921), discussed in 22 Col. L. Rev. 252 (1922). Indeed, it is under the Fifth Amendment due process clause that violations of equal protection are struck in federal legislation.

> [W]hile the Fifth Amendment contains no equal protection clause, it does forbid discrimination that is 'so unjustifiable as to be violative of due process.' Schneider v. Rush, 377 U.S. 163, 168, 84 S.Ct. 1187, 1190, 12 L.Ed.2d 218, 222 (1964); see also, Bolling v. Sharpe, 347 U.S. 497, 499, 74 S.Ct. 693, 694, 98 L.Ed. 884 (1954). This Court's approach to Fifth Amendment equal protection claims has always been precisely the same as to equal protection claims under the Fourteenth Amendment. [citations omitted].

Weinberger v. Wiesenfeld, 95 S.Ct. 1225, 1228, n. 2 (1975).

Once discrimination is admitted, the equal protection analysis demands that the various constitutional infirmities be considered as a whole, for while discrimination may be allowed if it bears "a fair and substantial relation" to the legislation, such legislation must be legitimate and constitutionally permissible in itself.

The degree of judicial power this Court possesses to inquire into the legislative legitimacy is fairly broad. "The question of benefit [of the legislation by the persons burdened] is not irrelevant . . ." Mobil Oil Corp. v. Local Boundary Commission, 518 P.2d 92, 101 (Alaska 1974), and

> A statute based upon a legislative declaration of facts is subject to constitutional attack on the ground that the facts no longer exist; in ruling upon such a challenge a court must, of course, be free to re-examine the factual declaration.

Leary v. United States, 395 U.S. 6, 36 L.Ed.2d 57, 82 (1969).

In Isakson v. Rickey, the legitimacy of the legislation was unquestionable because the people of Alaska had approved a constitutional amendment allowing just such legislation to be passed. Indeed, on the first page of the opinion it is stated:

> In August, 1972, the people of Alaska voted overwhelmingly to amend the State Constitution to permit the adoption of a limited entry program for the commercial fisheries. [footnote omitted] In

> January of 1973, the Governor proposed legislation for a limited entry program to the state legislature.

Isakson v. Rickey, supra, at 360.

In State v. Reefer King, 559 P.2d 56 (Alaska 1976) the legitimacy of the legislative tax discrimination had already been upheld in State v. Wakefield Fisheries, Inc., 495 P.2d 166 (Alaska 1972). Since the statute attacked "reflects a similar sort of legislative judgment" as that already upheld (State v. Reefer King, supra, at 65), ". . . it was not arbitrary" for the legislature to amend the statute as it did, and the only relevant question was whether the discrimination involved bore "a fair and substantial relation" to the legislative "judgment." Supra.

In an article by Gunther, "Forward: In Search of Evolving Doctrine on a Changing Court: A Model for a Newer Equal Protection," 86 Harv. L. Rev. 1, is support for the thesis that intensified scrutiny should be applied to legislative means chosen and not ends. However, Gunther ends his article by stating at 48:

> Indeed, perhaps the greatest difficulty in applying the model will be to delineate the boundary between the narrow value judgments required in evaluating means and the broad ones implicit in choosing among ends, such as Baird's excessively intense concentration on actual state objectives. The lines between means and ends will be drawn primarily in such terms of breadth of value judgments; it will present the most difficult questions of degree.

In a recent United States Supreme Court decision involving equal protection, the Court found that

> . . . appellee's statistics in our view cannot support the conclusion that the gender-based distinction closely serves to achieve that objective and therefore the distinction cannot under Reed withstand equal protection challenge. (emphasis added.)

Craig v. Boren, supra, 45 U.S.L.W. at 4060. The Court there noted that the statistical method used by the State in attempting to show the achievement of a legitimate purpose

was "one that inevitably is in tension with the normative philosophy that underlies the Equal Protection Clause." Supra. Obviously the requirement of a relationship between purpose and means, that the means closely serve the ends, coupled with a reference to "the normative philosophy" of the equal protection clause, indicates a greater scrutiny of legislative purposes and ends than Gunther five years previously would have required.

Similarly the Alaska Supreme Court, in the cases which have evolved since the adoption of an intensified scrutiny test, have consistently moved toward an analysis of purpose or ends of the legislation attacked that is less deferential than Gunther.

In Isakson v. Rickey, supra, at 365, the doctrine of irrebutable presumption was used to strike the legislation in question. In Vlandis v. Kline, 412 U.S. 442, 452, 37 L.Ed.2d 63 (1973), the judicial usage of an irrebuttable presumption was applied to the right to travel, considered fundamental and requiring strict scrutiny of ends as means and, of course, the legitimacy of purpose. An irrebuttable presumption necessarily requires a strict scrutiny of the ends and the purpose of the legislation because while, as a means, it may bear a fair and substantial relation to the purpose of the legislation (See, Isakson v. Rickey, supra, at 366 et seq., Connor, J. dissenting), it may, as the Alaska Supreme Court determined, be an illegitimate legislative purpose of the particular statute when viewed against the purpose of the Act as a whole.

> Appellees contend that it was this rush for gear licenses which provcked the legislature to insert the contested provision that only holders of gear licenses issued before January 1, 1973, could submit applications to the Commission for an entry permit. They maintain that this justified the classification. This argument assumes that more gear licenses meant more gear in already depleted fisheries, and that a heavy influx of gear into certain areas before entry permits were required in January of 1974 would result in detrimental

> economic and biological ramifications. While we agree with these assumptions, it is our view that the means for stopping the hear rush and its consequent harmful effects was accomplished by a provision already in the Act.

Isakson v. Rickey, supra, at 363-364.

Finally, in Hicklin v. Orbeck, supra, after noting the distinction in the Alaska Hire law between the residents and non-residents bears "a close correlation" to the state purpose of providing economic benefit to residents, the Alaska Supreme Court discussed the nature of fundamental and non-fundamental rights within the context of the right to work.

> The differences between rights which are 'fundamental' and those which are not are analyzed at length in San Antonio School District v. Rodrigquez, 411 U.S. 1, 98-110, 36 L.Ed.2d 16, 81-88 (1973)(Marshall, J. dissenting), and "Developments in the Law - Equal Protection," 82 Harv. L. Rev. 1065, 1127-31 (1969). Both Justice Marshall and the Harvard commentators reach the conclusion that rights are considered 'fundamental' simply because they are believed to be more important than other personal and economic interests. 411 U.S. at 100, 36 L.Ed.2d at 82; 82 Harv. L. Rev. at 1128. A balance of the state's interests and those of the individual is implicit. 411 U.S. at 108, 36 L.Ed.2d at 87; 82 Harv. L. Rev. at 1132.
>
> Justice Marshall, citing his San Antonio dissent, dissented in Mass. Board of Retirement v. Murgia, supra. But he did not believe that the right to work was a fundamental right invoking strict scrutiny; he urged that laws infringing that right be tested by the standard used in cases such as Reed v. Reed, 404 U.S. 71, 30 L.Ed.2d 225 (1971), this is the standard we adopted in Isakson v. Rickey, 500 P.2d 359 (Alaska 1976). His objection was to the use of the extremely differential standard of City of New Orleans v. Dukes, 427 U.S. 297, 49 L.Ed.2d 511 (1976), which we no longer use in testing laws against the Alaska Constitution. 427 U.S. 307, 317-23, 49 L.Ed.2d 520, 527-31.

Hicklin v. Orbeck, supra, p. 166, n. 12.

As stated by Mr. Justice Connor and Chief Justice Boochever in their concurring opinions in Ravin v. State, supra, 537 P.2d at 575:

> I would apply a single flexible test depending first upon the importance of the right involved. Based on the nature of that right, a greater or lesser burden would be placed on the state to show the relationship of the intrusion to a legitimate governmental interest.

The scrutiny which this Court must apply, whether the words used are "fair and substantial," "close and substantial," "substantially further" or "intensified scrutiny" is to question the legitimacy of the legislation by the burden it places on the discriminated class. The higher the burden and the more important the constitutional rights such burden infringes, the closer the scrutiny that must be given the legitimacy of the legislature to act in the first place. Less drastic alternatives, irrebuttable presumptions and actual, rather than hypothesized purposes, are central to determining whether the legislature could act at all, and the constitutional provisions which the Act infringes indicate the importance of the burden the Act places on the discriminated class.

b. In Particular.

The stated purposes of the legislation are to:

(1) produce salmon for the common property fisheries of the state; and to

(2) promote the enhancement of the state's fisheries by means of grants for the organization of qualified regional associations and long-term, low interest loans for hatchery planning and construction.

Beyond the stated purposes it can also be fairly said that the overall purpose is to provide for continuing efficient aquaculture development in Alaska.

As discussed in the previous section on the development of natural resource policy in Alaska, the legislature is constitutionally obligated to provide for the utilization, development and conservation of all natural resources of the state. In the constitutional amendment providing for limited entry into the fisheries for specific purposes, one of those purposes was the efficient development of aquaculture. Clearly, the legislature is authorized to enter the field

of fisheries development with an efficient aquaculture development plan.

c. The Classification

The obvious classification created by the legislation is all commercial fishermen actually harvesting the resource in those regions which have qualified regional associations. 45/

It is clear this classification is reasonable and neither overinclusive nor underinclusive. There is a direct and substantial relationship between a commercial fisherman actually harvesting the resource and the benefits derived from increased salmon production of the common property fisheries. No such direct and substantial relationship exists with any other user group. 46/

d. Fairness

The test enunicated in Isakson v. Rickey is that the classification must hear a fair and substantial relation. Clearly, the relation between commercial fishermen actually harvesting the resource and fisheries enhancement is fair.

B. LEGITIMACY OF THE STATE ACTION AND THE MEANS CHOSEN

The state action is the adoption of a statutory framework for efficient aquaculture development. As discussed previously, efficient aquaculture development is a constitutionally legitimate purpose for legislative action in Alaska. It is defendant Southern Southeastern Regional Aquaculture Association's position that the constitutional efficacy of the means chosen by the legislature not only satisfies the close and substantial relationship test but also is the most

---

45/ Although the legislature identifies the burdened class as all commercial fishermen actually harvesting the resource, it is defendants' position that the vested interest of numerous members of the class in the continuing increased benefits from aquaculture production prevents plaintiffs from representing a putative class that broad in scope.

46/ It is defendant's position that burdening a group larger than commercial fishermen with fisheries enhancement would be overinclusive to constitutional proportions.

capital and labor efficient means to effect the purposes of the salmon enhancement policy.

The legislature chose a means that blends the executive efficiency of the private sector with the constitutional policy safeguards of the public sector. The regional associations participate in the planning stages of salmon enhancement programs, yet the state is not yielding nor neglecting its role as trustee of the common property resource. The execution of appropriate phases of the enhancement programs are handled not by a bureaucracy of public employees but rather by a publicly responsive non-profit corporation which operates with private sector efficiency and has the capabilities of securing development assistance through the financial community. 47/ The statutory program manifests a legislative finding that the most capital and labor efficient means of aquaculture development is the means chosen in law. That the legislature chose to provide for a royalty share assessment, subject to regional and executive approval for the purpose of partially funding or securing the necessary debt, capital improvements and operating costs for salmon enhancement reflects a finding that the select class of persons most directly benefiting from enhanced salmon production should bear a proportionate share of the cost. That finding also reflects a legislative judgment that the assessment is the most capital and labor efficient, as well as the least discriminatory manner in which to meet the stated and implicit purposes of the aquaculture program.

47/ Indeed, the key to financial assistance from the private sector is the section 530 assessment.

VII. THE ASSESSMENT - ROYALTY SHARE OR TAX?

A.S. 16.10.530 allows the Commissioner of Commerce, after request of a qualified regional association, to levy an assessment on the sale of "one or more species of salmon caught by persons licensed under A.S. 16.05.540 - 16.05.600 in the area for which the assessment is to be levied." A.S. 16.10.530(9). Plaintiff contends that the "alleged assessment constitutes a delegation of the taxing power of the State of Alaska to an entity other than a city or a borough in contravention of Art. X, § 2, of the Alaska Constitution". (See complaint, page 5(b)). Defendant submits that this assessment is not a tax but rather the assessment of a royalty share of the resource, and that the statutory provisions at issue do not involve an unconstitutional delegation of legislative power.

A. THE ASSESSMENT IS NOT A TAX.

Taxes are annual, recurring pecuniary burdens posed by legislative authority upon individuals or property to support the government. Efros v. Russo, 171 A.2d 370, 371 (N.J. 1961). A tax is a forced burden, charge, exaction, imposition, or contribution assessed in accordance with some reasonable rule of apportionment by authority of a sovereign state upon the persons or property within its jurisdiction to provide public revenue for the support of the government, the administration of the law or the payment of public expenses. Any payment exacted by the state or its municipal subdivisions as a contribution toward the costs of maintaining governmental functions, where the special benefits derived from their performance is merged in the general benefit, is a tax. 51 Am.Jur. Taxation §3, p. 35.

Taxation proceeds upon the theory that the existence of government is a necessity; that it cannot continue without means to pay its expenses, and that for those means it has the right to compel all citizens and property within its limits to contribute. Multnomah v. Luihn, 178 P.2d 159

(Ore. 1947).

A tax is "in no way dependant upon the will or expressed consent of the person taxed". Menz v. Coyle, 117 N.E.2d 290 (N.D. 1962). Michigan Employment Security v. Falt, 144 N.W.2d 663 (C.A. Mich. 1966); "Cooley on Taxation", 4th Ed. 41 §3. It is an imposition upon individuals who enjoy no direct benefit from its expenditure, and who are not responsible for the conditions to be remedied. It is not an assessment of benefits; rather it is a means of distributing the burden of the cost of government. The only benefit to which the taxpayer is entitled is that derived from his enjoyment of the privileges of living in an organized society. People v. George, 250 N.W.2d 491 (Mich. 1977) quoting from Carmichael v. Southern Coal and Coke Company, 301 U.S. 514, 515, 81 L.Ed. 45, 49 (1937).

In Aetna Life Insurance Company v. Washington Life and Dis.I.G.Ass'n., 520 P.2d 162 (Wash. 1974),plaintiff challenged the constitutionality of the Washington Life and Disability Assurance Guaranty Act and the assessments levied thereunder. The primary purpose of the Act was to accummulate funds arising from assessments upon all insurers authorized to transact life or disability insurance business in the State of Washington. These funds are then used to insure the performance of contractual insurance obligations of insolvent insurers.

Appellant argued that these assessments amounted to an unconstitutional tax. The court disagreed, holding that money which does not reach the general fund is not a tax:

> "The assessments made under the Act were not State revenue funds. They did not rebound to the benefit of any state or municipal treasury. Rather they were trust funds assessed by a private association to be retained in private bank accounts to carry out the purpose of the Act. This court has characterized assessments under the Industrial Insurance Act saying that 'it is manifest that it is not a tax in the sense that the word is used in

> the section of the constitution to which reference is here made. No assessment to the public revenue, general or local, is authorized or aimed at. The purpose of the exaction is entirely different. It is to be used, not to meet the current expenses of government but to recompense employees of the industry upon whom the burden is imposed for injuries received by them while engaged in pursuit of their employment' ". at 171 Citing State ex rel, Davis Smith Company v. Clausen, 117 P. 101, 116 (1911). See also State Farm Mutual Auto Insurance Company v. Board of Trustees, 79 S.2d 512 (Alabama 1973).

In the Opinion of the Justices, 379 A.2d 782 (NH 1977), House Bill 439 created a "tax" of 1 cent per barrel on oil terminal facilities with a capacity over 50 barrels. The purpose of the "tax" was to establish a fund to finance the activities of the pollution control commission. The court held that this "tax" is not a tax as it too did not become a part of the general fund:

> "The 'tax' exacted by House Bill 439 is more in the nature of a charge of facilities to reimburse the state for maintaining, and if necessary, employing pollution control for their benefit. Monies collected from this tax do not go into the general fund revenues, but in fact the tax abates when the pollution control fund is sufficiently capitalized, thus House Bill 439 imposes no 'tax' in the sense employed by the Constitution; hence it need not be apportioned." supra, 787.

In Orbison v. Welsh, 179 NE.2d 727 (Ind. 1962) an Indiana statute provided for the operation and maintenance of a port from the proceeds of tolls that it charges levied by a port commission. The fees were to "provide sufficient revenue to pay the cost, operation, etc. including the administration expenses of the commission". Net revenue over and above this amount were to be paid into the state general fund. Nevertheless the court held that these tolls were not taxes either:

> " . . . [T]his court has held in numerous decisions that the 'raising revenue' used in Art. 4, §17 . . . does not apply to other purposes which may incidently create revenue. . . . The purpose of the act in question is not to levy t xes but as set out in the statute to promote the agricultural industrial and commercial development of the state and to provide for the general welfare by the construction and operation of a modern port on Lake Michigan.

* * *

> The payment of a tax is compulsary and not optional, and it entitles the taxpayer to receive nothing in return, other than the rights of government which are enjoyed by all citizens alike. . . . Under the statute the tolls, rentals and fees are to be paid by the users of the port or its facilities but this is merely compensation for the use of the property and the improvement of the port and can in no sense be considered a tax". supra, at 743.

In Wickham v. Trapani, 246 N.Y.Supp.2d 137 (N.Y. 1964); affirmed 272 N.Y.Supp.2d 6 (N.Y. 1966), a referendum was held pursuant to New York law for the establishment of an apple marketing order. The order provided for an assessment on apple growers to create a fund to promote New York apples. Defendant asserted that the assessment was a tax, the New York Supreme Court said it was not:

> "Indeed, the assessment here involved does not appear to be a tax at all, but merely a fund raising measure, incidental to a valid regulation and this is true even though the assessment may be 'part' of the regulatory order. See U.S. v. Butler, 297 U.S. 1, 59, 56, Sup. Ct. 312 A.D.L.Ed. 477, moreoever, we view the expenditure of the funds raised by assessment rebounding primarily to the benefit of appellant and all other apple producers from anticipated expansion of markets for their product. That other classes involved in apple marketing may also be benefited is or could be found to be incidental. (at 272 N.Y.Supp.2d 6, 9).

Finally, the court should note carefully the Michigan decision of the Michigan Supreme Court in Dukesherer Farms, Inc. v. Bald, 251 N.W.2d 278 (Mich. App. 1977) In that case, a Michigan statute allowed producers to commission the Department of Agriculture for particular marketing programs; funding to be derived from special assessments collected "from each producer of any marketable agricultural commodity directly affected by marketing programs." The statute said the assessments were to be used to defray program and administrative costs.

The court stated that the key to determining the constitutionality of this marketing act was to decide whether the funds collected in support of its marketing program were assessments or taxes. In holding that the funds were assessments, the court noted that taxes are imposed for a public

purpose; they are a means of raising revenue for the general benefit of the public as a whole. Assessments, on the other hand, are exactions required in addition to the general levy and "demand that special contribution, in consideration of special benefits, shall be made by the person receiving it". The court recognized that these assessments to benefits do benefit the general welfare of the state but felt that they were not taxes because of the distinct benefit was conferred on the cherry producers. Supra.

Thus, case after case, courts have emphasized that taxes are involuntary exactions which return to the general fund for general public expenses, and that assessment similar to those challenged in the case at bar, which are primarily designed to benefit those assessed, simply to not fit within this definition. There are, however, several cases contrary to this conclusion. In Scott v. Donnelly, 133 N.W.2d 418 (ND 1965) for example, a North Dakota statute authorized a collection of 'fees' not to exceed "1% per 100 weight of potatoes shipped" to be fixed and collected by the North Dakota Potato Development Commission. The purpose of the fee was to promote the marketing of potatoes. The Donnelly court called the fee an excise tax not a regulatory fee, the primary purpose was for revenue, the benefit accruing to the people of the state in general, and the potato growers throughout the state in particular.

The court should note however, that the Donnelly court was concerned with several provisions of that statute which are not at issue here. First, the board was given the power to determine and prescribe taxing areas. Yet, once the areas were prescribed, the expenditures of the proceeds of the tax were not limited in areas for the benefit of the potato growers throughout the state. In the case at bar, the assessment is for the benefit of the association which

requested it. Second, liability to pay the "tax" in Donnelly could be extended to certain taxpayers elsewhere in the state including all persons engaged in the production, processing or handling of potatoes sold or shipped within that state. In the case at bar liability for the assessment is limited to those members of the association commercially harvesting salmon within the appropriate area. Third, the Donnelly court was concerned that neither the growers nor the taxpayers in general had a voice in determining the purposes for which the tax proceeds might be spent either through a government body of their own choosing or by referendum. As we have seen A.S. 16.10.300 et seq. requires the association to determine the rate, scope and purpose of the assessment, subject to executive approval.

The Georgia Supreme Court has advanced the Donnelly theory in Agricultural Commodities v. Balkcom, 109 S.E.2d 276 (Georgia 1959) and Campbell v. Farmer, 157 S.E.2d 276 (Georgia 1967). In Balkcom, supra, the George legislature empowered the Agricultural Commodities Authority to levy and collect from peanut producers an "assessment" of "not less than 25 cents nor more than one dollars per ton" on peanuts for advertising and promotion. The act authorized a purchaser of peanuts to collect from the producer and remit the money to the authority within a specified amount of time. No assessment was effective until ratified by two thirds of the producers voting in a referendum. The Court held that the "assessment" was in fact a tax:

> "A tax is a rate of sum of money assessed in the person, property, etc. . . . but a license issued under the police power of the authority granting it, permitting the performance of an act which except for payment of a prescribed fee, would be prohibited; if the fee required for the license is intended for revenue, it is an exercise of the power of taxation."

The court went on to invalidate the statute because they concluded that such a tax is prohibited by the Georgia

constitution - "The state can never do indirectly that which it cannot lawfully do directly." In Campbell, supra, the legislature tried again following the adoption of an appropriate constitution amendment. The Georgia Supreme Court relying on Balkcom, supra, held that the assessments were still taxes.

It is the position of the defendant that this court should first apply the Dukesherer reasoning, focusing initally on the fact that no money reaches the general fund for general public expenses; and that the act's stated purpose is to promote fisheries enhancement thereby conferring a direct benefit on those assessed (fisherman) and only a broad secondary effect on the public as a whole.

Dukesherer is consistant with a wide range of authorities which unequivically hold that taxes must remit to the general fund for general public expenses and are in no way dependent upon the will or consent of the persons taxed. As is discussed supra, the assessment here is not for general expenses, and may not be levied unless requested by a majority of those affected.

Defendant urges that Donnelly and Campbell have mischaracterized the old axiom that money acquired as "revenue" is tax money. It is not "revenue", at least for purposes of Donnelly analysis because no money is returned to the general fund. See cases, supra and Rainwater v. Haynes, 428 S.W.2d 254 (Ark. 1968); Cooley on Taxation, Vol. 1, subsection 26 at 94, section 27 at 98. 48/

Defendant Southern Region urges the court to then consider that in all other cases analyzing assessments, a common property resource, with limited commercial entry, is not involved in the question.

48/ "But a charge of a fixed sum which bears no relation to the cost of inspection which is payable into the general revenue of the state this a tax rather than an exercise of police power". Cooley at §27, p. 98.

The classic assessment situation is an assessment on real property for the purpose of guaranteeing the debt required for road and sidewalk improvements abutting the property. The assessment levied is generally a percentage of the appraised value of the property. It is an assessment of benefits. 49/ Here the benefits are two-fold: (a) the benefits of the privilege of commercially harvesting the common property resource with limited commercial entry, and (b) the benefit received from the increase salmon production of efficient aquaculture development. The assessment is equal to a fixed percentage of the fair market value of a common property resource when reduced to capture, as determined by the value received at the point purchased. The assessment essentially exacts a royalty share of the fair market value of the resource reduced by harvest to private possession for the purpose of guaranteeing the reception of public funds (matching grant) and private financing. This analysis is consistent with the Dukesherer case. See also Efros v. Russo, 171 A.2d 370 (New Jersey 1961); Northwestern Mutual Life Insurance Company v. State Board of Equalization, 169 P.2d 917 (California 1946); Outman v. Kilburn, 116 P.2d 812 (New Mexico 1941). Here, money collected results in improved fisheries and enhanced livelihood for those participating. The statute is not a lefthanded taxing mechanism, rather it is a modern equitable devise, endorsed by several states, to help people help themselves.

B. A.S.16.10.530 ET SEQ. DOES NOT UNCONSTITUTIONALLY DELEGATE LEGISLATIVE POWER.

In the case at bar, we are concerned with two forms of delegation; the delegation to the qualified regional association of the power to determine the rate, scope, purpose and ration of the assessment, subject to executive

---

49/ Assessments are not taxes. McCoy v. City of Florence, 409 S.W.2d 511 (Kentucky C.A. 1966) City of Idabel ex rel. Wood Roof v. School District No. 5 of McCurtain County, 430 P.2d 285 (Okla. 1967); Rainwater v. Haynes, 428 S.W.2d 254 (Ark. 1968); Cooley on Taxation, Vol. I.

approval and the power of the commissioners to specify areas applicable and to determine whether the proposed assessment is procedurally sound and reasonable.

1. The Power to Tax or Assess is Not Delegated.

The legislature cannot delegate its lawmaking powers, but it can delegate the power to fill in the blanks;

> " . . . [T]he legislature cannot delegate its power to make a law, but it can make a law to delegate a power to determine some fact or state of things upon which the law makes or intends to make its own action. To deny this would be to stop the wheels of government. There are many things upon which wise and useful legislatures depend which cannot be known to the lawmaking power, and must therefore be a subject of inquiry and determination outside of the legislative halls. Knight v. West Alabama Environmental IMP Authority, 246 S.2d 903, 909 (Alabama 1971) citing Porter v. Davis, 160 So. 93 (Alabama 1936). See also Cohen v. Mississippi State University of Agriculture and Applied Science, 256 S.2d 954 (D.C. Miss. 1966); Randolph v. U.S., 274 F.Supp. 200 (D.C. MC. 1967) affirmed 88 Sup. Ct. 695, 389 U.S. 570 19 L.Ed.2d 785; Quincy College Seminary Corp. v. Burlington Northern, Inc., 328 F.Supp. 808 (D.C. Ill 1971) affirmed 405 U.S. 906, 92 Sup. Ct. 939, 30 L.Ed.2d 177.

Clearly the taxation power has not been delegated. The legislature has empowered the Commissioner of Commerce and Economic Development to make certain findings relevant to the manner in which an assessment is levied and its reasonableness. The reasonableness of the assessment depends primarily on the type of enhancement and rehabilitation pursued. For example, in southern southeast central incubation facilities requiring egg takes, egg plants, and transportation are the primary focus of the regional salmon enhancement plan. Whereas, in northern southeast as well as the Cook Inlet region, completely different salmon enhancement plans are being pursued, also utilizing techniques of stream rehabilitation and bypasses into previously unproductive areas. Obviously, the type of enhancement is strongly dictated by geography and the species involved. 50/

50/ Silver and red salmon, for example, spawn primarily in lakes, pink salmon in fast moving mountain streams, king salmon spawn in larger, siltier rivers.

The means chosen by the legislature reflects the judgment that the complexity of the economic analysis necessary to determine the most cost efficient and least discriminatory method of achieving the legislative policy of salmon enhancement is best determined by the users themselves, subject to approval by the executive. No power of taxation or of assessment has been delegated.

2. Any Delegations Are Justified and Constitutional.

The court in Barry and Barry, Inc. v. Department of Motor Vehicles, 500 P.2d 540 (Wash. 1972) has delineated the constitutional boundaries of the delegation doctrine:

> "The delegation of legislative powers is justified constitutional, and the requirements of the standard doctrine are satisfied when it can be shown 1) that the legislature provided standards or guidelines that define in general terms what can be done in the instrumentality or administrative body which is to accomplish it and 2) that procedural safeguards exist to control arbitrary administrative action and any administrative abuse of the discretionary power.

In Wilson v. Connecticut Product Development, Corp., 355 A.2d 72 (Conn 1974) the court discusses the modern trend in delegation questions:

> "As the complexity of economic and governmental conditions has increased over the years, courts have tended to approve ever broader standards to facilitate operational functions of administrative agencies . . . The modern trend holds statutory standards are constitutionally sufficient so long as they are declared as definite as is reasonably practical under the circumstances , cases cited at 77 (emphasis added). See also Westervelt v. Natural Resources Commission, 263 N.W.2d 564 (Mich. 1978) and Automotive Service v. Secretary of State, 267 N.W.2d 698 (Mich. 1978); In Re Johnson, 554 S.W.2d 775 (Texas 1977); See also People v. Mosely, 566 P.2d 331 (Colorado 1977) U.S. v. Paster, 557 F.2d (C.A. N.Y. 1977).

The legislature may also delegate power to private persons:

> "In order to meet a reasonableness test, a statute delegating power to private person must satisfy both underlying concerns of the nondelegation doctrine. First, the legislature itself must have decided the fundamental policy question relevant to the legislative scheme. . . . Second, such

> power may not validly be delegated by the legislature to a private body where the exercise of such power is not accompanied by adequate legislative standards or safeguards against arbitrary or self motivated action on the part of such private body." Jennings v. Exitor West Green Reg. Sch. Dist. Com., 352 A.2d 634, 638 (R.I. 1976) See also Carrol v. Finch, 3[illegible] F.Supp. 891 (D.C. Alaska 1971); Humane Society of U.S., New Jersey Branch, Inc. v. New Jersey Fish and Game Council, 322 A.2d 841 (N.J. Super. C.H. 1976); Arlington v. Board of Conciliation and Arbitration, 352 N.E.2d 914 (Mass. 1976).

DELEGATION TO ASSOCIATION

As outlined supra two delegation questions need be addressed. First, does A.S. 16.10.530(a) "declare legislative policy, establish primary standards or lay down an intelligable principal to which the instrumentality must conform? " Second, is the exercise of this power "accompanied by adequate legislative standard safeguards against arbitrary or self motivated action on the part of a private body?"

A.S. 16.10.500 declares that "[I]t is the policy of the state under §§ 500 - 550 of this chapter, to promote the enhancement of the state's fisheries by means of grants for organizational and planning purposes to regional associations which have qualified under §380 of this chapter, and by means of long term low interest for hatchery planning, construction and operation". A.S. 16.10.530 authorizes the Commissioner of Commerce, on request of a qualified regional association, to levy an assessment on a sale of one or more species of salmon by person licensed under A.S. 16.05.540 - A.S. 16.05.640. The rate and conditions of the assessment, including species covered, are to be submitted in conjunction with request by the regional association. A.S. 16.10.530(c) states that the Commissioner and association must agree on a appropriate means of collecting the assessment. A.S. 16.10.530(d) states that the assessment will terminate upon the request of the association "when all financial obligations relating to the assessment have been met".

Thus, the legislature has defined the purpose of A.S. 16.10.530 - enhancement of the state's fisheries through

hatchery and other enhancement organization planning, construction and operation - but has left the details of these plans to the qualified regional associations; subject to executive approval.

It is not necessary that the legislature supply a specific formula for the guidance of an administrative agency in a field were flexibility and adoption of legislative policy to infinitely variable conditions constitute the essense of the program. The modern tendancy is to permit liberal grants of discretion in order the facilitate the administration of laws dealing with involved economic and governmental conditions. Swisher v. Brown, 402 P.2d 621, 627 (Cal 1965). See also State v. Reisman, 374 P.2d 1002 (Wash. 1972); Walker v. Alaska State Mortgage Association, 416 P.2d 245 (Alaska 1966).

Consequently, the determination of the adequacy of standards to guide an agency or other entity cannot be made in the abstract; consideration must be given to the nature of the subject matter regulated. Atlantic City Electric Company v. Parden, 368 A.2d 366 (N.J. 1976). In the case at bar, the variables associated with the operation and development of hatcheries are infinite and highly complex; incapable of meaningful legislative orchestration.

The statute at bar also establishes important checks on the arbitrary exercise of power by the regional association. A.S. 16.10.530(e) provides that the assessment cannot be levied until the qualified association has held two public hearings. Reasonable notice is required. Ballots are to be mailed to all limited entry permits holders actively participating in a fishery at least twenty days before the initial public hearing. After a vote is taken at the initial hearing the second meeting is required following newspaper notice and full notice to active limited entry permit holders 14 days before the second public meeting. The votes of the

second are to the counted with the votes of the first meeting. The appendix reveals voluminous examples that these safeguards were diligently followed.

VIII. THE COLLECTION OF THE ROYALTY SHARE ASSESSMENT BY A REGIONAL AQUACULTURE ASSOCIATION IS NOT IN VIOLATION OF ARTICLE IX, SECTION 7 OF THE ALASKA CONSTITUTION.

Plaintiffs contend that the collection of the royalty share assessment by the regional associations is a dedication of the proceeds of a state tax or license for a special purpose in violation of Article IV, Sec. 7 of the Alaska Constitution which provides in relevant part:

> Section 7. Dedicated Funds. The proceeds of any state tax or license shall not be dedicated to any special purpose,

It is the position of defendant SSRAA that the royalty share assessments are not the proceeds of a state tax or license, are not dedicated to a special purpose and, alternatively, the savings clause of the last sentence of the present section 7, constitutionally excepts the assessments from any general prohibition.

A. State Tax or License

1. Defendant believes that a ruling by this court that the royalty share assessed is not a tax is dispositive of this issue. The critical language for the purpose of review are the first eight words of the section: "The proceeds of any state tax or license."

At the Constitutional Convention the framers had experience with a variety of dedicated funds during territorial days. 51/

At that time, however, the delegates were singularly unexperienced with revenues raised from sources other than taxes or license fees. With that in mind it is worth reviewing the progress of Sec. 7 through the convention in detail.

51/ Cigarette taxes dedicated to school construction; marine fuel taxes to water and harbor facilities; highway motor fuel taxes to the highway fund; and aviation fuel taxes to airport construction. Cf. 1960 Opinion of Attorney General No. 31.

The section first appeared in the committee minutes on November 24, 1955, as follows:

> All tax revenues shall be deposited in a general fund to be established and maintained by the state. This provision shall not prohibit the continuance of any special fund for special purposes existing at the effective date of the constitution.

Minutes, Committee on Finance and Taxation, (Hereafter, Committee Minutes).

On December 9, 1955, the section was amended to read, in relevant part, as follows:

> All revenues shall be deposited in the State treasury without allocation for special purposes, except where state participation in Federal programs will thereby be denied.

Committee Minutes.

The section was sent to the Convention floor with a proposed amendment to change the first clause of the section to read:

> "All public revenues shall be deposited in the State treasury . . . " Constitutional Convention Proceedings, p. 2297 (Hereafter Proceedings)

The section was subsequently withdrawn from floor deliberation at the request of the chairman of the Committee on Finance and Taxation. Proceedings, 2318.

When the section was again submitted for deliberation by the delegates it was changed to read substantially the same as the form in which it passed:

> "The proceeds of any state tax or license shall not be dedicated to any special purpose. . . ." Proceedings, p. 2361.

The significance of the retreat from the broad language of "all public revenues" to that of "the proceeds of any tax or license" is emphasized when reviewing another section of the constitution regarding the dedication of revenues. Article VI, Sec. 7 directs that "[T]he initiative shall not be used to dedicate revenues. . ." That section remained substantively unchanged throughout the convention. Cf. Proceedings, Vol. 6, p. 19.

The term "all public revenues" has a reasonably clear meaning as does the term "the proceeds of any state tax or license." The meanings are clearly not identical. To argue that royalty shares or assessments are included in "the proceeds of any state tax or license" is to argue that the language in the constitution does not mean what it says and that the convention went through an amendment exercise for no reason. All fundamental canons of constitutional interpretation reject such an approach.

2. Clearly the royalty shares assessed from those commercially harvesting common property resources by a regional association is not a state tax or license. It is not of a state but a regional nature.

In Black & White Taxi Co. v. Standard Oil Co., 218 P. 139 (Ariz. 1923), the governor of Arizona sought to veto a provision giving half the gas tax to the county under a constitutional provision giving him the power to veto individual line items in appropriation bills. The court held that the governor had no authority to veto this provision for this reason:

> "An appropriation or items of appropriation that the Governor may decline to approve are of funds belonging to the State . . . the fifty percent of the 3 cents gasoline tax that goes to the county is not levied for a State purpose and does not become the State's money. It is collected by the gasoline dealers and by them remitted to the Secretary of State, who pays one half thereof to the State Treasurer . . . and remits the other one half to the Treasurers of the different counties from which it has been received. It is the counties' money, levied for a county purpose; it is as though the legislature had directed the county authorities to collect one and one half cents tax per gallon on gasoline and apply it to the maintenance of the county's roads and highways, or as though the legislature had directed the county authorities to make a tax levy upon the property of the county to be used in building, improving, repairing, and maintaining a public court house, or a county hospital for the indigent sick and disabled, or any other public purpose or use . . . the item or items that may be disapproved [by the Governor] are items of money, to be paid out of the State's money levied and collected for the purposes of the State and not expenditures the legislature may authorize and direct its political subdivisions to make." Supra, p. 144.

See also, Buchanan v. Town of Salina, 58 N.Y.S.2d 797 (1945); State v. Donald, 158 N.W. 317 (Wis. 1916); Opinion of the Justices, supra; Aetna Life, supra.

B. Savings Clause.

Should this court construe the royalty share to be a state tax, defendant urges the following analysis on this court for the purpose of resolving the issue.

As originally adopted the last cluase of Art. IV, Sec. 7 read as follows:

> This provision shall not prohibit the continuance of any dedication for special purposes existing upon the date of ratification of this constitution by the people of Alaska."

That clause was amended at the general election held in November, 1976 to read:

> This provision shall not prohibit the continuance of any dedication for special purposes existing upon the date of ratification of this section by the people of Alaska."

A.S. 16.10.530 was adopted in 1976 by the same legislature that presented the permanent fund amendment to the voters.

The change in the savings clause by the same legislature that adopted Sec. 530 has no meaning if it is construed merely to allow valid dedication to continue since for a dedication to be valid it must either be a dedication other than the proceeds of a state tax or license or the dedication of a tax or license made prior to the date of the constitution. No change in the constitution was needed to accomplish this. A fundamental canon of constitutional construction is that no part of an enactment is to be considered meaningless if a reasonable meaning can be found.

IX. VAGUENESS.

Plaintiffs allege that the statutory framwork for the assessment is unconstitutionally vague because it is not clear who should pay the assessment. It is defendant SSKAA's position that the law is not vague, any possible vagueness has been cured by executive interpretation, and finally that plaintiffs are precluded from raising this issue because they have failed to exhaust their administrative remedies.

A. The Law is Not Vague.

The previous argument in the section on equal protection and the due process of the laws clearly reveals that the levy of assessment is not over-inclusive nor under-inclusive. Plaintiffs' allegation is thus reduced to the question of whether the law is sufficiently definite to determine who the assessment is levied against. The law clearly states that the assessment "shall be levied on the sale of one or more species of salmon caught by persons" commercially harvesting salmon in the qualified region. A.S. 16.10.530(a). The law further states that the "commissioner may, by regulation, require its collection by buyers of the salmon upon the sale of which an assessment is levied" A.S. 16.10.530(c). These sections make it clear that the assessment is levied against the person harvesting the salmon. See also A.S. 16.10.540(a).

B. Any Possible Vagueness Has Been Corrected By Executive Interpretation.

It is a long established rule that administrative or executive interpretation of a statute is weighed by a court in determining whether that statute is constitutionally infirm. Cf. Kelly v. Zamarello, 486 P.2d 106 (Alaska 1971); C.J.S.2d, Statutes. A review of 3 AAC 88.040 (Collection of Assessment) leaves no room for imagination.

C. Exhaustion

It is abundantly clear that plaintiffs have not petitioned, requested action from, no objected to the

Commissioner of Commerce and Economic Development about any aspect of the assessment process. Such a failure to utilize the administrative remedies available prohibits certain allegations raised for the first time in the judicial branch. Plaintiffs' vagueness argument could have been and should have been addressed to the Commissioner. Failure to do so estopped plaintiffs from raising any argument that the statute is indefinite to the level of constitutional concerns.

X. COMMERCE CLAUSE.

Defendant SSRAA believes it appropriate to conclude the substantive analysis of plaintiffs' allegations in this memorandum with a discussion about the commerce clause. The issue could be dealt with summarily but an important contrast between economic policy by Congress subjected to commerce clause and other challenges and the challenges in this case should be considered. Plaintiffs sweeping allegation that A.S. 16.10 is in violation of the commerce clause of the Federal Constitution will be dealt with following a brief discussion of the evolution of the commerce clause in the judicial branch.

A. General Background

The evolution of judicial interpretation of the commerce clause closely parallels the evolution of social and economic affairs of the nation. The first century and a half of the republic was dominated by the doctrine of laissez-faire. The government's main task apart from defense was to keep and maintain fair-play while private interests asserted themselves freely within the market. The invasion of federal power into areas of state jurisdiction was only justified when the exercise of state power had to yield to the doctrine of laissez-faire. Thus, in Hammer v. Dagenhart, 247 U.S. 251 (1918), commonly known as the child labor case, the Supreme Court held that the federal government could not prohibit the shipment in inter-state commerce of goods produced by child labor because the effect of such prohibition was to regulate manufacturing carried on within individual states. However, if the exercise of state power infringed upon private market enter-play, the Court was quick to strike down that action pursuant to the commerce clause. This led to the development of a doctrine known by scholars and jurists as dual federalism. A line had to be drawn, in cases such as those involved in the regulation of commerce, dividing the area in which the national

government could operate from that over which the state had exclusive jurisdiction. Today scholars point to the development of a new federalism. Cf. Clark, The Rise of a New Federalism, (1938). They acknowledged the expanded role of government in American life as the root of the new federalism, and point to great economic depression which began in 1929 as the turning point in executive, legislative and judicial policy.

The doctrine of laissez-faire, upon which the operation of governmental authority had been essentially based since the founding of the republic, proved wholly inadequate to meet the problems presented by the depression. Congress moved with the adoption of the legislative measures which sought to regulate most of the critical aspects of the economic system - most of which was previously considered beyond the scope of federal regulatory power. An early legislative enactment was the National Industrial Recovery Act of 1933, granting broad powers of business and industrial interaction with consumers and labor. In Schechter Poultry Corporation V. United States, 295 U.S. 495 (1935), the Court struck down the act:

> Where the effect from intrastate transactions upon interstate commerce is merely indirect, such transactions remain within the domain of state power. If the commerce clause were construed to reach all enterprises and transactions which could be said to have a indirect effect upon interstate commerce, federal authority would embrace practically all the activities on the people and the authority of the state over its domestic concerns would exist only by sufferance of the federal government. Supra, p. 546.

It is generally considered today that the Schechter Poultry case involved one of the last important applications by the Supreme Court of the concept of dual federalism. One commentator has noted:

> The need for national regulation of the economic system, which had induced the legislative and executive branches of the federal government to discard the laissez-faire policies that had controlled their action prior to 1929, was bound also

> to have its effect on the jurisprudence upon the Supreme Court. It is true that there was a certain delay before the court began to adjust its case law to the change that was demanded by the great depression. Thus, while the 'new deal' measures to deal with the economic crisis were enacted as early as 1933, it was not until 1937 - two years after the Schechter decision - that the American court began to remove the restrictions upon federal action which had been imposed by the strict adherence to dual federalism. Such a lag appears to be inherent in the functioning of any judicial tribunal which is compelled by changing external conditions to make fundamental modifications in its case law. It constitutes perhaps the prime weakness of the American system of judicial review, the basic conservatism of the judiciary often makes it difficult for its members to make the necessary accomodation before it is too late. Schwartz, American Constitutional Law, p. ___, (1963).

Within six years the court had retreated from and then expressly overruled the prior decision in the child labor case. Cf. National Labor Relations Board v. Jones and Laughlin Steel Corp., 301 U.S. 1 (1937); Sunshine Anthracite Coal Co. v. Atkins, 310 U.S. 381 (1940); United States v. Darby, 312 U.S. 100 (1941).

Another example of the retreat from dual federalism involved the Agricultural Adjustment Act of 1933. Under the Act, a processing tax was levied upon different agricultural commodities, and the proceeds from this tax were used to compensate farmers who agreed before hand to raise less or none of such commodities. The prime purpose of this exercise power to tax was the regulation of agricultural production, rather than securing of revenue. In United States v. Butler, 297 U.S. 1 (1936), the Act was struck down as an improper exercise of the taxing powers. There was a strong dissent by Justices Stone, Brandeis and Cardoso:

> The limitation now sanctioned must lead to absurd consequences. The government may give seeds to farmers, but may not condition the gift upon their being planted in places where they are most needed or even planted at all. The government may give money to the unemployed, but may not ask that those who get it shall give labor in return, or even use it to support their families. They may give monies to sufferers from earthquakes, fire, tornado, pestilence or flood, but may not impose conditions - health precautions designed to prevent the spread of disease, or induce the movement of population to safer or more sanitary areas. All that, because it is purchased regulation infringing state powers, must be left with the states, who are unable or unwilling to supply the necessary relief. Supra, p. 85.

Three years later, in Mulford v. Smith, 307 U.S. 38, 48 (1939) the dissents noted above became the law when the Court upheld the Agricultural Adjustment Act of 1938 which did not differ in substance from the act held unconstitutional in 1936. In United States of America v. Rock Royal Cooperative, Inc., et al., 307 U.S. 533 (1938), the demise of laissez-faire was plain. That case involved various parts of the Agricultureal Marketing Agreement Act of 1937 as well as a scheme adopted by the Secretary of Agriculture in connection with the establishment of a plan for fixing uniform prices of milk in certain areas. The scheme created an equalization pool that required producers to pay into the common fund any surplus over a uniform price. The law provided for a vote by the producers to approve any such scheme. The law was challenged on due process grounds, vagueness grounds, delegation grounds, violation of the commerce power and delegation of legislative power to the producers. The court rejected all of these arguments.

B. Interstate Commerce is Not Impermissibly Burdened.

These cases set the foundation for the new federalism, upon which plaintiff apparently rest their allegation that A.S. 16.10 violates. Defendant SSRAA developed that short background for the purpose of pointing out the marked similarities between the constitutional challenges to the new deal legislation and the constitutional challenge resting before this court in this lawsuit. The tragedy of the great depression forced the Supreme Court to disgard the shackles of past judicial interpretation of federal and state power, in order to give the Congress and the executive the flexibility necessary for economic recovery. In order to do this the court had to deal with litigious plaintiffs and multiplicitous constitutional challenges carrying over from the 19th century. The tenacity that laissez-faire capitalism displayed in the face of new and far reaching economic policy by the legislative

and executive branches is understandable. The tenacity of plaintiff fishermen in this lawsuit is equally understandable.

A.S. 16.10 et seq. places no impermissible burdens on interstate commerce. The assessment is in no sense exclusionary. Henneford v. Silas Mason Co., 300 U.S. 577 (1937). It levies a share of the common property resource reduced to capture by commercial harvest prior to the introduction of the fish into commerce. The assessment in no way discourages commerce and the purposes of the aquaculture development will in fact increase commerce between the states and effectively increase the opportunity for nonresidents to travel here and participate in the commercial harvest. General Motors Corp. v. Washington, 377 U.S. 436 (1964). Members of SSRAA are not discriminated against and, in fact, at least one member of the board lives in Seattle and actively participates in management of the corporation. The burden plaintiffs allege are burdens shared by all persons most directly benefited from the fisheries enhancement and are in no sense burdens upon the streams of commerce. However, as noted in this brief, the equal protection and commerce claims of the plaintiffs effectively put the complaint in perspective.

XI. PLAINTIFFS HAVE NOT EXHAUSTED ADMINISTRATIVE REMEDIES.

It is fundamental that plaintiffs seeking judicial review of administrative action must normally first exhaust their administrative remedies. See generally McKart v. United States, 395 U.S. 185 (1969). The doctrine of exhaustion helps delimit the respective roles of the executive and judicial branches. It gives the agency the first chance to exercise discretion or apply its special expertise, and promotes efficiency in both judicial and administrative processes. McKart, supra, 395 U.S. at 193-194. Its purpose is to allow an agency to perform functions within its special competence and to "correct its own errors so as to moot judicial controversy." Parisi v. Davidson, 405 U.S. 34, 37, 31 L.Ed.2d 17 (1972).

Plaintiffs' failure to attempt adminstrative resolution of their claims short-circuits the system by denying to the agency charged with administering this statute the opportunity to apply its expertise. An administrative agency often has wide latitude to construe its enabling legislation, Cf. Boehl v. Sabre Jet Room, Inc., 349 P.2d 585 (Alaska 1960); Kelly v. Zamarello, 486 P.2d 906, 908-911 (Alaska 1971) and of course would do so in such a manner as to resolve doubtful questions of constitutionality where present. Plaintiffs' resort to the court might have been obviated had the administrator been asked to consider their challenges and perhaps construe the statutes to satisfy them. This is expecially true to the extent plaintiffs are claiming a vagueness problem of constitutional proportions. Defendant asserts that there is no such problem, and that the statute is quite clear on the point plaintiffs seek to obfuscate. Assuming arguendo that it were vague, proper administrative action could rectify the problem. Plaintiffs were remiss in not seeking such.

If plaintiffs were challenging reasonableness of the assessment, e.g., or the method by which the election

was conducted, exhaustion would obviously be required. Such claims are completely without merit on the facts of this litigation, however, and plaintiffs have eschewed them.

A more interesting situation is posed by the fact that plaintiffs' claims are at least in part based on allegations of unconstitutionality. The mere fact that such issues are raised, however, does not obviate exhaustion requirements. See Montana Chapter of Ass'n. of Civilian Technicians v. Young 514 F.2d 1165, 1167-1168 (9th Cir. 1975). Where relief may be granted on nonconstitutional grounds, exhaustion is still required.

Plaintiffs at bar failed to present their claims to the administrator to allow possible resolution which would avoid necessity for judicial intervention. They should therefore be estopped from asserting such claims now, and their case should be dismissed, or alternatively, the matter should be remanded to the Commissioner for appropriate consideration and action.

Defendant observes that another available remedy which plaintiffs totally ignored is provided in A.S. 44.62.220. That section grants to any "interested person" the right to "petition an agency for adoption or repeal of a regulation". By failing to avail themselves of this administrative remedy, plaintiffs are denying the Commissioner opportunity to "correct his own (alleged) errors so as to moot judicial controversy," Parisi, supra, and to apply his expertise to effectuate the intent of the legislature through appropriate construction of the statute. For this reason, also the plaintiffs should be estopped and their cause dismissed, or alternatively the court should defer to appropriate administrative procedures.

XII. PLAINTIFFS ARE BARRED BY LACHES

As a result of plaintiffs' unreasonable delay in initiating and prosecuting this action, defendant SSRAA would be unfairly prejudiced should the court grant the relief sought. Plaintiffs are therefore estopped from asserting their claims due to laches. Accordingly, defendant asks this court to exercise its discretion to dismiss the action.

Prejudice to the defendant (as well as delay by plaintiffs) is demonstrated in detail below. It consists primarily of expenditures of funds and organizational efforts in reliance upon continued unhampered operation of the salmon enhancement program. As part of their complaint plaintiffs seek to recover monies collected pursuant to the assessment election. These funds have largely been spent or committed by the regional aquaculture associations. To the extent plaintiffs seek such damages, failure to timely assert their rights seems clearly to preclude recovery. However, the question of damages is irrelevant to this motion for summary judgment, and its consideration is best deferred since it may well be moot. Defendants request that the court bifurcate these proceedings, determining the question of liability first, and then, if need be, the question of damages. Accordingly defendant's argument on laches is addressed to dismissal of the action. Issues related more specifically to damages will be briefed subsequently should that become necessary.

The traditional equitable doctrine of laches is applied and discussed extensively in two leading Alaska cases, Moore v. State, 553 P.2d 8 (Alaska 1976), and Concerned Citizens of South Kenai Peninsula v. Kenai Peninsula Borough, 527 P.2d 447 (Alaska 1974). Two criteria must be met before laches will be applied to bar a claim. "The defendant must show the plaintiff was guilty of inexcusable delay, resulting

in undue prejudice to the defendant." Moore, supra, 553 P.2d at 15. While the court refers to these as "independent" tests, they in fact appear to be inversely related. A showing of severe prejudice might justify application of laches though the causative delay is relatively short. Concerned Citizens, 527 P.2d at 457. An indefinite inexcusable delay, on the other hand, will not justify barring a claim due to laches where the defendant has suffered no resulting prejudice.

In Moore, the plaintiffs brought suit challenging the legality of the sale of certain offshore oil and gas leases in Kachemak Bay. The trial court held plaintiffs' claim were barred by laches and dismissed the action on defendants' motion for summary judgment. The Alaska Supreme Court reversed on this issue, finding that plaintiffs' three week delay in filing the action after the issuance of the first drilling permit did not cause sufficient prejudice to justify preclusion of the suit.

In Concerned Citizens, the Supreme Court unheld a trial court grant of summary judgment based on laches. In that action, the taxpayer plaintiffs sought dissolution of a hospital service district on constitutional and other grounds. The suit was not brought until four years and ten months after the voters had approved delegation of the Borough's hospital powers on April 8, 1969 - the point at which the court held plaintiffs' claims arose. Between that date and June 5, 1973 a hospital board was authorized, a long term lease was negotiated for operation of a former city hospital, and plans were laid for enlarging the facility. 527 P.2d at 447. On June 5, 1973, nine months before the complaint was filed - voters authorized issuance of bonds for construction of a new hospital. Between then and February 13, 1974, when the complaint was filed, defendants obtained federal and state grants and loans and contracted for architectural and other services. Ibid.

Before proceeding to specifics of the case at bar defendant wishes to dispose of a threshhold issue raised in plaintiffs' pleadings -- the claim that laches may not be interposed as a defense where constitutional claims are made. This is without merit. In Concerned Citizens, e.g., plaintiffs claimed the organization of the service area violated constitutional provisions, 527 P.2d at 449, and the Supreme Court expressly noted that it was barring a constitutional claim for laches. Id. at 458 n. 32. See also, Neizer v. School District of the Township of Schuylkill, 121 A.2d 93 (Pa. 1956); Ciletti v. Washington, 140 A.2d 98 (Pa. 1958), app. dism'd. 358 U.S. 130, 3 L.Ed.2d 225. In Neizer plaintiff taxpayers sued on constitutional grounds to enjoin a school district from paying rent to an authority created for the purpose of building and equipping school facilities and renting the same to the district. The action was barred by laches. In Ciletti, the court barred plaintiffs' suit due to laches where they waited five months to challenge creation of a sewage treatment authority. Reference to the lower court opinion in Ciletti, 107 A.2d 871 (1954), reveals that plaintiffs raised a number of constitutional challenges to the validity of the statutes and ordinances at issue. Plaintiffs apparently conceded the constitutionality of the enabling statute at trial, but continued to press other constitutional claims including challenges to alleged unconstitutional delegations of power to private corporations hired by the authority. Id., at 872. These claims were all held barred due to laches.

Application of the doctrine of laches depends on the facts and equitable considerations of each case, Moore, supra, 553 P.2d at 16. Defendant believes the following will demonstrate to the court ample grounds for a finding of laches. SSRAA reserves the right however to supplement

matters presented herein with information requested in pending discovery motions, should the court find such further documentation necessary or desirable.

The two key determinants of laches -- delay by plaintiffs and prejudice to defendants -- must be analyzed with reference to a particular time frame. Moore provides guidance in determining the relevant period for measuring prejudice attributable to delay.

> "The point in time at which plaintiffs must exercise their remedies in court or lose their right to assert their cause of action depends on the facts and equitable considerations of each case, including the knowledge of the plaintiffs, the conduct of the defendants, the interests to be vindicated, and the resulting prejudice. ... (O)ur concern is ... with when, in light of any resulting prejudice to defendants, it became reasonable to expect plaintiffs to act upon the (alleged) wrong."

The Supreme Court goes on to enumerate two specific factors to be used in evaluating plaintiffs' delay:

> "(One) is when, under the circumstances, it became no longer reasonable for plaintiffs to assume that defendants would comply with the law. We will also look to that point in time when there were positive steps taken by defendants which made their course of conduct irrevocable, and would have galvanized reasonable plaintiffs into seeking a lawyer."

How do these tests apply to the facts of this case? In both instances they demonstrate that plaintiffs are guilty of laches.

With respect to the first test, plaintiffs could not reasonably have presumed defendants would comply with the law as they view it at any point after passage of the legislation. It is plaintiffs' contention that the statute itself is constitutionally infirm, so that nothing defendant might do could remedy its illegality. Thus there is a substantial argument that the point from which to measure plaintiffs' delay is June 19, 1976, when the statutory scheme became law. This would be consistent with the holding in Concerned Citizens, supra, where the Supreme Court stated, "All the claims which appellants attempted to argue before

the superior court could have been asserted in April 1969." 527 P.2d at 458. (The date voters approved an ordinance creating a hospital service area and delegating assembly powers to it). In Moore, unlike the instant case or Concerned Citizens, plaintiffs did not challenge the validity of the statutes and regulations at issue, only their application. Thus it could not be assumed until these were actually illegally applied that defendants would not comply with the law -- indeed plaintiffs were entitled to presume the officials would proceed in accordance with the law. 553 P.2d at 18. As noted, such was not the case here, and nothing short of failure to implement the statute would save state officials from violating plaintiffs' version of the constitution. Plaintiffs have shown no evidence, nor did any exist, to support a finding that state officials did not intend from the outset to fully implement the law.

Application of the second test, however, points to a somewhat different time period. Defendant is willing to concede that the most reasonable and meaningful date to use with reference to the second test is July 1977, when the mandatory assessment for the Southern Region was approved by the Commissioner of Commerce. Persuasive arguments could be made that the relevant point in time when the positive steps taken by defendants made their course of conduct irrevocable came much earlier - when the region was formed, e.g., or when the Executive Director was hired, or particularly when the assessment vote was taken. But defendant contends that there can be no reasonable dispute that approval of the mandatory assessment marked such a point in time, plaintiffs' actions bear this out, for they were in fact "galvanized into action and motivated to hire counsel" by this event. See Moore, 553 P.2d at 16. The principal plaintiff, Wayne Alex, stated that he found out in late July or early August that the assessment had actually been instituted. (Depo. of Wayne Alex, p. 37). At that point, he was galvanized. He

obtained a copy of the law and information about it (ibid.), he pulled his membership card from United Fishermen of Alaska (UFA), which had lobbied for the plan (id., 14), and went to see an attorney, Bill Ruddy (id., 43), began trying to organize fishermen in opposition to the law (id., 47), and sent out letters to certain permit holders seeking financial and political support (id., 69).

Plaintiff John C. Martin likewise took action after the election results came out. As a member of the Board of Directors of PFI in Petersburg, Martin favored having the cannery refuse to collect the assessments. (Depo. of John C. Martin, at 27). The cannery (PFI) supplied a form fishermen could fill out to protest the assessment (Id. 26).

These men were and others were aware of the assess-- ment program in varying degrees before the assessment vote, but their interest and concern crystalized into action at that point and the test is satisfied.

Given July 1977 as the time at which plaintiffs should have acted, we must assess the prejudic which defendant suffered as a result of their delay a filing the Complaint until March 15, 1978. The following activities, commitments and expenditures by SSRAA occured between July 1977 and the time plaintiffs filed their complaint.52/

(a) $100,000 was committed to secure an engineering contract with the firm of CMH2 Hill; (b) $260,000 in grants were received from the state, $100,000 of which was awarded specifically on the basis of passage of the mandatory assessment, and these monies were committed; (c) thousands were spent for site selection, and helicopters and boats were employed throughout Southeast for this purpose, biologists

51/ Defendants contend the date it received notice of the suit by being served is the relevant time for terminating the period of latches -- the extra week, however, is of little actual significance.

were sent to various towns, and eggs were taken from numerous streams; (d) SSRAA and auxiliary personnel were employed and engaged in extensive planning and research functions premised on assessment income.

To allow this belated attack on the program after defendant made such substantial commitments during a period in which plaintiffs unreasonably delayed action would work a gross injustice on defendant. The defense of laches "is one of great public utility ... (which) induces confidence in what is, and willingness to improve property in possession." Holmstead v. Grinnan, 152 U.S. 412, 38 L.Ed 495. Plaintiffs failure to challenge the salmon enchancement program at its inception, or at least at the stage of the assessment vote approval when they demonstrably could have, estops them from asserting any right to dismantle the now growing, visible entity which is SSRAA.

As noted above, this case is similar to Concerned Citizens. There the Authority which plaintiffs sought to dismantle, though formed for several years, untertook its major actions cited by the court to prove prejudice within nine months before plaintifffs filed their complaint. These included issuance of construction bonds, securing of federal and state grants and loans, and awarding of an architectural design contract.

The prejudice to defendant SSRAA is likewise similar to that found by the court in Ciletti, supra, 107 A.2d at 872, where laches was found based on plaintiffs' five month delay in filing suit. The court noted the sewage authority which plaintiffs there sought to dismantle had sold sewage bonds, agreed to provide services, employed a consulting engineer, and contracted with private companies to receive certain services.

One final factor deserves mention with respect to plaintiffs' laches. The Moore case expressly makes the public interest an element of the laches equation.

> "In determining whether laches was properly applied in the case at bar, we cannot overlook the fact that under Section I of Article VIII of our Constitution, the public also has an interest in the proper development of Alaska's resources." 533 P.2d at 19.

The Alaska legislature has made a judgment that the statutes codified in A.S. 16.10 et seq. represent the best method of development of our common property fisheries resource. This creates a strong presumption that the public interest is represented and served by this salmon enhancement program. This Court should therefore consider the public interest as a factor supporting a finding of laches here.

Considering this important public interest, and the serious prejudice to defendant resulting from plaintiffs' unnecessary delay, this court should grant summary judgment for defendants on the basis of laches.

XIII. THE CONSTITUTIONALITY OF REGIONAL AQUACULTURE ASSOCIATIONS AND THE ASSESSMENT IN A NUTSHELL.

Defendant realizes that this court is being confronted with issues of first impression. It is for that reason that this memorandum contains extensive background material in order that the issues can best be understood in the light of constitutional, executive and legislative policy as well as the judicial interpretations given those policies. This section is devoted to placing the issues in a nutshell with the positions of the opposing parties.

It is defendant SSRAA's position that the regional aquaculture program and the mandatory assessment contained in A.S. 16.10.375 - 620 is a legitimate purpose for legislative intervention, that the means chosen bears a close substantial relationship to the purposes stated, is not vague, is not the delegation of a taxing power in violation of Art. 10, § 2, Alaska Constitution, does not establish a dedicated fund in violation of Art. 9, § 7, Alaska Constitution, and in no way impermissibly interferes with interstate commerce. Further, the regulations and orders adopted by the executive pursuant to the law were lawful. Finally, it is defendant's position that plaintiffs are precluded from raising certain issues for the first time in the judicial branch when they have not sought administrative remedies, and are precluded in seeking certain relief by the doctrine of latches.

The real issues in this case are the most elusive ones to identify because of the multiplicitous allegations raised by plaintiffs. The first real issue is equal protection and fortunately there is substantial recent case law and commentaries from which the section in this memorandum was drawn and from which the court can review its conclusions. The second real issue involves interplay between Art. 8 of

the Alaska Constitution (Natural Resources) and Art. 10 (Local Government). Plaintiffs urge a construction of Art. 10, § 2 that is narrow and rigid. They allege that a taxing power is delegated to an institution other than a borough or city. Defendant believes that the assessment is not a tax and, in any event, no power to tax or levy an assessment has been delegated.

One thing should be clear at this juncture. The legislature can delegate the power to tax or levy assessments in any manner it chooses in the unorganized borough. Art. 10, § 6. Regardless of how the assessment is interpreted, if a regional aquaculture association operates exclusively in the unorganized borough the provisions of A.S. 16.10.375 - 620 are constitutionally firm. It is defendant's position that current qualified regional aquaculture associations in Southeast Alaska may tax or levy an assessment, notwithstanding the presence of local government jurisdictions. The obligation to provide for the rehabilitation and enhancement of the common property fisheries of the state is clearly a state function and in no sense can be delegated to local government. Given that the legislature cannot delegate to local governments fisheries enhancement, it chose the only constitutionally permissible means to provide for regionally oriented fisheries enhancement while at the same time engrossing contemporary public interests such as user input and control, executive oversight for a complex subject matter, equitable distributions of the burdens, and labor and capital resource conservation.

The essense of plaintiff's position, then, is that the only permissible means for the legislature to provide for fisheries enhancement is through absolute and continuous state involvement funded by general income tax revenues. 52/

52/ It is defendant's position that funding fisheries enhancement through general tax revenues, if not unconstitutional is a graphic example of a hidden subsidy that inequitably distributes public wealth to an exclusive class harvesting a common property resource.

We believe that the constitutional framers in no sense intended the division between state and local functions to mean that the presence of a local government in or near a region of fisheries commerce precluded the legislature from establishing the means for fisheries rehabilitation and enhancement that it chose. The position plaintiffs urge has similarities to the dual federalism that for so long hamstrung the commerce and taxing powers of congress. The framers surely did not intend that the presence of local government jurisdictions was a license to balkanize rehabilitation and enhancement of common property resources. The framers also surely did not intend to cripple future legislatures dealing with resource development economics by restricting their powers to the limited scope urged.

The position plaintiffs' urge is archaic in a constitutional and a public policy sense. It would effectively limit the legislature to recreating the policies and ideas of the past through instant replays, regardless of their effectiveness and efficiency, rather than recognizing the flexibility necessary for the economic transition into the 21st century.

CONCLUSION

For all the reasons stated above, defendant SSRAA respectfully requests that this court enter judgment as a matter of law against the plaintiffs in this action.

DATED this 15th day of February, 1979.

Douglas Pope
Attorney for Defendant SSRAA

IN THE SUPERIOR COURT FOR THE STATE OF ALASKA

FIRST JUDICIAL DISTRICT, AT JUNEAU

WAYNE ALEX, WILLIAM A. THOMAS, JR., ED MAKI, JOHN C. MARTIN, WARREN S. WESTROM, DICK WORKMAN, MARK W. WHITE, CARL SINS, BRUCE R. GILBERT, FRED CHAMBERS, DOUGLAS D. KARNS, HAROLD D. BIELESKI and LEO R. ALBECKER, JR.,	)

SOUTHERN SOUTHEAST REGIONAL AQUACULTURE ASSOCIATION, ET AL.,	)
Defendants.	)

No. 1JU-78-191 Civil

AFFIDAVIT OF JACK MILNES

STATE OF ALASKA)
) ss.
THIRD JUDICIAL DISTRICT)

JACK MILNES, upon oath, says:

1. My name is Jack Milnes and I am the Executive Director of Southern Southeast Aquaculture Association, Inc. I have served in that position since August 15, 1976, and my duties are set out in the by-laws. At the time I became Executive Director for the corporation the only staff was part-time secretarial help, and my early chores were to solicit directors from the various representational user groups, and to gain acceptance of the corporation as a qualified regional aquaculture association. Pursuant to my duties as set out in by-laws, I began collecting records and other physical materials in a corporation filing system relevant to all phases of my responsibility and all necessary activities of the corporation. Those materials appended to this affidavit have been selected from those files and records kept as a part of the corporation business and are attached herewith for the purposes of explaining certain points in more detail.

2. In August of 1976 the corporation had approximately Ten Thousand Dollars ($10,000.00) of cash on hand from contribution and donations by various users, processors, and other interested persons.

3. On August 26th, I began traveling to various towns in Southeast Alaska and informing fishermen of the purposes of the aquaculture association, and to solicit voluntary contributions in the form of direct contributions, and voluntary assessments. The first was to Wrangell on August 26 and 27, then I traveled to Juneau for the period of August 31 through September 3rd. On September 20, 21, 22, 23, 24, and 25 I traveled to Haines, Skagway, and Juneau, with Larry Dalton, President of the Southern Association. Other people present on the trip were James Beaton and several other directors who met us along the way in various towns. In this latter trip we began distributing a small brochure which contained information regarding proposed releases from hatchery sights and estimated returns, hatchery costs, estimates, approximate duration and magnitute of the proposed assessment, projected assessment return calculations, and a form for those fishermen interested in contributing to the Southern Region by agreeing to assess themselves Three Percent (3%) of their gross salmon catch in Districts One through Eight. (See Appendix) As I traveled to these various communities, meetings were organized ahead of time where various fishermen from the different areas would attend, look at the brochure, fill out the agreement for a voluntary assessment if they were so interested, and would engage with me in a dialog and discussion regarding the pros and cons of hatchery development and funding mechanisms. I had prepared some material for discussion that I tried to cover at each meeting. A standard dialog is reflected in the appendix and memorandum dated October 1976 and entitled

"Narrative to Accompany the Pamphlet which discusses the Reasoning Behind and Request for Assessment by each Fisherman." The narrative attached to this affidavit in the appendix was actually prepared for other persons to utilize in their discussions to various user groups about the reasoning behind and the request for the assessment, but it also adequately reflects what I attempted to cover at each meeting. Preceding the above referenced "Narrative" in the appendix is a graph entitled "SSRAA's Target". That graph was used frequently during these meetings and was reproduced in different forms and distributed.

During this period we also sought support from other organizations and local governments. For example, the Alaska Trollers Aquaculture Corporation agreed to consolidate with us, and the Ketchikan Chamber of Commerce assisted us in securing donations. Local merchants petitioned the city and borough governments to give us as much support as permissible. The reaction was quite favorable.

Also included in the appendix, is a memorandum dated December, 1976, entitled "Viewpoints from Southeast Alaska". That memorandum was prepared by me and delivered to members of Governor Hammond's staff at their request, for the purpose of providing a brief history of activities to date, capital shortfalls, and to discuss various problems and concerns then known or perceived in the aquaculture programs, and to suggest some solutions.

4. Meanwhile, in November 2, 1976, pursuant to our request, the Alaska Department of Fish and Game recognized Southern Southeast Regional Aquaculture Association, Inc. as a qualified regional association under the terms of Chapter 161 of the 1976 session laws. The region covered the same geographic boundaries as Fish and Game regulatory districts 1 through 8 in Southeastern Alaska. (See November 2 letter

and map in appendix). By the end of October, 1976, a significant portion of the cash on hand of the corporation had been expended for preliminary hatchery site selection.

A preliminary application for a private nonprofit hatchery at Beaver Falls had been submitted to the Commissioner of Fish and Game. Submitted with the application and also to the Department of Commerce, Division of Business Loans were the signature and comments of those persons agreeing to a voluntary assessment. The assessment volunteers were considered essential to any successful financing. (See October 8, Memorandum and Application).

5. 1977 In late February of 1977, the board of directors' Executive Committee met with Phil Daniels for the purpose of discussing current legislative proposals regarding the aquaculture program pending in the legislature. Phil Daniels, a United Fishermen of Alaska representative, advised the board about the proposed legislative changes providing for a change in the funding mechanisms as well as mechanisms for mandatory assessment. Shortly thereafter, the full board resolved to proceed with a mandatory assessment election in order to meet compliance with legislation pending before the legislature. An elections committee was appointed, and a calendar of events established to conform with the election procedures in the proposed law. The committee drew up procedural rules for voting, and made substantial preparations for full and adequate notice of the proposed election to all limited entry permit holders in Southeast Alaska. In the appendix, are included numerous copies of actual notices posted in public places, newspaper notices of the pending election, affidavits of publication, and other evidence of various efforts taken by the corporation to insure the largest possible turn out for the election. Also included in the appendix are copies of the various election materials mailed to each limited entry permit holder in Southeast

Alaska. For example, a small brochure entitled "Fisheries Permit Holders: Want More Fish?" contained information about the board of directors of the corporation, proposed hatchery facilities, projected costs, and encouraged votes. The law was precisely followed prior to and during the election. The corporation hired the Ketchikan accounting firm of Walter W. Shuham to audit and tabulate the results of the election. On June 1, 1977, the certified public accountant advised the association that of 1,052 ballots by qualified fishermen received in accordance with established voting procedures the number of votes cast for the proposal were 592 and the number of votes cast against the proposal were 446. 14 votes cast were not counted because the envelopes contained two or more ballots or the general meaning of the ballot was unclear and the result of the ballot would not affect the outcome of the election. On June 30, 1977, the corporation requested that the Department of Commerce approve the mandatory assessment vote, and establish on a emergency basis, a mandatory assessment. On July 15, 1977, the Commissioner of the Department of Commerce and Economic Division made a finding of an emergency and noticed adoption of emergency regulations. The notices of adoption of emergency regulations, which fleshed out provisions of the statute regarding requests for institution of assessment, review and approval of initial and final requests, and other related matters, were posted in every fishing village and town in Southeast Alaska. Although the Commissioner gave notice to the processors and other fish buyers, pursuant to A.S. 16.10 that they were to begin collecting the assessment, the processors collected but declined to transmit the assessment funds to the regional association without first obtaining a court order or specific authorization from fish sellers from whom the assessments were collected. and Southern Southeast Aquaculture Association, Inc. v. Annette Island Packing Company, et al., civil action number 77-10006, Juneau. However, some fish buyers did collect and forward the assessment and by November 11, 1977, Southern Southeast Regional Aquaculture Association had received some $49,000.00 in assessments. (See appendix.) On December 28, 1977, in the above cited case, the State of Alaska, SSRAA, and the various defendant processors filed a release and indemnity agreement in Superior Court. Pursuant to that release and indemnity agreement over $545,000 was released to SSRAA by the processors.

In 1977, another $17,000.00 was expended on the hatchery sites selection process.

6. Meanwhile, the board was actively proceeding with plans for hatchery sites and the hatchery facility at Witman Lake on Ravila Island near Ketchikan. (See project Management Request for Proposal, appendix) On December 15, 1977, the final request for the $100,000.00 matching grant, pursuant to A.S. 16.10.510, was sent to the director of the Division of Business Loans, Department of Commerce and Economic Development.

7. 1978. In early 1978 the corporation contracted with CH2M-Hill, an engineering consultant, for design and engineering of the Witman Lake hatchery facility. The design of the facility and its specifications were supervised by Milo Bell, Professor Emeritous, Fisheries, University of Washington, SSRAA's senior technical advisor. Pursuant to the contract, CH2M-Hill was advanced $100,000.00. In early March, 1978, the board authorized the executive director to arrange, with the State of Alaska, for its long term hatchery construction and operation financing, as authorized by A.S. 16.10.

8. Interim financing for the construction of the

DOUGLAS POPE
LAWYER

272-6225

hatchery was secured through the Spokane Bank for Cooperatives. Construction began at the Herring Cove-Witman Lake hatchery site in June. Land was cleared and graded, the lake was drained and necessary repairs were begun on the dam valves. Construction required installation of over 3,000 feet of up to 24" pipe for the purpose of feeding the hatchery. The pipeline made a fall of over three hundred feet while restrained to a narrow fifty foot corridor on national forest land, and required the expertise of a major construction company; Palmer Wright-Schugart.

9. In July, construction began on the Beaver Falls temporary hatchery. That temporary hatchery was completed in September, and was ready for eggs. The building is 40' by 50' and contains 2,560 Heath incubating trays. Each tray can handle 10,000 eggs. The total capacity at the Beaver Falls temporary hatchery is 25,600,000. The purpose for building the temporary hatchery was primarily to prevent a year delay in production.

10. During 1978, the corporation also became heavily involved in the regional planning process. The corporation's involvement in the regional planning team broke down into general areas, public involvement, and technical planning. Corporation expenses in 1978 exceeded $112,000.00 in conjunction with this process.

11. Other significant aspects of the corporate process on which energies were focused in 1978 included board development, rehabilitation, and stream surveys. Board development involved the preparation of the board for the necessary activities to meet multi-million dollar committments.
